- If Claimant was at MMI and not entitled to conversion, whether Respondent proved by a preponderance of the evidence that the DIME physician's scheduled rating was incorrect?

- Whether Claimant proved by preponderance of the evidence that she was entitled to an average weekly wage of $1,409.75?

- Whether Claimant proved by a preponderance of the evidence that she was entitled to disfigurement compensation for scars on her knees?

ISSUE RESERVED

- Claimant reserved the issue of permanent total disability benefits for future determination because she asserted that she was not at MMI and thus a permanent disability could not be assessed at this time.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. On April 15, 2015, Claimant, a 58-year-old female employed with the Employer as a courier, sustained injuries to her upper and lower extremities. Claimant testified that she had worked for the Employer for 19 years and had had her present courier route for the last seven years. According to Claimant, she injured her upper extremities and knees during the course of completing her route using a substitute delivery truck. Specifically, Claimant had to enter and exit the substitute truck by the passenger door because the truck's sliding door was broken and packages could not be accessed by the rear door. As she was "surfing" over packages and attempting to pick up packages, she began to experience soreness in her bilateral shoulders, upper arms, and neck. She also sustained a contusion to her right knee.

2. Claimant notified her employer on April 17, 2015. That same day, she presented to authorized treating physician (ATP), Dr. Robert Dupper. Dr. Dupper

assessed Claimant with sprains of the bilateral shoulders, neck sprain, and right knee contusion. He recommended that Claimant take Ibuprofen, prescribed Flexeril, and removed Claimant from work.

3. On April 23, 2015, Claimant returned to Dr. Dupper. Claimant reported approximately 40% improvement. She denied any continued symptoms with her knee. Claimant reported continued soreness in her neck, but with no neurological deficits or visual changes. Additionally, Claimant denied numbness or tingling in her upper extremities. Dr. Dupper recommended that Claimant return to regular work status. Additionally, he recommended massage therapy.

4. On May 4, 2015, Claimant returned to Dr. Dupper. Claimant reported reduced neck pain following the massage treatment. Claimant reported soreness in her shoulders and upper arms "when she [worked] a long day but otherwise [was] feeling fairly well." Claimant also described some pain under the kneecap of her right knee. Physical examination revealed some swelling on the medial side of the right knee with full range of motion and no tenderness.

5. On May 12, 2015, Claimant returned to Dr. Dupper. Claimant's complaints focused her right arm and shoulder. Physical examination revealed full range of motion of the shoulders with some pain at end points of the range of motion. Due to Claimant's complaints of increased soreness at work, Dr. Dupper recommended restricted duty. He imposed a lifting restriction of 20 pounds and recommended physical therapy.

6. On May 26, 2015, Claimant returned to Dr. Dupper. Claimant described bilateral pain in her shoulders, right greater than left. Dr. Dupper released Claimant to regular work activities. He recommended that she start physical therapy and continue taking Ibuprofen as needed.

7. On June 16, 2015, after a few sessions of physical therapy, Claimant returned to Dr. Dupper. Claimant reported that her left shoulder and right knee were doing quite well. Her complaints focused on pain and soreness in the right shoulder, into the upper arm. Because physical therapy did not resolve the right shoulder pain, Dr. Dupper recommended that Claimant undergo an MRI and an evaluation with an orthopedic surgeon.

8. A right shoulder MRI on July 3, 2016 revealed mild-moderate tearing of the supraspinatus and infraspinatus muscles, labral tear, moderate-severe AC joint arthritis, old trauma to the AC and coracoclavicular joints, and mild-moderate glenohumeral joint effusion.

9. After undergoing the MRI, Claimant presented to Dr. David Beard, orthopedic surgeon, on July 14, 2015. His review of the MRI showed right shoulder rotator cuff tendonitis with possible small partial thickness cuff fraying. Dr. Beard did not recommend surgery as Claimant had improved with conservative management.

10. On July 20, 2015, Claimant returned to Dr. Dupper. Claimant reported improvement but still described difficulty with certain activities of daily living. Claimant remained on work restrictions, requiring her to do office duty only, which did not aggravate her condition.

11. On August 3, 2015, Claimant returned to Dr. Dupper, reporting continued improvement, but that she did notice increased pain in the right shoulder after use. However, when not utilizing the right arm, the pain would dissipate. Dr. Dupper recommended that Claimant return to regular duty. He noted that if Claimant tolerated the return to regular activity, he would likely be placing her at maximum medical improvement (MMI).

12. On August 17, 2015, Dr. Bruce Cazden placed Claimant at MMI. Claimant noted that having returned to full duty two weeks prior, her pain had been manageable. Claimant agreed that she had reached MMI. At the time of the evaluation, Claimant did not require medication. Dr. Cazden did not recommend any permanent work restrictions. Additionally, he did not assign an impairment rating. Regarding future medical treatment, he noted that Claimant might consider a cortisone injection and/or surgical intervention if her condition deteriorated. Claimant agreed with Dr. Cazden that she had likely plateaued regarding treatment.

13. On September 14, 2015, Respondent filed a Final Admission of Liability (FAL) admitting consistent with Dr. Cazden's opinion. Respondent admitted for post-MMI maintenance treatment allowing Claimant to return to her treaters for reasonable and necessary care to relieve the effects of the industrial injury. Claimant objected to the FAL and requested a Division-sponsored IME (DIME).

14. Dr. Timothy Hall performed the DIME. He opined that Claimant was not at MMI but the basis for that opinion is not entirely clear from his report. He stated that should Claimant simply chose to proceed with additional conservative treatment like a corticosteroid injection, she would still be at MMI and such treatment could be provided under medical maintenance care. However, if she chose to have surgery, which had not been recommended by any of her treatment providers, then she would no longer be at MMI. Dr. Hall, who is not a surgeon, did not opine on whether Claimant was a surgical candidate.

15. Dr. Hall clarified his position in his deposition testimony: "If I would have seen [Claimant] on 8/17/15 [the date on which Dr. Cazden placed Claimant at MMI], I would have put her at MMI as well. And that's why I would go back to that date, as I said in my note, if she's determined not to be a surgical candidate." However, he also admitted in his deposition that his physical examination of Claimant was not suggestive of rotator cuff tear or labral pathology, which would support a surgical recommendation.

16. Concerning permanent impairment, Dr. Hall assigned a 19% scheduled rating for Claimant's right upper extremity, which converted to an 11% whole person rating. He also assigned a 4% scheduled rating for Claimant's left upper extremity, which converted to a 2% whole person rating. He did not provide any lower extremity

ratings. The rating worksheet attached to Dr. Hall's report indicates that he combined Claimant's whole person ratings to reach a 22% total whole person rating. However, Dr. Hall clarified in his deposition that this was an error and the correct combined whole person rating was actually 13%.

17. Claimant testified that she did not believe that she reached MMI on August 17, 2015. She disagreed with Dr. Cazden's MMI report indicating that she had reached a plateau acceptable to her; that she was pleased with her progress; and that she felt she had reached MMI. She also disagreed with the record in Dr. Beard's report that her shoulders had significantly improved with conservative treatment.

18. She further testified that her condition had worsened since August 17, 2015. She now had elbow pain, catching and locking in the right shoulder, difficulty lifting overhead, and difficulty with sleep. However, on cross-examination, she acknowledged that she reported difficulty with overhead lifting and problems with sleep to her medical providers even prior to the April 15, 2015 injury.

19. Claimant testified that she would like to go back and receive more treatment. However, although she was free under the final admission of liability to return to her authorized treating physicians for medical maintenance care at any time, she had yet to schedule a follow-up appointment. She testified that she was unaware of her right to maintenance care despite being represented by counsel, and that she did not return to her treatment providers because she felt they could do nothing else for her.

20. Claimant had other inconsistencies in her testimony. At one point, she testified that her left shoulder symptoms never fully resolved following a 2012 attack by a dog. But, at another point during the hearing, she stated that her left shoulder was not bothering her at the time of the August 15, 2015 injury.

21. Concerning conversion, Claimant testified that she has tingling radiating from her right shoulder into her neck and some stiffness with turning. She indicated that she had trouble lifting above her head, mowing the lawn, pulling weeds, scrubbing the sink, throwing a ball, and that her pain increased with activity. She also received massage treatment for her neck. However, on cross-examination, Claimant acknowledged that her difficulty with pushing, pulling, and lifting was localize to her arms and shoulders and no other part of her body prevented her from doing work activities and activities of daily living.

22. Dr. Carlos Cebrian performed an independent medical examination at Respondent's request. Dr. Cebrian is board certified and Level II Accredited since 2001 in physical and rehabilitation medicine with the Division of Workers' Compensation. He asserted working knowledge of the AMA Guides and the Division of Workers' Compensation Medical Treatment Guidelines. Dr. Cebrian was present in the courtroom for Claimant's testimony.

23. Dr. Cebrian agreed that Claimant sustained bilateral rotator cuff strains with tendonitis on April 15, 2015. He further opined that Claimant's course of treatment

was reasonable and appropriate. He stated that the July 3, 2015 right shoulder MRI showed a partial rotator cuff tear, labral tear, and arthrosis of the joint, which were likely degenerative in nature. Dr. Cebrian explained that the mechanism of injury, as described by Claimant, would not cause the pathology indicated on the MRI report. He further explained that, although the MRI did indicate the presence of old trauma to the shoulder joint, Claimant's rotator cuff and labral tears were likely the result of her degenerative shoulder condition. Such changes are an aspect of cellular changes as we age he explained, and it is a misunderstanding of the underlying pathology to say that those changes are merely the result of "wear and tear."

24. Dr. Cebrian also reviewed Claimant's May 1, 2012 left shoulder MRI, taken prior to the date of injury. This MRI also showed degenerative changes consistent with the degenerative disease processes shown in Claimant's right shoulder. Dr. Cebrian explained that, given Claimant's age, such breakdown of the shoulder joint would be normal and expected. He also noted that there would be pain with this degeneration that could be aggravated by the mechanism of injury described here.

25. However, all of the findings were suggestive of chronic conditions that were not caused by the mechanism of injury Claimant described. Rotator cuff or labral tears would be the result of either degenerative processes or a significant trauma to the shoulder, which Claimant did not allege. Accordingly, he concluded that the injuries Claimant sustained on April 15, 2015 did nothing to change the underlying disease processes of her pre-existing arthritis of her bilateral shoulders.

26. He agreed it was reasonable to refer Claimant for an orthopedic evaluation. He noted that the evaluating surgeon, Dr. Beard, did not see tearing on the right shoulder MRI and diagnosed Claimant with right shoulder rotator cuff tendinitis with possible small partial-thickness cuff fraying. He recommended against surgery. Further, Dr. Beard only recommended a corticosteroid injection should Claimant's condition worsen.

27. Based on this, Dr. Cebrian opined that it was appropriate for the ATP to place Claimant at MMI.

28. Concerning the DIME report, Dr. Cebrian opined that it contained opinions inconsistent with the medical records and sound medical research, including that the report attributed much of Claimant's underlying pathology to arthritis but then attributed the arthritis to the work injury and the wear and tear of Claimant's job. But, the medical research shows that movement is actually good for arthritic conditions. Additionally, the DIME based his opinion that Claimant was not at MMI on Claimant proceeding with the surgery. But no surgical recommendation had been made in the case, and Dr. Hall himself was not qualified to make such a recommendation. Finally, Dr. Hall's physical examination did not reveal any findings for rotator cuff tear or labral pathology.

29. Dr. Cebrian did agree with Dr. Hall's deposition testimony that placed Claimant at MMI on August 17, 2015.

30. Dr. Cebrian disagreed with Dr. Hall's assignment of an impairment rating. He opined that an impairment rating was not appropriate because there was no objective evidence of any change in Claimant's underlying degenerative pathology. Essentially, there was no medical evidence that Claimant's underlying degenerative changes had been permanently exacerbated by the injury. Rather, the aggravation of her underlying disease resolved following conservative treatment.

31. Concerning conversion, Dr. Cebrian testified that Claimant's upper extremity ratings should not be converted to whole person ratings. This was so because Claimant returned to regular duty after the injury; her complaints were localized to the upper extremities when she reached MMI; all of her pathology was localized to the shoulder joints; and no shoulder surgery took place.

32. Dr. Cebrian testified on rebuttal that Claimant's testimony did not change his opinion regarding MMI and impairment. He testified that on physical examination there was no weakness in Claimant's left or right shoulder, no impingement, no atrophy of the shoulder and neck muscles, and that the shoulder and neck muscles were symmetric. Claimant did exhibit crepitus on physical examination, which he attributed to Claimant's underlying degenerative condition. He reiterated that he disagreed with Dr. Hall's opinion regarding MMI in the report, but agreed with Dr. Hall's deposition testimony that Claimant was at MMI on August 17, 2015.

33. Claimant did not present any disfigurement evidence.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000). The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201. The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

Overcoming the DIME concerning MMI

A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." C.R.S. § 8-42-107(8)(b)(III); *Peregoy v. ICAO*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. ICAO*, 961 P.2d 590 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (Oct. 4, 2001). Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

The question of whether the party challenging the DIME physician's finding regarding MMI has overcome the finding by clear and convincing evidence is one of fact for the ALJ. *Id*. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. ICAO,* 984 P.2d 656 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (Jun. 30, 2008).

When a DIME physician issues conflicting or ambiguous opinions concerning whether or not the claimant has reached MMI, the ALJ may resolve the inconsistency as a matter of fact so as to determine the DIME physician's true opinion. *Magnetic Eng'g, Inc.*, *supra*.

The ALJ concludes that Dr. Hall's deposition testimony clarified his ambiguous DIME report and thus Claimant is at MMI as of August 17, 2015. The medical records support this conclusion. In his DIME report, Dr. Hall expressly stated that the only basis for Claimant to not be at MMI was the need for additional surgery. However, the medical records are devoid of any recommendation for surgery and indeed no one who provided treatment or evaluated Claimant in this case has recommended surgery.

Additionally, Claimant has been working full duty without permanent work restrictions and has not returned to her treatment providers for additional medical maintenance care to address any issues related to the April 15, 2015 injury.

The conclusion that Claimant reached MMI on August 17, 2015 is further supported by Dr. Cebrian's credible testimony that Claimant was appropriately placed at MMI on that date based on his physical examination of Claimant, her treatment history, and the normal progression of her underlying degenerative condition.

Conversion

The question of whether a claimant has sustained a scheduled "injury" measured as a "loss of an arm at the shoulder" under C.R.S. § 8-42-107(2)(a), or a whole person impairment compensated under C.R.S. § 8-42-107(8)(c), depends on whether the claimant sustained "functional impairment" beyond the arm at the shoulder. This is true because the term "injury," as used in C.R.S. § 8-42-107(1)(a)-(b), refers to the part or parts of the body which have been impaired or disabled, not the situs of the injury itself or the medical reason for the ultimate loss. *Warthen v. ICAO*, 100 P.3d 581 (Colo. App. 2004). Whether the claimant has sustained a functional impairment beyond the arm at the shoulder is a factual question for the ALJ and depends on the particular circumstances of the individual case. *Walker v. Jim Fuoco Motor Co.*, 942 P.2d 1390 (Colo. App. 1997).

Claimant expressly testified that none of her difficulties with worker or daily living was because of a functional impairment beyond the shoulder. She localized her functional difficulties to her arms and shoulders. She acknowledged that she had had sleep disturbance and problems with lifting long before the work injury. The treatment records further support Claimant's account that she experienced not functional impairment beyond the arm because of the industrial injury.

Impairment Rating

The procedures of C.R.S. § 8-42-107(8)(c), which states that a DIME finding as to permanent impairment can be overcome only by clear and convincing evidence and that such a finding is a prerequisite to a hearing on permanent impairment, have been recognized as applying only to non-scheduled impairments. *Delaney v. ICAO*, 30 P.3d 691, 693 (Colo. App. 2000). Therefore, the ALJ applies a preponderance of the evidence standard when determining whether the DIME applied the correct *scheduled* rating. *Id*.

A DIME physician must apply the AMA Guides when determining the claimant's medical impairment rating. C.R.S. §8-42-101(3.7); C.R.S. §8-42-107(8)(c). The question of whether the DIME physician properly applied the AMA Guides is a question of fact for determination by the ALJ. *See Wackenhut Corp. v. ICAO*, 17 P.3d 202 (Colo. App. 2000). Although deviation from the AMA Guides is not determinative, it constitutes evidence that the ALJ may consider in determining whether the DIME physician's rating is incorrect. *See Wilson v. ICAO*, 81 P.3d 1117 (Colo. App. 2003).

Dr. Cebrian credibly testified that an impairment rating was not appropriate because there was no objective evidence of any change in Claimant's underlying degenerative pathology. Essentially, there was no medical evidence that the injury permanently exacerbated Claimant’s underlying condition. Continued complaints of pain were likely given her condition and do not indicate a change to the underlying pathology. Indeed, any aggravation of her underlying disease resolved following conservative treatment.

Average Weekly Wage

Under Colorado’s Workers’ Compensation Act, the average weekly wage (AWW) is a key part of the formula used to calculate compensation for injured workers, and it is based upon the definition of “wages” provided at section 8-40-201(19). *ICAO v. Ray,* 145 P.3d 661 (Colo. 2006). To determine a claimant’s AWW, the ALJ may choose from two different methods set forth in section 8-42-102. The first method, referred to as the “default provision,” provides that an injured employee’s AWW “be calculated upon the monthly, weekly, daily, hourly, or other remuneration which the injured or deceased employee was receiving at the time of injury.” C.R.S § 8-42-102(2). The default provision in C.R.S. § 8-42-102(2)(a)-(f), lists six different formulas for conducting this calculation. Pursuant to C.R.S. § 8-42-102(5)(a), the phrase “at the time of injury” in subsection (2) requires the AWW to be determined using the wage earned on the date of the employee’s accident. The second method for calculating a claimant’s AWW, referred to as the “discretionary exception,” applies when the default provision will not fairly compute the employee’s AWW. C.R.S. § 8-42-102(3). In such a circumstance, the ALJ has discretion to compute the AWW of a claimant in such other manner and by such other method as will, based upon the facts presented, fairly determine the employee’s AWW. *Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010).

Respondents calculated Claimant’s AWW by taking three months of wages immediately prior to the work injury, which equaled $14,265.84 earned over the 91-day period. (Ex. S, pp. 126 & 142-146). This equated to an average of $156.77 per day or and an AWW of $1,097.37. (Ex. S, pp. 126). The ALJ concludes that this is a fair approximation of Claimant’s AWW.

Additionally, the ALJ concludes that Claimant’s AWW calculations are not a fair approximation for her AWW because they are based in part on higher wages earned during the holiday season and because her calculations did not account for the total number of days worked during the period thus resulting in a significantly lower denominator and higher AWW.

Disfigurement

Disfigurement benefits are awarded for the “observable impairment of the natural appearance of a person.” *Arkin v. Indus. Comm’n*, 145 Colo. 463, 358 P.2d 879 (Colo. 1961). The ALJ is afforded great discretion when determining the amount of compensation to be awarded for disfigurement. C.R.S. § 8-42-108.

Claimant did not present any evidence on the issue of disfigurement and therefore she is not entitled to a disfigurement award.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant is at MMI as of August 17, 2015.

2. Claimant's request to convert her left and right upper extremity ratings to whole person ratings is denied and dismissed.

3. Respondents request to reduce Claimant's left and right upper extremity ratings to 0% is granted.

4. Claimant's request to adjust her average weekly wage is denied and dismissed and thus her average weekly wage remains $1,097.37.

5. Claimant's request for disfigurement is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. ***For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.***

DATED: August 16, 2016

Denver, CO 80203

ISSUES

- Whether Claimant established by a preponderance of the evidence that he suffered either an inhalation and/or head injury in the course and scope of his employment on June 4, 2014.

- Whether Claimant has established by a preponderance of the evidence that he is entitled to additional reasonable, necessary, and related medical treatment.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

Background

1. Claimant is a former industrial painter who began his employment with Employer around October 2014.

2. Employer manufactures heavy industrial wind turbine towers. Sections of these towers can be as large as 11 feet in diameter and 40-50 feet long.

3. Claimant's responsibility was to use an airless painting system to apply both epoxy paint and a top coat of epoxy to sections of the wind towers manufactured at Employer's plant in Pueblo, Colorado.

4. Painting was done in a series of eight painting lanes and Claimant would normally apply somewhere between 500 to 800 gallons of paint per shift. Claimant's normal working hours were from 6:00 A.M. to 6:30 P.M. for three (3) consecutive days, followed by three (3) days off and then four (4) days on the same shift.

5. Claimant wore latex gloves and a "Tyvek" suit outfitted with a hood as well as a respirator equipped with replaceable filters called a "papper". The suit Claimant and the other painters used is commonly referred by Employer as Personal Protective Equipment ("PPE").

6. Claimant alleges that on June 4, 2015, he inhaled toxic paint fumes despite wearing his protective paint suit/respirator, thereby leading him to pass out and fall to the ground injuring his head.

Claimant's Testimony

7. Claimant testified that he received minimal training to carry out his job duties consisting of one class that lasted one or two weeks involving "the dos and don'ts." He testified he received no training specific to painting.

8. Regarding the PPE, including the respirator, Claimant testified fresh air was pumped into the suit which passed through the replaceable filter. Claimant testified the replacement filters for the PPE were kept in a secure booth, and a supervisor's permission was required to obtain new filters. He testified that painters would be reprimanded for not working hard enough if a replacement was requested. He testified he was not provided instruction on how often the filters should be changed.

9. In addition to the air filtration system in the PPE, there was a filtration system within the paint bays. Claimant testified those filters would become clogged, and he would need to scrape off paint from them. He testified that he complained to various supervisors, including Nick Portaleos and Jason Atayde about the condition of the paint bay filters, but his complaints were ignored.

10. Regarding the mechanism of injury, Claimant contends that the filter in his PPE was no longer functioning properly. Consequently, he testified that he inhaled paint fumes for an indeterminate amount of time on June 4, 2015. Claimant testified as follows: "If the filter gets plugged at a slow rate, you're not realizing that you're smelling it, and I know that's what happened." Claimant testified he did not smell any fumes prior to allegedly passing out and hitting his head. However, Claimant acknowledged the paints had a strong odor which was apparent when not wearing the PPE equipment. He admitted on cross-examination he had no indication his PPE suit was not functioning properly on that date.

11. Regarding the date of injury, Claimant testified he had painted for nearly his entire 12 hour shift prior to passing out. He testified he sprayed top coat paint in paint lanes 7 and 8, and he then returned to lanes 5 and 6 to finish top coat painting in those lanes. He testified that at some point close to the end of his shift he passed out in lane 6 and subsequently came to. There were no witnesses to the incident as Claimant was painting alone in the lane. He alleged he had been feeling tired for about a month prior to the alleged incident, but otherwise he had no symptoms immediately preceding his alleged loss of consciousness. He alleged that when he woke up, he had bit his tongue and had something in his mask, testifying: "I don't know if it was vomit or what inside my mask."

12. After coming to, Claimant testified that he saw his co-worker, Brian Manguso, as he was exiting the paint lane. He told Mr. Manguso he did not feel well, and asked Mr. Manguso to finish painting his tower. Claimant alleged Mr. Manguso said, "No, I'm going home." Claimant then testified that he saw Mr. Atayde when he went back to the employee changing area, and told Mr. Atayde that he bit his tongue and did not feel good. Claimant further alleged he told Mr. Atayde that he "fell out. I

don't feel good. I'm going to the doctor." Claimant alleged Mr. Atayde said, "It's time to go home. I'm going."

13. Claimant testified he sought medical care from Emergicare that night. He testified he was vomiting. He testified he returned to Emergicare the following day complaining of the same symptoms. He testified that on either June 5th or 6th, 2015, both he and his wife left messages with "Gabby," Employer's receptionist, to have Frances Alexander (HR) contact him regarding the alleged accident. He also testified on direct examination that he texted Mr. Portaleos regarding the injury, but he "never got no calls no nothing back." Claimant went on to testify that one day shortly thereafter he tried to call Ms. Alexander 42 times during the day but could not generate a response.

14. Respondents submitted text messages between Claimant and Mr. Portaleos dated from June 5, 2015 and June 11, 2015. *Resps. Ex. L.* Claimant admitted on cross-examination that his June 5, 2015 text stating that he "woke up not feeling good this morning" did not mention the alleged work injury. *See Id.* at p. 81. The following day, Claimant stated to Mr. Portaleos in a text that "Dr. was surprised I didn't pass out during shift . . . multiple things going on and could be contagious. . ." *Id.* at p. 83. When asked whether this was opposite to his allegations at hearing, Claimant responded that he did not believe so because he did not pass out during his shift but towards the end of his shift. He then admitted he was alleging he passed during his normal shift hours.

15. Claimant was asked about a June 11, 2015 text to Mr. Portaleos which stated, "something going on with my heart . . . I had a small stroke wow last day on at work I was ready to pass out but I cooled down. . . went that night to the er." *Id.* at p. 85. Claimant initially admitted he sent that text message. When pressed as to the difference in the text to his current allegations, Claimant stated his wife wrote the text. He testified that his wife would send some texts from her phone and he would send texts from both phones. He testified the black LG phone was his phone, and the white phone was his wife's. The ALJ notes the text messages from June 5, 6, and 11 are shown to be on a black LG phone.

Claimant's Medical Records

16. Claimant was evaluated at Emergicare by Dr. Bradley on June 5, 2015. *Resps. Ex. B*, p. 41. The recorded vital signs note Claimant was evaluated at 4:50 p.m. There are no records showing Claimant was evaluated on the evening of June 4, 2014. Dr. Bradley's records note Claimant complained of dizziness and respiratory complaints of coughing and wheezing for 6 days, onset May 29, 2015. *Id.* He also complained of a sore throat, onset June 4, 2015. *Id.* Claimant denied vomiting. *Id.* Dr. Bradley performed an EKG. *Id.* at p. 43. Claimant had a normal chest examination. *Id.* at p. 42. There is no reference to any loss of consciousness the day prior, or at all. *See Id.* The next record of Claimant's treatment at Emergicare is from June 10, 2015. *Id.* at p. 35. Claimant reported nausea, throat pain, vomiting with an onset of June 9, 2015, along

with an alleged loss of strength in his right hand with a June 9, 2015 onset. *Id.* He was provided an IV and referred for a CT. *Id.* at pp. 37-39. There is again no reference to a work incident. *See Id.* A chest x-ray taken on this day was unremarkable. *Resps. Ex. F.*

17. Dr. Bradley reevaluated Claimant on June 11, 2015 and recorded an onset date for claimant's respiratory complaints, vertigo, and vomiting of May 29, 2015. *Resps. Ex. B*, p. 29. Dr. Bradley specifically wrote, "complaints of vertigo onset 5/29/2015 and emesis onset 6/9/15 . . . contact with mosquitoes. He thinks he may have West Nile." *Id.* It is noted that Claimant denied syncope (loss of consciousness). *Id.* Dr. Bradley on this date noted Claimant's June 5th EKG was abnormal. *Id.* at p. 32. There is no mention of any work related incident or loss of consciousness at work. *See Id.*

18. On June 16, 2015, Dr. Bradley, for the first time documents that Claimant was alleging chemicals at work were the cause of his respiratory complaints. *Id.* at p. 23. However, there is no reference to an alleged loss of consciousness from June 4, 2015. Claimant again had a normal chest examination. *Id.* at p. 25. Dr. Bradley drew blood for laboratory testing for arsenic, lead, and mercury. *Id.* The results of that blood panel were noted on July 17, 2015 to be negative. *Id.* at p. 20.

19. Claimant had a brain MRI on August 12, 2015. *Resps. Ex. G.* It showed scattered small periventricular white matter lesions worrisome for demyelinating plaques, possibly with early chronic ischemic changes, and vasculitis as well as Lyme disease were noted to be possible causes. *Id.*

20. On August 20, 2015, Claimant apparently discussed "previous exacerbation from working in high heat on towers in temperatures up to 120 degrees." *Id.* There is still no discussion of a loss of consciousness or inhalation injury at work in the record generated from this date of visit. However, Dr. Arrington discussed multiple sclerosis and Lyme disease with Claimant. *Id.*

21. Claimant was evaluated by Kimberly Wagner, M.D., neurologist, on September 23, 2015. For the first time in the medical records, it is noted that Claimant complained of a loss of consciousness at work due to exposure to paints. *Resps. Ex. E*, p. 54. Claimant alleged he was vomiting "all night" on the night of the exposure. *Id.* This is contrary to the Emergicare records from June 5, 2015 which reflect he denied vomiting. Claimant's physical examination was normal. *Id.* at pp. 55-56.

22. On October 12, 2015, for the first time, Dr. Bradley referenced an allegation from Claimant that his issues began June 4, 2015, when he passed out at work and hit his head from inhaling paint fumes. *Id.* at p. 8. Dr. Bradley further stated, "His work is now allowing it to be turned into a work comp claim." *Id.*

23. Jeffrey Schwartz, M.D., performed an IME of Claimant on February 25, 2016, on behalf of Respondents. Claimant alleged that he passed out without any warning on June 4, 2015 at approximately 5:30 p.m. *Resps. Ex. A*, p. 1. Dr. Schwartz

also noted Claimant denied any lightheadedness prior to passing out. *Id.* Claimant alleged his loss of consciousness was related to inhaling paint fumes due to inadequate filtering. *Id.* He alleged that he bit his lip and tongue when he passed out, and he went straight from work to urgent care due to vomiting and dizziness. *Id.* He complained of continued nausea, vomiting, headaches, and dizziness since June 4, 2015. *Id.* at pp. 1-2. Dr. Schwartz also recorded that Claimant told him he had changed his filter the morning before the alleged date of injury. *Id.* Claimant admitted to Dr. Schwartz he was not aware of any malfunction of his suit on the alleged date of injury. *Id.*

24. Dr. Schwartz noted he reviewed MSDS sheets for the paints Claimant used while working at Employer. *Id.* at pp. 3-4. Dr. Schwartz found Claimant had no respiratory complaints, but rather, his subjective complaints were more indicative of a head injury. *Id.* at p. 4. Yet, Dr. Schwartz noted the cause of the alleged sudden syncope was unclear, and there was no evidence the filters in his PPE or paint bay failed resulting in an accidental toxic exposure to fumes that could have caused the syncope. *Id.* Importantly, Dr. Schwartz noted there were other potential causes of a loss of consciousness (if one occurred), including that Claimant had a demyelinating disorder, as seen in the MRI of his brain, which could cause seizure activity and secondary syncope. *Id.* He also noted there was no evidence the syncope occurred as a result of an inhalation exposure. He explained that exposure to an inhaled toxin, which led to a loss of consciousness, would have central nervous system effects that would have resulted in the gradual onset of lightheadedness which Claimant specifically denied. Accordingly, Dr. Schwartz did not believe that Claimant had evidence of a work-related accident.

The Testimony of Dr. Bradley

25. Dr. Bradley testified at hearing. He initially testified that he recalled Claimant telling him that he had passed out at work. Dr. Bradley noted a chest x-ray would be used to determine if someone was impacted by a volatile organic compound (VOC). The ALJ notes the June 9, 2015 chest x-ray was normal.

26. Dr. Bradley was asked on direct examination whether he believed Claimant suffered a work-related injury. Dr. Bradley's initial answer did not reference any work related cause for the alleged loss of consciousness. Rather, he stated simply, "yes to the point that he did fall when he was at Vestas and he did have a head injury . . . looking into why did he fall, I don't know on that . . ."

27. Dr. Bradley further testified he felt Claimant's symptoms were due to his alleged fall and a head injury, not due to an exposure. On cross-examination, Dr. Bradley admitted there was no indication of a loss of consciousness, fall, or hitting his head at work in the first few months of treatment notes. Dr. Bradley was asked about the denial of loss of consciousness in the June 11, 2015, and he admitted that any report of loss of consciousness at that time would have been recorded in the records. Dr. Bradley further agreed that October 12, 2015 was the first time Claimant informed him of a head injury. He further admitted that any date of onset of symptoms

documented in the records, including the May 29, 2015 onset as recorded in that report, was obtained directly from Claimant. Dr. Bradley further admitted that he had no reason to consider this a work related issue initially until Claimant began making that claim later on.

The Testimony of Brian Manguso

28. Brian Manguso is a painter with Employer. He worked with Claimant on June 4, 2015. He testified the two of them sanded towers and prepped towers for about 4 hours that morning, contradicting Claimant's testimony he painted the entire day. Mr. Manguso did not recall Claimant telling him that he did not feel good or asking him to finish a tower. He testified any allegation by Claimant regarding that interaction occurring was not accurate. Mr. Manguso specifically denied making the statements Claimant attributed to him. Mr. Manguso had no memory of Claimant ever telling him he did not feel good at work or asking him to finish a tower for him. Mr. Manguso further testified that Claimant did not have blood or vomit on him that day.

29. Mr. Manguso testified about the PPE suits worn by the painters at Employer's plant. He testified he would change his PPE filter "about every week." He testified nobody ever told him not to change filters or otherwise pressured him not to do so. He testified the filters were easily accessible, without permission, by scanning employee cards for the supply cage where replacement filters were located. He testified he was not aware of anyone ever being reprimanded for obtaining replacement filters for change out as necessary. He also testified that he knew when to change the PPE filters, because they would emit an odor as a warning when they were no longer serving their intended purpose. Mr. Manguso also testified that if paint fumes were to leak into the suit it would be readily apparent, because the odor would be strong and unbearable.

30. Mr. Manguso also testified regarding the filter serving the paint lanes. He testified he was involved in changing the filters sometimes. According to Mr. Manguso these filters were changed as needed, being approximately every week or two. He testified they were inspected before every shift. He testified he was never worried about them not working correctly. He testified he never had any concerns about the air quality in the paint lanes.

31. Mr. Manguso was asked about a baking portion of the painting process where the paint bay is heated to about 150 degrees to dry paint. He testified the baking occurs after each layer of paint is applied. On re-direct examination, Mr. Manguso clarified that the painters would leave the paint booth during the baking process.

The Testimony of Jason Atayde

32. Jason Atayde is a Paint Line Lead for Employer. He oversaw the painting department. Mr. Atayde wore a PPE suit while checking/monitoring the paint lines during his shift. He was Claimant's supervisor. He testified he would spend his time primarily walking between the 16 paint lanes.

33. Mr. Atayde testified that he is also a member of the Emergency Response Team ("ERT"), which respond to medical emergencies on the production floor. He testified that as an ERT, his role would be to respond to any workplace injuries depending on the situation. Mr. Atayde further testified that new hires are notified of the identity of the personnel who are members of the ERT and their role on the floor. Mr. Atayde testified Claimant did not report an injury to him on June 4, 2015.

34. Mr. Atayde testified filters for the papper units needed to be changed as necessary. According to Mr. Atayde, painters would typically change the filter every few days and some every week or two. He testified painters are instructed to change the filters as often as they want. He also testified that the replacement filters were located in the corridor next to the paint booths during Claimant's employment. Consistent with the testimony of Mr. Manguso, Mr. Atayde testified that painters would scan their employee badge to obtain access to the filters without permission. He also testified that Claimant never asked him for permission to obtain replacement filters for his papper unit. He testified Claimant never expressed any concerns about the air quality in the paint lanes or concern about the ability to obtain replacement filters. Mr. Atayde also testified that he changed his PPE filter regularly, but sometimes it would emit a charcoal type odor prompting him to change it.

35. Mr. Atayde specifically denied that Claimant told him on June 4, 2015 that he did not feel well. He also testified he did not see Claimant pass out or lying in the paint lane while he was walking the lanes as part of his supervisory duties.

36. Mr. Atayde testified as to the paint bay filters. He testified he monitors the filters to determine when they need to be changed. He noted there was also an RTO system, which is the system that burns off the Volatile Organic Compounds (VOCs,) that will sound off a notification if filters need to be changed. He testified that when the notification sounded, they would change the filters. Mr. Atayde testified that painters would exit the paint booths when the baking process occurred. He testified he was not aware of anyone every passing out due to heat exhaustion or any other cause.

The Testimony of Nick Portaleos

37. Nick Portaleos is a shift supervisor with Employer. His job is to coordinate daily safety meetings, plan out days with line leads, and monitor floor production throughout his shift, including the production in the painting areas of the plant.

38. Mr. Portaleos testified that for the first two months of Claimant's employment he went through training, including classroom training and floor training. He testified Claimant was thereafter timely fitted with his respirator in December.

39. Mr. Portaleos testified regarding certain business records kept to track the location of tower sections being painted as wells as where the section was painted and who painted it. According to Mr. Portaleos the document marked as *Resps. Ex. F*, p. 88

is a manufacturing order document, which identifies what tower section a particular employee is working on. The document shows Claimant's work on the alleged date of injury, identified with an employee ID number for Claimant as 88,574. As to p. 89 of Respondents' Exhibit F, Mr. Portaleos testified that it shows where the work being done, i.e. what paint lane that work was being done in. This document also identifies the paint bay lanes in which Claimant worked by his employee ID number on June 4, 2015. Mr. Portaleos was then asked about p. 90, which he identified as a Daily Status Update sheet. He testified this sheet is used to document status of the painting process for tower sections. It shows where employees work. Mr. Portaleos testified that on the section 230796, which matches the section number assigned to Claimant on June 4, 2015 from previous forms, Claimant was working in paint lane 8 on June 4, 2015. *See Id.*

40. Mr. Portaleos testified that Claimant's allegation he passed out in lane 6 does not match the Employer's documentation of where he was working. Mr. Portaleos then described *Resps. Ex. F*, p. 92. He identified Claimant's employee number of 88574 listed on several occasions next to certain times of the day. He testified this sheet registers climactic readings taken before any work is done on towers because climactic readings need to verified and correct before paint is applied. He testified typically the person spraying paint, identified by employee ID number, will be the one taking the readings. Mr. Portaleos testified that based upon the documentation this sheet shows Claimant was conscious and working at 6:15:49, p.m., 6:18:34 p.m., and 6:20:37 p.m., as those reflect times that climactic conditions were recorded under Claimant's employee ID number. *See Id.*

41. Mr. Portaleos testified that Claimant's employment had been in jeopardy. Prior to his alleged injury. Per Mr. Portaleos, Claimant had attendance issues and was set to be terminated if he missed one more shift. Mr. Portaleos testified as to the text messages received in evidence as *Resps. Ex. L*. At the time he received Claimant's first text on June 5, 2015, Mr. Portaleos was not aware that Claimant was alleging a work injury. *See Id.* at p. 81. He also noted that Claimant had not informed him prior to this time of his reportedly not feeling well week prior, which is indicated in Claimant's text message when he said "also on the 29." *Id.* He testified that throughout those text messages, he was not made aware that Claimant was alleging an exposure or loss of consciousness at work. He testified he had no other types of communications with Claimant during the periods reflected in the text messages. Mr. Portaleos testified he informed Claimant, via test message on June 11, 2015, that he (Claimant) had voluntarily resigned his position, because he was not made aware of Claimant medical status and he had missed multiple shifts without calling in. *See Id.* at p. 85-86.

42. Mr. Portaleos testified that Claimant never complained to him about the air quality of the paint bays or access to replacement filters for his PPE. With regard to the paint booth air filters, he testified supervisors walk through and verify the quality of the paint lane air filters daily, and he is responsible for verifying those sheets are complete. He testified that paint department has a filtration system that burns VOCs, and that this system has a set of filters, and if the filters are not operating at 100% capacity, an alarm

system will go off. The alarm will disable this system and serves to notify painters that the paint pumps will shut down in ten minutes. In the past the system could be bypassed in order for the painters to finish a tower in the middle of production. Mr. Portaleos testified that typically filters are changed weekly so they do not get to a point where the alarm will go off.

43. Regarding replacement PPE filters, Mr. Portaleos testified an employee may obtain filters from a storage area without permission. He testified he liked his painters to change out filters on a weekly basis, but they could change them as they saw fit. He testified that he has never received complaints from employees about not having access to air filters. The ALJ finds Mr. Portaleos' testimony regarding access to replacement filters for the papper units consistent with that of Mr. Manguso and Mr. Atayde.

The Testimony of Earl Spriggs

44. Earl Spriggs is the Health Safety and Environmental Specialist for Employer. He is certified as an environmental specialist through OSHA, has been trained to conduct respirator fit tests, has had chemical training and training on the transportation of hazardous materials through the DOT, and has nineteen years of experience handling dangerous chemicals/materials. He handles the general oversight of the health and safety of employees and environmental programs for Employers manufacturing plant.

45. He testified all employees attend an 8 hour safety class where proper handling of chemicals used on site are discussed and where employees are instructed on where to access MSDS sheets. He testified he conducted new employee training for Mr. Maldonado. He testified Claimant also was provided specialized training for sanders and painters, as are all such employees. He testified that he conducted a respiratory protection/fit test which Claimant attended where his respirator was fitted and assigned, as evidenced by *Resps. Ex. N*, pp. 185-186. Mr. Spriggs testified that employees are trained to replace PPE filters any time it becomes difficult to breath or any time they smell or taste any chemicals. He testified the PPE filters emit a charcoal odor when the filter starts to breakdown, which indicates that the filter is at the end of his useful life and needs to be changed. He testified the smell, if present, does not indicate though that the employee is inhaling fumes. Mr. Spriggs testified the training slide on p. 194 of Respondents exhibits also reflects training provided to employees on this subject. He testified employees are not reprimanded for requesting replacement PPE filters and they do not need permission to obtain such filters to do so.

46. Mr. Spriggs testified that if an employee detects no odor of paint or chemical smell while wearing the PPE, the suit and filter are performing their intended function and there is no evidence that the employee has inhaled paint/chemicals. Mr. Spriggs further testified that Claimant never complained to him about the filters in the paint lanes or the air quality in the paint lanes. He testified the filters in the paint lanes are routinely changed when inspection dictates it.

47. Mr. Spriggs specifically refuted two statements Claimant attributed to him, the first being the allegation that he told Claimant there were only two ways out of Vestas, either death or being fired. He also refuted Claimant's interrogatory response about not having a respirator for his first four months of working, wherein Mr. Spriggs told Claimant, "fuck you, we will get a class when we are ready." *See Resps. Ex. K* at p. 74. The ALJ notes the records reflect Claimant received his respirator approximately two months after his job began anyway, which also draws the reliability of the alleged comment into question.

The Testimony of Frances Alexander

48. Frances Alexander is the Human Resources Business Partner for Employer. She testified that she met with Claimant post-alleged injury for the first time on June 15, 2015, which was scheduled after Mr. Portaleos notified Ms. Alexander that Claimant had missed two or more shifts without justification. Ms. Alexander testified that she spoke with Claimant regarding whether his absences were justified. She testified that Claimant told her he had been out sick and the doctors were not sure what was wrong with him. She testified during this meeting Claimant did not inform her he had passed out at work or otherwise suffer a work related injury. She testified that Claimant did not submit a workers' compensation claim at that time, but he did apply for short term disability benefits. She further testified that she was not aware that Claimant was filing a workers' compensation claim until October 1, 2015. She testified that she spoke with Claimant 2 or 3 times in the time between June 4, 2014 and when he filed his workers' compensation claim during which times Claimant never reported that he passed out at work or otherwise suffered a work place injury.

49. Ms. Alexander testified she did not recall receiving any messages from Claimant directly or from the receptionist Gabby that she did not return. She testified that Claimant did not try to contact her 42 times, or any number of frequent calls, on any date, in contravention to Claimant's allegations. She testified she receives a notification on her email of phone calls to her office, regardless of whether a voicemail is left and no such notifications were received.

The Testimony of Dr. Jeffrey Schwartz

50. Dr. Schwartz testified via telephone at hearing. He was qualified as an expert in the fields of pulmonary medicine and critical care medicine. Dr. Schwartz confirmed Claimant alleged to him that he believed his claimed loss of consciousness was due solely the inhalation of paint fumes. Dr. Schwartz also confirmed that Claimant told him he changed his PPE filter the morning prior to June 4, 2015.

51. Dr. Schwartz also confirmed Claimant told him that he passed out without any preceding symptoms. Dr. Schwartz testified that an inhalation exposure to paint fumes would have precipitated some neurological symptoms, such as lightheadedness or dizziness before one would actually pass out. He testified that the MSDS sheets for

the chemicals contained in the materials Claimant was spraying reference that exposure would lead to increasing symptoms, beginning with headaches, dizziness, and nausea. He testified that he has never treated anyone who suffered loss of consciousness from exposure to paint fumes. Rather, the patients he has treated for paint exposures typically present with more symptoms such as headaches and respiratory irritation. Dr. Schwartz opined that it is improbable that Claimant inhaled a toxic substance that resulted in a loss of consciousness on June 4, 2015. He testified Claimant had no signs of a respiratory injury, nor did he see signs of a respiratory injury in the records.

52. Dr. Schwartz testified that the reports in Dr. Bradley's records regarding symptoms with an onset of May 29, 2015 did not match Claimant's report to him. Dr. Schwartz testified that an exposure to paint fumes could result in a temporary sore throat, but that symptom should not persist for more than a few hours or a day after such exposure. Dr. Schwartz also testified that Claimant's reported loss of strength in his right hand with an onset of June 9, 2015, was not consistent with an inhalation exposure five days prior. He testified that the symptoms Claimant complained of as contained in the medical records were not typical for cases involving inhalation exposure.

53. Dr. Schwartz further testified that he could not identify on examination any objective verification for Claimant's alleged symptoms. Dr. Schwartz noted claimant's brain MRI showed a demyelinating disorder, which could be explained by a number of causes, although not an inhalation exposure.

54. The ALJ finds that Dr. Bradley's testimony established that his initial opinion that Claimant fell at work was based solely upon Claimant's report to him in October 2015, four months after the alleged incident. Prior to that time, Claimant's reports concerning the onset and cause of his symptoms, as well as his specific symptoms are either inconsistent by omission of his current allegations or directly opposite to his current allegations. Dr. Bradley admitted as much during his testimony, noting that he was not considering a work related injury during until Claimant later made such an allegation. Dr. Bradley also admitted that, if there was a loss of consciousness, he could not state what the cause was.

55. Based upon the evidence presented, Claimant has failed to prove it is more probably true than not that he sustained any work related injury on June 4, 2015. Claimant's allegations that he inhaled paint fumes causing him to pass out and hit his head are supported only by his testimony, which the ALJ finds has been credibly, consistently and convincingly contradicted factually by the testimony of Mr. Manguso. Mr. Atayde, Mr. Portaleos, Mr. Spriggs and Ms. Alexander and the exhibits admitted into evidence. The evidence presented persuades the ALJ that it is unlikely that Claimant's papper filter failed and he was unwittingly exposed toxic paint fumes causing him to "pass out." In this case, the medical records are inconsistent with Claimant suffering any inhalation injury likely to cause a loss of consciousness resulting in a head injury on June 4, 2015. To the contrary, for the first several months of Claimant's treatment, he reported onset dates for symptoms which preceded the alleged date of injury, he denied

symptoms which he later claimed existed, and he failed to report to Emergicare what would otherwise be considered a significant event involving a loss of consciousness while working around toxic fumes. Importantly, Claimant's chest x-ray was unremarkable, his EKG was abnormal and imaging of his brain revealed lesions worrisome for demyelinating plaques all of which, according to Dr. Schwartz, can cause episodes of syncope. In addition to the testimony of the various witnesses cited above, the documentary evidence supports that Claimant was, more probably than not, conscious and taking climatic readings in paint lane 8 at the time he alleges he lost consciousness, i.e. "fell out" in paint lane six. The totality the evidence raises questions regarding the reliability of Claimant's testimony. Considering the record evidence as a whole, the ALJ is not persuaded that Claimant actually passed out as he claims. Even if Claimant had established that he actually passed out, the ALJ credits the opinions of Dr. Schwartz to find that the cause of Claimant's sudden syncope "unclear" and likely unrelated to his work duties as a painter for Employer.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-101, *et seq*., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S*. The Claimant shoulders the burden of proving by a preponderance of the evidence that he is a covered employee who suffered an "injury" arising out of and in the course of employment. *Section 8-43-301(1), C.R.S.; Faulker v. Industrial Claim Appeals Office, 12 P.3d 844 (Colo. App. 2000); City of Boulder v. Streeb, 706 P.2d 786 (Colo. 1985); Pacesetter Corp. v. Collett, 33 P.3d 1230 (Colo. App. 2001).* A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark, 197 Colo. 306, 592 P.2d 792 (1979)*. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. *Section 8-43-201, C.R.S*. A workers' compensation claim is decided on its merits. *Section 8-43-201, supra.*

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. As found in this case, Claimant's allegations have been contradicted by the credible testimony of fellow painters. In this case, Claimant's testimony generally painted a picture of grave working conditions at Employer where Claimant and other painters were consciously/purposefully exposed to toxic materials through what Claimant primarily alleged was strictly controlled access to replacement filers for his respirator. This allegation was effectively rebutted by all Employer witnesses. Those witnesses credibly testified to Employer's training program, access to filters, and procedures for immediately addressing work-related injuries. Given the multiple inconsistencies between Claimant's testimony and balance of the contrary evidence, including the weight of contradictory evidence to his allegations, the ALJ finds Claimant's testimony unreliable and unconvincing. Here Claimant failed to produce sufficient credible evidence to establish that he suffered a toxic inhalation leading to a loss of consciousness and hitting his head at work on June 4, 2015.

C. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); see also, Dow Chemical Co. v. Industrial Claim Appeals Office, 843 P.2d 122 (Colo. App. 1992)(ALJ may credit one medical opinion to the exclusion of a contrary opinion). In this case, the undersigned ALJ concludes that the expert medical opinions of Dr. Schwartz are credible and supported by the medical record. When the evidentiary record is considered in its totality, the opinions of Dr. Schwartz are more persuasive than the testimony of Claimant and to the extent that they are contradictory, the opinions of Dr. Bradley.

D. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

E. Under the Workers' Compensation Act, an employee is entitled to compensation where the injury or death is proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment. *Section 8-41-301(1), C.R.S.; Horodyskyj v. Karanian* 32 P.3d 470 (Colo. 2001). The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements to establish a compensable injury. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). Thus, an injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question*

Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co., 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976).

F. The term "arises out of" refers to the origin or cause of an injury. *Deterts v. Times Publ'g Co. supra.* There must be a causal connection between the injury and the work conditions for the injury to arise out of the employment. *Younger v. City and County of Denver, supra.* An injury "arises out of" employment when it has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered part of the employee's employment contract. *Popovich v. Irlando supra.* In this case there is ample record support to establish that Claimant's alleged injury occurred within the time and place limits of his employment and during an activity connected to his job-related functions, i.e. painting. Rather, the question regarding compensability here is whether Claimant's alleged inhalation and head injury "arose out of" his employment related duties. As noted above, Claimant must prove this element before his injury can be found to be compensable. While the ALJ is not convinced that Claimant actually passed out as he claims, even if he had, he failed to establish that his sudden syncope arose out of his work duties as a painter for Employer. To the contrary, the evidence presented here supports a reasonable inference that if Claimant had passed out, his syncope and subsequent fall were likely caused by a idiopathic condition unrelated to his work duties as a painter. Consequently, Claimant was also obligated to establish that his idiopathic condition combined with a special hazard of employment to result in a compensable injury, which burden he failed to carry.

G. In C*ity of Brighton and Cirsa v. Rodriguez,* 318 P.2d 496, 502 (Colo. 2014), the Colorado Supreme Court clarified the three categories of risks attendant with all work place injuries in determining whether an unexplained fall down a flight of stairs was compensable. The Court set forth the following risk categories: (1) employment risks which are directly tied to the work itself; (2) risks which are inherently personal or private to the employee, (which includes idiopathic conditions or illnesses that are unrelated to the employment, such as epilepsy and fainting spells) and (3) neutral risks that are neither employment-related, nor personal. *Id.* at 503.

H. Under the first category, a fall at work is "typically…only attributable to an employment-related risk if it results from tripping on a defect or falling on an uneven or slippery surface on an employer's premises." *Id.* at 501, quoting from *In re Margeson*, 162 N.H. 273, 27 A.3d 663, 667 (2011); *See also, Miles v. Denver*, W.C. No. 4-961-742-01 (December 15, 2015) Based upon the evidence presented, the ALJ finds insufficient record support to conclude that an employment-related risk caused Claimant's to pass out and fall. To the contrary the evidence demonstrates that Claimant likely had a properly functioning paint suit fitted with a papper equipped with a working filter. His allegation that he suspects that he was inhaling paint fumes at such a low amount over time that he could not smell them is simply unconvincing and rebutted by the more persuasive testimony of Mr. Manguso, Mr. Atayde, Mr. Portaleos and Mr. Spriggs.

I. The second category includes risks that are entirely personal or private to the employee. Such risks would include an employee's pre-existing or idiopathic condition that is completely unrelated to his/her employment. Idiopathic conditions have been defined to mean "self-originated." C*ity of Brighton and Cirsa v. Rodriguez, supra* at 503*.* Purely idiopathic personal injuries generally are not compensable unless an exception applies. *Id.* at 503. One exception is when an idiopathic condition precipitates an accident and combines with a hazardous condition of employment to cause an injury. *Gates Rubber Co. v. Industrial Comm'n.*, 705 P.2d 6, 7 (Colo. App. 1985); *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989).

J. The third category includes injuries caused by "neutral risks." *City of Brighton*, *supra* at 503. Such risks are associated neither with the employment itself nor with the employee. *Id.* at 504. "An injury is compensable under the Act if triggered by a neutral source that is not specifically targeted at a particular employee and would have occurred to any person who happened to be in the position of the injured employee at the time and place in question". *Id.* citing *Horodyskyj*, 32 P.3d at 477. Concerning unexplained falls, as Claimant, in his position statement implies happened in this case, the Court noted that injuries resulting from neutral risks arise out of employment only if the employee would not have been injured but for the fact that the conditions and obligations of the employment placed the employee in the position where he was injured. *Id.* at 504. In this case, there is a lack of evidence to support a conclusion that Claimant's fall was "unexplained' and the result of a neutral risk. To the contrary, Claimant himself alleges that he fell and hit his head as a consequence of passing out after inhaling toxic paint fumes for an indeterminate amount of time. Moreover, the ALJ is not convinced that Claimant's syncope and subsequent fall would not have occurred "but for" the conditions and obligations of Claimant's employment, namely to paint sections of wind generator towers manufactured by Employer. In this case, the persuasive evidence establishes that Claimant's syncope/fall was, more probably than not, a consequence of an idiopathic condition rather than a result of his work duties for Employer and was likely to happen anywhere at any time.

K. The ALJ is persuaded by the following evidence in concluding that; had Claimant passed out has he claims, his injuries arose entirely out of a personal condition, i.e. an idiopathic condition unrelated to his work duties (Category 2 risk factors):

- Claimant had no notable respiratory complaints and an unremarkable chest x-ray which is inconsistent with suffering a toxic inhalation injury.

- Claimant did not experience gradually increasing central nervous system effects, i.e. headaches, dizziness, lightheadedness and nausea consistent with those listed on the MSDS sheets for the compounds he claimed contact with during his alleged exposure. Rather, Claimant described a sudden loss of consciousness.

- Claimant's June 5, 2015 EKG revealed abnormalities including evidence of a right bundle branch block, poor R-wave progression and slight ST-elevation likely cardiac in origin which is a known cause of syncope.

- Claimant's August 12, 2015 MRI of the brain revealed changes consistent with demyelinating plaques, vasculitis, chronic ischemic change and/or Lyme disease which Dr. Schwartz noted may account for seizure activity and secondary syncope.

L. The above cited evidence persuades the ALJ that Claimant's asserted injuries do not "arise out of" his employment. Nonetheless, because the ALJ concludes that Claimant's episode of syncope, assuming that it occurred, was idiopathic, the claimed injuries could be compensable if Claimant carried his burden to prove that an exception applied to the general rule that injuries caused by such personal conditions are not compensable. In concluding that Claimant failed to prove that he suffered a compensable work injury, if he had established that he passed out as he claims, the ALJ has considered the "special hazard" rule announced by the Court of Appeals in *Ramsdell v. Horn,* 781 P.2d 150 (Colo. App. 1989). Under the "special hazard" rule," a claimant may be compensated if a preexisting injury, infirmity, or disease is exacerbated by "the concurrence of a pre-existing weakness and a hazard of employment." *Id*. The rationale for this rule is that unless a special hazard of employment increases the risk or extent of injury, an injury due to the claimant's pre-existing condition does not bear sufficient causal relationship to the employment to "arise out of the employment. *Gates Rubber Co. V. Industrial Commission,* 705 P.2d 6 (Colo. App. 1985); *Gaskins v. Golden Automotive Group, L.L.C.,* W.C. No. 4-374-591 (August 6, 1999). In such cases, the existence of a special hazard, which elevates the probability of injury or the extent of the injury incurred, serves to establish the required causal relationship between the employment and the injury. *See National Health Laboratories v. Industrial Claim Appeals Office, supra; Ramsdell v. Horn, supra.*

M. To be considered an employment hazard for this purpose, the
employment condition must not be a ubiquitous one; it must be a special hazard not generally encountered. *Gates Rubber Co. V. Industrial Commission,* 705 P.2d 6 (Colo. App. 1985) (hard level concrete floor did not constitute a special hazard because it is a condition found in many non-employment locations); *Gaskins v. Golden Automotive Group, L.L.C.,* W.C. No. 4-374-591 (August 6, 1999) (injury when pre-existing condition caused the claimant to stumble on concrete stairs not compensable because stairs were ubiquitous condition). Here Claimant failed to establish that a special hazard of employment combined with an idiopathic condition to cause his injury. Even if Claimant had proven that he passed out as claimed, his claim must be denied and dismissed on the basis that he failed to establish that his idiopathic condition which caused him to pass out combined with the existence of a special hazard to elevate the probability and/or extent of injury. Accordingly, the remaining claims concerning entitlement to medical benefits need not be addressed.

ORDER

It is therefore ordered that:

1. Claimant’s claim for benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 18, 2016

Colorado Springs, CO 80906

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-989-931-02

ISSUES

- Whether Respondent overcame, by clear and convincing evidence, the DIME opinion of Dr. Timothy Hall that Claimant was not at maximum medical improvement (MMI)?

- If Claimant was at MMI, whether Claimant proved by a preponderance of the evidence that her left and right scheduled shoulder ratings should be converted to whole person impairment ratings?

- If Claimant was at MMI and not entitled to conversion, whether Respondent proved by a preponderance of the evidence that the DIME physician's scheduled rating was incorrect?

- Whether Claimant proved by preponderance of the evidence that she was entitled to an average weekly wage of $1,409.75?

- Whether Claimant proved by a preponderance of the evidence that she was entitled to disfigurement compensation for scars on her knees?

ISSUE RESERVED

- Claimant reserved the issue of permanent total disability benefits for future determination because she asserted that she was not at MMI and thus a permanent disability could not be assessed at this time.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. On April 15, 2015, Claimant, a 58-year-old female employed with the Employer as a courier, sustained injuries to her upper and lower extremities. Claimant testified that she had worked for the Employer for 19 years and had had her present courier route for the last seven years. According to Claimant, she injured her upper extremities and knees during the course of completing her route using a substitute delivery truck. Specifically, Claimant had to enter and exit the substitute truck by the passenger door because the truck's sliding door was broken and packages could not be accessed by the rear door. As she was "surfing" over packages and attempting to pick up packages, she began to experience soreness in her bilateral shoulders, upper arms, and neck. She also sustained a contusion to her right knee.

2. Claimant notified her employer on April 17, 2015. That same day, she presented to authorized treating physician (ATP), Dr. Robert Dupper. Dr. Dupper

assessed Claimant with sprains of the bilateral shoulders, neck sprain, and right knee contusion. He recommended that Claimant take Ibuprofen, prescribed Flexeril, and removed Claimant from work.

3. On April 23, 2015, Claimant returned to Dr. Dupper. Claimant reported approximately 40% improvement. She denied any continued symptoms with her knee. Claimant reported continued soreness in her neck, but with no neurological deficits or visual changes. Additionally, Claimant denied numbness or tingling in her upper extremities. Dr. Dupper recommended that Claimant return to regular work status. Additionally, he recommended massage therapy.

4. On May 4, 2015, Claimant returned to Dr. Dupper. Claimant reported reduced neck pain following the massage treatment. Claimant reported soreness in her shoulders and upper arms "when she [worked] a long day but otherwise [was] feeling fairly well." Claimant also described some pain under the kneecap of her right knee. Physical examination revealed some swelling on the medial side of the right knee with full range of motion and no tenderness.

5. On May 12, 2015, Claimant returned to Dr. Dupper. Claimant's complaints focused her right arm and shoulder. Physical examination revealed full range of motion of the shoulders with some pain at end points of the range of motion. Due to Claimant's complaints of increased soreness at work, Dr. Dupper recommended restricted duty. He imposed a lifting restriction of 20 pounds and recommended physical therapy.

6. On May 26, 2015, Claimant returned to Dr. Dupper. Claimant described bilateral pain in her shoulders, right greater than left. Dr. Dupper released Claimant to regular work activities. He recommended that she start physical therapy and continue taking Ibuprofen as needed.

7. On June 16, 2015, after a few sessions of physical therapy, Claimant returned to Dr. Dupper. Claimant reported that her left shoulder and right knee were doing quite well. Her complaints focused on pain and soreness in the right shoulder, into the upper arm. Because physical therapy did not resolve the right shoulder pain, Dr. Dupper recommended that Claimant undergo an MRI and an evaluation with an orthopedic surgeon.

8. A right shoulder MRI on July 3, 2016 revealed mild-moderate tearing of the supraspinatus and infraspinatus muscles, labral tear, moderate-severe AC joint arthritis, old trauma to the AC and coracoclavicular joints, and mild-moderate glenohumeral joint effusion.

9. After undergoing the MRI, Claimant presented to Dr. David Beard, orthopedic surgeon, on July 14, 2015. His review of the MRI showed right shoulder rotator cuff tendonitis with possible small partial thickness cuff fraying. Dr. Beard did not recommend surgery as Claimant had improved with conservative management.

10. On July 20, 2015, Claimant returned to Dr. Dupper. Claimant reported improvement but still described difficulty with certain activities of daily living. Claimant remained on work restrictions, requiring her to do office duty only, which did not aggravate her condition.

11. On August 3, 2015, Claimant returned to Dr. Dupper, reporting continued improvement, but that she did notice increased pain in the right shoulder after use. However, when not utilizing the right arm, the pain would dissipate. Dr. Dupper recommended that Claimant return to regular duty. He noted that if Claimant tolerated the return to regular activity, he would likely be placing her at maximum medical improvement (MMI).

12. On August 17, 2015, Dr. Bruce Cazden placed Claimant at MMI. Claimant noted that having returned to full duty two weeks prior, her pain had been manageable. Claimant agreed that she had reached MMI. At the time of the evaluation, Claimant did not require medication. Dr. Cazden did not recommend any permanent work restrictions. Additionally, he did not assign an impairment rating. Regarding future medical treatment, he noted that Claimant might consider a cortisone injection and/or surgical intervention if her condition deteriorated. Claimant agreed with Dr. Cazden that she had likely plateaued regarding treatment.

13. On September 14, 2015, Respondent filed a Final Admission of Liability (FAL) admitting consistent with Dr. Cazden's opinion. Respondent admitted for post-MMI maintenance treatment allowing Claimant to return to her treaters for reasonable and necessary care to relieve the effects of the industrial injury. Claimant objected to the FAL and requested a Division-sponsored IME (DIME).

14. Dr. Timothy Hall performed the DIME. He opined that Claimant was not at MMI but the basis for that opinion is not entirely clear from his report. He stated that should Claimant simply chose to proceed with additional conservative treatment like a corticosteroid injection, she would still be at MMI and such treatment could be provided under medical maintenance care. However, if she chose to have surgery, which had not been recommended by any of her treatment providers, then she would no longer be at MMI. Dr. Hall, who is not a surgeon, did not opine on whether Claimant was a surgical candidate.

15. Dr. Hall clarified his position in his deposition testimony: "If I would have seen [Claimant] on 8/17/15 [the date on which Dr. Cazden placed Claimant at MMI], I would have put her at MMI as well. And that's why I would go back to that date, as I said in my note, if she's determined not to be a surgical candidate." However, he also admitted in his deposition that his physical examination of Claimant was not suggestive of rotator cuff tear or labral pathology, which would support a surgical recommendation.

16. Concerning permanent impairment, Dr. Hall assigned a 19% scheduled rating for Claimant's right upper extremity, which converted to an 11% whole person rating. He also assigned a 4% scheduled rating for Claimant's left upper extremity, which converted to a 2% whole person rating. He did not provide any lower extremity

ratings. The rating worksheet attached to Dr. Hall's report indicates that he combined Claimant's whole person ratings to reach a 22% total whole person rating. However, Dr. Hall clarified in his deposition that this was an error and the correct combined whole person rating was actually 13%.

17. Claimant testified that she did not believe that she reached MMI on August 17, 2015. She disagreed with Dr. Cazden's MMI report indicating that she had reached a plateau acceptable to her; that she was pleased with her progress; and that she felt she had reached MMI. She also disagreed with the record in Dr. Beard's report that her shoulders had significantly improved with conservative treatment.

18. She further testified that her condition had worsened since August 17, 2015. She now had elbow pain, catching and locking in the right shoulder, difficulty lifting overhead, and difficulty with sleep. However, on cross-examination, she acknowledged that she reported difficulty with overhead lifting and problems with sleep to her medical providers even prior to the April 15, 2015 injury.

19. Claimant testified that she would like to go back and receive more treatment. However, although she was free under the final admission of liability to return to her authorized treating physicians for medical maintenance care at any time, she had yet to schedule a follow-up appointment. She testified that she was unaware of her right to maintenance care despite being represented by counsel, and that she did not return to her treatment providers because she felt they could do nothing else for her.

20. Claimant had other inconsistencies in her testimony. At one point, she testified that her left shoulder symptoms never fully resolved following a 2012 attack by a dog. But, at another point during the hearing, she stated that her left shoulder was not bothering her at the time of the August 15, 2015 injury.

21. Concerning conversion, Claimant testified that she has tingling radiating from her right shoulder into her neck and some stiffness with turning. She indicated that she had trouble lifting above her head, mowing the lawn, pulling weeds, scrubbing the sink, throwing a ball, and that her pain increased with activity. She also received massage treatment for her neck. However, on cross-examination, Claimant acknowledged that her difficulty with pushing, pulling, and lifting was localize to her arms and shoulders and no other part of her body prevented her from doing work activities and activities of daily living.

22. Dr. Carlos Cebrian performed an independent medical examination at Respondent's request. Dr. Cebrian is board certified and Level II Accredited since 2001 in physical and rehabilitation medicine with the Division of Workers' Compensation. He asserted working knowledge of the AMA Guides and the Division of Workers' Compensation Medical Treatment Guidelines. Dr. Cebrian was present in the courtroom for Claimant's testimony.

23. Dr. Cebrian agreed that Claimant sustained bilateral rotator cuff strains with tendonitis on April 15, 2015. He further opined that Claimant's course of treatment

was reasonable and appropriate. He stated that the July 3, 2015 right shoulder MRI showed a partial rotator cuff tear, labral tear, and arthrosis of the joint, which were likely degenerative in nature. Dr. Cebrian explained that the mechanism of injury, as described by Claimant, would not cause the pathology indicated on the MRI report. He further explained that, although the MRI did indicate the presence of old trauma to the shoulder joint, Claimant's rotator cuff and labral tears were likely the result of her degenerative shoulder condition. Such changes are an aspect of cellular changes as we age he explained, and it is a misunderstanding of the underlying pathology to say that those changes are merely the result of "wear and tear."

24. Dr. Cebrian also reviewed Claimant's May 1, 2012 left shoulder MRI, taken prior to the date of injury. This MRI also showed degenerative changes consistent with the degenerative disease processes shown in Claimant's right shoulder. Dr. Cebrian explained that, given Claimant's age, such breakdown of the shoulder joint would be normal and expected. He also noted that there would be pain with this degeneration that could be aggravated by the mechanism of injury described here.

25. However, all of the findings were suggestive of chronic conditions that were not caused by the mechanism of injury Claimant described. Rotator cuff or labral tears would be the result of either degenerative processes or a significant trauma to the shoulder, which Claimant did not allege. Accordingly, he concluded that the injuries Claimant sustained on April 15, 2015 did nothing to change the underlying disease processes of her pre-existing arthritis of her bilateral shoulders.

26. He agreed it was reasonable to refer Claimant for an orthopedic evaluation. He noted that the evaluating surgeon, Dr. Beard, did not see tearing on the right shoulder MRI and diagnosed Claimant with right shoulder rotator cuff tendinitis with possible small partial-thickness cuff fraying. He recommended against surgery. Further, Dr. Beard only recommended a corticosteroid injection should Claimant's condition worsen.

27. Based on this, Dr. Cebrian opined that it was appropriate for the ATP to place Claimant at MMI.

28. Concerning the DIME report, Dr. Cebrian opined that it contained opinions inconsistent with the medical records and sound medical research, including that the report attributed much of Claimant's underlying pathology to arthritis but then attributed the arthritis to the work injury and the wear and tear of Claimant's job. But, the medical research shows that movement is actually good for arthritic conditions. Additionally, the DIME based his opinion that Claimant was not at MMI on Claimant proceeding with the surgery. But no surgical recommendation had been made in the case, and Dr. Hall himself was not qualified to make such a recommendation. Finally, Dr. Hall's physical examination did not reveal any findings for rotator cuff tear or labral pathology.

29. Dr. Cebrian did agree with Dr. Hall's deposition testimony that placed Claimant at MMI on August 17, 2015.

30. Dr. Cebrian disagreed with Dr. Hall's assignment of an impairment rating. He opined that an impairment rating was not appropriate because there was no objective evidence of any change in Claimant's underlying degenerative pathology. Essentially, there was no medical evidence that Claimant's underlying degenerative changes had been permanently exacerbated by the injury. Rather, the aggravation of her underlying disease resolved following conservative treatment.

31. Concerning conversion, Dr. Cebrian testified that Claimant's upper extremity ratings should not be converted to whole person ratings. This was so because Claimant returned to regular duty after the injury; her complaints were localized to the upper extremities when she reached MMI; all of her pathology was localized to the shoulder joints; and no shoulder surgery took place.

32. Dr. Cebrian testified on rebuttal that Claimant's testimony did not change his opinion regarding MMI and impairment. He testified that on physical examination there was no weakness in Claimant's left or right shoulder, no impingement, no atrophy of the shoulder and neck muscles, and that the shoulder and neck muscles were symmetric. Claimant did exhibit crepitus on physical examination, which he attributed to Claimant's underlying degenerative condition. He reiterated that he disagreed with Dr. Hall's opinion regarding MMI in the report, but agreed with Dr. Hall's deposition testimony that Claimant was at MMI on August 17, 2015.

33. Claimant did not present any disfigurement evidence.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000). The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201. The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

Overcoming the DIME concerning MMI

A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." C.R.S. § 8-42-107(8)(b)(III); *Peregoy v. ICAO*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. ICAO*, 961 P.2d 590 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (Oct. 4, 2001). Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

The question of whether the party challenging the DIME physician's finding regarding MMI has overcome the finding by clear and convincing evidence is one of fact for the ALJ. *Id*. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. ICAO,* 984 P.2d 656 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (Jun. 30, 2008).

When a DIME physician issues conflicting or ambiguous opinions concerning whether or not the claimant has reached MMI, the ALJ may resolve the inconsistency as a matter of fact so as to determine the DIME physician's true opinion. *Magnetic Eng'g, Inc.*, *supra*.

The ALJ concludes that Dr. Hall's deposition testimony clarified his ambiguous DIME report and thus Claimant is at MMI as of August 17, 2015. The medical records support this conclusion. In his DIME report, Dr. Hall expressly stated that the only basis for Claimant to not be at MMI was the need for additional surgery. However, the medical records are devoid of any recommendation for surgery and indeed no one who provided treatment or evaluated Claimant in this case has recommended surgery.

Additionally, Claimant has been working full duty without permanent work restrictions and has not returned to her treatment providers for additional medical maintenance care to address any issues related to the April 15, 2015 injury.

The conclusion that Claimant reached MMI on August 17, 2015 is further supported by Dr. Cebrian's credible testimony that Claimant was appropriately placed at MMI on that date based on his physical examination of Claimant, her treatment history, and the normal progression of her underlying degenerative condition.

Conversion

The question of whether a claimant has sustained a scheduled "injury" measured as a "loss of an arm at the shoulder" under C.R.S. § 8-42-107(2)(a), or a whole person impairment compensated under C.R.S. § 8-42-107(8)(c), depends on whether the claimant sustained "functional impairment" beyond the arm at the shoulder. This is true because the term "injury," as used in C.R.S. § 8-42-107(1)(a)-(b), refers to the part or parts of the body which have been impaired or disabled, not the situs of the injury itself or the medical reason for the ultimate loss. *Warthen v. ICAO*, 100 P.3d 581 (Colo. App. 2004). Whether the claimant has sustained a functional impairment beyond the arm at the shoulder is a factual question for the ALJ and depends on the particular circumstances of the individual case. *Walker v. Jim Fuoco Motor Co.*, 942 P.2d 1390 (Colo. App. 1997).

Claimant expressly testified that none of her difficulties with worker or daily living was because of a functional impairment beyond the shoulder. She localized her functional difficulties to her arms and shoulders. She acknowledged that she had had sleep disturbance and problems with lifting long before the work injury. The treatment records further support Claimant's account that she experienced not functional impairment beyond the arm because of the industrial injury.

Impairment Rating

The procedures of C.R.S. § 8-42-107(8)(c), which states that a DIME finding as to permanent impairment can be overcome only by clear and convincing evidence and that such a finding is a prerequisite to a hearing on permanent impairment, have been recognized as applying only to non-scheduled impairments. *Delaney v. ICAO*, 30 P.3d 691, 693 (Colo. App. 2000). Therefore, the ALJ applies a preponderance of the evidence standard when determining whether the DIME applied the correct *scheduled* rating. *Id*.

A DIME physician must apply the AMA Guides when determining the claimant's medical impairment rating. C.R.S. §8-42-101(3.7); C.R.S. §8-42-107(8)(c). The question of whether the DIME physician properly applied the AMA Guides is a question of fact for determination by the ALJ. *See Wackenhut Corp. v. ICAO*, 17 P.3d 202 (Colo. App. 2000). Although deviation from the AMA Guides is not determinative, it constitutes evidence that the ALJ may consider in determining whether the DIME physician's rating is incorrect. *See Wilson v. ICAO*, 81 P.3d 1117 (Colo. App. 2003).

Dr. Cebrian credibly testified that an impairment rating was not appropriate because there was no objective evidence of any change in Claimant's underlying degenerative pathology. Essentially, there was no medical evidence that the injury permanently exacerbated Claimant's underlying condition. Continued complaints of pain were likely given her condition and do not indicate a change to the underlying pathology. Indeed, any aggravation of her underlying disease resolved following conservative treatment.

Average Weekly Wage

Under Colorado's Workers' Compensation Act, the average weekly wage (AWW) is a key part of the formula used to calculate compensation for injured workers, and it is based upon the definition of "wages" provided at section 8-40-201(19). *ICAO v. Ray,* 145 P.3d 661 (Colo. 2006). To determine a claimant's AWW, the ALJ may choose from two different methods set forth in section 8-42-102. The first method, referred to as the "default provision," provides that an injured employee's AWW "be calculated upon the monthly, weekly, daily, hourly, or other remuneration which the injured or deceased employee was receiving at the time of injury." C.R.S § 8-42-102(2). The default provision in C.R.S. § 8-42-102(2)(a)-(f), lists six different formulas for conducting this calculation. Pursuant to C.R.S. § 8-42-102(5)(a), the phrase "at the time of injury" in subsection (2) requires the AWW to be determined using the wage earned on the date of the employee's accident. The second method for calculating a claimant's AWW, referred to as the "discretionary exception," applies when the default provision will not fairly compute the employee's AWW. C.R.S. § 8-42-102(3). In such a circumstance, the ALJ has discretion to compute the AWW of a claimant in such other manner and by such other method as will, based upon the facts presented, fairly determine the employee's AWW. *Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010).

Respondents calculated Claimant's AWW by taking three months of wages immediately prior to the work injury, which equaled $14,265.84 earned over the 91-day period. (Ex. S, pp. 126 & 142-146). This equated to an average of $156.77 per day or and an AWW of $1,097.37. (Ex. S, pp. 126). The ALJ concludes that this is a fair approximation of Claimant's AWW.

Additionally, the ALJ concludes that Claimant's AWW calculations are not a fair approximation for her AWW because they are based in part on higher wages earned during the holiday season and because her calculations did not account for the total number of days worked during the period thus resulting in a significantly lower denominator and higher AWW.

Disfigurement

Disfigurement benefits are awarded for the "observable impairment of the natural appearance of a person." *Arkin v. Indus. Comm'n*, 145 Colo. 463, 358 P.2d 879 (Colo. 1961). The ALJ is afforded great discretion when determining the amount of compensation to be awarded for disfigurement. C.R.S. § 8-42-108.

Claimant did not present any evidence on the issue of disfigurement and therefore she is not entitled to a disfigurement award.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant is at MMI as of August 17, 2015.

2. Claimant's request to convert her left and right upper extremity ratings to whole person ratings is denied and dismissed.

3. Respondents request to reduce Claimant's left and right upper extremity ratings to 0% is granted.

4. Claimant's request to adjust her average weekly wage is denied and dismissed and thus her average weekly wage remains $1,097.37.

5. Claimant's request for disfigurement is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. ***For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.***

DATED: August 16, 2016

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

The issues dealt with in this decision concern the following:

- Whether Dr. Amjum Sharma is an authorized treating physician (ATP), upon whose opinions Respondents' may rely to file a Final Admission of Liability (FAL);

- If Dr. Sharma is an ATP, whether the March 2, 2016 FAL, predicating MMI on Claimant's refusal to attend a FCE, is valid;

- If Respondents' March 2, 2016 FAL is invalid, whether Claimant is entitled to temporary total disability (TTD) from January 23, 2016 and ongoing; and,

- Whether Respondents are entitled to an offset for subsequent wages earned and unemployment insurance (UI) compensation benefits received.

STIPULATION

At hearing, Claimant testified that she received $501.00 in weekly unemployment insurance (UI) compensation benefits beginning March 3, 2016. Claimant stipulated that, if she is entitled to TTD benefits from January 23, 2016 and ongoing, Respondents are entitled to offset said TTD benefits by the sum of $501.00 per week for Claimant's receipt of such UI compensation benefits. The ALJ approves the parties' stipulation.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. On July 22, 2014, Claimant, an insurance claims adjuster, was in Iowa performing a roof inspection when she fell approximately 12 feet off a roof. Claimant sustained multiple injuries. Upon her return to Colorado, Claimant initially treated with Dr. Siemer, at Premier Urgent Care, who transferred Claimant's care to Dr. Sharma, also at Premier Urgent Care. *Claimant's Exhibit 7, page 118-119*. On October 31, 2014, Claimant had an appointment with Dr. Sharma, who opined that Claimant was not at maximum medical improvement (MMI). *Claimant's Exhibit 8, page 162*. Between November 1, 2014, and February 24, 2015, Claimant did not treat with Dr. Sharma. At hearing, Claimant testified that during this time she requested a change of physician from Dr. Sharma to Dr. William H. Miller, III, M.D. Claimant testified that Respondents granted, or authorized, her request for a change of physician to Dr. Miller.

2. On February 24, 2015, Claimant first treated with Dr. Miller, who noted that he reviewed Claimant's medical records and performed a physical examination. Dr. Miller confirmed the work-relatedness of Claimant's multiple diagnoses and maintained Claimant's work restrictions. Dr. Miller noted possible referrals and recommendations. Dr. Miller instructed Claimant to follow-up in one month. Dr. Miller specifically noted that Claimant is not at MMI. *Claimant's Exhibit 7, pages 118-128*.

3. On March 31, 2015, Claimant treated with Dr. Miller, who maintained Claimant's treatment plan and work restrictions. *Claimant's Exhibit 7, pages 113-117*. On April 28, 2015, Claimant treated with Dr. Miller , who referred Claimant for MRIs of her cervical spine, right shoulder and right knee and referred Claimant to Drs. Barker, Hart, and Torres. Dr. Miller did not place Claimant at MMI. *Claimant's Exhibit 7, pages 107-110*. On May 26, 2015, Claimant treated with Dr. Miller, who maintained Claimant's work restrictions and treatment plan. Dr. Miller did not place Claimant at MMI. *Claimant's Exhibit 7, pages 101-105*.

4. On June 23, 2015, Claimant treated with Dr. Miller, who noted that Claimant is still waiting for the MRIs of her cervical spine, right shoulder, and right knee. Dr. Miller also noted that Claimant was in a motor vehicle accident while heading home from her last appointment on May 26, 2015. Dr. Miller maintained Claimant's work restrictions and treatment plan. Dr. Miller did not place Claimant at MMI. *Claimant's Exhibit 7, pages 87-100*.

5. On July 28, 2015, Claimant kept a demand appointment with Dr. Sharma, who stated that he had "been asked to perform a special report to indicate whether the patient had [reached] maximum medical improvement." Dr. Sharma noted that he spoke with Dr. Miller and that he agreed with Dr. Miller's plan for Claimant to undergo a number of diagnostic tests. Dr. Sharma stated that it was premature to assign MMI. Dr. Sharma added that once the diagnostic tests are completed, he "would like the opportunity once again to review this information and to then discuss this with Dr. Miller and see if there is an alignment in opinion with regard to MMI status." *Claimant's Exhibit 8, pages 158-160*.

6. On October 6, 2015, Claimant treated with Dr. Miller, who referred Claimant for chiropractic treatment, physical therapy and to Dr. Neil Politzer and Dr. James Simon for further evaluation. Dr. Miller maintained Claimant's work restrictions, recommended Claimant continue his treatment plan. He did not place Claimant at MMI. *Claimant's Exhibit 7, pages 69-80*. On November 3, 2015, Claimant treated with Dr. Miller, who maintained Claimant's treatment plan and work restrictions and recommended Claimant follow-up with the pending referrals. Dr. Miller did not place Claimant at MMI. Rather, he noted MMI would be considered pending Claimant's appointments with the specialists. *Claimant's Exhibit 7, pages 53-61*.

7. On December 21, 2015, Claimant kept a second demand appointment with Dr. Sharma, who referred Claimant for a functional capacity evaluation (FCE). He noted that Claimant was not at MMI and that he anticipated permanent impairment. Dr.

Sharma maintained Dr. Miller's work restrictions. *Claimant's Exhibit 8, page 157*.

8. On January 8, 2016, Claimant treated with Dr. Miller, who referred Claimant for neuropsych testing, referred Claimant back to Dr. Politzer, referred Claimant to Dr. Simon for urological conditions and maintained Claimant's work restrictions. Dr. Miller did not place Claimant at MMI. *Claimant's Exhibit 7, pages 46-52*.

9. Also on January 8, 2016, Claimant kept a third demand appointment scheduled by Respondents with Dr. Sharma. In his corresponding January 22, 2016 report, Dr. Sharma stated, "The patient was noncompliant in presenting for [FCE] and noncompliant in her completion of this task. I have, therefore, assigned maximum medical improvement date as of 01/22/2016 with this report serving as the final dictated report for this claim." *Claimant's Exhibit 8, pages 139-156*. Dr. Sharma noted that he last saw Claimant on January 8, 2016 and that he:

> waited for the patient to obtain a [FCE] at my request, which went through her attorney, which went through the adjuster, which was approved by the adjustor and the nurse case manager, both alike; however, the patient did not return phone calls and as a result, I am now closing her claim.

Claimant's Exhibit 8, page 153. Additionally, in regard to MMI and an impairment rating, Dr. Sharma stated:

> I am assigning the date of 01/22/2016. I am assigning this date because this is when I am completing this final permanent partial impairment report. In addition, since the patient is at MMI, an impairment rating is implied; however, in this case because since the patient did not present for [FCE], I am unable to determine what her functional capacities are.

Claimant's Exhibit 8, page 153.

10. On February 2, 2016, Respondents filed a Final Admission of Liability (FAL) based on Dr. Sharma's January 22, 2016 report. Attached to the FAL, Respondents included only Dr. Sharma's January 22, 2016 Physicians' Report of Workers' Compensation Injury (WC164 Form); Respondents did not attach Dr. Sharma's January 22, 2016 Report. Respondents did not mail the FAL to Claimant's attorney. *Claimant's Exhibit 1, pages 1-3*.

11. On February 9, 2016, Claimant treated with Dr. Miller, who noted that Claimant was still awaiting authorization for neuropsych testing, spinal surgery recommended by Dr. Barker, right hand surgery with Dr. Hart, and cystoscopy with Dr. Simon due to issues with incontinence. Dr. Miller added that Claimant should continue her pool therapy and follow-up with Dr. Politzer. Additionally, Dr. Miller noted that he reviewed Dr. Sharma's January 2016 report and that Dr. Sharma made inconsistent determinations of MMI, "none of [which] make medicolegal sense." Dr. Miller also noted that Dr. Sharma stated in his report that he is placing Claimant at MMI for non-

compliance with a FCE. Dr. Miller added that "The Division makes it very clear that a patient cannot be placed at MMI for non-compliance. *Reference Directors Interpretive Bulletin #12, "Non-Compliance does not equal MMI*." Dr. Miller also pointed out that Dr. Sharma made multiple errors in his report, including mischaracterizing Claimant's injuries and that he is treating Claimant for a Division IME at the request of attorney Kim Whiting (Claimant's former attorney). Dr. Miller opined that Claimant is not at MMI. *Claimant's Exhibit 7, pages 34-45*.

12. On March 1, 2016, a Prehearing Conference was held before Prehearing Administrative Law Judge (PALJ) David Gallivan on Claimant's Motion to Strike Respondents' February 2, 2016 FAL. PALJ Gallivan refused to rule on Claimant's Motion, noting the issues raised by Claimant are questions of fact that need to be resolved by a merits judge. PALJ Gallivan did note that pursuant to WCRP 5-6(A), Respondents should have attached Dr. Sharma's January 22, 2016 report to the February 2, 2016 FAL, thus PALJ Gallivan ordered Respondents to refile their FAL. *Claimant's Exhibit 2, pages 4-5*.

13. On March 2, 2016, Respondents filed a second FAL based on Dr. Sharma's January 22, 2016 report; Respondents attached Dr. Sharma's January 22, 2016 report (*Claimant's Exhibit 8, pages 139-156)*. Respondents did not mail he March 2, 2016 FAL to Claimant's attorney. *Claimant's Exhibit 3, pages 6-25*.

14. On March 15, 2016, a second Prehearing Conference was held before PALJ Gallivan on the issues of Claimant's Motion to add striking Respondents' March 2, 2016 FAL as an issue for the March 23, 2016 Hearing (which was set on Claimant's November 25, 2015 Application for Hearing on the issue of medical benefits) and Respondents' Motion to Strike Claimant's November 25, 2015 Application for Hearing. PALJ Gallivan: a) struck Claimant's November 25, 2015 Application for hearing; b) vacated the March 23, 2016 hearing; c) ordered Claimant to file a new Application for Hearing on the issue of striking the FAL; and d) held the DIME process in abeyance pending resolution of Claimant's new Application for Hearing. *Claimant's Exhibit 4, pages 26-28*.

15. On March 16, 2016, Claimant filed an Application for Hearing and endorsed: a) authorized provider; b) temporary total disability benefits from January 23, 2016 ongoing; and c) striking Respondents' March 2, 2016 FAL. *Claimant's Exhibit 5, pages 29-31*.

16. On April 4, 2016, Respondents filed a Response to Claimant's Application for Hearing and endorsed offsets, credits, and recovery of overpayments. *Claimant's Exhibit 6, pages 32-33*.

17. At hearing, Claimant testified that Respondents never provided her with a designated provider list. Claimant testified Respondents instructed her to go to Respondents website and find the closest workers' compensation doctor. Claimant testified that she initially treated with a doctor at Premier Urgent Care (who she found

online) and that this doctor then referred her to Dr. Sharma. Claimant testified that she requested a change of physician from Dr. Sharma to Dr. Miller. Claimant testified that Respondents granted, or authorized, her change of physician request and that she first treated with Dr. Miller on February 24, 2015. Claimant testified that Dr. Miller then took over as her authorized treating physician. Claimant also testified that in 2014 she received two checks, one for approximately $500 and a second for approximately $235, for work done for a private consulting business. Claimant testified that although she was paid after her date of injury, she completed the work prior to her date of injury. Finally, Claimant began receiving unemployment insurance (UI) benefits beginning March 3, 2016.

18. The ALJ finds Claimant's testimony credible and persuasive.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, this ALJ draws the following conclusions of Law:

General Legal Principals

A. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. C.R.S. §8-40-102(1). A claimant in a workers' compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. §8-42-101. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) ; *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. C.R.S. §8-43-201. A workers' compensation case is decided on its merits. C.R.S. §8-43-201.

B. The judge's factual findings concern only evidence that is dispositive of the issues involved; the judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Eng'g, Inc. v. Indus. Claim Apps. Office,* 5 P.3d 385, 389 (Colo. App. 2000).

C. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Dr. Sharma's Status as an Authorized Provider and the Validity of Respondents' March 2, 2016 Final Admission of Liability (FAL)

D. Claimant argues that under the current version of C.R.S. section 8-43-404(5)(a)(IV), Dr. Sharma is not an authorized treating physician because she requested, and was granted, a change of physician from Dr. Sharma to Dr. Miller, thus terminating Dr. Sharma as an authorized treating physician. Accordingly, Claimant has moved to strike Respondents' March 2, 2016 FAL, which is based on Dr. Sharma's MMI determination. After additional careful consideration of the statutory provisions cited by Claimant, the ALJ agrees that Dr. Sharma is not a treating provider upon whose opinions Respondents may rely to file a FAL.

E. Under § 8-43-404(5), C.R.S., respondents are afforded the right, in the first instance, to select a physician to treat the industrial injury and this provider becomes legally "authorized" to treat the injury. Indeed "authorization" refers to the provider's legal status to treat the injury at the respondents' expense. *Holt v. First Nat'l Bank of Colorado* 4-809-198 (ICAO Nov. 26, 2010) *citing Popke v. Industrial Claim Appeals Office,* 797 P.2d 677 (Colo.App.1997). Here, the evidence presented convinces the ALJ that Dr. Sharma became Claimant's authorized treating physician (ATP) and that he treated her off and on for a time.

F. Nonetheless, the evidence presented also persuades the ALJ that Claimant requested a change of physician through her legal representative on two occasions. Once respondents have exercised their right to select the authorized treating physician, a claimant may not change physicians without permission from the insurer or an ALJ. *See Gianetto Oil Co. v. Industrial Claim Appeals Office*, 931 P.2d 570 (Colo. App. 1996); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). In order to change physicians, a claimant has a statutory obligation to request that change in accordance with section 8-43-404(5)(a)(III) or 8-43-404(5)(a)(IV)(E)(VI), C.R.S. Although Respondents argue that the "addition of Dr. Miller as an ATP was not pursuant to, or in accordance with §8-43-404(5)(a)(III), the undersigned ALJ concludes that the question of whether Claimant made a "proper showing" sufficient to entitle her to a change of physician to Dr. Miller was not before him.[1]

[1] Despite that "change of physician" was not endorsed in either Claimant's application for hearing or Respondents response to the application for hearing, the ALJ finds and concludes that substantial evidence was presented to support a conclusion that Respondents acquiesced to Claimant's request to change physicians to Dr. Miller. Aside from the "selection" of an authorized physician as provided in § 8-43- 404(5)(a), C.R.S. or a recognized change of physician, a specific provider may become authorized upon referral from a previously authorized physician, or if the "employer has expressly or impliedly conveyed to the employee the impression" that a physician is considered to be authorized. *Bestway Concrete v. Industrial Claim Appeals Office,* 984 P.2d 680 (Colo. App. 1999); *Greager v. Industrial Commission,* 701 P.2d 168, 170 (Colo. App. 1985). In this case, the ALJ concludes that Respondents conveyed an impression to Claimant that Dr. Miller was authorized to treat her.

G. Rather the question presented in this case was whether Dr. Sharma remained an ATP or whether, by virtue of the addition of Dr. Miller as an authorized provider, Dr. Sharma was deauthorized. As noted by Respondents, it has long been recognized that once a physician becomes authorized, the mere selection or designation of another authorized physician does not have the effect of "deauthorizing" the previously authorized physician. *Granger v. Penrose Hospital,* W.C. No. 4-351-885 (July 20, 1999); *Chapman v. The Spectranetics Corp.,* W.C. No. 4-162-568 (May 30, 1997). Rather, "deauthorization" may occur if evidenced by an express agreement under which the claimant waives treatment by the previously authorized physician. *Id*. Absent such agreement, the insurer's approval for a change of physician merely adds another physician to the list of physicians who are legally authorized to treat the injury at the insurer's expense. *Chapman v. The Spectranetics Corp.*, W.C. No. 4-162-568 (May 30, 1997); *Matthews v. United Parcel Service*, W.C. No. 4-325-652 (December 15, 1997); *Nathaniel Granger, Jr., v. Penrose Hospital and Self-Insured*, W. C. No. 4-351-885, 1999 WL 603156, at *2 (July 20, 1999). Consequently, a claimant may have multiple attending physicians. *Popke v. Industrial Claim Appeals Office,* 944 P.2d 677 (Colo. App. 1997).

H. Claimant’s counsel argues that the current version of §8-43-404(5)(a)(IV), dictates a different result. Asserting that the above referenced case law was decided under a prior version of the statute, Claimant’s counsel argues that the language of §8-43 404(5)(a)(IV)(C), providing that the “treatment relationship” with the initially authorized treating provider terminates at the time of the injured workers initial visit to the new providers, serves to “deauthorize” Dr. Sharma. Claimant asserts that the language of §8-43-404(5)(a)(IV)(C) applies to all situations when a change of physician has occurred. As noted above, Respondents counter by asserting that the change of physician in this case was not made in accordance with §8-43-404(5)(a)(III). Thus, Respondents contend the argument is misplaced.

I. In interpreting a statute, the ALJ must apply the ordinary rules of statutory construction. The purpose of the rules of statutory construction is to effectuate the legislative intent. Because the best indicator of legislative intent is the language of the statute, words and phrases in a statute should be given their plain and ordinary meanings, and phrases should be read in context and construed according to the rules of grammar and common usage. CRS Section 2-4-101, *Weld County School District RE-12 v. Bymer,* 955 P2d 550 (Colo. 1998). Forced, subtle, strained, or unusual interpretation should never be resorted to where the statutory language is plain, its meaning is clear and no absurdity is involved, *People v. Thomas,* 867 P.2d 880 (Colo. 1994). The rules of statutory construction dictate that all words and phrases used in a statute shall be understood and construed according to the approved and common usage and that some meaning shall be given to every word used. *People v. J.J.H.,* 17 P.3d 159 (Colo. 2001). In considering the plain language of C.R.S. §8-43-404(5)(a)(IV)(A) which begins, “When an injured employee changes his or her designated authorized…” the undersigned concludes that §§8-43-404(5)(a)(IV)(A-E) set forth the rules concerning the transfer of medical care from the initially authorized treating physician to the newly authorized treating physician. The ALJ agrees with

Claimant that the plain interpretation of language contained therein makes it clear that the provisions of statute apply to any and all requests for a change of physician. Consequently, the ALJ finds that C.R.S. §8-43-404(5)(a)(IV) applies to all change of physician requests made under the Act and not simply those made under §8-43-404(5)(a) (III). This is consistent with the plain language of the statutory provision. If the legislature wanted C.R.S. section 8-43-404(5)(a)(IV) to apply only to a specific request for a change of physician, it would have specifically stated such limitation. *See Well Augmentation Subdistrict of Cent. Colo. Water Conservancy Dist. V. City of Aurora*, 221 P.3d 399, 419 (Colo. 2009).

J. While the undersigned concludes that the statutory provisions of §8-43-404(5)(a)(IV) applies to all change of physician requests made under the Act and not simply those made under §8-43-404(5)(a)(III), the ALJ is not persuaded that "termination" of the treatment relationship between a claimant and the initially authorized physician subsequently serves to "deauthorize" that initially authorized physician. Termination of the treatment relationship does not equate to deathorization. Thus, while Dr. Sharma's treatment relationship with Claimant "terminated", Respondents retained the legal authority, to send Claimant to Dr. Sharma for additional evaluation in an effort to obtain opinions concerning MMI and/or permanent impairment. While the ALJ concludes that Respondents retained the ability to return Claimant to Dr. Sharma for additional evaluation and comment, the ALJ agrees with Claimant that he is not a physician upon whose opinions they can rely to file an FAL.

K. In support of their FAL, Respondents rely on the above cited case law holding that the addition of another authorized provider does not deauthorize the initially authorized physician.[2] Accordingly, Respondents assert that the addition of Dr. Miller as Claimant's treating physician did not deauthorize Dr. Sharma who remains capable of rendering opinions regarding MMI/impairment upon which they rely. The undersigned ALJ agrees with Claimant that the case law cited by Respondents applies an outdated and inapplicable version of C.R.S. section 8-43-404(5)(a). C.R.S. section 8-43-404(5)(a)(IV)(C) was not part of the statute at the time the *Granger, Chapman, and Matthews* cases were decided, and Respondents reliance on these cases is misguided. Effective July 1, 2008, the legislature amended C.R.S. section 8-43-404(5)(a) to include sections 8-43-404(5)(a)(IV)(A-E), which were not previously part of the statute. The plain language of the sections added to C.R.S. section 8-43-404 provide that when a claimant changes his/her authorized treating physician, the "treatment" relationship with the initially authorized provider terminates, when the claimant first treats with the newly authorized treating physician. Accordingly, the ALJ finds and concludes that the initially authorized treating physician is no longer a "treating" physician for purposes of determining MMI pursuant to C.R.S. section 8-42-107(8)(b)(I) which provides: "An authorized "treating" physician shall make a determination as to when the injured employee reaches maximum medical improvement as defined in section 8-40-201(11.5)." As Claimant's treatment relationship with Dr. Sharma "terminated" pursuant

[2] See also *In re Nathaniel Granger, Jr.*, W.C. No. 4-351-885 (July 20, 1999), *citing Chapman v. The Spectranetics Corp.*, W.C. No. 4-162-568 (May 30, 1997); *Matthews v. UPS*, W.C. No. 4-325-652 (December 15, 1997).

to the change of physician, the ALJ concludes that he is not “an authorized treating physician” and Respondents are not permitted to rely on his MMI determination to file a FAL terminating benefits. Consequently, the ALJ agrees with Claimant that Respondents’ March 2, 2016 FAL is invalid and should be stricken. Because the ALJ concludes that Dr. Sharma is not “an authorized treating physician, it is unnecessary to address the question of whether Dr. Sharma could determine MMI based upon non-compliance.

Claimant’s Request for Temporary Total Disability

L. To prove entitlement to temporary total disability (TTD) benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts; that she left work as a result of the disability, and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by Claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of the earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the Claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). In this case, Claimant was receiving TTD prior to the filing of Respondents’ March 2, 2016 FAL predicated on Dr. Sharma’s opinions regarding MMI. Consequently, the ALJ finds and concludes that Claimant has proven that she was, prior to the FAL being filed, entitled to TTD benefits. As Claimant has not been placed at MMI by “an authorized *treating* provider” and the March 2, 2016 FAL is invalid, Claimant’s TTD benefits must be reinstated beginning January 23, 2016.

Respondents’ Entitlement to Offsets

M. Claimant’s earnings for work done for a private consulting business predate her injury and entitlement to TTD in this case. Accordingly, these earnings are not subject to being offset.

N. Although it is currently being held in abeyance based upon the Prehearing Conference Order of PALJ Gallivan, the outcome of any DIME in this case may affect Claimant’s entitlement to TTD as well as Respondents’ entitlement to offset the same. Consequently, the undersigned reaches the following conclusions regarding Respondents’ entitlement to offset any potential TTD benefits secondary to Claimant’s receipt of UI compensation benefits: Per the parties’ stipulation, Respondents are entitled to offset Claimant’s TTD based on any unemployment benefits Claimant has received since March 3, 2016 in the sum of $501.00 per week said offset to continue until such time that Claimant’s UI benefits cease.

O. Authority for the above cited UI offset is found in C.R.S. section 8-42-103(1)(f), which provides:

> In cases where it is determined that unemployment compensation benefits are payable to an employee, the aggregate benefits payable for permanent total disability pursuant to this section shall be reduced, but not below zero, by an amount equal as nearly as practical to such unemployment compensation benefits. *In cases where it is determined that unemployment insurance benefits are payable to an employee, compensation for temporary disability shall be reduced, but not below zero, by the amount of unemployment insurance benefits received,* unless the unemployment insurance amount has already been reduced by the temporary disability benefit amount and except that temporary total disability shall not be reduced by unemployment insurance benefits received pursuant to section 8-73-112. (emphasis added).

P. Claimant's admitted AWW is $3,499.91, and her WC disability rate is $881.65 per week. When deducting Claimant's unemployment earnings from her disability rate, Respondents owe Claimant TTD at a rate of $380.65 per week beginning March 3, 2016 and continuing until UI benefits cease. ($881.65 – $501.00 = $380.65).

ORDER

It is therefore ordered that:

1. Dr. Sharma is not an authorized "treating" physician.

2. Respondents' March 2, 2016 Final Admission of Liability is invalid, and Claimant's request to strike the same is GRANTED.

3. Respondents' shall pay Claimant ongoing temporary total disability benefits beginning January 23, 2016 at a rate of $881.65 per week through March 2, 2016. Beginning March 3, 2016, Respondents are entitled to offset Claimant's temporary total disability benefits based on her receipt of UI benefits by $510.00 per week. Consequently, Respondents shall pay TTD benefits beginning March 3, 2016 at a weekly rate of $380.65 and continue said TTD benefits at this rate until UI benefits cease. Thereafter, if Claimant remains temporarily totally disabled, Respondents shall resume payment of TTD benefits at the rate of $881.65 until said TTD benefits can be terminated according to law.

4. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUE

Whether Claimant has demonstrated by a preponderance of the evidence that his prescription for physical therapy from Authorized Treating Physician (ATP) Randall W. Viola, M.D. is reasonable, necessary and causally related to his May 1, 2014 industrial injury.

FINDINGS OF FACT

1. Claimant worked for Employer as a Concrete Finisher. On May 1, 2014 he suffered an admitted industrial injury to his right upper extremity. While Claimant was operating a hammer drill with his right arm the drill jammed and violently twisted.

2. Claimant subsequently underwent eight surgeries for his right wrist and elbow. He also received physical therapy after each procedure. Claimant has recently been diagnosed with Chronic Regional Pain Syndrome (CRPS).

3. Claimant testified that physical therapy relieved the numbness and tingling in his right wrist. The treatment also reduced his pain levels and increased his range of motion. Claimant remarked that physical therapy prevented further deterioration of his right upper extremity condition. However, Claimant acknowledged that physical therapy has only provided short-term relief and he has not achieved sustained benefits.

4. On February 24, 2016 Authorized Treating Physician (ATP) Thos A. Evans, M.D. recommended that Claimant "continue physical therapy with a focus on desensitization techniques, as well as mirror therapy." Claimant commented that he would like to pursue the treatment to maintain and improve his condition.

5. ATP Randall Viola, M.D. subsequently requested additional physical therapy for Claimant. The request consisted of two sessions per week for six weeks.

6. Respondents timely denied the request for physical therapy pursuant to Rule 16. On March 22, 2016 Moshe Lewis, M.D. determined that additional physical therapy was not reasonable. Dr. Lewis reviewed medical records that showed Claimant had completed 40 physical therapy visits post-operatively but continued to experience pain and weakness in the right forearm and hand. Relying on the *Colorado Medical Treatment Guidelines* (*Guidelines*) Dr. Lewis noted that positive results are defined primarily as functional gains that can be objectively measured. Furthermore, if a specific treatment or modality is not producing positive results within three to four weeks the treatment should be modified or discontinued. Clinical notes did not clearly establish that Claimant achieved functional gains in activities of daily living.

Accordingly, because Claimant had reached a plateau through physical therapy treatment, the request for 12 additional sessions should be denied.

7. Claimant is currently under the care of ATP Robert Wright, M.D. On April 11, 2016 Dr. Wright determined that Claimant was "going to need a spinal cord stimulator to help with his neuropathic pain." He also recommended a titrating dose of Gabapentin for additional therapeutic relief. However, Claimant noted that he does not take any medication because of side effects.

8. On May 23, 2016 Claimant underwent an independent medical examination with Barry A. Ogin, M.D. Dr. Ogin agreed that Claimant had met the diagnostic criteria for CRPS. He thus recommended consideration of medication trials, pain psychology and a spinal cord stimulator trial for pain management.

9. Dr. Ogin did not recommend additional physical therapy sessions. He remarked that, if Claimant's neuropathic pain could be reduced, "he might be able to tolerate more desensitization strategies and strengthen through therapy." Dr. Ogin explained "by this point, [Claimant] has had close to 80 therapy sessions, between his treatments for his fusion and afterwards, without any lasting relief. Additional therapy sessions should only be performed with very specific goals, particularly after he can get better control of his neuropathic pain. In the meantime, he should continue with an independent exercise regimen." Dr. Ogin reasoned that Claimant needs to reduce his pain levels through medication or a spinal cord stimulator before resuming physical therapy.

10. On May 31, 2016 Dr. Ogin issued an addendum to his independent medical examination. He maintained that additional physical therapy was not reasonable and necessary as a result of Claimant's May 1, 2014 admitted right upper extremity injury. Dr. Ogin also reiterated that additional physical therapy sessions "should only be pursued with specific goals in mind, not just short-term pain management."

11. Claimant has failed to demonstrate that it is more probably true than not that his prescription for physical therapy from ATP Dr. Viola is reasonable, necessary and causally related to his May 1, 2014 industrial injury. Claimant's industrial injury occurred over two years ago and has resulted in multiple surgeries. Because of the surgeries, Claimant suffers from debilitating neuropathic pain. Despite extensive follow-up treatment, physical therapy and other modalities Claimant has failed to achieve long-term pain relief or functional improvement. Although the *Guidelines* establish an appropriate standard of medical care, they are not a definitive determination as to the reasonableness and necessity of treatment modalities. Physicians have discretion to act in the best interests of patients.

12. The persuasive medical opinions of Drs. Lewis and Ogin demonstrate that physical therapy sessions no longer constitute reasonable treatment for Claimant's May 1, 2014 industrial injury. Relying on the *Guidelines* Dr. Lewis persuasively noted that positive results are defined primarily as functional gains that can be objectively

measured. Furthermore, if a specific treatment or modality is not producing positive results within three to four weeks the treatment should be modified or discontinued. Clinical notes did not clearly establish that Claimant achieved functional gains in activities of daily living. Accordingly, Dr. Lewis concluded that, because Claimant had reached a plateau through physical therapy treatment, the request for 12 additional sessions should be denied. Moreover, Dr. Ogin persuasively determined that additional physical therapy was not reasonable and necessary as a result of Claimant's May 1, 2014 admitted right upper extremity injury. He remarked that, if Claimant's neuropathic pain could be reduced, "he might be able to tolerate more desensitization strategies and strengthen through therapy." Dr. Ogin explained "by this point, [Claimant] has had close to 80 therapy sessions, between his treatments for his fusion and afterwards, without any lasting relief." He summarized that additional physical therapy sessions "should only be pursued with specific goals in mind, not just short-term pain management." Based on the persuasive medical opinions of Drs. Lewis and Ogin Claimant's request for additional physical therapy sessions is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the

employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

5. Pursuant to Workers' Compensation Rule of Procedure 17-2(A) health care practitioners are to use the *Guidelines* when furnishing medical care under the Workers' Compensation Act. *See* §8-42-101(3)(b), C.R.S. The ALJ may also appropriately consider the *Guidelines* as an evidentiary tool. *Logiudice v. Siemans Westinghouse*, W.C. 4-665-873 (ICAP, Jan. 25, 2011). However the ALJ is not required to grant or deny medical benefits based upon the *Guidelines*. *Thomas v. Four Corners Health Care*, W.C. 4-484-220 (ICAP, Apr. 27, 2009). The ALJ's consideration of the *Guidelines* may include deviations where there is evidence justifying the deviations. *Logiudice v. Siemans Westinghouse*, W.C. No. 4-665-873 (ICAP, Jan. 25, 2011). There is no requirement for an ALJ to award or deny medical benefits based on the *Guidelines*. *Thomas v. Four Corners Health Care*, W.C. No. 4-484-220 (ICAP, Apr. 27, 2009); *see Nunn v. United Airlines*, W.C. No. 40785-790 (ICAP, Sept. 9, 2011).

6. Rule 17, Exhibit 7 of the *Guidelines* provides that the primary purpose of the document is "advisory and educational" and "acceptable medical practice may include deviations" from the *Guidelines* based on the circumstances of each case. Moreover, the *Guidelines* specifically recognize that they do not constitute "relevant evidence of a provider's legal standard of professional care." Rule 17, Exhibit 7(A).

7. In addressing a positive patient response to treatment the *Guidelines* provide:

> Positive results are defined primarily as functional gains that can be objectively measured. Objective functional gains include, but are not limited to: positional tolerances, range-of-motion, strength, endurance, activities of daily living, ability to function at work, cognition, psychological behavior, and efficiency/velocity measures that can be quantified. Subjective reports of pain and function should be considered and given relative weight when the pain has anatomic and physiologic correlation. Anatomic correlation must be based on objective findings.

Rule 17, Exhibit 7(B)(6).

8. As found, Claimant has failed to demonstrate by a preponderance of the evidence that his prescription for physical therapy from ATP Dr. Viola is reasonable, necessary and causally related to his May 1, 2014 industrial injury. Claimant's industrial injury occurred over two years ago and has resulted in multiple surgeries. Because of the surgeries, Claimant suffers from debilitating neuropathic pain. Despite extensive follow-up treatment, physical therapy and other modalities Claimant has failed to achieve long-term pain relief or functional improvement. Although the *Guidelines*

establish an appropriate standard of medical care, they are not a definitive determination as to the reasonableness and necessity of treatment modalities. Physicians have discretion to act in the best interests of patients.

9. As found, the persuasive medical opinions of Drs. Lewis and Ogin demonstrate that physical therapy sessions no longer constitute reasonable treatment for Claimant's May 1, 2014 industrial injury. Relying on the *Guidelines* Dr. Lewis persuasively noted that positive results are defined primarily as functional gains that can be objectively measured. Furthermore, if a specific treatment or modality is not producing positive results within three to four weeks the treatment should be modified or discontinued. Clinical notes did not clearly establish that Claimant achieved functional gains in activities of daily living. Accordingly, Dr. Lewis concluded that, because Claimant had reached a plateau through physical therapy treatment, the request for 12 additional sessions should be denied. Moreover, Dr. Ogin persuasively determined that additional physical therapy was not reasonable and necessary as a result of Claimant's May 1, 2014 admitted right upper extremity injury. He remarked that, if Claimant's neuropathic pain could be reduced, "he might be able to tolerate more desensitization strategies and strengthen through therapy." Dr. Ogin explained "by this point, [Claimant] has had close to 80 therapy sessions, between his treatments for his fusion and afterwards, without any lasting relief." He summarized that additional physical therapy sessions "should only be pursued with specific goals in mind, not just short-term pain management." Based on the persuasive medical opinions of Drs. Lewis and Ogin Claimant's request for additional physical therapy sessions is denied and dismissed. *See Waller v. Waste Connections, Inc.*, W.C. No. 4-775-375 (ICAP, June 4, 2012) (reasoning that there was no error in ALJ's consideration of the *Guidelines* to support his determination that the claimant's surgeries were not reasonable or necessary).

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for additional physical therapy as recommended by ATP Dr. Viola is denied and dismissed.

2. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-*

070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-974-821-01

ISSUES

- Did Claimant sustain her burden to overcome the DIME physician's opinion that she sustained a permanent medical impairment to her thoracic spine?

- If Claimant satisfied her burden of proof and overcame Anjmun Sharma, M.D.'s opinion, what is Claimant's medical impairment rating?

- Is Claimant entitled to temporary partial disability benefits from December 31, 2014 to September 2, 2015?

- Are Respondents entitled to recoup what is claimed as an overpayment of temporary partial disability benefits?

FINDINGS OF FACT

1. Claimant has worked for Employer for eighteen (18) years as an interior designer. In that position, her job duties included meeting and greeting customers, as well as assisting them in the store. Claimant testified that the main objective of her employment is to build relationships with her clientele while in the store, so that she could make appointments to go to their homes to help with their interior design needs. After a home visit, Claimant prepared a design to be presented to the customer. Claimant does not earn any wages until the customer makes a purchase.

2. The physical demands of the job required her to climb ladders, walk around the showroom, carry samples, and pick up various items of furniture. When Claimant visited customer's homes, she carried sample books, tape measure and brief cases.

3. Claimant received commissions as part of her remuneration. The paycheck records admitted at hearing documented Claimant received a total of $30,187.62 in commissions for the year ending 12/31/14. Her total gross pay for that year was $69,701.04

3. On December 30, 2014, Claimant sustained an admitted industrial injury while assisting a customer at the store. The customer wanted to see a piece of furniture located in the back of the store. Claimant stepped over a 2 foot long piece of flooring, lost her balance and twisted her body. Although she did not fall to the floor, she twisted her ankle, leg, as well as her neck, back and shoulders.

4. An Employer's First Report of Injury (E-1) was prepared on or about December 31, 2014. It documented that Claimant was injured when she stepped over

a pile of boxes and twisted her ankle, back and neck.

5. On December 31, 2014, Claimant was examined by Daniel Peterson, M.D., the ATP for Employer. At that time, Claimant reported pain in her left foot and ankle, neck and back. Dr. Peterson's assessment was ankle sprain, cervical strain, trapezius strain and foot sprain. Dr. Peterson ordered physical therapy and prescribed medications. In the M–164, Dr. Peterson returned Claimant to regular duty as of December 31, 2014.

6. Claimant's physical therapy ("PT") records from Concentra were admitted at hearing, which documented treatment from January 6, 2015 through March 25, 2015. Claimant received a total of thirty (30) PT sessions at Concentra. The treatment modalities Claimant received included electrical stimulation therapeutic exercises and manual therapy. Claimant's cervical spine, trapezius and ankle/foot received treatment. The ALJ infers Claimant reported pain in the aforementioned areas of her body during her course of PT.

7. Claimant admitted no doctor issued work restrictions while she was treating for her work injury. None of the medical records received by the Court documented any work restrictions issued by Dr. Peterson or other ATP. Claimant testified she receibed help with some of the physical tasks required by her job, some of which was given my customers and some by co-workers. She also limited what she lifted.

8. Claimant testified she spoke to Ms. Spring, the adjuster for Insurer. An e-mail was admitted into evidence in which Ms. Spring explained her calculation of TPD benefits[1]. Ms. Spring stated TPD benefits were paid for the lost income related to time missed by Claimant for appointments.

9. Claimant was evaluated by Syketha Sprague, NP on January 19, 2015, at which time she reported her ankle was fine, but she continued to have soreness in her neck, back and shoulder. NP Sprague noted joint pain, stiffness, but no swelling. Range of motion ("ROM") was limited on left-sided bending and left rotation. NP Sprague's assessment was cervical strain and trapezius strain. Claimant was to continue with physical therapy.

10. On February 10, 2015, Claimant was seen for a follow-up appointment by Jocelyn Cavender, PA-C. Claimant reported she had better motion in her neck, but still had pain/tightness in her left shoulder. Tenderness was noted in the trapezius muscle, with left sided muscle spasm. Claimant had pain with lateral movement and extension. PA-C Cavender's assessment was trapezius strain and cervical strain.

11. On February 25, 2015, Insurer filed a General Admission of Liability ("GAL") on behalf of Employer, admitting for temporary partial disability benefits (from

[1] Exhibit 16.

12/31/14 and ongoing). Claimant's wage records were attached to the GAL. The GAL was filed by Cheryl Spring on behalf of Insurer.

12. Claimant was evaluated by Worley Lynch, PA-C on March 4, 2015. Claimant reported intermittent pain in her neck and upper back, particularly when she turned her head. PA-C Lynch found tenderness in Claimant's cervical spine, right and left trapezius muscles, as well as the paraspinal muscles. The assessment was trapezius strain and cervical strain. Physical therapy was re-started.

13. Claimant was evaluated by Walter Larimore, M.D. on March 25, 2005, at which time she still had intermittent pain in her neck and upper back. Claimant had completed two sessions of massage therapy and PT was requesting chiropractic. Dr. Larimore's assessment was history of sprained foot and ankle; cervical strain; and trapezius strain. Claimant was to continue massage therapy.

14. On April 8, 2015, Dr. Larimore re-evaluated Claimant. Claimant's thoracic spine had full range of motion, as did her lumbosacral spine. She had no upper extremity deficits. Dr. Larimore's assessment was cervical strain and trapezius strain.

15. Claimant was re-examined by PA-C Cavender on May 6 and 27, 2015. At that time, she had continued pain in her shoulder, arm, neck and mid back. PA-C Cavender noted Claimant was reporting deep ache sensations in the thoracic area of the back and bilateral shoulders. Cervical ROM was full, except for the left and right paraspinal and right trapezius muscles. Claimant was to continue with massage therapy.

16. Dr. Larimore reevaluated Claimant on July 15, 2015. Claimant reported continued back pain, with radiation to both arms, as well as upper and mid back pain; all of which were aggravated by work. Limitations in the ROM of upper back were noted, as well as tenderness at T1-6. Dr. Larimore's assessment was: chronic neck and back pain; history of trapezius strain; bilateral arm pain; and degenerative disc disease. An EMG was ordered and chiropractic referral was made. A referral to Albert Hattem, M.D. was also made, along with a psychiatric consult.

18. On July 28, 2015, an MRI was performed on Claimant's thoracic spine. The films were read by Tanweer Khan, M.D. Dr. Khan's impression was: L1-2 space showed a small posterior central to slightly right-sided acute to subacute disc herniation, slightly displaced cranially with minimal neural canal stenosis; minimal degenerative changes of the T9-10 disc space, with anterior osteophytic lipping. No posterior disc bulge or herniation was seen at this level and there was no evidence of nerve root impingement. The ALJ notes the MRI was ordered because of Claimant's continued pain in her neck , back (thoracic spine) and shoulders.

19. On August 12, 2015, Claimant returned to Dr. Larimore, at which time mid-back pain and bilateral shoulder pain was noted. Claimant had bilateral muscle spasms, which included the right and left trapezius muscles. Dr. Larimore's assessment was bilateral arm pain, chronic neck and back pain, degenerative disc disease-cervical,

degenerative joint disease-cervical, cervical disc herniation, degenerative joint disease of the thoracic spine, lumbar disc herniation, adjustment disorder with mixed anxiety and depressed mood, pain disorder associated with psychological and physical factors. Dr. Hattem was to assume Claimant's care and an EMG was scheduled with Dr. Jenks. Claimant was also to continue PT.

20. Claimant received physical therapy, medical massage and dry needling as part of her treatment. Records from Medical Massage of the Rockies from March 17, 2015 to July 28, 2015 were admitted at hearing. Those records reflected Claimant reported symptoms in her neck, as well as left shoulder and back. Decreased ROM in her thoracic spine was noted on March 17, 24, 31; April 6, 8, 13, 15, 20, 22, 27, 29; May 4, 5, 11, 8, 26, 28; June 3, 8, 15, 22, 29; and July 31, 2015. After that time, some improvement was noted and ROM findings were not documented at the appointments. However, the "objective findings/palpatory findings" documented tightness in the thoracic spine and treatment for that area. The ALJ infers the loss of ROM, tightness and restrictions noted in the records was evidence of an injury to the thoracic spine, surrounding musculature and connective tissues.

21. Claimant was evaluated by Brian Polvi, D.C. on August 9, 2015. She complained of bilateral shoulder pain, cervical and thoracic spine pain (bilateral). Dr. Polvi noted limitations in Claimant's range of motion of her cervical spine, diffuse bilateral paracervical pain that was considered mixed myofascial and facetogenic in nature, left fifth posterior rib displacement, superior trapezius contour interscapular and parascapular region active tenderness and trigger point formations. Dr. Polvi's diagnostic impressions were left C5-C6 facet capsulitis with associated diffuse cervicothoracic and bilateral parascapular myofascial dysfunction; multilevel cervical spondylosis without evidence of nerve root impingement or cord compression; MRI finding of L1-L2 disk space right-sided acute subacute disc herniation slightly displaced cranially with minimal neural canal stenosis. Claimant was started on a course of chiropractic manipulation and mobilization, manual therapy, trigger point dry needling, biomedical acupuncture proprioceptive neuromuscular facilitation of stretching and/or passive physical therapy modalities.

22. Claimant received treatment from August 6, 2015 through August 20, 2015. The ALJ noted symptoms referable to Claimant's thoracic spine, including muscle spasm and hypertonicity was found by Daniel Barbuto, D.C. at Dr. Polvi's office. Treatment was provided to the cervical spine (C5-C6) and thoracic spine (T5-T6).

23. Claimant testified there were times she had to leave work to attend medical appointments. She lost income because she could not assist customers when she was away from the store. Claimant continued to work throughout her treatment with various health care providers.

24. On September 3, 2015, Claimant was evaluated by Dr. Hattem. Dr. Hattem found decreased range of motion, with mild paracervical tenderness, good range of motion of the shoulder joints bilaterally and normal motor strength of the upper and lower extremities. Dr. Hattem's diagnoses were upper back and neck pain. Dr.

Hattem offered Claimant the option of a cervical epidural injection, which she declined. He concluded Claimant was at MMI and noted she could pursue the cervical epidural injection as maintenance care. Dr. Hattem concluded Claimant sustained a 0% medical impairment as a result of her injury.

25. Insurer filed a Final Admission Liability ("FAL") on September 22, 2015, based upon Dr. Hattem's rating. The FAL specifically referenced there was a TPD overpayment in the amount of $15,058.20 based on the fact that Claimant was not taken off work by any physician. The FAL was filed by Teresa Manshardt, who was employed by Insurer as a workers' compensation claims professional. Ms. Manshardt testified she replaced Ms. Spring as the adjuster on the case in mid 2015.

26. Ms. Manshardt testified she determined the payment of TPD benefits was a mistake, as Claimant was returned to full duty after her injury. She stated Claimant was not entitled to receive those benefits as she had returned to work with no restrictions. A ledger of TPD payments was admitted at hearing[2]. Ms. Manshardt confirmed that the ledger accurately reflected the total amount paid to Claimant in TPD benefits.

27. Claimant received a total of $8,886.53 in commissions for the year ending 12/31/15. Her total gross pay for that year was $44,853.82. Claimant testified her income was reduced because there were times she could not finish assisting a customer because of medical appointments. She believed there were times when she missed out on completing large sales because she was treating for her injuries. The earnings records for Claimant documented a reduction totaling $24,847.22 in her 2015 income (from 2014), which occurred while she was actively treating for her injury. Claimant attributed the reduction in commissions to her industrial injury. Respondent offered no evidence to contradict this explanation for the reduction in commissions. The ALJ found Claimant's explanation for the reduction in commissions was credible.

28. On January 4, 2016, Claimant underwent a DIME, which was performed by Dr. Sharma. Dr. Sharma concluded Claimant was at MMI and found she sustained a permanent medical impairment to her cervical spine. This included a Table 53 specific disorder impairment of 4% and an 8% impairment for ROM deficits. Dr. Sharma noted Claimant's left ankle sprain and left foot strain were resolved and Claimant had no permanent impairment to the left foot/ankle. Dr. Sharma opined that, although Claimant was complaining of low back pain, this was not part of the claim. Dr. Sharma stated Claimant did not require maintenance treatment. Dr. Sharma found Claimant's thoracic spine was mildly tender, but did not feel this was significant enough to cause an impairment and he did not rate the thoracic spine. There was no indication in the record (including worksheets) that Dr. Sharma performed dual inclinometer measurements on Claimant's thoracic spine. The ALJ notes Dr. Sharma did not provide an explanation why no impairment rating was assigned to this area of Claimant's body where she had scapular/paraspinal symptoms and required extensive treatment to these areas.

[2] Exhibit G.

29. Insurer filed an FAL on February 3, 2016, admitting for Dr. Sharma's impairment rating. This FAL was filed by Ms. Manshardt. The FAL referenced the TPD overpayment and stated "carrier will recover from PPD award".

30. On May 20, 2016, Claimant was evaluated by Jack Rook, M.D. Dr. Rook reviewed Claimant's course of treatment, which documented severe tenderness with severe tenderness with palpation of bilateral scalene muscles. Claimant’s cervical range of motion was decreased in all planes, but especially with extension and turning to the left. Dr. Rook's diagnoses were: neck pain, myofascial pain syndrome; thoracic myofascial pain syndrome.

31. Dr. Rook reviewed Dr. Sharma's report and concluded that the latter did not fulfill his Division Examiner responsibilities correctly. Dr. Rook noted Claimant was most probably complaining of pain in the thoracic spine at the time of the DIME and there were objective findings, including range of motion loss. Dr. Rook opined Dr. Sharma was in error when he found that Claimant's rating should be confined to the cervical spine. Dr. Rook stated the AMA Guides do not limit a rating to the primary area of Claimant's body affected. In this case, Claimant had pain complaints and treatment to her thoracic spine and Dr. Rook reasoned she suffered a permanent medical impairment to the thoracic spine. Dr. Rook opined Claimant was entitled to an impairment rating pursuant to Table 53 of the *AMA Guides.* Dr. Rook noted the fact Claimant’s pain was myofacial in nature did not preclude a rating from being assigned. In this regard, Dr. Rook said Claimant’s injury to her thoracic spine was supported by the clinical findings made by various health care providers. The ALJ credited Dr. Rook’s opinion that Claimant sustained a permanent impairment to her thoracic spine.

32. Dr. Rook assigned a 18% whole person rating, which included a 13% impairment to the cervical spine and 6% impairment to the thoracic spine. The ALJ notes Dr. Rook's range of motion testing done on the thoracic spine was valid and showed a loss.

33. The ALJ takes administrative notice of the AMA Guides, which governs Claimant’s medical impairment. The ALJ also notes that Chapter 1.2 is an explanatory section which directly relates to chapter 2.3, at issue here. This section provides in pertinent part:

> “…Evaluation of impairment using the *Guides* requires integration of previously gathered medical information with the results of a current clinical evaluation. To characterize the impairment fully, the evaluation should be carried out in accordance with the directions in the Guides. Accomplishing this is based on using three fundamental components.
>
> First, Chapter 2 of the *Guides* lists the kinds of information needed to document the nature of an impairment and its consequences; specifies procedures for acquiring the information; and defines a structured format

> for analyzing, recording, and reporting the information. A summary of this material appears at the beginning of each clinical chapter..."[3]

34. In the Introduction section for chapter 2 of the AMA Guides, it specifies:

> "If two physicians using the *Guides* have obtained similar results and reached similar conclusions, a framework exists within which to resolve the discrepancies. Analysis of records and reports will disclose the differences. In such an instance, the differences will be in the clinical findings, which are matters of fact, not opinion; the latter can be verified by further observation of the claimant in accordance with the procedures and methods of the *Guides*…"[4]

35. Claimant is entitled to receive temporary partial disability benefits, as she had a loss of earnings directly caused by her industrial injury.

36. Insurer paid TPD benefits to Claimant pursuant to the GAL filed on 9/22/15, which constituted an overpayment of indemnity benefits. Insurer is entitled to a credit for TPD benefits paid.

37. It is more probable than not that Dr. Sharma, who conducted the DIME, erroneously failed to assign a medical impairment rating to Claimant for her thoracic spine. Claimant sustained a 6% whole person impairment for impairment to her thoracic spine and is entitled to receive PPD benefits based upon said impairment.

38. Claimant failed to prove it is more probable than not that she is entitled to an award of *Grover* medical benefits to maintain MMI and/or prevent deterioration of her condition.

39. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), §8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. Section 8-43-201(1),C.R.S. Generally, the Claimant shoulders

[3] The second and third components refer to medical evaluation protocols and reference tables specifically keyed to the evaluation protocols.

[4] *Id.*

the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). In this case, the credibility of various health care providers was one of the primary issues on the question of Claimant's impairment rating.

Overcoming the DIME On the Issue of Impairment

Claimant has the burden of overcoming Dr. Sharma's opinion and argued he erred in his determination that Claimant sustained no permanent medical impairment to the thoracic spine. In this regard, Claimant asserted Dr. Sharma's findings were not supported by the record and relied on the opinion of Dr. Rook, who stated Claimant was entitled to an impairment rating for this area of her body*.*

Respondents contended Claimant failed to meet her burden of proof and argued Dr. Sharma's determination of medical impairment was correct. Respondents averred the evidence submitted by Claimant amounted to a difference of opinion between the doctors.

A DIME physician's finding that Claimant had a permanent medical impairment is binding on the parties unless overcome by clear and convincing evidence. § 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Clear and convincing evidence means "evidence which is stronger than a mere 'preponderance'; it is evidence that his highly probable and free from serious and substantial doubt." *Metro Moving & Storage Co v. Gussert, supra*, 914 P.2d at 414 (citing CJI-Civ. 3d 3:2 (1988); *DiLeo v. Koltnow*, 200 Colo. 119, 613 P.2d 318 (1980). A party meets this burden only by demonstrating that the evidence contradicting the DIME's MMI is "unmistakable and free from serious or substantial doubt." *Leming v. Indus. Claim Appeals Office*, 62 P.3d 1015, 1019 (Colo. App. 2002) [citing *DiLeo v. Koltnow, supra*].

The enhanced burden of proof imposed by § 8-42-108(b)(III), C.R.S., reflects an underlying assumption that the DIME, having been selected by an independent and unbiased tribunal, will provide a reliable medical opinion. *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590, 592 (Colo. App. 1998). The heightened burden of proof is evidence of the Colorado Legislature's intent to make these opinions to overcome. Since the DIME physician is required to identify and evaluate all losses resulting from the industrial injury, as part of the DIME's assessment process, the DIME physician's opinion regarding causation of those losses is also subject to the same enhanced burden of proof. *Id.* Furthermore, the DIME physician's opinions on these issues are binding unless overcome by clear and convincing evidence. *See Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

For the reasons set forth below, the ALJ concluded it was highly probable Dr. Sharma's conclusions were erroneous concerning Claimant's thoracic spine.
In concluding that it was highly probable Dr. Sharma's opinions were incorrect, the ALJ first considered whether Dr. Sharma fully considered whether Claimant's thoracic spine sustained a permanent impairment. As found, Dr. Sharma did not examine Claimant's thoracic spine. (Finding of Fact 26). Despite a records summary that that was eleven (11) pages in length and contained numerous references to Claimant's treatment to this area of her body, Dr. Sharma summarily concluded only a cervical spine rating was warranted. Dr. Sharma provided no further explanation beyond this despite noting Claimant had radiating pain in this area at the time of his examination. The lack of analysis contained within Dr. Sharma's report led the ALJ to conclude his conclusions were not supported by the medical evidence.

Second, as determined in Findings of Fact 30-31, the AMA Guides (particularly the introductory section to chapter 2) provide a framework for resolving discrepancies between evaluating physicians. In this case, there was a divergence between the findings made by Dr. Sharma, as opposed to the ones made by Dr. Rook. Dr. Sharma noted Claimant's thoracic spine was symptomatic, but opined her pain was myofacial in nature and decided not to rate this area of the body. On the other hand, after reviewing Claimant's clinical course, Dr. Rook based his rating on the treatment records, including the diagnoses made by the ATPs. The ALJ found Dr. Sharma's conclusions were erroneous based upon the clinical evidence of thoracic symptoms and the totality of medical evidence presented. Dr. Sharma did not provide a detailed analysis of all available medical evidence, as such, when he concluded Claimant had only a cervical spine impairment. Therefore, Claimant overcame Dr. Sharma's permanent medical impairment rating by clear and convincing evidence.

Claimant's Impairment Rating

Having decided that Dr. Sharma's opinion was overcome by clear and convincing evidence, the inquiry turns to what, if any, permanent medical impairment Claimant sustained as a result of her industrial injury. The analysis to be used in the case at bench is found in other cases in which a part of the DIME physician's rating was overcome by clear and convincing evidence. See *Deleon v. Whole Foods Market, Inc.,* W.C. No. 4-600-477 (ICAO, November 16, 2006); *Ortiz v. Service Experts,* W.C. No. 4-657-974 (ICAO, January 22, 2009). *Deleon* addressed the proper evidentiary standard for determining a Claimant's impairment rating after an ALJ found that a portion of the DIME physician's impairment rating was overcome by clear and convincing evidence.

In the *Deleon* case, the ALJ determined Respondents overcame by clear and convincing evidence a DIME physician's finding that Claimant sustained 5 percent impairment for lost range of motion in the lumbar spine. However, the ALJ also found that Respondents failed to overcome by clear and convincing evidence the DIME physician's finding that Claimant sustained 5 percent impairment for a specific disorder of the lumbar spine. Consequently the ALJ upheld the specific disorder portion of the rating. The ICAO ruled that once an ALJ determines "the DIME's rating has been overcome in any respect" the ALJ is "free to calculate the Claimant's impairment rating based upon the preponderance of the evidence" standard. See also *Laclay v. Academy Insulation,* W.C. No. 4-693-581 (ICAO June 4, 2009).

First, Claimant showed it more probably true than not that her injury proximately caused a specific disorder of the thoracic spine under Table 53 of the AMA Guides. There were objective findings made by her treating physicians. Objective evidence of a thoracic injury (including the adjacent areas) and therefore a potential impairment was found in the following medical records admitted at hearing:

- Concentra (12/31/14-8/12/15): PA-C/NP and PT records consistently documented symptoms and diagnosis of a trapezius strain.

- Dr. Larimore (3/25/15-8/12/15): Trapezius and paraspinal symptoms noted.

- Absolute/Dr. Polvi (8/3/15-8/20/15): Symptoms in the upper back, including the thoracic spine and trapezius were noted. Treatment provided to those areas.

- Dr. Hattem (9/3/15): Upper back pain noted.

Second, Claimant proved Dr. Sharma was most probably incorrect in not assigning a permanent medical impairment to her thoracic spine in that he did not really address the symptoms and treatment documented in the medical records. As found, the *AMA Guides* require the DIME physician to correlate the available clinical evident with the findings made during the evaluation. It was the omission of this analysis in his opinion which led the ALJ to conclude Dr. Sharma was more probably wrong in his impairment rating.

Finally, Claimant did not argue Dr. Sharma's rating to the cervical spine was incorrect and the ALJ notes no evidence was presented that those findings were incorrect. Respondents paid PPD benefits based on that rating and are entitled to a credit for those payments made.

Temporary Partial Disability Benefits

Claimant alleges she was entitled to receive TPD benefits from December 31, 2014 through September 2, 2015, the date on which she reached MMI. Claimant contends her work injury caused a wage loss, as evidenced by the reduction in her overall earnings. Claimant attributed the wage loss to time spent attending doctor appointments when she could not assist customers, which caused the reduction in her income (specifically commissions), about which she testified at hearing.

Respondents deny they are liable for TPD benefits because Claimant had a full duty release and continued to work even while receiving treatment. Respondents also point to the fact that no ATP issued work restrictions during this time.

The claim for TPD benefits is governed by § 8–42–106, C.R.S.[5], which provides in pertinent part:

> "(1) In the case of temporary partial disability, the employee shall receive sixty-six and two-thirds percent of the difference between the employee's average weekly wage at the time of the injury and the employee's average weekly wage during the continuance of the temporary partial disability..."
>
> (2) Temporary partial disability payments shall continue until the first occurrence of either one of the following:
>
> (a) The employee reaches maximum medical improvement; or
>
> (b) The attending physician gives the employee a written release to return to modified employment, such employment is offered to the employee in writing and the employee fails to begin such employment.

As a starting point, it was undisputed Claimant returned to work the day after her injury and continued to work full-time for Employer. (Finding of Fact 5). As found, there was no evidence in the record that any treating physician issued work restrictions for Claimant though the date on which she was placed at MMI. (Finding of Fact 7). There was also no question that Claimant experienced a diminution in her wages, specifically her commissions, during the time she was actively treating for her injuries. The question presented by this case is whether Claimant is entitled to receive TPD benefits where she received a full duty release from the ATP and continued to work without restrictions. The ALJ was persuaded Claimant is entitled to TPD benefits under these circumstances.

[5] The ALJ notes this section is similar to § 8–51-103, C.R.S. as it existed prior to 1990, however, that section provided the employee "shall receive sixty-six and two-thirds percent of the impairment of his earning capacity". Under that version of the Act, TPD benefits were paid for the loss of the ability to earn wages, not just the amount of lost wages. *Hendricks v. Industrial Claim Appeals Office,* 809 P.2d 1076, 1078 (Colo. App. 1991); *Vail Associates v. West,* 692 P.2d 1111, 1114 (Colo. 1984).

To decide this issue, ALJ considered the case of *Boddy v. Sprint*, W.C. 4-408-729 (ICAO 2000) cited by Claimant. In that case, Claimant was employed as a delivery driver, which required him to drive from Montrose to Gunnison each day. Claimant was returned to regular employment, however, his condition worsened. He then missed 13 deliveries in order to undergo further evaluation and treatment. At hearing, the ALJ found Claimant suffered a wage loss caused by his treatment for the industrial injury.

Affirming the decision of the ALJ, which awarded temporary disability benefits[6], the Industrial Claim Appeals Office noted the Act does not exclude an award of temporary disability benefits where the Claimant missed work to attend medical appointments. The Panel noted the ATP implicitly imposed "medical restrictions", which precluded Claimant from performing his regular work on the days of appointments. The award of temporary benefits was analyzed under § 8-42-103(1)(b), C.R.S., which required Claimant to prove the industrial injury caused a disability, that he left work as a result of the disability (for more than three regular work days) and this disability caused a wage loss. The Industrial Claim Appeals Office found there was substantial evidence in the record to support the finding that Claimant satisfied his burden of proof.

The ALJ concluded Claimant's reliance on *Boddy v. Sprint, supra,* was unavailing, first because that case involved a claim for TTD benefits under 8-42-103(1)(b). Second, *Boddy v. Sprint* is factually distinct from the case a bench. There was no evidence in the record in the instant case that Claimant's ATP took her off work when she had medical appointments. (In *Boddy v. Sprint*, the ATP took Claimant off work for those appointments.) Also, in *Boddy,* Claimant could not perform one of his job duties, namely driving because of his medical appointments. There was no evidence Claimant was unable to perform her job duties, although she testified she had assistance and also had to leave on occasion because of medical appointments.

Respondents' main contention was that Dr. Peterson's full duty release of Claimant to return to work is dispositive. The ALJ disagrees and notes Respondents cited no authority for the proposition that a return to regular duties precluded an award of temporary partial disability benefits. Indeed, the language of § 8–42–106, C.R.S. does not contain the proviso that TPD benefits terminate upon a release to return to regular employment. Moreover, there is a paucity of caselaw which addresses this factual scenario, namely Claimant's entitlement to TPD benefits where she received a full duty release, but still sustained a wage loss.

The ALJ has analyzed the request for TPD benefits in terms of whether the evidence supports the conclusion that Claimant's industrial injury was disabling and caused a wage loss, even after she returned to work with no restrictions. Indeed, the Court of Appeals case of *Champion Auto Body v. Industrial Claim Appeals Office,* 950 P.2d 671,673-674 (Colo. App. (Colo. App.1997) provides authority that such an award can be made.

[6] Although the decision does not specify TTD benefits were at issue, the statute cited refers specifically to § 8-42-103(1)(b), which governs TTD benefits.

On the one hand, the medical records are replete with references which noted Claimant was able to perform her regular duties. Although Claimant testified she had assistance from coworkers, there was no evidence before the Court which indicated she required any sort of job modifications to complete her duties. However, the ALJ credited Claimant's testimony she missed the opportunity to earn commissions when she went to medical appointments. This evidence led the ALJ to conclude she was not able to work at her pre-injury levels, which caused the wage loss. Also, the wage records admitted at hearing showed a significant reduction in Claimant's earnings, most notable a loss of commissions. This evidence was uncontroverted, as there was no evidence presented by Employer which refuted Claimant's contentions. The evidence established Claimant sustained a wage loss, despite having a full duty release to return to work. Further, the facts showed the wage loss was caused by Claimant's industrial injury. Accordingly, ALJ concludes Claimant is entitled to temporary partial disability benefits.

The ALJ next considered Claimant's contention that she is owed additional TPD benefits for the period of June 29, 2015 through September 3, 2015. The ALJ reviewed the ledger of TPD payments submitted on behalf of Insurer, as well as Claimant's wage records. Despite claiming that the payments made from May 31 through June 14, 2015 and June 14, 2015 through June 28, 2015 were not sufficient, Claimant provided no explanation to support this contention, nor was specific evidence cited to in the record. Thus, the ALJ is unable to conclude those TPD payments were incorrect. However, there was no evidence TPD was paid for the period from June 29, 2015 through September 3, 2015.

Therefore, the parties are ordered to confer regarding the amount owed for this period, in light of the Court's ruling that Claimant is entitled to recover TPD benefits. If the parties are unable to agree on amount, the case shall be set for hearing on the amount of temporary partial disability benefits owed.

Overpayment

Respondents contend they are entitled to recoup the TPD benefits which were paid to Claimant in error, as she was never taken off work. Respondents cited § 8-40-201(15.5), C.R.S., which provides:

> "'Overpayment' means money received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive, or which results in duplicative benefits because of offsets that reduce disability or death benefits payable under said articles. For an overpayment to result, it is not necessary that the overpayment exist at the time the claimant received disability or death benefits under said articles."

Respondents addressed this request for repayment to the authority of the ALJ, who has authority pursuant to § 8-43-207(1)(q), C.R.S. to conduct hearings and require repayment of overpayments. Based upon the evidence presented at hearing, the ALJ was persuaded Claimant was entitled to receive TPD benefits for the loss of earnings occasioned by Claimant's industrial injury. Claimant proved she lost income from December 31, 2014 through September 3, 2015. Therefore, no overpayment exists by virtue of TPD payments made. Respondents shall receive credit for the payments made.

***Grover* Medical Benefits**

The need for medical treatment may extend beyond the point of MMI where Claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995). An award of *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended, nor a finding that Claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999). Claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915 (Colo. App. 1993). An award of *Grover* medical benefits should be general in nature. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003).

Claimant had the burden of proving that she was entitled to maintenance medical benefits. As found, Dr. Hattem concluded Claimant could pursue cervical epidural injection as maintenance care, but did not require additional treatment. Claimant declined the injection. There was no evidence admitted that any physician specifically recommended maintenance medical treatment. In this regard, Dr. Sharma opined Claimant did not require further medical treatment. Dr. Rook did not recommend any further treatment. Although a DIME physician's or other IME physician's opinion on maintenance medical benefits is not controlling, the ALJ concluded, based upon the evidence in the record, Claimant does not require further medical treatment.

ORDER

It is therefore ordered that:

1. Respondents shall pay PPD benefits to Claimant based upon the 6% whole person impairment to the thoracic spine, as found by Dr. Rook.

2. Respondents shall pay TPD benefits to Claimant from December 31, 2014 through September 2, 2015.

3. Insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. Insurer is entitled to a credit in the amount of $15,058.20 for the payment of TPD benefits. Insurer is entitled to a credit for the PPD benefits previously paid.

5. Counsel for the parties shall confer regarding TPD benefits owed from June 29, 2015 through September 3, 2015 in an attempt to resolve the issue. If the

parties are unable to agree on amount, a hearing shall be set on the amount of temporary partial disability benefits owed.

6. Claimant's request for *Grover* medical benefits is denied.

7. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

1525 Sherman Street, 4th floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-977-019-02

ISSUES

- Whether the Claimant proved by a preponderance of the evidence that he suffered a compensable injury arising out of and occurring within the course and scope of employment with the Employer on or around July 26, 2014.

- If Claimant suffered a compensable injury on or around July 26, 2014, what medical benefits are reasonable, necessary, and related to that compensable event?

- If Claimant suffered a compensable injury on or around July 26, 2014, what temporary disability benefits, is Claimant entitled to as a result of that event?

STIPULATION

The parties stipulate to an Average Weekly Wage of $1,409.00.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a 52-year-old "Article 22" worker at UPS. As an Article 22 worker, Claimant performs split duties and works "pick-off" for the first four hours of his shift and drives at tug for irregular carts for the remainder of his shift. In his duties as a tug driver, Claimant arranges irregular carts to be filled with packages and then takes the full carts, arranges them onto a "mother cart," and drives them to their destination belts.

2. Claimant began a shift on July 25, 2014, which ended on Saturday morning on July 26, 2014. On or around the morning of July 26, 2014, Claimant was in a seated position on his tug when he turned/twisted his head and upper body to the right to look behind him. He felt an acute "tug" on the left side of his low back. Claimant described the onset of pain as mild. Claimant completed the rest of his shift and did not report an injury to anyone at UPS.

3. Claimant testified that he awoke on Saturday afternoon, July 26, 2014, and could not move due to painful spasms. Claimant testified that he could not get up or move forward. Claimant also told Dr. Lesnak during his November 23, 2015 IME that he began to experience left leg symptoms as well. Claimant did not report a work injury to UPS.

4. Claimant testified that his back condition did not improve the following day, Sunday, July 27, 2014.

5. Claimant attended a scheduled appointment at the University of Colorado Hospital for a non-related procedure to remove cysts from his scalp on Monday, July 28, 2014. During examination, Claimant reported that he had left-sided low back pain. Claimant denied radicular symptoms or leg weakness. Claimant reported that he had sciatica symptoms for the past 15 years but felt his pain acutely worsen while twisting at work. Claimant testified at hearing that he had not experienced symptoms involving his low back prior to the incident on July 26, 2014, including any soreness, pain, or problems.

6. Claimant did not work on Monday, July 28, 2014, or Tuesday July 29, 2014, as he was recovering from his cyst removal procedure.

7. On Wednesday, July 30, 2014, Claimant reported a work-related injury to his back to UPS. Claimant was referred to Dr. James Rafferty for treatment and presented on this same date. Claimant reported having experienced a "tweak" in the left side of his low back after twisting with the mild onset of pain. Dr. Rafferty noted that Claimant had experienced similar symptoms approximately 10 years prior, which resolved rapidly and without treatment. Claimant indicated symptoms were localized to his left low back and denied any radicular symptoms or weakness into the lower extremities. Dr. Rafferty diagnosed Claimant with a strain of the left hip (gluts) and stated that causation was undetermined because he did not know whether or not the tug placed Claimant at an increased risk of low back pain by turning. There were no work restrictions. At this time, Claimant weighed 219 pounds and stood 5' 5" in height.

8. Claimant was subsequently given light duty by UPS after his visit to Dr. Rafferty. Claimant took two weeks off of work and returned to see Dr. Rafferty on August 7, 2014. Claimant reported that he was "doing great" and was "now back to his usual state of health." Claimant reported that he had no back pain at this time and was ready to return to his usual duties at work. Dr. Rafferty placed Claimant at MMI and discharged him from care with no permanent impairment, permanent restrictions, or need for additional treatment.

9. Claimant worked regular duty and sought no further treatment until December 22, 2014, when he returned to Stapleton Clinic with complaints of renewed low back pain. Claimant saw Dr. Ryan Otten and reported that he had intermittent symptoms in the *right* buttock area after July 2014. Claimant reported that he had originally injured his back while twisting but that his pain had become worse after being on his feet all day. Claimant denied radicular symptoms. Dr. Otten left causation as undetermined and

gave Claimant work restrictions limiting walking and standing duties to 50% of the shift.

10. On January 5, 2015, Claimant returned to see Dr. Otten and again denied radicular symptoms into the legs.

11. On January 26, 2015, Claimant saw Dr. Ricky Lee Artist and complained of low back and *right* hip pain. Dr. Artist noted that Claimant experienced persistent pain at work, increased pain at home in the evenings, pain getting in and out of bed, and marked difficulty getting in and out of his car. Dr. Artist left causation to be determined.

12. On February 2, 2015, Claimant saw Dr. Rick Zimmerman. Claimant reported at "one-year history of slowly progressive low back pain that started insidiously." Claimant reported that, in July 2014, his symptoms became "too much" and that he had attempted to control his symptoms by taking two weeks off from work. Claimant stated that, after several weeks, his symptoms improved but did not totally resolve. Claimant stated that, approximately one month prior, he experienced a "flare-up" with no specific injury. Claimant denied leg pain or paresthesia in the lower extremities. Upon physical examination, Claimant was able to walk without difficulty but Dr. Zimmerman did note that there was a waddling-type gait pattern due to a combination of hip mechanics and general deconditioning. Dr. Zimmerman recommended that Claimant undergo physical therapy and also recommended weight loss to reduce strain on the low back. Dr. Zimmerman referred Claimant for an MRI study.

13. On February 12, 2015, Claimant saw Dr. Brian Williams. Claimant denied radicular symptoms or weakness into the bilateral lower extremities. Claimant was working modified duty at this time.

14. On February 16, 2015, Claimant underwent a lumbar spine MRI. The "Impression" section of the MRI study showed: edema bilaterally at the L4 and L5 pedicles with suspected trabecular stress fractures in the pedicles at these levels; advanced facet arthropathy at L4-L5 with degenerative anterolisthesis; and a broad L5-S1 left paracentral to lateral disc protrusion contributing to moderate left foraminal stenosis.

15. On February 18, 2015, Claimant subsequently began treating with Dr. Tanya Kern at Stapleton clinic.

16. On February 25, 2015, Claimant returned to see Dr. Zimmerman. Dr. Zimmerman noted that Claimant had been off work since February 3, 2015. Claimant complained of some intermittent paresthesia in the left lower extremity, including the lateral knee and foot region. Dr. Zimmerman noted that Claimant went from seated to standing without

hesitation and normal biomechanics. Dr. Zimmerman noted that Claimant ambulated with an upright posture and normal gait pattern. Dr. Zimmerman noted that Claimant could bend forward with only minimal low back discomfort, but that extension recreates axial back pain with stiff rotation and localized pain over the facet joints bilaterally. Dr. Zimmerman reviewed the MRI study and indicated that pain was extension-based and likely facet-mediated. Dr. Zimmerman discussed the findings with the radiologist and indicated that the findings were consistent with a stress reaction type phenomenon. Dr. Zimmerman recommended steroid injections at L4-5 and L5-S1 for diagnostic and therapeutic purposes.

17. On March 11, 2015, Dr. Kern noted that Claimant had taken all of February off of work for soreness. Dr. Kern noted that "sometimes [Claimant] sits and cries because he feels so bad" and that he had difficulties walking. Dr. Kern gave Claimant work restrictions limiting lifting to no more than 5 pounds occasionally, walking/standing no more than 15 minutes per hour, and avoiding repetitive bending and twisting at the waist.

18. On March 18, 2015, Dr. Zimmerman performed bilateral facet steroid injections at L4-5 and L5-S1. Claimant had a diagnostic response and demonstrated improvement with extension of the lumbar spine. Claimant ambulated without difficulty and could touch his toes without hesitation.

19. On April 8, 2015, Insurer's Nurse Case Manager sent a request to Dr. Kern asking whether the finding of trabecular stress fractures on the MRI was related to the mechanism of twisting described by Claimant in July 2014. Dr. Kern issued an undated reply and opined that the stress fractures were not caused by the injury described on July 26, 2014. Dr. Kern stated that such fractures of the lumbar spine are usually caused by repeated extension of the lumbar spine, and that the Claimant could have developed a stress fracture due to repetitive strain over time if his job involved repetitive extension of the lumbar spine.

20. On April 20, 2015, Claimant complained of additional back pain during an appointment with Dr. Zimmerman. Claimant had difficulty ambulating and showed hesitation going from a seated position to standing. Claimant indicated pain with stiffness with extension maneuvers. Dr. Zimmerman recommended medial branch blocks at L4-5 and L5-S1 for further diagnostic purposes. Dr. Zimmerman performed the injections on May 6, 2015. Claimant demonstrated a diagnostic response with pain free extension. Claimant reported complete relief of back pain during his last visit with Dr. Zimmerman, on May 15, 2015. Dr. Zimmerman noted significant improvement with mobility and pain free range of motion with lumbar extension. Dr. Zimmerman noted that Claimant had no evidence of lumbar radicular symptoms. Dr. Zimmerman indicated that further

interventional treatment was not necessary and recommended additional conservative therapy, which could be considered as part of maintenance.

21. Claimant continued pool therapy and saw Dr. Kern for regular follow-up visits. Claimant's complaints of pain continued to fluctuate. Claimant reported continued right hip pain. Claimant also reported ongoing left low back and leg pain.

22. On June 14, 2015, Claimant returned for a trial of full duty but did not believe he could return to his former duties. On June 29, 2015, Claimant reported pain of over 10/10 to Dr. Kern with painful lumbar extension. On or around July 27, 2015, UPS offered Claimant a lighter duty job and Claimant requested to be released to full duty. Claimant's weight fluctuated between 220 and 230 pounds during this time.

23. On August 17, 2015, Dr. Kern placed Claimant at MMI. Dr. Kern gave Claimant no permanent impairment, no work restrictions, and recommended no additional medical care. At the time of MMI Claimant's diagnoses were listed as stress fracture with routine healing and lumbosacral facet arthropathy. The vast majority of medical records admitted into evidence reference July 26, 2014 as the date of injury.

24. On November 3, 2015, Claimant saw Dr. Lawrence Lesnak for an IME commissioned by Respondents. Claimant told Dr. Lesnak that he had injured himself on July 14, 2014 (later clarified to be July 26, 2014) while he was in a seated position driving his tug and turned to the right to look behind him. Claimant stated that the following morning, he awoke with significant left low back pain symptoms and subsequently developed left leg symptoms. Claimant specifically denied any history of low back injuries or similar symptoms prior to the July 2014 alleged work injury. Claimant did not report any injury from pushing a cart on or around December 22, 2014.

25. During physical evaluation, Dr. Lesnak noted that Claimant showed no signs of antalgic gait and could independently heel and toe walk without difficulty. Claimant was negative for Patrick's maneuver.

26. Dr. Lesnak opined that the described mechanism of twisting could possibly cause a temporary strain, but that the findings on the MRI were unrelated to this mechanism. Dr. Lesnak noted that Claimant had initially reported left-sided low back symptoms in July 2014 but that his complaints after December 2014 involved right-sided buttock symptoms. Dr. Lesnak noted that there was no specific inciting event that caused these symptoms and that Claimant had preexisting chronic, intermittent low back and buttock symptoms prior to July 2014. Dr. Lesnak opined that any and all treatment after Claimant was found to be at MMI by Dr. Rafferty, on

August 7, 2014, would be completely unrelated to the alleged occupational injury which occurred in July 2014.

27. On December 2, 2015, Claimant saw Dr. Caroline Gellrick for an IME commissioned by Claimant. Claimant reported a 15-year history of sciatica with pain down his left leg. Claimant described work duties involving lifting, pushing, and pulling. Claimant told Dr. Gellrick that at times, while pushing and pulling carts, his sciatic pain down his left leg would become worse. Claimant told Dr. Gellrick that on or around December 21, 2014, "his back pain suddenly worsened and also pain down the leg." Dr. Gellrick states that, by Claimant's history, he had an injury on approximately "December 21, 2014 when he got up that morning the back pain was severe with pain radiating down the leg." She opined that "the injury itself probably occurred December 20, 2014" as an aggravation of a preexisting condition. Claimant did not describe any specific inciting event. Dr. Gellrick reviewed Claimant's job for extension-type injuries and Claimant stated that he did not recall hyperextension problems on the job, stating that his job involved bending, pushing, and pulling on carts.

28. Dr. Gellrick performed a physical examination and noted "definite weakness on the left." Dr. Gellrick noted that Claimant exhibited pain with a heel and toe walk maneuver. Dr. Gellrick indicated that Claimant tested positive for Patrick's maneuver, bilaterally, with the left worse than the right.

29. Dr. Gellrick opined that "It is clear the patient has two separate work related events that caused flare of symptoms in the low back." RHE I at 31. Dr. Gellrick did not address the mechanism of twisting or turning in regard to analysis of causation of the alleged July 26, 2014 injury. Dr. Gellrick states: "[Claimant's] sciatica that he describes of 15 years at the Family Medicine Clinic at the University of Colorado in July of 2014 he feels is due to repetitive use with lifting, pushing and pulling on his job." Dr. Gellrick opined that that Claimant was not at MMI for his alleged December 2014 work injury, without addressing medical causation. Dr. Gellrick opined that Claimant should have further diagnostic studies of the lower extremity based upon the weakness demonstrated upon evaluation.

30. Claimant testified at hearing that he did a full body turn while on his tug and "felt a tug on my left side" of the low back. Claimant explicitly denied having experienced symptoms involving his low back prior to this time. Claimant subsequently changed his testimony and stated that he had experienced prior low back pain, but that this had not prevented him from work. Claimant thereafter testified that he did not have any low back or leg pain prior to the alleged July 26, 2014 work injury. Claimant testified that he did not experience the onset of pain in July 2014 while lifting or

bending. Claimant testified that he did not have any leg pain at the time he reported back pain to the University of Colorado Hospital, on July 28, 2014, and at the time he was discharged from care by Dr. Rafferty, on August 7, 2014. Claimant testified that his pain had become much more severe after the alleged July 26, 2014 incident.

31. Claimant testified that he subsequently injured himself pushing a cart on December 22, 2014. Claimant testified that he had denied having suffered any injuries subsequent to the alleged July 26, 2014 incident in an interrogatory response sent to Respondents in November 2015. Claimant testified that he experienced the immediate onset of pain pursuant to this alleged event. Claimant testified that his job does not involve any activities requiring bending backwards.

32. Dr. Lesnak testified at hearing as Respondents' expert. Dr. Lesnak testified that twisting could possibly cause a sprain/strain. Dr. Lesnak testified that the mere act of twisting would not be specifically related to any work activities and that he agreed with Dr. Rafferty that causation was therefore undetermined in relationship to work duties. Dr. Lesnak testified that there was no medical evidence to suggest that Claimant would be at any increased risk of developing a strain/sprain by sitting in a tug and twisting. Dr. Lesnak testified that this type of injury, by the mechanism described by Claimant, could have occurred while sitting in a car, sitting at home, or sitting on the couch. Dr. Lesnak testified that none of the work activities described by Dr. Gellrick as the potential cause of the alleged July 26, 2014 work injury, including lifting, pushing and pulling, were related by Claimant to any of his providers as having precipitated his back pain on that date. Dr. Lesnak testified that, based upon the totality of the medical evidence and testimony, it was his medical opinion that the alleged strain from twisting was not work-related.

33. Dr. Lesnak testified that Claimant's testimony that he had no back pain or prior leg symptoms and his report to Dr. Lesnak upon evaluation contradicted the medical records which indicated a history of similar symptoms. Dr. Lesnak testified that sciatica commonly refers to back pain, buttock pain, and leg symptoms, including low back pain. Dr. Lesnak testified that Claimant's symptoms on or around July 25, 2014 would be consistent with a patient who has a history of episodic sciatica and back pain. Dr. Lesnak testified that Claimant's characterization of his pain having become "much more severe" after twisting in July 2014 was not consistent with the medical records at the time of that alleged incident, as these symptoms resolved within a week. Dr. Lesnak testified that, based upon Claimant's weight, his age, and the degenerative findings on the MRI study, he would be expected to have non-related back pain.

34. Dr. Lesnak testified that Claimant did not report any second work-related event to him during his IME evaluation in November 2015. Dr. Lesnak testified that there was no lifting, twisting, pushing or pulling incident reported in connection with an injury or aggravation sustained on or around December 22, 2014, and that Claimant had simply reported experiencing back pain from standing too much at work. Dr. Lesnak noted that Claimant's report of left-sided low back pain pursuant to the alleged July 26, 2014 incident was inconsistent with reports of right-sided low back pain subsequent to December 2014. Dr. Lesnak also testified that Claimant's complaints of leg pain were not consistent in the medical records.

35. Dr. Lesnak testified that the findings on the MRI, including suspected stress fractures of the pedicles at L4-5 and L5-S1, were not causally related to the alleged July 26, 2014 twisting event. Dr. Lesnak testified that extension, described by Dr. Kern as a potential cause of the MRI findings, involves backward bending at the waist. Dr. Lesnak testified that there would need to be a significant extension injury to cause stress fractures. Dr. Lesnak testified that twisting, lifting, pushing, and pulling do not and should not involve extension. Dr. Lesnak testified that none of the work activities that Claimant described to his providers involved repetitive extension and that there was no evidence of an extension-type injury at work. Dr. Lesnak testified that Claimant's weight at the time of the alleged injury would have classified him as overweight and that the increased gravitational forces upon the spine could hasten degenerative changes.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

In determining whether a claimant has met his burden of proof, the ALJ may resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence. *Bodensleck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Youngs v. Indus. Claim Appeals Office*, 297 P.3d 964 (Colo. App. 2012). The same principles for determining credibility of lay witnesses apply to expert witnesses as well. *Heinicke v. Indus. Claim Appeals Office*, 197 P.3d 220 (Colo. App. 2008). When determining credibility, the ALJ should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness, probability or improbability, of the testimony and actions, the motives of the witness; whether the testimony has been contradicted; and bias, prejudice and interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936), *overruled in part*, *Lockwood v. Travelers Ins. Co.*, 498 P.2d 947 (Colo. 1972). The ALJ should consider an expert witness' special knowledge, training, experience, or research, and has broad discretion to determine the weight of evidence on this basis. *See Young v. Burke*, 338 P.2d 284 (Colo. 1959); *see also* Section 8-43-210, C.R.S.; *One Hour Cleaners v. Indus. Claim Appeals Office*, 914 P.2d 501 (Colo. App. 1995).

The ALJ determines that Claimant's testimony is not credible. Claimant's testimony is not credible in regard to documented medical evidence in the record of a longstanding history of preexisting back pain and symptoms similar to those reported as part of his alleged July 26, 2014 work injury. Claimant's testimony is not consistent with his own reports to his providers and to the parties' experts regarding the nature of his symptoms, as he reported to Dr. Lesnak that he had leg pain after the alleged July 26, 2014 incident when this was denied in the medical records at that time. Claimant also reported having the onset of leg symptoms to Dr. Gellrick after his alleged December 2014 incident, which was not consistent with the medical records at that time. Claimant's testimony regarding the cause of the reoccurrence of his back pain in December 2014 is not credible, as he claims that he sustained an injury from pushing a cart and felt immediate pain when this mechanism is absent in the entirety of the medical records. Claimant also told Dr. Zimmerman that his pain reoccurred with no specific onset or mechanism of injury, which was contrary to his testimony. Likewise, while Claimant denied having prior back pain or leg pain on multiple occasions during testimony, and to Dr. Lesnak at his IME evaluation, he reported to Dr. Zimmerman in February 2015 a one-year history of similar symptoms which began insidiously and became progressively worse.

The ALJ finds that the opinion of Dr. Gellrick is not credible or persuasive. Dr. Gellrick surmises two separate work-related injuries, in July 2014 and in December 2014. This is contrary to the totality of the medical records, which indicate only a single alleged injurious event occurred at work on or around July 26, 2014. Dr. Gellrick does not address the causal mechanism of twisting in relation to this event and instead posits alternative mechanisms which were not described in the medical records and explicitly denied as a mechanism by Claimant at hearing. Dr. Gellrick likewise does not record any causal mechanism for the alleged December 2014 injury, though Claimant clearly reported at hearing that he injured himself pushing a cart at that time. Dr. Gellrick does not cite or provide supporting documentation in the record to serve as the basis for her opinion. Moreover, Dr. Gellrick explicitly notes that Claimant's job does not involve hyperextension, which Dr. Kern indicated may be a sufficient causal mechanism for the findings on the MRI and which Dr. Lesnak testified may be sufficient to cause stress fractures. Dr. Gellrick's findings upon examination were also markedly different to those of Dr. Lesnak, who had seen Claimant just one month prior to her IME. Dr. Gellrick's opinion regarding causation was largely based upon the report that Claimant, himself, attributed his symptoms to his work duties.

The ALJ finds that the testimony and opinions of Dr. Lesnak are credible and persuasive. The opinions of Dr. Lesnak are most consistent with the opinions of Claimant's providers in the medical records regarding the history of the alleged injury and causation. Dr. Lesnak's opinion regarding of causation of the alleged July 26, 2014 injury is consistent with that of Drs. Rafferty, Dr. Otten, and Dr. Artist. Dr. Lesnak's opinion regarding causation and the relatedness of the findings on the MRI is consistent with that of Dr. Kern.

An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010). Substantial evidence is that "quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. *See Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). An ALJ's determination of factual findings must be upheld if supported by substantial evidence and plausible inferences of the record. *Eller v. Indus. Claim Appeals Office*, 224 P.3d. 397, 399-400 (Colo. App. 2009).

The ALJ finds that Claimant's testimony and assertion of a work-related injury is not supported by substantial evidence in the record.

A compensable injury is one that arises out of and occurs within the course and scope of employment. § 8-41-301(1)(b), C.R.S. An injury occurs in the course of employment when it was sustained within the appropriate time, place, and circumstances of an employee's job function. *Wild West Radio v. Industrial Claim Appeals Office*, 905 P.2d 6 (Colo. App. 1995). An injury arises out of employment when there is a sufficient causal connection between the employment and the injury. *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014). Where the claimant's entitlement to benefits is disputed, the claimant has the burden to prove, by a preponderance of the evidence, a causal relationship between the work injury and the condition for which benefits are sought. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

An aggravation of a preexisting condition is compensable. *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. 1990). If there is a direct causal relationship between the mechanism of injury and resultant disability, the injury is compensable if it caused a preexisting condition to become disabling. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004). There must be some affirmative causal connection beyond a mere assumption that the asserted mechanism of injury was sufficient to have caused an aggravation. *Brown v. Industrial Commission*, 447 P.2d 694 (Colo. 1968). It is not sufficient to show merely that the asserted mechanism could have caused an aggravation, but rather Claimant must show that it is more likely than not that the mechanism of injury did, in fact, cause an aggravation. *Id*. Simply because a claimant experiences symptoms after performing a job function does not necessarily create a causal connection to the work function. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968). ICAO has upheld denial of compensability where the mechanism asserted was the mere act of turning and experiencing pain. *See*

Willis v. Craig Hospital, W.C. No. 4-627-742 (February 13, 2006).

Notwithstanding, if the claimant's injury is precipitated by a preexisting nonindustrial condition, the injury is not compensable unless a special hazard of the employment contributes to the accident or the extent of the injuries sustained. *National Health Laboratories v. Industrial Claim Appeals Office*, 844 P.2d 1259 (Colo. App. 1992). Under the "special hazard" rule, a claimant may be compensated if a preexisting injury, infirmity, or disease is exacerbated by the concurrence of a preexisting weakness and a hazard of employment. *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989); *Gates Rubber Co. v. Industrial Commission*, 705 P.2d 6 (Colo. App. 1985). In such cases, the existence of a special hazard, which elevates the probability of an injury serves to establish the required causal relationship between the employment and the injury. *Ramsdell v. Horn, supra*. A condition is not a special hazard of employment if it is ubiquitous in the sense that it is found generally outside of the employment. *Gates Rubber Co. v. Industrial Commission, supra*.

Notwithstanding Claimant's testimony to the contrary, the medical records establish that Claimant has a significant preexisting history of chronic, intermittent low back pain and sciatica. Claimant alleges that he injured his left low back while sitting on his tug and twisting to look behind him. Claimant was not driving his tug, not lifting, not bending, and not pushing or pulling anything. Dr. Rafferty indicated that he could not state that Claimant had a work-related injury because he did not know whether merely sitting and turning on a tug placed Claimant at increased risk of low back pain. Dr. Lesnak testified that, there was no medical evidence to suggest that a person is at increased risk of developing any strain/sprain injury by sitting in a tug and twisting. Dr. Lesnak testified that the act of sitting and twisting is one which is commonly encountered in everyday situations outside of work, including in one's car, at one's home, and sitting on the couch. Dr. Gellrick did not render any specific opinion concerning the causal relationship between Claimant's asserted mechanism of twisting, his job duties, and his injury. Rather, Dr. Gellrick indicated that Claimant likely developed an injury based upon job duties not reported to be the cause in the medical records or in testimony at hearing. Based upon the testimony, the medical records, and the preponderance of the medical opinion, Claimant's injury did not arise out of his employment duties.

Respondents are liable only for those medical benefits which are reasonable and necessary to cure and relieve the effects of the industrial injury. § 8-42-101(1)(a), C.R.S.; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The record must distinctly reflect the medical necessity of any medical treatment needed to cure and relieve an injured employee from the effects of the industrial injury and any ancillary service, care, or treatment as designed to cure and relieve the effects of such industrial injury. *Public Service Co. of Colorado v. Industrial Claim Appeals Office of State of Colo.*, 797 P.2d 584 (Colo. App. 1999). The question of whether medical treatment is reasonable and necessary is one of fact for determination by an ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

Treatment for a work injury must not only be reasonable and necessary but must also be causally related to that injury. *Lerner v. Wal-Mart Stores, Inc*., 865 P.2d 915 (Colo. App. 1993). Respondents are permitted to challenge causation and relatedness of the need for any treatment, despite having admitted liability for a claim. *Hanna v. Print Expediters, Inc*. 77 P.3d 863 (Colo. App. 2003). In a dispute over medical benefits that arises after filing an admission of liability, respondents may assert, based upon subsequent medical reports, that a workers' compensation claimant did not establish a threshold requirement of direct causal relationship between the on-the-job injury and need for medical treatment. *Snyder v. Industrial Claim Appeals Office of the State of Colo., supra*. Claimant bears the burden to prove a causal connection exists between a particular treatment and the industrial injury. *Id*.; *see also Grover v. Industrial Commission of Colorado*, 759 P.2d 705 (Colo. 1988). Causation is a question of fact for resolution by the ALJ. *F.R. Orr Construction v. Rint*, 717 P.2d 965 (Colo. App. 1985).

Claimant has failed to establish a causal relationship between his work duties and his alleged injury on July 26, 2014 and no medical treatment pursuant to that date of injury is reasonable, necessary, or related to an injury which arose out of and occurred within the course and scope of his employment.

While Claimant has recently filed a separate claim for a second injury which he alleges was caused by pushing a cart on or around December 22, 2014, issues concerning that claim are not before this ALJ for resolution.

Because the ALJ has found and concluded that Claimant's claim is not compensable, Respondents are not liable for temporary total disability benefits.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has failed to meet his burden of proof by a preponderance of the evidence that he suffered an acute aggravation of a preexisting condition arising out of and occurring within the course and scope of his employment on or around July 26, 2014. Claimant's claim for compensation is denied and dismissed.

2. 2. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 15, 2016

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

The sole issue to be determined at hearing was:

1. Whether the Claimant has proven that his request for a spinal cord stimulator trial is reasonable, necessary and related to his work injury of June 8, 2013.

FINDINGS OF FACT

1. The Claimant is 25-year-old male who was hired by Employer in March 2013 to repair and maintain pools and spas.

2. On June 8, 2013, the Claimant was hanging over a pool while unscrewing and opening steel jet covers. He was in the process of removing a metal plate from the jet with the use of a screw driver and when he lifted himself out of the pool, he experienced pain in his left mid back just to the left of his spine.

3. The Respondents initially admitted for injuries including the thoracic and cervical spine, but contested injuries to the lumbar spine which included a herniated disc. Following a hearing on November 21, 2013, ALJ Felter determined that the weight of the medical evidence established that the Claimant's lumbar spine condition was causally related to the admitted injury of June 8, 2013. ALJ Felter ordered that, "Respondents shall pay the costs of medical care and treatment for the Claimant's thoracic and low back injuries of June 8, 2013, subject to the Division of Workers Compensation Medical Fee Schedule."

4. Although Claimant originally received medical care in Colorado, he moved to Connecticut on July 12, 2013 and transferred his care briefly to Concentra Medical Center where he was seen by Dr. Victor Cohen and Dr. Victor Wasilauskas. The Claimant's care was then again transferred to Dr. Bhavesh Patel at US MedGroup who took over as the Claimant's primary care provider in Connecticut. Dr. Patel ultimately referred Claimant to Dr. Karnasiewicz for surgical consideration and both have remained active in Claimant's diagnosis and care for his lumbar spine.

5. After the Claimant's condition did not improve with physical therapy and treatment by Dr. Patel, he returned again to Dr. Karnasiewicz on February 11, 2014 for re-evaluation. At this visit, Dr. Karnasiewicz reviewed the lumbar MRI scan noting it showed a herniated disc that he felt was abutting the left S1 nerve root and a concomitant annular tear. At that point in time, since the Claimant's condition had not improved in spite of considerable conservative care including over 40 sessions of

therapy, a microdiscectomy was recommended. Complications of the surgery were discussed, and the Claimant wished to proceed with surgery.

6. After having the request for microdiscectomy reviewed by multiple physicians in Colorado, the Insurer denied the procedure as not reasonable, necessary, nor related to Claimant's original work-related injury. The matter then proceeded to hearing on July 8, 2014. Following the second hearing on February 6, 2015, it was found that the L5-S1 microdiscectomy recommended by Dr. Karnasiewicz was reasonably necessary to cure and relieve the Claimant from the effects of his June 8, 2013 lumbar spine work injury.

7. On March 23, 2015, Dr. Karnasiewicz performed a microdiscectomy at L5-S1 with a decompression of the left S1 nerve root. At that time he found no evidence of neurological damage (Respondents' Exhibit C, p. 15).

8. Although initially the Claimant noted he felt 20% improved following the surgery, he continued to report numbness in his left leg without significant changes in symptoms postoperatively. The Claimant also continued using narcotic medications (Respondents' Exhibit C, p. 15). By April 23, 2015, the Claimant reported that he had no significant changes after his surgery. By May 1, 2015, Dr. Karnasiewicz indicated that the Claimant still had burning in his left leg with minimal progress. *Id.*

9. On June 19, 2015, the Claimant reported persistent pain to Dr. Barinder Mahal and an updated MRI of the lumbar spine showed epidural scar formation that Dr. Beery noted was causing impingement of the left S1 nerve root (Claimant's Exhibit 2, p. 13).

10. In July and August, Dr. Karnasiewicz, noted persistent radicular pain indicating the Claimant may now be a candidate for spinal cord stimulator. At that time he recommended a spinal cord stimulator trial and referred the Claimant to Ms. Sharon Diaz for psychological counseling (Claimant's Exhibit 4).

11. The Claimant has been under the care of Sharon Diaz, a licensed professional counselor, to help him with his anxiety and depression as a result of his injury. She performed a psychological assessment at the request of Dr. Karnasiewicz. On August 11, 2015, Ms. Diaz assessed whether the Claimant was a good candidate for a spinal cord stimulator from a psychological standpoint. Her assessment, which included self-administered Beck Anxiety Inventory and Pain Catastrophizing Scale, led Ms. Diaz to opine that the Claimant suffered from moderate depression and anxiety as result of his injury. She noted that the Claimant advised her that his expectations were that he was hoping for 50% improvement. Ms. Diaz expressed that in order for the Claimant to take an anti-depressant medication, he must be willing to stop the marijuana use and she recommended this for the depression and anxiety. In regard to the spinal cord stimulator trial, Ms. Diaz opined that "he is a good candidate as it may bring relief for his nerve pain" (Claimant's Exhibit 6).

12. On August 14, 2015, the Claimant was first seen by Dr. Todd Beery, on referral from Dr. Mahal, for a spinal cord stimulator evaluation. At that time, the Claimant's pain rating was 7/10. Dr. Beery recommended decreasing the Claimant's narcotic use. On August 20, 2015, Dr. Beery again discussed the need for the Claimant to decrease his opioid use. He also recommended a psychological evaluation to ensure that there were no contraindications for spinal cord stimulation. Because the Claimant had tested positive for marijuana, Dr. Beery advised he would no longer prescribe opioid medications for the Claimant and advised that the Claimant would have to see another provider for these prescriptions. The Claimant has not denied his marijuana use during the pendency of this claim and his treatment.

13. The Insurer received a request for spinal cord stimulation trial from Concentra Medical Centers and this was ultimately denied on September 3, 2015 after peer clinical review. Respondents also filed an Application for Hearing on September 10, 2015 seeking a determination of whether spinal cord stimulation was reasonable, necessary or related to Claimant's work injury.

14. On September 2, 2015, Dr. Floyd Ring, specialty in interventional pain management and anesthesiology, was asked to review the Claimant's medical history and render a preliminary opinion regarding the requested procedure. He concluded that at the time of his review there remained questions regarding the etiology of Claimant's pain complaints. He acknowledged that the MRI showed granulation tissues, but noted that this is not unexpected following a surgical intervention. He opined that the most recent physical examinations at the time of the request did not support evidence of significant neurological findings on physical examination to warrant the device. He recommended additional physical evaluation through IME and a comprehensive psychological/psychiatric evaluation pursuant to the medical treatment guidelines (Respondents' Exhibit B).

15. In a report dated October 6, 2015, Dr. Karnasiewicz noted that the Claimant had a radicular component to his pain. Dr. Karnasiewicz stated that the leg pain outweighed the back pain, which is an important consideration when recommending a spinal cord stimulator. He stated that the spinal cord stimulator is reasonable and necessary (Claimant's Exhibit 4, p. 19).

16. On November 3, 2015, Dr. Kathy Fine McCranie issued an IME report including a thorough medical record review and narrative of the history she obtained and her physical examination of the Claimant. Based on her evaluation, she opined that the request for the spinal cord stimulator trial was not clinically indicated. In support of this opinion, she noted that the Claimant has never had electrodiagnostic testing to clarify whether his pain was truly radicular. In further support, she opined that the Claimant did not have a demonstrated history of motivation and adherence to prescribed treatments. She also questioned his candidacy from a psychological standpoint, but noted that the Claimant was undergoing a psychiatric or psychological evaluation the following day. Rather than proceed with the recommended spinal cord stimulator trial, Dr. McCranie felt that the Claimant would benefit from a comprehensive

interdisciplinary pain management program to include tapering and discontinuation of opioids and marijuana (Respondents' Exhibit C).

17. The Claimant underwent a psychiatric evaluation with Dr. Robert Kleinman on November 4, 2015. Dr. Kleinman completed his psychiatric review and issued a written opinion on November 6, 2015 regarding psychiatric clearance for spinal cord stimulator trial. Dr. Kleinman opined that the Claimant has a diagnosis of psychological factors that are affecting his medical condition. Dr. Kleinman opines that the psychological factors seem related to emotional and physical dependence and these, in turn, require consideration of secondary gain. He further opines that the Claimant continues to have some evidence of ADHD with a rapid speech pattern which is slightly circumstantial. Dr. Kleinman notes that the Claimant continues to be unable to give an accurate assessment of how much the medications or the marijuana actually helps him. Though the Claimant told Dr. Kleinman that without it he cannot do anything and with it he can dress and bath himself and use the toilet, Dr. Kleinman noted it was difficult to get any further, more specific information about how the Claimant has done. The Claimant reports that without these drugs he can do nothing, but his functioning while on them is not significantly improved and he continues to complain of extensive pain. Dr. Kleinman opines that, with what he finds to be continued non-physiological pain reports, it would be difficult to establish the success of a spinal cord stimulator trial. Dr. Kleinman points out that if the Claimant is not an accurate historian, he is not likely to be able to give a good report of actual benefits from the trial. Dr. Kleinman feels that from a psychological perspective the Claimant is a poor candidate for spinal cord stimulation. Per Dr. Kleinman, the primary support for his opinion is that the Claimant has, at least in part, a somatoform disorder, there is evidence of drug dependence, the Claimant is over idealizing the benefits of the procedure and understating the risks, and the Claimant is prone to invalid responses. In respect to what Dr. Kleinman opines are nonphysiologic and expansive complaints, even if there is some objective pathology, and even if some treatment was reasonable and necessary, he cautions that serious thought needs to be given to how much is enough. In other words, in the process of leaving "no stone unturned," it is Dr. Kleinman's opinion that more harm than good can come in cases like the Claimant's, where the Claimant has not received much benefit despite extensive treatment and high dose opioid use combined with marijuana use.

18. On December 7, 2015, Dr. Michael Rauzzino, a neurosurgeon, reviewed the request for spinal cord stimulation along with conducting a thorough records review, noting that he previously rendered an opinion that surgical intervention would not be successful in relieving the Claimant's symptoms. The Claimant continued with a diffuse syndrome of pain for which no modality of treatment had been effective both before and after the surgery. Dr. Rauzzino noted that, at the time of his report, an EMG/NCV had not been conducted. However, he stated that even if there was a positive EMG, it would not change his position due to the nature of the Claimant's complaints. Dr. Rauzzino opined that it would be a disservice to the Claimant to proceed with a spinal cord stimulator implant which only changes his native anatomy more and exposes him to the risk of more complications. He opined that the risks of spinal cord stimulation are significant. Dr. Rauzzino cited studies which showed: device complications have been

reported to be 25% at 6 months, 32% at 12 months, and 45% at 24 months. In sum, Dr. Rauzzino opined that given the many questions of the actual etiology of Claimant's pain and the fact that his pain has not been significantly responsive to any form of treatment, it is not at all likely that the implanting of a spinal cord stimulator would help him in any way. Rather, he felt it has a much higher likelihood of making him worse (Respondents' Exhibit E).

19. On December 11, 2015, Dr. Beery responded to interrogatories from Claimant's counsel on December 11, 2015 stating:

> [The Claimant] was referred for evaluation for spinal cord stimulator trial after being recommended by his neurosurgeon and a physiatrist, regarding his persistent lumbar and left lower extremity pain after undergoing a left L5-S1 discectomy. Spinal cord stimulation can be beneficial in lumbar radicular pain refractory to surgical intervention. One of the contraindications to pursue the trial can be untreated and underlying psychiatric pathology. Mr. Papanicolaou has sought treatment with psychologist Dr. Sharon Diaz and was diagnosed with depression and anxiety. Despite these conditions he has reportedly been cleared from a psychological perspective to pursue spinal cord stimulation. Despite attempts to obtain documentation supporting this, medical records indicating clearance have not been obtained for my review. There are other concerns in pursuing and having a successful trial given his lack of any response to prior interventional treatments. Past interventional or surgical treatments have demonstrated no benefit or resulted in increased medication requirements. In addition other concerns include, the presence pain behaviors exhibited on physical exam and managing his expectations of the relief provided by spinal stimulation. Given these concerns, an EMG/NCS of the left lower extremity could be considered to evaluate for left lumbar radiculopathy to confirm his symptoms are radicular in nature. If an EMG/NCS confirms a left lumbar radiculopathy and he passes the psychological screening process, then pursuing spinal cord stimulation trial is medically reasonable.
> (Claimant's Exhibit 2)

20. On December 15, 2015, Dr. Mark Paz, performed an independent medical record review (and had previously performed an independent medical evaluation with examination) to address the request for spinal cord stimulation. He cited the Colorado Medical Treatment Guidelines, Rule 17, Exhibit 9, Chronic Pain Disorder, noting that "in order to justify operative interventions, clinical findings, clinical course, and diagnostic testing must all be consistent resulting in a reasonable likelihood of at least measurable and meaningful function and symptomatic improvement." Furthermore, Dr. Paz noted "it is imperative to rule out non-physiologic modifiers of pain presentation of non-operative conditions mimicking radiculopathy or instability prior to consideration of elective surgical intervention." Spinal cord stimulation "may be indicated in a subset of patients who have a clear neuropathic radicular pain." In addition, Dr. Paz opined that patients with severe psychiatric disorders and issues of secondary gain are not candidates for

the procedure. A comprehensive psychiatric or psychological evaluation, which includes standardized detailed personality inventory with validity scales such as MMPI-2, pain inventory with validity measures, clinical interview and complete review of the medical records should be completed before the spinal stimulator trial. Dr. Paz noted there should be no indication of falsifying information or invalid responses on testing, no primary risk factors including addiction, and a demonstrated history of motivation and adherence to prescribed treatment. Dr. Paz opined that prior physical examinations performed by himself, Dr. Rauzzino, and Dr. McCranie were consistent with nonorganic, non-physiologic responses. Moreover the documented physical examination findings by his providers in Connecticut and of Dr. McCranie were inconsistent with a dermatomal distribution. At the time of Dr. Paz' evaluation there had been no electrodiagnostic testing which would confirm a left lower extremity radiculopathy necessary to justify spinal cord stimulation (Respondents' Exhibit D).

21. The Claimant testified at the hearing on January 5, 2016 by telephone. The Claimant's date of birth is June 24, 1991. He is currently living in Connecticut. At the time of his injury he was living in Colorado, working for Employer. While he was working full time, he generally worked 10 hour shifts Monday through Saturday. He testified that he was very active in his free time. However, the Claimant testified that since his work injury he is in constant pain. He has a throbbing, constant, burning pain at his left low back and hip that goes down the back of his quad, down to his calf and down to his left heel. The Claimant testified that it feels as if it is all attached by a cord. He testified that everything he does now is done to take the edge off the pain. The Claimant testified that the pain is affecting him now just as much as it did prior to surgery. Right after the surgery, he felt about 20% better, but once his initial recovery period was over, it was back to the same. He testified that physical therapy and massage helps some because it keeps him more physical, but it is temporary. The Claimant relies on medications for pain relief, including a Percocet every 6 hours and marijuana use. The Claimant testified that he is willing to take the risks associated with a spinal cord stimulator because he does not want to continue taking narcotics at his current levels to escape the pain. On cross-examination, the Claimant responded to questions about his marijuana use and testified that he now uses it to control nausea issues and to help him sleep. He testified that he has a medical marijuana card in Connecticut that he received based on his condition.

22. Dr. Kathy McCranie testified at the hearing on January 5, 2016 as an expert witness in the areas of physical medicine and rehabilitation, chronic pain management and Level II accreditation matters for workers' compensation. Dr. McCranie saw the Claimant for an independent medical examination and she issued a report dated November 3, 2015. Dr. McCranie testified that she concluded that the Claimant is not an appropriate candidate for a trial spinal cord stimulator. She opined that a good candidate is one with clear neuropathy. She testified that the Claimant has very diffuse extremity neuropathy, which she described as similar to fibromyalgia type of pain. Dr. McCranie also testified that it is possible that the Claimant has opioid hyperalgesia which is when medication use causes a sensitization causing multiple places of pain or tenderness. Dr. McCranie testified that she does not believe a spinal

cord stimulator would help the Claimant's condition. She also testified regarding risks associated with stimulator implants including infections, pain in other areas, and a limited time period for the maximum benefit. With respect to whether or not a trial should be conducted, Dr. McCranie testified that patients have a tendency to magnify symptoms during a trial and physicians must rely on a patient's subjective complaints and subjective reports that an implant ins helping. Dr. McCranie also expressed concerns that all prior interventions have not resulted in benefit for the Claimant and his medication use has actually increased. On examination of the Claimant, Dr. McCranie noted 5/5 Waddell's signs present which she opines is significant for a large psychological component to the Claimant's pain presentation. Dr. McCranie testified that if the Claimant had a positive EMG, she would find him to be a better candidate for a trial spinal cord stimulator but still had some reservations. Dr. McCranie recommends tapering opioids and marijuana use and placing the Claimant in a comprehensive pain management program. After further discussion about the Claimant undergoing an EMG, the hearing was continued so that the Claimant could be scheduled to undergo an EMG.

23. On January 6, 2016, the day following the first day of hearing in this matter, Dr. Beery conducted an EMG/NCV evaluation and he noted that the Claimant had a normal study with no electrodiagnostic evidence of left lower extremity radiculopathy (Respondents' Exhibit N).

24. On January 11, 2016, the Claimant saw Dr. Beery who noted that, in spite of an essentially normal EMG, the Claimant continues to have debilitating and severe symptoms in his low back and left lower extremity. Dr. Beery noted the spinal cord stimulation trial that was recommended is still pending approval for authorization. He advised that another treatment option is consideration for a transforaminal approach of the left L5-S1 epidural steroid injection. Dr. Beery continued to recommend this treatment option on January 20, 2016 (Respondents' Exhibit N, pp. 99-106).

25. On January 20, 2016, Dr. McCranie provided a written Rule 16 evaluation discussing the EMG conducted by Dr. Beery and the January 11, 2016 recommendation for a left transforaminal L5-S1 epidural steroid injection. She opined that the Claimant has not met the Medical Treatment Guidelines for a repeat lumbar epidural steroid injection (Respondents' Exhibit N, p. 107).

26. On February 2, 2016, the Claimant saw Dr. Karnasiewicz who noted the Claimant continued to complain of radiating left leg pain. Dr. Karnasiewicz opined that, although the EMG and nerve conduction studies were negative, it remained his opinion that the Claimant has neuropathic symptoms and the best chance for the Claimant's improvement is a trial of a spinal cord stimulator. Dr. Karnasiewicz specifically opined that it has been his experience that, "an EMG is a poor predictive of radiculopathy, and is negative more often than not" (Claimant's Exhibit 8; Respondents' Exhibit P).

27. On February 9, 2016, Dr. McCranie provided a written opinion that, based on the EMG nerve conduction study that was within normal limits, there were no

objective findings of radiculopathy and a spinal cord stimulator was not indicated in this case (Respondents' Exhibit N, p. 110).

28. On March 4, 2016, the Claimant saw Dr. Phillip A. Mongelluzzo who, on examination, commented on "noticeable atrophy in his left quadriceps" and muscle wasting which, Dr. Mongelluzzo attributes to nerve involvement. Dr. Mongelluzzo noted that the Claimant is in need of a spinal cord stimulator (Claimant's Exhibit 7).

29. Subsequent to the Claimant undergoing an EMG, the hearing was continued on March 28, 2016 and Dr. Kathy McCranie continued with her testimony in this case as an expert witness. She noted that the Claimant's EMG came back negative for lumbar radiculopathy. Dr. McCranie testified that a negative finding for radiculopathy indicates that a spinal cord stimulator is not reasonable. Referencing Respondents' Exhibit O, Dr. McCranie also noted that the Claimant reported that he felt worse after an L5-S1 spinal block on December 17, 2013. She testified that if the Claimant's pain generator was at L5-S1, a positive response would be expected. In any event, Dr. McCranie testified that the EMG study is the "gold standard" for lumbar radiculopathy and a negative finding there is the best evidence that there is no radiculopathy because it is more objective that the nerve block response. At the second day of hearing, Dr. McCranie expressed the same concerns as she did before. Again, she recommended the Claimant be tapered off from his pain medications. Ultimately, Dr. McCranie opined that her prior opinion on the Claimant not being a candidate for a spinal cord stimulator was only strengthened because the EMG showed no radiculopathy. However, Dr. McCranie agreed that the Medical Treatment Guidelines do not require positive findings on an EMG or positive findings with an epidural steroid injection for a spinal cord stimulator trial. Nevertheless, Dr. McCranie expressed concerns with going forward with the procedure as the Claimant is in his early 20's and not functioning very well with a dependence on pain medications. She continued to opine that the complications in this case are likely to outweigh the benefit.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *Robinson v. Youth Track*, 4-649-298 (ICAO May 15, 2007).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Reasonable, Necessary and Causally Related

Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. § 8-42-101, C.R.S. However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. § 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000).

In this case, Respondents initially admitted for injuries including the thoracic and cervical spine, but contested injury to the lumbar spine. Pursuant to a December 3, 2013 Order of ALJ Felter, the Claimant’s lumbar spine condition was determined to be causally related to the admitted injury on June 8, 2013. Later in this claim, the Respondents denied recommended surgical intervention and this matter proceeded to hearing. Pursuant to a February 6, 2015 Order of the undersigned ALJ, the proposed L5-S1 discectomy was found to be reasonably necessary to cure and relieve the Claimant from the effects of his June 8, 2013. On March 23, 2015, Dr. Karnasiewicz performed the microdiskectomy with a decompression of the left S1 nerve root. At that time, Dr. Karnasiewicz found no evidence of neurological damage. Ultimately, the surgery was not successful and the Claimant reports that he continues to experience persistent and severe pain in his left low back that radiates down his left leg all the way to his heel. Dr. Karnasiewicz, Dr. Mahal, Dr. Beery and Dr. Mongelluzzo now recommend that the Claimant undergo a trial of spinal cord stimulator to provide up to 50% relief of the Claimant's leg pain symptoms. On the other side, Dr. McCranie, Dr. Rauzzino, Dr. Ring, and Dr. Paz all strongly urge that the surgery be denied because they opine that the Claimant is not a good candidate for the procedure and they feel the risks substantially outweigh the likely benefits in this case.

Although Respondents are liable for medical treatment that is reasonably necessary to cure and relieve the effects of the industrial injury in a compensable case, Respondents may, nevertheless, challenge the reasonableness and necessity of current or newly requested treatment notwithstanding its position regarding previous medical care in a case. *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002), (upholding employer's refusal to pay for third arthroscopic procedure after having paid for multiple surgical procedures). The question of whether a particular medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office, supra*; *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P.2d 251 (Colo. App. 1999). The claimant bears the burden of proof to establish the right to specific medical benefits. *HLJ Management Group, Inc. v. Kim,* 804 P.2d 250 (Colo. App. 1990). Factual determinations related to this issue must be supported by substantial evidence in the record. § 8-43-301(8), C.R.S. Substantial evidence is that quantum of probative evidence which a rational fact finder would accept as adequate to support a conclusion without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert,* 914 P.2d 411, 415 (Colo. App. 1995).

Pursuant to W.C. Rule of Procedure 17-2 (A), 7 Code Colo. Regs. 1101-3, health care practitioners are to use the Medical Treatment Guidelines referenced as Exhibits at W.C. Rule of Procedure 17-7, 7 Code Colo. Regs. 1101-3 (the "Medical Treatment Guidelines") when furnishing medical aid under the Workers' Compensation Act. The ALJ may also appropriately consider the Medical Treatment Guidelines as an evidentiary tool. *Logiudice v. Siemans Westinghouse,* W.C. 4-665-873 (ICAO January 25, 2011). However the ALJ is not required to grant or deny medical benefits based upon the Medical Treatment Guidelines. *Thomas v. Four Corners Health Care,* W.C. 4-484-220 (ICAO April 27, 2009). The Medical Treatment Guidelines are not definitive, but merely guidelines, and the ALJ has the discretion to make findings and orders which follow or deviate from the Medical Treatment Guidelines depending upon the evidence presented in a particular case. *Jones v. T.T.C. Illinois, Inc.,* W.C. 4-503-150 (ICAO May 5, 2006), *aff'd Jones v. Industrial Claims Appeals Office,* N. 06CA1053 (Colo. App. March 1, 2007)(not selected for official publication); *Nunn v. United Airlines,* W.C. 4-785-790 (ICAO September 9, 2011).

In considering all of the evidence presented in this case, including, but not limited to the poor results the Claimant has received from prior treatment authorized and/or ordered in this case, the Colorado Medical Treatment Guidelines would support a finding against the use of spinal cord stimulation for all of the reasons outlined by the numerous Respondents' medical experts who have provided opinions. It is unclear if the providers from Connecticut are aware of these guidelines or if they considered them in their analysis. Although the Colorado Medical Treatment Guidelines are not outcome determinative in a claim, they are an evidentiary tool, devised by medical experts who are familiar with the use of neurostimulation. The guidelines on neurostimulation are clear that this procedure should be limited to a subset of patients with a clear identifiable radiculopathy. Indeed, a neuropathic pain generator is the only target of the spinal cord stimulator. Moreover, because of a risk of complication, and the fact that (per the Guidelines) "several studies have shown that workers' compensation patients are less likely to gain significant relief than other patients" it is particularly important that a patient meet all of the indications before proceeding. The evidence in this case establishes that numerous providers have identified invalid responses on testing, psychological issues which are contraindicated, abnormal pain behaviors, and lack of motivation and adherence to prescribed treatment, a failure to identify an objective neurological abnormality, and an unrealistic expectation of the benefits that this procedure may offer. This is not a situation where this Claimant fails to meet one of the prerequisites or a single physician simply disagrees with the efficacy of spinal cord stimulation. Rather, this is a situation where multiple medical experts have expressed significant concerns with this interventional treatment at this time.

In addition to the opinions of the doctors, the ALJ finds persuasive the opinion of Dr. Robert Kleinman who performed a psychiatric evaluation November 4, 2015 and issued a written opinion on November 6, 2015 regarding psychiatric clearance for spinal cord stimulator trial. Dr. Kleinman opined that the Claimant has a diagnosis of psychological factors that are affecting his medical condition. Dr. Kleinman opines that the psychological factors seem related to emotional and physical dependence and these, in turn, require consideration of secondary gain. He further opines that the Claimant continues to have some evidence of ADHD with a rapid speech pattern which is slightly circumstantial. Dr. Kleinman notes that the Claimant continues to be unable to give an accurate assessment of how much the medications or the marijuana actually helps him. Dr. Kleinman also opines that, with what he finds to be continued non-physiological pain reports, it would be difficult to establish the success of a spinal cord stimulator trial. Dr. Kleinman points out that if the Claimant is not an accurate historian, he is not likely to be able to give a good report of actual benefits from the trial. Dr. Kleinman feels that from a psychological perspective the Claimant is a poor candidate for spinal cord stimulation. Per Dr. Kleinman, the primary support for his opinion is that the Claimant has, at least in part, a somatoform disorder, there is evidence of drug dependence, the Claimant is over idealizing the benefits of the procedure and understating the risks, and the Claimant is prone to invalid responses.

While the Claimant offered the opinion of Ms. Diaz who stated that the Claimant was a good candidate for the trial of spinal cord stimulator, Ms. Diaz based this opinion on her hope that a spinal cord stimulator may bring relief for the Claimant's nerve pain. Her written report did not address most of the indications and contraindications for the surgery set forth in the Medical Treatment Guidelines, although she did opinion that the Claimant's expectations were realistic regarding likely outcomes.

Based in part on Dr. Karnasiewicz prior opinion that Claimant's condition and situation was "straightforward" and that he was confident the microdiscectomy he proposed would address the Claimant's symptoms, the previous surgical intervention at L5-S1 was ordered. It is now clear that the surgery at L5-S1 was not successful. The fact that the Claimant received absolutely no relief from the previous surgery at the L5-S1 level now strongly suggests this is not the cause of the Claimant's symptoms. This is further bolstered by the fact that the EMG/NCS testing is negative. At this point, there is no persuasive, objective evidence that the Claimant has a true radiculopathy emanating from the L5-S1 level. Thus, it is more likely than not that spinal cord stimulator implantation at this level will also be unsuccessful in relieving the Claimant's symptoms.

The implantation of a spinal cord stimulator in this young Claimant is not a procedure without significant risk of complication. Multiple physicians and Dr. Kleinman have noted that the Claimant has failed to fully appreciate these risks or the fact that a spinal cord stimulator may not provide relief to his symptoms. Even Dr. Beery has noted that one of his concerns is managing the Claimant's expectations of the relief provided by spinal stimulation. However, more troubling for the Claimant is the fact that should he ultimately move forward with permanent implantation, his ability to undergo future MRIs is significantly limited. This is not a limitation that should be taken lightly considering that the Claimant has an ongoing cervical problem which is actively being treated and an ongoing lumbar problem which has not been fully defined.

The Claimant's reliance on summary statements from Dr. Karnasiewicz and Dr. Mongelluzzo as to the need for spinal cord stimulation is misplaced. First, Dr. Karnasiewicz referred the Claimant to Dr. Beery to address the reasonableness of a trial. Therefore, he should give deference to the statements made by Dr. Beery in his December 11, 2015, letter outlining the need for a positive EMG/NCS test. Although Dr. Karnasiewicz discredits the usefulness of EMG test, Dr. McCranie testified that this is the gold standard for neurological diagnosis. Considering that this is also recommended testing in the Colorado Medical Treatment Guidelines, her opinion carries additional weight. None of the objective neurological testing has supported Dr. Karnasiewicz' conclusions as of today. Moreover, the surgery he recommended previously, and felt confident would provide necessary relief of the Claimant's symptoms was a failure in that respect. Up to this point in the Claimant's treatment, the focus at the L5-S1 segment is not providing any permanent relief. To that extent, Dr. Rauzzino's opinions over the course of this claim have been more accurate and predictive than Dr. Karnasiewicz. As for Dr. Mongelluzzo, his treatment recommendations are currently out of line with the other medical providers in this case. While Respondents' medical experts have noted a significant problem with opioid use, marijuana use and the possible issue of dependence and addiction, he continues to increase the Claimant's dose of these medications. This is even in conflict with the recommendations of Dr. Beery who will no longer prescribe narcotic medications for the Claimant and had previously recommended tapering. Furthermore, this is outside of the recommendations of Claimant's own counselor, Sharon Diaz, who specifically noted that the Claimant has to be willing to stop marijuana use to address his psychological issues. In addition, Dr. Mongelluzzo seems unsure of the locations of the pain generator in Claimant's back as he has now recommended additional imaging diagnostics at this time. Per the Medical Treatment Guidelines and the credible and persuasive opinions of the Respondents' medical experts, proceeding with spinal cord stimulation while you are still searching for the problem is not likely to provide the Claimant with relief from his current symptoms.

Ultimately, based upon the foregoing, the Claimant has failed to prove by a preponderance of the evidence that the trial of spinal cord stimulation is reasonably necessary treatment to cure and relieve him of the effects of his June 8, 2013 admitted industrial injury.

ORDER

Based on the above factual findings and legal conclusions, it is therefore ORDERED that:

1. The Claimant has failed to prove by a preponderance of the evidence that the trial of spinal cord stimulation is reasonably necessary treatment to cure and relieve him of the effects of his June 8, 2013 admitted industrial injury. The Respondents' denial of this procedure is appropriate under the Act.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 17, 2016

Kimberly A. Allegretti
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-965-833-03

ISSUES

The following issues were raised for consideration at hearing:

I. Whether Claimant overcame the opinions of the Division Independent Medical Examiner (DIME) by clear and convincing evidence;

II. Whether Claimant is entitled to reasonably necessary and related medical benefits, including, but not limited to evaluation and treatment directed at her thoracic spine;

III. Whether Claimant is entitled to a change of physician to Dr. Yamamoto;

IV. Whether Claimant proved by a preponderance of the evidence that she is entitled to temporary partial disability benefits(TPD); and

V. What is Claimant's average weekly wage.

FINDINGS OF FACT

Having considered the evidence presented at hearing, the following Findings of Fact are entered:

1. On February 3, 2014, Claimant sustained admitted injuries during the course and scope of her employment, when she slipped on ice and fell on her buttocks, also hitting her back on the running board of the truck as she fell. On that day, Julia Balderson, PA-C of Concentra noted that Claimant had lower back and mid back pain. Claimant was tender to palpation over the bony processes of the spine in the mid thoracic and the lumbar region. She was also tender to palpation over the paraspinal musculature on the back. Ms. Balderson reviewed x-rays and stated that she questioned a thoracic compression fracture. She ordered a CT scan to rule out further injury. Ms. Balderson assessed Claimant as having a back contusion and questionable compression fracture of thoracic vertebrae. Ms. Balderson stated, "In my professional opinion, with a reasonable degree of medical probability, I conclude that there is consistency to these elements and that the aforementioned diagnosis(es) is/are related to the alleged work-related injury."

2. On February 3, 2014, Dr. Bao Nguyen read Claimant's thoracic spine x-rays as showing no vertebral fracture, compression deformity or focal kyphosis. However, in an addendum report dated June 22, 2016, Dr. Nguyen reviewed the x-rays a second time and stated, "In retrospect, there is a shallow wedge deformity of the

superior endplate of a mid-thoracic vertebral body, possibly T8, visible only on the lateral view."

3. Both the medical staff and the physical therapists at Concentra consistently reported multiple complaints of pain, rigidity and tenderness to palpation in both the lumbar spine and the thoracic spine from the date of injury onward.

4. On March 7, 2014, Dr. Sarah Harvey released Claimant to modified duty with restrictions. On March 19, 2014 Nickolas Curcija, PA-C noted that Claimant was having more pain since she had been back to work. Claimant had pain in the lumbar spine with all range of motion, and was reduced in all directions. He provided work restrictions. During subsequent visits to P.A. Curcija and Dr. Don Aspegren, they noted that Claimant continued to report discomfort in the thoracic, lumbosacral and hip region.

5. On May 20, 2014, Joyce Ziomek, PT, noted that the mechanism of Claimant's injury included thoracic pain and Claimant was diagnosed with lumbar strain and strain of the thoracic region.

6. On May 28, 2014, Ms. Ziomek noted that Claimant's low thoracic and lumbar area felt worse. On July 18, 2014, P.A. Curcija noted that Claimant had tenderness in the thoracic spine.

7. On September 16, 2014, Dr. Ericson Tentori noted that Claimant had tenderness with palpation at the upper thoracic region and lower lumbar/lumbosacral region. Dr. Tentori assessed Claimant as having lumbar and sacral region contusions, myofascial pain/irritation involving the thoracic spine/shoulder girdles, and development of chronic back pain. Dr. Tentori recommended that Claimant be reevaluated by Dr. Kawasaki prior to consideration of case closure.

8. On October 9, 2014, Dr. Mark Winslow noted that Claimant had constant pain primarily central to the upper lumbar and mid-thoracic areas. During subsequent visits, Dr. Winslow documented objective findings of thoracic spine rotation to the right. He noted that Claimant was having increased mid-back pain.

9. On December 4, 2014, Dr. Kawasaki stated that Claimant was at maximum medical improvement. He determined that Claimant had 5% whole person impairment for specific disorders of the lumbar spine.

10. On January 6, 2015, Dr. Tentori noted that Claimant was frustrated with Dr. Kawasaki because a thoracic spine MRI was never obtained during the course of her claim. Dr. Tentori stated it was reasonable to obtain a thoracic spine MRI to ensure that Claimant did not sustain a compression fracture as a result of the original work injury, as an explanation for Claimant's ongoing thoracic spine regional pain.

11. On February 5, 2015, Dr. J. Raschbacher stated that it would be reasonable to obtain a thoracic MRI and see if it had any clear objective findings that

would mandate further care or evaluation or other change in her previously delineated MMI date.

12. On March 3, 2015, Dr. Tentori referred Claimant for a thoracic MRI to rule out disc pathology. Dr. Tentori stated that if the MRI revealed any significant pathology, then it would be potentially conceivable that Claimant's claim would not be at MMI and that Claimant may require additional treatment and/or provision of permanent physical impairment based on thoracic spine-related issues.

13. An MRI of Claimant's thoracic spine, taken on March 9, 2015, revealed subtle rightward disc displacement at T7-8, and a T8 remote compression fracture deformity, about 50%. There was also a tiny hemangioma associated with T8.

14. On March 19, 2015 Dr. Kawasaki noted that Claimant had a thoracic compression fracture at T8. Dr. Kawasaki stated, "Thoracic CT scan revealed the compression fracture seen at this point, and there may be evidence to help determine acuity. With the patient's mechanism of injury and initial evaluation suspecting thoracic fracture, this would be significant."

15. On April 15, 2015 Dr. Bennett Machanic DIME. He opined that Claimant reached maximum medical improvement on December 4, 2014. He noted that there was a recent discovery of a compression fracture of the thoracic spine; however, he stated that because the original films did not show fracture, this occurred subsequent to the on-the-job injury, and is not related. Therefore, Dr. Machanic determined that Claimant's work-related impairment involved only her lumbar spine. He assigned 5% whole person impairment for specific disorders of the lumbar spine, and found 9% impairment for loss of range of motion of the lumbar spine. The combined impairment was calculated as 14% whole person impairment.

16. On April 16, 2015 Dr. Kawasaki reported that there was a typographical error on his last note indicating acute change in the area of the thoracic fracture. Despite reneging on the statement that there was acute change in the area of the thoracic fracture, Dr. Kawasaki opined that the remote compression fracture at T8 is not related to this claim.

17. On April 19, 2015 Dr. Bennett Machanic stated, "assuming that the original plain x-rays were read accurately by a competent radiologist one must assume that the thoracic spine pathology has very little to do with the patient's original on-the-job injury of February 03, 2014." Dr. Machanic stated, "In essence, this leads me therefore to reject my original impairment rating. I would agree with Dr. Kawasaki that probably 5% of the whole person for specific disorder would be a reasonable approach, but the range of motion changes that I find would have to be related to a new issue or indeed a new injury and the presence of the T8 findings on the films done during early March suggest also a new injury subsequent to July of 2014."

18. On June 17, 2015 Dr. Edwin Healey reviewed Claimant's medical records, the thoracic spine films taken on February 3, 2014, at Claimant's request, and concluded that Claimant's diagnoses that are causally related, within a reasonable degree of medical probability, to the February 3, 2014, slip-and-fall on ice at work included: 1. Thoracic compression fracture at T8, approximately 50%, with ongoing chronic mid and lower thoracic spine pain and associated myofascial pain involving the thoracic paraspinals; 2. Lumbar sprain/strain aggravation of preexisting disc and spine disease with chronic low back pain; 3. Coccydynia and sacroiliac joint dysfunction secondary to fall on buttocks on February 3, 2014; and, 4. Right cervical myofascial pain with secondary headaches as a result of pain radiating from her thoracolumbar region. Dr. Healey reported that the thoracic spine x-rays clearly demonstrate a mild compression fracture at T8. He stated that he had Dr. Eduardo Seda, a radiologist, and Dr. Bao Nguyen, the radiologist who originally read the x-rays, review the thoracic spine films, and both radiologists concurred that there was evidence of a thoracic compression fracture on the February 3, 2014, films.

19. Dr. Healey credibly opined, within a reasonable degree of medical probability that Claimant is not at maximum medical improvement. He opined that she requires more aggressive maintenance therapy of her cervical, thoracic and lumbar myofascial pain and coccydynia and sacroiliac joint dysfunction. He noted that she will require ongoing, chronic pain management indefinitely with a muscle relaxant and analgesics. Dr. Healey opined that Claimant may require repeat sacroiliac joint injections, as well as some paracoccygeal muscle blocks in order to gain better control of her chronic pain.

20. On January 7, 2016 Dr. Kawasaki opined that Claimant can benefit from trigger point injections in conjunction with massage therapy. On February 18, 2016, Dr. Kawasaki recommended further sacroiliac joint injections and permanent medical restrictions of limited walking three to four hours a day and alternate positions 15 minutes per hour and only occasional bending, squatting and climbing. On March 3, 2016, Dr. Michael Striplin agreed with Dr. Kawasaki and proceeded to administer to Claimant the third epidural steroid injection for the right sacroiliac joint dysfunction.

21. On March 9, 2016 Dr. Kawasaki stated, "Within medical probability, with her mechanism of injury and initial complaints which included thoracic pain and with the correlating compression fracture in the original x-rays, unless there is evidence that the patient had previous injury to the area, the patient's compression fracture appears to be work-relatable to the injury that occurred on 02/03/14." This reversed his prior opinion on causation.

22. During his deposition, taken on April 21, 2016, Dr. Kawasaki stated that if Claimant had a preexisting thoracic fracture, she would probably have been complaining of pain prior to her February 2014 injury. He stated that he had not seen any preexisting records or any prior history of thoracic spine conditions prior to Claimant's injury. He also stated that it would be unusual for a 47-year-old to have osteoporotic fractures or degenerative fractures. He had not seen any x-ray reports or

images that there was any indication that Claimant has osteoporosis. However, he stated that even if Claimant had underlying osteoporosis, the compression fracture caused by her fall would be an acute injury. Dr. Kawasaki stated, “My opinion is that she does not have an osteoporotic fracture in the thoracic spine.” Dr. Kawasaki testified that he is convinced there was a fracture on Claimant’s original x-ray. He stated, within a reasonable degree of medical probability that Claimant’s mechanism of injury on February 3, 2014, caused an injury to the thoracic spine. He stated, “My opinion has changed as far as the causation in the case as far as the thoracic spine and the fracture of the thoracic spine based on the error and correction of the error on the initial radiograph.” Dr. Kawasaki stated that Dr. Machanic was correct with the information that he had at the time, but that information has changed. He stated that it is all hinging on that incorrect reading by Dr. Nguyen.

23. Claimant testified that she is asking for a change of physician from Dr. Kawasaki to Dr. Yamamoto because she consistently complained of both mid-back and low back pain; however, the doctors only paid attention to the low back, and did not pay attention to the middle of her back.

24. Claimant also testified that she is still working under restrictions, and is working less hours. Claimant’s reduction in hours is partially as a result of medical appointments for her workers’ compensation injury. Claimant testified that she had no difficulties with her work duties prior to the February 3, 2014, injury, and that she had not been involved in any other injuries or accidents since February 3, 2014.

25. It is found that the medical records show that Claimant consistently complained about her thoracic spine. Dr. Healey credibly stated that he disagreed with Dr. Machanic’s opinion and that Dr. Machanic was incorrect with regard to the causality of Claimant’s thoracic spine injury and the impairment rating.

26. Dr. Striplin credibly testified that usually, thoracic spine pain is not an area of referred pain from some other part of the body. Dr. Striplin also testified that he does not typically associate degenerative conditions with thoracic compression fractures and there is no evidence that Claimant has osteoporosis. Dr. Striplin testified that thoracic wedge fractures typically and normally cause pain, and he was not aware that Claimant had experienced any prior episodes of thoracic back pain.

27. At the time of her injury, Claimant’s average weekly wage was $576.84. This is calculated using the paychecks for pay periods ending December 21, 2013, through February 1, 2014. During this eight week period of time, Claimant earned $4,614.72. This amount divided by eight renders an average weekly wage of $576.84. Using this limited period to calculate Claimant’s average weekly wage is the fairest calculation, because Claimant received a raise to $11.25 per hour on December 8, 2013.

CONCLUSIONS OF LAW

Based on the foregoing Findings of Fact, the ALJ enters the following Conclusions of Law:

General Legal Authority

1. The purpose of the Workers' Compensation Act is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43- 201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 592 P.2d 792 (1979). The facts in a workers' compensation claim must be interpreted neutrally, neither in favor of the rights of Claimant nor in favor of the rights of Respondents. Section 8-43-201, C.R.S.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline,* 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A workers' compensation claim is decided on its merits. Section 8-43-201, C.R.S. Further, factual findings concern only evidence that is dispositive of the issues involved; even if the judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to cited findings as unpersuasive. See *Magnetic Engineering, Inc. v. Indus. Claim Apps. Office*, 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME Opinion

3. The findings of the DIME must be overcome by clear and convincing evidence. Section 8-42-107(8), C.R.S. Clear and convincing evidence is stronger than a preponderance, and it is evidence which renders a particular proposition highly probable and free from serious or substantial doubt. To satisfy this burden, the challenging party is required to show the ALJ that it is "highly probable" that Dr. Machanic's opinion was incorrect. See *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (1995). Claimant has proven by clear and convincing evidence that the DIME was incorrect with regard to his determination of causation, his finding of MMI and his impairment rating. The DIME incorrectly concluded that Claimant's thoracic spine impairment was not related to the claim based on the radiologist report of February 3, 2014. The evidence established that the radiologist, re-read the films, finding that Claimant did, in fact have a compression fracture at the T8 on February 3, 2014. The DIME's opinion regarding causation was premised on incorrect information regarding whether Claimant had a compression fracture at T8. Dr. Healey's testimony and

medical reports are credible and persuasive in his explanation that the DIME was incorrect.

4. “Maximum medical improvement” is defined in Section 8-40-201(11.5) C.R.S. as:

> A point in time when any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition. The requirement for future medical maintenance which will not significantly improve the condition or the possibility of improvement or deterioration resulting from the passage of time shall not affect a finding of maximum medical improvement. The possibility of improvement or deterioration resulting from the passage of time alone shall not affect a finding of maximum medical improvement.

5. MMI exists when any medically determinable physical or mental impairment caused by the injury has become stable and no further treatment is reasonably expected to improve the claimant’s condition. Section 8-40-201(11.5), C.R.S.; *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002). In contrast post-MMI medical benefits are available to relieve the effects of the injury or prevent deterioration of the claimant’s otherwise stable condition. *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995).

6. The cases suggest that medical “treatment” encompasses both diagnostic and curative medical procedures. *See Merriman v. Industrial Commission,* 120 Colo. 400, 210 P.2d 448 (1949) (exploratory surgery held compensable even where it revealed non-industrial condition); *Public Service Co v. Industrial Claim Appeals Office,* 979 P.2d 584 (Colo. App. 1999) (“The record must distinctly reflect the medical necessity of any such treatment and any ancillary service, care or treatment as designed to cure or relieve the effects of such industrial injury.”); *Villela v. Excel Corp.,* W.C. No. 4-400-281 (ICAO February 1, 2001) (reasonable diagnostic procedures are a prerequisite to MMI if they have reasonable prospect for defining claimant’s condition and suggesting further treatment).

7. In this case, Claimant was not at MMI on December 4, 2014, as determined by Dr. Kawasaki and the DIME because the MRI diagnostic had not been completed until March 9, 2015. The PA’s original diagnosis was correct and that Drs. Kawasaki and Tentori as well as the DIME diagnosis were incorrect. Dr. Healey’s opinion regarding care and treatment of Claimant’s injuries related to the February 3, 2014, injury is persuasive.

8. Further, the DIME was incorrect regarding his assessment of the thoracic spine impairment. The DIME did not believe the thoracic spine was causally related and thus did not provide an impairment rating.

Medical Benefits

9. Claimant has proved by a preponderance of the evidence that she requires reasonably necessary and related medical benefits for the thoracic spine injury caused by the February 3, 2014, accident to cure and relieve her from the effects of her injuries. The care received by Claimant for the thoracic spine condition after December 20, 2016, is deemed reasonably necessary and related medical benefits. This includes the MRI of the thoracic spine recommended by both Dr. Tentori and Dr. Raschbacher. However, Claimant's care has not been completed.

10. The respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Claimant has proved by a preponderance of the evidence that she is entitled to an order for medical treatment to cure and relieve her of the effect of the industrial injury including treatment for her thoracic spine.

Change of Physician

11. The employer is obliged to provide a physician willing to render treatment so long as it is reasonably necessary. *Tellez v. Teledyne Water Pik, I.C.A.O., W.C. No. 3-990-062 (March 24, 1992); aff'd., Teledyne Water Pik v. ICAO, Colo. App. No. 92CA0643, December 24, 1992 (not selected for publication)*. Once respondents are on notice of a need for medical care, they are required to tender a physician willing to treat the claimant based upon medical considerations alone, and not financial considerations. *Dodge v. Burns International Security, W.C. No. 3-935-989, I.C.A.O., December 10, 1993*.

12. Upon the proper showing to the division, the employee may procure its permission at any time to have a physician of the employee's selection attend said employee. C.R.S. 8-43-404(5)(a)(vi). Claimant failed to make a proper showing for a change of physician. Claimant contends that she established that she feels mistrust for Dr. Kawasaki as a result of her opinion that he failed to listen to her complaints about her thoracic spine pain. The evidence established that Dr. Kawasaki was one of a number of physicians that relied on the erroneous radiologist report regarding the condition of Claimant's thoracic spine. Besides this error, Dr. Kawasaki actively provided treatment of Claimant's lumbar spine. Dr. Kawasaki's reliance on a radiologist's report alone does not form the basis for a change of physician.

Average Weekly Wage

13. Claimant has proven by a preponderance of the evidence that her average weekly wage is correctly calculated at $576.84. This is calculated using the paychecks for pay periods ending December 21, 2013 through February 1, 2014. Claimant received a raise to $11.25 per hour on December 8, 2013. Therefore, wages earned

during this eight week period of time, is the fairest calculation. "Wages" is construed to mean the money rate at which the services rendered are recompensed under the contract of hire in force at the time of the injury, either express or implied. Section 8-40-201(a), C.R.S.

Temporary Partial Disability Benefits

14. To establish entitlement to temporary disability benefits, the claimant must prove that the industrial injury has caused a "disability," and that she has suffered a wage loss which, "to some degree," is the result of the industrial disability. Section 8-42-103(1), C.R.S.; *PDM Molding, Inc. v. Stanberg, 898 P.2d 542 (Colo. 1995)*. The term "disability," as used in workers' compensation cases, connotes two elements. The first element is "medical incapacity" evidenced by loss or restriction of bodily function. There is no statutory requirement that the Claimant present evidence of a medical opinion of an attending physician to establish her physical disability. *See Lymburn v. Symbios Logic, 952 P.2d 831 (Colo. App. 1997)*. Rather, the Claimant's testimony alone could be sufficient to establish a temporary "disability*." Lymburn v. Symbios Logic, supra.* The second element is loss of wage earning capacity. *Culver v. Ace Electric, 971 P.2d 641 (Colo. 1999)*. The impairment of earning capacity element of "disability" may be evidenced by a complete inability to work, or physical restrictions which preclude the Claimant from securing employment. *Barnes v. Anheuser-Busch Sales Co. of Denver, I.C.A.O., W.C. No. 4-548-535, February 24, 2004*.

15. The credible evidence established that Claimant returned to modified duty work under restrictions and missed work due to medical appointments. Claimant earned $25,256.16 for the 42 week period from pay period ending February 15, 2014 through December 20, 2014, including four bonus payments. Claimant should have earned $27,688.56, for a difference of $2,432.40. Therefore, Claimant has established by a preponderance of the evidence that she is entitled to temporary partial disability benefits for her lost wages in the amount of $1,621.60 for the period between February 4, 2014, and December 20, 2014.

ORDER

It is therefore ordered that:

1. Claimant has overcome the opinions of the DIME by clear and convincing evidence on the issues of causation, MMI and impairment rating.

2. Claimant is entitled to reasonably necessary medical benefits, including, but not limited to treatment related to her thoracic spine.

3. Claimant is not entitled to a change of physician.

4. Claimant's average weekly wage is $576.84.

5. Claimant is entitled to TPD from December 4, 2014, until terminated by law.

6. Claimant is entitled to interest at the rate of eight percent (8%) per annum for all benefits which were not paid when due.

7. Any and all issues not determined herein are reserved for future decision.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-990-447-02

STIPULATION

Prior to the commencement of hearing, the parties reached the following stipulation, which is approved by the ALJ:

The parties stipulated that Claimant would be considered a maximum wage earner at the time of his alleged injury. Based on his date of alleged injury the parties stipulated to a TTD rate of $881.65.

ISSUES

The remaining issues addressed in this decision concern compensability and Claimant's entitlement to medical and indemnity benefits. The specific questions addressed are:

I. Whether Claimant has proven by a preponderance of the evidence that he sustained a compensable injury to his low back arising out of and in the course of his employment on June 24, 2015.

II. Whether Claimant has proven by a preponderance of the evidence that he is entitled to all reasonable, necessary, and medical treatment stemming from his June 24, 2015 alleged injury.

III. Whether Claimant established by a preponderance of the evidence that Respondents failed to timely designate a treatment provider to attend to Claimant's alleged injuries.

IV. If Claimant has proven a compensable injury, whether Claimant has proven by a preponderance of the evidence that he is entitled to TTD benefits in from June 24, 2015 and on-going.

V. Whether Respondents have proven, by a preponderance of the evidence, that Claimant was responsible for the termination of her employment precluding her entitlement to temporary total disability (TTD) benefits.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant was hired by Millwrights 4 Hire, Employer, on May 18, 2015. Claimant completed his application for hire online, was subsequently hired and

assigned to travel to and work on a job located outside of Cambridge, Nebraska. The entire application/hiring process was completed on line and by telephone. Claimant's only contact, to whom he spoke with by phone during the hiring process, was "Stephanie," a representative of Employer. Stephanie worked from Employer's headquarters located in Kentucky.

2. On June 24, 2015, Claimant was walking some elevated scaffolding on the project while carrying a 70-80 pound load. As Claimant attempted to pass behind a fellow worker, he stepped on an unsecured piece of metal planking covering a gap in the scaffolding causing his leg and body to fall half way through the void created when the flooring moved. Claimant reportedly fell backward, twisting to the right injuring his low back in the process.

3. Claimant reported the injury to the onsite foreman, Juan Rodriquez and took it "easy" for the remainder of the workday. Claimant returned to his motel room following his shift, took a shower and went to bed. He testified that he experienced increasing low back pain during the evening and into the early morning hours of June 25, 2015. Consequently, Claimant sent a text message at 4:21 AM to Mr. Rodriquez notifying him he would not be reporting to work because his "lower back [was] sore and bruised" from his fall the day before. The original test message was followed by a second test message at 4:32 AM noting Mr. Rodriquez that he intended to soak and rest his back on June 25, 2015 so he could later provide 100% effort on the job. Claimant testified that he was incapable of performing his regular work duties due to the heavy lifting requirements of the job and his ongoing back pain.

4. Mr. Rodriguez is not an employee of Employer.

5. Following his text messages to Mr. Rodriquez, Claimant reportedly called Stephanie informing her that he had been injured and had called off work. According to Claimant, there was no response to his reports of injury, either from Mr. Rodriquez or Stephanie. He testified no one appeared concerned as he was never given a provider list or paperwork to initiate his claim.

6. Claimant returned to Colorado on his regularly scheduled day off following the June 24, 2015 incident. According to a recorded statement provided to the claims representative assigned to the claim, Claimant left Nebraska around June 28, 2015. He did not notify anyone he was leaving the job site. Moreover, Claimant did not return to work following his day off nor did he inform Employer that he had could not work due to his injury and therefore, had no intention of returning to the job site.

7. Claimant sought treatment for low back pain in the Emergency Room (ER) of Parkview Medical Center (hereinafter "Parkview") on July 9, 2015. According to the history provided during this admission, Claimant reported a two week history of low

back pain after some scaffolding gave way and his leg fell through causing an immediate onset of low back pain secondary to "twisting." The ALJ finds that two weeks prior to July 9, 2015 would have been June 25, 2015.

8. While in the ER, Claimant was provided medication, given an x-ray and instructed to follow-up with a primary care physician in "1-2 days."

9. Claimant's x-ray demonstrated "grade I and borderline grade II anterolisthesis of L5 on S1" and "age-related endplate changes" as well as "scoliosis."

10. On July 13, 2015, Claimant sent a test message to Stephanie notifying her that he had gone to the ER with increasing back pain over the last week and a half, that he needed a workman's comp claim number so he could talk to Amy, indicating further that he did not "know anything about workers' comp."

11. On July 14, 2015, Claimant received a text message in response to his July 13, 2015 messages to Stephanie. In her text message responses, Stephanie instructs Claimant to contact the main office in Kentucky and talk to Amy. According to the response, Stephanie informed Claimant that she was simply a "recruiter" and did not deal with workman's compensation issues. She also noted that she had reviewed a phone call from the motel where Claimant was staying informing her that Claimant had left his belongings there.

12. Claimant returned to the ER at Parkview on July 27, 2015 with continued complaint's of low back pain. Concern was raised regarding Claimant's honesty surrounding prior prescriptions for narcotics and his attitude with the ER staff. Despite these concerns, additional prescription medications were provided with a clear indication that future medications would need to be prescribed by a primary care physician as the ER was not a "pain management center."

13. Based upon the evidence presented, the ALJ finds the care claimant received in the ER and through Hanson Family Practice Clinic reasonable, necessary and directly related to his back pain caused by falling through unsecured scaffolding while working for Employer on June 24, 2015.

14. Claimant filed a Worker's Claim for Compensation on August 7, 2015.

15. On September 1, 2015, Lori Watson, the Insurer's claim representative assigned to the claim contacted Claimant and obtained a recorded statement. During his recorded statement, Claimant outlined the details of his telephone conversation with Stephanie the day he called off work on June 25, 2015. Based upon the evidence presented, including the text message exchange between Claimant and Stephanie, the ALJ finds the phone conversation between the two likely occurred sometime on June

25, 2015, after Claimant had sent text messages to Mr. Rodriquez and called off work secondary to low back pain. The detail contained in Claimant's recorded statement concerning his conversation with Stephanie following the June 24, 2015 incident is unrebutted as neither Ms. Watson nor Stephanie testified at hearing.

16. Respondents contend that Claimant's recorded statement indicates that he told Ms. Watson that during his discussion with Stephanie he thought he would get better on his own and no treatment was necessary. The ALJ is not persuaded. Rather, the recorded statement indicates that Claimant told Stephanie that he hoped he was alright, that he was scared about the condition of his back and that he had contemplated going to the ER the night following the incident "[because] it hurt so bad I couldn't even stand up." Moreover, while Claimant felt he could "work it out" and that it might "just be sore" he was "not sure."

17. Respondents, through Ms. Watson, filed a Notice of Contest on September 2, 2015 denying liability for the claimed injury citing the need for "further investigation."

18. Claimant sought additional treatment with Dr. Jeremy Brown of the Hanson Family Medicine Clinic on November 10, 2015. Physical Examination revealed mild to moderate range of motion loss, mild tenderness with chronic spasm in the lumbar left lumbar region and a positive Patrick's test on the left. Dr. Brown referred Claimant for an MRI, initiated therapy and started Claimant on Hysingla for pain management.

19. MRI of the lumbar spine was obtained on November 18, 2015. The MRI demonstrated:

> Mild degenerative disc disease scattered throughout the lumbar spine;
>
> At the L5-S1 level, prominent posterior facet osteoarthropathy, grade-I anterolisthesis and moderate circumferential disc bulge noted. Moderate left and right neuroforaminal narrowing noted. No central canal stenosis. Cannot exclude pars defects at the L5 level. CT imaging may be of additional value.

20. Claimant attended his initial physical therapy (PT) appointment on November 24, 2015. Examination revealed a positive straight leg raise (SLR) on the left with radicular pain into the left lower extremity (L LE) and foot. Claimant was excluded as a candidate for PT due to "radicular/neural symptoms as well as lack of tolerance for weight bearing and table transitions." Follow-up with his primary care physician was recommended.

21. Claimant returned to Dr. Brown on December 22, 2015, who, after reviewing the findings of Claimant's MRI, referred him to Dr. Danylchuk for an orthopedic surgical evaluation.

22. The ALJ concludes Claimant's subjective complaints of pain coupled with the findings on physical examination constitute evidence of injury, including an aggravation of a previously asymptomatic pre-existing low back condition.

23. Tim Conner, Employer's Office Manager testified that Claimant just stopped coming to work. He testified that no accident reports were filed and that he was unaware of Claimant's injury initially because Claimant never contacted him to report it at the time. Moreover, Mr. Connor testified that no one at the job site in Nebraska contacted him to state that Claimant was injured and unable to do his job duties.

24. Mr. Connor testified that generally if an employee simply stops coming to the job site, said worker would be considered to have abandoned the employment opportunity. Mr. Connor testified that Claimant was responsible for the termination of his employment as he "abandoned his position" with Employer since he simply stopped coming to the job site. The ALJ finds Mr. Connor's testimony in this regard supported by the evidence as a whole. The ALJ finds from the evidence presented that Claimant voluntarily quit his job by returning to Colorado and failing to give notice. Claimant is responsible for his termination.

25. While Mr. Conner testified that he was initially unaware of Claimant's injury and that no one, including Juan Rodriquez contacted him to report Claimant's injuries; he conceded that he had spoken with Claimant later as he had called into the office a "couple" of times. Mr. Connor testified that he became aware of the claimed injuries later when the "work comp claim came out." He also noted that Claimant would know to contact Stephanie and/or Amy regarding his claimed injuries, which the ALJ finds Claimant attempted to do. He recognized Stephanie and Amy as employees of the company, noting further that Juan Rodriquez was the job site foreman, but not Employer's employee. Importantly, contradicting Stephanie's July 14, 2015 text message, Mr. Conner testified that Stephanie would direct Claimant on how to make a claim.

26. The evidence presented convinces the ALJ that Claimant initially notified the only person with whom he had contact that he was injured when he fell though some unsecured scaffolding on June 24, 2015. The text messages admitted into evidence support that Claimant had reached out both verbally and by text to Stephanie requesting her help in getting a worker's compensation claim number so he could talk to "Amy" because he "knew nothing about workman's comp." Importantly, Mr. Conner testified

that Stephanie would be the person Claimant would contact as the recruiter for the particular job Claimant was working and that Stephanie would direct Claimant on how to prefect his claim. While Stephanie's text message response to Claimant refutes Mr. Connor's testimony, the evidence presented persuades the ALJ that Mr. Connor, as Employer's office manager was likely made aware of the claim later during conversations with Claimant. Based upon the evidence presented, the ALJ is persuaded that after Stephanie informed Claimant, via text message, that she did not handle workers' compensation issues, Claimant, more probably than not, contacted Employer and was directed to Mr. Connor. Moreover, the evidence presented convinces the ALJ that after Claimant filed his workers' claim for compensation; Mr. Connor, by his own admission, was aware of Claimant's alleged injuries and the claim in general. Based upon the evidence presented, the ALJ finds that Employer had some knowledge of facts that would lead a reasonably conscientious manager to believe the case may involve a claim for compensation triggering the duty to designate a treating physician. Respondents have not designated a physician to attend to Claimant's injuries despite having knowledge of the same. Accordingly, the ALJ finds that the right of selection passed to Claimant.

27. Claimant has proven by a preponderance of the evidence that he sustained an twisting injury and a contemporaneous aggravation of a pre-existing condition to/of his low back after falling into a void created when unsecured metal scaffolding moved while working for Employer on June 24, 2015.

28. Although Claimant testified in direct examination that he was unable to continue in his job duties due to his alleged injury, he did admit on cross examination that he worked for the rest of the work day on the date of his alleged injury as well as two (2) full days after his injury. Moreover, Claimant's medical records fail to disclose that any provider, including those in the ER imposed any work restrictions or otherwise precluded Claimant from working in any capacity. Consequently, the ALJ finds Claimant's testimony that he was unable to continue his job duties unreliable and unpursuasive.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-101, *et seq*., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S*. The claimant shoulders the burden of proving by a preponderance of the evidence that he is a covered employee who suffered an “injury” arising out of and in the course of employment. *Section 8-43-301(1), C.R.S.; Faulker v. Industrial Claim Appeals Office, 12 P.3d 844 (Colo.App. 2000); City of Boulder v. Streeb, 706 P.2d 786 (Colo. 1985); Pacesetter Corp. v. Collett, 33 P.3d 1230 (Colo.App. 2001).* A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark, 197 Colo. 306, 592 P.2d 792 (1979)*. The facts in a workers’ compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. *Section 8-43-201, C.R.S*. A workers’ compensation claim is decided on its merits. *Section 8-43-201, supra.*

B. In accordance with § 8-43-215, C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, *84 P.3d 1023 (Colo. 2004).* This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, 5 P.3d 385 (Colo.App. 2000).*

C. In determining credibility, the ALJ should consider the witness’ manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16.

Compensability

D. A claimant’s right to compensation initially hinges upon a determination that the claimant suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. C.R.S. § 8-41-301. The phrases "arising out of” and "in the course of" are not synonymous and a claimant must meet both requirements for the injury to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). An injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. *Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). It is the burden of the claimant to establish causation by a preponderance of the evidence. *Faulkner v.*

Indus. Claim Appeals Office, 12 P.3d 844, 846 (Colo.App. 2000). There is no presumption than an injury which occurs in the course of employment arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo.App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 2993. Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado, 717 P.2d 1000 (Colo.App. 1986).* In this case, there is a question of whether Claimant suffered an acute injury to his back on June 24, 2015 or if his back pain represents the natural progression of a pre-existing non-industrial condition based upon the results of his imaging studies, including x-ray and MRI.

E. A pre-existing condition "does not disqualify a claimant from receiving worker's compensation benefits." *Duncan v. Indus. Claims Appeals Office*, 107 P.3d 999, 1001 (Colo.App. 2004). To the contrary, a claimant may be compensated if his or her employment "aggravates, accelerates, or "combines with" a pre-existing infirmity or disease "to produce the disability and/or the need for treatment for which workers' compensation is sought". *H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo.App. 1990). Even temporary aggravations of pre-existing conditions may be compensable. *Eisnack v. Industrial Commission*, 633 P.2d 502 (Colo.App. 1981). Pain is a typical symptom from the aggravation of a pre-existing condition. Thus, a claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment–related activities and not the underlying pre-existing condition. *See Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 488 (1940). Here, the persuasive evidence demonstrates that Claimant sought treatment for his low back pain after falling through the scaffolding on June 24, 2015. Although Claimant has pre-existing degenerative changes in the lumbar spine, confirmed by MRI, the ALJ finds no evidence to establish that Claimant's pre-existing condition was symptomatic or disabling immediately prior to June 24, 2015. Moreover, Claimant's MRI demonstrated disc bulging which the ALJ finds likely explains the objective findings, i.e., positive Patrick's testing, positive straight leg raise testing and spasm on physical examination. Consequently, the ALJ concludes that Claimant has proven, by a preponderance of the evidence that Claimant likely sustained an acute twisting injury to his lumbar spine and a contemporaneous aggravation of his previously asymptomatic lumbar degenerative disc disease when he partially fell through unsecured planking while working for Employer on June 24, 2015. Accordingly, his injury is compensable.

Claimant's Entitlement to Medical Benefits

F. Once a claimant has established the compensable nature of his/her work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable and necessary and related medical care to cure and relieve the effects of the work injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797

P.2d 777 (Colo. App. 1990). However, a claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his/her need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949); *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970)*;* § 8-41-301(1)(c), C.R.S. Ongoing benefits may be denied if the current and ongoing need for medical treatment or disability is not proximately caused by an injury arising out of and in the course of the employment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo.App. 1997). In other words, the mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability was caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those which flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball*, *supra*.

G. Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003). The question of whether a particular medical treatment is reasonably necessary to cure and relieve a claimant from the effects of the injury is a question of fact. *City & County of Denver v. Industrial Commission*, 682 P.2d 513 (Colo.App. 1984). As found here, Claimant has proven by a preponderance of the evidence that he sustained a compensable injury/aggravation to his low back on June 24, 2015. The evidence presented persuades the ALJ that these compensable "injuries" are the direct cause of Claimant's need for medical treatment, including the referral to Dr. Danylchuk for an orthopedic evaluation. Taken in its entirety, the ALJ finds that the evidentiary record contains substantial evidence to support a conclusion that Claimant's work duties and not a pre-existing condition is responsible for his current symptoms and need for treatment. Moreover, the totality of the evidence presented establishes that conservative care, including Claimant's ER room treatment as well as his treatment with Dr. Brown and the initial PT evaluation was reasonable and necessary in the face of Claimant's continued pain and functional decline. Consequently, the ALJ concludes that Respondents are liable for Claimant's ER treatment as well as the limited physical therapy and treatment he had at the hands of Dr. Brown.

Claimant's Right to Select a Treatment Provider to Attend to his Low Back Injury

H. Under §8-43-404(5)(a), C.R.S., the employer or insurer is afforded the right in the first instance to select a physician to treat the injury. The statute requires the employer or insurer to "provide a list of at least two physicians, . . . in the first instance, from which list an injured employee may select the physician who attends said injured employee." Similarly, Workers' Compensation Rules of Procedure, Rule 8-2(A), 7 Code Colo. Reg. 1101-3, states that "[w]hen an employer has notice of an on the job injury, the employer or insurer shall provide the injured worker with a written list . . .." In order to maintain the right to designate a provider in the first instance, the employer has an obligation to name the treating physician forthwith upon receiving notice of the compensable injury. *See Rogers v. Industrial Claim Appeals Office,* 746

P.2d 545 (Colo. App. 1987). The failure to tender the "services of a physician ... at the time of injury" gives the employee "the right to select a physician or chiropractor." The employer's duty to designate is triggered once the employer or insurer has some knowledge of facts that would lead a reasonably conscientious manager to believe the case may involve a claim for compensation. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo.App. 2006); *Jones v. Adolph Coors Co.,* 689 P.2d 681 (Colo. App. 1984); *Gutierrez v. Premium Pet Foods, LLC*, W.C. No. 4-834-947 (Industrial Claim Appeals Office, September 6, 2011). As found here, Mr. Connor testified he became aware of Claimant's injury "later when the work comp claim came out", yet Claimant was not provided with the required WCRP, 8-2 Choice of Physician Form. Consequently, the ALJ concludes that the right of selection to choose his authorized provider passed to and vested with Claimant. Claimant exercised this right by treating with Dr. Brown. There is no evidence that Claimant set and appointment let alone treated with Dr. Castrejon. Rather, he chose to follow with Dr. Brown. Absent a change of physician to Dr. Castrejon, Claimant's treating provider in this case is limited to Dr. Brown and his referrals.

Claimant's Entitlement to Temporary Total Disability (TTD)

I. To prove entitlement to temporary total disability ("TTD") benefits, Claimant must prove: that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo.App. 1997). C.R.S. § 8-42-103(1)(a), requires a claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo.App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*. As found here, the evidence is uncontroverted that Claimant worked for at least two and a half days after the alleged injury occurred. During that time he never contacted anyone from Employer to report that he was unable to continue in his job duties. He was not taken off work at this time and there was no evidence that work restrictions were imposed restricting/precluding Claimant from working. Consequently, the ALJ finds and concludes that Claimant has failed to prove entitlement to TTD.

Responsibility for Termination

J. Even if Claimant had proven his entitlement to TTD, a claimant found to be responsible for his or her own termination is barred from recovering temporary disability benefits under the Act. §§ 8-42-103(1)(g), 8-42-105(4). *Anderson v. Longmont Toyota, Inc*., 102 P.3d 323 (Colo. 2004). Because the termination statutes constitute an affirmative defense to an otherwise valid claim for temporary disability benefits, the burden of proof is on the Respondents to establish the Claimant was "responsible" for the termination from employment. *Henry Ray Brinsfield v. Excel Corporation,* W.C. No. 4-551-844 (ICAO July 18, 2003).

K. The concept of "responsibility" is similar to the concept of "fault" under the previous version of the statute. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). "Fault" requires a volitional act or the exercise of some control in light of the totality of the circumstances. *Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1994). An employee is "responsible" if the employee precipitated the employment termination by a volitional act that an employee would reasonably expect to result in the loss of employment. *Patchek v. Colorado Department of Public Safety*, W.C. No. 4-432-301 (September 27, 2001). “Fault” does not require “willful intent” on the part of the Claimant. *Richards v. Winter Park Recreational Association*, 919 P.2d 933 (Colo.App. 1996)(unemployment insurance); *Harrison v. Dunmire Property Management, Inc.,* W.C. no. 4-676-410 (ICAO April 9, 2008). “Fault” can include poor job performance, but Claimant is not at fault if the termination is due to claimant’s physical or mental inability to perform assigned duties, *Johnston v. Deluxe/Current Corporation*, W.C. No. 4-376-417 (Industrial Claim Appeals Office, June 7, 1999). In this case, the evidence presented persuades the ALJ that Claimant voluntarily abandoned/resigned his position with the company to return to Colorado. Nevertheless, *Blair v. Art C. Klein Construction Inc.,* W.C. No. 4-556-576 (Industrial Claim Appeals Office, November 3, 2003), held that claimant’s voluntary resignation is not dispositive of the issue of whether he is responsible for termination of his employment. *Blair, supra,* held that the pertinent issue is the reason the claimant quit because the claimant is not "responsible" where the termination is the result of the injury. *See Colorado Springs Disposal v. Industrial Claim Appeals Office, supra; Gregg v. Lawrence Construction Co.,* W.C. No. 4-475-888 (ICAO, April 22, 2002); *Bonney v. Pueblo Youth Service Bureau,* W.C. No. 4-485-720 (ICAO April 24, 2002). According to *Blair, supra,* “if the claimant was compelled to resign from this employment such that it can be said the termination was a necessary and natural consequence of the injury, rather than the claimant's subjective choice, the claimant would not be at fault for the termination.” In this case, there is a dearth of evidence to establish that Claimant’s injury was the reason he abandoned and otherwise resigned his position. Indeed, Claimant worked, by his testimony for an additional two days after his injury and he presented no evidence to establish that Employer made Claimant’s working conditions so difficult that a reasonable person in Claimant’s position would feel compelled to resign. *Derr v. Gulf Oil Corp*., 796 F.2d 340, 344 (10th Cir. 1986). *Evenson v. Colorado Farm Bureau*, 879 P.2d 402 (Colo.App. 1993). Rather, the convincing evidence establishes that Claimant’s decision to leave the job site was purely a voluntary decision under his volition and control. Accordingly the undersigned ALJ finds and concludes that Respondents have proven by a preponderance of the evidence that Claimant is responsible for the termination of his employment and that Claimant is not entitled to workers’ compensation benefits under the facts presented.

ORDER

It is therefore ordered that:

1. Claimant's June 24, 2015, low back injury is deemed compensable.

2. Respondents shall pay for all medical expenses associated with Claimant's treatment and care received through the ER at Parkview Medical Center.

3. Dr. Brown is Claimant's ATP in this case. Respondent shall pay for all reasonable, necessary and related treatment resulting from Claimants June 24, 2015 injury as provided by Dr. Brown and any of his referrals, including physical therapy.

4. Respondents have established by a preponderance of the evidence that Claimant was terminated for cause from his employment. For this reason and because Claimant otherwise failed to establish his entitlement, Claimant's request for TTD benefits is DENIED AND DISMISSED.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 23, 2016

Colorado Springs, CO 80906

ISSUES

The Respondents' application for hearing states that Respondents "request a judicial determination as to what treatment Claimant is currently receiving from her authorized physicians is reasonable and necessary and related to the injury." The Respondents failed to identify any specific treatment with which they take issue. At the commencement of hearing, the Respondents again failed to identify any specific treatment they believed was no longer reasonable, necessary or related to the Claimant's work injury. During opening statement, Respondents' counsel indicated that Respondents have "some issues about what . . . ongoing symptom presentology [sic] may be related to the injury." Respondents also asserted that multiple medications as well as interventional treatment including injections, and diagnostic studies such as MRI arthrogram studies are no longer reasonable and necessary.

Based on the application for hearing, the comments made by counsel, the evidence presented, and the post-hearing position statements filed by the parties, the ALJ finds that the issues to be determined by this decision are whether the Claimant has proven that continued Oxycontin, Percocet, Methocarbamol, Cymbalta, Protonix, and Gabapentin are reasonable, necessary and related to her workers' compensation claim. The ALJ declines the invitation by Respondents to determine whether future diagnostic studies, injections or any other specific treatment recommendations not currently pending are reasonable, necessary or related to Claimant's injury. Such a determination would be speculative, and evaluating the merits of treatment not currently being recommended would be difficult. The ALJ also declines to determine which body parts are causally related to the work injury unless a specific treatment recommendation is pending for that body part.

FINDINGS OF FACT

General Findings

1. The Claimant is a 62-year old woman.

2. On February 17, 1993, ALJ Conway Gandy found that Claimant sustained an occupational disease to her low back.

3. On July 15, 2006, ALJ Gandy found Claimant permanently and totally disabled as a result of the occupational disease, and ordered the Respondents to pay for Claimant's future medical expenses arising out of her compensable injury.

4. In 1992, Claimant had surgery under her workers' compensation claim that consisted of a posterior lumbar interbody fusion with instrumentation done at L4-5 and L5-S1. Claimant still has hardware in her lumbar spine.

5. Claimant testified that she continues to experience low back pain that sometimes radiates up to her neck. She has bilateral leg pain and groin pain. She experiences spasms in her low back and upper back about two to three times per week. Her average pain level is 7 out of 10 with medications.

6. Dr. Harlan Ribnik has been the Claimant's authorized treating physician (ATP) for approximately 18 years.

7. Dr. Ribnik manages Claimant's prescription medications. As of the date of the hearing Dr. Ribnik prescribed the following medications to the Claimant:

Oxycontin
Percocet
Methocarbamol (Robaxin)
Cymbalta
Protonix
Gabapentin (Neurontin)
Senokot
Trazadone

8. The Claimant testified that she feels stable on her medications. She can engage in activities and care for herself.

9. According to Dr. Ribnik's records, the Claimant consistently reports pain at a level of 7 out of 10.

10. Dr. Ribnik testified by deposition. He explained that Claimant has chronic low back pain, some sacroilitis, post laminectomy syndrome, pain in the lower extremities, lumbar spinal stenosis and lumbosacral spondylolysis.

11. Dr. Ribnik described Claimant's symptoms as predominantly back pain, pain her hips and pain in her lower extremities, with the pain greater in her right rather than left lower extremity. Dr. Ribnik associates all of these symptoms with her work injury.

12. There is no pending treatment recommendation for Claimant's lower extremities other than Gabapentin, and no treatment recommendation pending for Claimant's groin or hips.

13. Dr. Ribnik indicated that Claimant suffers from depression and anxiety due to her work injury. He explained Claimant suffers from the sleep issues due to difficulties with finding a comfortable position because of pain. He prescribes Trazadone for sleep.

14. Claimant walks with a marked antalgic gait to the right side and uses a cane. Dr. Ribnik opined that Claimant's symptoms are consistent with the pathology in her lower back associated with the work injury. He explained that it was not uncommon for people who have extensive lumbar surgery to have continued pain in that area and that the lower extremity pain is related to the nerves involved in the low back.

15. Dr. Ribnik indicated that Claimant suffers from some nerve irritation related to her back surgery. He indicated that the hardware "creates an abnormal physiologic and mechanical condition and it occupies a space that can potentially attract scarring or create narrowing of areas against which nerves may rub and become irritated."

16. Dr. Ribnik testified that Claimant's description of her leg pain fits the S1 dermatomal pattern.

17. Claimant is compliant with her medication. She has had no failed drug screens.

18. Dr. Ribnik testified that his treatment goal for Claimant is to maintain a reasonable level of function, control pain and allow Claimant to take care of herself. He does not believe she is symptom magnifying.

19. On February 23, 2015, Dr. Elizabeth Bisgard performed an independent medical examination at Respondents' request. Dr. Bisgard examined the Claimant as well as reviewing the Claimant's medical records prior to issuing a report.

20. Dr. Bisgard indicated that multiple diagnostic studies demonstrate that Claimant's hardware is intact and, therefore, not the source of Claimant's back pain. Dr. Bisgard also indicated that CT myelograms failed to reveal the source of Claimant's back or leg pain.

21. Dr. Bisgard diagnosed the following:

Chronic low back pain secondary to posterior fusion, L4 to S1.
Groin pain bilaterally.
Bilateral leg pain without clear radiculopathy.
Depression.
Chronic constipation secondary to chronic narcotic pain medication.
Narcotic dependency.

22. Dr. Bisgard noted that Claimant has not responded to SI joint injections, radiofrequency ablation of the SI joints or numerous epidural injections.

23. Dr. Bisgard noted that Claimant reports only a 10-20% improvement in her function with medications. She ultimately opined that Dr. Ribnik's records fail to document increased functional activity or decreased pain thus Claimant should be weaned from all pain medications.

24. Dr. Bisgard also opined that Claimant should receive no maintenance medication under her workers' compensation claim, but if it is determined Claimant is entitled medications, the only appropriate medications would be Cymbalta, 30 mg, twice per day, and methocarbamol as needed at the lowest recommended dose of 500 mg.

25. Claimant has been reporting ongoing right leg pain. The medical records reflect that Claimant has been reporting right leg pain since 2004 or earlier.

26. Dr. Ribnik believes that there is objective support for Claimant's right leg pain, and that she carries a diagnosis of S1 radiculopathy.

27. Dr. Bisgard disagrees that objective evidence supports S1 radiculopathy or any right leg symptoms.

28. Dr. Ribnik testified that when Claimant identifies an area of pain (such as her right leg), then he would perform injections to help verify that there is a pain generator at that location and then attempt to do something about it. As reflected in Dr. Bisgard's report, Dr. Ribnik, since January 2008, has performed seven epidural steroid injections in Claimant's low back, with the last injection performed on March 21, 2014. As explained by Dr. Bisgard, the purpose of epidural injections is to determine a pain generator. Specifically, under fluoroscopy, a needle is inserted into a specific level of the spine and injected with both a local numbing medication, as well as a steroid. In order for an injection to be considered diagnostic, there needs to be an 80% or greater reduction of pain in the immediate time period of the anesthetic, and, for a therapeutic response, a lasting benefit from the effect of the steroid.

29. Dr. Bisgard opined that Claimant did not have a diagnostic response to any of the epidural steroid injections.

30. In her report, Dr. Bisgard documented the fact that Claimant's right SI joint radiofrequency ablation in February 2014 resulted in significant benefit in right leg symptoms, but no relief in her back. However, Dr. Bisgard indicated that Claimant's reported response to this procedure was "non-physiologic." As explained by Dr. Bisgard, a radiofrequency ablation performed at the SI joint is not designed to target the nerves that would cause right leg symptomology. Dr. Bisgard opined that it makes no medical sense that Claimant, following a procedure at her SI joint, would experience significant relief in right leg pain.

31. Claimant saw Dr. Ribnik on October 21, 2014. At that time, Claimant had seen Dr. Tolge for an evaluation. Dr. Ribnik explained that he made the referral to Dr. Tolge, a neurologist, for purposes of attempting to determine what may be causing Claimant's ongoing complaints. Dr. Ribnik, in his October 21, 2014 report, made the following comments:

> I had a conversation with Dr. Tolge today about [Claimant's] issues.
> She felt that there wasn't likely any pathology interspinally, but can't rule out retroperitoneal pathology. She suggested that a trial of

> peripheral nerve blocks might be helpful diagnostically, possible ilioinguinal or genitofemoral.
>
> I reviewed the report of the lumbar myelogram dated August 2013 that shows only a mild flattening of the thecal sac at L2-L3 without any compression of the cord or nerve roots or any paravertebral structures. I did a lumbar epidural injection for her at L2-L3 in March 2014. Reviewing the subsequent office notes, she did not get more than a day's relief from that injection, suggesting that it was only a brief local anesthetic effect, and not an effect of the steroid.

32. Dr. Bisgard, after reviewing this clinical note, agreed with Dr. Tolge that there was no interspinal pathology to explain Claimant's ongoing symptom presentation.

33. Dr. Ribnik testified that just because imaging shows the hardware intact does not mean that it cannot be the source of Claimant's pain. Dr. Ribnik explained that the hardware is a foreign substance in the body and can create an abnormal physiological and mechanical condition.

34. In addition to providing a written report, Dr. Bisgard also testified at the hearing. She is Board Certified in Occupational Medicine. She is not Board Certified in anesthesiology, not sub-specialty Board Certified in pain management, not Board Certified in interventional pain medicine, and has no certification of any kind in pain management. She does not specialize in treatment of chronic pain patients. She refers her difficult pain patients to other chronic pain specialists.

35. Dr. Bisgard testified Claimant is a chronic pain patient and The Division of Workers' Compensation Chronic Pain Disorder Medical Treatment Guidelines are applicable. She acknowledges the Division recognizes that acceptable medical practice may include deviation from the Treatment Guidelines as individual changes dictate and she agrees with that statement.

36. Referencing Claimant's Exhibit 15, page 187, Dr. Bisgard testified she agrees with the Guidelines' statement that some healthcare providers, by virtue of their experience and additional training or accreditation by pain specialist organizations, have much greater expertise in the area of chronic pain evaluation and treatment than others and that such patients should be referred to recognized specialists.

37. Dr. Bisgard acknowledges Claimant had an L4-S1 posterior lumbar spinal fusion and, on direct examination, testified that L4-5 and L5-S1 involves nerves that go down the right leg. Dr. Bisgard was unaware of what symptoms Claimant reported following her injury and surgery as she did not have records dating back to that time.

38. When asked if she admits Claimant has chronic low back pain secondary to her fusion, Dr. Bisgard stated: "That's what she has been diagnosed with for the last

20 plus years." She conceded: "I agree she has chronic low back pain, that she is subjectively reporting low back pain. It has been attributed to her posterior fusion….and I understand why that is confusing." Dr. Bisgard then testified Claimant does not have low back and right leg pain secondary to her fusion but then comments: "I will clarify. I am not stating that she is not experiencing pain. I am—I cannot get into her head and tell—and say that she is subjectively not feeling some pain. I am looking at a medical explanation for the pain. There is no medical explanation for the bilateral leg pain and the subjective chronic low back pain."

Oxycontin & Percocet

39. Oxycontin, 20 milligrams, is a sustained release form of oxycodone. Dr. Ribnik is prescribing Claimant Oxycontin in a 20 mg dose one tablet, four times a day.

40. Dr. Ribnik indicated that this dosage is moderate, but Dr. Bisgard opined the dosage is excessive especially because Claimant takes the Oxycontin more frequently inasmuch as she is only taking Oxycontin between 5:00 a.m. and 10:00 p.m.

41. Dr. Bisgard went on to testify that Oxycontin should be prescribed once every 12 hours. Because Oxycontin is a medication that is timed released, the manufacturers have designed and packaged this medication so that there is a 12 hour benefit from it.

42. Dr. Ribnik testified that Percocet (5 mg of oxycodone and 325 mg of Tylenol) is a narcotic pain medication directly related to Claimant's pain and maintenance of function. She takes it every six hours.

43. Percocet is a short-acting narcotic pain medication. Dr. Bisgard noted that because Percocet is a short-acting medication, it is designed only for breakthrough pain to be taken on a PRN basis. According to Dr. Bisgard, there is no need to take a short acting medication (Percocet) while you are taking the long acting medication (Oxycontin).

44. Dr. Ribnik explained that he prescribes the Percocet in a way that is most effective for the patient. In this case, it works best for the Claimant to take it every six hours "when the Oxycontin wears thin." He also explained that Claimant is free not to take the Percocet if she feels she does not need it.

45. Dr. Ribnik acknowledged that the FDA has specifically identified how Oxycontin and Percocet should be taken and that he is not prescribing these medications the way the FDA has recommended. Dr. Ribnik also acknowledged that he has never read the specific FDA provisions for the proper use of Oxycontin and Percocet. Dr. Ribnik, however, opined that the FDA recommendations do not establish the standard of care for treatment by a physician.

46. Claimant testified that she tried tapering or weaning from the opioid medications in the past without much success. She recalled reducing her dosage by

one pill per day for approximately one month. She felt her pain increased from 7 out of 10 to 8-8.5 out of 10.

47. Claimant testified that her function was impacted by the reduction in opioids such that on some days she did not get dressed, she sat in her recliner up to 6 hours rather than 1 to 2 hours, she did not cook or clean her house.

48. The Claimant explained that she became more depressed and her sleep disturbances increased. Once she returned to her normal dosages, her pain levels stabilized and returned to her baseline 7 out of 10.

49. Dr. Ribnik agreed that he tried a reduction of Claimant's narcotic pain medications at the Insurer's request but that Claimant's pain levels increased accompanied by increased anxiety.

50. The Claimant's testimony concerning her pain levels in her back is credible. As found above, Dr. Bisgard acknowledged that Claimant experiences pain, but Dr. Bisgard believes that no objective medical evidence supports the Claimant's pain complaints. Dr. Bisgard has opined that Claimant's pain may be psychogenic. Dr. Bisgard is not a mental health professional and the Claimant has not been evaluated by one.

51. The ALJ is also not persuaded by Dr. Bisgard's opinions regarding the lack of an objective basis for Claimant's back pain. The ALJ credits Dr. Ribnik's opinions concerning the hardware and irritation the hardware can cause. Claimant has experienced ongoing back pain since her work injury and resulting surgery. She has received treatment for her back pain for over 20 years. Respondents' argument would essentially suggest "improvement" in Claimant's condition, which is not supported by the medical evidence.

52. Dr. Bisgard takes issue with the reasonableness of the Oxycontin and Percocet dosages and Dr. Ribnik's "off label" prescriptions of these two drugs. While the reasonableness of the dosages may be questionable and there is little doubt that Claimant's continued use of opioids presents other health risks, a medical utilization review would be the more appropriate avenue for modifying the treatment plan for the Claimant. The "off label" use in and of itself is not a basis to simply discontinue the prescriptions as unreasonable and unnecessary.

53. Based on the evidence, the ALJ finds that Oxycontin and Percocet are reasonable, necessary and related to the claim. The Claimant has proven that she continues to experience pain that is relieved with Oxycontin and Percocet.

Methocarbamol

54. Methocarbamol (also known as Robaxin) is a muscle relaxer used to treat muscle spasms. Dr. Ribnik has prescribed Methocarbamol on a scheduled basis (1-2 tablets 4 times per day) as opposed to a PRN basis.

55. Dr. Ribnik testified that Claimant suffers from “quite a bit” of muscle spasms. However, Dr. Bisgard noted that Dr. Ribnik’s medical records rarely, if at all, document that Claimant is having ongoing muscle spasms in the three year period of time prior to Dr. Bisgard’s evaluation.

56. When asked about lack of documentation of spasms in his reports, Dr. Ribnik admitted that he has not documented spasm consistently.

57. Both Dr. Ribnik and the Claimant believe the Methocarbamol is working to alleviate the spasms. Dr. Ribnik testified that Claimant’s chronic low back pain triggers muscle spasm.

58. Dr. Bisgard opined that Methocarbamol is designed to treat muscle spasms when they are present, as opposed to acting as a prophylactic medication to prevent muscle spasms.

59. Dr. Bisgard does not disagree that Methocarbamol is reasonable, necessary or related to Claimant’s injury. Rather, Dr. Bigard disagrees with the prophylactic use of Methocarbamol. Again, the dosage and prescription indications are subjects more appropriately addressed by a medical utilization review.

60. Based on the credible medical evidence, the Claimant has proven that Methocarbamol is reasonable, necessary and related to her work injury.

Cymbalta

61. Dr. Bisgard conceded that Cymbalta, 30 mg, twice per day, would be appropriate if Claimant were entitled maintenance medications. The ALJ finds that Claimant has proven she is entitled to continued prescriptions for Cymbalta based on the opinions of Dr. Bisgard and Dr. Ribnik. The ALJ makes no finding regarding the specific appropriate dosages.

Protonix

62. Protonix is a medication designed to relieve symptoms of GERD.

63. Dr. Ribnik opined that the Protonix is related to the Claimant’s work injury due to the litigation.

64. According to Dr. Ribnik’s medical records, Respondents began questioning Dr. Ribnik’s ongoing medical care during the summer of 2014. Dr. Ribnik’s records indicate that he has prescribed Protonix since as early as October 4, 2010.

Thus, Dr. Ribnik's opinion that Claimant needs Protonix due litigation stress lacks any foundation.

65. Dr. Ribnik later testified that almost all of Claimant's medications cause some form of gastric irritation. He could not specifically recall Claimant's history of gastric irritation and when he began prescribing Protonix.

66. The medical evidence fails to support that Claimant's work injury or the associated medications cause her to need Protonix. As such, Claimant has failed to prove that Protonix is related to her work injury.

Gabapentin

67. Gabapentin (Neurontin) is a nerve stabilizer designed to treat specific nerve pain.

68. On April 22, 2011 by Dr. Ribnik's physician's assistant started Claimant on Neurontin. The medical record fails to clearly document the basis for the prescription.

69. On June 1, 2011, the Claimant reported "some benefit" from the Nuerontin but her reported pain levels remained the same at 7 out of 10.

70. Dr. Ribnik believes that Claimant suffers from nerve irritation associated with the low back surgery. He characterized the dosages of 600 mg three times per day as mild.

71. Based on a review of Dr. Ribnik's medical records, Dr. Bisgard was unable to identify any reports of neuropathic pain that Claimant would benefit by the ongoing consumption of Gabapentin.

72. Dr. Ribnik's records fail to document any evidence of neuropathic pain generators. The Claimant may have right leg pain but there has been no objective evidence to support that such pain is neuropathic in nature.

73. The ALJ finds that none of the medical records clearly document an objective basis to support the need for Gabapentin. As found above, the initial prescription for Gabapentin lacked support. Claimant has failed to prove that the ongoing need for Gabapentin is reasonable, necessary or related to her work injury.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge enters the following conclusions of law:

General Legal Principals

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a

reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

Medical Benefits

Section 8-42-101(1)(a), C.R.S., provides:

> Every employer … shall furnish … such medical, hospital, and surgical supplies, crutches, and apparatus as may reasonably be needed at the time of the injury … and thereafter during the disability to cure and relieve the employee from the effects of the injury.

Respondents are obligated to provide medical benefits to cure or relieve the effects of the industrial injury. Section 8-42-101(1), C.R.S.; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Respondents, however, retain the right to dispute liability for specific medical treatment on grounds the treatment is not authorized or reasonably necessary to cure or relieve the effects of the industrial injury.

The Claimant has proven entitlement to ongoing pain medications. Dr. Bisgard admitted that Claimant suffers from pain, but Dr. Bisgard contends there is no objective reason for it. As found above, the ALJ credits Dr. Ribnik's opinions concerning Claimant's pain generator. The Claimant has been complaining of back pain for over 20 years and has consistently received treatment for it, including pain medications. Claimant's ongoing back pain continues to be related to her work injury. To the extent the Respondents argue that the dosages prescribed by Dr. Ribnik are excessive, the Respondents should pursue the appropriate remedy which is a medical utilization review. Claimant has also proven that she is entitled to Cymbalta.

Claimant has failed to prove that the Protonix is related to her industrial injury. Respondents are no longer liable for the Protonix prescription. Claimant has failed to prove that Gabapentin is reasonable, necessary or related to her industrial injury. Dr. Ribnik shall wean the Claimant from Gabapentin within 90 days of the date of this order or Claimant assume responsibility for payment of the Gabapentin beginning on the 91st day from the date of this order.

ORDER

It is therefore ordered that:

1. Claimant is entitled to Oxycontin, Percocet, Methocarbamol and Cymbalta.

2. Claimant is no longer entitled to Gabapentin or Protonix. Dr. Ribnik shall wean Claimant from Gabapentin within 90 days of the date of this order, or Claimant shall assume responsibility for payment of Gabapentin.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant prove by a preponderance of the evidence that the treatment recommended by Dr. Kawasaki (left C6-7 TF ESI and left L3-4 TF ESI)[2] is reasonable and necessary?

FINDINGS OF FACT

1. Claimant suffered an admitted industrial injury on February 6, 2012, when he fell on the ice while working for Employer. Claimant injured his neck, back, right shoulder and elbow.

2. There was no evidence in the record Claimant required treatment for his neck, back, shoulder or elbow prior to February 6, 2012.

3. Claimant testified he received treatment from Dr. Kawasaki, both before and after he reached MMI. He also received treatment from John Papilion, M.D., who treated his shoulder and left elbow, as well as Andrew Motz, M.D., who treated his left elbow and neck.

4. On June 8, 2012, Claimant underwent an arthroscopic chondroplasty of the glenoid, with resection of chondral flaps, debridement of the superior labrum, and subacromial decompression, which was performed by Dr. Papilion. Claimant continued to have symptoms in his right shoulder after this surgery.

5. Claimant was evaluated by Dr. Kawasaki on January 24, 2013. At that time, Claimant had complaints of neck pain and headaches. Claimant had diffuse tenderness to palpation in the posterior cervical musculature, although he had good range of motion. He had tenderness to palpation in the shoulder girdles, worse on the right side. Limitations in his shoulder range of motion were noted.

6. Dr. Kawasaki's impressions were: right shoulder S/P arthroscopic chondroplasty, labral debridement, and subacromial decompression; articular defect in the right shoulder glenoid; low back pain with no radicular symptoms; and unusual symptomotology of pain spasms with fasciculations to the right upper extremity-rule out neuropathic lesion. Dr. Kawasaki referenced the original evaluation by Dr. Bratman, who questioned brachial plexus syndrome, but did not think Claimant's pain complaints had a cervical origin. Dr. Kawasaki stated Claimant had cervical complaints as of February 6, 2012 and the ALJ notes Dr. Kawasaki was of the opinion the cervical spine

[2] In the recitation of issues at the outset of the hearing, counsel for both parties agreed this was the sole issue for determination.

required work-up, including an MRI. Dr. Kawasaki recommended an EMG/nerve conduction study, noting Claimant did not require epidural steroid injections at that time.

7. On June 6, 2013, Claimant was evaluated by Dr. Kawasaki, who found tenderness in the cervical spine and right shoulder, as well as tenderness to palpation of the right ulnar groove with positive Tinel's sign with numbness and tingling into his right hand. Claimant had diffuse tenderness to palpation in the lower lumbar segments. Claimant wanted to defer the medial branch blocks and Dr. Kawasaki noted that medial branch rhizotomies would be a last ditch effort. Claimant was to continue chiropractic and acupuncture treatments. Dr. Kawasaki recommended a PT program, along with health club membership.

8. Claimant returned to Dr. Kawasaki on October 3, 2013 and reported increasing pain in his cervical spine. Dr. Kawasaki's impressions were: right shoulder S/P chondroplasty, debridement, and subacromial decompression (likely at MMI since he did not want to undergo resurfacing procedure); cervical strain with cervicogenic headaches (worsening); lumbar spondylosis with low back symptoms; right ulnar neuropathy; multiple delays in this case. Dr. Kawasaki recommended bilateral C2-3, C3-4 and third occipital nerve blocks. The ALJ notes this recommendation directly related to increased neck pain with headaches. If Claimant had a good response, Dr. Kawasaki noted he would have a second set per protocol. Claimant had the first set of medial branch blocks at C2, C3, C4, and the third occipital nerve.

9. Claimant was seen by Dr. Kawasaki on November 7, 2013, at which time he noted Claimant had undergone the medial branch blocks at C2, C3, C4, and third occipital nerve. Claimant’s response was diagnostic and he experienced significant improvement. Claimant was a candidate to undergo a second round of the medial blocks. The ALJ infers Dr. Kawasaki believed the second round of medial blocks was reasonable and necessary at the time of this evaluation. Dr. Kawasaki noted Claimant was likely at MMI for the shoulder, as well as the lumbar spine. The surgery for the ulnar nerve transposition was on hold, which was described as a logistical issue.

10. Approximately six months later, Claimant returned to Dr. Kawasaki on May 19, 2014. Claimant reported left-sided neck pain, with associated headaches. Claimant had tenderness in the posterior cervical region, along with the shoulder and lower lumbar segments. Straight leg raise testing cause numbness/tingling into the anterior tibial region and on the right involving posterior hamstring region in to the calf. Dr. Kawasaki recommended a second medial branch block procedure bilaterally at C2-3, C3-4 and third occipital nerve levels. Claimant wished to receive this treatment. The ALJ infers Dr. Kawasaki was of the opinion that the second medial branch block procedure was reasonable and necessary at this time based upon his findings at this evaluation.

11. On May 29, 2014, Claimant returned to Dr. Kawasaki and advised that his low back pain was more pressing. Dr. Kawasaki's note indicated his office was seeking medial branch block authorization at the bilateral C2-3, C3-4, and third occipital nerve levels. Dr. Kawasaki recommended a left L3-4 transforaminal epidural steroid injection

because of Claimant's low back pain. The ALJ infers Dr. Kawasaki was of the opinion that the lumbar ESI injection was reasonable and necessary.

12. When Claimant returned to Dr. Kawasaki on August 4, 2014, he had undergone an epidural steroid injection and the left L3-4 transforaminal block. Claimant reported he felt much better after the injection, which eliminated some of the constant pain. Claimant was ready to proceed with his second medial branch block, which Dr. Kawasaki recommended. Dr. Kawasaki noted if Claimant had a diagnostic response, he would be set up for the rhizotomy. Dr. Kawasaki stated Claimant had some improvement with epidural steroid injection. Dr. Kawasaki also injected Claimant's lateral epicondyle region at this appointment.

13. Claimant was examined by Dr. Hattem on September 29, 2014, who determined he was at MMI. Dr. Hattem noted Claimant declined further injections and was discharged by Dr. Kawasaki on August 5, 2013.[3] Dr. Hattem performed an evaluation of Claimant's permanent medical impairment. Dr. Hattem assigned an impairment rating for Claimant's abnormal right shoulder motion and abnormal right elbow motion; abnormal cervical motion, abnormal lumbar motion and a Table 53 diagnosis.

14. Respondents filed a Final Admission of Liability ("FAL") on November 6, 2014 based upon Dr. Hattem's rating. The FAL admitted for "reasonable and necessary medical care, related to this work injury, by an authorized treating physician". No Objection was filed to the FAL.

16. On April 25, 2015, a cervical spine MRI was performed. The films were read by Eduardo Seda, M.D., whose impression was stable degenerative disc and joint changes without cord deformity. There were multiple stable levels with foraminal narrowing which appeared predominantly bony, except for the C6-7 level where there was a small new disc component extending into the left foramen.

17. Claimant was evaluated by Dr. Motz on May 7, 2015. He presented with pain on the right and left side equally, which he said occurred constantly. Dr. Motz reviewed the cervical spine MRI, which had fairly significant disc bulges at C4-5 and C6-7, the latter of which was new from the prior study. Dr. Motz thought this could explain some of the numbness and tingling Claimant was getting in his hand. Dr. Motz concluded Claimant would require the left elbow surgery, but Dr. Motz wanted to wait until after the cervical epidural. Claimant wished to proceed with the epidural injections. There was no evidence in the record Claimant received this medical treatment.

[3] This may relate to an earlier evaluation which was not part of the record. The ALJ notes Claimant returned to Dr. Kawasaki after August 5, 2013. Dr. Kawasaki's record of August 4, 2014 states authorization for the second medial branch block was being sought.

18. A document entitled “authorization for cervical ESI” (including fax cover sheet, dated May 12, 2015) from Dr. Motz’s office was admitted into evidence.[4]

19. At Respondents’ request, Mark Failinger, M.D. performed an IME on July 10, 2015. In his opinion, there was nothing related to the work incident to explain Claimant’s neck pain, as that appeared to be due to ongoing degeneration. Dr. Failinger recommended a referral back to Dr. Kawasaki so he could compare the new MRI with the previous MRI. The ALJ found Dr. Kawasaki’s opinion regarding the need for the cervical ESI to be more persuasive than Dr. Failinger’s.

20. Claimant returned to Dr. Kawasaki on January 18, 2016, at which time he was complaining of severe low back and left anterior thigh pain. On examination, Claimant's cervical spine showed tenderness to palpation through the posterior cervical musculature and upper cervical region. He had specific tenderness along the lateral epicondyle or region, with pain on wrist extension, finger extension and grip. The lumbar spine examination revealed tenderness to palpation diffusely.

21. Dr. Kawasaki's impressions were: poly-trauma with multiple injuries; dental trauma; cervicogenic headaches with the facetogenic pain generators with diagnostic initial medial branch blocks at C2-3, C3-4 and third occipital nerves; left C7 radiculopathy with a change on MRI taken in July 2015; left lateral epicondylitis; L2-3 stenosis with left L3 radiculopathy. Dr. Kawasaki believed that a diagnostic and potentially therapeutic left C6-7 transforaminal epidural steroid injection would help decipher how much the left C6-7 foraminal disc protrusion was contributing to Claimant's pain. The ALJ infers Dr. Kawasaki made the recommendation for injections due to the findings made on examination.

22. On January 21, 2016, Dr. Kawasaki's office sent a request for authorization for left C6-7 TF ESI and left L3-4 TF ESI.[5]

23. Claimant testified the treatment he previously received from Dr. Kawasaki was helpful and he wished to receive the injections.

24. Dr. Kawasaki's evidentiary deposition was admitted into evidence. Dr. Kawasaki was qualified as an expert in physical medicine rehabilitation, the specialty in which he is board certified. He is Level II accredited pursuant to the WCRP. Claimant's course of medical treatment was reviewed in some detail with Dr. Kawasaki. With regard to the recommendation for the left C6-7 transforaminal epidural steroid injection, Dr. Kawasaki testified this injection was diagnostic and would potentially help determine the source of Claimant's ongoing shoulder issues. Therefore, even though the disc protrusion at C6-7 was a new issue and not related to the 2012 injury, the proposed ESI was reasonable as a diagnostic test to decide whether this was a shoulder issue and therefore compensable, or a neck issue and not causally related. Dr. Kawasaki was also asked about the branch blocks and noted he would not do both the medial branch

[4] Exhibit C, p.1-2.

[5] Exhibit 4, p. 2.

block and the epidural at the same time, as diagnostic clarity would be lost. The ALJ credited Dr. Kawasaki's recommendations for the cervical ESI.

25. Dr. Kawasaki testified that his January 18, 2016 report should have referenced L3-4, as opposed to L2-3. Dr. Kawasaki was recommending the second lumbar injection based upon Claimant's response to the first injection. The ALJ credited Dr. Kawasaki's recommendations for this second lumbar injection.

26. No evidence was presented that the instant claim was closed for purposes of *Grover* medical benefits.

27. Based on the medical records admitted at hearing, the ALJ concludes that Claimant’s right shoulder, right elbow, cervical spine and lumbar spine were part of the industrial injury on 6, 2012.

28. Based upon the medical records admitted at hearing, the ALJ concludes Respondents provided post-MMI medical benefits to Claimant, including the April 25, 2015 cervical spine MRI, the May 7, 2015 evaluation with Dr. Motz, and the January 18, 2016 examination by Dr. Kawasaki.

29. The left C6-7 TF ESI and left L3-4 TF ESI recommended by Dr. Kawasaki are reasonable and necessary.

30. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers’ Compensation Act of Colorado (Act), §8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. Section 8-43-201(1),C.R.S. Generally, the Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). In this case, the credibility of various health care providers was implicated on the question of whether Claimant was entitled to maintenance medical benefits.

***Grover* Medical Benefits**

The need for medical treatment may extend beyond the point of MMI where Claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995). An award of *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended, nor a finding that Claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999). Even if Respondents admit for *Grover* medical benefits, they retain the right to question the reasonableness and necessity of proposed treatment. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003).

In the instant case, Claimant had the burden of proof to establish that the treatment proposed by Dr. Kawasaki was reasonable and necessary, as well as related to his industrial injury. Section 8-42-101(1)(a), C.R.S.; *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The question of whether the Claimant proved the proposed treatment was reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

In *Kroupa,* the ALJ denied Claimant's request for additional knee surgery, which would have been her third procedure. The ALJ found the surgery was not reasonable and necessary, based upon the opinion of Respondents' expert. That decision was affirmed first by the Industrial Claims Appeals Office, then the Colorado Court of Appeals, which noted that the fact there were contrary opinions did not compel the ALJ to reach a different conclusion. The Court of Appeals noted the ALJ was required to make specific findings only as to evidence found persuasive and determinative. *Kroupa v. Industrial Claim Appeals Office, supra,* 53 P.3d at 1197. In this regard, the ALJ is free to credit one medical opinion to the exclusion of a contrary opinion. *Dow Chemical v. Industrial Claim Appeals Office,* 843 P.2d 122, 125 (Colo. App. 1992).

The ALJ considered Respondents' contention that Claimant was not entitled to *Grover* medical benefits because no Petition to reopen was filed. In this case, the medical benefits were never closed, as Claimant continued to receive medical treatment after MMI. As found, Dr. Hattem recommended maintenance medical benefits. (Finding of Fact 13). This included treatment for Claimant's dental condition, as well as returning to Dr. Davis for right elbow surgery. Dr. Hattem also stated Claimant could return to Dr. Papilion if he wished to proceed with additional right shoulder surgery. Respondents filed an FAL admitting for said benefits. (Finding of Fact 14). Respondents continued to provide medical benefits to Claimant after MMI. (Finding of Fact 28).

As determined by Findings of Fact 6-12, 17, 20-21, Claimant required continued evaluation and treatment for his cervical and lumbar spine. Claimant consistently reported symptoms and treatment was provided for his cervical spine, as well as arm symptoms. In this regard, Dr. Kawasaki's testimony established why the cervical ESI was necessary at this time and the ALJ credited his opinion. (Finding of Fact 24). Claimant proved the cervical spine ESI proposed by Dr. Kawasaki was reasonable and necessary. The opinions expressed in Dr. Kawasaki's deposition were concordant with those expressed in the records of Dr. Kawasaki's treatment, as well as the reasonable inferences derived therefrom. The ALJ credited Dr. Kawasaki's opinions that the C6-7 ESI was necessary as a diagnostic test to determine the source of Claimant's continued pain. Therefore, Claimant is entitled to receive the proposed cervical C6-7 ESI.

The ALJ notes Respondents' proposed Findings of Fact, Conclusions of Law and Order referenced the fact that authorization for the cervical ESI had been granted after Dr. Kawasaki's deposition. However, no evidence of that was admitted into evidence before the record was closed. To the extent that medical benefit has now been authorized, this issue is now moot.

Turning to the proposed lumbar epidural steroid injection, based on the totality of the evidence, the ALJ found this treatment was recommended by Dr. Kawasaki and reasonable and necessary. Dr. Kawasaki based the recommendation on Claimant's response to the previous injection. (Finding of Fact 25). In his deposition, Dr. Kawasaki clarified the injection would be at the L3-4 level, as the L3 nerve root was pinched. No contrary medical opinion was introduced into evidence and therefore, Claimant is entitled to said treatment.

ORDER

It is therefore ordered that:

1. Claimant's request for authorization of left C6-7 TF ESI and left L3-4 TF ESI injections is granted.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty

(20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding proceduresto follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant prove by a preponderance of the evidence that the treatment recommended by Dr. Kawasaki (left C6-7 TF ESI and left L3-4 TF ESI)[2] is reasonable and necessary?

FINDINGS OF FACT

1. Claimant suffered an admitted industrial injury on February 6, 2012, when he fell on the ice while working for Employer. Claimant injured his neck, back, right shoulder and elbow.

2. There was no evidence in the record Claimant required treatment for his neck, back, shoulder or elbow prior to February 6, 2012.

3. Claimant testified he received treatment from Dr. Kawasaki, both before and after he reached MMI. He also received treatment from John Papilion, M.D., who treated his shoulder and left elbow, as well as Andrew Motz, M.D., who treated his left elbow and neck.

4. On June 8, 2012, Claimant underwent an arthroscopic chondroplasty of the glenoid, with resection of chondral flaps, debridement of the superior labrum, and subacromial decompression, which was performed by Dr. Papilion. Claimant continued to have symptoms in his right shoulder after this surgery.

5. Claimant was evaluated by Dr. Kawasaki on January 24, 2013. At that time, Claimant had complaints of neck pain and headaches. Claimant had diffuse tenderness to palpation in the posterior cervical musculature, although he had good range of motion. He had tenderness to palpation in the shoulder girdles, worse on the right side. Limitations in his shoulder range of motion were noted.

6. Dr. Kawasaki's impressions were: right shoulder S/P arthroscopic chondroplasty, labral debridement, and subacromial decompression; articular defect in the right shoulder glenoid; low back pain with no radicular symptoms; and unusual symptomotology of pain spasms with fasciculations to the right upper extremity-rule out neuropathic lesion. Dr. Kawasaki referenced the original evaluation by Dr. Bratman, who questioned brachial plexus syndrome, but did not think Claimant's pain complaints had a cervical origin. Dr. Kawasaki stated Claimant had cervical complaints as of February 6, 2012 and the ALJ notes Dr. Kawasaki was of the opinion the cervical spine

[2] In the recitation of issues at the outset of the hearing, counsel for both parties agreed this was the sole issue for determination.

required work-up, including an MRI. Dr. Kawasaki recommended an EMG/nerve conduction study, noting Claimant did not require epidural steroid injections at that time.

7. On June 6, 2013, Claimant was evaluated by Dr. Kawasaki, who found tenderness in the cervical spine and right shoulder, as well as tenderness to palpation of the right ulnar groove with positive Tinel's sign with numbness and tingling into his right hand. Claimant had diffuse tenderness to palpation in the lower lumbar segments. Claimant wanted to defer the medial branch blocks and Dr. Kawasaki noted that medial branch rhizotomies would be a last ditch effort. Claimant was to continue chiropractic and acupuncture treatments. Dr. Kawasaki recommended a PT program, along with health club membership.

8. Claimant returned to Dr. Kawasaki on October 3, 2013 and reported increasing pain in his cervical spine. Dr. Kawasaki's impressions were: right shoulder S/P chondroplasty, debridement, and subacromial decompression (likely at MMI since he did not want to undergo resurfacing procedure); cervical strain with cervicogenic headaches (worsening); lumbar spondylosis with low back symptoms; right ulnar neuropathy; multiple delays in this case. Dr. Kawasaki recommended bilateral C2-3, C3-4 and third occipital nerve blocks. The ALJ notes this recommendation directly related to increased neck pain with headaches. If Claimant had a good response, Dr. Kawasaki noted he would have a second set per protocol. Claimant had the first set of medial branch blocks at C2, C3, C4, and the third occipital nerve.

9. Claimant was seen by Dr. Kawasaki on November 7, 2013, at which time he noted Claimant had undergone the medial branch blocks at C2, C3, C4, and third occipital nerve. Claimant’s response was diagnostic and he experienced significant improvement. Claimant was a candidate to undergo a second round of the medial blocks. The ALJ infers Dr. Kawasaki believed the second round of medial blocks was reasonable and necessary at the time of this evaluation. Dr. Kawasaki noted Claimant was likely at MMI for the shoulder, as well as the lumbar spine. The surgery for the ulnar nerve transposition was on hold, which was described as a logistical issue.

10. Approximately six months later, Claimant returned to Dr. Kawasaki on May 19, 2014. Claimant reported left-sided neck pain, with associated headaches. Claimant had tenderness in the posterior cervical region, along with the shoulder and lower lumbar segments. Straight leg raise testing cause numbness/tingling into the anterior tibial region and on the right involving posterior hamstring region in to the calf. Dr. Kawasaki recommended a second medial branch block procedure bilaterally at C2-3, C3-4 and third occipital nerve levels. Claimant wished to receive this treatment. The ALJ infers Dr. Kawasaki was of the opinion that the second medial branch block procedure was reasonable and necessary at this time based upon his findings at this evaluation.

11. On May 29, 2014, Claimant returned to Dr. Kawasaki and advised that his low back pain was more pressing. Dr. Kawasaki's note indicated his office was seeking medial branch block authorization at the bilateral C2-3, C3-4, and third occipital nerve levels. Dr. Kawasaki recommended a left L3-4 transforaminal epidural steroid injection

because of Claimant's low back pain. The ALJ infers Dr. Kawasaki was of the opinion that the lumbar ESI injection was reasonable and necessary.

12. When Claimant returned to Dr. Kawasaki on August 4, 2014, he had undergone an epidural steroid injection and the left L3-4 transforaminal block. Claimant reported he felt much better after the injection, which eliminated some of the constant pain. Claimant was ready to proceed with his second medial branch block, which Dr. Kawasaki recommended. Dr. Kawasaki noted if Claimant had a diagnostic response, he would be set up for the rhizotomy. Dr. Kawasaki stated Claimant had some improvement with epidural steroid injection. Dr. Kawasaki also injected Claimant's lateral epicondyle region at this appointment.

13. Claimant was examined by Dr. Hattem on September 29, 2014, who determined he was at MMI. Dr. Hattem noted Claimant declined further injections and was discharged by Dr. Kawasaki on August 5, 2013.[3] Dr. Hattem performed an evaluation of Claimant's permanent medical impairment. Dr. Hattem assigned an impairment rating for Claimant's abnormal right shoulder motion and abnormal right elbow motion; abnormal cervical motion, abnormal lumbar motion and a Table 53 diagnosis.

14. Respondents filed a Final Admission of Liability ("FAL") on November 6, 2014 based upon Dr. Hattem's rating. The FAL admitted for "reasonable and necessary medical care, related to this work injury, by an authorized treating physician". No Objection was filed to the FAL.

16. On April 25, 2015, a cervical spine MRI was performed. The films were read by Eduardo Seda, M.D., whose impression was stable degenerative disc and joint changes without cord deformity. There were multiple stable levels with foraminal narrowing which appeared predominantly bony, except for the C6-7 level where there was a small new disc component extending into the left foramen.

17. Claimant was evaluated by Dr. Motz on May 7, 2015. He presented with pain on the right and left side equally, which he said occurred constantly. Dr. Motz reviewed the cervical spine MRI, which had fairly significant disc bulges at C4-5 and C6-7, the latter of which was new from the prior study. Dr. Motz thought this could explain some of the numbness and tingling Claimant was getting in his hand. Dr. Motz concluded Claimant would require the left elbow surgery, but Dr. Motz wanted to wait until after the cervical epidural. Claimant wished to proceed with the epidural injections. There was no evidence in the record Claimant received this medical treatment.

[3] This may relate to an earlier evaluation which was not part of the record. The ALJ notes Claimant returned to Dr. Kawasaki after August 5, 2013. Dr. Kawasaki's record of August 4, 2014 states authorization for the second medial branch block was being sought.

18. A document entitled "authorization for cervical ESI" (including fax cover sheet, dated May 12, 2015) from Dr. Motz's office was admitted into evidence.[4]

19. At Respondents' request, Mark Failinger, M.D. performed an IME on July 10, 2015. In his opinion, there was nothing related to the work incident to explain Claimant's neck pain, as that appeared to be due to ongoing degeneration. Dr. Failinger recommended a referral back to Dr. Kawasaki so he could compare the new MRI with the previous MRI. The ALJ found Dr. Kawasaki's opinion regarding the need for the cervical ESI to be more persuasive than Dr. Failinger's.

20. Claimant returned to Dr. Kawasaki on January 18, 2016, at which time he was complaining of severe low back and left anterior thigh pain. On examination, Claimant's cervical spine showed tenderness to palpation through the posterior cervical musculature and upper cervical region. He had specific tenderness along the lateral epicondyle or region, with pain on wrist extension, finger extension and grip. The lumbar spine examination revealed tenderness to palpation diffusely.

21. Dr. Kawasaki's impressions were: poly-trauma with multiple injuries; dental trauma; cervicogenic headaches with the facetogenic pain generators with diagnostic initial medial branch blocks at C2-3, C3-4 and third occipital nerves; left C7 radiculopathy with a change on MRI taken in July 2015; left lateral epicondylitis; L2-3 stenosis with left L3 radiculopathy. Dr. Kawasaki believed that a diagnostic and potentially therapeutic left C6-7 transforaminal epidural steroid injection would help decipher how much the left C6-7 foraminal disc protrusion was contributing to Claimant's pain. The ALJ infers Dr. Kawasaki made the recommendation for injections due to the findings made on examination.

22. On January 21, 2016, Dr. Kawasaki's office sent a request for authorization for left C6-7 TF ESI and left L3-4 TF ESI.[5]

23. Claimant testified the treatment he previously received from Dr. Kawasaki was helpful and he wished to receive the injections.

24. Dr. Kawasaki's evidentiary deposition was admitted into evidence. Dr. Kawasaki was qualified as an expert in physical medicine rehabilitation, the specialty in which he is board certified. He is Level II accredited pursuant to the WCRP. Claimant's course of medical treatment was reviewed in some detail with Dr. Kawasaki. With regard to the recommendation for the left C6-7 transforaminal epidural steroid injection, Dr. Kawasaki testified this injection was diagnostic and would potentially help determine the source of Claimant's ongoing shoulder issues. Therefore, even though the disc protrusion at C6-7 was a new issue and not related to the 2012 injury, the proposed ESI was reasonable as a diagnostic test to decide whether this was a shoulder issue and therefore compensable, or a neck issue and not causally related. Dr. Kawasaki was also asked about the branch blocks and noted he would not do both the medial branch

[4] Exhibit C, p.1-2.

[5] Exhibit 4, p. 2.

block and the epidural at the same time, as diagnostic clarity would be lost. The ALJ credited Dr. Kawasaki's recommendations for the cervical ESI.

25. Dr. Kawasaki testified that his January 18, 2016 report should have referenced L3-4, as opposed to L2-3. Dr. Kawasaki was recommending the second lumbar injection based upon Claimant's response to the first injection. The ALJ credited Dr. Kawasaki's recommendations for this second lumbar injection.

26. No evidence was presented that the instant claim was closed for purposes of *Grover* medical benefits.

27. Based on the medical records admitted at hearing, the ALJ concludes that Claimant's right shoulder, right elbow, cervical spine and lumbar spine were part of the industrial injury on 6, 2012.

28. Based upon the medical records admitted at hearing, the ALJ concludes Respondents provided post-MMI medical benefits to Claimant, including the April 25, 2015 cervical spine MRI, the May 7, 2015 evaluation with Dr. Motz, and the January 18, 2016 examination by Dr. Kawasaki.

29. The left C6-7 TF ESI and left L3-4 TF ESI recommended by Dr. Kawasaki are reasonable and necessary.

30. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), §8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. Section 8-43-201(1),C.R.S. Generally, the Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). In this case, the credibility of various health care providers was implicated on the question of whether Claimant was entitled to maintenance medical benefits.

Grover **Medical Benefits**

The need for medical treatment may extend beyond the point of MMI where Claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995). An award of *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended, nor a finding that Claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999). Even if Respondents admit for *Grover* medical benefits, they retain the right to question the reasonableness and necessity of proposed treatment. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003).

In the instant case, Claimant had the burden of proof to establish that the treatment proposed by Dr. Kawasaki was reasonable and necessary, as well as related to his industrial injury. Section 8-42-101(1)(a), C.R.S.; *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The question of whether the Claimant proved the proposed treatment was reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

In *Kroupa,* the ALJ denied Claimant's request for additional knee surgery, which would have been her third procedure. The ALJ found the surgery was not reasonable and necessary, based upon the opinion of Respondents' expert. That decision was affirmed first by the Industrial Claims Appeals Office, then the Colorado Court of Appeals, which noted that the fact there were contrary opinions did not compel the ALJ to reach a different conclusion. The Court of Appeals noted the ALJ was required to make specific findings only as to evidence found persuasive and determinative. *Kroupa v. Industrial Claim Appeals Office, supra,* 53 P.3d at 1197. In this regard, the ALJ is free to credit one medical opinion to the exclusion of a contrary opinion. *Dow Chemical v. Industrial Claim Appeals Office,* 843 P.2d 122, 125 (Colo. App. 1992).

The ALJ considered Respondents' contention that Claimant was not entitled to *Grover* medical benefits because no Petition to reopen was filed. In this case, the medical benefits were never closed, as Claimant continued to receive medical treatment after MMI. As found, Dr. Hattem recommended maintenance medical benefits. (Finding of Fact 13). This included treatment for Claimant's dental condition, as well as returning to Dr. Davis for right elbow surgery. Dr. Hattem also stated Claimant could return to Dr. Papilion if he wished to proceed with additional right shoulder surgery. Respondents filed an FAL admitting for said benefits. (Finding of Fact 14). Respondents continued to provide medical benefits to Claimant after MMI. (Finding of Fact 28).

As determined by Findings of Fact 6-12, 17, 20-21, Claimant required continued evaluation and treatment for his cervical and lumbar spine. Claimant consistently reported symptoms and treatment was provided for his cervical spine, as well as arm symptoms. In this regard, Dr. Kawasaki’s testimony established why the cervical ESI was necessary at this time and the ALJ credited his opinion. (Finding of Fact 24). Claimant proved the cervical spine ESI proposed by Dr. Kawasaki was reasonable and necessary. The opinions expressed in Dr. Kawasaki's deposition were concordant with those expressed in the records of Dr. Kawasaki’s treatment, as well as the reasonable inferences derived therefrom. The ALJ credited Dr. Kawasaki's opinions that the C6-7 ESI was necessary as a diagnostic test to determine the source of Claimant's continued pain. Therefore, Claimant is entitled to receive the proposed cervical C6-7 ESI.

The ALJ notes Respondents’ proposed Findings of Fact, Conclusions of Law and Order referenced the fact that authorization for the cervical ESI had been granted after Dr. Kawasaki's deposition. However, no evidence of that was admitted into evidence before the record was closed. To the extent that medical benefit has now been authorized, this issue is now moot.

Turning to the proposed lumbar epidural steroid injection, based on the totality of the evidence, the ALJ found this treatment was recommended by Dr. Kawasaki and reasonable and necessary. Dr. Kawasaki based the recommendation on Claimant’s response to the previous injection. (Finding of Fact 25). In his deposition, Dr. Kawasaki clarified the injection would be at the L3-4 level, as the L3 nerve root was pinched. No contrary medical opinion was introduced into evidence and therefore, Claimant is entitled to said treatment.

ORDER

It is therefore ordered that:

1. Claimant’s request for authorization of left C6-7 TF ESI and left L3-4 TF ESI injections is granted.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty

(20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding proceduresto follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. A determination of whether Division Independent Medical Examination (DIME) physician Stanley H. Ginsburg, M.D. assigned Claimant a 7% or 29% whole person impairment rating.

2. Whether Respondents have produced clear and convincing evidence to overcome the opinion of Dr. Ginsburg that Claimant suffered a 29% whole person impairment as a result of his October 14, 2014 admitted industrial injuries.

FINDINGS OF FACT

1. Claimant worked for Employer as a Taxi Driver. On October 14, 2014 he suffered admitted industrial injuries during the course and scope of his employment. While Claimant was stopped at a traffic light in his cab he was rear-ended in a multi-vehicle automobile accident.

2. Claimant underwent medical treatment with Authorized Treating Physician (ATP) Albert Hattem, M.D. Dr. Hattem concluded that Claimant reached Maximum Medical Improvement (MMI) on August 24, 2015. In assigning Claimant's permanent impairment rating Dr. Hattem conducted internally valid lumbar range of motion tests. Based on Table 53, §2B of the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised)* (*AMA Guides*) Dr. Hattem determined that Claimant suffered a 5% whole person impairment for six months of medically documented pain with none-to-minimal degenerative changes on structural testing. He also assigned Claimant a 5% whole person rating for abnormal lumbar range of motion based on Tables 60-61 of the *AMA Guides*. Combining the Table 53 and range of motion impairments yields a total 10% whole person rating.

3. Claimant challenged Dr. Hattem's MMI and impairment determinations and sought a Division Independent Medical Examination (DIME) on November 23, 2015. In his Application for a DIME Claimant sought evaluation of the following: cervical spine; thoracic spine; lumbar spine; left leg; lumbar radiculopathy; SI joint pain; lumbo-sacral pain; L5-S1 disk herniation; left hip; left knee; left medial meniscus tear; and several related concerns.

4. On January 28, 2016 Claimant underwent a DIME with Stanley H. Ginsburg, M.D. Dr. Ginsburg conducted a medical records review and performed a physical examination. He explained that Claimant should do the best he could during testing in order to generate accurate data for an impairment rating. Claimant displayed no more than five degrees of cervical rotation and refused to flex or extend his neck. Dr. Ginsburg found no obvious spasms or tenderness in the paracervical or

suprascapular areas or atrophy in the upper or lower extremities. The upper extremity examination revealed normal function and tone with respect to strength, coordination, and cerebellar function. Deep tendon responses were present in the lower extremities. Notably, while undergoing examination in the supine position, Claimant repeatedly cried out in pain with every movement.

5. Claimant demonstrated full extension on a test of knee mobility but exhibited pain behaviors on flexion testing. Dr. Ginsburg found intact reflexes despite continued cries of pain, moaning and groaning. He attempted sensory examination and thought it was "probably normal" but found testing difficult because Claimant constantly "[gave] in" during lower extremity strength testing. Claimant also refused to stand on his heels and toes. Although Claimant stood during lumbar testing, he demonstrated minimal movement on straight leg raising.

6. After concluding a physical examination, Dr. Ginsburg determined that the mobility testing findings were "not at all 'physiological'" and pain behaviors were "prominently present." Dr. Ginsburg explained:

> I will state at this time that I do not believe that the range of motion findings represent a true analysis of the patient's lumbar mobility, but the instruction from the division is to report what we have found and comment on our findings if we so desire. I did tell the patient that I felt there were problems with the measurements I had and I would be happy to reevaluate him, but he should speak about this to his attorney and I did not reschedule him. As one can tell from my report, I reviewed the chart in detail and among all the specific body parts to be evaluated, I believe that the lumbar spine is the appropriate area to be evaluated. I do not believe that any of the other requests are appropriate items to evaluate. . . . I have dealt with MMI, permanent impairment, [and] future medical maintenance . . . . Based on the patient's desire to close his case, he did reach MMI on 08/24/2015 when he was evaluated for MMI and the result of that was 10%. My rating was 29%, but I have stated very clearly above that I do not believe this carries any validity. I do think that [a] specific disorder rating of 7% is appropriate.

Dr. Ginsburg's remarks reflect that he assigned Claimant a rating based on range of motion testing pursuant to instructions from the Division of Workers' Compensation. However, he recognized the range of motion results were invalid and offered Claimant the opportunity for a reevaluation. Because Claimant never returned for a reevaluation, Dr. Ginsburg assigned a 29% whole person impairment rating. However, he maintained that the 29% whole person impairment rating lacked validity.

7. In addition to his report, Dr. Ginsburg prepared a DIME Summary Sheet. He agreed with Dr. Hattem that Claimant had reached MMI on August 24, 2015. Dr. Ginsburg assigned Claimant a 7% whole person impairment rating for a specific disorder of the lumbar spine pursuant to Table 53 of the *AMA Guides*. He also assigned Claimant a 24% whole person rating for range of motion deficits. Dr. Ginsburg

specifically reported an 8% impairment for lumbar flexion, noting “valid” on the Figure 83 chart, a 6% impairment for lumbar extension, a 5% impairment for lumbar right lateral flexion and a 5% impairment for lumbar left lateral flexion. The tests were conducted according to the *AMA Guides* in sets of three. Combining the Table 53 and range of motion impairments yields a total 29% whole person rating.

8. Marc Steinmetz, M.D. testified at the hearing in this matter. He agreed with Dr. Ginsburg that Claimant had suffered a 7% whole person impairment rating for a specific disorder of the lumbar spine pursuant to Table 53 of the *AMA Guides*. However, Dr. Steinmetz explained that Dr. Ginsburg’s range of motion testing results were invalid pursuant to the *AMA Guides* and Colorado Division of Workers’ Compensation *Impairment Rating Tips* (*Impairment Rating Tips*). Relying on the *Impairment Rating Tips* Dr. Steinmetz explained that, if an examiner is unable to obtain valid results, he must offer the patient the opportunity to return for retesting. If a patient accepts retesting of lumbar motion, the DIME examiner is supposed to schedule a reevaluation. If valid measurements are obtained, the DIME examiner should conclude the DIME and issue an opinion as to impairment. If valid measurements are not obtained on reevaluation, the examiner must note the invalid results. Alternatively, if the patient declines a reevaluation, the examiner should note “invalidity” in his report and on the summary sheet. An examiner may utilize previously valid range of motion tests obtained by another provider to replace invalid range of motion results.

9. Dr. Steinmetz explained that, because Dr. Ginsburg had obtained invalid range of motion results, he should have had Claimant return for repeat testing. Alternatively, Dr. Ginsburg could have relied on the valid range of motion testing results obtained by other examiners. Dr. Steinmetz thus summarized that Dr. Ginsburg’s report was internally inconsistent and invalid. However, he noted that Dr. Hattem’s range of motion measurements were valid and thus his 5% range of motion impairment rating was correct. Combining the 7% whole person impairment rating for a specific disorder of the lumbar spine pursuant to Table 53 of the *AMA Guides* with Dr. Hattem’s 5% range of motion impairment yields a 12% whole person rating. Dr. Steinmetz acknowledged that a 12% whole person rating was acceptable and valid pursuant to the *AMA Guides*.

10. Reviewing Dr. Ginsburg’s DIME report and summary sheet reveals that he assigned Claimant a 29% whole person impairment rating for his October 14, 2014 injuries. The 29% whole person rating consists of a 7% whole person impairment for a specific disorder of the lumbar spine pursuant to Table 53 of the *AMA Guides* and a 24% whole person rating for range of motion deficits. Although Dr. Ginsburg expressed skepticism about the validity of the range of motion measurements, he nevertheless assigned a 24% rating. Dr. Ginsburg specifically reported an 8% impairment for lumbar flexion, a 6% impairment for lumbar extension, a 5% impairment for lumbar right lateral flexion and a 5% impairment for lumbar left lateral flexion. Accordingly, Respondents bear the burden of proving by clear and convincing evidence that Dr. Ginsburg’s 29% whole person impairment rating was erroneous.

11. Respondents have produced clear and convincing evidence to overcome the opinion of Dr. Ginsburg that Claimant suffered a 29% whole person impairment for his October 14, 2014 admitted industrial injuries. Initially, Dr. Ginsburg assigned Claimant a 7% whole person impairment rating for a specific disorder of the lumbar spine pursuant to Table 53 of the *AMA Guides*. He also assigned Claimant a 24% whole person rating for range of motion deficits. Combining the Table 53 and range of motion impairments yields a total 29% whole person rating. However, Dr. Ginsburg's remarks reflect that he only assigned Claimant a rating for range of motion deficits pursuant to instructions in the *Impairment Rating Tips* from the Division of Workers' Compensation. He recognized the range of motion results were invalid and offered Claimant the opportunity for a reevaluation. Because Claimant never returned for a reevaluation, Dr. Ginsburg assigned a 29% whole person impairment rating. However, he maintained that the 29% whole person impairment rating lacked validity.

12. Dr. Steinmetz agreed with Dr. Ginsburg that Claimant had suffered a 7% whole person impairment rating for a specific disorder of the lumbar spine pursuant to Table 53 of the *AMA Guides*. However, Dr. Steinmetz persuasively explained that Dr. Ginsburg's range of motion testing results were invalid pursuant to the *AMA Guides* and *Impairment Rating Tips*. Relying on the *Impairment Rating Tips* Dr. Steinmetz explained that, if an examiner is unable to obtain valid results, he must offer the patient the opportunity to return for retesting. If a patient accepts retesting of lumbar motion, the DIME examiner is supposed to schedule a reevaluation. If valid measurements are obtained, the DIME examiner should conclude the DIME and issue an opinion as to impairment. If valid measurements are not obtained on reevaluation, the examiner must note the invalid results. Alternatively, if the patient declines a reevaluation, the examiner should note "invalidity" in his report and on the summary sheet. An examiner may utilize previously valid range of motion tests obtained by another provider to replace invalid range of motion results.

13. Dr. Steinmetz explained that, because Dr. Ginsburg had obtained invalid range of motion testing results, he should have had Claimant return for repeat testing. Alternatively, Dr. Ginsburg could have relied on the valid range of motion testing results obtained by other examiners. Dr. Steinmetz thus summarized that Dr. Ginsburg's report was internally inconsistent and invalid. Based on the persuasive testimony of Dr. Steinmetz, Respondents have provided unmistakable evidence that it is highly probable the Dr. Ginsburg's 29% whole person impairment rating was incorrect.

14. Dr. Steinmetz commented that Dr. Hattem's range of motion measurements were valid and thus his 5% range of motion impairment rating was correct. Combining the 7% whole person impairment rating for a specific disorder of the lumbar spine pursuant to Table 53 of the *AMA Guides* with Dr. Hattem's 5% range of motion impairment yields a 12% whole person rating. Dr. Steinmetz acknowledged that a 12% whole person rating was acceptable and valid pursuant to the *AMA Guides*. Because Dr. Ginsburg's 24% range of motion impairment rating was clearly erroneous, it is appropriate to use Dr. Hattem's valid 5% range of motion impairment rating. Combining Dr. Ginsburg's 7% whole person impairment rating for a specific disorder of the lumbar spine with Dr. Hattem's 5% whole person rating for range of motion deficits

yields a 12% whole person rating for Claimant's October 14, 2014 industrial injuries. A 12% whole person rating is valid and correct pursuant to the *AMA Guides* and *Impairment Rating Tips*.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAP, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

5. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAP, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAP, Apr. 16, 2008).

. 6. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by “clear and convincing evidence.” §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). “Clear and convincing evidence” is evidence that demonstrates that it is “highly probable” the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, “there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt.” *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAP, Nov. 17, 2000).

7. In addressing spinal range of motion measurements, the *Impairment Rating Tips, Spinal Rating,* §9, p.6 provide that, to invalidate spinal range of motion impairments, claimants must have two visits. Two sets of three measurements must be taken during each visit. When a DIME physician determines that range of motion measurements are invalid, he may “fulfill this requirement by accepting invalidated measurements from other reports in lieu of bringing the claimant back for a second set of measurements. The physician must, however, report his/her own initial sets of measurements.” *See Impairment Rating Tips, Spinal Rating,* §9, p.6.

8. If a party has carried the initial burden of overcoming the DIME physician’s impairment rating by clear and convincing evidence, the ALJ’s determination of the correct rating is then a matter of fact based upon the lesser burden of a preponderance of the evidence. *See Deleon v. Whole Foods Market, Inc*., W.C. No. 4-600-47 (ICAP, Nov. 16, 2006). The ALJ is not required to dissect the overall impairment rating into its numerous component parts and determine whether each part has been overcome by clear and convincing evidence. *Id.* When the ALJ determines that the DIME physician’s rating has been overcome, the ALJ may independently determine the correct rating. *Lungu v. North Residence Inn*, W.C. No. 4-561-848 (ICAP, Mar. 19, 2004); *McNulty v. Eastman Kodak Co*., W.C. No. 4-432-104 (ICAP, Sept. 16, 2002);

9. As found, reviewing Dr. Ginsburg’s DIME report and summary sheet reveals that he assigned Claimant a 29% whole person impairment rating for his October 14, 2014 injuries. The 29% whole person rating consists of a 7% whole person impairment for a specific disorder of the lumbar spine pursuant to Table 53 of the *AMA Guides* and a 24% whole person rating for range of motion deficits. Although Dr. Ginsburg expressed skepticism about the validity of the range of motion measurements, he nevertheless assigned a 24% rating. Dr. Ginsburg specifically reported an 8% impairment for lumbar flexion, a 6% impairment for lumbar extension, a 5% impairment for lumbar right lateral flexion and a 5% impairment for lumbar left lateral flexion. Accordingly, Respondents bear the burden of proving by clear and convincing evidence that Dr. Ginsburg’s 29% whole person impairment rating was erroneous.

10. As found, Respondents have produced clear and convincing evidence to overcome the opinion of Dr. Ginsburg that Claimant suffered a 29% whole person impairment for his October 14, 2014 admitted industrial injuries. Initially, Dr. Ginsburg assigned Claimant a 7% whole person impairment rating for a specific disorder of the lumbar spine pursuant to Table 53 of the *AMA Guides*. He also assigned Claimant a 24% whole person rating for range of motion deficits. Combining the Table 53 and range of motion impairments yields a total 29% whole person rating. However, Dr. Ginsburg's remarks reflect that he only assigned Claimant a rating for range of motion deficits pursuant to instructions in the *Impairment Rating Tips* from the Division of Workers' Compensation. He recognized the range of motion results were invalid and offered Claimant the opportunity for a reevaluation. Because Claimant never returned for a reevaluation, Dr. Ginsburg assigned a 29% whole person impairment rating. However, he maintained that the 29% whole person impairment rating lacked validity.

11. As found, Dr. Steinmetz agreed with Dr. Ginsburg that Claimant had suffered a 7% whole person impairment rating for a specific disorder of the lumbar spine pursuant to Table 53 of the *AMA Guides*. However, Dr. Steinmetz persuasively explained that Dr. Ginsburg's range of motion testing results were invalid pursuant to the *AMA Guides* and *Impairment Rating Tips*. Relying on the *Impairment Rating Tips* Dr. Steinmetz explained that, if an examiner is unable to obtain valid results, he must offer the patient the opportunity to return for retesting. If a patient accepts retesting of lumbar motion, the DIME examiner is supposed to schedule a reevaluation. If valid measurements are obtained, the DIME examiner should conclude the DIME and issue an opinion as to impairment. If valid measurements are not obtained on reevaluation, the examiner must note the invalid results. Alternatively, if the patient declines a reevaluation, the examiner should note "invalidity" in his report and on the summary sheet. An examiner may utilize previously valid range of motion tests obtained by another provider to replace invalid range of motion results.

12. As found, Dr. Steinmetz explained that, because Dr. Ginsburg had obtained invalid range of motion testing results, he should have had Claimant return for repeat testing. Alternatively, Dr. Ginsburg could have relied on the valid range of motion testing results obtained by other examiners. Dr. Steinmetz thus summarized that Dr. Ginsburg's report was internally inconsistent and invalid. Based on the persuasive testimony of Dr. Steinmetz, Respondents have provided unmistakable evidence that it is highly probable the Dr. Ginsburg's 29% whole person impairment rating was incorrect.

13. As found, Dr. Steinmetz commented that Dr. Hattem's range of motion measurements were valid and thus his 5% range of motion impairment rating was correct. Combining the 7% whole person impairment rating for a specific disorder of the lumbar spine pursuant to Table 53 of the *AMA Guides* with Dr. Hattem's 5% range of motion impairment yields a 12% whole person rating. Dr. Steinmetz acknowledged that a 12% whole person rating was acceptable and valid pursuant to the *AMA Guides*. Because Dr. Ginsburg's 24% range of motion impairment rating was clearly erroneous, it is appropriate to use Dr. Hattem's valid 5% range of motion impairment rating. Combining Dr. Ginsburg's 7% whole person impairment rating for a specific disorder of

the lumbar spine with Dr. Hattem's 5% whole person rating for range of motion deficits yields a 12% whole person rating for Claimant's October 14, 2014 industrial injuries. A 12% whole person rating is valid and correct pursuant to the *AMA Guides* and *Impairment Rating Tips*.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Dr. Ginsburg assigned Claimant a 29% whole person impairment rating.

2. Respondents have produced clear and convincing evidence to overcome Dr. Ginsburg's 29% rating.

3. Claimant suffered a 12% whole person rating as a result of his October 14, 2014 admitted industrial injuries.

4. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-887-035-02

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER UPON REMAND

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing Upon Remand in the above-captioned case was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on May 20, 2016, in Denver, Colorado. The hearing was digitally recorded (reference: 5/20/16, Courtroom 3, beginning at 8:30 AM, and ending at 9:30 AM). As a result of the Remand by the Industrial Claim Appeals Office (ICAO), the ALJ set the hearing upon remand to determine more specific findings concerning the Claimant's "release to return to work," and entitlement to temporary disability benefits from the date of the admitted injury, February 13, 2012, through the date of maximum medical improvement (MMI), May 5, 2014., consistent with ICAO's Remand Order.

On December 4, 2015, the Industrial Claim Appeals Office (ICAO) issued a Remand Order, setting aside the undersigned Administrative Law Judge's (ALJ's) order of June 16, 2015 for further findings concerning the Claimant's "release to return to work," and entitlement to temporary disability benefits from the date of the admitted injury, February 13, 2012, through the date of maximum medical improvement (MMI), May 5, 2014. The hearing on remand occurred on May 20, 2016, after which the ALJ established a schedule for the filing of the post-hearing evidentiary depositions of Adam Mackintosh, M.D., (taken on June 30, 2016) and Nurse Practitioner (NP) Paulette Carpenter (also taken on June 30, 2016). Written transcripts of these depositions were subsequently filed; and, a briefing schedule was established. The Claimant's opening brief was filed on August 15, 2016. The Respondents' answer brief was filed on August

19, 2016; and, the Claimant's reply brief was due within two working days, or not later than August 24, 2016. No timely reply brief having been filed, the matter was deemed submitted for a decision upon remand on August 25, 2016.

Claimant's Exhibits1 through 13 were admitted into evidence, without objection. Respondents' Exhibits A through M were admitted into evidence, without objection, at the original hearing of May 21, 2015. No additional exhibits were received at the hearing on remand on May 20, 2016.

ISSUES ON REMAND

The issues to be determined by this decision upon remand concern average weekly wage (AWW), based on multiple employments; and, temporary partial disability (TPD) and temporary total disability (TTD) benefits from February 13, 2012, the date of the admitted injury, through May 5, 2014, the date of maximum medical improvement (MMI). Respondents designated the issue of an unemployment insurance (UI) benefit offset. The Respondents did **not** designate the issue of "responsibility for termination," nor was it an issue. The paramount issue to be determined upon remand is whether authorized attending physician (ATP), Dr. Mackintosh or Dr. Bacon (Dr. Bacon never saw the Claimant), properly authorized NP Carpenter to release the Claimant to return to work without restrictions; and, if so, when was the ratification effective. A corollary is whether or not NP Carpenter fits the definition of "**attending physician.**"

The Claimant bears the burden of proof, by preponderant evidence on all issues, with the exception of the UI offset, wherein the Respondents bear the burden of proof by a preponderance of the evidence.

FINDINGS OF FACT UPON REMAND

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Respondents admitted liability for injuries sustained by Claimant arising out of a slip and fall accident on February 13, 2012.

2. On July 24, 2014, the Respondents filed a Final Admission of Liability (FAL), admitting for an average weekly wage (AWW) of $156.76; zero temporary disability benefits; a maximum medical improvement (MMI) date of May 5, 2014; 14% whole person permanent medical impairment for a total of $5,852.56 (based on the admitted AWW as a component of the formula), however, permanent disability (PPD) was not designated as an issue nor was it an issue at the hearing; PPD was admitted payable at the rate of $150 per week; and, for $40,438.08 in medical benefits to date;

and, for causally related and reasonably necessary post-MMI medical maintenance benefits.

3. The Claimant was working as a school bus driver at the time of her injury. According to the Claimant, she was able to continue to work as a bus driver but had difficulty performing some of the lifting and reaching duties required of her employment. She continued to work for Employer until she was dismissed from employment on May 22, 2013. The ALJ draws a plausible inference that the Claimant was dismissed because she could no longer perform the full range of her school bus driver duties as supported by the Claimant's undisputed testimony. Since temporary disability benefits are based on a strict temporary wage loss concept, the Employer, by terminating the Claimant's employment, increased her temporary wage loss. The issue upon remand is whether the Claimant had been working under proper full releases to return to work during specified periods of time, given by a nurse practitioner, or by a nurse practitioner whose release was properly co-signed or agreed upon by the attending physician.

4. The ALJ takes administrative notice of the fact, and finds, that a **"nurse practitioner"** is not an "**attending physician,"** within the meaning of the Workers' Compensation Act. This issue has never been decided in a precedent-setting opinion of an appellate court. Indeed, § 12-36-106, C.R.S. defines the practice of medicine by "**physicians"** and proscribes the **unauthorized** practice of medicine by "physicians assistants." Despite the respondents lengthy argument on how far physicians' assistants have come, a distinction is made in the Colorado Medical Practice Act, §§12-36-101 *et seq.,* which makes it clear that physicians' assistants cannot be defined as "**attending physicians."** Consequently, NP Carpenter cannot take the place of an "**attending physician.**"

5. Despite the ALJ's determination in the original decision that the Claimant's credible lay testimony that she ultimately had to give up all of her employments because of her work-related injury whereby the holding in *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997), permits the ALJ to find that the Claimant's testimony was more persuasive and credible than the NP Carpenter's testimony and the subsequent so-called ratifications thereof by Banner physicians, Dr. Mackintosh and Dr. Bacon, as well as Dr. Benz, who saw the Claimant once (but for purposes of the law of the case on remand shall be considered an "attending physician"), the ALJ infers that ICAO, in its remand order, has established the law of the case whereby each release to return to full duty must be given effect when ratified by an **attending physician**, regardless of whether the ratifying physician ever saw the Claimant or only saw the Claimant once on referral from Banner.

Chronology

6. From February 13, 2012, the date of injury, until May 7, 2012, the date that Robert Benz, M.D., released the Claimant to full duty, the Claimant was working at

her multiple employments as a bus driver for the Employer herein; at Stops (until December 2012); and at Rita/Quizno's (until April 15, 2012), thus, sustaining no wage loss based on her multiple employments. Her AWW from the Employer was $192.35; from Stops, it was $110.09; and, from Reata/Quizno's, it was $157.16, thus, establishing an AWW of $459.60, based upon multiple employments as of the date of the admitted injury.

7. From April 16, 2012 (the date the Claimant could no longer work at Quizno's because of the effects of her admitted injury) through May 6, 2012, both dates inclusive, a total of 21 days, she experienced a temporary wage loss of $157.16 per week (she was still working for the Employer herein during this time), thus, yielding a temporary partial disability (TPD) benefit rate of $104.77 per week, or $14.97 per day, for an aggregate subtotal amount of $314.37.

8. From May 7, 2012, the date that Dr. Benz released the Claimant to full duty work, until March 1, 2013, the date that Kenneth Pettine, M.D., restricted the Claimant, she experienced no wage loss attributable to the admitted injury.

9. From March 1, 2013 until April 16, 2013 (the date Dr. Bacon released the Claimant to full duty work), both dates inclusive, a total of 47 days, the Claimant continued working as a school bus driver for the Employer, despite her restrictions, until she was terminated by the Employer herein on May 22, 2013. Consequently, she was experiencing a temporary wage loss [having lost her jobs at Quizno's (April 15, 2012) and Stops (December 2012) because of the effects of her admitted injury], based on the AWW of $459.60 minus $192.35 (her then continuing wage with the Employer herein) equaling a temporary wage loss of $267.25, thus, yielding a TPD rate of $178.16 per week, or $25.45 per day, for an aggregate subtotal amount of $1,196.15.

10. From April 16, 2013 (the date that banner Dr. bacon ratified NP Carpenter's releases to full duty although he had not ever seen the Claimant, until September 25, 2013 (the date that Dr. Mackintosh agreed with the restrictions of Gregory Reichhardt, M.D.), the Claimant experienced no temporary wage loss attributable to the admitted injury

11. The Claimant was not working at all because of the effects of her admitted injury from September 26, 2013 through November 24, 2013, both dates inclusive, a total of 60 days. She had been receiving Unemployment Insurance (UI) benefits of $64.50 per week which are subject to a 100% offset against workers' compensation benefits; during which time the Claimant was temporarily and totally disabled during this period and entitled to TTD benefits of 2/3rd of the AWW of $459.60 (the (AWW) or TTD benefits of $305.40 per week. Subtracted from the TTD weekly benefit, a net TTD benefit of $240.90 per week, or $34.41 per day, for an aggregate subtotal amount of $2,064.60, is yielded.

12. From November 25, 2013 through December 1, 2013, both dates inclusive, a total of 6 days, the Claimant was no longer receiving UI benefits and she was temporarily and totally disabled and, thus, entitling her to a TTD benefit of $305.40 per week, or $43.63 per day, in the aggregate subtotal amount of $261.77.

13. From December 2, 2013 until the day before the Claimant reached MMI, May 4, 2014, both dates inclusive, a total of 154 days, she was employed by Stage Stores, earning $129.00 per week, thus, sustaining a temporary wage loss of $330.60 per week, thus, yielding a TPD rate of $220.40 per week, or $31.49 per day, in the aggregate subtotal amount of $4,849.46.

Medical Status

14. After the admitted injury, the Employer sent the Claimant to Banner Health for treatment, where she was seen by Paulette Carpenter, FNP (Nurse Practitioner). NP Carpenter released the Claimant to return to full duty work immediately on February 13, 2012. According to the Claimant, NP Carpenter referred her for an orthopedic evaluation a few months after her injury. Claimant was seen by Robert Benz, M.D., an orthopedic surgeon, on May 7, 2012, who was of the opinion that the Claimant could return to her full duties as a bus driver. According to the Claimant, she was not seen by any physician at Banner until she was seen by Adam Mackintosh, M.D., a Sterling physician, in August 2013. Her testimony is corroborated by the deposition testimony of Dr. Mackintosh. The Claimant denied having been seen by Jeff Bacon, M.D., at Banner Health. NP Carpenter, in her June 30, 2016 deposition, does **not** refute the Claimant's testimony in this regard. Dr. Bacon did not come forward to dispute the Claimant's testimony in this regard. The Claimant was also referred to Kenneth Pettine, M.D., Usama Ghazi, D.O., and Gregory Reichhardt, M.D. All of these physicians were within the chain of authorized referrals and, therefore, authorized.

15. The Claimant's medical records from Banner Health reveal that the Claimant was treated by Paulette Carpenter, FPN, throughout the course of her medical treatment. NP Carpenter released the Claimant to return to full duty as a bus driver almost immediately on February 13 2012, without any co-signature by an attending physician. With the exception of the period from October 25, 2013 until November 17, 2013, FPN Carpenter indicated that the Claimant was able to return to full duty work. Dr. Mackintosh, however, agreed with Dr. Reichhardt's restrictions on September 25, 2013, thus, contradicting and superseding NP Carpenter's full duty release thereafter.

16. The evidentiary deposition of NP Carpenter, taken on June 30, 2016 (after the hearing on remand) reveals that NP Carpenter considered herself to be the treating medical provider and her releases to full duty were not with the ratification of an M.D. physician until Dr. Bacon (never having seen the Claimant) co-signed releases on April 26, 2013. Indeed, NP Carpenter admitted that she did not discuss the releases to full duty with a physician:

> Q. Do you think you would have discussed this with a physician?
>
> A. No. (NP Carpenter 6-30-16 Depo., p. 49, lines 10-13).

Nothing in NP Carpenter's evidentiary deposition contradicts the Claimant's sworn testimony that Banner Dr. Bacon never saw the Claimant.

17. In her evidentiary deposition of June 30, 2016, NP carpenter testified that she did not know what the Claimant's job duties at Stops, Quizno's or Stage Stops entailed nor did she have a clear understanding of the Claimant's lifting requirements as a school bus driver for the Employer herein.

18. As found herein below, the ALJ infers and finds that NP Carpenter's "releases to return to full duty work" were neither co-signed nor agreed upon by a Banner Physician until April 16, 2013. The majority of reports beginning on April 16, 2013 were signed or co-signed by Dr. Bacon (who had never seen the Claimant) or by Dr. Mackintosh. Based on the remand order of ICAO, the ALJ infers that the law of the case indicates that a physician can be an **attending physician** (Dr. Bacon) without ever seeing the injured worker by simply ratifying a nurse practitioner's release to return to work. All medical reports after April 16, 2013 indicated that the Claimant was able to return to full duty work—until September 25, 2013 when Banner Dr. Mackintosh agreed with Dr. Reichhardt's restrictions that establish that the Claimant could not work at any of her pre-injury jobs.

19. In his evidentiary deposition of June 30, 2016, Dr. Mackintosh stated that he did not consider himself the Claimant's attending physician. He stated: "No I would not consider myself that (attending physician). I would consider Nurse Practitioner Carpenter the **attending provider** (emphasis supplied) in this case" (6-30-16 Mackintosh depo., p. 19, lines 3-10).

20. The Claimant was under a full duty release to return to work by Dr. Benz from May 7, 2012, at least through March 1, 2013, when Dr. Pettine restricted the Claimant. This continued until April 16, 2013, when Dr. Bacon, who had never seen the Claimant, co-signed NP Carpenter's releases to return to full duty work. Based on the law of the case, as established by ICAO, the ALJ must consider this attenuated delegation an appropriately delegated release to return to work by an "**attending physician."**

21. In his evidentiary deposition of April 10, 2015, Dr. Mackintosh testified that he first saw the Claimant in September 25, 2013. He stated that Paulette Carpenter, FNP, provided primary care to Claimant prior to this date. Dr. Mackintosh began seeing the Claimant when nurse practitioners required a physician to sign off on treatment. As

of September 25, 2013, Dr. Mackintosh stated that he felt the Claimant could perform the regular duties of a bus driver as he understood them to be, and that he was hesitant to place work-restrictions on patients that could impact their employment. Dr. Mackintosh's statement in this regard is internally inconsistent and he subsequently in the same deposition indicated his agreement with Dr. Reichhardt's permanent restrictions, which the ALJ infers and finds relate back to the date of injury to include temporary restrictions. Dr. Mackintosh stated that there were physical limitations that the Claimant should have avoided after her injury such as heavier lifting. Dr. Mackintosh did not disagree with the permanent restrictions of Dr. Reichhardt "because this was his (Dr. Reichhardt's) area of expertise. Dr. Mackintosh stated that the Claimant had medical incapacity after her date of injury and it would not have been unreasonable for the Claimant to have the permanent restrictions provided by Dr. Reichhardt in place from her date of injury until MMI. The ALJ infers and finds that Dr. Mackintosh deferred to Dr. Reichhardt on the issue of medical restrictions, and Dr. Reichhardt, as subsequently inferred and found herein, permanently restricted the Claimant to limitation of lifting, pushing, pulling and carrying up to 20 pounds occasionally, 10 pounds frequently. Limit bending and twisting at the waist to a rare basis four times per hours. The law of the case requires that **there is no entitlement to** temporary disability benefits during delegated full duty releases to return to work.

Dr. Pettine

22. The Claimant was seen by Kenneth A. Pettine, M.D., on or about March 1, 2013. Dr. Pettine was of the opinion that the Claimant was a candidate for a 2-level fusion procedure. Dr. Pettine also outlined a number of non-operative treatment options. Dr. Pettine stated the opinion that the Claimant should avoid heavy weight lifting, squats and dead lifts as well as extensive lifting, twisting, bending and stooping. The ALJ finds the opinions of Dr. Pettine to be more credible and persuasive than the opinions of Dr. Benz, thus, superseding Dr. Benz's May 7, 2012 release to full duty. Consequently, Dr. Benz's full duty release was effective from May 7, 2012 through March 1, 2013. Consequently, the ALJ infers and finds that Dr. Pettine's restrictions, being later in date, superseded and replaced Dr. Benz's full duty release to return to work. Thereafter, Dr. Bacon (who had never seen the Claimant) ratified NP Carpenter's full duty release to return to work, effective April 16, 2013. This full duty release to return to work, according to NP Carpenter, continued until the Claimant was placed at MMI by Dr. Reichhardt on May 5, 2014. Dr. Mackintosah, however, contradicted this full duty release, effective, September 25, 2013, when he agreed with Dr. Reichhardt's restrictions.

23. The Claimant underwent bilateral L4-5, bilateral L5-S1 facet joint intra-articular injections performed by Scott Hompland, D.O., on September 6, 2012 and December 6, 2012.

24. Claimant was seen by Usama Ghazi, D.O., on or about November 11, 2013. Dr. Ghazi recommended a course of treatment to begin with sacroiliac injections. Dr. Ghazi subsequently performed bilateral sacroiliac injections and a sacrococcygeal joint injection with some improvement. Dr. Ghazi noted that the Claimant was frustrated that her tailbone pain was precluding her from returning to her occupation as a trucker. Although Dr. Ghazi did not specifically comment on work-restrictions, this later evidence of the Claimant's level of function and intensity of treatment is persuasive evidence that she was unable to perform full duty work for the Employer.

Dr. Reichhardt

25. The Claimant was placed at MMI by Dr. Reichhardt on May 5, 2014. Dr. Reichhardt issued a 10% whole person permanent impairment rating for Claimant's cervical spine and 11% whole person permanent impairment rating for Claimant's lumbar spine (later apportioned to 4%). Dr. Reichhardt recommended 3 years of maintenance treatment and provided permanent work-related restrictions of limited lifting, pushing, pulling and carrying to 20 pounds occasionally, 10 pounds frequently. Limit bending and twisting at the waist "to a rare basis four times per hours." Dr. Reichhardt deferred any opinion concerning the Claimant's temporary restrictions prior to MMI to the Claimant's authorized treating physicians. The opinions of Dr. Reichhardt are credible and persuasive. Additionally, Dr. Pettine had prescribed temporary restrictions of avoiding heavy weight lifting, squats and dead lifts as well as extensive lifting, twisting, bending and stooping. All of these restrictions would prevent the Claimant from performing the full range of her job duties with the Employer, with Stops, and with Quizno's.

26. Despite restrictions prescribed by Dr. Pettine, the Claimant continued working some multiple employments in excess of those restrictions, however, the ALJ infers and finds that she was **not** able to properly perform at any of her remaining multiple jobs. The ALJ infers and finds that based on the Claimant's undisputed testimony, she should not have been working, full duty, at any of her multiple employments unless she had been offered modified duties to accommodate those restrictions. She was **not** offered modified duties at any of her employments, and she ultimately was forced to discontinue these employments because of her restrictions.

Multiple Employments as of Admitted Date of Injury

27. The Claimant's gross earnings from the Employer herein for 2011 (Claimant's Exhibit 7) amount to $10, 012.05 divided by 52 = $192.35 per week, as opposed to the admitted AWW of $156.76. The ALJ finds that this basis of calculating the AWW is more equitable and fair to the Claimant than the method utilized by the adjuster who filed the admissions herein. This higher AWW would affect the formula for determining permanent medical impairment, however, permanency was **not** a designated issue. Further, because of multiple, contemporaneous, employments on the

date of the admitted injury, $192.35 is only one component of the Claimant's overall AWW.

28. On the date of her injury, the Claimant also worked as a driver for Stops Enterprises. She began working for Stops in the early part of 2011 and continued to work for Stops until approximately December 2012. As found herein above, the Claimant was under appropriate full duty releases to return to work from May 7, 2012 through September 26, 2013, based on the law of the case, and any temporary disability cannot be attributed to the Claimant's inability to perform job duties during this period of time. Her job duties at Stops included driving patients to their medical appointments. The Claimant was able to do her job duties after her injury, but had some trouble with longer drives. Her employer stopped sending her assignments in December of 2012. The ALJ infers and finds, based on the totality of the evidence, that the Employer stopped sending her assignments in December of 2012 because of her inability to perform the full range of her job duties caused by the admitted injury. After Stops stopped sending the Claimant assignments, her temporary wage loss attributable to the admitted injury increased as of January 1, 2013. The Claimant's wage records from Stop Enterprises from July 5, 2011 until January 5, 2012 reveal gross earnings of $2,909.40 for this 185 day period. The ALJ finds that the most equitable and fair method of determining the Claimant's weekly wage at Stop's is by averaging gross earnings for the Claimant's entire period of employment at Stop's. This would result in a weekly average wage of $110.09 ($2,909.40 divided by 185 x 7= $110.09) at Stops.

29. Also on the date of her admitted injury, the Claimant worked at The Reata Petroleum Corporation, which was a Quizno's sandwich shop located at a truck stop. Her job duties were as a sandwich maker. She was required to be on her feet all day long, which was contraindicated by the totality of her physical restrictions. She started working for Quizno's in June 2011 until she stopped working on April 15, 2012 because her physical limitations arising out of the injury prevented her from performing the full range of her duties for Quizno's. As of the time she stopped working at Quizno's, the Claimant had not yet been released to full duty by Dr. Benz (May 7, 2012). According to the Claimant, she stopped working at Quizno's because she could no longer handle the physical demands of working three (3) jobs. Claimant's employment records from Reata Petroleum Corporation indicate that Claimant started working for Quizno's on June 14, 2011. Her 2011 W-2 from Reata Petroleum (Quizno's) indicates that the Claimant earned $4,512.60 for the tax year of 2011. The ALJ finds that the most equitable and fair method of determining the Claimant's wage at Quizno's should be based on averaging her gross wages during the entire length of her employment at Quizno's. Based on 201 days from June 14, 2011 until December 31, 2011, these gross earnings would result in a weekly average of $157.16 at Quizno's.

Average Weekly Wage (AWW)

30. As of the admitted date of injury, the Claimant had three concurrent, multiple employments. Her gross earnings from the Employer herein for 2011 (Claimant's Exhibit 7) amount to $10, 012.05 divided by 52 = $192.35 per week. Add $110.09 per week from Stops and $157.16 per week from Quizno's, and an overall AWW of $459.60 results. The ALJ hereby finds that the above described methodology for determining AWW from the Claimant's three multiple employments is the fairest and most objective way of determining the AWW herein. Therefore, the ALJ finds that the Claimant's AWW on the date of injury was $459.60, which is the baseline from which temporary partial disability (TPD) is measured, based on temporary wage loss.

Temporary Disability

31. From the date of the admitted injury of February 13, 2012 until the Claimant was terminated from employment by the Employer herein on May 22, 2013, she continued to earn $192.35 per week from the Employer herein. From February 13, 2012 through December 31, 2012, she continued working for Stops, earning an additional $110.09 per week. From February 13, 2012 through April 15, 2012, she continued working for Quizno's at $157.16 per week. Consequently, the Claimant had **no** temporary wage loss from February 13, 2012 through April 15, 2012. From April 16, 2012 (the date she was unable to continue working at Quizno's) through May 6, 2012, both dates inclusive, a total of 21 days, the Claimant was sustaining a temporary wage loss of $157.16 per week during this period of time, yielding a TPD rate of $104.77 per week, or $14.97 per day, in the aggregate subtotal amount of $314.32. From January 1, 2013 through May 22, 2013, both dates inclusive, a subtotal of 142 days, the Claimant no longer worked for Stops at $110.09 per week and she no longer worked at Quizno's at $157.16 per week, all because of the restrictions occasioned by the admitted injury, however, she continued work for the Employer herein.

32. The Claimant was under a full duty release to return to work, by Dr. Benz, from May 7, 2012 through March 1, 2013, when Dr. Petttine restricted her.

33. From April 16, 2013 (when Dr. Bacon ratified NP Carpenter's full duty release) until September 25, 2013, when Dr. Mackintosh agreed with Dr. Reichhardt's restrictions, the Claimant was under a full duty release to return to work.

34. From June 1, 2013 through November 24, 2013, the Claimant was receiving Unemployment Insurance (UI) benefits of $64.50 per week, which are subject to a 100% statutory offset. She was temporarily and totally disabled, attributable to the admitted injury, from September 25, 2016 through November 24, 2013.

35. From November 25, 2013 through November 30, 2013, both dates inclusive, a total of 5 days, the Claimant was no longer receiving UI benefits and she

was still temporarily and totally disabled, thus, her TTD benefit is $306.40 per week, or $43.77 per day, in the aggregate subtotal amount of $218.85.

36. In approximately December 2013, the Claimant started to work retail sales for Stage Stores. She continued to work at Stage Stores, averaging between 12-17 hours/week at $8.60 an hour, or an average of 15 hours per week, or $129.00 per week, until after she was placed at MMI on May 5, 2014. From December 2, 2013 through the date before the MMI date, May 4, 2014, both dates inclusive, a total of 154 days, the Claimant was sustaining a temporary wage loss of $330.60 per week ($459.60 - $129.00= $330.60), thus, yielding a TPD benefit rate of $220.40 per week, or $31.49 per day, in the aggregate amount of $4,849.46.

Releases to Full Duty/Restrictions

37. From February 13, 2012 through May 7, 2012, NP Carpenter had released the Claimant to full duty work without restrictions, and this release was not co-signed or properly ratified by an attending physician, however, the Claimant had continued working at her pre-injury work as a bus driver; at Stops; and, at Quizno's until May 7, 2012. Consequently, she had no temporary wage loss during this period of time.

38. From May 7, 2012 through March 1, 2013, the Claimant was under a full duty release to return to work by NP Carpenter, ratified by Dr. Bacon. Consequently, she had no temporary wage loss attributable to her admitted injury during this period of time.

39. From March 1, 2013 through April 16, 2013, the Claimant was under restrictions from Dr. Pettine. Consequently, she was experiencing a temporary wage loss attributable to her admitted injury during this period of time.

40. From April 16, 2013 through September 25, 2013, the Claimant was under a full duty release to return to work by NP Carpenter, ratified by Dr. Bacon. Consequently, she had no temporary wage loss attributable to her admitted injury during this period of time.

41. From September 25, 2013 through May 4, 2014, the day before the Claimant was placed at MMI by Dr. Reichhardt, she was under restrictions admitted by Dr. Mackintosh, thus, she was experiencing a temporary wage loss, measured against the baseline of her AWW (which is based on multiple employments as of the date of injury).

Unemployment Insurance (UI) Benefit Offset

42. The Claimant received UI benefits of $129.00 every two weeks, or $64.50 per week, from June 1, 2013 until November 24, 2013 (Claimant's Exhibit 6).

Ultimate Findings

43. It is undisputed that Dr. Mackintosh deferred to Dr. Reichhardt on the Claimant's medical restrictions on September 25, 2013. Also, Dr. Pettine imposed temporary restrictions on March 1, 2013, effective until April 16, 2013 (when Dr. Bacon ratified NP Carpenter's full duty release to return to work without ever having seen the Claimant). Dr. Pettine's restrictions would have prevented the Claimant from performing the full range of her duties at any of her multiple employments. Nonetheless, the Claimant worked at her remaining multiple employments despite her medical restrictions, but she could not perform adequately or properly at any of her multiple jobs.

44. The ALJ finds the Claimant's testimony as a whole, credible and un-refuted. Her lay testimony establishes that she could **not** perform properly or adequately at any of her multiple jobs. Also, the ALJ finds the medical opinions of Dr. Pettine and Dr. Reichhardt concerning restrictions persuasive and credible. When she lost the jobs in her multiple employments and she was not under appropriately delegated or appropriate full duty releases to return to work, the Claimant was temporarily disabled.

45. Between conflicting medical opinions, the ALJ makes a rational choice to accept the opinions of Dr. Pettine, Dr. Reichhardt and Dr. Mackintosh's ultimate opinion (as found in paragraph 6 herein above), because they are based on substantial evidence, and to reject the opinion of Dr. Benz and FPN Carpenter, other than giving accord to Dr. Benz's full duty release to return to work, effective from May 7, 2012 through March 1, 2013, that date of Dr. Pettine's restrictions.

46. The Claimant's AWW from her multiple employments on the date of injury is $459.60, which is the baseline measurement for TPD benefits.

47. From the date of injury, February 13, 2012 through April 15, 2012, the Claimant was working at all three multiple employments and sustained **no** temporary wage loss.

48. As found herein above, from April 16, 2012 through May 7, 2012, the Claimant was sustaining a temporary wage loss, attributable to her admitted injury. The details of that wage loss are specified herein above.

49. The Claimant was under a full duty release by an attending physician, Dr. Benz, from May 7, 2012 through March 1, 2013, the date that Dr. Pettine restricted her, thus there was no temporary wage loss attributable to the admitted injury.

50. From March 1, 2013 through April 16, 2013 (the date of NP Carpenter's full duty release, ratified by Dr. Bacon), the Claimant was sustaining a temporary wage loss as specified herein above under Dr. Pettine's restrictions.

51. From April 16, 2013 through September 25, 2013, the Claimant was under a full duty release from NP Carpenter, ratified by Dr. Bacon. Therefore there was no temporary wage loss attributable to the admitted injury.

52. From September 25, 2013 through December 1, 2013, the Claimant was sustaining a 100% temporary wage loss, having lost all of her other employments due to her restrictions and inability to do the jobs, as specified herein above.

53. From December 2, 2013 (when the Claimant began employment with Stage Stops at an average wage of $129.00 per week) through May 4, 2014 the day before her MMI date, the Claimant was sustaining a temporary wage loss as specified herein above.

54. The Claimant received UI benefits of $129.00 every two weeks, or $64.50 per week, from June 1, 2013 until November 24, 2013 (Claimant's Exhibit 6).

RESPONDENTS' ARGUMENTS

The Respondents argue that it is the law of this case that an attending physician may make a blanket delegation to an NP to determine when a claimant may return to work. The question is may a physician who has never seen an injured worker be deemed an "attending physician," and may an attending physician make a retroactive blanket delegation one and a half years after the NP has released the injured worker to return to work. The Respondents concede that there are factual issues "surrounding the status and abilities of nurse practitioners, which should be resolved" with the hearing on remand.

Respondents argue, at great length that nurse practitioners, by necessary implication, should be accorded the status of "attending physicians" for purposes of releasing injured workers to full duty. The Respondents point out that the State of Colorado regulates NP's through the Board of Nursing – a DORA body. The Legislature has established a Nurses Practice Act, §§.12-38-101 to 12-38-133, C.R.S. In general, advanced nurse practitioners are granted wide authority to administer care, including prescriptive authority, work independent of a physician and professional decision making. **NP's are not physicians; physicians are regulated under a separate statutory system.** But the regulation and authority of NP's mirrors the system developed for physicians. As argued in Respondents' earlier briefing, NP's were heralded as an important part of our evolving medical care system under the Affordable Care Act. NP's play and important role in offering care to patients, especially in areas that have fewer providers generally, such as rural locations throughout the country, where access to providers is limited. Nonetheless, the Respondents concede that NP's are not **attending physicians.** Indeed, if the General Assembly had intended for NPs to be in the place of **attending physicians** in the Workers' Compensation Act , it would have said so.

NP Carpenter testified via deposition on June 30, 2016. NP Carpenter has been a nurse for 44 years with Banner Health. In 1997, NP Carpenter became a Certified Family Nurse Practitioner through the ANCC, a national board for advanced nursing. To qualify for the certification, a nurse must possess, at a minimum, a master's degree in nursing, complete a residency program, and a work a significant amount of clinical hours. NP Carpenter completed the requirements while working in northern Colorado – both Greeley and Brush. She worked with physicians and other allied medical professionals during her training to become a NP. She has maintained her board certification for almost 20 years, all the time serving the citizens of northern Colorado.

NP Carpenter has prescriptive authority. She met the requirements for the prescribing controlled medicines through the DEA. This authority was attained after 1500 to 1700 clinical hours of work.

NP's have several specialties, similar to medical specialties. NP Carpenter chose to become a Family NP and earned her certification to hold the title of an FNP.

NP Carpenter is an independent practitioner. She has a scope of practice under the Nurses Practices Act that permits her to work independent of any provider or clinic. Her license permits her to work without the supervision or authority of a physician. NP Carpenter, however, has worked in the Banner system for 44 years. She collaborates with other providers, including physicians and other allied medical professionals.

NP Carpenter explained her practice places her in the role of providing primary care to patients. There may be times when she is the only medical professional treating a patient in a clinic. She will make referrals to specialists, however, when more advanced care is needed.

When a patient wants to see her, they make an appointment. She will take a history and treat them as expected of any medical professional caring for a patient.

Despite NP Carpenter's extensive credentials and activities she is **not** an **attending physician** in the contemplation of the Workers' Compensation Act.

The Claimant and NP Carpenter

The Respondents observe that the Claimant was a patient of NP Carpenter prior to her workers' compensation claim. When the Claimant sustained her admitted injury, Claimant made the appointment with NP Carpenter, as she had treated her previously for non-work related conditions. Claimant made the appointment with NP Carpenter through Occumed. NP Carpenter was the first treater to evaluate and treat the Claimant for her work injury. This fact does **not** make NP Carpenter an **attending physician** as defined by the Workers' Compensation Act.

NP Carpenter explained injured workers are provided the same care by her as she would treated any patient. If additional advice was needed, she had professionals she could reach out to for help. NP Carpenter testified 15 to 20% of her patients are injured workers where she is the primary provider.

Respondents observe that NP Carpenter diagnosed the Claimant with a cervicothoracic muscle strain with lumbar pain. This is a condition NP Carpenter treated regularly. Every day she works, NP Carpenter testified she treats patients for strains, sprains and orthopedic-type complaints. She was trained in nursing to handle these types of injuries and her 44 years of experience in the clinic honed her skills. The injury was straight-forward and a common one in her experience. This does not make NP carpenter an attending physician within the definition of the Workers' Compensation Act. Had the General Assembly intended such a situation, it would have clearly indicated that an **NP** could release an injured worker to return to work instead of limiting this action to an **attending physician.**

Claimant had treated with NP Carpenter prior to the work injury for similar complaints. She had prescribed pain medication and muscle relaxants to claimant prior to the work injury.

NP Carpenter evaluated the Claimant after taking a history. She performed a physical examination and inputted her notes into the medical chart for the Claimant. She charts every day for each patient seen in order to keep records of her work.

Based on the history and examination provided by the Claimant when she first saw NP Carpenter for her work related injury, NP Carpenter felt capable of treating the Claimant's injuries. She had more than 40 years of experience in treating patients like the Claimant for these types of injuries. Nonetheless, this does not make NP Carpenter an **attending physician** within the meaning of the Workers' Compensation Act.

NP Carpenter is the primary caregiver in all her patient relationships. She does not work as a traditional nurse, who carries out the orders of physicians. As a primary caregiver, NP Carpenter provides her own treatment plans and provides care she deems reasonable and necessary. Dr. Mackintosh confirms this in his last deposition.

NP Carpenter's Return to Work Recommendation

Respondents observe that NP Carpenter testified that the Claimant was on a full duty work status for most of the time she treated the Claimant.

When NP Carpenter released the Claimant to full duty work, she believed that she understood the nature of the Claimant's work. As found herein above, NP carpenter did not understand the Claimant's lifting requirements as a school bus driver. Respondents argue that there is no indication in the record that the claimant ever complained about the full duty work status for the job with the Employer or any of the other jobs claimant held during the pendency of her claim. This argument begs the question. Either the Claimant could perform at her multiple jobs or she could not perform. As found herein above, she could not perform at various times. Whether NP carpenter released the Claimant to return to work without restrictions, based on inadequate information, does not mean that the Claimant could perform all of her multiple jobs.

The Respondents argue that the Claimant did not make NP Carpenter aware of other jobs she was working or that the Claimant had any difficulty doing those jobs. It is sheer speculation as to what NP carpenter would have done had she been aware of the Claimant's difficulties with her other jobs. Indeed, the respondents' arguments minimize the extent of the Claimant's injuries, which minimization is belied by subsequent medical opinions. NP Carpenter did provide restrictions for claimant when there was a clinical indication for the restrictions. She in fact did provide restrictions when claimant complained of increased complaints. Claimant was evaluated by Dr. Ghazi during that period. After the evaluation, claimant's condition improved and she was returned to full duty work.

The Respondents argue that the Claimant never asked NP Carpenter for restrictions. This argument is contrary to the "independent professional judgment" of NP Carpenter's extensive discussion of her abilities to independently treat patients.

Despite the extensive arguments to justify NP carpenter's unqualified releases for the Claimant to return to full duty, the ALJ has found on remand herein above that specific physician ratified releases to return to work at full duty by NP Carpenter were sufficient to cause a cessation of temporary disability benefits. The Respondents simplistic argument that NP Carpenter's full duty releases were effective from the beginning, with minor exceptions, does not contemplate the complicated effects, and subsequent restrictions, of the Claimant's admitted injury. The Respondents admitted for 14% working unit permanent partial disability, which flies in the face of pre-MMI minimization of any temporary disability whatsoever. Indeed, the overshadowing tenor of the Respondents argument is that the Claimant is entitled to **no** temporary disability benefits from the date of injury, February 13, 2012, through the date of MMI, May 5, 2014, despite the respondents indicating that NP Carpenter had restricted the Claimant when there was a clinical indication for the restrictions. Respondents indicate that NP carpenter, in fact provided restrictions when the Claimant complained of increased complaints. Despite this, no temporary disability was admitted or paid.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

The Law of the Case

a. ICAO has determined that a full duty release to return to work by a nurse practitioner, if ratified by a physician who has not seen the injured worker, or if retroactively ratified by an attending physician one and a half years after the admitted injury should be given effect. ICAO has, therefore, established the "law of the case," and this ALJ is bound by this determination, absent a clear error or changed circumstance. *See Buckley Powder Co. v. State,* 70 P.3d 547 (Colo. App. 2002); *Giampapa v. American Family Mut. Ins. Co.,* 64 P.3d 230 (Colo. 2003); *Arizona v. California,* 460 U.S. 605, 103 S.Ct. 1382, 75 L.Ed.2d 318 (1983). As found herein above, there are periods when releases to full duty have been ratified by a physician under the circumstances dictated by the law of the case. Therefore, temporary disability benefits should be denied during these periods of time.

Credibility

b. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As found, the Claimant's testimony, as a whole, was credible and un-refuted. Also, as found, the medical opinions of Dr. Pettine and Dr. Reichhardt, concerning restrictions, were persuasive and credible. As further found, the opinion of Dr. Benz was lacking in credibility, other than his release of the Claimant to full duty from May 7, 2012 through March 1, 2013 (the date that Dr. Pettine restricted the Claimant). The ultimate medical opinions of Dr. Mackintosh, Dr. Pettine and Dr.

Reichhardt on restrictions are essentially un-contradicted by later opinions; and, they are credible and persuasive. *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony.

Substantial Evidence

c. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leeway v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions, the ALJ made a rational choice to accept the opinions of Dr. Pettine, Dr. Reichhardt and Dr. Mackintosh's ultimate opinion of September 25, 2013, because they are based on substantial evidence, and to reject the opinions of FPN Carpenter, when rendered at times un-supported, not co-signed, or not ratified by an **attending physician**.

Average Weekly Wage

d. Where an injured worker has arranged **multiple** employments to earn a living, and the injury precludes work altogether, or in one or more employments, a fair computation of the true AWW encompasses all employments. *St. Mary's Church & Mission v. Indus. Comm'n,* 735 P. 2d 902 (Colo. App. 1986); *Jefferson County Public Schools v. Dragoo,* 765 P.2d 636 (Colo. App. 1988); *Broadmoor Hotel v. Indus. Claim Appeals Office,* 939 P.2d 460 (Colo. App. 1996), *cert. denied* July 14, 1997. An AWW calculation is designed to compensate for temporary wage loss. *Pizza Hut v. Indus. Claim Appeals Office,* 18 P. 3d 867 (Colo. App. 2001). *See* § 8-42-102, C.R.S
An ALJ has the discretion to determine a claimant's AWW, based not only on the claimant's wage at the time of injury, but also on other relevant factors when the case's unique circumstances require, including a determination based on increased earnings and insurance costs at a subsequent employer. *Avalanche Industries, Inc. v. Clark,* 198 P.3d 589 (Colo. 2008). As found, a fair and objective determination of the Claimant's

AWW from her multiple employments at the time of the admitted injury is $459.60, which is the baseline from which to measure temporary wage loss.

Temporary Disability

e. Essentially, temporary disability benefits shall continue until **the attending physician** gives the employee a written release to return to regular work without restrictions § 8-42-105 (2) (c), C.R.S. and § 8-42-106. This provision should be mechanistically applied regardless of whether subsequent medical opinions seem to override these releases. As found, from the date of injury, February 13, 2012 through April 15, 2012, the Claimant was working at all three multiple employments and sustained **no** temporary wage loss.

f. As found herein above, from April 16, 2012 through May 7, 2012, the Claimant was sustaining a temporary wage loss, attributable to her admitted injury. The details of that wage loss are specified herein above.

g. The Claimant was under a full duty release by an attending physician, Dr. Benz, from May 7, 2012 through March 1, 2013, the date that Dr. Pettine restricted her, thus there was no temporary wage loss attributable to the admitted injury.

h. From March 1, 2013 through April 16, 2013 (the date of NP Carpenter's full duty release, ratified by Dr. Bacon), the Claimant was sustaining a temporary wage loss as specified herein above.

i. From April 16, 2013 through September 25, 2013, the Claimant was under a full duty release from NP Carpenter, ratified by Dr. Bacon. Therefore there was no temporary wage loss attributable to the admitted injury.

j. From September 25, 2013 through December 1, 2013, the Claimant was sustaining a 100% temporary wage loss, having lost all of her other employments due to her restrictions and inability to do the jobs, as specified herein above.

k. From December 2, 2013 (when the Claimant began employment with Stage Stops at an average wage of $129.00 per week) through May 4, 2014 the day before her MMI date, the Claimant was sustaining a temporary wage loss as specified herein above.

l. The Claimant received UI benefits of $129.00 every two weeks, or $64.50 per week, from June 1, 2013 until November 24, 2013 (Claimant's Exhibit 6).

m. To establish entitlement to temporary disability benefits, a claimant must prove that the industrial injury has caused a "disability," and that he has suffered a wage loss that, "to some degree," is the result of the industrial disability. § 8-42-103(1), C.R.S; *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). When a temporarily disabled employee loses her employment for reasons which are not her responsibility, the causal relationship between the industrial injury and the wage loss necessarily continues. Disability from employment is established when the injured employee is unable to perform the usual job effectively or properly. *Jefferson Co. Schools v. Headrick*, 734 P.2d 659 (Colo. App.1986). This is true because the employee's restrictions presumably impair his opportunity to obtain employment at pre-injury wage levels. *Kiernan v. Roadway Package System*, W.C. No. 4-443-973 (ICAO, December 18, 2000). Claimant's termination in this case was not her fault but the result of undisclosed reasons. There is no statutory requirement that a claimant must present medical opinion evidence from of an attending physician to establish her physical disability. See *Lymburn v. Symbois Logic*, 952 P.2d 831 (Colo. App. 1997). Rather, the Claimant's testimony alone is sufficient to establish a temporary "disability." *Id*. As found, the Claimant worked at her multiple employments despite her medical restrictions, but she could not perform adequately or properly at any of her multiple jobs.

n. Once the prerequisites for TPD and/or TTD are met (*e.g.,* no release to return to full duty, MMI has not been reached, a temporary wage loss is occurring), modified employment is not made available, and there is no actual return to work, TPD and TTD benefits are designed to compensate for temporary wage loss. TTD benefits are designed to compensate for a 100% temporary wage loss. *See Eastman Kodak Co. v. Industrial Commission,* 725 P. 2d 107 (Colo. App. 1986); *City of Aurora v. Dortch,* 799 P. 2d 461 (Colo. App. 1990). As found, the Claimant is entitled to TTD or TPD benefits as specified herein below.

o. From the date of the admitted injury of February 13, 2012 until the Claimant was terminated from employment by the Employer herein on May 22, 2013, she continued to earn $192.35 per week from the Employer herein. From February 13, 2012 through December 31, 2012, she continued working for Stops, earning an additional $110.09 per week. From February 13, 2012 through April 15, 2012, she also continued working for Quizno's at $157.16 per week. Consequently, the Claimant had **no** temporary wage loss from February 13, 2012 through April 15, 2012. From April 16, 2012 (the date she was unable to continue working at Quizno's) through May 6, 2012, both dates inclusive, a total of 21 days, the Claimant was sustaining a temporary wage loss of $157.16 per week during this period of time, yielding a TPD rate of $104.77 per week, or $14.97 per day, in the aggregate subtotal amount of $314.32. From January 1, 2013 through April 25, 2013, both dates inclusive, a subtotal of 115 days, the Claimant no longer worked for Stops at $110.09 per week and she no longer worked at Quizno's at $157.16 per week, all because of the restrictions occasioned by the admitted injury, however, she continued work for the Employer herein. Consequently, her temporary wage loss during this period of time was $267.25 per week, thus, yielding a TPD rate of $178.16 per week, or $25.45 per day for this period of time. Nonetheless, her temporary wage loss from April 16, 2013 through September 25, 2013 was not attributable to the admitted injury because she had a full duty release to return to work during this time.

p. From June 1, 2013 through November 24, 2013, both dates inclusive, a total of 177 days, the Claimant was receiving Unemployment Insurance (UI) benefits of $64.50 per week, which are subject to a 100% statutory offset, thus, net TTD benefits are $241.90 per week, or $34.56 per day for the TTD period from Sep0tember 25, 2013 through November 24, 2013..

q. From November 25, 2013 through November 30, 2013, both dates inclusive, a total of 5 days, the Claimant was no longer receiving UI benefits and she was still temporarily and totally disabled, thus, her TTD benefit is $306.40 per week, or $43.77 per day.

r. In approximately December 2013, the Claimant started to work retail sales for Stage Stores. She continued to work at Stage Stores, averaging between 12-17 hours/week at $8.60 an hour, or an average of 15 hours per week, or $129.00 per week, until after she was placed at MMI on May 5, 2014. From December 2, 2013 through the date before the MMI date, May 4, 2014, both dates inclusive, a total of 154 days, the Claimant was sustaining a temporary wage loss of $330.60 per week ($459.60 - $129.00= $330.60), thus, yielding a TPD benefit rate of $220.40 per week, or $31.49 per day.

Unemployment Insurance (UI) Benefit Offset

s. Section 8-42-103 (1) (f), C.R.S., provides for a 100% offset for UI benefits. As found, the Claimant received UI benefits of $129.00 every two weeks, or $64.50 per week, from June 1, 2013 until November 24, 2013, and the Respondents are entitled to an offset of $64.50 per week during this period of time. During this period of time, the respondents are entitled to a 100% offset against temporary total and/or temporary partial disability benefits.

Burden of Proof

t. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained her burden with respect to an increased AWW and temporary disability benefits through the date of MMI, May 5, 2014.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Claimant's average weekly wage is hereby re-established at $459.60

B. Any and all claims for temporary disability benefits from February 13, 2012 through April 15, 2012 are hereby denied and dismissed.

C. Respondents shall pay the Claimant temporary partial disability benefits from April 16, 2012 (the date she was unable to continue working at Quizno's) through May 6, 2012, both dates inclusive, a total of 21 days, at the rate of $104.77 per week, or $14.97 per day, in the aggregate subtotal amount of $314.32, which is payable retroactively and forthwith.

D. Any and all claims for temporary disability benefits from May 7, 2012 through March 1, 2013 are hereby denied and dismissed.

E. From March 1, 2013 through April 16, 2013, both dates inclusive, a subtotal of 47 days, the Respondents shall pay the Claimant temporary total disability benefits of $306.40 per week, or $43.77 per day, in the aggregate subtotal amount of $2,057.24, which is payable retroactively and forthwith.

F. Any and all claims for temporary disability benefits from April 16, 2013 through September 25, 2013 are hereby denied and dismissed.

G. From June 1, 2013 through November 24, 2013, both dates inclusive, a total of 177 days, the Claimant was receiving Unemployment Insurance (UI) benefits of $64.50 per week, which are subject to a 100% statutory offset, thus, net temporary total disability benefits from September 25, 2013 through November 24, 2013, both dates inclusive, a subtotal of 62 days, are $241.90 per week, or $34.56 per day ,in the aggregate amount of $2,142.72, which is payable retroactively and forthwith.

H. From November 25, 2013 through November 30, 2013, both dates inclusive, a total of 5 days (the Claimant was no longer receiving UI benefits), the Respondents shall pay the Claimant temporary total disability benefits of $306.40 per week, or $43.77 per day, in the aggregate subtotal amount of $218.85, which is payable retroactively and forthwith.

I. From December 1, 2013 through the date before the MMI date, May 4, 2014, both dates inclusive, a total of 153 days, the Respondents shall pay the Claimant temporary partial disability benefits at the rate of $220.40 per week, or $31.49 per day, in the aggregate amount of $4,817.97, which is payable retroactively and forthwith.

J. Aggregate temporary disability benefits (total and partial) from the date of injury through the date of maximum medical improvement equal $9,332.25, which is payable retroactively and forthwith.

K. The Respondents shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts of indemnity benefits due and not paid when due.

L. Any and all issues not determined herein are reserved for future decision.

DATED this______day of August 2016.

____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP.   You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable occupational disease to his left upper extremity during the course and scope of his employment with Employer.

2. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive authorized medical treatment that is reasonable and necessary to cure or relieve the effects of his industrial injury.

3. A determination of Claimant's Average Weekly Wage (AWW).

4. Whether Claimant has demonstrated by a preponderance of the evidence that he is entitled to receive Temporary Partial Disability (TPD) benefits for the period September 14, 2015 until terminated by statute.

FINDINGS OF FACT

1. Claimant works as a Meat Cutter for Employer. He asserts that he suffered a cumulative trauma injury to his left upper extremity during the course and scope of his employment with Employer. Claimant specifically contends that he injured his left elbow and left wrist as a result of his repetitive job duties. He filed a claim for Workers' Compensation on August 11, 2015.

2. Claimant testified that he cuts a variety of meats. Depending on the type of meat he is cutting, Claimant uses tools including a hook, a saw and a knife. He remarked that he uses both wrists all of the time to perform his job duties.

3. Employer's Production Manager Thomas Griego detailed Claimant's job duties. He explained that Claimant's meat-cutting responsibilities involve alternating between using a knife and a saw. When using a saw, Claimant receives the piece of meat from a conveyor belt onto a table so that he does not have to lift the meat. Mr. Griego commented that the saw is mounted to a table and runs constantly. The table slides back and forth on rollers so that the table "rolls across" the saw. Mr. Griego noted that rolling the table across the saw alleviates the force needed to push the meat. Claimant uses his right hand to hold the piece of meat and his left hand to catch each pork chop as it is cut by the saw. He then places each pork chop on the table. After the entire piece of meat is cut Claimant pushes the pieces of meat back onto the conveyor belt.

4. Mr. Griego explained that Claimant's meat-cutting knife has a plastic handle and weighs approximately four to six ounces. While using the knife, Claimant also holds a hook in his left hand to pull the piece of meat towards him off the conveyor

belt and hold it in place while he cuts. Claimant can adjust the angle at which he holds the meat based on the size of each piece.

5. Claimant is qualified to perform other job duties besides cutting meat, including "processing the meat, being in utility, where you open the product, and wrapping." Claimant's co-worker Salvador Quinones testified that meat cutters are qualified "to do all the jobs they have" at Employer's facility. Claimant commented that, in addition to cutting meat with the saw and knife, he also carries meat to the conveyor belt. Claimant and Mr. Griego testified that Claimant performs processing work that includes pulling meat off the conveyor belt, pushing the meat onto trays and wrapping. Wrapping includes feeding the trays of meat into a machine and putting the wrapped trays into totes for shipment. Claimant remarked that he performs processing work "all the time." Mr. Griego summarized that Claimant's job includes a number of duties involving cutting, sawing, grinding, lifting, pulling and using equipment.

6. Claimant explained that he works approximately 8-10 hours each day for five days per week. He receives an 18 minute break between each one and one-half hour shift as well as a 30 minute lunch break. Claimant noted that meat cutters are scheduled to rotate job stations after each break.

7. Claimant does not cut meat when the conveyor belt or line becomes obstructed. During an obstruction the conveyor belt is turned off. Mr. Griego explained that the conveyor belt is down periodically during the day for approximately two to three minutes each time.

8. Claimant received medical treatment through HealthOne Occupational Medicine and Rehabilitation. On September 14, 2015 he visited Deana Halat, FNP-BC at HealthOne for an examination. FNP-BC Halat reported that Claimant's left hand had a quarter-sized palpable mass that was tender to palpation. Claimant exhibited decreased range of left upper extremity motion with flexion, extension and rotation. He also had decreased sensation to the second digit of the left hand. FNP-BC Halat ordered an MRI and an EMG/nerve conduction study. She concluded that there was a "greater than 50% probablity that this is a work-related injury due to work as a meat grinder for 18 years." FNP-BC Halat also assigned work restrictions including no meat cutting or grinding.

9. On October 3, 2015 Claimant underwent an MRI of his left wrist. The MRI revealed fourth extensor compartment tenosynovitis and edema. There were also findings of ulnar impaction that included degenerative thinning of the central articular disc and cystic degenerative changes in the proximal lunate.

10. On October 13, 2015 Claimant visited Katherine Drapeau, M.D. for an examination. Dr. Drapeau diagnosed Claimant with a ganglion cyst as well as tendinosis of the index and fourth finger of the left hand. She recommended occupational therapy and referred Claimant to Sean Griggs, M.D. She stated that objective findings were consistent with the work related mechanism of injury described by Claimant.

11. On October 13, 2015 Dr. Drapeau also responded to a letter from Respondents. She reported Claimant's primary diagnosis as left hand extensor tendinosis and a ganglion cyst. Dr. Drapeau noted that Claimant had suffered his injuries as a result of his work activities for Employer. She recommended an EMG and a referral to a hand surgeon.

12. On October 20, 2015 Claimant visited Sean Griggs, M.D. for an evaluation. Dr. Griggs noted that, although the MRI revealed some changes consistent with ulnar impaction, Claimant's physical exam findings and complaints were more consistent with radial tunnel syndrome and fourth dorsal compartment cellulitis. Dr. Griggs remarked that "the ulnar impaction may become a significant issue due to the repetitive nature of his job and the fact that he has to ulnar deviate."

13. On October 28, 2015 FNP-BC Halat responded to a letter from Respondents. She noted that Claimant's primary diagnosis was pain in the left hand. FNP-BC Halat explained that Claimant's repetitive work activities as a Meat Cutter for 19 years was the likely cause of his left hand pain and need for medical treatment.

14. On November 17, 2015 Claimant returned to Dr. Griggs for an examination. Dr. Griggs noted that Claimant had pain to resisted supination and there was some tenderness along the dorsal fourth compartment. He diagnosed Claimant with probable bilateral radial tunnel syndrome and bilateral ulnar impaction syndrome. Dr. Griggs recommended physical therapy and assigned work restrictions.

15. On January 7, 2016 Claimant underwent an independent medical examination with Anjmun Sharma, M.D. Claimant reported that on August 11, 2015 he began to experience pain in his left wrist and hand. He also noticed a large lump "distal to the first digit on the dorsal aspect of his hand." Claimant denied any type of trauma, but remarked that he had been a meat-cutter for 18 years. Dr. Sharma reviewed Claimant's medical records and performed a physical examination. He explained that Claimant exhibited normal range of motion and had an excellent prognosis. Dr. Sharma diagnosed Claimant with a left wrist sprain and a left forearm strain that had both resolved. Although Claimant attributed his symptoms to a cumulative trauma condition as a result of his work for Employer, Dr. Sharma determined that there was nothing in the medical records to suggest a causal relationship between his work activities and symptoms. Accordingly, Claimant did not require any additional medical treatment.

16. On April 1, 2016 Claimant underwent an independent medical examination with Edwin M. Healey, M.D. Claimant reported that on August 11, 2015 he began to experience pain in his left wrist and hand. He also noticed a large lump distal to the first digit on the dorsum of his left hand. Dr. Healey determined that the "current diagnoses causally and directly relate to the cumulative trauma disorder [Claimant] has developed as a result of being a meat cutter for 30 years and most recently with increased work load at his present place of employment." His diagnoses included the following: "1. Left radial wrist ganglion cyst; resolved. 2. Left wrist extensor tenosynovitis; improved. 3. Probable bilateral radial tunnel syndrome; still symptomatic. 4. Bilateral ulnar impaction syndrome." Dr. Healey noted that cumulative trauma disorders of the upper extremities

are common in meat cutters. He explained that Dr. Sharma did not follow the *Workers' Compensation Medical Treatment Guidelines* (*Guidelines*) in considering whether Claimant had suffered a cumulative trauma injury while working for Employer. Dr. Healey reasoned that Claimant met the cumulative trauma disorder criteria for force, repetition, duration, awkward posture and repetition, use of hand-held vibratory power tools and working in a cold environment as outlined in the *Guidelines*. He also noted that Claimant had no other risk factors that would predispose him to the development of his symptoms.

17. Dr. Sharma testified at the hearing in this matter. Relying on the *Guidelines*, Dr. Sharma explained that the combination of repetition, force, cycle time and awkward postures in Claimant's duties as a Meat Cutter failed to meet the causation requirements for the development of a left upper extremity cumulative trauma condition. He specifically noted that the amount of force used to push or pull an object is measured by electromyography. The *Guidelines* delineate 3-5 kilograms of force to constitute a primary risk factor for the development of a cumulative trauma disorder. However, there has been no measurement of the force required to perform Claimant's job duties. Moreover, Dr. Sharma remarked that the *Guidelines* characterize an awkward posture as an ulnar deviation of greater than a 45 degree angle for six hours or more than 50 task cycles per minute. However, Dr. Sharma commented that based on Claimant's description of his job duties, he did not exhibit an awkward posture pursuant to the *Guidelines*. Furthermore, Dr. Sharma explained that Claimant's left upper extremity did not reveal any objective evidence of a cumulative trauma disorder. He also remarked that Claimant's wrist swelling could have arisen from any number of sources and appeared to be acute. Accordingly, Dr. Sharma summarized that Claimant's left upper extremity symptoms were not caused by his work activities for Employer.

18. Dr. Healey also testified at the hearing in this matter. He explained that Claimant suffers from ulnar impaction and tenosynovitis in his left upper extremity. Dr. Healey maintained that Claimant's work activities for Employer involved the requisite repetition, force, cycle time and awkward postures to constitute a cumulative trauma condition pursuant to the *Guidelines*. Although Dr. Healey testified that Claimant's job requires repetitive ulnar deviation, he offered no measurement of ulnar deviation as it relates to a cumulative trauma disorder pursuant to the *Guidelines*. Dr. Healey also acknowledged "there's no ulnar impaction syndrome as part of the *Guidelines* for a finding of a cumulative trauma injury." Furthermore, although Dr. Healey noted that Claimant suffers from tenosynovitis, he did not explain how the condition was caused by Claimant's repetitive work activities. Finally, Dr. Healey acknowledged that he was unaware of the amount of force required to perform Claimant's job and Claimant's failure to use vibratory power tools.

19. The *Guidelines* include a Primary Risk Factor Definition Table for Force and Repetition/Duration. The Table requires 6 hours of greater than 50% of individual maximum force with task cycles 30 seconds or less, or sufficient force used for at least 50% of a task cycle. The maximum force for most individuals is 3-5 kilograms. An additional Primary Risk Factor category is Awkward Posture and Repetition/Duration.

The factor requires four hours of wrist flexion greater than 45 degrees, extension greater than 30 degrees or ulnar deviation greater than 20 degrees, six hours of elbow flexion greater than 90 degrees, six hours of supination/pronation with task cycles 30 seconds or less, or awkward posture for at least 50% of a task cycle. Other Primary Risk Factors include computer work for more than seven hours per day or at a non-ergonomically correct work station, continuous mouse use of greater than four hours or use of a handheld vibratory power tool for 6 hours or more. Additional risk factors are six hours of lifting 10 pounds greater than 60 times per hour or six hours using hand held tools weighing two or more pounds.

20. Claimant has failed to establish that it is more probably true than not that he sustained a compensable occupational disease in the form of a left upper extremity injury during the course and scope of his employment with Employer. Although Claimant attributed his symptoms to his work activities, a review of his job duties as a Meat Cutter reflects that they lacked the requisite repetition, force or awkward postures to cause his symptoms. Claimant engaged in a variety of tasks throughout his shift. The persuasive reports and testimony of Dr. Sharma reveal that, although Claimant engaged in some forceful activities, his job duties did not meet the minimum thresholds for repetition, force, duration or awkward postures to establish a cumulative trauma condition pursuant to the *Guidelines*.

21. Claimant has not demonstrated that his work involves repetitive duties pursuant to the *Guidelines*. Claimant explained that he works approximately 8-10 hours each day for five days per week. He receives an 18 minute break between each one and one-half hour shift as well as a 30 minute lunch break. Claimant noted that meat cutters are scheduled to rotate stations after each break. Furthermore, Claimant is qualified to perform other job duties besides cutting meat, including “processing the meat, being in utility, where you open the product, and wrapping.” Claimant commented that, in addition to cutting meat with the saw and the knife, he carries meat to the conveyor belt. Claimant also performs processing work that includes pulling meat off the conveyor belt, pushing the meat onto trays and wrapping. Wrapping includes feeding the trays of meat into a machine and putting the wrapped trays into totes for shipment. Mr. Griego summarized that Claimant’s job includes a number of duties involving cutting, sawing, grinding, lifting, pulling and using equipment. Although Claimant may engage in repetitive activities for each one and one-half hour shift, the variety of his responsibilities and intermittent breaks throughout each day reflect that his job duties did not likely cause a cumulative trauma injury to his left upper extremity.

22. Dr. Sharma persuasively explained that the combination of repetition, force, cycle time and awkward postures in Claimant’s duties as a Meat Cutter failed to meet the causation requirements for the development of a left upper extremity cumulative trauma condition. He specifically noted that the *Guidelines* delineate 3-5 kilograms of force to constitute a primary risk factor for the development of a cumulative trauma disorder. However, there has been no measurement of the force required to perform Claimant’s job duties. Moreover, Dr. Sharma remarked that the *Guidelines* characterize an awkward posture as an ulnar deviation of greater than a 45 degree angle for six hours or more than 50 task cycles per minute. However, Dr. Sharma

commented that, based on Claimant's description of his job duties, he did not exhibit an awkward posture pursuant to the *Guidelines*.

23. In contrast, FNP-BC Halat and Dr. Drapeau concluded that Claimant's work activities caused a cumulative trauma condition to his left upper extremity. However, FNP-BC Halat and Dr. Drapeau did not perform a causation analysis pursuant to the *Guidelines*. Moreover, Dr. Healey explained that Claimant suffers from ulnar impaction and tenosynovitis in his left upper extremity. Dr. Healey maintained that Claimant met the criteria for force, repetition, duration, awkward posture and repetition, use of hand-held vibratory power tools and working in a cold environment outlined in the *Guidelines*. Although Dr. Healey testified that Claimant's job requires repetitive ulnar deviation, he offered no measurement of ulnar deviation as it relates to a cumulative trauma disorder pursuant to the *Guidelines*. Dr. Healey also acknowledged "there's no ulnar impaction syndrome as part of the *Guidelines* for a finding of a cumulative trauma injury." Furthermore, Dr. Healey noted that Claimant suffers from tenosynovitis, but did not explain how the condition was caused by his repetitive work activities. Dr. Healey also acknowledged that he was unaware of the amount of force required to perform Claimant's job. Finally, Claimant did not use vibratory hand tools to perform his duties as a Meat Cutter for Employer. Accordingly, Claimant has failed to prove that his work activities for Employer caused a cumulative trauma disorder to his left upper extremity. Claimant's claim for Workers' Compensation benefits is thus denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and

bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. The test for distinguishing between an accidental injury and an occupational disease is whether the injury can be traced to a particular time, place and cause. *Campbell v. IBM Corp.*, 867 P.2d 77, 81 (Colo. App. 1993). "Occupational disease" is defined by §8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

5. A claimant is required to prove by a preponderance of the evidence that the alleged occupational disease was directly or proximately caused by the employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251, 252 (Colo. App. 1999). Moreover, §8-40-201(14), C.R.S. imposes proof requirements in addition to those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819, 824 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

6. When the precipitating cause of an injury is a pre-existing condition that the claimant brings to the workplace, the injury is not compensable unless a "special hazard" of the employment combines with the pre-existing condition to contribute to the injury. *In Re Shelton,* W.C. No. 4-724-391 (ICAP, May 30, 2008). The rationale for the rule is that, in the absence of a special hazard, an injury due to the claimant's pre-existing condition does not bear a sufficient causal relationship to the employment to "arise out of" the employment. *Id.* A condition does not constitute a "special hazard" if it is "'ubiquitous' in the sense that it is found generally outside of the employment." *In Re Booker,* W.C. No. 4-661-649 (ICAP, May 23, 2007).

7. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct.

27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

8. In addressing cumulative trauma conditions, the *Guidelines* provide, in relevant part:

> Indirect evidence from a number of studies supports the conclusion that task repetition up to 6 hours per day unaccompanied by other risk factors is not causally associated with cumulative trauma conditions. Risk factors that are likely to be associated with specific CTC diagnostic categories include extreme wrist or elbow postures, force including regular work with hand tools greater than 1 kg or tasks requiring greater than 50% of an individual's voluntary maximal strength, work with vibratory tools at least 2 hours per day; or cold environments.

W.C.R.P. Rule 17, Exhibit 5, p.16. The duration of force and repetition as a primary risk factor must be greater than six hours at 50% of individual maximum force with task cycles of 30 seconds or less.

9. As found, Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable occupational disease in the form of a left upper extremity injury during the course and scope of his employment with Employer. Although Claimant attributed his symptoms to his work activities, a review of his job duties as a Meat Cutter reflects that they lacked the requisite repetition, force or awkward postures to cause his symptoms. Claimant engaged in a variety of tasks throughout his shift. The persuasive reports and testimony of Dr. Sharma reveal that, although Claimant engaged in some forceful activities, his job duties did not meet the minimum thresholds for repetition, force, duration or awkward postures to establish a cumulative trauma condition pursuant to the *Guidelines*.

10. As found, Claimant has not demonstrated that his work involves repetitive duties pursuant to the *Guidelines*. Claimant explained that he works approximately 8-10 hours each day for five days per week. He receives an 18 minute break between each one and one-half hour shift as well as a 30 minute lunch break. Claimant noted that meat cutters are scheduled to rotate stations after each break. Furthermore, Claimant is qualified to perform other job duties besides cutting meat, including "processing the meat, being in utility, where you open the product, and wrapping." Claimant commented that, in addition to cutting meat with the saw and the knife, he carries meat to the conveyor belt. Claimant also performs processing work that includes pulling meat off the conveyor belt, pushing the meat onto trays and wrapping. Wrapping includes feeding the trays of meat into a machine and putting the wrapped trays into totes for shipment. Mr. Griego summarized that Claimant's job includes a number of duties involving cutting, sawing, grinding, lifting, pulling and using equipment. Although Claimant may engage in repetitive activities for each one and one-half hour shift, the

variety of his responsibilities and intermittent breaks throughout each day reflect that his job duties did not likely cause a cumulative trauma injury to his left upper extremity.

11. As found, Dr. Sharma persuasively explained that the combination of repetition, force, cycle time and awkward postures in Claimant's duties as a Meat Cutter failed to meet the causation requirements for the development of a left upper extremity cumulative trauma condition. He specifically noted that the *Guidelines* delineate 3-5 kilograms of force to constitute a primary risk factor for the development of a cumulative trauma disorder. However, there has been no measurement of the force required to perform Claimant's job duties. Moreover, Dr. Sharma remarked that the *Guidelines* characterize an awkward posture as an ulnar deviation of greater than a 45 degree angle for six hours or more than 50 task cycles per minute. However, Dr. Sharma commented that, based on Claimant's description of his job duties, he did not exhibit an awkward posture pursuant to the *Guidelines*.

12. As found, in contrast, FNP-BC Halat and Dr. Drapeau concluded that Claimant's work activities caused a cumulative trauma condition to his left upper extremity. However, FNP-BC Halat and Dr. Drapeau did not perform a causation analysis pursuant to the *Guidelines*. Moreover, Dr. Healey explained that Claimant suffers from ulnar impaction and tenosynovitis in his left upper extremity. Dr. Healey maintained that Claimant met the criteria for force, repetition, duration, awkward posture and repetition, use of hand-held vibratory power tools and working in a cold environment outlined in the *Guidelines*. Although Dr. Healey testified that Claimant's job requires repetitive ulnar deviation, he offered no measurement of ulnar deviation as it relates to a cumulative trauma disorder pursuant to the *Guidelines*. Dr. Healey also acknowledged "there's no ulnar impaction syndrome as part of the *Guidelines* for a finding of a cumulative trauma injury." Furthermore, Dr. Healey noted that Claimant suffers from tenosynovitis, but did not explain how the condition was caused by his repetitive work activities. Dr. Healey also acknowledged that he was unaware of the amount of force required to perform Claimant's job. Finally, Claimant did not use vibratory hand tools to perform his duties as a Meat Cutter for Employer. Accordingly, Claimant has failed to prove that his work activities for Employer caused a cumulative trauma disorder to his left upper extremity. Claimant's claim for Workers' Compensation benefits is thus denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's claim for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: August 22, 2016.

ISSUES

The issues presented for determination are:

- Whether Claimant's average weekly wage (AWW) should be increased to reflect both a pay raise and tip income.

- Whether the cervical spine surgery recommended by Michael Drewek, M.D., reasonable, necessary and related to the November 2, 2015 industrial injury.

STIPULATIONS

The parties entered into a partial stipulation concerning Claimant's AWW. They agreed that without the alleged tips, the Claimant's AWW is $789.48. The ALJ hereby adopts and approves the stipulation of the parties.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ finds as follows:

1. Claimant began working for the Employer as a delivery driver on August 20, 2015. Claimant testified that he continued in this position until November 6, 2015.

2. Claimant's job included picking up and delivering storage pods for both residential and commercial clients. It is undisputed that Claimant earned $15.40 per hour for regular hours worked, and $23.00 per hour for overtime hours worked.

3. Claimant testified that he received tips from his residential customers, testifying that some of them were not home when he delivered or picked up the storage pods, and that his tips averaged $10.00 per tip, as some customers tipped nothing and some tipped as high as $50.00.

4. Claimant testified that he did not specifically track his tips, just kept mental notes of the tips he received. He further testified that he did not initially include the tips or gratuities in his 2015 tax return. Instead, he testified that he amended his tax return on April 21, 2015 to include his estimated tips in the amount of $1,875 over the course of 10 weeks of work for the Employer.

5. Claimant did not submit into evidence a tax return received by the IRS, nor did he submit his initial tax return filed with the IRS into evidence. Rather he submitted portions of a copy of a tax return that does not contain the alleged amended W-2 that he

testified he amended to include his tips, nor was the original W-2 submitted into evidence. Furthermore, the potions of the purported tax return submitted into evidence are not signed or dated.

6. Claimant refused to provide a release to Respondents to obtain his actual tax return filed with the IRS.

7. Claimant was involved in a motor vehicle accident (MVA) on November 2, 2015 while working for the Employer.

8. Respondents filed a General Admission of Liability on December 23, 2015. The Respondents admitted for an AWW of $756.65.

9. Claimant continued working for the Employer for a few days following the accident. By November 6, 2015, Claimant could no longer work because he had difficulty turning his head from side to side to see into his side rear view mirrors. He believed his inability to see into his side mirrors presented a safety hazard.

10. Claimant initially sought treatment with his personal health care physician at Kaiser Permanente on November 6, 2015. The Kaiser records from November 6, 2015 reflect that Claimant complained of pain secondary to a MVA the prior Tuesday. Claimant reported whiplash to the side as a result of the accident. Claimant reported that his neck started to feel stiff and that he was having difficulty looking at his side mirrors. He also reported headache in the occipital region, interscapular pain and some tingling down the back and right arm, but not constant.

11. X-rays taken at Kaiser on November 6, 2015 revealed no fractures, degenerative disease is observed from C4-5 through C6-7, and small cervical ribs are again seen at the C7 level. No acute findings were noted and Claimant was diagnosed with a cervical strain.

12. On November 11, 2015, Claimant returned to Kaiser, and reported neck pain right greater than left, right scapular pain and pain/numbness/tingling in his right humerus, and headaches. Claimant was referred to Kaiser physical therapy to increase his flexibility and improve his stability and posture to address his pain and stiffness in his neck.

13. On December 2, 2015 Claimant underwent an MRI scan of his cervical spine through Kaiser. The MRI revealed the presence of cervical stenosis and multilevel degenerative changes throughout Claimant's cervical spine. The physician interpreting the scan indicated that it revealed cord compression and remodeling at C3-4 and C4-5 with suggestion of increased cord signal likely secondary to chronic compressive myelomalacia.

14. The Employer eventually referred the Claimant to Aviation and Occupational Medicine. On December 4, 2015, the Claimant had an initial visit with Hector Brignoni, M.D. Claimant reported that he was driving a box truck which was struck on the passenger side by pickup truck. He reported that his head hit the driver's

side window, and that he felt fine immediately afterward but noticed his neck started feeling stiff over the ensuing days.

15. Claimant also reported to Dr. Brignoni that he started having low back pain approximately two weeks after the accident. Dr. Brignoni diagnosed Claimant with a head contusion and cervical, thoracic and lumbar sprains. Dr. Brignoni referred Claimant for an MRI due to Claimant's reports of bilateral upper extremity numbness and tingling.

16. Kaiser personnel contacted the Claimant on December 8, 2015 to inform him that the MRI results revealed that "nerves" are being "impinged" and that he could benefit from a neurosurgery consultation.

17. Claimant underwent a second MRI scan of his cervical spine with Health Images on December 14, 2015. The radiologist's impressions included early facet degenerative changes at L3-4, L4-5, and L5-S1; minor disc protrusion at L2-3, with resultant central spinal canal stenosis or neural foraminal compromise at any level; no abnormal distal thoracic cord signal or syrinx.

18. On December 17, 2015, Michael Ladwig, M.D., also with Aviation and Occupational Medicine referred Claimant to Dr. Franklin Shih for further evaluation.

19. Dr. Shih evaluated the Claimant on January 6, 2016. Claimant again reported that as he drove a box truck, a pickup truck hit the passenger side of his truck causing him to hit his head on the driver's side window. Claimant developed neck discomfort within a few hours of the accident. Dr. Shih noted that Claimant developed low back pain and extremity problems within days of the MVA. Claimant reported a "sensation of numbness into the legs predominantly along with posterior aspects" which he associated with prolonged sitting or standing.

20. Dr. Shih noted during that evaluation that Claimant exhibited no pain behaviors, but exhibited mild discomfort. Claimant demonstrated limited range of motion in his cervical spine with regard to side bending and rotation, and exhibited normal flexion and extension. Dr. Shih was unable to elicit neurologic symptoms with cervical motion and compression.

21. Dr. Shih assessed cervicalgia with multi-level multi-factorial degenerative changes with stenosis and possible increased cord signal; and low back pain with multi-factorial, multi-level mild degenerative changes. Dr. Shih did not feel that Claimant presented with significant signs or symptoms of cord involvement although the myelomalacia observed on the imaging concerned Dr. Shih. Dr. Shih referred the Claimant to a surgeon for a consultation.

22. On January 26, 2016, Michael Drewek, M.D. evaluated the Claimant for a surgical consultation. Dr. Drewek's report reflects that Claimant struck the top of his head on the roof of his truck after impact, and has since had aching and pain 8/10 in his cervical and lumbar spine.

23. Dr. Drewek noted the MRI findings and stated that the stenosis had "been present for some time," but also stated that Claimant had "no clinical findings" prior to the injury. Dr. Drewek noted that because of the loss of "CSF" (an abbreviation for cerebrospinal fluid in the central canal of the spinal cord), "the neck injury sustained was enough to cause some increased cord signal." Dr. Drewek opined that the symptoms in Claimant's arms and legs are due to the cervical cord compression and recommended anterior cervical discectomy and fusion at C3-4, C4-5, C5-6, and C6-7.

24. Dr. Shih continued to follow up on a monthly basis with Claimant after his initial evaluation of January 6, 2016. Dr. Shih testified that Claimant's condition essentially remained unchanged with no new problems reported.

25. In late January 2016/early February 2016 Claimant changed authorized treating physicians to David Orgel, M.D. Claimant's initial evaluation with Dr. Orgel occurred on February 9, 2016. Dr. Orgel's note reports his agreement with Dr. Drewek's surgical recommendation. The note also states that Dr. Orgel was concerned enough with Claimant's symptoms that he contacted Claimant's counsel to express that "surgery should not be delayed given the symptoms." Dr. Orgel subsequently issued a second report on March 4, 2016, after the surgery had been denied by Respondents. Dr. Orgel recommended that Claimant proceed with surgery through his health insurance because of the "urgent" need for surgery.

26. Subsequent to receipt of Dr. Drewek's surgical recommendation, Respondents requested that Robert Messenbaugh, M.D. perform a records review pursuant to WCRP Rule 16.

27. On February 21, 2016, Dr. Messenbaugh issued his report. He is board certified in orthopedic surgery. Dr. Messenbaugh documented the history of Claimant's mechanism of injury based on the reports Claimant gave to medical providers. It was consistent with Claimant's testimony at hearing. Dr. Messenbaugh opined that at the time of Claimant's motor vehicle accident, the Claimant likely sustained some degree of cervical spine soft tissue myofascial strain and sprain with resultant stiffness and some associated decreased ability to turn his head fully left and right.

28. Dr. Messenbaugh opined that the MRI findings are chronic. He also stated that, "Under the circumstances, it is my opinion that the surgery as recommended for [Claimant's] cervical spine is in part related to his accident . . . but that the major cause of this need for neck surgery is his severe and advance [sic] cervical spine pathology that certainly pre-dated his accident." Dr. Messenbaugh also opined that Claimant would have needed surgery regardless of the accident. Dr. Messenbaugh further opined that the Claimant's condition may well be worsened rather than improved by such extensive cervical spine surgery. Dr. Messenbaugh's opinions, while equivocal, support that recommended surgery is due, at least in part, to the work-related accident.

29. Respondents referred the Claimant to neurosurgeon Frederic Sonstein, M.D., for an independent medical examination which occurred on March 31, 2016. Dr.

Sonstein again noted a mechanism of injury consistent with that reported to Dr. Shih, Dr. Ladwig, Kaiser and Claimant's testimony at hearing. Dr. Sonstein personally reviewed the MRI scans from Health Images and noted bulges at the C3-4 and C4-5 levels, with spondylotic bars at the C5-6 and C6-7 levels, and mild cord compression at the C3-4 and C4-5 levels. He diagnosed cervical spondylosis at C5-6, C6-7 with cervical disk bulges at C3-4 and C4-5, with mild cord compression at those levels. Dr. Sonstein opined that the MRI scans did not reveal severe stenosis in the cervical spine, contrary to Dr. Drewek's opinion. Dr. Sonstein did not see the need for urgent surgical intervention based on the MRI findings or the Claimant's clinical findings.

30. Dr. Sonstein recommended an EMG study of Claimant's upper and lower extremities in light of his subjective complaints of tingling in his arms and pain down the left leg, as well as a course of epidural steroid injections and therapy for his ongoing neck pain and upper extremity symptoms.

31. Dr. Shih testified by deposition. Dr. Shih indicated that he concurs with the cervical spine surgical recommendation made by Dr. Drewek, and endorsed by Dr. Orgel. Dr. Shih opined that surgery is reasonable and necessary due to the cord compression and myelomalacia. Dr. Shih indicated given the compression noted on the MRI scans, and that the spinal cord is being impacted by that compression, Claimant requires surgery to remove that compression. Dr. Shih testified that while the injections and therapy recommended as an alternative by Dr. Sonstein may reduce Claimant's symptoms, they do nothing to address the compression.

32. Dr. Shih agreed that Claimant's findings on both MRI scans, including the cord compression issues and degenerative changes, all likely pre-dated the work injury. He recommended surgery based on the December 2, 2015 MRI report which indicated an increased cord signal. Dr. Shih further testified that the second MRI taken two weeks later did not reveal any abnormal cord signal, and based on that report surgery would not necessarily be indicated, thus he elected to defer to Dr. Drewek. Dr. Shih testified that the surgery Dr. Drewek was recommending is not emergent rather urgent because the abnormal cord signal suggested damage to the Claimant's spinal cord.

33. Dr. Shih also testified that he was unable to elicit any neurologic symptoms with cervical motion and compression, and that the only evidence of Claimant's symptoms were his subjective complaints.

34. Dr. Shih reviewed the pre-accident Kaiser records prior to his deposition. He testified that nothing in the Kaiser records would change his opinion that Claimant's work-related accident caused the need for the recommended cervical spine surgery. Dr. Shih agreed that the October 28, 2015 Kaiser record corroborates Claimant's claim that he was asymptomatic prior to the industrial accident. Dr. Shih testified that contrary to the opinion of Dr. Messenbaugh, the pre-accident state of Claimant's cervical spine would make him more susceptible to injury.

35. Claimant testified that he has a burning pain in his neck especially after typing, but that his pain has improved, as has the stiffness. His primary complaint is

numbness and tingling in his arms and legs. He is not taking any pain medication, and has no difficulty with bladder or bowel movements.

36. Claimant wishes to proceed with the surgery because he feels like his overall health has declined because he cannot engage in physical activities other than walking his dog.

37. Claimant has failed to prove entitlement to an increase in his AWW beyond the amount to which the parties stipulated, which is $789.48. The Claimant has failed to prove that he properly reported the claimed gratuities to the Internal Revenue Service, or that the amount he allegedly claimed is accurate. The Claimant admittedly did not keep any documentation of the gratuities he received, and relied on "mental notes." Further, the Claimant did not persuasive evidence that he filed the amended tax return.

38. Claimant has proven that the cervical spine surgery recommended by Dr. Drewek is reasonable, necessary and related to his work injury. The ALJ credits the opinions of Drs. Drewek, Shih and Orgel and as the most persuasive in this case. The ALJ finds that Dr. Drewek's mistaken belief that Claimant struck the top of his head rather than the side of his head does not materially alter his opinion or those of Drs. Shih or Orgel. The work-related motor vehicle accident aggravated Claimant's underlying cervical spine condition and has provided the need for medical treatment, including the surgery.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge enters the following conclusions of law:

General

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a

conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

Average Weekly Wage

4. Section 8-42-102(2), C.R.S., requires a claimant's average weekly wage to be calculated upon the monthly, weekly, hourly, daily or other remuneration the claimant was receiving at the time of the injury. Section 8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective of calculating AWW is to arrive at a fair approximation of claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 1997).

5. The Workers' Compensation Act states that the term "wages" shall include "gratuities reported to the federal internal revenue service by or for the worker for purposes of filing federal income tax returns*.* §8-40-201(19)(b). C.R.S. The purpose of this requirement is to discourage fraud by requiring reliable documentary evidence to corroborate a claimant's testimony concerning the amount of tips received. *Brimmerman v. Denny's,* W.C. No. 4-396-902 (April 5, 2000); *Dawes v. Colorado Cabana, Inc.,* W.C. No. 4-283-730 (August 1, 2997), *aff'd,* March 5, 1998).

6. As found above, the Claimant did not initially claim any tips on his 2015 IRS income tax return. He testified that he filed an amended return to add the tips, but Claimant produced no credible documentary evidence to substantiate his assertion. While the ALJ is not necessarily finding that Claimant's testimony lacks credibility, the best evidence would be the actual signed and amended tax return filed with the IRS (a document the Claimant failed to produce). In addition, the Claimant testified that he kept mental notes concerning the amount of his tips. Again, the ALJ is not persuaded given the lack of documentation to support Claimant's assertion.

7. The parties entered into a partial stipulation concerning Claimant's AWW. They agreed that without the alleged tips, the Claimant's AWW is $789.48. The ALJ finds that the credible evidence supports that the fairest approximation of Claimant's wage loss results in an AWW of $789.48.

Medical Benefits – Cervical Spine Surgery

8. Section 8-42-101(1)(a), C.R.S., provides:

Every employer … shall furnish … such medical, hospital, and surgical

> supplies, crutches, and apparatus as may reasonably be needed at the time of the injury … and thereafter during the disability to cure and relieve the employee from the effects of the injury.

Respondents are obligated to provide medical benefits to cure or relieve the effects of the industrial injury. Section 8-42-101(1), C.R.S.; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Respondents, however, retain the right to dispute liability for specific medical treatment on grounds the treatment is not authorized or reasonably necessary to cure or relieve the effects of the industrial injury. *Id.*

9. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

10. A preexisting condition does not disqualify a claimant from receiving workers' compensation benefits. Rather, where the industrial injury aggravates, accelerates, or combines with a preexisting disease or infirmity to produce the need for treatment, the treatment is a compensable consequence of the industrial injury. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App.1990). Resolution of that issue is one of fact for the ALJ. *F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985).

11. Claimant has proven that the surgery recommended by Dr. Drewek is reasonable, necessary and related to his work injury. The credible and persuasive medical evidence, including the opinions of Dr. Sonstein, demonstrates that Claimant has moderate to severe spinal stenosis, foraminal narrowing and cord compression. While the providers agree that these conditions likely pre-existed the admitted work-related MVA, the Claimant had no symptoms. Claimant pursued medical treatment for other issues with his primary care physician just a few days before the accident but did not report any neck or upper extremity symptoms. Thus, the ALJ specifically rejects any contrary evidence that the need for surgery is unrelated to the work injury.

12. The medical evidence also supports that the surgery is reasonable and medically necessary. The opinions of Drs. Drewek, Shih and Orgel are persuasive in that regard. Dr. Drewek explained that the work-related MVA aggravated Claimant’s pre-existing condition and produced the need for surgery. Dr. Shih essentially shared that opinion. Further, Dr. Sonstein did not specifically rule out surgery as unnecessary or unreasonable. Instead, he indicated the surgery was not “urgent” and that other treatment modalities should be pursued first. The ALJ acknowledges that the surgery proposed by Dr. Drewek is invasive and poses risks. Nevertheless, the Claimant wishes to pursue it, and Drs. Drewek, Shih and Orgel agree that it is reasonable and necessary.

ORDER

It is therefore ordered that:

1. Claimant's average weekly wage is $789.48.

2. The cervical spine surgery recommended by Dr. Drewek is reasonable, necessary and related to Claimant's work-related injury. The Respondents shall be liable for the surgery.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Respondents sustain their burden to overcome the DIME physician's (Jeffrey Jenks, M.D) opinion that Claimant sustained a permanent medical impairment?
- If Respondents satisfied their burden of proof and overcame Dr. Jenks' opinion, what is Claimant's medical impairment rating?

FINDINGS OF FACT

1. Claimant was employed as a banquet houseman for Employer, a position he has held for almost five (5) years. In that capacity, Claimant set up for guest events, such as meetings, weddings and conferences. His job duties included moving tables and chairs for the various events at the hotel. Claimant testified the work was physically demanding and hard.

2. Claimant had not injured his back before April 10, 2013.

3. On April 10, 2013, Claimant sustained an admitted industrial injury while moving ten (10) 72" round-top tables. He was working with his supervisor and pulling the cart which held the tables. Claimant was walking backward and was pushed into a storage unit for ice/water. Claimant testified he struck his lower back, just above his waist. In order to get out from behind the cart, Claimant stated he twisted his back and pushed against the cart.

4. An Employer's First Report of Injury was completed on April 10, 2013, which listed Claimant's trunk-lower back area as the part of body affected.

5. Claimant was evaluated on April 15, 2013 by Robert Nystrom, D.O. at Concentra, the ATP for Employer. Claimant was complaining of low back pain and stiffness, which he said had persisted since the injury. Mild diffuse discomfort was noted at the lower thoracic and lumbar spine. Dr. Nystrom's assessment was contusion and strained back. Dr. Nystrom prescribed Ibuprofen and Flexeril and issued work restrictions. Claimant also began physical therapy ("PT") on April 15, 2013.

6. On April 22, 2013, Claimant returned to Dr. Nystrom. At that time, Claimant had diffuse tenderness to palpation, as well as pain with right rotation. Dr. Nystrom's assessment was thoracic and lumbar strain. He made a referral to physiatry and noted a concern over exaggerated pain complaints. A prescription for Tramadol was also given.

7. Claimant was evaluated by Dr. Nystrom on May 13, 2013 and improvement was noted. PA-C Nicholas Curcija saw Claimant on May 20, 2013, after he was examined by Dr. Zimmerman. Claimant reported he felt pain after sitting too long or performing repetitive activities. No palpable bony or muscular tenderness was noted in Claimant's back. Claimant's PT was continued, as were his work restrictions.

8. On June 5, 2013, Claimant underwent bilateral L4-5 intraarticular steroid injections. The injections were performed by Rick Zimmerman, D.O., whose pre-and post-procedural diagnoses were lumbar spondylosis and lumbar facet pain. Dr. Zimmerman noted after the procedure Claimant had none of his pre-procedural axial spine pain and this was a diagnostic response.

9. Claimant returned to PA-C Curcija on June 24, 2013, whose assessment was contusion of back, thoracic pain, lumbar strain, thoracic strain, and back pain. PT was resumed and Claimant ‘s work restrictions were increased to lifting no greater than 25 lbs; pushing and pulling no greater than 35 lbs. PA-C Curcija evaluated Claimant at follow-up appointments on July 11 and July 25, 2013 at which time his assessment was the same and he continued Claimant’s work restrictions. On August 26, 2013, PA-C Curcija noted some improvement and increased Claimant’s lifting restrictions, but reduced the amount he could push/pull.

10. On August 1, 2013, an MRI was done of Claimant's lumbar spine. The films were read by Robert Leibold, M.D, whose impression was mild to moderate multilevel facet arthrosis. No disc herniations were identified at any level.

11. On November 13, 2013, Claimant underwent a functional capacity evaluation (FCE) which was performed by Lauren Politzer, DPT and Sarah Anderson, PTA of Select Physical Therapy. Claimant demonstrated the ability to occasionally lift up to 70 lbs. floor to waist, 50 lbs. waist to shoulder, carry up to 80 lbs, and push/pull up to 170 lbs. of force. He complained of slight back pain following frequent lifting, however, lifting was not limited by pain. Claimant demonstrated consistent performance throughout testing, which in combination with physiological responses indicated the results of the evaluation were considered to be an accurate representation of his functional abilities. The ALJ infers Claimant put forth sufficient effort for the FCE testing results to be valid and he did not appear to exaggerate symptoms during this testing.

12. Claimant returned to Dr. Nystrom on November 22, 2013. Claimant’s pain level was listed as 1-2/10, as he had diffuse discomfort in his lumbar spine. Dr. Nystrom noted the FCE was completed and he found full range of motion (“ROM”) in Claimant’s lumbar spine. There was no evidence Dr. Nystrom performed ROM testing with dual inclinometers. Dr. Nystrom concluded Claimant was at MMI, with no impairment or restrictions.

13. Respondents filed a Final Admission of Liability ("FAL") on February 4, 2014 based upon Dr. Nystrom's findings that Claimant reached MMI as of 11/ 22/13 and sustained a 0% impairment.

14. Claimant objected to the FAL and requested a DOWC Independent Medical Examination ("DIME").

15. Claimant underwent a DIME on May 14, 2014 and was evaluated by John Ogrodnick, M.D. Claimant reported throbbing and stabbing pain, 3-4/10. Claimant indicated his pain increased if he sat for more than two hours and he used a back hugger as lumbar support. Dr. Ogrodnick recorded bending increased Claimant's pain, as did carrying heavy objects. On examination, Dr. Ogrodnick found lumbar extension was painful upon bilateral rotation, very tender over L4-L5 interspace and slightly tender over SI joints bilaterally. Dr. Ogrodnick noted Claimant had thirty-one (31) PT sessions from May through November 2013.

16. Dr. Ogrodnick diagnosed Claimant with a lumbar strain, bilateral SI dysfunction and facet arthrosis. Dr. Ogrodnick concluded Claimant's pain generator was "SI joint dysfunction and this has not been specifically addressed". Dr. Ogrodnick opined that Claimant was not at MMI and gave a provisional impairment rating of 9% whole person. He recommended treatment in the form of chiropractic manipulation.

17. Respondents filed a General Admission of Liability ("GAL") on June 18, 2014.

18. Claimant received treatment following the DIME with Dr. Ogrodnick, including chiropractic treatments.

19. Claimant was evaluated by Dr. Nystrom on July 4, 2014. In a September 27, 2014 amendment, Dr. Nystrom noted he agreed with Dr. Ogrodnick's recommendations as far as the impairment rating and chiropractic treatments, provided the range of motion measurements were reproducible. He referred Claimant for chiropractic treatment, although he was not sure Claimant needed treatment for the length of time recommended.

20. Claimant treated with Don Aspegren, D.C. beginning on October 10, 2014. His pain was characterized as 6/10 aching and stabbing in his lower back region. Long trips created moderate pain. Dr. Aspegren's assessment was thoracic and lumbar sacral strain; contusion, back. Claimant received chiropractic manipulation, along with exercise in the lumbosacral region.

21. Claimant received treatment from Dr. Aspegren from October 10 through November 21, 2014. He reported discomfort from his thoracic to lumbosacral region. Dr. Aspegren noted decreased segmental motion in the thoracic to lumbosacral region. At the time of his discharge, Claimant was noted to be quite proficient in his exercises.

22. On January 9, 2015, Dr. Nystrom evaluated Claimant, who reported back pain for months, that his pain has never gone away, was constant, throbbing and shooting. Dr. Nystrom noted that Claimant had decreased range of motion, that further treatment would include another MRI and physiatry referral.

23. Claimant was examined by Dr. Nystrom on May 1, 2015, at which time he reported intermittent pain in his back. On examination, Dr. Nystrom noted diffuse tenderness to palpation of low back and SI joints. Decreased ROM was noted for the lumbar spine. Dr. Nystrom concluded Claimant was at MMI, "with a permanent impairment per Dr Ogrodnick". Claimant had no permanent work restrictions and no maintenance care was recommended. No ROM worksheets were attached to this report of Dr. Nystrom. The ALJ concludes Dr. Nystrom was of the opinion that Claimant suffered a permanent medical impairment and he deferred to Dr. Ogrodnick for the rating. In the M-164 (dated 5/6/15), Dr. Nystrom checked the box stating Claimant had a permanent medical impairment.

24. On September 7, 2015, Claimant underwent a repeat DIME, which was performed by Dr. Jenks[1], who noted some tenderness and L4-5 and L5-S1 facet regions. Claimant's lumbar flexion was normal, but increased pain was noted with lumbar extension. Dr. Jenks' impression was chronic low back pain, potential facet in origin. Dr. Jenks agreed Claimant was at MMI. He performed range of motion testing and concluded Claimant had a 5% impairment rating for a specific disorder. Taken from Table 53, he had an additional 4% impairment for loss of lumbar ROM, but no neurologic impairment. Dr. Jenks concluded Claimant sustained a 9% whole person impairment. The ALJ notes the range of motion testing done on Claimant's lumbar spine was valid, as evidenced by the impairment worksheet attached to Dr. Jenks' report. Dr. Jenks did not assign an impairment for loss of ROM for lumbar extension or lumbar left and right lateral flexion. The ALJ credited Dr. Jenks' opinion that Claimant was entitled to a specific disorder impairment.

25. Claimant was examined by Lawrence Lesnak, D.O. on September 15, 2015, at the request of Respondents. Claimant was complaining of constant low back pain, which was worse with prolonged standing or sitting. He rated his pain as 20/100 and said over the past six (6) weeks his worst pain was 50/100, but never better than 20/100. A Distress and Risk Assessment Method (DRAM) was completed. Dr. Lesnak stated the results suggested there were psychosocial factors influencing his recovery and symptoms.

26. Dr. Lesnak's impressions were: subjective complaints of constant low back pain, without any buttock or extremity symptoms whatsoever; possible lumbar contusion; no current clinical evidence of lumbar or sacral radiculitis, radiculopathy or myelopathy; no current clinical evidence of symptomatic SI joint dysfunction or

[1] Dr. Jenks performed this DIME, as Dr. Ogrodnick was not performing DIMEs at this time.

sacroiliitis; previous post injury lumbar spine x-rays performed on 4/15/13 that noted no abnormalities; post injury lumbar spine MRI performed on 8/1/13 that reported mild to moderate multilevel facet joint arthrosis without reported abnormalities; previous bilateral L4-L5 and L5-S1 joint injections performed by Dr. Zimmerman that possibly resulted in a positive diagnostic response, but not a long-term therapeutic response; MMI initially on 11/22/13, without evidence of permanent functional impairment or permanent work restrictions; 5/14/13 [sic] DIME by Dr. Ogrodnick, who opined patient had symptomatic SI joint dysfunction; six weeks of chiropractic treatment; patient at MMI on 5/1/15, with no impairment; and psychosocial evaluation, which identified probable psychosocial factors that could be influencing his symptoms and recovery.

27. Dr. Lesnak concurred with Dr. Nystrom that Claimant was at MMI with no impairment. He stated there were no clinical findings of lumbar or sacral radiculitis, radiculopathy, myelopathy, or SI joint dysfunction. Dr. Lesnak opined Claimant had no permanent impairment and no work restrictions.

28. Dr. Lesnak issued an addendum report on October 22, 2015, after he had a chance to review the DIME report prepared by Dr. Jenks. He noted Dr. Jenks assigned a 9% impairment rating, but felt this was based purely on the patient's subjective complaints. Dr. Lesnak opined Claimant had no clear objective findings to support the subjective complaints. He believed there was no medical evidence to suggest that the mild to moderate lumbar facet joint arthropathy was caused by or even potentially aggravated by the incident in which he may have sustained a mild contusion to his low back. Dr. Lesnak did not believe Claimant qualified for an impairment rating.

29. Dr. Lesnak testified on behalf of Respondents at hearing as an expert witness. He is board certified in physical medicine and rehabilitation. He is Level II accredited pursuant to the WCRP. Dr. Lesnak noted he examined Claimant on 9/15/15. Dr. Lesnak performed the Patrick's and Gaenslen's maneuvers, which confirmed Claimant did not have pain from an SI joint. Dr. Lesnak performed ROM testing and Claimant's lumbar flexion was invalid.

30. Dr. Lesnak testified the AMA *Guides* required an examining physician to have reproducible objective findings to support the patient's complaints. Dr. Lesnak disagreed the MRI finding of facet arthropathy was an objective finding, as he characterized this as an MRI finding. The ALJ finds this is a distinction without a difference. Dr. Lesnak stated pain is not ratable under the AMA *Guides*. He opined Dr. Jenks did not follow the AMA *Guides* in that he based the rating on Claimant's subjective complaints and there was no diagnosis which correlated with these complaints. Dr. Lesnak testified under the AMA *Guides* Claimant qualified for a 0% impairment. Dr. Lesnak stated the AMA *Guides* did not address how to resolve a conflict between different ROM testing results.

31. The ALJ took administrative notice of the AMA *Guides*, which governs Claimant's medical impairment, pursuant to Section 8-42-107, C.R.S. The ALJ also

notes that Chapter 1.2 is an explanatory section which directly relates to chapter 2.3, at issue here. This section provides in pertinent part:

> "…Evaluation of impairment using the *Guides* requires integration of previously gathered medical information with the results of a current clinical evaluation. To characterize the impairment fully, the evaluation should be carried out in accordance with the directions in the Guides. Accomplishing this is based on using three fundamental components.
>
> First, Chapter 2 of the *Guides* lists the kinds of information needed to document the nature of an impairment and its consequences; specifies procedures for acquiring the information; and defines a structured format for analyzing, recording, and reporting the information. A summary of this material appears at the beginning of each clinical chapter..."[2]

32. In the Introduction section for chapter 2 of the AMA *Guides*, it specifies:

> "If two physicians using the *Guides* have obtained similar results and reached similar conclusions, a framework exists within which to resolve the discrepancies. Analysis of records and reports will disclose the differences. In such an instance, the differences will be in the clinical findings, which are matters of fact, not opinion; the latter can be verified by further observation of the claimant in accordance with the procedures and methods of the *Guides*…"[3]

33. As a result of his industrial injury, Claimant had more than six (6) months pain and rigidity in his lumbar spine.

34. The ALJ found Dr. Nystrom did not express definitive opinions with respect to Claimant's ROM deficits and there was no evidence he performed testing with dual inclinometers both times he concluded Claimant had reached MMI. He also concluded Claimant was entitled to an impairment rating in May 2015 and deferred to Dr. Ogrodnick regarding the rating.

35. Both DIME physicians (Drs. Ogrodnick and Jenks) concluded Claimant was entitled to a permanent impairment pursuant to Table 53 of the AMA *Guides*.

36. The ALJ was not persuaded by Dr. Lesnak's opinions that Claimant's only diagnosis was pain and that he was not entitled to a specific disorder impairment under pursuant to the AMA *Guides*.

[2] The second and third components refer to medical evaluation protocols and reference tables specifically keyed to the evaluation protocols.

[3] *Id.*

37. The ALJ found the opinions of Drs. Nystrom, Ogrodnick and Jenks to be more persuasive than those offered by Dr. Lesnak. At most, Dr. Lesnak's conclusions constituted a difference of opinion on whether Claimant was entitled to a medical impairment for his lumbar spine.

38. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), §8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. Section 8-43-201(1), C.R.S. Generally, the Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). In this case, the credibility of various health care providers was one of the primary issues on the question of Claimant's impairment rating.

Overcoming the DIME On the Issue of Impairment

Respondents have the burden of overcoming Dr. Jenks opinion and argued he erred in his determination that Claimant sustained a permanent medical impairment. In this regard, Respondents asserted Dr. Jenks' findings were not supported by the record, and relied on the opinion of Dr. Lesnak, who stated Claimant was rated for pain which was not ratable under the AMA *Guides.* Respondents asserted the results of Claimant's range of motion testing were unreliable.

Claimant contended Respondents failed to introduce sufficient evidence to meet their burden of proof and argued Dr. Jenks' determination of medical impairment was correct. Claimant relied upon the diagnoses made by the ATPs, as well as both DIME physicians as support for the contention Claimant was entitled to an impairment rating.

A DIME physician's finding that Claimant had a permanent medical impairment is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Clear and convincing evidence means "evidence which is stronger than a mere 'preponderance'; it is evidence that his highly probable and free from serious and substantial doubt." *Metro Moving & Storage Co v. Gussert, supra*, 914 P.2d at 414 (citing CJI-Civ. 3d 3:2 (1988); *DiLeo v. Kotlnow*, 200 Colo. 119, 613 P.2d 318 (1980). A party meets this burden only by demonstrating that the evidence contradicting the DIME's MMI is "unmistakable and free from serious or substantial doubt." *Leming v. Indus. Claim Appeals Office*, 62 P.3d 1015, 1019 (Colo. App. 2002) [citing *DiLeo v. Koltnow, supra*].

The enhanced burden of proof imposed by § 8-42-108(b)(III), C.R.S., reflects an underlying assumption that the DIME, having been selected by an independent and unbiased tribunal, will provide a reliable medical opinion. *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590, 592 (Colo. App. 1998). Since the DIME physician is required to identify and evaluate all losses resulting from the industrial injury, as part of the DIME's assessment process, the DIME physician's opinion regarding causation of those losses is also subject to the same enhanced burden of proof. *Id.* Furthermore, the DIME physician's opinions on these issues are binding unless overcome by clear and convincing evidence. *See Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

In this case, the controversy centers on Dr. Jenks' impairment rating and whether he erroneously found Claimant sustained a permanent medical impairment to the lumbar spine. The ALJ's analysis had two parts, beginning with a determination of whether there was objective evidence in the record which supported Dr. Jenks' finding of a Table 53 impairment. Next, the ALJ considered whether it was appropriate under the AMA *Guides* to assign an impairment to the lumbar spine.

Turning to the first consideration, the ALJ found there was objective evidence, including diagnoses made by the ATPs and DIME physicians, which supported the rating. Claimant had a diagnosis of lumbar strain, as found by Dr. Nystrom (an ATP). This diagnosis was reflected in the Concentra records, both when Dr. Nystrom examined Claimant, as well as PA-C Curcija. (Findings of Fact 5-7). Moreover, Dr. Zimmerman's records reflected a diagnosis for Claimant's symptoms for which he provided treatment. (Finding of Fact 8). The diagnoses articulated by Dr. Nystrom and Zimmerman, as well as PA-C Curcija were direct evidence that Claimant's injury was one that warranted an impairment rating. In fact, by 5/1/15 Dr. Nystrom opined Claimant had a permanent impairment. This was a change from his prior opinion that Claimant had no permanent impairment.

There was also objective evidence of injury, which pointed to what was causing Claimant's continued pain complaints. As found, the MRI documented mild to moderate facet arthropathy. (Finding of Fact 8).

Additional support for the conclusion Claimant had a permanent medical impairment was found in the in the opinion of Dr. Ogrodnick, who performed the first DIME. As found, Dr. Ogrodnick also made a specific diagnosis of Claimant's condition, concluded Claimant was not at MMI and required additional treatment. (Findings of Fact 15-16). More importantly, Dr. Ogrodnick opined Claimant was entitled to a specific disorder impairment and he provided a provisional rating when he examined Claimant.

As determined in Finding of Fact 24, Dr. Jenks concluded Claimant suffered an injury for which there was a diagnosis. Dr Jenks referred to the MRI findings and concluded there was objective evidence to support his diagnosis (impression) of chronic low back pain, potential facet in origin. There were sufficient facts in the record to support Dr. Jenks' opinion that Claimant's pain could be facet in origin, which was also supported by the MRI. The ALJ relied upon this support for Dr. Jenks' opinion. Although Dr. Lesnak tried to distinguish this as an MRI finding as opposed to an objective finding, the ALJ was not persuaded. (Finding of Fact 29).

Second, the ALJ considered Respondents' contention that Dr. Jenks' rating was not done pursuant to the AMA *Guides* as stated by Dr. Lesnak*.* More particularly, Dr. Lesnak testified there were invalid ROM measurements for lumbar flexion and noted Dr. Ogrodnick obtained a similar result for lumbar flexion. Dr. Lesnak also testified the computerized assessment performed showed Claimant had various psychosocial factors, which could cause exaggeration of symptoms. Dr. Lesnak opined there were minimal physical findings to support a rating, which should not have been given pursuant to the AMA *Guides.* Dr. Lesnak did not believe Dr. Jenks' rating complied with the Level II accreditation training physicians receive*.*

In *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202, 204 (Colo. App. 2000), the Colorado Court of Appeals noted that under the AMA Guides the "evaluation or rating of impairment is an assessment of data collected during a clinical evaluation and the comparison of those data to the criteria contained in the Guides." Consistent with this concept, the Industrial Claim Appeals Office has upheld a DIME physician's impairment rating that excluded "valid" range of motion deficits from an impairment rating based on the determination that the range of motion deficits did not correlate with clinical observations and data. *Adams v. Manpower,* W.C. No. 4-389-466 (I.C.A.O. August 2, 2005); *Garcia v. Merry Maids,* W.C. No. 4-493-324 (I.C.A.O. August 12, 2002). Ultimately, the questions of whether the DIME physician properly applied the AMA *Guide* and whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office, supra*.

In this case, the ALJ found Dr. Jenks utilized the clinical data from Claimant's treatment records and correlated that with his findings on examination. The ALJ concluded that simply because there were different ROM findings for Claimant's lumbar flexion, this was insufficient to overcome Dr. Jenks' opinion, particularly where his ROM measurements were valid and conformed with the AMA *Guides*. Stated, another way Dr. Lesnak's conclusions did not persuade the ALJ that Dr. Jenks' calculation of the rating was erroneous.

In this case, the ALJ credited Dr. Jenks'opinion with regard to Claimant's entitlement to a Table 53 impairment. Also, although Dr. Lesnak found Claimant lumbar flexion ROM measurements were not valid when he performed an examination, the ALJ was not persuaded that because one aspect of the rating was previously invalid, this invalidated the entire rating.

Based upon the evidence, the ALJ found Claimant qualified for an impairment rating under the AMA *Guides.* Claimant had six months of pain and rigidity; that conclusion that was not overcome by Dr. Lesnak's expert opinion. The ALJ was not persuaded that the presence of some psychosocial factors was a basis to disregard Dr. Jenks' impairment rating

Finally, Dr. Zimmerman described Claimant's response to the injections as diagnostic. Dr. Jenks stated the facet joints were a potential pain generator. Although Dr. Lesnak disagreed, this difference of the opinion did not rise to the level of clear and convincing evidence to overcome Dr. Jenks' opinion.

ORDER

It is therefore ordered that:

1. Claimant sustained a permanent medical impairment to his lumbar spine as a result of his industrial injury and he is entitled to benefits for this impairment.

2. Respondents shall pay Claimant permanent partial disability benefits based upon Dr. Jenks' 9% whole person rating.

3. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

Whether Respondents have established by a preponderance that they are entitled to withdraw their July 13, 2013 Final Admission of Liability (FAL) acknowledging reasonable, necessary and related medical maintenance benefits designed to relieve the effects of Claimant's April 29, 2010 industrial injury or prevent further deterioration of her condition pursuant to *Grover v. Industrial Comm'n.,* 759 P.2d 705 (Colo. 1988).

FINDINGS OF FACT

1. Employer is a large retail store. Claimant worked for Employer as a Department Manager. On April 29, 2010 Claimant suffered an admitted industrial injury to her cervical spine during the course and scope of her employment with Employer.

2. Claimant received medical treatment from Authorized Treating Physician (ATP) Gregory Reichhardt, M.D. Dr. Reichhardt determined that Claimant had suffered disc protrusions at C4-C5 and C5-C6. He suggested a consultation with a spine surgeon. Dr. Reichhardt also expressed concerns regarding Claimant's psychiatric status and recommended a pain psychology evaluation.

3. On August 23, 2010 Claimant underwent a psychiatric evaluation with Ron Carbaugh, PsyD. Dr. Carbaugh observed signs and symptoms consistent with a pain disorder associated with psychological factors, a general medical condition and depressive disorder. He recommended pain and adjustment counseling.

4. On September 15, 2010 Claimant consulted with Douglas Beard, M.D. about surgical options. On December 6, 2010 Claimant underwent an anterior cervical discectomy and fusion at C4-C5 and C5-C6.

5. Claimant's psychological condition continued to deteriorate after surgery. She thus underwent an independent medical examination with J. Tashof Bernton, M.D. on June 30, 2011. He concluded that Claimant's surgical recovery had been "complicated by very significant psychological issues and strong indications of somatoform disorder on psychological testing."

6. On June 25, 2012 Claimant reached Maximum Medical Improvement (MMI). Dr. Reichardt assigned Claimant a 10% whole person impairment for a specific disorder of the cervical spine, a 9% whole person impairment for range of motion deficits and a 3% psychiatric impairment. Combining the ratings yielded a 21% whole person impairment as a result of Claimant's April 29, 2010 industrial injury. Dr. Reichardt also determined that Claimant was entitled to receive medical maintenance benefits in the form of "monthly follow up visits with a physician, coverage of

medications and any necessary laboratory tests to monitor for side-effects of medications on an as-needed basis over each of the next three years."

7. On November 30, 2012 Claimant underwent a Division Independent Medical Examination (DIME) with John S. Hughes, M.D. After reviewing Claimant's medical history and performing a physical examination he agreed that Claimant had reached MMI on June 25, 2012 with a 21% whole person impairment rating. Dr. Hughes recommended medical maintenance treatment in the form of follow-up visits with Dr. Reichhardt and Gary Gutterman, M.D.

8. On July 13, 2013 Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Hughes' MMI and impairment determinations. The FAL also specified that Claimant was entitled to receive reasonable, necessary and related medical maintenance benefits

9. On April 17, 2014 the parties executed a Settlement Agreement. The parties settled the matter relating to all injuries Claimant sustained as a result of the April 29, 2010 work incident. However, the parties agreed that Respondents remained liable "for related, reasonable and necessary benefits by an authorized treating physician."

10. On April 21, 2014 Claimant suffered a stroke. She was hospitalized from April 21, 2014 until April 30, 2014. Claimant was then transferred to a rehabilitation facility for approximately two months. She exhibited persistent symptoms including speech and cognitive deficits.

11. On August 13, 2015 Claimant underwent an independent medical examination with Dr. Bernton. He reviewed Claimant's medical records and perfomed a physical examination. Dr. Bernton explained that Claimant continued to suffer symptoms as a result of her April 21, 2014 stroke that included cognitive deficits, balance problems and coordination difficulties. He noted that, although Claimant had discontinued the medications related to her April 29, 2010 industrial injury, her cervical spine symptoms had improved. Dr. Bernton also commented that Claimant exhibited a diminished somatoform disorder after her April 21, 2014 neurologic event. Although Claimant mentioned diffuse body pain, her levels had decreased. Dr. Bernton thus concluded that Claimant no longer required medical maintenance medications for her April 29, 2010 industrial injury.

12. After reviewing additional medical records Dr. Bernton prepared another report on January 19, 2016. Dr. Bernton recounted the circumstances and treatment surrounding Claimant's April 21, 2014 stroke. He noted that Claimant's condition improved after undergoing a thrombectomy but she still suffered decreased mobility and other deficits. Claimant was ultimately discharged from the hospital to a long-term care facility for continued respiratory and ventilator management. Dr. Bernton explained that the additional medical records he reviewed were consistent with the history he had reviewed at the August 13, 2015 independent medical examination. He remarked that Claimant demonstrated tremendous improvement considering "the serious nature of the

embolic event that she sustained." Nevertheless, Claimant still suffered persistent deficits. Dr. Bernton explained that Claimant had ceased medications for her work-related cervical spine injury as discussed in his August 13, 2015 independent medical examination. He summarized that Claimant did not require further work-related maintenance care or have specific restrictions for her work-related condition because her stroke limitations "clearly" exceeded her work-related impairment.

13. On June 7. 2016 the parties conducted the post-hearing evidentiary deposition of Dr. Bernton. Dr. Bernton maintained that Claimant did not require medical maintenance treatment in the form of medications to relieve the effects of her April 29, 2010 industrial injury or prevent further deterioration of her condition. He recounted that, after Claimant's April 21, 2014 stroke, she no longer required medications for her industrial injury. He commented that Claimant had suffered somatoform complaints but they resolved subsequent to her stroke. Dr. Bernton remarked that unusual behavioral effects can follow strokes and Claimant's stroke had a positive effect because she "was very clear and very emphatic that she didn't feel she needed those medications." Moreover, despite the lack of medications her work-related pain levels decreased. Dr. Bernton summarized that Claimant "was in a better position" regarding her occupational problems subsequent to her stroke and no longer requires medications for her industrial injury. He explained that Claimant has reported lower pain levels since she ceased her medications and does not require medications to maintain her industrial condition. Dr. Bernton concluded that Claimant's work-related condition is stable and it is not medically probable that she will require future medical maintenance treatment.

14. Respondents have established that it is more probably true than not that they are entitled to withdraw their July 13, 2013 FAL acknowledging reasonable, necessary and related medical maintenance benefits designed to relieve the effects of her April 29, 2010 industrial injury or prevent further deterioration of her condition pursuant to *Grover v. Industrial Comm'n.,* 759 P.2d 705 (Colo. 1988). On April 29, 2010 Claimant suffered an admitted cervical spine injury and subsequently underwent surgery for the condition. During Claimant's medical treatment she exhibited symptoms consistent with a pain disorder associated with psychological factors. On June 25, 2012 Claimant reached MMI. DIME Dr. Hughes assigned her a 21% whole person impairment rating. He recommended medical maintenance treatment in the form of follow-up visits with Dr. Reichhardt and Gary Gutterman, M.D.

15. On April 21, 2014 Claimant suffered a stroke. She was hospitalized from April 21, 2014 until April 30, 2014. Claimant was then transferred to a rehabilitation facility for approximately two months. She exhibited persistent speech and cognitive deficits. At an August 13, 2015 independent medical examination Dr. Bernton explained that Claimant continued to suffer symptoms as a result of her April 21, 2014 stroke that included cognitive deficits, balance problems and coordination difficulties. He noted that, although Claimant had discontinued the medications related to her April 29, 2010 industrial injury, her cervical spine symptoms had improved. Dr. Bernton also commented that Claimant exhibited a diminished somatoform disorder after her April 21, 2014 neurologic event. Although Claimant mentioned diffuse body pain, her levels had

decreased. Dr. Bernton thus concluded that medical maintenance medications were no longer required. After reviewing additional medical records Dr. Bernton prepared a report on January 19, 2016. He remarked that Claimant demonstrated tremendous improvement considering “the serious nature of the embolic event that she sustained.” Nevertheless, Claimant still had persistent deficits. Dr. Bernton explained that Claimant had ceased medications for her work-related cervical spine injury as discussed in his August 13, 2015 independent medical examination. He summarized that Claimant did not require further work-related maintenance care or have specific restrictions for her work-related condition because her stroke limitations “clearly” exceeded her work-related impairment. Finally, at his post-hearing evidentiary deposition Dr. Bernton maintained that Claimant did not require additional medical maintenance treatment for her April 29, 2010 industrial injury. Dr. Bernton explained that Claimant did not require medical maintenance treatment in the form of medications to relieve the effects of her April 29, 2010 industrial injury or prevent further deterioration of her condition. He recounted that, after Claimant’s April 21, 2014 stroke, she no longer required medications for her industrial injury. He commented that Claimant had suffered somatoform complaints but they resolved subsequent to her stroke. Dr. Bernton remarked that unusual behavioral effects can follow strokes and Claimant’s stroke had a positive effect because she “was very clear and very emphatic that she didn’t feel she needed those medications.” Moreover, despite the lack of medications her work-related pain levels decreased. Dr. Bernton summarized that Claimant “was in a better position” regarding her occupational problems subsequent to her stroke and no longer requires medications for her industrial injury. Accordingly, Respondents are permitted to withdraw their FAL acknowledging reasonable, necessary and related medical maintenance benefits.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge’s factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. To prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App. 1995). Once a claimant establishes the probable need for future medical treatment he "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna v. Print Expediters, Inc.*, 77 P.3d 863, 866 (Colo. App. 2003); *see Karathanasis v. Chilis Grill & Bar,* W.C. No. 4-461-989 (ICAP, Aug. 8, 2003). Whether a claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the Judge. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 919 P.2d 701, 704 (Colo. App. 1999).

5. The court of appeals has previously concluded that the burden of proof to establish compensability remained on the claimant even when an employer was attempting to withdraw an admission of liability. However, the Colorado Workers' Compensation Act has since been amended to change the burden of proof when respondents are attempting to withdraw admissions of liability. Specifically, respondents must now prove by a preponderance of evidence that the claimant did not suffer a compensable injury as defined under Colorado law. §8-43-201(1) (2015), C.R.S. On July 13, 2013 Respondents filed a FAL consistent with Dr. Hughes' MMI and impairment determinations. Respondents also specified that Claimant was entitled to receive reasonable, necessary and related medical maintenance benefits In order to withdraw the FAL Respondents thus have the burden of proving by a preponderance of the evidence that Claimant is not entitled to receive reasonable, necessary and related medical maintenance benefits designed to relieve the effects of her April 29, 2010 industrial injury or prevent further deterioration of her condition pursuant to *Grover v. Industrial Comm'n.,* 759 P.2d 705 (Colo. 1988).

6. As found, Respondents have established by a preponderance of the evidence that they are entitled to withdraw their July 13, 2013 FAL acknowledging reasonable, necessary and related medical maintenance benefits designed to relieve the effects of her April 29, 2010 industrial injury or prevent further deterioration of her condition pursuant to *Grover v. Industrial Comm'n.,* 759 P.2d 705 (Colo. 1988). On April 29, 2010 Claimant suffered an admitted cervical spine injury and subsequently underwent surgery for the condition. During Claimant's medical treatment she exhibited symptoms consistent with a pain disorder associated with psychological factors. On June 25, 2012 Claimant reached MMI. DIME Dr. Hughes assigned her a 21% whole

person impairment rating. He recommended medical maintenance treatment in the form of follow-up visits with Dr. Reichhardt and Gary Gutterman, M.D.

7. As found, on April 21, 2014 Claimant suffered a stroke. She was hospitalized from April 21, 2014 until April 30, 2014. Claimant was then transferred to a rehabilitation facility for approximately two months. She exhibited persistent speech and cognitive deficits. At an August 13, 2015 independent medical examination Dr. Bernton explained that Claimant continued to suffer symptoms as a result of her April 21, 2014 stroke that included cognitive deficits, balance problems and coordination difficulties. He noted that, although Claimant had discontinued the medications related to her April 29, 2010 industrial injury, her cervical spine symptoms had improved. Dr. Bernton also commented that Claimant exhibited a diminished somatoform disorder after her April 21, 2014 neurologic event. Although Claimant mentioned diffuse body pain, her levels had decreased. Dr. Bernton thus concluded that medical maintenance medications were no longer required. After reviewing additional medical records Dr. Bernton prepared a report on January 19, 2016. He remarked that Claimant demonstrated tremendous improvement considering "the serious nature of the embolic event that she sustained." Nevertheless, Claimant still had persistent deficits. Dr. Bernton explained that Claimant had ceased medications for her work-related cervical spine injury as discussed in his August 13, 2015 independent medical examination. He summarized that Claimant did not require further work-related maintenance care or have specific restrictions for her work-related condition because her stroke limitations "clearly" exceeded her work-related impairment. Finally, at his post-hearing evidentiary deposition Dr. Bernton maintained that Claimant did not require additional medical maintenance treatment for her April 29, 2010 industrial injury. Dr. Bernton explained that Claimant did not require medical maintenance treatment in the form of medications to relieve the effects of her April 29, 2010 industrial injury or prevent further deterioration of her condition. He recounted that, after Claimant's April 21, 2014 stroke, she no longer required medications for her industrial injury. He commented that Claimant had suffered somatoform complaints but they resolved subsequent to her stroke. Dr. Bernton remarked that unusual behavioral effects can follow strokes and Claimant's stroke had a positive effect because she "was very clear and very emphatic that she didn't feel she needed those medications." Moreover, despite the lack of medications her work-related pain levels decreased. Dr. Bernton summarized that Claimant "was in a better position" regarding her occupational problems subsequent to her stroke and no longer requires medications for her industrial injury. Accordingly, Respondents are permitted to withdraw their FAL acknowledging reasonable, necessary and related medical maintenance benefits.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents are permitted to withdraw their FAL acknowledging reasonable, necessary and related medical maintenance benefits.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: June 30, 2016.

Denver, CO 80203

ISSUE

The sole issue to be determined by this decision concerns the causal relatedness of post maximum medical improvement (MMI) or *Grover* medical benefits.

Although the Respondents raised the issue, the Claimant has the burden of proof, by preponderant evidence to establish entitlement to *Grover* medical benefits.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant (d.o.b. March 12, 1959) sustained an admitted injury to his low back on April 14, 2009.

2. The Respondents filed a Final Admission of Liability (FAL), dated October 18, 2010, admitting for an MMI date of April 1, 2010; temporary disability benefits through April 1, 2010; permanent partial disability (PPD) benefits, based on 23% whole person; an average weekly wage (AWW) of $3,057.72; and, reasonably necessary and causally related post-MMI medical maintenance benefits.

3. The Respondents have raised the issue of causal relatedness of present post-MMI medical maintenance benefits.

Medical Chronology

4. The Claimant began treating with John Nordin, M.D., at Exempla Northwest on April 16, 2009. Dr. Nordin diagnosed a low back strain. Dr. Nordin referred the Claimant to Nicholas K. Olsen, D.O., who became the Claimant's authorized treating physician (ATP). Dr. Olsen saw the Claimant on June 8, 2009 and diagnosed: (1) lumbar strain; and, (2) left L5-S1 disc protrusion. As of July 14, 2009, Dr. Olsen added to his diagnosis: 91) status post lumbar sprain/strain, lifting injury at work 4/14/09; and, (2) disc protrusion at L5-S1 with bilateral lower extremity radiculopathy, stable.

5. As of September 28, 2009, Dr. Olsen indicated that the Claimant "notes a 10% aggravation since he was placed at MMI." Dr. Olsen recommended a bilateral S1 transforaminal epidural steroid inject to address the current symptoms.

6. On December 15, 2009, the Claimant underwent back surgery at the hands of Michael Shen, M.D. The procedure consisted of; (1) bilateral L4-5 microdecompression; AND, (2) left L5-S1 microdikectomy. On January 25, 2010, Dr. Olsen assessed "status post laminectomy/discectomy at L5-S1." On April 1, 2010, Dr. Olsen noted that the Claimant had undergone several epidural steroid injections at the left L5-S1. Dr. Olsen noted that the Claimant had reached MMI, and he gave the Claimant permanent restrictions. As of December 23, 2013, Dr. Olsen added to his assessment: probable facet syndrome at bilateral L5-S1, right greater than left; and, "chronic opioid use." On January 23, 2014, Dr. Olsen noted that the Clamant was requesting a refill of his hydrocodone prescription. As of March 12, 2015, the Claimant was indicating a 50% worsening of his symptoms.

7. ATP Dr. Olsen continues to provide the Claimant with post-MMI medical maintenance treatment,

Independent Medical Examination (IME) by Frederick P. Scherr, M.D.

8. On September 2, 2015, Dr. Scherr performed an IME of the Claimant at the behest of the Respondents. Ultimately, Dr. Scherr was of the opinion that the chronic low back pain was probably related to the admitted work injury, but the probable facet syndrome first noted in Dr. Olsen's December 23, 2013 report was not causally related to the admitted work injury. The ALJ infers and finds that Dr. Scherr bases his opinion that the facet syndrome is not causally related entirely upon the temporal gap between the admitted injury and the first mention of the facet syndrome in 2013.

9. Dr. Scherr notes: "While the injury of April 2009 and subsequent surgery of the l4-5 microdecompression, which may have weakened the annulus, has certainly contributed to his natural degeneration process, given [Claimant's] prior degenerative lumbar spine…it is unlikely the original injury and surgery a significant aggravation or material accelerant cause this far removed (temporal)….." Dr. Scherr concedes that the admitted injury and surgery aggravated and accelerated the Claimant's degenerative condition, however, he is of the opinion that the admitted injury was not a **significant** aggravation or acceleration of the Claimant's degenerative condition. The ALJ notes that this minimization of the work-relatedness of the Claimant's back condition is at odds with the Respondents' 23% whole person admission.

10. Dr. Scherr testified at hearing and he re-confirmed the opinions in his Report, conceding that Dr. Olsen's treatment was reasonably necessary to maintain the Claimant at MMI (he would defer any recommendation of additional surgery to a spine surgeon), but it was not causally related to the admitted injury.

Dr. Olsen's Rebuttal of Dr. Scherr's Opinions

11. In a report of November 23, 2015 (Claimant's Exhibit 1, admitted into evidence without objection), ATP Dr. Olsen states:

> There is no indication that [Claimant] was receiving the kind of treatment he has required following his injury of 4/14/09. It remains my opinion that [Claimant's current complaints of both discogenic pain and facetogenic pain are related to his prior injury as he underwent prior discectomies at both L4-5 and L5-S1 as part of his work-related injury.

12. The causality opinions of IME Dr. Scherr and ATP Dr. Olsen are diametrically opposed. Dr. Olsen has dealt with the Claimant's medical case as an ATP over a long period of time. Dr. Scherr saw the Claimant once as an IME physician. As found herein above, a central pillar underlying Dr. Scherr's causality opinion concerns the temporal relationship between the admitted injury and the manifestation of some of the Claimant's pain complaints. Dr. Olsen, on the other hand, has been consistently dealing with the Claimant since 2009 through November 2015, and he places no importance on the temporal relationships.

Ultimate Findings

13. For the reasons stated herein above, the ALJ finds the causality opinions of ATP Dr. Olsen more credible and persuasive than the causality opinions of IME Dr. Scherr. Dr. Scherr's minimization of the effects of the admitted work injury is at odds with the Respondents' admission for 23% whole person PPD. The Claimant's testimony was credible, persuasive and, essentially, undisputed.

14. The ALJ makes a rational choice, based on substantial evidence, to accept the causality opinions of ATP Dr. Olsen, and to reject the causality opinions of IME Dr. Scherr.

15. The Claimant has proven, by a preponderance of the evidence that his current post-MMI medical maintenance treatment by Dr. Olsen is reasonably necessary to maintain the Claimant at MMI and it is causally related to the admitted injury of April 14, 2009 as the product of an aggravation and acceleration of the Claimant's underlying degenerative condition.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As found, the causality opinions of ATP Dr. Olsen were more credible and persuasive than the causality opinions of IME Dr. Scherr. Dr. Scherr's minimization of the effects of the admitted work injury was at odds with the Respondents' admission for 23% whole person PPD. The Claimant's testimony was credible, persuasive and, essentially, undisputed.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, the ALJ made a rational choice, based on substantial evidence, to accept the causality opinions of ATP Dr. Olsen, and to reject the causality opinions of IME Dr. Scherr.

Aggravation and Acceleration of Underlying Condition

c. An injured worker has a compensable new injury **if the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought.** § 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). An injury resulting from the concurrence of a pre-existing condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, *supra*. *Duncan v. Indus. Claims App. Office*, 107 P.3d 999 (Colo. App. 2004). Even where the direct cause of an accident is the employee's pre-existing disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989). *Also see* § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). As found, the Claimant's need for post-MMI maintenance treatment up to this point resulted from an aggravation and acceleration of the Claimant's underlying pre-existing back condition.

Causal Relatedness of Post-MMI Medical Maintenance Treatment

d. An industrial accident is the proximate cause of a claimant's disability if it is the necessary precondition or trigger of the need for medical treatment. *Subsequent Injury Fund v. State Compensation Insurance Authority,* 768 P.2d 751 (Colo. App. 1988). In order to prove that an industrial injury was the proximate cause of the need for medical treatment, an injured worker must prove a causal nexus between the need for treatment and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). It is for the ALJ, as the fact-finder, to determine whether a need for medical treatment is caused by the industrial injury, or some other intervening injury. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985). Respondents are liable for the "direct and natural consequences" of a work-related injury, including consequential injuries caused by the original compensable injury. *See Travelers Ins. Co. v. Savio*, 806 P.2d 1258 (Colo. 1985). An employee is entitled to continuing medical benefits after MMI if reasonably necessary to relieve the employee from the effects of an industrial injury. *See Grover v. Indus. Comm'n of Colorado*, 759 P.2d 705 (Colo. 1988). The record must contain substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve a claimant from the effects of an injury or to prevent further deterioration of his condition. *Stollmeyer v. Indus. Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995); *Grover v. Indus. Comm'n, supra*. An injured worker is ordinarily entitled to a general award of future medical benefits, subject to an employer's right to contest causal relatedness and reasonable necessity. *See Hanna v. Print Expediters,* 77 P.3d 863 (Colo. App. 2003). As found, Dr. Olsen's post-MMI treatment and recommended treatment is causally related to the admitted injury and reasonably necessary to maintain the Claimant at MMI.

Burden of Proof

e. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found. The post-MMI treatment being provided and recommended by Dr. Olsen has been proven to be causally related and reasonably necessary.

ORDER

IT IS, THEREFORE, ORDERED THAT:

The Respondents shall pay the costs of all **causally relqated and reasonably necessary** post maximum medical improvement medical maintenance treatment being provided by Nicholas K. Olsen, D.O., subject to the Division of Workers' Compensation medical Fee Schedule.

DATED this______day of July 2016.

EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm.*

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-962-995-01

ISSUES

Whether Respondents proved by a preponderance of the evidence that they were entitled to a 50% offset for Claimant's willful violation of a safety rule pursuant to section 8-42-112(1)(b), C.R.S.

STIPULATIONS

The parties stipulated to an Average Weekly Wage (AWW) of $657.14.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

Introduction

1. Employer hired Claimant in approximately 2002 or 2005 as a laborer. Claimant initially worked in Employer's concrete division but later worked in its waterproofing division. Employer's business involves repairing and protecting commercial structures from water damage.

Accident

2. On September 26, 2014, Claimant was working for Employer in the waterproofing division on a job that involved repairing damaged concrete on an elevated parking structure at the Park Meadows Mall (the job). At that time, Claimant was working as a "lead laborer," and was responsible for the project when the foreman was not on site.

3. Claimant testified that on September 26, 2014, he was working as a laborer and his duties included getting materials, tearing out caulking, chipping and patching concrete, and doing what the foreman asked.

4. The job scope was determined by structural engineers who understood loads and repair methods. The engineers drew up the repair scope and Employer's workers were to execute those work items. The engineering firm remained responsible for identifying the scope of work throughout the course of the job and was responsible for any change in scope.

5. The initial scope for the job involved only the top surface of the parking area. Employers' workers were to remove the approximately six spalls – "amoeba" shaped areas of water and rust damaged concrete. The spalls occurred every several feet along a line where two pieces of concrete were joined by imbedded

rebar. The spalls measured approximately 6 - 12 inches by approximately 12 – 36 inches. The original scope required the workers to use a diamond blade saw to cut out squared-up partial-depth areas surrounding each spall. After work began, it became apparent that some of the spalls went through not just the top surface, but the full thickness of the concrete.

6. On September 25, 2014, the day before Claimant's accident, an engineer came to the site to reevaluate the job scope. The engineer who inspected the site modified the scope to provide that the approximately six spalls were to be individually cut out by making full depth cuts around each spall. The new scope was communicated by the engineer to Employer's foreman, Jeremy Martin. Mr. Martin testified that he did not recall ever discussing cutting out all of the spalls together in one piece either with the engineer or with Claimant. There would not have been reason to because such a scope was not within code and was not within the scope of Employer's contract. Rather, Claimant and a coworker were to drill the pilot holes to mark the perimeter of each small hole that was to be individually cut. Mr. Martin testified that Claimant and his coworker, Jamal Hicks, drilled the pilot holes while the engineer was on site.

7. The best evidence of the original and modified scope of work would be the original and modified engineered plans. However, Respondents did not introduce the engineered plans, and the plans therefore were not admitted as evidence.

8. Mr. Martin testified that he told Claimant what the scope of work was, and that he and Claimant walked to job with the engineer on September 25, 2014. After walking the job, the engineer returned to his office, revised the scope, and sent the revised plans to Mike Padilla, the project manager. Mr. Padilla then sent them to Mr. Saltzman, who brought them out to the jobsite where they remained. Mr. Martin testified that Claimant had the revised plans on the afternoon of September 25, and he and Claimant discussed the plans in detail. He believed Claimant understood the revised scope of work.

9. Claimant acknowledged participating in part of the job walk with Mr. Martin and the engineer. Claimant did not complete the walk, but went back to the top surface and finished some other work.

10. Claimant testified that after the job walk, Mr. Martin told him to drill the pilot holes from underneath the top surface and chalk line around the spalls to identify on the top surface what concrete had been identified as bad from underneath. The chalk lines showed "how much really needed to be taken out full depth." Claimant testified that he was told "to be safe and get the job done."

11. The size and shape of each spall was more visible from the underside of the parking surface. At Mr. Martin's direction, Claimant and Mr. Hicks marked the corners around the perimeter of each spall by drilling pilot holes from the underneath surface up through the top surface, the holes were then marked on

the top surface in spray paint and an outline of the shape to be cut was chalk-lined to form a square or rectangle on the top service. Claimant and Jamal were in the man-basket of a scissor lift to be able to reach the 20’ height of the undersurface. There was no shoring up of the top surface, and Claimant would have been aware of that because he worked on the lower level when he was drilling the pilot holes. Also, the scissor lift would not have fit if shoring were present.

12. Once the squares were marked, the plan called for a worker on the top surface to use a concrete saw with a 14” blade to cut out the individual spalls, creating one or two square-foot, individual holes.

13. Claimant testified that he or one of his coworkers chalk-lined *not* around individual spalls, but rather that they made “a [singular] square or rectangle” of the area he thought needed to be removed. For example, he testified that on the day of his injury, that he had "it [singular] chalked out.” And that he started saw-cutting the line he and his coworkers chalked out. Claimant ultimately testified that as engineered, he was to cut out a series of small rectangles underneath, and then from the top, to cut out the entire area to encompass the perimeter of the area where all the underneath cuts had been made. Claimant testified that Mr. Martin had told him to do it that way.

14. Early on September 26, 2014, Claimant called Mr. Martin because the laborers he was supervising that day, Jamal Hicks and Aaron, were not listening to him and not respecting his authority as lead laborer. The ALJ infers from the timing and context of the call that Jamal and Aaron disagreed with Claimant’s perspective of their scope of work.

15. On September 26, 2014, after the pilot holes had been marked and the individual spalls chalk lined, Claimant did not cut out the individual spalls. Rather, he began to make full depth cuts around the general area that encompassed all of the spalls. That area measured approximately 4’ by 20’, roughly 80 square feet. Claimant cut through both of the 20’ sides and one 4’ side of the area with a saw, but was unable to use a saw on the fourth side due to the proximately of a column. The column occupied approximately 3’ of the 4’ side, with approximately six inches on either side of the column. At that time, the cut, 80square -foot area was supported solely by the uncut 4’ edge.

16. The concrete gave way and the 4’ by 20’ area collapsed, falling with Claimant twenty feet onto the parking level below.

17. On the day of the accident, Claimant was working as the lead laborer and was in charge of the site while Mr. Martin was away at a personal event.

18. Mr. Martin testified that he and Claimant were friends and both were “family men.” Mr. Martin had advocated with Employer’s owner for Claimant to be given raises. Mr. Martin thought Claimant “had potential” and that he tried to help

Claimant at work by encouraging him to take on foreman-type tasks such as the engineer walk on September 25, 2014.

19. Mr. Martin testified that he made Claimant his lead because Claimant had experience with concrete and knew more about it than Mr. Martin did. Mr. Martin trusted Claimant and described him as having the same understanding of the "big picture" as a foreman would.

Safety Rules

CHANGING WORK SCOPE

20. Mr. Martin testified that by making the 20' long cuts, Claimant created a safety hazard that called for use of the fall protection equipment. He further testified that Claimant knew Employer's policy that if a person in charge sees a safety issue they are to immediately call a supervisor. Claimant was aware of the policy because Claimant and Mr. Martin had worked on other projects where safety issues arose and work had been stopped. Further, Claimant had been in a stop work situation on an earlier Park Meadows project. There, a similar but smaller project was stopped, the project was delayed, and shoring was required to brace a six foot cut.

21. Claimant did not consult with or notify Mr. Saltzman or his assistant Levi, Mr. Martin, or Mike Padilla the project supervisor, about his decision to change the way the work was to be performed. Mr. Saltzman testified that Claimant had been trained that anytime the work scope changed, you had to stop the work. He testified that Claimant violated company policy when he decided to change the scope of the project because (1) it greatly increased the cost of the project; (2) it increased the time involved to complete the increased amount of work; (3) it created a risk of fall; and (4) Claimant failed to set up and require his crew to use the fall protection equipment.

22. Mr. Martin testified that on September 25, 2014, he told Claimant to follow the outlines [plural] and to cut out the small areas. Mr. Martin defined the process for how the small holes should be patched. He handed Claimant his paperwork, his notes, and contact information for the engineer. He instructed Claimant, "If there were any questions at all, stop, shut everything down, and wait until someone gives you an answer."

23. Mr. Martin testified on rebuttal that the scope of the project involved making small cuts and that the job was supposed to be a "very small, very quick repair." The scope was not to cut an entire area as Claimant did, but rather to cut small damaged areas approximately 18" on a side. The project was never engineered for the cuts that Claimant made. Mr. Martin never told Claimant to cut out the entire area or that the engineer had approved of such. Mr. Martin further testified that Employer could not have made the cuts Claimant made because it was not approved by code or within the contracted scope for the job.

24. Mr. Martin testified that on September 25, 2014, he told Claimant to follow the outlines [plural] and to cut out the small areas. Mr. Martin defined the process for how the small holes should be patched. He handed Claimant his paperwork, his notes, and contact information for the engineer. He instructed Claimant, “If there were any questions at all, stop, shut everything down, and wait until someone gives you an answer.”

25. Mr. Martin testified that Claimant did call him on the morning of September 26, 2014. Mr. Martin did not understand Claimant to have called to discuss the job scope, but rather Claimant was “really upset” because Jamal and Aaron were not willing to listen to him and were “giving him a bunch of grief.”

26. There would be no need to drill pilot holes around individual spalls if the engineered scope was to cut out the entire area. If the entire area were to be cut out, the area would have been measured from underneath and those measurements would have been transferred to the top surface.

27. Mr. Saltzman testified: “The expansion of the scope created the safety violation because [Claimant] knew that he was going to create a large hole,” and he failed to use or require his crew to use the fall protection equipment that was already on site.

28. Mr. Saltzman testified workers all were trained not to expand the scope of a project and to only perform specified duties and tasks. With respect to changing the scope of a project, all employees are told at the beginning of a project what the scope is and that they are not to deviate without consulting a supervisor.

29. The ALJ finds it more probably true than not that Claimant misapprehended the actual scope of authorized work. Because the ALJ finds that Claimant believed he was performing authorized work, the ALJ is unable to find that Claimant willfully changed the scope of work without authorization.

CREATING A SAFETY HAZARD

30. Claimant testified that when he started using the chipping hammer, there were no openings in the concrete. Claimant testified that he “was not exposed to a fall prior to the concrete falling,” and that he was not ever concerned that there would be a risk of falling when he was cutting or chipping the concrete. He was not concerned because he had done “this” “plenty of times” in his ten to fifteen years working with concrete, and he never had a situation where he cut three sides of concrete and it fell through.

31. Mr. Saltzman testified that Employer recognized a number of safety issues generally and required that protective gear be used in instances of loud noise and risk of falling more than six feet. Employer conducted monthly safety meetings as required by OSHA. Mr. Saltzman testified that on the morning of the accident Employer had done training on general fall protection and the requirement that if a worker was exposed to a risk of falling six or more feet, that

he was required to be tied off to a 5,000 pound anchor and wear full body harnessing. Exhibit D is a sign in sheet indicating that Claimant attended the session. The topic was “Fall Protection: General.” Employer also conducted weekly “toolbox topics” trainings on a variety of safety topics specific to the projects being worked. Mr. Martin testified that “ten sheets were handed out at a time” at the toolbox meetings. One such sheet, admitted into evidence as exhibit G, covered crushing accidents, but dealt with material not relevant to the job such as trenching and materials storage. Mr. Saltzman was the instructor of the April 18, 2014 Job Box Talk, and Claimant signed the attendance sheet for the talk. The April 18 training topic was “Fall Protection Inspection Rigging.” No documentary evidence sets forth what the training encompassed. Mr. Saltzman testified that Claimant had been involved in a similar job but with larger holes within six months of his accident and had been trained on how to set up safety equipment, where to put it, and how to use it. Mr. Saltzman testified that he had done training on a number of topics including fall protection and that he knew Claimant had been present because he had signed the sign-in sheets.

32. With respect to exhibit G, Claimant testified that it did not apply to concrete work but rather to tagging out defective electrical equipment.

33. Claimant was not using any fall protection equipment on the day of the accident. When asked why he did not use a safety harness, Claimant responded,

> Why I didn’t use a harness? We already talked about just to be safe, and it was supposed to be a little fix. And there is no need to be tied off. How are you going to be tied off on a parking structure?

Claimant was not aware of “a specific safety rule for when you’re using a harness while cutting through a concrete floor.” He testified that he had harnesses but no other fall protection gear on site, but that he could have called in if he did not have the gear that he needed.

34. When asked whether he saw “a safety danger” by cutting out three sides of the floor he was on and chipping out the fourth side, and whether he recognized that as a situation which would require fall protection, Claimant answered no. Claimant did not remember where he was standing at the time the concrete collapsed.

35. Claimant testified that he cut three sides of the chalk lined area, but did not saw cut the fourth because a column was too close for him to use the saw. Claimant also testified that there were no pilot holes drilled on the fourth, uncut side. None of the concrete fell out after the three sides were cut, and when asked if he had any reason to believe the concrete would fall, Claimant responded “no.” Claimant and his coworker, Jamal, then began chipping the fourth side of the rectangle.

36. Due to the location of the column, the small amount of space outside of the column, and the proximity of a cement wall (see Exhibit F-2), the ALJ infers that Claimant was inside the area that had already been cut when he began chipping the fourth side with a jack-hammer-like tool.

37. Mr. Saltzman testified that creating fall hazards and not being tied off when there is a risk of falling more than six feet are safety violations. With respect to a fall hazard, Mr. Saltzman testified that the risk of fall existed "once the hole was created," and that once the hole was created, he was obligated to be tied off with a full body harness.

38. On cross-examination Mr. Saltzman was asked: "it was Claimant's position to make the judgment call as to whether or not a safety rule was – whether a safety harness was going to be needed; is that correct?" Mr. Saltzman responded, "Correct."

39. Claimant acknowledged that on the day of his accident, he was working as the lead laborer and that one of his duties was to make sure the worksite was safe for him and other workers. He knew there was no shoring.

40. The ALJ finds it more probably true than not that Claimant misapprehended the risk of fall that existed when he cut out the large section of concrete. Although it seems unlikely that an adult would not perceive the risk, Claimant's behavior of cutting both long sides first, and of standing on the portion of concrete that would fall, support the finding that he actually did not recognize the consequence his action would cause. Because the ALJ finds that Claimant did not apprehend the safety hazard his conduct created, the ALJ is unable to find that Claimant willfully violated Employer's safety rule which prohibited employees from creating safety hazards.

FAILURE TO USE FALL PROTECTION EQUIPMENT

41. Mr. Martin testified that Employer's policy for fall hazards was that if any hazard of falling over six feet existed, employees had to be tied off. Claimant was aware of the policy because it was in the employee handbook, was discussed in safety meetings, and was spoken about often on worksites. Mr. Martin testified that there was no risk of fall with the engineered modified work scope because no holes larger than four square feet were anticipated. Nevertheless, the majority of the fall safety gear, including D-ring plates that are bolted in to 20,000 pound anchors, half-inch cable, and shackles and harnesses were already on site. Additional wire cable was brought to the job site on the afternoon or evening of September 25.

42. Mr. Martin testified that Claimant was aware that the gear was there and that Claimant's harness was with the bulk of the gear. However, Claimant denied being aware of the presence of the safety gear.

43. Although Claimant had installed the same safety equipment on a different area of the site within six months of the accident, he did not install it on the site and did not require his crew to use fall protection equipment.

44. On September 26, Mr. Martin was unable to be at the site, therefore Claimant, as the lead, was in charge of the site. Claimant was responsible that day to make sure his crew understood what hazards might be present, how to avoid the hazards, and to stop work if a safety issue arose.

45. Mr. Saltzman testified that training on September 26, 2014, included the OSHA regulation which requires tie off if a risk exists of falling more than 6 feet. Exhibit 9 documents what the training covered, and includes the language,

> "You must always be tied off with a full body harness if you are exposed to a fall greater than 6' no matter what means of access you are using."

Mr. Saltzman testified that the training covered general fall protection policies "on elevated portions of buildings, ladder safety, scaffolding, man lifts, Boson's chairs, general notes." He acknowledged that the training on the morning of September 26, 2014 did not address holes in parking decks which were "a very specific situation."

46. On cross-examination, Claimant's counsel had Mr. Saltzman identify a copy of Employer's Employee Manual dated August 26, 2015. While the policy post dates the accident, Mr. Saltzman testified that it was the manual that was used at the time of Claimant's injury. Claimant did not move for the admission of the manual into evidence, and therefore the ALJ was not able to consider its contents.

47. Mr. Martin testified that Claimant would have found the safety rule that he violated in the employee handbook. Although Respondents' exhibit A is Claimant's acknowledgement that he received the handbook, Respondents also did not introduce the manual as an exhibit during the hearing, and no such manual was admitted as evidence.

48. Mr. Saltzman testified that Employer enforced the fall protection policy. He gave an example of writing up three workers for not wearing their harnesses when they were working in a stick boom lift. The workers were suspended for three days without pay.

49. However Mr. Saltzman did not write Claimant up for violating company policy. He testified that he did not do so because he was hurt and taken urgently to the hospital and had not returned to work. Mr. Saltzman testified that he thought Claimant's injuries were punishment enough, and that he would not have given Claimant a suspension notice in the emergency room. He stated that if Claimant were to return to work, the policy violations would definitely go on Claimant's record. After Claimant was injured, Mr. Saltzman and Jesus Odonez, Employer's

human resources director, discussed what discipline Claimant might be subject to based on the accident. Employer had discretion to decide what employment action to take. Employer could have terminated Claimant for his conduct, which Mr. Saltzman testified was “one of the worst safety violations in history.” Employer decided, as a humanitarian matter, to not discipline Claimant. The ALJ finds this testimony credible and persuasive and therefore finds that Employer’s decision not to take negative employment action against Claimant does not indicate that Employer di not recognize Claimant’s conduct as violating safety rules.

50. Mr. Saltzman testified that if a safety violation occurred on a project, the person in charge would be written up for allowing an unsafe condition.

51. Claimant was aware, likely through tool box meetings, that you need to use fall protection when you are exposed to a fall of six or more feet. He acknowledged that he was over six feet above the lower level of the garage while he was working, and that circumstances could exist that would require him to be harnessed off.

52. The ALJ finds it more probably true than not that Claimant misapprehended the risk of fall that existed when he cut out the large section of concrete. Because the ALJ finds that Claimant because Claimant did not apprehend the existence of a risk of fall, the ALJ is unable to find that Claimant willfully violated Employer’s safety rule which required employees to use fall protection equipment if they were exposed to a fall of six feet or more.

53. Based on the totality of the evidence, the ALJ finds that Employer had safety rules which (1) prohibited unauthorized changes in the scope of work; (2) prohibited employees from creating hazardous work conditions, and (3) required employees to use fall protection gear when they were exposed to a risk of falling six feet or more.

54. Based on the totality of the evidence, the ALJ finds that Employer’s safety rules were reasonable, specific, and unambiguous. The ALJ further finds that Employer trained Claimant on the safety rules and enforced the rules. The ALJ further finds that Claimant’s violation of any one of the rules would have caused his injuries.

55. Based on the totality of the evidence, the ALJ finds that Claimant’s act of cutting out an 80 square foot area rather than individual spalls, violated Employer’s safety rule which prohibited unauthorized changes of work scope.

56. Based on the totality of the evidence, the ALJ finds that Claimant’s act of cutting out an 80 square foot area rather than individual spalls, violated Employer’s safety rule which prohibited employees from creating unsafe work conditions by creating a risk of falling six feet or more.

57. Based on the totality of the evidence, the ALJ finds that Claimant violated Employer’s safety rule which required the use of fall protection gear when an employee was exposed to a risk of falling six or more feet.

58. Based on the totality of the evidence, the ALJ finds that Respondents have not met their burden of establishing by a preponderance of the evidence that Claimant’s violation of any of the rules was willful.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General

The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S.

A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The question of whether the claimant met her burden of proof is one of fact for determination by the ALJ. See *Jefferson County Public Schools v. Dragoo*, 765 P.2d 636 (Colo. App. 1988).

The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

The ALJ’s factual findings concern only evidence and inferences found to be dispositive of the issues involved. The ALJ need not address every piece of evidence/or every inference that might lead to conflicting conclusions. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Indus. Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and

bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

In deciding whether a party has met their burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to testimony, and draw plausible inferences from the evidence." *See Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Safety Rule Violation

Section 8-42-112(1)(b), C.R.S., provides for a fifty percent reduction in compensation to a claimant where a respondent proves by a preponderance of the evidence that the claimant's injury was caused by the willful failure to obey any reasonable rule adopted by the employer for the claimant's safety. *See In re Claim of Bromirski, 082113 COC, 4-882-047-01.*

Under Section 8-42-112(1)(b), C.R.S. it is the respondents' burden to prove every element justifying a reduction in the claimants' compensation for the willful failure to obey a reasonable safety rule. *Triplett v. Evergreen Builders*, Inc., W. C. No. 4-576-463 (May 11, 2004). The elements the respondents must prove are as follows: 1) There must be a specific, unambiguous and definite safety rule adopted by the employer; 2) The safety rule must be reasonable; 3) The safety rule must be "brought home" to the employee and diligently enforced; 4) Violation of the safety rule must be willful; 5) The violation of the safety rule must be a cause of the claimant's injury. C.R.S. § 8-42-112(1)(b)(2015); *L.B. Cole Produce Co. v. Indus. Com'n.*, 228 P.2d 808, 809 (1951); *Lori's Family Dining, Inc. v. Indus. Claim Appeals Office*, 907 P.2d 715, 719 (Colo. App. 1995).

Respondents contend that they are entitled to reduce Claimant's compensation benefits by fifty percent for Claimant's willful violation of one or more safety rules, pursuant to Section 8-42-112(1)(b), C.R.S. Respondents bear the burden of establishing Claimant's willful violation of the safety policy by a preponderance of the evidence.

The question of whether the Respondent proved willful violation of a safety rule by a preponderance of the evidence is one of fact for the ALJ. *Lori's Family Dining, Inc. v. Indus. Claim Appeals Office*, 907 P.2d 715 (Colo. App. 1995). Violation of a rule is not willful unless the claimant did the forbidden act with deliberate intent. A violation which is the product of mere negligence, carelessness, forgetfulness or inadvertence is not willful. *Bennett Properties Co. v. Indus. Commission*, 437 P.2d 548 (Colo. 1968); *Johnson v. Denver Tramway Corp.*, 171 Colo. 214, 171 P.2d 410 (1946). Conduct which might otherwise constitute a safety rule violation is not willful misconduct if the employee's actions were intended to facilitate accomplishment of a task or of the employer's business. *Grose v. Riviera Electric*, W.C. No. 4-418-465 (ICAO August 25, 2000). A violation of a safety rule will not be considered willful if the employee can provide some plausible purpose for the conduct. *City of Las Animas v. Maupin*, 804 P.2d 285 (Colo. App. 1990).

The first step is to determine whether or not the employer adopted a reasonable "safety rule". A safety rule does not have to be formally adopted, does not have to be in writing, and does not have to be posted. Rather, it is necessary that the safety rule was heard and understood and given by someone generally in authority. *Indus. Commission v. Golden Cycle Corp.*, 126 Colo. 68, 246P.2d 902 (Colo. 1952) *McCulloch v. Industrial Commission*, 109 Colo. 123, 123 P.2d 414 (Colo. 1942).

Respondents allege Claimant violated three possible safety rules. The first alleged safety rule violation is that Claimant changed the scope of work he was directed to do, without authorization. This safety rule is specific and unambiguous. While the rule served several purposes, including cost and time containment, it also addressed safety issues especially as here where engineers had to approve changes because they had specialties in areas such as load bearing capacities, and would only approve changes that did not create unsafe conditions. The ALJ finds and concludes such was the case here.

The ALJ also finds and concludes that Claimant misapprehended the engineered scope of work and that his conduct in cutting out the entire area of spalls rather than individual spalls effectively constituted an unauthorized change in scope.

However, Respondents did not meet their burden of establishing by a preponderance of the evidence that Claimant's violation of the safety rule was done with deliberate intent. Rather, as found, Claimant believed he was performing the modified scope of work. Therefore he could not have acted with the intent to deliberately violate a rule which he believed he was following. Claimant credibly testified that it was his understanding that Mr. Martin directed him to mark and cut out one squared-off section of concrete that encompassed all of the spalls. The ALJ finds that there was simply a misunderstanding between Claimant and Mr. Martin regarding the size and number of areas to remove. A misunderstanding does not constitute a willful violation of a safety rule. The case law is clear, "a finding that Claimant had been momentarily careless or casually negligent does not rise to a finding of willfulness." *American Furniture Warehouse v. Indus. Claim Appeals Office*, 15CA0846 (Colo. App. December 3, 2015)(not published pursuant to CAR 35(f)); *Bennett Properties Co. v. Indus. Com'n*, 437 P.2d 548 (Colo. 1968).

To prove Claimant willfully violated his foreman's direction, Respondents were required to demonstrate the Claimant understood the foreman's direction and then decided to change the scope without proper approval. At a minimum, Claimant did not understand the direction by the foreman. Respondents provided no documentation as to the scope of the work Claimant was directed to perform after the September 25, 2014 job walk.

Respondents allege that Claimant violated a safety rule which prohibited employees from creating safety hazards. Respondents did not meet their burden of establishing that Claimant willfully violated this safety rule. Rather, Claimant's credible testimony supports the finding that Claimant did not apprehend that his conduct created a fall hazard. Claimant's credibility is bolstered by the fact that he was standing on the largely cut out area while he chipped away the four foot portion that was supporting 80 square feet of otherwise unsupported concrete. Because Claimant did not even comprehend that he created a hazard, the ALJ is unable to conclude that Claimant intentionally created a hazard.

Finally, Respondents allege that Claimant violated a safety rule which required that he use fall protection equipment when he was exposed to a risk of falling six or more feet. This rule sets forth an objective standard, and Claimant certainly violated the rule because a risk of falling six or more feet existed before the concrete collapsed with Claimant on it. While Claimant suggests that *American Furniture Warehouse v. Indus. Claim Appeals Office*, 15CA0846 (Colo. App. December 3, 2015)(not published pursuant to CAR 35(f)) applies to these facts, the ALJ disagrees. The safety rule in *American Furniture Warehouse* imposed a subjective standard on whether a risk existed. Here, Employers rule imposed an objective standard and a risk of fall clearly existed. However, this distinction is of little merit because Respondents did not prove by a preponderance of the evidence that Claimant willfully violated this rule. While Claimant's failure to perceive the risk of fall that existed does not prevent the ALJ from finding that Claimant violated this rule, it does preclude the ALJ from finding that the violation was deliberate. Claimant did not perceive a risk and therefore his conduct was not an intentional rule violation.

As Respondents have failed to prove by a preponderance of the evidence that they are entitled to reduced compensation benefits by fifty percent for willful violation of a safety rule pursuant to section 8-42-112(1)(b), C.R.S., Claimant is entitled to payment of back TTD owed based on the stipulated AWW rate plus applicable interest.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's AWW is $657.14 with an equivalent TTD rate of $438.09, based on the party's stipulation.

2. It is therefore ordered that Respondents' request for a safety rule offset is denied and dismissed.

3. Respondents shall pay Claimant any offset withheld for the alleged safety rule violation based on the stipulated AWW.

4. Insurer shall pay Claimant interest at the rate of 8% per annum on all amounts of compensation not paid when due.

6. Issues not expressly decided herein are reserved to the parties for future determination.

7. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 7, 2016

Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-999-503-01

ISSUES

- The sole issue for determination is the Respondents petition to suspend the Claimant's temporary total disability benefits beginning on February 25, 2016 and ongoing based upon their allegation that the Claimant was terminated for cause.

STIPULATIONS

The parties stipulated that Claimant's average weekly wage is $714.45.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant was hired by Employer in July, 2015.

2. Claimant suffered an admitted on-the-job injury on November 7, 2015. Claimant had received temporary total disability benefits from November 8, 2015 until December 7, 2015, and temporary partial disability benefits from December 8, 2015 and ongoing.

3. On February 23, 2016, Respondents filed a petition to terminate temporary partial disability benefits as of February 25 2016. The grounds listed for termination of these benefits were that the Claimant was terminated for cause for "refusing to sign a form required by his employer to continue his employment."

4. Claimant's first language is French. He testified through an interpreter. Claimant's hearing was originally set on April 20, 2016, but was continued because the interpreter did not appear, and Claimant sought and was granted a continuance so he could proceed with an interpreter. However, Claimant does speak limited English and stated that he generally understands the instructions given to him at work which are often accompanied by drawings. He also used an interpreter when he went to medical appointments. Dr. Zimmer stated in his April 29, 2016 letter that the interpreter said he had "relatively good English," and that he seemed to be able to speak English when he was concentrating.

5. Respondents' witnesses testified that Claimant seemed to understand instructions he was given in English and the form they required him to sign.

6. Clamant, however, repeated and credibly testified that he did not understand English well. For example, Claimant testified:

- He understood what tasks he was supposed to do at work because "When they asked me to do something, they draw it on the paper, and I – I follow the drawing and I do it."

- He could read English "a little."

- He always had an interpreter with him at his doctor appointments. "I Can't – I can't speak with the doctor in English."

- At work, if someone said something simple and easy, he could understand. If he did not understand, he would ask and then be shown – not told – what to do.

- When he was assigned paperwork as light duty, his job was to enter numeric data into a computer and to put papers into numeric order. Likewise, Claimant testified that he understood a different letter about his performance because it used numbers and from context because he had been having difficulties with the time clock.

- Claimant was uncomfortable speaking English in a legal context.

- The ALJ also notes that Claimant asked that his earlier scheduled hearing be continued when his interpreter did not appear.

7. After returning to work following his injury Employer presented Claimant with a "Letter of Instruction-Safety Policy Violation."

8. Ms. Sarah Jones testified that she is Employer's personnel supervisor and is responsible for the issuance of the Letter of Instruction. She stated that the letters are done when there is some kind of violation of policy or procedure and that employer required employees to sign such letters for the purpose of showing that they received it and that they've had the letter explained to them.

9. Ms. Jones testified that employees sometimes refuse to sign the letters because they think it is an admission of guilt or wrongdoing, but that most employees eventually sign.

10. Ms. Jones testified that she gave the letter to the freight operations manager, Zach Gibbs, to present to Claimant. Claimant refused to sign the document and she then went through each line of the document with Claimant. When he still refused to sign, they went to Todd Steyer's office. Mr. Steyer also went through the letter line by line but Claimant still refused to sign it. At that point, Claimant was taken off work pending an investigation by the HR department. Shortly thereafter, Employer terminated Claimant for insubordination for his refusal to sign the letter.

11. Ms. Jones admitted on cross-examination that the Letter of Instruction was a disciplinary matter and was part of a "strike policy" in place for unsafe acts or

accidents with employees who drive company vehicles. The letter was generated as a result of the accident which caused Claimant's compensable injury. She also admitted that even without Claimant's signature, there were three witnesses, Mr. Gibbs, Mr. Steyer, and herself, who could state that Claimant received a copy of the letter, thus fulfilling the stated purpose for requiring Claimant's signature. She also stated that Clamant was allowed to take a copy of the letter home with him, but only if he signed it first.

12. Mr. Zachary Gibbs testified that at the time Claimant was terminated, he was Employer's operations manager. He stated that he went through the letter "word for word" with Claimant, that it was not an admission of guilt, but that Claimant refused to sign it the letter. Mr. Gibbs testified that Claimant wanted to take the document home to show his wife who is a native English speaker.

13. The Clamant testified that the letter was read to him by Mr. Gibbs. Claimant was not given an opportunity to read the actual letter himself. Rather, it was read to him by Mr. Gibbs. Claimant asked to take a copy of the letter to his lawyer but he was not allowed to do that. Later he was mailed a copy of the letter and he brought it to his attorney. After that, he was willing to sign it, but Employer had already terminated him.

14. Claimant testified on cross-examination that he signed documents as part of his employment and that he did not have his wife review those. However, he realized that this document was different. He knew that this letter was disciplinary in nature. He had a pending Workers' Compensation claim against Employer, and he was represented by an attorney. He stated that he did not refuse to sign the document, but rather that he wanted to show it to his lawyer. He understood that he could be terminated and that was why he wanted to show it to his attorney prior to signing it. He testified that the letter was read to him by Mr. Gibbs but that he was unclear about the words and that is why he wanted to show it to his attorney.

15. Based on the totality of the evidence, the ALJ finds that Claimant's desire to show the letter to his wife and attorney prior to signing it was reasonable and that doing so prior to signing it would not have had a detrimental effect on the employer. It was also reasonable that the Claimant would not want to sign a document after having it read to him but not having an opportunity to read it himself. Being able to read the document and allow his attorney to read it prior to signing would be particularly important inasmuch as it was disciplinary in nature, the Claimant was involved in a workers' compensation claim to which the Employer was an adverse party, and the Claimant had retained counsel.

16. Based on the totality of the evidence, the ALJ finds that Claimant was not at fault for his termination.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General

1. The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Except as specifically noted below, the Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

3. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Termination for Cause

4. Section 8-42-103(1)(g), C.R.S., and § 8-42-105(4)(a), C.R.S., (termination statutes) provide that if a temporarily disabled employee "is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury." Because the termination statutes provide a defense to an otherwise valid claim for TTD benefits, respondents shoulder the burden of proof by a preponderance of the evidence to establish each element of the defense. *Gilmore v. Industrial Claim Appeals Office,* 187 P.3d 1129 (Colo. App. 2008); *Brinsfield v. Excel Corp.,* W.C. No. 4-551-844 (ICAO July 18, 2003).

5. In *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061(Colo. App. 2002), the court held the term "responsible" as used in the termination statutes reintroduces the concept of fault as it was understood prior to the Supreme

Court's decision in *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995). Consequently, the concept of fault used in the unemployment insurance context is instructive. Fault requires a volitional act or the exercise of a degree of control over the circumstances leading to the termination. *Apex Transportation, Inc. v. Industrial Claim Appeals Office,* 321 P.3d 630 (Colo. App. 2014); *Gilmore v. Industrial Claim Appeals Office, supra*; *Padilla v. Digital Equipment Corp.,* 902 P.2d 414 (Colo. App. 1994), *opinion after remand*, 908 P.2d 1185 (Colo. App. 1995); *Brinsfield v. Excel Corp., supra.*

6. Whether an employee is at fault for causing a separation of employment is a factual issue for determination by the ALJ. *Gilmore v. Industrial Claim Appeals Office*, *supra.*

7. In this case, Claimant was asked to sign a document that was not in his native language and which he was not allowed to read. This occurred during the pendency of his workers' compensation claim. It was reasonable for Claimant to want his wife who is a native English speaker and attorney to read the document prior to signing. It was unreasonable for the Employer to ask Claimant to sign a document without being given an opportunity to read it. Employer contends that the signature was to evidence that Claimant was shown the document and that they read the document to Claimant. English was not Claimant's first language and while he could understand and speak some English, he was being asked to sign a document that he had not personally read. Rather, it was read to him by Employer. Inasmuch as Claimant was represented by legal counsel, it was not unreasonable for Claimant to want his attorney to read the document prior to signing it. In fact, after Claimant showed the letter to his attorney he was willing to sign it.

8. Employer did not demonstrate that it would be prejudiced in any way if it were to allow Claimant to show the document to his wife or attorney prior to signing it.

9. This case does not turn on Claimant's ability to speak English. Even if he were fluent in English, Claimant should still have had an opportunity to read the document for himself. He should have also been able to show it to his attorney prior to signing.

10. Given these circumstances and findings, Respondents have failed to show that Claimant was responsible for his termination or that temporary disability benefits should be terminated.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents’ petition to terminate temporary disability benefits is denied.

2. By stipulation of the parties, Claimant’s average weekly wage is $714.45.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 8, 2016

Kimberly Turnbow, Administrative Law Judg
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable right heel injury during the course and scope of his employment with Employer on August 18, 2015.

2. Whether Claimant has proven by a preponderance of the evidence that he received authorized, reasonable and necessary medical treatment for his August 18, 2015 industrial injury.

3. A determination of Claimant's Average Weekly Wage (AWW).

4. Whether Claimant has established by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period August 20, 2015 through September 28, 2015.

FINDINGS OF FACT

1. Employer is a company that provides transportation services in the Denver, Colorado Metropolitan area. Claimant is an independent contractor who drives a taxicab for Employer.

2. Claimant began working for Employer in 2009 and renewed his contract on August 10, 2015. Claimant executed a contract for hire on August 10, 2015 in which he indefinitely agreed to lease a vehicle from Employer. He was also responsible for additional fees and costs associated with insurance, credit card processing, car accidents and tickets.

3. Claimant's 2015 Federal Income Tax Return reflects that he did not earn wages during the year. However, Lines 12 and 22 of Claimant's 2015 Form 1040 reveal that he earned a gross income of $22,833.00 with expenses of $7,680.00 for a net business income of $15,153.00 for the year. The corresponding Schedule C identified Claimant's business as Babili Book Store. Claimant testified that not all of his self-employment income came from his bookstore. Because Claimant worked as a taxicab driver and owned a bookstore during 2015 an Average Weekly Wage (AWW) incorporating concurrent employment is appropriate. Dividing $15,153.00 by 52 weeks yields an AWW of $291.40. An AWW of $291.40 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

4. Claimant explained that on August 18, 2015 he was driving a passenger from the Sheraton Hotel in Denver to Denver International Airport (DIA). He was

operating a Crown Victoria taxicab that he had leased from Employer. While driving approximately 65-70 miles per hour on Interstate 70 Claimant began to feel heat radiating up from the floor of the vehicle. Claimant specifically felt heat or a burning sensation on the back of his right heel. He remarked that he was wearing thin dress socks and ordinary running or sports shoes. After Claimant dropped his passenger at DIA he examined his right heel and noticed that a large blister had developed.

5. On August 20, 2015 Claimant reported his right heel injury to Employer's Insurance and Safety Manager Barbara Romero. Ms. Romero directed Claimant to Concentra Medical Centers for treatment. Claimant recounted that on August 18, 2015 he picked up a passenger downtown and was driving to DIA. He noticed that his right heel was becoming very hot but he had to keep driving to get the passenger to DIA. After the passenger exited his vehicle, Claimant noticed a large blister on the back of his right heel. Allison Hedien, N.P. diagnosed Claimant with an open wound of the right heel. She assigned Claimant work restrictions that included no driving. N.P. Hedien anticipated that Claimant would reach Maximum Medical Improvement (MMI) by November 20, 2015.

6. Ms. Romero subsequently inspected the Crown Victoria taxicab that Claimant had been driving on August 18, 2015. She did not detect any defects in the vehicle. The Crown Victoria had a heat shield, flooring and a protective rubber mat. Furthermore, photographs of the Crown Victoria did not reveal any evidence of burns, melting or other damage associated with extreme heat. The vehicle has remained in service without alteration and other drivers have not reported problems with interior heat.

7. Based on a referral from Concentra, Claimant visited Parker Adventist Hospital for an evaluation on August 21, 2015. Claimant reported that he experienced a significant pain in his right heel while driving his taxicab. He suffered discomfort and noticed blistering. Michael Emil Bertocchi, M.D. noted that he performed a debridement of the right heel wound over an approximately 24 centimeter area.

8. On August 23, 2015 Daniel M. Peterson, M.D. completed a Physician's Report of Workers' Compensation Injury. He noted that objective findings were consistent with a work-related mechanism of injury. Dr. Peterson placed Claimant on modified duty involving no driving and working only in a seated position until August 25, 2015. He anticipated that Claimant would reach MMI by November 20, 2015.

9. On August 25, 2015 Claimant returned to Concentra for an examination. N.P. Hedien reported that Dr. Bertocchi had performed a wound debridement on Claimant's right heel. She remarked that the current treatment plan involved applying Santyl and dressing the wound at home over the following week. N.P. Hedien commented that Claimant remained restricted from driving and could only work in a seated position with the ability to elevate his right foot as needed.

10. On September 4, 2015 Claimant returned to Concentra for an examination. Rosalie Einspahr, N.P. documented that Claimant's right heel injury was healing well and he had no signs of an infection. She assessed Claimant with an open wound of the heel and recommended Ibuprofen. N.P. Einspahr continued Claimant's work restrictions and anticipated that he would reach MMI by November 20, 2015.

11. On September 8, 2015 Claimant underwent another debridement of his right heel at Parker Adventist Hospital. John Christopher James, M.D. noted that Claimant's right heel wound had a total surface area of 8.64 square centimeters. Claimant tolerated the procedure well.

12. On September 28, 2015 Claimant again visited Parker Adventist Hospital. Dr. James reported that Claimant had suffered a significant burn to his right heel while resting his foot on the floor of his taxicab. He diagnosed Claimant with a deep partial thickness wound/burn of the right heel. Dr. James commented that Claimant had been tolerating his right heel debridement procedures well. He released Claimant to full duty employment.

13. During early October 2015 Claimant underwent two additional debridement procedures on his right heel. On October 10, 2015 Claimant returned to Dr. James for an evaluation. Dr. James commented that Claimant suffered from a full thickness wound/burn of the right heel. He summarized that Claimant had undergone debridements to his right heel and was tolerating the procedures. Dr. James also noted that Claimant's wound was healing well and he had experienced little pain or drainage. He remarked that Claimant did not want to undergo another debridement at the visit.

14. Claimant has demonstrated that it is more probably true than not that he suffered a compensable right heel injury during the course and scope of his employment with Employer on August 18, 2015. Claimant credibly testified that on August 18, 2015 he was driving a passenger to DIA. While moving at approximately 65-70 miles per hour on Interstate 70 Claimant began to feel heat or a burning sensation on the back of his right heel. He remarked that he was wearing thin dress socks and ordinary running or sports shoes. After Claimant dropped his passenger at DIA he noticed a large blister on the back of his right heel. The medical records demonstrate that Claimant consistently maintained the heat from the floor of his taxicab caused a burn on his right heel. Moreover, on August 23, 2015 Dr. Peterson completed a Physician's Report of Workers' Compensation Injury. He noted that objective findings were consistent with a work-related mechanism of injury. Dr. Peterson placed Claimant on modified duty involving no driving and working only in a seated position. Although Ms. Romero inspected Claimant's vehicle and did not detect any defects, Claimant's credible testimony and the persuasive medical records reveal that driving the taxicab on August 18, 2015 caused a right heel injury and produced a need for medical treatment.

15. Claimant has proven that it is more probably true than not that he received authorized, reasonable and necessary medical treatment for his August 18, 2015 industrial injury. The record reflects that Claimant received authorized medical

treatment from Concentra. He subsequently underwent a series of debridement procedures on his right heel from authorized medical provider Parker Adventist Hospital. Claimant's treatment for his right heel full thickness wound/burn was reasonable, necessary and causally related to his job duties of driving a taxicab on August 18, 2015. The medical treatment was designed to cure or relieve the effects of his right heel injury.

16. Claimant has established that it is more probably true than not that he is entitled to receive TTD benefits for the period August 20, 2015 through September 28, 2015. The medical records and Claimant's testimony reveal that he was unable to perform his job duties as a taxicab driver between August 20, 2014 and September 28, 2015. During the period Claimant was prohibited from driving, could only work in a seated position with the ability to elevate his right foot and underwent several debridement procedures to treat his industrial injury. He is entitled to an award of TTD benefits because his August 18, 2015 right heel full thickness wound/burn caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the “logical and recurrent consequence” of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant’s symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that “correlation is not causation,” and merely because a coincidental correlation exists between the claimant’s work and his symptoms does not mean there is a causal connection between the claimant’s injury and work activities.

7. As found, Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable right heel injury during the course and scope of his employment with Employer on August 18, 2015. Claimant credibly testified that on August 18, 2015 he was driving a passenger to DIA. While moving at approximately 65-70 miles per hour on Interstate 70 Claimant began to feel heat or a burning sensation on the back of his right heel. He remarked that he was wearing thin dress socks and ordinary running or sports shoes. After Claimant dropped his passenger at DIA he noticed a large blister on the back of his right heel. The medical records demonstrate that Claimant consistently maintained the heat from the floor of his taxicab caused a burn on his right heel. Moreover, on August 23, 2015 Dr. Peterson completed a Physician’s Report of Workers’ Compensation Injury. He noted that objective findings were consistent with a work-related mechanism of injury. Dr. Peterson placed Claimant on modified duty involving no driving and working only in a seated position. Although

Ms. Romero inspected Claimant's vehicle and did not detect any defects, Claimant's credible testimony and the persuasive medical records reveal that driving the taxicab on August 18, 2015 caused a right heel injury and produced a need for medical treatment.

Medical Benefits

8. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

9. Authorization to provide medical treatment refers to a medical provider's legal authority to treat the claimant with the expectation that the insurer will compensate the provider. *Bunch,* 148 P.3d at 383; *One Hour Cleaners v. Industrial Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). Authorized providers include those to whom the employer directly refers the claimant and those to whom an ATP refers the claimant in the normal progression of authorized treatment. *Town of Ignacio v. Industrial Claim Appeals Office,* 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). Whether an ATP has made a referral in the normal progression of authorized treatment is a question of fact for the ALJ. *Suetrack USA v. Industrial Claim Appeals Office,* 902 P.2d 854 (Colo. App. 1995).

10. As found, Claimant has proven by a preponderance of the evidence that he received authorized, reasonable and necessary medical treatment for his August 18, 2015 industrial injury. The record reflects that Claimant received authorized medical treatment from Concentra. He subsequently underwent a series of debridement procedures on his right heel from authorized medical provider Parker Adventist Hospital. Claimant's treatment for his right heel full thickness wound/burn was reasonable, necessary and causally related to his job duties of driving a taxicab on August 18, 2015. The medical treatment was designed to cure or relieve the effects of his right heel injury.

Average Weekly Wage

11. Section 8-42-102(2), C.R.S. requires the Judge to determine a claimant's AWW based on his earnings at the time of injury. The Judge must calculate the money rate at which services are paid to the claimant under the contract of hire in force at the time of injury. *Pizza Hut v. ICAO,* 18 P.3d 867, 869 (Colo. App. 2001). However, §8-42-102(3), C.R.S. authorizes a Judge to exercise discretionary authority to calculate an

AWW in another manner if the prescribed methods will not fairly calculate the AWW based on the particular circumstances. *Campbell v. IBM Corp.,* 867 P.2d 77, 82 (Colo. App. 1993). The overall objective in calculating an AWW is to arrive at a fair approximation of a claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 1997). Therefore, §8-42-102(3), C.R.S. grants an ALJ substantial discretion to modify the AWW if the statutorily prescribed method will not fairly compute a claimant's wages based on the particular circumstances of the case. *In Re Broomfield,* W.C. No. 4-651-471 (ICAP, Mar. 5, 2007).

12. As found, Claimant's 2015 Federal Income Tax Return reflects that he did not earn wages during the year. However, Lines 12 and 22 of Claimant's 2015 Form 1040 reveal that he earned a gross income of $22,833.00 with expenses of $7,680.00 for a net business income of $15,153.00 for the year. The corresponding Schedule C identified Claimant's business as Babili Book Store. Claimant testified that not all of his self-employment income came from his bookstore. Because Claimant worked as a taxicab driver and owned a bookstore during 2015 an AWW incorporating concurrent employment is appropriate. Dividing $15,153.00 by 52 weeks yields an AWW of $291.40. An AWW of $291.40 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

Temporary Total Disability Benefits

13. Section 8-42-103(1), C.R.S. requires a claimant seeking temporary disability benefits to establish a causal connection between the industrial injury and subsequent wage loss. *Champion Auto Body v. Industrial Claim Appeals Office*, 950 P.2d 671 (Colo. App. 1997). To demonstrate entitlement to TTD benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability," connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999).

14. As found, Claimant has established by a preponderance of the evidence that he is entitled to receive TTD benefits for the period August 20, 2015 through September 28, 2015. The medical records and Claimant's testimony reveal that he was unable to perform his job duties as a taxicab driver between August 20, 2014 and September 28, 2015. During the period Claimant was prohibited from driving, could only work in a seated position with the ability to elevate his right foot and underwent several debridement procedures to treat his industrial injury. He is entitled to an award of TTD benefits because his August 18, 2015 right heel full thickness wound/burn caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. On August 18, 2015 Claimant suffered a right heel injury during the course and scope of his employment with Employer.

2. Claimant shall receive authorized, reasonable, necessary and causally related medical benefits designed to cure or relieve the effects of his industrial injury.

3. Claimant earned an AWW of $291.40.

4. Claimant shall receive TTD benefits for the period August 20, 2015 through September 28, 2015.

5. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-969-572-03

ISSUES

- Did Claimant prove by a preponderance of the evidence that his exposure to jet aircraft or other noise in the workplace proximately caused his hearing loss and tinnitus.

- If compensable, did Claimant prove by a preponderance of the evidence that he is entitled to receive medical benefits to cure and relieve the effects of his injury or occupational disease.

PROCEDURAL STATUS

The undersigned issued Findings of Fact, Conclusions of Law and Order on June 3, 2016, which was e-mailed to the parties on June 6, 2016. Claimant filed a Request for Corrected Order and the time for Respondent's Response has not elapsed. The statutory deadline for issuance of a Corrected Order is July 6, 2016.

The Request for Corrected Order seeks identification of the ATP to provide medical benefits. At the outset of the hearing, there was discussion regarding medical benefits, with Claimant stating the issue of authorization had to be addressed, but once compensability was resolved, other medical benefits could be resolved.[1] Counsel for Respondent then stated the issues of authorization of medical benefits, reasonable and necessary could be held in abeyance.[2] Both attorneys then confirmed that the issue of specific medical benefits was held in abeyance.[3]

The Request for Corrected Order is granted by the ALJ, in part, as to the identity of the ATP. This Corrected Order is being issued pursuant to 8-43-302, C.R.S.

FINDINGS OF FACT

1. Claimant, who was born on April 26, 1950, is 66 years old.

2. Claimant began working for Employer in 1975. Claimant's job duties included mechanical work on jet engines and related systems on various types of aircraft. The job description was "generally recognized as technician's work in shops,

[1] Hearing Transcript pages 3:22-4:8.

[2] Hearing Transcript pages 4:20-5:1.

[3] Hearing Transcript page 5:2-7.

maintenance bases and line stations on aircraft (including power plants), parts and other related work"[4].

3. He initially worked as an aircraft mechanic in the San Francisco maintenance center. In this position, Claimant worked around large bead blasting machines and heavy duty solvent cleaning machines.

4. The first record of testing done on Claimant's hearing was May 31, 1977. The testing was done by HPI-National Mobile Health Programs ("HPI") and showed no hearing loss[5].

5. After he was furloughed in San Francisco, Claimant transferred to Denver, working at Stapleton International Airport from 1980-94. While at Stapleton, he worked on the ramp. Claimant testified he was exposed to engine noise and auxiliary power units ("APU") noise at various times during his workday at Stapleton, when airplanes arrived at the gate and departed the gate. He provided maintenance services at the gate area, proximate to the terminal. Employer shared this area with other air carriers. These carriers (including Continental Airlines) would rev up the engines while the aircraft were backing from the jet way to the runway. The ALJ infers this regularly exposed the Claimant to jet engine noise on the ramp.

6. Claimant was exposed to noise from different types of aircraft throughout his employment. Three classifications of aircraft were in service during his employment-Stage 1, 2 and 3. Stage 1 aircraft were the loudest and had no muffling on the engines. Stage 2 aircraft were the second loudest. Claimant testified he thought Stage 2 aircraft's noise level was 180-190 decibels ("dB") in 1990[6]. Claimant testified "hush" kits were put on Stage 1 and 2 aircraft in the 1980s. There was no evidence introduced concerning the decibel levels of Stage 2 jet aircraft engines once the hush kits were installed. Stage 1 and 2 aircraft were slowly phased out. However, Claimant was exposed to noise from aircraft in these classifications up to January 1, 2000, when the FAA required all aircraft to comply with Stage 3 requirements. The ALJ infers Claimant was exposed to noise levels in excess of 110 dB when he was around Stage 1 and 2 aircraft and this was for at least fifteen (10) years.

7. Claimant testified he wore hearing protection throughout his employment, including ear plugs and earmuffs. Employees provided their own hearing protection during the early years of his employment and the hearing protection was not as effective as the current protection. When he worked at Stapleton, Claimant testified he could hear the jet engines through the headsets and the earpieces also housed the radio. When he worked on the ramp, he was within walking distance of all sides of the aircraft

[4] Exhibit 9.

[5] The results of this baseline test were described by the experts as normal.

[6] Claimant agreed this noise level was at take-off and during flight.

and sometimes as close as an arm’s reach. Claimant estimated he would wear hearing protection approximately twenty (20) minutes per hour around the dispatch of a single aircraft, which occurred several times per day. Claimant noted there were times when he removed hearing protection in order to communicate with other mechanics. This occurred throughout his employment up to the present. There were also occasions when he would be surprised by jet engine noise or a noise from aircraft when he wasn’t wearing hearing protection.

8. There was no evidence in the record as to whether testing was done to show the level of noise exposure Claimant received while wearing the older hearing protection during the period 1975-2010.

9. In 1994, Claimant started working at Denver International Airport ("DIA") and worked in the hangar full-time. He has continued to work in the hangar, working on both wide and narrow body aircraft. Claimant testified he is exposed to noise from jet engines and the APUs and he works in close proximity to the APUs, which sometimes are running when the aircraft is in the hangar. Claimant testified there are other noise sources to which he is exposed in the hangar, which include noise from the air conditioning systems, hydraulic pumps and other electrical power devices.

10. HPI hearing testing records for Claimant from 1977, 1979, 1980, 1986 1989, 1990, 1991-1994, 1996-1997, 1999, 2000, 2011-2012, and 2014 were admitted into evidence at hearing. No Standard Threshold Shift (“STS”) was noted in the tests performed through 2012. The tests performed on September 12 and December 5, 2014 confirmed a STS occurred.

11. No hearing testing records for Claimant from 2001-2010 were introduced into evidence. Claimant testified his hearing was not tested during that period of time.

12. Evidence of Employer’s OSHA violations in 2010 were admitted at hearing. On August 6, 2010, OSHA issued a citation to Employer for not obtaining audiograms for each employee exposed at or above 85 dB for an 8 hour Time Weighted Average (“TWA”), including ramp service employees, customer service representatives and mechanics. On August 6, 2010, OSHA issued a citation to Employer on eighteen employees who were subject to long term hearing loss from the lack of a comprehensive hearing conservation program and from a lack of re-testing. Employer also received a citation because audiometric testing was being conducted in a room that did not meet requirements. Employer was also cited for failing to record employees whose audiogram showed a STS shift in the OSHA 300 log and failed to provide audiograms at no cost to employees. Employer also failed to adequately record work-related injuries. The ALJ infers Claimant was within the group of employees exposed to noise in excess of 85 dB when the OSHA testing was done.

13. Claimant testified the quality of hearing protection improved after 2010 when Employer had an OSHA evaluation.

14. Claimant testified that he began noticing some hearing difficulties prior to 2014. Specifically, he had difficulty hearing voices in a crowd and hearing certain segments of speech and understanding people. He also noticed tinnitus intermittently before 2014. Claimant testified the tinnitus is now constant and disturbs his sleep on occasion.

15. Claimant noticed a significant change in his hearing in 2014. He reported his hearing loss to Employer and an Employer's First Report of Injury was prepared by Mark Hofstatter on December 15, 2014. The description of how the injury occurred said: "Cumulative hearing loss sustained over 39 years of working as a mechanic on aircraft. Noise sources include power tools equipment & aircraft engine noise".

16. Claimant stated he was sent to Concentra after he reported his hearing issue to his supervisor. On December 5, 2014, Claimant underwent audiometric testing and was evaluated by Kirk Holmboe, D.O., who noted there was evidence of high frequency hearing loss on the left and right. There was no information in the record which indicated whether Dr. Holmboe believed Claimant's hearing loss resulted from his occupational noise exposure. Dr. Holmboe was an ATP for purposes of this claim. Claimant testified his supervisor told him he was "on his own" for treatment.

17. Claimant discussed the issue of his hearing with other employees and then went on his own to see Alan Lipkin, M.D. Dr. Lipkin evaluated Claimant on February 12, 2015. The intake notes recorded Claimant's history as follows:

> "New patient presents with hearing loss: bilateral. Patient is an airplane mechanic for United Airlines. Patient reports that over the years he has been compliant with hearing test(ing); first test was performed 5/31/2977 with United Airlines. Throughout his employment, the patient has been compliant with hearing protection and hearing tests. Uses hearing protection whenever possible. However, over the last several years the patient has noticed a significant hearing loss in both ears. Although the patient cannot identify one episode of loud noise exposure, he reports that he is consistently around loud engines and airplanes at his job. The patient denies dizziness, otalgia, and otorrhea.
>
> Occasional high pitched whining tinnitus.
>
> Review of serial hearing tests – gradual progressive high frequency loss.
>
> Having problems communicating due to hearing loss.
>
> Nonsmoker, non-diabetic. No other non-work noise exposure. Has been hunting, used ear protections."

18. After the evaluation, Dr. Lipkin reviewed the results of serial hearing tests performed since 1977. The history section noted Claimant had a history of

noise exposure with classic, progressive, sloping sensorineural hearing loss. Dr. Lipkin opined Claimant's hearing in 1977 was essentially normal and his hearing loss progressed over the years, particularly the last fifteen years. Dr. Lipkin concluded: "To a reasonable degree of medical probability, [Claimant] has work related noise-induced hearing loss and tinnitus secondary towards this." Dr. Lipkin's concluded that Claimant's hearing loss had progressed over the years (particularly over the last 15 years) and at this point in time was bilateral significant sloping sensorineural hearing loss, worse in the upper frequencies. The ALJ infers Dr. Lipkin's opinion was based upon the history taken from Claimant of his noise exposure, his extrapolation from the hearing tests and his expertise as an otolaryngologist.

19. The ALJ notes Dr. Lipkin's report recorded Claimant was a non-smoker and not diabetic. The report also excluded non-occupational noise exposures. The ALJ infers Dr. Lipkin considered Claimant's medical conditions when concluding what caused his hearing loss, although not every condition he reviewed was identified.

20. Dr. Lipkin recommended further evaluation/ treatment, including fitting Claimant for hearing aids.

21. Claimant testified he wishes to pursue treatment with Dr. Lipkin.

22. Claimant testified he had a shot a total of ten rounds with his gun over the years, as hunting was not an activity he did on a regular basis. Claimant wore hearing protection when firing the weapon.

23. Terry McGurk ("McGurk") testified at hearing. He is Employer's operations supervisor or manager for United Airlines at Denver International Airport (DIA) and was previously the manager of safety from 2009 to 2011. Mr. McGurk testified OSHA requires employees to wear hearing protection when exposed to TWA noise of 85 dB or greater. He testified regarding Employer's hearing conservation program, which included the choice of a molded earplug, a plastic insert, or an earmuff. Employer requires ear protection to be worn at 80 dB. Additionally, Employer requires any employees who are working outside of the building to have hearing protection on at all times. The various ear protection options include ear plugs and muffs which have a noise reduction rating of 28 dB to 34 dB. Mr. McGurk testified he wore earmuff protectors when he started working for Employer thirty-six (36) years ago and agreed hearing protection has improved over time.

24. Mr. McGurk testified OSHA requires Employer to conduct yearly testing of the hearing of employees exposed to noise at DIA. At present, Employer provides audiometric testing at no cost to employees. For the years 2000-2010, there were no reported test results for Claimant.

25. Mr. McGurk testified testing was done in August of 2010 to measure noise levels at DIA. The testing was done by having certain employees wear noise dosimeters. Dosimeters measure the level of noise that is absorbed over a period of

time. Mr. McGurk stated the measured noise levels on a time weighted average in the areas in which the Claimant worked were all less than 85 dB. The time-weighted average for noise exposure as measured by dosimeters worn by employees ranged from 66.4 dB to 86.1 dB. On cross-examination, Mr. McGurk admitted the highest level of noise exposure to which employees were exposed could exceed the TWA.

26. OSHA also obtained dosimeter noise measurements in August of 2010 which were generally consistent with the results obtained by Employer. The eight (8) hour time TWAs ranged from 58.1 dB (the 57.7dB was not valid) to 87.1 dB, with the latter dosimeter reading taken at B48 Planeside-all functions. None of the dosimeter readings were over 90 dB. No testing has been done since 2010.

27. At the request of Respondent, Edward Jacobson, Ph.D. performed a review of Claimant's medical records, including the results of the audiometric testing. He also reviewed the records of the 2010 testing done at DIA. Dr. Jacobson did not evaluate Claimant, nor did he perform any testing of his hearing. After reviewing available records, Dr. Jacobson opined in his August 20, 2015 report there was nothing that would convincingly establish a job-related hearing loss. Dr. Jacobson noted some issues needed to be clarified in order to determine whether the hearing loss was work-related, including: the reason for inter-aural asymmetry; change in the audiometric configuration as is apparent on the various audiograms; no noise measurements obtained in Claimant's work area relative to his job description as a mechanic, but apparently unknown as to those who have seen him clinically; the use of ear protection, which would further reduce the aforementioned workplace noise levels by 20-30 dB based on known research; workplace noise less in recent years; more effective hearing protection; reasons why the loss progressed to the levels obtained at the time of the ENT visit in a very short period of time and; the lack of mention of presbycusis.

28. On August 27, 2015, Claimant was evaluated by Allison Fall, M.D. at the request of Respondents. Based on the information provided regarding the measured decibel levels and the fact that hearing protection was utilized (which would protect against 20-30 dB), Dr. Fall opined Claimant's levels of exposure at work were within the acceptable range according to OSHA. Dr. Fall believed none of the levels would be near 85 dB, which would be the sound-pressure action level, above which HCP, use of ear protection, and hearing tests become necessary. Dr. Fall also noted hearing loss is known to increase with age and is more common in men. Dr. Fall opined it was more likely that his hearing loss was age-related. The ALJ notes that Dr. Fall's opinion was based upon the decibel level measured at DIA in 2010. Dr. Fall's report did not account for Claimant's noise exposure while working in San Francisco or at Stapleton. Dr. Fall also did not analyze the Claimant's exposure to noise above the 85 dB level when he wasn't wearing hearing protection.

29. Dr. Jacobson issued an addendum report on December 17, 2015, after reviewing medical records from Kaiser Permanente[7]. In this report, Dr. Jacobson noted

[7] The Kaiser Permanente records were not admitted at hearing.

there were many contributors relative to identifiable hearing loss, often greater for the high frequencies. These included vascular disease/hypertension, abnormal lipids, C-spine anomalies, chemotherapy and associated Cisplatin medication, alcohol intake, migraines, and various medications which were documented in the Kaiser records. Dr. Jacobson opined these factors should be taken into consideration as a cause of auditory/vestibular symptoms, including hearing loss and tinnitus. The ALJ notes this opinion falls shorts of a conclusion that these factors caused Claimant's hearing loss.

30. Dr. Fall issued an addendum report on January 5, 2016, after she reviewed medical records from Kaiser Permanente and Dr. Jacobson. Dr. Fall stated there were documented non-work related medical conditions, which further supported her opinion that the hearing loss was not related to his work at Employer.

31. Dr. Fall testified as an expert on behalf of Respondent at hearing. She is board-certified in physical medicine and rehabilitation. She is Level II accredited pursuant to the W.C.R.P. Dr. Fall agreed she had less experience in otolaryngology than Dr. Lipkin. Dr. Fall reviewed the case from a causation standpoint, looking at Claimant's particular risk from the work he did for Employer versus his risk outside of that work. She found the National Institute for Occupational Safety and Health indicated there was an 8% chance of hearing loss when exposed to noise at the 85 dB level for eight hours per day for 40 years. In other words, this represented an 8% percent chance of hearing loss at that decibel level. Since he wore hearing protection, Dr. Fall did not believe Claimant was exposed to levels of 85 db or above for 8 hours per day. Dr. Fall stated she came to that conclusion based upon the data (2010 testing) which was provided and the fact that hearing protection would dampen 20-30% of the noise. Dr. Fall did not think Claimant's noise exposure in his older employment (working in San Francisco or at Stapleton) was greater than the 85 dB level. The ALJ found this opinion to be less persuasive, as Dr. Fall did not specify how she reached it.

32. Dr. Fall testified there were other risk factors for Claimant which could affect his hearing. This included his age, carpal tunnel, high blood pressure, and chemotherapy agents, which added to Claimant's risk of hearing loss. On cross-examination, Dr. Fall agreed that none of the medical records she reviewed concluded these other factors caused Claimant's hearing loss. Dr. Fall did not offer an opinion regarding the cause of Claimant's tinnitus while testifying.

33. Dr. Jacobson testified as an expert in audiology, industrial audiology, and audiometric testing. He is a fellow of the American College of Forensic Examiners and a diplomat at the American Board of Forensic Medicine. Dr. Jacobson is not a physician and does not prescribe medications. He is qualified to confirm hearing problems and identify abnormalities. Dr. Jacobson testified once damage happens to the nerves in the ear, the nerves do not regenerate or grow back. Exposure to noise in the 90-95 dB range may result in hearing loss. Dr. Jacobson testified the permissible level for noise exposure for an 8 hour day for 115 dB is .25 or 15 minutes. He stated the permissible level for an 8 hour day for 110 dB is .5 or 30 minutes. Based on the 2010 testing records, Dr. Jacobson believed Claimant was exposed to noise at the 57.1

dB level. Dr. Jacobson opined the noise Claimant was exposed to while working for Employer did not aggravate or accelerate his hearing loss.

34. Dr. Jacobson believed Claimant's non-occupational medical conditions were the more likely cause of his hearing loss. Dr. Jacobson noted there was nothing in Dr. Lipkin's report which indicated he reviewed the noise level records from the 2010 testing or medical records from Kaiser Permanente. He noted an STS did not necessarily mean an individual had a hearing loss, but did not dispute Claimant had a hearing loss in the higher frequencies. Dr. Jacobson testified regarding Claimant's exposure to gun shots and stated he had never seen anyone wear hearing protection. Dr. Jacobson agreed tinnitus could develop as a result of an occupational exposure, as well as other factors such as over-the-counter drugs. Dr. Jacobson did not believe it correlated to anything Claimant was exposed to at work and did not qualify Claimant for a permanent impairment. By completely excluding any role Claimant's occupational noise exposure may have played in the tinnitus, Dr. Jacobson's testimony was less persuasive to the ALJ. Also Dr. Jacobson's testimony relating his own experience with hearing loss and tinnitus was not persuasive to the ALJ.

35. Based upon the expert opinions before the Court, including the testimony on OSHA standards, exposure to noise above the 85 dB level can cause hearing loss.

36. The ALJ finds Claimant was a credible witness when describing the level of noise he was exposed to and the hearing protection he wore. Based upon Claimant's testimony and extrapolating from the 2010 dosimeter testing, the ALJ finds it is more probable than not Claimant was exposed to noise above the 85 dB level while working at Stapleton, where he worked for fourteen (14) years. This includes exposure to Stage 1 and 2 aircraft. It is more probable than not the accumulated exposure was a cause of Claimant's hearing loss.

37. The ALJ finds it is more probable than not Claimant was exposed to noise above the 85 dB level for short periods of time when he took off his hearing protection. This exposure has continued to the present.

38. The ALJ credited Dr. Lipkin's opinions concerning Claimant's hearing loss, namely that is was progressive and resulted from noise exposure during his employment.

39. The ALJ credited that portion of Dr. Jacobson's testimony concerning the progression of hearing loss, including that exposure over time can cause hearing loss and the nerves in the ear do not regenerate after suffering damage. Dr. Jacobson's testimony was less persuasive when discussing the non-occupational factors which increased Claimant's risk of hearing loss and the failure to include occupational noise exposure at all made Dr. Jacobson less credible.

40. Claimant had non-occupational risk factors for hearing loss. As confirmed by Drs. Fall and Jacobson, these included: his age, hypertension,

chemotherapy (treatment with the cancer drug Cisplatin[8]), anti-inflammatory medications, and exposure to gun shots. There were no medical records admitted at hearing in which a physician concluded Claimant's hearing loss was caused by one of these conditions/factors. Both Dr. Fall and Dr. Jacobson conceded that risk does not equal cause.

41. There is no evidence in the record that Respondent authorized medical treatment for Claimant's hearing loss after December 2014.

42. Claimant pursued treatment with Dr. Lipkin, after being told he was on his own by supervisor.

43. Dr. Lipkin is an authorized treating physician.

44. The evidence and inferences inconsistent with these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), §8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. Section 8-43-201(1),C.R.S.

A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). The instant case requires a credibility

[8] The ALJ notes there was nothing in the hearing testing records which showed a hearing loss in 2007 which was potentially attributable to Cisplatin taken in connection with Claimant's chemotherapy.

determination between various medical experts, who have disagreed as to the cause of Claimant's hearing loss and tinnitus.

Compensability-Hearing Loss and Tinnitus

Both Claimant and Respondent agreed the overriding issue in the instant case was whether Claimant's hearing loss constituted a compensable occupational disease. An occupational disease is "a disease which results directly from the employment or conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard which the worker would have been equally exposed outside of the employment." §8-40-201(14), C.R.S. 2014.

A Claimant seeking benefits for an occupational disease must first establish the existence of the disease, then that it was directly and proximately caused by Claimant's employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claims,* 989 P.2d 251, (Colo. App. 1999). A Claimant is entitled to recovery for an occupational disease only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate, the disability for which compensation is sought. *Anderson v. Brinkhoff,* 839 P.2d 819, 824 (Colo. 1993)[9].

If Claimant establishes a causal relationship exists between the employment and occupational disease, the burden shifts to Respondents to prove both the existence of non-occupational contributors to the disease and the extent to which these contribute to the disability as well as the need for treatment. *Cowin & Co. v. Medina,* 860 P.2d 535, 537 (Colo. App. 1992). Where the disease for which a Claimant is seeking compensation is produced solely by some extrinsic or independent cause, it is not compensable. *Anderson v. Brinkhoff, supra,* 839 P.2d at 824.

In this regard, Claimant contended he satisfied his burden of proof that his hearing loss was proximately caused by noise exposure he experienced at work. Claimant relied upon his testimony concerning noise exposure, evidence of OSHA violations, along with the expert opinions of Dr. Lipkin to support his contentions. Claimant urged the rejection of Drs. Fall and Jacobson's opinions with regard to causation.

On the other hand, Respondent asserted Claimant failed to meet his burden of proof and did not establish Claimant was exposed to a level of occupational noise which caused his hearing loss. Respondent averred Dr. Jacobson's and Dr. Fall's opinions were more persuasive than those of Dr. Lipkin on this issue. Respondent also argued non-occupational factors were the cause of Claimant's hearing loss.

[9] The ALJ notes *Anderson v. Brinkhoff* was decided under prior version of the definitional section in the Colorado Worker's Compensation Act, however, its holding concerning proof of an occupational disease remains good law.

At the heart of the compensability question was an evaluation of the evidence concerning Claimant's noise exposure while working for Employer and an assessment of the respective expert opinions. The analysis of this issue was divided into two parts. First, did Claimant adduce sufficient evidence to establish that his hearing loss directly resulted from his employment and constituted an occupational disease. The ALJ answered this question in the affirmative.

In the case at bench, there was no dispute Claimant had no hearing loss before starting work for Employer. (Finding of Fact 3). During his forty year employment, Claimant worked in a noisy environment on a daily basis. As found, Claimant was exposed to noise in the workplace in excess of OSHA-prescribed limits threshold for hearing damage. (Finding of Fact 33 and 34).

The evidence admitted at hearing also led the ALJ to conclude Claimant wore hearing protection throughout his employment. (Finding of Fact 7 and 17). The evidence regarding hearing protection during Claimant's early employment from 1975-1994 was that it was not as effective as it is at present. (Finding of Fact 7 and 13). Claimant testified to this fact, which was confirmed by Mr. McGurk, Employer's representative. (Finding of Fact 23).

The most significant area of dispute was the level of Claimant's exposure and whether it was the cause of his hearing loss and tinnitus. Respondent's experts questioned whether Claimant, who was compliant with wearing hearing protection, received a sufficient level of noise exposure to cause his hearing loss and tinnitus. Claimant's testimony established he was exposed to Stage 2 aircraft, whose noise level was 180-190 decibels while working at Stapleton. (Finding of Fact 6). Claimant was also exposed to aircraft revving the engines to pull away from the gate. (Finding of Fact 5). Even assuming hearing protection reduced the noise exposure by 30 dB and he was not directly behind the engines, Claimant's exposure was well above 110 dB limit, which was sufficient to cause hearing damage. The inference drawn by the ALJ from Dr. Lipkin's report was that the level of noise Claimant was exposed to and the efficaciousness of the hearing protection used caused Claimant's hearing loss.

Respondent did not submit sufficient evidence to dispel this conclusion, as both Dr. Jacobson and Fall assumed Claimant's noise exposure was much lower based upon the testing done in 2010. Neither of Respondent's experts persuaded the ALJ that Claimant's noise exposure during his early employment was not the cause of his hearing loss. Dr. Jacobson's admission on cross-examination that he found hearing loss in other ramp employees at Stapleton indirectly helped to prove this point. In short, the ALJ was persuaded by the evidence that the cumulative effect of Claimant's exposure to older aircraft (Stage 1 & 2), the occasions when he took of his hearing protection to communicate with other mechanics and his work on the ramp at Stapleton; all were sufficient to cause hearing loss.

Considering the totality of the evidence, Claimant's noise exposure at work led the ALJ to conclude Claimant was exposed to noise levels which led to the STS and ultimately hearing loss. The ALJ found this occurred over time, as opined by Dr. Lipkin. The ALJ relied on Claimant's testimony, along with Dr. Lipkin's opinion regarding the cause of his hearing loss and was persuaded that the noise levels to which he was exposed caused progressive hearing loss. As determined in Finding of Fact 31 and 36, Dr. Jacobson's testimony concerning nerve damage also supported this conclusion.

As found, Claimant proved his hearing loss resulted directly from his employment as an airline mechanic and was a natural consequence of the work. The exposure to noise levels in excess of the OSHA standards were occasioned by his employment and he was not equally exposed to this hazard outside of his employment. *Cowin & Co. v. Medina, supra,* 860 P.2d at 537. Based upon the evidence before the Court, the ALJ found Claimant's hearing loss was compensable as an occupational disease.

Turning to the second consideration, the ALJ evaluated whether Respondent submitted sufficient evidence to prove Claimant's hearing loss resulted from non-occupational factors or medical conditions. On this subject, Respondent's experts disagreed with the conclusions of Claimant's expert. As noted, *supra*, Respondent's experts disagreed the noise exposure was sufficient to cause hearing loss. Dr. Fall and Dr. Jacobson also both opined that Claimant's hearing loss was also from non-occupational medical conditions. As found, Dr. Jacobson's testimony was less persuasive because he completely excluded Claimant's occupational noise exposure as a factor in his hearing loss. Therefore, Dr. Jacobson's conclusion regarding the etiology of Claimant's hearing loss (that it resulted from non-occupational factors) was not persuasive. (Finding of Fact 33 and 38). The focus of Dr. Fall's opinion was that it was attributable to Claimant's age and other factors. By completely excluding the work exposure, these expert opinions were less credible.

In addition, Dr. Fall did not address the cause of Claimant's tinnitus. (Finding of Fact 32). Dr. Jacobson commented that he had tinnitus was not persuasive to the ALJ regarding the cause of this condition. (Finding of Fact 33). This did not refute Dr. Lipkin's conclusion that Claimant's exposure to work place noise over time caused tinnitus.

On balance, the ALJ concluded while Claimant had non-occupational risk factors for hearing loss, there was insufficient proof that these factors actually caused the hearing loss. Both Dr. Jacobson and Dr. Fall agreed there was no medical opinion within the Kaiser Permanente records that these non-occupational factors were a cause of Claimant's hearing loss. Both experts conceded the presence of non-occupational factors did not necessarily mean these caused Claimant's hearing loss. (Finding of Fact 32 and 38). Accordingly the ALJ concluded Respondent did not meet its burden of proof to show that non-occupational factors or medical conditions caused Claimant's hearing loss. Since Claimant's condition is a compensable occupational disease, he is entitled to receive medical benefits for his hearing loss.

Medical Benefits-Authorized

As found, when Claimant reported his hearing difficulties he was sent to the ATP for Employer, Dr. Holmboe, who then ordered audiometric testing. (Finding of Fact 16). Therefore, Dr. Holmboe is an ATP.

When further discussions ensued between Claimant and his supervisor, he was told he was "on his own" for treatment of the hearing loss. (Finding of Fact 16). Claimant then sought treatment with Dr. Lipkin. (Finding of Fact 17). A Claimant "may engage medical services if the employer has expressly or impliedly conveyed to the employee the impression that the employee has authorization to proceed in this fashion." *Greager v. Industrial Commission,* 701 P.2d 168, 170 (Colo. App. 1985); *see also, Brickell v. Business Machines, Inc.,* 817 P.2d 536 (Colo. App. 1990).

Under these circumstances, Employer conveyed the impression that Claimant was authorized to secure treatment on his own. Therefore, Dr. Lipkin is an ATP to treat Claimant's hearing loss.

ORDER

It is therefore ordered that:

1. Claimant suffered a compensable hearing loss while working for Employer.

2. Employer shall provide medical benefits to cure and relieve the effects of Claimant's hearing loss.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-981-802-02

ISSUES

➢ Whether claimant suffered a compensable injury on December 6, 2013?

➢ Whether claimant is entitled to medical treatment, specifically right shoulder surgery, as a result of his alleged injury on December 6, 2013?

➢ Whether Respondents violated C.R.S. § 8-43-103(1) or W.C.R.P. 8-2(A), and if so, whether claimant is entitled to an award of penalties.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Employer hired claimant on June 9, 2012 and employed his as a foreman.

2. Six months prior to Claimant's accident, he underwent Laterjet right shoulder surgery to stabilize it. Claimant had a history since age 13 of repeated and frequent dislocations. Prior to his surgery, his shoulder would dislocate as many as seven or eight times a day.

3. November 26, 2013 medical records show that Claimant sought treatment for right shoulder pain and that he was being tapered off of Percocet.

4. Claimant alleges that he sustained right shoulder and neck injuries as a result of rear end collision that took place on December 7, 2013.

5. On December 7, 2013, Claimant was working with a crew near San Antonio, Texas. Claimant was seat-belted while driving Employer's Ford F250 work truck. Claimant stopped at a stop sign or red light and the truck was rear-ended by a light weight vehicle. Claimant testified that the impact was severe, that the truck was hit by a vehicle travelling at least 55 miles per hour, and reported to at least one medical provider that he was thrown violently around in the vehicle.

6. Claimant's testimony and reports were contradicted by the testimony of Oliver Singleton who testified live at hearing. Mr. Singleton works as a supervisor for Employer and has worked for Employer approximately four years. Mr. Singleton was in the vehicle with Claimant on December 7, 2013. Mr. Singleton, who was riding unrestrained in the back seat, testified that he would characterize the rear end collision as very minor. The work truck was large and heavy and was rear ended by what he believed was a smaller, light weight SUV. He did not believe the vehicle that rear ended them was traveling at a high rate of speed at impact. Rather, he testified that he did not

even realize they had been hit from behind, instead believing the truck had downshifted. Mr. Singleton did not sustain any injury nor was he moved around the vehicle in any appreciable way. He testified that it would not be accurate if Claimant told medical providers that the vehicle that rear ended them was traveling 55 miles per hour. He also testified that it would not be accurate if Claimant told medical providers that the individuals in the vehicle were thrown around violently when they were rear ended. Finally, there was very minor damage to the truck they were driving as a result of collision.

7. Claimant's testimony and reports also were contradicted by the police report which described a "minor accident" that received a "non emergency" response; and Methodist Hospital records which indicate that the work truck was hit by a "Kia compact car" at moderate speed. Further, Claimant was able to drive the truck back to Colorado without any repairs. The record provides details of a minor collision.

8. Claimant's hearing testimony is also contradicted by his earlier report to Dr. Hattem. Claimant later reported to Dr. Hattem during an October 28, 2015 IME that the driver of the other vehicle pulled up alongside the truck and said that if everyone was okay, he would be leaving. Such would not be the case if the other vehicle sustained damage, and also indicates that neither the driver or passengers, if any, in the smaller car sustained serious injuries.

9. Claimant dropped his coworkers off at the job site, and drove himself to Methodist Hospital. Claimant complained of mild pain and identified the location of his pain as his neck. Claimant presented in no acute distress. Claimant had decreased range of motion in his neck due to pain and was noted to have a mild muscle spasm in the back of his neck. Claimant did not report shoulder symptoms or complain of right shoulder pain at the hospital, yet testified at hearing that his right shoulder was his worst injury. Diagnostics were not necessary. Claimant was diagnosed on examination with a cervical strain. Claimant was given ten Flexeril tablets and was instructed to take ibuprofen. Claimant was taken off work for three days and was not to lift more than ten pounds "until well." Claimant was seen at 8:18 a.m. and discharged at 8:44 a.m.

10. That same day, Claimant retained an attorney after speaking with the insurance carrier for the other driver. The attorney referred Claimant to chiropractor Dr. Graham in Colorado. Claimant saw the chiropractor twenty-four times between February 28, 2014 and February 27, 2015. Dr. Hattem described the chiropractor's handwritten notes as illegible.

11. Claimant rested the day of the accident and the following day. He returned to supervise the work the next day.

12. Employer's pay records show that during the week following the accident, Claimant worked 72.75 hours as a laborer and driller. The following week, Claimant worked 54 hours. No persuasive evidence supports a finding that Claimant worked under any restrictions during that time. Claimant continued to work full time for several months. Claimant's ability to work at heavy labor for extended hours support a finding

that Claimant was not injured.

13. Claimant testified that after he returned to Colorado, he told Employer's owner, Mike Davis, that he had shoulder pain. Claimant did not say that his shoulder pain was a result of the accident. Claimant testified that Employer allowed Claimant to drive a dump truck until that work became unavailable. As an equipment operator, Claimant was paid $19.78, a higher hourly rate that he was paid as a laborer or driller, $15.00 and $16.93 respectively.

14. On December 30, 2013, Claimant sought care at St. Thomas More. He complained of neck pain since the accident, with migraines and restricted neck movement. Claimant had not taken any pain medication for two weeks. Claimant did not report right shoulder symptoms. A CT scan of Claimant's neck was performed and read as negative.

15. Claimant was to follow up with his PCP, Dr. Button. However, Claimant testified that Dr. Button did not treat Claimant because he did not see patients for motor vehicle accidents. Claimant returned to Dr. Button in October, 2014. Dr. Button's October 22, 2014 report notes that Claimant's automobile coverage had ended and that Claimant needed Medicaid coverage.

16. The ALJ reasonably infers from this fact and from the fact that Claimant retained counsel on the day of the accident that Claimant chose to pursue treatment under automobile coverage rather than pursue a claim under workers ' compensation.

17. On February 4, 2014, Claimant sought treatment at Button Family Practice after he fell on ice. The record of that visit notes a "right shoulder injury….this a.m. fell on ice with outstretch[ed] right arm to catch fall."

18. When Claimant was seen by Dr. Graham on February 28, 2014, Claimant did not mention injuring his right shoulder when he fell on ice on February 4, 2014. Rather, he refers only to the rear end collision on December 7, 2013, and mentions right shoulder pain and neck pain.

19. On March 14, 2014, Claimant sought treatment from Dr. Weinstein who documented Claimant "denies any neck pain, numbness, tingling, or motor weakness." Claimant did not mention his February fall on ice. Rather, he reported to Dr. Weinstein that he "had a significant shoulder injury" due to a car accident.

20. Claimant's interrogatory responses, signed and notarized on November 16, 2015, were admitted into evidence at the hearing. Interrogatory no. 7 propounded the following question to Claimant:

> **Question**: Other than your injury in this claim, describe in detail any accidents, physical injuries, diseases, or other health problems, whether or not work-related, that you have sustained, including the date of the injury, the name of any

medical provider who treated the injury, and any permanent disability sustained from the injury.

Claimant answered: "I underwent a surgery with Dr. FitzPatrick in 2013 to fix my right dislocated shoulder. After the accident on December 6, 2013, I underwent another surgery on my right shoulder with Dr. David Weinstein in March 2014. Also, I was involved in a motor vehicle accident on March 14, 2015 and had to undergo right shoulder replacement surgery with Dr. FitzPatrick in June 2015. I'm scheduled to undergo left shoulder surgery with Dr. FitzPatrick on November 20, 2015."

21. Claimant's answer failed to disclose the following events which required emergency room care:

- On January 20, 2009, claimant was assaulted and sustained cervical trauma at C2-3.

- On July 31, 2009, Claimant was riding on the back of a truck which hit a large boulder and claimant was thrown into a rail. Claimant reported chest pain that radiated into his axilla, and subsequent loss of consciousness.

- On February 15, 2010, Claimant fell 8 feet off his truck and dislocated his left shoulder.

- On July 4, 2010, Claimant injured his right shoulder when it popped out of place and he could not move his hand.

- On October 3, 2011, Claimant hit a deer while driving 60 mph. The St. Thomas More Hospital records document neck pain.

- On May 9, 2013, Claimant injured his arm and shoulder when climbing over a horse panel.

- On May 30, 2013, Claimant was seen at Centura Health for "right shoulder recurrent instability."

- On February 4, 2014, Claimant injured his right shoulder when he slipped and fell on ice with his right arm outstretched to catch his fall.

- On September 9, 2014, Claimant sustained a hernia when lifting a car engine.

- On January 9, 2015, Claimant had "left inguinal hernia surgery three months ago, and reinjured himself at work while pulling and straining on heavy machinery."

22. Interrogatory no. 12, propounded the following question:

> **Question**: Describe your current daily activities, including any hobbies, sports, or recreational activities in which you participate. Be sure to include whether you ride bulls or other animals, and if so, whether you have sustained any injuries from this activity.

Claimant answered: "I am very limited with my daily activities. I cannot carry heavy items, or anything over 5 lbs. I have hard time with daily chores: carrying groceries, sweeping, moping; my right arm doesn't work property. I used to go water skiing, tubing behind the boat. And I'm unable to do those activities since the injury. Occasionally, I used to ride horses, and now I'm unable to do that. I never fell from the horse before. I do not ride bulls or other animals, and I never had any injuries from riding horses."

23. Claimant's response is inconsistent with the following:

- On August 26, 2012, medical records from St. Thomas More Hospital document Claimant: "Got bucked off of horse landed on tail bone…..low back pain."

- On cross examination at hearing, after being a shown a picture of himself participating in a "Warrior Dash Race", Claimant acknowledged that it was him in the picture and he participated in the race in August, 2015. The picture shows Claimant doing some type of water crossing with both arms above his head climbing across a rope ladder in an obstacle course. At hearing, Claimant also acknowledged that he posted this picture social media.

24. Mr. Davis testified at hearing that he knew his crew was involved in a rear end collision on December 7, 2013, while were working in San Antonio, Texas. He spoke with Claimant immediately after the accident and Claimant told him that he had called the police to make a report, he was not injured, and that the vehicle sustained only minor damage. Claimant told Mr. Davis that he and a coworker were going to the hospital to be evaluated, and later reported that they were not injured.

25. Mr. Davis testified that if Claimant were to have reported an injury to him, he would have prepared a first report of injury and directed Claimant to see a workers' compensation physician. Mr. Davis testified that he has protocols in place and adheres to the workplace rules regarding reporting work related injuries. Mr. Davis has dealt with other employee's work related injuries with Employer in the past and prepared reports of injury accordingly.

26. Although Claimant testified that Mr. Davis told him the accident was not covered by workers' compensation because Claimant was not "on the clock" when he was injured, Mr. Davis denied making the statement. Further, Mr. Davis testified that he did consider all of his crew in the vehicle on December 7, 2013 to be at work and on the clock, and had handled a previous workers' compensation claim where that was the

case.

27. Mr. Davis testified that Claimant abandoned his job in April of 2014 and, to his knowledge, left to start a business servicing radiators and working on cars. Mr. Davis did not speak to claimant after April of 2014.

28. Mr. Davis first learned that Claimant was reporting a work related injury due to the rear end collision on December 7, 2013, in April of 2015, when he received notice from Pinnacol Assurance that a claim had been filed.

29. On January 20, 2015, Claimant was seen at Valley Wide Health Systems. He reported, "Approximately 1 year ago he was read ended by a car traveling > 55mph and was thrown violently around the car and sustained additional damage to the right shoulder."

30. On March 14, 2015, Claimant was involved in a significant non work-related high speed motor vehicle accident. Claimant was an unrestrained passenger driving with his father and was ejected from the car during a rollover accident. Claimant lost consciousness and sustained multiple injuries including head trauma, a right shoulder fracture, left rib fracture, pelvic fracture, and multiple lacerations.

31. On April 30, 2015, Claimant filed a worker' claim for compensation for alleged injuries that he sustained on December 7, 2013. On the same day, Claimant prepared a first report of injury for the alleged injuries on December 7, 2013.

32. Dr. Albert Hattem, M.D., performed a Respondents Independent Medical Examination (IME), of Claimant and issued a report on October 25, 2015. As part of his IME, Dr. Hattem evaluated Claimant, took Claimant's medical history, and reviewed Claimant's medical records. Dr. Hattem opined:

- It was not plausible that the December 7, 2013 accident could lead to a significant aggravation of the Claimant's preexisting right shoulder condition. It was not likely that the mechanism of injury could even result in any type of shoulder injury.

- The shoulder surgery performed by Dr. Weinstein in 2014 was not related to the December 2013 rear end accident.

- Claimant was involved in a catastrophic second motor vehicle accident in March 2015. But for the second motor vehicle accident, Claimant would not have required a right total shoulder arthroplasty done in 2015.

33. Dr. Hattem attended the hearing. However, due to time constraints, he was unable to testify live and the Judge permitted his post hearing deposition, which took place on May 13, 2016. The deposition transcript was admitted as Respondent's Exhibit W.

34. Dr. Hattem testified as an expert in occupational medicine. He testified that he asked Claimant about his prior injuries and physical problems. Claimant did not disclose to him: injuring his neck in an assault in 2009, injuring his neck injury in 2011 when he hit a deer going in excess of 60 miles per hour, injuring his right shoulder injury in May of 2013 when he fell climbing over a horse panel, injuring his right shoulder in February of 2014 when he slipped and fell on ice.

35. Dr. Hattem opined that based on his review of the medical records, Claimant had a pre-existing history of neck pain and right shoulder pain, which pre-dated the December 7, 2013 accident.

36. Six months prior to the December accident, Claimant had a Laterjet right shoulder surgical procedure, which has complication/failure rates as high as 25-30%.

37. Dr. Hattem testified that when Claimant was evaluated at Methodist Hospital in San Antonio, essentially no treatment was administered and no diagnostics were conducted, and it appeared to be a minor incident.

38. Dr. Hattem would not relate Claimant's need for shoulder surgery to the December 7, 2013 rear end collision for multiple reasons. First, "the mechanism of injury is not consistent with the shoulder condition. His car was just pushed forward." Second, Claimant did not mention shoulder pain or injury at Methodist Hospital. Third, Claimant did not report shoulder injury or pain later at St. Thomas Moore. And fourth, Claimant most likely sustained a non work-related right shoulder injury on February 4, 2014, when he slipped and fell on ice with his right arm outstretched.

39. Dr. Hattem opined that Claimant's fall on February 4, 2014, was the proximate cause for Dr. Weinstein's right shoulder surgery that occurred on June of 2014.

40. Dr. Hattem opined that Dr. Graham and Dr. Weinstein did not have medical records from Claimant's initial hospital visits, and therefore did not have an accurate picture of Claimant's pre-existing medical history, nor an accurate understanding of the severity of the December 7, 2013, accident. Claimant's cervical MRI was normal, and "there was no objective evidence of there being any cervical spine pathology at all." The rear end collision of December 7, 2013 did not aggravate Claimant's preexisting right shoulder condition or neck condition.

41. The testimony of Dr. Hattem is credible and persuasive.

42. The documentary evidence as well as the testimony of Mr. Davis and Mr. Singleton, is more credible and persuasive than the testimony of Claimant.

43. Claimant's testimony is not credible.

44. Claimant has not met his burden of proving by a preponderance of the evidence that he sustained a work-related injury on December 7, 2013.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. § 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. § 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S.

The ALJ's factual findings concern only evidence dispositive of the issues involved. The ALJ has not addressed every piece of evidence leading to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010). It is the sole province of the fact finder to weigh the evidence and resolve contradictions therein. See *Pacesetter Corp. v. Collett,* 33 P.3d 1230 (Colo. App. 2001).

When determining credibility, the fact finder should consider, among other things the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline,* 57 P.2d 1205 (1936). A Workers' Compensation case is decided on its merits. Section 8-43-210, C.R.S.

An injury is compensable under Colorado's Workers' Compensation Act if incurred by an employee in the course and scope of employment. § 8-41-301(1)(b), C.R.S.; *Price v. ICAO,* 919 P.2d 207 (Colo. 1996). Claimant must show a connection between the employment and the injury, such that the injury has its origin of the employee's work-related functions, and is sufficiently related to those functions to be considered part of the employment contract. *See Madden v. Mountain W. Fabricators*, 977 P.2d 861 (Colo. 1999).

A pre-existing condition "does not disqualify a Claimant from receiving workers' compensation benefits." *Duncan v. ICAO*, 107 P .3d 999, 1001 (Colo. App. 2004). Thus, if an industrial injury aggravates, accelerates, or combines with a pre-existing condition so as to produce disability and need for treatment, the claim is compensable. *Id*. The ALJ finds and concludes that Claimant presented no persuasive evidence that his condition was aggravated, accelerated, or combined with the pre-existing disease or infirmity to produce a disability or need for medical treatment.

Claimant is not credible. His account of the December 7, 2013 accident is contradicted by the vast weight of documentary evidence and the consistent and credible testimony of other witnesses. Also, his reporting of the severity of the accident became exaggerated over time. His interrogatory response about previous injuries was vastly understated, as were his responses about his physical abilities. His account of his work limitations is contradicted by payroll records which show that the worked 72.75 hours as a laborer and driller the week immediately following his accident and 54 hours the following week.

The ALJ credits the opinions of Dr. Hattem as credible and persuasive. Neither Dr. Graham nor Dr. Weinstein had an accurate picture of Claimant's prior medical history, did not possess his medical records, and had only Claimant's subjective reporting to rely on regarding the rear end collision on December 7, 2013. Because the ALJ has found Claimant not credible, she further discredits the opinions of Dr. Graham and Dr. Weinstein as they relied on Claimant's reporting.

The evidence supports the conclusion that Claimant chose not to pursue a workers' compensation claim until long after the incident. Rather, he retained an attorney and deliberately chose to pursue coverage under the other driver's auto policy. His reports to Mr. Davis that he was uninjured, his initial medical evaluation, and other persuasive evidence all support the conclusion that Claimant was not injured in the December 7, 2013 accident.

Therefore, the ALJ concludes that based on the totality of the evidence, Claimant did not meet his burden of proving by a preponderance of the evidence that he sustained a compensable injury. Because the ALJ finds and concludes that Claimant did not sustain a compensable injury, she likewise finds and concludes that Claimant is not entitled to medical treatment, specifically right shoulder surgery.

Claimant has also failed to prove entitlement to penalties based on the alleged violation of 8-43-103(1) or WCRP 8-2. In relevant part, 8-43-103(1) provides:

> Notice of an injury, for which compensation and benefits are payable, shall be given by the employer to the division and insurance carrier, unless the employer is self-insured, within ten days after the injury, and, in case of the death of any employee resulting from any such injury or any accident in which three or more employees are injured, the employer shall give immediate notice thereof to the director. If no such notice is given by the employer, as required by articles 40 to 47 of this article, such notice may be given by any person. Any notice required to be filed by an injured employee or, if deceased, by said employee's dependents may be made and filed by anyone on behalf of such claimant and shall be considered as done by such claimant if not specifically

> disclaimed or objected to by such claimant in writing filed with the division within a reasonable time.

As found, Claimant did not report an injury to Mr. Davis due to the rear end collision of December 7, 2013. Rather, when the two spoke the day of the accident Claimant indicated that he was fine, and that there was minor damage to the truck. When Claimant returned from Texas to Colorado he did not report an injury, and if he had, Mr. Davis would have referred Claimant for medical treatment and filled out the appropriate paperwork to file a workers' compensation claim. Mr. Davis first learned that Claimant was alleging an injury from the December 7, 2013 rear end collision in April of 2015, when he received paperwork from Pinnacol Assurance. Claimant's first report of injury states the "Date employer notified" was "4/30/15". The key provision in 8-43-103(1) is notice of an injury, not just an accident. In this matter, Mr. Davis was well aware that an accident occurred on December 7, 2013; however, he was not notified that an injury resulted from the rear end collision. As a result, Employer will not be penalized for failing to file a notice of injury with the Division.

In addition, the penalty allegations claimant has made are barred by the relevant statute of limitations. Notwithstanding the arguments noted above, Claimant's penalty claims are beyond the time period for requesting penalties under 8-43-304(5). In relevant part, 8-43-304(5) provides: "A request for penalties shall be filed with the director or administrative law judge within one year after the date that the requesting party first knew or reasonably should have known the facts giving rise to a possible penalty."

Claimant testified at hearing, and in his discovery responses that were entered into evidence, that he reported a work injury to Mr. Davis, on December 7, 2013. As a result, he was required, pursuant to 8-43-304(5), to file his alleged penalty claim with the director within one year after he knew about the possible penalty. Claimant failed to do this, and instead did not file the alleged penalty request until his initial application for hearing which was filed on June 15, 2015, a year and a half after the alleged penalty.

Claimant has failed to bring this requested penalty within the mandatory timeframe of 8-43-304(5). In addition, Claimant has offered no credible evidence that he somehow did not know the facts giving rise to a possible penalty. Rather, Claimant testified that he reported an injury to his supervisor Mr. Davis the same day it occurred, December 7, 2013.

Finally, with respect to the alleged WCRP 8-2 violation, Respondents contend that the same arguments apply, and in any event, a monetary penalty is not the remedy for such a violation; rather, it is that Respondents lose their right to designate, giving claimant the choice of provider.

The penalty allegations were not plead with specificity as required by 8-43-304(4) and, in any event, have been cured pursuant to 8-43-304(4). As noted above, 8-43-103(1) provides: "Notice of an injury, for which compensation and benefits are payable, shall be given by the employer to the division and insurance carrier, unless the employer is self-insured, within ten days after the injury, and, in case of the death of any employee resulting from any such injury or any accident in which three or more employees are injured, the employer shall give immediate notice thereof to the director. If no such notice is given by the employer, as required by articles 40 to 47 of this article, such notice may be given by any person. Any notice required to be filed by an injured employee or, if deceased, by said employee's dependents may be made and filed by anyone on behalf of such claimant and shall be considered as done by such claimant if not specifically disclaimed or objected to by such claimant in writing filed with the division within a reasonable time."

In addition, 8-43-304(4) provides: "In any application for hearing for any penalty pursuant to subsection (1) of this section, the applicant shall state with specificity the grounds on which the penalty is being asserted. After the date of mailing of such an application, an alleged violator shall have twenty days to cure the violation. If the violator cures the violation within such twenty-day period, and the party seeking such penalty fails to prove by clear and convincing evidence that the alleged violator knew or reasonable should have known such person was in violation, no penalty should be assessed. The curing of the violation within the twenty-day period shall not establish that the violator knew or should have known that such person was in violation."

Claimant filed a first report of injury on May 7, 2015. As a result, the alleged penalty was cured. Section 8-43-304(1) provides that if no such notice is given by the employer, "such notice may be given by any person." *See* 8-43-304(1). The filing of the First Report of Injury, which was done by Claimant's own attorney, cured the alleged penalty before an application for hearing was ever filed. Moreover, Claimant has not presented any clear and convincing evidence that Employer knew or should have known that they were in violation of any rule regarding reporting injuries at work. As found, Mr. Davis credibly testified that while he was aware of December 7, 2013, accident, Claimant explicitly told Mr. Davis that he was not injured.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for compensation is denied and dismissed.

2. Claimant's claim for penalties is denied and dismissed.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 14, 2016

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

The issues presented for determination are whether the lumbar fusion surgery recommended by either Dr. John Barker or by Dr. John Stanley is reasonable, necessary and related to the Claimant's work injury.

FINDINGS OF FACT

1. The Claimant, who is 42-years old, suffered a low back injury on November 24, 2014 while working for the Employer.

2. On December 9, 2014, Claimant had an MRI of his lumbar spine. The radiologist's impressions were: Multilevel discogenic degenerative changes of the lumbar spine; and right foraminal/far lateral disc protrusion at L5-S1 which results in moderate to severe neural foraminal stenosis and mass effect with possible impingement of the exiting right L5 nerve root. Claimant's MRI showed disc bulges at every level of his lumbar spine from L1 through L5.

3. The Claimant apparently rested for a few weeks and took medications but did not improve. He was eventually referred to Dr. John Barker who is a spine surgeon.

4. Dr. Barker initially evaluated the Claimant on December 15, 2014. Dr. Barker's notes indicate that Claimant's MRI showed degenerative disc disease from the L2 to S1 levels of the spine and foraminal stenosis on the right at L5-S1 from a "far lateral disc herniation."

5. By February 5, 2015, Claimant was reporting to Dr. Barker that physical therapy and an epidural steroid injection (ESI) had not provided significant relief. Claimant reported occasional numbness and tingling in his left leg that was not present in December 2014. Dr. Barker's impressions were: lumbar degenerative disc disease from L2-S1, lumbar stenosis, right-sided disc herniation at L5-S1, lumbar spondylosis, and mild thoracic degenerative disc disease.

6. Claimant continued with conservative treatment until April 15, 2015 when Dr. Barker recommended a discogram and post-discogram CT scan to determine which discs are causing Claimant's symptoms.

7. The Respondents requested that Dr. Michael Janssen perform a review prior to approving or denying the discogram authorization request. Dr. Janssen issued a report dated April 21, 2015. He noted that the MRI failed to demonstrate findings that would warrant discography. Dr. Janssen recommended denying the discography until after Claimant had his scheduled second opinion evaluation with Dr. Stanley. Dr. Janssen noted that "there is some suggestion and general impression (from the medical

records) there may be symptom amplification and the patient has been clearly off work ever since the date of injury."

8. On May 7, 2015, Dr. Stanley evaluated the Claimant. Dr. Stanley concurred with Dr. Barker that a discogram might be helpful. He also recommended facet injections at the L4-5 and L5-S1 levels. Dr. Stanley indicated the injections might be both diagnostic and therapeutic. Dr. Stanley also wanted Claimant to have a CT scan of the lumbar spine to determine if an L5 pars defect was present.

9. On May 12, 2015, Dr. Janssen opined that there was "no clear cut anatomical pathology that was correlated with the November 24th lifting injury." Dr. Janssen noted that Claimant has long standing age-related disc disease to the lumbar spine, facets, discs and possibly even a pars interarticularis defect (spondylolysis). Dr. Janssen opined that there was no exacerbation or "truly an occupationally related injury." Dr. Janssen, therefore, recommended against injections, discography, or invasive workup, but did opine that the CT scan recommended by Dr. Stanley appeared reasonable.

10. Respondents referred the Claimant to Dr. Anant Kumar for an independent medical evaluation which occurred on June 5, 2015. Dr. Kumar noted his review of the imaging studies and took a history from the Claimant. Dr. Kumar concluded that Claimant has axial back pain with no neurological deficits but has occasional left lower limb radiculopathy. Dr. Kumar recommended a non-surgical approach for axial back pain including weight reduction, non-impact exercise such as swimming and land rehabilitation. Dr. Kumar stated that "surgical treatment for axial back pain is fraught with failure and has unpredictable results." He opined that no additional tests are required and no further treatment options are required.

11. On August 17, 2015, Dr. Scott Primack evaluated the Claimant. Dr. Primack administered a Comprehensive Outcome Management Technologies Assessment to determine if any psychosocial factors would preclude a good outcome. The results suggested that Claimant has some significant psychosocial factors which would preclude a good outcome but Dr. Primack opined that the results were understandable given the Claimant's longstanding pain, pathology and lack of progress. Dr. Primack indicated it would be reasonable and appropriate for the Claimant to undergo psychological treatment as he progresses through rehabilitation.

12. Dr. Primack also counseled the Claimant regarding next steps including a fusion procedure. Dr. Primack explained to the Claimant that if he was not prepared for a fusion he should not have it done, and that if the disogram were negative, he would not need a fusion. Dr. Primack explained to Claimant that if he has no interest in a fusion then discography and psychological testing would be superfluous.

13. Dr. Primack indicated that an option other than fusion would be facet injections, and if those provided a good response, a facet joint rhizotomy might be considered.

14. On August 13, 2015, Dr. Stanley wrote a letter to the Insurer in response to a request from the Insurer. Dr. Stanley indicated that he is unaware of any pars defect diagnosis prior to May 7, 2015. Dr. Stanley indicated that the work-related lifting incident could have further displaced the pars defect as well as the bone structure into the foramen causing the lower extremity discomfort. Dr. Stanley agreed with Dr. Kumar that weight reduction and non-impact exercise could be helpful, but he disagreed that surgical treatment for axial low back pain is fraught with failure and unpredictable results. Dr. Stanley indicated that he did not have such experiences with displaced pars fractures. Dr. Stanley opined that Dr. Barker is recommending the proper course of care.

15. On August 20, 2015, Dr. Janssen noted that Claimant was pulling a compressor on the second day of work and sustained non-specific low back pain, and reiterated the injury occurred on Claimant's second day of employment. Dr. Janssen opined that it is highly likely Claimant reached maximum medical improvement "regarding his alleged occupational injury and there is high suspicion that is concurred that surgical intervention in this longstanding degenerative disease may have little value in this particular patient." Dr. Janssen also stated that he would concur with Dr. Stanley that appropriate treatment would either be a referral back to Dr. Kumar for an MMI determination or to Dr. Barker. Dr. Janssen concluded this report by stating the MRI findings demonstrate longstanding multi-level age-related symptomatology that would not be suggestive of a lifting injury that occurred on the second day of employment.

16. On September 18, 2015, Dr. Primack issued a report in which he opined that the odds of a good surgical outcome decrease as the number of levels fused increases. Dr. Primack again offered Claimant the opportunity to undergo facet injections for potential facet syndrome. The Claimant expressed understanding of Dr. Primack's opinions concerning surgical outcomes but he wished to be worked up for a fusion procedure nevertheless. The Claimant elected to follow up with Dr. Barker for a fusion workup.

17. On December 16, 2015, Claimant underwent a CT scan of the lumbar spine, which revealed disc degeneration ranging from grade three to grade five at every level from L1-2 through L5-S1, in addition to confirming the existence of bilateral pars defect at L5 with anterolisthesis of L5 and S1.

18. On December 16, 2015, Claimant also underwent a discography, which was positive for concordant pain from L2-3 through L5-S1. The discography results suggested that L1-2 was negative as the pain elicited was not concordant with the Claimant's usual pain.

19. On December 28, 2015, Dr. Barker recommended a four-level fusion from L2 to S1 spine levels. Dr. Barker noted that the problem with a two-level fusion from L4 to S1 is that Claimant has positive discogram results at levels L3-4 and L2-3, and a fusion below those levels would cause rapid degeneration at those levels and need for a second surgery. Dr. Barker discussed the risks and benefits of the surgery with the Claimant, as well as post-operative restrictions. The Claimant expressed awareness of

the potential complications and restrictions and elected to proceed with the fusion surgery.

20. On January 8, 2016, Dr. Janssen issued a report in which he described the fusion recommendation as a "major intervention" which "may not deal with the underlying anatomical pathology" and was based on "soft criteria (discography) and longstanding spondylosis." Dr. Janssen again opined that Claimant's findings are "most likely congenital and not work-related in any capacity . . ." For these reasons, he recommended against a two-level or four-level fusion.

21. Dr. Barker testified via deposition on May 2, 2016. Dr. Barker identified several potential generators of Claimant's symptoms, including discogenic pain, the pars defect, and facet mediated pain. Dr. Barker testified that Claimant does not have instability or stenosis. Dr. Barker testified that weight loss would be helpful, and although he felt this would be challenging. Besides weight loss and surgery, Dr. Barker does not have any other treatment recommendations. Dr. Barker is worried that if nothing is done, given that Claimant has not improved in 18 months, he will never return to work, he will gain more weight and become unhealthier.

22. Dr. Barker testified that his goal with a fusion would be to relieve seventy-five percent of Claimant's back pain. He recommends a four-level, instrumented, posterolateral and transforaminal interbody fusion. Dr. Barker testified that he agrees with Dr. Kumar "that you have to worry about . . . a four-level fusion on a young guy like this when it is mainly back pain." Dr. Barker testified that a two-level fusion "would be a bad idea" because it would cause rapid degeneration at the levels above the fusion and lead to another surgery "soon."

23. On May 23, 2016, Lance La Certe, Psy.D., performed a pre-surgical psychological evaluation of the Claimant. Dr. La Certe observed Claimant engage in pain behaviors but he did not believe that Claimant was exaggerating. Dr. La Certe documented that Claimant worked for the Employer for 17 years performing repetitive heavy labor.

24. Claimant reported to Dr. La Certe that he experiences nightly, pain-related sleep disruption. Claimant reported the ability to complete activities of daily living, but some activities, such as driving are compromised due to pain. Claimant reported intermittent overeating and weight gain of approximately 60 pounds since the injury. Claimant reported smoking five to six cigarettes per week which he attributed to stress and chronic pain. Dr. La Certe concluded that Claimant is a reasonable surgical candidate from a psychosocial perspective, but he identified litigation, obesity, and smoking as risk factors for a poor recovery.

25. Dr. Janssen testified via deposition on May 26, 2016. He performs spinal fusion surgeries and is board-certified in the fields of spine surgery and orthopedic surgery. Dr. Janssen has never examined or met the Claimant.

26. Dr. Janssen opined that a fusion is not reasonable and necessary due to the dubious objective findings, Claimant's comorbidities, and the low odds of a good outcome. Dr. Janssen also referenced the Division of Workers' Compensation's Medical Treatment Guidelines (hereinafter "*Guidelines*").

27. Dr. Janssen testified that Claimant's pain generators have not been adequately identified and the discography findings are "soft" because "if you have to do four or five levels of discography . . . then the clinician really doesn't know for sure where the pain is coming from." Dr. Janssen explained that four-level fusions are more complicated and riskier than two-level fusions, and are more successful in patients with grossly unstable spines due to deformities such as scoliosis. He further testified that if Claimant undergoes a fusion "it will just be a matter of time in a young patient before he breaks down" at the adjacent levels and requires more surgery. Dr. Janssen stated that, "that's why, in general, in my opinion, consistent with the guidelines, doing low back pain surgery over multiple levels . . . doesn't give great outcomes compared to patients who have one or two single clearcut anatomical problems."

28. Dr. Janssen recommended rehabilitation, weight loss, and psychological care. Dr. Janssen disputes the notion that Claimant cannot lose weight due to his symptoms and explained that he simply needs to decrease his overall caloric intake in comparison to his current activity level.

29. Claimant testified that he continues to occasionally smoke cigarettes. Claimant also testified that he has not yet attempted pool therapy or facet injections.

30. The Claimant testified at hearing that when his back pain is at its worst it is at a level of 7 with 1 being mild pain and 10 being severe pain. He stated that the pain gets to a level 7 on a daily basis.

31. Since the injury, the Claimant has gained approximately 60 pounds of weight due to not working and being sedentary. Claimant testified that he has tried to exercise but doing so causes his back pain to spike, but he seemed to indicate that he exercises an average of 3.5 hours per week.

32. Claimant wants the 4-level fusion with the hope of returning to work.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge enters the following conclusions of law:

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering

all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

4. Section 8-42-101(1)(a), C.R.S., provides:

> Every employer … shall furnish … such medical, hospital, and surgical supplies, crutches, and apparatus as may reasonably be needed at the time of the injury … and thereafter during the disability to cure and relieve the employee from the effects of the injury.

5. Respondents are obligated to provide medical benefits to cure or relieve the effects of the industrial injury. Section 8-42-101(1), C.R.S.; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Respondents, however, retain the right to dispute liability for specific medical treatment on grounds the treatment is not authorized or reasonably necessary to cure or relieve the effects of the industrial injury. *Id.*

6. Health care practitioners shall use the *Guidelines* when furnishing medical care under the Act. Section 8-42-101(3)(b), C.R.S.; *Hall v. ICAO*, 74 P.3d 459 (Colo. App. 2003); however, an administrative law judge is not required to utilize the *Guidelines* as the sole basis for determining whether certain treatment is reasonable, necessary and related to the work injury. Section 8-43-201(3), C.R.S. In this case, the ALJ has considered the relevant portions of the *Guidelines*, and is not persuaded that Dr. Barker's surgical recommendation is expressly prohibited by the *Guidelines.*

7. Claimant has proven by a preponderance of the evidence that the four-level fusion surgery recommended by Dr. Barker is reasonable, necessary and the result of his work-related injury. The ALJ is not persuaded by the contrary opinions of Dr. Janssen and Dr. Kumar that the surgery is not reasonable or necessary. Dr. Janssen has never examined the Claimant, his reports often questioned the existence of an injury, and he seemed to emphasize inaccurate information. Dr. Kumar offered no treatment options other than weight loss. He opined that surgical treatment for axial

back pain is unpredictable, but no surgery offers exact predictability. The ALJ acknowledges Dr. Janssen's concerns regarding the risks associated with the fusion procedure, but the Claimant has expressed an understanding and wishes to proceed. In addition, the Claimant has engaged in conservative treatment and rest, but his condition has not improved such that he can return to work. As Dr. Barker pointed out, the Claimant has not improved in over 18 months, and is likely to continue gaining weight and becoming unhealthier. The Respondents arguments concerning relatedness of the need for surgery are specifically rejected. The credible medical evidence demonstrates that Claimant suffered an aggravation of his pre-existing condition on November 24, 2014 while in the course and scope of his employment.

ORDER

It is therefore ordered that:

1. The Respondents are liable for the four-level fusion surgery recommended by Dr. Barker.

2. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant prove by a preponderance of the evidence that she suffered a compensable injury during the course and scope of her employment on February 19, 2015?

- If Claimant sustained a compensable injury, did Respondents prove by a preponderance of evidence that was Claimant terminated for cause by Employer?

- If Claimant sustained a compensable injury, what is Claimant's average weekly wage?

- If Claimant sustained a compensable injury, did Respondents fail to designate the authorized treating physician?

FINDINGS OF FACT

1. Claimant was employed by Employer as a day porter. Employer provides commercial janitorial services, including at two adjacent buildings operated by the City and County of Denver: the Lindsey Flanigan Courthouse and the Van Cise-Simonet Detention Center. Claimant was hired by Employer on January 1, 2015 when Employer entered into a contract to provide janitorial services to the City of Denver.

2. Claimant normally performed janitorial duties at the Van Cise-Simonet Detention Center.

3. Claimant's medical history was significant in that she previously treated at Denver Health on May 15, 2013 for neck pain. She was also evaluated for neck pain on April 28, 2014 by her primary care physician Alicia Appel, M.D. at Denver Health. There was no evidence in the record which showed Claimant sustained a left shoulder injury before February 2015.

4. On February 19, 2015, Claimant was scheduled to work at the Van Cise-Simonet Detention Center. Claimant testified she was injured while working at the Lindsey Flanigan Courthouse, at the request of her supervisor Elvira Bobka.[1] Claimant stated Ms. Bobka asked her to work that morning for Alejandra Melgarejo, who was out of town.

[1] Ms. Bobka, who could have provided corroboration or potentially an explanation, did not testify at hearing.

5. Claimant testified she started work at 7:00 a.m. at the Lindsey Flanigan Courthouse and suffered an injury sometime between 10:00 a.m. and 11:00 a.m. She said she was with a co-worker named Roberto Gutierrez and two law enforcement officers at the time of her injury. Claimant testified she was coming out of the elevator with a cart containing cleaning supplies when one of the cart's wheels became stuck in a gap between the elevator and the floor. Claimant testified the cart started to tip and when she went to catch it, she felt a pull and pain in her left arm and back. Claimant stated that the cart tipped about halfway over on its side.

6. Claimant testified she did not report her injury the same day because her supervisor was not working that day. Claimant testified Ms. Bobka submitted the timesheet for her work that morning under Ms. Melgarejo's name. Claimant filled out and signed a timecard on February 20, 2015 noting that she had worked from 12:00 p.m. to 5:00 p.m. on February 19, 2015.[2]

7. In the employment records (timecards) admitted at hearing, Claimant worked twenty-four (24) hours during the previous month (January) at the Lindsey Flanigan Courthouse.[3]

8. In the video sequence admitted at hearing, Claimant was shown working at the Van-Cise Simonet Detention Center in the afternoon of 2/19/15[4]. Claimant was using her left hand/arm without difficulty, which contradicted her testimony that she had significant pain in her arm and shoulder after the injury.

9. On February 23, 2015, Claimant reported to her immediate supervisor, Ms. Bobka, that she suffered a workplace injury on February 19, 2015 in the morning while she was working at the Lindsey Flanigan Courthouse. Claimant testified Ms. Bobka told her to say the injury occurred when she was working at the Van Cise-Simonet Detention Center.

10. On February 23, 2015, Erma De Paz, Employer's office manager, filled out a First Report of Injury. Ms. Paz noted that Claimant was pushing a restroom cart, and "was getting off of elevator and a front wheel from the restroom cart got jammed in the elevator track. Says she tried to hold the restroom cart so it would not (sic)." The time of injury was noted as 1:15 p.m.

11. Marisol Lopez testified at hearing. She is a manager for the City of Denver account for Employer. Ms. Lopez heard about the injury through her supervisor, Travis Roth. After hearing about the alleged injury from Mr. Roth, Ms. Lopez, who is fluent in Spanish, spoke with Claimant regarding her injuries. Claimant told Ms. Lopez that she was pushing a cart into an elevator when the cart became stuck on the elevator track. Claimant told Ms. Lopez that she was hurt grabbing a mop bucket on the cart to

[2] Exhibit K.

[3] Exhibit J.

[4] Exhibit N.

prevent it from spilling.

12. Travis Roth, the Director of Finance for Employer, testified at hearing. Part of his job duties in this capacity included investigating workers' compensation claims made by employees. Mr. Roth testified he found out on February 23, 2015 that Claimant had sustained a work-related injury, as he was in the office when Ms. De Paz received a call from Claimant. He stated Ms. De Paz issued a First Report of Injury based upon her conversation with Claimant. Mr. Roth testified that he had initial concerns regarding the claim because Claimant waited four days to report her injury. Mr. Roth was told that Claimant was injured at the Van Cise-Simonet Detention Center on her first elevator ride after the start of her afternoon shift.

13. Both Mr. Roth and Ms. Lopez testified Claimant would have been allowed to work at the Lindsey Flanigan Courthouse and would not have gotten in trouble covering that shift for Ms. Melgarejo. The ALJ found Claimant did not provide a credible explanation why subterfuge was required and why the timecard was not submitted under her own name.

14. Claimant testified she never received a list of medical providers for her injury. A designated provider letter, dated February 23, 2015 was admitted into evidence.[5]

15. On February 23, 2015, in the initial evaluation at Midtown Occupational Health Matthew Edwards, PA-C recorded that Claimant alleged to be injured by "pulling a cart out of the elevator, the cart got stuck in the gap between the elevator and the floor, and Ms. Garcia injured her shoulder in a pulling motion". Claimant reported pain from her neck down to her fingers at an 8/10. On examination, limited range of motion-internal and external rotation of the left shoulder was noted. PA-C Edwards found full range of motion for abduction, flexion and extension of the left shoulder. Full range of motion was found Claimant's cervical spine. PA-C Edwards assessment was cervical strain and left shoulder strain. A physical therapy ("PT") program was ordered and Claimant was put on modified duty. This report was also signed by Lon Noel, M.D.

16. At the time of the March 2, 2015 appointment with PA-C Edwards, Claimant was said to have injured her arm/shoulder when pushing the cart into the elevator when it began to tip and she grabbed it. Claimant had diffuse pain to palpation at her shoulder along the trapezius muscle. Tenderness was also noted on the lateral aspect of the shoulder near the insertion point of the supraspinatus. PA-C Edwards' assessment was the same as 2/23/16, along consideration of thoracic outlet syndrome. PA-C Edwards anticipated a more focal pain relationship would be established at this point in time and conservative care was continued.

17. Dr. Raschbacher then took over Claimant's treatment as an ATP. When Claimant was examined by Dr. Raschbacher on March 9, 2015, she reported that she

[5] Exhibit L.

was going into the elevator when one of the wheels got stuck and she reached down and pulled it up with her left hand. Claimant reported pain in her left shoulder and left trapezius. Her symptoms were neither improving, nor worsening. Dr. Raschbacher's assessment was cervical strain and right[6] shoulder strain.

18. In the Worker's Claim for Compensation, dated March 30, 2015 (signed by Claimant), she said the accident occurred "while walking out of the elevator, cart got stuck in gap of the elevator door, tried pulling it out, felt pain in left shoulder". Nothing was said about the cart almost tipping over. The description of the accident in the first Worker's Claim for Compensation also conflicted with what Claimant showed Mr. Roth and Ms. Lopez on March 12, 2015.

19. On March 12, 2015, Claimant met with Mr. Roth and Ms. Lopez at the Van Cise-Simonet Detention Center to discuss her injury. Ms. Lopez acted as a translator for the meeting. Claimant had a cart with her on that day and said it was the same cart she was using on February 19, 2015. She confirmed that the elevators in the rotunda at the Van Cise-Simonet Detention Center were the same elevators that she was riding on February 19, 2015. When demonstrating how she was injured, Claimant said she pushing her cart into the elevator. Claimant testified she continued maintain this version of how she was injured out of loyalty and/or friendship to Ms. Bobka. The ALJ noted Claimant was earnest when providing this explanation. The ALJ infers Claimant may have felt some pressure because of this relationship. However, the ALJ was not persuaded by Claimant's explanation why she was not forthcoming as to what actually happened when she met with Mr. Roth and Ms. Lopez.

20. On March 18, 2015, Claimant returned to Dr. Raschbacher at which time Claimant reported pain in her posterior and dorsal glenohumeral joint, which was causing difficulty sleeping. Dr. Raschbacher noted tenderness at the trapezius muscle, negative impingement sign and no crepitus. Dr. Raschbacher's assessment was cervical strain and strain of the left shoulder. He ordered more PT.

21. Dr. Raschbacher examined Claimant on March 31, 2015, to recheck her left shoulder and neck. Claimant was not making progress in PT. Dr. Raschbacher discussed the possibility of her neck being the source of Claimant's shoulder problems. He noted that Claimant made poor effort with power grip and pinch grip and finger abduction and adduction. Dr. Raschbacher opined Claimant had generalized discomfort at the left shoulder, which did not localize very well. It was not clear why she would have decreased power grip. Claimant had full range of motion in the cervical spine. Dr. Raschbacher's assessment was the same as 3/18/15. He ordered an MRI arthrogram of the left shoulder.

22. Insurer issued a letter on April 1, 2015 which confirmed liability was denied for the claim and payment for treatment would not be authorized.

[6] This appears to be a typographical error, as all other references in the report were to the left shoulder.

23. On April 20, 2015, Claimant was examined by Dr. Appel at Denver Health and she was complaining of pain in her left shoulder. Dr. Appel noted Claimant “was at work and she was pushing a cart that contained a lot of cleaning supplies off the elevator. One of the wheels fell off the cart and started to fall. She tried to hold the cart up and felt like she really pulled the left shoulder.” Claimant was evaluated by Edgar Renteria on the same day. He noted that “the cart she was pushing lost a wheel, she tried to hold it up.” Claimant testified on direct examination that one of the wheels got caught in the gap and the cart started to tip. On cross-examination, Claimant equivocated whether a wheel on the cart fell off or was falling off. The ALJ notes Claimant was not complaining of neck pain when she was seen at Denver Health.

24. Dr. Raschbacher reviewed the video from February 9, 2015 and issued a letter dated April 30, 2015. Dr. Raschbacher noted there was no incident involving the cart depicted on the video. The video showed Claimant raising her arms up and shaking a drink, using both arms to drink out of a bottle. Based on the video, which suggested no injury occurred, Dr. Rascbacher did not believe Claimant required medical treatment.

25. In the Worker's Claim for Compensation, dated May 21, 2015, the description of the accident was: “while trying to catch a housekeeping cart from flipping over, she went to grab it and felt her arm pulled". The latter document was completed by Lupe Olive and the ALJ infers this is what Claimant told Ms. Olive. Claimant’s description of the accident differed than the one she provided on 3/30/15.

26. On June 4, 2015, Claimant was evaluated by James Benoist, M.D. of MSK Medical. She reported on the date of injury, “she was working in housekeeping and was pushing a cart into an elevator when the wheel became wedged in the space in the floor. She pulled the cart with sufficient force to dislodge the cart before the door closed on it”.

27. Dr. Raschbacher testified as an expert in Occupational Medicine. He is also Level II accredited pursuant to the W.C.R.P. Dr. Raschbacher testified Claimant had diffuse pain, meaning it did not generalize to an anatomic structure. He stated this could be a factor in determining whether someone suffered a work-related injury or whether a pain generator had been identified. Dr. Raschbacher was not aware Claimant had previously been evaluated at Denver Health for neck pain, although retrospectively he could not say how much weight he would have given the prior treatment. He had no information which showed Claimant had any restrictions or problems performing her job prior to her injury. Dr. Raschbacher noted there was no medical or physiologic reason for Claimant’s decreased grip strength when he examined her.

28. Dr. Raschbacher reviewed the video taken on 2/19/15 at his deposition. He testified his opinion regarding compensability changed after reviewing the video sent by Insurer. When viewing the video taken on 2/19/15, Dr. Raschbacher noted Claimant pulled the cart out of the elevator with her left hand and he would not expect an individual who had suffered an injury earlier that day to use her arm in that way. Dr.

Raschbacher stated he wouldn't have expected to use her left hand if it was injured earlier that day, especially since she was right-handed. Dr. Raschbacher treated Claimant based upon the history she provided to him. The ALJ credited Dr. Raschbacher's testimony that Claimant showed no sign of injury on the video of February 19, 2015.

29. Claimant provided different descriptions of how the accident happened in the Worker's Claims for Compensation she filed.

30. Claimant provided divergent descriptions of how the accident happened to various health care providers, including Dr. Appel, Dr. Benoist and Dr. Raschbacher.

31. The fact Claimant gave several versions of her injury detracted from her credibility.

32. The ALJ found Claimant to be less credible than Employer's witnesses, particularly Ms. Lopez.

33. Claimant's credibility was undermined further by the video taken on the date she claims she was injured. Claimant was shown using her left arm without difficulty after the time she said the injury occurred.

34. Claimant failed to sustain her burden of proof that she sustained a compensable injury.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), §8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. Section 8-43-201(1),C.R.S. Generally, the Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). The question of whether Claimant suffered a compensable injury in this case turns of the credibility of the witnesses who testified at hearing.

Compensability

To receive workers' compensation benefits, an injured worker bears the threshold burden of establishing (by a preponderance of the evidence) that he or she has sustained a compensable injury proximately caused by his employment. Section 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000). ("Proof of causation is a threshold requirement which an injured employee must establish by a preponderance of the evidence before any compensation is awarded.")

Accordingly, Claimant was required to prove by a preponderance of the evidence that at the time of the injury he or she was performing a service for Respondent-Employer arising out of and in the course of the employment and that the injury or occupational disease was proximately caused by the performance of such service. *Triad Painting Co. v. Blair* 812 P.2d 638 (Colo. 1991). The question of whether the Claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985).

In the case at bench, Claimant alleges she sustained injury while working at the Lindsey Flanigan Courthouse on February 19, 2015. She further claimed the reason there was no record of her working at that facility was her supervisor (Ms. Bobka) submitted the time card under the name of Alejandra Melgarejo. After she was injured, Claimant asserted Ms. Bobka told her to say the injury occurred at her normal job location-the Van Cise-Simonet Detention Center. Respondents disputed Claimant's version of events, relying on the testimony of Mr. Roth and Ms. Lopez, as well as the expert testimony of Dr. Raschbacher.

As determined in Findings of Fact 29-34, the ALJ concluded Claimant failed to prove she sustained an injury arising out of and in the course of her employment. The ALJ found Claimant's testimony she sustained injuries at the Lindsey Flanigan Courthouse on the morning of February 19, 2015 was not credible, nor persuasive. The ALJ was not persuaded by Claimant's explanation that Ms. Bobka asked her to work for Ms. Melgarejo that day and then submitted a timecard under Ms. Melgarejo's name. The ALJ found the evidence that Claimant had worked a total of 24 hours at the Lindsey Flanigan Courthouse the previous month was particularly persuasive and Employer's witnesses confirmed there was no reason why she did not submit a timecard in her own name.

After reporting the injury and then meeting at the location where it allegedly occurred(on 3/12/15), Claimant did not provide full details of the alleged incident. In this regard, Claimant testified she didn't provide correct time and place of her injury because of her friendship with Ms. Bobka or because felt some loyalty to her supervisor. However, at the time when she met with Mr. Roth and Ms. Lopez and was told of the importance of providing accurate details as to how the accident happened, it was incumbent on Claimant to provide accurate details of how the accident happened, including its location. Claimant failed to do so.

In addition, Claimant's description of her injury differed when she discussed it with various healthcare providers. (Finding of Fact 30). Claimant also gave different versions of how she was injured in the Worker's Claims for Compensation she filed. (Findings of Fact 17 and 24). Dr. Raschbacher's expert testimony also supported the conclusion Claimant was not injured as she alleged.

Accordingly, the ALJ concluded Claimant was not a credible witness and based upon the totality of the evidence, the injury did not occur as she claimed. As such, she did not meet her burden of proving that she sustained an injury arising out of and in the course and scope of her employment.

In light of the finding on compensability, the ALJ need not address the issues of liability for medical benefits, average weekly wage and temporary disability benefits.

ORDER

It is therefore ordered that:

1. The claim for worker's compensation benefits in W.C. Case No. 4-979-855-01 is denied and dismissed

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a

petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80203

PROCEDURAL BACKGROUND

1. *Preliminary Matters / Determination of Issues*: At the outset of the hearing, the parties stipulated and agreed that, to the extent issues were not previously resolved, all five (5) of Claimant's pending Applications for Hearing related to the Claimant for the same work injury, Respondents' corresponding Responses and the Prehearing Conference Orders related to the Applications and Responses, would be consolidated for hearing at the April 29, 2016 hearing. The ALJ approved the stipulation of the parties to consolidate these matters and stated that the various documents would be reviewed, along with the transcript of the hearing, to establish the issues remaining for resolution. The review of the relevant documents and hearing transcript is summarized as follows for the purpose of clarifying the remaining issues:

10/09/2015 Application (Cl. Ex. 9) ***(Consolidated with 10/20/2015 App)*** • Issues: (1) penalties for belated GAL and belated DIME application; CRS 8-43-304(1), 8-42-107.2, 8-42-107(8)(b),(e), and WCRP 11; (2) propriety of DIME Application	**10/28/2015 Response** **(Cl. Ex. 12; R. Ex. A)** • Issues: (1) penalties – CRS 8-43-211(3); (2) other-CRS 8-43-101; 8-42-107(8)(b.5)(I)(D); 8-42-107.2; WCRP 5-2, 11-3; *Reichert v. Maxtor Corp.*
10/20/2015 Application (Cl. Ex. 10) ***(Consolidated with 10/09/2015 App)*** • Issues: (1) other-propriety of DIME selection panel & physician specialties; hold DIME process in abeyance	**11/19/2015 Response** **(Cl. Ex. 14; R. Ex. B)** • Issues: (1) penalties-CRS 8-43-211(3); (2) other-CRS 8-43-101, 8-42-107(8(b.5)(I)(D), 8-42-107.2, WCRP 5-2, 11-3; *Reichert v. Maxtor Corp.*
• 11/13/2015 prehearing order: (1) 10/09/2015 and 10/20/2015 Applications (and corresponding Responses) consolidated; (2) R motion to strike penalty issue denied; (3) briefing schedule set for issue #2-propriety of DIME Application (Cl. Ex. 13) • 12/18/2015 prehearing order: dismissed issue of penalty for late DIME Application as without merit; dismissed issue RE propriety of R's preemptive DIME Application as without merit; denies R's motion to strike Cl's issue of penalty for filing belated GAL due to genuine issue of material fact and reserves R's defenses, including request for specificity; strikes sole issue in 10/20/15 Application RE propriety of DIME selection process & physician specialties (Cl. Ex. 18; R. Ex. H)	

12/07/2015 Application (Cl. Ex. 16) ***(Consolidated with 12/24/2015 App)*** • Issues: (1) Resolve issues raised by R's Motion to Strike Issues dated 11/23/15 pursuant to *Gustavo Lozano v. Front Range Rebar Co. Inc. (ICAO, Aug. 3, 1998, WC 4-285-320)*	**01/04/2016 Response** **(Cl. Ex. 21)** • Issues: (1) penalties- attorney fees for pursuing unripe issues; (2) interlocutory orders not subject to appeal
12/24/2015 Application (Cl. Ex. 19) ***(Consolidated with 12/07/2015 App)*** • Issues: (1) reconsider PALJ's 12/18/2015 order; (2) longstanding pattern of bias/predisposition RE: attorney	**01/22/2016 Response** **(Cl. Ex. 22)** • Issues: (1) penalties-attorney fees for pursuit of unripe issues; (2) interlocutory orders not subject to appeal; (3) collateral estoppel; (4) facial challenge to DIME not reviewable by OAC; (5) failure to state a claim
• 01/04/2016 OAC Order consolidates issues endorsed in 12/07/2015 and 12/24/2015 Applications and corresponding Responses to be heard at hearing set for 02/26/2016 (R. Ex. K) • 02/16/2016 prehearing order: (1) motion that is the subject of the 12/07/15 Application has been ruled on and is resolved, so this issue is stricken; (2) R's motion to strike 12/24/15 Application is denied; (3) R's request for attorney fees and costs is reserved for 02/26/2016 hearing; (4) R's request for specificity to Cl's request for penalties reserved as a defense for 02/26/2016 hearing (Cl. Ex. 24; R. Ex. I)	
02/15/2016 Application (Cl. Ex. 23) • Issues: (1) penalties for requesting attorney fees & relief beyond a PALJ's authority; (2) other-resolve issues raised by the R's prehearing scheduled for 2/16/2016 at 11:00 pursuant to *Gustavo Lozano v. Front Range Rebar Co. Inc. (ICAO, Aug. 3, 1998, WC 4-285-320)*	**03/16/2016 Response (Cl. Ex. 25)** • Issues: (1) attorney fees for pursuit of unripe issues; (2) facial challenge to DIME not reviewable by OAC; (3) collateral estoppel; (4) failure to state a claim
• 04/08/2016 prehearing order: granted R's motion to compel Cl's attendance at DIME with Dr. Thurston on May 25, 2016 at 9:00 AM. Further ordered that Cl's failure to attend DIME will result in sanctions against CL, including up to $1,000 per day penalty and dismissal of her claim (unless vacated by an OAC ALJ) (Cl. Ex. 26; R. Ex. J) • 04/26/2016 prehearing order: granted R's motion to compel Cl to complete R's 3/18/2016 interrogatories (Cl. Ex. 27) • 04/29/2016 hearing: parties stipulated to consolidating remaining issues from all	

five applications and corresponding responses for hearing (Hrg. Tr., pp. 35-36)

- 04/29/2016 hearing: Cl's motion for relief from the 04/08/2016 prehearing order RE compel DIME attendance was granted, in part. Cl. is relieved from attending the DIME with Dr. Thurston on May 25, 2016 at 9:00 AM. However, Cl. must attend a rescheduled DIME appointment with Dr. Thurston to take place between June 10, 2016 and July 10, 2016 unless ordered otherwise (Hrg. Tr., pp. 86-88)

2. *Determination of Attorney Fee and Cost Award:* A preliminary Order dated June 10, 2016 was provided to the parties in this case authorizing an award of attorney fees and costs and holding the record open for evidence to establish the appropriate amount of attorney fees and costs to be awarded. Respondents filed a Motion for Attorney Fees and Costs Pursuant to Order Dated June 10, 2016 on June 21, 2016 and submitted evidence in Exhibit A to the Motion to support the Motion. On July 12, 2016, Claimant filed a Verified Response to Respondents' Motion for Attorney Fees and Costs Pursuant to Order Dated June 10, 2016. No party requested a hearing on the issue of attorneys fees pursuant to C.R.C.P. Rule 121, §1-22(2)(c), nor was discovery on the issue of attorney fees requested pursuant to C.R.C.P. Rule 121, §1-22(2)(b). Sufficient evidence was provided for the ALJ to make an appropriate determination as to the amount of attorney fees and costs to be awarded in the written submissions.

ISSUES

In light of the procedural background summarized above, the following issues remain for resolution by the ALJ in this consolidated matter:

1. Whether the Respondents timely and properly requested a Division Independent Medical Examiner ("DIME") and the effect of such request.

2. Whether the Respondents timely and properly filed a General Admission of Liability ("GAL").

3. If the Respondents failed to timely and properly request a DIME or file a GAL, whether penalties should be assessed against the Respondents pursuant to C.R.S. §§ 8-43-304(1), 8-42-107.2, 8-42-107(8)(b)(e), and WCRP 11.

4. Propriety of DIME panel selection and whether the Claimant is entitled to a DIME physician with a requested specialty.

5. Whether, and for how long, the DIME process is held in abeyance.

6. Reconsideration of the issues raised before PALJ Harr that were addressed in his December 18, 2015 Interlocutory Order.

7. Reconsideration of the issues raised before PALJ Gallivan that were addressed in his February 16, 2016 Prehearing Conference Order.

8. Consideration of the allegation of a longstanding pattern of bias or predisposition with respect to the Claimant's attorney.

9. Whether the Respondents have proven that attorney fees and costs should be assessed against the Claimant's attorney for pursuing unripe issues pursuant to C.R.S. § 8-43-211(3).

10. Whether the Claimant has proven that penalties should be assessed against the Respondents for requesting attorney fees and costs and such other relief beyond a PALJ's authority.

11. Determination of the amount of any attorney fee and cost award.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. The Claimant has had prior back surgery at the L3-4 level, a laminotmy that took place somewhere in between 2007 and 2009. This was her only previous low back surgery (Hrg. Tr., pp. 59-60).

2. The Claimant was injured at an out-of-state work location on April 9, 2014. On that date, the Claimant testified credibly that she tripped as she was walking through the entrance to a bathroom. She further testified that she did not fall after tripping, but caught herself. The Claimant testified that this resulted in injury to her left low back and hip area (Hearing Tr., p. 55).

3. After the Claimant's work injury, she continued to work full duty for her employer and did not miss time from work due to the work injury until February 5, 2016. After February 5, 2016, the Claimant has not been working (Hearing Tr., pp. 64-65).

4. The Claimant testified credibly that since her injury she has only been free of pain for a two-month period following a rhizotomy and some very temporary relief from some injections (Hrg. Tr., p. 56 and pp. 63-64). The Claimant testified that she continues to have symptoms in her low back, a stabbing pain in her hip area and an intermittent numbness in her feet towards her toes (Hrg. Tr., pp. 56-58).

5. The Claimant treated with John Charbonneau, M.D., Gregory Reichhardt, M.D., Ricardo Nieves, M.D. (also see Claimant's Exhibit 1), Dr. Columbus (also see Claimant's Exhibits 2 and 3), Daniel Bruns, Psy.D., and Dawn Jewell Psy.D. (Claimant's Exhibit 4, p. 474; Respondents' Exhibit E, p. 17). Dr. Charbonneau was the Claimant's primary authorized treating provider and he is an occupational medicine physician and

not a surgeon (Hrg. Tr., p. 61). In addition to treatment and oversight provided by Dr. Charbonneau, the Claimant has undergone a lumbar MRI, physical therapy, injections and a rhizotomy (Claimant's Exhibit 4, p. 474; Respondents' Exhibit E, p. 17). The Claimant testified that Dr. Charbonneau never referred the Claimant to an orthopedic surgeon or neurosurgeon for evaluation for any surgical procedures (Hrg. Tr., p. 60). The Claimant testified that she requested a referral for surgical spine evaluation but that Dr. Charbonneau did not make the referral (Hrg. Tr., p. 61). The Claimant testified that if surgery would provide her with relief from her condition, she would definitely consider undergoing a surgical procedure (Hrg. Tr., p. 63).

6. On August 26, 2014, subsequent to her work injury, the Claimant underwent a lumbar MRI which was compared to the Claimant's prior May 6, 2009 lumbar MRI. The radiologist noted that the comparison study revealed no change, except for evidence of interval improvement in the appearance of the postsurgical changes for her prior non-work-related L3-L4 laminotomy (Claimant's Exhibit 29; Respondents' Exhibit E, p. 20).

7. On July 13, 2015, the Claimant saw Dr. Reichhardt, on referral from Dr. Charbonneau, for evaluation for permanent impairment. Dr. Reichhardt reviewed the history of the Claimant's injury and summarized her treatment up to that date. He noted that the Claimant reported "an aching pain in the low back and left gluteal area, with some numbness extending down the posterior aspect of the thigh." He also noted that the Claimant had symptoms of depression and Dr. Bruns felt she had a ratable psychological impairment. He noted her current pain rating was 4-8/10 but that recent injections provided little relief and a rhizotomy provided only a month of relief. Dr. Reichhardt opined the Claimant was at maximum medical improvement as of July 13, 2015. He recommended maintenance care and provided an impairment rating of 7% whole person for the specific disorder of the lumbar spine combined with a 6% whole person rating for range of motion deficits for a total lumbar impairment of 13% whole person. He further combined this with a 2% psychiatric impairment for a total combined 15% whole person impairment rating. Page 5 of Dr. Reichhardt's report states that the following were cc'd: Insurance Company, Dr. Charbonneau and [Claimant], but there is no certificate of mailing or other indication of when the report was actually mailed. (Claimant's Exhibit 4; Respondents' Exhibit E, pp. 17-25).

8. The Claimant then saw Dr. Charbonneau for a final case closure visit on July 30, 2015. Based on Dr. Reichhardt's impairment evaluation report, Dr. Charbonneau placed the Claimant at MMI as of July 13, 2015, and provided an impairment rating of 15% whole person impairment. He recommended the impairment rating be accepted and specifically noted that he attributed the impairment to her work injury. Dr. Charbonneau also agreed that maintenance care consisting of six follow up visits with him and four follow up visits with a physical therapist and continuing medications of Celebrex and Flexeril were necessary. In reviewing Dr. Charbonneau's medical report of July 30, 2015, it appears that he sent Dr. Reichhardt's July 13, 2015 report to the Claimant after explaining it to her and it also appears that the document was faxed out and received on July 31, 2015 (Respondents' Exhibit E, pp. 13-15).

9. The ALJ finds that it is undisputed that the Respondents received the impairment rating of Dr. Reichhardt via Dr. Charbonneau as of July 31, 2015. However, it cannot be determined from the evidence admitted in this case that the Respondents received a medical report notifying them that the Claimant sustained a permanently physically impairing injury prior to July 31, 2015.

10. The Respondents disagreed with the impairment determination by Dr. Reichhardt and adopted by Dr. Charbonneau and filed a Notice and Proposal to Select a DIME Examiner on August 7, 2015 (Respondents' Exhibit F).

11. On August 26, 2015, the Respondents filed a General Admission of Liability admitting for medical benefits only and specifically denying temporary and permanent disability benefits until deemed otherwise payable in accordance with Rule 5-5(B). It was noted that if the temporary or permanent benefits were sustained, an amended admission would be filed (Claimant's Exhibit 6).

12. The Claimant filed an Application for Hearing on October 9, 2015, on the issues of penalties against Respondents for filing belated General Admission of Liability and for filing a belated DIME Application per 8-43-304(1), 8-42-107.2, 8-42-107(8)(b), (e), and Rule 11 of WCRP; and "to determine the propriety and effect of Respondents' preemptive and belated bogus DIME application" (Claimant's Exhibit 9).

13. The Claimant filed an Application for Hearing on October 20, 2015, on the issues of "propriety of DIME panel selection and physician specialties, contrary to Claimant's DIME rights as expressed in *AFL-CIO v Donlon* and *Whiteside v. Smith*, contrary to the Claimant's true treatment and diagnostic needs and extent of his (sic) occupational impairments and to hold the DIME process in abeyance per *Jesus Munoz v ICAP* and *JBS Swift & Compan*y (Claimant's Exhibit 10).

14. The Respondents filed a Response to the Claimant's October 9, 2015 Application for Hearing on October 28, 2015 asserting defenses to the claims that Respondents filed an untimely admission and an untimely DIME application and Respondents sought attorney fees related to the Claimant's pursuit of unripe issues (Claimant's Exhibit 12; Respondents' Exhibit A).

15. The Respondents scheduled a prehearing conference to request that issues on both Claimant's October 9, 2015 and October 20, 2015 applications for hearing be stricken. The prehearing conference was held before PALJ Michael Harr on November 13, 2015. PALJ Harr requested written briefing by both parties on the issues. The Claimant's October 9, 2015 and October 20, 2015 Applications for Hearing were also consolidated by Order dated November 13, 2015 and set for hearing for February 26, 2016 (Claimant's Exhibit 13).

16. On November 19, 2015, the Respondents filed a Response to the Claimant's October 20, 2015 Application for Hearing asserting defenses to the claim regarding the propriety of the DIME selection process and the Claimant's request to

hold the DIME process in abeyance and also sought attorney fees related to the Claimant's pursuit of unripe issues (Claimant's Exhibit 14; Respondents' Exhibit B).

17. The Respondents submitted a written motion to strike issues endorsed in the Claimant's October 9, 2015 and October 20, 2015 Applications for Hearing on November 23, 2015 (Claimant's Exhibit 15). The Claimant's submitted a written response to Respondents' motion to strike issues on December 14, 2015 (Claimant's Exhibit 17).

18. In the meantime, the Claimant filed another Application for Hearing on December 7, 2015, on the issue of "resolve issues raised by the Respondents' Motion to Strike Issues dated November 23, 2015, pursuant to *Gustavo Lozano v. Front Range Rebar Co., Inc.*" (Claimant's Exhibit 16).

19. PALJ Harr issued an order on December 18, 2015, striking the issues in Claimant's October 20, 2015 Application for Hearing, with prejudice, "because it questions a process that is unripe until a party applies for hearing to overcome the opinion of the DIME physician." As to the Claimant's October 9, 2015 Application for Hearing, PALJ Harr also dismissed the Claimant's penalty allegation for "filing a belated DIME application" as meritless, dismissed the issue of "propriety and effect of Respondents' preemptive and belated bogus DIME application" as meritless. PALJ Harr did not dismiss the Claimant's penalty allegation for "filing and relying on a belated General Admission" as he determined that the Claimant's allegation raises a genuine issue of material fact regarding the timely filing. However, he did find that the allegation was vague and unspecific and reserved to Respondents any defense they have, including lack of specificity (Claimant's Exhibit 18; Respondents' Exhibit H).

20. The Claimant' filed a fourth Application for Hearing on December 24, 2015, on the issues of "to determine propriety, jurisdiction and effect of and to reconsider PALJ's Order of December 18, 2015," and "this longstanding pattern of bias or predisposition vis-à-vis the undersigned" (Claimant's Exhibit 19).

21. The Respondents filed a Response to the Claimant's December 7, 2015 Application Hearing on January 4, 2016 and also requested attorney fees and costs be assessed for pursing unripe issues and raised the defense that interlocutory orders are not subject to appeal (Claimants' Exhibit 21; Respondents' Exhibit C).

22. The Claimant's December 7, 2015 and December 24, 2015 Applications for Hearing were consolidated with issues to be heard at the February 26, 2016 hearing pursuant to an OAC Order granting Respondents' unopposed motion to consolidate dated January 6, 2016 (Respondents' Exhibit K).

23. On January 15, 2016, Lloyd Thurston, DO was confirmed as the Division IME physician (Respondents' Exhibit L). The Claimant agrees that Dr. Thurston is Level II accredited (Hrg. Tr., p. 71).

24. The Claimant filed a fifth Application for Hearing on February 15, 2016, on the issues of penalties against Respondents for requesting attorney fees and costs and such other relief beyond a PALJ's authority and "to resolve issues raised by the Respondents' prehearing scheduled for February 16, 2016" (Claimant's Exhibit 23).

25. A prehearing conference was held on February 16, 2016 before PALJ Gallivan on the issues of Respondents' motions to strike Applications for Hearing, for attorney fees and costs and for specificity regarding the Claimant's request for penalties. PALJ David Gallivan struck the Claimant's December 7, 2016 Application for Hearing, finding that at the time the Application for Hearing was filed, the issues were under review by PALJ Harr, which resulted in an order. This order resolved any issues regarding that motion. He then found that the issue of reconsideration of PALJ Harr's December 18, 2015 order (the issue in the December 24, 2015 Application for Hearing) is proper and would not be stricken. Finally, PALJ Gallivan found that the Claimant had failed to meet her burden of specificity regarding penalties and Respondents preserved that defense for hearing and that Respondents had made the requisite attempt to strike issues in Claimant's applications for hearing and may seek attorney fees and costs at hearing but that the PALJ would not issue an order addressing this request (Claimant's Exhibit 24).

26. The February 26, 2016, docket was heavily scheduled and this case had lower priority than other matters scheduled. As a result, hearing on these matters was rescheduled for April 29, 2016.

27. On March 16, 2016, the Respondents filed a Response to the Claimant's February 15, 2016 Application for Hearing asserting that a facial challenge to the DIME is not reviewable by the OAC, collateral estoppel and that the Claimant failed to state a claim upon which relief may be granted. Respondents also sought attorney fees related to the Claimant's pursuit of unripe issues (Claimant's Exhibit 25)

28. A prehearing conference was held on April 6, 2016 before PALJ Craig Eley on Respondents' Motion to Compel Claimant's Attendance at Division Independent Medical Examination. PALJ Eley noted that the Claimant failed to attend a DIME on March 9, 2016 with Dr. Lloyd Thurston and that Respondents sought an order compelling the Claimant's attendance at a DIME scheduled for April 13, 2016. After considering the argument of counsel, PALJ granted the Respondents' motion with conditions. Namely, he ordered attendance at a rescheduled May 25, 2016 DIME evaluation unless vacated by order of an OAC ALJ. He further ordered that the Claimant's failure to attend the DIME evaluation would result in sanctions, including, but not limited to, a penalty of up to $1,000.00 per day and dismissal of her claim for workers' compensation (Claimant's Exhibit 26; Respondents' Exhibit J).

29. On April 26, 2016 a prehearing conference was held before PALJ David Gallivan on the issue of Respondents' Motion to Compel Responses to Discovery. PALJ Gallivan ordered the Claimant to provide responses to the Respondents' March 18, 2016 Interrogatories on or prior to April 28, 2016 (Claimant's Exhibit 27). The Claimant provided the responses found at Claimant's Exhibit 28 on April 28, 2016.

30. At the hearing held on April 29, 2016, the undersigned ALJ ordered that the Claimant was relieved of compliance with PALJ Craig Eley's Order requiring the Claimant to attend a DIME evaluation with Dr. Thurston on May 25, 2016 in order to provide sufficient time for the parties to submit briefs in this matter and for the ALJ to issue an order. The ALJ ordered that the Claimant must work with Respondents to reschedule a DIME evaluation with Dr. Thurston to be scheduled between June 10, 2016 and July 10, 2016 and that the Claimant shall attend that DIME evaluation unless this order relieves the Claimant of that obligation. Having considered the evidence and arguments presented at hearing and in the post-hearing briefs (see below), the ALJ determines that this order does not change the Claimant's obligation to attend the rescheduled DIME evaluation with Dr. Thurston. The Claimant remains under order compelling her attendance at the most recently scheduled DIME evaluation with Dr. Thurston.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Judicial or Administrative Notice of Adjudicative Facts Pursuant to C.R.E. 201

Counsel for the Claimant requested that the ALJ "take administrative or official notice the contents of the underlying related case computer entries and Office

Administrative Courts' and Division of Worker's Compensation and I.M.E. Unit files in consideration of this matter, pursuant to C.R.E. 201" (Claimant's Position Statement, p. 3). C.R.E. 201 permits the ALJ to use discretion to take judicial notice of adjudicative facts if the fact is not subject to reasonable dispute in that it is either (1) generally known within the territorial jurisdiction of the trial court or (2) capable of accurate and ready determination by resort to sources whose accuracy cannot reasonably be questioned. It is mandatory for a court to take judicial notice of adjudicative facts covered by Rule 201 if requested by a party and supplied with the necessary information. With respect to information in the files and records of the Division of Workers' Compensation and I.M.E. Unit files, any request is governed by C.R.S. §8-47-203 and WCRP Rule 1-5. Counsel for the Claimant has failed to comply with the requirements of both the statute and WCRP Rule 1-5 for requesting inspection and copying of files and the ALJ will not take judicial notice of facts in the files and records and computer entries of the Division of Workers' Compensation. With respect to the files and computer entries at the Office of Administrative Courts, the Claimant has failed to supply the Court with the necessary information to determine what contents and computer entries are included in the request for judicial notice. Nor has counsel for Claimant provided identification of information to counsel for Respondents for the purpose of providing Respondents' counsel with the ability to ascertain which information is included in Claimant's request, to object to any such information, or to prepare a defense in light of such information. Therefore, the request for the ALJ to take administrative or official notice pursuant to C.R.E. 201 is denied. Only the exhibits which were submitted to the ALJ and the testimony taken at the hearing on April 29, 2016 will be considered evidence in this matter.

Reconsideration of the issues raised before PALJ Harr that were addressed in his December 18, 2015 Interlocutory Order and PALJ Gallivan that were addressed in his February 16, 2016 Prehearing Conference Order

Respondents have raised the defense that interlocutory orders are not subject appeal in two of the Responses to Claimant's Applications for Hearing (Claimant's Exhibits 21 and 22). Panels of the Industrial Claim Appeals Office have held that "orders related to DIME requests are in the nature of evidentiary rulings and are therefore, interlocutory (see *Alvarez v. JBS USA, LLC,* W.C. 4-783-538 (ICAO, July 10, 2012). However, the *Alvarez* case involved review of an order of an OAC ALJ that determined that the Claimant failed to show persuasive authority to support his argument that he had the right to apply for a hearing to contest the selection of the three-physician panel under WRCP 11-3(c) based on a selection process that relied upon the level of accreditation of the physician rather than the physicians' areas of practice. In the present case, the Claimant has endorsed issues in two of the five Applications for hearing requesting the ALJ reconsider the rulings of PALJs pursuant to prehearing conferences.

The Colorado Supreme Court and ICAO panels have issued orders contemplating ALJ review of prehearing orders issued by PALJs. In *Szot v. U.S. Security Associates, Inc.,* W.C. 4-714-229 (ICAO, October 2, 2007), the panel concluded that an ALJ erred by not reconsidering a ruling from a PALJ. The panel stated that an ALJ has jurisdiction to review interlocutory rulings of a PALJ and that further consideration by an ALJ of prehearing orders is anticipated. Although the orders of a PALJ that arise in the context of a prehearing conference are “interlocutory” and “not immediately appealable,” the Colorado Supreme Court noted that, it makes sense to treat a PALJ’s order related a prehearing conference in this manner, “because a prehearing conference, by definition, is followed by a full hearing before the director or an ALJ” and “thus, the propriety of a PALJ’s prehearing order may be addressed at the subsequent hearing.” *Industrial Claim Appeals Office v. Orth,* 965 P.2d 1246, 1254 (Colo. 1998).

While the PALJ orders in question in this case are not deemed to be final, appealable orders as they arose out of a prehearing conference, they are nevertheless subject to review by the ALJ. To the extent that the Claimant has endorsed issues addressed by prehearing orders, or had requested reconsideration of the PALJs orders, the ALJ has authority to review the same and such issues are considered below.

The Claimant has failed to establish that Respondents are subject to penalties for failure to timely file a General Admission of Liability (GAL)

C.R.S. § 8-43-203(1)(a) provides, in pertinent part,

> The employer or, if insured, the employer’s insurance carrier shall notify in writing the division and the injured employee…within twenty days after a report is, or should have been, filed with the division pursuant to section 8-43-101, whether liability is admitted or contested.

C.R.S. § 8-43-101(1), states, in pertinent part, as follows:

> Within ten days after…the occurrence of a permanently physically impairing injury, or lost-time injury to an employee…the employer shall, upon the forms prescribed by the division for that purpose, report said…permanently physically impairing injury, [or] lost time injury…to the division.

In this case, the Claimant was injured at an out-of-state work location on April 9, 2014. However, after the Claimant’s work injury, she continued to work full duty for her employer and did not miss time from work due to the work injury until February 5, 2016. As a result, prior to August 26, 2015, this was not a lost-time injury to the employee that would require a report pursuant to C.R.S. § 8-43-101(1) which would, in turn, trigger a required filing of an admission of liability for this reason.

Therefore, until the Respondents reasonably understood the Claimant’s injury to be one which was permanently physically impairing to the Claimant, no report or admission was required. Dr. Reichhardt issued a medical report of his evaluation for permanent impairment on July 13, 2015 and provided a total lumbar impairment of 13% whole person which he further combined with a 2% psychiatric impairment for a total combined 15% whole person impairment rating. The Claimant then saw Dr. Charbonneau for a final case closure visit on July 30, 2015. Based on Dr. Reichhardt’s impairment evaluation report, Dr. Charbonneau placed the Claimant at MMI as of July 13, 2015, and provided an impairment rating of 15% whole person impairment. He recommended the impairment rating be accepted and specifically noted that he attributed the impairment to her work injury.

Thus, the earliest arguable date that a report could have been required in this case under C.R.S. § 8-43-101(1) is ten days after July 13, 2015 or July 23, 2015. Then, the earliest arguable date that an admission would be required is twenty days after that, or August 12, 2015. However, the Claimant did not establish that the Respondents actually received a copy of Dr. Reichhardt's July 13, 2015 report on that day. Page 5 of Dr. Reichhardt's report states that the following were cc'd: Insurance Company, Dr. Charbonneau and [Claimant], but there is no certificate of mailing or other indication of when the report was actually mailed.

In reviewing Dr. Charbonneau's medical report of July 30, 2015, it appears that he sent Dr. Reichhardt's document to the Claimant after explaining it to her and it also appears that the document was faxed out and received on July 31, 2015. It is undisputed that the Respondents received the impairment rating via Dr. Charbonneau as of July 31, 2015. If this is the first notice that the Respondents had of a permanently physically impairing injury, then a report would have been required ten days later, or August 10, 2015 and then an admission would be required twenty days after that, or August 30, 2015.

The ALJ specifically determined that it is undisputed that the Respondents received the impairment rating of Dr. Reichhardt via Dr. Charbonneau as of July 31, 2015. However, it could not be determined from the evidence admitted in this case that the Respondents received a medical report notifying them that the Claimant sustained a permanently physically impairing injury prior to July 31, 2015. If July 31, 2015 is the date that ultimately triggered the requirement to file an admission, then the August 26, 2015 GAL would have been timely as it was filed before August 30, 2015.

In any event, pursuant to C.R.S. § 8-43-203(2),

> If such notice is not filed as provided in subsection (1) of this section, the employer, or if insured, the employer's insurance carrier, as the case may be, may become liable to the claimant, if the claimant is successful on the claim for compensation, for up to one day's compensation for each day's failure to so notify….

The penalty statute in for this violation is discretionary and not mandatory. While the ALJ has determined that the Claimant has failed to prove that the GAL was filed late, even if the filing was not timely, the filing was not more than 14 days late. Furthermore, the Respondents disagreed with the impairment determination by Dr. Reichhardt and adopted by Dr. Charbonneau and filed a Notice and Proposal to Select a DIME Examiner on August 7, 2015, putting the Claimant on notice that although the medical benefits were admitted, liability for temporary or permanent disability benefits was disputed. There was no persuasive evidence presented that the Claimant suffered any prejudice due to the failure to accept liability for medical benefits in a timely manner or that the Respondents failed to pay for medical treatment.

To the extent the filing was up to 14 days late, the Claimant also failed to establish that she suffered any harm or prejudice as a result of the late filing with respect to disability benefits. The Claimant did not miss time from work until February 5, 2016, well after the admission was filed on August 26, 2015. Further, the Respondents admitted for medical benefits only and specifically denied temporary or permanent disability benefits and also requested a Division IME for review of Dr. Reichhardt's impairment rating. In this case, any subsequent delay in the completion of the DIME process, and the determination of the Claimant's impairment, and potentially entitlement to benefits for such impairment, is attributable to the Claimant's objections to the DIME process and multiple requests to delay and postpone the DIME evaluation. Therefore, even if the filing was up to 14 days late, the Claimant has delayed the DIME process.

The Claimant has failed to persuade the ALJ that any penalty should be assessed against the Respondents for an untimely filing of the General Admission and no penalty will be assessed for this claim.

The Claimant has failed to establish that Respondents improperly requested the selection of a Division IME or are subject to penalties for failure to timely file a Notice and Proposal to Select an Independent Medical Examiner

Jurisdiction

First, on the matter of jurisdiction of the ALJ, citing *Alvarez v. JBS USA, LLC,* W.C. No. 4-783-538 (ICAO, July 10, 2012), the Respondents have argued that the ALJ does not have jurisdiction to consider the Claimant's October 9, 2015 issue of "determine the propriety and effect of Respondents' preemptive and belated bogus DIME application." The Respondents further argue that the ALJ does not have jurisdiction to review prehearing conference orders that dismissed these issues, but this was addressed above.

The Claimant asserts, to the contrary, that the Office of Administrative Courts and its ALJs have long been statutorily and administratively vested with original jurisdiction to hear and decide all matters arising under articles 40 to 47 of the Colorado Worker's Compensation Act, including "disputes concerning the division IME process that arise in individual cases that cannot be resolved by agreement of the parties...." The Claimant cites a long string of cases and C.R.S. §8-43-201(1); WCRP 11-10 as authority.

Multiple cases before the Industrial Claim Appeals Office have contemplated litigation before an ALJ regarding disputes over the DIME procedure arising in an individual case as distinguished from controversy implicating the DIME system as a whole. *Rodriguez v. Safeway Stores,* W.C. No. 4-712-019 (ICAO, September 10, 2008); *Caro v. Johnson Controls, Inc.,* W.C. 4-786-424 (ICAO, May 12, 2010). Further, the Respondents' reliance on *Alvarez* is misplaced as the ALJ in that case did not decline to rule on a DIME panel selection issue. Rather, the ALJ determined that the Claimant failed to prove entitlement to selection of a DIME physician by practice specialty since WRCP 11-3(c) provides for selection of a three-physician panel based on their accreditation to perform impairment ratings on the body parts or medical conditions designated by the requesting party on the IME application and, as such, failed to state a claim under which relief may be granted. Per WCRP 11-10 and C.R.S. §8-43-201(1), the ALJ has jurisdiction to address the issues related to the DIME process that have arisen in this case. To the extent that an issue alleges a failure to comply with the rules or statutes applicable to commencement of the DIME process or entitlement to commence the DIME process related to the facts of this case, or to review a PALJ order regarding the same, these issues fall within the ALJ's jurisdiction.

Timeliness of DIME Request

In this case, the Respondents disagreed with the impairment determination by Dr. Reichhardt and adopted by Dr. Charbonneau and filed a Notice and Proposal to Select a DIME Examiner on August 7, 2015.

C.R.S. § 8-42-107.2(b) provides that,

> If any party disputes a finding or determination of the authorized treating physician, such party shall request the selection of an IME. The requesting party shall notify all other parties in writing of the request, on a form prescribed by the division by rule, and shall propose one or more acceptable candidates for the purpose of entering into negotiations for the selection of an IME….Unless such notice and proposal are given within thirty days after the date of mailing of the final admission of liability or the date of mailing or delivery of the disputed finding or determination…the authorized treating physician's findings and determinations shall be binding on all parties and on the division.

The timing for selection of an IME for an insurer or self-insured is prescribed by C.R.S. § 8-42-107.2(2)(a)(I)(B) as commencing "with the date on which the disputed finding or determination is mailed or physically delivered to the insurer or self-insured employer. Therefore, to contest the impairment rating determination of Dr. Reichhardt which was found to be delivered with the medical opinion of Dr. Charbonneau as of July 31, 2015, the Respondents were required by the statute to request a Division IME on or before August 30, 2015. So, Respondents' August 7, 2015 Notice and Proposal to Select an Independent Medical Examiner was timely[1].

[1] Although the ALJ determined that impairment rating determination of Dr. Reichhardt was delivered with the medical opinion of Dr. Charbonneau as of July 31, 2015, even if the earlier July 13, 2015 date of Dr. Reichhardt's report is used, the Respondents' August 7, 2015 Notice and Proposal to Select an Independent Medical Examiner would have been timely.

"Preemptive" DIME Issue

In addition to disputing the timeliness of the Respondents' Notice and Proposal to Select a DIME Examiner, the Claimant also characterizes the DIME in this case as "preemptive" and "bogus." The Claimant's principle argument with respect to this issue appears to be that when the Respondent seeks a DIME before filing a Final Admission of Liability, this is done in "bad faith" and utilized to preempt the Claimant's ability to seek a DIME and it shifts the burden on the Claimant.

Claimant points out that pursuant to C.R.S. § 8-42-107.2(2)(a)(I)(A):

> For the claimant, the time for selection of an IME commences with the date of mailing of a final admission of liability by the insurer or self-insured employer that includes an impairment rating issued in accordance with section 8-42-107.

and

C.R.S. § 8-42-107.2(c) provides that,

> If the insurer or self-insured employer requests and IME and the examination is conducted before the insurer or self-insured employer admits liability pursuant to section 8-43-203(2)(b), the claimant may not request a second independent medical examination on that issue but may appeal the IME's decision, as set forth in section 8-43-203(2)(b)(II).

As a result, counsel for the Claimant argued at hearing and in her post-hearing brief, that if Respondents seek a Division IME before filing a final admission, the Claimant is unfairly prejudiced as the Respondent is effectively preempting the single opportunity to procure a burden-shifting objective determination as to MMI and the Claimant's impairment rating. The Claimant has argued, without citing any persuasive authority, that the Respondent must have a "good faith" basis for seeking a DIME in this situation or it is inherently unfair that the Claimant may only challenge the IME through appeal and is then subject to a burden of overcoming the DIME by clear and convincing evidence.

The timing for seeking requesting selection of a Division IME is established by the statute. The language is clear and unequivocal. If a Respondent does not request an IME when prescribed by statute, then the ATP's findings and determinations are binding. If the Respondent fails to seek the IME when required, there is no way to challenge determinations of MMI or impairment ratings. Nothing in the statute requires a showing of good faith by Respondents seeking a DIME evaluation prior to filing a Final Admission of Liability.

In filing a Notice and Proposal to Select a DIME Examiner on August 7, 2015, the Respondents complied with statutory requirements and preserved the only method to challenge the impairment rating provided determination by Dr. Reichhardt and adopted by Dr. Charbonneau. The Claimant has failed to show how the Respondents acted in bad faith or that they failed to follow statutorily prescribed procedure to preserve the right to a Division IME in this case. To the extent that the Claimant argues that the statute is unconstitutional, the ALJ lacks jurisdiction to address this contention.

Propriety of DIME panel selection process and whether or not the DIME physician selected meets required qualifications

On August 7, 2015, the Respondents filed a Notice and Proposal to Select a DIME Examiner. Following receipt of this document, the parties have 30 days to negotiate and select an IME pursuant to C.R.S. § 8-42-107.2(3)(a). If the parties are unable to agree, the insurer is to give notice of this fact to the Division within 30 days. Then, C.R.S. § 8-42-107.2(3)(a) provides, in pertinent part,

> The division shall then, within ten days after receiving such notice, select three physicians by a revolving selection process established by the division from the list of physicians maintained by the division.
>
> **…**
>
> The director of the division shall promulgate rules to implement the process of selecting a panel of three physicians from which the parties may select a physician to conduct a division independent medical examination. The selection of a physician panel shall be based on various factors, including, but not limited to, the designation by rule of the fields of specialization authorized to perform independent medical examinations for conditions listed under each medical treatment guideline and measures to prevent the over-utilization of physicians or specialists. The requesting party shall have the opportunity to strike one of the three physicians from the list, followed by the opposing party who shall then be given the opportunity to strike one physician from the list. The remaining IME physician shall be designated by the division to conduct the IME. If one or neither party strike a physician from the list, the division shall select the physician to conduct the IME from the remaining physicians on the list.

Prior to making a determination to strike a physician from the list of IME physicians per C.R.S. § 8-42-107.2(3)(a), a party is entitled to obtain and review a summary disclosure pertaining to any business, financial, employment, or advisory relationship between a listed physician, or any entity affiliated with the physician, and the insurer, self-insured employer, or claimant who is a party to the claim.

The provisions of WCRP, Rule 11-3 (C), as promulgated by the director, require the DIME Unit to select a panel of three physicians based upon the requesting party's designation of geographic area and body parts or medical conditions to be evaluated as listed on the DIME application. Rule 11-3 (C) specifically provides:

> The three-physician panel will be comprised of physicians based on their accreditation to perform impairment ratings on the body part(s) and/or

> medical conditions designated by the requesting party on the IME application.

In this case, prior to the selection of the DIME physician, the Claimant filed an Application on October 10, 2015 listing “propriety of the DIME Application” as an issue. On October 20, 2015, the Claimant filed a second Application for Hearing endorsing the issues of “propriety of DIME panel selection and physician specialties, contrary to Claimant’s DIME rights as expressed in *AFL-CIO v Donlon* and *Whiteside v. Smith*, contrary to the Claimant’s true treatment and diagnostic needs and extent of his (sic) occupational impairments and to hold the DIME process in abeyance per *Jesus Munoz v ICAP* and *JBS Swift & Compan*y.”

The parties ultimately received notice that the Division selected Lloyd Thurston, DO to perform the Division Independent Medical Examination on January 15, 2016. Because Dr. Thurston was not an orthopedic surgeon nor a neurologist and the Claimant’s authorized treating physician was not an orthopedic surgeon nor a neurologist, nor did he refer the Claimant to one of these specialists during her treatment for this work injury, the Claimant has argued that the Claimant has been denied determination of maximum medical improvement by a person who would be competent to render such a decision.

Under C.R.S. § 8-42-107(8)(b)(I), an authorized treating physician shall make a determination as to when the injured employee reaches maximum medical improvement. It is undisputed that Dr. Charbonneau is the Claimant’s authorized treating physician, and that Dr. Charbonneau determined the Claimant reached maximum medical improvement for this work injury as of July 13, 2015. Contrary to the Claimant’s argument that Dr. Charbonneau was not competent to determine MMI, the Worker’s Compensation Act specifically provides that an authorized treating physician determines maximum medical improvement. The Worker’s Compensation Act consistently provides that no specialist is required to determine MMI in C.R.S. § 8-42-107.2(3)(a), which specifically discourages the overutilization of specialists.

Furthermore, the case cited in the Claimant’s October 20, 2015, application for hearing, *Colorado AFL-CIO v. Donlon*, supports Respondents’ position, stating:

> The claimant's treating physician makes the initial determination of MMI and degree of impairment. Since these two facts are of considerable financial consequence, they have historically been the subject of extensive litigation. The General Assembly sought to decrease such litigation by providing that, if either party disputes the finding of the treating physician as to MMI or degree of impairment, that party may require that an independent medical examination (IME) be performed.
>
> *Colorado AFL-CIO v. Donlon*, 914 P.2d 396, 401 (Colo. App. 1995).

As found, the Respondents timely disputed the impairment rating of Dr. Reichhardt adopted by Dr. Charbonneau. In this case, it does not appear that the

Claimant is not challenging application of the rules. The Claimant presented no evidence or argument that DOWC or the DIME Unit specifically violated any rules. Rather, the Claimant appears to present a facial challenge of the DIME process and is disputing the Worker's Compensation Act and Worker's Compensation Rules of Procedure themselves.

The Claimant provides no legal authority to prevent Respondents' statutory right have Dr. Thurston as the DIME selected to review the authorized treatment provider's impairment rating. In fact, Claimant's counsel has previously raised a nearly identical issue in multiple claims, all of which have dismissed this issue. *See Alfredo Leyva v. NextEra Energy, Inc.,* W.C. No. 4-934-570; *Barrios v. Morgan County Schools*, W.C. No. 4-646-145; *Archuleta v. Hi-tech Auto Body, Inc.*, W.C. No. 4-684-250; *Verdin v. Safeway*, W.C. No. 4-682-903, *Caro vs. Johnson Controls*¸ W.C. No. 4-786-424 (ICAO, May 12, 2010); *Rodriguez v. Safeway Stores, Inc.*, W.C. No. 4-712-019 (ICAO, Sept. 10, 2008); *Hester v. Eco Express, LLC*, W.C. No. 4-838-236 (ICAO, Sept. 10, 2013); *Emily Maestas v. Wal Mart Stores, Inc.,* (ICAO, Jan. 22, 2009).

Having considered the evidence and argument in the context of C.R.S. § 8-42-107.2 and WCRP 11-3, the Claimant failed to show any persuasive authority to support the argument that she has the right to apply for hearing to contest selection of the three-physician panel under Rule 11-3 (C) in this case. As found, Rule 11-3 (C) requires the DIME Unit to select panel physicians based upon the level of accreditation through the division, and not based upon area of practice. There was no persuasive evidence presented that the physicians selected for the three-physician panel were not Level II accredited. During hearing, counsel for the Claimant explicitly agreed that Dr. Thurston is Level II accredited. The Claimant has not produced any evidence to support an inference that the DIME unit failed to comply with its procedures or that Dr. Thurston is not qualified to perform the DIME. Therefore, the Claimant failed to raise an issue upon which an administrative law judge could grant relief.

The DIME process is no longer held in abeyance

The Claimant failed to attend a DIME on March 9, 2016 with Dr. Lloyd Thurston and the Respondents sought an order compelling the Claimant's attendance at a DIME scheduled for April 13, 2016. After considering the argument of counsel, a PALJ granted the Respondents' motion with conditions. Namely, he ordered attendance at a rescheduled May 25, 2016 DIME evaluation unless vacated by order of an OAC ALJ.

At the hearing held on April 29, 2016, the undersigned ALJ ordered that the Claimant was relieved of compliance with PALJ Craig Eley's Order requiring the Claimant to attend a DIME evaluation with Dr. Thurston on May 25, 2016 in order to provide sufficient time for the parties to submit briefs in this matter and for the ALJ to issue an order. The ALJ ordered that the Claimant must work with Respondents to reschedule a DIME evaluation with Dr. Thurston to be scheduled between June 10, 2016 and July 10, 2016 and that the Claimant shall attend that DIME evaluation unless ordered otherwise.

Having considered the evidence and arguments presented at hearing and in the post-hearing briefs (see below), the ALJ determines that this order does not change the Claimant's obligation to attend the rescheduled DIME evaluation with Dr. Thurston. The Claimant remains under order compelling her attendance at the most recently scheduled DIME evaluation with Dr. Thurston.

Consideration of the allegation of a longstanding pattern of bias or predisposition with respect to the Claimant's attorney

ALJs are presumed to be competent and unbiased until the contrary is shown. *Halfmo Salad v. JBS USA, LLC,* W.C. 4-886-842-04 (ICAO, September 23, 2013), citing *Wecker v. TBL Excavating, Inc.,* 908 P.2d 1186 (Colo. App. 1995). In the absence of an allegation that an ALJ had a "personal, financial, or official stake in the decision which would evidence a conflict of interest on his part" a Claimant does not make a showing of bias or predisposition. *Neoplan USA Corp. v. Industrial Claim Appeals Office,* 778 P.2d 312, 314 (Colo. App. 1989).

Other than, potentially, the Claimant's request that the ALJ take administrative or official notice the contents of the underlying related case computer entries and Office Administrative Courts' and Division of Worker's Compensation and I.M.E. Unit files in consideration of this matter, pursuant to C.R.E. 201, which the ALJ declined to do, the Claimant failed to offer any evidence of a longstanding pattern of bias or predisposition of any PALJ or ALJ involved in any of the five consolidated Applications for Hearing in this claim.

In any event, the ALJ lacks jurisdiction to hear this allegation. This is not a matter arising under the Workers' Compensation Act. More precisely, allegations of bias against the Claimant's counsel do not constitute a dispute between an employee and an employer/insurer regarding a work-related injury.

Whether the Respondents have proven that attorney fees and costs should be assessed against the Claimant's attorney for pursuing unripe issues pursuant to C.R.S. § 8-43-211(3).

C.R.S. § 8-43-211 (3) provides,

> If an attorney requests a hearing or files a notice to set a hearing on issues which are not ripe for adjudication at the time such request or filing is made, the attorney may be assessed the reasonable attorney fees and costs of the opposing party in preparing for such hearing or setting. The requesting party must prove its attempt to have an unripe issue stricken by a prehearing administrative law judge to request fees and costs. Requested fees or costs incurred after a prehearing conference may only be awarded if they are directly caused by the listing of an unripe issue.

This statute authorizes a party to seek its fees and costs incurred before the hearing and without reference to the guidelines for seeking attorney fees and costs provided by other statutes or by court rules. *Youngs v. Industrial Claim Appeals Office,* 297 P.3d 964 (Colo. App. 2012). Rather, the amount of attorney fees and costs assessed under C.R.S. § 8-43-211(3) is left to the sound discretion of the ALJ. *Id.* An ALJ does not abuse discretion unless the order is beyond the bounds of reason, as where it is unsupported by the law or contrary to the evidence. *Pizza Hut v. Industrial Claim Appeals Office,* 18 P.3d 867 (Colo. App. 2001); *McMeekin v. Memorial Gardens,* WC 4-384-910 (ICAO November 15, 2012).

The statute does not define "ripe for adjudication." However, the Colorado Court of Appeals has found that "generally, ripeness tests whether an issue is real, immediate, and fit for adjudication." *Olivas-Soto v. Industrial Claim Appeals Office,* 143 P.3d 1178 (Colo. App. 2006); *also see Silviera v. Colorado Springs Health Partners,* W.C. 4-502-555 (I.C.A.O. November 8, 2011). In general, under the doctrine of ripeness courts will not consider uncertain or contingent future matters because the injury is speculative, may never occur and might resolve prior to the court's determination. See, *Stell v. Boulder County Dep't of Social Svcs*., 92 P.3d 910 (Colo. 2004).

Of the Claimant's five applications for hearing, all of which endorsed issues regarding the DIME directly or indirectly, four were filed before the DIME examiner was confirmed on January 19, 2016 (Applications dated October 9, 2015, October 20, 2015, December 7, 2015 and December 24, 2015). In these Applications for Hearing, the Claimant endorsed issues for hearing contesting the propriety of the DIME and DIME examiner's qualifications prior to the DIME examiner's confirmation. The Respondents argue that these issues were unripe at the time they were filed as they disputed an uncertain future matter, the DIME physician to be selected, and that had not yet been determined and that, furthermore, the DIME examination has still not occurred. Respondents thus contend that it is unknown whether the DIME examiner Dr. Thurston will agree with Dr. Charbonneau's date of MMI and the impairment rating assigned to the Claimant or if he will reach a different determination. Therefore, any allegations of injury to the Claimant related to DIME selection were speculative at the time the Claimant filed the first four Applications for Hearing in this case.

On this issue, the Claimant states in her post-hearing position statement,

> Nor is Respondents' utterly vague, amorphous, specious, and conclusory allegation of "unripeness" in any manner, way, shape, or form compatible with a claim for dispositive relief, since they are mutually repugnant, self-contradictory, and inherently inconsistent and incompatible concepts. Indeed, no manner of substantive adjudication is permissible as to "unripe" claims. Accordingly, as a matter of law and procedure, no unripe claim may even be the subject of a dispositive motion, which necessarily seeks relief on the merits. Rather, an unripe claim is one which by its very nature is not "ripe" for adjudication as a matter of law.

In ruling on the issues related to propriety of DIME panel selection, physician specialties, preemptive DIMEs and the timeliness of the DIME applications related to this individual case, the ALJ has either denied and dismissed the claims for lack of persuasive supporting evidence or found that the Claimant failed to raise an issue upon which relief could be granted. With respect to allegations that went beyond this individual case and alleged that the statute or its administration by the Division is unconstitutional, the ALJ determined that she lacked jurisdiction. While the issues were denied and may, in some instances, be groundless and frivolous, this is distinct from a finding that the issues were unripe. Because the Workers' Compensation Rules of Procedure provide that disputes concerning the DIME process that arise in individual cases may be presented to an ALJ for resolution, there is no legal impediment to immediate adjudication of these disputes. *Rodriguez v. Safeway Stores, Inc.,* W.C. 4-712-019 (ICAO, September 10, 2008). A challenge to the DIME panel is also ripe even where the ALJ ultimately determines there is no jurisdiction to proceed because the DIME has not yet occurred. While the Claimant may not prevail due to lack of jurisdiction, there is no legal impediment to immediate adjudication. *Maestas v. Wal Mart Stores, Inc.,* W.C. 4-717-132 (ICAO, January 22, 2009). Therefore, the Respondents have not established that attorney fees and costs should be assessed against the Claimant's attorney for the issues related to propriety of DIME panel selection, physician specialties, preemptive DIMEs and the timeliness of the DIME applications.

The Claimant also filed two Applications for Hearing for review of issues to be heard at prehearing conferences, before the prehearing conferences took place or a pending order was issued. The Claimant filed an Application for Hearing on December 7, 2016 to, "resolve issues raised by the Respondents' Motion to Strike Issues dated November 23, 2015, pursuant to *Gustavo Lozano v. Front Range Rebar Co., Inc*." This matter was under advisement by PALJ Harr at the time the Claimant's application for hearing was filed and the PALJ had ordered the parties to brief the issues. PALJ Harr did not issue his order until December 18, 2016. The Claimant also filed an Application for Hearing on February 15, 2016 on the issue of "to resolve issues raised by the Respondents' prehearing scheduled for February 16, 2016." Obviously, the prehearing conference of February 16, 2016, had not taken place. There was no disputed issue or actual controversy between the parties as no order had been issued by the prehearing judge. The Claimant's Application for Hearing involved uncertain future matters with speculative injury that, at the time the Claimant filed her Application for Hearing, might never occur. While the ALJ may later review the orders of the PALJ (see above), as long as the matters were being considered by the PALJ, there was no real and immediate issue fit for adjudication before the ALJ. Thus, the ALJ finds that these two issues endorsed by the Claimant were unripe. In the Claimant's Response to the Respondents' Motion for Attorney's Fees and Costs, the Claimant's attorney characterizes the December 7, 2015 and February 15, 2016 Applications for Hearing as "*Lozano* Applications" filed for the "procedural mechanism to accordingly divest the PALJ's jurisdiction over the issue(s) endorsed for prehearing and to place it instead within the jurisdiction of the Office of Administrative Courts ALJs for determination at a duly conducted hearing theron on the record." Claimant's counsel further states that, "it should be noted that the undersigned has been filing countless such *Lozano* Applications for this very purpose in a myriad of Worker Compensation proceedings over the course of the last 18 years. Thus, the Claimant's attorney acknowledges a long-standing practice of filing similar Applications for Hearing containing issues which are not ripe for adjudication at the time such filing is made.

The Respondents endorsed the issue of attorney's fees and costs and the relevant statute, C.R.S. § 8-43-211 (3), on each applicable Response to Application for Hearing. The Respondents also made the requisite attempt to strike the Claimant's unripe issues at prehearings held November 13, 2015 and February 16, 2016. Attorney fees and costs may be awarded for unripe issues endorsed in Applications for Hearing even when other issues raised in the same Applications were ripe for adjudication. *Youngs v. Industrial Claim Appeals Office,* 297 P.3d 964 (Colo. App. 2012).

The Claimant's attorney is ordered to pay attorney's fees and costs to Respondents for defense of only the issues endorsed in the Claimant's December 7, 2015 and February 15, 2016 Applications for Hearing related to review of issues pending before Prehearing ALJs prior to the PALJs rulings on the same.

Award of Attorney Fees and Costs Pursuant to C.R.S. § 8-43-211(3)

As found above, the ALJ determined that the Claimant's attorney was ordered to pay attorney's fees and costs related to two of the five Applications for Hearing that Claimant filed in this consolidated case. Respondents filed a Motion seeking attorney fees of $6,749.00 and costs of $169.28. In support of the Motion, Respondents filed detailed billing information. The Claimant did not object to any specific items in the billing information, but rather asserted a blanket objection to any award of fees or costs arguing that the issues endorsed in the Claimant's December 7, 2015 and February 15, 2016 Applications for Hearing were ripe for adjudication.

The ALJ has reviewed the information provided by the parties and has determined that the Respondents seek attorney fee and cost amounts in excess of that permitted by the ALJ's preliminary Order of June 10, 2016 and in excess of that permitted by C.R.S. § 8-43-211(3). No party requested a hearing on the issue of attorneys fees pursuant to C.R.C.P. Rule 121, §1-22(2)(c), nor was discovery on the issue of attorney fees requested pursuant to C.R.C.P. Rule 121, §1-22(2)(b). However, the billing information provided by Respondents is sufficiently detailed for the ALJ to make findings to support a determination of the amount to be awarded as attorneys fees and costs in this case in compliance with the standard of C.R.C.P Rule 121, §1-22(c) and as provided by C.R.S. § 8-43-211(3).

The ALJ has reviewed billing detail provided by Respondents containing 104 unredacted line items of billing entries and has made adjustments to the amounts sought by Respondents. The adjustments were made to reasonably calculate an award for amounts directly related to the endorsement of unripe issues. Certain billing items listed were permitted in their entirety, certain billing items were stricken as unrelated, and certain items were modified. The first two categories are self-explanatory. As for the modified items, the billing appeared to be for preparation and legal work related to all five Applications for Hearing that were a part of the consolidated hearing held on April 29, 2016. The ALJ apportioned these billing items so that only 2/5 of the amount was taxed as costs or attorney fees because the remaining 3/5 of the billing item is attributed to the three Applications for Hearings for which no award of attorney fees and costs was made. The line item review is set forth in *Exhibit A* to this Order. The first part of *Exhibit A* sets forth the line item analysis and any modification to the original amount sought by Respondents. The second part of *Exhibit A* identifies the specific line items by number as the line items were listed in the Respondents' billing information for ease of reference.

Please refer to *Exhibit A* to this Order for detailed analysis of the amounts requested for attorney fees and cost versus the amounts awarded. Based on the line item analysis, the ALJ orders the attorney for the Claimant to pay $3,004.27 to the Respondents pursuant to C.R.S. § 8-43-211(3).

ORDER

It is therefore ordered that:

1. The Claimant has failed to prove the Respondents failed to follow the statutorily prescribed procedure to preserve the right to a Division IME in this case. The Claimant also failed to prove that the DIME unit failed to comply with its procedures or that Dr. Thurston is not qualified to perform the DIME. Therefore, the Claimant failed to raise an issue upon which an administrative law judge could grant relief and the Claimant's issues of propriety of the DIME Application and propriety of the DIME selection and physician specialties are dismissed.

2. The Claimant is ordered to attend the DIME appointment with Dr. Thurston that has been rescheduled for June 22, 2016.

3. The ALJ lacks jurisdiction to consider the Claimant's issue of bias or predisposition toward the Claimant's counsel and this issue is dismissed.

4. The Claimant has failed to prove any penalty should be assessed against the Respondents for an untimely filing of the General Admission or DIME Application or for requesting attorney fees and relief beyond a PALJ's authority and all penalty claims asserted by the Claimant against the Respondents are dismissed.

5. The Claimant's attorney is ordered to pay attorney's fees and costs to Respondents for defense of only the issues endorsed in the Claimant's December 7, 2015 and February 15, 2016 Applications for Hearing related to review of issues pending before Prehearing ALJs prior to the PALJs rulings on the same.

6. The attorney for the Claimant to pay $3,004.27 to the Respondents pursuant to C.R.S. § 8-43-211(3).

7. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

➢ Whether claimant suffered a compensable injury on December 6, 2013?

➢ Whether claimant is entitled to medical treatment, specifically right shoulder surgery, as a result of his alleged injury on December 6, 2013?

➢ Whether Respondents violated C.R.S. § 8-43-103(1) or W.C.R.P. 8-2(A), and if so, whether claimant is entitled to an award of penalties.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Employer hired claimant on June 9, 2012 and employed his as a foreman.

2. Six months prior to Claimant's accident, he underwent Laterjet right shoulder surgery to stabilize it. Claimant had a history since age 13 of repeated and frequent dislocations. Prior to his surgery, his shoulder would dislocate as many as seven or eight times a day.

3. November 26, 2013 medical records show that Claimant sought treatment for right shoulder pain and that he was being tapered off of Percocet.

4. Claimant alleges that he sustained right shoulder and neck injuries as a result of rear end collision that took place on December 7, 2013.

5. On December 7, 2013, Claimant was working with a crew near San Antonio, Texas. Claimant was seat-belted while driving Employer's Ford F250 work truck. Claimant stopped at a stop sign or red light and the truck was rear-ended by a light weight vehicle. Claimant testified that the impact was severe, that the truck was hit by a vehicle travelling at least 55 miles per hour, and reported to at least one medical provider that he was thrown violently around in the vehicle.

6. Claimant's testimony and reports were contradicted by the testimony of Oliver Singleton who testified live at hearing. Mr. Singleton works as a supervisor for Employer and has worked for Employer approximately four years. Mr. Singleton was in the vehicle with Claimant on December 7, 2013. Mr. Singleton, who was riding unrestrained in the back seat, testified that he would characterize the rear end collision as very minor. The work truck was large and heavy and was rear ended by what he believed was a smaller, light weight SUV. He did not believe the vehicle that rear ended them was traveling at a high rate of speed at impact. Rather, he testified that he did not even realize they had been hit from behind, instead believing the truck had downshifted.

Mr. Singleton did not sustain any injury nor was he moved around the vehicle in any appreciable way. He testified that it would not be accurate if Claimant told medical providers that the vehicle that rear ended them was traveling 55 miles per hour. He also testified that it would not be accurate if Claimant told medical providers that the individuals in the vehicle were thrown around violently when they were rear ended. Finally, there was very minor damage to the truck they were driving as a result of collision.

7. Claimant's testimony and reports also were contradicted by the police report which described a "minor accident" that received a "non emergency" response; and Methodist Hospital records which indicate that the work truck was hit by a "Kia compact car" at moderate speed. Further, Claimant was able to drive the truck back to Colorado without any repairs. The record provides details of a minor collision.

8. Claimant's hearing testimony is also contradicted by his earlier report to Dr. Hattem. Claimant later reported to Dr. Hattem during an October 28, 2015 IME that the driver of the other vehicle pulled up alongside the truck and said that if everyone was okay, he would be leaving. Such would not be the case if the other vehicle sustained damage, and also indicates that neither the driver or passengers, if any, in the smaller car sustained serious injuries.

9. Claimant dropped his coworkers off at the job site, and drove himself to Methodist Hospital. Claimant complained of mild pain and identified the location of his pain as his neck. Claimant presented in no acute distress. Claimant had decreased range of motion in his neck due to pain and was noted to have a mild muscle spasm in the back of his neck. Claimant did not report shoulder symptoms or complain of right shoulder pain at the hospital, yet testified at hearing that his right shoulder was his worst injury. Diagnostics were not necessary. Claimant was diagnosed on examination with a cervical strain. Claimant was given ten Flexeril tablets and was instructed to take ibuprofen. Claimant was taken off work for three days and was not to lift more than ten pounds "until well." Claimant was seen at 8:18 a.m. and discharged at 8:44 a.m.

10. That same day, Claimant retained an attorney after speaking with the insurance carrier for the other driver. The attorney referred Claimant to chiropractor Dr. Graham in Colorado. Claimant saw the chiropractor twenty-four times between February 28, 2014 and February 27, 2015. Dr. Hattem described the chiropractor's handwritten notes as illegible.

11. Claimant rested the day of the accident and the following day. He returned to supervise the work the next day.

12. Employer's pay records show that during the week following the accident, Claimant worked 72.75 hours as a laborer and driller. The following week, Claimant worked 54 hours. No persuasive evidence supports a finding that Claimant worked under any restrictions during that time. Claimant continued to work full time for several months. Claimant's ability to work at heavy labor for extended hours support a finding that Claimant was not injured.

13. Claimant testified that after he returned to Colorado, he told Employer's owner, Mike Davis, that he had shoulder pain. Claimant did not say that his shoulder pain was a result of the accident. Claimant testified that Employer allowed Claimant to drive a dump truck until that work became unavailable. As an equipment operator, Claimant was paid $19.78, a higher hourly rate that he was paid as a laborer or driller, $15.00 and $16.93 respectively.

14. On December 30, 2013, Claimant sought care at St. Thomas More. He complained of neck pain since the accident, with migraines and restricted neck movement. Claimant had not taken any pain medication for two weeks. Claimant did not report right shoulder symptoms. A CT scan of Claimant's neck was performed and read as negative.

15. Claimant was to follow up with his PCP, Dr. Button. However, Claimant testified that Dr. Button did not treat Claimant because he did not see patients for motor vehicle accidents. Claimant returned to Dr. Button in October, 2014. Dr. Button's October 22, 2014 report notes that Claimant's automobile coverage had ended and that Claimant needed Medicaid coverage.

16. The ALJ reasonably infers from this fact and from the fact that Claimant retained counsel on the day of the accident that Claimant chose to pursue treatment under automobile coverage rather than pursue a claim under workers ' compensation.

17. On February 4, 2014, Claimant sought treatment at Button Family Practice after he fell on ice. The record of that visit notes a "right shoulder injury….this a.m. fell on ice with outstretch[ed] right arm to catch fall."

18. When Claimant was seen by Dr. Graham on February 28, 2014, Claimant did not mention injuring his right shoulder when he fell on ice on February 4, 2014. Rather, he refers only to the rear end collision on December 7, 2013, and mentions right shoulder pain and neck pain.

19. On March 14, 2014, Claimant sought treatment from Dr. Weinstein who documented Claimant "denies any neck pain, numbness, tingling, or motor weakness." Claimant did not mention his February fall on ice. Rather, he reported to Dr. Weinstein that he "had a significant shoulder injury" due to a car accident.

20. Claimant's interrogatory responses, signed and notarized on November 16, 2015, were admitted into evidence at the hearing. Interrogatory no. 7 propounded the following question to Claimant:

> **Question**: Other than your injury in this claim, describe in detail any accidents, physical injuries, diseases, or other health problems, whether or not work-related, that you have sustained, including the date of the injury, the name of any medical provider who treated the injury, and any permanent disability sustained from the injury.

Claimant answered: “I underwent a surgery with Dr. FitzPatrick in 2013 to fix my right dislocated shoulder. After the accident on December 6, 2013, I underwent another surgery on my right shoulder with Dr. David Weinstein in March 2014. Also, I was involved in a motor vehicle accident on March 14, 2015 and had to undergo right shoulder replacement surgery with Dr. FitzPatrick in June 2015. I’m scheduled to undergo left shoulder surgery with Dr. FitzPatrick on November 20, 2015.”

21. Claimant’s answer failed to disclose the following events which required emergency room care:

- On January 20, 2009, claimant was assaulted and sustained cervical trauma at C2-3.
- On July 31, 2009, Claimant was riding on the back of a truck which hit a large boulder and claimant was thrown into a rail. Claimant reported chest pain that radiated into his axilla, and subsequent loss of consciousness.
- On February 15, 2010, Claimant fell 8 feet off his truck and dislocated his left shoulder.
- On July 4, 2010, Claimant injured his right shoulder when it popped out of place and he could not move his hand.
- On October 3, 2011, Claimant hit a deer while driving 60 mph. The St. Thomas More Hospital records document neck pain.
- On May 9, 2013, Claimant injured his arm and shoulder when climbing over a horse panel.
- On May 30, 2013, Claimant was seen at Centura Health for “right shoulder recurrent instability.”
- On February 4, 2014, Claimant injured his right shoulder when he slipped and fell on ice with his right arm outstretched to catch his fall.
- On September 9, 2014, Claimant sustained a hernia when lifting a car engine.
- On January 9, 2015, Claimant had “left inguinal hernia surgery three months ago, and reinjured himself at work while pulling and straining on heavy machinery.”

22. Interrogatory no. 12, propounded the following question:

> **Question**: Describe your current daily activities, including any hobbies, sports, or recreational activities in which you

> participate. Be sure to include whether you ride bulls or other animals, and if so, whether you have sustained any injuries from this activity.

Claimant answered: "I am very limited with my daily activities. I cannot carry heavy items, or anything over 5 lbs. I have hard time with daily chores: carrying groceries, sweeping, moping; my right arm doesn't work property. I used to go water skiing, tubing behind the boat. And I'm unable to do those activities since the injury. Occasionally, I used to ride horses, and now I'm unable to do that. I never fell from the horse before. I do not ride bulls or other animals, and I never had any injuries from riding horses."

23. Claimant's response is inconsistent with the following:

- On August 26, 2012, medical records from St. Thomas More Hospital document Claimant: "Got bucked off of horse landed on tail bone…..low back pain."

- On cross examination at hearing, after being a shown a picture of himself participating in a "Warrior Dash Race", Claimant acknowledged that it was him in the picture and he participated in the race in August, 2015. The picture shows Claimant doing some type of water crossing with both arms above his head climbing across a rope ladder in an obstacle course. At hearing, Claimant also acknowledged that he posted this picture social media.

24. Mr. Davis testified at hearing that he knew his crew was involved in a rear end collision on December 7, 2013, while were working in San Antonio, Texas. He spoke with Claimant immediately after the accident and Claimant told him that he had called the police to make a report, he was not injured, and that the vehicle sustained only minor damage. Claimant told Mr. Davis that he and a coworker were going to the hospital to be evaluated, and later reported that they were not injured.

25. Mr. Davis testified that if Claimant were to have reported an injury to him, he would have prepared a first report of injury and directed Claimant to see a workers' compensation physician. Mr. Davis testified that he has protocols in place and adheres to the workplace rules regarding reporting work related injuries. Mr. Davis has dealt with other employee's work related injuries with Employer in the past and prepared reports of injury accordingly.

26. Although Claimant testified that Mr. Davis told him the accident was not covered by workers' compensation because Claimant was not "on the clock" when he was injured, Mr. Davis denied making the statement. Further, Mr. Davis testified that he did consider all of his crew in the vehicle on December 7, 2013 to be at work and on the clock, and had handled a previous workers' compensation claim where that was the case.

27. Mr. Davis testified that Claimant abandoned his job in April of 2014 and, to

his knowledge, left to start a business servicing radiators and working on cars. Mr. Davis did not speak to claimant after April of 2014.

28. Mr. Davis first learned that Claimant was reporting a work related injury due to the rear end collision on December 7, 2013, in April of 2015, when he received notice from Pinnacol Assurance that a claim had been filed.

29. On January 20, 2015, Claimant was seen at Valley Wide Health Systems. He reported, "Approximately 1 year ago he was read ended by a car traveling > 55mph and was thrown violently around the car and sustained additional damage to the right shoulder."

30. On March 14, 2015, Claimant was involved in a significant non work-related high speed motor vehicle accident. Claimant was an unrestrained passenger driving with his father and was ejected from the car during a rollover accident. Claimant lost consciousness and sustained multiple injuries including head trauma, a right shoulder fracture, left rib fracture, pelvic fracture, and multiple lacerations.

31. On April 30, 2015, Claimant filed a worker' claim for compensation for alleged injuries that he sustained on December 7, 2013. On the same day, Claimant prepared a first report of injury for the alleged injuries on December 7, 2013.

32. Dr. Albert Hattem, M.D., performed a Respondents Independent Medical Examination (IME), of Claimant and issued a report on October 25, 2015. As part of his IME, Dr. Hattem evaluated Claimant, took Claimant's medical history, and reviewed Claimant's medical records. Dr. Hattem opined:

- It was not plausible that the December 7, 2013 accident could lead to a significant aggravation of the Claimant's preexisting right shoulder condition. It was not likely that the mechanism of injury could even result in any type of shoulder injury.

- The shoulder surgery performed by Dr. Weinstein in 2014 was not related to the December 2013 rear end accident.

- Claimant was involved in a catastrophic second motor vehicle accident in March 2015. But for the second motor vehicle accident, Claimant would not have required a right total shoulder arthroplasty done in 2015.

33. Dr. Hattem attended the hearing. However, due to time constraints, he was unable to testify live and the Judge permitted his post hearing deposition, which took place on May 13, 2016. The deposition transcript was admitted as Respondent's Exhibit W.

34. Dr. Hattem testified as an expert in occupational medicine. He testified that he asked Claimant about his prior injuries and physical problems. Claimant did not disclose to him: injuring his neck in an assault in 2009, injuring his neck injury in 2011

when he hit a deer going in excess of 60 miles per hour, injuring his right shoulder injury in May of 2013 when he fell climbing over a horse panel, injuring his right shoulder in February of 2014 when he slipped and fell on ice.

35. Dr. Hattem opined that based on his review of the medical records, Claimant had a pre-existing history of neck pain and right shoulder pain, which pre-dated the December 7, 2013 accident.

36. Six months prior to the December accident, Claimant had a Laterjet right shoulder surgical procedure, which has complication/failure rates as high as 25-30%.

37. Dr. Hattem testified that when Claimant was evaluated at Methodist Hospital in San Antonio, essentially no treatment was administered and no diagnostics were conducted, and it appeared to be a minor incident.

38. Dr. Hattem would not relate Claimant's need for shoulder surgery to the December 7, 2013 rear end collision for multiple reasons. First, "the mechanism of injury is not consistent with the shoulder condition. His car was just pushed forward." Second, Claimant did not mention shoulder pain or injury at Methodist Hospital. Third, Claimant did not report shoulder injury or pain later at St. Thomas Moore. And fourth, Claimant most likely sustained a non work-related right shoulder injury on February 4, 2014, when he slipped and fell on ice with his right arm outstretched.

39. Dr. Hattem opined that Claimant's fall on February 4, 2014, was the proximate cause for Dr. Weinstein's right shoulder surgery that occurred on June of 2014.

40. Dr. Hattem opined that Dr. Graham and Dr. Weinstein did not have medical records from Claimant's initial hospital visits, and therefore did not have an accurate picture of Claimant's pre-existing medical history, nor an accurate understanding of the severity of the December 7, 2013, accident. Claimant's cervical MRI was normal, and "there was no objective evidence of there being any cervical spine pathology at all." The rear end collision of December 7, 2013 did not aggravate Claimant's preexisting right shoulder condition or neck condition.

41. The testimony of Dr. Hattem is credible and persuasive.

42. The documentary evidence as well as the testimony of Mr. Davis and Mr. Singleton, is more credible and persuasive than the testimony of Claimant.

43. Claimant's testimony is not credible.

44. Claimant has not met his burden of proving by a preponderance of the evidence that he sustained a work-related injury on December 7, 2013.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. § 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. § 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S.

The ALJ's factual findings concern only evidence dispositive of the issues involved. The ALJ has not addressed every piece of evidence leading to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010). It is the sole province of the fact finder to weigh the evidence and resolve contradictions therein. See *Pacesetter Corp. v. Collett,* 33 P.3d 1230 (Colo. App. 2001).

When determining credibility, the fact finder should consider, among other things the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline,* 57 P.2d 1205 (1936). A Workers' Compensation case is decided on its merits. Section 8-43-210, C.R.S.

An injury is compensable under Colorado's Workers' Compensation Act if incurred by an employee in the course and scope of employment. § 8-41-301(1)(b), C.R.S.; *Price v. ICAO,* 919 P.2d 207 (Colo. 1996). Claimant must show a connection between the employment and the injury, such that the injury has its origin of the employee's work-related functions, and is sufficiently related to those functions to be considered part of the employment contract. *See Madden v. Mountain W. Fabricators*, 977 P.2d 861 (Colo. 1999).

A pre-existing condition "does not disqualify a Claimant from receiving workers' compensation benefits." *Duncan v. ICAO*, 107 P .3d 999, 1001 (Colo. App. 2004). Thus, if an industrial injury aggravates, accelerates, or combines with a pre-existing condition so as to produce disability and need for treatment, the claim is compensable. *Id*. The ALJ finds and concludes that Claimant presented no persuasive evidence that his condition was aggravated, accelerated, or combined with the pre-existing disease or infirmity to produce a disability or need for medical treatment.

Claimant is not credible. His account of the December 7, 2013 accident is contradicted by the vast weight of documentary evidence and the consistent and credible testimony of other witnesses. Also, his reporting of the severity of the accident became exaggerated over time. His interrogatory response about previous injuries was vastly understated, as were his responses about his physical abilities. His account of his work limitations is contradicted by payroll records which show that the worked 72.75 hours as a laborer and driller the week immediately following his accident and 54 hours the following week.

The ALJ credits the opinions of Dr. Hattem as credible and persuasive. Neither Dr. Graham nor Dr. Weinstein had an accurate picture of Claimant's prior medical history, did not possess his medical records, and had only Claimant's subjective reporting to rely on regarding the rear end collision on December 7, 2013. Because the ALJ has found Claimant not credible, she further discredits the opinions of Dr. Graham and Dr. Weinstein as they relied on Claimant's reporting.

The evidence supports the conclusion that Claimant chose not to pursue a workers' compensation claim until long after the incident. Rather, he retained an attorney and deliberately chose to pursue coverage under the other driver's auto policy. His reports to Mr. Davis that he was uninjured, his initial medical evaluation, and other persuasive evidence all support the conclusion that Claimant was not injured in the December 7, 2013 accident.

Therefore, the ALJ concludes that based on the totality of the evidence, Claimant did not meet his burden of proving by a preponderance of the evidence that he sustained a compensable injury. Because the ALJ finds and concludes that Claimant did not sustain a compensable injury, she likewise finds and concludes that Claimant is not entitled to medical treatment, specifically right shoulder surgery.

Claimant has also failed to prove entitlement to penalties based on the alleged violation of 8-43-103(1) or WCRP 8-2. In relevant part, 8-43-103(1) provides:

> Notice of an injury, for which compensation and benefits are payable, shall be given by the employer to the division and insurance carrier, unless the employer is self-insured, within ten days after the injury, and, in case of the death of any employee resulting from any such injury or any accident in which three or more employees are injured, the employer shall give immediate notice thereof to the director. If no such notice is given by the employer, as required by articles 40 to 47 of this article, such notice may be given by any person. Any notice required to be filed by an injured employee or, if deceased, by said employee's dependents may be made and filed by anyone on behalf of such claimant and shall be considered as done by such claimant if not specifically

> disclaimed or objected to by such claimant in writing filed with the division within a reasonable time.

As found, Claimant did not report an injury to Mr. Davis due to the rear end collision of December 7, 2013. Rather, when the two spoke the day of the accident Claimant indicated that he was fine, and that there was minor damage to the truck. When Claimant returned from Texas to Colorado he did not report an injury, and if he had, Mr. Davis would have referred Claimant for medical treatment and filled out the appropriate paperwork to file a workers' compensation claim. Mr. Davis first learned that Claimant was alleging an injury from the December 7, 2013 rear end collision in April of 2015, when he received paperwork from Pinnacol Assurance. Claimant's first report of injury states the "Date employer notified" was "4/30/15". The key provision in 8-43-103(1) is notice of an injury, not just an accident. In this matter, Mr. Davis was well aware that an accident occurred on December 7, 2013; however, he was not notified that an injury resulted from the rear end collision. As a result, Employer will not be penalized for failing to file a notice of injury with the Division.

In addition, the penalty allegations claimant has made are barred by the relevant statute of limitations. Notwithstanding the arguments noted above, Claimant's penalty claims are beyond the time period for requesting penalties under 8-43-304(5). In relevant part, 8-43-304(5) provides: "A request for penalties shall be filed with the director or administrative law judge within one year after the date that the requesting party first knew or reasonably should have known the facts giving rise to a possible penalty."

Claimant testified at hearing, and in his discovery responses that were entered into evidence, that he reported a work injury to Mr. Davis, on December 7, 2013. As a result, he was required, pursuant to 8-43-304(5), to file his alleged penalty claim with the director within one year after he knew about the possible penalty. Claimant failed to do this, and instead did not file the alleged penalty request until his initial application for hearing which was filed on June 15, 2015, a year and a half after the alleged penalty.

Claimant has failed to bring this requested penalty within the mandatory timeframe of 8-43-304(5). In addition, Claimant has offered no credible evidence that he somehow did not know the facts giving rise to a possible penalty. Rather, Claimant testified that he reported an injury to his supervisor Mr. Davis the same day it occurred, December 7, 2013.

Finally, with respect to the alleged WCRP 8-2 violation, Respondents contend that the same arguments apply, and in any event, a monetary penalty is not the remedy for such a violation; rather, it is that Respondents lose their right to designate, giving claimant the choice of provider.

The penalty allegations were not plead with specificity as required by 8-43-304(4) and, in any event, have been cured pursuant to 8-43-304(4). As noted above, 8-43-103(1) provides: "Notice of an injury, for which compensation and benefits are payable, shall be given by the employer to the division and insurance carrier, unless the employer is self-insured, within ten days after the injury, and, in case of the death of any employee resulting from any such injury or any accident in which three or more employees are injured, the employer shall give immediate notice thereof to the director. If no such notice is given by the employer, as required by articles 40 to 47 of this article, such notice may be given by any person. Any notice required to be filed by an injured employee or, if deceased, by said employee's dependents may be made and filed by anyone on behalf of such claimant and shall be considered as done by such claimant if not specifically disclaimed or objected to by such claimant in writing filed with the division within a reasonable time."

In addition, 8-43-304(4) provides: "In any application for hearing for any penalty pursuant to subsection (1) of this section, the applicant shall state with specificity the grounds on which the penalty is being asserted. After the date of mailing of such an application, an alleged violator shall have twenty days to cure the violation. If the violator cures the violation within such twenty-day period, and the party seeking such penalty fails to prove by clear and convincing evidence that the alleged violator knew or reasonable should have known such person was in violation, no penalty should be assessed. The curing of the violation within the twenty-day period shall not establish that the violator knew or should have known that such person was in violation."

Claimant filed a first report of injury on May 7, 2015. As a result, the alleged penalty was cured. Section 8-43-304(1) provides that if no such notice is given by the employer, "such notice may be given by any person." *See* 8-43-304(1). The filing of the First Report of Injury, which was done by Claimant's own attorney, cured the alleged penalty before an application for hearing was ever filed. Moreover, Claimant has not presented any clear and convincing evidence that Employer knew or should have known that they were in violation of any rule regarding reporting injuries at work. As found, Mr. Davis credibly testified that while he was aware of December 7, 2013, accident, Claimant explicitly told Mr. Davis that he was not injured.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant’s claim for compensation is denied and dismissed.

2. Claimant’s claim for penalties is denied and dismissed.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 14, 2016

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she sustained a compensable occupational disease in the form of a right shoulder injury during the course and scope of her employment with Employer.

2. Whether Claimant has proven by a preponderance of the evidence that she is entitled to receive authorized medical treatment that is reasonable and necessary to cure or relieve the effects of her industrial injury.

3. Whether Claimant has demonstrated by a preponderance of the evidence that she is entitled to receive Temporary Total Disability (TTD) benefits for the period December 9, 2015 through January 20, 2016.

STIPULATION

The parties agreed that Claimant earned an Average Weekly Wage (AWW) of $1,260.63.

FINDINGS OF FACT

1. Employer is a government contractor who services the Fort Carson Army Base. In September 2009 Claimant began working for Employer as a Fire Sprinkler Technician. Her primary job duties include inspecting and testing fire alarm and sprinkler systems for approximately 700 buildings at Fort Carson. Claimant's specific duties include turning valves to fill the system, checking gauges, walking throughout the building to visually inspect the pipes for leaks, shutting down the system after a test is finished and completing paperwork. The testing takes approximately 60-90 minutes per building. If there are no problems with the system, Claimant will proceed to test the next building. If there are problems, Claimant makes recommendations regarding repairs. She may perform minor repairs but most repair and installation projects are subcontracted to others. Claimant generally conducts testing of up to six buildings per day. She spends approximately 90% of her time testing fire alarm and sprinkler systems and the remainder of her time on repairs.

2. Claimant's medical history includes autoimmune and connective tissue disorders. She has been diagnosed with rheumatoid arthritis, osteoarthritis, lupus, carpal tunnel syndrome, Raynaud's syndrome, Sjogrens syndrome, chronic fatigue syndrome, sleep disruption, depression and fibromyalgia. Claimant complained of bilateral shoulder pain dating as far back as January 17, 2002. She also has chronic joint pain involving her back, hips, knees, ankles, feet, elbows, wrists and hands.

3. Claimant testified that she works at least 40 hours each week for Employer. Her job duties require her to use a ladder on a daily basis and she engages in significant, almost continuous, overhead work. To perform her job duties Claimant uses pipe wrenches, band saws, reciprocating saws and an air groover. She noted that she is required to use significant force with pipe wrenches to open valves that are part of the fire suppression system.

4. Supervisor of Employer's High Voltage Shop Rick Fisher also testified at the hearing in this matter. He explained that there are approximately 600-700 buildings with fire suppression systems on Fort Carson. Mr. Fisher noted that Claimant is required to turn valves and monitor gauges in order to test the zones in the fire suppression system. She must also conduct a visual walkthrough to detect leaks in the system. Mr. Fisher specified that testing the fire suppression system in a small building takes about two hours and approximately 40% of the time is spent turning valves. He remarked that about 70% of the valves are below shoulder level.

5. Mr. Fisher commented that Claimant spends approximately 20%-30% of her time engaged in overhead work. Claimant also lifts up to 75 pounds and completes paperwork. Mr. Fisher explained that Claimant engages in a variety of tasks throughout each day and approximately 90% of her job duties involve testing fire suppression systems.

6. Claimant explained that in August 2014 she began to develop right shoulder pain while performing her job duties. She specifically commented that her right shoulder symptoms were the most pronounced while she was loading and unloading ladders as well as using force in turning pipe wrenches. Claimant noted that, because her pain increased over time, she visited an urgent care facility in December 2014.

7. On January 27, 2015 Claimant visited Trisha R. Finnegan, NP-C at Front Range Orthopaedics for an examination. Claimant reported that she had been experiencing right shoulder pain and range of motion difficulties for approximately one year. She denied any specific injury or trauma, but noted that her job duties involved significant overhead work. Claimant remarked that she had received a right shoulder cortisone injection at an urgent care facility on December 3, 2014. Her symptoms initially worsened, but subsequently began to improve. X-rays revealed a type II acromion but were otherwise normal.

8. On February 12, 2015 Claimant underwent a right shoulder MRI. The MRI reflected that the AC joint was relatively unremarkable. However, the MRI also revealed a possible small rim rent type tear in the anterior insertion of the supraspinatus tendon.

9. Claimant reported her right shoulder condition as a work-related injury on February 17, 2015. She claimed that years of repetitive motion caused her right shoulder symptoms. Claimant did not report a specific incident or mechanism of injury.

10. On February 17, 2015 Claimant visited Concentra Medical Centers for an examination. She reported that she began to experience right shoulder pain approximately one year earlier. There was no mechanism of injury except for repetitive overhead use of her shoulders. Claimant was diagnosed with tendinits and impingement syndrome of the right shoulder. She received work restrictions that Employer accommodated by providing an assistant to complete the physical aspects of her job including opening and closing valves. Claimant was only required to instruct her assistant, take readings of the gauges and complete paperwork.

11. On March 17, 2015 Claimant returned to Front Range Orthopaedics for an examination with NP-C Finnegan. Claimant reported that approximately one year earlier she had been stretching at work when she developed right shoulder pain. The pain progressively worsened and was aggravated by her overhead work activities. NP-C Finnegan noted that Claimant's right shoulder symptoms had not improved with conservative treatment. After discussing surgical options, NP-C Finnegan recorded that she would schedule a right shoulder arthroscopy with subacromial decompression, debridement and a rotator cuff repair.

12. On August 12, 2015 Claimant underwent an independent medical examination with Jorge O. Klajnbart, D.O. Claimant reported that her right shoulder symptoms began approximately one year and seven months earlier at work in the absence of a traumatic incident. She denied that "windmill" stretching exercises at work caused her symptoms because she was "achy" before stretching. Dr. Klajnbart noted that Claimant's surgical recommendation involved an "arthroscopic subacromial decompression with probable acromioplasty for a type II acromion and to address her rotator cuff pathology."

13. Dr. Klajnbart determined that the requested right shoulder surgery was more likely caused by Claimant's underlying degenerative condition than her work activities for Employer. He explained that Claimant's right shoulder MRI revealed more of a degenerative process than an acute event. Dr. Klajnbart commented that Claimant's job duties involved some overhead activities and the placement of sprinklers but did not include the repetitive stress that is seen in "sports like baseball, tennis, rowing or weightlifting or in someone who performs many hours of overhead activity, to include occupations such as painting or carpentry." He also commented that many daily chores, including overhead activities, can cause overuse tears of the rotator cuff. Dr. Klajnbart thus summarized that, although the request for surgical intervention constituted reasonable and necessary medical treatment for Claimant's condition, it was not related to her work activities. Claimant's right shoulder condition was more likely caused by the "biological development of the rotator cuff changes than to an acute injury pattern from her employment."

14. On August 19, 2015 Claimant underwent an evaluation with Jack L. Rook, M.D. Dr. Rook stated that Claimant's job duties involve the repetitive use of her upper extremities while performing work that is frequently at or above shoulder level. Claimant's right shoulder symptoms developed approximately 18 months earlier while she was performing required morning stretching exercises that involved "windmill"

backwards and forwards range of motion movements. Claimant was not suffering any discomfort when she arrived at work, but after stretching, her right shoulder pain increased while performing her job-related activities. Claimant explained that she spent most of her day using ladders while working on sprinkler systems and pipes that are at or above ceiling level. She estimated that she spends in excess of 50% of her typical day working above shoulder level. Dr. Rook explained that Claimant did not initially file a Workers' Compensation Claim for her right shoulder because she believed her symptoms would improve. However, her condition continually worsened and became aggravated while she was performing her work activities. Dr. Rook remarked that Claimant was eventually diagnosed with right shoulder tendonitis, impingement syndrome and a rotator cuff. tear. Orthopedic Surgeon John H. Pak, M.D. subsequently recommended surgery in the form of a subacromial decompression, a rotator cuff repair and an evaluation.

15. Dr. Rook concluded that Claimant's right shoulder condition was related to her work activities for Employer. He explained that Claimant first noted right shoulder symptoms while performing warm-up exercises at work and her pain increased while completing job duties involving lifting and reaching above shoulder level. Moreover, Claimant's non-occupational activities do not involve repetitive lifting above shoulder level, there were no traumatic events associated with the development of right shoulder symptoms and she had no prior history of right shoulder problems. Accordingly, Dr. Rook determined that Claimant's work activities for Employer caused her right shoulder symptoms. Right shoulder surgery was also reasonable and necessary to relieve her condition.

16. On December 9, 2015 Claimant underwent right shoulder surgery with Dr. Pak. Dr. Pak specifically performed a right shoulder arthroscopy, a subacromial decompression and a rotator cuff repair.

17. Dr. Klajnbart testified at the hearing in this matter. He explained that Claimant suffered from right shoulder pain as a result of rotator cuff impingement or a partial thickness tear of the supraspinatus. Dr. Klajnbart noted that Claimant did not suffer a specific or acute injury at work but instead developed right shoulder pain through a degenerative process. He remarked that Claimant engaged in overhead work less than 30% of each work day.

18. Dr. Klajnbart explained that Claimant suffers from autoimmune disorders including lupus and rheumatoid arthritis that can significantly increase the likelihood of rotator cuff problems. He determined that Claimant would have developed a right shoulder tear regardless of her work activities. In fact, Dr. Klajnbart stated that Claimant's development of additional left shoulder symptoms suggests that her right shoulder condition was caused by a disease process instead of her work activities. Accordingly, he concluded that Claimant's work activities did not cause, aggravate or accelerate her right shoulder symptoms, but instead constitute the natural progression of an underlying condition.

19. On June 17, 2016 the parties conducted the post-hearing evidentiary deposition of Dr. Pak. Dr. Pak remarked that he performed Claimant's December 9, 2015 right rotator cuff surgery. He noted that he did not conduct a causation analysis to determine whether Claimant's right rotator cuff tear was related to her job duties for Employer. After reviewing a list of Claimant's job duties and video of a Fire Sprinkler Technician engaged in work activities, he determined that Claimant's job duties increased the likelihood of a rotator cuff tear. However, Dr. Pak could not state with medical probability that her work activities caused her rotator cuff tear. He commented that rotator cuff tears are degenerative in nature because the incidence of tears increases as individuals age. Dr. Pak explained that he was unaware of Claimant's specific job duties or the length of time she spent performing each of her duties. Dr. Pak thus noted that he was unable to provide a causation analysis regarding the development of Claimant's right rotator cuff tear. He summarized that he could not state within a reasonable degree of medical probability that Claimant's right shoulder problems are work-related.

20. Claimant has failed to establish that it is more probably true than not that she sustained a compensable occupational disease in the form of a right shoulder injury during the course and scope of her employment with Employer. Although Claimant attributed her symptoms to her work activities, a review of her job duties as a Fire Sprinkler Technician reflects that they lacked the requisite force or repetition to cause her symptoms. Claimant engaged in a variety of tasks throughout each shift. The persuasive reports and testimony of Dr. Klajnbart reveal that, although Claimant engaged in some forceful activities, her job duties did not meet the minimum thresholds for force, repetition or duration to establish a cumulative trauma condition pursuant to the *Workers' Compensation Medical Treatment Guidelines*, Rule 17, Exhibit 4 (shoulder) *Cumulative Trauma Conditions* (*Guidelines*).

21. Claimant testified that her job duties require her to use a ladder on a daily basis and she engaged in almost continuous, overhead work. She noted that she is required to use significant force with pipe wrenches to open valves that are part of the fire suppression system. Mr. Fisher specified that testing the fire suppression system in a small building takes about two hours and approximately 40% of the time is spent turning valves. He remarked that about 70% of the valves are below shoulder level. Mr. Fisher recounted that Claimant spends approximately 20%-30% of her time engaged in overhead work. He summarized that Claimant completes a variety of tasks throughout each day and approximately 90% of her job duties involve testing fire suppression systems.

22. Dr. Klajnbart persuasively determined that Claimant's need for right shoulder surgery was more likely caused by her underlying degenerative process than by her work activities for Employer. He explained that Claimant's right shoulder MRI revealed more of a degenerative process than an acute event. Dr. Klajnbart commented that Claimant's job duties included some overhead activities and the placement of sprinklers, but did not involve the requisite, repetitive stress to cause shoulder symptoms. He summarized that, although the request for surgical intervention constituted reasonable and necessary medical treatment for Claimant's condition, it was

not related to her work activities. Claimant’s right shoulder condition was more likely caused by a degenerative process than her work activities for Employer. Accordingly, he concluded that Claimant’s work activities did not cause, aggravate or accelerate her right shoulder symptoms, but instead constitute the natural progression of an underlying condition.

23. In contrast, Dr. Rook concluded that Claimant’s work activities for Employer caused her right shoulder symptoms. He explained that Claimant first noted right shoulder symptoms while performing warm-up exercises at work and her pain increased while completing job duties involving lifting and reaching above shoulder level. However, Dr. Rook did not conduct a causation analysis involving Claimant’s specific job duties or the length of time she spent performing her daily job duties. Moreover, Dr. Pak also explained that he was unaware of Claimant’s specific job duties or the length of time she spent performing her duties each day. He thus noted that he was unable to provide a causation analysis regarding Claimant’s development of a right rotator cuff tear. Accordingly, the persuasive reports and testimony of Dr. Klajnbart reveal that, although Claimant engaged in some forceful activities, her job duties did not meet the minimum thresholds for force, repetition or duration to establish a cumulative trauma condition pursuant to the *Guidelines.* Her symptoms more likely constitute the natural progression of an underlying condition. Claimant’s claim for Workers’ Compensation benefits is thus denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge’s factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and

bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. The test for distinguishing between an accidental injury and an occupational disease is whether the injury can be traced to a particular time, place and cause. *Campbell v. IBM Corp.*, 867 P.2d 77, 81 (Colo. App. 1993). "Occupational disease" is defined by §8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

5. A claimant is required to prove by a preponderance of the evidence that the alleged occupational disease was directly or proximately caused by the employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251, 252 (Colo. App. 1999). Moreover, §8-40-201(14), C.R.S. imposes proof requirements in addition to those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819, 824 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

6. When the precipitating cause of an injury is a pre-existing condition that the claimant brings to the workplace, the injury is not compensable unless a "special hazard" of the employment combines with the pre-existing condition to contribute to the injury. *In Re Shelton,* W.C. No. 4-724-391 (ICAP, May 30, 2008). The rationale for the rule is that, in the absence of a special hazard, an injury due to the claimant's pre-existing condition does not bear a sufficient causal relationship to the employment to "arise out of" the employment. *Id.* A condition does not constitute a "special hazard" if it is "'ubiquitous' in the sense that it is found generally outside of the employment." *In Re Booker,* W.C. No. 4-661-649 (ICAP, May 23, 2007).

7. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct.

27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

8. The *Guidelines* specifically include factors for the development of shoulder pathology. They include the following: (1) overhead work of 30 minutes per day for a minimum of five years; (2) shoulder movement at the rate of 15-36 repetitions per minute and no two second pauses for 80% of the work cycle; and (3) shoulder movement with force greater than 10% of maximum with no two second pauses for 80% of the work cycle. Moreover, jobs requiring heavy lifting in excess of 10 times per day over the years may contribute to shoulder disorders. Vibration can also be considered an additional risk factor pursuant to Rule 17, Exhibit 4 of the *Guidelines*. Notably, the *Guidelines* provide that, because of the lack of multiple, high quality studies, each case must be evaluated individually when addressing the likelihood of cumulative trauma contributing to shoulder pathology.

9. As found, Claimant has failed to establish by a preponderance of the evidence that she sustained a compensable occupational disease in the form of a right shoulder injury during the course and scope of her employment with Employer. Although Claimant attributed her symptoms to her work activities, a review of her job duties as a Fire Sprinkler Technician reflects that they lacked the requisite force or repetition to cause her symptoms. Claimant engaged in a variety of tasks throughout each shift. The persuasive reports and testimony of Dr. Klajnbart reveal that, although Claimant engaged in some forceful activities, her job duties did not meet the minimum thresholds for force, repetition or duration to establish a cumulative trauma condition pursuant to the *Guidelines*.

10. As found, Claimant testified that her job duties require her to use a ladder on a daily basis and she engaged in almost continuous, overhead work. She noted that she is required to use significant force with pipe wrenches to open valves that are part of the fire suppression system. Mr. Fisher specified that testing the fire suppression system in a small building takes about two hours and approximately 40% of the time is spent turning valves. He remarked that about 70% of the valves are below shoulder level. Mr. Fisher recounted that Claimant spends approximately 20%-30% of her time engaged in overhead work. He summarized that Claimant completes a variety of tasks throughout each day and approximately 90% of her job duties involve testing fire suppression systems.

11. As found, Dr. Klajnbart persuasively determined that Claimant's need for right shoulder surgery was more likely caused by her underlying degenerative process than by her work activities for Employer. He explained that Claimant's right shoulder MRI revealed more of a degenerative process than an acute event. Dr. Klajnbart commented that Claimant's job duties included some overhead activities and the placement of sprinklers, but did not involve the requisite, repetitive stress to cause shoulder symptoms. He summarized that, although the request for surgical intervention

constituted reasonable and necessary medical treatment for Claimant’s condition, it was not related to her work activities. Claimant’s right shoulder condition was more likely caused by a degenerative process than her work activities for Employer. Accordingly, he concluded that Claimant’s work activities did not cause, aggravate or accelerate her right shoulder symptoms, but instead constitute the natural progression of an underlying condition.

12. As found, in contrast, Dr. Rook concluded that Claimant’s work activities for Employer caused her right shoulder symptoms. He explained that Claimant first noted right shoulder symptoms while performing warm-up exercises at work and her pain increased while completing job duties involving lifting and reaching above shoulder level. However, Dr. Rook did not conduct a causation analysis involving Claimant’s specific job duties or the length of time she spent performing her daily job duties. Moreover, Dr. Pak also explained that he was unaware of Claimant’s specific job duties or the length of time she spent performing her duties each day. He thus noted that he was unable to provide a causation analysis regarding Claimant’s development of a right rotator cuff tear. Accordingly, the persuasive reports and testimony of Dr. Klajnbart reveal that, although Claimant engaged in some forceful activities, her job duties did not meet the minimum thresholds for force, repetition or duration to establish a cumulative trauma condition pursuant to the *Guidelines.* Her symptoms more likely constitute the natural progression of an underlying condition. Claimant’s claim for Workers’ Compensation benefits is thus denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant’s claim for Workers’ Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge’s order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge’s order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: July 13, 2016.

ISSUES

- Did Claimant prove by a preponderance of the evidence that he suffered a compensable injury to his low back on July 19, 2015?

- If Claimant suffered a compensable injury, is he entitled to temporary total disability benefits from July 20, 2015 and continuing?

- What was Claimant's average weekly wage?

- If Claimant suffered a compensable injury, what medical benefits is he entitled to cure and relieve the effects of his industrial injury?

FINDINGS OF FACT

1. Claimant is 33 years old, with a D.O.B. of May 6, 1983.

2. Claimant's medical history was significant in that he previously injured his low back and required surgery. On February 18, 2015, Claimant was evaluated by Jacob Freeman, M.D. at the University of Colorado Hospital Neurosurgery Department. Dr. Freeman noted Claimant had been suffering progressive back pain with intermittent bilateral lower extremity pain since 2005 after suffering a back injury in a motor vehicle accident. Claimant initially received conservative treatment and his back pain had worsened six or seven months earlier. Dr. Freeman said Claimant was hospitalized at St. Anthony's hospital sometime in July or August 2014 and underwent a lumbar MRI which revealed a large herniated/extruded disc at L4-5.

3. On February 18, 2015, an endoscopic diskectomy was performed by Peter Witt, M.D. at the L4-5 level. Claimant's post-surgery diagnosis was L4-5 herniated/extruded disk fragment. The ALJ notes Claimant was credible when testifying about his medical history.

4. On February 23, 2015, Claimant returned to the University of Colorado Hospital, complaining of back pain and left leg pain/left lower extremity weakness. The MRI revealed a residual extruded disc resulting in compression of the bilateral lateral recesses and possible impingement of the traversing nerve roots bilaterally, left greater than right; tiny fragment of disc at the superior level of the L4 vertebral body extending to the level of the L3-4 disc. Claimant was diagnosed with a postoperative back pain, including radiating pain in his left leg; urinary urgency; and chest pain.

5. Dr. Witt examined Claimant on March 19, 2015, at which time Claimant had some guarding with his gait, difficulty going on heels and toes, with positive SLR on the left at 30 degrees. Claimant was diagnosed with a re-herniation and underwent a

discectomy/lumbar decompression at the L4-5 level on March 25, 2015, which was performed by Dr. Witt. Dr. Witt noted Claimant tolerated the procedure well.

6. On April 16, 2015, Claimant was re-evaluated by Dr. Witt. Claimant reported that his surgery did provide relief for several days, but that the low back and leg pain returned. Dr. Witt noted reduced range of motion ("ROM") and recommended a new MRI.

7. Claimant was evaluated by his family physician, Joseph Lovato, D.O., on April 22, 2015. Dr. Lovato noted Claimant had two surgeries and was potentially headed for a third, as his low back pain had not improved. Dr. Lovato noted tenderness in the lumbar spine, along with moderate pain with motion. He renewed Claimant's prescriptions, including Valium and Percocet.

8. Claimant was seen by Dr. Witt on April 30, 2015, at which time he complained of pain in his back and left leg weakness, as well as increased pain of the right side of the back. Pain on palpation was noted to the right side of the surgical scar, along with decreased ROM on left dorsiflexion. Dr. Witt recommended that Claimant follow-up in 3-4 weeks.

9. On May 7, 2015, Claimant was seen by Dr. Witt at the University of Colorado Hospital, complaining of continued low back pain (at a 9/10 pain level). On examination, Claimant had no tenderness to palpation and reduced ROM. Claimant was referred for physical therapy ("PT") and an injection. The option of a L4-5 fusion was also discussed. A letter, dated May 28, 2015, from Dr. Witt addressed to Dr. Lovato was admitted into evidence. Dr. Witt discussed possible injections and an L4-5 fusion in July 2015, if conservative treatment was unsuccessful.

10. Claimant received PT at Summit Physical Therapy after his second surgery. In the initial evaluation done by on May 14, 2015, Laura Whitson, MSPT, CNHP the goal for the PT program was to reduce pain and return to full functional activities. Claimant was noted to have a history of an automobile accident and prior low back injury while working on a construction site. Claimant reported low back pain with radiating symptoms into bilateral lower extremities and rated his pain 9/10 (at worst). The Oswestry index for low back pain was listed as a 70% disability. As far as functional limitations, Claimant noted he was unable to sit for extended periods and able to sit for a maximum of twenty-five (25) minutes at the time of this initial evaluation. Aggravating factors included sitting, standing, walking, and bending. He also required assistance with bending and lifting objects. Ms. Whitson noted Claimant ambulated with an antalgic gait and had limitations in the ROM of his lumbar spine with all ROM tests.

11. Claimant testified he began work for Employer on May 25, 2015. His rate of pay was $12.50 per hour. He did not work full-time, but averaged anywhere from 28-31 hours per week. He estimated he worked an average of 30 hours per week.

12. Claimant testified his job duties included assisting customers, moving product down from the shelves and straightening shelves. He would also help in other

departments, such as the garden department. In his work for Employer, he was required to lift, as well as climb ladders. Claimant stated he was physically able to perform his job duties, despite his back condition.

13. Claimant received a total of six (6) PT treatments from May 14, 2015 through June 11, 2015. Claimant received manual therapy, massage and iontophoresis. Some improvement in Claimant's condition was noted in the notes of the daily PT sessions. The ALJ notes Claimant was never found to be pain free in the PT records admitted at hearing. In the discharge note, dated July 31, 2015, Claimant was discharged because he was unable to schedule therapy sessions.

14. Claimant testified he was able to twist and bend after receiving PT treatments. Claimant stated he asked both the physical therapist, as well as the neurosurgeon, and was released to return to work without restrictions. The ALJ notes no medical records were admitted to show a full duty release.

15. Dr. Lovato examined Claimant on July 6, 2015. Dr. Lovato's assessment was low back pain, control-poor. Dr. Lovato noted Claimant's medications were reconciled, as he was getting medications from both his office and University Hospital. Claimant's prescriptions were renewed.

16. On July 13, 2015, Claimant returned to Dr. Lovato. Claimant was complaining of abdominal pain and low back pain. Dr. Lovato described the low back pain as acute, although no further explanation was provided in the records admitted at hearing. Claimant's Valium prescription was refilled.

17. Claimant was taking prescriptions for chronic low back pain as of July 19, 2015.

18. Claimant testified he injured his low back while working for Employer on July 19, 2015. That day, he was "front-facing" merchandise on shelves, placing electric drills back in the proper location. He was kneeling on a concrete floor, moved to a squatting position and then stood up. When he stood up, he felt a pop in his low back.

19. Claimant felt pain in his low back, but completed his shift. Claimant stated he applied ice to his back, but felt excruciating pain in the low back, as well as going down his right leg.

20. Claimant testified he called in and told his supervisor the next day and was told to go to the emergency room. He picked the emergency room which was closest to the store location, as he was in a lot of pain.

21. On July 20, 2015, Claimant was seen at the Platte Valley Emergency Department. Claimant was noted to have a history of low back pain, which was improving until he got acute pain when he stood up. Claimant was evaluated by Ryan Maldonado, PA, whose findings were: "32 y.o. male to the ED with acute on chronic

LBP; no indication for emergent MRI”. Claimant was treated with Prednisone, an IM injection and released.

22. Claimant was examined by Robert Massa, M.D. on July 23, 2015. Claimant reported he was at the end of his shift while he was kneeling and lifting boxes that weighed about 25 pounds[1]. When he went from a kneeling to a squatting to a standing position, he felt an onset of severe low back pain after he felt a pop in the back. Dr. Massa noted Claimant walked with an antalgic gait and had loss of normal lumbar lordotic curvature. No frank SI joint, buttock or sciatic notch tenderness was noted. Dr. Massa's assessment was low back pain-acutely subjectively fairly severe, suspicious for lumbar degenerative disease with radiculopathy. Dr. Massa took Claimant off work from July 20-July 30, 2015.

23. Plain x-rays of Claimant's lumbar spine were taken on July 31, 2015. The films were read by Stephen George, M.D., whose impression was no acute lumbar spine abnormalities. Mild to moderate degenerative disc changes at L4-5 were noted.

24. On August 4, 2015, a CT scan was done on Claimant's head, as there was an indication of a head injury. The films were read by Eric Lyders, M.D., who determined there was no hemorrhage or acute intracranial abnormality.

25. Claimant underwent an MRI of his lumbar spine on August 12, 2015. The films were read by Maksym Dymek, M.D. whose impressions were: “post-operative changes of interval partial L4-L5 laminectomy with resection of large extruded disk at L4-L5. On current study, some protruding disc material and/or scar persists at this level however this is significantly smaller than before and only results in mild thecal sac impingement and borderline mild central canal stenosis, much improved from prior study”. Mild bilateral neural foraminal stenosis was noted at L4-5 which appeared slightly worse in some images. However, Dr. Dymek felt this was due to differences in slice selection, as opposed to a progressive intraforaminal disc bulge and facet arthropathy.

26. Claimant returned to Dr. Lovato on August 17, 2015 to discuss a leave of absence and prescription refill. Dr. Lovato’s assessment was acute low back pain. Claimant’s Percocet prescription was not re-filled. Dr. Lovato completed the Certification of HealthCare Provider Form-Associate’s Serious Health Condition, which noted Claimant was unable to complete all of his job duties. The condition commenced on 7/19/15 and was expected to last through 9/22/15, when Claimant was scheduled to see a surgeon.

27. On August 25, 2015, Claimant returned to the Platte Valley Medical Center ED and was evaluated by Thaine Gillaland, PA. He was complaining of pain in his abdomen, after falling at home. PA Gillaland's impression was contusion of abdominal wall and chronic back pain.

[1] This differed from the description given to other health care providers.

28. Claimant was referred by Dr. Massa to Karen Beasley, D.O., who evaluated him on December 14, 2015. At that time, he reported constant low back pain, which was alleviated by lying in a supine position and exacerbated with sitting, standing and walking. Claimant had spasms in his low back, with lower extremity pain and numbness which radiated into his lateral thigh, calf, foot and toe. Dr. Beasley's assessment/impression was herniated nucleus pulposus, bilateral low back pain with right-sided sciatica, lumbar radiculopathy, and degenerative disc disease-lumbar.

29. Dr. Beasley felt it would be reasonable to try an epidural steroid injection at L4/5, along with facet injections. Dr. Beasley noted Claimant may have chronic radiculopathy after multiple traumas that would not respond to further lumbar decompression. Accordingly, she felt an EMG was warranted. The ALJ notes Dr. Beasely did not offer an opinion as to what role, if any, the incident on 7/19/15 played in the progression of symptoms in Claimant’s lumbar spine

30. On January 27, 2016, Claimant underwent a PT evaluation at Platte Valley Medical Center, which was done by Corbin Wierzbinski, PT, DPT. Various modalities of treatment were recommend, which Claimant received on January 29, 2016. No additional records were admitted for this course of PT.

31. Claimant was evaluated by Allison Fall, M.D. at the request of Respondent on March 2, 2016. At that time, Claimant reported a lot of back pain, down his buttocks and down his upper and lower left leg into the foot. He described his pain as 5-6/10. Dr. Fall noted Claimant's range of motion was self-limited. He had complaints of pain in the right sacroiliac area, with superficial tenderness to palpation along the right sacral sulcus. Claimant had “give-way” weakness for great right toe extension and knee extension. The ALJ infers these were positive signs of lumbar pathology.

32. Dr. Fall's impression was S/P lumbar diskectomy L4-5; redo diskectomy, with chronic pain and radicular symptoms without focal neurological deficit. She opined there was no aggravation of his underlying condition, nor did Claimant sustain a new injury on July 19, 2015 while Claimant worked at Home Depot. Claimant’s medical records were consistent with a long-standing problem for which he underwent two surgeries, without resolution of symptomotology. Dr. Fall stated Claimant's current lumbar problems were a result of natural progression of this condition rather than a work-related aggravation. Dr. Fall also felt there might be psychological issues also playing a role in his condition.

33. Claimant received a prescription for a course of PT from Peak Anesthesia and Pain Management on March 10, 2016

34. Dr. Fall testified at hearing and was received as an expert in the area of Physical Medicine and Rehabilitation, the specialty in which she is board certified. Dr. Fall is also Level II accredited pursuant to the W.C.R.P. Dr. Fall characterized Claimant's condition as failed lumbar spine surgery, as he was having fairly significant problems and limitations even after his second microdiscectomy. More particularly, Dr. Fall noted the medical records reflected he was continuing to take pain medications,

including six days before the date of injury. Dr. Fall did not believe Claimant would have been released to full duty two months after his second surgery. Dr. Fall noted Claimant was consistent in his description of the mechanism of injury when she did the IME.

35. Dr. Fall testified the MRI of 8/12/15 did not have any new disc bulges, progression of disc bulging or arthritis of the facet joints. Thus, the MRI did not support any aggravation or further injury to Claimant's lumbar spine.   The ALJ credited Dr. Fall’s opinion that there was no aggravation or worsening or new injury to Claimant's lumbar spine.

36. Claimant testified he continued to experience significant low back pain, which has affected all aspects of his life.

37. The medical records admitted at hearing reflect that in 2015, Claimant had continuous pain in his low back for which he required treatment and took prescription medications, including Percocet. This included the months of May-June when he was working for Employer.

38. There was no evidence of a special hazard present on the premises of Employer when Claimant was injured on July 19, 2015.

39. The ALJ finds Claimant did not sustain a new injury on July 19, 2015. The ALJ finds Claimant did not aggravate, accelerate or worsen his preexisting low back condition on July 19, 2015 while working for Employer. Rather, Claimant’s symptoms were the result of the natural progression of his chronic low back condition.

40. Claimant failed to sustain his burden of proof that he sustained a compensable injury.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers’ Compensation Act of Colorado (Act), §8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S.   The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. Section 8-43-201(1),C.R.S.   Generally, the Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S.   A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). The instant case requires a credibility determination, not only of the Claimant, but also the medical experts.

Compensability-Low Back

Claimant alleges he sustained an injury to his low back while working for Employer. Claimant relies primarily on his own testimony to prove he injured his low back. In this regard, he argued that the incident on 7/19/15 exacerbated his low back condition. Claimant averred he had no restrictions before going to work for Employer. After July 19, 2015, his doctors issued work restrictions, which Claimant relied on to support his argument that his low back condition became disabling.

Respondent focused on the fact that Claimant had extensive treatment to the low back before the date of injury, including two (2) surgical procedures. Respondent asserted Claimant continued to have to symptoms related to this condition, which were not resolved before his alleged injury. Respondent also relied on the opinions of IME physician, Dr. Fall, to support the contention no compensable low back injury occurred and Claimant’s need for treatment was based upon the natural progression of his low back condition.

To receive workers' compensation benefits, an injured worker bears the threshold burden of establishing, by a preponderance of the evidence, that he or she has sustained a compensable injury proximately caused by his employment. Section 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000). ("Proof of causation is a threshold requirement which an injured employee must establish by a preponderance of the evidence before any compensation is awarded.")

Accordingly, Claimant was required to prove by a preponderance of the evidence that at the time of the injury he was performing a service for Respondent-Employer arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. *Triad Painting Co. v. Blair* 812 P.2d 638 (Colo. 1991). The question of whether the Claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). Lay testimony alone may be sufficient to prove causation. However, where medical evidence is presented on the issue of causation it is for the ALJ to determine the weight and credibility of such evidence. *Rockwell International v. Turnbull*, 802 P.2d 1182.

A preexisting condition does not disqualify Claimant from receiving benefits. Rather, where the industrial injury aggravates, accelerates, or combines with a preexisting disease or infirmity to produce the need for treatment, the treatment is a compensable consequence of the industrial injury. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo.App.1990).[2] Moreover, an otherwise compensable injury does not cease to arise out of a worker's employment simply because it is partially attributable to the worker's pre-existing condition. See *Subsequent Injury Fund v. Thompson,* 793 P.2d 576, 579 (Colo. 1990).

As a starting point, there was no evidence before the ALJ which contradicted Claimant's version of events of July 19, 2015. The ALJ found Claimant to be a credible witness both in his description of the events of that day, as well as the medical history which preceded it. The overriding issue in the case was whether the medical evidence established that the action of sitting up to a kneeling position, then standing up aggravated or accelerated the condition of Claimant's lumbar spine. As determined in Findings of Fact 37-40, the ALJ concluded there was insufficient evidence to show such an aggravation or acceleration.

There were two bases for the ALJ's decision. First, the objective medical evidence admitted at hearing did not show an aggravation or acceleration of the condition of Claimant's lumbar spine. As found, the August 12, 2015 MRI actually documented improvement from the previous study. (Finding of Fact 25). This study showed no evidence of new trauma or an aggravation of the underlying condition. The plain x-rays taken on July 31, 2015 also showed no acute abnormalities. (Finding of Fact 23).

Claimant's treating physicians identified reduced ROM, as well as lower extremity weakness before the date of injury. Dr. Fall's testimony also supported the conclusion Claimant's low back condition was not aggravated or accelerated by his activity at work on July 19, 2015. (Finding of Fact 32). This evidence led the ALJ to conclude, Claimant's need for treatment was a result of his chronic low back condition, as opposed to the events of July 19, 2015.

Second, Claimant continued to require medical treatment, including physical therapy immediately before the accident. Although Claimant testified his symptoms improved and he also told several physicians that his symptoms had improved, the medical evidence documented significant pain complaints for which treatment was required. In fact, there was no evidence before the ALJ which indicated Claimant ever stopped his treatment or ceased taking pain medication. Some examples of this treatment before the injury include:

[2] The ALJ notes both Claimant and Respondent cited *H & H Warehouse v. Vicory,* but neither side argued the special hazard doctrine applied in this instance. The ALJ agrees and views the issue in this as one whether Claimant suffered an industrial aggravation of pre-existing condition or had symptoms as a result of the natural progression of the pre-existing condition. *In Re Claim of Shaffstall v. Champion Tech*., W.C. No. 4-820-016 (Industrial Claim Appeals Office March 2, 2011). In any event, there was no evidence of a special hazard present on 7/19/15, which increased Claimant's risk of injury.

- 4/22/15: Dr. Lovato documented Claimant's pain had not improved. A third surgery was noted as possible.

- 4/30/15: Dr. Witt noted pain and left leg weakness, as well as increased pain in the right side, along with decreased ROM. Dr. Witt noted another surgery was possible.

- 5/7/15: Claimant reported pain at the 9/10 level at the appointment with Dr. Witt, reduced ROM found. Referral for PT and injection.

- 5/14/15: Ms. Whitson noted functional limitations, including Claimant unable to sit for longer than 25 minutes.

- 7/6/15: Dr. Lovato noted significant low back pain and prescribed Valium. Claimant’s pain control was described as poor

As found, Claimant required opiate pain medications in the months preceding 7/19/15 and was in an active PT program to treat chronic low back pain. Claimant had continuous symptoms in his low back. In addition, the physical therapy notes documented Claimant's subjective limitations, which included his report that he required assistance when lifting, as well as an aggravation of his symptoms while walking, standing, and sitting. As found, Claimant continued to take significant pain medication, including Percocet, up to six days before the incident at work

In the case at bench, the ALJ determined Claimant failed to meet his burden of proof that the incident on July 19, 2015 aggravated, accelerated, or combined with a preexisting condition in his lumbar spine. In concluding Claimant failed to adduce sufficient evidence that the incident on 7/19/15 aggravated or accelerated the condition of his lumbar spine, the ALJ considered Claimant’s argument that he had no restrictions or other evidence of disability before he experienced the “pop” in his back while working for Employer. Given the relatively short time since Claimant’s second surgery, his continued symptoms and treatment for those symptoms, it is more likely than not the condition of Claimant’s lumbar spine was disabling before July 19, 2015. Considering the totality of the evidence, the ALJ concluded Claimant’s preexisting condition, as opposed to his work for Employer was the cause of the disability. As such, he did not meet her burden of proving that he sustained an injury arising out of and in the course and scope of his employment.

In light of the finding on compensability, the ALJ need not address the issues of liability for medical benefits, average weekly wage and temporary disability benefits.

ORDER

It is therefore ordered that:

1. The claim for worker's compensation benefits in W.C. Case No. 4-988-344-01 is denied and dismissed

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 18, 2016

Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

The following issues were raised for consideration at hearing:

1. Whether Claimant proved by a preponderance of the evidence that he suffered a compensable injury in the course and scope of his employment for Employer;

2. Whether Respondents should be permitted to withdraw a improvidently filed General Admission of Liability;

3. Whether Claimant overcame the April 16, 2015, opinion of Dr. Volz, Division Independent medical examiner (DIME), by clear and convincing evidence; and

4. Whether Claimant proved by a preponderance of the evidence that he is entitled to reasonably necessary and related medical benefits.

PRELIMINARY MATTERS

On January 27, 2016, Claimant moved the ALJ to take administrative notice of the January 5, 2016, Findings of Fact, Conclusions of Law and Order (order) of ALJ David Cain. Claimant's motion was granted on March 14, 2016. ALJ Cain's January 5, 2016, order followed a March 5, 2015, hearing pertaining to a claim for temporary total disability benefits (TTD).

On March 3, 2016, Claimant moved to strike Respondents' July 14, 2015, Application for Hearing and Notice to Set. This is the application for hearing which forms the basis of the claim before the undersigned ALJ at the hearing held on November 3, 2015. This hearing concerned overcoming the April 16, 2015, follow-up DIME opinion of Dr. Volz, among other issues.

In ALJ Cain's January 5, 2016, order, in the course of discussing the TTD issue, ALJ Cain found that a February 14, 2014, DIME opinion of Dr. Volz was overcome by clear and convincing evidence. Claimant now contends that the Application for Hearing and Notice to Set in this matter should be stricken because it is "inefficient" and "prejudicial" to require Claimant to relitigate the issues already addressed in ALJ Cain's January 5, 2016, order.

While the undersigned ALJ takes administrative notice of ALJ Cain's January 5, 2016, order, and reaches the same conclusions regarding Claimant's medical condition and the work relatedness of his injury, ALJ Cain's findings do not provide a basis to strike the July 14, 2015, Application for Hearing and Notice to Set. The doctrine of issue preclusion does not apply here where ALJ Cain's January 5, 2016, order considers a February 20, 2014, DIME opinion of Dr. Volz. The matter herein pertains to an April 16, 2015, follow-up DIME opinion of Dr. Volz. Furthermore, ALJ Cain's January 5, 2016, order arises from a claim for TTD, while this claim involves Respondents' attempt to overcome the April 16, 2015, DIME opinion.

FINDINGS OF FACT

Having considered the evidence presented at hearing and the post hearing depositions, the following Findings of Fact are entered.

1. Claimant is a 53-year-old male employee of Employer. Claimant was born in China and lived there until he was 39-years old, when he immigrated to the United States. Claimant speaks Chinese; he does not speak, read, write or understand English. Claimant has worked as a chef cooking Chinese cuisine his adult life. Employer hired Claimant in the winter of 2009. A daily shift lasted nine hours and thirty minutes, and Claimant spent a majority of that time cooking food over the stove. During rush-hour or lunchtime, Claimant cooked in front of the stove for a minimum of one hour and thirty minutes to two hours.

2. On December 20, 2011, Claimant was cooking during rush hour when the kitchen filled with smoke due to a dysfunctional exhaust system over the stove. Claimant experienced pressure in his chest, difficulty breathing and he began to cough. Claimant notified Employer of the ventilation issue several times but it was not rectified, and Claimant continued to work under these conditions and continued to experience respiratory symptoms.

3. Claimant first sought medical treatment with his primary care provider, Nathaniel Moore, M.D. at Rocky Mountain Urgent Care and Family Medicine (RMFM) on March 21, 2012. He complained of cough and chest tightness. Dr. Moore ordered a chest x-ray, which was normal. Claimant returned to RMFM on March 28, 2012 after using prescribed Albuterol, reporting improvement in his symptoms at night but a worsening at work when exposed to smoke.

4. On March 29, 2012, Claimant returned to work for a half day; he reported to Employer that he felt something was wrong with his health, noting that he had not experienced any of these symptoms prior to December 20, 2011. Claimant returned to RMFM on April 4, 2012, and was told to stay off work until he received further evaluation. On April 11, 2012, Claimant returned to RMFM where he was diagnosed with "chronic bronchitis most likely directly attributed to smoke inhalation at his work establishment" and was referred for pulmonary medicine and "GI" consultations.

5. Claimant presented to National Jewish Hospital (NJH) on May 10, 2012, where he was examined by Ahmad Rashid, M.D., and Kasia Hoover, PA-C. Claimant reported "increasing respiratory difficulty" over the past six months due to excessive smoke exposure at work. He complained of cough, chest pain and

dyspnea. Claimant explained that his symptoms improved when he returned home from work at night and worsen upon returning to work. Claimant's spirometry tests revealed reduced airflow and Dr. Rashid opined that Claimant's cough was "smoke/irritant induced from his occupational exposures" and recommended he remain off of work, considering "the hypersensitivity of his airways and aggravation by exposure to smoke at work."

6. On May 30, 2012, Claimant underwent a simple pulmonary stress test at NJH which was interpreted as a "normal study" by Dr. Rashid. Dr. Rashid opined that Claimant "does seem to have underlying small airway obstructive lung disease - cough variant asthma" and that his "symptoms of cough and wheezing do get worse by workplace exposure to fumes and smoke." Dr. Rashid prescribed Advair and referred Claimant to NJH Occupational Medicine Division for further assessment.

7. On July 11, 2012, Claimant was examined by Annyce Mayer, M.D. at NJH for an occupational/environmental consultation. Upon obtaining Claimant's history, discussing his symptoms, and performing a physical examination, Dr. Mayer opined that Claimant's symptoms were suggestive of "airway irritation," and "bronchitis and irritant-induced asthma" were in the differential, and an element of vocal cord dysfunction (VCD) could not be ruled out. A CT scan of Claimant's chest was performed with no significant clinical findings. Dr. Mayer recommended a methacholine challenge (MC) with laryngoscopy. On August 8, 2012, Claimant underwent a maximum multistage exercise test ("stress test") at NJH, and upon review of the stress test in her August 17, 2012, report, Dr. Mayer assessed "chest tightness with exertion that seemed distinct from the symptoms triggered by smoke." Dr. Mayer noted that "Suspicion had been heightened by history of hypertension and metabolic syndrome obtained from Dr. Moore's office; however, there is no suggestion of ischemia on his exercise stress ECG and the chest pain developing after the test and persisting for several days is also not consistent with cardiac pain."

8. On September 13, 2012, Claimant underwent three tests at NJH: an esophagram, an MC, and a rhinolaryngoscopy. The esophagram was performed by Valerie Hale, M.D., and the only impression was mild, spontaneous gastroesophageal reflux. The MC was performed by Amy Olson, M.D., and the finding was "Positive airways hyperresponsiveness to methacholine with a PC[-20] FEV1 of 6/131 mg/mL. The rhinolaryngoscopy was performed by Karin Pacheco, M.D., who reported "Vocal cords closed variably with posterior chink formation, most notably at end expiration and following cough, and often remained closed for several seconds." Dr. Pacheco listed the post procedure diagnoses of vocal cord dysfunction and chronic rhinitis.

9. On September 26, 2012, Claimant complained of hoarseness increased by exposure to wind and air conditioning, chest tightness triggered by physical activity such as going up stairs or inclines, and exposure to smoke from a

barbecue or nearby smoker increased his symptoms. Dr. Mayer assessed the following with respect to this workers' compensation claim: Cough, chest tightness and shortness of breath that by history developed in temporal association with failure of the exhaust ventilation to remove the smoke in the kitchen where he worked as a chef and effectively concentrated the smoke in his breathing zone. His symptoms have improved, but have not resolved, out of exposure. Mild asthma, confirmed by a methacholine challenge PC20 at 6.131 mg/mL. In my opinion, this is contributory to his ongoing symptoms. Vocal cord dysfunction, confirmed on laryngoscopy. In my opinion, this is also contributory to his symptoms. Gastroesophageal reflux disease, mild. Dr. Mayer reported that Claimant's symptoms were due to the "combination of mild asthma and vocal cord dysfunction, both irritant induced on a medically probable basis."

10. Dr. Mayer reported that her environmental medicine case conference group, comprised of an industrial hygienist and occupational pulmonologists, reached a consensus that, "but for the described smoke exposure, it is medically probable that Claimant would not have developed these respiratory symptoms due to asthma and vocal cord dysfunction."

11. On October 10, 2012, Claimant reported significant improvement from the GERD medications of rantidine and omeprazole, but was unable to tolerate QVAR or ProAir due to side effects, mainly head rush. Claimant requested oral medication for asthma and Dr. Mayer prescribed Albuterol. On October 19, 2012, Claimant reported to be about 65% better, but still had cough triggered by barbecue smoke, heavy exhaust, or wind. Dr. Mayer opined that Claimant’s asthma was "symptomatically much improved on the oral Albuterol, indicating airways hyper-responsiveness was contributing to his ongoing symptoms in addition to the VCD." Additionally, she reported Claimant derived benefit from the speech therapy breathing techniques employed to treat his VCD and that his GERD was resolved.

12. Upon request by Respondents, on October 23, 2012, Lawrence Repsher, M.D. performed an independent medical examination (IME) of Claimant where he took a history, reviewed Claimant's treatment records and performed a physical examination. Dr. Repsher noted that the MC was reported to be strongly positive, but opined that Claimant was malingering. Dr. Repsher opined that Claimant was not suffering from any medical condition and thus there was no causality and no need for additional medical care or restrictions. Based on Dr. Repsher's IME, Respondents filed a Notice of Contest on November 2, 2012, and consequently, Claimant was unable to afford medications to treat his condition.

13. On January 16, 2013, Claimant presented to Dr. Mayer through his personal insurance for medical follow up. Dr. Mayer noted continued improvement in Claimant's breathing, although he had some "triggering symptoms" around smoke, stir frying in the home and cold air. Dr. Mayer's diagnoses were unchanged, work related mild asthma and VCD, and she opined that Claimant's

condition had stabilized and that he reached MMI since there was no additional treatment to consider. Dr. Mayer assessed 14% whole person impairment for occupational asthma with permanent restrictions of avoiding exposure to irritant dust, smoke and fumes and physical exertion in cold air. As maintenance, Dr. Mayer recommended follow up visits up to 2-3 times per year for the next year or two, and would again prescribe Albuterol for use as needed.

14. On March 14, 2013, Clarence Henke, M.D. performed an IME of Claimant upon Respondents' request. Dr. Henke reviewed Claimant's medical records provided by Respondents from March 21, 2012 through October 23, 2012, as well as a comprehensive patient medical history form and pain diagram completed by Claimant. Upon examination, Dr. Henke's impressions included "occupational asthma secondary to smoke inhalation" at work, laryngitis secondary to VCD of uncertain etiology and GERD. Dr. Henke opined that Claimant's condition would continue to improve if he could afford medications prescribed at NJH. Accordingly, Respondents filed a General Admission of Liability (GAL) dated April 29, 2013, admitting Claimant sustained a compensable injury and admitted liability for medical benefits.

15. Claimant returned to Dr. Mayer on July 31, 2013, reporting cough and throat tightness. Dr. Mayer remained "concerned that with his ongoing respiratory symptoms from asthma and VCD despite practicing the speech therapy techniques and now dysphagia may be due to GERD." Dr. Mayer prescribed Albuterol and recommended an impedance pH probe and tailored barium swallow for further evaluation of GERD and possible aspiration. On August 7, 2013, Claimant underwent a tailored barium swallow study and a subsequent impedance pH probe on August 9, 2013, both performed at NJH.

16. On September 9, 2013, Claimant reported to Dr. Mayer that he felt "about 30% better," attributing his improvement to the Albuterol. Dr. Mayer reported the tailored barium swallow was mildly abnormal and the impedance pH probe study was negative, stating "[n]o evidence of gastroesophageal reflux diseases that was suspected as a contributor to his ongoing symptoms, and had been suggested by the esophagram." Further, she opined that Claimant's ongoing symptoms are related to VCD.

17. In a letter dated November 12, 2013, Dr. Henke prepared responses to Respondent counsel's questions upon review of additional medical records. Dr. Henke opined that Claimant's ongoing elbow pain, lung nodule, and possible liver cyst were considered to be non-industrial conditions.

18. By December 5, 2013, Claimant had attended four sessions of speech therapy to address his breathing technique in treating VCD. Dr. Mayer opined that there is no additional treatment reasonably likely to improve Claimant’s condition and he is at maximum medical improvement (MMI) on December 5, 2013. Dr. Mayer assessed a combined 19% whole person impairment for asthma and VCD and

restricted Claimant from exposure to irritant dust, smoke, fumes and work in cold air. Dr. Mayer opined that such restrictions would limit Claimant's future employment options, including Claimant's work as a chef in a Chinese restaurant. Again, Dr. Mayer recommended two clinic visits per year as needed an ongoing use of oral Albuterol as medical maintenance treatment.

19. On February 20, 2014, Michael Volz, M.D. performed a DIME. Claimant reported symptoms of cough, chest pain, shortness of breath and chest tightness. Dr. Volz assessed cough, dyspnea, chest pain and chronic pharyngitis and opined the cause(s) of Claimant's symptoms were "unknown" at this time. If there was an "airflow issue at work", Dr. Volz opined that it undoubtedly could have worsened Claimant's "status non-specifically." Dr. Volz opined that a "positive" MC test does not necessarily prove that a patient has asthma, but noted that Claimant's improvement on Albuterol subjectively suggests that asthma may be present. Dr. Volz opined that no evidence existed to support a diagnosis of VCD. Dr. Volz opined that Claimant was not at MMI, and that such issue is a moot point because Claimant's symptoms were not causally related to his work.

20. Respondents did not file a Final Admission of Liability following the submission of Dr. Volz's DIME report, and the case remained on a GAL.

21. Claimant returned for a follow-up visit with Dr. Mayer on December 31, 2014 where he reported he was doing "relatively well" and that he was using his medications. Dr. Mayer recommended Claimant continue to use Albuterol on an as needed basis for asthma and return for follow up in a year unless his conditioned worsened.

22. On April 16, 2015, Dr. Volz performed a follow-up DIME to address MMI and impairment rating. Claimant reported symptoms of shortness of breath, chest tightness, cough from the upper chest and throat areas, and aggravating factors of weather/temperature changes, activity, cold air, and any irritant and indicated no change in frequency, severity, impact, season or any other factor since his prior DIME visit. Dr. Volz assessed cough, dyspnea, chest pain, chronic pharyngitis, chronic rhinitis, GERD, bronchiectasis without acute exacerbation and rash. Again, Dr. Volz opined that Claimant had not reached MMI, noting his overall status had not changed since February 2014. Dr. Volz reasoned, "there are many opportunities that offer a probable chance of being impactful in a positive manner and since none of these have been attempted - either alone or in combination - it is impossible to estimate to what degree [Claimant] might improve." Dr. Volz opined "one could argue he does NOT have asthma and if he does have asthma, there could be other factors aggravating his respiratory status." Dr. Volz concluded Claimant suffered from GERD, cylindrical bronchial dilation or bronchiectasis, and chronic rhinitis.

23. Dr. Volz stated that if Claimant does suffer from asthma, "his treatment has been sub-optimal" because every patient with "persistent asthma should be taking a daily controller medication", and that control has not been achieved with Claimant. Dr. Volz opined that there is a "strong relationship between rhinitis being active and less than optimal control of asthma and when the rhinitis is controlled, oftentimes asthma control improves", and further indicated there was no attempt to treat Claimant’s rhinitis. Dr. Volz opined that several objective tests show that Claimant suffers from GERD and that Claimant does not suffer from VCD, stating, "as part of his GERD, he might have aspiration as well."

24. Dr. Mayer submitted a rebuttal report dated July 28, 2015, in response to the follow-up DIME report prepared by Dr. Volz. Dr. Mayer disagreed with Dr. Volz's opinion that Claimant was not at MMI because he could improve further with more treatment, stating, "[t]hat is not true in this case. [Claimant] was not tolerant of inhaled medications, which precluded further treatment . . . As per the Colorado Workers' Compensation Level II Curriculum on page 25, 'At times a patient may refuse to undergo treatment recommended by their physicians. In this case physicians must rate the individual as they are at the time of maximum medical improvement.'" Dr. Mayer referred to the positive MC to confirm a diagnosis of asthma, explaining that the "presence of non-specific airways hyperresponsiveness was confirmed with PC20 at 6.131 mg/ml. Most sources consider 8 mg/ml or less to be confirmatory of asthma." Dr. Mayer asserted additional factors considered in diagnosing asthma, such as "symptoms being improved with short acting bronchodilator and worsened by exposure to irritants and cold air and return of FEV1 to baseline after administration of Albuterol."

25. Also, Dr. Mayer challenged Dr. Volz's diagnosis of GERD with possible aspiration, stating that upon performance of the pH probe, "[t]he conclusion of the gastroenterologist was that there was no evidence of ongoing acid reflux, nonacid reflux was within normal limits, and that none of his symptomatic complaints were temporally related to reflux events.” Dr. Mayer concluded her report by stating:

> It remains my medical opinion to a reasonable degree of medical probability that [Claimant] developed irritant-induced asthma and vocal cord dysfunction while employed as a chef . . . with an improperly functioning ventilation system that caused the smoke to concentrate in his breathing zone over the course of about 5 months. The diagnosis of asthma was confirmed, based on consistent history and results of the methacholine challenge. The diagnosis of vocal cord dysfunction was confirmed on laryngoscopy. He is not tolerant of inhaled medications, which precludes additional treatment of his asthma, so it remains my medical opinion that he is at maximum medical improvement.

26. Claimant proved it is highly probable and free from serious doubt that he developed symptomatic occupational asthma proximately caused by the admitted industrial accident of December 20, 2011.

27. To the extent Dr. Volz, the DIME physician, opined that Claimant does not suffer from asthma caused by his exposure to smoke in the workplace the ALJ finds his opinions are not persuasive. Dr. Volz's opinions are persuasively refuted by the credible opinions of Drs. Mayer, Rashid and Dr. Henke. Drs Mayer, Rashid and Henke agree that exposure to smoke either caused Claimant to develop asthma or aggravated a prior underlying condition that manifested itself as symptomatic asthma. Moreover, even Dr. Volz admitted that Claimant's "subjective" improvement while taking Albuterol and "objective" tests demonstrating "some degree of airway reversibility" suggest asthma "might be present."

28. Claimant credibly testified that on December 20, 2011, he was performing his duties as a chef when the kitchen became very smoky because of a malfunctioning exhaust system. Claimant credibly testified that this event caused him to experience pressure in his chest and coughing. Claimant continued to experience these symptoms whenever the kitchen filled with smoke, and his symptoms tended to decline when he went home from work. Claimant credibly testified that the ventilation system was not repaired before he left work on March 29, 2012. Claimant credibly testified he had not had any respiratory symptoms prior to the events of December 20, 2011.

29. Dr. Mayer credibly and persuasively opined that Claimant's exposure to smoke at work caused him to develop irritant-induced asthma. Dr. Mayer credibly explained that the methacholine challenge was positive for asthma when considered in the context of Claimant's history. Dr. Mayer credibly and persuasively opined that there is a significant "temporal relationship" between the malfunctioning of the ventilation system at Claimant's place of employment and the development of Claimant's respiratory symptoms. Dr. Mayer's opinion is further corroborated by Dr. Rashid who shared her opinion that Claimant's condition was work related "mild reactive airway disease and bronchospasm."

30. Dr. Mayer's opinion that the work-related exposure to smoke caused Claimant to develop asthma is corroborated by Dr. Henke. In his report of April 4, 2013, Dr. Henke opined that Claimant sustained "occupational asthma" secondary to exposure to smoke. He explained that the diagnosis was supported by sounds of "slight rhonchi and wheezing" on forced exhalation. Even though Dr. Henke changed his opinion concerning whether or not Claimant suffers from VCD, he never changed his opinion that Claimant developed "occupational asthma" caused by exposure to smoke.

CONCLUSIONS OF LAW

Having entered the foregoing Findings of Fact, the following Conclusions of Law are reached.

General propositions of law

1. The purpose of the Workers' Compensation Act of Colorado (Act), §§8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201. Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

Issue Preclusion

2. Claimant's motion to take administrative notice of ALJ Cain's January 5, 2016, order was granted. Claimant's motion to strike a July 14, 2015, Application for Hearing and Notice to Set was denied. Claimant contends that ALJ Cain's January 5, 2016, order precludes relitigation of the issues raised in the July 14, 2015, Application for Hearing and Notice to Set of compensability, medical benefits and overcoming the April 16, 2015, +DIME opinion of Dr. Volz..

4. Collateral estoppel, or issue preclusion, is a judicially created, equitable doctrine that operates to bar relitigation of an issue that has been finally decided by a court in a prior action. *Bebo Constr. Co. v. Mattox & O'Brien, P.C.*, 990 P.2d 78, 84 (Colo. 1999); 18 Charles Alan Wright, Arthur R. Miller & Edward H. Cooper, *Federal Practice & Procedure: Jurisdiction* § 4403 (1981). The doctrine serves to relieve parties of multiple lawsuits, conserve judicial resources, and promote reliance on the judicial system by preventing inconsistent decisions. *Bebo Constr*., 990 P.2d at 84. Although originally developed in the context of judicial proceedings, issue preclusion is just as viable in administrative proceedings and may bind parties to an administrative agency's findings of fact or conclusions of law. *Id*. at 85; *Indus. Comm'n v. Moffat County Sch. Dist. RE No. 1*, 732 P.2d 616, 620 (Colo. 1987).

5. Issue preclusion bars relitigation of an issue if: (1) the issue sought to be precluded is identical to an issue actually determined in the prior proceeding; (2) the party against whom estoppel is asserted has been a party to or is in privity with a party

to the prior proceeding; (3) there is a final judgment on the merits in the prior proceeding; and (4) the party against whom the doctrine is asserted had a full and fair opportunity to litigate the issue in the prior proceeding. *Bebo Constr*., 990 P.2d at 85; *Guar. Nat'l Ins. Co. v. Williams*, 982 P.2d 306, 308 (Colo. 1999); *Indus. Comm'n*, 732 P.2d at 619-20. Only when each of these elements has been satisfied are the equitable purposes of the doctrine furthered by issue preclusion. *Sunny Acres Villa, Inc. v. Cooper*, 25 P.3d 44 (Colo. 2001).

6. It is settled law that a full and fair opportunity to litigate an issue requires not only the availability of procedures in the earlier proceeding commensurate with those in the subsequent proceeding, *Maryland Cas. Ins. Co. v. Messina*, 874 P.2d 1058, 1062 (Colo. 1994), but also that the party against whom collateral estoppel is asserted have had the same incentive to vigorously defend itself in the previous action, *Salida Sch. Dist. R-32-J v. Morrison*, 732 P.2d at 1166-67; Restatement (Second) of Judgments § 28(5)(c) & cmt. j (1982). These considerations apply equally to the adjudication of workers' compensation benefits. *Sunny Acres Villa, Inc. v. Cooper, supra*.

7. In this case, issue preclusion has no application because there was not a fair and full opportunity to litigate the issues. The matter before ALJ Cain concerned the issue of TTD benefits and the matter before this judge relates to overcoming the DIME. These are different issues for which the parties have different incentive to defend. Furthermore, the issues in the cases are not identical. ALJ Cain’s case pertained to TTD benefits with reference made to ALJ Cain’s determination that Dr. Volz’s DIME opinion dated February 20, 2014, was overcome by clear and convincing evidence. The claim before the undersigned ALJ pertains to Dr. Volz’s April 16, 2015, DIME opinion. The claims are not identical, and ALJ Cain’s conclusions have no preclusive effect, where they pertain to wholly different DIME opinions.

Compensability and Withdrawal of the GAL

8. Respondents seek to withdraw its General Admission of Liability (GAL). *HLJ Management Group, Inc. v. Kim,* 804 P.2d 250 (Colo. App. 1990), held that an admission may not be withdrawn retroactively unless procured by fraud, but did permit the prospective withdrawal of an erroneous admission. Further, where the insurer seeks to withdraw the GAL on grounds that the claimant did not sustain an injury arising out of and in the course of employment, the burden of proof rests with the claimant to establish that a compensable injury occurred in the first instance. *Pacesetter Corp. v. Collett,* 33 P.3d 1230 (Colo. App. 2001). To recover workers’ compensation benefits on a compensable claim, there must be a causal relationship between the industrial accident and the injury for which benefits are sought. *Snyder v. Industrial Claims Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

9. The issue to be determined concerns the “threshold” determination of whether the Claimant sustained *any injury* proximately caused by the performance of service arising out of and in the course of employment, the DIME physician’s opinion is not given any presumptive weight and need not be overcome by clear and convincing

evidence. Rather the threshold issue of “compensability” is determined under the preponderance of the evidence standard. *Eller v. Industrial Claim Appeals Office,* 224 P.3d 397 (Colo. App. 2009); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000).

10. In this case the “threshold” issue of whether the Claimant sustained an injury arising out of and in the course of employment is disputed. Respondents filed a GAL admitting that Claimant sustained a compensable injury on December 20, 2011, and now, in this case, Respondents seek to withdraw that admission. Accordingly, the precise issues presented for determination are whether the Claimant sustained work-related asthma and/or VCD as a result of his exposure to smoke at work, and whether one or both of these conditions caused Claimant to become disabled.

11. It is concluded that Claimant sustained his burden of proof by a preponderance to establish that he suffered a work injury on December 20, 2011, when the ventilation system in the kitchen where he worked broke causing him upper respiratory distress. Since Claimant established that he suffered a work injury in the course and scope of his employment for Employer, the Employer cannot withdraw its General Admission of liability.

Overcoming the DIME by clear and convincing evidence

12. Both parties in this matter raise the issue of overcoming the DIME opinion of April 16, 2015. Claimant’s position is that the DIME physician is incorrect and Claimant proved that his mild asthma and VCD was caused by the work injury, is not at MMI because he requires additional treatment to cure and relieve Claimant of the effect of the injury and has disabled him. By contrast, Respondents take the position that the DIME opinion is incorrect because Claimant condition is not caused by the work injury and therefore medical treatment and disability are not Respondents’ liability.

13. The question of whether the admitted injury caused asthma and/or VCD fell within the DIME physician’s authority to diagnose the Claimant’s medical conditions, determine whether any of Claimant’s medical conditions are work-related, determine whether Claimant’s conditions are stable and determine whether these conditions caused any ratable permanent impairment. It follows that the question presented here is the “extent” of the Claimant’s work-related injury and not the existence of a work-related injury. The “extent” of Claimant’s injury was a question properly submitted to the DIME physician and the ALJ and the parties are bound by the DIME physician’s findings unless overcome by clear and convincing evidence. *Leprino Foods v. Industrial Claim Appeals Office, supra*; *Nielsen-Hernandez v. King Soopers, supra*; *Gianzero v. Final Order Wal-Mart Stores, Inc., supra*. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging a DIME physician's findings concerning MMI and or impairment must produce evidence demonstrating that it is highly probable the DIME physician’s findings are incorrect. The question of whether the party challenging the DIME physician’s findings has overcome them by clear and

convincing evidence is one of fact for the ALJ. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

14. The ALJ notes that the DIME physician's April 16, 2015, findings concerning the diagnosis of Claimant's injury-related medical conditions and the cause of those conditions are ambiguous. In the April 16, 2015, DIME report Dr. Volz states that Claimant is not at MMI and his DIME opinion includes a discussion of the various medical treatments from which Claimant might benefit. Dr. Volz states that, if Claimant has asthma, VCD, GERD, rhinitis or bronchiectasis, there are many treatments that have not been tried on him that might provide Claimant relief from the symptoms. With regard to causation, Dr. Volz reiterates his opinion contained in the February 20, 2014, DIME report that "one could argue that [Claimant] does NOT have asthma, and if he does have asthma, there could be other factors aggravating his respiratory status."

15. In cases where a DIME physician offers ambiguous or conflicting inferences concerning MMI or impairment, the ALJ must determine the DIME physician's true opinion as a matter of fact. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000); *Rainwater v. Sutphin*, WC 4-815-042-04 (ICAO September 9, 2014).

16. The ALJ determines as a matter of fact that Dr. Volz's true findings are that Claimant probably does not have asthma, but even if he does have asthma it is not causally related to his exposure to smoke in the workplace. It follows that because the DIME physician in both his February 20, 2014, and April 16, 2015, DIME reports found the Claimant does not have work-related asthma and/or VCD Claimant must overcome the April 16, 2015, findings by clear and convincing evidence. The ALJ concludes Claimant proved by clear and convincing evidence that he has work-related occupational asthma proximately caused by the admitted industrial injury of December 20, 2011.

17. Claimant proved it is highly probable and free from serious doubt that he sustained occupational asthma proximately caused or aggravated by exposure to smoke in the workplace. As found, the ALJ is persuaded by the opinions of Dr. Mayer, Dr. Rashid and Dr. Henke that Claimant has occupational asthma that was either caused by or aggravated by the workplace exposure to smoke. The ALJ is persuaded by Claimant's credible testimony that the asthma was caused or aggravated by the exposure to smoke that resulted from the malfunctioning of the ventilation system in the employer's kitchen. The ALJ finds that the opinions of Dr. Volz are not persuasive. Dr. Volz's opinions are persuasively refuted by the credible opinions of Dr. Mayer, Dr. Rashid and Dr. Henke. Doctors Mayer, Rashid and Henke agree that exposure to smoke either caused Claimant to develop asthma or aggravated a prior underlying condition that manifested itself as symptomatic asthma.

Medical Benefits

18. Claimant contends that he is entitled to medical benefits to cure and relieve him of the effects of the industrial injury. The respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988).

19. Since Claimant has proven by preponderant evidence that he suffered an injury in the course and scope of his employment and further proved by clear and convincing evidence that he suffers specifically from asthma, Respondents are liable for medical benefits to cure and relieve him of this condition.

ORDER

It is therefore ordered that:

1. Respondents are liable for Claimant's December 20, 2011, work injury.

2. Respondents' claim for withdrawal of the GAL is denied.

3. Claimant overcame the April 16, 2015, DIME opinion of Dr. Volz by clear and convincing evidence. Claimant proved that he is not at MMI for the occupational asthma proximately caused or aggravated by exposure to smoke in the workplace.

4. Respondents are liable for reasonably necessary and related medical benefits to cure or relieve Claimant of the effects of the occupational asthma.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUE

Whether Respondent has demonstrated by a preponderance of the evidence that Claimant did not have a reasonable excuse for filing her Worker's Claim for Compensation more than two years but fewer than three years after the date of her industrial injuries pursuant to §8-43-103(2), C.R.S. and is thus entitled to withdraw its June 30, 2015 Final Admission of Liability (FAL).

FINDINGS OF FACT

1. Claimant worked for Employer as a Paraprofessional. On November 27, 2012 Claimant was struck in the head by a basketball while at work. Employer referred her to Concentra Medical Centers for treatment. She was diagnosed with a cervical strain, a trapezius/rhomboid strain and contusions of the face, scalp and neck. Terrell R. Webb, M.D. assigned work restrictions including no lifting in excess of 10 pounds, no pushing or pulling in excess of 20 pounds of force and no functioning in a safety-sensitive position.

2. On November 28, 2012 Employer completed an Employer's First Report of Injury. The Report noted that Claimant had been struck in the head by a basketball on November 27, 2012 and suffered a concussion.

3. Claimant retained attorneys Mark Rau and Robert James to represent her for her November 27, 2012 industrial injuries. The attorneys entered their appearance on December 12, 2012. Claimant's attorneys subsequently wrote numerous letters to Respondent seeking ongoing medical treatment. The letters specifically sought clarification regarding prescription medications and gym memberships.

4. Claimant continued to receive treatment from Concentra. By May 8, 2013 Joel C. Boulder, M.D. diagnosed Claimant with the following: (1) a cervical strain; (2) chronic pain syndrome; (3) myalgia and myositis, unspecified; (4) scoliosis and kyphoscoliosis, idiopathic; and (5) a trapezius/rhomboid strain. He released Claimant to regular duty employment. Dr. Boulder determined that Claimant had reached Maximum Medical Improvement (MMI) and released her from care. He recommended medical maintenance treatment in the form of a 12-month gym membership for independent exercise.

5. On May 8, 2013 Claimant underwent an impairment evaluation. She received a 7% whole person rating for her November 27, 2012 industrial injuries.

6. On June 25, 2013 Employer issued a letter granting Claimant's request for a health leave of absence. The leave was effective from April 1, 2013 through August

29, 2013. However, the letter noted that Claimant's position would not remain open and she would be required to apply for any available positions when she was able to return to employment.

7. On June 9, 2015 Claimant filed a Workers' Claim for Compensation. Claimant stated that she suffered back, head and shoulder injuries when she was struck in the head by a basketball while working for Employer.

8. On June 30, 2015 Respondent filed a Final Admission of Liability (FAL). The FAL acknowledged that Claimant had incurred medical expenses in the amount of $7,154.54. The FAL only admitted for the medical benefits that had previously been paid. It did not acknowledge continuing medical benefits, temporary disability benefits or permanent disability benefits.

9. Respondent subsequently filed an Application for Hearing. Respondent contended that it erroneously filed its FAL because Claimant failed to file her Workers' Claim for Compensation within the two year period delineated in §8-43-103(2), C.R.S. Moreover, there was no excusable neglect for Claimant to file her Workers' Claim for Compensation more than two years but fewer than three years after the date of her industrial injuries pursuant to §8-43-103(2), C.R.S.

10. Claimant asserts that she was unable to file her claim within the two year statute of limitations period because she suffered from mental incapacitation. Furthermore, she contends that her mental incapacitation constituted a reasonable excuse to justify the filing of her Workers' Claim for Compensation more than two years but fewer than three years after the date of her industrial injuries.

11. Respondent has demonstrated that it is more probably true than not that Claimant did not have a reasonable excuse for filing her Worker's Claim for Compensation more than two years but fewer than three years after the date of her industrial injuries pursuant to §8-43-103(2), C.R.S. Initially, Claimant was aware of the nature, seriousness and probable compensable character of her injuries on November 27, 2012. The record reveals that the injuries were of sufficient magnitude to cause a disability that would lead a reasonable person to recognize that she might be entitled to compensation benefits. Employer referred her to Concentra Medical Centers for treatment. She was diagnosed with a cervical strain, a trapezius/rhomboid strain and contusions of the face, scalp and neck. Dr. Webb assigned work restrictions including no lifting in excess of 10 pounds, no pushing or pulling in excess of 20 pounds of force and no functioning in a safety-sensitive position. On the following day Employer completed a First Report of Injury. The Report noted that Claimant had been struck in the head by a basketball on November 27, 2012 and suffered a concussion. Finally, Claimant hired attorneys within two weeks after the date of her injury and the attorneys wrote numerous letters to Respondent seeking ongoing medical treatment. The letters specifically sought clarification regarding prescription medications and gym memberships. Accordingly, Claimant was aware of the compensable character of her injuries on November 27, 2012 and the statute of limitations was not tolled.

12. Claimant also did not have a reasonable excuse for failing to timely file her claim for Workers' Compensation benefits. Although Claimant contends that mental incapacitation justified the delayed filing of her Workers' Compensation claim, her actions demonstrate that she lacked a reasonable excuse. Claimant sought medical treatment, retained attorneys and received work restrictions. Claimant was not misled by Employer regarding her claim and a reasonable person would have believed that it was necessary to file a claim. The record simply lacks persuasive evidence that Claimant's mental incapacitation delayed the filing of her claim. Respondent has thus established that Claimant did not have a reasonable excuse for failing to timely file her claim for Workers' Compensation benefits. Accordingly, Respondent may withdraw its June 30, 2015 FAL.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Withdrawing the Final Admission of Liability

4. The court of appeals has previously concluded that the burden of proof to establish compensability remained on the claimant even when an employer was attempting to withdraw an admission of liability. However, the Colorado Workers' Compensation Act has since been amended to change the burden of proof when respondents are attempting to withdraw admissions of liability. Specifically, respondents must now prove by a preponderance of evidence that the claimant did not

suffer a compensable injury as defined under Colorado law. §8-43-201(1) (2015), C.R.S. On June 30, 2015 Respondent filed an FAL acknowledging medical benefits that had previously been paid. Accordingly, Respondent bears the burden of proving that it is entitled to withdraw the FAL.

5. Respondent did not waive its statute of limitations argument by filing the FAL. In *Williams v. El Paso County*, W.C. 3-961-519 (ICAP, Dec. 17, 1992), the ICAP determined that filing an admission of liability for benefits previously paid does not constitute a waiver of the statute of limitations. The ICAP specified that “[the] respondents were only admitting liability for certain medical expenses that had been paid. If the claimant wished to seek additional benefits, she was required under the statute to file a timely notice claiming such benefits.”

Compensable Character of Injury

6. Section 8-43-103(2), C.R.S. provides that the right to Workers' Compensation benefits is barred unless a formal claim is filed within two years after the injury. However, the statute of limitations does not begin to run until the claimant, as a reasonable person, knows or should have known the "nature, seriousness and probable compensable character of his injury." *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). The requirement that the claimant recognize the "seriousness" of the injury contemplates the claimant will recognize the gravity of the medical condition. Finally, a "compensable" injury is one which is disabling and entitles the claimant to compensation in the form of disability benefits. *Romero v. Industrial Commission,* 632 P.2d 1052 (Colo. App. 1981). Therefore, to recognize the "probable compensable character" of an injury, the injury must be of sufficient magnitude that it causes a disability that would lead a reasonable person to recognize that he may be entitled to compensation benefits. *Id.*

7. As found, Respondent has demonstrated by a preponderance of the evidence that Claimant did not have a reasonable excuse for filing her Worker’s Claim for Compensation more than two years but fewer than three years after the date of her industrial injuries pursuant to §8-43-103(2), C.R.S. Initially, Claimant was aware of the nature, seriousness and probable compensable character of her injuries on November 27, 2012. The record reveals that the injuries were of sufficient magnitude to cause a disability that would lead a reasonable person to recognize that she might be entitled to compensation benefits. Employer referred her to Concentra Medical Centers for treatment. She was diagnosed with a cervical strain, a trapezius/rhomboid strain and contusions of the face, scalp and neck. Dr. Webb assigned work restrictions including no lifting in excess of 10 pounds, no pushing or pulling in excess of 20 pounds of force and no functioning in a safety-sensitive position. On the following day Employer completed a First Report of Injury. The Report noted that Claimant had been struck in the head by a basketball on November 27, 2012 and suffered a concussion. Finally, Claimant hired attorneys within two weeks after the date of her injury and the attorneys wrote numerous letters to Respondent seeking ongoing medical treatment. The letters specifically sought clarification regarding prescription medications and gym

memberships. Accordingly, Claimant was aware of the compensable character of her injuries on November 27, 2012 and the statute of limitations was not tolled.

Reasonable Excuse

8. The Act requires that a notice claiming Workers' Compensation benefits shall be filed with the Division of Workers' Compensation within two years following the date of death. However, a claim may be filed within three years after the death if it is determined that a reasonable excuse exists for the failure to file the claim within two years and the employer's rights have not been prejudiced. §8-43-103(2), C.R.S. The claimant bears the burden of proving that a reasonable excuse exists. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *Colorado Fuel & Iron Corp. v. Industrial Commission*, 129 Colo. 257, 269 P.2d 696 (1954). A "reasonable excuse" is one which is "legally justifiable." *Armour & Co. v. Industrial Commission*, 149 Colo. 251, 368 P.2d 798 (Colo. 1962); *Morford v. Fresh Express*, W.C. No. 4-209-032 (ICAP, Sept. 29, 1995).

9. A "reasonable excuse" for neglecting to timely file a claim may exist when an employer misleads a claimant regarding compensability. *City and County of Denver v.* Phillips, 443 P.2d 379 (1968). However, a claimant's lack of knowledge of the law or of her legal rights cannot constitute a reasonable excuse. *Ramos v. Sears Roebuck Company*, W.C. No. 4-156-827 (ICAP, Feb. 10, 1994). The applicable standard is whether the claimant, as a reasonable person, believed that it was unnecessary to file a claim for compensation. *Id.* The existence of a reasonable excuse for purposes of neglecting to file a claim within two years is a matter within the discretion of the ALJ. *Emrich v. Jackson Hewitt Tax Service*, W.C. No. 4-241-443 (ICAP, Oct. 27, 1998). Moreover, an ALJ has "wide discretion" in determining whether reasonable excuse exists. *Butler v. Memorial Gardens Cemetery*, W.C. No. 4-589-950 (ICAP, Nov. 9, 2005).

10. As found, Claimant also did not have a reasonable excuse for failing to timely file her claim for Workers' Compensation benefits. Although Claimant contends that mental incapacitation justified the delayed filing of her Workers' Compensation claim, her actions demonstrate that she lacked a reasonable excuse. Claimant sought medical treatment, retained attorneys and received work restrictions. Claimant was not misled by Employer regarding her claim and a reasonable person would have believed that it was necessary to file a claim. The record simply lacks persuasive evidence that Claimant's mental incapacitation delayed the filing of her claim. Respondent has thus established that Claimant did not have a reasonable excuse for failing to timely file her claim for Workers' Compensation benefits. Accordingly, Respondent may withdraw its June 30, 2015 FAL.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Because Claimant's claim for Workers' Compensation benefits was untimely, Respondent is permitted to withdraw its June 30, 2015 Final Admission of Liability.

2. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-852-135-02

ISSUES

- Whether Claimant established by a preponderance of the evidence that his condition has worsened sufficient to re-open his claim?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. On March 28, 2011, Claimant sustained a work-related injury to his lower back while employed by Employer. Claimant received authorized medical care eventually resulting in a two-level lumbar spine fusion surgery at L4-L5 and L5-S1. Claimant was eventually placed at maximum medical improvement on October 23, 2012 and was assigned a whole-person medical impairment rating of 31% after a Division Independent Medical Examination.

2. Prior to undergoing the fusion, Claimant was seen on June 14 and 23, 2011 in consultation by Dr. Gordon G. K. Yee for a consultation at Foothills Orthopedic & Spine Center, P.C. Dr. Yee noted on the June 14 that if Claimant were to undergo a lumbar spine fusion that there would be a significant risk of developing adjacent segment degeneration. He therefore recommended against surgery.

3. On May 19, 2013, Claimant saw Dr. James S. Ogsbury at Rocky Mountain Neurosurgical Consultants, LLC, who recommended an L5-S1 fusion or perhaps a two level fusion.

4. Because of the difference of opinion, Claimant was referred to Dr. Bryan Castro who recommended the two level fusion.

5. After Claimant reached maximum medical improvement, he began experiencing increased pain and sought treatment at the office of the authorized treating physicians at Concentra. On July 27, 2015, Claimant saw Dr. Julia Balderson with the permission of Respondent for evaluation. Dr. Balderson noted that Claimant had increasing back pain over the last one to two years with pain and numbness radiating into the interior thigh. She referred Claimant back to Dr. Castro to determine whether or not the worsening pain was due to the original injury for purposes of reopening of the case.

6. Claimant returned to see Dr. Castro on August 26, 2015. Dr. Castro recommended that Claimant have an additional MRI to evaluate any neural encroachment and referred Claimant to Dr. Meza at Concentra for

evaluation and scheduling of an MRI. Claimant returned to Dr. Meza on August 27, 2015. Dr. Meza ordered a physical medicine and rehab referral to Dr. Tobey.

7. Claimant had previously had an MRI on March 3, 2015 at Boulder Community Hospital when he self-reported with severe back pain. That MRI showed that at the L3-L4 level there was severe canal stenosis as well as tethering of the nerve roots of the central spinal canal and the neural foramina appear moderately narrowed bilaterally secondary to annular bulging. The impression was severe acquired central canal stenosis at L3-L4 with tethering of the cauda equina, primarily secondary to disk bulging ventrally and focal epidural fatty hypertrophy posteriorly.

8. Respondent sent Claimant for an examination by Dr. Michael Madsen, a neurosurgeon in Lonetree, Colorado. On December 2, 2015, Dr. Madsen sent an addendum report addressing the causation of Claimant's symptoms. At that point his diagnosis was severe acquired central canal stenosis at L3-L4 secondary to a disc bulge with epidural hypertrophy (fatty deposit).

> This development of stenosis most likely represents a combination of the natural progression of degenerative change, accelerated by the presence of loads transferred due to fusion. . . . The Colorado Division of Worker's Compensation has no guidelines regarding distinguishing causation between natural degenerative change and degeneration adjacent to prior fusion. My medical opinion is that the findings at L3-4 represent a combination of both. I am unable to quantify the respective contributions further.

9. After receiving this report, Respondent sent Claimant for an additional examination with Lawrence A. Lesnak, D.O. Dr. Lesnak is an osteopath certified in physical medicine and rehabilitation. He opined that Claimant's symptoms, while worsening, were due solely to the fatty deposit at L3-L4. However, he admitted he had not reviewed the addendum report of Dr. Madsen, that there was acquired stenosis due to bulging at L3-L4 in combination with the hypertrophy combined to cause Mr. Violette's ongoing problems.

10. The ALJ finds that the opinion expressed in the reports of Dr. Michael W. Madsen on the issue of relatedness of the Claimant's symptoms to be more credible and persuasive than those expressed by Dr. Lesnak. The Court notes that in this instance Claimant was seen by both Dr. Madsen and Dr. Lesnak at the request of the Respondent. When the report of Dr. Madsen, a neurosurgeon, supported the position that Claimant has had a worsening of his work-related condition, Respondents sent Claimant to Dr. Lesnak who offered the opposite opinion.

11. The Administrative Law Judge finds, based on the totality of the evidence, that Claimant has established by a preponderance of the evidence, that he has had a natural worsening of his work-related injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

Once a claim is closed by final admission, it is not subject to further litigation unless it is reopened under § 8-43-303, C.R.S. 2014. To reopen a claim, a claimant must show error, mistake, or change in condition. § 8-43-303(1) C.R.S.; *Berg v. Indus. Claim Appeals Office*, 128 P.3d 270, 272 (Colo. App. 2005).

A 'change in condition' . . . means 'a change in the claimant's physical or mental condition resulting from the compensable injury.' Thus, 'change in condition' refers either to a change in the condition of the original compensable injury or to a change in claimant's physical or mental condition which can be causally connected to the original compensable injury. *Chavez v. Indus. Comm'n*, 714 P.2d 1328, 1330 (Colo. App. 1985).

"Reopening is appropriate when the degree of permanent disability has changed, or when additional medical or temporary disability benefits are warranted." *Richards v. Indus. Claim Appeals Office*, 996 P.2d 756, 758 (Colo. App. 2000). The party attempting to reopen a claim "shall bear the burden of proof as to any issues sought to be reopened." § 8-43-303(4) C.R.S.

An ALJ has broad discretionary authority to determine if a claimant has met the burden of proof of establishing the change of condition warranting reopening. *Renz v. Larimer Cnty. Sch. Dist.*, 924 P.2d 1177, 1181 (Colo. App. 1996). The statutory reopening authority granted ALJs is "permissive, and whether to reopen a prior award when the statutory criteria have been met is left to the sound discretion of the ALJ." *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186, 189 (Colo. App. 2002).

Here Claimant proved by a preponderance of the evidence, specifically the opinion of Dr. Madsen, that Claimant's symptoms are caused by a combination of a natural progression of degenerative change, combined with the presence of loads transferred due to his fusion. Consequently, the petition to reopen is granted.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim is reopened pursuant to § 8-43-303 C.R.S.

2. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 22, 2016

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

The issues to be determined by this decision are:

- Whether the Claimant's average weekly wage should be increased to $1101.96 in WC 4-977-328;

- Whether the Respondents properly terminated Claimants temporary total disability benefits in WC 4-977-328 due to her failure to accept a modified duty job;

- Whether Respondents' petition to reopen WC 4-910-076, due to an alleged overpayment of benefits should be granted; and if the claim is reopened, whether the Respondents may recover the overpayment by reducing benefits payable in WC 4-977-328.

- The Claimant asserted that the Final Admission of Liability (FAL) filed in WC 4-910-076 is invalid thus reopening would be unnecessary.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge finds as fact:

1. The Employer operates a hotel and spa located in Avon, Colorado. The Claimant worked at the spa as a massage therapist.

2. On January 28, 2013, the Claimant suffered an admitted work injury to her right wrist (WC 4-910-076). Claimant primarily underwent medical treatment at Vail Valley Medical Center with Lucia London, a certified nurse practitioner. Claimant also had surgery on her right wrist performed by Dr. Viola.

3. On March 24, 2014, Ms. London evaluated the Claimant. She completed a report documenting that Claimant had reached maximum medical improvement with no impairment or restrictions.

4. On April 10, 2014, the Respondents filed a FAL. The FAL states that the date of MMI is March 24, 2014, and in the section entitled "Remarks and basis for permanent disability award" states that, "There are no impairment benefits based on "London's" report of 3-24-14." The report attached to the FAL is the March 24, 2014 report referenced in paragraph 2 above. Ms. London, who is not a physician, signed the

report. There is no indication that an authorized treating physician reviewed Ms. London's recommendations or that the Respondents referred Claimant to a level II accredited physician for an evaluation regarding permanent impairment.

5. On March 9, 2015, the Claimant suffered a work injury to her left shoulder (WC 4-977-328). The Respondents admitted liability, and the Claimant has undergone medical treatment again primarily at Vail Valley Medical Center with Ms. London.

6. Claimant was eventually referred to Dr. William Sterett, an orthopedic surgeon. On July 14, 2015, Dr. Sterett performed surgery on Claimant's left shoulder.

7. On July 31, 2015, Dr. Sterret imposed work restrictions to include no lifting, carrying, pushing, pulling more than 10 pounds; and no overhead lifting. He also indicated Claimant should wear her sling for one more week then wean off of it.

8. On August 20, 2015, the Employer sent a letter to Dr. Sterret asking him to approve a modified duty job as a Spa Front Desk Attendant. The modified duty job was based on the restrictions Dr. Sterret imposed on July 31, 2015, stated in paragraph 7 above. Dr. Sterret signed the letter and dated it August 20, 2015. The Employer indicated that the modified duty job began on August 27, 2015.

9. Dr. Sterret signed the August 20, 2015 letter and faxed it back to the Employer in the morning around 9:48 a.m. according to the date and time fax stamp at the top of the letter.

10. Also on August 20, 2015, the Claimant called Dr. Sterret to report that she had a set back and her pain had increased. She also expressed concern that her work restrictions were not appropriate for her. Dr. Sterret electronically signed the note at 11:41 a.m.

11. The ALJ acknowledges that the timing of the new 2-pound restrictions is suspicious but there was no credible or persuasive evidence, such as testimony from Dr. Sterret or Ms. London, that Claimant deliberately urged either of them to modify her restrictions after receiving the August 20, 2015 modified duty job offer.

12. According to Dr. Sterret's August 28, 2015 record, Claimant recovered from her surgery rather slowly. Dr. Sterret imposed work restrictions to include no lifting of more than 2 pounds more than two times per hour and no overhead lifting or overhead work, and no typing.

13. The Claimant also saw Ms. London on August 28, 2015. Ms. London's report indicates that Claimant was residing in Denver so her family could help her out. Ms. London noted that Claimant's restrictions included lifting, carrying, pushing and pulling 0-2 pounds with her left arm; no reaching away from the body; no overhead work; and no typing.

14. On September 3, 2015, the Insurer had Claimant personally served at her physical therapist's office in Denver with the August 20, 2015 modified duty job offer, which offered her a job at the spa in Avon, Colorado. The letter indicated that Claimant must start the modified duty job three business days from the receipt of the letter which fell on September 8, 2015. The Insurer relied upon the restrictions Dr. Sterret imposed on July 31, 2015.

15. The Claimant testified that she had no notice of the August 20, 2015 modified duty job offer until it was personally served upon her on September 3, 2015, although the original letter states that it was sent by regular mail and e-mail.

16. The Claimant did not report to work to begin the modified duty job on or before September 8, 2015. The Claimant testified that the restrictions included in the September 3, 2015 modified duty job offer were no longer valid. Claimant's attorney sent a letter to Respondents' attorney stating that Claimant had re-located to Denver and that due to the change in work restrictions, the job offer was no longer valid.

17. On September 16, 2015, Dr. Sterret again changed Claimant's restrictions to no lifting more than 15 pounds more than two times per hour, no overhead lifting or work, and no typing. Dr. Sterret also indicated that Claimant should not need to use a sling at work. Dr. Sterret did not examine or talk to the Claimant on September 16, 2015 prior to modifying her work restrictions.

18. The Respondents filed a General Admission of Liability terminating Claimants temporary total disability effective September 8, 2015. Respondents relied upon the modified duty job offer dated August 20, 2015, and personally served upon Claimant on September 3, 2015.

19. On September 28, 2015, Dr. Sterret approved a modified duty job of Spa Desk Agent with no lifting greater than 10 pounds; no overhead lifting; and no typing with her left arm. Dr. Sterret's signature indicated that he agreed the modified duty job was within the restrictions he had imposed on September 16, 2015.

20. On October 2, 2015, the Insurer had Claimant personally served with the modified duty job offer dated September 30, 2015 enclosing Dr. Sterret's approval of the modified duty job dated September 28, 2015. The offer letter informed the Claimant that she must begin the modified duty job three business days after receiving the letter. Three business days after October 2 was October 7, 2015. Claimant did not report for work on October 7, 2015.

21. Paige Bowers, the Employer's spa manager, testified that the Employer closed completely every October for an undetermined amount of time until ski season. The wage records supplied by the Respondents show Claimant earned no wages October 2014.

22. Claimant had moved to Denver just before she had surgery in July 2015 because she needed assistance recovering from the surgery. Claimant owned a home in Eagle County. Claimant testified that she felt she could no longer afford to live there due to her injury.

23. Claimant was undergoing physical therapy in the Denver area but still traveling to Vail for her monthly visits with the physicians. She indicated that she scheduled appointments with both Dr. Sterret and Vail Valley Medical on the same day to avoid multiple trips from Denver to Vail.

24. The Employer has a property in the Denver area that is owned by the same management company. Claimant testified that she would have been able to accept an offer of modified duty employment in the Denver area had it been offered.

25. Dr. Sterett has not yet placed Claimant at maximum medical improvement, and Claimant still has work restrictions.

26. Based on the foregoing, the Respondents have failed to prove that termination of TTD effective September 8, 2015 was appropriate under the circumstances. **While it is true that the September 3, 2015 modified duty job offer letter was valid and in compliance with DOWC Rule 6 when prepared by the Respondents, the ALJ finds that the offer became invalid when Dr. Sterret reduced Claimant's lifting capacity to 2 pounds on August 28, 2015. Dr. Sterret did not review the Spa Desk Agent job with a 2-pound restriction in mind prior to the Employer offering Claimant the modified duty job on September 3, 2015. Thus, the unilateral termination of TTD effective September 8, 2015 was improper.**

27. The ALJ finds that the job offer made on October 2, 2015 was a valid job offer but that Claimant, as a practical matter, could not accept it. As such, Claimant remains entitled to TTD.

28. Respondents admitted for an AWW of $810.04, which the Respondents assert is inflated and Claimant asserts is too low.

29. In WC 4-910-076, the Respondents admitted for an AWW of $1,165.69. Claimant urges the ALJ to adopt a method of calculating her AWW that would result in a wage closer to $1,165.69. Claimant supplied wage information for an eight-week period reflecting that she earned $8,815.71 immediately before her injury. Claimant's wage calculation fails to recognize that the Employer closes for several weeks each year. In 2014, the Employer closed for eight weeks during which Claimant earned no wages. Claimant testified that she had side work during those weeks, but provided absolutely no testimony or evidence as to how much she earned thus that loss of earning capacity cannot be considered.

30. Claimant also alleged that in all of 2014 and 2015 through March 9, 2015, she earned less than normal because she was still recovering from her January 2013

injury. Claimant provided no documentary evidence to support her assertion. The fact that Respondents admitted for a higher wage in WC 4-910-076, does not prove that Claimant's AWW should be higher in her subsequent claim.

31. The Respondents urge the ALJ to calculate Claimant's AWW based on 52 weeks of income Claimant earned from March 8, 2014 through March 6, 2015. Claimant earned a total of $30,781.45 over that period which results in an AWW of $591.95. The ALJ finds that $591.95 more accurately reflects Claimant's average wage.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge enters the following conclusions of law:

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A Claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

WC 4-910-076 –Petition to Reopen and Overpayment

4. Section 8-42-107(8)(b)(I), C.R.S., states that an authorized treating physician shall determine when the injured worker reaches MMI. Because the best indicator of legislative intent is the language of the statute, words and phrases in a statute should be given their plain and ordinary meanings. *Weld County School District RE-12 v. Bymer*, 955 P.2d 550 (Colo. 1998). The plain language of the statute requires that a *physician* determine when a Claimant as reached MMI. There is no dispute that

Lucia London is not a physician. As such, Ms. London had no authority to determine Claimant had reached MMI on March 24, 2014, and she certainly had no authority to determine permanent medical impairment as she is not a physician, and cannot have obtained the appropriate accreditation by the DOWC. Because no authorized treating physician has placed the Claimant at MMI, the FAL is void and the claim remains open. Further, the overpayment issue is rendered moot because without an MMI determination, the ALJ cannot ascertain whether the Respondents overpaid any benefits to the Claimant.

WC 4-977-328 – Termination of TTD

5. Section 8-43-105(3)(d)(I), C.R.S., requires termination of TTD once the attending physician releases a claimant to modified duty work, the employer offers, in writing, the modified duty work and the claimant fails to begin such employment. Section 8-42-105(3), C.R.S., provides that upon the occurrence of one of four enumerated conditions TTD benefits shall cease. The termination of TTD benefits under any one of the four enumerated conditions is mandatory. *Burns v. Robinson Dairy, Inc., 911 P.2d 661* (Colo. App. 1995).

6. WCRP Rule 6 provides that respondent may unilaterally terminate claimant's TTD without a hearing by filing an admission of liability together with a certified letter to the claimant containing both an offer of modified employment, setting forth duties, wages and hours and a statement from an authorized treating physician that the employment offered is within the claimant's physical restrictions.

7. While it is true that the September 3, 2015 letter was valid and in compliance with DOWC Rule 6 when prepared by the Respondents, it became invalid when Dr. Sterret reduced Claimant’s lifting capacity to 2 pounds on August 28, 2015. Dr. Sterret did not review the Spa Desk Agent job with a 2-pound restriction in mind prior to the Employer offering Claimant the modified duty job on September 3, 2015. Thus, the unilateral termination of TTD effective September 8, 2015 was improper.

8. The Respondents made a second modified duty job offer on October 2, 2015, when the Insurer had Claimant personally served with the offer dated September 30, 2015 enclosing Dr. Sterret’s approval of the modified duty job dated September 28, 2015. The offer letter informed the Claimant that she must begin the modified duty job three business days after receiving the letter. Three business days after October 2 was October 7. The Claimant failed to report to work on October 7, 2015. The ALJ concludes that the October 2, 2015 modified duty job offer complied with Rule 6 of the DOWC Rules of Procedure.

9. Once it has been established that the offer of modified duty was valid and in compliance with Rule 6 and § 8-42-105(3)(d)(I), C.R.S., the appropriate inquiry is whether the offered employment is reasonably available to the claimant under an objective standard. *See Ragan v. Temp Force*, W.C. No. 4-216-579 (ICAO June 7, 2006).

10. Section 8-42-105(3)(d)(I), C.R.S., creates no explicit prescriptions or restrictions on the type of modified employment Respondents may offer other than that the attending physician must approve the employment. *Ragan, supra.* In *Belanger v. Keystone Resorts*, Inc., W.C. No. 4-250-114 (ICAO October 9, 1997) ICAP acknowledged that the location of a claimant's residence is a relevant factor in determining whether the refusal to accept the employment is reasonable. However, ICAP held that the residence factor must be viewed against the totality of the circumstances, including the claimant's decision to relocate. *See also Loya v. Colorado Roofing Contractors, Inc*., W.C. No. 4-530-597 (ICAO July 22, 2004).

11. As found above, the modified duty job was not reasonably available to the Claimant. The Claimant moved from Vail to Denver due, in part, to her work injury. She needed assistance recovering from the work-related shoulder surgery and she did not have the financial means to continue residing in Vail. In addition, the imminent closure of the Employer's spa following the modified duty job offer would not provide any impetus to the Claimant to move back to Vail. She would have been unemployed within a week or two of commencing the modified duty job, and unable to perform massages for private clients during the shutdown. Under the circumstances presented, the ALJ concludes that Claimant reasonably refused to accept the modified duty job in Vail. Respondents remain liable for TTD commencing on September 9, 2015 and ongoing until terminated by operation of law.

Average Weekly Wage

12. Section 8-42-102(2), C.R.S., requires a claimant's average weekly wage to be calculated upon the monthly, weekly, hourly, daily or other remuneration the claimant was receiving at the time of the injury. Section 8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective of calculating AWW is to arrive at a fair approximation of claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 1997).

13. The Claimant has presented no persuasive evidence that her AWW should be increased whereas Respondents proved by a preponderance of the evidence that they erroneously admitted for an inflated wage. Over a 52-week period from March 8, 2014 through March 6, 2015, Claimant earned a total of $30,781.45. This period of time includes the weeks when the Employer shuts down and Claimant earns no wages. It also reflects the fairest approximation of Claimant's wage loss given that she did not prove that she earned any additional wages during the Employer's shutdown nor did she prove she was earning less than usual due to her 2013 work injury. Thus, Claimant's AWW is $591.95.

ORDER

It is therefore ordered that:

1. Claim number WC 4-910-076 remains open; and the issue of overpayment in that claim is moot.

2. Respondents' unilateral termination of TTD in WC 4-977-328 is reversed. Claimant remains entitled to TTD commencing on September 9, 2015 and ongoing until terminated by operation of law.

3. Claimant's AWW in WC 4-977-328 is $591.95.

4. The Insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the supplemental order, as indicated on certificate of mailing or service; otherwise, the Judge's supplemental order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the supplemental order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. The petition set forth in detail the particular errors and objections relied upon, and shall be accompanied by a brief in support thereof. For statutory reference, see section 8-43-301(6), C.R.S.

PRELIMINARY ISSUE

1. Whether the applicability of a safety rule violation is an issue ripe and ready to proceed to hearing.

The Claimants assert that pursuant to O.A.C.R.P. 12, parties must appraise the ALJ prior to hearing of the issues and affirmative defenses to be determined by endorsing issues and affirmative defenses in either the application for hearing or the response to application for hearing or by agreement of the parties or pursuant to a judge's order. The Claimants further assert that affirmative defenses must be explicitly pled and that penalties for an employee's willful failure to use a safety device or willful failure to follow a reasonable safety rule are affirmative defenses, and therefore, must be specifically pled or they are waived. The Claimants argue that the Respondents failed to endorse affirmative defenses pursuant to § 8-42-112(1)(a) & (b), C.R.S., in any of the multiple responses to applications for hearing filed in this matter. Respondents did not seek the Claimants' agreement to add the issue or a judge's order allowing them to add the issue for good cause shown subsequent to filing their most recent responsive pleading. Claimant RH further argues that he sought information through discovery regarding the penalties being taken in Respondents' General Admission of Liability pursuant to § 8-42-112, C.R.S. and Respondents objected to providing complete information in response to Claimant RH's discovery requests.

It is the position of the Respondents that, through the Fatal Case - General Admission, Respondents specifically asserted a safety rule violation. Respondents further argue that by Claimant MH endorsing death benefits as an issue for hearing (even though they are being paid through the admission), it is clear that the safety rule violation issue was understood. Otherwise there would be no reason for Claimant MH to proceed in the case disputing benefits paid. Respondents also note that discovery was completed regarding the safety rule violation and multiple documents acknowledged that the asserted safety rule violation was a disputed issue for the set hearing.

Waiver is the intentional relinquishment of a known right. A waiver must be made with full knowledge of the relevant facts, and the conduct should be free from ambiguity and clearly manifest the intention not to assert the right. *Johnson v. Industrial Commission, supra*; *Department of Health v. Donahue,* 690 P.2d 243 (Colo. 1984). In this case, the Respondents did clearly assert the safety rule violation on the Fatal Case – General Admission and took the penalty deduction per calculations of the benefits owed. There was considerable correspondence and multiple motions mentioning the safety rule violation. In addition, all parties indicated that they were prepared to proceed on the safety rule violation at the commencement of the hearing. The ALJ finds that the totality of the evidence shows that the parties understood that safety rule violation was an issue for hearing.

ISSUES

The issues for determination are:

1. Whether the Claimant RH is entitled to death benefits under the Workers' Compensation Act of Colorado as a dependent widower of the Decedent under the doctrine of common law marriage.

2. Determination of the Decedent's average weekly wage ("AWW") including COBRA benefits.

3. Whether Respondents have proven they are entitled to a fifty percent (50%) reduction in compensation because the Claimant's death on January 3, 2014 was caused by a willful failure to obey a reasonable rule adopted by Employer for the safety of the employee.

4. Determination of the offset amount for Social Security Survivor benefits to which the Respondent is entitled.

FINDINGS OF FACT

1. Decedent was hired by Employer as a route sales representative and delivery driver on October 25, 2012 (Claimant RH's Exhibit 34; Respondents' Exhibit H, p. 82, Respondents' Exhibit N; and Hearing Tr., p. 60:16-18).

2. Decedent was working for Employer in the course and scope of her employment when she was involved in a fatal motor vehicle accident on January 3, 2014. On January 3, 2014, the delivery vehicle of Employer's that Decedent was driving was rear ended by a tractor-trailer. The tractor-trailer pushed Decedent's vehicle off the road and caused it to rotate in a counter clockwise direction until Decedent's vehicle rolled one quarter turn onto the passenger side. Decedent was partially ejected out the front passenger side window. Decedent was killed when a portion of her vehicle came down on her head and upper torso.

3. Colorado State Trooper Seth Soukup testified via deposition on December 15, 2015. Trooper Soukup is a level 4 certified accident reconstruction specialist for the Colorado State Patrol. He is also accredited by the Accreditation Commission for Traffic Accident Reconstruction. Trooper Soukup has worked for the Colorado State Patrol since 2008. Trooper Soukup's job duties include going to crash sites, determining contributing factors, determining how the crash occurred, documenting the accident, using momentum calculations, doing computer animations, and concluding what occurred (Soukup Depo. 4:19 – 8:24).

4. Trooper Soukup testified that on January 3, 2014 he received a call to report to the scene of Decedent's accident. Trooper Soukup arrived on the scene and observed Decedent's vehicle laying on the passenger side (Soukup Depo. 9:7 – 10:17). He testified that he found Decedent deceased when he arrived on the scene. Decedent

was partially in her vehicle and partially out of the vehicle. Decedent's torso was out of the passenger window with her head pinned beneath the A-pillar on the vehicle. Decedent's legs and the lower part of her body were still inside the vehicle (Soukup Depo. 13:20 – 14:11). Trooper Soukup opined that the evidence shows Decedent was thrown out the passenger side window of her vehicle because the vehicle was turning left when it was hit from the rear causing it to turn even more sharply to the left. The fact that Decedent was hit from the rear by a vehicle traveling 30 to 40 miles faster than she was pushed her vehicle forward faster than she was and as a result, pushed her forward. Decedent maintained a northern course as the vehicle turned west causing her to be ejected out the passenger window (Soukup Depo. 56:2 – 60:12).

5. At the scene of the accident, Trooper Soukup was able to look into Decedent's vehicle through the broken windshield and observed that the driver's seat belt was fully retracted and had not been in use at the time of the accident. Trooper Soukup also entered into the vehicle and checked the seat belt at the scene to ensure it was functional and was not locked (Soukup Depo. 26:3-11 and 46:3 – 47:25). Trooper Soukup testified that he later inspected Decedent's vehicle at the tow yard and "it was evident that the seat belt was fully retracted and had not been in use at the time of the crash." Additionally, the seat belt was operational. When Trooper Soukup pulled on the seat belt, it was in non-locking mode so he was able to pull it out. The seat belt was able to latch and release and retracted fully (Soukup Depo. 26:3-22).

6. After completing his investigation of the accident, Trooper Soukup completed a Colorado State Patrol Traffic Accident Report. Trooper Soukup noted that Decedent's vehicle was making a left turn at the time of the accident and was traveling at an estimated 5 mph. Trooper Soukup testified that he determined Decedent's vehicle was traveling at 5 mph based on a speed work-up using momentum, weight and speed of the vehicles, roadway evidence, skid marks on the road, path of travel, and distance traveled. These same factors led Trooper Soukup to determine that Decedent was making a left turn at the time of impact (Respondents' Exhibit D, p. 68 and Soukup Depo. 28:1 – 30:12). Trooper Soukup also noted that Decedent's vehicle was equipped with safety equipment of a shoulder and lap belt that was not used at the time of the accident. Trooper Soukup testified that he determined the safety equipment was not used based on looking at the scene and the seat belt position being fully retracted and Decedent's position under the vehicle with her torso being out of the vehicle and under the A-pillar. Trooper Soukup testified that there was evidence the seat belt had not been in use at that time (Respondents' Exhibit D, p. 69 and Soukup Depo. 37:1-20). Trooper Soukup testified that there was no evidence Decedent was at a stop at the time of impact or that she had gotten out if her vehicle to check her stock or check a mechanical issue. This is because the driver of the other vehicle stated that he saw Decedent driving in from of him just moments before the accident (Soukup Depo. 51:7 – 52:2). Trooper Soukup also testified that at the time of impact, the driver's side tires of Decedent's vehicle were near the middle of the road and the passenger side tires were in the right-hand lane, several feet away from the side of the road. Decedent was not on the shoulder or side of the road due to mechanical defects or stopping for some reason. (Soukup Depo. 38:22 – 39:13).

7. In the Accident Narrative section of the report, Trooper Soukup concluded as follows:

> Both vehicles were northbound on Morgan County Road 24. Vehicle #2 [Decedent's vehicle] had slows to make a left turn onto Morgan Count Road U & 5/10 (U.5). Vehicle #1 rear-ended Vehicle #2, causing Vehicle #2 to begin to rotate counter-clockwise. Vehicle #2 traveled approximately 64.8' while it rotated one-quarter time counter-clockwise before rolling one-quarter time onto its right side. The unrestrained driver of Vehicle #2 was partially ejected out the passenger side window and Vehicle #2 came to rest partially on top of its driver. Vehicle #2 came to final rest on its right side facing southwest. Vehicle #1 came to final rest on the roadway on its wheels facing north.
>
> (Respondents' Exhibit D, p. 69)

8. Garrick Mitchell is an accident reconstruction specialist. Mr. Mitchell has a bachelor's degree and a master's degree in mechanical engineering. Mr. Mitchell is a Certified Accident Reconstructionist by the Accreditation Commission for Traffic Accident Reconstruction. Mr. Mitchell has been doing accident reconstructions since 2000. His accident investigations include mechanically inspecting vehicles, performing site inspections, gathering and analyzing data from police reports, photographs, and witness statements, and using digital site mapping (Respondents' Exhibit C, p. 58 and Mitchell Depo. 5:11-23). Mr. Mitchell has had specialized training courses on Traffic Accident Investigation, Traffic Crash Reconstruction, Commercial Vehicle Accident Reconstruction, and Human Factors in Traffic Crashes. Mr. Mitchell has given presentations on vehicle accident reconstruction, how to analyze and photograph vehicle accidents, technology in collision reconstruction, biomechanics of injury causation, and human biomechanics in low-speed vehicle collisions. Some of these courses and presentations, included seat belt training although none of the courses were exclusively on seat belts (Respondents' Exhibit C, p. 60 and Mitchell Depo. 5:24 – 8:5).

9. Mr. Mitchell completed an inspection and partial accident reconstruction of the motor vehicle accident in this matter. On January 3, 2014, Mr. Mitchell inspected the scene of the accident, spoke with the State Patrol, and took some initial photos. (Mitchell Depo. 10:19-53). Mr. Mitchell filled out an inspection form and checklist as part of his investigation to document his inspection of Decedent's vehicle. Mr. Mitchell noted that the seat belt on Decedent's vehicle was stowed, the retractor was okay and passed a functional test, and there was no damaged observed (Respondents' Exhibit A, p. 3 and Mitchell Depo. 17:25 – 19:11).

10. On January 8, 2014, Mr. Mitchell was able to perform a closer inspection of the site and Decedent's vehicle, including the seat belt in Decedent's vehicle. Mr. Mitchell did a digital map of the site, took measurements, and took numerous photos.

Mr. Mitchell took multiple photos of the seat belt to document its condition. Mr. Mitchell took photos of the seat belt depicting the driver's seat buckle, the B pillar (pillar that seat belt retracts into), the seat belt latch plate, the upper and lower D rings, and the seat belt webbing. (Resp. Ex. B p. 11-18 and Mitchell Depo 11:4 – 13:16).

11. Mr. Mitchell testified via deposition on December 7, 2015. Mr. Mitchell testified regarding his inspection of the seat belt. Mr. Mitchell also performed a functional test of the seat belt retractor to ensure that the seat belt would retract into the pillar properly and would lock and not rapidly extend if the seat belt were pulled suddenly. Mr. Mitchell also tested that the seat belt would latch and release properly. Mr. Mitchell concluded that the seat belt in Decedent's vehicle functioned properly. The seat belt was able to be fastened, it clicked into the latch properly, and it did not release improperly. Mr. Mitchell concluded that there were not any malfunctions or errors with the seat belt (Mitchell Depo. 13:20 – 14:15). Mr. Mitchell also testified that there was no physical evidence that the seat belt was being worn at the time of the accident. Mr. Mitchell described the seat belt as being "pristine" with no stains, no wear, no evidence of loading, no transfer of plastic from the D ring to the webbing, no marks on the D ring, and no grittiness in the retractor. Mr. Mitchell testified that what he observed was a seat belt that had been in the stowed position throughout the course of the accident. Mr. Mitchell concluded that Decedent had not been wearing a seat belt at the time of accident (Mitchell Depo. 14:16 – 15:10). Mr. Mitchell testified that he has only investigated one accident where a person wearing a seat belt ended up outside of the driver's seat, like Decedent did in this case. In that particular case, the vehicle hit a guardrail and the impact damaged the seat belt retractor causing the seat belt to unspool. There was severe, obvious damage to the seat belt. This was not the case in Decedent's accident. Decedent's seat belt was undamaged and not in use. (Mitchell Depo. 15:11 – 17:24). In Decedent's case, Mr. Mitchell opined that her body was lifted out of the driver's seat and ejected partially out the passenger window due to the force of the collision while the vehicle was rotating and curving off to the left at the same time. (Mitchell Depo. 36:12 – 37:10).

12. In response to questioning about whether Decedent may have recently reentered her vehicle after stopping to smoke, make a call, or check her inventory levels and may still have been in park, Mr. Mitchell noted that at the time of the accident, Decedent's vehicle was in the middle of a traffic lane. The road Decedent was driving on has a wide shoulder and Decedent was not parked on the shoulder of the road. Furthermore, Mr. Mitchell concluded that Decedent's vehicle was actually in motion at the time of the accident and not in park based on the skid marks on the ground. Decedent's vehicle was "in the northbound lane, turning left when it was rear-ended. It was not parked on the side of the road. It was in a position where it was about to or in the process of making a left turn." Mr. Mitchell could not determine the exact speed of the vehicles from his analysis since he did not do a complete accident reconstruction but he was able to determine that Decedent's vehicle's tires were in motion. Additionally, Trooper Soukup testified that the other driver, who hit Decedent's vehicle, stated he had seen Decedent driving in front of him in the moments prior to the crash. (Mitchell Depo. 33:20 – 34:20, 53:17-19, 54:14 – 55:7, and 58:3-14, Claimant MH's

Exhibit 3, and Soukup Depo. 44:14-18). The Claimants also questioned Mr. Mitchell about whether Decedent's vehicle may have had mechanical failures causing her to be stopped in the road. Mr. Mitchell testified that his examination of Decedent's vehicle lights showed that the left turn signal was illuminated at the time of impact but that the right turn signal was not illuminated at the time of impact. Therefore, Decedent likely had her left turn signal on and not her hazards or emergency lights (Mitchell Depo. 58:15-23 and 62:24 – 63:22).

13. Dr. Burson completed Decedent's autopsy on January 4, 2014. Dr. Burson recorded the following relevant articles of clothing on Decedent: a green rubber bracelet with the phrase "Safe by choice" on the left wrist, a white metal ring on the left thumb, and a yellow metal engagement-type ring with clear stones and a yellow metal band on the left ring finger (Respondents' Exhibit G, p. 76). Dr. Burson noted that the Decedent's death was due to blunt force injuries to Decedent's head and neck that were sustained during a motor vehicle accident. Specifically, Dr. Burson noted that Decedent sustained a severe crush type injury of the skull (Respondents' Exhibit G, p. 75). Dr. Burson noted that Decedent was reportedly the unrestrained driver of a delivery type vehicle that was involved in a motor vehicle accident and Decedent was partially ejected from the passenger side window. Decedent sustained fatal injuries to her head and was pronounced dead at the scene of the accident (Respondents' Exhibit G, p. 76).

14. The Morgan County Coroner's Office completed a personal effects release form for Decedent dated January 10, 2014. The form noted that Decedent was wearing a green wrist band at the time of her death. The form also noted that Decedent was wearing three rings at the time of her death-one white metal ring and two yellow metal rings with clear stones. The personal effects were received by Claimant RH who wrote that his relationship to the Deceased was "husband" (Respondents' Exhibit F). Claimant RH testified that the gold ring was the wedding band he gave Decedent when they reconciled in a church a few weeks after entry of the Divorce Decree. He referred to the rings the Claimant was wearing on her left hand as an "engagement/wedding set" (Hearing Tr. 86:16 – 87:1).

15. This is an admitted claim. Decedent and Claimant RH had one minor biological son, Claimant MH. Respondents filed a Fatal Case-General Admission on January 29, 2014 admitting to death benefits paid solely to Claimant MH, Decedent's minor son. Respondents calculated an average weekly wage of $577.85. Respondents reduced the compensation payable to Claimant MH for a 50% penalty for a safety rule violation (Claimant RH's Exhibit 10; Respondents' Exhibit V). Respondents contest that Claimant RH is entitled to benefits as a surviving spouse.

16. Claimant RH testified that he first met the Decedent on February 3, 2001. He and the Decedent were married on August 29, 2002 in front of a retired judge. There was no formal wedding ceremony at that time. The Claimant RH's credible testimony is supported by a Marriage License (Claimant RH's Exhibit 39). At the time of the marriage, Decedent was pregnant with Claimant MH. After the marriage, Decedent changed her surname from Kinion to Henry which is Claimant RH's surname.

17. Decedent and Claimant RH later separated and a separation agreement with a parenting plan was filed on October 4, 2010. Claimant RH and the Decedent were divorced effective January 4, 2011 (Claimant RH's Exhibit 40; Respondents' Exhibit S). Decedent did not legally change her surname back to Kinion following the divorce.

18. Claimant RH testified that while he and the Decedent were divorced, she moved out of their residence but they continued to see each other and worked on mending the problems they had in the marriage. Claimant RH testified that he and the Decedent reconciled on February 22, 2011 and at that time he presented the Decedent with a gold wedding ring to complete her wedding/engagement set (Hearing Tr. 53:12-18 and 69:8-17 and 86:16-24). At this time, the Decedent moved back into their shared residence. The title to the home and the mortgage remained in both their names the entire time (Hearing Tr. 53:21 – 54:16).

19. After their reconciliation, Decedent and Claimant RH were planning a ceremony in Las Vegas with their family. However, the wedding ceremony never took place (Hearing Tr. 67:25 – 68:4 and 87:7-9). Claimant RH testified that Decedent was allegedly getting pressure from her parents to have a second ceremony because they wanted a traditional kind of marriage and did not look at a marriage in front of a judge as real. He testified their parents are old-fashioned and that a formal ceremony was for their benefit (Hearing Tr. 75:6 – 76:2).

20. The Claimant RH's testimony about his marriage, divorce and subsequent reconciliation and recommitment of their marriage was credible and persuasive. The testimony is supported by evidence in the record.

21. Evelyn Oster, Claimant RH's mother, testified via telephone at the hearing. Ms. Oster testified that she believed Decedent and Claimant RH were married in their hearts in the months preceding Decedent's death. However, she later stated that she knew that they were thinking about having a wedding in Las Vegas in the future. (Hearing Tr. 106:1-8 and 112:14-18).

22. Susan Branom, Decedent's mother, testified at the hearing. Ms. Branom testified that she believed prior to Decedent's death, Decedent and Claimant RH "weren't married. They were just living together" (Hearing Tr. 125:9-13). Ms. Branom testified that Decedent and Claimant RH got divorced and then when Decedent moved back in with Claimant RH, she looked at her as living as an adultress. Ms. Branom said that she would always tell Decedent to go get married (Hearing Tr. 125:19-25). Ms. Branom testified that she did not have any issues with Decedent's marriage to Claimant RH in 2002 that was in front of a judge (Hearing Tr. 126:3-15). Ms. Branom testified that Claimant RH proposed marriage to Decedent after they reconciled by getting down on one knee and proposing marriage. Ms. Branom testified that Decedent wanted to go look for a wedding dress and go to Las Vegas to get married. Ms. Branom believed that Decedent and Claimant RH were engaged, not married, and were going to be getting

married (Hearing Tr. 131:23 – 132:4 and 135:4-25). Ms. Branom testified, however, that she is a Jehovah's Witness and that her religion does not recognize common law marriages regardless of whether they are recognized under the Colorado law. Because of her religious beliefs, she would only recognize a marriage if there is a certificate of marriage (Hearing Tr. 125:12-25).

23. The testimony of Ms. Branom actually supports Claimant RH's testimony that while he and Decedent considered themselves to be married after their reconciliation and held themselves out as married, they were still planning a formal ceremony to appease their families who were more traditional in their views of marriage. The ALJ specifically finds that the Decedent and Claimant RH did not consider themselves merely engaged to be married, in spite of planning an eventual ceremony, but rather they considered and held themselves out as husband and wife.

24. Claimant RH testified that tax returns for the years from 2002 until the Decedent's death were filed jointly. The tax returns submitted at Claimant RH's Exhibit 41 support this testimony.

25. Decedent completed a W-4 for Employer on October 25, 2012 and did not indicate she was married or single on the form. Decedent also claimed only 1 allowance on the tax form, indicating only herself and no spouse or dependents according to the personal allowance worksheet on the W-4 form. (Resp. Ex. U).

26. Claimant RH testified that he and the Decedent jointly held titles to several vehicles, namely a 1999 Chevy pickup, a 2000 Chevy pickup, and a Toyota Yaris.

27. At the time of her death, Decedent had a separate checking account in her name only. It was a single-party account. This account was opened on April 15, 2011. This was after Decedent and Claimant RH had reconciled their relationship. This was the account that Decedent requested Employer deposit her paychecks in. Claimant RH did not have access to this account while Decedent was alive. Decedent also had other checking accounts without Claimant RH's name on them. (Resp. Ex. T; Hearing Tr. 65:3-14). Claimant RH testified that when he and the Decedent first met, they had separate accounts and bills coming out of each that the other person was not responsible for, so they just kept that intact (Hearing Tr. 65:12-22).

28. Claimant RH testified that he relied on the Decedent's income to pay the family bills and that he would not have been able to cover the family bills on his own without her income (Hearing Tr. 66:12-20).

29. Claimant RH testified that when he and Decedent divorced, he began paying child support to her for Claimant MH. Claimant RH continued paying child support to Decedent despite the reconciliation and alleged remarriage (Hearing Tr. 82:8-15). Claimant RH testified that he and the Decedent had looked into terminating the child support payments but did not follow up due to court costs required (Hearing Tr. 83:20-24 and 88:22-89:3).

30. Claimant RH testified that Decedent never allowed Claimant MH to ride in a car without a car seat. Decedent's children wore seatbelts when they rode in the car with Decedent. Decedent wore a seat belt when she rode in the car with Claimant RH and he never saw Decedent not wear a seat belt. Claimant RH said that his family would stop at the edge of the driveway if anybody in the car did not have a seat belt on. Claimant RH testified that he heard Decedent reprimand the children to put on seat belts and that Decedent would stop the car and not go any further until the family had on their seat belts. (Hearing Tr. 70:24 – 71:1, 71:25 – 72:7, and 78:9 – 79:2).

31. Employer had written company rules regarding seat belt usage and all drivers following state driving/traffic laws. Employer's Fleet Safety Policies and Procedures (Respondents' Exhibit I), which requires employees to wear seat belts and follow traffic laws, state as follows:

- Page B-1 (Bates stamp p. 95) – "Obey all federal, state and local traffic laws, rules and regulations."
- Page B-1 (Bates stamp p. 95) – "Wear your seat belt – as a driver, you have a legal duty to wear your seat belt. The Federal Department of Transportation and company policy requires every employee to wear a seat belt. Enforcement will not only be by federal, state and local enforcement but all Schwan's management. You will pay any fines levied against you as a result of not complying with seat belt laws; the company will not reimburse you."
- Page B-6 (Bates stamp p. 100) – Self-Check Questions No. 1 "Both, Federal laws and Schwan's policy dictate that all drivers must wear their seatbelts. a. True b. False"
- Page D-4 (Bates stamp p. 123) – Driver Based Violations – "If the violation is driver based such as HOS, Medical Examiners Card, expired Driver License, seatbelt usage or traffic offenses, the direct supervisor will need to sign the original Inspection report and provide written documentation providing the Disciplinary Action taken to send back with the Inspection form."
- Page I-10 (Bates stamp p. 163) – Identifying High-Risk Safety Concerns – "Each supervisor will be held responsible to identify high-risk safety concerns and correct them on the spot. Although the following list is by no means complete, some safety behaviors which need on-the-spot corrections are: Failure to wear a seat belt."
- Page N-2 (Bates stamp p. 194) – Self-Check Answers No. 1 "Both, Federal laws and Schwan's policy dictate that all drivers must wear their seatbelts. (a) True. Seatbelt use is required by law and mandated by Schwan's policy. Schwan is committed to ensuring your safe return to your home, family, and friends. Using a seat belt helps ensure you're in a position to control the vehicle after impact. Statistics have shown that

> drivers who are belted-in have less severe injuries following an accident and are able to return to work sooner than those drivers involved in an accident who were not wearing a seat belt."
>
> (Respondents' Exhibit I).

32. Decedent signed a form acknowledging receipt and understanding of Employer's Fleet Safety Policies and Procedures on November 6, 2012. The acknowledgement form included a statement that Decedent had read, agreed with and understood she must comply with all federal, state, and local laws which govern the operation and maintenance of company vehicles. (Respondents' Exhibit H p. 83). A second acknowledgement form for receipt of the Employer's Fleet Safety Policies and Procedures was also completed by Decedent on November 26, 2012. (Respondents' Exhibit H p. 84).

33. The Colorado Driver Handbook states that Colorado's Safety Belt Laws (C.R.S. §§ 42-4-237 and 42-2-105.5) require that a fastened safety belt must be worn in all motor vehicles while in operation on public roadways by the driver of the vehicle. (Respondents' Exhibit J p. 211).

34. C.R.S. § 8-42-4-237(2) states that "every driver of and every front seat passenger in a motor vehicle equipped with a safety belt system shall wear a fastened safety belt while the motor vehicle is being operated on a street or highway in this state." (Respondents' Exhibit K).

35. William Vollmer, Employer's Safety Manager for the West Division of Home Service, testified via deposition on December 17, 2015. Mr. Vollmer testified that at the time of Decedent's death, he was safety manager for Colorado (Vollmer Depo. 4:25 – 5:10). Mr. Vollmer testified that Employer has a policy regarding drivers wearing seat belts and had a policy on drivers wearing seat belts at the time of Decedent's death. Employees are required to wear a seat belt while in Employer's vehicles (Vollmer Depo. 5:21 – 6:15). Employees are required to wear a seat belt any time a vehicle is in motion (Vollmer Depo. 7:18-25). Mr. Vollmer testified that employees are trained regarding the policies and rules on seat belt usage. The policy is communicated in the policy and procedure manual and is covered during training of new employees. Training includes computer work to review policies and procedures manuals and a written exam (Vollmer Depo. 6:17 – 7:17). Mr. Vollmer testified that Decedent would have been given a road test when she started work with Employer and not have been allowed to start driving until she passed the road test. A portion of the road test included wearing a seat belt (Vollmer Depo. 16:18 – 17:18). Mr. Vollmer testified that Employer's number one business priority is safety. Safety is a level 10 of importance to Employer on a scale of 0 to 10. Seat belt usage is also a level 10 of importance to Employer on a scale of 0 to 10. This is communicated on posters at every depot and also via monthly safety meetings and weekly power huddles (Vollmer Depo. 11:13 – 12:2, 13:4 – 14:12). Employees are also given green wrist bands that say "Safe By Choice" to wear to remind them to make safe choices while driving so they can come

home to their family at the end of the shift. Mr. Vollmer also testified that employees are given visor organizers in the vehicles that talk about being safe by choice. The visors have a spot for employees to place a photo of their family, kids, or anything important to them so that when they get in the vehicle, they notice the photo and it reminds them why it is important to drive safely (Vollmer Depo. 12:3 – 13:3). Mr. Vollmer also testified that there are permanent signs posted at the exits of the depots so employees can see when they are driving out. The signs remind employees to wear seat belts and buckle up (Vollmer Depo. 13:4-25). Mr. Vollmer also testified that at the time of Decedent's death, if an employee was seen not wearing a seat belt, they would receive a citation and points would be assessed against them. Employees would ultimately be terminated if they accumulated too many points. Since Decedent's death, Employer has decreased their tolerance even further and a violation of the seat belt policy is now automatic termination. (Vollmer Depo. 6:6-15 and 8:1 – 11:12).

36. At the time of her fatal injury, the Decedent was not wearing a seatbelt. Yet, there was no persuasive evidence presented as to the specific reason the Decedent failed to wear her seatbelt immediately prior to her fatal injury. Although it has been established that the seatbelt was in good working order and that the Decedent didn't fail to wear the seatbelt due to malfunction, there was no persuasive evidence to establish whether the Decedent intentionally or willfully failed to wear her seatbelt or whether she negligently forgot to wear her seatbelt or whether there was some other reason for her failure to wear her seatbelt. However based on the testimony from Claimant RH that the Decedent was vigilant about seatbelt use, and based on the evidence establishing that the Employer was adamant and vigilant about enforcement of the seat belt rule, and based on evidence that the Decedent was never disciplined for failure to use her seat belt and was generally known as a compliant employee with a good safety record, who was wearing her "Safe By Choice" bracelet at the time of her death, the ALJ makes the following inference from the evidence. It was more likely that the Decedent failed to wear her seatbelt because she negligently forgot, or for some other reason than it was that she intentionally and willfully failed to wear her seatbelt.

37. Decedent was enrolled in health insurance while employed with Employer. Decedent had elected benefits for herself, Claimant RH, and Claimant MH. Decedent completed the paperwork to obtain the benefits. Health benefits were only available for spouses and dependents of employees. In response to an April 22, 2013 eligibility audit, the Decedent provided a copy of her marriage certificate and the top portion of her most recent Federal 1040 tax return as requested by her Employer Claimant RH's Exhibit 36).

38. Respondents have admitted to an average weekly wage of $577.85. (Respondents' Exhibit V) which is based on Decedent's total earnings from 12/23/2012 to 12/21/2013 of $30,048.20 (Respondents' Exhibit P). The Claimant RH and the Claimant MH dispute this calculation and argue that it does not provide a fair approximation of wage loss and diminished earning capacity resulting from the Decedent's death and the loss of income to the Decedent's family.

39. The Decedent’s first paycheck from Employer was dated November 15, 2012 and the Decedent’s final paycheck from Employer was dated January 23, 2014. Her gross wages were paid approximately every 2 weeks and included the following categories: Product Sales Commission, Daily Base Pay, Daily Service Incentive, Incentive, New Customer Incentive, Ovations AwardperQs, and Vacation Pay. Some of these categories were included with each paycheck and some were only paid intermittently or when earned. All of these categories added up to the gross wage paid to the Decedent. Her gross wages are summarized as follows (taken from Claimant’s Exhibit 33):

Check Date	**Check Amount**
11/15/2012 (Initial Training Pay)	$1,265.00
11/29/2012	$1,137.42
12/13/2012	$1,197.80
12/27/2012	$1,102.21
1/10/2013	$1,078.35
1/24/2013	$977.93
2/7/2013	$1,137.15
2/21/2013	$1,109.64
3/7/2013	$1,212.45
3/21/2013	$1,199.53
4/4/2013	$1,147.44
4/18/2013	$1,176.49
5/2/2013	$1,230.80
5/16/2013	$1,390.79
5/30/2013	$1,335.32
6/13/2013	$1,326.81
6/27/2013	$1,558.17
7/11/2013	$1,141.13
07/25/2013	$981.56
08/08/2013	$1,443.27
08/22/2013	$1,341.03
09/05/2013	$1,238.70
09/19/2013	$1,133.46
10/03/2013	$1,153.07
10/17/2013	$1,212.17
10/31/2013	$1,300.06
11/14/2013	$1,249.13
11/27/2013	$1,315.45
12/12/2013	$1,024.38
12/26/2013	$1,208.72
01/09/2014 (final payout)	$1,383.58

40. Per the wage records, there were regular and natural fluctuations to the Decedent’s gross wages from paycheck to paycheck. Claimants argue that in the six

pay periods or twelve weeks prior to her death, the Decedent was earning increased wages because she was earning more commissions the longer she was on her route as her customer base and sales increased. Claimants argue that the Decedent earned an average weekly wage of $608.13 in this time period and that this is more representative of the wages that the Decedent was earning at the time of the injury.

41. The ALJ finds that there are fluctuations and finds persuasive the Claimants' argument that the last six regular pay periods, encompassing the last 12 full weeks the Decedent worked for Employer prior to her death would result in a fair approximation of her wages. The final paycheck on 01/09/2014 is not a regular paycheck in the ordinary course and is not included for the purposes of calculating the AWW. So, the paychecks from 10/17/2013, 10/31/2013, 11/14/2013, 11/27/2013, 12/12/2013 and 12/26/2013 which are the last 12 regular full weeks of the Decedent's employment are used to calculate AWW.

$1,212.17
$1,300.06
$1,249.13
$1,315.45
$1,024.38
$1,208.72
Total: $7,309.81
÷ 12 = **$609.16**

42. Decedent had group insurance benefits (health, dental, vision, wellness) through Employer covering herself, Claimant RH and Claimant MH at the time of her death. Per her 2014 Enrollment form which was effective January 1, 2014, the Claimant elected Health Plan, Dental and Vision Plan coverage for Employee + Spouse + Child. She did not have the Vision buy-up plan or other options, including the well-being coverage, that were available on the Annual Enrollment Form (Claimant RH's Exhibit 37). Per the COBRA Election Notice sent to Claimant RH on January 6, 2014, these benefits terminated effective January 11, 2014 in connection with the termination of Decedent's employment due to her death (Claimant RH's Exhibit 38, p. 1).

43. Per the COBRA Notice, the full cost of continuing these benefits for Individual + Spouse + Child would be $1,120.21 per month ($1,014.10 for health; $84.24 for dental; and $21.87 for vision) (Claimant RH's Exhibit 38, p. 4). The monthly amount corresponds to a weekly amount of $258.51 per week.

44. Per the COBRA Notice, the cost of continuing these benefits for only Claimant RH and Claimant MH (and excluding the Decedent) would be $739.15 per month ($664.42 for health; $59.78 for dental; and $14.95 for vision)(Claimant RH's Exhibit 38, p. 4). The monthly amount corresponds to a weekly amount of $170.57 per week.

45. As a result of her death, Decedent would no longer be eligible for health, dental and vision insurance benefits as of the date of her death. Thus, there is no actual cost associated with continuing such benefits for Decedent as there is a legal impediment to continuation.

46. Claimant MH was awarded $720.00 per month for Social Security Survivor benefits ("SSS benefits") effective January 2014 (Respondents' Exhibit N). A fifty percent offset of those periodic benefits would equate to an offset of $83.08 per week.

47. Claimant MH was awarded SSS benefits on March 1, 2014 based on the date of the Social Security Award Letter. Neither Claimant MH nor his guardian or representative notified Respondents of his receipt of benefits until September 18, 2015 with his Responses to Interrogatories, which only stated he was receiving benefits and did not provide the award amount. Claimant MH did not provide a copy of his Social Security award letter to Respondents until November 5, 2015 (Respondents' Exhibit N and II).

48. Claimant RH testified that he is also receiving SSS benefits every month. He receives a check for him and a check for Claimant MH each month. Claimant RH testified that he also received SSS benefits in the same amount of $720.00 per month. (Hearing Tr. 85:21 – 86:3 and 87:14 – 88:21). A fifty percent offset of those periodic benefits would equate to an offset of $83.08 per week.

49. Claimant RH did not notify Respondents of his receipt of SSS benefits until March 3, 2015 with his Responses to Interrogatories, which only stated he was receiving benefits and did not provide the award amount. Claimant RH did not notify Respondents of the amount of SSS benefits he was awarded until November 10, 2015 when he testified about his receipt of benefits during the hearing (Hearing Tr. 85:21 – 86:3 and 87:14 – 88:21).

50. In adjusting the Average Weekly Wage in this case, the increase for COBRA was effective on January 11, 2014. However, the SSS offset was effective starting on January 3, 2014 (Respondents' Exhibits L and N).

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), C.R.S. §8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits at a reasonable cost to employers, without the necessity of litigation. C.R.S. §8-40-102(1). The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. §8-43-201. Respondent bears the burden of establishing any affirmative defenses. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. §8-43-201 (2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

Dependent Death Benefits and Common Law Marriage

The payment of death benefits is governed by the Act. In the event of death, the dependents of the deceased who are entitled to benefits shall receive death benefits equal to sixty-six and two-thirds percent of the deceased employee's average weekly wages, not to exceed a maximum of ninety-one percent of the state average weekly wage per week, subject to offsets permitted by the statute. C.R.S. §8-42-114. The Act provides that "[d]eath benefits shall be paid to a dependent widow or widower for life or until remarriage…." C.R.S. §8-42-120. Under the Act, a widow or widower is presumed to by wholly dependent unless it is shown that he or she was voluntarily separated from the decedent and living apart at the time of the injury or death or was not dependent in whole or in part on the deceased for support. C.R.S. §8-41-501(a). Children of the deceased under the age of 18 years or who are under the age of 21 and were dependent on the deceased for support at the time of the decedent's death and were or are attending an accredited school are considered wholly dependent as well. § 8-41-501(1)(b)-(c).

A common law marriage may be the basis for the payment of death benefits to a widow or widower under the Act. *Sergio Reyes (Deceased) v. LVI Environmental Svcs., Inc.,* W.C. No. 4-425-155 (ICAO April 5, 2001). The determination of whether a common law marriage is proven turns on issues of fact and credibility. *Estate of Wires v. Medina,* 765 P.2d 618 (Colo. App. 1988); *Larry Baggett (Deceased) v. Don Ward, Inc.*, W.C. No. 4-391-071 (ICAO March 12, 2001).

The issue of the existence of a common law marriage arises in all types of cases. It frequently arises in the context of a dissolution proceeding under the UDMA. *See, In re Marriage of Cargill,* 843 P.2d 1335 (Colo. 1993); *In re Marriage of Gercken,* 706 P.2d 809 (Colo. App. 1985). However, the issue is also resolved in a host of other types of cases. *See, e.g., People v. Lucero,* 747 P.2d 660 (Colo. 1987)(spousal testimonial privilege); *Carter v. Firemen's Pension Fund,* 634 P.2d 410 (Colo. 1981)(entitlement to pension); *Employers Mut. Liab. Ins. Co. v. Indus. Comm'n,* 145 Colo. 91, 357 P.2d 929 (1960)(entitlement to workers' compensation benefits); *In re Estate of Sky Dancer,* 13 P.3d 1231 (Colo. App. 2000)(determination of heirship); *Whitenhill v. Kaiser Permanente, supra* (right to bring wrongful death action).

Common law marriage was first recognized by the Colorado Supreme court in *Klipfel's Estate v. Klipfel,* 92 P. 26 (Colo. 1907), noting that marriage in the State of Colorado is a civil contract or agreement between two consenting parties. A marriage by agreement of two parties with the capacity to consent, followed by other attendant circumstances, may be valid and binding. *Id.* at 28. The seminal case of *People v. Lucero,* 747 P.2d 660 (Colo. 1987) established that the consent or agreement of the parties to a common law marriage must be manifested by conduct that gives evidence of the mutual understanding of the parties. The *Lucero* court held that,

> The two factors that most clearly show an intention to be married are cohabitation and a general understanding or reputation among persons in the community in which the couple lives that the parties hold themselves out as husband and wife. Specific behavior that may be considered includes maintenance of joint banking and credit accounts; purchase and joint ownership of property; the use of the man's surname by the woman; the use of the man's surname by children born to the parties; and the filing of joint tax returns. See Mills, Common Law Marriage in Colorado, 16 Colo. Law. 252, 257 (1987). However, there is no single form that any such evidence must take. Rather, any form of evidence that openly manifests the intention of the parties that their relationship is that of husband and wife will provide the requisite proof from which the existence of their mutual understanding can be inferred.

Cohabitation is "holding forth to the world by the manner of daily life, by conduct, demeanor, and habits, that the man and woman have agreed to take each other in marriage and to stand in the mutual relation of husband and wife." *Smith v. People*, 64 Colo. 290, 170 P. 959 (1918). The Court of Appeals in *Taylor v. Taylor*, 10 Colo. App. 303, 50 P. 1049 (1897), stated:

> "Cohabitation," as here used, means something more than sexual intercourse. Bouvier defines "cohabit" to be "to live together in the same house, claiming to be married." Webster defines "cohabitation" as "the act or state of dwelling together, or in the same place with another." "It is not a sojourn, nor a habit of visiting, nor even a remaining with for a time. None of these fall within the true idea of cohabitation as a fact presumptive of marriage. To cohabit is to live or dwell together, to have the same habitation; so that, where one lives and dwells, there does the other live and dwell with him."

The *Taylor* court also held that general reputation or repute means the "understanding among the neighbors and acquaintances with whom the parties associate in their daily life that they are living together as husband and wife." *Taylor at* 1049.

Relevant to the determination in this case Claimant RH and the Decedent were married on August 29, 2002 in front of a retired judge. There was no formal wedding ceremony at that time. After the marriage, Decedent changed her surname from Kinion to Henry which is Claimant RH's surname. The Decedent and Claimant RH later separated and a separation agreement with a parenting plan was filed on October 4, 2010. Claimant RH and the Decedent were divorced effective January 4, 2011. Decedent did not legally change her surname back to Kinion following the divorce. Claimant MH, the only child born to both Decedent and Claimant RH also used the surname Henry. While Claimant RH and the Decedent were divorced, she moved out of their residence but they continued to see each other and worked on mending the problems they had in the marriage. Per the credible testimony of Claimant RH, they reconciled on February 22, 2011 and the Decedent moved back into their shared residence, long before the Decedent's fatal injury and before the Decedent even began working for Employer. The title to the home and the mortgage remained in both their names the entire time in spite of the period of separation and divorce.

After their reconciliation, Decedent and Claimant RH were planning a ceremony in Las Vegas with their family. However, the wedding ceremony never took place. Claimant RH testified credibly and persuasively that Decedent was getting pressure from her parents to have a ceremony because they wanted a traditional kind of marriage and that a formal ceremony was for their benefit.

Claimant RH's mother testified that, although she knew they were thinking about having a wedding in Las Vegas in the future, she believed Decedent and Claimant RH were married in their hearts in the months preceding Decedent's death. The Decedent's mother testified that she believed prior to Decedent's death, Decedent and Claimant RH "weren't married. They were just living together." However, Ms. Branom testified that she is a Jehovah's Witness and that her religion does not recognize common law marriages regardless of whether they are recognized under the Colorado law. Because of her religious beliefs, she would only recognize a marriage if there is a certificate of marriage. The testimony of Ms. Branom actually supports Claimant RH's testimony that while he and Decedent considered themselves to be married after their reconciliation and held themselves out as married, they were still planning a formal ceremony to appease their families who were more traditional in their views of marriage. As found, the Decedent and Claimant RH did not consider themselves merely engaged to be married, in spite of planning an eventual ceremony that ultimately did not take place, but rather they considered and held themselves out as husband and wife.

There is considerable support in the record for the determination that the Claimant RH and the Decedent were married at the time of her death, including, but not limited to:

- Claimant RH and the Decedent filing joint tax returns for the years from 2002 until the Decedent's death

- Jointly held titles to several vehicles, namely a 1999 Chevy pickup, a 2000 Chevy pickup, and a Toyota Yaris

- Claimant RH and Decedent relied upon each other to pay joint bills and Claimant RH would not have been able to cover the family bills on his own without the Decedent's income

- At the time of her fatal accident, the Decedent was wearing and engagement/wedding set on her left hand, with both a gold band and a ring with stones, rather than only the engagement ring

- Decedent completed considerable paperwork for her employer noting the Claimant RH was her husband

Based on the foregoing, Claimant RH established by a preponderance of the evidence that he was the Decedent's common law spouse and her dependent for the purposes of C.R.S. §8-42-114 and C.R.S. §8-41-501(a).

Calculation of Average Weekly Wage

Under Colorado's Workers' Compensation Act, the "average weekly wage" is a key part of the formula used to calculate compensation for injured workers, and it is based upon the definition of "wages" provided at C.R.S. § 8-40-201(19). *Industrial Claim Appeals Office v. Ray,* 145 P.3d 661 (Colo. 2006). To determine a claimant's AWW, the ALJ may choose from two different methods set forth in C.R.S. § 8-42-102. The first method, referred to as the "default provision," provides that an injured employee's AWW "be calculated upon the monthly, weekly, daily, hourly, or other remuneration which the injured or deceased employee was receiving at the time of injury." C.R.S. § 8-42-102(2). The default provision in C.R.S. § 8-42-102(2)(a)-(f), lists six different formulas for conducting this calculation. Per C.R.S. § 8-42-102(5)(a), the phrase "at the time of injury" in subsection (2) requires the AWW to be determined using the wage earned on the date of the employee's accident. The second method for calculating a claimant's AWW, referred to as the "discretionary exception," applies when the default provision will not fairly compute the employee's AWW. C.R.S. § 8-42-102(3). In such a circumstance, the ALJ has discretion to compute the AWW of a claimant in such other manner and by such other method as will, based upon the facts presented, fairly determine the employee's AWW. *Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010).

The overall objective of calculating AWW is to arrive at a fair approximation of claimant's wage loss and diminished earning capacity. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993); *Ebersbach v. United Food & Commercial Workers Local No.*

7, W.C. No. 4-240-475 (ICAO May 7, 1997); *Vigil v. Industrial Claim Appeals Office,* 841 P.2d 335 (Colo.App.1992). Because the default method will not fairly compute the Claimant's AWW in this case, the discretionary method is appropriate to use in order to arrive at a fair approximation of the Claimant's wage loss.

Respondents have admitted to an average weekly wage of $577.85. which is based on Decedent's total earnings from 12/23/2012 to 12/21/2013 of $30,048.20. The Claimant RH and the Claimant MH dispute this calculation and argue that it does not provide a fair approximation of wage loss and diminished earning capacity resulting from the Decedent's death and the loss of income to the Decedent's family. The Decedent's first paycheck from Employer was dated November 15, 2012 and the Decedent's final paycheck from Employer was dated January 23, 2014. Her gross wages were paid approximately every 2 weeks and included the following categories: Product Sales Commission, Daily Base Pay, Daily Service Incentive, Incentive, New Customer Incentive, Ovations AwardperQs, and Vacation Pay. Some of these categories were included with each paycheck and some were only paid intermittently or when earned. All of these categories added up to the gross wage paid to the Decedent. Per the Decedent's wage records, there were regular and natural fluctuations to the gross wages from paycheck to paycheck (see chart in Findings of Fact).

Claimants argue that in the six pay periods or twelve weeks prior to her death, the Decedent was earning increased wages because she was earning more commissions the longer she was on her route as her customer base and sales increased. Claimants argue that this is more representative of the wages that the Decedent was earning at the time of the injury.

The ALJ found that there were fluctuations and finds persuasive the Claimants' argument that the last six regular pay periods, encompassing the last 12 full weeks the Decedent worked for Employer prior to her death would result in a fair approximation of her wages. The ALJ also found that the final paycheck on 01/09/2014 is not a regular paycheck in the ordinary course because it included amounts paid out due to the termination of the Decedent's employment resulting from her death. Therefore, this paycheck is not included for the purposes of calculating the AWW. So, the paychecks from 10/17/2013, 10/31/2013, 11/14/2013, 11/27/2013, 12/12/2013 and 12/26/2013 which are the last 12 regular full weeks of the Decedent's employment are used to calculate base AWW for the Decedent.

$1,212.17
$1,300.06
$1,249.13
$1,315.45
$1,024.38
$1,208.72
Total: $7,309.81
÷ 12 = **$609.16**

Calculation of the Cost of Insurance Benefits

In this case, a portion of the dispute also centers over whether the Claimants have established that the full value of a health insurance benefit provided by the Employer should be added to Claimant's AWW for a further increase to her AWW.

C.R.S. §8-40-201(19)(a), provides:

> "Wages" shall be construed to mean the money rate at which the services rendered are recompensed under the contract of hire in force at the time of the injury, either express or implied.

C.R.S. § 8-40-201(19)(b), provides, as follows:

> The term "wages" includes the amount of the employee's cost of continuing the employer's group health insurance plan and, upon termination of the continuation, the employee's cost of conversion to a similar insurance plan, and gratuities reported to the federal internal revenue service by or for the worker for purposes of filing federal income tax returns and the reasonable value of board, rent, housing and lodging received from the employer, the reasonable value of which shall be fixed and determined from the facts by the division in each particular case, but does not include any similar advantage or fringe benefit not specifically enumerated in this subsection (19). If, after the injury, the employer continues to pay any advantage or fringe benefit specifically enumerated in the subsection (19), including the cost of health insurance coverage or the cost of the conversion of health insurance coverage, that advantage or benefit shall not be included in the determination of the employee's wages so long as the employer continues to make payment.

In interpreting statutes, we must give effect to the intent of the General Assembly, and if the statutory language is clear and unambiguous, we must give the words their ordinary meaning and apply the statute as written. *See Cochran v. West Glenwood Springs Sanitation Dist.,* 223 P.3d 123, 125-26 (Colo. App. 2009). In doing so, we must read and consider the statute as a whole and interpret it in a manner giving consistent, harmonious, and sensible effect to all of its parts. *Lujan v. Life Care Centers,* 222 P.3d 970, 973 (Colo. App. 2009). We should not interpret the statute so as to render any part of it either meaningless or absurd. *Id.* Additionally, nonexistent provisions should not be read into the workers' compensation act. *Kraus v. Artcraft Sign Co.,* 710 P.2d 480, 482 (Colo. 1985).

The Colorado Supreme Court has determined that the plain language of C.R.S. § 8-40-201(19)(b), does not require claimants to actually purchase health insurance in order for the cost of the insurance to be included in the average weekly wage. *Industrial Claim Appeals Office v. Ray*, 145 P.3d 661 (Colo. 2006).

However, Respondents argue that they are not required to increase the average weekly wage for the *full* cost of continuing the terminated group insurance benefits because doing so would include premium amounts for Decedent's benefits. Respondents reason that Decedent is dead, and therefore, no longer in need of insurance. Thus, the cost of continuing insurance benefits for Claimant MH and Claimant RH (if the ALJ found him to be a dependent) would be included in the average weekly wage computation, but not the cost for continuing coverage for Decedent.

Claimant RH argues that C.R.S. § 8-40-201(19)(b) mandates that the full cost of the terminated benefits be included in the average weekly wage calculation. Claimant RH further asserts that, whether an injured worker actually uses the increased benefits to purchase health insurance, or their need to do so, has never been taken into account when addressing whether the average weekly wage is to be increased for the full amount of the terminated benefits. *See Industrial Claims Appeals Office v. Ray,* 145 P.3d 661 (Colo. 2006); and, *Restaurant Technologies, Inc. v. Industrial Claims Appeals Office*, 15CA0231 (Colo. App. February 4, 2016)(not selected for publication). Claimant RH argues that the only circumstance where the cost of insurance benefits is not includes is if an employer continues to pay for the benefits; a situation that is inapplicable here. Claimant points out that C.R.S. §8-40-201(19)(b), itself establishes that an injured worker who replaces employer provided group insurance benefits with Medicaid or some other low income medical program would still get the full average weekly wage increase. Claimant RH further argues that the average weekly wage calculation is focused on a fair approximation of the "wage" loss and the "cost" of continuing the benefit as opposed to whether or not benefits actually continue.

Yet, in this instance, it is not merely that Claimants chose to continue benefits or did not choose to continue the benefits for the Decedent. With respect to the Decedent, her death is a legal impediment to continuation of insurance benefits. The Decedent's death prevents the ability to obtain insurance coverage for the Decedent, whether it be through continuation of the employer's group health insurance plan or through the employee's cost of conversion to a similar insurance plan. The intent of the inclusion of the cost of continuing benefits is to provide the ability to continue to purchase the benefits, whether or not benefits are actually continued. In this case, the death of the Decedent means that no further benefits on her behalf would be available and could not continue under any circumstance. The Decedent's dependents could not legally choose to continue the benefits for her and, therefore, there is no cost for continuing coverage. To include this amount in the average weekly wage computation would result in a windfall for the dependents.

The cost for continuing to provide the insurance benefits for Claimant MH and Claimant RH are to be included in the from the date the benefits were terminated, January 11, 2014. However, as there is no cost for continuing coverage for the Decedent, this is not to be included in the calculation of the average weekly wage

As found, the cost of continuing these benefits for only Claimant RH and Claimant MH (and excluding the Decedent) would be $739.15 per month ($664.42 for health; $59.78 for dental; and $14.95 for vision). The monthly amount corresponds to a weekly amount of $170.57 per week.

Offsets

C.R.S. § 8-42-114 provides, in pertinent part,

> In cases where it is determined that periodic death benefits granted by the federal old age, survivors, and disability insurance act or a workers' compensation act of another state or of the federal government are payable to an individual and the individual's dependents, the aggregate benefits payable for death pursuant to this section shall be reduced, but not below zero, by an amount equal to fifty percent of such periodic benefits. C.R.S. § 8-42-114.

The purpose of the offset is to prevent receipt of the full amount of social security and workers' compensation benefits for the same disability. *Yates v. Sinton Dairy,* 883 P.2d 562 (Colo. App. 1994); See also, *Engelbrecht v. Hartford Accident & Indemnity Co.,* 680 P.2d 231 (Colo.1984).

Claimant MH was awarded $720.00 per month for Social Security Survivor benefits (“SSS benefits”) effective January 3, 2014. A fifty percent offset of those periodic benefits would equate to an offset of $83.08 per week. Claimant RH testified that he is also receiving SSS benefits every month. He testified that he also received SSS benefits in the same amount of $720.00 per month. A fifty percent offset of those periodic benefits would equate to an offset of $83.08 per week.

Respondents established the SSS offset of $83.08 per week against any death benefits paid to Claimant MH and Claimant RH. The benefits are to be reduced by this amount.

Safety Rule Violation

C.R.S. § 8-42-112(1)(a) provides for a 50% reduction in compensation to a claimant where a respondent proves that the claimant's injury was caused by the willful failure obey any reasonable rule adopted by the employer for the safety of the employee. The Respondents carry the burden of establishing all five elements of a safety rule violation, which are:

1. There must be a specific, unambiguous and definite safety rule adopted by the employer.

2. The safety rule must be reasonable.

3. The safety rule must be “brought home” to the employee and diligently enforced.

4. Violation of the safety rule must be willful.

5. The violation of the safety rule must be a cause of the claimant's injury.

Here, the evidence established that the Employer adopted a safety rule requiring employees to be aware of their surroundings and work safely. This is a reasonable rule for the safety of the Employer's employees.

However, the Respondents have failed to establish that the Claimant acted willfully and with deliberate intent. The safety rule penalty is only applicable if the violation is willful. The question of whether the respondents proved willful violation of a safety rule by a preponderance of the evidence is one of fact for the ALJ. *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office*, 907 P.2d 715 (Colo. App. 1995). Violation of a rule is not willful unless the claimant did the forbidden act with deliberate intent. A violation which is the product of mere negligence, carelessness, forgetfulness or inadvertence is not willful. *Bennett Properties Co. v. Industrial Commission*, 437 P.2d 548 (Colo. 1968); *Johnson v. Denver Tramway Corp.,* 171 Colo. 214, 171 P.2d 410 (1946); *In re Alverado,* W.C. No. 4-559-275 (ICAO December 10, 2003). Conduct which might otherwise constitute a safety rule violation is not willful misconduct if the employee's actions were intended to facilitate accomplishment of a task or of the employer's business. *Grose v. Riviera Electric*, W.C. No. 4-418-465 (ICAO August 25, 2000). A violation of a safety rule will not be considered willful if the employee can provide some plausible purpose for the conduct. *City of Las Animas v. Maupin*, 804 P.2d 285 (Colo. App. 1990).

In the present case, both the investigating Colorado State Patrolmen and the Respondents' retained expert did establish that Decedent was not wearing her seatbelt at the time her delivery truck was rear-ended by the tractor trailer. Both witnesses testified to the physics of the movement of Decedent's body within the cab of her truck after it had been struck from behind by a much larger vehicle. However, neither individual could offer any persuasive evidence or analysis (nor could they be expected to) as to why an employee with a spotless safety record was not wearing her seatbelt when behind the wheel of her work vehicle.

Critically, the Respondents have failed to offer any persuasive evidence that the Decedent's failure to wear a safety belt was somehow "willful." The statute permitting the reduction in benefits requires the alleged failure to "use a safety device" or to follow a "reasonable rule" of the employer to have been "willful." Here, the record is devoid of evidence regarding alleged willfulness.

Although it has been established that the seatbelt was in good working order and that the Decedent didn't fail to wear the seatbelt due to malfunction, there was simply no persuasive evidence to establish whether the Decedent intentionally or willfully failed to wear her seatbelt or whether she negligently forgot to wear her seatbelt or whether there was some other reason for her failure to wear her seatbelt. However based on the testimony from Claimant RH that the Decedent was vigilant about seatbelt use, and based on the evidence establishing that the Employer was adamant and vigilant about enforcement of the seat belt rule, and based on evidence that the Decedent was never disciplined for failure to use her seat belt and was generally known as a compliant employee with a good safety record, who was wearing her “Safe By Choice” bracelet at the time of her death, it was found that it was more likely that the Decedent failed to wear her seatbelt because she negligently forgot, or for some other reason than it was that she intentionally and willfully failed to wear her seatbelt.

Where, as here, the Respondents fail to establish that the Decedent’s injury resulted from her willful failure to obey a reasonable rule adopted by the Employer for her safety, the Respondents are not entitled to a 50% reduction in death benefits to the dependents RH and MH. Death benefits awarded in this case shall not be subject to a 50% reduction.

ORDER

It is therefore ordered that:

1. Claimant RH is entitled to benefits pursuant to §§ 8-42-114 & 8-41-501(1), C.R.S. as Decedent’s surviving common law spouse.

2. The average of Decedent’s paychecks for the last six regular pay periods, encompassing the last 12 full weeks the Decedent worked for Employer prior to her death would result in a fair approximation of her wages. The paychecks from 10/17/2013, 10/31/2013, 11/14/2013, 11/27/2013, 12/12/2013 and 12/26/2013 which are the last 12 regular full weeks of the Decedent’s employment are used to calculate base AWW for the Decedent. This results in a base average weekly wage of $609.16.

3. The cost for continuing to provide the insurance benefits for Claimant MH and Claimant RH are to be included in the average weekly wage calculation from the date the benefits were terminated, January 11, 2014. However, as there is no cost for continuing coverage for the Decedent, this is not to be included in the calculation of the average weekly wage. The cost of continuing these benefits for only Claimant RH and Claimant MH (and excluding the Decedent) would be $739.15 per month ($664.42 for health; $59.78 for dental; and $14.95 for vision). The monthly amount corresponds to a weekly amount of $170.57 per week to be added to the base average weekly wage.

4. Respondents established the Social Security Survivors benefit offset of $83.08 per week against any death benefits paid to Claimant MH and Claimant RH. The benefits are to be reduced by this amount.

5. Respondents have failed to establish that Decedent’s injury resulted from her willful failure to obey a reasonable safety rule adopted for the safety of

the employees and therefore Respondents are not entitled to a reduction in benefits pursuant to §8-42-112(1).

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 22, 2016

Kimberly A. Allegretti
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUE

Whether Claimant has established by a preponderance of the evidence that she should be permitted to reopen her March 14, 2014 Workers' Compensation claim prior to March 3, 2016 based on a change in condition pursuant to §8-43-303(1), C.R.S.

FINDINGS OF FACT

1. Claimant worked for Employer as a Concrete Foreman. Her job duties involved setting forms and pouring concrete on large, industrial sites.

2. On March 14, 2014 Claimant was on a jobsite and noticed that a 12 inch I-beam weighing in excess of one ton had tipped over. While stabilizing the beam it fell on her right leg. The I-beam specifically landed on Claimant's lower right leg and twisted her knee.

3. On the day of the incident Claimant underwent right leg surgery with Lance Farnsworth, M.D. She was diagnosed with a Grade 1 open tibial diaphyseal fracture. Dr. Farnsworth inserted a rod in Claimant's right leg that extended from her ankle to her kneecap.

4. After recovering from the right leg surgery Authorized Treating Physician (ATP) Cynthia Lund, M.D. determined that Claimant had reached Maximum Medical Improvement (MMI) on October 10, 2014. Dr. Lung assigned Claimant a 7% right lower extremity impairment rating. Based on a Functional Capacity Evaluation (FCE) Dr. Lund placed Claimant in the medium work category and assigned restrictions including: (1) no lifting or carrying in excess of 50 pounds; (2) no repetitive kneeling, crouching or stair climbing; and (3) no height work in excess of four feet. Dr. Lund also recommended maintenance medical treatment including follow-up care with Dr. Farnsworth over a period of one year or up to three visits if Claimant experienced any problems with the internal fixation or rod of the right tibia. Respondents subsequently filed a Final Admission of Liability (FAL) consistent with Dr. Lund's MMI and impairment determinations.

5. Claimant explained that after reaching MMI her right leg condition worsened. She noted that in January 2015 she was removing concrete forms from a truck bed at work. While stepping backwards one of the forms came out easier than expected and Claimant twisted her right knee. Claimant suffered increased right knee pain and remarked that something with the rod in her leg had "tweaked."

6. After continuing to work for Employer for several months Claimant's right leg condition continued to worsen. She noted that eventually she could no longer stand

and walk to perform her job duties as a Concrete Foreman. By April 2015 Claimant also could not bear weight on her right leg. Claimant thus ceased working for Employer.

7. On May 13, 2015 Claimant visited Dr. Farnsworth for an examination. Dr. Farnsworth recounted that Claimant had been crushed by a large piece of metal on March 14, 2014. She returned for medical treatment because of increased right leg pain and swelling. Dr. Farnsworth noted that approximately four months earlier Claimant had twisted her right knee and has suffered increased pain. Although Dr. Farnsworth did not observe any significant swelling in Claimant's right leg he noted that she had suffered "a torsional injury to the right knee and appears to have an intra-articular injury i.e. meniscus tear with the possibility of involvement of the anterior cruciate ligament." He thus referred Claimant for a right knee MRI.

8. On June 17, 2015 Claimant underwent an MRI of her right knee. At a June 30, 2015 visit with Dr. Farnsworth he evaluated the MRI. He explained "the MRI scan dated 6/17/15 demonstrates postsurgical changes of the tibial tuberosity and distal patellar tendon consistent with placement of the intramedullary rod for tibial shaft fracture. Degenerative changes about the patellofemoral joint are noted. There is significant chondromalacia patellar and slightly laterally set patella." In addressing the cause of Claimant's right knee condition Dr. Farnsworth commented that the "exacerbation of patellofemoral arthrosis with thickening and tendinosis of the patellar tendon was related to her previous surgery" of placing a nail for a tibial shaft fracture.

9. On July 23, 2015 Claimant underwent a right knee outpatient surgery with Dr. Farnsworth. The operative procedures included an arthroscopic chondroplasty, microfracture and lateral retinacular release. Respondents authorized and paid for the surgical procedure.

10. On July 31, 2015 Claimant returned to Dr. Farnsworth for an examination. He noted that Claimant was ambulating without any assistive devices and had no right knee instability. Dr. Farnsworth remarked that Claimant should return on an as-needed basis and had no restrictions on activity. He stated that Claimant had returned to work and was tolerating it well.

11. Because Claimant continued to experience right knee problems she returned to ATP Dr. Lund on September 30, 2015. Dr. Lund noted that the July 23, 2015 surgery was related to Claimant's March 14, 2014 right tibia fracture. She assigned work restrictions including no carrying in excess of 10 pounds and no kneeling, squatting, ladder climbing, repetitive stair climbing, or working on uneven surfaces. Dr. Lund also remarked "at MMI healed." Because Claimant had moved from Colorado Springs to Pueblo, her medical care was transferred to J. Douglas Bradley, M.D. at the Emergicare Clinic in Pueblo.

12. On October 20, 2015 Claimant filed a Petition to Reopen her March 14, 2014 claim. She attached a copy of Dr. Farnsworth's July 23, 2015 surgical report.

13. Claimant first visited Dr. Bradley on December 22, 2015. Dr. Bradley remarked that Claimant was experiencing pain in and around the right knee area with pain going up her lower back. He conducted x-rays of Claimant's right leg and lumbar spine. Dr. Bradley continued Claimant's work restrictions and noted "at MMI since October 10, 2014."

14. On January 19, 2016 Claimant returned to Dr. Bradley for an evaluation. Claimant mentioned stabbing and aching pain throughout her right leg, ankle and foot. Because Dr. Farnsworth's office had closed, Dr. Bradley referred Claimant to Michael Simpson, M.D. for a surgical consultation. Dr. Bradley continued Claimant's work restrictions and noted "at MMI since October 10, 2014."

15. Respondents sent letters to Dr. Bradley on January 19, 2016 and January 29, 2016 in an attempt to clarify his opinions. In an undated typed response to the January 19, 2016 correspondence, Dr. Bradley remarked that he would like Claimant to visit Michael Simpson, M.D. to address possible hardware removal of the right tibia rod and pins. He listed October 10, 2014 as the date of MMI in both the caption and body of the response. In responding to the January 29, 2016 correspondence from Respondents, Dr. Bradley handwrote "[p]atient at MMI until results of consult."

16. On January 27, 2016 Claimant visited Dr. Simpson for an evaluation. Dr. Simpson determined that the hardware in Claimant's tibia was causing significant tendinitis. He explained "I think her nail could safely be removed at this point. I think this would relieve a lot of her patellar tendinitis and a lot of her medial ankle pain… She noticed at least 70% of her pain is in the region of her patellar tendon where her prominent proximal tibial nail resides. An additional 25% of her pain is in the medial distal area with distal interlocking screws." Dr. Simpson summarized that Claimant would be an appropriate candidate for hardware removal.

17. On March 3, 2016 Claimant underwent a third surgery. The surgery involved hardware removal from her right leg. Claimant returned to work for Employer approximately one month after the procedure and has reported steady improvement.

18. On April 22, 2016 the parties conducted the pre-hearing evidentiary deposition of Dr. Bradley. Although Dr. Bradley acknowledged that he lacked complete medical records, he determined that Claimant was no longer at MMI on May 13, 2015 when she visited Dr. Farnsworth or July 1, 2015 when Dr. Farnsworth recommended surgery or July 23, 2015 when she underwent a second right knee surgery.

19. On May 8, 2016 Henry J. Roth, M.D. performed a records review of Claimant's claim. Dr. Roth concluded that Claimant did not suffer a worsening of condition until her hardware removal surgery on March 3, 2016. He thus rescinded Claimant's MMI status effective March 3, 2016. Dr. Roth determined that the July 23, 2015 surgical procedure performed by Dr. Farnsworth addressed an aggravation of pre-existing, non-work-related, degenerative changes in Claimant's right knee. He remarked that the July 23, 2015 surgery did not constitute a worsening of Claimant's March 14, 2014 industrial injury.

20. On May 17, 2016 Respondents filed a General Admission of Liability (GAL). Respondents voluntarily reopened Claimant's claim as of the March 3, 2016 surgery with Dr. Simpson.

21. On June 6, 2016 Dr. Bradley determined that Claimant had returned to MMI.

22. Dr. Roth testified at the hearing in this matter. He reiterated that the March 3, 2016 hardware removal surgery warranted a rescission of Claimant's MMI status. Dr. Roth also noted that the July 23, 2015 surgical procedure addressed degenerative changes in Claimant's right knee and thus did not constitute a worsening of her work-related condition. In fact, there were no objective changes in Claimant's right knee pathology during the spring or summer of 2015 that reflected a worsening of symptoms.

23. Claimant has failed to establish that it is more probably true than not that her condition has worsened and she is entitled to benefits. ATP Dr. Lund concluded that Claimant reached MMI for her March 14, 2014 right leg injury on October 10, 2014. She assigned work restrictions and recommended medical maintenance treatment including follow-up care with Dr. Farnsworth over a period of one year or up to three visits if Claimant experienced any problems with the internal fixation or rod of the right tibia. Claimant explained that after reaching MMI her right leg condition worsened. She noted that in January 2015 she was removing concrete forms from a truck bed at work and twisted her right knee. On May 13, 2015 Claimant visited Dr. Farnsworth and reported increased right knee pain as a result of the January 2015 twisting incident. After a right knee MRI reflected post-surgical changes, Dr. Farnsworth performed a second right knee surgery on July 23, 2015.

24. The July 23, 2015 right knee procedure constituted medical maintenance treatment for Claimant's March 14, 2014 industrial injury. Initially, at the time of MMI Dr. Lund had anticipated that Claimant might require medical maintenance treatment if she experienced any problems with the internal fixation or rod of the right tibia. Moreover, Dr. Farnsworth never suggested that the July 23, 2015 surgery warranted a rescission of Claimant's MMI status. In fact, on July 31, 2015 Claimant returned to Dr. Farnsworth for an examination. He noted that Claimant was ambulating without any assistive devices and had no right knee instability. Dr. Farnsworth remarked that Claimant should return on an as-needed basis and had no restrictions on activity. He stated that Claimant had returned to work and was tolerating it well. Furthermore, on September 30, 2015 Dr. Lund assigned Claimant work restrictions but did not rescind MMI status. She simply noted "at MMI healed." Finally, Dr. Roth testified that there were no objective changes in Claimant's right knee pathology during the spring or summer of 2015 that reflected a worsening of condition.

25. Claimant's care was transferred to Dr. Bradley in late 2015. At his deposition Dr. Bradley acknowledged that he lacked complete medical records but determined that Claimant was no longer at MMI on May 13, 2015 when she visited Dr. Farnsworth or July 1, 2015 when Dr. Farnsworth recommended surgery or July 23,

2015 when she underwent a second right knee surgery. However, at his initial evaluation in December 2015 and a subsequent examination in January 2016, Dr. Bradley continued Claimant's work restrictions and noted that she had remained at MMI since October 10, 2014. Furthermore, in response to letters from Respondents in January 2016 Dr. Bradley maintained that Claimant had remained at MMI since October 10, 2014 pending the results of a consultation. Finally, Dr. Bradley's deposition opinion is not persuasive because he lacked complete medical records but nevertheless provided a variety of possible dates for the rescission of Claimant's MMI status. The numerous dates contradict his medical records and the September 30, 2015 opinion of ATP Dr. Lund. The bulk of the medical records reveal that Claimant did not suffer a worsening of condition after he reached MMI on October 10, 2014. She has thus failed to demonstrate that she has suffered a change in the condition of the original compensable injury or a change in her physical or mental condition that is causally connected to her March 14, 2014 injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Section 8-43-303(1), C.R.S. provides that a worker's compensation award may be reopened based on a change in condition. In seeking to reopen a claim the claimant shoulders the burden of proving her condition has changed and she is entitled to benefits by a preponderance of the evidence. *Osborne v. Industrial Commission*, 725 P.2d 63, 65 (Colo. App. 1986). A change in condition refers either to a change in the

condition of the original compensable injury or to a change in a claimant's physical or mental condition that is causally connected to the original injury. *Jarosinski v. Industrial Claim Appeals Office,* 62 P.3d 1082, 1084 (Colo. App. 2002). A "change in condition" pertains to changes that occur after a claim is closed. *In re Caraveo,* W.C. No. 4-358-465 (ICAP, Oct. 25, 2006). The determination of whether a claimant has sustained her burden of proof to reopen a claim is one of fact for the ALJ. *In re Nguyen,* W.C. No. 4-543-945 (ICAP, July 19, 2004).

5. As found, Claimant has failed to establish by a preponderance of the evidence that her condition has worsened and she is entitled to benefits. ATP Dr. Lund concluded that Claimant reached MMI for her March 14, 2014 right leg injury on October 10, 2014. She assigned work restrictions and recommended medical maintenance treatment including follow-up care with Dr. Farnsworth over a period of one year or up to three visits if Claimant experienced any problems with the internal fixation or rod of the right tibia. Claimant explained that after reaching MMI her right leg condition worsened. She noted that in January 2015 she was removing concrete forms from a truck bed at work and twisted her right knee. On May 13, 2015 Claimant visited Dr. Farnsworth and reported increased right knee pain as a result of the January 2015 twisting incident. After a right knee MRI reflected post-surgical changes, Dr. Farnsworth performed a second right knee surgery on July 23, 2015.

6. As found, the July 23, 2015 right knee procedure constituted medical maintenance treatment for Claimant's March 14, 2014 industrial injury. Initially, at the time of MMI Dr. Lund had anticipated that Claimant might require medical maintenance treatment if she experienced any problems with the internal fixation or rod of the right tibia. Moreover, Dr. Farnsworth never suggested that the July 23, 2015 surgery warranted a rescission of Claimant's MMI status. In fact, on July 31, 2015 Claimant returned to Dr. Farnsworth for an examination. He noted that Claimant was ambulating without any assistive devices and had no right knee instability. Dr. Farnsworth remarked that Claimant should return on an as-needed basis and had no restrictions on activity. He stated that Claimant had returned to work and was tolerating it well. Furthermore, on September 30, 2015 Dr. Lund assigned Claimant work restrictions but did not rescind MMI status. She simply noted "at MMI healed." Finally, Dr. Roth testified that there were no objective changes in Claimant's right knee pathology during the spring or summer of 2015 that reflected a worsening of condition.

7. As found, Claimant's care was transferred to Dr. Bradley in late 2015. At his deposition Dr. Bradley acknowledged that he lacked complete medical records but determined that Claimant was no longer at MMI on May 13, 2015 when she visited Dr. Farnsworth or July 1, 2015 when Dr. Farnsworth recommended surgery or July 23, 2015 when she underwent a second right knee surgery. However, at his initial evaluation in December 2015 and a subsequent examination in January 2016, Dr. Bradley continued Claimant's work restrictions and noted that she had remained at MMI since October 10, 2014. Furthermore, in response to letters from Respondents in January 2016 Dr. Bradley maintained that Claimant had remained at MMI since October 10, 2014 pending the results of a consultation. Finally, Dr. Bradley's deposition opinion is not persuasive because he lacked complete medical records but nevertheless

provided a variety of possible dates for the rescission of Claimant's MMI status. The numerous dates contradict his medical records and the September 30, 2015 opinion of ATP Dr. Lund. The bulk of the medical records reveal that Claimant did not suffer a worsening of condition after he reached MMI on October 10, 2014. She has thus failed to demonstrate that she has suffered a change in the condition of the original compensable injury or a change in her physical or mental condition that is causally connected to her March 14, 2014 injury.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's request to reopen her March 14, 2014 Workers' Compensation claim is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: July 20, 2016.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-940-803-02

ISSUES

- What is Claimant's Average Weekly Wage (AWW)?

- Whether Claimant has established by a preponderance of the evidence that he is entitled to temporary total disability (TTD) or temporary partial disability (TPD) benefits?

- Whether Claimant is entitled under section 8-43-301(14), C.R.S. to an award of attorney fees for work performed responding to Respondent's petition to review a non-final order?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. On January 2, 2014, Claimant sustained severe work related injuries. At the time of the accident, Claimant was a career agent with Employer.

2. After a previous hearing, ALJ Broniak found that Claimant was an employee and that the injuries he sustained are compensable.

3. Employer petitioned for review of Judge Broniak's order. The ICAO determined the order was not final and therefore was not subject to review. It dismissed the petition without prejudice.

4. Claimant has not worked since January 2, 2014, as the result of the work related injuries he sustained.

5. At the time of the accident, Claimant was a career agent and district manager. At the time of the accident, his compensation included a variable monthly bonus based on the performance of the agents he supervised. During the twelve month period immediately preceding his accident, these included:

March, 2013	$165.00
June, 2013	$1,000.00
July, 2013	$1,250.00
September, 2013	$1,000.00
October, 2013	$2,500.00
November, 2013	$3,000.00
December, 2013	$2,500.00

Claimant's average weekly management bonus is calculated by averaging these monthly amounts, multiplying that amount by 12 months, and then dividing by 52 weeks.

(($11,415 /12) x 12) /52 = $219.52

6. Claimant's compensation also included commissions both on the products he sold and their renewals, and also a smaller commission on products and renewals sold by the agents he supervised. During the twelve month period immediately preceding his accident, these gross commissions totaled $56,373.22.

7. In certain circumstances, the full amount of the commission paid would not be earned, resulting in a "charge back." For example, if an individual purchased a life insurance policy, Claimant would be paid the annual commission for that product. However, if the policy were terminated for non-payment after six months, Employer would charge back half of the commission -- the portion of the commission paid but not earned.

8. During the twelve month period immediately preceding his accident, Employer charged back a total of $18,592.70.

9. Claimant credibly testified that it was his regular practice and procedure to review his charge backs each January to ensure the charge backs taken the previous year were correct, and if not, to challenge them. Claimant testified that because of his injuries, he was unable to perform that review and challenge, resulting in Employer taking improper charge backs.

10. Employer's national sales director, Dani Karrow, testified that agents and managers can audit improper charge backs as they are assessed. Ms. Karrow testified that charge backs can be incorrect due to administrative mistakes at individual insurance companies. Ms. Karrow testified that Employer performs its own charge back audits because it is in Employer's interest to make sure that it was not losing business and revenue due to third party administrative errors.

11. Claimant was unsure of the amount improperly charged back in 2013, but he testified that proportionally lower amounts had been charged back during prior years. In 2012, Claimant was charged back $27,872.79 on a gross commission of $84,375.18, thus the 2012 charge back was 33.03% of his gross commission. In 2013, Claimant was charged back $18,592.70 on a gross commission of $56,373.22, thus the 2013 charge back was 32.92% of his gross commission. The ALJ finds that Claimant has not established by a preponderance of the evidence that the amount of charge backs Employer took in 2013 was inaccurate or the result of his injury.

12. During the twelve month period immediately preceding his accident, Claimant's net commissions totaled $37,780.52. Claimant's average weekly commission is calculated by dividing this amount by 52 weeks, to arrive at $726.55.

13. Claimant’s AWW is the combined amount of his weekly management bonus of $219.52 and his average weekly net commission of $726.55, for an AWW of $946.07.

14. While some evidence was produced that might tend to support a finding that Claimant received some compensation after the date of his accident, the issue of offset was not endorsed for hearing and is not properly before the court at this time.

15. Employer concedes that it was uninsured at the time of Claimant’s accident.

16. Claimant failed to establish by a preponderance of the evidence that Respondent filed the petition to review for an improper purpose, such as to harass, cause delay, or unnecessarily increase the cost of litigation.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance* Co. V. *Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

Average Weekly Wage

“Wages” are defined as the money rate at which services are paid under the contract for hire at the time of the injury for accidental injuries C.R.S. § 8–40–201 (19)(a). The objective of wage calculation is to reach a fair approximation of the claimant’s actual wage loss and diminished earning capacity. *Campbell v. IBM Corp*. 867 P.2d 77 (Colo. App. 1993). The average weekly wage is generally determined by the wage the injured worker received at the time of the injury. § 8-42-102(2), C.R.S. 2000.

Respondents have suggested a calculation for determining average weekly wage which does not account for Claimant’s compensation as a district sales manager. Claimant has suggested calculating average weekly wage using only Claimant’s last thirteen weeks of compensation. Neither party’s proposal is supported by controlling law.

C.R.S. § 8-42-102(2) describes the various methods of computing a claimant's average weekly wage. While C.R.S. § 8-42-102(3), allows an ALJ to use an alternative method of calculating average weekly wage, the ALJ finds good cause to do so has not been shown. As found, a portion of Claimant's compensation was a variable monthly amount for the work he performed as a district sales manager. Calculating that amount as set forth in § 8-42-102(2)(a) yields an AWW for that portion of Claimant's compensation of $219.52. Another portion of Claimant's compensation was based on commissions. Calculating that amount as set forth in § 8-42-102(2)(e) yields an AWW for the commission portion of Claimant's compensation of $726.55. Combining these two figures yields an AWW of $946.07.

C.R.S. § 8-43-408(1) requires that when an employer does not have insurance coverage as required by the Colorado Workers' Compensation Act, any compensation benefits are to be increased by 50%. C.R.S. section 8-43-408(1) provides "in any case where the employer is subject to the provisions of articles 40 to 47 of this title and at the time of the injury has not complied with the insurance provisions of said articles, … the employee, if injured, … may claim the compensation and benefits provided … and in any such case the amounts of compensation or benefits provided in said articles shall be increased fifty percent."

Claimant's temporary total disability rate is calculated by multiplying his AWW of $946.07 by 2/3. Here, Claimant's temporary total disability rate is $ 630.65. That rate is then increased by the 50% penalty assessed pursuant to section 8-43-408(1), resulting in a TTD rate of $ 945.98.

Temporary Total Disability

To prove entitlement to TTD benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that claimant left work as a result of the disability, and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a), C.R.S., requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg*, *supra*. The term "disability" connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office*, *supra*.

The uncontroverted evidence establishes that Claimant's injury is work related, and that Claimant has not been able to return to work as a direct result of his injuries.

Attorney Fees

Claimant requested attorney's fees on the basis that Respondent's Petition to Review Judge Broniak's Order was improper pursuant to C.R.S. § 8-43-301(14) (2015). The section states, in pertinent part,

> The signature of an attorney on a petition to review or brief in support thereof constitutes a certificate by the attorney that such attorney has read the petition or brief; that, to the best of the attorney's knowledge, information or belief formed after reasonable inquiry, it is well grounded in fact and is warranted by existing law or a good faith argument for the extension, modification of reversal of existing law, and that it is not interposed for any improper purpose, such as to harass, cause delay, or unnecessarily increase the cost of litigation. If a petition to review or brief is signed in violation of subsection (14), the director, the administrative law judge, or the panel shall award reasonable attorney's fees and costs to the party incurring the fees and costs as a result of the improper actions.

C.R.S. § 8-43-301(14) (2015).

As found, Claimant failed to establish by a preponderance of the evidence that Respondent filed the petition to review for an improper purpose, such as to harass, cause delay, or unnecessarily increase the cost of litigation. As this is an essential of a claim for attorney's fees, its absence defeats Claimant's claim.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Employer shall pay Claimant TTD benefits at the weekly rate of $ 945.98 from the date of injury and ongoing until terminated by the operation of law.

2. Employer shall pay Claimant interest at the rate of 8% per annum on compensation benefits not paid when due.

3. Claimant's claim for attorney's fees is denied and dismissed.

4. Issues not expressly decided herein are reserved to the parties for future determination.

5. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 26, 2016

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable lower back injury during the course and scope of his employment with Employer on June 15, 2015.

2. Whether Claimant has established by a preponderance of the evidence that the right of medical selection passed to him because Respondents failed to provide a written list of at least four designated medical providers within seven days after receiving notice of his injury.

3. Whether Claimant has proven by a preponderance of the evidence that he received authorized, reasonable and necessary medical treatment for his June 15, 2015 industrial injury.

4. Whether Claimant has established by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period October 5, 2015 through December 28, 2015.

STIPULATION

The parties agreed that Claimant earned an Average Weekly Wage (AWW) of $1,200.00.

FINDINGS OF FACT

1. Claimant worked for Employer as a Maintenance Manager. His typical job duties involved repairing large vehicles and supervising other mechanics.

2. Claimant testified that on June 15, 2015 he was installing brakes on a bus. The brake drums weighed approximately 200 pounds each. While lifting a brake drum when kneeling Claimant experienced a "pop" or "crunch" in his lower back area.

3. Claimant remarked that on June 16, 2015 he reported his injury to General Manager of Employer Craig Pruett. However, Mr. Pruett responded that Employer could not afford to have Claimant out on "Workers' Comp." Two employees had recently quit, one was terminated and one was out of work with a Workers' Compensation injury. Claimant noted that Employer also did not provide him with a written list of at least four designated medical providers or any other treatment options.

4. Claimant initially sought medical treatment on September 2, 2015. He visited Woodland Park Family Medicine, LLC for an evaluation of his lower back symptoms. Claimant reported that approximately 2.5 months earlier he "was picking up

a very large item and felt a pop in his back." He subsequently experienced pain and pressure in his lower back area. Stacy Concelman, NP diagnosed Claimant with a strain of the lumbar spine. She recommended an MRI and an x-ray to rule out a compression fracture. NP Concelman noted that Claimant's symptoms were 'suspicious" for an annular tear.

5. On October 2, 2015 Claimant visited Jennifer Sullivan, NP at Woodland Park Family Medicine, LLC for a review of his lumbar MRI. NP Sullivan diagnosed Claimant with a protruded lumbar disc. She recommended pain medication and referred Claimant for physical therapy.

6. On October 5, 2015 Claimant ceased working for Employer. Claimant characterized his termination from employment as a forced resignation.

7. On October 5, 2015 Employer filed a First Report of Injury. The document specified that Claimant injured his back while at work on June 15, 2015 and "notified us [on October 5, 2015] the day his employment ended." The First Report of Injury provided that Claimant was engaged in "mechanics work" just prior to the accident.

8. On January 22, 2016 Claimant visited Chris Malinky, M.D. for diagnostic and medial branch blocks at levels L4, L5 and S1. Claimant returned to Dr. Malinky on February 26, 2016 for a rhizotomy. He reported that he had experienced greater than 70% reduction of pain from the previous medial branch blocks. Dr. Malinky noted that the MRI suggested facet related pain and that conservative therapy has failed.

9. Employer's Vice President of New Business Development Craig Pruett testified at the hearing in this matter. Mr. Pruett commented that Claimant did not report his injury on June 15-16, 2015. In fact, replacing brakes was not part of Claimant's job duties. Instead, he oversaw the work of other employees in Employer's shop. Mr. Pruett also denied telling Claimant not to file a Workers' Compensation claim. Finally, Mr. Pruett recalled that at some point Claimant stated he suffered from degenerative joint disease and injured his back while working out.

10. Mr. Pruett recounted that Claimant did not mention a Workers' Compensation claim until approximately 1.5 hours after he resigned on October 5, 2015. Mr. Pruett had asked Claimant to resign because he was verbally abusing other employees. After Mr. Pruett was apprised of the Workers' Compensation claim he directed Claimant to Employer's Human Resources Department.

11. Employer's Safety and Training Manager Andrew Cottrell also testified at the hearing in this matter. He acknowledged filing Employer's First Report of Injury on October 5, 2015. Mr. Cottrell explained that he was first informed of Claimant's injury on October 5, 2015 or just minutes after Claimant's resignation from employment. He remarked that he sent a designated provider list to Claimant through certified mail on October 8, 2015. In fact, the record reveals that in an October 8, 2015 Designated Provider List Notification Letter Mr. Cotrell provided Claimant with a written list of four designated medical providers. Mr. Cottrell stated that he received notice that the letter

had been received by Claimant on October 13, 2015. He knew that Claimant had received the letter because the signature he had on file for Claimant matched the signature on the certified mail receipt.

12. On February 25, 2016 Claimant underwent an independent medical examination with Timothy Hall, M.D. Claimant reported that on June 15, 2015, while he was lifting a brake drum weighing approximately 200 pounds, he experienced a “pop” in his lower back. After conducting a physical examination Dr. Hall diagnosed Claimant with a lumbar strain/mechanical lower back pain and myofascial pain in the lumbosacral area. Dr. Hall determined that Claimant’s work activities on June 15, 2015 could certainly have caused a lower back injury. Dr. Hall did not note any inconsistencies in Claimant’s presentation and believed that he continued to work because he believed his condition would improve over time. He thus concluded that Claimant’s condition and need for medical treatment was causally related to the June 15, 2015 work incident.

13. On March 16, 2016 Claimant underwent an independent medical examination with John J. Raschbacher, M.D. Claimant reported that on June 15, 2015 he was kneeling and crouching to pick up a brake on a vehicle. As he lifted the brake he heard a “pop” but did not experience any pain until the following day. The pain was limited to his lower back and did not extend into his lower extremities. Dr. Raschbacher noted that Claimant’s mechanism of injury is not typically associated with facet arthropathy. He remarked that during an October 2, 2015 evaluation Claimant did not experience pain with a lumbar spine back extension but declined any backward extension at the independent medical evaluation. Dr. Raschbacher characterized Claimant at the independent medical examination as exhibiting decreased range of motion and greater functional limitations. He was thus unable to explain Claimant’s presentation on a physical or physiological basis. Dr. Raschbacher also noted that Claimant’s lumbar MRI reflected degenerative lower lumbar facet arthropathy but was otherwise unremarkable. He thus did not recommend any physical restrictions or additional medical treatment for the June 15, 2015 incident.

14. On June 3, 2016 the parties conducted the pre-hearing evidentiary deposition of Dr. Hall. After his independent medical examination he reviewed additional medical records that included Dr. Raschbacher’s independent medical examination report. Dr. Hall explained that Claimant’s June 15, 2015 lifting incident could have caused a musculoskeletal or discogenic injury. He maintained that Claimant’s symptoms were most likely related to the June 15, 2015 lifting and twisting maneuver. Dr. Hall noted that Claimant’s lower back condition had been progressing over time and was unrelated to a severe mid-back injury caused by a motor vehicle accident on January 27, 2016.

15. Dr. Raschbacher testified at the hearing in this matter. He maintained that Claimant did not suffer an industrial lower back injury on June 15, 2015 during the course and scope of his employment with Employer. Dr. Raschbacher explained that Claimant’s description of his mechanism of injury would not likely produce the described pathology or symptoms. He remarked that Claimant’s MRI did not reflect any acute findings and a left paracentral disc protrusion is a common finding on any MRI of an

individual’s lower back. Dr. Raschbacher also disagreed with Dr. Hall’s independent medical examination report because the analysis was grossly incomplete, did not meet the format designated by the Division of Worker’s Compensation and did not reflect any prior medical history regarding Claimant’s lower back.

16. Claimant has failed to demonstrate that it is more probably true than not that he suffered a compensable lower back injury during the course and scope of his employment with Employer on June 15, 2015. Claimant explained that he injured his lower back while installing an approximately 200 pound brake drum on a bus on June 15, 2015. He stated that he reported his injury to Mr. Pruett on the day of the incident but Mr. Pruett responded that Employer could not have another employee out on Workers’ Compensation. However, Claimant continued to perform his job duties and did not seek medical treatment for his lower back symptoms for approximately 2.5 months. Mr. Pruett specifically testified that Claimant did not report a Workers’ Compensation claim until after his resignation from employment on October 5, 2015. He also recalled that at some point Claimant had stated he suffered from degenerative joint disease and injured his back while working out. Furthermore, Mr. Cottrell explained that he was first informed of Claimant’s injury on October 5, 2015 or just minutes after Claimant’s resignation from employment. He sent a designated provider list to Claimant through certified mail on October 8, 2015. In fact, the record reveals that in an October 8, 2015 Designated Provider List Notification Letter Mr. Cotrell provided Claimant with a written list of four designated medical providers.

17. The medical records also reveal that Claimant did not suffer an industrial lower back injury on June 15, 2015 while working for Employer. Dr. Raschbacher maintained that Claimant did not suffer an industrial lower back injury on June 15, 2015 during the course and scope of his employment with Employer. He explained that the mechanism of injury would not likely produce Claimant’s pathology or symptoms. He remarked that Claimant’s MRI did not reflect any acute findings and a left paracentral disc protrusion is a common finding on any MRI of an individual’s lower back. Dr. Raschbacher specifically commented that during an October 2, 2015 evaluation Claimant did not experience pain with a lumbar spine back extension but declined any backward extension at the independent medical evaluation. He characterized Claimant at the independent medical examination as exhibiting decreased range of motion and greater functional limitations. He was thus unable to explain Claimant’s physical or physiological presentation. Finally, Claimant’s lumbar MRI reflected degenerative lower lumbar facet arthropathy but was otherwise unremarkable. In contrast, Dr. Hall explained that Claimant’s lower back symptoms were most likely related to the June 15, 2015 lifting and twisting incident at work. He noted that Claimant’s lower back condition had been progressing over time and was unrelated to a severe mid-back injury caused by a motor vehicle accident on January 27, 2016. However, Dr. Raschbacher persuasively explained that Dr. Hall’s independent medical examination report was inadequate because the analysis was grossly incomplete, did not meet the format designated by the Division of Worker’s Compensation and did not reflect any prior medical history regarding Claimant’s lower back. Based on the persuasive testimony of Mr. Pruett, Mr. Cottrell and Dr. Raschbacher, as well as the medical records, Claimant’s claim for Workers’ Compensation benefits is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he suffered a compensable lower back injury during the course and scope of his employment with Employer on June 15, 2015. Claimant explained that he injured his lower back while installing an approximately 200 pound brake drum on a bus on June 15, 2015. He stated that he reported his injury to Mr. Pruett on the day of the incident but Mr. Pruett responded that Employer could not have another employee out on Workers' Compensation. However, Claimant continued to perform his job duties and did not seek medical treatment for his lower back symptoms for approximately 2.5 months. Mr. Pruett specifically testified that Claimant did not report a Workers' Compensation claim until after his resignation from employment on October 5, 2015. He also recalled that at some point Claimant had stated he suffered from degenerative joint disease and injured his back while working out. Furthermore, Mr. Cottrell explained that he was first informed of Claimant's injury on October 5, 2015 or just minutes after Claimant's resignation from employment. He sent a designated provider list to Claimant through certified mail on October 8, 2015. In fact, the record reveals that in an October 8, 2015 Designated Provider List Notification Letter Mr. Cotrell provided Claimant with a written list of four designated medical providers.

8. As found, the medical records also reveal that Claimant did not suffer an industrial lower back injury on June 15, 2015 while working for Employer. Dr. Raschbacher maintained that Claimant did not suffer an industrial lower back injury on June 15, 2015 during the course and scope of his employment with Employer. He explained that the mechanism of injury would not likely produce Claimant's pathology or symptoms. He remarked that Claimant's MRI did not reflect any acute findings and a left paracentral disc protrusion is a common finding on any MRI of an individual's lower back. Dr. Raschbacher specifically commented that during an October 2, 2015 evaluation Claimant did not experience pain with a lumbar spine back extension but declined any backward extension at the independent medical evaluation. He characterized Claimant at the independent medical examination as exhibiting decreased range of motion and greater functional limitations. He was thus unable to explain Claimant's physical or physiological presentation. Finally, Claimant's lumbar MRI reflected degenerative lower lumbar facet arthropathy but was otherwise unremarkable. In contrast, Dr. Hall explained that Claimant's lower back symptoms were most likely related to the June 15, 2015 lifting and twisting incident at work. He noted that

Claimant’s lower back condition had been progressing over time and was unrelated to a severe mid-back injury caused by a motor vehicle accident on January 27, 2016. However, Dr. Raschbacher persuasively explained that Dr. Hall’s independent medical examination report was inadequate because the analysis was grossly incomplete, did not meet the format designated by the Division of Worker’s Compensation and did not reflect any prior medical history regarding Claimant’s lower back. Based on the persuasive testimony of Mr. Pruett, Mr. Cottrell and Dr. Raschbacher, as well as the medical records, Claimant’s claim for Workers’ Compensation benefits is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant’s request for Workers’ Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge’s order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge’s order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: July 25, 2016.

ISSUES

The issues to be determined by the ALJ are:

1. Whether the claimant has proven by a preponderance of the evidence that her medical condition causally related to her February 9, 2011, injury covered by this claim has worsened since she was placed at maximum medical improvement (MMI) on July 22, 2013, by authorized provider (ATP) Timothy Sandell, M.D. and Division IME (DIME) provider William Watson, M.D. so that she is no longer at MMI, and her claim shall be reopened for additional medical benefits due to a change in condition pursuant to C.R.S. § 8-43-303 (1).

2. Whether the claimant has satisfied her burden of proof by showing by a preponderance of the evidence that she needs additional curative medical benefits that are causally related to her injury covered by this claim;

3. Whether the claimant has proven by a preponderance of the evidence that, if her condition causally related to this claim has worsened and she no longer is at MMI, she is entitled to temporary total disability (TTD) benefits beginning April 30, 2015, and continuing.

PROCEDURAL MATTERS

The parties reached the following stipulations:

1. Scott Stanley, M.D. is an authorized provider effective April 30, 2015. The claimant therefore withdrew the issue of a change of provider endorsed for hearing.

2. Respondents reserved the Workers’ Compensation medical fee schedule for any medical benefit awarded or ordered.

These stipulations were approved and accepted by the ALJ.

FINDINGS OF FACT

1. The claimant sustained an admitted industrial injury on February 9, 2011. The claimant's injury affected her lumbar spine and she also suffered radicular symptoms. As a result of her injury, the claimant underwent a lumbar fusion at the hands of Dr. David A. Wong, M.D.

2. Subsequent to surgery, the claimant continued her treatment with her primary physician, Dr. Timothy Sandell. On February 25, 2013, the claimant reported to Dr. Sandell that she was getting worse. On that date, an EMG was completed, noting the only abnormality was some nerve root irritation, which the doctor found not to be uncommon.

3. Dr. Sandell placed the claimant at Maximum Medical Improvement on July 22, 2013. In so doing, Dr. Sandell noted the July 18, 2013 re-evaluation of Dr. Wong who found that there is no significant surgical lesion and agreed with ongoing rehab and pain management. By report of November 13, 2013, Dr. Sandell addressed permanent impairment and permanent work restrictions. On December 4, 2013, Dr. Sandell noted that despite ongoing symptoms, there are no new treatment options available for the claimant. He continued to monitor her medications. On December 23, 2013, Dr. Sandell notes that the claimant comes in with concerns of worsening symptoms. He noted that while she had previously reported some tingling and numbness in the feet, this has become worse and is described as a burning sensation in the feet. He noted that she felt she was having difficulty walking and has used a cane. He noted that she had gone to the emergency room based on his instructions on December 19, 2013, where a lumbar MRI was performed that showed no acute changes. Dr. Sandell noted that an IME had been scheduled which he felt would be appropriate. In his report of March 18, 2014, Dr. Sandell noted that the claimant complained of six falls since she was last seen and has suffered episodes of not being able to walk.

4. On April 8, 2014, the claimant underwent a Division Independent Medical Examination (DIME) by Dr. William Watson. Dr. Watson stated in the discussions portion that he felt that it was appropriate, as the claimant still had so much pain and disability, to provide a provocative discography at the L4-5, L5-S1 and L3-4 level above. Depending on the results, he opined she may be a candidate for interbody fusion at either L4-5 or L5-S1 or both levels. He further stated that the claimant should return to Dr. Wong after the evaluation. He felt the discography should be done under maintenance care and he also stated that she would not be at Maximum Medical Improvement if it was found that she needed further surgery.

5. Dr. Sandell agreed with Dr. Watson's recommendation for lumbar discogram and possible surgical evaluation. Dr. Sandell referred the claimant to Dr. Mark Meyer for a lumbar discogram on June 2, 2014.

6. On July 31, 2014, Dr. Sandell indicated that he had no idea why the discogram was not approved as he had made the referral. The claimant was noted to have an evaluation with Dr. Wong.

7. The claimant was evaluated by Dr. Wong on August 5, 2014. Dr. Wong opined that other evaluations would be of higher priority than a discography. He recommended an evaluation with a neurologist and a psychological evaluation. The claimant was referred for a neurological evaluation and a psychological evaluation subsequent to her visit with Dr. Wong. On September 24, 2014, Dr. Sandell wrote a letter to Giovonna Maestas, a paralegal with Ritsema & Lyons, outlining that there was really no significant treatment recommendations by the psychologist, Dr. Weingarten. On September 29, 2014, Dr. Sandell made a recommendation for an evaluation by a neurologist. As of November 24, 2014, Dr. Sandell noted the claimant's continued complaints but felt that there was nothing new to offer her in regard to treatment.

8. On or about January 14, 2015, the claimant underwent an evaluation by Dr. Scott Stanley. At that time, Dr. Stanley recommended a CT myelogram as well as an EMG.

9. On a follow up evaluation, Dr. Timothy Sandell made a referral for a CT myelogram and an EMG. On April 30, 2015, Dr. Sandell noted that the claimant had the CT myelogram and the EMG with Dr. Pamela Knight. At that time, noting the new studies, Dr. Sandell referred the claimant to Dr. Stanley for surgical evaluation and likely treatment at his discretion. He further stated that, "Because she is pursuing further treatment and likely another surgery, she is now off Maximum Medical Improvement status until she stabilizes once again," which he anticipated to be post-operatively. On April 30, 2015, Dr. Sandell wrote a letter to Susan Canny, a Strategic Nurse Consultant of Pinnacol Assurance, indicating that we are anticipating another surgery. He further made a referral to Dr. Stanley. On June 4, 2015, Dr. Wong again examined and evaluated the claimant. At that time, he had the CT myelogram and EMG studies completed by Dr. Knight. Dr. Wong was of the opinion that he would need to know whether the finding of Dr. Pamela Knight were chronic or acute. He asked that Dr. Knight clarify acute vs. chronic question in terms of her right L5 changes on the EMG and nerve conductive studies. If more of the right L5 changes are seen, then the more likely that additional decompression might be helpful. Dr. Knight issued an addendum

to her report on August 17, 2015 indicating that the findings on the EMG were sub-acute.

10. The ALJ finds that the claimant has established as more likely than not that her condition has changed and worsened subsequent to MMI. This is based on the medical opinions of Dr. Sandell as well as that of Dr. Scott Stanley and Dr. Pamela Knight. It is also based on the opinion of Dr. Wong. It is noted that for some time after she was placed at MMI Dr. Sandell had nothing further to offer the claimant. However, after further testing and based on a progression of her symptoms post MMI, Drs. Wong, Sandell and Stanley all feel that the claimant would benefit from surgery. A change of her condition is supported by the EMG findings which were noted as sub-acute. The ALJ also credits the testimony of the claimant as to the progression of her symptoms including new symptoms which were noted by Dr. Sandell on December 23, 2013, a point in time subsequent to MMI.

11. The ALJ finds the claimant to be credible in her statements regarding the change in her condition. The ALJ finds that the claimant has established that it is more likely than not that the claimant is entitled to additional and curative care, including surgery, as recommended by Dr. Stanley.

12. The ALJ finds that the claimant has established that it is more likely than not that her case should be reopened as of April 30, 2015.

13. Based on the medical records and claimant's credible testimony, the ALJ finds that claimant's condition has worsened since she was placed at MMI. Her worsened condition has had a greater impact on her capacity to work than when she was placed at MMI. Specifically, after reaching MMI, claimant has suffered an increase in pain and numbness which extends into her entire right lower extremity. The increased pain and numbness have more severely impacted claimant's ability to walk. As noted above, claimant has episodes where she is unable to walk at all. When claimant does walk, she uses a cane. The increased pain and numbness have also caused claimant to fall unexpectedly; while claimant has had such falls since 2012, the falls are occurring with greater frequency. As noted in the paragraphs above, claimant's physicians have also noted a worsening in claimant's condition.

14. Claimant's increased risk of falling, pain and numbness, and need for additional surgery have placed greater physical restrictions on her, which, in turn, have further decreased her ability to effectively perform her regular employment duties as a CNA than when she was placed at MMI.

15. Based on the medical records and evidence submitted the ALJ finds that the claimant has established as more likely than not that she has been temporarily totally disabled from April 30, 2015 and continuing. The claimant testified that she has not earned any wages from at least April 30, 3015 and continuing. Further, the records support that the claimant had physical restrictions at all times which would prevent her from working in her occupation.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado, C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102 (1). Claimant in a workers' compensation claim shall have the burden of proving entitlement to benefits by a preponderance of the evidence; the facts in a workers' compensation case shall not be interpreted liberally in favor of either the rights of the injured worker or the rights of the employer, and a workers' compensation case shall be decided on its merits." *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590, 592 (Colo. App. 1998); C.R.S. § 8-43-201. The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102 (1), C.R.S.

2. The question of whether the claimant met her burden of proof is one of fact for determination by the ALJ. See *Jefferson County Public Schools v. Dragoo*, 765 P.2d 636 (Colo. App. 1988).

3. A preponderance of the evidence is that which leads the trier of fact after considering all of the evidence to find that a fact is more probably true than not. See *Page v. Clark*, 593 P. 2d 792 (Colo. 1979).

4. When determining credibility, the fact finder should consider among other things the consistency or any inconsistencies of the witness' testimony, the fact that the witness' testimony in important particulars was contradicted by other witnesses; the reasonableness or unreasonableness (probability or improbability) of the testimony or actions; the motive of the witness, and the bias or prejudice of the witness, if any. See *Prudential Insurance Co. of America v. Cline*, 57 P.2d 1205 (1936), CJI Civil 3:16 (2005).

5. After considering all of the evidence, the ALJ concludes that the claimant has met her burden of proof and the ALJ concludes that the claimant has established by

a preponderance of the evidence that her condition changed as of April 30, 2015, a time subsequent to Maximum Medical Improvement as contemplated by section 8-43-303(1) C.R.S. and that her case should be reopened thereunder.

6. The respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. See § 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). The claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997), *cert. denied* September 15, 1997*.* As found, the claimant has established by a preponderance of the evidence that treatment and surgery as recommended by Dr. Scott Stanley is related to this work injury and the ALJ concludes that such is reasonable and necessary to cure and relieve the worker from the effects of her injury.

7. A workers' compensation claimant is eligible for temporary total disability (TTD) benefits if: (1) the injury or occupational disease causes disability; (2) the injured employee leaves work as a result of the injury; and (3) the temporary disability is total and lasts more than three regular working days. *Anderson v. Longmont Toyota, Inc.*, 102 P.3d 323 (2004). This ALJ has concluded that this claim should be reopened as of April 30, 2015. The ALJ further concludes that the claimant's injury has resulted in total disability as of April 30, 2015 and this total disability continues. Therefore the ALJ concludes that the respondents shall pay the claimant temporary total disability benefits starting April 30, 2015 and continuing until terminated by law.

[The Order continues on the following page.]

ORDER

It is therefore ordered that:

1. This claim is reopened as of April 30, 2015.

2. The respondent-insurer is responsible for the payment of the claimant’s reasonable, necessary, and related medical benefits for her low back injury, including the surgical treatment recommended by Dr. Scott Stanley.

3. The claimant is entitled to temporary total disability benefits from and including April 30, 2015 and continuing until terminated by operation of law.

4. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATE: July 26, 2016

Hollyce Farrell

Hollyce Farrell
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

STIPULATIONS

Prior to the commencement of hearing, the parties reached the following stipulation, which is approved by the ALJ:

I. The parties stipulated to an average weekly wage of $870.00.

ISSUES

The remaining issues addressed in this decision concern compensability and Claimant's entitlement to medical benefits. The specific questions addressed are:

I. Whether Claimant established by a preponderance of the evidence, that she sustained a compensable injury arising out of and in the course and scope of her employment on April 13, 2015.

II. Whether Claimant has proven by a preponderance of the evidence that she is entitled to all reasonable, necessary, and medical treatment stemming from the April 13, 2015 alleged injury.

III. Whether the Respondent-Employer timely designated a medical provider in Michigan once Respondent-Employer had some knowledge of facts that would lead a reasonably conscientious person to believe that the claimant was relocating to Michigan and would require treatment in Michigan.

FINDINGS OF FACT

Based on the testimony and evidence presented at hearing, as well as the post hearing deposition testimony of Dr. Rachel Basse, the undersigned ALJ enters the following findings of fact:

1. Claimant was employed full-time as correctional officer for Respondent-Employer on April 13, 2015, the alleged date of injury.

2. As a correctional officer, Claimant would provide security and direction to various areas of the prison facility. Occasionally, Claimant would be selected for special assignment to guard offenders who were being transferred to and from the local hospital. Such special assignment is known "hospital duty."

3. On April 13, 2015, Claimant was partnered with a fellow correctional officer, Cody

Dillinger to guard an inmate who had recently been admitted to the hospital. Claimant and Mr. Dillinger had never worked together previously.

4. Before proceeding to the hospital, Claimant drove a prison vehicle to the control tower so that she could obtain a firearm.

5. There was no sense of urgency and the two were not in a rush to get to the hospital.

6. Upon arrival at the control tower, Claimant went inside, obtained the firearm, and returned to her employer issued vehicle. Claimant opened the drivers' side door of the vehicle, which she described as being a heavier, reinforced door. As Claimant was entering the vehicle, she testified that she lost control of the door and the corner of it struck her on the left side of her forehead above the eye. Claimant is 5'2 ¾" tall.

7. Mr. Dillinger testified that he did not see the door strike Claimant. Moreover, Mr. Dillinger testified that he did not hear any sound consistent with someone striking their head on a car door. Mr. Dillinger was sitting in the passenger seat of the vehicle. He was not distracted or otherwise occupied.

8. Claimant reported that she stated audibly that she had just hit herself in the head with the door but Mr. Dillinger appeared oblivious to the incident. Mr. Dillinger testified that Claimant never said anything about hitting her head.

9. While Claimant was backing the car, in order to turn around and proceed to the hospital; she hit a retaining wall constructed of railroad ties on the prison grounds. Mr. Dillinger estimated that Claimant was driving less than 5 MPH when she made contact with the wall. There was no damage to the car and neither he nor Claimant hit their head as a consequence of striking the retaining wall.

10. After making contact with the wall, Claimant drove to the hospital and the two proceeded to the inmate patient's hospital room. Mr. Dillinger and Claimant spent approximately four hours together at the hospital, arriving at around 2:00 p.m. According to Mr. Dillinger, Claimant left the hospital between 6:00 and 8:00 p.m. Claimant left the hospital after receiving a phone call from the supervising officer indicating that it was unnecessary for two people to guard the inmate patient.

11. While they were together, Claimant and Mr. Dillinger sat on a couch guarding the inmate. They engaged in small talk. During this time, Claimant never said anything about hitting her head, nor did Claimant appear to be in pain to Mr. Dillinger. Rather, Claimant was happy, coherent and engaged. She did not demonstrate problems with her speech and ate her lunch without trouble.

12. Mr. Dillinger admitted that he had never worked with Claimant before and had no understanding of her baseline cognitive functioning and/or behavior. He also testified that he and Claimant did not engage in any stressful duties while working together.

13. Claimant testified that she felt tired and groggy after being struck by the door, but was able to continue working her shift. She reported that she felt like she needed caffeine to wake up as the day progressed. She testified that she was embarrassed by the incident. Consequently, she did not report it or say anything to anyone the day it occurred. Claimant testified that she noticed worsening symptoms during the evening following the incident; feeling more and more tired and noticing increasing pain in her head. According to Claimant's testimony, she felt "out of it" although she did not relate her worsening symptoms to the incident occurring earlier in the day.

14. By morning on April 14, Claimant's head was hurting even more, she felt dizzy, nauseated, and was experiencing visual disturbances. Consequently, she reported the incident to her Lieutenant, Trevor Bugles.

15. After reporting the incident, Claimant went to the emergency room (ER) at the Sterling Regional Medical Center. The emergency room record provides the following reported history of present illness: "Yesterday she was at work and opened a car door forcefully hitting the left side of her head. She had no LOC.[1] According to the ER report, Claimant complained of ongoing severe HA, blurred vision and nausea. While she had nausea, the ER report specifically documents an absence of vomiting. Indeed, no persuasive evidence was presented that Claimant ever vomited as a consequence of striking her head.

16. Given the described mechanism of injury (MOI), a CT of the head/brain was ordered. CT results were interpreted by Dr. Eric M. Lyders as "normal" without evidence of "hemorrhage or acute finding."

17. Physical examination in the ER revealed Claimant to be in no acute distress. Her skin was warm and dry. She presented with a "mild contusion" on the left forehead, but had no abrasions. There were no deformities, crepitus, battle sign or raccoon eyes noted upon inspection of the head. Claimant's pupils were equal, round and reactive to light and her extraocular movements were intact. Finally neurological examination revealed Claimant to be "[a]lert and oriented to person, place time, and situation." Claimant's cranial nerves (CN) were intact and she demonstrated normal sensation, motor movement, speech and coordination. No focal neurological deficits were observed. Although imaging study (CT) and the physical examination were normal, "concern" for concussion was noted secondary to Claimant's ongoing severe headache. Claimant was given a 30 mg intramuscular (IM) injection of Toradol and provided prescriptions for Ativan, Norco and Zofran and discharged with instruction to follow up with her primary care physician (PCP).

18. Claimant testified that she filled her prescriptions. As evidenced by a April 17, 2015 ER report, the prescribed medications failed to provide relief of her ongoing pain. Consequently, Claimant returned to the ER on April 17, 2015 for additional treatment. The ER record from this date of visit indicates that Claimant reported "left sided pain

[1] The ALJ finds LOC to refer to loss of consciousness.

that starts behind her left eye and radiates to the side of her left head." According to Claimant's report in the ER, her head pain was constant in nature and throbbing. The pain was not consistent with Claimant's pre-existing migraines except that it was on the left side of her head were her typical migraines emanated from. Claimant reported using "ice packs over the left neck because she [thought] she [had] a mild amount of whiplash" from her April 13, 2015 injury. Evaluation failed to reveal any ecchymosis around the eye and Claimant was noted not to be on any anticoagulants. Consequently, occult skull fracture and/or intercranial bleeding were not felt to be the cause of Claimant's ongoing pain. Claimant was given a "migraine cocktail" after which her symptoms improved "significantly." Accordingly, it was felt that Claimant was "most likely suffering from a tension-type or migraine type headache, the trauma to her head being the inciting factor."

19. Claimant has a history of pre-existing migraine headaches. She testified that she has had such headaches off and on since her mid twenties. According to Claimant, her typical migraines were localized, would involve the left eye and she would almost always experience an aura with her migraines. The aura was described as a circle in her vision that would slowly diminish and be followed by a headache. Claimant experienced no such aura after the April 13, 2015 event. She would experience migraines, on average, every month or every other month per her testimony. She would have periods of time where she would go three to six months with no migraines. Since April 13, 2015, Claimant testified that her headaches have occurred almost daily to varying degrees.

20. Claimant also has a pre-existing history of prior closed head injury stemming from a motor vehicle accident in 1998.

21. Currently, Claimant reports symptoms of pain behind the left eye, being tired and needing to nap, poor concentration and difficulty with her focus. Respondent suggests that Claimant's is currently suffering from many of the same symptoms she had before hitting her head with the car door on April 13, 2015 and that these symptoms are related to her prior head injuries and/or migraine headaches rather than any head injury sustained on April 14, 2015. In support of this contention, Respondent cites the following excerpts from Claimant's pre-incident medical records:

> 9/16/2008 – to Stephen R. Hochberg, LpC: "Gives a history of depressive episodes, emotional liability, and several closed HI all as a result of MVAs. First HI 1994, second 10 years ago with sequelae which included vertigo, problems with s/t memory, problems with concentration and organization. More recently she had another 'fender bender' in wh9ich she experienced mild whiplash and is concerned about additional concussive episode."

> 7/10/2009: "Has also had migraine h/a's…. Told Dr. Wiggins that she thought she was bipolar… Currently w/o motivation and doesn't feel like doing anything… the lamictal makes her tired and also feels dizzy…"

7/17/2009: Claimant reported “vegetative sx, ongoing migraines.”

8/26/2009: Claimant reported “extreme fatigue, reports slurred speech, dizziness, and sleepy all the time… running into things, loss of balance and feeling sedated since Lamictal start last year and addition of risperdal causes pt to feel ‘non functional’.”

9/1/2009: Claimant had “lots of problems with focus… having problems with focus and is extra sleepy, lethargic and tired… has down times during the day…”

9/14/2009 & 3/17/2010: Claimant was advised that Lamictal (lamotrigine) for her bipolar disorder, a drug that she has taken for depression and continues to take for depression to the present day (ex. J pg. 10), has side effects including but not limited to tiredness, headache, dizziness, nausea, mild rash…”

11/1/12: “pt has been out of lamictal for the last few days and she is starting to feel bad with HAs and dizziness with some nausea… Pt has been out of her lamictal before and she remembers feeling the same way until she was able to get back on it.”

11/6/13: “Patient is here today with % abdominal pain and headache which started over a week ago.” History: “body aches, HA, sleeping a lot… mild nausea.”

10/3/14: Claimant presented at Salud Family health and gave her history: “39 y/o female % migraine HA with HA, eye pain, neck pain, back pain, and abdominal pain that started yesterday. Trigger from stress, menses, eating pizza…” (Ex. E pg. 1 [sic].) Claimant requested Toradol as well (id.), which was the same treatment she testified she received on the date of alleged injury. Trans. 18:8.

6/3/14: Her physician reported the history of Claimant as “fatigue and exhaustion problems x 2 years… Pt often has naps during the day as she feels like she does not have enough energy… nothing has helped.” (Ex. E, pg. 3 (emphasis added).) Claimant was so concerned she requested a thyroid workup. (Id.)

22. While many of the aforementioned symptoms are similar to those Claimant reports presently, the ALJ finds that Claimant’s reported increased incidence of fatigue, headache, dizziness and nausea between September 1, 2009 and June 3, 2014 are related to Claimant’s pre-existing depression and/or psychotropic medications used to her bipolar disorder and not any lingering effects of a closed head injury or migraine headache complex. Moreover, the ALJ finds Respondent’s assertion that these records

support the conclusion that Claimant's current symptoms are related to a prior head injury or a migraine head ache complex equally unpursuasive. To the contrary, the ALJ finds that the above mentioned records establish that Claimant was having symptoms similar to those she is experiencing now but for substantially different reasons, specifically because she was laboring under the effects of significant depression and untoward side effects of psychotropic medication.

23. On April 20, 2015, Claimant was evaluated by Dr. Keyna Schlup. Dr. Schlup documented that the ER notes had "muddied the water" regarding the case because Claimant had not been forthcoming with the ER doctor regarding her history of depression nor migraine headaches. Dr. Schlup noted further that Claimant's migraine headaches were different than her current headaches. The ALJ finds from these statements, when considered together and in the context of the entire report, that Dr. Schlup was likely upset with Claimant that she did not give a detailed history of her migraine headaches upon initial presentation to the ER on April 14, 2015 because it made it difficult to determine whether Claimant was actually having a typical migraine headache or if her headache was related to the April 13, 2015 incident. Nonetheless, after considering Claimant's reported MOI and having reviewed the ER reports and completing a physical examination, Dr. Schlup diagnosed Claimant as having a head injury without skull fracture and post-concussive symptoms.

24. As part of her evaluation, Dr. Schlup documented that Claimant was concerned about eye "drooping" which Dr. Schlup found to be mild swelling around the eye. Like the contusion documented in the ER report from April 14, 2015, the ALJ finds the mild swelling noted by Dr. Schlup to constitute objective evidence that Claimant was struck in the area of the eye by the corner of the car door on April 13, 2015 as Claimant testified and as she reported in the ER on April 14, 2015.

25. Dr. Schlup documented on May 5, 2015, that Claimant's "physical exam findings" had improved, but she was still symptomatic from a concussive standpoint. Claimant was instructed not to perform throws or tosses during her training at work because it could cause her concussion to worsen. By May 28, 2015, Claimant had experienced some improvement in the post-concussive symptoms, but her vision disturbances had yet to improve. Dr. Schlup noted that the vision disturbances usually took a few weeks or months to resolve after the other symptoms resolve. She referred Claimant to an ophthalmologist for evaluation.

26. Claimant underwent an ophthalmologic evaluation on June 2, 2015. She was diagnosed with post-concussion headaches, ptosis, and myopia.

27. Claimant subsequently moved to Michigan in June of 2015.

28. Claimant testified that she was not able to see a physician again until her first evaluation at McLaren Internal Medicine Associates on September 8, 2015, with Dr. Deborah Richmond. Based upon the evidence presented, the ALJ finds that Claimant obtained this treatment on her own without seeking approval from the carrier. Claimant

had continued her health insurance coverage through Respondent-Employer as part of the Consolidated Omnibus Budget Reconciliation Act (COBRA) and had the bill for services rendered submitted to her health insurance carrier. During this appointment, she continued to complain of left eye vision changes and migraines that had changed in character and frequency since the work incident, as well as ongoing tightness in the back of her head. No assessment was made regarding whether Claimant was suffering from the continued effects of a head injury. Rather, the assessment reached included depression and migraine headache.

29. Claimant was not instructed to see any specific physician by Respondents when she moved to Michigan. Consequently, she asserts that she is entitled to change physicians from Dr. Schlup to Dr. Richmond. Based upon the evidence presented, the ALJ

30. Dr. Rachel Basse performed an Independent Medical Examination (IME) at the request of Respondents' on October 13, 2015. Claimant explained that her only immediate symptoms after the incident were feeling kind of tired, groggy, and "out-of-it." Dr. Basse documented that Claimant was in a motor vehicle accident at age 23 that resulted in a closed head injury.

31. Dr. Basse opined that Claimant's mechanism of injury could have "caused the injury" of which Claimant complains, specifically a "concussive event. However, she noted that Claimant's current symptoms are not related to that injury. Rather, Dr. Basse that any symptoms associated with a mild concussive event would have resolved. According to Dr. Basse, Claimant's ongoing eye symptoms and headaches are "probably a combination of chronic underlying headaches symptoms and acute re-aggravation with daily stress complicated by rebound component from her current medication." Dr. Basse documented that Claimant was taking 200 mg of Lamictal at the time of the IME. This is the same medication which the ALJ finds gave rise to many of Claimant's ongoing symptoms of fatigue, headache, dizziness and nausea between September 1, 2009 and June 3, 2014. Dr. Basse indicated that the treatment Claimant received from Dr. Schlup and the two emergency room visits were reasonable and necessary based upon Claimant's reported symptoms.

32. Dr. Bennett Machanic performed a medical records review at the request of Claimant's counsel and authored a report dated May 10, 2016. He did not perform a physical examination due to Claimant living in Michigan.

33. Dr. Machanic opined, "Based on my review of the medical records, it is clear that the patient suffered [a] closed head injury on April 13, 2015, while employed as a correctional officer." Dr. Machanic explained that although Claimant did have a history of pre-existing migraine headaches, they have worsened and have been less available to control by therapeutic interventions since the incident. He noted that Claimant's emotional state has also been worsened after the incident. Dr. Machanic recommended ongoing maintenance treatment in the form of prophylactic medications for headaches and possibly botox injections.

34. Dr. Rachel Basse testified by post-hearing deposition on June 22, 2016. Dr. Basse testified that Claimant's described mechanism of injury struck her as being odd because she did not understand how Claimant struck the left side of her forehead while opening the car door. (Basse Depo. 4:17 – 5:8). She also explained that it was her opinion that Mr. Dillinger's testimony contradicted what Claimant had indicated happened in the several hours after the injury. (Basse Depo. 5:9-25). Dr. Basse reasoned that since Claimant was able to eat her lunch without trouble, i.e. without vomiting and drive home after the incident, it showed that she was aware, alert and oriented. Consequently Dr. Basse did not think it likely that Claimant had a significant head injury/concussion because such abilities are inconsistent in a person who had just sustained a concussive event. Dr. Basse did not comment on the fact that Claimant backed the Employer's vehicle into a wall immediately after the incident was alleged to have occurred.

35. Dr. Basse concluded that if the incident happened as alleged, Claimant would have required treatment, but would have been at MMI as of June 13, 2015. However, if the incident did not occur as alleged, then Claimant's symptoms would have been caused by nothing more than a migraine. (Basse Depo. 16:1-25).

36. On cross-examination, Dr. Basse testified that Claimant did have a history of at least one prior concussion and that "the primary risk factor for a concussion is a prior concussion" and that those individuals that have suffered from multiple concussions are more likely to develop persistent post-concussive symptoms from each subsequent concussion. She also agreed that individuals that have suffered multiple concussions are more likely to develop depression and other cognitive deficits. (Basse Depo. 18:1 – 19:1).

37. The ALJ finds Claimant to be credible. Based upon the evidence presented as a whole, the ALJ finds that Claimant has proven by a preponderance of the evidence that she sustained a compensable injury on April 13, 2015 when a car door struck her in the head above the left eye. This finding is supported by the objective evidence of contusion documented in the ER the morning following the April 13, 2015 incident. It is further bolstered by documented swelling in the area of the eye as noted by Dr. Schlup on April 20, 2015.

38. As the ALJ finds that the incident occurred as described by Claimant on April 13, 2015, the undersigned credits the opinions of Drs. Basse and Machanic to find that Claimant is entitled to reasonable, necessary, and related treatment for her injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). As found, the testimony of Claimant is credible. Claimant testified credibly that she struck herself with the door of her Employer issued vehicle on April 13, 2015. Her claims are supported by the emergency room record from April 14, 2015 and Dr. Schlup's report of April 20, 2015. These reports document the same mechanism of injury as Claimant testified to and provide objective of injury, i.e. contusion and swelling on the left side of her forehead in the area of the eye. The testimony of Cody Dillinger is also found to be credible; however, the fact that he did not see Claimant strike her head or hear anything consistent with Claimant striking her head with the car door does not negate the fact that the incident is found to have occurred. More probably than not, Mr. Dillinger simply did not notice the event taking place, nor would Claimant be expected to draw attention to an embarrassing event to a co-worker that she did not know personally and whom she had never worked with.

Compensability

D. To sustain her burden of proof concerning compensability, Claimant must establish that the condition for which she seeks benefits was proximately caused by an "injury" arising out of and in the course of employment*.* *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo. App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); *Section 8-41-301(I)(b), C.R.S.* The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements for the injury to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). An injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). Based upon the testimony of Claimant and Mr. Dillinger, the ALJ concludes that Claimant was in the course of her employment at the time of the injury. She was clearly engaged in an activity connected to her job-related functions as a prison guard, specifically procuring a duty weapon and preparing to drive to a location to guard a sick inmate. Indeed, Respondent appears to concede this point. Rather, the question presented here is whether Claimant's alleged injury and associated symptoms arise out of her employment or as argued by Respondent, whether said symptoms are related to a pre-existing migraine headache complex.

E. The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. *Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). The fact that Claimant may have experienced an onset of pain while or shortly after performing job duties does not mean that he sustained a work-related injury. An incident which merely elicits pain symptoms without a causal connection to the industrial activities does not compel a finding that the claim is compensable. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Parra v. Ideal Concrete,* W.C. No. 3-963-659 and 4-179-455 (April 8, 1988)*; Barba v. RE1J School District,* W.C. No. 3-038-941 (June 28, 1991); *Hoffman v. Climax Molybdenum Company,* W.C. No. 3-850-024 (December 14, 1989).

F. The determination of whether there is a sufficient "nexus" or causal relationship between a claimant's employment and the injury is one of fact which the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the*

United States Court of Appeals, 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo. App. 1996). Moreover, the question of whether Claimant met the burden of proof to establish the requisite causal connection between the industrial injury and the need for medical treatment is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000). In this case the ALJ is persuaded that Claimant's injury is compensable because the conditions and obligations of her special assignment placed her in a position where she was struck in the head by a car door after losing control of it while entering the car to drive to the hospital. Here, the totality of the persuasive evidence presented, including the testimony of Dr. Basse and opinion of Dr. Machanic, convinces the ALJ that Claimant's need for treatment was directly and proximately caused by the April 13, 2015 work related event and not the effects of a pre-existing head injury or migraine headache complex. Consequently, the ALJ concludes that Claimant has established by a preponderance of the evidence, that there is a causal connection between her employment related duties and the resulting condition for which medical treatment benefits are sought. §8-43-201, C.R.S.; *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000). The claimed injury is compensable.

Medical Benefits

G. Once a claimant has established the compensable nature of his/her work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable and necessary and related medical care to cure and relieve the effects of the work injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). However, a claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his/her need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949); *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970)*;* § 8-41-301(1)(c), C.R.S., Contending that Claimant's current symptoms represent the effects of a preexisting, non-industrial condition that periodically becomes symptomatic, Respondents urge the ALJ to conclude that Claimant's treatment at the ER and with Dr. Schlup is unrelated to her work duties for Employer. As found and concluded above, Respondents' implication is not compelling. Based upon the evidence presented, the ALJ concludes that Claimant's treatment in the emergency room on April 14, April 17, and her treatment with Dr. Schlup, as Claimant's designated provider was reasonable, necessary, and related to the April 13, 2015 industrial incident. Consequently, Respondents are liable for this treatment.

Dr. Deborah Richmond's Status as a Treating Physician

H. The questions of whether the respondents failed to timely tender the services of a physician and the right of selection passed to the claimant are questions of fact for resolution by the ALJ. *See Ruybal v. University Health Sciences Center,* 768 P.2d 1259 (Colo. App. 1988); *Buhrmann v. University of Colorado Health Sciences Center,* W.C.

No. 4-253-689 (November 4, 1996); *Tellez v. Teledyne Waterpik,* W.C. No. 3-990-062, (March 24, 1992), *aff'd, Teledyne Water Pic v. Industrial Claim Appeals Office,* (Colo. App. 92CA0643, December 24, 1992) (not selected for publication). 4-674-408 (2011). Under § 8-43-404(5)(a), C.R.S., the employer or insurer is afforded the right in the first instance to select a physician to treat the injury. In order to maintain the right to designate a provider in the first instance, the employer has an obligation to name the treating physician forthwith upon receiving notice of the compensable injury. *See Rogers v. Industrial Claim Appeals Office,* 746 P.2d 545 (Colo. App. 1987). The failure to tender the "services of a physician ... at the time of injury" gives the employee "the right to select a physician or chiropractor." The employer's duty to designate is triggered once the employer or insurer has some knowledge of facts that would lead a reasonably conscientious manager to believe the case may involve a claim for compensation. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006); *Jones v. Adolph Coors Co.,* 689 P.2d 681 (Colo. App. 1984); *Gutierrez v. Premium Pet Foods, LLC*, W.C. No. 4-834-947 (Industrial Claim Appeals Office, September 6, 2011). The aforementioned principals regarding knowledge of facts to place a reasonably conscientious manager on notice that the case may involve a claim for compensation also apply to situations concerning Claimant seeking medical treatment following relocation to a different jurisdiction, i.e. Michigan. See Sibyl A. Ries, v. Subway of Cherry Creek, Inc., W.C. No. 4-674-408 (ICAO August 4, 2011). Based upon the evidence presented the ALJ is not persuaded that “Respondent-Employer had some knowledge of facts that would lead them to believe that the Claimant was relocating to Michigan and would require treatment in Michigan. Consequently, the ALJ finds and concludes that Claimant’s medical treatment with Dr. Richmond was unauthorized and that the right of selection to select a physician did not pass to her.

ORDER

It is therefore ordered that:

1. Claimant’s April 13, 2015 claim for work related injuries to her head are compensable.

2. Claimant is entitled to all reasonable, necessary, and related care through an authorized treating physician.

3. Claimant has failed to carry her burden to establish that Dr. Deborah Richmond is an authorized treating provider. Claimant’s treatment with Dr. Richmond is unauthorized. Consequently, Respondent-Employer is not liable for it.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 29, 2016

Colorado Springs, CO 80906

ISSUES

The issue presented for determination is whether the Claimant is entitled to a general award of maintenance medical treatment.

FINDINGS OF FACT

1. The Claimant sustained an admitted work injury on September 4, 2014.

2. The Claimant's authorized treating physician, Dr. Randall Jones, found that Claimant reached maximum medical improvement (MMI) on June 18, 2015. Dr. Jones determined that maintenance medical treatment was not necessary.

3. The Respondents filed a Final Admission of Liability (FAL) on July 9, 2015, and specifically denied maintenance medical treatment pursuant to the opinions of Dr. Jones.

4. The Claimant objected to the FAL and pursued a Division Independent Medical Examination (DIME) which Dr. Miguel Castrejon performed on November 17, 2015.

5. Dr. Castrejon concurred with the MMI date. Under "Maintenance Care" he stated that Claimant experienced marginal benefit from spinal injections, and that the Colorado Medical Treatment Guidelines do not support repeat injections. Dr. Castrejon also indicated that his physical examination of the Claimant did not reveal "any other specific treatable etiology that would respond to additional spinal injections." Dr. Castejon, however, recommended that Claimant be provided with a six-month gym membership in order to continue with her independent home exercise program.

6. The Respondents agree that the six-month gym membership is reasonable, necessary and related to the work injury. The Respondents have agreed to pay for the membership.

7. On June 13, 2016, Dr. Jones reiterated his opinion that no additional maintenance medical treatment is needed to maintain the Claimant at MMI.

8. No substantial evidence shows that Claimant requires future medical treatment to prevent further deterioration of her condition or maintain her at maximum medical improvement. Despite the lack of substantial evidence, the Respondents have stipulated that the gym membership is reasonable, necessary and related to the Claimant's injury.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge enters the following conclusions of law:

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A Claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. To prove entitlement to maintenance medical benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of the work-related condition. *Grover v. Industrial Commission,* 759 P.2d 705, 710-13 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App. 1995). Once a claimant establishes the probable need for future medical treatment he "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna v. Print Expediters, Inc.*, 77 P.3d 863, 866 (Colo. App. 2003); *see Karathanasis v. Chilis Grill & Bar,* W.C. No. 4-461-989 (ICAP, Aug. 8, 2003). Whether a Claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the Judge. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 919 P.2d 701, 704 (Colo. App. 1999).

4. Claimant asserts that Respondents should file an amended FAL and admit for a general award of maintenance medical benefits. The Claimant reasons that the recommended gym membership constitutes maintenance medical treatment, and that because the Respondents have agreed that the membership is reasonable, necessary and related to the work injury, a general award of maintenance medical benefits is required. The Respondents agreed to pay for the six-month gym membership but declined to file an amended FAL. The Respondents contend that Claimant is not entitled to a general award of maintenance medical treatment due to a lack of substantial evidence to support such an award.

5. As indicated above, the Claimant maintains the burden of proving entitlement to maintenance medical treatment. The Claimant has failed to meet her burden. Dr. Castrejon merely recommended a six-month gym membership, but he did not recommend additional medical treatment, and Dr. Jones specifically indicated no further maintenance treatment was necessary. Despite the lack of substantial evidence concerning the need for maintenance medical treatment, the Claimant and Respondents essentially stipulated that the Respondents would pay for the six-month gym membership recommended by Dr. Castrejon. The parties did not expressly agree to a general award of maintenance medical benefits, and the ALJ does not construe Respondents' agreement to pay for a gym membership as an agreement (express or implied) to a general award of maintenance medical benefits. The ALJ also rejects the Claimant's argument that the gym membership is necessarily a maintenance medical benefit necessitating an admission for a general award of maintenance treatment. No persuasive legal authority supports the Claimant's argument.

ORDER

It is therefore ordered that:

1. Respondents are liable for payment of a six-month gym membership.

2. Claimant's request for a general award of maintenance medical benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-988-024-01

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered compensable injuries during the course and scope of his employment with Employer on July 11, 2015 and the quasi-course of his employment on July 16, 2015.

2. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive authorized, reasonable and necessary medical treatment for his industrial injuries.

3. A determination of Claimant's Average Weekly Wage (AWW).

4. Whether Claimant has established by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period July 13, 2015 through October 31, 2015 and Temporary Partial Disability (TPD) benefits for the period November 1, 2015 through June 15, 2016.

FINDINGS OF FACT

1. Claimant worked for Employer as a Flight Attendant. Claimant testified that on July 11, 2015 he was working on a flight from Chicago Midway International Airport to Philadelphia, Pennsylvania. While he was performing a safety demonstration the pilot took off. As he was heading back to the galley area to sit in his jump seat, he lost his balance and fell against the back of the galley. He struck the back of his head and the right side his body. Claimant commented that he did not fall to the ground but twisted his right ankle during the incident.

2. Claimant reported the incident and Employer directed him to Concentra Medical Centers for an examination. On July 13, 2015 he visited Arlene R. Emmons, M.D. for an evaluation. Dr. Emmons diagnosed Claimant with the following: (1) a cervical strain; (2) a shoulder/upper arm strain; (3) an ankle sprain; (4) a thoracic strain; and (5) a lumbar strain. However, Dr. Emmons recorded that Claimant exhibited full range of motion in his cervical spine, full range of motion in his thoracic spine and full range of motion of his lumbar spine. He exhibited normal ankle and foot strength with full range of motion. Claimant's right ankle also appeared to be normal without any evidence of swelling. Notably, Dr. Emmons recorded that Claimant had a "non-contributory" medical history. She assigned work restrictions that included: (1) no stair climbing; (2) occasional bending for up to three hours per day; (3) lifting not to exceed 10 pounds for eight or more hours each day; and (4) pushing/pulling not to exceed 10 pounds for up to three hours each day.

3. In contrast to Dr. Emmons' note about Claimant's lack of medical history, the record reveals that Claimant has suffered a number of significant medical conditions prior to the July 11, 2015 incident. On May 2, 2014 Claimant was involved in a motor vehicle accident. He was transported to Grady Hospital Emergency Room by ambulance and treated for the following complaints: (1) head pain; (2) left hand pain; (3) neck pain; (4) back pain; and (5) bilateral knee pain. A physical examination revealed tenderness at both the C7 level and the right shoulder. Claimant underwent a CT of his brain, a CT of his cervical spine, a CT of his face, an x-ray of his pelvis, an x-ray of his chest, an x-ray of his left hand and wrist and an x-ray of his left elbow. He was discharged with a prescription for Oxycodone.

4. On May 5, 2014 Claimant sought treatment from personal chiropractor, Cleve Taylor, D.C. He reported 10/10 pain in the following areas: neck, right shoulder, mid-back, lower back and head. Dr. Taylor noted that Claimant had severe edema, muscle spasms and pain with limited range of motion in the preceding areas. He diagnosed Claimant with the following:

- Cervicalgia;
- Spondylosis with myelopathy;
- Low back pain – lumbago;
- Pain in upper arm;
- Lumbar intervertebral disc degeneration with myelopathy;
- Displacement of lumbar intervertebral disc without myelopathy;
- Spasm of muscles;
- Knee/leg sprain;
- ISD lower extremities;
- Sprain/strain to cervical area;
- Thoracic sprain/strain;
- Sacral strain/sprain; and
- Adhesive capsulitis of shoulder.

Dr. Taylor determined that Claimant should receive treatment two to three times per week to manage his symptoms.

5. On May 6, 2014 Claimant obtained medical treatment from Kamal Kabakibou, M.D. for his injuries arising out of the motor vehicle accident. Claimant's complaints included: neck pain, back pain, right shoulder pain, numbness in the right leg and right hip pain. Dr. Kabakibou diagnosed Claimant with cervicalgia and lumbago. He ordered MRIs for Claimant's right shoulder, cervical spine, lumbar spine and brain.

6. Claimant subsequently received cervical and lumbar facet blocks. On September 12, 2014 Claimant underwent a right shoulder diagnostic arthroscopy and anterior reconstruction. He remained off work for several months because of the motor vehicle accident and subsequent surgery. Claimant returned to work in approximately late February 2015.

7. Between Claimant's full duty return to work and the July 11, 2015 work incident, or 150 days, Claimant earned total wages of $22,030.46. Dividing $22,030.46 by 150 yields a daily wage of $146.87 and a weekly wage of $1028.09. An AWW of $1028.09 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

8. During early August 2014 Claimant underwent radiofrequency thermocoagulation procedures at L3, L4, L5, C5 and C6. On August 20, 2014 Dr. Kabakibou noted that the procedures were intended to provide long-term relief for Claimant. However, after nine to twelve months he would expect that "the pain eventually will come back in the future because the nerve will grow again" and the procedure would need to be repeated.

9. On September 3, 2014 Claimant returned to Dr. Taylor for an evaluation. Dr. Taylor commented that the likelihood of near complete symptomatic relief within six months was "moderate" because Claimant's prognosis was "guarded." He noted that for Claimant to maintain his level of improvement he would have to return for approximately one to two visits per month.

10. Despite Dr. Taylor's recommendation for maintenance treatment, Claimant did not return for an examination until May 6, 2015. Claimant reported pain in his lower back, upper back, right shoulder and neck.

11. On July 8, 2015, or only three days prior to Claimant's industrial accident, he reported 3/10 pain in his lower back, upper back, neck and right shoulder. Claimant also noted moderate difficulty with bending, looking over his shoulder, driving and lifting. He commented that his difficulties had not changed since the recurrence of symptoms in May 2015. Dr. Taylor assessed Claimant with moderate muscle spasms. He commented that Claimant should continue to receive chiropractic treatment two to three times per week to manage his symptoms.

12. On July 13, 2015, or just two days after Claimant's work incident, he visited Dr. Emmons for an examination. She diagnosed Claimant with a right ankle sprain but remarked that he had normal ankle and foot strength with full range of motion. Claimant's right ankle also did not reveal any evidence of swelling.

13. On July 16, 2015 Claimant was involved in a motor vehicle accident while he was returning from a physical therapy session. The physical therapy note was signed by the therapist after dictation at 9:44 a.m.

14. Claimant sought treatment for his motor vehicle accident at Piedmont Healthcare on July 16, 2015. He arrived at 6:35 p.m. Claimant reported a headache, lower back pain, neck pain, right shoulder pain, left forearm pain and numbness in the bilateral lower extremities. Claimant was discharged with pain medication. Medical providers recorded that the motor vehicle accident occurred just one to two hours prior to the admission.

15. On July 17, 2015 Claimant visited Brice Choi, M.D. based on a referral from Concentra. Dr. Choi assessed Claimant for both the July 11, 2015 work incident and July 16, 2015 motor vehicle accident. He noted that Claimant's primary complaint was neck pain that was related to the work incident. However, Dr. Choi remarked that the following conditions were related to the motor vehicle accident: headaches, vision disturbances, eye pain and pain in the lower and middle spine that radiated to the lower extremities. Notably, Dr. Choi remarked that Claimant had normal range of motion of the major joints of the lower extremities with no areas of focal tenderness. He also noted that Claimant had a "stable" gait and that Claimant was "able to walk on toes and heels, and tandem walk without difficulties."

16. On July 20, 2015 Claimant returned to Dr. Taylor for a chiropractic assessment as a result of the July 16, 2015 motor vehicle accident. Claimant did not mention the July 11, 2015 industrial incident. He informed Dr. Taylor that his main complaints consisted of headaches, pain in the mid-back, neck pain and pain in the lower back. Dr. Taylor recorded that "[Claimant] indicated that he had not experienced prior symptoms similar to his current complaints, and was symptom free at the time of the aforementioned [motor vehicle] accident." He concluded that "based on an assessment of [Claimant's] history, along with his subjective complaints, objective findings, and other test results, it is evident from a standpoint of medical certainty, that his current condition did result from the type of injury/onset described in this report." Dr. Taylor did not address the July 11, 2015 work incident.

17. On June 3, 2016 Claimant visited Kathleen D'Angelo, M.D. for an independent medical examination. Claimant reported that on July 11, 2015 he was working as a Flight Attendant for Employer. While he was performing a safety demonstration the pilot took off. Claimant was heading back to the galley area but twisted his right ankle, fell and struck the back of his neck on the back of the galley. Claimant also recounted the details of his May 2, 2014 and July 16, 2015 motor vehicle accidents. He noted that his current symptoms included headaches, neck pain, back pain, right shoulder pain and hip pain. Claimant remarked that his right ankle was "fine" but he periodically experienced a "little twitch." After reviewing Claimant's extensive medical history and treatment Dr. D'Angelo explained that Claimant's

> present pain symptoms are consistent with his prior extensive history of identical complaints for which the patient was still receiving active treatment as recently as three days prior to his work injury. In fact, [Claimant's] present complaints are almost indistinguishable from his 1-year prior history of medical presentations following his May 2014 MVA.

18. Dr. D'Angelo concluded that Claimant did not suffer "an aggravation, acceleration or exacerbation of his underlying injury process" as a result of the July 11, 2015 work incident. She noted that "medical aggravation" of an underlying disease process is a temporary condition that causes an inflammatory response of limited duration. Dr. D'Angelo explained that she would not expect persistent diffuse pain from the aggravation of an underlying condition after almost 12 months of treatment with physical therapy, pain medications and a brief cessation of work activities. She

determined that Claimant’s symptoms were not related to his general work activities for Employer or a specific acute injury. Accordingly, Dr. D’Angelo concluded that Claimant’s current diffuse symptoms “are not related to any work incident but the need for treatment for those symptoms are independent, unrelated and incidental to the alleged July 11, 2015 work injury.” She specifically noted that Claimant’s right shoulder, right hip, headache complaints and “other symptoms are not due to an acute, chronic or cumulative work related trauma.” Instead, Claimant’s current symptoms were a manifestation of his prior myofascial injuries sustained during his May 2014 motor vehicle accident. Dr. D’Angelo thus determined that no further active or maintenance treatment was warranted through the Workers’ Compensation system.

19. On June 15, 2016 Dr. D’Angelo testified through an evidentiary deposition in this matter. She maintained that Claimant’s work activities on July 11, 2015 did not constitute an aggravation or acceleration of his pre-existing condition. Instead, his symptoms were the natural progression of his underlying, degenerative condition. Nevertheless, Dr. D’Angelo acknowledged that Claimant suffered a right ankle injury on July 11, 2015 that had resolved.

20. Dr. D’Angelo explained that, with the exception of Claimant’s right ankle sprain, his symptoms were similar or “almost identical” to those he had experienced as a result of his May 2, 2014 motor vehicle accident. In fact, there was no diagnostic evidence that Claimant suffered an acute injury while working on July 11, 2015. Radiological studies revealed that Claimant suffered from degenerative changes. Claimant’s physical complaints after the July 11, 2014 industrial incident were consistent with the degenerative changes for which he had been receiving treatment since 2014. Moreover, Dr. D’Angelo remarked that Claimant does not require any additional medical treatment. She specifically agreed with Dr. Kabakibou that the radiofrequency thermocoagulation procedures administered in August 2014 would only provide temporary relief for Claimant’s symptoms. Dr. D’Angelo emphasized that “it’s entirely physiologically predictable that his pain would return in nine to twelve months, because that’s how long it takes for the nerves we destroy in the spine [through ablation] to regrow.” Dr. D’Angelo summarized that Claimant’s only injury as a result of the July 11, 2015 work incident was a right ankle sprain that resolved. She clarified that the only recommendation she would have provided for an ankle sprain was to rest it for 24-48 hours with ice and elevation. Dr. D’Angelo commented that “most ankle sprains do resolve without any interference from the medical community.”

21. Claimant has failed to demonstrate that it is more probably true than not that he suffered compensable injuries during the course and scope of his employment with Employer on July 11, 2015 and the quasi-course of his employment on July 16, 2015. Claimant testified that, while he was performing a safety demonstration in his job as a Flight Attendant, the pilot took off. Claimant walked back to the galley area but twisted his right ankle, fell and struck the back of his neck on the back of the galley. Claimant reported a myriad of diffuse pain complaints involving his back, right shoulder, head/neck and right ankle. He also explained that on July 16, 2015 he was involved in a motor vehicle accident while returning from a physical therapy session. Claimant reported a headache, lower back pain, neck pain, right shoulder pain, left forearm pain

and numbness in the bilateral lower extremities. Although Claimant reported a number of pain complaints after the July 11, 2015 and July 16, 2015 incidents, the record reveals that he has suffered a number of significant medical conditions prior to the July 11, 2015 incident. The July 11, 2015 and July 16, 2015 incidents did not aggravate, accelerate or combine with Claimant's pre-existing condition to produce a need for medical treatment.

22. On May 2, 2014 Claimant was involved in a motor vehicle accident. He received treatment for the following complaints: (1) head pain; (2) left hand pain; (3) neck pain; (4) back pain; and (5) bilateral knee pain. Claimant received extensive chiropractic and medical treatment for his injuries. On July 8, 2015, or only three days prior to Claimant's industrial accident, he reported 3/10 pain in his lower back, upper back, neck and right shoulder. Claimant also noted that he was having moderate difficulty with bending, looking over his shoulder, driving and lifting.

23. After conducting an independent medical examination, Dr. D'Angelo concluded that Claimant did not suffer "an aggravation, acceleration or exacerbation of his underlying injury process" as a result of the July 11, 2015 work incident. Dr. D'Angelo explained that, with the exception of Claimant's right ankle sprain, his symptoms were similar or "almost identical" to those he had experienced as a result of his May 2, 2014 motor vehicle accident. In fact, there was no diagnostic evidence that Claimant suffered an acute injury while working on July 11, 2015. Radiological studies revealed that Claimant suffered from degenerative changes. Claimant's physical complaints after the July 11, 2015 industrial incident were consistent with the degenerative changes for which he had been receiving treatment since 2014. Moreover, Dr. D'Angelo remarked that Claimant does not require any additional medical treatment. She specifically agreed with Dr. Kabakibou that the radiofrequency thermocoagulation procedures administered in August 2014 would only provide temporary relief of nine to twelve months for Claimant's symptoms. Dr. D'Angelo concluded that Claimant's current diffuse symptoms "are not related to any work incident but the need for treatment for those symptoms are independent, unrelated and incidental to the alleged July 11, 2015 work injury." She specifically noted that Claimant's right shoulder, right hip, headache complaints and other symptoms were not caused by an acute, chronic or cumulative work related trauma. Accordingly, based on the medical records and persuasive testimony of Dr. D'Angelo, Claimant's only work injury was a sprained right ankle.

24. Claimant's contention that the injuries he sustained as a result of his July 16, 2015 motor vehicle accident occurred during the quasi-course of employment also fails. Initially, Claimant testified that on July 16, 2015 he was involved in a motor vehicle accident while he was returning from a physical therapy session. However, the physical therapy note was signed by the therapist after dictation at 9:44 a.m. and Claimant sought treatment for his motor vehicle accident at Piedmont Healthcare on July 16, 2015 at 6:35 p.m. Medical providers recorded that the motor vehicle accident occurred just one to two hours prior to the admission. The record thus reveals that Claimant may not have been involved in the motor vehicle accident while driving from his physical therapy appointment. Moreover, Claimant reported a headache, lower back pain, neck

pain, right shoulder pain, left forearm pain and numbness in the bilateral lower extremities. Claimant's symptoms were virtually identical to the degenerative changes for which he had been receiving treatment since the May 2, 2014 motor vehicle accident. Based on the persuasive testimony of Dr. D'Angelo, Claimant did not suffer any compensable injuries during the quasi-course and scope of his employment on July 16, 2015.

25. Claimant has failed to prove that it is more probably true than not that he is entitled to receive authorized, reasonable and necessary medical treatment for his industrial injuries. On July 13, 2015, or just two days after Claimant's work incident, he visited Dr. Emmons. She diagnosed Claimant with a right ankle sprain but remarked that he had normal ankle and foot strength with full range of motion. Claimant's right ankle also did not reveal any evidence of swelling. Furthermore, on July 17, 2015 Dr. Choi remarked that Claimant had normal range of motion of the major joints of the lower extremities with no areas of focal tenderness. He also noted that Claimant had a "stable" gait and was "able to walk on toes and heels, and tandem walk without difficulties." Finally, Dr. D'Angelo summarized that Claimant's only injury as a result of the July 11, 2015 work incident was a right ankle sprain that resolved. She clarified that the only recommendation she would have provided for an ankle sprain was to rest it for 24-48 hours with ice and elevation. Dr. D'Angelo commented that "most ankle sprains do resolve without any interference from the medical community." Based on the medical records and persuasive testimony of Dr. D'Angelo, Claimant's July 11, 2015 right ankle injury did not require medical treatment subsequent to July 13, 2015. Accordingly, his request for additional medical benefits is denied and dismissed.

26. Claimant has failed to establish that it is more probably true than not that he is entitled to receive TTD benefits for the period July 13, 2015 through October 31, 2015 and TPD benefits for the period November 1, 2015 through June 15, 2016. As discussed in the preceding sections, Claimant's only industrial injury was a right ankle sprain. However, his right ankle symptoms had improved by July 13, 2015 or within two days of his July 11, 2015 industrial incident. Claimant has thus not suffered a wage loss that entitles him to temporary indemnity benefits.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge’s factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the “logical and recurrent consequence” of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant’s symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that “correlation is not causation,” and merely because a coincidental correlation exists between the claimant’s work and his symptoms does not mean there is a causal connection between the claimant’s injury and work activities.

7. Under the quasi-course of employment doctrine, injuries incurred while undergoing authorized medical treatment for an industrial injury are considered compensable even though they occur outside the ordinary time and place limitations of "normal employment." *Excel Corp. v. Industrial Claim Appeals Office,* 860 P.2d 1393 (Colo. App. 1993). The rationale for the doctrine is that, because the employer is required to provide reasonable and necessary medical treatment and the claimant is required to submit to it or risk suspension or termination of benefits, treatment by the physician becomes an implied part of the employment contract. *See Employers Fire Insurance Co. v. Lumbermen's Mutual Casualty Co.,* 964 P.2d 591 (Colo. App. 1998)*; Shreiber v. Brown & Root, Inc.,* 888 P.2d 274 (Colo. App. 1993).

8. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he suffered compensable injuries during the course and scope of his employment with Employer on July 11, 2015 and the quasi-course of his employment on July 16, 2015. Claimant testified that, while he was performing a safety demonstration in his job as a Flight Attendant, the pilot took off. Claimant walked back to the galley area but twisted his right ankle, fell and struck the back of his neck on the back of the galley. Claimant reported a myriad of diffuse pain complaints involving his back, right shoulder, head/neck and right ankle. He also explained that on July 16, 2015 he was involved in a motor vehicle accident while returning from a physical therapy session. Claimant reported a headache, lower back pain, neck pain, right shoulder pain, left forearm pain and numbness in the bilateral lower extremities. Although Claimant reported a number of pain complaints after the July 11, 2015 and July 16, 2015 incidents, the record reveals that he has suffered a number of significant medical conditions prior to the July 11, 2015 incident. The July 11, 2015 and July 16, 2015 incidents did not aggravate, accelerate or combine with Claimant's pre-existing condition to produce a need for medical treatment.

9. As found, on May 2, 2014 Claimant was involved in a motor vehicle accident. He received treatment for the following complaints: (1) head pain; (2) left hand pain; (3) neck pain; (4) back pain; and (5) bilateral knee pain. Claimant received extensive chiropractic and medical treatment for his injuries. On July 8, 2015, or only three days prior to Claimant's industrial accident, he reported 3/10 pain in his lower back, upper back, neck and right shoulder. Claimant also noted that he was having moderate difficulty with bending, looking over his shoulder, driving and lifting.

10. As found, after conducting an independent medical examination, Dr. D'Angelo concluded that Claimant did not suffer "an aggravation, acceleration or exacerbation of his underlying injury process" as a result of the July 11, 2015 work incident. Dr. D'Angelo explained that, with the exception of Claimant's right ankle sprain, his symptoms were similar or "almost identical" to those he had experienced as a result of his May 2, 2014 motor vehicle accident. In fact, there was no diagnostic evidence that Claimant suffered an acute injury while working on July 11, 2015. Radiological studies revealed that Claimant suffered from degenerative changes. Claimant's physical complaints after the July 11, 2015 industrial incident were consistent with the degenerative changes for which he had been receiving treatment since 2014. Moreover, Dr. D'Angelo remarked that Claimant does not require any

additional medical treatment. She specifically agreed with Dr. Kabakibou that the radiofrequency thermocoagulation procedures administered in August 2014 would only provide temporary relief of nine to twelve months for Claimant's symptoms. Dr. D'Angelo concluded that Claimant's current diffuse symptoms "are not related to any work incident but the need for treatment for those symptoms are independent, unrelated and incidental to the alleged July 11, 2015 work injury." She specifically noted that Claimant's right shoulder, right hip, headache complaints and other symptoms were not caused by an acute, chronic or cumulative work related trauma. Accordingly, based on the medical records and persuasive testimony of Dr. D'Angelo, Claimant's only work injury was a sprained right ankle.

11. As found, Claimant's contention that the injuries he sustained as a result of his July 16, 2015 motor vehicle accident occurred during the quasi-course of employment also fails. Initially, Claimant testified that on July 16, 2015 he was involved in a motor vehicle accident while he was returning from a physical therapy session. However, the physical therapy note was signed by the therapist after dictation at 9:44 a.m. and Claimant sought treatment for his motor vehicle accident at Piedmont Healthcare on July 16, 2015 at 6:35 p.m. Medical providers recorded that the motor vehicle accident occurred just one to two hours prior to the admission. The record thus reveals that Claimant may not have been involved in the motor vehicle accident while driving from his physical therapy appointment. Moreover, Claimant reported a headache, lower back pain, neck pain, right shoulder pain, left forearm pain and numbness in the bilateral lower extremities. Claimant's symptoms were virtually identical to the degenerative changes for which he had been receiving treatment since the May 2, 2014 motor vehicle accident. Based on the persuasive testimony of Dr. D'Angelo, Claimant did not suffer any compensable injuries during the quasi-course and scope of his employment on July 16, 2015.

Medical Benefits

12. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

13. As found, Claimant has failed to prove by a preponderance of the evidence that he is entitled to receive authorized, reasonable and necessary medical treatment for his industrial injuries. On July 13, 2015, or just two days after Claimant's work incident, he visited Dr. Emmons. She diagnosed Claimant with a right ankle sprain but remarked that he had normal ankle and foot strength with full range of motion. Claimant's right ankle also did not reveal any evidence of swelling. Furthermore, on

July 17, 2015 Dr. Choi remarked that Claimant had normal range of motion of the major joints of the lower extremities with no areas of focal tenderness. He also noted that Claimant had a “stable” gait and was “able to walk on toes and heels, and tandem walk without difficulties.” Finally, Dr. D’Angelo summarized that Claimant’s only injury as a result of the July 11, 2015 work incident was a right ankle sprain that resolved. She clarified that the only recommendation she would have provided for an ankle sprain was to rest it for 24-48 hours with ice and elevation. Dr. D’Angelo commented that “most ankle sprains do resolve without any interference from the medical community.” Based on the medical records and persuasive testimony of Dr. D’Angelo, Claimant’s July 11, 2015 right ankle injury did not require medical treatment subsequent to July 13, 2015. Accordingly, his request for additional medical benefits is denied and dismissed.

Average Weekly Wage

14. Section 8-42-102(2), C.R.S. requires the Judge to determine a claimant's AWW based on his earnings at the time of injury. The Judge must calculate the money rate at which services are paid to the claimant under the contract of hire in force at the time of injury. *Pizza Hut v. ICAO,* 18 P.3d 867, 869 (Colo. App. 2001). However, §8-42-102(3), C.R.S. authorizes a Judge to exercise discretionary authority to calculate an AWW in another manner if the prescribed methods will not fairly calculate the AWW based on the particular circumstances. *Campbell v. IBM Corp.,* 867 P.2d 77, 82 (Colo. App. 1993). The overall objective in calculating an AWW is to arrive at a fair approximation of a claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 1997). Therefore, §8-42-102(3), C.R.S. grants an ALJ substantial discretion to modify the AWW if the statutorily prescribed method will not fairly compute a claimant’s wages based on the particular circumstances of the case. *In Re Broomfield,* W.C. No. 4-651-471 (ICAP, Mar. 5, 2007).

15. As found, between Claimant’s full duty return to work and the July 11, 2015 work incident, or 150 days, Claimant earned total wages of $22,030.46. Dividing $22,030.46 by 150 yields a daily wage of $146.87 and a weekly wage of $1028.09. An AWW of $1028.09 constitutes a fair approximation of Claimant’s wage loss and diminished earning capacity.

TTD and TPD Benefits

16. Section 8-42-103(1), C.R.S. requires a claimant seeking temporary disability benefits to establish a causal connection between the industrial injury and subsequent wage loss. *Champion Auto Body v. Industrial Claim Appeals Office*, 950 P.2d 671 (Colo. App. 1997). To demonstrate entitlement to TTD benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term “disability,” connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by the claimant's inability to resume his prior work. *Culver v. Ace Electric*,

971 P.2d 641 (Colo. 1999). A claimant suffers from an impairment of earning capacity when he has a complete inability to work or there are restrictions that impair his ability to effectively and properly perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability.

17. As found, Claimant has failed to establish by a preponderance of the evidence that he is entitled to receive TTD benefits for the period July 13, 2015 through October 31, 2015 and TPD benefits for the period November 1, 2015 through June 15, 2016. As discussed in the preceding sections, Claimant's only industrial injury was a right ankle sprain. However, his right ankle symptoms had improved by July 13, 2015 or within two days of his July 11, 2015 industrial incident. Claimant has thus not suffered a wage loss that entitles him to temporary indemnity benefits.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. With the exception of a right ankle sprain, Claimant did not suffer compensable Workers' Compensation injuries on July 11, 2015 or July 16, 2015.

2. Claimant's request for additional medical benefits is denied and dismissed.

3. Claimant earned an AWW of $1028.09.

4. Claimant's request for TTD and TPD benefits is denied and dismissed.

5. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

1. Whether PALJ Sandberg erred in his denial of Respondents' motion to compel the Claimant to attend a follow up DIME with Dr. Roth.

2. Whether Respondents have proven by a preponderance of the evidence that they are entitled to withdraw a General Admission of Liability by proving by a preponderance of the evidence that the Claimant did not sustain a compensable injury arising out of and in the course of his employment with Employer on June 4, 2014.

3. Whether Claimant has proven he is entitled to the medical benefits recommended by Dr. Hall and Dr. Foster, namely a right SI joint injection and possible follow up lumbar epidural steroid injections.

4. Whether Claimant has proven by a preponderance of the evidence that he is entitled to temporary total disability ("TTD") benefits in this claim from June 27, 2014 to November 6, 2014 and from February 28, 2015 to November 3, 2015.

5. If Claimant has proven that he is entitled to temporary disability benefits, whether Respondent has proven by a preponderance of the evidence that Claimant was responsible for his termination.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. The Claimant testified at the hearing on January 14, 2016 by telephone as he lives in Georgia. The Claimant was working for Employer on June 4, 2014 on a highway project in Idaho Springs. His job duties included manual labor involved with expanding tunnels.

2. The Claimant testified that on June 4, 2014, they were getting ready to blast the tunnel and he was directed to move a beam out of the way. He and a coworker went to move it and the Claimant bent down and lifted but found it to be heavier than it looked. The Claimant testified that the felt pain at that moment but he kept working. He stated that it felt bad in the top left side of his buttocks. This testimony varies slightly from the medical record of Dr. Gellrick which was contemporaneous with the event. The Claimant's testimony is generally found to be credible regarding the mechanism of

injury, however, to the extent that there are conflicts between the testimony and the June 5th medical record, the ALJ resolves those conflicts in favor of the medical record.

3. The Claimant testified that after he went home on June 4, 2014, the pain got worse so later he reported it to his supervisor. The Claimant was sent to Dr. Gellrick and continued to treat with her. However, on cross-examination, the Claimant agreed that he did not go back to see Dr. Gellrick after he returned to Colorado from Georgia and didn't attempt to follow up with her.

4. On June 5, 2014, the Claimant saw Dr. Caroline Gellrick for an initial evaluation. The Claimant's chief complaint was right groin pain. He described the mechanism of injury as follows,

> He was working with a co-worker lifting heavy steel beams late yesterday afternoon and last night. The beams weigh about 300 pounds. He did not feel initially any pain but about three hours later he developed pain in the right groin. The pain progressed during the night…the pain radiates into the buttock as well and is right-sided.

On physical examination, Dr. Gellrick noted positive evidence of hernia with a bulge on in the right groin. Dr. Gellrick diagnosed a right inguinal hernia and determined that it was more probable than not that the condition was work related. Dr. Gellrick placed the Claimant on light duty with no repetitive bending, no ladders and no heavy equipment operation and recommended a surgical evaluation (Claimant's Exhibit 3, pp. 76-79; Respondents' Exhibit B, pp. 9-12).

5. The Claimant returned to see Dr. Gellrick on June 6, 2014 due to increased pain during the previous night. The Claimant reported that he had a pain level up to 10 and he reported for duty that day. After examination, Dr. Gellrick opined that the Claimant had a right groin strain with probable hernia along with a hamstring pull at the base of the SI joint. She provided the Claimant with Vicodin for pain to get him through until his surgery consult (Claimant's Exhibit 3, p. 80; Respondents' Exhibit B, p. 13).

6. The Claimant was seen in the emergency department at Exempla Lutheran on June 10, 2014 complaining of right groin pain and difficulty voiding. The Claimant was placed with a Foley catheter until follow up with urology. Dr. Gunter saw no evidence of hernia and felt the Claimant's pain was secondary to hamstring strain (Claimant's Exhibit 3, pp. 93-95; Respondents' Exhibit D, pp. 29-33).

7. The Claimant saw Dr. Gellrick again on June 12, 2014 and she noted that over the weekend before the Claimant had his surgical consult, he developed bladder obstruction of urinary outflow and was seen in the emergency room where he was put on a catheter. The Claimant was then seen for his surgical consult at the beginning of the week and it was determined that the Claimant did not have a hernia but there was a hamstring pull. The Claimant will also follow up with Urology Center of Colorado (Claimant's Exhibit 3, pp. 82-84; Respondents' Exhibit B, pp. 15-17).

8. The Claimant testified at the hearing that the weekend after the incident on June 4, 2014, he was unable to use the restroom due to excruciating pain. He called an ambulance and went to the hospital. He testified that they put in a catheter that remained for a few days. The Claimant testified that he also saw a urologist for this and everything turned out okay.

9. The Claimant was seen on June 16, 2014 for follow up with The Urology Center of Denver on referral from Dr. Gellrick. Dr. Ferdinand Mueller noted that the Claimant had a catheter placed for 8 days but that there was no evidence of a prostate enlargement or issues. The catheter was removed and the Claimant placed on Flomax (Respondents' Exhibit E, pp. 36-37).

10. On June 17, 2014, Dr. Gellrick noted that the Claimant's urinary retention condition was determined to be secondary to an idiopathic reaction to the Vicodin he was given for pain so she found this condition to be a part of the worker's compensation case. The Claimant's catheter had been removed at urology and he was being provided antibiotics to prevent bladder infection from wearing the catheter so long. The Claimant's right hamstring groin strain was slowly resolving (Claimant's Exhibit 3, p. 86; Respondents' Exhibit B, p. 19).

11. On June 19, 2015, the Claimant reported to Dr. Gellrick he was working modified duty but his right posterior thigh continued to hurt and give him problems although he was able to walk and stand and lift a little bit more. Dr. Gellrick noted the groin strain and urinary retention conditions were resolved and the thigh strain was slowly resolving. Dr. Gellrick increased the Claimant's work restrictions to no lifting more than 20 pounds, no pushing/pulling more than 30 pounds, no ladder use, and work standing up to 45 minutes per hour with 15 minutes sitting per hour (Claimant's Exhibit 3, pp. 88-89; Respondents' Exhibit B, pp. 21-22).

12. The Claimant testified that he went back to work light duty, working in the yard moving objects around. Then, on June 26, 2014, the Claimant went to Georgia for vacation and his pain returned and he asked to see a doctor in Georgia. The Claimant testified that he told his work superintendant Ray Beesley that he was going to heal in Georgia. The Claimant testified that none of his supervisors (Ray, John or Bill) told him they had light duty work for him after this. The Claimant testified that he went back to Georgia and treated with Dr. Lofton for about three months. He testified that the treatment and shots helped a little bit. However, he stated that after June 26, 2014, he couldn't do the job that he used to with Employer due to the pain in the low back and right buttocks and hamstring.

13. On cross-examination, the Claimant testified that he said would come back from vacation in Georgia around July 9, 2014 but he did not return to work that day. The Claimant further explained that when he spoke with Ray Beasley, he told him the pain was bad and he wanted to get treated in Georgia. He did agree that Ray Beasley expected the Claimant to come back.

14. The testimony of the Claimant regarding contact with his work supervisors is at odds with testimony provided by Ray Beesley (see below) that the Claimant never contacted him after we went to Georgia for vacation and that he was surprised that the Claimant never returned from vacation. Mr. Beesley's testimony was supported by telephone records that showed no contact with the Claimant and so, to the extent that the Claimant's testimony on this issue is in conflict with Mr. Beesley's, the testimony of Mr. Beesley is found to be more credible and persuasive.

15. On August 1, 2014, the Claimant saw Dr. Beatrice Lofton, a chiropractor in Georgia, for an initial evaluation. The Claimant complained of aching pain in his low back, right groin and leg. The Claimant advised Dr. Lofton of his work injury on June 4, 2014 that occurred while lifting a 300 pound beam with a coworker. After physical examination, Dr. Lofton assessed the Claimant with lumbar strain or sprain with lumbosacral radiculitis and hip or thigh strain and muscle spasm (Claimant's Exhibit 4, 102-103; Respondents' Exhibit K, pp. 80-81). This is the first medical record documenting a lumbar condition since the Claimant's June 4, 2014 work injury. The Claimant continued to treat with Dr. Lofton through August of 2014 with electrical stimulation, ultrasound therapy and myofasical release/manual therapy. Over the course of this month, Dr. Lofton noted "slight improvement" or "slight regression" at each visit (Claimant's Exhibit 4, pp. 201-123; Respondents' Exhibit K, pp. 80-100).

16. On August 6, 2014, Dr. Gellrick noted the Claimant was a no show for appointments on July 9, 2014 and July 23, 2014. She opined that the process of hamstring strain would have resolved by this point and he was anticipated for MMI and case closure with no impairment and a full duty release. The case was closed accordingly on this date (Claimant's Exhibit 3, p. 92; Respondents' Exhibit B. p. 25).

17. The Claimant continued to treat with Dr. Lofton through the month of September and up to October 1, 2014. As of October 1, 2014, the Claimant continued to report intermittent, aching, throbbing, radiating low back pain and aching throbbing pain in the right pelvis. After two months of regular treatment with Dr. Lofton, the Claimant was still showing only "slight improvement" although Dr. Lofton noted "he is progressing as anticipated" (Claimant's Exhibit 4, pp. 143-144; Respondents' Exhibit K, pp. 120-121).

18. On October 6, 2014, the Respondents filed a Final Admission of Liability based on Dr. Gellrick's finding of MMI and no PPD. On October 24, 2014, Respondents filed an amended Final Admission of Liability. The Claimant objected and requested a Division IME (Respondents' Exhibit N and O).

19. On returning from Georgia, the Claimant testified that he came back to Colorado to work at Michels Corporation, a different employer, because they gave him light duty. The Claimant testified that while he worked there he was doing light duty yard work and mostly working the radio. This testimony is contradicted by testimony of Tonya Williams from Human Resources at Michels Corporation (see below). Ms. Williams stated that there was no indication that the Claimant was working light duty and he was

a general laborer performing regular duty work. Ms. Williams' testimony is supported by the Claimant's job application. In his Application for Employment with Michels Corporation, the Claimant stated he was available to work as of November 7, 2014 and was looking for full time work, and would be willing to work overtime, in the tunneling division as a rigger and toplander. The Claimant stated he would be willing to travel (Respondents' Exhibit P). He started this job on November 11, 2014 and stayed there until February 27, 2015 when he was laid off due to lack of work as the job he was working was coming to an end. To the extent there is a discrepancy between the testimony of the Claimant and the testimony of Ms. Williams which is based on the employment records, the dispute is resolved in favor of the records and the testimony of Ms. Williams.

20. On July 6, 2015, the Claimant saw Dr. Henry Roth for a Division IME. Dr. Roth notes that treatment was provided in Colorado through June 19, 2014 and the Claimant is now living in Georgia. Dr. Roth noted that after treatment stopped, the Claimant was placed at MMI but there is no record with respect to impairment or restrictions. Dr. Roth notes that back in Georgia, the Claimant received treatment through chiropractor Beatrice Lofton without any sustained benefit. The Claimant reported that when he went to a Concentra medical center in Atlanta, he was turned away because they did not have authorizing paperwork (Claimant's Exhibit 1; pp. 1-2; Respondents' Exhibit A, pp. 1-2). The Claimant reported to Dr. Roth that he continued to experience discomfort at a 6/10 pain level and he feels that he is worse now than when his symptoms first began. The Claimant identified the regions of pain as midline low back with emphasis to the right-sided paraspinals. The Claimant also identified the right gluteal and right posterior leg extending down to mid-calf. Dr. Roth noted that, other than chiropractic, little to no medical attention was provided to the Claimant and does not have any prescription medications. The Claimant reported some temporary benefit from OTC anti-inflammatory agents and dry needling performed in physical therapy (Claimant's Exhibit 1; p. 2; Respondents' Exhibit A, p. 2). The Claimant reported diminished ability to engage in normal activities such as playing basketball, fishing, running and dancing as he has difficulty lifting, bending, standing or sitting for long periods. As of this date, the Claimant was not working (Claimant's Exhibit 1; p. 2; Respondents' Exhibit A, p. 2). On physical examination, Dr. Roth noted that "discomfort to palpation is evident on the right at L4-5 and also the quadrates lumborum. This discomfort is continuous with right-sided lateral sacrum, gluteal and piriformis. No similar discomfort on the left." Dr. Roth was also unable to rule out the right hip abnormality as the Claimant continues to have mild, very medial groin discomfort even though hernia has been ruled out. Dr. Roth assess right-sided lumbopelvic pain as the claim related issue and opined that the Claimant was not at MMI as the source of his discomfort is not medically determined and his treatment is not complete (Claimant's Exhibit 1; p. 3; Respondents' Exhibit A, p. 3). Based on this, Dr. Roth felt that the Claimant was not currently appropriate for an impairment rating because the body parts to be evaluated were not clear and there was no diagnosis yet (Claimant's Exhibit 1; p. 4; Respondents' Exhibit A, p.4).

21. The Claimant testified that eventually he saw Dr. Hall at Concentra (this would have been in Georgia) and that Dr. Hall sent the Claimant to see Dr. Foster, a specialist. The Claimant testified that he is not working because Dr. Hall had the Claimant on restrictions. The Claimant testified that, at this point when he saw Dr. Hall, he was still feeling a lot of pain, with some days better than others, but he could not have performed his full duty regular work.
`

22. On August 10, 2015, the Claimant treated with Dr. Roy Hall at Concentra in Morrow, Georgia. The Claimant reported pain in the lower back and right leg from a June 4, 2014 lifting injury at work. He stated that he has had pain ever since lifting a beam he discovered weighed more than 200 pounds. The Claimant reported that two days prior to the office visit, the pain has been worse and radiated down to the right calf muscle. He reported that he had been seeing a chiropractor for treatment but that it wasn't helping much. He reported a moderate pain level of 6/10. After examination, Dr. Hall assessed a lumbar sprain and chronic lumbar radiculopathy and recommended an MRI and made a referral for physical therapy. Dr. Hall placed the Claimant on modified work/activity limiting lifting, pushing and pulling to 30 pounds and limiting bending to occasionally (defined as up to 3 hours per day)(Claimant's Exhibit 2, pp. 9-11; Respondents' Exhibit L, pp. 122-124).

23. On August 31, 2015, the Respondents filed a General Admission of Liability based on Dr. Roth's DIME opinion that the Claimant was not at MMI (Respondents' Exhibit N and O).

24. On September 2, 2015, The Claimant filed an Application for Hearing on the issues of compensability, medical benefits, TTD and TPD (Respondents' Exhibit N and O).

25. On September 3, 2015, the Claimant saw Dr. Hall reporting that his "symptoms are unchanged." Dr. Hall noted that the Claimant had attended all 6 PT visits but could benefit from 4 more. By this visit, the work/activity restrictions from Dr. Hall were limiting lifting to 30 pounds and pushing and pulling to 50 pounds with no other restrictions (Claimant's Exhibit 2, pp. 45-47; Respondents' Exhibit L, pp. 144-146).

26. The Claimant underwent an MRI of the lumbar spine without contrast on September 22, 2015. The radiologist noted mild disc bulge at L3-4 and disc bulge with left foraminal disc protrusion and suggestions of annular tear at L4-5 with left foraminal disc protrusion. At L5-S1, disc bulge was also noted with suggestion of annular tear. Mild bilateral neural foraminal stenosis was noted at L4-5 and L5-S1 (Claimant's Exhibit 2, p. 58; Respondent's Exhibit H).

27. Respondents' filed their Response to Application seeking to withdraw the General Admission of Liability and challenging medical benefits (Respondents' Exhibit N and O).

28. On September 28, 2015, the Claimant saw Dr. Michael McHenry for electrodiagnostic consultation on referral from Dr. Hall. Dr. McHenry opined that the Claimant had a normal electrodiagnostic examination (Claimant's Exhibit 2, pp. 51-57; Respondents' Exhibit G, pp. 53-54).

29. On October 8, 2015, the Claimant saw Dr. Roy Hall again for a recheck of his injuries. The Claimant reported that his symptoms were unchanged after physical therapy sessions. The Claimant was not working at this time. Dr. Hall continued to assess the Claimant with lumbar strain and chronic lumbar radiculopathy. Work restrictions were maintained occasional lifting up to 30 pounds, occasional pushing/pulling up to 50 pounds, and bending, standing and walking up to 3 hours per day with a need to change positions periodically to relieve discomfort (Claimant's Exhibit 2, pp. 67-68; Respondents' Exhibit L, pp. 160-161). On October 15, 2015, Dr. Hall referred the Claimant to an orthopedic specialist (Claimant's Exhibit 2, p. 70; Respondents' Exhibit L, p. 166).

30. On November 3, 2015, the Claimant saw Dr. John Foster, III, for evaluation of low back pain and right leg pain. On examination, Dr. Foster noted pain over the right SI joint with no tenderness elsewhere, including the midline and left SI joint. Dr. Foster found full active range of motion and no instability. Dr. Foster recommended a right SI injection and placed the Claimant at full duty. Dr. Foster noted that he would see the Claimant back in 3 weeks and if the Claimant gets temporary or partial improvement from the right SI injections, he would consider a series of up to three injections. If there was no improvement and no significant findings on MRI, Dr. Foster opined the Claimant would likely be at MMI (Claimant's Exhibit 2, p. 75; Respondents' Exhibit L, p. 168).

31. On November 10, 2015, PALJ Sandberg denied the Respondents' motion to compel Claimant to attend a follow up DIME with Dr. Roth because no ATP has made a determination as to MMI (Respondents' Exhibit N).

32. The Claimant saw Dr. Foster again on November 24, 2015 and Dr. Foster noted the Claimant still has not had the first right SI injection. The Claimant did bring the MRI films from September 22, 2015 for Dr. Foster's review and Dr. Foster noted mild bilateral neural foraminal stenosis at L4-5 and L5-S1. On examination, Dr. Foster continued to note tenderness over the right SI joint, positive Gaenslen's, positive Patrick's and positive FABER with negative straight leg raise tests. Dr. Foster opined that he still believed the right SI joint was the Claimant's pain generator and continued to recommend that the Claimant undergo the first right SI joint injections. If this didn't work, Dr. Foster also indicated he would like to try a one-time basis lumbar epidural steroid injection. Dr. Foster opined that if he does not have surgically treatable pathology, the Claimant would be at MMI when he has exhausted injection therapy (Respondents' Exhibit L, p. 169).

33. On November 24, 2015, Dr. Jeffrey Wunder provided a written report of his medical record review of the Claimant's prior 2012 injury records and the records for the June 2014 work injury. Ultimately, Dr. Wunder agreed with Dr. Roth that the physical

diagnoses in this case are not clear and he further stated that subjective symptoms seem disproportionate to objective findings. Additionally, Dr. Wunder expressed confidence in Dr. Gellrick's initial findings that the Claimant had only presented with hamstring and gluteal tenderness up to the inferior SI joint but she did not find and SI or lumbar strain. Dr. Wunder also pointed out that only when the Claimant went to the chiropractor in Atlanta, did the focus shift from the groin and hip to the low back. Based on all of this, Dr. Wunder opined there is no indication for epidural steroid injections since there is no leg pain or radicular symptoms plus a normal MRI (Respondents' Exhibit M).

34. Dr. Henry Roth testified by deposition on December 22, 2015. Dr. Roth acknowledged that he performed the Division IME on the Claimant on July 6, 2015 (Roth Depo. Tr., p. 3). Dr. Roth testified that the Claimant complained chiefly of low back pain, discomfort in his right leg and difficulty sleeping. He testified that the Claimant told him that he developed discomfort in his groin and the back of his right leg the night after a day at work handling unusual heavy materials (Roth Depo. Tr., p. 4). Dr. Roth testified that the Claimant denied any similar history of discomfort or disabling difficulties (Roth Depo. Tr., p. 5). After examination, Dr. Roth reached a descriptive diagnosis of "complaint of right-sided low back pain" which is the symptom itself, but was unable to reach a specific claim related diagnosis (Roth Depo. Tr., p. 7). In order to reach a diagnosis, Dr. Roth recommended a lumbar MRI and an EMG nerve conduction study of the right lower extremity and hip x-rays (Roth Depo. Tr., p. 8). Later in the deposition testimony, Dr. Roth reviews the MRI report noting that it is relatively benign and the minor degenerative changes to not correlate with the Claimant's complaints. Namely, there was nothing on the right side in the upper, mid-lumbar spine that would explain pelvic pain (Roth Depo. Tr., pp. 22-23). Dr. Roth also reviewed the EMG from September 28, 2015 which was negative and provided no indication of nerve root irritation to explain the symptoms the Claimant was reporting (Roth Depo. Tr., p. 23). Dr. Roth also reviewed hip x-rays from September 3, 2015 and testified that the right hip is normal and shows no arthritis (Roth Depo. Tr., p. 23). Based on his review of the results from the diagnostic testing Dr. Roth had recommended in his DIME report, Dr. Roth now opined that he had sufficient information to formulate an opinion as to the Claimant's work related diagnosis (Roth Depo. Tr., pp. 23-24). He opined that there is no lumbar or hip diagnosis and no hernia and no evidence of a lesion to explain his symptoms. Rather, going back to Dr. Gellrick's medical records, Dr. Roth testified that there is a presumption of a strain of his hip flexor tendon with some swelling for his work related injury. However, with respect to any work related injury, the Claimant is at MMI without impairment and Dr. Roth now agrees with Dr. Gellrick's date of MMI (Roth Depo. Tr.,pp. 24-25).

35. On cross-examination, Dr. Roth agreed that Dr. Gellrick had released the Claimant from care because he failed to show up for a couple of appointments because he had moved to Georgia. Based on this, Dr. Roth also agreed that Dr. Gellrick's assumption that the Claimant's pain must have resolved and that was why he no longer needed care was probably incorrect (Roth Depo. Tr., pp. 25-26). In reviewing the medical records from the Claimant's September 26, 2012 work injury, Dr. Roth agreed

that as the Claimant was released without impairment and at MMI by October 4, 2012, this injury was likely a minor injury (Roth Depo. Tr., pp. 26-27). Dr. Roth opined that, to the extent that the Claimant is still complaining of right-sided pain in his leg and back, there is no indication that it is due to a work-related disorder and the Claimant should see a primary care provider for additional follow up (Roth Depo. Tr., p. 27). Dr. Roth testified that when he initially prepared his DIME report, he did not feel the Claimant had a complete enough evaluation and he recommended additional studies. He further stated that now that these studies have been completed they revealed nothing and so further medical evaluation and treatment is not likely to provide benefit and, therefore, the Claimant is at MMI (Roth Depo. Tr., p. 28). Additionally, as there is no work-related medical diagnosis in the lumbar spine, continuing lumbar pain and rigidity would not result in an impairment rating. Dr. Roth also opined that it would not be appropriate to rate the buttock and groin pain where there is no physiologic correlation (Roth Depo. Tr., pp. 28-29).

36. A prehearing conference was held on January 7, 2016 in this matter on Respondents' motion to compel attendance at a follow up DIME, for a continuance and Respondents' motion to order Dr. Roth to issue a supplemental DIME report. PALJ Sandberg denied all three of Respondents' motions specifically indicating that Respondents already obtained deposition testimony from Dr. Roth and there is no known authority for the PALJ to order the DIME physician to issue a supplemental report (Respondents' Exhibit O).

37. At the hearing on January 14, 2016, the Claimant testified that he had a prior worker's compensation injury in Texas on September 26, 2012 but that turned out to be nothing and was different from the injury in this case. Per the Claimant's testimony, after the 2012 injury he had no further back problems. Records in Respondents' Exhibit G, pp. 57-69 show that the Claimant's 2012 work injury involved sharp pain in the right side neck area that radiated to the right shoulder and a right mid/lower back pain after lifting a 150-200 pound dump chain (Respondents' Exhibit G, p. 57). The Claimant was initially under work restrictions limiting lifting to no more than 5 pounds for more than 2 hours per day. However, by October 4, 2012, after some physical therapy sessions, the Claimant's work restrictions were lifted and he was returned to work with no restrictions whatsoever (Respondents' Exhibit G, pp. 57-69).

38. The Claimant testified that he also had a motor vehicle accident in 2007 when his car was rear-ended. According to medical records, the Claimant was brought in to Southern Regional Medical Center on October 8, 2007 on a stretcher with complaints of neck and back pain (Respondents' Exhibit F).

39. The Claimant testified at the hearing that right now he feels okay, he has good days and bad days. The problem is mainly with his low back and right buttocks.

40. On February 8, 2016, Tonya Wilson testified as a lay witness. She is employed in Human Resources for Michels Corporation. She is familiar with the Claimant who was an employee of the Michels Corporation as a general laborer (Wilson

Depo. Tr., p. 3). The job description for this position requires a general laborer to move soil, pull, push and lift heavy objects, measure distance, clean tools, use hand trenches, operate pavement breakers/jackhammers, and clear and prepare highway work zones (Wilson Depo. Tr., pp. 3-4). In reviewing the Claimant's employment file there is no information that the Claimant was assigned to work light duty. In order to work light duty, the Claimant would have to report an incident and it would be documented in the system in the risk management department. The reason for termination of the Claimant's employment with Michels Corporation was layoff (Wilson Depo. Tr., p. 5). On cross-examination, Ms. Wilson testified that she never watched the Claimant perform his job duties and that she was only testifying based on the records she had (Wilson Depo. Tr., pp. 5-6).

41. On February 23, 2016, Raymond Beesley testified as a lay witness. He is a general superintendent for Obayashi and has worked for them for about eight years. He directs all the work that is underground on a project (Beesley Depo. Tr., p. 3). In June of 2014, he was working on the twin tunnels project in Idaho Springs, Colorado. He is familiar with the Claimant who had worked for him on that project as well as a prior job in Atlanta (Beesley Depo. Tr., p. 4). Mr. Beesley testified that he had discussions with the Claimant about taking some time off from work. Mr. Beesley recalled that the Claimant had some family business or some type of business to take care of in Atlanta and Mr. Beesley told him that he is welcome to go home and take care of that and then he could return to work (Beesley Depo. Tr., p. 4). Mr. Beesley recalled that this conversation was in June or July of 2014.. Beesley also testified that he recalled the Claimant reporting an injury to him and the safety director. After this, the Claimant was placed on modified duty to accommodate physician restrictions. At some point after this the Claimant left on a scheduled vacation (Beesley Depo. Tr., p. 5). Mr. Beesley testified that there was modified duty available for the Claimant when he returned from vacation, but the Claimant never returned from vacation which surprised Mr. Beesley (Beesley Depo. Tr., p. 6). Mr. Beesley testified that he does not have any idea why the Claimant did not return. However, eventually, he had to terminate the Claimant's employment. Mr. Beesley specifically denied that he had any phone conversation with the Claimant during which the Claimant told him he was in too much pain to return to work. Rather, Mr. Beesley was certain that he never heard anything at all from the Claimant (Beesley Depo. Tr., p. 7). In reviewing phone records between July 8, 2014 and August 7, 2014, Mr. Beesley was able to confirm that he did not receive any phone calls from the Claimant during that time period (Beesley Depo. Tr., pp. 7-8). On cross-examination, Mr. Beesley testified that he did not provide anything in writing to the Claimant that stated the Employer would meet his restrictions and bring him back to work.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1), the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. Respondent bears the burden of establishing any affirmative defenses. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201 (2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

Reconsideration of the issues raised before PALJ Sandberg in his November 10, 2015 and January 7, 2016 Prehearing Conference Orders

Respondents have requested review of PALJ Sandberg's Prehearing Orders dated November 10, 2015 and January 7, 2016 which denied the Respondents' Motion to Compel the Claimant to Attend a Follow Up DIME. Panels of the Industrial Claim Appeals Office have held that "orders related to DIME requests are in the nature of evidentiary rulings and are therefore, interlocutory (see *Alvarez v. JBS USA, LLC,* W.C. 4-783-538 (ICAO, July 10, 2012).

However, the Colorado Supreme Court and ICAO panels have issued orders contemplating ALJ review of prehearing orders issued by PALJs. In *Szot v. U.S. Security Associates, Inc.,* W.C. 4-714-229 (ICAO, October 2, 2007), the panel concluded that an ALJ erred by not reconsidering a ruling from a PALJ. The panel stated that an ALJ has jurisdiction to review interlocutory rulings of a PALJ and that further consideration by an ALJ of prehearing orders is anticipated. Although the orders of a PALJ that arise in the context of a prehearing conference are "interlocutory" and "not immediately appealable," the Colorado Supreme Court noted that, it makes sense to treat a PALJ's order related a prehearing conference in this manner, "because a prehearing conference, by definition, is followed by a full hearing before the director or an ALJ" and "thus, the propriety of a PALJ's prehearing order may be addressed at the subsequent hearing." *Industrial Claim Appeals Office v. Orth,* 965 P.2d 1246, 1254 (Colo. 1998).

While the PALJ orders in question in this case are not deemed to be final, appealable orders as they arose out of a prehearing conference, they are nevertheless subject to review by the ALJ.

Respondents have argued before PALJ Sandberg and the ALJ in this case that Claimant should be compelled to return to Dr. Roth for a follow up DIME. Respondents argue that *Williams v. Kunau*, 147 P.3d 33 (Colo. 2006), *Sanco Indus. v. Stefanski*, 147 P.3d 5 (Colo. 2006) and *Favela* v. *Cargill Meat Solutions Corp.,* (ICAO May 3, 2012) support their position. Respondents are incorrect and these cases are factually distinguishable from the current situation. In both *Williams* and *Stefanski,* the Colorado Supreme Court held that "once a claimant has successfully challenged a finding of MMI through the DIME process, the DIME process remains open." In both of those cases, ***after*** an authorized treating physician (ATP) made a second finding of MMI, the respondents were not permitted to file a Final Admission of Liability to close the case prior to returning the claimant to the DIME for a follow up examination and determination of MMI. Here, there is no second finding of MMI by an ATP.

PALJ Sandberg found that, without a requisite determination of MMI by an ATP, either in Colorado or Georgia, there was no authority to compel the Claimant to attend a follow up DIME with Dr. Roth. This position is in line with the statute which provides that "an authorized treating physician shall make a determination as to when the injured employee reaches maximum medical improvement." C.R.S. § 9-42-107(8)(b)(I). The only determination that the Claimant was at MMI in this case was made by Dr. Gellrick. However, that was effectively nullified by Dr. Roth's DIME opinion. Since the DIME opinion, no ATP has determined that the Claimant is at MMI. There is only Dr. Roth's deposition testimony that now states the Claimant is at MMI.

At this point the Respondents' remedy, where no ATP has determined the Claimant has reached MMI, is through C.R.S. § 8-42-107(8)(b)(II) if all of the conditions are met. The conditions are:

(1) at least 24 months have passed since the date of injury;
(2) a party has made a written request that an ATP determine whether the Claimant has reached MMI;
(3) the ATP has not determined that the Claimant is at MMI; and
(4) a physician other than the ATP has determined the Claimant is at MMI.

At the time of the hearing, 24 months had not elapsed since the date of the injury, but now they have. However, Respondents have not complied with the second requirement that a party makes a written request that an ATP determine whether the Claimant has reached MMI. Therefore, this ALJ agrees with PALJ Sandberg and finds that Respondents motion to compel remains premature and the Respondents have still not satisfied all of the requirements to return the Claimant to Dr. Roth for follow up examination.

Withdrawal of Admissions Made in a General Admission of Liability

C.R.S. § 8-43-201 deals with disputes arising under the Workers' Compensation Act of Colorado. It provides, in pertinent part, that,

> A claimant in a workers' compensation claim shall have the burden of proving entitlement to benefits by a preponderance of the evidence; the facts in a workers' compensation case shall not be interpreted liberally in favor of either the rights of the injured worker or the rights of the employer; a workers' compensation case shall be decided on its merits; and a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification.

Prior to the above modification provision being enacted, case law construing C.R.S. 8-43-203(2)(d) permitted respondents to receive relief from "improvidently filed" admissions. However, under the provisions of Section 8-43-201(1), C.R.S., as amended effective August 5, 2009, the party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification. *Rodriguez v. City of Brighton,* W.C. No. 4-782-516 (ICAO August 23, 2011). Under the provisions of § 8-43-201(2), C.R.S. the amendments to subsection 1 of § 8-43-201, C.R.S. are procedural and apply to all claims for workers' compensation regardless of the date of filing of the claim. Here, Respondents seek to modify the issue of compensability determined by General Admission filed by Insurer. Respondents therefore bear the burden of proof, by a preponderance of the evidence, to show that Claimant did not sustain a compensable injury on June 4, 2014.

Compensability

A claimant's right to compensation initially hinges upon a determination that the claimant suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. C.R.S. § 8-41-301. Whether a compensable injury has been sustained is a question of fact to be determined by the ALJ. *Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo. App. 2009). In this case, since Respondents seek to withdraw a General Admission of Liability filed on August 31, 2015 based on Dr. Roth's DIME opinion that the Claimant was not at MMI, the Respondents must establish that the Claimant did not suffer a compensable injury on June 4, 2014.

There is no presumption than an injury which occurs in the course of employment arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 2993. Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado, 717 P.2d 1000 (Colo. App. 1986).* The weight and credibility to be assigned expert testimony on the issue of causation is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

Compensable injuries are those which require medical treatment or cause disability. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970). In order to prove causation, it is not necessary to establish that the industrial injury was the sole cause of the need for treatment. Rather, it is sufficient if the injury is a "significant" cause of the need for treatment in the sense that there is a direct relationship between the precipitating event and the need for treatment. A preexisting condition does not disqualify a claimant from receiving workers' compensation benefits. Rather, where the industrial injury aggravates, accelerates, or combines with a preexisting disease or infirmity to produce the need for treatment, the treatment is a compensable consequence of the industrial injury. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001); *H and H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Seifried v. Industrial Commission,* 736 P.2d 1262 (Colo. App. 1986). However, where an industrial injury merely causes the discovery of the underlying disease to happen sooner, but does not accelerate the need for the surgery for the underlying disease, treatment for the preexisting condition is not compensable. *Robinson v. Youth Track*, 4-649-298 (ICAO May 15, 2007).

There is sufficient evidence in the record that the Claimant suffered an injury on June 4, 2015. While there were some discrepancies in the testimony and evidence, overall, the Claimant's testimony regarding his mechanism of injury was generally credible and the medical records of Dr. Gellrick provide support for a determination that there was a compensable injury that required medical treatment.

Although Respondents argue that the deposition testimony of Dr. Roth provides support for the requested withdrawal of the admission, at best, Dr. Roth's deposition testimony supports a conclusion that the Claimant was at MMI as of August 6, 2014. However, Dr. Roth does not testify that the Claimant never suffered a compensable injury. Rather, going back to Dr. Gellrick's medical records, Dr. Roth testified that there was a presumption of a strain of the Claimant's hip flexor tendon with some swelling for his work related injury. Further, in looking at the full deposition transcript for Dr. Roth along with his prior DIME report, Dr. Roth supports a position that certain conditions arising out of the Claimant's work injury resolved and the source of the Claimant's continued pain has not been determined yet. This does not equate with a finding that the Claimant suffered no compensable injury.

Based on the foregoing, the ALJ determines that Respondents have not proven by a preponderance of the evidence that the Claimant's work activities on June 4, 2016 did not cause his current medical conditions or permanently aggravate, accelerate or combine with a preexisting condition producing the need for medical treatment. Thus, the Claimant suffered a compensable injury on that date. Respondents may not withdraw the General Admission of Liability.

Medical Benefits –Reasonable and Necessary

Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. C.R.S. § 8-42-101. However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000).

Although Respondents are liable for medical treatment that is reasonably necessary to cure and relieve the effects of the industrial injury, Respondents may, nevertheless, challenge the reasonableness and necessity of current or newly requested treatment notwithstanding its position regarding previous medical care in a case. *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002), (upholding employer's refusal to pay for third arthroscopic procedure after having paid for multiple surgical procedures). The question of whether a particular medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office, supra*; *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P.2d 251 (Colo. App. 1999). The claimant bears the burden of proof to establish the right to specific medical benefits. *HLJ Management Group, Inc. v. Kim,* 804 P.2d 250 (Colo. App. 1990). Factual determinations related to this issue must be supported by substantial evidence in the record. Section 8-43-301(8), C.R.S. Substantial evidence is that quantum of probative evidence which a rational fact finder would accept as adequate to support a conclusion without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert,* 914 P.2d 411, 415 (Colo. App. 1995).

As stated above, the Claimant has not yet been placed at MMI under the Act and is entitled to receive medical treatment for conditions arising out of his work related injury. However, Respondents have challenged whether the proposed treatment recommended by Dr. Foster, namely a right SI joint injection and a lumbar steroid injection.

Claimant initially treated with Dr. Gellrick from June 5, 2014, the day following his work injury, until his last office visit with her on June 19, 2014. The entire time that the Claimant treated with Dr. Gellrick, his complaints were pain and discomfort in the right groin and hip area and his right posterior thigh. There were no low back or lumbar complaints and no treatment was provided for the low back. The Claimant also made no back complaints to emergency room physicians when he was experiencing the urinary dysfunction symptoms. At that point, Dr. Gunter also saw no evidence of hernia and felt the Claimant's pain was secondary to hamstring strain.

The first low back complaint in the Claimant's medical records is to his chiropractor in Georgia, Dr. Lofton, on August 1, 2014, almost two months after the work injury. She assessed the Claimant with low back pain and a lumbar strain or sprain with lumbosacral radiculitis and she provided treatment to the low back over several months. However, the Claimant stated to both Dr. Roth and Dr. Hall that the chiropractic treatment was not helping much. Dr. Lofton's notes are somewhat consistent in that she repeatedly indicated that the Claimant was showing only slight improvement.

Dr. Hall diagnosed the Claimant with lumbar strain and chronic lumbar radiculopathy and Dr. Foster felt the Claimant's pain generator might be the right SI joint. However, neither of these doctors established a causal link between the Claimant's June 4, 2014 work injury and any lumbar or SI joint symptoms.

Dr. Roth had recommended a lumbar MRI and an EMG nerve conduction study of the right lower extremity and hip x-rays. These were ultimately performed on referral from the Claimant's ATP in Georgia, Dr. Hall. At his deposition in December 2015, Dr. Roth reviewed the MRI report noting that it is relatively benign and the minor degenerative changes to not correlate with the Claimant's complaints. Namely, there was nothing on the right side in the upper, mid-lumbar spine that would explain pelvic pain. Dr. Roth also reviewed the EMG from September 28, 2015 which was negative and provided no indication of nerve root irritation to explain the symptoms the Claimant was reporting. Dr. Roth also reviewed hip x-rays from September 3, 2015 and testified that the right hip is normal and shows no arthritis. Based on his review of the results from the diagnostic testing Dr. Roth had recommended in his DIME report, Dr. Roth opined that there is no lumbar or hip diagnosis and no hernia and no evidence of a lesion to explain the Claimant's symptoms.

The Claimant's treatment has been somewhat intermittent in this case, due in large part to the Claimant moving back and forth between Colorado and Georgia and also due to a lack of communication. There have also been multiple treatment providers who have not necessarily had access to the medical records from the other treatment providers. This may explain some of the divergence in the assessments and treatment provided by the various treating physicians. What is clear, nevertheless, is that while the Claimant was initially treated for right-sided groin, hip/buttock and thigh symptoms, his treatment shifted to treatment for a lumbar condition with radiculopathy. Based on the diagnostic testing results, it would appear that the Claimant's ATPs in Georgia are treating the Claimant's subjective complaints of pain as opposed to symptoms that correlate to objective diagnostic findings. Further, the lumbar symptoms were treated in the absence of a comprehensive causation analysis linking the lumbar symptoms to the June 4, 2014 work injury.

In viewing the medical evidence and the Claimant's testimony as a whole, the Claimant has failed to prove that the right SI joint injection and lumbar steroid injection recommended by Dr. Foster are reasonably necessary to cure and relieve the effects of the Claimant's industrial injury. Claimant's medical benefits claim is, therefore, denied and dismissed.

Temporary Disability Benefits

To prove entitlement to temporary disability benefits, the Claimant must prove: that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). C.R.S. § 8-42-103(1)(a), requires a claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain temporary disability benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). If the period of disability lasts longer than two weeks from the day the injured employee leaves work as the result of the injury, disability indemnity shall be recoverable from the day the injured employee leaves work. § 8-42-103(1)(b), C.R.S. TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*, namely:

- The employee reaches maximum medical improvement;
- The employee returns to regular or modified employment;
- The attending physician gives the employee a written release to return to regular employment; or
- The attending physician gives the employee a written release to return to modified employment, such employment is offered to the employee in writing, and the employee fails to begin such employment.

The existence of disability presents a question of fact for the ALJ. There is no requirement that the claimant produce evidence of medical restrictions imposed by an ATP, or by any other physician. Rather, lay evidence alone may be sufficient to establish disability. *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997).

In this case, the Claimant established that he suffered a compensable work injury on June 4, 2014, but he failed to prove that he suffered a wage loss as a result of that injury for the time periods when he claims entitlement to TTD benefits, namely June 27, 2014 to November 6, 2014 and from February 28, 2015 to November 3, 2015.

After his work injury, the Claimant returned to modified employment with his Employer per his testimony and the testimony of his supervisor Mr. Beesley. His TTD benefits therefore, ceased. Then, the Claimant left for a scheduled vacation and never returned to work. In resolving conflicting evidence, the ALJ found that the Claimant never contacted his supervisor or his Employer to explain why he wasn't returning to work. He simply did not return. The Claimant admitted that Mr. Beesley likely expected him to return to work from his vacation. The Claimant also had no reason to believe that he would be returning to full duty. Mr. Beesley testified credibly that light duty would have been available on the Claimant's return from vacation for as long as he required it. The Claimant did not offer contradictory testimony or indicate that he had been advised that he would no longer have the option of light duty/modified employment. The Claimant's employment was subsequently terminated for failing to return to work after his scheduled vacation without contacting his Employer. This is the reason for the Claimant's wage loss.

Additionally, the Claimant returned to Colorado and worked a laborer position for a different employer from November 7, 2014 to February 28, 2015. In his Application for this job, the Claimant stated he was looking for full time work, was willing to work overtime and wanted to work in the tunneling division as a rigger and toplander. He was hired by the second employer and worked until he was laid off due to lack of work as the job was coming to an end. Per the testimony of Ms. Wilson who works in HR for this second employer, there is no information that the Claimant was assigned to work light duty. Rather, because he had not suffered a work injury on this job and did not report any incident, he would not have been assigned light duty by the risk management department. The Claimant worked regular employment which is another event that would terminate TTD benefits. Here the Claimant's wage loss is due to the lay off and is in no way related to a work related disability.

Next, there was no persuasive evidence that the Claimant's work injury related conditions deteriorated after February 28, 2015 such that his work related disability impaired his ability to resume his prior work or impaired his wage earning capacity. Between February 28, 2015 and August 10, 2015, when the Claimant first treated with Dr. Roy Hall, the Claimant was under no work restrictions from a treating physician. While the Claimant testified that he didn't believe he could have worked his regular job, he had just worked for Michels Corporation in a similar type of laborer job and only stopped working there due to layoff. Therefore, the Claimant's testimony about ability to work is not credible or persuasive. Then on August 10, 2015, Dr. Hall diagnosed the Claimant with a lumbar condition and lumbar radiculopathy and based on this, placed the Claimant under work restrictions. However, it has not been established that the lumbar condition is related to his work injury. In fact, Dr. Roth persuasively testified that there is no work-related lumbar condition. Therefore, the Claimant is not entitled to TTD benefits after August 10, 2015 and November 3, 2015.

Finally, on November 3, 2015, Dr. Foster, an ATP in Georgia, placed the Claimant at full duty again and so the Claimant was under no work restrictions from that point forward.

The Claimant has failed to establish that he is entitled to temporary disability benefits in this case and the claim is denied and dismissed.

ORDER

It is therefore ordered that:

1. In reconsidering the prehearing order of PALJ Sandberg, this ALJ concurs that without a requisite determination of MMI by an ATP, either in Colorado or Georgia, there was is authority to compel the Claimant to attend a follow up DIME with Dr. Roth at this time.

2. Respondents have not proven by a preponderance of the evidence that the Claimant did not suffer a compensable industrial injury on June 4, 2014. Thus, the Respondents may not withdraw the General Admission of Liability.

3. The Claimant has failed to prove that the right SI joint injection and lumbar steroid injection recommended by Dr. Foster are reasonably necessary to cure and relieve the effects of the Claimant's industrial injury. Claimant's medical benefits claim is, therefore, denied and dismissed.

4. The Claimant failed to prove his wage loss was due to disability resulting from the work injury and thus, failed to prove he is entitled to temporary total disability benefits and this claim is denied and dismissed.

5. Insurer shall pay the Claimant interest at the rate of 8% per annum on compensation benefits not paid when due.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's supplemental order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after the certificate of mailing in the supplemental order, as indicated on the certificate of mailing or service; otherwise, the Judge's supplemental order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the supplemental order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. The petition shall be in writing, shall set forth in detail the particular errors and objections relied upon, and shall be accompanied by a brief in support thereof. For statutory reference, *see* § 8-43-301(6), C.R.S. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 28, 2016

Kimberly A. Allegretti
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-965-603-02

ISSUES

I. Whether Claimant established by a preponderance of the evidence that he sustained compensable injuries to his head, neck, right shoulder and lungs (inhalation injuries) as a consequence of an explosion in Employers steel making facility on September 28, 2014.

II. If Claimant sustained compensable injuries, whether he established, by a preponderance of the evidence that he is entitled to all reasonable, necessary and related medical treatment for his head, neck, right shoulder, and lung conditions, including treatment obtained through St. Mary Corwin Hospital and the Hanson Clinic.

III. If Claimant sustained compensable injuries, whether he is entitled to a change of physician, to Dr. Michael A. Dallenbach.

IV. If Claimant sustained compensable injuries whether he is entitled to temporary total disability benefits from October 25, 2014 through February 15, 2015.

V. Whether Claimant's average weekly wage (AWW) is $1,440.81 or some other figure.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant was hired by Respondent-Employer as a mechanical millwright technician (MMT) on July 10, 2006. As an MMT, Claimant performs maintence and repairs in the mill. His duties include welding.

2. On September 28, 2014, Claimant was assigned to weld damaged safety stair rail located on a second floor in the steel making section of the mill. The project location was approximately sixty feet to the northeast and behind the ladle refinery north furnace (LRF) used to melt scrap iron into molten steel.

3. Claimant testified that he was using a gasoline powered portable welding machine mounted to a truck to complete the job. According to Claimant, the welding machine began to sputter as if it was running out of fuel. Consequently, Claimant testified that he elected to use a stationary welder located near the "vacuum tank degasser (VTD) across from the LRF.

4. Claimant testified that he was laying out the stationary welding leads to complete

his work when an explosion occurred at the LRF. It is uncontested that the explosion occurred and that there was a subsequent investigation into the root cause of the blast. Based upon the investigation, it was concluded that steel braided water hoses attached to the LRF hood likely got caught and ripped off during the hood's rotation while processing a batch of steel. In turn, an unknown quantity of water poured into the super heated molten steel and slag causing a steam explosion.

5. Claimant testified that he heard and felt a concussive explosion that slammed his body up against the VTD structure and its attachments (wall piping).

6. The shock wave from the explosion was sufficient to dislodge particulate matter from the steel making buildings rafters and cause the entire facility to go dark due to the dust, smoke, gases and incendiary materials, including molten steel, released into the air.

7. Claimant testified that he was briefly rendered unconscious and when he awoke he inhaled airborne particulate matter. Claimant testified that he was stunned by the concussive force of the blast, which he testified blew off his hard-hat. According to Claimant, the facility was dark but he could hear the popping of molten metal and a voice calling his name over the radio. Claimant testified that he was able to get to his feet and locate the stair way in an effort to exit the building. Claimant reportedly staggered down the stairs with use of the handrail, losing his balance and falling down the stairs to the floor secondary to poor visibility and his disorientation. The floor is constructed of rough grated metal. Claimant further testified to striking various parts of his body on the stairs and floor multiple times as he stumbled down the stairs. Once on ground level, Claimant testified that he saw glimpses of light and flashes of another worker wearing some type of "orange" garment moving away from him. Claimant testified that he was able to escape the building by feeling his way along and attempting to grab onto the person wearing the orange article of clothing.

8. Once outside the building, Claimant was attended to by emergency medical personnel dispatched to the scene. Claimant's vital signs were taken revealing a blood pressure of 160/90, a pulse of 110, respirations of 18 and pupils that were equal and reactive of light (PERL). Claimant testified that he was "in and out", was dizzy, had a headache, and ringing in his ears. The triage/ambulance report provides the following: "53 year old involved in explosion at steel mill – exposed black dust, eyes burning, lungs congested- . . . left side HA (headache). pt (patient) coughing". It goes on to confirm that while his throat was clear and he had a normal heart rhythm, Claimant had objective bilateral "wheezing." The assessment for the objective wheezing was recorded as exposure to "black dust" after explosion. There is no indication in the ambulance report that Claimant reported any injury to his head, neck and/or right shoulder. The record is also devoid of any obvious bumps, bruises or abrasions to Claimant's body. Claimant was transported by ambulance to St. Mary Corwin Hospital Emergency Room where he was attended to by Dr. Jennifer Lynne Carlis.

9. Dr. Carlis documented that Claimant presented with complaints of "mild

shortness of breath" noting further that he reported that he had "been coughing up dust like material." Claimant "[denied] any smoke inhalation or exposure to extreme heat." He denied "any other complaints." Musculoskeletal examination revealed full range of motion in the extremities which were also non-tender. Claimant was alert and oriented x3. He demonstrated a normal affect and his sensory and motor neurological examination was intact. Inspection of Claimant's body failed to reveal any physical injuries, including abrasions, burns, contusions, penetrating wounds or lacerations about the head, neck or extremities. Claimant was given a breathing treatment and at the time of discharge was in "absolutely no respiratory distress." Final diagnosis was "inhalation injury" with recommendation for follow-up.

10. Perry Bourgeois, Safety Supervisor for the maintenance department testified by Telephone. According to Mr. Bourgeois, he was dispatched to pick Claimant up from St. Mary Corwin Hospital emergency room following Claimant's examination. Mr. Bourgeois testified that upon his arrival he made contact with Claimant who appeared shaken by the event. Per Mr. Bourgeois, Claimant appeared nervous and was complaining of having a queasy/upset stomach. Upon discharge from the emergency room, Mr. Bourgeois offered Claimant a ride home. Claimant declined and Mr. Bourgeois drove Claimant back to the plant parking lot where Claimant later retrieved his vehicle and drove home. According to Mr. Bourgeois, Claimant was well enough to drive home. Claimant mentioned nothing to Mr. Bourgeois about being blown into a wall, losing consciousness, falling down stairs, or anything about injuring his neck or right shoulder during their time together.

11. Claimant testified that once he was back at the mill, he proceeded to the shower house where he cleaned himself up, as he was coated in particulate matter. He then drove home. Claimant, who lives alone, testified that he passed out in the hallway of his home. His next recollection is waking up in the hallway covered in vomit and experiencing severe coughing, headaches, and dry mouth. During an independent medical examination (IME) conducted by Dr. Eric Ridings, at Respondent's request, Claimant reported that after arriving home, he had no recollection of the evening. Claimant recalled waking up in his hallway with vomit all over himself. He then showered, and with blurred vision and ringing in his ears, went back to sleep, and slept until the next evening. During this same period, Claimant testified that he had repeated bouts of vomiting. Despite his worsening nausea and other symptoms, Claimant did not call for medical assistance notwithstanding the expressed instruction from the ER to follow up there should his symptoms worsen or other concerns arise.

12. Claimant attempted to return to work on Wednesday, October 1, 2014, but had problems performing his job. According to Claimant he had difficulty holding wrenches, hammers, welding leads, etc. He also reportedly was experiencing memory problems and nightmares. Per Claimant, he felt "locked up." He experienced similar symptoms the next day so was assigned different job duties at the caster. Claimant reportedly had to climb 85 steps in this position, which caused difficulty with breathing.

13. Claimant testified that he complained about his ongoing symptoms to the on-site

nurse evaluator, Sally Stark. Claimant was adamant about having his ongoing symptoms addressed. He wanted to see a "real doctor." According to Claimant, Ms. Stark's response was to give him aspirin, BioFreeze and BenGay. Claimant felt that he had been exposed to heavy metals and other particulates that were poisoning him and causing lock jaw. On October 20, 2014, Claimant reported to the on-site medical clinic for a pulmonary function test so he could be fitted for a respirator. A note for his encounter with Nurse Stark on this date reflects that Claimant wanted a referral to a pulmonologist for a lung biopsy. When Nurse Stark raised the risks associated with a lung biopsy and instead suggested blood testing for heavy metals, Claimant reported that he did not trust the company, suggesting that Respondent-Employer would manipulate the results. Nurse Stark called the medical director for the on-site medical clinic to discuss Claimant's request for a lung biopsy and later Claimant with the outcome of her conversation with Dr. Goren, purportedly informing Claimant that no one would do the requested biopsy given the nature of the exposure and the risks associated with the procedure.

14. On October 24, 2014, Claimant appeared in Respondent-Employer's medical clinic where he was attended to by Nurse Stark. According to a note from this encounter, Claimant appeared psychologically compromised. His speech was pressured and erratic, he was pale, his hands were shaking and he was rocking back and forth in his chair. After discussing the situation with co-employee Kyle Billings and John Sabat, Nurse Stark concluded that Claimant presented a danger to himself and others and that he should be transported to the hospital for further evaluation. An ambulance was summoned and when the emergency medical technicians arrived, they spoke with Claimant. The EMT's agreed that Claimant should be evaluated and asked him to lie down on a stretcher for transport to the hospital. Claimant refused prompting a call to the Sheriff's office. Upon the deputy sheriff's arrival, Claimant agreed to proceed to the hospital as long as he was able to drive his car. Claimant was followed to the hospital by the deputy. Claimant was evaluated in the ER after which it was felt that Claimant should be evaluated by a psychiatrist. Regardless, Claimant was provided with a release to return to work.

15. Claimant left the ER and returned to the mill where he contacted Dave Ryder his supervisor who refused to accept the release paperwork from the hospital and had him escorted off the property. His electronic access to the mill's property was then cut off pending a psychological fitness for duty evaluation.

16. Claimant then testified that he submitted a one-time change of physician form to Nurse Stark, as his treating provider, but Nurse Stark did not act upon it. Consequently, Claimant referred himself to Dr. Michael Dallenbach for treatment. Dr. Dallenbach subsequently evaluated Claimant on May 6, 2015. The record evidence supports that Claimant submitted a "Notice of One-Time Change of Physician & Authorization for Release of Medical Information form to Ms. Stark on November 4, 2014.

17. Claimant was also evaluated by Dr. Robert Kleinman on November 4, 2014 for

purposes of assessing his psychological status and fitness for duty. As part of the history surrounding the explosion, Claimant specifically denied any loss of consciousness to Dr. Klienman. Claimant told Dr. Kleinman that he was doing work repairing the rail when the machine exploded. Dr. Kleinman noted that Claimant believed the "company was trying to cover this up." Though Dr. Kleinman noted that Claimant's justification for his behavior when confronting NP Stark was that he "just wanted to see a doctor," Claimant mentioned nothing about ongoing head, neck, or shoulder pain. Dr. Kleinman noted that Claimant was alert to time, place, and person, and demonstrated no memory or concentration impairments. Dr. Kleinman administered the MMPI-2 evaluation. Based upon the test, Dr. Kleinman noted that "the client's conscious efforts to influence the outcome of the evaluation and to project an overly positive self-image...unrealistic claims of virtue, as shown in this profile, reflect conscious attempts to influence the outcome of the evaluation by giving the appearance of having extremely high moral virtue and honesty." Dr. Kleinman also reviewed a substantial number of prior medical and employment records. Dr. Kleinman concluded that "during the interview, and on psychological testing, [Claimant] misrepresents himself." Dr. Kleinman pointed out that the Claimant cannot be accepted as an accurate historian, and that he had a paranoid personality disorder. He was disqualified from work until he sought psychological assistance.

18. Claimant returned to John Dengler, a counselor whom he had treated with previously for the recommended psychological assistance. On December 22, 2014, Mr. Dengler opined that Claimant was psychologically ready to return to work; however, he was very concerned that Claimant had not been checked out medically since the day of the explosion. Dr. Dengler noted that Claimant had complained of headaches and neck, arm, and hand pain for the entire six weeks he had been seeing him. He noted the pain seemed to getting steadily worse, and Claimant was under the impression that he was prohibited from seeing any medical professional except for one ordered by the mill. Mr. Dengler stated, "I believe Rafael needs to be seen by a medical doctor as soon as possible to ascertain the extent of physical damage has been caused by the explosion. Until this is resolved, Rafael can be expected to experience anxiety of not knowing the extent of his injuries or his prognosis." Mr. Dengler also stated his concern that Claimant not knowing the details of his injuries could result in his accidentally causing further damage to his body.

19. On January 8, 2015 Dr. Charles Hanson noted that he was requested to see Claimant regarding a "work related acute neck injury", that occurred on September 28, 2014 when there was an explosion and he was thrown to the ground. Claimant reported that he thought he lost consciousness and upon "coming to", realized he was face up in darkness. Claimant continued by reporting that he was able to crawl to a doorway; however, in the process of crawling to the door, he "tumbled" down some stairs. Dr. Hanson noted that Claimant was taken by ambulance to the hospital; however, he was not treated for any neck related injury. Over the next couple days, Claimant became aware of gradually and progressively worsening neck pain, which seemed to radiate out over the superior aspect of his right shoulder, down the posterior aspect of the upper arm and volar radial aspect of the forearm to the dorsal aspect of

the thumb, second and third fingers. Also, he became aware of constant headaches, a bump in the right posterolateral paracervical area, dizziness, nausea and sensitivity to light. Dr. Hanson's review of systems revealed eye pain, nausea, neck pain, stiffness, numbness, paresthesias, weakness, and depression. Despite being depressed, Claimant demonstrated no anxiety or confusion. On examination of Claimant's neck, Claimant had tenderness in the right posterior paracervical and upper trapezius areas, limitation in flexion, marked limitation of extension, moderate limitation of lateral bending and moderate limitation of rotation. Claimant's right shoulder had giveaway weakness in all directions. Claimant also had giveaway weakness of all muscle groups and altered sensation of the entire right upper extremity in a global distribution. Dr. Hanson reviewed Claimant's cervical spine x-rays, and reported that they showed straightening of the cervical spine, as well as narrowing of the disc space at C4-5, C5-6, C6-7, and C7-8, with hypertrophic spurring. Right shoulder x-rays revealed hypertrophic spurring along the clavicular portion of the acromioclavicular joint, and some narrowing of the subacromial space with abduction. Dr. Hanson reported his principal diagnoses as: 1) Preexisting mild to moderate degenerative disc disease at the C4-5 level and moderate degenerative disc disease at the C5-6 and C6-7 levels; 2) Approximately 3 1/3 months post work related explosion resulting in a couple of injuries including an acute neck injury; 3) Persistent posttraumatic right posterior paracervical pain which radiates out over the superior aspect of the shoulder, down posterior aspect of the upper arm and volar radial aspect of the forearm to the dorsal aspect of the thumb, second and third fingers in association with dizziness, nausea, fairly constant headaches, sensitivities to light and weakness of the right arm, probably due to acute cervical sprain/strain superimposed upon problem #1. Dr. Hanson requested an MRI of Claimant's neck, as well as his shoulder, because he questioned whether Claimant's pain was radiating solely from the neck, or if there was also some from the shoulder. Per Dr. Hanson, Claimant's work status would be as determined by the medical department at Evraz.

20. An MRI of Claimant's right shoulder, taken on January 16, 2015, showed chronic rotator cuff tendinosis with partial-thickness tears; chronic hypertrophic change of the AC joint with rounded undersurface osteophytes and fluid in the joint; chondral surface wear of the glenohumeral joint; chronic enthesopathic changes at the rotator cuff insertion and bicipital groove; and, trace fluid in the subacromial-subdeltoid bursa. Dr. Hanson reviewed the right shoulder MRI. He concluded on January 26, 2015, that the right shoulder pathology preexisted the work-place event.

21. An MRI of Claimant's cervical spine, also taken on January 16, 2015, revealed chronic central disc osteophyte complex at C2-3. At C3-4 there was a broad-based central disc osteophyte complex, resulting in central canal narrowing. There was also bilateral facet hypertrophy. At C4-5, there was a smooth posterior disc osteophyte complex, resulting in central canal narrowing, as well as facet and uncovertebral joint hypertrophy resulting in chronic bilateral neural foraminal narrowing. At C5-6 there was minimal posterior disc osteophyte complex resulting in central canal narrowing, as well as facet and uncovertebral joint hypertrophy resulting in moderate bilateral neural foraminal stenosis. At C6-7 there was a small posterior disc osteophyte complex resulting in central canal narrowing, as well as facet and uncovertebral joint hypertrophy

with bilateral neural foraminal narrowing. Dr. Hanson reviewed the right cervical MRI, and concluded on January 26, 2015, that the cervical spine pathology pre-existed the work-place event.

22. On January 27, 2015 Dr. Robert Kleinman reported that Claimant was cleared to return to work; however, Claimant did not return to work until February 15, 2015. In his report following a repeat fitness for duty evaluation, Dr. Klienman noted that the objective finding he had observed previously had remitted. Dr. Klienman did not reaffirm that Claimant had a paranoid personality disorder.

23. On January 21, 2015 Dr. Jeffrey Schwartz performed an independent medical examination (IME) to assess Claimant's pulmonary/respiratory status. During this IME, Claimant reported that he was "doing repair work when a nearby machine exploded. He estimated the machine that exploded was approximately 25 feet away from where he was working. This explosion knocked him out. When he awoke, he was covered in metal dust, which he thought came from the above rafters and beams that had collected dust over the years. He described a "cloud of dust" in the work area and he awoke coughing up dust. He stated he had to crawl out of his work area and fell down stairs." Although he reported that he was rendered unconscious, Dr. Schwartz was unable to find "documentation of loss of consciousness in the reports from the two practitioners [Claimant] saw on 09/28/2014." Dr. Schwartz found Claimant's exam "unremarkable." Both spirometry and a methacholine challenge demonstrated normal results and showed he had no evidence of hyper-active airways." Consequently, given the duration of claimant's exposure and his normal spirometry and negative methacholine challenge test, Dr. Schwartz opined that Claimant did not have reactive airways dysfunction syndrome (RADS). He also noted that "the cause of his shortness of breath with exertion is unclear given his normal breathing tests, normal chest x-ray, normal exam and normal oxygen levels." Dr. Schwartz found no evidence of a long term respiratory injury due to Claimant's exposure to dust on September 28, 2014. Rather, Dr. Schwartz opined that Claimant's exposure "would have caused a temporary irritation of his lungs that would have resolved within 1-4 weeks after his exposure."

24. On February 23, 2015 Dr. Charles Hanson reported that Claimant had reached maximum medical improvement on February 12, 2015.

25. On March 2, 2015 Dr. Charles Hanson noted that Claimant reported increased neck and right shoulder pain since using his home cervical traction device. Claimant reported increased tightness over the posterior aspect of his neck as well as more frequent tingling which extended from the right lateral aspect of his neck, down the posterior aspect of his upper arm, down the radial and volar aspect of his forearm and into his thumb, 2nd and 3rd fingers. Also, since using the traction unit, Claimant reported experiencing the spontaneous onset of intermittent shocking sensations over the palmer aspect of his left thumb distal phalange. Further, movement of Claimant's neck purportedly increased his pain, although Dr. Hanson noted what he described as "over reactive guarding" and limitation of cervical range of motion.

26. During the March 2, 2015 appointment, Claimant asked Dr. Hanson if he would place him on light duty, because he was having extreme difficulty performing his job at regular duty. Dr. Hanson responded that regular duty would be "therapeutic." Claimant explained the struggles he was having at work, and that he did not feel safe because of the limitations he had as a result of his injuries. Dr. Hanson stated, "From my standpoint, you can perform your regular duties." Claimant advised Dr. Hanson that he felt he was putting him in danger. Upon leaving Dr. Hanson's office, Claimant was overheard to call Dr. Hanson a "corporate whore" noting further that he had a "greasy hand." At hearing Claimant, first denied than admitted, calling Dr. Hanson a "corporate whore" and a "quack," referring to people who take money from a company, with no justification.

27. On May 6, 2015 Dr. Michael Dallenbach examined claimant for the first time since the explosion occurred. Dr. Dallenbach noted that Claimant was injured in an explosion on September 28, 2014. Dr. Dallenbach documented the following history concerning the event: "[Claimant] states that he was in the process of welding when there was a sudden explosion, and he was thrown across the room into a metal wall and, although he could not recall the exact mechanism of injury, he felt that he briefly lost consciousness. He was covered with an (sic) inhaled dust because the first thing that he remembers was not being able to catch his breath and coughing. When he was finally able to get his wits, he remembers getting to his feet and running for stairs and in the process of trying to escape the area, he tripped and fell down the stairs, and although, once again, he cannot recall the exact mechanism of injury, felt that he may have landed on his right shoulder." Dr. Dallenbach noted Claimant to be alert and oriented to person, place, time and situation. His affect was documented as being within normal limits and he was "quite affable throughout the entire process."

28. On examination, Claimant's cervical active range of motion was significantly diminished in all planes. There was significant hypertonicity in the bilateral cervical and upper thoracic paraspinals and bilateral cervicotrapezius musculature. Claimant was tender at the cervical facet joints bilaterally at C3-4, C4-5, C5-6, and C6-7. There was decreased light touch sensation through the C7 and C8 dermatomes. Both active and passive range of motion of the right shoulder was diminished relative to the left. There was an impingement sign. Claimant was tender at the right acromioclavicular joint. Strength at the right shoulder was 4/5 relative to the left with the exception of external rotation which was 4-/5 relative to the left. There was swelling and tenderness over the biceps tendon. Claimant demonstrated crepitus at the glenohumeral joint. Dr. Dallenbach reported his assessment as: Questionable postconcussive syndrome; cervicogenic headaches; cervical strain; cervical spondylosis; right upper extremity radiculopathy; right shoulder impingement; questionable rotator cuff tear; bilateral tinnitus; questionable benign paroxysmal positional vertigo. Dr. Dallenbach stated, "Within a reasonable degree of medical probability, the aforementioned diagnoses are secondary to the clinical sequela of Rafael's work-related injury 09/28/2014." Dr. Dallenbach recommended that the following should be considered: seven view radiographic series of the cervical spine to rule out instability of the cervical spine; MRI of the brain; neuropsychological evaluation; physiatry referral; MRI arthrogram of the

right shoulder to rule out rotator cuff and/or labral pathology; and, physical therapy for strength, endurance, flexibility and coordination.

29. On June 4, 2015 Dr. Eric Ridings evaluated Claimant at the request of Respondent-Employer. Claimant reported to Dr. Ridings that he was 20 feet away from the explosion when it occurred, that he awakened from a loss of consciousness to find the room so dark with dust that it was "pitch back" and that he "couldn't see [his] hand in front of his face." According to Claimant's history to Dr. Ridings, he took a deep breath when he woke inhaling dust, after which he "crawled to the end of the railing and then went down a set of stairs" by feel. Claimant reported that he lost his footing and 'tumbled down' approximately the last seven steps of the stairs." Again Claimant did not mention any complaints concerning his head, neck or right arm during Dr. Ridings questioning. Physical examination noted Claimant's cognition to be "intact to conversation and history taking. There were not apparent speech or language deficits noted. Although Dr. Ridings completed a physical examination, he did not complete the assessment portion of his report. Rather, he ended his report with a section entitled "Discussion Notes to Self. Consequently, Dr. Ridings was asked to complete the report by providing a formal statement regarding his findings and opinions.

30. Dr. Ridings completed the report by providing an addendum to the June 4, 2015 report on August 23, 2015. In his addendum, Dr. Ridings notes that he was provided with additional materials to review, including employer records and the deposition transcript of Dr. Dallenbach. Following review of these materials, Dr. Ridings summarized the physical examination findings of June 4, 2015 as suggestive of "right shoulder impingement and altered sensation based upon the subjective reports of Claimant. However, because Claimant was an unreliable historian and his sensory complaints "nondermatonal", Dr. Ridings he questioned the findings on examination. Moreover, Dr. Ridings found the opinions expressed by Dr. Dallenbach "entirely unconvincing" primarily because Dr. Dallenbach relied upon the history provided by Claimant, which he (Dr. Ridings) noted to be inconsistent and contradicted by multiple medical records. According to Dr. Ridings, Claimant "inhaled some dust after the explosion which caused him to cough, but which did not result in any ongoing symptoms." Per Dr. Ridings, Claimant "did not sustain any injury to his neck or right upper extremity or other parts of his body in the incident of 09-28-14."

31. On July 30, 2015 Dr. Charles Hanson recommended that Claimant be seen by a neurologist and/or spine surgeon.

32. On October 28, 2015 Micah Johnson, PA, of Parkview Neurosurgery, noted that Claimant complained of neck pain. He noted that Claimant was involved in an explosion and was thrown back injuring his neck. The pain was on the right side of Claimant's neck, radiating into the trap, shoulder and down the right arm. Also up the back of his head to the eye area causing headaches. Claimant complained of dizziness on occasion. Examination of the cervical spine revealed tenderness to palpation diffusely in the paravertebral musculature. Claimant had limited range of motion secondary to pain. The trapezius and scalene muscles were tender to palpation.

Claimant also had tenderness to palpation in the paravertebral musculature in the lumbar spine. Mr. Johnson reported his assessment as cervical radiculopathy and cervicalgia. He stated, "Mr. Rodriguez presents with the above history and found to have symptoms it (sic) may be attributed to the pathologies seen and described in great detail from cervical spine MRI which was reviewed by myself and Dr. Murad." In order to assess whether Claimant's symptoms were emendating from the pathologies seen on MRI, an EMG study was recommended.

33. Claimant was referred, by Respondent-Employer as part of the claimed head injury, for a neuropsychological evaluation by Kevin Reilly, Ph.D. Dr. Kevin Reilly, a licensed clinical psychologist and clinical neurologist, attempted to conduct a neuropsychological evaluation on September 15, 2015. According to Dr. Reilly's report, Claimant demonstrated defensive, obstructive and passive aggressive behavior during the interview and testing procedures employed. Testing was incomplete and that which was took about 300% more time than was usually required for the assessment given. He noted that the Neuropsychological Assessment Battery could not be administered in it's entirely because of Claimant's unreliable performance and that his results were similar to Dr. Kleinman's when he evaluated Claimant. Dr. Reilly noted that the MMPI-2-RF he administered showed the Claimant to be malingering with symptom magnification. Ultimately Dr. Reilly opined "[t]here are no indications of a concussion or head injury in the medical records. If there was a head injury, it would have been documented." Dr. Reilly concluded "there is no objective medical evidence to support Mr. Rodriguez's head injury claims." He emphasized that "You cannot rely upon the patient's self-report as accurate" because there is strong evidence of exaggeration, bias, and a behavioral presentation indicating strong secondary gain motives.

34. Claimant undertook the recommended EMG study on December 22, 2015. The test revealed no cervical radicular pain. Rather, the test revealed findings of "mild slowing of the right median potential consistent with mild right carpal tunnel syndrome.

35. On December 30, 2015, Claimant was evaluated by Dr. Jose Lafosse, Ph.D. at the request of his attorney. Dr. Lafosse was provided the following history concerning the event:

> [Claimant had started working a 12-hour shift at 7 am and around mid-afternoon he was preparing to straighten out some railing and weld it back together. At the time he was running a portable machine and heard it running low on fuel, so he started pulling out welding leads to connect them to a stationary machine when there was a suddenly a loud explosion about 40-60 feet away that threw him back against the machinery. He recalls regaining awareness and hearing people calling him on the radio. He took a deep breath and inhaled a lot of dust, which he reports to have actually been small metal particles that had accumulated in the rafters of the building over many years that were shaken loose in the explosion. He states that the dust was so thick that he couldn't see his hand in front of his face so he started crawling. He didn't know what happened and was afraid. He

eventually found a stairwell and tumbled down the stairs from the second floor to the first, banging his head and right shoulder as he tumbled.

36. Dr. Lafosse opined that Claimant's "current cognitive functioning is generally intact." According to Dr. Lafosse, Claimant's Glascow Coma Scale (GCS) scores in the hospital immediately after the accident supported a conclusion that he would have experienced "nothing more severe than a mild, uncomplicated brain injury that "may" have resulted in a "concussion." Dr. Lafosse concluded that Claimant's "memory difficulties are more likely attributable to significant symptoms of depression and anxiety" rather than any "cognitive problems related to his work-related accident." Dr. Lafosse also stated that there was no strong support for the conclusion that Claimant has paranoid personality disorder. He reported that Claimant does not demonstrate distrust and suspiciousness of other such that their motives are interpreted as malevolent as an enduring pattern that is inflexible and pervasive across a broad range of personal and social situations. Nor do his behaviors appear to be generally withdrawn, cold, suspicious, or irrational. He stated, "While he does show some distrust and suspiciousness, it is directed toward his employer and those with financial connections to his employer rather than pervasive across the board range of personal and social situations. The suspicions that individuals with paranoid personality disorder harbor are unjustified, but those of Mr. Rodriguez appear grounded in specific experiences with his employer over several years that at face value sound reasonable." Dr. Lafosse also stated that there is no evidence to suggest that there is a pattern of distrust and suspiciousness that is stable and of long duration, with an onset that can be traced back at least to adolescence or early adulthood – another key component of paranoid personality disorder and other personality disorders in general. Dr. Lafosse stated, "In fact, the client's self-reported history runs counter to what one would expect in someone with paranoid personality disorder."

37. In his deposition, taken on July 6, 2015, Dr. Michael Dallenbach testified within a reasonable degree of medical probability, that based upon Claimant's history and mechanism of injury, all of his conditions were caused by or aggravated by the September 28, 2014 explosion he was involved in at Evraz. (Depo. pgs. 22-23, lines 18-25 & 1-3; pg. 44, lines 12-18) (Exhibit 14).

38. Dr. Dallenbach testified that he absolutely believed that Claimant was a credible patient. (Depo. pg. 103, lines 15-24) (Exhibit 14)

39. Dr. Dallenbach testified that Claimant's reported symptoms of nausea, vomiting and dizziness the days following the explosion could be a sign of respiratory difficulty, or they could be a sign of closed head injury. He stated that those symptoms would be consistent with the effects of an explosion, and being thrown backward, having the neck hyperextended. He also stated that the concussive dispersement of energy caused by an explosion could have certainly played a role. (Depo. pgs. 104-105, lines 1-25 & 1) (Exhibit 14)

40. Dr. Dallenbach testified that the patient's trust in a provider is important because

the patient is presenting with problems and questions that he is asking the provider to help find the answers to. (Depo. pg. 105, lines 13-19) (Exhibit 14)

41. Dr. Dallenbach testified that he used to be the primary care physician at Evraz (Rocky Mountain), but that he was terminated because they weren't satisfied with the care that he was providing. He stated, "Let me just say first and foremost, I'm glad they fired me...I'm glad they fired me because I felt they wanted me to put employees in positions that I didn't feel they were capable of functioning in safely." He testified that they were asking him to send them back to work to specific tasks before they were able to safely do so. It was his understanding that they wanted him to make decisions based on the company's interests. (Depo. pgs. 96-97, lines 23-25 & 1-2 & pgs. 97-98, lines 21-25 & 1-20) (Exhibit 14)

42. During cross examination, Dr. Dallenbach conceded that he did not know how far Claimant was from the blast. His understanding of the incident causing Claimant's alleged injuries was that Claimant was standing over a pipe, welding when something ignited and an explosion occurred in close proximity to Claimant's chest. Dr. Dallenbach described the details surrounding the distance from the explosion as well as what exploded as minutia, admitting that all he had documented was that Claimant was in the "process of welding." Based upon the evidence presented, the ALJ is persuaded that Dr. Dallenbach had only a rudimentary understanding of the explosion, including the cause and type of the blast and the distance Claimant was from the explosion. Consequently, the ALJ finds Dr. Dallenbach's causation opinions regarding Claimant's alleged injuries unpursuasive. Nonetheless, Dr. Dallenbach understood Claimant to be in the "process" of welding, which the ALJ finds probable given the testimony of Joe Gutierrez.

43. Dr. Dallenbach also agreed during cross examination that the findings on the right shoulder MRI were consistent with degenerative change. He noted that the right shoulder MRI demonstrated a small amount of joint fluid, which could be acute or chronic. Tr. 91. He noted that the joint fluid, which is an inflammatory process, would not arise a month after an acute injury to the shoulder. Depo 91-92. Based upon the evidence presented, including Dr. Ridings' opinion, which is consistent with the medical evidence, coupled with Dr. Dallenbach's observations/testimony, the ALJ finds that the findings on Claimant's right shoulder MRI are likely chronic in nature, pre-existed the blast and are unrelated to the explosion occurring September 28, 2014. Crediting the opinions of Dr. Ridings, the ALJ finds it unlikely that Claimant sustained an acute right shoulder injury in the explosion occurring September 28, 2014.

44. Charles Fink a veteran millwright in the same department as Claimant testified that when he heard the explosion, he also observed debris and smoke billowing out of the building entrance from his location 70-80 feet away. When he attempted to enter the building he could only get 50 to 70 feet inside due to limited visibility. Mr. Fink testified that he tried to go into the building four to five times but could not see anything and he tried to use his two-way radio to summon Claimant five or six times. He testified that it is not unusual for the railings to be damaged by heavy equipment used in the

plant. He testified that the Claimant in his estimation would have been 50 to 60 feet from the epicenter of the explosion and that the distance from the explosion to the steel making pulpit was approximately 8 feet. Lastly, Mr. Fink testified that Claimant did not want to have anything to do with the area involved in the explosion when he returned to work shortly after the event. According to Mr. Fink, Claimant appeared "scared" and "messed up." The ALJ infers from Mr. Fink's testimony that it was challenging from a psychological perspective for Claimant to enter and work in the area of the blast shortly after it occurred.

45. Christian Carrillo, a steel maker with four (4) years of service testified that he was in the pulpit when the explosion occurred. The pulpit is protected by 3 panes of safety glass.[1] According to Mr. Carrillo, the north ladle exploded and the force expelled was so great that it shattered the outer pane of safety glass; cracked the middle pane and bowed in the third pane into the pulpit room itself. The explosion also caused the north pulpit door to fly open. Mr. Carrillo testified that from behind the glass he could not see more than ten (10) feet in front of himself even though he was in an enclosed area. He went onto testify that molten steel splashed out of the ladle and the manifold hood/power hood was destroyed. He estimated that it took was 5-10 minutes before he saw headlights from rescuers coming to guide him out of the pulpit. Mr. Carrillo testified that he saw Claimant as he was evacuating the building.

46. Joe Gutierrez testified that he is a 40 year veteran of the mill and was the VTD operator on the date of the explosion. Mr. Gutierrez was on the top level of the VTD in a "cover car" at the time of the explosion. He was performing a "pump down" on the pot of molten steel. He testified that the explosive impact was such that he "got knocked over and things went black." According to Mr. Gutierrez, "everything was falling down on top of me everywhere, I could not see. I could not see my hand in front of me." Following the explosion he testified that he was crawling on the floor trying to locate the doors that entered into the pulpit. He also testified that it took about 10 or 15 minutes of crawling because he could not see anything in front of him. Mr. Gutierrez testified that the blast was level with the second floor where Claimant was assigned to work. Mr. Gutierrez testified that when the explosion occurred or at least right before, the Claimant was actually welding as he could see sparks from Claimant's welding gun. Mr. Gutierrez, who was standing on the floor above Claimant, explained that "I'd see sparks coming up where he was filling." As noted in ¶ 2 above, the location Claimant was assigned to work was approximately 60 feet away from the LRF and behind the VTD

.

47. Thaddeus Atencio, a 25 year employee of mill testified that on the date of the explosion, he had just pulled up to the "caster" in a truck when he heard the blast. He further testified that responded to the location of the blast and tried to help those trapped inside get out of the building from the east side. He testified that it was so dark from the explosion that he had to use the welding leads on Claimant's truck to try and guide him to Claimant's last known location. Mr. Atencio testified that he later observed Claimant sitting in the back of an ambulance getting oxygen. He also testified that

[1] According to Kyle Billings, the pulpit is protected by 3 panes of "explosion" rated safety glass.

Claimant attempted to climb out of the ambulance while gasping for air and vomiting. He felt Claimant appeared to be "disoriented."

48. George Lee, a maintenance electrician and a member of the safety committee with advanced first aid training mill testified that he was in the old mill wright shop about 80 yards south of the LRF and VTD when the explosion occurred. He responded to the location of the blast and observed the Claimant to be in "shock" and "disoriented." He testified that Claimant was having difficulty breathing, was grasping his chest and looked scared.

49. Kyle Billings, Respondent-Employer's Manager of Safety and Security testified that he was not on scene the day of the explosion and did not get there until the following morning at which time he started his investigation with management. He further testified that he did not take any photographs of the area around the explosion[2] nor did he personally interview any of the workers that were in the steel making building when the explosion occurred. He confirmed that the dimensions of the ladle were approximately 15 feet tall by 15 feet wide. The ladle itself weighs between 120-160 tons. He also testified that the LRF/VTD building was approximately 400 yards long and had not been cleaned in five (5) years and that there would have been significant dust and debris that had accumulated on the structural beams of the building. He confirmed that the railings in this area of the facility are regularly damaged and require constant repair. His investigation concluded that "steel braided water hoses likely got ripped off during the hoods rotation" and injected an unknown quantity of water into the super heated molten steel and slag. He also confirmed that the steel making building does not have any mechanical ventilation system to remove smoke and airborne particles in an emergency.

50. Josh Patterson, an EMT who responded to the scene of the explosion testified that he saw 15-20 people outside of the building upon arrival. He testified that he requested that Nurse Stark proceed to the area due to the large number of potential patients to triage. According to Mr. Patterson, he made contact with Claimant who had to be retrieved from and brought to the ambulance from the shower house. Mr. Patterson has received basic training in head injuries testifying that Claimant was alert and oriented x4, i.e. to person, place, time and event. Claimant did not request treatment for his head, nor did he appear in respiratory distress. He drove the ambulance to St. Mary Corwin while Nurse Stark attended Claimant while in route. According to Mr. Patterson, there were no changes in Claimant's condition to the hospital and that he ran "normal", i.e. without code.

51. Scott Bond an EMT/Firefighter with four (4) years of service testified that he felt and heard the explosion from approximately one (1) mile away. He then drove the fire engine to the scene. He was the second emergency responder to get there. He observed 12 to 15 people outside. He entered the building with "bunker gear" and a breathing apparatus and testified that visibility for him was less than 10 to 15 feet. He then attempted to lead people outside of the building. He testified that all of those

[2] Photographs had been taken earlier after the explosion by another management team member.

individuals in the building were covered, "head to toe" with dust due to the explosion. He testified that George Lee was the person that he believed retrieved Claimant from the shower house and brought him back to the ambulance.

52. Claimant was recalled in rebuttal and testified that he was near the southwest corner of the ladle refining furnace (LRF) when this occurred and that he was approximately 50 to 60 feet away from the epicenter of the explosion. He specifically recalled being awakened by someone calling his radio with his head up against sections of parallel pipes.

53. Robert Martin, a mill electrical technician with nine (9) years of service testified on rebuttal that he heard and felt a huge canon like boom approximately two (2) football fields away from his original location. Mr. Martin testified that he proceeded to the scene of the explosion and when he attempted to enter the building, he testified that he could not see "his hand in front of his face" and that it was "pitch black". He testified that he did make radio contact with Claimant who stated "I can't breathe". He later observed Claimant, testifying that Claimant appeared like a "bronze statue" covered in dust and that he "did not know what the hell he was doing" and appeared "scared and confused."

54. Robert Fox was also called to testify in rebuttal. According to Mr. Fox, he was 150-200 yards to the south of the steel making building when he heard and felt the noise and concussion from the explosion. Mr. Fox testified that he found the Claimant in the ambulance triage area 15 minutes after the explosion. He spoke with the Claimant for approximately one minute while he was in the ambulance. Mr. Fox did not observe any blood on Claimant's head. During the minute Mr. Fox spoke with Claimant, he appeared dazed. Mr. Fox described his appearance as "shell shocked." Claimant did not tell Mr. Fox that he hurt his neck, lost consciousness, or fell down a flight of stairs.

55. Mike Rodriguez testified in rebuttal. Mr. Rodriquez is a MMT with 22 years of service. He also testified that he is the past union president, serving in that capacity from 2009 to 2015. He is a longtime friend of Claimant's and confirmed that he spoke with the Claimant within a day or two after the explosion. According to Mr. Rodriquez, Claimant called him to express his fear about having ingested heavy metals following the explosion and his dissatisfaction with the delay in receiving medical care from the mills onsite clinic. Mr. Rodriquez testified he contacted the HR Department, specifically John Sabat six times and also called Nurse Stark after problems arose between Claimant and Nurse Stark. According to Mr. Rodriquez, he was trying to resolve a the conflict between Claimant and Nurse Stark informally; he took no official action and was acting as a "friend" outside of his official capacity as the union president. While he testified that he was contacting the employer about Claimant, he could not recall any specific dates or details of these conversations. Nor did he provide any written evidence of his conversations with Mr. Sabat or Nurse Stark. According to Mr. Rodriquez, Nurse Stark "basically hung . . . up the phone on me."

56. Although he professed concern for Claimant because of Claimant's perceived delay in treatment, Mr. Rodriquez admitted on cross examination that he did not advise Claimant to go to his personal doctor or the ER, despite knowing that an injured worker could go the emergency room for a claimed workers' compensation injury. Further, as noted above, Mr. Rodriguez took no official action as the Union president to assist Claimant with the conflict he was purportedly having with Nurse Stark. He filed no grievance against the Employer. Based upon Mr. Rodriquez' testimony that he was acting as a "friend" outside of his official capacity on Claimant's assertion that his medical care was being delayed, the ALJ is not surprised that Nurse Stark may have refused to discuss the situation concerning Claimant's medical care with Mr. Rodriquez.

57. Kyle Billings testified on surrebuttal that union reps can contact HR regarding issues concerning medical care but that in the case of such contact, HR will reach out to him and he was never made aware of any efforts on the part of Mr. Rodriquez to address problems Claimant was allegedly having in obtaining medical treatment.[3]

58. The evidence presented persuades the ALJ that the magnitude of the explosion occurring on September 28, 2014 was considerable and sufficient to cause an extensive amount of settled dust and particulate matter to disperse into the air. The ALJ is also convinced, based upon the opinions of Dr. Schwartz, that this dust likely irritated Claimant's lungs resulting in his immediate need for treatment in the ER at St. Mary Corwin Hospital. Consequently, the ALJ finds that Claimant's exposure to dust and other particulate matter caused a compensable injury to his lungs. Nonetheless, the ALJ is not persuaded that the Claimant suffers from RADS, based upon the opinions of Dr. Schwartz and the results of his spirometry and methacholine challenge testing.

59. Given the quantity of dust and particulate matter to which Claimant was exposed, the ALJ finds the treatment he required both on site and subsequently at St. Mary Corwin ER reasonable, necessary and related to the September 28, 2014 explosion.

60. Based upon the totality of the evidence presented, the ALJ finds Claimant's assertion that he suffered injuries to his neck and right shoulder as well as a closed head injury unpersuasive. Careful review of the evidence presented persuades the ALJ that Claimant did not begin reporting that he was blown into the VTD and lost consciousness until Claimant was disqualified from work after his confrontation with Nurse Stark and Dave Ryder on October 24, 2014. Claimant's reported history to the various providers who have treated and/or evaluated him are replete with inconsistencies. Claimant variously reported that he crawled to the stairway, while on other occasions he reported he got to his feet and either ran or stumbled to the stairway where he staggered down bumping into the railing and falling down the last seven stairs. Moreover, the reports of claimant's location at the time of the explosion have changed over time. On one hand, Dr. Dallenbach documented that Claimant reported

[3] Mr. Billings testified that out of the 124 injuries last year, he did not receive any real complaints about delayed care. Tr. 290. Mr. Billings explained that, if the Employer received complaints, they would investigate the complaints and refer the individual to an outside clinic. Tr. 291.

that he was in the process of welding, while at hearing Claimant testified that he was laying out welding cables when the explosion occurred. When the Claimant went to Dr. Charles Hanson on January 8, 2015, with his friend Stephen Fischer (who had been recently terminated from the Employer), Claimant told Dr. Hanson that a couple days after the event his neck and right shoulder became progressively worse. Claimant told Dr. Hanson of weakness in the right arm. He also attributed a bump on his cervical spine to the event, but that bump had been on the Claimant's neck for years. He also complained of dizziness and blurred vision. These wide array of symptoms were not in the prior medical records of the EMT who attended to Claimant on scene; nor where they mentioned in the reports of Dr. Carlis. The ALJ finds it highly improbable that trained medical professionals, including NP Stark, EMT Patterson or Dr. Carlis would neglect to include Claimant's other problems if Claimant disclosed them. EMT Patterson noted that Claimant was alert and oriented prior to admission to St. Mary Corwin Emergency Room. His observations and ambulance record are consistent with the September 28, 2014, ER records of Dr. Carlis, and the subsequent records of other providers, including Dr. Lafosse who opined that Claimant's cognition was essentially intact. Finally, it is reasonable to infer that a person who either was blown into a wall with exposed piping or who reportedly staggered and/or fell down seven metal stairs, without a hard hat while striking various body parts on the way down, allegedly landing with sufficient force to cause signs of internal impingement would have at least some evidence of trauma to the head/body. Yet, the ER "Site of Trauma" diagram documents very clearly that the Claimant had "no physical injuries." What is lacking is the medical record submitted is any indication that the Claimant had any head, neck or shoulder injury from being blown backward into a wall or any cuts, bruises, abrasions or contusions from striking railing or from falling down a flight of metal stairs at the time of the explosion.

61. The ALJ credits the opinions of Dr. Klienman and Dr. Reilly to find that Claimant misrepresents himself and cannot be accepted as an accurate/reliable historian. The evidence presented convinces the ALJ that there are no objective indications of a concussion or head injury in this case and that Claimant's claims of head, neck and shoulder claims are likely exaggerated due to secondary gain motives. The contrary opinions of Dr. Lafosse are not persuasive. Indeed, Dr. Lafosse stated only that the explosion "may" have caused a concussion and that Claimant's memory problems are likely attributable to depression and anxiety. Even Dr. Dallenbach, when pressed, agreed that the Claimant was not a credible historian and that the history Claimant provided to him was "incongruous" with the histories contained in the medical records. Consequently, the ALJ rejects Dr. Lafosse's opinions as well as Dr. Dallenbach's opinion that Claimant is a credible patient. Rather, the ALJ finds that Claimant's history of injury to his head, neck and right shoulder is unreliable and contradicted by the more convincing opinions of Drs. Klienman, Reilly and Ridings.

62. Claimant has failed to prove by a preponderance of the evidence that he sustained a compensable injuries to his head, neck or right shoulder in the industrial explosion of September 28, 2014. Accordingly, his claim for medical benefits to treat a

closed head injury and/or injuries to the cervical spine and right shoulder are denied and dismissed.

63. The totality of the evidence presented persuades the ALJ that Claimant's Inability to safely function in the work place, i.e. his "disqualification" from work arose out of considerable distrust and suspiciousness surrounding Respondent-Employer's motives rather than any compensable injury caused by the September 28, 2014 explosion. Although Dr. Lafosse disputes Dr. Klienman's diagnosis of a paranoid personality disorder, Claimant's distrust of Respondent-Employer is well documented. Claimant has expressed that he does not trust the company, does not trust individuals who work for the mill, including Nurse Stark, that Respondent-Employer will manipulate his lab results, suggesting that the mill is covering up/hiding something surrounding the explosion and the dust particles he was exposed to and that he is being set up. Indeed, Dr. Dengler documented that factors delaying psychological recovery include, Claimant's "fears of continued targeting and retribution upon returning to work" noting further that Claimant "[feels] that he's been targeted by management" since the explosion. Such belief is consistent with Dr. Klienman's notation that "[t]here is a pervasive distrust and suspiciousness of others such that their motives are interpreted as malevolent" which, as documented by Dr. Klienman, "interferes with his ability to get along at work." The evidence presented does not persuade the ALJ that Claimant lost time and therefore wages secondary to his lung injury. Moreover, because the undersigned ALJ finds that Claimant's inability to work from October 25, 2015 through February 15, 2016 was unrelated to a compensable injury attributable to the September 28, 2014 explosion, Claimant's claim for temporary total disability benefits for the aforementioned time period is denied and dismissed.

64. Wage records submitted into evidence for the 52 week period extending from September 28, 2013 through September 28, 2014 establish that Claimant earned gross wages of $74,992.30. Consequently, the ALJ calculates Claimant's average weekly wage to be $1,440.81 ($74,992.30 ÷ 52 weeks= $1,440.81). The ALJ finds that this figure most closely approximates Claimant's wage loss and diminished earning capacity at the time of his September 28, 2014 compensable work related lung injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S.* The Claimant shoulders the burden of proving by a preponderance of the evidence that he is a covered employee who suffered an "injury" arising out of and in the course of employment. *Section 8-43-301(1), C.R.S.; Faulker v. Industrial Claim Appeals Office, 12 P.3d 844 (Colo. App. 2000); City of*

Boulder v. Streeb, 706 P.2d 786 (Colo. 1985); Pacesetter Corp. v. Collett, 33 P.3d 1230 (Colo. App. 2001). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark, 197 Colo. 306, 592 P.2d 792 (1979).* The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. *Section 8-43-201, C.R.S.* A workers' compensation claim is decided on its merits. *Section 8-43-201, supra.*

A. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); see also, *Dow Chemical Co. v. Industrial Claim Appeals Office*, 843 P.2d 122 (Colo. App. 1992)(ALJ may credit one medical opinion to the exclusion of a contrary opinion). While the evidence presented clearly supports that Claimant was exposed to a precipitous amount of dust which likely irritated his lungs, his testimony regarding head, neck and right shoulder injuries is neither credible nor convincing. As found, the evidence presented supports a conclusion that the claimed head, neck and shoulder injuries are probably being driven by Claimant's inclination to misrepresent his condition for secondary gain. Moreover, when the various expert medical opinions surrounding Claimant's claimed head, neck and shoulder injuries are carefully analyzed against the evidence presented as a whole, including Claimant's pre-injury history and personality characteristics, the ALJ concludes that Dr. Klienman's, Dr. Reilly's and Ridings' opinions are more persuasive than those of Dr. Lafosse and Dr. Dallenbach.

B. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

C. Under the Workers' Compensation Act, an employee is entitled to compensation where the injury is proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment. *Section 8-41-301(1), C.R.S.; Horodyskyj v. Karanian* 32 P.3d 470 (Colo. 2001). The phrases "arising out of "and "in the course of" are not synonymous and a claimant must meet both requirements. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). Thus, an injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). In this case, there is sufficient evidence to establish that Claimant's alleged lung injury occurred within the time and place limitation of his work as a MMT for Respondent-Employer and during an activity connected with that position, namely welding damaged safety railing. Consequently, the ALJ concludes that Claimant has met his burden to prove that his alleged lung injury occurred in the course and scope of his employment. Nonetheless, Claimant must still establish that his injury arose out of his employment related duties.

D. The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. In this regard, there is no presumption that an injury which occurs in the course of a worker's employment also arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968); *see also, Industrial Commission v. London & Lancashire Indemnity Co.,* 135 Colo. 372, 311 P.2d 705 (1957) (*mere fact that the decedent fell to his death on the employer's premises did not give rise to presumption that the fall arose out of and in course of employment*). Rather, it is the Claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. § 8-43-201, C.R.S. 2006; *Ramsdell v, Horn,* 781 P.2d 150 (Colo. App. 1989).

E. The determination of whether there is a sufficient "nexus" or causal relationship between the claimant's employment and the injury is one of fact which the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo. App. 1996). As found here, Claimant's work duties require him to make repairs to Respondent-Employer's facility. While the ALJ is not persuaded that Claimant was blown into the VTD, lost consciousness and/or fell down seven stairs as he claims, there is little question that the explosion occurred, that Claimant is in the general vicinity of the blast, i.e. 60 feet away welding and that he was exposed to dust and other debris falling from the rafters of the mill. Per the credible and convincing opinion of Dr. Schwartz and incidentally Dr. Ridings, Claimant's exposure to this dust, more probably than not, irritated his lungs causing his need for treatment both on scene by Nurse Stark and EMT Patterson and subsequently in the ER by Dr. Carlis. Consequently, the ALJ concludes that a logical causal connection exists between Claimant's work duties, his lung irritation and his need for treatment. The lung injury is compensable. Conversely, there is insufficient objective evidence to substantiate that Claimant suffered any injury to his head, neck or right shoulder and his subjective reports of the same are not credible for the reasons cited above. Accordingly, claims for injuries to the head, neck and shoulder are denied and dismissed.

Medical Benefits

F. Once a claimant has established the compensable nature of his/her work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable and necessary and related medical care to cure and relieve the effects of the work injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). However, a claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his/her need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949); *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970)*;* § 8-41-301(1)(c), C.R.S.

G. Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc.*, W.C. No. 4-117-758 (ICAO April 7, 2003). The question of whether a particular medical treatment is reasonably necessary to cure and relieve a Claimant from the effects of the injury is a question of fact. *City & County of Denver v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). As found here, Claimant has proven by a preponderance of the evidence that he sustained a compensable injury in the form of irritation of his lungs due to exposure and likely inhalation of dust and particulate matter. The evidence presented persuades the ALJ that this compensable lung "injury" is the proximate cause of Claimant's need for medical treatment, including his need for treatment in the ER at St. Mary Corwin. Taken in its entirety, the ALJ finds the evidentiary record to contain substantial evidence to support a conclusion that the explosion exposing Claimant to substantial dust occurring while Claimant's was performing his work duties was responsible for his post explosion symptoms, including his coughing and wheezing for which he received a breathing treatment. Consequently, the ALJ concludes that Claimant has established that his need for the treatment both at the scene and in the ER was causally related to his work-related dust exposure on September 28, 2014. Moreover, the totality of the evidence presented establishes that the care, received at the scene and in the ER was reasonable and necessary given Claimant's respiratory symptoms and the mechanism of injury. Consequently, the ALJ concludes that Respondents are liable for Claimant's care at St. Mary Corwin Hospital ER. As Claimant failed to establish that he sustained a compensable head, neck and/or right shoulder injury, this order does not address his entitlement to additional treatment for these alleged conditions further.

Change of Physician to Dr. Dallenbach

H. The employer is obliged to provide a physician willing to render treatment so long as it is reasonably necessary. *Tellez v. Teledyne Water Pik, I.C.A.O., W.C. No. 3-990-062 (March 24, 1992); aff'd., Teledyne Water Pik v. ICAO, Colo. App. No. 92CA0643, December 24, 1992 (not selected for publication).* Once respondents are on notice of a need for medical care, they are required to tender a physician willing to treat the Claimant based upon medical considerations alone, and not financial considerations. *Dodge v. Burns International Security, W.C. No. 3-935-989, I.C.A.O., December 10, 1993.* W.C.R.P. 8-1(C)(2) states, "If the employer designates an on-site health care facility, the employer must, within seven (7) business days following notice of an on the job injury, provide the injured worker with a designated provider list consistent with the provisions of rule 8-2. While the on-site health care facility shall be the initial authorized treating physician, the injured worker may thereafter change to a physician or corporate medical provider on the designated provider list if the injured worker complies with all statutory and rule requirements for the one-time change of physicians." See Sec. 8-43-404(5)(a)(I)(A), § 8-43-404(5)(a)(II)(B).

I. If the employer fails to supply the required designated provider list in accordance with this rule, the injured worker may select an authorized treating physician or chiropractor of their choosing. W.C.R.P. 8-2(E). Here, the evidence presented supports Claimant's entitlement for a change of physician to Dr. Dallenbach. Respondent did not provide Claimant with a designated provider list after he complied with the procedural obligations necessary to secure a change to Dr. Dallenbach by completing and serving the required change of physician form to Nurse Stark, who took no further action concerning the request for several weeks until Claimant was referred by Respondent-Employer to Dr. Hanson. Consequently, the undersigned ALJ finds Respondent's suggestion that Claimant selected Dr. Hanson as the ATP in this case following his treatment with Onsite Innovations unpursuasive. Respondent cites no authority for their suggestion that Claimant is not entitled to such change because he was unable to timely schedule an appointment his the requested physician prior to seeing Dr. Hanson on January 8, 2015 and the undersigned ALJ is not aware of any authority holding that a claimant's inability to secure an appointment with the requested physician prior to seeing Respondents later selected physician negates change of physician request made weeks earlier. An ALJ has broad discretion in authorizing a change of physician so long as that decision is supported by substantial evidence. *Brenneman v. McDuff Electronics, I.C.A.O., W.C. No. 3-936-449, November 14, 1991.* The undersigned ALJ finds that such evidence exists in this case.

Temporary Disability Benefits

J. To prove entitlement to temporary total disability (TTD) benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts; that he left work as a result of the disability, and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM*

Molding, Inc. v. Stanberg, supra. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by Claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of the earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the Claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). As found here, Claimant failed to prove that a compensable injury caused his disability. Rather, Claimant "disability" was the direct consequence of a non-work related psychological condition/personality disorder manifesting as extreme distrust and suspiciousness surrounding Respondent-Employer that precluded him from safely discharging his work duties for employer from October 25, 2014 to February 15, 2015. Consequently, the claim for TTD benefits must be denied and dismissed.

K. The overall purpose of the average weekly wage (AWW) statute is to arrive at a fair approximation of Claimant's wage loss and diminished earning capacity resulting from the industrial injury. *See Campbell v. IBM Corp., 867 P.2d 77 (Colo. App. 1993); National Fruit Prod. v. Crespin, 952 P.2d 1207 (Colo. App. 1997).*

L. Sections 8-42-102 (3) and (5) (b), C.R.S. (2013), give the ALJ discretion to determine an AWW that will fairly reflect loss of earning capacity. An AWW calculation is designed to compensate for total temporary wage loss. *Pizza Hut v. Indus. Claim Appeals Office,* 18 P. 3d 867 (Colo. App. 2001). *See* § 8-42-102, C.R.S. The best evidence of Claimant's actual wage loss and therefore a fair approximation of his diminished earning capacity comes from the wage records submitted into evidence. The ALJ adopts Claimant's calculation of his average Weekly Wage (AWW) as that figure represents his average weekly earnings for 12 months prior to the September 28, 2014 compensable lung injury. Accordingly, the ALJ determines that Claimant's average weekly wage is $1,440.81. The ALJ concludes that this figure most closely approximates Claimant's wage loss and diminished earning capacity at the time of his compensable work related injury.

ORDER

It is therefore ordered that:

1. Claimant sustained a compensable lung injury as a direct consequence of the September 28, 2014 explosion.

2. Respondent shall pay for all reasonable, necessary and related medical Treatment resulting from the Claimants compensable lung injury, including but not limited to the care provided by Respondent-Employer and the providers at St. Mary Corwin.

3. Claimant's claim for injuries to his head, neck and right shoulder are denied and dismissed.

4. Claimant claim for medical benefits for treatment associated with his head, neck and right shoulder is denied and dismissed.

5. Claimant is entitled to a change of physician/ medical provider from Onsite Innovations and Dr. Hanson to Dr. Dallenbach.

6. Claimant's claim for TTD benefits for the time period extending from October 25, 2014 to February 15, 2015 is denied and dismissed.

7. Claimant's average weekly wage for purposes of this claim is $1,440.81

8. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 13, 2016

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

STATE OF COLORADO OFFICE OF ADMINISTRATIVE COURTS 2864 South Circle Drive, Suite 810, Colorado Springs, CO	
In the Matter of the Workers' Compensation Claim of: , Claimant, vs. , Employer, and Insurer, Respondents	□COURT USE ONLY □ CASE NUMBERS: WC 4-967-090-02 4-974-447-02
CORRECTED FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER	

A hearing in the above captioned matter was held before Administrative Law Judge ("ALJ") Richard M. Lamphere on December 9, 2015. The ALJ digitally recorded the proceeding in the Courtroom of the Office of Administrative Courts (OAC) in Colorado Springs between 9:20 and 11:30 AM. Due to time constraints, the December 9, 2015 hearing was continued to February 19, 2016. The proceeding continued to February 19, 2016 was also digitally recorded in the Courtroom of the Colorado Springs OAC between 9:05 and 10:50 AM. The hearings were held to address issues arising from two claims, which were consolidated for purposes of hearing only. A Division IME was conducted in W.C. No. 4-967-090 only; W.C. No. 4-974-447 is a fully contested claim.

Claimant was present for both hearings and represented by , Esq. Respondents were represented by , Esq. Claimant testified on her behalf. Respondents presented the hearing testimony of James Lindberg, M.D. and Edwin Baca, M.D. In lieu of live testimony, Respondents also lodged the transcripts of the February 4, 2016, evidentiary depositions of Jessica Lopez, Shannon Lemons, Rebecca Manuszak, and Aaron Griffen, Ph.D. Additionally, the parties' Hearing Exhibits (Respondents A-L and Claimant's 1-22) were admitted into evidence, without objection, at the outset of the hearing convened December 9, 2015.

At the conclusion of the February 19, 2016 hearing, the ALJ held the record open through March 7, 2016 to allow counsel time to submit position statements in lieu of closing argument. The parties' position statements were timely received by electronic transmission. The ALJ issued detailed findings of fact, conclusions of law and order on March 31, 2016. Respondents filed a motion for corrected order on April 20, 2016, to which claimant responded. The parties held a conference with the ALJ on May 6, 2016 regarding respondents' motion for corrected order. The ALJ determined additional briefing from the parties was necessary to decide respondents' motion for corrected order. Consequently, any duty to act on the March 31, 2016 order was stayed pending a ruling on respondents' motion for corrected order. Upon additional review, the ALJ grants respondents motion for corrected order and issues these amended findings of fact, conclusions of law and order. The March 31, 2016 Findings of fact, Conclusions of Law and Order are withdrawn, vacated and supplanted with this "Corrected Findings of Fact, Conclusions of Law and Order."

In this order, will be referred to as "Claimant"; will be referred to as "Employer" and will be referred to as "Insurer." All others shall be referred to by name.

Also in this order, "Judge" or "ALJ" refers to the Administrative Law Judge, "C.R.S." refers to Colorado Revised Statutes (2014); "OACRP" refers to the Office of Administrative Courts Rules of Procedure, 1 CCR 104-1, "WCRP" refers to Workers' Compensation Rules of Procedure, 7 CCR 1101-3 and "Division IME" refers to Division Independent Medical Examination.

ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that she sustained a compensable left shoulder injury on November 12, 2014 as a result of an alleged slip and fall in Employer's parking lot.

II. Whether Claimant produced clear and convincing evidence to overcome Dr. Tyler's Division IME opinion that Claimant's left shoulder complaints were unrelated to the admitted November 4, 2014 workers' compensation claim.

III. Whether Respondents produced clear and convincing evidence to overcome Dr. Tyler's Division IME regarding Maximum Medical Improvement ("MMI") and impairment for her injury sustained on November 4, 2014. (Dr. Tyler is the Division IME for the November 4, 2014 claim only. Consequently, his opinions regarding the November 12, 2014 contested claim are not entitled to any special weight, since he was not the Division IME for that contested claim.)

IV. If Claimant overcame the Division IME regarding non-relatedness of the left shoulder complaints to the November 4, 2014 injury by clear and convincing evidence, or, proved by a preponderance of the evidence that she sustained a compensable injury to her left shoulder on November 12, 2014, whether Respondents are liable for treatment related expenses concerning the left shoulder, including but not limited to out-of-pocket expenses associated with Claimant's left shoulder surgery performed by Christopher Jones, M.D.

V. Whether Respondents have proven, by a preponderance of the evidence, that Claimant was responsible for the termination of her employment precluding her entitlement to temporary total disability (TTD) benefits.

FINDINGS OF FACT

Based upon the evidence presented, including the deposition testimony of Jessica Lopez, Shannon Lemons, Rebecca Manuszak, and Aaron Griffen, Ph.D., the ALJ enters the following findings of fact:

Claimant's November 4, 2014 Work Related Incident and Her Prior Medical History

1. Claimant worked for Employer from August of 2013 to June 26 of 2015 as an assistant principal.

2. Claimant testified and the persuasive documentary evidence supports that on November 4, 2014, she responded to an altercation involving some students and a security guard on the Employer's educational campus. While attempting to separate the combatants, Claimant was hit from behind and knocked to the floor along with one of the students who fell on Claimant's ankle. According to the security guard on scene, Claimant struck her head on the floor and lost consciousness for approximately thirty seconds. There is a lack of persuasive or credible evidence that Claimant injured her left shoulder as a direct result of the altercation.

3. Emergency medical technicians (EMT) were summoned to the scene and contacted Claimant who was, by the time EMT's arrived, sitting in a wheelchair. Claimant reported right ankle pain and a worsening headache. She specifically denied "dizziness, blurred vision, diplopia, chest pain, back pain, abdominal pain, pain in her right leg, left lower extremity, and bilateral upper extremities. Claimant was noted to have a Glasgow Coma Scale score of 15 and was alert and oriented to person, place, time and event. There is a lack of persuasive evidence that Claimant complained of or reported left shoulder symptoms to the EMT's responding to her injury on November 4, 2014. Claimant alleged she injured her left shoulder in the November 4, 2014 scuffle, but her testimony in this regard is not credible or persuasive.

4. After the scuffle on November 4, 2014, Claimant was transported to Penrose-St. Francis Hospital where she was evaluated in the Emergency Room (ER) by Dr. Christopher Johnson. Claimant's loss of consciousness was noted and it was documented further that she was "amnesic to the event." Claimant reported pain in the right eye, the head, right hip, right ankle and right foot. She again specifically denied any vomiting, diarrhea, altered mentation, numbness, tingling or weakness. Claimant was provided with an aircast for a "potential sprained ankle." It was specifically noted that it was "okay" for Claimant to bear weight. There is a lack of credible or persuasive evidence that Claimant complained of or reported left shoulder symptoms as a result of the November 4,

2014 scuffle while in the ER.

5. The ALJ finds the November 4, 2014 ER records to support the subsequent finding of Dr. Tyler, the Division IME that Claimant's left shoulder complaints are unrelated to the November 4, 2014 work injury. Rather, the ALJ interprets Dr. Tyler's DIME report to indicate that Claimant was "asymptomatic prior to her alleged November 12, 2014 fall in Employer's parking lot. Dr. Tyler determined treatment, including the need for surgery to the left shoulder, "would not have occurred" but for the acute trauma that Claimant sustained on November 12, 2014 as a consequence of the alleged fall. Dr. Tyler's opinion regarding the work relatedness of the left shoulder to the November 4, 2014 injury is unambiguous – the content of Dr. Tyler's report makes it clear that, in his opinion, the November 4, 2014 injury did not cause the left shoulder to become symptomatic. Rather, the left shoulder became symptomatic because of a subsequent fall on November 12, 2014.

6. Following her discharge from the ER on November 4, 2014, Claimant followed-up at Integrity Urgent Care (Integrity), Employers designated provider, on November 5, 2014. Again, the ALJ finds the content of these records to be consistent with the Division IME's finding that Claimant did not sustain an injury to her left shoulder as a result of the November 4, 2014 work injury. At Integrity, Claimant evaluated by Edwin Baca, M.D. Dr. Baca testified at hearing. He credibly testified he performed an "extensive" evaluation during Claimant's first visit on November 5, 2014. He reviewed Claimant's past medical history, evaluated all of her current bodily systems, obtained a history concerning the mechanism of injury (MOI) and performed a formal examination with treatment recommendations. Dr. Baca reported he had no difficulty speaking and communicating with Claimant at this appointment. During this visit, Claimant reported head, neck right hip, right knee, right foot and right ankle pain. Dr. Baca's findings on November 5, 2014 are consistent with the Dr. Tyler's Division IME opinion that the November 4, 2014 work injury did not result in injury to the left shoulder; the findings are consistent with Dr. Tyler's when he (Dr. Tyler) found Claimant's left shoulder was asymptomatic prior to the November 12, 2014 alleged slip and fall in her employer's parking lot. Claimant told Dr. Baca she had a "moderate" headache and "intermittent" vision changes. She also reported "mild" nausea and one episode of vomiting prior to her appointment; however, she denied "current dizziness, nausea, vision changes memory loss or confusion." She had moderate ankle pain and difficulty weight bearing and walking. Claimant was given a prescription for medications and provided with a "lace up" ankle brace and crutches which, according to a November 5, 2014 "Physicians Report of Workers' Compensation Injury", she was to use 100% of the time as she was instructed to engage in no weight bearing with the right leg. Dr. Baca testified throughout his care of Claimant, that he continued to evaluate and monitor her complaints/symptoms. Claimant had no complaints of left shoulder pain on November 5, 2014.

7. Dr. Baca testified that he performed a general examination of Claimant, with focus on the areas where she reported problems during his treatment of Claimant. He testified that he performed an examination of her head for any signs of abrasions, lacerations or trauma. Dr. Baca noted that he performed a “complete” neurological examination to determine whether Claimant had any signs or symptoms of concussion or post-concussive injury. Dr. Baca’s findings on November 5, 2014 and on subsequent examinations were negative for closed trauma to the head. There were no signs of concussion or post-concussive symptoms according to Dr. Baca.

8. On November 13, 2014, Claimant returned to Integrity on a “walk-in” basis. She was evaluated by Dr. Autumn Dean for complaints of intermittent dizziness and forgetfulness and well as shoulder pain which Claimant associated with nine days of crutch use. Contrary to earlier reports to paramedics, emergency room providers and Dr. Baca, Claimant testified that she told Dr. Dean that she injured both shoulders during the November 4, 2014 incident. Claimant completed a pain diagram on this date depicting burning and aching pain in the left shoulder. According to Dr. Dean’s report from this date of encounter, Claimant reported that she thought her “concussion symptoms were improving, but a day or so after her last visit, she started noticing intermittent dizziness and forgetfulness again.” Claimant also specifically reported that the “crutches she is using hurt her left shoulder, which had been injured in a previous accident.”[1] Claimant was then provided with a walker to use for ambulation which took the place of the crutches that she had used for the past nine days.

9. Claimant has a pre-existing history of anxiety and prior injury to the left shoulder resulting in a prior rotator cuff surgery. She also has a pre-existing history of anxiety. According to records from Claimant’s primary care physician (PCP), Dr. Michael Yoesel, Claimant was evaluated for anxiety, likely associated with her high stress job, on April 10, 2014. During this visit, Claimant complained of “fatigue, lightheadedness, difficulty with concentration, headaches and visual disturbances. Dr. Yoesel also noted a prior 1979 left rotator cuff surgery.

10. Careful inspection of the records submitted into evidence from Dr. Yoesel’s office after April 10, 2014, indicates that Claimant received treatment, primarily in the form of medications for her anxiety between April 10, 2014 and September 8, 2014. Claimant’s anxiety symptoms improved with the use of medication and by September 8, 2014, she was denying any anxiety and/or depression. Dr. Yoesel noted that Claimant appeared “alert and cooperative” with “normal mood and affect” and with “normal attention span and concentration.”

[1] Based upon Claimant’s specific pain complaints and history of left shoulder injury/surgery, the ALJ finds Claimant’s reference to “previous accident,” more probably than not, meant her remote car accident occurring around 1980 wherein she injured her left shoulder and not the November 4, 2014 incident.

11. Claimant testified that since the November 4, 2014 incident, she has had difficulty with balance, dizziness, and her short-term memory. Claimant's testimony in this regard is inconsistent with the records and testimony of Dr. Baca. Dr. Baca testified he continued to evaluate claimant for any problems associated with a head injury after the November 4, 2014 fall, including signs of post-concussive syndrome and found none.

Claimant's Alleged November 12, 2014 Slip and Fall and Continued Treatment at Integrity Urgent Care for the November 4, 2014 Work-Related Incident

12. Claimant testified that she fell in the parking lot of the school on November 12, 2014 after lunch as a result of her balance and dizziness issues, which Dr. Baca evaluated and found no objective evidence of on multiple examinations. This fall allegedly injured her left shoulder. She testified that she told Dr. Dean that she injured both shoulders during the November 4, 2014 incident, an allegation inconsistent with the credible and persuasive evidence in the medical records near that date. She testified that told Dr. Dean further that she fell on November 12, 2014 during her appointment with Dr. Dean on November 13, 2014. As noted, Claimant was seen by Dr. Dean on November 13, 2014 in follow-up for injuries sustained during the November 4, 2014 incident. During this visit, Dr. Dean documented that Claimant reported left shoulder pain as a consequence of using crutches secondary to her right ankle injury. The report of Dr. Dean is devoid of any discussion/reference to a left shoulder injury occurring during the November 4, 2014 incident or as a consequence of a fall occurring in Employer's parking lot occurring on November 12, 2014.

13. Claimant testified she hit her shoulder against a vehicle in the parking lot on November 12, 2014 and then landed on the parking lot surface with her outstretched arm. Claimant could not remember whether she had scrapes or bruises on her left shoulder, arm, elbow, wrist or hand when she fell against her car and then landed on the pavement with her outstretched left hand, but she testified the entire left arm hurt. Following physical examination on November 13, 2014, Dr. Dean reported the entire left upper extremity had normal appearance. Examination and testing of the entire left upper extremity revealed normal function. As both to the alleged fall and the crutch use allegedly causing problems, objective evaluations do not support any left shoulder injury. Conceivably, Claimant could have experienced pain from crutch use, but there is a lack of objective evidence supporting that she sustained an aggravation or acceleration of her left shoulder condition as a result of crutch use for nine days or that she fell in the parking lot as she claimed at hearing.

14. In addition to seeing Dr. Dean on November 13, 2014, Claimant evaluated the same day by a physical therapist. Similar to Dr. Dean's report, the initial physical therapy note fails to mention a fall occurring on November 12, 2014 in the parking lot which resulted in injury to Claimant's left shoulder, even

though this appointment was one day after the alleged fall. There is no evidence of any fall onto a parking lot surface in the physical therapist's examination (i.e., no evidence of any scrapes, bruising or other skin changes one would expect to see on a person who fell and landed on her outstretched arm as testified to by Claimant). Claimant did subjectively complain the crutches caused her discomfort and that she had a prior history of a rotator cuff tear. Nonetheless, there is no mention of falling; there is no report of a new injury the day before; and there are no examination findings consistent with Claimant's allegation of a fall injuring her left shoulder on November 12, 2014.

15. On November 21, 2014, Claimant returned to Integrity for follow-up for what she reported was "severe pain from injury received at work when I fell on crutches." Dr. Baca noted that Claimant was "using a cane now b/c she is having a great deal of pain in her left shoulder and it was worse when using the walker." According to Dr. Baca's note, Claimant was "reporting pain in her shoulder secondary to her fall. She fell onto her left shoulder she believes and had immediate pain the day of the injury." Mention is made of Claimant's prior left shoulder surgery from 1980 with indication that Claimant reported no "problems with the shoulder" following that surgery until she fell "again." At face value, Claimant alleges the pain in the shoulder was secondary to a fall on November 12, 2014. However, the report is devoid of any reference to the date of Claimant's alleged fall while using crutches.

16. Claimant completed a pain diagram dated November 20, 2014 depicting pain in the left shoulder caused by what is reported on the diagram as an "injury [occurring] at school when [Claimant] fell on crutches last week." The ALJ finds the date referenced on the pain diagram likely a documentation error as Claimant did not have a medical appointment on November 20, 2014. Rather, Claimant was evaluated on November 21, 2014. During her November 21, 2014 appointment, Claimant's reported pain emanates from a fall in the parking lot, not the experience of continued pain from using crutches or a walker.

17. On December 3, 2014, Claimant was seen in the offices of her PCP for a productive cough of one month duration. She was diagnosed with bronchitis and exacerbation of her asthma. Claimant also complained of left shoulder pain during this appointment, although discussion regarding a specific cause for her left shoulder pain is not included in the record. It was noted that Claimant was using a cane in the right hand. The ALJ finds that Claimant likely held the cane in her right hand secondary to left shoulder pain.

18. Review of the evidence presented persuades the ALJ that Dr. Baca acted on Claimant's subjective complaints, regardless of whether Claimant's allegation of a fall on November 12, 2014 is inconsistent the medical history. His treatment of Claimant reflects thoroughness and an earnest effort to aid Claimant.

19. On December 4, 2014, Claimant was re-evaluated by Dr. Baca who ordered an MRI of the left shoulder for “possible RCT” (rotator cuff tear). Dr. Baca noted that Claimant was to continue use of the cane and “may engage in sedentary activities only. No reaching with L (left) shoulder or arm. Regarding causation, Dr. Baca noted: “ >50% probability for causation.”

20. MRI of the left shoulder was preformed December 8, 2014. The MRI demonstrated what Dr. Baca described as “moderate to severe degenerative changes and rotator cuff tendonopathy, with associated labral fraying and tears.

21. On December 11, 2014, Dr. Baca reviewed the findings of the December 8, 2014, MRI with Claimant. After reviewing the MRI findings, Dr. Baca opined that there was a less than a 50% chance of Claimant’s left shoulder injury being caused by her accident. Nevertheless, Dr. Baca provided Claimant with an ability to treat her shoulder, regardless of whether it was associated with a work accident, by referring her to Dr. Christopher Jones for orthopedic consult.

22. As Claimant’s treatment with Dr. Baca progressed he clarified his opinion concerning the cause of Claimant’s left shoulder condition. On January 1, 2015, Dr. Baca noted that Claimant sustained a “secondary injury” as a consequence of falling while using crutches. Consequently he noted the following regarding causation for Claimant’s left shoulder condition: “>50% probability for causation; however, L (left) shoulder injury is <50% probability for causation for initial injury; however, PT (patient) fell using crutches and landed directly onto L (left) shoulder exacerbating chronic deg (degenerative) changes and causing labral tear.” The ALJ infers from this causality statement that Dr. Baca does not ascribe any left shoulder injury to the November 4, 2014 incident, i.e. “initial injury.” Rather, Dr. Baca’s concluded that Claimant’s left shoulder condition (injury) was caused by a secondary fall in Employer’s parking lot she alleged while using crutches and this fall aggravated chronic pre-existing degenerative changes in the shoulder and a labral tear.

23. As noted above, Claimant previously injured her left shoulder in a car accident resulting in rotator cuff surgery. Claimant testified that her prior left shoulder injury occurred as a consequence of a car accident in 1981. She testified that she had no trouble with her left shoulder after this surgery and the shoulder had time to heal. According to Claimant, her last treatment was likely in 1981. Respondents noted at the first hearing that Claimant’s shoulder surgeon opined that she had “degeneration” and “gout” in her shoulder. Nonetheless, Claimant testified that her shoulder “didn’t really hurt” much before her work accident, but it was a “12 out of ten” after. The ALJ is unable to find record support demonstrating that Claimant obtained treatment or even complained of left shoulder pain/symptoms between 1981 and November 13, 2014.

Dr. Jones’ Treatment

24. As noted above, Claimant was referred to Dr. Christopher Jones for orthopedic consult. Dr. Jones first evaluated Claimant on December 29, 2014. During this visit, Dr. Jones documented what he understood to be the events surrounding Claimant's injuries sustained on November 4, 2014. Regarding those events, Dr. Jones noted that Claimant had been "pushed into a door and struck her shoulder." He does not indicate which shoulder was struck however. Assuming Dr. Jones is referencing the left shoulder, the ALJ finds no record support, outside of Claimant's contention, for such conclusion. Nonetheless, Dr. Jones also documents that following the November 4, 2014 incident, Claimant was using crutches when she fell at "work on 11/10/14, and that is when she really feels like she re-hurt her shoulder." The reference to a date of injury occurring November 10, 2014 is inconsistent with the balance of the record evidence suggesting that Claimant fell and injured her left shoulder on November 12, 2014.

25. Dr. Jones also commented on the findings of Claimant's December 8, 2014 MRI, noting that the MRI demonstrated "a lot of intra-articular debris consistent with possible lose chondral debris and some synovitis associated with that" along with "some tendinopathy of [the] rotator cuff and possibly a partial tear, but I do not see a full-thickness defect."

26. Regarding the cause of Claimant's left shoulder symptoms', Dr. Jones noted: "Given the mechanism of injury, this could certainly be a traumatic injury with impaction of the humeral head onto the glenoid. However, it could also be all chronic with some exacerbation of her previously existing injury." Dr. Jones elected to proceed conservatively by injecting the shoulder with a 2:2:1 solution of Marcaine, Lidocaine and Depo-Medrol.

27. By January 19, 2015, it was evident Claimant had failed conservative treatments such as physical therapy and injections. Dr. Jones requested surgical authorization from Respondents on January 30, 2015. Respondents denied the request on February 11, 2015.

28. Claimant testified to having two surgeries on her left shoulder following her November fall while using crutches. The first surgery took place on February 11, 2015, and the second occurred in March of that year. The second surgery was necessary to correct a "popeye" deformity in Claimant's left biceps caused by the first surgery. During Claimant's February 11, 2015 procedure it was discovered that she had pseudo gout. Claimant's surgery was covered by her private health insurance although she had out-of-pocket costs for the surgery and subsequent physical therapy.

Maximum Medical Improvement, Dr. Lindberg's Evaluation, Dr. Hall's Evaluation and Dr. Tyler's Division Independent Medical Evaluation (DIME)

29. Dr. Baca placed Claimant at maximum medical improvement (MMI)

without permanent impairment on March 3, 2015. At the time he placed Claimant at MMI, Dr. Baca noted she was not working secondary to her left shoulder condition. Claimant testified she missed work from February 11, 2015 through March 20, 2015, as a result of her left shoulder surgery. Dr. Baca's opinion concerning causality of Claimant's left shoulder condition/injury was unchanged from his January 1, 2015 opinion.

30. Respondents sought an opinion from Dr. James Lindberg regarding the cause of Claimant's left shoulder condition. Dr. Lindberg examined Claimant on May 5, 2015 after which he opined that he did not believe Claimant had suffered an injury to her left shoulder as a result of the November 4, 2014 incident. He also concluded that there were multiple inconsistencies surrounding Claimant's alleged second injury stemming from a fall allegedly occurring on or about November 12, 2014.

31. Claimant sought an opinion from Dr. Timothy Hall. Dr. Hall evaluated Claimant on June 19, 2015. Dr. Hall concluded that while Claimant had pre-existing degenerative changes in the left shoulder, the two events in November, i.e. the original incident of November 4, 2014 and particularly the November 12, 2014 fall caused those changes to become symptomatic. Similar to Dr. Tyler's opinion, Dr. Hall found that "but for" the November 12, 2014 fall, Claimant "would not have gone to surgery." Consequently, he opined that Claimant's left shoulder condition/injury was a direct result of the alleged work-related fall on November 12, 2014. Dr. Hall also felt that Claimant needed additional work-up for ongoing symptoms related to a concussion. According to Dr. Hall's independent medical examination (IME) report, Claimant needed referral to a neuro ophthalmologist and testing/treatment for ongoing cognitive complaints.

32. Dr. Hall is the first doctor to find there may be ongoing problems from a concussion. Dr. Hall's report is contrasted with Dr. Baca, who evaluated Claimant multiple times and found no objective evidence for post-concussive problems. Based upon the evidence presented, the ALJ finds the opinions of Dr. Hall regarding Claimant's need for additional treatment for post concussive symptoms credible and persuasive (See paragraph 63 below).

33. Dr. Hall provides multiple opinions regarding the left shoulder – that Claimant injured it on November 4, 2014 (an opinion that is inconsistent with the medical records on or about that date of injury) and he finds that she fell on November 12, 2014 while getting out of her car (again, a opinion that is inconsistent with the totality of the evidence presented, including the medical records from November 13, 2014). Dr. Hall fails to find any preexisting problem with the left shoulder, even though this condition is well documented. Dr. Hall found claimant had some left shoulder symptoms following the November 4, 2014 fall (a fall where he opines claimant hit her left shoulder, but which conclusion is unsupported by the record). He then finds Claimant was "markedly worse" after a fall in the parking lot on November 12, 2014. Dr. Hall's opinion

relies on two pieces of evidence (left shoulder injured on November 4, 2014 and left shoulder injury more significantly on November 12, 2014) that are inconsistent with the credible and convincing evidence in this case. Consequently, the ALJ rejects Dr. Hall's opinions regarding the cause of Claimant's left shoulder symptoms as unpursuasive.

34. Claimant requested a Division Independent Medical Examination (DIME) with Dr. John Tyler for the November 4, 2014 work injury only. Dr. Tyler completed the requested DIME on July 24, 2015, but apparently misunderstood what he was requested to evaluate. He did not complete his report with an impairment rating, despite a request from the Division IME unit for the same. Claimant alleges because Dr. Tyler did not perform an impairment rating, he did not express an opinion concerning causation of Claimant's left shoulder condition. The ALJ is not persuaded. Careful review of Dr. Tyler's DIME report convinces the ALJ that Dr. Tyler has very specific opinions regarding causation pertaining to Claimant's left shoulder and her need for treatment, including surgery. In his DIME report, Dr. Tyler relates Claimant's left shoulder complaints to a November 12, 2014 injury. He specifically rejects that her left shoulder complaints are related to the November 4, 2014 work injury, which was the subject of the requested DIME. As part of his opinion concerning the cause of Claimant's left shoulder symptoms and need for surgery, Dr. Tyler opines: "Claimant was only on crutches because of her work injury. While she may have had an underlying shoulder condition, this fall exacerbated that condition and created a need for surgery. "Whether or not this patient had previous trauma to the shoulder, that trauma went back nearly 34 years ago and was asymptomatic until this event."

35. Dr. Tyler also opined that Claimant was not at MMI for her head injury, agreeing with Dr. Hall that Claimant should be seen by a neuro-optometrist. Dr. Tyler believes Claimant may have a mid-line shift brought on by the trauma of November 4, 2014. Finally, Dr. Tyler opined that Claimant should be evaluated by a psychologist for emotional counseling stemming from the fact that she had become a victim of a violent altercation between a student and a security guard that she unfortunately became entangled in.

The Testimony of Claimant's Co-Workers

36. Aaron Griffen, Ph.D. testified Claimant did not report a left shoulder injury as a consequence of a fall in the parking lot to him on November 12, 2014, the date Claimant asserts it occurred. This contradicts Claimant's report that she immediately told Dr. Griffen of the injury. Had Claimant reported an injury, Dr. Griffen testified he would have followed standard protocol, i.e. provide the employee with medical aide, contact Risk Management, and complete an accident report. Dr. Griffen testified that he did not learn about the alleged November 12, 2014 injury until February of 2015 when Claimant finally reported the injury.

37. Claimant’s report of an injury on February 10, 2015 for the alleged November 12, 2014 fall came after Dr. Griffen counseled her in December of 2014 and January of 2015 on her need to improve her work performance. Claimant was working under restricted duty when Dr. Griffen spoke with her regarding her work. Claimant was missing crucial deadlines necessary and important to the employer and those it served. She was also missing meetings necessary to conduct the business of the school district.

38. Dr. Griffen documented the problems associated with Claimant’s job performance in a running memorandum. He removed some of Claimant’s duties in January of 2015 because of her failure to meet mandatory deadlines which resulted in compliance issues for critical testing. Claimant was also counseled on her failure to respond appropriately to a subordinate challenging her authority. Finally, Claimant was warned to cease gossiping; she was a leader of the employer’s organization and it was important to not undermine the authority structure given the nature of the work (education). On January 15, 2015, Claimant was told she would be put on a corrective action plan to bring her into compliance with the ten standards set by the state for administrators like her.

39. Dr. Griffen met with Claimant to finalize her corrective action plan on February 6, 2015 (four days before Claimant reported the November 12, 2014 alleged fall at work). The corrective action plan was signed on February 9, 2015, one day before Claimant filed her report of a November 12, 2014 work injury. In the corrective action plan, Claimant is put on notice that “Failure to meet the corrective actions mentioned above will result in further disciplinary actions that may lead to termination of your contract.” Claimant testified that she told Dr. Griffen she could not meet her duties because of her worker’s compensation claim. Claimant returned to work following her surgery on March 20, 2015. She testified that she moved slowly as a result of her injuries and that it took her a lot longer to do things because her memory wasn’t that good. According to Claimant, it took her twice as—probably three times as long to get something done. She also testified that she had difficulty remembering things, but later testified that she was never told the meetings she missed were mandatory. Finally she testified that she did not fail to show up for the ACT exam, but instead had informed a co-worker that she had a doctor appointment she had to go to.

40. Dr. Griffen credibly testified to the repeated failure of Claimant to meet identified goals in the corrective action plan. Furthermore, Claimant violated Employer policies/procedures regarding student discipline by extending a delayed suspension consequence to a student. Claimant suggested that she inadvertently reverted back to how things were done at her previous employer as an explanation for her action concerning the extension of a delayed consequence. The ALJ finds Claimant’s testimony in this regard unpursuasive.

41. Claimant’s employment was terminated at the end of the school year

in May of 2015.

42. Based upon the evidence presented, the ALJ finds Claimant's suggestion that she was not a fault for her contract not being renewed unpersuasive. The evidence presented, demonstrates that Claimant's employer went to great lengths to work with her in an effort to ensure her continued success at work. The ALJ is persuaded that Dr. Griffen asked what specific duties Claimant could not meet, since claimant had been working in a modified job approved by her physician, Dr. Baca. Thereafter some of Claimant's work responsibilities were taken from her. Furthermore, the record evidence supports that Claimant was provided with a support person to help her meet her remaining responsibilities. Dr. Griffen reviewed the specific duties Claimant was expected to perform at which point Claimant stated she did not agree to the corrective action plan and would go to her attorney. Claimant left school after the corrective action plan without permission and indicated she was going to see her attorney. The February 6, 2015 meeting is memorialized in Dr. Griffen's memorandum.

43. Based upon the testimony presented, the ALJ finds that Claimant ascribes the problems with her job performance to the effects of a closed head injury. Claimant's testimony that she did not know that the meetings were mandatory is unconvincing. Her suggestion that the effects of a closed head injury explain her failure to attend meetings, complete deadlines in a timely fashion, adequately prepare and attend critical testing and violating district discipline policies is equally unpersuasive given Claimant's position, the inconsistencies in her testimony and length of her employment with the school district.

44. Based upon the evidence presented, the ALJ is persuaded that Claimant exercised a degree of control over her work performance and otherwise committed multiple volitional acts that directly lead to the termination of her employment.

45. As noted above, after the corrective action plan was put into place, Claimant reported her November 12, 2014 fall. Claimant indicated that Jessica Lopez witnessed the fall. She also indicated that she notified Dr. Griffen of the injury on November 12, 2014, the date it allegedly occurred. As noted above, Dr. Griffen contradicts Claimant's assertion.

46. At hearing, Claimant amended her statement that Jessica Lopez witnessed the fall, testifying that she told her about it. She also testified that she could not remember whether her statement about reporting a November 12, 2014 injury to Griffen was correct.

47. Jessica Lopez testified that she did not witness the fall. Rather, Ms. Lopez testified that Claimant told her about the second fall the day after it allegedly occurred. According to Ms. Lopez, Claimant reported to her that she fell

and everything was alright. In response to Ms. Lopez' inquiry as to whether she needed to report an injury, Claimant replied "no", that she was fine a little bumped and bruised, but nothing more than that. As noted above, no physical indications of injury, such as bruises, contusions or scrapes are documented in either the physical therapy or Dr. Dean's notes from November 13, 2014, the day after the alleged fall.

48. Shannon Lemons testified that when Claimant returned to work after the November 4, 2014 incident, a student came into her office early in the morning (between 8:00 a.m. and 8:30 a.m.) asking for a wheelchair. Ms. Lemons asked the student why he needed the chair and he replied he needed it for Claimant. Ms. Lemons responded with the student to Claimant's location. Ms. Lemons found Claimant in a doorway hunched over her crutches. Ms. Lemons knew Claimant had trouble with her lungs and Claimant was breathing heavily as she leaned over her crutches.[2]

49. Ms. Lemons testified that she had Claimant sit in the wheelchair and that she wheeled Claimant to her (Claimant's) office. Claimant indicated she needed the wheelchair after lunch on November 12, 2014 as she fell in the parking lot on her way back into the building after lunch. Ms. Lemons testified that she responded with the wheelchair first thing in the morning as Claimant arrived at work. According to Ms. Lemons she responded with a wheelchair before lunch and offered to help her the rest of the day. Ms. Lemons testified that Claimant used the wheelchair prior to lunch because Claimant called her and asked to be wheeled out to her vehicle for lunch. Per Ms. Lemons, when Claimant returned from lunch, she (Claimant) used her cell phone to call Ms. Lemons to meet her at her car so she could be wheeled from the parking lot back into the school. Ms. Lemons testified there was no fall in the parking lot at lunch time, as she wheeled Claimant to her car, helped her get into the vehicle and helped her get her seatbelt on nor was there a fall in the parking lot after lunch because when Claimant returned from lunch (the time which Claimant reports she fell in the parking lot), Ms. Lemons met her at her car. According to Ms. Lemons, Claimant was still in her vehicle when she arrived with the wheelchair and rolled her into the building. Ms. Lemons witnessed her arrival after lunch and testified there was no fall in the parking lot after lunch as Claimant asserts.

50. During her deposition, Ms. Lemons was asked whether Claimant reported a fall in the parking lot when she arrived at school on November 12, 2014, when Ms. Lemons brought her a wheelchair. Ms. Lemons testified Claimant never reported any fall in the parking lot to her. Ms. Lemons, a health worker for Employer, testified Claimant was having trouble breathing when she responded with a wheel chair to Claimant's location, that Claimant is an asthmatic and that she helped Claimant with her nebulizer. Ms. Lemons believed Claimant's need for assistance upon arrival to school on November 12, 2014 was

[2] The medical records from the office of Claimant's PCP support a conclusion that Claimant was struggling with respiratory conditions and an unspecified exacerbation of her pre-existing asthma.

due to trouble breathing, as there no report or signs of an injury consistent with a fall and there was no report of a fall by Claimant. At the end of the school day, Ms. Lemons testified she wheeled Claimant out to her car around 3:15.

51. After Claimant reported the November 12, 2014 injury to Employer on February 10, 2015, Claimant approached Ms. Lemons and complained about the Insurer's denial of her left shoulder claim. Ms. Lemons responded she was unaware of Claimant hurting her left shoulder. Later, Claimant went to Ms. Lemons again about her denied claim. Claimant told Ms. Lemons she had reported a second injury to her. Claimant stated to Lemons, "I hope you don't get in trouble for this." Ms. Lemons was concerned about Claimant's statement, so she reported it to her supervisor, Rebecca Manuszak. Ms. Manuszak was the District Nurse for Employer at the time. Both Ms. Lemons and Ms. Manuszak no longer work for Employer and were not employed by the school district when they testified. Like Ms. Lemons, Ms. Manuszak was present when Claimant was injured on November 4, 2014. She stayed with Claimant until paramedics arrived.

52. Ms. Manuszak was also aware of Claimant returning to work after the November 4, 2014 admitted work injury. Ms. Manuszak was aware that Ms. Lemons provided wheelchair assistance to Claimant when she returned to work. According to Ms. Manuszak, Ms. Lemons told her that Claimant had a difficult time ambulating on her crutches due to her asthma. Ms. Lemons reported to Manuszak that a student saw Claimant in distress and that Ms. Lemons brought a wheelchair to Claimant and wheeled Claimant around because of Claimant's asthma. Ms. Manuszak saw Claimant later on the day of her alleged fall in the parking lot. According to Ms. Manuszak, Claimant reported to her that it was too difficult to use the crutches because of her asthma. Ms. Manuszak believes the student notified Ms. Lemons of Claimant's distress as Claimant arrived to work, not after lunch as maintained by Claimant.

53. Ms. Manuszak testified that Ms. Lemons told her about Claimant coming to her office and asking her to support Claimant's allegation that she (Claimant) reported a second injury to Ms. Lemons in November of 2014. Ms. Manuszak characterized Claimant's actions as a threat to Ms. Lemons to "change her story" or "her job would be in jeopardy." Ms. Manuszak testified Ms. Lemons was very upset about Claimant's statements. Ms. Manuszak noted neither she nor Ms. Lemons were aware of a second fall. According to Ms. Manuszak, Claimant did not report a second fall to her and did not report a second fall to Ms. Lemons. Ms. Manuszak testified Ms. Lemons was upset because Claimant suggested that she (Ms. Lemons) would be in trouble because she failed to report Claimant's second injury at the time it allegedly occurred as required by Employer policy. Ms. Manuszak reported Claimant's statements to Claimant's supervisor's assistant and to the Risk Manager for Employer. She also went to Claimant's supervisor directly and indicated she would not tolerate an employee threatening Ms. Lemons. Ms. Manuszak testified she did not believe there was a second fall; she remembers Claimant coming into the clinic

and reporting her shoulder began hurting when she was dressing at home one day. Claimant reported a “dislocation” of the left shoulder while “getting dressed for school” on January 21, 2015 according to records from Integrity. According to Dr. Baca’s report from this date, Claimant’s report of dislocation was the second time her shoulder had dislocated. Claimant testified she reduced the dislocation herself based on what she had seen on television.

54. Claimant testified that she believed Ms. Lemons knew about her injury in the parking lot when she mentioned to Ms. Lemons that she (Ms. Lemons) may get in trouble for not handling things right away. Based upon the evidence presented, the ALJ finds Claimant’s explanation regarding the verbal exchange between her and Ms. Lemons unconvincing. The totality of the evidence presented concerning this issue persuades the ALJ that Claimant’s decision to repeatedly approach Ms. Lemons about the denial of the November 12, 2014 claim coupled with the statement suggesting that Ms. Lemons may be in trouble for failing to report the claim constituted a veiled threat to intimidate Ms. Lemons into reporting that Claimant had actually fallen in an attempt to bolster the claim.

55. Based upon the evidence presented, the ALJ finds Claimant’s allegations surrounding her alleged fall on November 12, 2014 inconsistent. When Claimant finally does report a November 12, 2014 injury on February 10, 2015, she provides details that are inconsistent with the testimony of her co-workers and her own later testimony. At hearing, Claimant reported she fell after getting dizzy while trying to use her crutches to get from the parking lot to the school. Claimant told Dr. Lindberg she slipped on ice. Clamant told the Division IME, she became dizzy and fell. In her initial report of injury on February 10, 2015, Claimant asserts an employee (Ms. Lopez) witnessed the fall and that she reported the fall to her supervisor (Dr. Griffen) on the date of alleged injury, November 12, 2014. However, these reports are contradicted by the testimony of both Ms. Lopez and Dr. Griffen.

56. Based upon the totality of the evidence presented, the ALJ finds the reports and testimony of Claimant concerning an alleged fall occurring on November 12, 2014, inconsistent, unreliable and unpersuasive. The evidence presented persuades the ALJ that Claimant has failed to establish by a preponderance of the evidence that she actually fell in Employer’s parking lot injuring her left shoulder on or about November 12, 2014.

Dr. Lindberg’s Testimony

57. Dr. Lindberg testified that there was no initial injury to the left shoulder from the November 4 fall. He testified further that there was no medical evidence to support a fall on November 12, 2014.

58. Dr. Lindberg testified that Claimant has gout or other crystalline disorder that is unrelated to work. Dr. Lindberg testified that “gout can be caused

by— exacerbated by trauma" He also testified that a gout flare-up can be caused by trauma. He testified that he had no knowledge of any of left shoulder symptoms between Claimant's car accident in the 80s, and her injury in November 2014. Dr. Lindberg's hypothesis as to why Claimant had not previously been prescribed medication for gout (if she in fact did have it) was that "[i]It hadn't reached a crescendo point in any joint." According to Dr. Lindberg, Claimant's left shoulder condition/symptoms and need for treatment is unrelated to any work related accident occurring November 4 or 12, 2014 and should be cared for under her health insurance.

Dr. Baca's Testimony

59. Dr. Baca testified that his own medical report from the initial visit documents three different mechanisms of injuries for Claimant's injury on November 4, 2014. Dr. Baca's November 5, 2015 report begins by stating that Claimant "hit her head on a door knob and had loc for 10+ seconds." A few lines down, the report indicates that Claimant fell and hit the left side of her head on the door, not the door knob. The final page of Dr. Baca's report states that the Claimant hit the *right* side of her head on the door, fell to the floor, and then hit the left side of her head and right side of body on the floor.

60. Dr. Baca testified that he did not notice any concussive or post-concussive symptoms when he first examined Claimant. However, he also testified that assessment of her post-concussive or concussive symptoms was difficult due to her "emotional lability, anxiety, and stress." He also testified that if Dr. Tyler was correct, Claimant would require additional evaluation and treatment, but he did not find Claimant failed to attain MMI.

61. As noted, the initial emergency room report notes Claimant was unconscious for around approximately 30 seconds, and she was "amnesic" to the event. While Claimant had no symptoms of concussion on re-evaluation in the ER, the provider noted a concussion as "always possible" for which he recommended monitoring of symptoms and close follow-up with her PCP. Dr. Baca also reported a concussion as a work related medical diagnosis when he examined Claimant on November 5, 2014. As found above, that examination revealed moderate headache and intermittent vision changes as well as an episode of vomiting. The ALJ finds these symptoms consist with concussion.

62. Claimant was still complaining of "intermittent lightheadedness and intermittent headaches" three days after her initial injury on November 4, 2014. She complained of "intermittent dizziness and forgetfulness" on November 13, 2014. Despite these complaints, Dr. Baca testified he did not notice any post-concussive symptoms.

63. Based upon the evidence presented, the ALJ finds that Claimant likely suffered a concussion as a consequence of the November 4, 2014 incident.

While the evidentiary record reveals inconsistencies regarding whether Claimant injured her left shoulder in the incident occurring November 4, 2014, the medical records submitted repeatedly document that Claimant hit her head and lost consciousness. The evidence presented persuades the ALJ that Claimant likely suffers from post-concussive symptoms, including dizziness, visual difficulties and cognitive sequela, i.e. forgetfulness as a direct consequence of hitting her head when she fell to the floor on November 4, 2014. Thus, while Dr. Baca took Claimant's post concussive complaints seriously as evidenced by the completion of multiple evaluations over time, the ALJ credits the opinions of Dr. Hall and Dr. Tyler to find that Claimant is not at MMI for the effects of her head injury suffered on November 4, 2014.

64. Respondents have failed to produce clear and convincing evidence to overcome Dr. Tyler's Division IME regarding Maximum Medical Improvement ("MMI") and impairment for the injuries Claimant sustained on November 4, 2014.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principles

A. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S.* Claimant must prove that he is a covered employee who suffered an injury arising out of and in the course of employment. *Section 8-41-301(1), C.R.S.; See, Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). Claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997), *cert. denied* September 15, 1997*.* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16.

C. A workers' compensation case is decided on its merits. *Section 8-43-201, C.R.S.* In accordance with *Section 8-43-215, C.R.S.,* this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability of the Alleged November 12, 2014, Fall in Employer's Parking Lot

D. Under the Workers' Compensation Act, an employee is entitled to compensation where the injury is proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment. *Section 8-41-301(1), C.R.S.; Horodyskyj v. Karanian* 32 P.3d 470 (Colo. 2001). The phrases "arising out of "and "in the course of" are not synonymous and a claimant must meet both requirements. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). Thus, an injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976).

E. The term "arises out of" refers to the origin or cause of an injury. *Deterts v.Times Publ'g Co. supra.* There must be a causal connection between the injury and the work conditions for the injury to arise out of the employment. *Younger v. City and County of Denver, supra.* An injury "arises out of" employment when it has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered part of the employee's employment contract. *Popovich v. Irlando supra.* In this regard, there is no presumption that an injury which occurs in the course of a worker's employment also arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968); *see also, Industrial Commission v. London & Lancashire Indemnity Co.,* 135 Colo. 372, 311 P.2d 705 (1957) (*mere fact that the decedent fell to his death on the employer's premises did not give rise to presumption that* *the fall arose out of and in course of employment*). Rather, it is the Claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. § 8-43-201, C.R.S. 2013; *Ramsdell v, Horn,* 781 P.2d 150 (Colo. App. 1989). The question for determination here is whether Claimant's left shoulder symptoms and need for treatment arise out of an alleged work related fall on November 12, 2014 and are sufficiently connected thereto to result in a finding that her left shoulder condition is compensable.

F. The determination of whether there is a sufficient "nexus" or causal relationship between Claimant's employment and the injury is one of fact which the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo. App. 1996). Whether Claimant sustained her burden of proof is a factual question for resolution by the ALJ. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). In this claim, Claimant alleges, in part, that she sustained an injury to her left shoulder as a consequence of a fall in Employer's parking lot on or about November 12, 2014. Claimant's testimony regarding her alleged November 12, 2014 fall is inconsistent, unreliable and substantially contradicted by the more persuasive testimony of Ms. Lemons, Ms. Manuszak and Dr. Griffen. Although Claimant alleges she sustained an injury in the parking lot on November 12, 2014, when she fell and injured her left shoulder, she was evaluated by Dr. Dean on November 13, 2014 – one day after this fall allegedly occurred. In that November 13, 2014 visit, Claimant makes no mention of a fall in a parking lot and there are no outward signs of injury to her left shoulder, despite Claimant's report to Jessica Lopez that she was "bumped and bruised." Claimant also visited with a physical therapist on November 13, 2014 who makes no mention of a November 12, 2014 work injury to Claimant's left shoulder. This evidence coupled with the testimony of Ms. Lemons persuades the ALJ that Claimant did not fall in the parking lot as she maintains on November 12, 2014. As the ALJ concludes that Claimant likely did not fall, there is no nexus between Claimant's left shoulder condition and that fall. Consequently, the claim for left shoulder injuries occurring as a consequence of an alleged fall in Employer's parking lot must be denied and dismissed.

Overcoming Dr. Tyler's Opinion Regarding the Cause of Claimant's Left Shoulder Symptoms

G. A more difficult question concerning Claimant's left shoulder condition is posed by the Division IME opinion of Dr. Tyler. A plain reading of the report reveals Dr. Tyler failed to comply with standards required of a Division IME. Dr. Tyler is the Division IME for the November 4, 2014 claim only. He was directed to address that one claim, yet reached conclusions concerning the compensable nature of Claimant's alleged November 12, 2014 fall. Dr. Tyler's opinion on the causality of Claimant's left shoulder complaints to the November 4, 2014 is unequivocal. Dr. Tyler does not relate the left shoulder complaints and need for treatment to the November 4, 2014 work related injury or to crutch use following that injury. Rather, Dr. Tyler expressed his opinion that Claimant's left shoulder symptoms and need for surgery were related to a subsequent injury to the left shoulder as a consequence of a fall occurring on November 12, 2014.

H. The law regarding Division IME opinions is clear. A DIME physician's findings of causation, MMI and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding MMI, permanency or the cause of a particular component of a claimant's medical condition, the party challenging the DIME must demonstrate that the physicians determinations in these regards are highly probably incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.* As found, the ALJ concludes that Dr. Tyler expressed an opinion concerning the cause of Claimant's left shoulder condition and her need for treatment when he completed the requested DIME for the admitted November 4, 2014 injury. As found, he did not causally relate Claimant's symptoms and/or need for surgery to Claimant's November 4, 2014 injury or use of crutches. Rather, he unmistakably related Claimant's left shoulder condition and need for treatment, i.e. surgery to an alleged November 12, 2014 fall in Employer's parking lot. In so doing, Dr. Tyler made certain assumptions about that claimed injury prematurely. Nevertheless, he did express his opinions regarding the cause of Claimant's shoulder condition. Respondents did not challenge Dr. Tyler's opinions in this regard. Even if they had, the undersigned ALJ finds that Dr. Tyler's opinion on the work-relatedness of the alleged second injury is not afforded any special weight because he was chosen as a DIME to address the finding of MMI and impairment by Dr. Baca concerning the first injury occurring November 4, 2014 only, not the compensable nature of an alleged second injury.

I. In this case, the undersigned ALJ agrees with Respondents that the DIME report of Dr. Tyler reflects that he conflated the claim he was appointed to review (the November 4, 2014 claim) with a claim that was contested from November 12, 2014. Regardless, Dr. Tyler's opinion that Claimant's need for left shoulder treatment did not result from the November 4, 2014 work injury is a determination of causation that falls squarely on the DIME doctor to decide. In order to effectively challenge that determination, there must be evidence that the physician's determination is highly probably incorrect and this evidence must be "unmistakable and free from serious or substantial doubt. Simply put, the opinion that Claimant's left shoulder condition and need for treatment is related to the November 12, 2014 fall must be overcome by clear and convincing evidence. In this case, Respondents filed an application for hearing over the Division IME's report because the filing of admission given the structure of Dr. Tyler's report would have been impossible given that the November 12, 2014 claim was fully contested. When Dr. Tyler conflated the November 4, 2014 claim before him with a contested claim, which the ALJ concludes is not compensable, the ALJ must carefully craft an order that reflects the proper burdens for each party. Given the weight provided to Division IME opinions, the relative burdens may lead to an order with unusual results. Under the circumstances presented here, the ALJ concludes that Claimant had the burden of proving, by clear and convincing evidence, that Dr. Tyler's causation determination regarding the cause of Claimant's left shoulder condition, was highly probably incorrect.

J. As noted, Respondents objected to the Division IME conflating the two separate claims; however, they did not disagree with the Division IME's opinion that the left shoulder was not caused by the November 4, 2014 work injury. Rather, Respondents contend that the DIME process veered off course when Dr. Tyler concluded that a second fully contested injury was the primary reason for Claimant not attaining MMI in the only case he was requested to evaluate. Claimant advances theories different from what the Division IME found and, therefore, must overcome Dr. Tyler's causation opinions by clear and convincing evidence. Here, Claimant failed to prove there was a compensable injury occurring on November 12, 2014 and there is no credible evidence that she sustained an injury to her left shoulder on November 4, 2014. Claimant's alternate third theory is that her nine days of crutch use caused the left shoulder complaints, but that is unsupported by the Division IME, who found claimant was "asymptomatic" on before November 12, 2014. In addition to failing to prove, by a preponderance of the evidence that she sustained a compensable injury on November 12, 2014, Claimant failed to prove by clear and convincing evidence that the Division IME was incorrect when he found her left shoulder problems unrelated to the November 4, 2014 work injury.

K. Since claimant has failed to overcome the Division IME's opinion that the November 4, 2014 work injury did not cause her left shoulder condition and/or her need for treatment, her claim for medical benefits, in the form of left shoulder surgery must be denied and dismissed. As found, Claimant underwent two separate surgeries on her left shoulder that were covered by herself and her private insurance. Claimant paid $1,000 out of pocket already and according to her testimony, there is still an outstanding $800 bill pending with Orthopedic Rehabilitation Associates. As Claimant's left shoulder injury on November 12, 2014 is not compensable and she failed to overcome the Division IME's opinion that the November 12, 2014 and not the November 4, 2014 injury is the cause of her need for treatment to the left shoulder, Claimant's request for Respondents to reimburse her for her out-of-pocket expenses of $1,000 and to pay all reasonable and necessary outstanding medical expenses related to treatment of the left shoulder is also denied and dismissed.

Overcoming Dr. Tyler's DIME Opinion Concerning MMI

L. Similar to a DIME physician's findings regarding causation, findings of the DIME doctor regarding MMI and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, *supra*; *Peregoy v. Industrial Claim Appeals Office, supra.*

M. "Maximum medical improvement" is defined in Section 8-40-201(11.5), C.R.S. as:

> A point in time when any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition. The requirement for future medical maintenance which will not significantly improve the condition or the possibility of improvement or deterioration resulting from the passage of time shall not affect a finding of maximum medical improvement. The possibility of improvement or deterioration resulting from the passage of time alone shall not affect a finding of maximum medical improvement.

N. In resolving the question of whether the DIME physician's opinions have been overcome, the ALJ may consider a variety of factors including whether the DIME physician properly applied the AMA Guides and other rating protocols. *See Metro Moving and Storage Co. v Gussert,* 914 P.2d 411 (Colo. App. 1995); *Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo. App. 2000); *Aldabbas v. Ultramar Diamond Shamrock*, W.C. No. 4-574-397 (ICAO August 18, 2004). The ALJ should also consider all of the DIME physician's written and oral testimony. *Lambert and Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). The questions of whether the DIME physician properly applied the AMA Guides, and whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office, supra*. Not every deviation from the rating protocols of the AMA Guides requires the ALJ to conclude that the DIME physician's rating has been overcome as a matter of law. Rather, deviation from the AMA Guides constitutes some evidence that the ALJ may consider in determining whether the DIME physician's rating has been overcome. *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117 (Colo. App. 2003); *Adams v. Manpower, supra*.

O. In addition to questions surrounding the cause of Claimant's left shoulder symptoms and her need for surgery related thereto, the instant case involves complex medico-legal questions concerning Claimant's need additional treatment associated with her persistent post concussive symptoms. Here the DIME report of Dr. Tyler reflects that he reviewed medical records from the various providers who evaluated and/or treated Claimant. The DIME considered the opinion of Dr. Lindberg and did not change his opinion regarding MMI. To the contrary, Dr. Tyler rather aggressively, outlined his disagreement with the conclusions reached by both Dr. Baca and Dr. Lindberg. While Dr. Tyler engages in unnecessary rhetoric, the ALJ finds and concludes that his opinions concerning her need for additional treatment to address persistent post concussive symptoms, including Claimant's emotional lability are supported by the record evidence presented. Claimant did fall and lose consciousness on November 4, 2014 which has seemingly affected her vision. While the ALJ is not convinced that her claimed cognitive symptoms adequately explain her poor work performance, Claimant is emotionally labile, which likely emanates from a combination of striking her head and being caught up in a violent confrontation. Dr. Tyler persuasively opines that these conditions require additional treatment, leading the undersigned ALJ to conclude that Claimant's is not at MMI for all conditions related to her November 4, 2014 industrial injury. To the extent that Dr. Tyler's opinions concerning MMI (as a consequence of Claimant's need for additional cognitive and visual evaluation/treatment, in addition to counseling) diverge from those expressed by Dr. Baca, the ALJ concludes that those divergences constitute a professional difference of opinion. A mere difference of opinion between physicians fails to constitute error concerning the findings of the DIME physician. *See Gonzales v. Browning Farris Indust. of Colorado*, W.C. No. 4-350-356 (ICAO March 22, 2000). Consequently, Respondents have failed to prove that Dr. Tyler's opinion regarding Claimant's MMI status from a neuro-cognitive and psychological standpoint was highly probably incorrect as stated in the July 24, 2015 DIME report.

Responsibility for Termination

P. Because Claimant's injury was after July 1, 1999, sections 8-42-105(4) and 8-42 103(1)(g), C.R.S. apply. Those identical provisions state, "In cases where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury." Sections 105(4) and 103(1)(g) bar reinstatement of TTD benefits when, after the work injury, claimant causes his/her wage loss through his/her own responsibility for the loss of employment. *Colorado Springs Disposal d/b/a Bestway Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061 (Colo.App. 2002). Simply put, if claimant is responsible for his/her termination of employment, the wage loss which is the consequence of claimant's actions shall not be attributable to the on-the-job injury. *Anderson v. Longmont Toyota, Inc.,* W.C. No. 4-465-839 (ICAO February 13, 2002). Respondents shoulder the burden of proving by a preponderance of the evidence that Claimant was responsible for her termination. *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office,* 20 P. 3d 1209 (Colo. App. 2000).

Q. The concept of "responsibility" is similar to the concept of "fault" under the previous version of the statute. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). "Fault" requires a volitional act or the exercise of some control in light of the totality of the circumstances. *Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1994). An employee is "responsible" if the employee precipitated the employment termination by a volitional act that an employee would reasonably expect to result in the loss of employment. *Patchek v. Colorado Department of Public Safety*, W.C. No. 4-432-301 (September 27, 2001). "Fault" does not require "willful intent" on the part of the Claimant. *Richards v. Winter Park Recreational Association*, 919 P.2d 933 (Colo. App. 1996)(unemployment insurance); *Harrison v. Dunmire Property Management, Inc.,* W.C. no. 4-676-410 (ICAO April 9, 2008). "Fault" can include poor job performance, but Claimant is not at fault if the termination is due to claimant's physical or mental inability to perform assigned duties, *Johnston v. Deluxe/Current Corporation*, W.C. No. 4-376-417 (Industrial Claim Appeals Office, June 7, 1999).

R. In this case, Respondents assert that Claimant was terminated for cause at the end of the academic school year in May 2015 for failure to meet her goals set out in her corrective action plan. Claimant counters that she is not responsible for her termination because she was mentally unable to perform her due to the effects of a closed head injury caused by the November 4, 2014 incident occurring at work. As found above, the ALJ is not persuaded by Claimant's assertion. Here, the evidence supports a conclusion that Claimant knew what was required of her to maintain her employment. She was warned, put on a corrective action plan and given all the tools necessary to do her job. Nonetheless, she continued to miss meetings without a reasonable excuse, she failed to perform important functions of her job, again without reasonable explanation and she directly disregarded the policies of the disciplinary policies of the employer by extending to delayed consequence to a student under suspension. In short, Claimant took voluntary acts that caused the termination of her employment. Accordingly, Claimant's claim for TTD benefits must be denied and dismissed.

ORDER

It is therefore ordered that:

1. Claimant's claim for benefits arising out of a fall allegedly occurring on or about November 12, 2014 (W.C. No. 4-974-447-02), is denied and dismissed.

2. Claimant has failed to overcome the Division IME's opinion that the left shoulder condition and subsequent need for treatment is related the above

denied and dismissed November 12, 2014 claim and not a compensable consequence of her November 4, 2014 admitted injury. (W.C. No. 4-967-090-02);

3. As a result of failing to overcome the Division IME's causation determination that the left shoulder was not a compensable consequence of the admitted November 4, 2014 work injury, Claimant's claim for additional medical care to cure and relieve the Claimant from the effects of her left shoulder condition, including the treatment/surgery provided by Dr. Jones and out of pocket expenses associated with Dr. Jones' surgeries is denied and dismissed

4. Respondents request to set aside the DIME opinion of Dr. Tyler regarding MMI and impairment is denied and dismissed. Claimant has not attained MMI for all conditions related to her November 4, 2014 injury.

5. Claimant's request for TTD benefits is denied and dismissed.

6. All matters not determined herein, and not closed by operation of law pertaining to Claimant's November 4, 2014 claim are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUE

Whether the claimant has established by a preponderance of the evidence that she is entitled to conversion of her scheduled right shoulder impairment of 18% to impairment of the whole person rated at 11%.

FINDINGS OF FACT

1. On January 1, 2015 the claimant suffered an injury to her right shoulder while serving as a Mental Health Clinician I during her employment with the respondent-employer in Pueblo. The claimant placed her right arm in between two patients who were arguing. She felt pain.

2. One of the claimant's job functions was to engage in restraint training and combative training. The claimant was restricted from performing continuum of therapeutic interventions (CTI) training by Dr. Larsen.

3. The claimant came under the care of Dr. Lakin and was initially seen on January 2, 2015. The claimant underwent an x-ray of the right AC joint which showed no acute findings. The claimant's complaints of pain in the right shoulder were high initially at 10/10. The claimant was released to light duty with lifting restrictions as to the right extremity only. The claimant was also restricted from violent or physical contact with patients. The claimant did return to work light duty but had occasional days of no work due to pain.

4. The claimant underwent an MRI of the right shoulder on January 14, 2015 which showed possible adhesive capsulitis, and a small low-grade partial thickness insertional tear of the anterior supraspinatus and small hi-grade partial thickness tear of the supraspinatus tendon.

5. The claimant's work restrictions were based on limitations related to the use of her right arm for lifting, pushing/pulling, overhead use of right arm including and tactical activities.

6. The claimant was treated conservatively with physical therapy, therapeutic medical massage, and trigger point injections.

7. Specifically, the claimant received trigger point injections by Dr. Lakin on March 31, 2015. There were eight trigger points identified in the right trap, supra and infraspinatus, levator and rhomboid muscles. While some of these muscles are connected to the shoulder joint it is apparent that they also extend away from the shoulder joint beyond the arm.

8. The claimant was referred to Derek Purcell, M.D an orthopedic surgeon on February 5, 2015. He reported the following after reviewing the MRI images. “There was no significant tearing of the rotator cuff. I would not recommend surgical intervention. She should improve with conservative measures alone….” On examination claimant had painless range of motion of her cervical spine. The claimant had no complaints of scapular or neck pain. She did not mention any sleep disturbance.

9. On exam by Dr. Purcell, Spurling’s testing was negative. The claimant had only had trace tenderness over the right AC Joint. Internal rotation behind her back is to her belt line on the right. Loss of range of motion was limited to the right shoulder. Dr. Purcell’s diagnosis was right shoulder myofascial muscle strain rotator cuff.

10. The claimant was referred to Dr. Roger Davis, for an orthopedic evaluation and was seen on June 18, 3015. On examination he found somewhat limited range of motion in the right shoulder but good strength over all. She had mild tenderness at the AC joint and reported her pain at a 3 on exam. The claimant’s pain complaints were limited to her right shoulder. There were no complaints of scapular pain or neck pain. Dr. Davis administered a steroid injection and range of motion exercises. He did not recommend any surgery. The claimant was to return if needed and she never did.

11. The claimant received a course of massage therapy and physical therapy throughout her recovery. Throughout the massage therapy the claimant consistently complained of pain in the muscles extending beyond the arm at the shoulder.

12. Dr. Lakin placed claimant at MMI on November 11, 2015. He assessed 13% upper extremity impairment based on loss of range of motion and 6% joint impairment for mild crepitus of 6% for a total of 18% scheduled impairment. The only restriction imposed is that the claimant not perform any CTI activities.

13. Dr. Lakin’s final work related diagnoses were: Partial tear of the rotator cuff; strain of muscles and tendons of the rotator cuff of right shoulder. The ALJ finds that the rotator cuff muscles extend beyond the arm at the shoulder.

14. Although Dr. Lakin recommended maintenance care, claimant has not returned for any care since reaching MMI.

15. At the time claimant underwent her impairment rating she advised Dr. Lakin that her “activities of daily living are significantly impeded with her right shoulder dysfunction.” The claimant reported to Dr. Lakin that “her hair hygiene is difficult, especially combing and styling her hair. She reports getting dressed slower and painful and she favors her right shoulder greatly with those types of activities.”

16. The claimant testified at hearing that she is able to wash and dry her own hair. She testified at hearing she can dress herself including wearing clothing that goes over her head. At hearing, claimant was wearing a sweater that would have been pulled on over her head. She does experience pain during these activities.

17. The claimant nonetheless suffers from a constant pain and ache that has continued since the date of MMI. This pain and aching radiates into her shoulder and into the right scapula area. The claimant has numerous documented issues with trigger points in the trapezius and scapula area.

18. The claimant testified at hearing she can raise her hand above her head and can use her right arm. She testified she can use her right arm for activities of daily living. The claimant testified she can pick up her youngest child who is about 40 pounds and carry her but does so by holding the child on her hip.

19. The claimant testified she does not take any prescription or over-the counter medications for sleep. She does not have daytime sleepiness or any cognitive problems due to lack of sleep. The claimant has not requested nor received any prescriptions or medical care directed for sleep disturbance.

20. The claimant was recorded on surveillance video on February 22, 2016. The ALJ does not find the video to be of significant probative value.

21. The claimant testified she takes no prescription pain medications or prescription. She’ll occasionally take over the counter pain reliever.

22. The claimant testified she wakes up during the night from time to time as her movements sometime illicit shoulder pain. She also testified she has pain in her upper back near the trapezius muscle and on the right.

23. The ALJ finds that the claimant has established that it is more likely than not that the situs of the claimant's functional impairment extends beyond the arm at the shoulder and that she is entitled to a whole person rating of 11%.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S.

2. A claimant in a worker's compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

3. The facts in a worker's compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A worker's compensation case is decided on its merits. Section 8-43-201, C.R.S.

4. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

5. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

6. When a claimant's injury is listed on the schedule of disabilities, the award for that injury is limited to a scheduled disability award. *Section 8-42-107(1)(a), C.R.S.* However, a claimant may establish that his/her injury has resulted in "functional impairment" beyond the schedule enumerated in C.R.S. Section 8-42-107(2)(a); thus, entitling him/her to "conversion" of the scheduled impairment to impairment of the whole

person. This is true because the term “injury” as used in Section 8-42-107(1)(a)-(b), C.R.S., refers to the part or parts of the body which have been impaired or disabled, not the situs of the injury itself or the medical reason for the ultimate loss. *Walker v. Jim Fucco Motor Co,* 942 P.2d 1390 (Colo. App. 1997); *see also Strauch v. PSL Swedish Healthcare System,* 917 P.2d 366 (Colo. App. 1996). In the case of a shoulder injury, the question is whether the claimant has sustained functional impairment beyond the arm at the shoulder. *Langton v. Rocky Mountain Health Care Corp.* 937 P.2d 883 (Colo. App. 1996); *Strauch v. PSL Swedish Healthcare System, supra.*

7. “Functional impairment” is distinct from physical (medical) impairment under the AMA Guidelines and as noted above, the site of functional impairment is not necessarily the site of the injury itself. The site of functional impairment is that part of the body which has been impaired or disabled*, Strauch, supra.* Physical impairment relates to an individual’s health status as assessed by medical means. Disability or ‘functional impairment”, on the other hand, pertains to a person’s ability to meet personal, social, or occupational demands, and is assessed by non-medical means. Consequently, physical impairment may or may not cause “functional impairment” or disability. *Lambert & Sons, Inc. v. ICAO, 984 P.2d 656, 658 (Colo. App. 1998).* Physical impairment becomes a disability only when the medical condition limits the claimant’s capacity to meet the demands of life’s activities. *Lambert & Sons, Inc., supra at 658.*

8. “Functional impairment” need not take any particular form. *See Nichols v. LaFarge Construction, W.C. No. 4-743-367 (October 7, 2009); Aligaze v. Colorado Cab Co, W.C. No. 4-705-940 (April 29, 2009); Martinez v. Albertson’s LLC, W.C. No. 4-692-947 (June 30, 2008).* Moreover, “referred pain from the primary situs of the industrial injury may establish proof of functional impairment to the whole person.” *Hernandez, v. Photronics, Inc., W.C. No. 4-390-943 (July 8, 2005); Latshaw v. Baker Hughes, Inc., W.C. No. 4-842-705 (ICAO, December 17, 2013).* Nonetheless, symptoms of pain do not automatically rise to the level of a functional impairment. To the contrary, there must be evidence that such pain limits or interferes with the claimant’s ability to use a portion of her body to be considered functional impairment. *See Mader v. Popejoy Construction Co., Inc., W.C. No. 4-198-489 (August 9, 1996), aff’d Popejoy Construction Co., Inc., (Colo. App. 96CA1508, February 13, 1997)(not selected for publication)*(claimant sustained functional impairment of the whole person where back pain impaired us of the arm). In order to determine whether permanent disability should be compensated as physical impairment on the schedule or as impairment of the whole person, the issue is not whether the claimant has pain, but whether the injury has impacted part of the claimant’s body which limits her “capacity to meet personal, social

and occupational demands." *Askew v. ICAO, 927 P.2d 1333 (Colo. 1996).* Consequently, an injury to the structures which make up the shoulder may or may not result in functional impairment beyond the arm at the shoulder. *Walker v. Jim Fucco Motor Co., supra; Strauch v. PSL Swedish Healthcare System, supra; Langton V. Rocky Mountain Health Care Corp., supra.*

9. Whether the claimant has sustained functional impairment beyond the arm at the shoulder is a factual question for the ALJ and depends on the particular circumstances of the individual case. *Walker v. Jim Fuoco Motor Co., supra.* In the instant case, the medical records support that claimant has consistently complained of (and received treatment for) pain, discomfort and functional loss beyond the shoulder joint. She has increased symptoms while completing activities of daily living as well as activities of employment and upon MMI demonstrated loss of active range of motion of the right shoulder. She testified credibly regarding her inability to function in her activities of daily living and in her ability to maintain proper sleep patterns.

10. As found, the claimant has proven by a preponderance of the evidence that she has sustained a functional impairment beyond the arm at the shoulder entitling her to permanent partial disability compensation based upon an impairment rating of 11% whole person.

[The Order continues on the following page.]

ORDER

It is therefore ordered that:

1. The respondent shall pay the claimant permanent partial disability payments based upon a whole person rating of 11%

2. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-958-503-02

ISSUE

1. Whether Claimant is entitled to a general admission for continued reasonable and necessary medical benefits ("Grover meds").

2. Whether Dr. Burris' maintenance recommendation of a six month health club membership is a recommendation for medical benefits after maximum medical improvement.

FINDINGS OF FACT

1. Claimant is employed by Employer as a plumbing/fire protection inspector.

2. On July 15, 2014 Claimant was so employed. Claimant was walking with another individual when he turned to answer a question, stepped off a curb onto a street, rolled his left ankle, and fell to the ground.

3. On August 27, 2014 Claimant underwent surgical intervention for his left ankle with orthopedic surgeon Dr. Schwappach.

4. Claimant's authorized treating provider, John Burris, M.D. noted that Claimant had numerous other complaints throughout his care including the cervical spine, left upper extremity, left lower extremity, right shoulder, and right knee. *See* Exhibits 1, A.

5. Dr. Burris noted that the cervical spine showed no acute abnormalities associated with the work event and that the MRI of the right shoulder showed no acute abnormalities associated with the work event. Dr. Burris noted the diagnosis for Claimant was left ankle sprain. *See* Exhibits 1, A

6. On October 20, 2015 Dr. Burris evaluated Claimant. Dr. Burris diagnosed left ankle sprain and noted that Claimant had completed approximately 100 sessions of therapy and had been released by the treating specialist after surgical intervention for his left ankle pain. Dr. Burris opined that Claimant was at maximum medical improvement (MMI). Dr. Burris provided a 6% lower extremity impairment rating. Dr. Burris opined that Claimant's other numerous complaints with negative diagnostic workups were not eligible for ratings based on the AMA Guides. *See* Exhibits 1, A

7. Dr. Burris opined that Claimant did not need any permanent work restrictions and that Claimant required no follow up. Dr. Burris encouraged Claimant to remain active with an aggressive home exercise program focused on stretching,

strengthening, and conditioning. Dr. Burris provided Claimant with a six month health club membership to ensure the continuity of Claimant's home program. Dr. Burris opined that the health club membership could be provided through maintenance and that no other maintenance was required. *See* Exhibits 1, A

8. On November 20, 2015 Dr. Burris submitted a Physician's Report of Worker's Compensation Injury to the Division of Workers' Compensation. Dr. Burris noted that Claimant had reached MMI on October 20, 2015 and that Claimant required maintenance care after MMI. Where the document asked to specify the care, Dr. Burris typed, "please see attached dictation" and attached a copy of his October 20, 2015 report and evaluation. *See* Exhibits 1, A

9. On December 3, 2015 Respondents filed a Final Admission of Liability. Respondents stated that their position on medical benefits after MMI was: "we do not admit for medical maintenance."

10. Claimant testified credibly at hearing. Claimant has continued symptoms in his ankle. Claimant attends a health club regularly to perform exercises. Claimant's strength and flexibility in his ankle has increased and his conditioning has improved somewhat with the regular use of his health club membership. At the health club, Claimant continues to perform similar activities to what he performed in physical therapy for this injury.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The Workers' Compensation Act of Colorado has a beneficent purpose and has consistently been given a liberal construction in favor of the interests of injured workers. *Padilla v. Industrial Comm'n*, 696 P.2d 273 (Colo. 1985).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or

improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo.App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo.App. 2000).

Medical Benefits

Every employer shall furnish such medical, surgical, dental, nursing, and hospital treatment, medical hospital, and surgical supplies, crutches, and apparatus as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee from the effects of the injury. *See* § 8-42-101(1)(a), C.R.S. Colorado courts have ruled that the need for medical treatment may extend beyond the point of MMI where the claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or prevent further deterioration of her condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995). Employers have been required to provide services which are either medically necessary for the treatment of a claimant's injuries or incidental to obtaining such treatment. *Atencio v. Quality Care, Inc*. 791 P.2d 7 (Colo. App. 1990).

In all claims in which an authorized treating physician recommends medical benefits after maximum medical improvement, and there is no contrary medical opinion in the record, the employer shall, in a final admission of liability, admit liability for related reasonable and necessary medical benefits by an authorized treating physician. *See* § 8-42-107(8)(f), C.R.S. MMI exists when any medically determinable physical or mental impairment caused by the injury has become stable and no further treatment is reasonably expected to improve the claimant's condition. *See* § 8-40-201(11.5), C.R.S.; *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002). In contrast post-MMI medical benefits are available to relieve the effects of the injury or prevent deterioration of the claimant's otherwise stable condition. *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995).

An award for post-MMI medical benefits, or *Grover* medical benefits, is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999). The claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915 (Colo. App. 1993). An award of *Grover* medical benefits should be general in nature. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003).

Here, Claimant has established by a preponderance of the evidence that he is entitled to a general award for post-MMI medical benefits. The ALJ concludes from the reports of Dr. Burris that Dr. Burris intended Claimant receive the benefits of a health membership to relieve the effects of Claimant's ankle injury and to prevent Claimant's ankle condition from deteriorating. Dr. Burris did not require a specific course of medical treatment for the ankle, but has submitted enough information to show that he believed a health membership would be for the continued treatment of Claimant's ankle and to prevent it from deteriorating. Although Claimant is not receiving any other medical treatment at this time, and although no specific future course of medical treatment has been recommended, the ALJ finds that Claimant has met his burden to show that the health club membership qualifies as a medical benefit to relieve the effects of Claimant's injury and to prevent deterioration of his condition. The ALJ notes the beneficent purpose of the Workers' Compensation Act and the liberal construction in favor of injured workers. Although Respondents argue that a health club membership is not medical "treatment," the health club membership in this case was intended to provide a continued way for Claimant to strengthen, stretch, and condition his ankle following his work injury. The recommendation of this maintenance by Dr. Burris for Claimant's injured ankle will assist in relieving the effects of the injury and preventing deterioration of the injury and therefore constitutes "treatment" aimed at Claimant's injured ankle under a liberal interpretation of the Act. The ALJ concludes that Claimant has met his burden to show that the health club membership recommended as maintenance treatment by Dr. Burris, with no contrary medical opinions, constitutes future treatment necessary to relieve the effects of his injury and prevent further deterioration of his condition.

ORDER

1. Claimant is entitled to a general admission for continued reasonable and necessary medical benefits ("Grover meds").

2. Dr. Burris' maintenance recommendation of a six month health club membership is a recommendation for medical benefits after maximum medical improvement.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. DATED: June 2, 2016,

/s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUE

The sole issue for determination is the claimant's average weekly wage (AWW).

FINDINGS OF FACT

1. The claimant was an employee of the respondent-employer and worked as a laborer.

2. The claimant was hired by the respondent-employer on October 7, 2015.

3. The claimant had an admitted work related injury on October 20, 2015.

4. The claimant's hourly wage was $16.80.

5. Mary Jo Rees is the Controller for the respondent-employer.

6. Ms. Rees testified that when laborers are hired they are not promised or guaranteed overtime. Nonetheless, the claimant was offered 10 hours a day for six days a week working Monday through Saturday.

7. The claimant's first week of work was a partial week where he began on a Wednesday with 7.5 hours of work and then worked ten hour days the rest of the week, which is consistent with the offer.

8. The claimant's first full week he worked 59 hours, which is again consistent with the offer.

9. The number of hours that the claimant worked each day from the time of hire up to the date of injury is as follows:

DAY	DATE	HOURS WORKED
Wed	10/07/2015	7.5
Thurs	10/08/2015	10.0
Fri	10/09/2015	10.0
Sat	10/10/2015	10.0
Sun	10/11/2015	Off

Mon	10/12/2015	11.0
Tues	10/13/2015	10.5
Wed	10/14/2015	8.0
Thurs	10/15/2015	10.0
Fri	10/16/2015	10.0
Sat	10/17/2015	9.5
Sun	10/18/2015	Off
Mon	10/19/2015	10.0
Tues	10/20/2015	10.0

10. During the claimant's first full week of work (10/12/2015 through 10/17/2015), the claimant earned $1103.10, after working 59 hours. This included 46 hours of regular time and 13 hours of overtime. It is unclear why the claimant was not paid overtime for the 6 hours in excess of 40 hours.

11. The ALJ finds that based upon the offer of employment of 60 hours of work per week and the fact that the claimant's work history, albeit truncated, up to the date of injury was consistent with that offer, that the claimant's average weekly wage is best determined by using 40 hours at regular time ($16.80 x 40 = $672.00) and adding the projected overtime of 20 hours at time and a half (20 x $16.80 x 1.5 = $504.00) to arrive at $1,176.00 as the AWW.

12. The fact that the number of hours is not guaranteed does not affect the outcome because at the time of the injury the claimant was actually working consistent 10-hour days. Additionally, whether the claimant is given the opportunity to work each day is not in the claimant's control, yet he was in fact working in accordance with the offer.

13. The ALJ finds that it is more likely than not that the claimant's AWW is $1,176.00.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a workers' compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197

Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See Magnetic *Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. It is the ALJ's sole province to assess the credibility of the witnesses. *Monfort Inc. v. Rangel*, 867 P.2d 122 (Colo. App. 1993).

4. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo.

5. Section 8-42-102(2), C.R.S., requires the ALJ to base the claimant's AWW on his earnings at the time of injury. However, under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Avalanche Industries, Inc. v. Clark,* 198 P.3d 589 (Colo. 2008); *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993).

6. Specifically, § 8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra.*

7. Here, the ALJ perceives no reason that the claimant's wages should be determined in any manner other than that provided by statute.

8. Specifically, § 8-42-102(2)(d), C.R.S. states:

> Where the employee is being paid by the hour, the weekly wage shall be determined by multiplying the hourly rate by the number of hours in a day during which the employee was working at the time of the injury or would have worked if the injury had not intervened, to determine the daily wage; then the weekly wage

> shall be determined from said daily wage in the manner set forth in paragraph (c) of this subsection (2).

9. § 8-42-102(2)(c), C.R.S. states:

> Where the employee is rendering service on a per diem basis, the weekly wage shall be determined by multiplying the daily wage by the number of days and fractions of days in the week during which the employee under a contract of hire was working at the time of the injury or would have worked if the injury had not intervened.

10. Based upon the credible testimony and persuasive evidence presented, the ALJ concludes as found above, that the claimant has established by a preponderance of the evidence that the claimant's average weekly wage is $1,176.00.

[The Order continues on the following page.]

ORDER

It is therefore ordered that:

1. The respondent-insurer shall pay benefits to the claimant based upon the average weekly wage of $1,176.00.

2. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

2864 S. Circle, Suite 810
Colorado Springs, CO 80906

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-992-247-01

ISSUES

- Did Claimant prove by a preponderance of the evidence that she sustained an accidental injury or occupational disease proximately caused by the performance of service arising out of and in the course of her employment?

- Did Claimant prove by a preponderance of the evidence that she is entitled to an award of temporary total disability benefits for the period of December 3, 2015 through December 10, 2015?

- What is Claimant's average weekly wage?

- Did Claimant prove by a preponderance of the evidence that she is entitled to an award of reasonable, necessary and authorized medical benefits?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. At hearing Claimant's Exhibits 1 though 6 were admitted into evidence. Respondents' Exhibits A through D were admitted into evidence.

CLAIMANT'S TESTIMONY

2. Claimant is an insurance agent. She has worked for the Employer since November 2013. Claimant's schedule requires her to work from 7:00 a.m. to 3:15 p.m. During that time she has a 45 minute lunch period and two 15 minute breaks.

3. Claimant's duties require her to sit at a desk and answer "inbound calls" from insured persons and other insurance agents. Claimant receives 50 to 60 calls per day. Claimant's work is transactional and requires constant typing on a keyboard and constant use of a mouse.

4. Claimant testified as follows concerning the events of July 15, 2015. Claimant was at work performing her regular duties answering calls while typing and using the mouse. While working Claimant felt a slight twinge and burning sensation in her right lower shoulder blade. The pain sensation continued throughout the entire work day but stopped after Claimant went home from work.

5. Claimant testified as follows concerning the events of July 16, 2015. Claimant went to back to work on July 16 and the pain she experienced on July 15

returned in the same location. Claimant reported the pain to her supervisor but the supervisor did not refer her to a doctor.

6. Claimant testified that after July 16, 2015 she continued working and the pain increased. The pain then moved up her neck and her right arm "went numb." Claimant then chose to go to her personal care physician, Julie Mullin, M.D.

7. Claimant testified that before July 15, 2015 she never had any symptoms in her neck, arm or shoulder.

8. Claimant testified that Dr. Mullin prescribed medications, physical therapy (PT) and dry needling. Claimant stated that these treatments were beneficial to her and she has returned to her regular duties.

9. Claimant testified that she underwent two ergonomic evaluations through the Employer. Claimant stated that the second evaluation was performed by a "specialist" and was more "in depth" than the first evaluation. Claimant stated the second evaluator recommended various changes in her work station. Claimant stated that the changes to the work station included alteration of her desk height, changes to her chair and alteration of the height of her monitors. The evaluator also recommended changes in Claimant's posture. Claimant opined that these changes helped relieve her symptoms.

10. Claimant testified that the second evaluator also recommended that she use a "vertical mouse." Claimant explained that a vertical mouse is like a "joystick" that eliminates the need to use the wrist to move the mouse side to side. Claimant stated that the Employer did not provide her with a vertical mouse but she eventually purchased one herself. Claimant did not provide the date that she she purchased the vertical mouse but she explained that it helped alleviate her symptoms.

MEDICAL RECORDS AND MEDICAL EVIDENCE

11. Dr. Mullin examined Claimant on July 24, 2015 for a chief complaint of 10 to 14 days of pain that started in the upper back and then moved into the neck and right shoulder. The history of present illness (HPI) reflects that Claimant reported there was no "inciting event or trauma" but she experienced more pain while "working at computer at work." The pain was worse when Claimant was "reaching forward or using computer/mouse." At this time Dr. Mullin suspected strains of the upper trapezius and rhomboid muscles. Dr. Mullen considered a herniated cervical disc and thoracic outlet syndrome to be less likely diagnoses. She noted there were no signs of nerve impingement or radiculopathy. Dr. Mullin prescribed physical therapy (PT) with dry needling, Voltaren, Flexeril and NORCO.

12. Dr. Mullin re-examined Claimant on August 4, 2015. The HPI reflects that Claimant had returned to work after the July 24, 2015 examination and over the next week her pain "worsened to the point of having difficulty picking things up with right hand, keyboarding, mousing." The right thumb was "completely numb." Claimant stated that her supervisor thought Claimant's condition should be treated "under [a]

work comp claim." As a consequence Claimant had not been able to begin PT. Dr. Mullin noted that Claimant's job required frequent "mousing and keyboarding." Dr. Mullin "suspected" upper back and shoulder girdle strains with "radial neuropathy/radiculopathy." Dr. Mullin wrote that Claimant's condition was "at least 50% likely to have been caused by exposure at work." Dr. Mullin continued the previous medications, added gabapentin and again referred Claimant for PT. Dr. Mullin also recommended Claimant undergo a right upper extremity EMG to evaluate numbness and weakness. Dr. Mullin imposed restrictions of no right upper extremity lifting or carrying in excess of 2 pounds and limited Claimant to 15 minutes of "mouse work" in a one hour period. Dr. Mullin opined that a "vertical mouse would be helpful."

13. On September 2, 2015 Dr. Mullin noted that Claimant's pain and numbness were improving with PT and dry needling. Claimant reportedly had not been using the computer at work but experienced immediate numbness in her thumb when she used a computer during a training session.

14. On September 11, 2015 Claimant underwent a right upper extremity electrodiagnostic evaluation by George Leimbach, M.D. Dr. Leimbach reported that the evaluation was "abnormal" and most consistent with C6 radiculopathy.

15. Dr. Mullin referred Claimant for a cervical MRI that was performed on September 24, 2015. The radiologist noted a broad-based "slightly more right-sided disc protrusion at C5-6 with mild bilateral neural foraminal narrowing, right more severe than left with some narrowing along the expected course of the right C6 root."

16. Dr. Mullin referred Claimant to Roberta P. Anderson-Oeser, M.D. for a physical medicine consultation. Dr. Anderson-Oeser examined Claimant on October 12, 2015. Claimant reported to Dr. Anderson-Oeser that she was experiencing "an aching sensation in the posterior cervical region in addition to numbness in the right forearm, thumb and index finger." Claimant gave a history that her pain began as a dull ache in the right shoulder blade that progressed with typing and mousing. Later Claimant experienced numbness in her arm and thumb. She then felt a "pop" in her neck and warmth radiating to the right arm. Dr. Anderson-Oeser's impressions included right C6 radiculopathy, cervicalgia and muscle spasms. In light of the EMG and MRI findings Dr. Anderson-Oeser recommended that Claimant undergo a "diagnostic/therapeutic C5-6 transforaminal epidural steroid injection" (ESI). Dr. Anderson-Oeser also recommended a trial of cervical traction.

17. On October 28, 2015 Claimant reported to Dr. Mullin that she continued to "have pain when seated more than 15 minutes or mousing more than a few minutes." Overall Claimant stated that her pain was improved by PT with dry needling and with the "contracture therapy" recommended by Dr. Anderson-Oeser. Dr. Mullin noted that Claimant wanted to hold off undergoing the ESI because she preferred the "most conservative treatments" and wanted to see whether the contracture therapy helped. Dr. Mullin again recommended Claimant use a joystick mouse.

18. On November 18, 2015 Claimant reported to Dr. Mullin that she felt "80% better" and was no longer having neck symptoms. Claimant denied any continued numbness and parasthesia. However, Claimant had new complaints of bilateral elbow pain and some "crampy pain in right thumb with intermittent twitching." Dr. Mullin prescribed an elbow strap for the elbow pain and again recommended claimant use a joystick mouse.

19. On December 18, 2015 Claimant reported to Dr. Mullin that she felt "80% improved" since the date of injury but did not think she had made much improvement over the last month. Claimant stated she felt she wasn't "doing anything useful at work" and expressed a desire to go back to work without restrictions. Dr. Mullin opined Claimant could attempt to return to work without restrictions but wanted Claimant to limit herself to 4 hours per day for the first week.

20. At the request of Respondents Allison Fall, M.D., performed an independent medical examination (IME) of the Claimant on March 3, 2016. Dr. Fall is board certified in physical medicine and rehabilitation and is level II accredited.

21. As part of the IME Dr. Fall took a history from Claimant, reviewed medical records and performed a physical examination. Claimant gave a history that in mid-July she was at work on the computer when she felt pain "right in the middle of her right shoulder blade" that felt like a "pinched nerve." Claimant reported that over the next few days she experienced "more burning," especially when using the mouse. Claimant also stated that one day she felt a "pop" and the "right deltoid got warm and it went down her arm with numbness." Claimant advised Dr. Fall that she had undergone two in-house ergonomic evaluations and was told everything was fine. Claimant also stated that she had an "independent man" perform an ergonomic evaluation and this man stated that some things "were incorrect." Claimant advised Dr. Fall that had purchased her own "joystick." Claimant reported that she had been diagnosed with cervical radiculopathy and had undergone PT, dry needling and cervical traction until December 2015 when "no more visits were approved." Claimant stated that her residual symptoms included occasional tingling in the arm, neck stiffness and headaches. Claimant had returned to work and was "uncomfortable."

22. Dr. Fall assessed a right-sided "C5-6 disc protrusion with right C6 radiculopathy, improving." Dr. Fall opined that Claimant experienced the "insidious onset of right-sided radicular symptoms secondary to a C5-6 disc protrusion." In support of this conclusion Dr. Fall explained that there was "no specific trauma that led to the disc protrusion, which does happen more often than many realize." Dr. Fall also noted that claimant was initially diagnosed with muscular problem that was thought to be work-related, but workup established that "this was C6 radiculopathy from a disc protrusion which is not caused by sedentary activity." Dr. Fall stated there was "no contraindication to [Claimant] continuing her regular-duty work."

23. On March 15, 2016 Dr. Mullin authored a "to whom it may concern" letter. Dr. Mullin noted that she treated Claimant for "neck pain, right upper extremity pain, [and] right thumb numbness." Dr. Mullin wrote that: "I feel this is a work-related injury

due to [Claimant's] extensive use of the phone, keyboard and mouse at work." In support of this opinion Dr. Mullin noted that when Claimant was first examined on July 24, 2015 she reported "pain in the right shoulder and arm worsened with reaching forward or using computer/mouse while working." Dr. Mullin also noted that Claimant felt a "burning in the right upper back" while working on July 15, 2015. Dr. Mullin stated that the EMG and MRI findings of C6 radiculopathy correlate with Claimant's symptoms of neck pain radiating into the right upper extremity and thumb numbness.

24. Dr. Fall testified at the hearing. Dr. Fall stated that Claimant's testimony about her job duties was consistent with the history Claimant provided at the IME. However, Dr. Fall added that at the IME Claimant reported she wore a headset when talking on the telephone.

25. Dr. Fall opined to a reasonable degree of medical probability that Claimant did not sustain any traumatic injury that caused herniation of the C5-6 disc. In support Dr. Fall noted that Claimant did not report she suffered a specific traumatic event that correlated with the onset of her symptoms.

26. Dr. Fall opined to a reasonable degree of medical probability that Claimant did not suffer a work-related "cumulative trauma injury" that caused or aggravated the C5-6 disc herniation. In support of this opinion Dr. Fall opined that there was no "mechanism of injury" that would cause or aggravate a C5-6 disc herniation. She explained that sitting at a desk while using the hand and arm does not create any "abnormal" force or trauma to the neck that could cause or aggravate a cervical disc herniation. Dr. Fall also explained that the Division of Workers' Compensation Cumulative Trauma Conditions Medical Treatment Guidelines (MTG), found a WCRP Rule 17, Exhibit 5, do not list cervical disc herniation as a type of cumulative trauma diagnosis that is associated with any specific "risk factors" such as force and vibration. Dr. Fall also opined that the fact Claimant experienced symptoms of C6 radiculopathy while working did not mean that her duties caused or aggravated the disc herniation. Dr. Fall explained that sitting in one position for a long period of time can elicit symptoms of a disc herniation without actually causing any physiological change in the disc herniation. By way of analogy Dr. Fall noted that a physician may place a patient's head in a particular position to elicit symptoms of a disc herniation without causing any additional physiological damage to the disc.

27. Dr. Fall opined that ergonomic changes to Claimant's work station, such as the purchase of the joystick, can't logically be credited with the overall improvement in Claimant's symptoms over time. Dr. Fall explained that symptoms of a disc herniation tend to be worst during the first 6 weeks and that Claimant got medical treatment during this period of time. Dr. Fall also pointed out that ergonomic evaluations may also result in improved posture and a consequent reduction of symptoms regardless of changes to the work station.

FINDINGS CONCERNING ALLEGED ACCIDENTAL INJURY

28. Claimant failed to prove it is more probably true than not that he sustained an accidental injury that proximately caused herniation of the C5-6 injury. Specifically Claimant failed to prove that there was any event or occurrence at work that caused the disc herniation and consequent radiculopathy.

29. Claimant did not testify that she experienced any specific event or occurrence that she considers to be the cause of her neck and arm systems. Rather, Claimant credibly testified that she experienced the onset of pain in her right shoulder while performing her regular duties that included talking on the phone, using a keyboard and using a mouse.

30. On July 24, 2016 Dr. Mullin recorded that Claimant gave a history of upper back, neck and right upper extremity pain for which there was no "inciting event or trauma." Rather, Claimant reported that she developed pain while "working at computer at work." Similarly, Claimant did not tell Dr. Fall that she sustained a traumatic event that was correlated with the onset of symptoms.

31. Dr. Fall credibly and persuasively opined that considering Claimant's medical records and history she did not suffer a traumatic injury that caused herniation of the C5-6 disc.

FINDINGS CONCERNING ALLEGED OCCUPATIONAL DISEASE

32. Claimant failed to prove it is more probably true that the disc herniation and consequent radiculopathy can be seen to have followed as a natural incident of her employment and can be traced to her employment as a proximate cause. Rather, the credible and persuasive evidence establishes that the disc herniation and consequent radiculopathy were probably caused by the natural progression of an idiopathic condition uninfluenced by the conditions and circumstances of Claimant's employment.

33. Dr. Fall credibly and persuasively opined that Claimant experienced the "insidious onset of right-sided radicular symptoms secondary the C5-6 disc protrusion" and that this sequence of events happens "more often than many realize."

34. Dr. Fall credibly and persuasively opined to a reasonable degree of medical probability that Claimant did not suffer a work-related "cumulative trauma injury" that caused or aggravated the C5-6 disc herniation. Dr. Fall took an extensive history concerning Claimant's job duties and the circumstances of her employment. Dr. Fall also heard the Claimant's testimony concerning her job duties and the ergonomic conditions under which Claimant performed her job. Considering this evidence Dr. Fall persuasively explained that sitting at a desk and moving the arm to manipulate the mouse did not cause any abnormal force or trauma to the cervical spine that could cause or aggravate a disc herniation.

35. Dr. Fall also credibly and persuasively explained that the MTG do not address cervical disc herniations as "cumulative trauma injuries" likely to result from

exposure to particular types of hazards experienced on the job. The ALJ assigns considerable weight to this evidence and infers from it that cervical disc herniation is not a diagnosis that is recognized as being caused by the specific risk factors set forth in the MTG.

36. Dr. Mullin's opinion or feeling that Claimant sustained a "work-related injury" because of the "extensive use of the phone, keyboard and mouse at work" is not persuasive. Dr. Mullin does not credibly and persuasively specify the mechanism of injury that leads her to believe that using a phone, keyboard and mouse caused the disc herniation or aggravated the disc herniation. Dr. Mullin did not persuasively refute Dr. Fall's arguments that disc herniations may occur insidiously without identifiable cause and that disc herniations are not addressed by the MTG as the type of condition likely to be caused by recognized risk factors such as repetitive awkward posture or force.

37. Dr. Mullin's theory of causation appears to be largely based on the facts that Claimant's symptoms first appeared while she was at work and tended to worsen when she was using the mouse and reaching.

38. However, Dr. Fall persuasively refuted Dr. Mullin's theory of causation insofar as it is based on the temporal relationship between use of the phone, keyboard and mouse and the appearance and progression of Claimant's symptoms. Dr. Fall credibly explained that the mere fact of a temporal relationship between performance of an activity and the experience of a symptom does not establish that the activity caused the symptom. For instance, Dr. Fall pointed out that without regard to mouse or keyboard use merely sitting at a desk for long periods of time may elicit symptoms of a disc herniation. Indeed Claimant told Dr. Anderson-Oeser that sitting for more than 15 minutes caused her to experience symptoms. (Finding of Fact 17). Dr. Fall also pointed out that physicians test for disc herniations by positioning the head so as to elicit symptoms without causing damage to the disc.

39. Dr. Fall also persuasively argued that the temporal relationship between the ergonomic changes to Claimant's work station and the reduction of her symptoms does not establish a causal relationship between the two events. Dr. Fall persuasively argued that the temporal relationship between the ergonomic changes and reduction in symptoms could well have been coincidental. In support Dr. Fall pointed out that the symptoms of a disc herniation are generally the worst during the first 6 weeks. Moreover, Dr. Fall pointed out that during the period of time the ergonomic changes were made Claimant was also receiving admittedly effective medical treatment. (Findings of Fact 8, 13, 17, 18). Moreover, the credible and persuasive evidence demonstrates that Claimant did not purchase and use the vertical mouse until at least the latter part of 2015, after she underwent medical treatment. Claimant testified that she did not purchase the mouse until after the "independent" ergonomic expert recommended it. Moreover, Dr. Mullin was still recommending that Claimant obtain a joystick mouse as late as November 18, 2015. (Finding of Fact 18). By that time Claimant had already told Dr. Mullin on October 28, 2015 that PT, dry needling and cervical traction were improving her symptoms. (Finding of Fact 17).

40. At hearing the parties stipulated that if the claim is found to be compensable Claimant is entitled to an award of temporary total disability benefits from December 3, 2015 through December 10, 2015.

41. Evidence and inferences contrary to or inconsistent with these findings of fact are not credible and persuasive.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), §§8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A Workers' Compensation case is decided on its merits. Section 8-43-201(1). The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions.

LEGAL PRINCIPLES OF COMPENSABILITY AND CAUSATION INJURY

Although not entirely clear, it appears Claimant is arguing that a preponderance of the evidence supports a finding that she sustained either an accidental injury or occupational disease that proximately caused or aggravated the C5-6 disc herniation and resulted in the consequent radiculopathy. In support of these arguments Claimant relies on the opinions of Dr. Mullin. She also relies on possible inferences derived from the temporal relationship between the onset and continuation of the symptoms and the performance of her normal work duties. Conversely Respondents rely heavily on the opinions of Dr. Fall in support of their contention that Claimant failed to prove she sustained an accidental injury or occupational disease that proximately caused or aggravated the C5-6 disc herniation. The ALJ agrees with Respondents' position.

Claimant was required to prove by a preponderance of the evidence that her "injury" was "proximately caused by an injury or occupational disease arising out of and in the course of" the employment. Section 8-41-301(1)(c), C.R.S. An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with her work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991).

The "arising out of" element is narrower and requires claimant to show a causal connection between the employment and the injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. *See Triad Painting Co. v. Blair*, *supra.* Generally, injuries "arise out of" the employment if the risk of injury is inherent in the employment itself. The causal relationship between these types of risks and the employment is "intuitive and obvious." Examples of such risks include gas explosions that cause burns and malfunctioning machines that amputates a limb.   Injuries also "arise out of" employment if produced by a "neutral risk." Neutral risks are not distinctly associated with the employment nor inherently personal or private to the Claimant. Examples of neutral risks include stray bullets, lightning, murderous attacks and "unexplained falls." However, an injury does not "arise out of employment" if it is caused by risks that are entirely personal or private to the claimant. Such risks include preexisting idiopathic illnesses or medical conditions, such as fainting, heart disease and epilepsy that are completely unrelated to the employment. *City of Brighton v. Rodriguez,* 318 P.3d 496 (Colo. 2014). Of course, if a "personal risk" such as epilepsy precipitates an event at work and the conditions or duties of the employment create a "special risk" that enhances the degree of injury sustained, the additional injury (beyond that resulting solely from the seizure) is compensable.   *Eg. Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1898) (applies "special hazard" doctrine to injuries caused by fall from 25 foot scaffold that was initiated by epileptic seizure).

Accidental injuries can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation,* 867 P.2d 77 (Colo. App. 1993). In contrast , occupational diseases result from the conditions under which the work was performed and exposure occasioned by the nature of the employment, can be fairly traced to the employment as a proximate cause and do not come from a hazard to which the worker would have been equally exposed outside the employment. Section 8-40-201(14), C.R.S.; *Wal-Mart Stores, Inc. v. Industrial Claims Office*, 989 P.2d 251 (Colo. App. 1999).

Regardless of whether the alleged compensable condition results from an "accidental injury" or an "occupational disease" Claimant must prove by a preponderance of the evidence that the injury or disease was caused by the employment. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000); *Wal-Mart Stores, Inc. v. Industrial Claims Office*, *supra*. A preexisting disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any preexisting condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a preexisting condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office, supra*.

The claimant must prove causation to a reasonable probability. Lay testimony alone may be sufficient to prove causation. However, where expert testimony is presented on the issue of causation it is for the ALJ to determine the weight and credibility to be assigned such evidence. *Rockwell International v. Turnbull,* 802 P.2d 1182 (Colo. App. 1990).

When evaluating this issue of causation the ALJ may consider the provisions of the MTG because they represent the accepted standards of practice in workers' compensation cases and were adopted pursuant to an express grant of statutory authority. However, the MTG are not dispositive of the issue of causation and the ALJ may assess the weight to be given the MTG considering the totality of the evidence. *See Cahill v. Patty Jewett Golf Course,* WC 4-729-518 (ICAO February 23, 2009); *Siminoe v. Worldwide Flight Services,* WC 4-535-290 (ICAO November 21, 2006); Section 8-43-201(3), C.R.S.

COMPENSABILITY OF ALLEGED OCCUPATIONAL DISEASE

As determined in Findings of Fact 28 through 31 Claimant failed to prove that she sustained an accidental injury arising out of and in the course of her employment that proximately caused herniation of the C5-6 disc. As found, Claimant's testimony concerning the appearance of her symptoms and the histories she provided to Dr. Mullin and Dr. Fall all indicate that the symptoms simply appeared while she was performing her regular job duties and did not result from any traumatic event sufficient to cause a disc herniation. Moreover, Dr. Fall credibly opined that the medical evidence does not support the occurrence of any traumatic event sufficient to have caused a disc herniation.

However, the mere fact that Claimant failed to prove that there was an injury associated with a particular time place and cause does not preclude a finding that she sustained an occupational disease that either caused the C5-6 herniation or aggravated or accelerated a preexisting condition.

COMPENSABILITY OF ALLEGED OCCUPATIONAL DISEASE

As determined in Findings of Fact 32 through 39, Claimant failed to prove it is more probably true that her C5-6 disc herniation and consequent radiculopathy Claimant failed to prove it is more probably true that the disc herniation and consequent radiculopathy can be seen to have followed as a natural incident of her employment and can be traced to her employment as a proximate cause. Rather, the credible and persuasive evidence establishes that the disc herniation and consequent radiculopathy were probably caused by the natural progression of an idiopathic condition uninfluenced by the conditions and circumstances of Claimant's employment.

As determined in Findings of Fact 33 though 35, the ALJ credits Dr. Fall's testimony that cervical disc herniations can occur "insidiously." The ALJ understands Dr. Fall to mean that disc herniations can and do occur as the result of idiopathic weakness or disease of the spine and without regard to external factors such trauma and repetitive motion. Dr. Fall also opined credibly opined that the circumstances of Claimant's employment that involved sitting at a desk and moving her arm did not generate the type of force or trauma necessary to be considered the cause of a cervical disc herniation. Although Dr. Mullin expressed a contrary opinion, the ALJ finds that Dr. Mullin's opinion concerning causation is not persuasive for the reasons stated in Findings of Fact 36 through 39.

At hearing Claimant's counsel cited *Sanchez v. Industrial Claim Appeals Office,* (Colo. App. No. 15CA1481, March 17, 2016) (not selected for publication), as authority for the proposition that this claim should be found compensable. Because the *Sanchez* opinion is not published the ALJ need not consider it to be precedential authority for any legal proposition. C.A.R. 35(f).

In any event, the ALJ concludes that the present claim is factually distinguishable from those in Sanchez. In *Sanchez* case the claimant was found to have sustained a horizontal tear of the medical meniscus, a "mild MCL" knee sprain and "mild posteromedial corner sprains/strains." Claimant testified he never had knee problems prior to May 2014 when he was at work and stood up from a kneeling position and his right knee "popped." A treating physician opined there was a "51% chance" the injuries were work-related. However, the ALJ denied the claim. In so doing the ALJ credited the opinion of Respondents' expert medical witness who opined that the type of meniscus tear suffered by claimant was generally chronic rather than acute and there was only a 10% chance that the tear was caused by standing up and feeling the knee pop. The expert also opined there was a 0% chance the claimant's injuries would have had to have been caused by a "much more significant injury" than "standing up at work and feeling a knee pop."

The *Sanche*z court interpreted the ALJ's reliance on the Respondents' expert as establishing an "implicit finding that claimant's condition was chronic and likely pre-existing." The court inferred from this finding that the ALJ necessarily treated the claimant's injury as arising from a non-compensable "personal risk" as that term is used in *City of Brighton v. Rodriguez, supra*. The *Sanchez* court also stated that it was undisputed that the claimant was asymptomatic before he stood up and experienced the knee pop at work and that he "consistently conveyed the mechanism and onset of symptoms in testimony and to his various providers."

In these circumstances the *Sanchez* court held that the ALJ committed a legal error by placing the claimant's injury in the personal or idiopathic category. The court concluded that the claimant's knee injury fell under the "neutral risk" category as a matter of law and that the "knee would not have 'popped' *but for* his actions at work." (Emphasis in original). Therefore, the *Sanchez* court held that the claimant sustained a compensable injury.

The ALJ understands the *Sanchez* court to have concluded that on the particular facts of that case the ALJ could not have found that the cause of Claimant's knee injuries resulted from a pre-existing idiopathic condition, but was instead legally compelled to find that the cause of the knee injuries was "unexplained." Hence, the injury resulted from a compensable "neutral risk" under the holding in *City of Brighton v. Rodriguez, supra*.

Whatever the merits of the *Sanchez* court's legal analysis, the facts in this claim are distinguishable from those in *Sanchez*. Here, the ALJ has expressly found, based mostly on Dr. Fall's testimony and the medical records that it is more probably true than not that Claimant's disc herniation and consequent radiculopathy resulted from a "personal or idiopathic" weakness of the disc without any causal contribution from the circumstances or conditions of Claimant's employment. The ALJ concludes that these determinations lie fully within his fact finding authority and are supported by the evidence found to be credible and persuasive. Therefore, this case falls within the parameters of that long line of published decisions holding that causation presents a question of fact for determination by the ALJ. *City of Boulder v. Streeb*, *supra*; *Faulkner v. Industrial Claim Appeals Office, supra*; *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office, supra*; *F.R. Orr Construction v. Rinta, supra*.

In light of the determination that Claimant failed to prove that she sustained a compensable injury or occupational disease the ALJ need not specifically address the other issues.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the ALJ enters the following order:

1. The claim for workers' compensation benefits in WC 4-992-247-01 is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 3, 2016

1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she suffered a compensable occupational disease injury to her right upper extremity that arose out of and in the course of her employment with Employer.

2. Whether Claimant has established by a preponderance of the evidence an entitlement to temporary partial disability benefits (TPD) from September 21, 2015 through December 20, 2015.

STIPULATIONS

1. Claimant's average weekly wage at the time of the alleged injury was $611.49.

FINDINGS OF FACT

1. Claimant began working for the Employer as a pet groomer on June 27, 2012.

2. Claimant's duties involved grooming, cleaning, and managing dogs of various sizes. Grooming the dogs involved a variety of individual tasks including shampooing, combing, lifting dogs into and out of the grooming area, rinsing the dogs, clipping the dogs' fur with scissors and clippers, trimming nails, towel drying, and blow drying.

3. Claimant regularly used her hands in performing her job duties. Claimant used a hose with a grip nozzle for bathing/shampooing, used her hands to towel dry the dogs, and used a blow dryer to complete the drying process. Claimant used scissors and vibrational clippers as well as nail clippers. Grooming an average sized dog took a total of approximately 3-4 hours, with periods of inactivity and Claimant typically groomed between 4-8 dogs per shift.

4. On July 28, 2015 Claimant was evaluated by her primary care provider, Sandra Bernard, PA-C. Claimant reported back pain, a lump at the base of her skull, what she believed to be carpal tunnel in her right wrist, and what she believed to be mild depression issues. Claimant reported she worked as a dog trimmer and believed she had tendonitis or carpal tunnel. A note was made of "competitive motion for years." PA Bernard noted a positive Tinnel exam on Claimant's right wrist and assessed wrist pain and carpal tunnel syndrome. PA Bernard recommended Claimant take Aleve and that she buy and wear a special wrist brace for carpel tunnel as much as possible, even while sleeping. *See* Exhibits A, 4.

5. Throughout August and September of 2015 Claimant continued to have symptoms in her right arm and wrist.

6. On September 21, 2015 Claimant reported the pain to Employer. Claimant believed the pain was affecting her ability to perform her duties as a pet groomer and that the pain was work related.

7. On September 21, 2015 Claimant was evaluated at Concentra by Casey McKinney, PA-C. Claimant reported symptoms for about a month and that she began having pain from her elbow into her wrist that was progressing. Claimant reported the pain was diffuse and changed with activities and that she had intermittent swelling. PA McKinney assessed: strain of forearm, right; and strain of wrist, right. PA McKinney recommended a wrist brace, physical therapy, and modified activity work with limited repetitive use of the right hand. *See* Exhibits B, 2.

8. On October 6, 2015 Claimant was evaluated at Concentra by Scott Richardson, M.D. Claimant reported having worked as a dog groomer for 4.5 years and that she had the gradual onset of right elbow/hand/digit pain. Claimant reported she was doing better and seeing improvement in physical therapy. Claimant reported she was working light duty and not grooming dogs and that she was wearing a wrist splint during the day. Dr. Richardson assessed: strain of wrist, right; strain of forearm, right; and pain, hand joint, right. Dr. Richardson referred Claimant for a work site evaluation. Dr. Richardson also noted Claimant could continue to work modified duty but that she was unable to use power/impact/vibratory tools with her right upper extremity, that she had to wear a splint/brace on the right upper extremity constantly, and that she could grip/squeeze/pinch with her right upper extremity occasionally. *See* Exhibits B, 2.

9. On October 20, 2015 Jill Adams, CRC, CCM, CEAS II performed a job demands analysis. Ms. Adams interviewed Claimant, noted and listed the job duties, and observed Claimant performing the position. Ms. Adams also observed other pet stylists performing parts of the job duties as Claimant was still on work restrictions. Ms. Adams noted that Claimant lifted grooming tools such as clippers, shears, combs, brushes, etc. with the frequency of “frequent to constant” with the force required of “simple grasp.” Ms. Adams conducted a one hour study of the hand wrist flexion, extension, or ulnar deviation as well as a one hour study of use of grooming clipper/vibratory tools. Ms. Adams analyzed the frequency and force required for Claimant’s job duties. Ms. Adams concluded that Claimant’s job duties did not meet any primary or secondary risk factors. *See* Exhibit E.

10. On October 26, 2015 Claimant was evaluated by PA McKinney. PA McKinney again assessed: pain, hand joint, right; strain of forearm, right; and strain of wrist, right. PA McKinney noted that an ergonomic evaluation was reviewed with Dr. Villavicencio and that the evaluation noted constant gripping/coupling with the right hand that they believed supported the treatment of strain of the right wrist and forearm. PA McKinney noted, however, that Claimant would be referred to a hand specialist for a

more definitive diagnosis and that the ergonomic evaluation would not support a chronic overuse diagnosis, such as carpal tunnel syndrome, per the CO state guidelines. PA McKinney referred Claimant to a hand specialist for the right hand and wrist pain. *See* Exhibits B, 2.

11. On November 6, 2015 Claimant was evaluated by Tracy Wolf, M.D. Claimant reported her right hand and arm pain started over time from grooming dogs and that the pain varied from day to day. Claimant reported pinching and pain over the volar wrist going toward the thumb and that she also got pain on the dorsal wrist sometimes up to the arms. Dr. Wolf noted tenderness on both the lateral and medial epicondylar regions anteriorly as well as distally at the wrist dorsally over the wrist extensors and the first compartment, over the volar wrist over the carpal tunnel. Dr. Wolf assessed: right medial and lateral epicondylitis, wrist tendonitis; and possible right carpal tunnel/median neuritis. Dr. Wolf noted that Claimant had responded nicely to therapy and splinting and that both would be continued. Dr. Wolf performed an injection into Claimant's right carpal tunnel. *See* Exhibits B, 2.

12. On November 10, 2015 Claimant was evaluated at Concentra by Craig Hare, PA-C. PA Hare assessed: pain, hand joint, right; strain of forearm, right; and strain of wrist, right. PA Hare opined that Claimant had reached maximum medical improvement on November 10, 2015 and noted that the job site analysis results determined there was no causality for Claimant's symptoms. PA Hare noted that Claimant's case would be closed. *See* Exhibits B, 2.

13. On December 20, 2015 Claimant resigned from her employment with Employer.

14. On January 21, 2016 Respondent sent a letter to Dr. Wolf. Dr. Wolf responded by checking a box opining that it was medically probable that Claimant's diagnoses and need for treatment were caused by her exposure at work. Dr. Wolf hand wrote that she did not know if Claimant was at maximum medical improvement and that she did not know how Claimant was doing currently. *See* Exhibit 5.

15. On March 18, 2016 Claimant was evaluated by her primary care physician Oluwaseun Oladiran, M.D. Claimant reported five months of right wrist pain aggravated by movement with joint tenderness. Claimant reported working as a pet groomer when she suffered the injury due to repetitive movements. Dr. Oladiran assessed right wrist pain, worsening. Dr. Oladiran noted that Claimant had cortisone shots without much help and physical therapy that showed improvement but had plateaued. Dr. Oladiran suspected carpal tunnel syndrome and referred Claimant for an EMG and for further physical therapy. *See* Exhibit 1.

16. On April 14, 2015 Claimant was evaluated by Dr. Oladiran. Dr. Oladiran noted that Claimants' EMG testing came back within normal limits. Claimant also reported neck pain. Dr. Oladiran assessed neck pain, ordered an x-ray exam of the neck, and also assessed other chronic pain. *See* Exhibit 1.

17. On April 17, 2016 Henry Roth, M.D. issued an independent medical examination report after performing a record review and assessment at the request of Respondents. Dr. Roth opined that Claimant had no specific work related diagnosis or condition and that her experience of discomfort while a work was the reasonable symptomatic medical expectation for her underlying, idiopathic, personal medical condition. Dr. Roth opined that Claimants' carpal tunnel syndrome symptoms, wrist pain, forearm pain, and elbow pain were due to an idiopathic disorder unique to Claimant and attributed to non-occupational factors (genetics and aging). *See* Exhibit D.

18. Dr. Roth noted that Claimant had multiple right upper extremity complaints with discomfort that was diffuse and nonspecific. Dr. Roth opined that minimum thresholds were necessary before considering an activity to be causal of carpal tunnel syndrome and that Claimants' work activities did not breach those thresholds. Dr. Roth noted the absence of any measurable primary or secondary risk factors per the Colorado Division of Labor Medical Treatment Guidelines to have caused Claimant's symptoms. Dr. Roth recommended against any further medical evaluation, diagnosis, or treatment under workers' compensation. *See* Exhibit D.

19. Dr. Roth testified at hearing consistent with his written report. Dr. Roth opined that that Claimant did not have any work exposure that met the criteria for a primary or secondary risk factor under the Medical Treatment Guidelines and that there were not sufficient forces, repetition, or duration of activity to consider her upper extremity physical discomforts and conditions to be causally related to her work activities.

20. The opinions of Dr. Roth are found credible and persuasive. Dr. Roth performed a causation analysis after fully reviewing the medical records and job demands analysis, which was consistent with Claimant's description of her job duties. There are no primary or secondary risk factors that would provide a causal connection between Claimant's job duties and her symptoms. Although Claimant believes her job duties caused her symptoms, there is insufficient objective evidence to support her belief.

21. The opinion of Dr. Wolf is not found as credible or persuasive. Dr. Wolf's opinion does not provide a full causality assessment or reference specifically the job demands analysis report. It is unclear from Dr. Wolf's opinion whether or not she reviewed the full job demands assessment including the conclusion that the Claimant's job duties met no primary or secondary risk factors under the Medical Treatment Guidelines. The opinion of Dr. Wolf is a mere check box and not as detailed or persuasive as the report and testimony of Dr. Roth.

22. Claimant testified credibly at hearing. Claimant's description of her job duties is similar to what was reported in the job demands analysis. The job demands analysis is a fair and accurate description of Claimant's duties.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

A claimant must prove by a preponderance of the evidence that his injury arose out of the course and scope of his employment with employer. *See § 8-41-301(1)(b), C.R.S.; City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). An injury occurs "in the course of" employment where claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arise out of" requirement is narrower and requires claimant to show a causal connection between the employment and injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. *Id.*

An accident "arises out of" employment when there is a causal connection between the work conditions and the injury. *In re Question Submitted by the United States Court of Appeals for the Tenth Circuit,* 759 P.2d 17 (Colo. 1988). The determination of whether there is a sufficient "nexus" or causal relationship between the claimant's employment and the injury is one of fact that the ALJ must determine based on a totality of the circumstances. *Moorhead Machinery & Boiler Co. v. DelValle,* 934 P.2d 861 (Colo. App. 1996). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation,* 867 P.2d 77 (Colo. App. 1993). An occupational disease arises not from an accident, but from a prolonged exposure occasioned by the nature of the employment. *Colorado Mental Health Institute v. Austill*, 940 P.2d 1125 (Colo. App. 1997). An "occupational disease" is a disease which results directly from the employment of the conditions under which work was performed, which can be seen to have followed as a natural incident of the work, and as a result of the exposure occasioned by the nature of the employment, and which be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would been equally exposed outside of the employment. *See* § 8-40-201(14), C.R.S. This section imposes additional proof requirements beyond those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). However, the existence of a preexisting condition does not defeat a claim for an occupational disease. *Id.* A claimant is entitled to recovery if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.*

A claimant seeking benefits for an occupational disease must establish the existence of the disease and that it was directly and proximately caused by the claimant's employment duties or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P. 2d 251 (Colo. App. 1999). The claimant bears the burden to prove by a preponderance of the evidence that the hazards of the employment caused, intensified or aggravated the disease for which compensation is sought. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000); *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251 (Colo. App. 1999).

The credible and persuasive evidence establishes that there is not a causal relationship between Claimant's alleged injuries and her employment. Specifically, pursuant to the Division's Medical Treatment Guidelines, set forth in Rule 17, a specific set of steps should be followed to determine if the Claimant's conditions are work related. In this instance Dr. Roth performed a causation analysis consistent with the Division's Medical Treatment Guidelines. His conclusions are well-founded and establish that Claimant's job duties did not meet the primary or secondary risk factors risk factors pursuant to the Medical Treatment Guidelines. As found above, several of Claimant's treating providers opined that the job demands analysis did not support the contention that Claimant's condition or symptoms were the result of her employment. Specifically, Dr. Richardson wished to have a job demands analysis performed to aid in causality, PA McKinney and Dr. Villavicencio opined that the ergonomic evaluation did not support a chronic overuse diagnosis or a diagnosis of carpal tunnel syndrome, and PA Hare also opined that the job demands analysis did not support the work related causality of Claimant's symptoms. These opinions are consistent with the opinions of Dr. Roth and are credited. The contrary opinion of Dr. Wolf is not credited. It is unclear whether Dr. Wolf reviewed the entire job demands analysis, whether she was aware of the lack of any primary or secondary risk factors found, and her opinion is not detailed or persuasive. The Claimant has failed to establish that her symptoms were directly and proximately caused by her employment duties or working conditions.

ORDER

It is therefore ordered that:

1. Claimant has failed to meet her burden of proof to establish that she suffers from an occupational disease of her right upper extremity. Her claim is denied and dismissed.

2. As the claim is not compensable, the claim for temporary partial disability benefits from September 21, 2015 through December 20, 2015 is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 2, 2016,

/s/ Michelle E. Jones

____

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

- Did Claimant prove by a preponderance of the evidence that his exposure to jet aircraft or other noise in the workplace proximately caused his hearing loss and tinnitus.

- If compensable, did Claimant prove by a preponderance of the evidence that he is entitled to receive medical benefits to cure and relieve the effects of his injury or occupational disease.

FINDINGS OF FACT

1. Claimant, who was born on April 26, 1950, is 66 years old.

2. Claimant began working for Employer in 1975. Claimant's job duties included mechanical work on jet engines and related systems on various types of aircraft. The job description was "generally recognized as technician's work in shops, maintenance bases and line stations on aircraft (including power plants), parts and other related work"[1].

3. He initially worked as an aircraft mechanic in the San Francisco maintenance center. In this position, Claimant worked around large bead blasting machines and heavy duty solvent cleaning machines.

4. The first record of testing done on Claimant's hearing was May 31, 1977. The testing was done by HPI-National Mobile Health Programs ("HPI") and showed no hearing loss[2].

5. After he was furloughed in San Francisco, Claimant transferred to Denver, working at Stapleton International Airport from 1980-94. While at Stapleton, he worked on the ramp. Claimant testified he was exposed to engine noise and auxiliary power units ("APU") noise at various times during his workday at Stapleton, when airplanes arrived at the gate and departed the gate. He provided maintenance services at the gate area, proximate to the terminal. Employer shared this area with other air carriers. These carriers (including Continental Airlines) would rev up the engines while the aircraft were backing from the jet way to the runway. The ALJ infers this regularly exposed the Claimant to jet engine noise on the ramp.

[1] Exhibit 9.

[2] The results of this baseline test were described by the experts as normal.

6. Claimant was exposed to noise from different types of aircraft throughout his employment. Three classifications of aircraft were in service during his employment- Stage 1, 2 and 3. Stage 1 aircraft were the loudest and had no muffling on the engines. Stage 2 aircraft were the second loudest. Claimant testified he thought Stage 2 aircraft's noise level was 180-190 decibels ("dB") in 1990[3]. Claimant testified "hush" kits were put on Stage 1 and 2 aircraft in the 1980s. There was no evidence introduced concerning the decibel levels of Stage 2 jet aircraft engines once the hush kits were installed. Stage 1 and 2 aircraft were slowly phased out. However, Claimant was exposed to noise from aircraft in these classifications up to January 1, 2000, when the FAA required all aircraft to comply with Stage 3 requirements. The ALJ infers Claimant was exposed to noise levels in excess of 110 dB when he was around Stage 1 and 2 aircraft and this was for at least fifteen (10) years.

7. Claimant testified he wore hearing protection throughout his employment, including ear plugs and earmuffs. Employees provided their own hearing protection during the early years of his employment and the hearing protection was not as effective as the current protection. When he worked at Stapleton, Claimant testified he could hear the jet engines through the headsets and the earpieces also housed the radio. When he worked on the ramp, he was within walking distance of all sides of the aircraft and sometimes as close as an arm's reach. Claimant estimated he would wear hearing protection approximately twenty (20) minutes per hour around the dispatch of a single aircraft, which occurred several times per day. Claimant noted there were times when he removed hearing protection in order to communicate with other mechanics. This occurred throughout his employment up to the present. There were also occasions when he would be surprised by jet engine noise or a noise from aircraft when he wasn't wearing hearing protection.

8. There was no evidence in the record as to whether testing was done to show the level of noise exposure Claimant received while wearing the older hearing protection during the period 1975-2010.

9. In 1994, Claimant started working at Denver International Airport ("DIA") and worked in the hangar full-time. He has continued to work in the hangar, working on both wide and narrow body aircraft. Claimant testified he is exposed to noise from jet engines and the APUs and he works in close proximity to the APUs, which sometimes are running when the aircraft is in the hangar. Claimant testified there are other noise sources to which he is exposed in the hangar, which include noise from the air conditioning systems, hydraulic pumps and other electrical power devices.

10. HPI hearing testing records for Claimant from 1977, 1979, 1980, 1986 1989, 1990, 1991-1994, 1996-1997, 1999, 2000, 2011-2012, and 2014 were admitted into evidence at hearing. No Standard Threshold Shift ("STS") was noted in the tests performed through 2012. The tests performed on September 12 and December 5, 2014 confirmed a STS occurred.

[3] Claimant agreed this noise level was at take-off and during flight.

11. No hearing testing records for Claimant from 2001-2010 were introduced into evidence. Claimant testified his hearing was not tested during that period of time.

12. Evidence of Employer's OSHA violations in 2010 were admitted at hearing. On August 6, 2010, OSHA issued a citation to Employer for not obtaining audiograms for each employee exposed at or above 85 dB for an 8 hour Time Weighted Average ("TWA"), including ramp service employees, customer service representatives and mechanics. On August 6, 2010, OSHA issued a citation to Employer on eighteen employees who were subject to long term hearing loss from the lack of a comprehensive hearing conservation program and from a lack of re-testing. Employer also received a citation because audiometric testing was being conducted in a room that did not meet requirements. Employer was also cited for failing to record employees whose audiogram showed a STS shift in the OSHA 300 log and failed to provide audiograms at no cost to employees. Employer also failed to adequately record work-related injuries. The ALJ infers Claimant was within the group of employees exposed to noise in excess of 85 dB when the OSHA testing was done.

13. Claimant testified the quality of hearing protection improved after 2010 when Employer had an OSHA evaluation.

14. Claimant testified that he began noticing some hearing difficulties prior to 2014. Specifically, he had difficulty hearing voices in a crowd and hearing certain segments of speech and understanding people. He also noticed tinnitus intermittently before 2014. Claimant testified the tinnitus is now constant and disturbs his sleep on occasion.

15. Claimant noticed a significant change in his hearing in 2014. He reported his hearing loss to Employer and an Employer's First Report of Injury was prepared by Mark Hofstatter on December 15, 2014. The description of how the injury occurred said: "Cumulative hearing loss sustained over 39 years of working as a mechanic on aircraft. Noise sources include power tools equipment & aircraft engine noise".

16. Claimant stated he was sent to Concentra after he reported his hearing issue to his supervisor. On December 5, 2014, Claimant underwent audiometric testing and was evaluated by Kirk Holmboe, D.O., who noted there was evidence of high frequency hearing loss on the left and right. There was no information in the record which indicated whether Dr. Holmboe believed Claimant's hearing loss resulted from his occupational noise exposure. Claimant testified his supervisor told him he was "on his own" for treatment.

17. Dr. Lipkin evaluated Claimant on February 12, 2015. The intake notes recorded Claimant's history as follows:

> "New patient presents with hearing loss: bilateral. Patient is an airplane mechanic for United Airlines. Patient reports that over the years he has been compliant with hearing test(ing); first test was performed 5/31/2977 with United Airlines. Throughout his employment, the patient has been compliant with

> hearing protection and hearing tests. Uses hearing protection whenever possible. However, over the last several years the patient has noticed a significant hearing loss in both ears. Although the patient cannot identify one episode of loud noise exposure, he reports that he is consistently around loud engines and airplanes at his job. The patient denies dizziness, otalgia, and otorrhea.
>
> Occasional high pitched whining tinnitus.
>
> Review of serial hearing tests – gradual progressive high frequency loss.
>
> Having problems communicating due to hearing loss.
>
> Nonsmoker, non-diabetic. No other non-work noise exposure. Has been hunting, used ear protections."

18. After the evaluation, Dr. Lipkin reviewed the results of serial hearing tests performed since 1977. The history section noted Claimant had a history of noise exposure with classic, progressive, sloping sensorineural hearing loss. Dr. Lipkin opined Claimant's hearing in 1977 was essentially normal and his hearing loss progressed over the years, particularly the last fifteen years. Dr. Lipkin concluded: "To a reasonable degree of medical probability, [Claimant] has work related noise-induced hearing loss and tinnitus secondary towards this." Dr. Lipkin's concluded that Claimant's hearing loss had progressed over the years (particularly over the last 15 years) and at this point in time was bilateral significant sloping sensorineural hearing loss, worse in the upper frequencies. The ALJ infers Dr. Lipkin's opinion was based upon the history taken from Claimant of his noise exposure, his extrapolation from the hearing tests and his expertise as an otolaryngologist.

19. The ALJ notes Dr. Lipkin's report recorded Claimant was a non-smoker and not diabetic. The report also excluded non-occupational noise exposures. The ALJ infers Dr. Lipkin considered Claimant's medical conditions when concluding what caused his hearing loss, although not every condition he reviewed was identified.

20. Dr. Lipkin recommended further evaluation/ treatment, including fitting Claimant for hearing aids.

21. Claimant testified he wishes to pursue treatment with Dr. Lipkin.

22. Claimant testified he had a shot a total of ten rounds with his gun over the years, as hunting was not an activity he did on a regular basis. Claimant wore hearing protection when firing the weapon.

23. Terry McGurk ("McGurk") testified at hearing. He is Employer's operations supervisor or manager for United Airlines at Denver International Airport (DIA) and was previously the manager of safety from 2009 to 2011. Mr. McGurk testified OSHA requires employees to wear hearing protection when exposed to TWA noise of 85 dB or

greater. He testified regarding Employer's hearing conservation program, which included the choice of a molded earplug, a plastic insert, or an earmuff. Employer requires ear protection to be worn at 80 dB. Additionally, Employer requires any employees who are working outside of the building to have hearing protection on at all times. The various ear protection options include ear plugs and muffs which have a noise reduction rating of 28 dB to 34 dB. Mr. McGurk testified he wore earmuff protectors when he started working for Employer thirty-six (36) years ago and agreed hearing protection has improved over time.

24. Mr. McGurk testified OSHA requires Employer to conduct yearly testing of the hearing of employees exposed to noise at DIA. At present, Employer provides audiometric testing at no cost to employees. For the years 2000-2010, there were no reported test results for Claimant.

25. Mr. McGurk testified testing was done in August of 2010 to measure noise levels at DIA. The testing was done by having certain employees wear noise dosimeters. Dosimeters measure the level of noise that is absorbed over a period of time. Mr. McGurk stated the measured noise levels on a time weighted average in the areas in which the Claimant worked were all less than 85 dB. The time-weighted average for noise exposure as measured by dosimeters worn by employees ranged from 66.4 dB to 86.1 dB. On cross-examination, Mr. McGurk admitted the highest level of noise exposure to which employees were exposed could exceed the TWA.

26. OSHA also obtained dosimeter noise measurements in August of 2010 which were generally consistent with the results obtained by Employer. The eight (8) hour time TWAs ranged from 58.1 dB (the 57.7dB was not valid) to 87.1 dB, with the latter dosimeter reading taken at B48 Planeside-all functions. None of the dosimeter readings were over 90 dB. No testing has been done since 2010.

27. At the request of Respondent, Edward Jacobson, Ph.D. performed a review of Claimant's medical records, including the results of the audiometric testing. He also reviewed the records of the 2010 testing done at DIA. Dr. Jacobson did not evaluate Claimant, nor did he perform any testing of his hearing. After reviewing available records, Dr. Jacobson opined in his August 20, 2015 report there was nothing that would convincingly establish a job-related hearing loss. Dr. Jacobson noted some issues needed to be clarified in order to determine whether the hearing loss was work-related, including: the reason for inter-aural asymmetry; change in the audiometric configuration as is apparent on the various audiograms; no noise measurements obtained in Claimant's work area relative to his job description as a mechanic, but apparently unknown as to those who have seen him clinically; the use of ear protection, which would further reduce the aforementioned workplace noise levels by 20-30 dB based on known research; workplace noise less in recent years; more effective hearing protection; reasons why the loss progressed to the levels obtained at the time of the ENT visit in a very short period of time and; the lack of mention of presbycusis.

28. On August 27, 2015, Claimant was evaluated by Allison Fall, M.D. at the request of Respondents. Based on the information provided regarding the measured

decibel levels and the fact that hearing protection was utilized (which would protect against 20-30 dB), Dr. Fall opined Claimant's levels of exposure at work were within the acceptable range according to OSHA. Dr. Fall believed none of the levels would be near 85 dB, which would be the sound-pressure action level, above which HCP, use of ear protection, and hearing tests become necessary. Dr. Fall also noted hearing loss is known to increase with age and is more common in men. Dr. Fall opined it was more likely that his hearing loss was age-related. The ALJ notes that Dr. Fall's opinion was based upon the decibel level measured at DIA in 2010. Dr. Fall's report did not account for Claimant's noise exposure while working in San Francisco or at Stapleton. Dr. Fall also did not analyze the Claimant's exposure to noise above the 85 dB level when he wasn't wearing hearing protection.

29. Dr. Jacobson issued an addendum report on December 17, 2015, after reviewing medical records from Kaiser Permanente[4]. In this report, Dr. Jacobson noted there were many contributors relative to identifiable hearing loss, often greater for the high frequencies. These included vascular disease/hypertension, abnormal lipids, C-spine anomalies, chemotherapy and associated Cisplatin medication, alcohol intake, migraines, and various medications which were documented in the Kaiser records. Dr. Jacobson opined these factors should be taken into consideration as a cause of auditory/vestibular symptoms, including hearing loss and tinnitus. The ALJ notes this opinion falls shorts of a conclusion that these factors caused Claimant's hearing loss.

30. Dr. Fall issued an addendum report on January 5, 2016, after she reviewed medical records from Kaiser Permanente and Dr. Jacobson. Dr. Fall stated there were documented non-work related medical conditions, which further supported her opinion that the hearing loss was not related to his work at Employer.

31. Dr. Fall testified as an expert on behalf of Respondent at hearing. She is board-certified in physical medicine and rehabilitation. She is Level II accredited pursuant to the W.C.R.P. Dr. Fall agreed she had less experience in otolaryngology than Dr. Lipkin. Dr. Fall reviewed the case from a causation standpoint, looking at Claimant's particular risk from the work he did for Employer versus his risk outside of that work. She found the National Institute for Occupational Safety and Health indicated there was an 8% chance of hearing loss when exposed to noise at the 85 dB level for eight hours per day for 40 years. In other words, this represented an 8% percent chance of hearing loss at that decibel level. Since he wore hearing protection, Dr. Fall did not believe Claimant was exposed to levels of 85 db or above for 8 hours per day. Dr. Fall stated she came to that conclusion based upon the data (2010 testing) which was provided and the fact that hearing protection would dampen 20-30% of the noise. Dr. Fall did not think Claimant's noise exposure in his older employment (working in San Francisco or at Stapleton) was greater than the 85 dB level. The ALJ found this opinion to be less persuasive, as Dr. Fall did not specify how she reached it.

32. Dr. Fall testified there were other risk factors for Claimant which could affect his hearing. This included his age, carpal tunnel, high blood pressure, and

[4] The Kaiser Permanente records were not admitted at hearing.

chemotherapy agents, which added to Claimant's risk of hearing loss. On cross-examination, Dr. Fall agreed that none of the medical records she reviewed concluded these other factors caused Claimant's hearing loss. Dr. Fall did not offer an opinion regarding the cause of Claimant's tinnitus while testifying.

33. Dr. Jacobson testified as an expert in audiology, industrial audiology, and audiometric testing. He is a fellow of the American College of Forensic Examiners and a diplomat at the American Board of Forensic Medicine. Dr. Jacobson is not a physician and does not prescribe medications. He is qualified to confirm hearing problems and identify abnormalities. Dr. Jacobson testified once damage happens to the nerves in the ear, the nerves do not regenerate or grow back. Exposure to noise in the 90-95 dB range may result in hearing loss. Dr. Jacobson testified the permissible level for noise exposure for an 8 hour day for 115 dB is .25 or 15 minutes. He stated the permissible level for an 8 hour day for 110 dB is .5 or 30 minutes. Based on the 2010 testing records, Dr. Jacobson believed Claimant was exposed to noise at the 57.1 dB level. Dr. Jacobson opined the noise Claimant was exposed to while working for Employer did not aggravate or accelerate his hearing loss.

34. Dr. Jacobson believed Claimant's non-occupational medical conditions were the more likely cause of his hearing loss. Dr. Jacobson noted there was nothing in Dr. Lipkin's report which indicated he reviewed the noise level records from the 2010 testing or medical records from Kaiser Permanente. He noted an STS did not necessarily mean an individual had a hearing loss, but did not dispute Claimant had a hearing loss in the higher frequencies. Dr. Jacobson testified regarding Claimant's exposure to gun shots and stated he had never seen anyone wear hearing protection. Dr. Jacobson agreed tinnitus could develop as a result of an occupational exposure, as well as other factors such as over-the-counter drugs. Dr. Jacobson did not believe it correlated to anything Claimant was exposed to at work and did not qualify Claimant for a permanent impairment. By completely excluding any role Claimant's occupational noise exposure may have played in the tinnitus, Dr. Jacobson's testimony was less persuasive to the ALJ. Also Dr. Jacobson's testimony relating his own experience with hearing loss and tinnitus was not persuasive to the ALJ.

35. Based upon the expert opinions before the Court, including the testimony on OSHA standards, exposure to noise above the 85 dB level can cause hearing loss.

36. The ALJ finds Claimant was a credible witness when describing the level of noise he was exposed to and the hearing protection he wore. Based upon Claimant's testimony and extrapolating from the 2010 dosimeter testing, the ALJ finds it is more probable than not Claimant was exposed to noise above the 85 dB level while working at Stapleton, where he worked for fourteen (14) years. This includes exposure to Stage 1 and 2 aircraft. It is more probable than not the accumulated exposure was a cause of Claimant's hearing loss.

37. The ALJ finds it is more probable than not Claimant was exposed to noise above the 85 dB level for short periods of time when he took off his hearing protection. This exposure has continued to the present.

38. The ALJ credited Dr. Lipkin’s opinions concerning Claimant’s hearing loss, namely that is was progressive and resulted from noise exposure during his employment.

39. The ALJ credited that portion of Dr. Jacobson’s testimony concerning the progression of hearing loss, including that exposure over time can cause hearing loss and the nerves in the ear do not regenerate after suffering damage. Dr. Jacobson’s testimony was less persuasive when discussing the non-occupational factors which increased Claimant’s risk of hearing loss and the failure to include occupational noise exposure at all made Dr. Jacobson less credible.

40. Claimant had non-occupational risk factors for hearing loss. As confirmed by Drs. Fall and Jacobson, these included: his age, hypertension, chemotherapy (treatment with the cancer drug Cisplatin[5]), anti-inflammatory medications, and exposure to gun shots. There were no medical records admitted at hearing in which a physician concluded Claimant’s hearing loss was caused by one of these conditions/factors. Both Dr. Fall and Dr. Jacobson conceded that risk does not equal cause.

41. The evidence and inferences inconsistent with these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers’ Compensation Act of Colorado (Act), §8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. Section 8-43-201(1),C.R.S.

A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57

[5] The ALJ notes there was nothing in the hearing testing records which showed a hearing loss in 2007 which was potentially attributable to Cisplatin taken in connection with Claimant’s chemotherapy.

P.2d 1205 (1936); CJI, Civil 3:16 (2005). The instant case requires a credibility determination between various medical experts, who have disagreed as to the cause of Claimant's hearing loss and tinnitus.

Compensability-Hearing Loss and Tinnitus

Both Claimant and Respondent agreed the overriding issue in the instant case was whether Claimant's hearing loss constituted a compensable occupational disease. An occupational disease is "a disease which results directly from the employment or conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard which the worker would have been equally exposed outside of the employment." §8-40-201(14), C.R.S. 2014.

A Claimant seeking benefits for an occupational disease must first establish the existence of the disease, then that it was directly and proximately caused by Claimant's employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claims,* 989 P.2d 251, (Colo. App. 1999). A Claimant is entitled to recovery for an occupational disease only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate, the disability for which compensation is sought. *Anderson v. Brinkhoff,* 839 P.2d 819, 824 (Colo. 1993)[6].

If Claimant establishes a causal relationship exists between the employment and occupational disease, the burden shifts to Respondents to prove both the existence of non-occupational contributors to the disease and the extent to which these contribute to the disability as well as the need for treatment. *Cowin & Co. v. Medina,* 860 P.2d 535, 537 (Colo. App. 1992). Where the disease for which a Claimant is seeking compensation is produced solely by some extrinsic or independent cause, it is not compensable. *Anderson v. Brinkhoff, supra,* 839 P.2d at 824.

In this regard, Claimant contended he satisfied his burden of proof that his hearing loss was proximately caused by noise exposure he experienced at work. Claimant relied upon his testimony concerning noise exposure, evidence of OSHA violations, along with the expert opinions of Dr. Lipkin to support his contentions. Claimant urged the rejection of Drs. Fall and Jacobson's opinions with regard to causation.

On the other hand, Respondent asserted Claimant failed to meet his burden of proof and did not establish Claimant was exposed to a level of occupational noise which caused his hearing loss. Respondent averred Dr. Jacobson's and Dr. Fall's opinions were more persuasive than those of Dr. Lipkin on this issue. Respondent also argued non-occupational factors were the cause of Claimant's hearing loss.

[6] The ALJ notes *Anderson v. Brinkhoff* was decided under prior version of the definitional section in the Colorado Worker's Compensation Act, however, its holding concerning proof of an occupational disease remains good law.

At the heart of the compensability question was an evaluation of the evidence concerning Claimant's noise exposure while working for Employer and an assessment of the respective expert opinions. The analysis of this issue was divided into two parts. First, did Claimant adduce sufficient evidence to establish that his hearing loss directly resulted from his employment and constituted an occupational disease. The ALJ answered this question in the affirmative.

In the case at bench, there was no dispute Claimant had no hearing loss before starting work for Employer. (Finding of Fact 3). During his forty year employment, Claimant worked in a noisy environment on a daily basis. As found, Claimant was exposed to noise in the workplace in excess of OSHA-prescribed limits threshold for hearing damage. (Finding of Fact 33 and 34).

The evidence admitted at hearing also led the ALJ to conclude Claimant wore hearing protection throughout his employment. (Finding of Fact 7 and 17). The evidence regarding hearing protection during Claimant's early employment from 1975-1994 was that it was not as effective as it is at present. (Finding of Fact 7 and 13). Claimant testified to this fact, which was confirmed by Mr. McGurk, Employer's representative. (Finding of Fact 23).

The most significant area of dispute was the level of Claimant's exposure and whether it was the cause of his hearing loss and tinnitus. Respondent's experts questioned whether Claimant, who was compliant with wearing hearing protection, received a sufficient level of noise exposure to cause his hearing loss and tinnitus. Claimant's testimony established he was exposed to Stage 2 aircraft, whose noise level was 180-190 decibels while working at Stapleton. (Finding of Fact 6). Claimant was also exposed to aircraft revving the engines to pull away from the gate. (Finding of Fact 5). Even assuming hearing protection reduced the noise exposure by 30 dB and he was not directly behind the engines, Claimant's exposure was well above 110 dB limit, which was sufficient to cause hearing damage. The inference drawn by the ALJ from Dr. Lipkin's report was that the level of noise Claimant was exposed to and the efficaciousness of the hearing protection used caused Claimant's hearing loss.

Respondent did not submit sufficient evidence to dispel this conclusion, as both Dr. Jacobson and Fall assumed Claimant's noise exposure was much lower based upon the testing done in 2010. Neither of Respondent's experts persuaded the ALJ that Claimant's noise exposure during his early employment was not the cause of his hearing loss. Dr. Jacobson's admission on cross-examination that he found hearing loss in other ramp employees at Stapleton indirectly helped to prove this point. In short, the ALJ was persuaded by the evidence that the cumulative effect of Claimant's exposure to older aircraft (Stage 1 & 2), the occasions when he took of his hearing protection to communicate with other mechanics and his work on the ramp at Stapleton; all were sufficient to cause hearing loss.

Considering the totality of the evidence, Claimant's noise exposure at work led the ALJ to conclude Claimant was exposed to noise levels which led to the STS and ultimately hearing loss. The ALJ found this occurred over time, as opined by Dr. Lipkin.

The ALJ relied on Claimant's testimony, along with Dr. Lipkin's opinion regarding the cause of his hearing loss and was persuaded that the noise levels to which he was exposed caused progressive hearing loss. As determined in Finding of Fact 31 and 36, Dr. Jacobson’s testimony concerning nerve damage also supported this conclusion.

As found, Claimant proved his hearing loss resulted directly from his employment as an airline mechanic and was a natural consequence of the work. The exposure to noise levels in excess of the OSHA standards were occasioned by his employment and he was not equally exposed to this hazard outside of his employment. *Cowin & Co. v. Medina, supra,* 860 P.2d at 537. Based upon the evidence before the Court, the ALJ found Claimant's hearing loss was compensable as an occupational disease.

Turning to the second consideration, the ALJ evaluated whether Respondent submitted sufficient evidence to prove Claimant's hearing loss resulted from non-occupational factors or medical conditions. On this subject, Respondent's experts disagreed with the conclusions of Claimant's expert. As noted, *supra*, Respondent’s experts disagreed the noise exposure was sufficient to cause hearing loss. Dr. Fall and Dr. Jacobson also both opined that Claimant‘s hearing loss was also from non-occupational medical conditions. As found, Dr. Jacobson’s testimony was less persuasive because he completely excluded Claimant’s occupational noise exposure as a factor in his hearing loss. Therefore, Dr. Jacobson's conclusion regarding the etiology of Claimant's hearing loss (that it resulted from non-occupational factors) was not persuasive. (Finding of Fact 33 and 38). The focus of Dr. Fall’s opinion was that it was attributable to Claimant’s age and other factors. By completely excluding the work exposure, these expert opinions were less credible.

In addition, Dr. Fall did not address the cause of Claimant’s tinnitus. (Finding of Fact 32). Dr. Jacobson commented that he had tinnitus was not persuasive to the ALJ regarding the cause of this condition. (Finding of Fact 33). This did not refute Dr. Lipkin’s conclusion that Claimant’s exposure to work place noise over time caused tinnitus.

On balance, the ALJ concluded while Claimant had non-occupational risk factors for hearing loss, there was insufficient proof that these factors actually caused the hearing loss. Both Dr. Jacobson and Dr. Fall agreed there was no medical opinion within the Kaiser Permanente records that these non-occupational factors were a cause of Claimant's hearing loss. Both experts conceded the presence of non-occupational factors did not necessarily mean these caused Claimant's hearing loss. (Finding of Fact 32 and 38). Accordingly the ALJ concluded Respondent did not meet its burden of proof to show that non-occupational factors or medical conditions caused Claimant’s hearing loss. Since Claimant’s condition is a compensable occupational disease, he is entitled to receive medical benefits for his hearing loss.

ORDER

It is therefore ordered that:

1. Claimant suffered a compensable hearing loss while working for Employer.

2. Employer shall provide medical benefits to cure and relieve the effects of Claimant's hearing loss.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

WORKERS' COMPENSATION NO. WC 4-906-018-02

ISSUES

- The issues for the hearing included overcoming the DIME, conversion, relatedness of the shoulder, permanent partial disability, disfigurement, TTD, TPD, and penalties.

- The parties withdrew the issues of TTD, TPD, and Penalties on the record, as they had been resolved prior to the hearing.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is 54 years old.

2. Claimant suffered a compensable work-related injury to her left wrist on September 10, 2014. Claimant was treated by Dr. John P. Mars and then referred to a surgeon, Dr. Robert Koch, for assessment. She was placed on restrictions on September 14, 2012 and those continued until her surgery. On January 18, 2013, Dr. Koch performed Left de Quervains release surgery on Claimant's left wrist and bone spur removal on Claimant's left thumb to treat her injury.

3. After the surgery, Claimant's left wrist was placed in an Ace wrap and, later in a splint. She was not allowed to work or use her left hand immediately following the surgery until March 12, 2014. Claimant wore her brace at most times, but could not wear it all the time because the brace put pressure on her surgical incision which caused additional pain.

4. Claimant is right handed. Claimant testified that she did not use her left arm except for slight movements when getting dressed while she was off work healing from her surgery. She understood that she was not allowed to use her left hand. For that reason she did not use her arm to reach forward or up, because she was not allowed to grab anything. She did not cook, wash the laundry or walk the dog during this time, her husband performed these tasks. Her husband helped Claimant to wash her hair and get dressed so she did not have to use her left arm in any manner. Rather, it sat in the sling/splint or in her lap.

5. On March 12, 2013, Claimant was released back to work on light duty "with no use of L hand." Claimant testified that she typed right handed and that she would have to have somebody help her unlock her computer for the control/alt/delete function and, if she was alone, she used a chopstick with her mouth to touch the keys.

6. After her surgery Claimant started physical therapy for her left hand and wrist. There is no record in evidence that the physical therapist focused on movement for her left shoulder or elbow at this time. Both Dr. Hughes and Dr. Beatty confirmed that they both reviewed the physical therapy records and did not see any type of therapy for the whole arm or shoulder. Claimant further testified that while in therapy she only performed simple movements with her hand, wrist, and thumb primarily while sitting at a table.

7. After returning to work in 2013, Claimant began feeling achiness in her left shoulder. That progressed to a feeling of stiffness, and then finally her shoulder locked altogether. In March 2013, Claimant began reporting to her outside chiropractor that she was having pain and stiffness in her left shoulder. She also reported her left shoulder pain to her physical therapist and Dr. Mars. On April 27, 2013, Dr. Susskind, Claimant's family doctor, noted that Claimant had left shoulder pain as a result of her wrist and that she was about to get physical therapy for her shoulder through Workers' Compensation.

8. On May 20, 2013, Claimant was evaluated by physical medicine specialist Justin Green, M.D. While the record of that visit was not introduced into evidence, medical experts including Dr. Hughes, Claimant's IME doctor, and Dr. Beatty, the DIME doctor, relied on the record of that particular visit in forming their medical opinions about relatedness. The record is quoted as providing that Claimant had wrist and hand symptoms from a "non-related left shoulder injury she is treating she is treating with outside providers."

9. The ALJ finds that Dr. Green's May 20, 2013 record erroneously refers to Claimant's left shoulder. It is clear from other medical records introduced as exhibits and the general context of Claimant's medical history that Dr. Green was referring to Claimant's *right* shoulder. Claimant sustained a right upper extremity injury in March 2012 which required a right first dorsal compartment release with stabilization of the abductor pollicis longus tendon. This surgery is discussed in Dr. Koch's June 4, 2012 operative report. Claimant reported injuring herself while lifting a five-gallon water jug into a dispenser. Dr. Mars addressed Dr. Green's May 20, 2013, note with Claimant and she denied that she was treating for her left should outside of workers' compensation. Dr. Beatty, in his medical record review, also references Claimant's extensive treatment with Dr. Meyer for right shoulder complaints during that time frame.

10. In his DIME report, Dr. Beatty wrote that Dr. Justin Green, who saw Claimant once for the wrist pain, stated that "Claimant did report that a non-work-related left shoulder injury was being treated by outside providers." Dr. Beatty stated during his deposition that this was important in his causation analysis of adhesive capsulitis and his conclusion that it was not work-related. To the extent that Dr. Beatty relied on Dr. Green's record to conclude that Claimant's adhesive capsulitis was not work related, the ALJ finds that reliance to be misplaced.

11. On June 19, 2014, Dr. Mars wrote in his notes that Claimant "is no[w] reporting reduced range of motion of the left shoulder as she has not been using it. She

had reported some soreness in the shoulder in the past and this seems to have worsened." In his treatment plan, Dr. Mars stated that Claimant "has a frozen shoulder and I want the therapist to start working on this to regain range of motion. She may need to be referred back to the orthopedist for a second opinion." Finally, Dr. Mars stated, "I do feel the frozen shoulder is related to her splinting the left arm due to her wrist pain. Maximum medical improvement remains unknown at this time as this is quite a setback with the adhesive capsulitis."

12. Dr. Mars and Dr. Koch kept Claimant on the same restrictions of no use of the left hand until July 3, 2013, at which time she was able to lift no more than one pound with her left hand and type with her left hand for no more than 10 minutes each hour. She was still unable to pinch or grip with her left hand or reach above her shoulder with her left arm. Claimant testified that when she was allowed to use her left hand she stayed compliant with her restrictions – she still did not reach, grasp, or pull.

13. Dr. Mars referred Claimant to physical therapy for her left shoulder and then back to Dr. Koch for follow-up. Claimant underwent an MRI on her left shoulder. While Dr. Stewart, the radiologist who read the MRI, did not mention capsulitis, Dr. Koch read and reviewed the photos of the MRI, and found capsular thickening. Dr. Koch agreed with Dr. Mars that Claimant's shoulder pain, stiffness, and adhesive capsulitis was in reaction and related to the surgery. Dr. Beatty, the DIME physician, agreed that Dr. Koch would be able to correctly read an MRI.

14. Dr. Beatty stated that there may have been some pre-existing symptoms in Claimant's left shoulder based on Dr. Green's note. However, Dr. Mars specifically addressed a history of left shoulder stiffness. Dr. Mars wrote,

> With some difficulty, I reviewed Kevin Meyer's, DC, Handwritten notes. She had been treated for neck pain, back pain and right shoulder pain on multiple occasions. The first mention of L shoulder pain is 3/3/13 which is 1½ months after her surgery. He notes on 4/8/13 possible "adhesive capsulitis," which appears to be a new DX. This is near 3 months post op. Therefore my position on this is unchanged and I feel her left shoulder adhesive capsulitis is due to restricted ROM post op.

Additionally, Dr. Meyer reported that Claimant had only one incident of left shoulder pain prior to the adhesive capsulitis, and it was two and one half years prior to Claimant's injury and resolved by her next visit. The ALJ finds that Claimant did not have a pre-existing left shoulder injury.

15. Dr. Beatty reported and testified that the adhesive capsulitis was not a direct and proximate result of Claimant's injury because there was no documentation of a direct injury to her shoulder either at the time of the original problem or afterwards. He reported that "symptoms did not show up until about a month or so after surgery." The ALJ finds that Dr. Betty's analysis displays a misapprehension of Claimant's condition as adhesive capsulitis would not exist at the time of her injury. He also stated that her neck could not be a part of the injury because she also only started complaining

of symptoms in that area several months after the injury. Again, the ALJ finds that Dr. Beatty's analysis on this point shows a misapprehension of Claimant's condition. Finally, he stated that the restriction on Claimant's use of her left shoulder was self-imposed and therefore the adhesive capsulitis would not be a natural manifestation of her initial work-related injury. Importantly, he also acknowledged that Claimant's medical notes and history confirm that because she was not allowed to use her left hand to lift, grab, grip, et cetera, that she did not use her left shoulder, and that a person who does not use their left hand may not use their shoulder.

16. In his DIME report, Dr. Beatty assigned Claimant a 4% left upper extremity impairment rating which did not include a rating for Claimant's shoulder, which converts to a 2% whole person rating when applicable. Dr. Beatty's report concluded, "I do not believe the right [sic] shoulder symptoms are related to the date of injury of 9/10/2012." The ALJ finds that Dr. Beatty's reference to Claimant's right shoulder, which was not at issue in this matter, diminishes the persuasiveness of his opinions.

17. Dr. John Hughes performed an IME for Claimant. Dr. Hughes has been a medical practitioner since 1980 and has worked with Workers' Compensation patients since 1984 when he got out of the Navy. He has served on a variety of medical committees and panels for the Colorado Division of Workers' Compensation. Dr. Hughes is also an instructor for Level II certification for the Colorado Division of Workers' Compensation and serves as a Clinical Assistant Professor for the Colorado School of Public Health in the Department of Environmental and Occupational Health. He treats patients and performs IMEs for both claimants and respondents.

18. Dr. Hughes, upon evaluating Claimant, determined that "Claimant's left shoulder adhesive capsulitis and subsequent neuropathic conditions stem from post-surgical immobilization by Claimant of her left arm due to pain." He noted that Claimant reported that she has "a dull ache" under the blade of her posterior left shoulders and that when she has increased symptoms in her left shoulder, she also has headaches and pain that radiates along the left shoulder blade, up the neck, and behind the ear on the left side. Dr. Hughes noted that Dr. Beatty's determination that the shoulder achiness did not show up for a month after the surgery and was therefore not related "does not make sense." Dr. Hughes explained that the temporality of the achiness showing up about one month or more after the surgery, actually suggests a relationship between the surgery and the onset of adhesive capsulitis of the shoulder. Dr. Hughes agreed that the non-use of the left upper extremity may have been self-imposed, but that it was also "a natural manifestation of the severe neuropathic pain documented clearly by Drs. Mars, Koch, and Green" during the period of time that Claimant's left wrist was restricted. "Her left de Quervains surgery followed by neuropathic pain caused her appropriately to avoid left upper extremity use." Dr. Hughes also testified that "whether this restriction was self imposed by fear or prescribed by a medical doctor," the non-use of the shoulder leading to adhesive capsulitis was still "related to the surgery." He further stated that if someone, hypothetically, could not grip or use their wrist, that they would likely guard the use of moving the entire arm, such as by not reaching or lifting, and that in his medical opinion, there would not be a reason to use a left shoulder if one was not allowed to use his or her left hand or wrist. Dr. Hughes'

opinion of the relatedness of the shoulder is consistent with Claimant's treating physicians, Dr. Mars and Dr. Koch, as well as with documentation from the scientific community.

19. Dr. Hughes additionally relied on the Mayo Clinic's report concerning Frozen Shoulder. He testified that the Mayo Clinic's reports are well referenced and are peer reviewed. The Mayo Clinic reports that the "risk of developing frozen shoulder increases if you're recovering from a medical condition or procedure that prevents you from moving your arm." Frozen shoulder typically develops slowly in progresses through three stages: freezing stage, frozen stage, and thawing stage. Doctors are not sure why frozen shoulder happens to some people, but it is more likely to occur in people who recently had to immobilize their shoulder for a long period, such as after surgery. People 40 and older, particularly women, are more likely to have frozen shoulder. Both Dr. Hughes and Dr. Beatty confirmed that the frozen shoulder occurred after Claimant had surgery on her wrist and that she reported that she was not using her shoulder or arm after her surgery due to her understandings of her restrictions. They both also agreed that Claimant was female and over 40, and so she fit into the typical population that was most likely to experience frozen shoulder. Dr. Hughes' testimony concerning relatedness of the shoulder is accepted as credible and persuasive by the ALJ and the ALJ rejects ad contrary medical opinions expressed by Dr. Beatty.

20. Claimant's treating physicians, including her surgeon, diagnosed Claimant with adhesive capsulitis as related to the lack of movement of her left shoulder after her left wrist surgery. This is consistent with Claimant's credible testimony that she did not use her left shoulder for months after her surgery because she was restricted from performing any gripping, pinching, or lifting tasks with her left hand and wrist. The ALJ finds and concludes that Dr. Mars and Dr. Koch's reports are credible as to the relatedness of Claimant's left shoulder injuries.

21. The ALJ finds that Claimant has overcome the DIME with respect to relatedness by clear and convincing evidence.

22. Dr. Mars assigned a combined upper extremity impairment rating of a 19% which included adhesive capsulitis. Dr. Beatty's measurements of Claimant's shoulder, taken almost fifteen months later, are similar. This rating converts to 11% whole person impairment.

23. Claimant continues to have an ache in her shoulder that progresses up to her neck every day. It starts as a dull ache from under her shoulder blade, and then the tightness and stiffness goes up the back of her neck and behind her ear and head. She also has headaches that she believes come "definitely from the shoulder and the stiff neck." She has trouble sleeping because of the stiffness and ache in her left shoulder. She also still has burning, tingling, and numbness in her left hand. Claimant had none of these problems before her surgery in 2013. Dr. Hughes confirmed in his medical opinion that the dull ache in Claimant's shoulder could lead to pain radiating along the left shoulder, up the neck, behind her left ear, and to headaches in light of Claimant's known pathology.

24. The ALJ finds, based upon a preponderance of the evidence, that Claimant is entitled to an impairment rating of 11% whole person.

25. Claimant has scarring from her surgery on her left wrist. The ALJ finds, after viewing Claimant's wrist at the hearing that Claimant has a 2 inch scar with visible suture marks and a slightly discolored area, on a part of her body that normally is exposed to public view.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado is to insure the quick and efficient delivery of disability and medical benefits to injured litigation. § 8-40-102(1), C.R.S.

A workers' compensation case is decided on its merits. § 8-43-201, C.R.S. The requirements of proof for civil non-jury cases in the district courts apply in workers' compensation hearings. § 8-43-210, C.R.S. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that may lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App 2000).

It is the ALJ's sole prerogative to assess the credibility of witnesses and the probative value of the evidence to determine whether a party has met its burden of proof. The weight and credibility to be assigned expert testimony is a matter within the discretion of the *ALJ. Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). It is the ALJ's prerogative to weigh the evidence, and that the ALJ might have reached a contrary conclusion is immaterial on review. *Mountain Meadows Nursing Center v. Indus. Claim Appeals Office*, 990 P.2d 1090 (Colo. App. 1999). The ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968); *Dow Chemical Co. v. Industrial Claim Appeals Office*, 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

An employer is responsible for the direct and natural consequences which flow from a compensable injury. *Vanadium Corp. Of America,* 307 P.2d 454 (Colo. 1957); *Hembry v. ICAO,* 878 P.2d 114, 115 (Colo. App. 1995). Whether a causal connection exists between the work-related injury and subsequent injury is a question of fact. *Baca v. Helm,* 682 P.2d 474 (Colo.1984); *Hembry v. Indus. Claim Appeals Office of State of Colo.*, 878 P.2d 114, 115 (Colo. App. 1994).

The DIME physician's finding of impairment is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(c), C.R.S. "Clear and convincing evidence" is evidence which proves that it is "highly probable" the DIME physician's opinion is incorrect. *Metro Moving & Storage Co. v. Gussert, supra*. These are issues of fact for the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office*, 17 P.3d 2002 (Colo. App. 2000); *Mosley v. Indus. Claim Appeals Office*, 78 P.3d 1150 (Colo. App. 2003). In workers' compensation cases, the division-sponsored independent medical examination (DIME) physician's “finding” consists not only of the initial report but also any subsequent opinion given by the physician. *Andrade v. Indus. Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

Where the ALJ determines that the DIME physician's rating has been overcome by clear and convincing evidence, the question of the claimant's correct medical impairment rating then becomes a question of fact for the ALJ. *DeLeon v. Whole Foods Market, Inc.*, W.C. No. 4-600-477 (Nov. 16, 2006). Once the ALJ determines that the DIME's rating has been overcome in any respect, the ALJ is free to calculate the claimant's impairment rating based upon the preponderance of the evidence. *Id.* The ALJ is not required to dissect the overall impairment rating into its numerous component parts and determine whether each part or sub-part has been overcome by clear and convincing evidence. *Id.*

The DIME doctor determined that adhesive capsulitis was not caused or proximately caused by the original wrist injury. Both of Claimant’s treating physicians, however, including the surgeon who performed the wrist surgery, contend that the adhesive capsulitis is compensable because the healing process after surgery required Claimant to refrain from using her left hand and wrist, which resulted in a lack of motion of Claimant’s left shoulder giving rise to the frozen shoulder. Dr. Hughes also determined that the frozen shoulder occurred in the same way – as a result of the restrictions after surgery -- relying on his extensive years of experience and a peer reviewed report from the Mayo Clinic. Both Dr. Beatty and Dr. Hughes agreed that Dr. Koch, the surgeon, would be able to read and interpret Claimant’s MRI, from which Dr. Koch concluded that Claimant had frozen shoulder as a result of not using her left shoulder. Dr. Beatty’s conclusion that frozen shoulder could not come from a lack of use, but rather only from a direct injury, is in contradiction to all of Claimant’s treating and examining doctors, as well as the testimony of Dr. Hughes and the report by the Mayo Clinic citing restrictions of the arm as the most common predecessor to adhesive capsulitis, and is thus overcome by clear and convincing evidence. The ALJ determines that while she made a prior finding that the shoulder adhesive capsulitis was related to Claimant’s original injury under the preponderance standard, she further finds that Claimant has overcome the DIME doctor’s causation analysis by the clear and convincing evidence standard as well.

Claimant credibly testified that she complied with her restrictions for no use or limited use of the left hand during the healing process after the surgery of her left wrist. This is consistent with the treating doctors’ conclusions that the frozen shoulder stemmed from the wrist surgery.

As a result, the ALJ finds and concludes that Dr. Beatty’s lack of impairment rating for Claimant’s shoulder was unfounded, and that the most appropriate impairment rating was the one performed by the authorized treating physician, Dr. Mars. Dr. Mars treated Claimant for several years and was the most familiar with her condition and her range of motion.

The determination of whether a claimant has sustained a scheduled or nonscheduled injury is “a question of fact for the ALJ, not the rating physician.” *City Market, Inc. v. Industrial Claim Appeals Office of State of Colorado*, 86 P.3d 601, 603 (Colo. App. 2003). In resolving “whether the claimant sustained a ‘loss of an arm at the shoulder’ within the meaning of § 8-42-107(2)(a), C.R.S. or a whole person medical impairment compensable under § 8-42-107(8)(c), C.R.S. . . . the ALJ must determine the situs of the claimant’s ‘functional impairment,’ and the site of the functional impairment is not necessarily the site of the injury itself.” *In re Cassius*, W.C. No. 4-732-489 at *2 (ICAO Mar. 26, 2010) (citing *Langton v. Rocky Mountain Health Care Corp.*, 937 P.2d 883 (Colo. App. 1996); *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366 (Colo. App. 1996)).

The Industrial Claim Appeals Office (“ICAO”) has concluded that pain and discomfort, which interfere with a claimant’s ability to use a portion of the body may be considered functional impairment. *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366 (Colo. App. 1996); *Garcia v. Advanced Component Systems, Inc.*, W.C. No. 4-187-720 (June 21, 1996); *Mader v. Popejoy Constr. Co., Inc.*, W.C. No. 4-198-489 (August 9,1996), *aff’d*, *Popejoy Constr. Co., Inc. v. Industrial Claim Appeals Office*, No. 96CA1508 (February 13, 1997) (not selected for publication).

Claimant credibly testified that every day she has an ache in her shoulder that progresses up to her neck. It starts as a dull ache from under her shoulder blade, and then the tightness and stiffness goes up the back of her neck and behind her ear and head. She also has headaches that she believes come “definitely from the shoulder and the stiff neck.” Dr. Hughes confirmed, in his medical expert opinion that the ache in Claimant’s shoulder could lead to pain radiating along the left shoulder, up the neck, behind her left ear, and to headaches in light of Claimant’s known pathology. As the situs of the pain is above the head of the glenohumeral joint, the ALJ finds that the rating must be converted to whole person impairment rating.

The Act provides for a claimant to be paid benefits if a claimant has a scar or other disfigurement due to an industrial injury or disease on a part of a body normally exposed to public view. § 8-42-108, C.R.S. The ALJ found above and concludes now that Claimant is entitled to compensation in the amount of $700 for the disfigurement to the left wrist caused by the surgery required as a part of this compensable injury.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. The left shoulder adhesive capsulitis is related to the original workers' compensation injury.

2. Claimant is entitled to a whole person impairment rating of 11%.

3. Claimant is entitled to $700 in compensation for her disfigurement.

4. Respondents shall file a Final Admission reflecting the whole person impairment rating within 30 days.

5. Issues not expressly decided herein are reserved to the parties for future determination.

6. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 7, 2016

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-954-459-01

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that right shoulder arthroscopy and open rotator cuff repair surgery recommended by Satoru Chamberlain, M.D. is reasonable, necessary, and causally related to his June 18, 2014 work injury.

FINDINGS OF FACT

1. Claimant is employed by Employer as a deliveryman with job duties including driving a semi-truck and unloading and delivering large quantities of food items and supplies into restaurants. Claimant has been employed by Employer in this position since approximately 2006.

2. On June 18, 2014 Claimant made a delivery to a Texas Roadhouse restaurant located in Arizona when he sustained an acute injury to his right shoulder and rotator cuff.

3. While attempting to retrieve a five gallon bucket of pickles that was wedged at the bottom of a pallet in the delivery truck, Claimant pulled on the bucket with his right arm. Claimant heard a pop in his right shoulder and felt immediate, sharp, and deep pain.

4. On June 19, 2014 Claimant was evaluated by Nazia Javed, M.D. Claimant reported sharp pain in his shoulder joint and tingling in his right arm. An x-ray was negative for fracture or dislocation. Dr. Javed diagnosed right shoulder injury, rotator cuff sprain, and right arm pain. Dr. Javed placed Claimant on modified duty with work restrictions, instructed Claimant to use a sling, and indicated that if Claimant's symptoms did not improve in a few weeks she would consider ordering an MRI to check for a rotator cuff tear. Dr. Javed believed that the objective findings were consistent with the history and/or a work related mechanism of injury. *See* Exhibit 6.

5. On June 26, 2014 Claimant was evaluated by Dr. Javed. Claimant reported worsened right shoulder pain and Dr. Javed referred Claimant for a right shoulder MRI. *See* Exhibit 6.

6. On July 3, 2014 Claimant underwent an MRI of his right shoulder interpreted by Tanya Tivorsak, M.D. The impression provided was: focal full thickness tear of the anterior supraspinatus tendon at the insertion with up to 1.5 cm retraction of the tendon fibers with the tear gap measuring about .6 cm and no rotator cuff muscle

atrophy; mild intra-articular long head biceps tendinosis; mild arthrosis of thae acromioclaviular joint; and no labral tear. *See* Exhibit 3.

7. On July 14, 2014 Claimant was evaluated by orthopedic specialist Mark Failinger, M.D. Dr. Failinger noted that the MRI showed a significant tear of the rotator cuff with some retraction and possible biceps tearing. Claimant reported wanting to have surgery and that he had this on the other side a long time ago and did fairly well. Dr. Failinger provided the impression of right shoulder rotator cuff tear and right shoulder rule out biceps tendon tear. Dr. Failinger recommended surgery for rotator cuff repair and decompression as well as possibly a biceps tenodesis. *See* Exhibit 5.

8. On August 12, 2014 Claimant underwent right shoulder surgery performed by Dr. Failinger that included: right shoulder subacromial decompression; right shoulder open rotator cuff repair; right shoulder open biceps tenodesis; and right shoulder debridement of labrum and rotator cuff. Dr. Failinger noted a large rotator cuff tear with severely degenerative tendon and that the tear extended back from the supraspinatus into the infraspinatus and split through the infraspinatus tendon. Dr. Failinger also noted an anteromedial hook that he flattened out. *See* Exhibit 4.

9. Following his surgery, Claimant continued to be evaluated by Dr. Javed and Dr. Failinger. Claimant also underwent physical therapy. Claimant reported continued right shoulder discomfort and in November of 2014 Dr. Javed opined that Claimant's progress following surgery was slow and Dr. Javed recommended a repeat right shoulder MRI.

10. November 24, 2014 Claimant underwent an MRI of his right shoulder interpreted by Frank Crnkovich, M.D. The impression provided was: focal 5 mm complete tear of the supraspinatus tendon with bursal to articular surface communication; and postoperative changes of a biceps tenodesis. Dr. Crnkovich opined that there was suggestion of correlation with Claimant's clinical exam. *See* Exhibit 3.

11. On December 3, 2014 Claimant was evaluated by Dr. Failinger. Claimant continued to report pain and discomfort. Dr. Failinger noted that the second MRI demonstrated a persistent area of full thickness tearing or re-tearing of the rotator cuff, recurrent tear of the supraspinatus with postoperative change with a biceps tenodesis. Dr. Failinger opined that Claimant could live with the shoulder pain or pursue a second right shoulder surgery. Claimant was advised that the odds of a second surgery working were not as high as the first surgery and that Claimant had a 50-50 chance, at best, that the surgery would be successful because Claimant's tendon was not in the greatest shape. Dr. Failinger opined that Claimant's tendon was deteriorating and degenerating with time and that there was nothing to be done about the natural process and Dr. Failinger opined that this would be the last time he would even suggest trying surgery to fix Claimant's shoulder condition. Claimant understood and elected to move forward with a second right shoulder surgery in hopes of regaining his pre-injury range of motion. *See* Exhibit 5.

12. On January 5, 2015 Claimant was evaluated by Dr. Javed. Dr. Javed noted that Claimant had an injury that caused a full thickness complex tear to his right supraspinatus tendon and that he underwent arthroscopic repair by Dr. Failinger on August 12, 2014. Dr. Javed noted that a repeat MRI performed on November 24, 2014 showed a re-tear of the supraspinatus tendon and that Dr. Failinger had recommended a second arthroscopic surgery. Dr. Javed kept Claimant on modified duty work restrictions. *See* Exhibit 6.

13. On January 15, 2015 Claimant underwent a second right shoulder surgery performed by Dr. Failinger. Dr. Failinger noted in surgery that there was a recurrent tear of the supraspinatus looked more side to side and looked like the insertion site and greater tuberosity was intact but it was split on the supraspinatus with one fairly large thicker portion retracted posteriorly and somewhat thinner anteriorly. Dr. Failinger noted he shaved down more of Claimant's acromion because Claimant had a mild curve anteriorly. Dr. Failinger noted the operations performed included: right shoulder arthroscopic subacromial decompression; right shoulder mini-open rotator cuff repair with side-to-side closure; right shoulder debridement of rotator cuff and labrum and synovectomy; and right shoulder open removal of foreign body (suture). *See* Exhibit 4.

14. On March 9, 2015 Claimant was evaluated by Dr. Failinger. Claimant reported mild pain. Claimant was evaluated again by Dr. Failinger on April 22, 2015 and reported moderate pain. On June 3, 2015 Claimant was again evaluated by Dr. Failinger and reported moderate pain with a burning and pulling sensation in the right shoulder that was present at rest. Dr. Failinger performed an injection in Claimant's right shoulder. Dr. Failinger noted that Claimant had few options, that Claimant wanted to try the injection, and that Claimant had a low probability of success with another surgery. Dr. Failinger opined that Claimant was nearing maximum medical improvement. Dr. Failinger noted that if Claimant did not improve with the injection, a second surgical opinion would be recommended. *See* Exhibit D.

15. On August 10, 2015 Claimant was evaluated by orthopedic specialist Saturo Chamberlain, M.D. Dr. Chamberlain noted that Claimant came in for a second opinion and that Claimant had undergone two surgeries on the right shoulder - a primary rotator cuff repair and a secondary repair. Dr. Chamberlain noted Claimant continued to have some pain and limitation of range of motion and was worried about a third tear. Dr. Chamberlain performed a physical examination and opined that the findings were in keeping with an ongoing rotator cuff pathology. Dr. Chamberlain opined that Claimant had quite good range of motion but a feeling of discomfort over the right shoulder. Dr. Chamberlain recommended a repeat MRI scan. *See* Exhibit 2.

16. On October 29, 2015 Claimant underwent a third MRI of his right shoulder interpreted by Eric Smith, M.D. Dr. Smith provided the impression of: 10 mm x 8 mm area of essentially full-thickness disruption of the surgically repaired supraspinatus tendon occurring in the critical zone prior to the greater tuberosity attachment site;

biceps tenodesis without evidence of complication; and subacromial decompression with a small amount of fluid in the subacromial subdeltoid space. *See* Exhibit 3.

17. On December 7, 2015 Claimant was evaluated by Dr. Chamberlain. Dr. Chamberlain noted that Claimant had a primary surgery on his right shoulder for rotator cuff disease and that soon thereafter he had a secondary surgery due to the failure of the repair. Dr. Chamberlain opined that repeat MRI scanning showed a sizable rotator cuff tear approximately 1 cm by 1.5 cm. with loose debris from a previous surgery. Dr. Chamberlain opined that definitely Claimant needed to undergo repeat arthroscopic and open surgery and that it may be that he would need grafting to the rotator cuff but that it would be prudent to perform arthroscopic diagnostic procedure of the glenohumeral joint as an adjuvant to the surgery. Dr. Chamberlain noted the treatment plan was to get workers' compensation authority to proceed with a second revision right shoulder rotator cuff repair with GraftJacket. *See* Exhibit 2.

18. On December 31, 2015 Dr. Chamberlain issued a letter to Respondents' counsel. The letter indicated that Claimant had a continued problem with his right shoulder which followed directly from his original workers' compensation claim and followed directly from the previous two surgeries and that a direct consequence and follow up from the prior two surgeries would be related to the worker's compensation claim. Dr. Chamberlain noted that the most recent MRI showed that Claimant had a sizable rotator cuff tear with loose debris from the previous surgery, that he did not see at any time that there was good healing of the rotator cuff muscle, and that Claimant had continued to have poor healing following his original injury and subsequent two surgeries. Dr. Chamberlain opined that surgery was a reasonable procedure and was directly related to the original industrial injury. Dr. Chamberlain noted that as Claimant had two prior surgeries and failed to heal, Claimant's success rate would have to be considered a little less than the average. *See* Exhibit 2.

19. On March 4, 2016 Timothy O'Brien, M.D. issued a report after performing a medical record review. Dr. O'Brien opined that Claimant's current right shoulder rotator cuff tear is a manifestation of Claimant's personal health and is in no way causally related to the work injury of June 18, 2014. Dr. O'Brien opined that the MRI scan and surgery in August of 2014 confirmed that there was a 1.5 cm retraction and that the magnitude of retraction would occur over the course of months or years and that the amount of retraction on MRI and confirmed during the first surgery clearly established the chronic nature of the pre-existing rotator cuff tear. Dr. O'Brien also pointed to the amount of degeneration Dr. Failinger noted during the first surgery. Dr. O'Brien opined that Dr. Failinger's August 2014 surgery did not fail and that where the rotator cuff had been reattached to the bone had healed as found in the January 2015 surgery. Dr. O'Brien opined that the second surgery showed a minor innocuous 5 mm tear that was essentially a separation of the muscle fibers and not a pulling off of the tendon from the bone but that it was nonetheless repaired. *See* Exhibit A.

20. Dr. O'Brien opined that Claimant had a pre-existing rotator cuff tear, that the work injury was quite minor and aggravated and accelerated the pre-existing tear

beyond its normal rate of progression but that the pre-existing condition was what was currently bothering Claimant and that the repair performed in August of 2014 did not fail and was still intact. Dr. O'Brien opined that whatever caused Claimant's pre-existing rotator cuff tear had resulted in another degenerative tear of Claimant's right shoulder rotator cuff tendon-to-bone attachment site and that the pre-existing condition was evidenced by the October 2015 MRI scan. Dr. O'Brien opined that the pre-existing condition was incurable, genetic, and age related and had caused another degenerative tear. Dr. O'Brien opined that the June 18, 2014 injury was addressed by the first surgery and the successful healing following that surgery. Dr. O'Brien opined that Dr. Chamberlain's surgical recommendation was to treat Claimant's pre-existing personal health issues. *See* Exhibit A.

21. Dr. O'Brien further opined that Dr. Chamberlain's surgical recommendation would not be successful. Dr. O'Brien opined that Claimant's tendon failed of its own accord prior to June of 2014, and that Claimant's genetic condition and age had resulted in another attritional failure. Dr. O'Brien opined that this was a manifestation of who Claimant is at a physiologic and anatomic level. Dr. O'Brien opined that it was medically probable that Claimant's tendon would not heal at the attachment site and that regardless of causation he recommended against the surgery. Dr. O'Brien opined that Claimant had excellent function with nearly full range of motion and that the surgery would not likely contribute to improved range of motion. *See* Exhibit A.

22. Dr. O'Brien testified at hearing consistent with his medical record review report. Dr. O'Brien opined that the first MRI taken approximately two weeks after the injury showed retraction of 1.5 cm that from a medical standpoint most likely would have taken a long time to develop. Dr. O'Brien opined that if Claimant had a prior left rotator cuff tear it would show that Claimant had the same type of bilateral condition and had a genetic pre-disposition to developing rotator cuff failure. Dr. O'Brien opined that Claimant's first surgery was successful although he was not sure why Claimant was still having pain. Dr. O'Brien agreed with Dr. Failinger's assessment that there were few options and a low probability of success with another surgery. Dr. O'Brien opined that at the time of the second surgery it showed that the rotator cuff tear was fixed and still holding but that now the tear is back and all sutures are gone or pulled back. Dr. O'Brien opined that a third surgery will not work and that a graft or dead tissue without any blood supply won't contribute to healing at the site, that Claimant genetically had failed previously in the same area, and that surgery would fail no matter what you did to Claimant's shoulder.

23. Dr. O'Brien opined that the procedure was not causally related to the injury and that the current retraction and re-tearing is due to Claimant's genetics despite the first surgery being successful. Dr. O'Brien also opined that no surgery could make Claimant better and that Claimant had almost full range of motion at his examination with Dr. Chamberlain.

24. Dr. Chamberlain testified by deposition. Dr. Chamberlain opined that the mechanism of injury and symptoms that began immediately considering the force would be appropriate to be considered an acute injury to the right shoulder. Dr. Chamberlain opined that Claimant continued to have trouble with his shoulder throughout the claim and that in spite of the two surgeries, Claimant continued to have limitations of function and pain in the shoulder and had never really recovered to his pre-injury state. Dr. Chamberlain opined that the most recent MRI showed that the rotator cuff was re-torn at the insertion very similar to where the initial rotator cuff tear was. Dr. Chamberlain noted that the intermediate MRI scan showed somewhat better attachment, but that the scans showed poor healing throughout in the insertion of the rotator cuff.

25. Dr. Chamberlain disagreed with Dr. O'Brien's assessment that the second surgery showed the rotator cuff had healed and opined that the second surgery showed that the rotator cuff was not completely healed. Dr. Chamberlain opined that there was loose debris in Claimant's shoulder that could cause irritation, inflammation, and a giant cell or body reaction and opined that some of the debris was related to the implants used in the prior two surgeries. Dr. Chamberlain again recommended a third surgery and opined that patients of Claimant's age with a full thickness rotator cuff tear do better with surgery than conservative treatment as well documented in literature and Rule 17 of the Workers' Compensation Medical Treatment Guidelines. Dr. Chamberlain noted that Claimant's success rate would be influenced by the poor healing in the past but that Claimant would benefit from a diagnostic and therapeutic arthroscopy of the shoulder. Dr. Chamberlain opined that augmentation of the rotator cuff repair would be done to add extra bulk and stability to the repair which was a different technique than what Dr. Failinger did in the past. Dr. Chamberlain opined that if the surgery is not performed, Claimant's treatment options at this point would be really palliative with limitation of activities and pain control modalities.

26. Dr. Chamberlain opined that it was unlikely Claimant had a full thickness tear prior to his work injury and noted no documentation of insufficiency in his shoulder or previous right shoulder problems. Dr. Chamberlain opined that with a young and active patient who was performing active work, it was very unlikely that Claimant had a full thickness rotator cuff tear prior to the work injury. Dr. Chamberlain opined that it was medically reasonable to proceed with the third surgery. Dr. Chamberlain noted that although Claimant had excellent function in the right shoulder, Claimant was limited in the ability to return to work and couldn't functionally perform work duties and that Claimant's function would progressively decrease over time.

27. Dr. Chamberlain opined that there was no evidence that could tell them how quickly Claimant's retraction occurred and that it was possible for Claimant to have had an intact rotator cuff tear that retracted more than 1.5 cm in a very short period of time. Dr. Chamberlain opined that an augmentation would aid a patient's ability to heal through their natural tissues. Dr. Chamberlain opined that the use of dermal acellular augmentation in sizable rotator cuff tears was supported by the Workers' Compensation Medical Treatment Guidelines.

28. Claimant testified credibly at hearing. Claimant had a prior left rotator cuff tear and repair surgery more than ten years prior from an acute injury suffered while riding dirt-bikes. Claimant had no symptoms in his right shoulder and had no limitations in use of his right shoulder prior to the June 18, 2014 work injury. Claimant was able to perform his job duties delivering large quantities of products with no known problems prior to June 18, 2014. Claimant continues now to have limitations in the use of his right upper extremity and continues now to have pain in his right upper extremity.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

Claimant is required to prove by a preponderance of the evidence that the condition for which he seeks medical treatment was proximately caused by an injury arising out of and in the course of the employment. *See* § 8-41-301(1)(c), C.R.S. Claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether Claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has met his burden to establish by a preponderance of the evidence that the third shoulder surgery requested by Dr. Chamberlain is reasonable, necessary, and causally related to his June 18, 2014 work injury. The surgery is a both a reasonable and necessary attempt to cure and relieve Claimant from the effects of the industrial injury. The opinion of Dr. Chamberlain is found credible and persuasive. The opinion of Dr. O’Brien has been considered and is rejected and found not as persuasive as the opinion of Dr. Chamberlain.

Claimant suffered an acute injury to his right rotator cuff and his current symptomatology and findings on MRI are more likely than not related to his June 18, 2014 injury. As found above, Claimant was asymptomatic prior to pulling on a five gallon bucket of pickles. Claimant had immediate and acute right shoulder pain after this incident. Claimant continued to have symptoms in his right shoulder throughout the claim including following his first and second surgeries. Dr. Chamberlain is credible and persuasive that the initial mechanism of injury could have caused the large rotator cuff shown by MRI shortly after the initial injury. Although Dr. O’Brien testified that a 1.5 cm retraction shown by MRI shortly after the injury likely took months or years to develop, he also testified it was possible it developed acutely. Dr. Chamberlain opined that the tear and retraction developed acutely. Further, although Claimant had a type II acromion and degeneration in the rotator cuff, Claimant was asymptomatic prior to June 18, 2014 working in a physically demanding job requiring regular delivery of supplies to restaurants. Further, Claimant remained symptomatic following the first surgical repair and the second surgical repair. Dr. Chamberlain is credible and persuasive that the two surgeries failed. Claimant has established, more likely than not, that his current right shoulder complaints were caused by the original injury on June 18, 2014 and the two following unsuccessful surgeries to treat the original work related injury.

Claimant also has established that the proposed surgery is reasonable and necessary to cure and relieve the effects of Claimant's June 18, 2014 injury. Dr. Chamberlain is found credible and persuasive regarding the potential for success and the goals of the surgery. Dr. Chamberlain acknowledges that Claimant has a lower chance of success than a patient undergoing an original rotator cuff repair surgery given his two prior failed surgeries, yet credibly opined that Claimant still had the potential for success to cure and relieve the effects of the injury. Although Dr. Failinger advised Claimant when discussing the second surgical repair that he would not recommend any further surgery after the second attempt, Dr. Failinger has not reviewed the proposed third procedure recommended by Dr. Chamberlain nor has he provided an opinion on the reasonableness or necessity of this third proposed surgery. As found above, the third surgery that Dr. Chamberlain is recommending is a different approach to the repair. Dr. O'Brien has provided a contrary opinion, however, his opinion is not found as persuasive as that of Dr. Chamberlain. Dr. O'Brien noted that Claimant's prior left rotator cuff tear and the current rotator cuff tear that was surgically repaired and then tore again evidences Claimant's genetic predisposition and inability to properly heal or allow the rotator cuff to reattach and that the surgery is unlikely to be successful. However, Dr. O'Brien failed to note that the prior left rotator cuff tear was the result of an acute injury and not due to genetic predisposition. Dr. Chamberlain provided a comprehensive and persuasive opinion regarding the reasonableness and necessity of the third proposed surgery, with a different approach than the first two surgeries. Overall, Claimant has established, more likely than not, that the surgery is not only causally related to his June 18, 2014 work injury but that it is reasonable and necessary to attempt to cure and relieve him of the continued effects of his injury.

ORDER

It is therefore ordered that:

1. Claimant has established by a preponderance of the evidence that the right shoulder surgery recommended by Dr. Chamberlain is reasonable, necessary, and causally related to his June 18, 2014 work injury.

2. Respondents shall authorize and pay for the recommended surgery.

3. All issues not determined are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 6, 2016,

/s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

1. Whether the claimant proven by a preponderance of the evidence that she sustained a compensable injury arising out of and in the course of her employment on October 23, 2014; if so,

2. Whether the claimant has proven by a preponderance of the evidence that the medical treatment she received in relation to the injury was reasonable and necessary to cure and relieve her from the effects of the industrial injury; and, if so,

3. Whether the claimant has proven by a preponderance of the evidence that she is entitled to temporary total disability or temporary partial disability in relation to the industrial injury.

FINDINGS OF FACT

1. The claimant was formerly employed by the respondent-employer as a farm laborer/herdsman. The claimant indicated that her job was to "be with the baby piglets" and that she "would help the pigs give birth."

2. The claimant testified that on October 23, 2014 she was standing on top of a pig cage, putting up a lamp, and then she fell. The claimant further testified that she has no recollection of what happened following her fall; she only remembers waking up in the hospital the following day.

3. The medical record from the emergency room at Weisbrod Memorial County Hospital indicates that the claimant fell through a crate and sustained very minor bruising to her left leg. After falling through the crate, the claimant went to the break room to elevate her leg. At that time, the claimant was conversing normally with her coworker. The claimant's coworker left the room for a period of time. The coworker reportedly heard a thump and returned to the break room where the coworker observed the claimant lying on her side on the floor.

4. Thereafter, an ambulance arrived on the scene. Upon arrival, paramedics observed the claimant lying on her right side on the floor. She was awake, her eyes were open, and she was responsive. The emergency room record documents that she

was lying on the ground for approximately 20 to 30 minutes. During that time, there was no seizure-like activity, no shaking, and no loss of bladder or bowel control.

5. The claimant was transferred to Weisbrod Memorial Hospital where she was evaluated by PA Dawn Beck. Upon examination, PA Beck noted that the claimant was awake and responsive. Other than a very minor bruise on the left shin, there were no signs of trauma. An x-ray of the left lower extremity showed no evidence of fracture or acute injury and that the soft tissues were unremarkable.

6. Even though there were no signs of head trauma, the claimant presented to the emergency room with subjective complaints of memory loss and dizziness. She claimed she could not remember her own birthday or her daughter's birthday. Accordingly, the claimant was transferred to Memorial Hospital in Colorado Springs in order to undergo a neurological workup.

7. Upon arrival at Memorial Hospital, the claimant was evaluated Dr. Robert Lam. He noted that the claimant was awake and alert. However, the claimant continued to exhibit amnesia about the event. She was unable to recount any details regarding the fall. She could not recall fainting. Accordingly, the claimant was admitted to the hospital for further evaluation.

8. On October 23, 2014, the claimant underwent a CT of the brain without contrast. The results were unremarkable and there were no signs of abnormalities.

9. Upon admission to Memorial Hospital, Dr. Christopher Evilsizer evaluated the claimant. The claimant reported that she felt "fine" and the claimant's friends and family indicated that she was behaving "normal."

10. In addition to the CT scan, the claimant underwent a MRI of the brain and an EEG. The MRI was normal. Specifically, the scan showed no evidence of acute intracranial abnormality or objective findings to correlate with the claimant's subjective complaints. The EEG was also normal and there were no signs of seizure.

11. The next morning, on October 24, 2014, the claimant was evaluated by neurologist, Dr. Drake McDonald. He noted that the claimant's mental status had been normal since being admitted to the hospital around 7:00 p.m. the previous evening. Upon examination, Dr. McDonald found no evidence of scalp or skull trauma. The neurologic examination was completely normal.

12. Dr. McDonald conducted a second neurological evaluation on October 25, 2014. He opined that even if the claimant did have a mild concussion, she was now “back to baseline.” He indicated that the claimant could be discharged.

13. On October 26, 2014, Dr. McDonald performed a third neurological evaluation and review of the MRI. Ultimately, Dr. McDonald assessed the claimant with probable nonspecific dizziness. He also notes, “I doubt there is an abnormality in the nervous system causing this.”

14. On October 26, 2014, the claimant was discharged from the hospital. Upon discharge, it was noted that all objective diagnostic studies were normal. There was no evidence of a neurological disorder to account for the claimant’s dramatic presentation. Providers at Memorial Hospital instructed the claimant to follow up with a primary care provider.

15. The ALJ finds that the totality of the evidence establishes that there was an event. If there was a fall, it is a truly unexplained fall. Clearly, the event is unexplained. Here, the evidence establishes only that the claimant was sitting in a chair conversing normally with a co-worker. After the co-worker departs the room he hears a noise and returns to find the claimant lying on the ground. The claimant agrees that she has no idea as to how this occurred and that she cannot explain it. The co-worker cannot explain it either.

16. Based upon all of the medical testing the claimant underwent, it is clear that there is no known pre-existing medical condition that precipitated the event.

17. The ALJ finds that the initial injury to the lower extremity was of a minor nature not requiring medical treatment in and of itself, and thus not a compensable event.

18. The ALJ finds that the claimant has failed to establish that it is more likely than not that on October 23, 2014 she suffered an injury arising out of and in the course of her employment with the respondent-employer.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Generally, the claimant shoulders the burden of proving entitlement to benefits by a

preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence to find that a "contested fact is more probable than its nonexistence." *Page v. Clark,* 592 P.2d 792, 800 (Colo. 1979).

2. Whether the claimant sustained her burden of proof is a factual question for resolution by the ALJ. *Cify of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

3. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved, the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

4. When determining credibility, the fact finder should consider, among other things the consistency or inconsistency of the witness' testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions, the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline,* 57 P.2d 1205 (1936). A Workers' Compensation case is decided on its merits. Section 8-43-210, C.R.S.

5. To recover workers' compensation benefits, the claimant must prove she suffered a compensable injury. A compensable injury is one which arises out of and in the course of employment. § 8-41-301(1)(b), C.R.S, *see City of Boulder v. Streeb,* 706 P.2d 786 (Colo. 1985). An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of her employment and during an activity that had some connection with her work-related functions. *Triad Painting Co.* v. Blair, 812 P.2d 638 (Colo. 1991). The "arising out of" element is narrower and requires the claimant to show a causal connection between the employment and the injury such that the injury has its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. See *Triad Painting Co. v. Blain supra.* In this regard, there is no presumption that an injury which occurs in the course of a worker's employment also arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968), *see also, Industrial Commission v. London & Lancashire Indemnify Co.,* 135 Colo. 372, 311 P.2d 705 (1957) *(mere fact that the decedent fell to his death on the employer's premises did not give rise to presumption that the fall arose out of employment).* Rather, it is the claimant's burden to prove by a

preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. § 8-43-201, C.R.S. 2006, *Ramsdell v, Horn,* 781 P.2d 150 (Colo. App. 1989). When a claimant does not prove the cause of an injury, the claim fails. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968).

6. Initially, the claimant was at work when she fell from the top of a pig crate injuring her left lower extremity. The ALJ concludes, as found above, that the claimant merely sustained a very minor bruise on her left shin, that in and of itself did not require medical attention nor cause a disability. Under *Wherry*, even if there was a minor fall and slight bruise to the claimant's left leg, it was not sufficient to cause a compensable injury that resulted in the need for medical treatment or disability. *Wherry*, W.C. No. 4-475-818.

7. The determination of whether there is a sufficient "nexus" or causal relationship between the claimant's employment and the injury is one of fact which the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by fhe United Sfates Court ofAppeals,* 759 P.2d 17 (Colo. 1988), *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo. App. 1996).

8. In *City of Brighton v. Rodriguez,* 318 P.3d 496 (Colo. 2014) the Colorado Supreme Court recognized three categories of injuries typically encountered in workers' compensation cases. The first category includes employment risks. The second is personal risks. The third comprises of neutral risks. The first and the third are typically compensable. The category of personal risks, including preexisting idiopathic injuries, were explained to generally not be compensable "unless an exception applies." The exception described is that of a "special hazard." The doctrine was explained to render an injury compensable even if the most direct cause of that injury is a preexisting idiopathic disease or condition "so long as a special employment hazard also contributed to the injury, *In the Matter of the Claim of Keith Murray*, Claimant, No. W.C. No. 4-921-576-02, 2014 WL 2726593 (Colo. Ind. Cl. App. Off. June 10, 2014) citing *City of Brighton v. Rodriguez*, 318 P.3d 496, (Colo. 2014).

9. The ALJ concludes that since this case establishes a truly unexplained fall, it falls within the personal risk. There is insufficient evidence to establish that the claimant was injured due to a positional risk. The ALJ concludes that the 'but for' test is inapplicable because we do not know what caused the claimant to sustain her cognitive deficits. There is insufficient evidence to establish that the claimant struck her head, thus the claimant has failed to establish just exactly what injury may have been suffered, if any.

10. Additionally, the claimant has failed to establish that a special hazard of employment is present.

11. The ALJ concludes based upon the above that the claimant has failed to establish by a preponderance of the evidence that she sustained an injury arising out of and in the course of her employment with the respondent-employer.

ORDER

It is therefore ordered that:

The claimant’s claim for benefits under the Workers’ Compensation Act of Colorado is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATE: June 7, 2016

/s/ original signed by:
Donald E. Walsh
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle, Suite 810
Colorado Springs, CO 80906

ISSUES

1. Whether Claimant is entitled to temporary total disability (TTD) benefits from November 5, 2015 through January 24, 2016.

2. Whether Claimant is entitled to temporary partial disability (TPD) benefits from January 25, 2016 and ongoing.

3. Whether Respondents have established that Claimant was terminated for cause on November 4, 2015 and is thus not entitled to TTD or TPD benefits.

4. If Claimant is entitled to TTD or TPD benefits, determination of Claimant's average weekly wage at the time of injury.

FINDINGS OF FACT

1. Employer is a corporation specializing in industrial construction and creates infrastructure for mines, power plants, and oil and gas operations. Claimant is a construction worker who was employed by Employer.

2. Claimant worked for Employer on and off for approximately four years. During this period of time, Claimant attended regular safety meetings conducted in English and regularly communicated with Employer in English.

3. Claimant worked from April 19, 2012 through February 1, 2013 as an iron worker. Claimant was given a leave request for February 4, 2013 through February 6, 2013 and thereafter Claimant did not call in or report back to work. *See* Exhibit G.

4. Claimant again worked for Employer from June 18, 2013 through May 9, 2014 as a foreman. As a foreman Claimant had supervisory duties and took part in Employer's supervisor training program which was conducted in English. Claimant's employment ended based on his "no call, no show." *See* Exhibit G.

5. Claimant again worked for Employer from July 7, 2014 through December 10, 2014 as a carpenter leadman. Claimant left employment to find another job. *See* Exhibit G.

6. On February 18, 2015 Claimant was again hired by Employer as a heavy equipment operator and he worked through July 10, 2015 when he left again to seek another job. *See* Exhibit G.

7. On September 29, 2015 Claimant was again hired as a carpenter and worked through November 4, 2015 and was fired on that date for refusing to follow instructions. *See* Exhibit G.

8. On November 3, 2015 while working for Employer, Claimant suffered a work related injury at a gold mine. Claimant was in the mine moving concrete forms and was taking the forms off a cement area and carrying them to a forklift. The forms weighed approximately 50-60 pounds. Claimant had one form in each hand and was walking up a slight incline when he noted the sudden onset of pain in his right calf.

9. Claimant reported the injury to Employer. Employer's safety manager, Rusty Campagna, took Claimant to a nearby clinic for evaluation.

10. On November 3, 2015 Claimant was evaluated by Robert Leach, NP. Claimant reported pulling and lifting heavy concrete forms when he had pain in the right calf that radiated up his leg. NP Leach assessed strain and released Claimant to modified duty that day with a zero pound lifting, pushing, and pulling restriction. NP Leach noted that Claimant was not to lift or pull until cleared by CCOM and recommended Claimant follow up with CCOM in Colorado Springs. *See* Exhibit 5.

11. Mr. Campagna reported Claimant's injury to Employer's corporate safety director, David Masterson. Mr. Masterson initially advised Mr. Campagna by email at 3:49 p.m. on November 3, 2015 to make arrangements for Clamant to be at his Grand Junction office the next morning by 7:00 a.m. Mr. Masterson sent a later email at 4:29 p.m. that advised Mr. Campagna that Claimant had a 10:00 a.m. appointment.

12. Mr. Campagna advised Claimant that Claimant had an appointment at Employer's Grand Junction facility at 10:00 a.m. the next morning and that Claimant needed to be there for follow up to hopefully get a doctors release and return for work.

13. After seeing NP Leach, Claimant returned to the mine where he had been working and went to the lunchroom trailer. Claimant was asked to straighten up the trailer which Employer believed was within the work restrictions given to Claimant.

14. Claimant sat in the lunchroom trailer for approximately 40 minutes and did not start straightening up the trailer. Claimant was on his cell phone and was also charging it in the trailer. Mr. Campagna walked in to the trailer and asked Claimant if he was going to straighten up the trailer. Claimant replied "I'm no fucking maid."

15. The following day, Claimant had his son drive him from Denver to Grand Junction for the appointment that Mr. Campagna told him he had to be present for. The day was snowy and Claimant arrived at Employer's Grand Junction office at 10:05 a.m. Mr. Masterson terminated Claimant immediately after Claimant's arrival. Mr. Masterson advised Claimant that he was not following orders and that he should have been there at 7:00 a.m. Mr. Masterson told Claimant that he had not followed orders with two

incidents in October, had made inappropriate comments to Mr. Campagna, and had failed to show up on time that morning.

16. Claimant was paid wages through November 4, 2015. From October 3, 2015 through his termination on November 4, 2015 Claimant earned an average weekly wage for taxed wages of $1,396.60. *See* Exhibit 8.

17. Mr. Masterson testified by deposition that Claimant was terminated for not following directions with the biggest problem being breaking the safety rules on two occasions in October of 2015. Mr. Masterson testified that Claimant had training on the proper operation of equipment and that Claimant also attended safety meetings and that the need for spotters while using the equipment is discussed all the time and consistently. Mr. Masterson also testified that Claimant failed on at least one occasion to bring his carpenter belt with him to work which was required. Mr. Masterson testified that Claimant talked to Mr. Campagna in an inappropriate way and that being late to the November 4, 2015 appointment was a continued showing of Claimant's overall patterns. Mr. Masterson's testimony, overall, is found credible and persuasive.

18. Approximately two weeks prior to his termination, Claimant was written up twice for safety violations that occurred when he was operating a skid steer. On October 13, 2015 at approximately 8:30 a.m., Claimant was written up for not following rules and regulations while operating a skid steer. When Claimant turned the machine sideways to dump a load the machine rear went over a bank and caused the machine to slide back and down against a form. *See* Exhibit F.

19. On October 13, 2015 at approximately 10:35 a.m. Claimant was written up again for not following rules or regulations while operating a skid steer. Claimant had been operating the skid steer with a spotter moving fill round concrete peers. Claimant's spotter walked away to put up barricade tape and Claimant continued to operated the skid steer and hit a stub-up breaking it off at ground level. Claimant had been trained not to move any equipment without a spotter and Claimant violated Employer's safety protocols when he moved the skid steer without the spotter. *See* Exhibit F.

20. Several months after his termination, and on March 31, 2016 Claimant underwent an Independent Medical Evaluation performed by Gretchen Brunworth, M.D. Dr. Brunworth noted that an evaluation was attempted earlier in the month but was not completed as a professional interpreter was not present. Claimant reported carrying forms off of cement and to a forklift with one form in each hand when he noted the sudden onset of pain in his right calf. Claimant reported going to a clinic then going back to work and working in the office for approximately an hour and that he was told he needed to be in Grand Junction the next day to be seen at the clinic. Claimant reported that the next day was snowy and that he made it to Grand Junction and was fired without being given a reason and that he had no treatment since.

21. Claimant reported to Dr. Brunworth that he started working for a new construction company on January 25, 2016 and that he was working full time. Dr. Brunworth assessed: low back and leg complaints; subjective complaints; and physical exam with complaints suggestive of a S1 radiculopathy. Dr. Brunworth recommended an MRI be completed. See Exhibit 6.

22. Claimant testified at hearing. Claimant denied that he stated to Mr. Campagna "I'm no fucking maid." Claimant testified that he does not know or understand what the word maid is so could not and would not have used that word. Claimant also testified that he was told by Mr. Campagna to be in Grand Junction by 10:00 a.m. for an appointment on November 4, 2015 and that he arrived only five minutes late.

23. Claimant also testified that he got a new job around January 19 or January 20, 2016 and has been earning wages in that job of $20/hour and works between 35 to 50 hours per week. Claimant reported to Dr. Brunworth that he started a new job on or about January 25, 2016. Claimant did not present any wage records to evidence the new job, start date, or wages earned.

24. Claimant's testimony, overall, is not found credible or persuasive. Claimant has been working for Employer on and off for four years during which he attended regular safety meetings in English, participated in the supervisor program in English, and also communicated with Employer in English. Claimant's report that he does not know the word "maid" and did not make the statement to Mr. Campagna in the lunchroom trailer is not credible.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or

improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Responsible for Termination

Claimant contends that he is owed temporary total disability payments for the period of time following his termination and until he began a new job in January of 2016. Claimant also contends that he is owed temporary partial disability payments from the time he started his new job in January of 2016 and ongoing. Therefore, it is necessary to address Respondent's contention that the Claimant is precluded from receiving temporary benefits because the Claimant is responsible for his termination.

A claimant found to be responsible for his or her own termination is barred from recovering temporary disability benefits under the Act. §§ 8-42-103(1)(g), 8-42-105(4). *Anderson v. Longmont Toyota, Inc*., 102 P.3d 323 (Colo. 2004). Because the termination statutes constitute an affirmative defense to an otherwise valid claim for temporary disability benefits, the burden of proof is on the Respondents to establish the Claimant was "responsible" for the termination from employment. *Henry Ray Brinsfield v. Excel Corporation,* W.C. No. 4-551-844 (I.C.A.O. July 18, 2003). Whether an employee is at fault for causing a separation of employment is a factual issue for determination by the ALJ. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129 (Colo. App. 2008).

In *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061 (Colo. App. 2002), the court held the term "responsible" as used in the termination statutes reintroduces the concept of "fault" as it was understood prior to the Supreme Court's decision in *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995). Thus, a finding of fault requires a volitional act or the exercise of a degree of control by a claimant over the circumstances leading to the termination. *Gilmore v. Industrial Claim Appeals Office, supra; Padilla v. Digital Equipment Corp.,* 902 P.2d 414 (Colo. App. 1994), *opinion after remand*, 908 P.2d 1185 (Colo. App. 1995). A claimant may act volitionally if he is aware of what the employer requires and deliberately fails to perform accordingly. *Gilmore v. Industrial Claim Appeals Office, supra*.

However, in any event, the word "responsible" does not refer to an employee's injury or injury-producing activity since that would defeat the Act's major purpose of compensating work-related injuries regardless of fault and would dramatically alter the mutual renunciation of common law rights and defenses by employers and employees alike under the Act. Hence, the termination statutes are inapplicable where an employer terminates an employee because of the employee's injury or injury-producing conduct. *Colorado Springs Disposal v. Industrial Claim Appeals Office of State of Colorado,* 58 P.3d 1061 (Colo. App. 2002).

Here, Claimant was not terminated due to his injury. In fact, the evidence shows that Employer drove Claimant to the clinic shortly after Claimant reported the injury, drove Claimant back to the mine, and accommodated his light duty restriction allowing Claimant to sit in the lunchroom trailer and straighten it up. Further, Employer set up a doctor's appointment for Claimant the following day. However, two weeks prior to the work injury, Claimant had two instances of failing to follow instructions where he violated safety rules and was written up. Additionally, the day of the injury Claimant was insubordinate to a supervisor when Claimant stated "I'm no fucking maid."

The evidence shows, more likely than not, that Claimant's termination was not due to his injury but was justified and due to Claimant's overall pattern of behavior that included failing to follow safety instructions twice within the month prior to his injury causing damage, insubordination to his supervisor, as well as a history of no call/no show and failing to show up to work with the required tool belt/tools. Although Employer could have terminated Claimant for cause earlier than November 4, 2015 based on Claimant's behaviors, the fact that they did not terminate him at an earlier date does not take away from the fact that they had sufficient cause to terminate Claimant and had a further reason to terminate him after the remarks he made to his supervisor on November 3, 2015. The evidence establishes that had Claimant's employment performance been satisfactory, it is more probable than not that he would have remained employed by Employer and that he was not terminated due to his injury, but due to his failure to follow safety instructions and his insubordination.

Due to Claimant's poor employment performance, Respondents have met their burden of showing that Claimant's termination was justified. Claimant acted volitionally and had control over his decision two times to violate safety procedures on October 13, 2015 and acted volitionally in making an inappropriate comment to his supervisor. Although the evidence does not establish that Claimant was more than five minutes late to the appointment on November 4, 2015 and shows mixed information as to whether he was told the meeting was at 7:00 a.m. or 10:00 a.m., Employer had sufficient justification to terminate Claimant based on the safety violations, the insubordination, and/or a combination of the two. Based on Claimant's performance, or lack thereof, Respondents have established that the termination was justified. Claimant did not establish any wage loss prior to his termination and the request for temporary benefits is thus denied and dismissed.

ORDER

It is therefore ordered that:

1. The claim for temporary disability benefits is denied and dismissed.

2. Claimant was responsible for his termination and resulting wage loss after November 4, 2015.

3. As Claimant is not entitled to any temporary disability benefits, the issue of average weekly wage is moot.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 8, 2016,

/s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

The issues for determination are:

1. Whether the claimant established by a preponderance of the evidence that the situs of her functional impairment is off the schedule and thus entitling her to an order converting her 13% scheduled impairment rating to an 8% whole person; and,

2. The amount of disfigurement benefits to which the claimant may be entitled.

FINDINGS OF FACT

1. The claimant was injured on December 3, 2013 while working as a preschool teacher at Castle Academy. At the time she was working in the 2-year-old room, taking care of children between infancy and 2 years old.

2. The claimant was injured when she tripped over a toy and fell on an outstretched left arm and had immediate pain to her left elbow. She fell awkwardly because she was trying to avoid harming a young student.

3. On December 6, 2013 the claimant underwent surgery with Dr. Steven Morgan. Dr. Morgan attached one plate and multiple screws in the claimant's left arm.

4. On January 15, 2014 the claimant returned to Dr. Morgan's office for a six-week follow-up post-surgery. Dr. Morgan noted in his assessment, "extreme limited range of motion in flexion and extension."

5. The claimant had continued difficulties with stiffness and pain in her elbow. This was noted by Dr. In Sok Yi on May 27, 2014.

6. Because the claimant continued to have difficulty with range of motion in her elbow she underwent a second surgery on October 8, 2014. The procedure performed was "left elbow retained hardware removal and left elbow contracture release, heterotopic bone excision, and radical capsular excision." During the surgery, Dr. Yi noted, "there appeared to be due to the intra-articular comminuted nature of the

fracture, some rotation and flexion of the lateral condyle piece causing mechanical blockage to extension and flexion… but appears to continually have mechanical block within the trochlea to prevent further flexion."

7. The claimant was placed at maximum medical improvement by Dr. Brian Beatty on May 6, 2015. He noted "again postoperatively she has gone through a full course of physical therapy with gradual improvement but continues to have significant loss of range of motion." Dr. Beatty assigned the claimant 8% scheduled impairment at the elbow which converts to 5% whole person impairment.

8. The claimant subsequently requested a Division Independent Medical Exam (DIME), which occurred with Dr. Lloyd Thurston on October 28, 2015. On physical exam Dr. Thurston found "the flexion and extension and points were solid and very consistent. She has been using a JAZ splint to regain range of motion in the elbow. She states there's been essentially no change in the last few months. The range of motion measurements I obtained resulted in a 13% upper extremity impairment which converts to 8% whole person impairment."

9. The claimant was regularly prescribed Percocet for the pain in her elbow from her date of injury through her date of maximum medical improvement.

10. Dr. Thurston specifically commented on the injury's effect on the claimant's day-to-day life. He noted, "[The claimant] has had to change her sleeping position, she is unable to crawl, golf, or swing a bat. When she is driving she must lean forward to roll down her window. She can't swing on a swing set. The most notable and frustrating result of the injury is that she is unable to touch her face with her left hand."

11. The claimant's statements to Dr. Beatty were consistent with her statements at hearing. In the claimant's position taking care of children from newborn to 2 years old, she is required to crawl, lift children, reach overhead and use a swing set among other job duties. Because the claimant does not have full flexion and extension in her elbow, she cannot sit on the swing set and lean forward to swing, nor is she able to crawl on the floor with the children. If she puts her left arm down to crawl, it causes immediate pain in her thoracic and scapular area. The claimant did not attempt to crawl at work prior to maximum medical improvement. The first time her difficulties with crawling were noted in the records was during the DIME exam. She also cannot reach overhead supplies, which as a preschool teacher she is required to either stock, or takedown for use.

12. Because the claimant's elbow is at a permanent angle, the most comfortable position for her to carry her left arm is with it resting across her midsection. When the claimant's left arm is down it causes pain into her scapula and thoracic regions. The claimant cannot simply let her left arm hang by her side without pain into her scapula and thoracic area.

13. The claimant can no longer sleep on her left side. The position she now sleeps in eventually causes her arm and shoulder to go numb, and she wakes with pain in her shoulder blade extending into the middle and upper spine areas. She wakes with this pain and it takes a few hours of moving around for that pain to resolve.

14. The claimant cannot drive a car for any long distance without experiencing pain into her scapula and thoracic area. She has difficulty driving longer stretches because extending the left arm to reach the steering wheel causes pain and discomfort in her scapula, neck and thoracic area. Because of the permanent angle the claimant's elbow remains at, she cannot comfortably rest her left arm in her lap while driving. Reaching the blinker causes a sharp, needle-like pain in the claimant's shoulder blade area.

15. In terms of activities of daily living, the claimant cannot reach her left ear with her left arm, she cannot wash her hair with her left arm, and she cannot wash her face with 2 hands. When the claimant attempts to wash her face with 2 hands or clean her left ear, she experiences aching pain in her neck and upper back.

16. The claimant was never asked by any of her authorized physicians about the effects of her inability to flex or extend her elbow past a specific point. The DIME physician, Dr. Thurston, was the first physician to comment on the injury's effects on the claimant's day-to-day life.

17. The ALJ finds the claimant to be credible.

18. The ALJ finds that the claimant has established that it is more likely than not that the situs of the claimant's functional loss extends beyond the left elbow and into her scapula area, thoracic spine and cervical area as it relates to her inability to wash her face and hair with her left arm, inability to reach her left ear, driving and sleeping which cause pain into her scapula thoracic and cervical areas, crawling or swinging on a swing set as part of her job duties, and reaching overhead.

19. The ALJ finds that as a result of her December 3, 2013 work injury, the claimant has a visible disfigurement to the body consisting of a surgical scar on the outside portion of the left elbow that is approximately eighteen inches in length and

three-quarters of an inch in width at its widest. The scar is discolored when compared to the surrounding tissue. The ALJ finds that the claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view, which entitles the claimant to additional compensation.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1)*. The claimant shoulders the burden of proving by a preponderance of the evidence that her injury rose out of the course and scope of his employment, *Section 8-41-301(1);* see *City of Boulder v Streeb*, 706 P.2d 786 (Colo. 1985). A preponderance of the evidence is that which leads the trier of fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in the favor of Respondent. *Section* 8-43-201.

2. A workers' compensation case is decided on its merits. *Section* 8-43-201. The ALJs' factual findings need only concern evidence that is dispositive of the issues involved. The ALJ does not need to address every piece of evidence that might lead to a conflicting conclusion and reject evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finders should consider, among other things, the consistency or inconsistency of the witnesses' testimony and action; the reasonableness or the unreasonableness (the probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interests. *See Prudential Insurance Company v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936).

4. The term injury refers to the part of the body that has sustained ultimate loss. *Mountain City Meat Company v. Oqueda*, 919 P.2d 246 (Colo. 1996). In the context of Section 8-42–107(1), the term "injury" refers to the part or parts of the body that have been functionally impaired or disabled as a result of the injury. *Maree v. Jefferson County Sheriff's Department*, WC No. 4–260–536 (ICAO August 6, 1998), citing *Strauch v. PSL Swedish Healthcare*, 917 P. 2d 366 (Colo. App. 1996). Section 8–42–107(1)(a), C.R.S. (2003), limits medical impairment benefits to those provided in

subsection (2) where the claimant's injury is one enumerated on the schedule. The schedule of specific injuries includes, in section 8–42–107(2), the loss of the arm; however, impairment of the scapula, thoracic spine and neck are not listed in the schedule of disabilities. *Maree v. Jefferson County Sheriff's Department*, *supra*. Although Section 8–42–107(2) does not describe a scapula, thoracic or neck injury, our courts have construed that the dispositive issue is whether the claimant sustained a functional impairment to the portion of the body that is listed on the schedule of disabilities. See *Strauch v. PSL Swedish Healthcare*, *supra*. Thus, the ALJ is constrained to determine the situs of the functional impairment, not the situs of the initial harm, in deciding whether the loss is one listed on the schedule of disabilities. *Id*. Pain and discomfort which limit the claimant's use of a portion of her body may be considered functional impairment. *Beck v. Mile High Express, Inc.*, WC No. 4–283–483 (ICAO February 11, 1997).

5. The ALJ concludes, based upon a totality of the evidence, that the claimant has established by a preponderance of the evidence that situs of her functional impairment extends from the left elbow into the thoracic spine region, the scapula area and the neck where the claimant suffers functional impairment restricting her from crawling, reaching overhead, driving for extended periods, washing her face and washing her hair. The claimant established that she experiences pain in the left upper extremity, thoracic spine and left scapula, which causes her to cradle her arm across her midsection and limits her functioning. Since the situs of the claimant's functional impairment does not appear on the schedule of disabilities, the claimant is entitled to a whole person impairment rating.

6. The evidence presented at hearing further established that the claimant is entitled to an 8% whole person impairment of her left elbow injury. This rating is arrived at based on the opinion of Division Independent Medical examiner Lloyd Thurston, M.D.

7. The ALJ concludes that as a result of her December 3, 2013 work injury, the claimant has a visible disfigurement to the body. The ALJ concludes that the claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view, which entitles the claimant to additional compensation. Section 8-42-108 (1), C.R.S.

[The Order continues on the following page.]

ORDER

It is therefore ordered that:

1. The respondent-insurer shall pay the claimant permanent partial disability benefits based upon 8% whole person impairment.

2. The insurer shall pay interest to the claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. The ALJ orders that the respondent-insurer shall pay the claimant $1,800.00 for her disfigurement. The respondent-insurer shall be given credit for any amount previously paid for disfigurement in connection with this claim.

4. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Colorado Springs, CO 80906

ISSUES

I. Whether Respondents have met their burden to prove that Claimant's injury resulted from the willful failure to use a safety device or a willful violation of a reasonable safety rule adopted by Employer for Claimant's safety in contravention of C.R.S. §8-42-112(1)(a) and (b), thus entitling Respondents to reduce Claimant's compensation by fifty (50) percent.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Employer is a manufacturing facility that uses heavy industrial forging equipment to produce bolts and screws for the railroad industry. Due to the nature of their business and the machinery used for production, Employer takes safety seriously and considers the wellbeing of their employees to be of paramount importance.

2. Employer has adopted many safety rules, but given the types of machinery used on the factory floor, two rules are heavily emphasized within the facility. The first rule is that all employees must use a lock out/tag out device on any machine before performing any maintenance or repair to that machine (lock out/tag out rule). The second rule is that all employees shall refrain from placing their hands or limbs in the pinch points of machines until the machine is locked out/tagged out (pinch point rule)
.

3. A machine is "locked out" when a locking device is placed on the lever of a power box in the off position. A machine is "tagged out" when an employee places a tag on the lock on the lever indicating "the device may not be operated or energized until the tag is removed." The purpose of lock out/tag out rule is to avoid injuries by "isolat[ing] [the machine] from all potential energy sources" and "physically restrain[ing] [the machine] from being operated or energized." When a machine is locked out/tagged out, it is disconnected from all sources of power that may result in the machine cycling, including mechanical power sources, i.e. compressed air. When a machine is merely off, it still has access to power and may accidentally cycle while under service resulting in serious injury.

4. The purpose of the pinch point rule is to prevent employees from placing their limbs or hands in danger of being severely harmed.

5. Claimant was hired as machine operator for Employer on July 10, 2015. According to Claimant, he had gone through safety classes with Employer and after passing those classes was called back to begin work. Leonard Gonzales, a project

team member with Employer, taught a new employee orientation class to claimant on the day he was hired. During this class, Mr. Gonzales verbally explained lock out/tag out procedures, demonstrated the lock out/tag procedures out on a power box inside the classroom, and explained the dangers of not locking out/tagging out a machine. Mr. Gonzales distributed a pamphlet detailing lock out/tag out procedures to new employees and claimant testified that he watched a series of videos during his class that illustrated photographs of injured industrial workers to reinforce the severity of potential injuries at facilities using heavy industrial equipment similar to that used on Employer's production lines.

6. Claimant also testified that he understood the safety rules that were covered in the new employee orientation and, based on his years of experience with machinery, he knew how to lock out/tag out a machine. At the completion of the class, claimant signed a document acknowledging that Employer's "Lock-Out/Tag-Out Procedures [had] been presented" and that he "understood and that [he] [would] comply with these rules." Mr. Gonzales ensures new employees understand this document by reviewing the document with the employee before the employee signs it.

7. After this class, claimant received individual training on machine safety procedures which reinforced the lock out/tag out rule for the equipment used in Employers manufacturing processes. Each time he received this training, claimant signed a document acknowledging that he understood the dangers of the machine and the safety procedures for it. Claimant also received training regarding the pinch point areas of specific machine on the manufacturing floor.

8. On July 11, 2015, claimant was trained on pointer machines. The training document he signed warned operators to keep their "hands away from the grip area" and to "watch out for pinch points." The document instructed that the machine must be lock out/tagged out before doing maintenance or repairs.

9. On July 13, 2015, claimant was trained on induction machines. The training document he signed stated "Do not place your fingers between the conveyor chains."

10. On July 18, 2015, claimant received training on reshear machines. The training document he signed noted that placing hands or fingers in the pinch point of the machine could result in broken hands or fingers. This machine needed to be locked out/tagged out whenever an employee performed any maintenance or repairs. The document also prohibited employees from placing their hands under the "guide bracket" or "near or on shear dies."

11. On July 30, 2015, claimant received training on the wheelabrator machine. The training document he signed warned of the machine's pinch points: "Keep hands and limbs clear of the door while opening and closing." The document again required the machine to be locked out/tagged out for maintenance and/or repairs.

12. Finally, on August 8, 2015, claimant received training on all header machines.

Header machines have a set of clamps approximately two feet inside the machine. One side of the clamp is called the “upsetter” and the other side of the clamp is called the “grip die.” The grip dies hold a bolt in place as the upsetter presses into the grip die to create the head on the bolt.

13. The training document claimant signed listed the first danger of a header machine as “PINCH POINTS! Do not put hands or fingers where they don’t belong or you risk losing them.” The second danger listed was “Putting hands in machine when it is not turned off properly could result in loss of fingers or other body parts.” The safety procedure for a header machine instructed employees to “Never put hands in between the dies unless the machine is locked-out” and to “know where the lock-out box is and use lock-out/tag out when doing maintenance on machine.” The document also warned that the machine “grips can activate by air pressure without the machine ever running.”

14. Claimant testified that all of his machine specific training took place outside of the factory floor.

15. Jacob Trost, claimant’s co-employee, also received training on Employer’s header machines. He testified that his trainer demonstrated the importance of the pinch points rule concerning this machine by showing him a smashed bolt that had been improperly inserted into the grip dies. As a consequence of his training, Mr. Trost testified that he recognized the grip dies as an obvious danger and pinch point area. Mr. Trost also testified that his trainer explained to him that the machine could cycle inadvertently and showed him the location of the lock out/tag out power box on the factory floor to secure the machine for maintenance and repairs.

16. Mr. Trost testified that he had no knowledge of Claimant’s floor training. The signed safety procedure records submitted at hearing evidence that Mr. Trost had a different trainer than claimant when claimant was trained in the safety aspects of all headers on August 8, 2015. Nonetheless, Mr. Gonzales, who serves on Employer’s safety committee, testified that all employees receive similar floor training. Mr. Gonzales and the plant manager, Brett McIntosh both testified that Employer’s standard procedure is to train employees on the factory floor. Mr. McIntosh testified that the reason the training is conducted on the factory floor is to give employees an opportunity to visualize the potential dangers of and safety procedures for each machine used on the factory floor. Based upon the evidence presented, the ALJ finds that while Claimant may have had a different trainer, who may or may not have used a smashed bolt as an example to demonstrate the representative hazards of the pinch points existing on header machines, Claimant likely received specific safety training on the factory floor regarding the dangers posed by headers with heavy emphasis on not placing his hands in between the upsetter and grip die unless the machine was locked out. Indeed, the Claimant acknowledged as much on August 8, 2015 as evidenced by his signature on Respondents Exhibit D, page 017. The ALJ finds Claimant’s testimony that all of his machine specific training took place outside and off of the factory floor unpursuasive.

17. At hearing, there was a dispute over whether Employer enforces the lock

out/tag out procedure. Claimant testified that on at least 10 occasions, he had performed maintenance and repairs to machines, including changing the grip dies on the header machine during which Employer's lock out/tag out procedures were not followed. He testified that during these incidents the machine would be shut down but not locked out. According to Claimant, he preformed such maintenance with Mr. Trost without locking/tagging the machine out.

18. Mr. Trost testified that he never maintained or repaired any machine or changed the grip dies in the header without locking out/tagging out the machine. He explained he would never maintain, repair, or change the grip dies in a header without locking/tagging it out because of the obvious risk of injury. Regarding the maintenance of machinery, Mr. Gonzales testified that Employer has employees who are specifically tasked with machine maintenance, making it unlikely that claimant performed maintenance on ten different occasions. Moreover, Mr. McIntosh testified that Employer fosters a corporate culture emphasizing safety. Consequently, Mr. McIntosh testified that employees come to him with safety concerns or instances where they have observed safety violations. Thus, Mr. McIntosh testified that he would know if an employee is regularly violating a safety rule. According to Mr. McIntosh, employee's bonuses are linked to their adherence to Employer's safety rules and violations of the rules are routinely dealt with by suspension and/or termination. Documents submitted into evidence establish support Mr. McIntosh's testimony that the company safety rules are enforced and violations of the same are met with disciplinary action.

19. Based upon the evidence presented, the ALJ finds that when violations of the lock out tag out policy or pinch point rule were known to Employer disciplinary action was taken. Consequently, the ALJ finds that in addition to making the specific lock out tag out and pinch point rules/procedures known to employees, Employer enforced the rules by making violations thereto subject to corrective action.

20. On August 30, 2015, claimant was working with Jacob Trost on header machine number 415. As with other machines on the factory floor, the lock out/tag out protocols apply to this header machine. The power box to lock out/tag out is located approximately two feet away from the front of the machine. Operating this machine to finish product is a two man job. Claimant's part in the operation required him to stand in front of a conveyor belt and feed unfinished bolts to Mr. Trost who stood on a platform in front of the header. As the bolts travel down the conveyer belt, an induction heating system heats the top of the bolts to make them malleable. Mr. Trost then used a pair of metal tongs to grab the bolt from the belt and place it into the header machine. Once the bolts were inside the header, Mr. Trost would depress a foot pedal which would engage the upsetter and the grip dies to smash together to form a head on the bolt.

21. Near the end of his shift, at approximately 3:30 AM, Mr. Trost ran a set of five bolts through the header to make sure the upsetters and the grip dies were properly calibrated for the incoming workers. As the last bolt came off the line, claimant noticed what he considered a manufacturing defect on it. According to claimant, the last bolts run by Mr. Trost contained some flashing (lipping) likely caused by improper setting of

the upsetter and grip dies. From his work position, claimant yelled for Mr. Trost in an effort to point out the defect. Shaking his head, Mr. Trost disagreed that the bolts were defective and motioned for his supervisor. In the interim, claimant joined Mr. Trost on the operator's platform where he grabbed a bolt run by Mr. Trost. Claimant pointed out the flashing on the bolt and the two began to argue about the upsets, dies and whether the bolt was made correctly. Claimant testified that the two argued about this. Mr. Trost testified that he and claimant argued a "little bit", however, he characterized the exchange as a "friendly disagreement." The ALJ is not convinced that the verbal exchange between claimant and Mr. Trost constituted a "friendly disagreement." Rather, based upon the fact that Mr. Trost testified that he did not believe that the bolts were defective and had turned away from claimant and was not paying attention to him as he attempted to explain the problem, the ALJ finds that both men were aggressively trying to prove the accuracy of their claims. The ALJ infers and finds from the evidence presented that Mr. Trost likely felt that claimant was interfering with his work and that claimant was equally aggravated with Mr. Trost for his dismissive attitude, prompting claimant to spontaneously reach into the machine to prove his point that the upset and dies were not calibrated properly.

22. The machine was on when claimant extended his hand into it. Claimant admitted that the machine was not locked out/tagged out when he reached into it. Claimant did not turn the header machine off and no one told him the machine was off. Claimant admitted further that he could have explained the problem he felt was causing the defect to Mr. Trost after the machine was locked and tagged out; however, he testified that after attempting to explain the problem to Mr. Trost, who would not listen, that he impetuously stuck his hand/arm into the machine without thinking.

23. While claimant's arm was approximately two feet in the machine and within the "pinch points", it unexpectedly cycled and crushed his hand between the upsetter and the grip die causing serious injuries.

24. Mr. Trost and Mr. McIntosh testified that claimant failed to use the lock out/tag out device because claimant did not lock out/tag out the machine before reaching his arm into the machine and no one told him the machine was locked out/tagged out. Both also testified that claimant violated the pinch point rule by putting his hand in a known pinch point. Based upon the evidence presented, the ALJ agrees with the testimony of Mr. Trost and Mr. McIntosh, specifically that claimant would not have been injured if he had used the lock out/tag out device or obeyed the pinch point safety rule.

25. During hearing, Claimant admitted he put his hand into the pinch point of the header machine to prove to Mr. Trost that there was a problem with the die and that he was injured as a consequence. While admitting that reaching into the pinch point of an unlocked machine was in violation of Employer's safety rules, Claimant maintains that his actions were thoughtless and perhaps careless or negligent, but not willful as must be proven, by statute, before his indemnity benefits can be reduced by 50%.

26. Based upon the evidence presented, the ALJ finds that Respondents failed to

present persuasive evidence that Claimant intended to violate Respondent's lockout/tag out and pinch point safety rules. While claimant undisputedly did not lock and tag the header machine out and further reached his hand into a known pinch point, the evidence presented persuades the ALJ that claimant did so on impulse. The evidence convinces the ALJ that the above referenced argument between claimant and Mr. Trost, despite being downplayed by Mr. Trost as a “friendly disagreement” coupled with Mr. Trost ignoring claimant as he tried to explain himself emotionally provoked claimant sufficiently that he was moved to a sudden, unconscious inclination to reach his hand into the pinch points of the header machine without locking/tagging it out. Consequently, while claimant’s actions were grossly negligent, reckless and manifestly stupid, they were not willful. On the evidence presented, the ALJ finds that Respondents have not met their burden to prove that Claimant’s injury resulted either from the willful failure to use safety devices provided by Employer or violation of a reasonable safety rule adopted by Employer for Claimant’s safety in contravention of C.R.S. §8-42-112(1)(a) and/or (b).

CONCLUSIONS OF LAW

Based upon the forgoing findings of fact, the ALJ draws the following conclusions of law:

A. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office,* 5 P.3d 385(Colo. App. 2000)

B. Section 8-42-112(1)(b), C.R.S. 2014, provides for a 50 percent reduction in benefits if the employee is injured due to a willful violation of a safety rule. The term "willful" connotes deliberate intent, but mere carelessness, negligence, forgetfulness, remissness or oversight does not satisfy the statutory standard. *Bennett Properties Co. v. Industrial Commission,* 165 Colo. 135, 437 P.2d 548 (1968). Respondents bear the burden of proof to establish that the claimant's conduct was willful. *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office,* 907 P.2d 715 (Colo. App. 1995).

C. The elements of proving a violation under Section 8-42-112(1)(a) and/or (b) include the following: 1). There must be a safety rule adopted by the employer. 2). The safety rule must be reasonable. 3). The safety rule must be known by the employee; “brought home” to the employee, and diligently enforced. *Pacific Employers Insurance Co. v Kirkpatrick*, 111 Colo. 470, 143 P.2d 267 (Colo. 1943). 4.) The meaning and content of the safety rule must be specific, unambiguous and definite, clear and non-conflicting. *Butland v. Industrial Claim Appeal Office*, 754 P.2d 422 (Colo. App 1988). 5). The violation of the safety rule must be willful, done with deliberate intent by the employee. *City of Las Animas v. Maupin*, 804 P.2d 285 (Colo. App 1990). The question of whether the respondents carried the burden of proof was one of fact for determination by the ALJ. *City of Las Animas v. Maupin*, 804 P.2d 285 (Colo. App. 1990). Here, there is little question that Respondents presented sufficient evidence to meet their burden of proof concerning elements 1-4. Rather, the question presented here is whether Claimant's injuries were caused by his willful failure to use a safety device (lock out equipment) and/or willful failure to adhere to safety rules, i.e. tagging the header and reaching to the pinch points of the machine.

D. Respondents argue that they have met their burden to prove willfulness based on the "obviousness" of the danger posed by an unlocked machine possessing evident, known pinch points. In essence, Respondents argue that obviousness of the risks associated with the equipment in question supports that conclusion that claimant acted with deliberate intent when he reached his hand into the machine without locking/tagging it out. Based upon the evidence presented, the ALJ is not persuaded. In this case, the preponderance of the persuasive evidence establishes that although Claimant's actions may have been careless and negligent, they were not willful, i.e. deliberate. As noted, a violation which is the product of mere negligence, forgetfulness or inadvertence is not willful. *Johnson v. Denver Tramway Corp.*, 171 P.2d 410 (Colo. 1946). While it is true that willfulness can be inferred from the circumstances presented, such as repeated warnings, knowledge of the risks associated with violations of a safety rule, and the degree of carelessness or indifference to obvious risks,[1] the persuasive evidence presented in this case establishes that, more probably than not, in an emotionally charged desire to prove himself correct to Mr. Trost, claimant likely did not act consciously, i.e. deliberately/willfully when he reached into the header toward the upset and dies. Rather, he acted without thinking and his "carelessness" resulted in serious injury. Nonetheless, the ALJ concludes that claimant did not intend to violate Employers safety rules by failing to use safety devices and/or the safety rules concerning lock out/tag out procedures and avoidance of pinch points. As such, the ALJ is not persuaded that Claimant's actions in contravention of Employers safety polices were willful as must be established by Section 8-42-112(1)(a) and (b).

ORDER

It is therefore ordered that:

1. Insurer's request to reduce claimant's compensation benefits by 50% as provided for by Sections 8-42-112(1)(a) and (b), *supra* is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed

[1] See *Industrial Commission v. Golden Cycle Corp.,* 126 Colo. 68, 246, P.2d 902 (1952); *Stockdale v. Industrial Commission,* 76 Colo. 494, 232 P. 669 (1925).

it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 10, 2016

/s/ Richard M. Lamphere
Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

PROCEDURAL BACKGROUND

At the outset of the hearing, the parties stipulated and agreed that, to the extent issues were not previously resolved, all five (5) of Claimant’s pending Applications for Hearing related to the Claimant for the same work injury, Respondents’ corresponding Responses and the Prehearing Conference Orders related to the Applications and Responses, would be consolidated for hearing at the April 29, 2016 hearing. The ALJ approved the stipulation of the parties to consolidate these matters and stated that the various documents would be reviewed, along with the transcript of the hearing, to establish the issues remaining for resolution. The review of the relevant documents and hearing transcript is summarized as follows for the purpose of clarifying the remaining issues:

<table>
<tr><td>10/09/2015 Application (Cl. Ex. 9)
<i>(Consolidated with 10/20/2015 App)</i>
• Issues: (1) penalties for belated GAL and belated DIME application; CRS 8-43-304(1), 8-42-107.2, 8-42-107(8)(b),(e), and WCRP 11; (2) propriety of DIME Application</td><td>10/28/2015 Response
(Cl. Ex. 12; R. Ex. A)
• Issues: (1) penalties – CRS 8-43-211(3); (2) other-CRS 8-43-101; 8-42-107(8)(b.5)(I)(D); 8-42-107.2; WCRP 5-2, 11-3; <i>Reichert v. Maxtor Corp.</i></td></tr>
<tr><td>10/20/2015 Application (Cl. Ex. 10)
<i>(Consolidated with 10/09/2015 App)</i>
• Issues: (1) other-propriety of DIME selection panel & physician specialties; hold DIME process in abeyance</td><td>11/19/2015 Response
(Cl. Ex. 14; R. Ex. B)
• Issues: (1) penalties-CRS 8-43-211(3); (2) other-CRS 8-43-101, 8-42-107(8(b.5)(I)(D), 8-42-107.2, WCRP 5-2, 11-3; <i>Reichert v. Maxtor Corp.</i></td></tr>
<tr><td colspan="2">• 11/13/2015 prehearing order: (1) 10/09/2015 and 10/20/2015 Applications (and corresponding Responses) consolidated; (2) R motion to strike penalty issue denied; (3) briefing schedule set for issue #2-propriety of DIME Application (Cl. Ex. 13)
• 12/18/2015 prehearing order: dismissed issue of penalty for late DIME Application as without merit; dismissed issue RE propriety of R’s preemptive DIME Application as without merit; denies R’s motion to strike Cl’s issue of penalty for filing belated GAL due to genuine issue of material fact and reserves R’s defenses, including request for specificity; strikes sole issue in 10/20/15 Application RE propriety of DIME selection process & physician specialties (Cl. Ex. 18; R. Ex. H)</td></tr>
</table>

12/07/2015 Application (Cl. Ex. 16) ***(Consolidated with 12/24/2015 App)*** • Issues: (1) Resolve issues raised by R’s Motion to Strike Issues dated 11/23/15 pursuant to *Gustavo Lozano v. Front Range Rebar Co. Inc. (ICAO, Aug. 3, 1998, WC 4-285-320)*	**01/04/2016 Response** **(Cl. Ex. 21)** • Issues: (1) penalties- attorney fees for pursuing unripe issues; (2) interlocutory orders not subject to appeal
12/24/2015 Application (Cl. Ex. 19) ***(Consolidated with 12/07/2015 App)*** • Issues: (1) reconsider PALJ’s 12/18/2015 order; (2) longstanding pattern of bias/predisposition RE: attorney	**01/22/2016 Response** **(Cl. Ex. 22)** • Issues: (1) penalties-attorney fees for pursuit of unripe issues; (2) interlocutory orders not subject to appeal; (3) collateral estoppel; (4) facial challenge to DIME not reviewable by OAC; (5) failure to state a claim
• 01/04/2016 OAC Order consolidates issues endorsed in 12/07/2015 and 12/24/2015 Applications and corresponding Responses to be heard at hearing set for 02/26/2016 (R. Ex. K) • 02/16/2016 prehearing order: (1) motion that is the subject of the 12/07/15 Application has been ruled on and is resolved, so this issue is stricken; (2) R’s motion to strike 12/24/15 Application is denied; (3) R’s request for attorney fees and costs is reserved for 02/26/2016 hearing; (4) R’s request for specificity to Cl’s request for penalties reserved as a defense for 02/26/2016 hearing (Cl. Ex. 24; R. Ex. I)	
02/15/2016 Application (Cl. Ex. 23) • Issues: (1) penalties for requesting attorney fees & relief beyond a PALJ’s authority; (2) other-resolve issues raised by the R’s prehearing scheduled for 2/16/2016 at 11:00 pursuant to *Gustavo Lozano v. Front Range Rebar Co. Inc. (ICAO, Aug. 3, 1998, WC 4-285-320)*	**03/16/2016 Response (Cl. Ex. 25)** • Issues: (1) attorney fees for pursuit of unripe issues; (2) facial challenge to DIME not reviewable by OAC; (3) collateral estoppel; (4) failure to state a claim
• 04/08/2016 prehearing order: granted R’s motion to compel Cl’s attendance at DIME with Dr. Thurston on May 25, 2016 at 9:00 AM. Further ordered that Cl’s failure to attend DIME will result in sanctions against CL, including up to $1,000 per day penalty and dismissal of her claim (unless vacated by an OAC ALJ) (Cl. Ex. 26; R. Ex. J) • 04/26/2016 prehearing order: granted R’s motion to compel Cl to complete R’s 3/18/2016 interrogatories (Cl. Ex. 27)	

- 04/29/2016 hearing: parties stipulated to consolidating remaining issues from all five applications and corresponding responses for hearing (Hrg. Tr., pp. 35-36)
- 04/29/2016 hearing: Cl's motion for relief from the 04/08/2016 prehearing order RE compel DIME attendance was granted, in part. Cl. is relieved from attending the DIME with Dr. Thurston on May 25, 2016 at 9:00 AM. However, Cl. must attend a rescheduled DIME appointment with Dr. Thurston to take place between June 10, 2016 and July 10, 2016 unless ordered otherwise (Hrg. Tr., pp. 86-88)

ISSUES

In light of the procedural background summarized above, the following issues remain for resolution by the ALJ in this consolidated matter:

1. Whether the Respondents timely and properly requested a Division Independent Medical Examiner ("DIME") and the effect of such request.

2. Whether the Respondents timely and properly filed a General Admission of Liability ("GAL").

3. If the Respondents failed to timely and properly request a DIME or file a GAL, whether penalties should be assessed against the Respondents pursuant to C.R.S. §§ 8-43-304(1), 8-42-107.2, 8-42-107(8)(b)(e), and WCRP 11.

4. Propriety of DIME panel selection and whether the Claimant is entitled to a DIME physician with a requested specialty.

5. Whether, and for how long, the DIME process is held in abeyance.

6. Reconsideration of the issues raised before PALJ Harr that were addressed in his December 18, 2015 Interlocutory Order.

7. Reconsideration of the issues raised before PALJ Gallivan that were addressed in his February 16, 2016 Prehearing Conference Order.

8. Consideration of the allegation of a longstanding pattern of bias or predisposition with respect to the Claimant's attorney.

9. Whether the Respondents have proven that attorney fees and costs should be assessed against the Claimant's attorney for pursuing unripe issues pursuant to C.R.S. § 8-43-211(3).

10. Whether the Claimant has proven that penalties should be assessed against the Respondents for requesting attorney fees and costs and such other relief beyond a PALJ's authority.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. The Claimant has had prior back surgery at the L3-4 level, a laminotmy that took place somewhere in between 2007 and 2009. This was her only previous low back surgery (Hrg. Tr., pp. 59-60).

2. The Claimant was injured at an out-of-state work location on April 9, 2014. On that date, the Claimant testified credibly that she tripped as she was walking through the entrance to a bathroom. She further testified that she did not fall after tripping, but caught herself. The Claimant testified that this resulted in injury to her left low back and hip area (Hearing Tr., p. 55).

3. After the Claimant's work injury, she continued to work full duty for her employer and did not miss time from work due to the work injury until February 5, 2016. After February 5, 2016, the Claimant has not been working (Hearing Tr., pp. 64-65).

4. The Claimant testified credibly that since her injury she has only been free of pain for a two-month period following a rhizotomy and some very temporary relief from some injections (Hrg. Tr., p. 56 and pp. 63-64). The Claimant testified that she continues to have symptoms in her low back, a stabbing pain in her hip area and an intermittent numbness in her feet towards her toes (Hrg. Tr., pp. 56-58).

5. The Claimant treated with John Charbonneau, M.D., Gregory Reichhardt, M.D., Ricardo Nieves, M.D. (also see Claimant's Exhibit 1), Dr. Columbus (also see Claimant's Exhibits 2 and 3), Daniel Bruns, Psy.D., and Dawn Jewell Psy.D. (Claimant's Exhibit 4, p. 474; Respondents' Exhibit E, p. 17). Dr. Charbonneau was the Claimant's primary authorized treating provider and he is an occupational medicine physician and not a surgeon (Hrg. Tr., p. 61). In addition to treatment and oversight provided by Dr. Charbonneau, the Claimant has undergone a lumbar MRI, physical therapy, injections and a rhizotomy (Claimant's Exhibit 4, p. 474; Respondents' Exhibit E, p. 17). The Claimant testified that Dr. Charbonneau never referred the Claimant to an orthopedic surgeon or neurosurgeon for evaluation for any surgical procedures (Hrg. Tr., p. 60). The Claimant testified that she requested a referral for surgical spine evaluation but that Dr. Charbonneau did not make the referral (Hrg. Tr., p. 61). The Claimant testified that if surgery would provide her with relief from her condition, she would definitely consider undergoing a surgical procedure (Hrg. Tr., p. 63).

6. On August 26, 2014, subsequent to her work injury, the Claimant underwent a lumbar MRI which was compared to the Claimant's prior May 6, 2009

lumbar MRI. The radiologist noted that the comparison study revealed no change, except for evidence of interval improvement in the appearance of the postsurgical changes for her prior non-work-related L3-L4 laminotomy (Claimant's Exhibit 29; Respondents' Exhibit E, p. 20).

7. On July 13, 2015, the Claimant saw Dr. Reichhardt, on referral from Dr. Charbonneau, for evaluation for permanent impairment. Dr. Reichhardt reviewed the history of the Claimant's injury and summarized her treatment up to that date. He noted that the Claimant reported "an aching pain in the low back and left gluteal area, with some numbness extending down the posterior aspect of the thigh." He also noted that the Claimant had symptoms of depression and Dr. Bruns felt she had a ratable psychological impairment. He noted her current pain rating was 4-8/10 but that recent injections provided little relief and a rhizotomy provided only a month of relief. Dr. Reichhardt opined the Claimant was at maximum medical improvement as of July 13, 2015. He recommended maintenance care and provided an impairment rating of 7% whole person for the specific disorder of the lumbar spine combined with a 6% whole person rating for range of motion deficits for a total lumbar impairment of 13% whole person. He further combined this with a 2% psychiatric impairment for a total combined 15% whole person impairment rating. Page 5 of Dr. Reichhardt's report states that the following were cc'd: Insurance Company, Dr. Charbonneau and [Claimant], but there is no certificate of mailing or other indication of when the report was actually mailed. (Claimant's Exhibit 4; Respondents' Exhibit E, pp. 17-25).

8. The Claimant then saw Dr. Charbonneau for a final case closure visit on July 30, 2015. Based on Dr. Reichhardt's impairment evaluation report, Dr. Charbonneau placed the Claimant at MMI as of July 13, 2015, and provided an impairment rating of 15% whole person impairment. He recommended the impairment rating be accepted and specifically noted that he attributed the impairment to her work injury. Dr. Charbonneau also agreed that maintenance care consisting of six follow up visits with him and four follow up visits with a physical therapist and continuing medications of Celebrex and Flexeril were necessary. In reviewing Dr. Charbonneau's medical report of July 30, 2015, it appears that he sent Dr. Reichhardt's July 13, 2015 report to the Claimant after explaining it to her and it also appears that the document was faxed out and received on July 31, 2015 (Respondents' Exhibit E, pp. 13-15).

9. The ALJ finds that it is undisputed that the Respondents received the impairment rating of Dr. Reichhardt via Dr. Charbonneau as of July 31, 2015. However, it cannot be determined from the evidence admitted in this case that the Respondents received a medical report notifying them that the Claimant sustained a permanently physically impairing injury prior to July 31, 2015.

10. The Respondents disagreed with the impairment determination by Dr. Reichhardt and adopted by Dr. Charbonneau and filed a Notice and Proposal to Select a DIME Examiner on August 7, 2015 (Respondents' Exhibit F).

11. On August 26, 2015, the Respondents filed a General Admission of Liability admitting for medical benefits only and specifically denying temporary and permanent disability benefits until deemed otherwise payable in accordance with Rule 5-5(B). It was noted that if the temporary or permanent benefits were sustained, an amended admission would be filed (Claimant's Exhibit 6).

12. The Claimant filed an Application for Hearing on October 9, 2015, on the issues of penalties against Respondents for filing belated General Admission of Liability and for filing a belated DIME Application per 8-43-304(1), 8-42-107.2, 8-42-107(8)(b), (e), and Rule 11 of WCRP; and "to determine the propriety and effect of Respondents' preemptive and belated bogus DIME application" (Claimant's Exhibit 9).

13. The Claimant filed an Application for Hearing on October 20, 2015, on the issues of "propriety of DIME panel selection and physician specialties, contrary to Claimant's DIME rights as expressed in *AFL-CIO v Donlon* and *Whiteside v. Smith*, contrary to the Claimant's true treatment and diagnostic needs and extent of his (sic) occupational impairments and to hold the DIME process in abeyance per *Jesus Munoz v ICAP* and *JBS Swift & Compan*y (Claimant's Exhibit 10).

14. The Respondents filed a Response to the Claimant's October 9, 2015 Application for Hearing on October 28, 2015 asserting defenses to the claims that Respondents filed an untimely admission and an untimely DIME application and Respondents sought attorney fees related to the Claimant's pursuit of unripe issues (Claimant's Exhibit 12; Respondents' Exhibit A).

15. The Respondents scheduled a prehearing conference to request that issues on both Claimant's October 9, 2015 and October 20, 2015 applications for hearing be stricken. The prehearing conference was held before PALJ Michael Harr on November 13, 2015. PALJ Harr requested written briefing by both parties on the issues. The Claimant's October 9, 2015 and October 20, 2015 Applications for Hearing were also consolidated by Order dated November 13, 2015 and set for hearing for February 26, 2016 (Claimant's Exhibit 13).

16. On November 19, 2015, the Respondents filed a Response to the Claimant's October 20, 2015 Application for Hearing asserting defenses to the claim regarding the propriety of the DIME selection process and the Claimant's request to hold the DIME process in abeyance and also sought attorney fees related to the Claimant's pursuit of unripe issues (Claimant's Exhibit 14; Respondents' Exhibit B).

17. The Respondents submitted a written motion to strike issues endorsed in the Claimant's October 9, 2015 and October 20, 2015 Applications for Hearing on November 23, 2015 (Claimant's Exhibit 15). The Claimant's submitted a written response to Respondents' motion to strike issues on December 14, 2015 (Claimant's Exhibit 17).

18. In the meantime, the Claimant filed another Application for Hearing on December 7, 2015, on the issue of "resolve issues raised by the Respondents' Motion

to Strike Issues dated November 23, 2015, pursuant to *Gustavo Lozano v. Front Range Rebar Co., Inc.*" (Claimant's Exhibit 16).

19. PALJ Harr issued an order on December 18, 2015, striking the issues in Claimant's October 20, 2015 Application for Hearing, with prejudice, "because it questions a process that is unripe until a party applies for hearing to overcome the opinion of the DIME physician." As to the Claimant's October 9, 2015 Application for Hearing, PALJ Harr also dismissed the Claimant's penalty allegation for "filing a belated DIME application" as meritless, dismissed the issue of "propriety and effect of Respondents' preemptive and belated bogus DIME application" as meritless. PALJ Harr did not dismiss the Claimant's penalty allegation for "filing and relying on a belated General Admission" as he determined that the Claimant's allegation raises a genuine issue of material fact regarding the timely filing. However, he did find that the allegation was vague and unspecific and reserved to Respondents any defense they have, including lack of specificity (Claimant's Exhibit 18; Respondents' Exhibit H).

20. The Claimant' filed a fourth Application for Hearing on December 24, 2015, on the issues of "to determine propriety, jurisdiction and effect of and to reconsider PALJ's Order of December 18, 2015," and "this longstanding pattern of bias or predisposition vis-à-vis the undersigned" (Claimant's Exhibit 19).

21. The Respondents filed a Response to the Claimant's December 7, 2015 Application Hearing on January 4, 2016 and also requested attorney fees and costs be assessed for pursing unripe issues and raised the defense that interlocutory orders are not subject to appeal (Claimants' Exhibit 21; Respondents' Exhibit C).

22. The Claimant's December 7, 2015 and December 24, 2015 Applications for Hearing were consolidated with issues to be heard at the February 26, 2016 hearing pursuant to an OAC Order granting Respondents' unopposed motion to consolidate dated January 6, 2016 (Respondents' Exhibit K).

23. On January 15, 2016, Lloyd Thurston, DO was confirmed as the Division IME physician (Respondents' Exhibit L). The Claimant agrees that Dr. Thurston is Level II accredited (Hrg. Tr., p. 71).

24. The Claimant filed a fifth Application for Hearing on February 15, 2016, on the issues of penalties against Respondents for requesting attorney fees and costs and such other relief beyond a PALJ's authority and "to resolve issues raised by the Respondents' prehearing scheduled for February 16, 2016" (Claimant's Exhibit 23).

25. A prehearing conference was held on February 16, 2016 before PALJ Gallivan on the issues of Respondents' motions to strike Applications for Hearing, for attorney fees and costs and for specificity regarding the Claimant's request for penalties. PALJ David Gallivan struck the Claimant's December 7, 2016 Application for Hearing, finding that at the time the Application for Hearing was filed, the issues were under review by PALJ Harr, which resulted in an order. This order resolved any issues regarding that motion. He then found that the issue of reconsideration of PALJ Harr's

December 18, 2015 order (the issue in the December 24, 2015 Application for Hearing) is proper and would not be stricken. Finally, PALJ Gallivan found that the Claimant had failed to meet her burden of specificity regarding penalties and Respondents preserved that defense for hearing and that Respondents had made the requisite attempt to strike issues in Claimant's applications for hearing and may seek attorney fees and costs at hearing but that the PALJ would not issue an order addressing this request (Claimant's Exhibit 24).

26. The February 26, 2016, docket was heavily scheduled and this case had lower priority than other matters scheduled. As a result, hearing on these matters was rescheduled for April 29, 2016.

27. On March 16, 2016, the Respondents filed a Response to the Claimant's February 15, 2016 Application for Hearing asserting that a facial challenge to the DIME is not reviewable by the OAC, collateral estoppel and that the Claimant failed to state a claim upon which relief may be granted. Respondents also sought attorney fees related to the Claimant's pursuit of unripe issues (Claimant's Exhibit 25)

28. A prehearing conference was held on April 6, 2016 before PALJ Craig Eley on Respondents' Motion to Compel Claimant's Attendance at Division Independent Medical Examination. PALJ Eley noted that the Claimant failed to attend a DIME on March 9, 2016 with Dr. Lloyd Thurston and that Respondents sought an order compelling the Claimant's attendance at a DIME scheduled for April 13, 2016. After considering the argument of counsel, PALJ granted the Respondents' motion with conditions. Namely, he ordered attendance at a rescheduled May 25, 2016 DIME evaluation unless vacated by order of an OAC ALJ. He further ordered that the Claimant's failure to attend the DIME evaluation would result in sanctions, including, but not limited to, a penalty of up to $1,000.00 per day and dismissal of her claim for workers' compensation (Claimant's Exhibit 26; Respondents' Exhibit J).

29. On April 26, 2016 a prehearing conference was held before PALJ David Gallivan on the issue of Respondents' Motion to Compel Responses to Discovery. PALJ Gallivan ordered the Claimant to provide responses to the Respondents' March 18, 2016 Interrogatories on or prior to April 28, 2016 (Claimant's Exhibit 27). The Claimant provided the responses found at Claimant's Exhibit 28 on April 28, 2016.

30. At the hearing held on April 29, 2016, the undersigned ALJ ordered that the Claimant was relieved of compliance with PALJ Craig Eley's Order requiring the Claimant to attend a DIME evaluation with Dr. Thurston on May 25, 2016 in order to provide sufficient time for the parties to submit briefs in this matter and for the ALJ to issue an order. The ALJ ordered that the Claimant must work with Respondents to reschedule a DIME evaluation with Dr. Thurston to be scheduled between June 10, 2016 and July 10, 2016 and that the Claimant shall attend that DIME evaluation unless this order relieves the Claimant of that obligation. Having considered the evidence and arguments presented at hearing and in the post-hearing briefs (see below), the ALJ determines that this order does not change the Claimant's obligation to attend the

rescheduled DIME evaluation with Dr. Thurston. The Claimant remains under order compelling her attendance at the most recently scheduled DIME evaluation with Dr. Thurston.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Judicial or Administrative Notice of Adjudicative Facts Pursuant to C.R.E. 201

Counsel for the Claimant requested that the ALJ "take administrative or official notice the contents of the underlying related case computer entries and Office Administrative Courts' and Division of Worker's Compensation and I.M.E. Unit files in consideration of this matter, pursuant to C.R.E. 201" (Claimant's Position Statement, p. 3). C.R.E. 201 permits the ALJ to use discretion to take judicial notice of adjudicative facts if the fact is not subject to reasonable dispute in that it is either (1) generally known within the territorial jurisdiction of the trial court or (2) capable of accurate and ready determination by resort to sources whose accuracy cannot reasonably be questioned. It is mandatory for a court to take judicial notice of adjudicative facts covered by Rule 201 if requested by a party and supplied with the necessary information. With respect to information in the files and records of the Division of Workers' Compensation and I.M.E. Unit files, any request is governed by C.R.S. §8-47-203 and WCRP Rule 1-5. Counsel for the Claimant has failed to comply with the requirements of both the statute and WCRP Rule 1-5 for requesting inspection and copying of files and the ALJ will not take judicial notice of facts in the files and records and computer entries of the Division of Workers' Compensation. With respect to the files and computer entries at the Office of Administrative Courts, the Claimant has failed to supply the Court with the necessary information to determine what contents and computer entries are included in the request for judicial notice. Nor has counsel for Claimant provided identification of information to counsel for Respondents for the purpose of providing Respondents' counsel with the ability to ascertain which information is included in Claimant's request, to object to any such information, or to prepare a defense in light of such information. Therefore, the request for the ALJ to take administrative or official notice pursuant to C.R.E. 201 is denied. Only the exhibits which were submitted to the ALJ and the testimony taken at the hearing on April 29, 2016 will be considered evidence in this matter.

Reconsideration of the issues raised before PALJ Harr that were addressed in his December 18, 2015 Interlocutory Order and PALJ Gallivan that were addressed in his February 16, 2016 Prehearing Conference Order

Respondents have raised the defense that interlocutory orders are not subject appeal in two of the Responses to Claimant's Applications for Hearing (Claimant's Exhibits 21 and 22). Panels of the Industrial Claim Appeals Office have held that "orders related to DIME requests are in the nature of evidentiary rulings and are therefore, interlocutory (see *Alvarez v. JBS USA, LLC,* W.C. 4-783-538 (ICAO, July 10, 2012). However, the *Alvarez* case involved review of an order of an OAC ALJ that determined that the Claimant failed to show persuasive authority to support his argument that he had the right to apply for a hearing to contest the selection of the three-physician panel under WRCP 11-3(c) based on a selection process that relied upon the level of accreditation of the physician rather than the physicians' areas of practice. In the present case, the Claimant has endorsed issues in two of the five Applications for hearing requesting the ALJ reconsider the rulings of PALJs pursuant to prehearing conferences.

The Colorado Supreme Court and ICAO panels have issued orders contemplating ALJ review of prehearing orders issued by PALJs. In *Szot v. U.S. Security Associates, Inc.,* W.C. 4-714-229 (ICAO, October 2, 2007), the panel concluded that an ALJ erred by not reconsidering a ruling from a PALJ. The panel stated that an ALJ has jurisdiction to review interlocutory rulings of a PALJ and that further consideration by an ALJ of prehearing orders is anticipated. Although the orders of a PALJ that arise in the context of a prehearing conference are "interlocutory" and "not immediately appealable," the Colorado Supreme Court noted that, it makes sense to treat a PALJ's order related a prehearing conference in this manner, "because a prehearing conference, by definition, is followed by a full hearing before the director or an ALJ" and "thus, the propriety of a PALJ's prehearing order may be addressed at the subsequent hearing." *Industrial Claim Appeals Office v. Orth,* 965 P.2d 1246, 1254 (Colo. 1998).

While the PALJ orders in question in this case are not deemed to be final, appealable orders as they arose out of a prehearing conference, they are nevertheless subject to review by the ALJ. To the extent that the Claimant has endorsed issues addressed by prehearing orders, or had requested reconsideration of the PALJs orders, the ALJ has authority to review the same and such issues are considered below.

The Claimant has failed to establish that Respondents are subject to penalties for failure to timely file a General Admission of Liability (GAL)

C.R.S. § 8-43-203(1)(a) provides, in pertinent part,

> The employer or, if insured, the employer's insurance carrier shall notify in writing the division and the injured employee…within twenty days after a report is, or should have been, filed with the division pursuant to section 8-43-101, whether liability is admitted or contested.

C.R.S. § 8-43-101(1), states, in pertinent part, as follows:

> Within ten days after…the occurrence of a permanently physically impairing injury, or lost-time injury to an employee…the employer shall, upon the forms prescribed by the division for that purpose, report said…permanently physically impairing injury, [or] lost time injury…to the division.

In this case, the Claimant was injured at an out-of-state work location on April 9, 2014. However, after the Claimant's work injury, she continued to work full duty for her employer and did not miss time from work due to the work injury until February 5, 2016. As a result, prior to August 26, 2015, this was not a lost-time injury to the employee that would require a report pursuant to C.R.S. § 8-43-101(1) which would, in turn, trigger a required filing of an admission of liability for this reason.

Therefore, until the Respondents reasonably understood the Claimant's injury to be one which was permanently physically impairing to the Claimant, no report or admission was required. Dr. Reichhardt issued a medical report of his evaluation for permanent impairment on July 13, 2015 and provided a total lumbar impairment of 13% whole person which he further combined with a 2% psychiatric impairment for a total combined 15% whole person impairment rating. The Claimant then saw Dr. Charbonneau for a final case closure visit on July 30, 2015. Based on Dr. Reichhardt's impairment evaluation report, Dr. Charbonneau placed the Claimant at MMI as of July 13, 2015, and provided an impairment rating of 15% whole person impairment. He recommended the impairment rating be accepted and specifically noted that he attributed the impairment to her work injury.

Thus, the earliest arguable date that a report could have been required in this case under C.R.S. § 8-43-101(1) is ten days after July 13, 2015 or July 23, 2015. Then, the earliest arguable date that an admission would be required is twenty days after that, or August 12, 2015. However, the Claimant did not establish that the Respondents actually received a copy of Dr. Reichhardt's July 13, 2015 report on that day. Page 5 of Dr. Reichhardt's report states that the following were cc'd: Insurance Company, Dr. Charbonneau and [Claimant], but there is no certificate of mailing or other indication of when the report was actually mailed.

In reviewing Dr. Charbonneau's medical report of July 30, 2015, it appears that he sent Dr. Reichhardt's document to the Claimant after explaining it to her and it also appears that the document was faxed out and received on July 31, 2015. It is undisputed that the Respondents received the impairment rating via Dr. Charbonneau as of July 31, 2015. If this is the first notice that the Respondents had of a permanently physically impairing injury, then a report would have been required ten days later, or August 10, 2015 and then an admission would be required twenty days after that, or August 30, 2015.

The ALJ specifically determined that it is undisputed that the Respondents received the impairment rating of Dr. Reichhardt via Dr. Charbonneau as of July 31, 2015. However, it could not be determined from the evidence admitted in this case that the Respondents received a medical report notifying them that the Claimant sustained a permanently physically impairing injury prior to July 31, 2015. If July 31, 2015 is the date that ultimately triggered the requirement to file an admission, then the August 26, 2015 GAL would have been timely as it was filed before August 30, 2015.

In any event, pursuant to C.R.S. § 8-43-203(2),

> If such notice is not filed as provided in subsection (1) of this section, the employer, or if insured, the employer's insurance carrier, as the case may be, may become liable to the claimant, if the claimant is successful on the claim for compensation, for up to one day's compensation for each day's failure to so notify….

The penalty statute in for this violation is discretionary and not mandatory. While the ALJ has determined that the Claimant has failed to prove that the GAL was filed late, even if the filing was not timely, the filing was not more than 14 days late. Furthermore, the Respondents disagreed with the impairment determination by Dr. Reichhardt and adopted by Dr. Charbonneau and filed a Notice and Proposal to Select a DIME Examiner on August 7, 2015, putting the Claimant on notice that although the medical benefits were admitted, liability for temporary or permanent disability benefits was disputed. There was no persuasive evidence presented that the Claimant suffered any prejudice due to the failure to accept liability for medical benefits in a timely manner or that the Respondents failed to pay for medical treatment.

To the extent the filing was up to 14 days late, the Claimant also failed to establish that she suffered any harm or prejudice as a result of the late filing with respect to disability benefits. The Claimant did not miss time from work until February 5, 2016, well after the admission was filed on August 26, 2015. Further, the Respondents admitted for medical benefits only and specifically denied temporary or permanent disability benefits and also requested a Division IME for review of Dr. Reichhardt's impairment rating. In this case, any subsequent delay in the completion of the DIME process, and the determination of the Claimant's impairment, and potentially entitlement to benefits for such impairment, is attributable to the Claimant's objections to the DIME process and multiple requests to delay and postpone the DIME evaluation. Therefore, even if the filing was up to 14 days late, the Claimant has delayed the DIME process.

The Claimant has failed to persuade the ALJ that any penalty should be assessed against the Respondents for an untimely filing of the General Admission and no penalty will be assessed for this claim.

The Claimant has failed to establish that Respondents improperly requested the selection of a Division IME or are subject to penalties for failure to timely file a Notice and Proposal to Select an Independent Medical Examiner

Jurisdiction

First, on the matter of jurisdiction of the ALJ, citing *Alvarez v. JBS USA, LLC,* W.C. No. 4-783-538 (ICAO, July 10, 2012), the Respondents have argued that the ALJ does not have jurisdiction to consider the Claimant's October 9, 2015 issue of "determine the propriety and effect of Respondents' preemptive and belated bogus DIME application." The Respondents further argue that the ALJ does not have jurisdiction to review prehearing conference orders that dismissed these issues, but this was addressed above.

The Claimant asserts, to the contrary, that the Office of Administrative Courts and its ALJs have long been statutorily and administratively vested with original jurisdiction to hear and decide all matters arising under articles 40 to 47 of the Colorado Worker's Compensation Act, including "disputes concerning the division IME process that arise in individual cases that cannot be resolved by agreement of the parties...." The Claimant cites a long string of cases and C.R.S. §8-43-201(1); WCRP 11-10 as authority.

Multiple cases before the Industrial Claim Appeals Office have contemplated litigation before an ALJ regarding disputes over the DIME procedure arising in an individual case as distinguished from controversy implicating the DIME system as a whole. *Rodriguez v. Safeway Stores,* W.C. No. 4-712-019 (ICAO, September 10, 2008); *Caro v. Johnson Controls, Inc.,* W.C. 4-786-424 (ICAO, May 12, 2010). Further, the Respondents' reliance on *Alvarez* is misplaced as the ALJ in that case did not decline to rule on a DIME panel selection issue. Rather, the ALJ determined that the Claimant failed to prove entitlement to selection of a DIME physician by practice specialty since WRCP 11-3(c) provides for selection of a three-physician panel based on their accreditation to perform impairment ratings on the body parts or medical conditions designated by the requesting party on the IME application and, as such, failed to state a claim under which relief may be granted. Per WCRP 11-10 and C.R.S. §8-43-201(1), the ALJ has jurisdiction to address the issues related to the DIME process that have arisen in this case. To the extent that an issue alleges a failure to comply with the rules or statutes applicable to commencement of the DIME process or entitlement to commence the DIME process related to the facts of this case, or to review a PALJ order regarding the same, these issues fall within the ALJ's jurisdiction.

Timeliness of DIME Request

In this case, the Respondents disagreed with the impairment determination by Dr. Reichhardt and adopted by Dr. Charbonneau and filed a Notice and Proposal to Select a DIME Examiner on August 7, 2015.

C.R.S. § 8-42-107.2(b) provides that,

> If any party disputes a finding or determination of the authorized treating physician, such party shall request the selection of an IME. The requesting party shall notify all other parties in writing of the request, on a form prescribed by the division by rule, and shall propose one or more acceptable candidates for the purpose of entering into negotiations for the selection of an IME….Unless such notice and proposal are given within thirty days after the date of mailing of the final admission of liability or the date of mailing or delivery of the disputed finding or determination…the authorized treating physician's findings and determinations shall be binding on all parties and on the division.

The timing for selection of an IME for an insurer or self-insured is prescribed by C.R.S. § 8-42-107.2(2)(a)(I)(B) as commencing "with the date on which the disputed finding or determination is mailed or physically delivered to the insurer or self-insured employer. Therefore, to contest the impairment rating determination of Dr. Reichhardt which was found to be delivered with the medical opinion of Dr. Charbonneau as of July 31, 2015, the Respondents were required by the statute to request a Division IME on or before August 30, 2015. So, Respondents' August 7, 2015 Notice and Proposal to Select an Independent Medical Examiner was timely[1].

"Preemptive" DIME Issue

In addition to disputing the timeliness of the Respondents' Notice and Proposal to Select a DIME Examiner, the Claimant also characterizes the DIME in this case as "preemptive" and "bogus." The Claimant's principle argument with respect to this issue appears to be that when the Respondent seeks a DIME before filing a Final Admission of Liability, this is done in "bad faith" and utilized to preempt the Claimant's ability to seek a DIME and it shifts the burden on the Claimant.

[1] Although the ALJ determined that impairment rating determination of Dr. Reichhardt was delivered with the medical opinion of Dr. Charbonneau as of July 31, 2015, even if the earlier July 13, 2015 date of Dr. Reichhardt's report is used, the Respondents' August 7, 2015 Notice and Proposal to Select an Independent Medical Examiner would have been timely.

Claimant points out that pursuant to C.R.S. § 8-42-107.2(2)(a)(I)(A):

> For the claimant, the time for selection of an IME commences with the date of mailing of a final admission of liability by the insurer or self-insured employer that includes an impairment rating issued in accordance with section 8-42-107.

and

C.R.S. § 8-42-107.2(c) provides that,

> If the insurer or self-insured employer requests and IME and the examination is conducted before the insurer or self-insured employer admits liability pursuant to section 8-43-203(2)(b), the claimant may not request a second independent medical examination on that issue but may appeal the IME's decision, as set forth in section 8-43-203(2)(b)(II).

As a result, counsel for the Claimant argued at hearing and in her post-hearing brief, that if Respondents seek a Division IME before filing a final admission, the Claimant is unfairly prejudiced as the Respondent is effectively preempting the single opportunity to procure a burden-shifting objective determination as to MMI and the Claimant's impairment rating. The Claimant has argued, without citing any persuasive authority, that the Respondent must have a "good faith" basis for seeking a DIME in this situation or it is inherently unfair that the Claimant may only challenge the IME through appeal and is then subject to a burden of overcoming the DIME by clear and convincing evidence.

The timing for seeking requesting selection of a Division IME is established by the statute. The language is clear and unequivocal. If a Respondent does not request an IME when prescribed by statute, then the ATP's findings and determinations are binding. If the Respondent fails to seek the IME when required, there is no way to challenge determinations of MMI or impairment ratings. Nothing in the statute requires a showing of good faith by Respondents seeking a DIME evaluation prior to filing a Final Admission of Liability.

In filing a Notice and Proposal to Select a DIME Examiner on August 7, 2015, the Respondents complied with statutory requirements and preserved the only method to challenge the impairment rating provided determination by Dr. Reichhardt and adopted by Dr. Charbonneau. The Claimant has failed to show how the Respondents acted in bad faith or that they failed to follow statutorily prescribed procedure to preserve the right to a Division IME in this case. To the extent that the Claimant argues that the statute is unconstitutional, the ALJ lacks jurisdiction to address this contention.

Propriety of DIME panel selection process and whether or not the DIME physician selected meets required qualifications

On August 7, 2015, the Respondents filed a Notice and Proposal to Select a DIME Examiner. Following receipt of this document, the parties have 30 days to negotiate and select an IME pursuant to C.R.S. § 8-42-107.2(3)(a). If the parties are unable to agree, the insurer is to give notice of this fact to the Division within 30 days. Then, C.R.S. § 8-42-107.2(3)(a) provides, in pertinent part,

> The division shall then, within ten days after receiving such notice, select three physicians by a revolving selection process established by the division from the list of physicians maintained by the division.
>
> **…**
>
> The director of the division shall promulgate rules to implement the process of selecting a panel of three physicians from which the parties may select a physician to conduct a division independent medical examination. The selection of a physician panel shall be based on various factors, including, but not limited to, the designation by rule of the fields of specialization authorized to perform independent medical examinations for conditions listed under each medical treatment guideline and measures to prevent the over-utilization of physicians or specialists. The requesting party shall have the opportunity to strike one of the three physicians from the list, followed by the opposing party who shall then be given the opportunity to strike one physician from the list. The remaining IME physician shall be designated by the division to conduct the IME. If one or neither party strike a physician from the list, the division shall select the physician to conduct the IME from the remaining physicians on the list.

Prior to making a determination to strike a physician from the list of IME physicians per C.R.S. § 8-42-107.2(3)(a), a party is entitled to obtain and review a summary disclosure pertaining to any business, financial, employment, or advisory relationship between a listed physician, or any entity affiliated with the physician, and the insurer, self-insured employer, or claimant who is a party to the claim.

The provisions of WCRP, Rule 11-3 (C), as promulgated by the director, require the DIME Unit to select a panel of three physicians based upon the requesting party’s designation of geographic area and body parts or medical conditions to be evaluated as listed on the DIME application. Rule 11-3 (C) specifically provides:

> The three-physician panel will be comprised of physicians based on their accreditation to perform impairment ratings on the body part(s) and/or medical conditions designated by the requesting party on the IME application.

In this case, prior to the selection of the DIME physician, the Claimant filed an Application on October 10, 2015 listing “propriety of the DIME Application” as an issue.

On October 20, 2015, the Claimant filed a second Application for Hearing endorsing the issues of “propriety of DIME panel selection and physician specialties, contrary to Claimant’s DIME rights as expressed in *AFL-CIO v Donlon* and *Whiteside v. Smith*, contrary to the Claimant’s true treatment and diagnostic needs and extent of his (sic) occupational impairments and to hold the DIME process in abeyance per *Jesus Munoz v ICAP* and *JBS Swift & Compan*y.”

The parties ultimately received notice that the Division selected Lloyd Thurston, DO to perform the Division Independent Medical Examination on January 15, 2016. Because Dr. Thurston was not an orthopedic surgeon nor a neurologist and the Claimant’s authorized treating physician was not an orthopedic surgeon nor a neurologist, nor did he refer the Claimant to one of these specialists during her treatment for this work injury, the Claimant has argued that the Claimant has been denied determination of maximum medical improvement by a person who would be competent to render such a decision.

Under C.R.S. § 8-42-107(8)(b)(I), an authorized treating physician shall make a determination as to when the injured employee reaches maximum medical improvement. It is undisputed that Dr. Charbonneau is the Claimant’s authorized treating physician, and that Dr. Charbonneau determined the Claimant reached maximum medical improvement for this work injury as of July 13, 2015. Contrary to the Claimant’s argument that Dr. Charbonneau was not competent to determine MMI, the Worker’s Compensation Act specifically provides that an authorized treating physician determines maximum medical improvement. The Worker’s Compensation Act consistently provides that no specialist is required to determine MMI in C.R.S. § 8-42-107.2(3)(a), which specifically discourages the overutilization of specialists.

Furthermore, the case cited in the Claimant’s October 20, 2015, application for hearing, *Colorado AFL-CIO v. Donlon*, supports Respondents’ position, stating:

> The claimant's treating physician makes the initial determination of MMI and degree of impairment. Since these two facts are of considerable financial consequence, they have historically been the subject of extensive litigation. The General Assembly sought to decrease such litigation by providing that, if either party disputes the finding of the treating physician as to MMI or degree of impairment, that party may require that an independent medical examination (IME) be performed.
>
> *Colorado AFL-CIO v. Donlon*, 914 P.2d 396, 401 (Colo. App. 1995).

As found, the Respondents timely disputed the impairment rating of Dr. Reichhardt adopted by Dr. Charbonneau. In this case, it does not appear that the Claimant is not challenging application of the rules. The Claimant presented no evidence or argument that DOWC or the DIME Unit specifically violated any rules. Rather, the Claimant appears to present a facial challenge of the DIME process and is disputing the Worker’s Compensation Act and Worker’s Compensation Rules of Procedure themselves.

The Claimant provides no legal authority to prevent Respondents' statutory right have Dr. Thurston as the DIME selected to review the authorized treatment provider's impairment rating. In fact, Claimant's counsel has previously raised a nearly identical issue in multiple claims, all of which have dismissed this issue. *See Alfredo Leyva v. NextEra Energy, Inc.,* W.C. No. 4-934-570; *Barrios v. Morgan County Schools*, W.C. No. 4-646-145; *Archuleta v. Hi-tech Auto Body, Inc.*, W.C. No. 4-684-250; *Verdin v. Safeway*, W.C. No. 4-682-903, *Caro vs. Johnson Controls*¸ W.C. No. 4-786-424 (ICAO, May 12, 2010); *Rodriguez v. Safeway Stores, Inc.*, W.C. No. 4-712-019 (ICAO, Sept. 10, 2008); *Hester v. Eco Express, LLC*, W.C. No. 4-838-236 (ICAO, Sept. 10, 2013); *Emily Maestas v. Wal Mart Stores, Inc.,* (ICAO, Jan. 22, 2009).

Having considered the evidence and argument in the context of C.R.S. § 8-42-107.2 and WCRP 11-3, the Claimant failed to show any persuasive authority to support the argument that she has the right to apply for hearing to contest selection of the three-physician panel under Rule 11-3 (C) in this case. As found, Rule 11-3 (C) requires the DIME Unit to select panel physicians based upon the level of accreditation through the division, and not based upon area of practice. There was no persuasive evidence presented that the physicians selected for the three-physician panel were not Level II accredited. During hearing, counsel for the Claimant explicitly agreed that Dr. Thurston is Level II accredited. The Claimant has not produced any evidence to support an inference that the DIME unit failed to comply with its procedures or that Dr. Thurston is not qualified to perform the DIME. Therefore, the Claimant failed to raise an issue upon which an administrative law judge could grant relief.

The DIME process is no longer held in abeyance

The Claimant failed to attend a DIME on March 9, 2016 with Dr. Lloyd Thurston and the Respondents sought an order compelling the Claimant's attendance at a DIME scheduled for April 13, 2016. After considering the argument of counsel, a PALJ granted the Respondents' motion with conditions. Namely, he ordered attendance at a rescheduled May 25, 2016 DIME evaluation unless vacated by order of an OAC ALJ.

At the hearing held on April 29, 2016, the undersigned ALJ ordered that the Claimant was relieved of compliance with PALJ Craig Eley's Order requiring the Claimant to attend a DIME evaluation with Dr. Thurston on May 25, 2016 in order to provide sufficient time for the parties to submit briefs in this matter and for the ALJ to issue an order. The ALJ ordered that the Claimant must work with Respondents to reschedule a DIME evaluation with Dr. Thurston to be scheduled between June 10, 2016 and July 10, 2016 and that the Claimant shall attend that DIME evaluation unless ordered otherwise.

Having considered the evidence and arguments presented at hearing and in the post-hearing briefs (see below), the ALJ determines that this order does not change the Claimant's obligation to attend the rescheduled DIME evaluation with Dr. Thurston. The

Claimant remains under order compelling her attendance at the most recently scheduled DIME evaluation with Dr. Thurston.

Consideration of the allegation of a longstanding pattern of bias or predisposition with respect to the Claimant's attorney

ALJs are presumed to be competent and unbiased until the contrary is shown. *Halfmo Salad v. JBS USA, LLC,* W.C. 4-886-842-04 (ICAO, September 23, 2013), citing *Wecker v. TBL Excavating, Inc.,* 908 P.2d 1186 (Colo. App. 1995). In the absence of an allegation that an ALJ had a "personal, financial, or official stake in the decision which would evidence a conflict of interest on his part" a Claimant does not make a showing of bias or predisposition. *Neoplan USA Corp. v. Industrial Claim Appeals Office,* 778 P.2d 312, 314 (Colo. App. 1989).

Other than, potentially, the Claimant's request that the ALJ take administrative or official notice the contents of the underlying related case computer entries and Office Administrative Courts' and Division of Worker's Compensation and I.M.E. Unit files in consideration of this matter, pursuant to C.R.E. 201, which the ALJ declined to do, the Claimant failed to offer any evidence of a longstanding pattern of bias or predisposition of any PALJ or ALJ involved in any of the five consolidated Applications for Hearing in this claim.

In any event, the ALJ lacks jurisdiction to hear this allegation. This is not a matter arising under the Workers' Compensation Act. More precisely, allegations of bias against the Claimant's counsel do not constitute a dispute between an employee and an employer/insurer regarding a work-related injury.

Whether the Respondents have proven that attorney fees and costs should be assessed against the Claimant's attorney for pursuing unripe issues pursuant to C.R.S. § 8-43-211(3).

C.R.S. § 8-43-211 (3), C.R.S. provides,

> If an attorney requests a hearing or files a notice to set a hearing on issues which are not ripe for adjudication at the time such request or filing is made, the attorney may be assessed the reasonable attorney fees and costs of the opposing party in preparing for such hearing or setting. The requesting party must prove its attempt to have an unripe issue stricken by a prehearing administrative law judge to request fees and costs. Requested fees or costs incurred after a prehearing conference may only be awarded if they are directly caused by the listing of an unripe issue.

This statute authorizes a party to seek its fees and costs incurred before the hearing and without reference to the guidelines for seeking attorney fees and costs provided by other statutes or by court rules. *Youngs v. Industrial Claim Appeals Office,* 297 P.3d 964 (Colo. App. 2012). Rather, the amount of attorney fees and costs assessed under C.R.S. § 8-43-211(3) is left to the sound discretion of the ALJ. *Id.* An ALJ does not abuse discretion unless the order is beyond the bounds of reason, as where it is unsupported by the law or contrary to the evidence. *Pizza Hut v. Industrial Claim Appeals Office,* 18 P.3d 867 (Colo. App. 2001); *McMeekin v. Memorial Gardens,* WC 4-384-910 (ICAO November 15, 2012).

The statute does not define "ripe for adjudication." However, the Colorado Court of Appeals has found that "generally, ripeness tests whether an issue is real, immediate, and fit for adjudication." *Olivas-Soto v. Industrial Claim Appeals Office,* 143 P.3d 1178 (Colo. App. 2006); *also see Silviera v. Colorado Springs Health Partners,* W.C. 4-502-555 (I.C.A.O. November 8, 2011). In general, under the doctrine of ripeness courts will not consider uncertain or contingent future matters because the injury is speculative, may never occur and might resolve prior to the court's determination. See, *Stell v. Boulder County Dep't of Social Svcs*., 92 P.3d 910 (Colo. 2004).

Of the Claimant's five applications for hearing, all of which endorsed issues regarding the DIME directly or indirectly, four were filed before the DIME examiner was confirmed on January 19, 2016 (Applications dated October 9, 2015, October 20, 2015, December 7, 2015 and December 24, 2015). In these Applications for Hearing, the Claimant endorsed issues for hearing contesting the propriety of the DIME and DIME examiner's qualifications prior to the DIME examiner's confirmation. The Respondents argue that these issues were unripe at the time they were filed as they disputed an uncertain future matter, the DIME physician to be selected, and that had not yet been determined and that, furthermore, the DIME examination has still not occurred. Respondents thus contend that it is unknown whether the DIME examiner Dr. Thurston will agree with Dr. Charbonneau's date of MMI and the impairment rating assigned to the Claimant or if he will reach a different determination. Therefore, any allegations of injury to the Claimant related to DIME selection were speculative at the time the Claimant filed the first four Applications for Hearing in this case.

On this issue, the Claimant states in her post-hearing position statement,

> Nor is Respondents' utterly vague, amorphous, specious, and conclusory allegation of "unripeness" in any manner, way, shape, or form compatible with a claim for dispositive relief, since they are mutually repugnant, self-contradictory, and inherently inconsistent and incompatible concepts. Indeed, no manner of substantive adjudication is permissible as to "unripe" claims. Accordingly, as a matter of law and procedure, no unripe claim may even be the subject of a dispositive motion, which necessarily seeks relief on the merits. Rather, an unripe claim is one which by its very nature is not "ripe" for adjudication as a matter of law.

In ruling on the issues related to propriety of DIME panel selection, physician specialties, preemptive DIMEs and the timeliness of the DIME applications related to this individual case, the ALJ has either denied and dismissed the claims for lack of persuasive supporting evidence or found that the Claimant failed to raise an issue upon which relief could be granted. With respect to allegations that went beyond this individual case and alleged that the statute or its administration by the Division is unconstitutional, the ALJ determined that she lacked jurisdiction. While the issues were denied and may be groundless and frivolous, this is distinct from a finding that the issues were unripe. Because the Workers' Compensation Rules of Procedure provide that disputes concerning the DIME process that arise in individual cases may be presented to an ALJ for resolution, there is no legal impediment to immediate adjudication of these disputes. *Rodriguez v. Safeway Stores, Inc.,* W.C. 4-712-019 (ICAO, September 10, 2008). A challenge to the DIME panel is also ripe even where the ALJ ultimately determines there is no jurisdiction to proceed because the DIME has not yet occurred. While the Claimant may not prevail due to lack of jurisdiction, there is no legal impediment to immediate adjudication. *Maestas v. Wal Mart Stores, Inc.,* W.C. 4-717-132 (ICAO, January 22, 2009). Therefore, the Respondents have not established that attorney fees and costs should be assessed against the Claimant's attorney for the issues related to propriety of DIME panel selection, physician specialties, preemptive DIMEs and the timeliness of the DIME applications.

The Claimant also filed two Applications for Hearing for review of issues to be heard at prehearing conferences, before the prehearing conferences took place. The Claimant filed an Application for Hearing on December 7, 2016, "resolve issues raised by the Respondents' Motion to Strike Issues dated November 23, 2015, pursuant to *Gustavo Lozano v. Front Range Rebar Co., Inc*." This matter was under advisement by PALJ Harr at the time the Claimant's application for hearing was filed and the PALJ had ordered the parties to brief the issues. PALJ Harr did not issue his order until December 18, 2016. The Claimant also filed an Application for Hearing on February 15, 2016 on the issue of "to resolve issues raised by the Respondents' prehearing scheduled for February 16, 2016." Obviously, the prehearing conference of February 16, 2016, had not taken place. There was no disputed issue or actual controversy between the parties as no order had been issued by the prehearing judge. The Claimant's Application for Hearing involved uncertain future matters with speculative injury that, at the time the Claimant filed her Application for Hearing, might never occur. While the ALJ may later review the orders of the PALJ (see above), as long as the matters were being considered by the PALJ, there was no real and immediate issue fit for adjudication before the ALJ. Thus, the ALJ finds that these two issues endorsed by the Claimant were unripe.

The Respondents endorsed the issue of attorney's fees and costs and the relevant statute, C.R.S. § 8-43-211 (3), on each applicable Response to Application for Hearing. The Respondents also made the requisite attempt to strike the Claimant's unripe issues at prehearings held November 13, 2015 and February 16, 2016. Attorney fees and costs may be awarded for unripe issues endorsed in Applications for Hearing even when other issues raised in the same Applications were ripe for adjudication. *Youngs v. Industrial Claim Appeals Office,* 297 P.3d 964 (Colo. App. 2012).

The Claimant's attorney is ordered to pay attorney's fees and costs to Respondents for defense of only the issues endorsed in the Claimant's December 7, 2015 and February 15, 2016 Applications for Hearing related to review of issues pending before Prehearing ALJs prior to the PALJs rulings on the same. Respondents shall submit a detailed summary of attorney fees and costs within 10 days of this order so that the ALJ may prepare a subsequent or supplemental order providing for the amount of attorney fees assessed against the Claimant's attorney.

ORDER

It is therefore ordered that:

1. The Claimant has failed to prove the Respondents failed to follow the statutorily prescribed procedure to preserve the right to a Division IME in this case. The Claimant also failed to prove that the DIME unit failed to comply with its procedures or that Dr. Thurston is not qualified to perform the DIME. Therefore, the Claimant failed to raise an issue upon which an administrative law judge could grant relief and the Claimant's issues of propriety of the DIME Application and propriety of the DIME selection and physician specialties are dismissed.

2. The Claimant is ordered to attend the DIME appointment with Dr. Thurston that has been rescheduled for June 22, 2016.

3. The ALJ lacks jurisdiction to consider the Claimant's issue of bias or predisposition toward the Claimant's counsel and this issue is dismissed.

4. The Claimant has failed to prove any penalty should be assessed against the Respondents for an untimely filing of the General Admission or DIME Application or for requesting attorney fees and relief beyond a PALJ's authority and all penalty claims asserted by the Claimant against the Respondents are dismissed.

5. The Claimant's attorney is ordered to pay attorney's fees and costs to Respondents for defense of only the issues endorsed in the Claimant's December 7, 2015 and February 15, 2016 Applications for Hearing related to review of issues pending before Prehearing ALJs prior to the PALJs rulings on the same. Respondents shall submit a detailed summary of attorney fees and costs within 10 days of this order so that the ALJ may prepare a subsequent or supplemental order providing for the amount of attorney fees assessed against the Claimant's attorney.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 633 17th Street, Suite 1300, Denver, Colorado, 80202. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 10, 2016

Kimberly A. Allegretti
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-998-498-01

ISSUES

The issue presented for determination is whether Claimant sustained an injury while in the course and scope of his employment on November 4, 2015. The parties stipulated that if the claim is found compensable, the Claimant would be entitled to reasonable and necessary medical benefits subject to the fee schedule, that his average weekly wage is $636.07, and that Claimant would be entitled to temporary total disability benefits commencing on November 4, 2015, and ongoing.

FINDINGS OF FACT

1. The Claimant worked for the Employer as an over-the-road truck driver.

2. The Employer is located in Evans, Colorado. The ALJ takes judicial notice that Evans, Colorado is approximately 60 miles from Denver, Colorado.

3. Claimant drove a truck owned by the Employer (truck 35). The truck is equipped with a sleeper cabin and Claimant routinely kept his personal belongings, including tools and clothing, in the truck.

4. On November 3, 2015, Maria Monje, the Employer's operations manager, sent a text message to the Claimant and asked if he would meet with her at the Employer's office the following morning (November 4, 2015). She did not identify a reason for the meeting.

5. The Claimant was not scheduled to work on November 4, 2015, but he reported to the Employer's office at approximately 8:00 a.m. for the meeting with Ms. Monje. Ms. Monje terminated the Claimant's employment during that meeting. She specifically asked him to return his fuel card, but she did not ask him to return the truck keys. The meeting lasted approximately 15 minutes.

6. At the time Ms. Monje terminated Claimant's employment, truck 35 was parked in a lot owned by the Employer at least six miles away from the office awaiting mechanical maintenance. According to Ms. Monje, she asked Claimant to give the truck key to the mechanic after retrieving his belongings.

7. The Claimant did not immediately retrieve his belongings from the truck. Because November 4, 2015 was his day off, the Claimant had other plans to pick up his sister in the Denver metro area to drive her to pick up a new vehicle she had purchased. Claimant had scheduled the meeting with his sister for 10:00 a.m. Claimant also stopped to submit paperwork to a potential new employer given the unanticipated termination of his employment.

8. Claimant testified that he did not have enough time to retrieve his belongings from truck 35 prior to meeting his sister in Denver at 10:00 a.m. The Claimant listed approximately 45 items he had left in the truck.

9. Claimant delayed returning to truck 35 for approximately five to six hours.

10. Once Claimant arrived at truck 35 at around 1:00 p.m., he started unloading his belongings by entering the truck then placing items on the floor of the truck to make it easier to transfer them into his personal vehicle. He then climbed down the truck steps and took the items and placed them into his personal vehicle. On his second trip climbing down out of truck 35, Claimant slipped or lost his balance and fell to the ground and suffered a left hip injury. An ambulance transported him to the hospital, and he eventually underwent hip replacement surgery.

11. Ms. Monje testified that she believed it logical for the Claimant to retrieve his belongings immediately after she terminated his employment, but she admittedly did not instruct him to do so. She made no specific arrangements and provided no specific instructions to the Claimant regarding a process for retrieving his belongings. Ms. Monje did not give Claimant a deadline or otherwise limit his ability to enter the Employer’s property to obtain his belongings. Ms. Monje also did not require someone to escort Claimant to truck 35.

12. The ALJ finds that employment includes a reasonable period of time after termination.

13. The reasonable period of time included the five to six hours after the Employer terminated Claimant’s employment based on the facts found above. Claimant’s decision to delay retrieving his items due to plans he had made prior to the unexpected termination of his employment was not unreasonable especially given the actions of the Employer.

14. The Claimant suffered a wage loss as stipulated by the parties.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

4. Claimant is required to prove by a preponderance of the evidence that at the time of the injury both he and the employer were subject to the provisions of the Workers' Compensation Act, that he was performing service arising out of and in the course of his employment, and that the injury was proximately caused by the performance of such service. *See* § 8-41-301(1)(a),(c), C.R.S. The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

5. The Claimant can satisfy his burden to prove that he was in the course and scope of his employment if he shows that the injury occurred within the time and place limits of the employment relationship and during an activity that had some connection with the employee's job-related functions. *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991).

6. Discharging an employee is an integral part of the employment and "employment" includes a reasonable period of time after termination. Accordingly, injuries sustained by an employee while leaving the premises, collecting pay, or gathering clothing or tools have been held to occur in the course of employment. *Alpine Roofing Co. v. Dalton*, 539 P.2d 487 (Colo. App 1975) (citing 1 A. Larson, Larson's Workers' Compensation Law, § 26.00 and *Hill v. Gregg, Gibson & Gregg, Inc.*, 260 So.2d 193 (Fla.1972)). It is undisputed that Claimant sustained his injury as he retrieved clothing and tools following termination of his employment. Thus, the issue is whether the period of time between termination and retrieval of the belongings was reasonable.

7. As found, following the unexpected termination of his employment on his day off, Claimant needed to retrieve his tools and other personal belonging from the Employer's truck located on the Employer's premises. Although delayed by pre-arranged plans entailing a 60-mile round trip to Denver, the Claimant returned on the same day to accomplish this task. In evaluating the totality of the circumstances, the ALJ concludes that such delay was not unreasonable. Employer did not instruct the Claimant to return the truck keys at the time of termination, did not require him to immediately vacate the premises, or otherwise provide any specific instruction regarding a time limitation within which Claimant could retrieve his property from the Employer's

truck. The Claimant could not immediately retrieve his belongings and the Employer conveyed no sense of urgency with regard to that task. His short deviation to drop off paperwork to a new employer also does not compel a different result. Any deviation ended once Claimant returned to the Employer's premises to retrieve his clothes and tools.

8. The ALJ is not persuaded that the decision in *Rios v. AJM Framers, Inc.* WC # 4-546-779 (ICAO December 19, 2003) compels a different conclusion. In *Rios*, the ICAO affirmed the ALJ's findings and conclusions. The ICAO noted that the ALJ found the employer fired the claimant and instructed the claimant to pick up his tools and leave the job site. The claimant ignored repeated requests to leave the job site until his supervisor assaulted him approximately two hours after the termination. The ALJ determined that claimant failed to prove the assault occurred within a reasonable time after his employment was terminated *or while the claimant was collecting his tools, his paychecks or his clothing* [Emphasis added]. The facts in Rios are distinguishable from the facts in this case. Contrary to the findings in Rios, the Claimant, in this case, was retrieving his tools and clothing when he sustained an injury.

9. The Claimant has proven that he was within the course and scope of his employment when he sustained an injury to his left hip on November 4, 2015. As stated above, injuries sustained by an employee while retrieving tools and clothes within a reasonable time subsequent to or at the time of the employee's termination are generally compensable. The ALJ concludes that Claimant's delay in returning to retrieve his clothes and tools was not unreasonable under the circumstances. Respondents' arguments to the contrary are not persuasive.

10. Pursuant to the stipulation of the parties, the Claimant is entitled to reasonable and necessary medical benefits related to the work injury subject to the fee schedule, including but not limited to the emergency room bill in the amount of $731.00. Claimant is also entitled to temporary total disability benefits based on the stipulated average weekly wage of $636.07.

ORDER

It is therefore ordered that:

1. The Claimant's claim for workers' compensation benefits is granted.

2. The Respondents shall be liable for all reasonable and necessary medical expenses related to the work injury subject to the fee schedule, including but not limited to the emergency room bill in the amount of $731.00.

3. The Claimant is entitled to temporary total disability benefits based on the stipulated average weekly wage of $636.07 per week commencing on November 4, 2015, and ongoing until terminated pursuant to law.

4. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. ISSUES

- Whether Claimant has proven by a preponderance of the evidence that she suffered a compensable injury on May 1, 2015 arising out of and in the course of her employment, and entitling her to reasonable and necessary medical treatment.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant was a firefighter paramedic with the city of Aurora on May 1, 2015 when she sustained an alleged injury to her low back.

2. Prior to May 1, 2015, Claimant had a complicated history of back problems. Pertinent portions of that history include:

- On August 20, 2014, Claimant sought medical care at Kaiser for low back pain she had been experiencing for one month, and reported recurrent self-limited episodes of low back pain in the past. She was assessed with lumbar strain vs herniated disc. She was prescribed muscle relaxants, physical therapy exercises, and anti-inflammatories.

- Claimant underwent a lumbar spine MRI on September 10 or 11, 2014. The radiologist read the MRI as showing
    - Grade 1 anterolisthesis of L4 on L5 facet degenerative changes
    - Mild to moderate degenerative changes of the lumbar spine facets most pronounced at L4-L5 level
    - L4-5: slight uncovering of the disc space with small circumferential disc bulge with shallow central disc protrusion. Mild bilateral discogenic ridging and degenerative changes of the facets are generating mild bilateral neural foraminal narrowing.
    - L5-S1: Small to moderate-sized central disc protrusion slightly eccentric to the right without significant neuroforaminal narrowing, spinal stenosis or mass effect on the visualized nerve roots.

- On September 15, 2014, Claimant treated with Donald S. Corenman, M.D. Claimant completed a pain diagram at that initial visit indicating aching in her low back, stabbing pain in her sacroiliac area and the top of her *bilateral* buttocks, burning pain in her right buttocks and down the back of *bilateral* thighs, with pain radiating down to the bottom of her calves right greater than left.

- On October 7, 2014 Claimant returned to Dr. Corenman for further evaluation and treatment. Dr. Corenman's notes from that visit provide, "[Claimant] explains that she has Kaiser Insurance and is seeing us out of pocket. She states that there is an option under Kaiser where she can see us through Kaiser yet this would have to be delayed a few months."

- Also at the October 7, 2014 visit, Dr. Corenman noted Claimant's "aching in her axial lumbar spine accounts for 70% of her complaint with spread to the bilateral paralumbar regions, right equal to left and 30% involves pain in the buttocks and posterior thigh described as burning and tightness sensation, 60% right 40% left stopping mainly in the midcalf."

  - Dr. Corenman reviewed Claimant's September 2014 MRI noting a mild degenerative right rotational slip at L4-5. L4-5 also had a significant degenerative facet disease. L5-S1 had a small to medium sized extruded herniation more on the right side that caused some compression on the right S1 root.

  - Dr. Corenman took x-rays which revealed L4-5 degenerative factet, L4-5 garde 1 degenerative spondolysthesis. Mild disc narrowing at L4-5 and moderate disc narrowing at L5-S1.

  - Dr. Corenman's impression was Degenerative spondolysthesis L4-5 with rotary slip, and L5-S1 right herniated nucleus pulposa probably causing buttock and leg pain.

- On October 20, 2014, Claimant treated with Daniel Colonno, M.D. She reported acute onset of back pain on August 17, 2014, and described her symptoms as initially being right greater than left and extending into her *bilateral* lower extremities. Claimant continued to have such significant back pain that she was unable to perform her regular job duties, and had been working light duty since August, 2014. Dr. Colonno reviewed the September MRI and diagnosed lumbar disc herniation with radiculopathy, lumbar spondylosis, and lumbar facet arthropathy. Claimant was offered large volume *bilateral* epidural steroid injections at L5-S1 and the eventual possibility of surgery was discussed.

- On January 6, 2015, Claimant returned to Dr. Corenman and reported an *increase in discomfort in her left leg*. She generally reported slight improvement in her symptoms and again was offered and declined epidural steroid injections.

- On March 18, 2015, Claimant returned to Dr. Corenman continuing to complain of axial low back pain and pain with localization to the *left* superior sacroiliac region with occasional radiation to the *left* buttock and *left* posterior thigh. He stated there was a "reasonable probability that [Claimant's] disc herniation at L5-S1 . . . is causing the majority of her very inferior axial low back/SI region pain." A large volume ESI was again recommended for diagnostic and therapeutic reasons. The possible need for surgery was discussed at this appointment, including microdiskectomy and two level fusion.

- On March 25, 2015 Dr. Corenman's notes report a call from Claimant in which she reiterated that that she had 70% low back pain, 30% pain in the *left* buttock and leg. "Even her axial pain shifts more to the *left* then [sic] right and therefore is truly a central and left-sided low back discomfort as 70% of her pain." The report continues, "She states that she cannot live with her pain anymore," she cannot even do simple activities, and has chronic pain that is affecting all aspects of her life. Claimant requested some type of surgical solution. Dr. Corenman requested a new MRI because Claimant's symptoms had shifted from right to *left* sided and her previous MRI was six months old. Again, microdiskectomy and two-level fusion surgeries were discussed.

- On April 1, 2015 Dr. Corenman wrote a letter to Kaiser explaining that another MRI was needed because Claimant's "symptoms before were mainly right-sided with low back pain *now they are left buttock and leg pain not right*. Because of the change in symptoms we need to have a new MRI because something untoward could have happened such as a new herniation." The letter also provides that Dr. Corenman was setting Claimant up for an injection at that time.

- On April 27, 2015 Dr. Corenman wrote another letter to Kaiser reiterating that Claimant initially had right sided low back pain but now had "*prominently left buttock and leg pain*." Dr. Corenman explained that the new MRI was needed because the previous MRI "does not show significant left-sided pathology and since the symptoms have changed, *obviously there is a different pathological disorder causing her current complaint*."

3. Claimant testified at hearing that prior to May 1, 2015, her symptoms included low back pain, decreased range of motion, and pain in her right leg. She testified that her symptoms were consistent but improving prior to May 1, 2015, and that she was able to increase her activities. When shown Dr. Corenman's March 25, 2015 records in which she reportedly stated that she could not live with the level of pain she was experiencing, Claimant reiterated that she was "getting better" at that time and that her symptoms were improving.

4. The ALJ finds Claimant's testimony about her symptomology prior to May 1, 2015, to be inconsistent with the detailed medical records of a Kaiser provider, Dr.

Colonno, and Dr. Corenman. The ALJ finds Claimant's testimony on this issue not credible or persuasive.

5. Claimant testified that on May 1, 2015, she was working light duty for Employer, putting fire fighters' jackets and pants together for new recruits. The process involved taking bagged, individual items out of a waist-high box, walking approximately fifteen feet, and dropping the item onto the floor. Each item weighed between five and ten pounds. Claimant testified that she did not recall bending to put the items down, but that she dropped them from standing.

6. Claimant testified that she experienced immediate 10/10 pain in her left low back and down her left leg to her foot when she straightened and turned to her left to go back to the box of jackets and pants. Claimant testified that at that time, her severe pain moved from the right to the left side. Claimant testified that after the May 1 incident she experienced decreased range of motion, increased pain, became unable to do all of her physical therapy exercises, experienced increased difficulty lifting items as heavy as a full laundry basket, and could no longer run. Claimant's testimony regarding her pain moving from the right to the left on May 1, 2015, is inconsistent with Dr. Corenman's medical records which indicate Claimant's symptoms began shifting in January 2015 and had progressed by mid-March to being her primary symptoms. By the end of March even Claimant's axial low back pain had shifted to her left side. And by April 27 – four days before Claimant's alleged injury – Dr. Corenman was insisting on a new MRI for what he described as an obvious change in her pathological disorder.

7. Claimant's medical records from before May 1, 2015 indicate that Claimant reported her pain going from 2/10 at rest to 9/10 with activity. Claimant testified that after the May 1 incident that her pain remained worse and was not intermittent as before.

8. Employer's First Report of Injury dated May 5, 2015, indicates that Claimant's lower back, buttocks, and left leg were affected and that her back/leg pain increases with exertion. It reports that Claimant's injury occurred while she was sorting bunker gear, using proper lifting of bunker gear, and resulted in a sharp pain in her left buttock and lower back.

9. On May 5, 2015, Claimant was treated by A. Koval, M.D. Claimant reported that she was sorting and stacking bunker gear in the office when she felt 10/10 pain in her low back and left buttocks. Claimant filled out a pain diagram at the visit which instructed "Mark the areas on your body where you feel discomfort." Claimant indicated aching in her bilateral low back; aching, burning and stabbing pain in her left buttocks; numbness and burning in her upper left thigh; and burning down her left leg to above her ankle. She marked no right side lower extremity symptoms. Claimant reported that the prior August she had experienced right leg pain which she treated with physical therapy and Aleve. She did not report any other medications, although two weeks later she reported to Dr. Fillmore that she was taking Meloxicam, Tramadol, Methocarbanol, and Naproxen. On exam, Dr. Koval noted sacroiliac joint tenderness, left greater than right, and spasm in the lumbar area. Dr. Koval understood Claimant's

August injury involved right-sided symptoms and leg pain, and that the left-sided symptoms were new. Dr. Koval stated, "In the best case scenario, this patient simply has a musculoskeletal strain with severe spasm which is causing her symptoms." Dr. Koval prescribed physical therapy, a pain reliever, and a muscle relaxant. She refrained from definitely assigning causality.

10. On May 11, 2015, Claimant returned to Dr. Koval. The follow-up report of that visit reinforces that Dr. Koval understood Claimant's left sided symptoms to be new as of the May 1 event, and that "in general, [Claimant] was doing reasonably well until this particular injury took place on May 1." Dr. Koval assessed "lumbosacral strain with radicular symptoms in the left leg which are new since this most recent injury on May 1." Dr. Koval ordered a new MRI.

11. On May 11, 2015, Claimant underwent an MRI of her bony pelvis and sacrum. The radiologist who read the MRI found the sacroiliac joints to be normal in appearance with no active arthropathy or sacroiliitis. On the same date, Claimant underwent a second MRI of her lumbar spine.

- At L5-S1 there was a mild asymmetric disc bulge more pronounced to the left with a posterior annular tear noted. There were minimal degenerative changes to the facets bilaterally. There was no significant spinal cord narrowing. There was moderate stenosis of the left neural foramen which could potentially impinge the left L5 nerve root. Small to moderate sized central disc protrusion slightly eccentric to the right without significant neural foraminal narrowing, spinal stenosis or mass effecton the visualized descending nerve roots.

- At L4-5 there was a mild disc bulge with moderate degenerative changes of the facets bilaterally. There was no significant central canal narrowing. There was mild narrowing of the lateral recesses and neural foramina more pronounced on the right side without clear evidence for nerve impingement. A Grade 1 anterolisthesis with facet degenerative changes. Also noted was a slight uncovering of the disc space with small circumferential disc bulge with shallow central protrusion. Mild bilateral discogenic ridging and degenerative changes of the facets were noted to be generating mild bilateral neural foraminal narrowing.

- The impression was mild to moderate facet and discogenic degenerative changes of the lower lumbar spine most pronounced at L4-5 level where there is mild bilateral neural foraminal narrowing with slight grade 1 anterolisthesis of L4 on L5.

12. On May 14, 2015, Claimant returned to Dr. Koval. The follow-up report from that appointment again reflects that Dr. Koval understood that Claimant's "low back pain with left-sided radiculopathic symptoms [ ] are new since an injury that took place on May 1." Based on that perception, Dr. Koval believed that the May1 work-related

event caused the specific findings in her May 11, 2015 MRI. Dr. Koval referred Claimant to Dr. Fillmore for evaluation and to consider epidural steroid injections.

13. On May 19, 2015, Claimant saw Joseph Fillmore, M.D. Claimant reported to Dr. Fillmore that she had midline lumbar pain with pain radiating to her left buttocks and down her left leg to her foot. She reported "This all began on May 1, 2015." Claimant reported pain ranging from 2/10 to 9/10, with an increase in pain with any physical exertion. Claimant reported that she had seen Dr. Corenman in August, 2014 in what was deemed a non-work related injury. She reported that her prior pain had radiated down her right leg, and that her current pain involved her left leg. The ALJ finds that Claimant's reports to Dr. Fillmore are inconsistent with her symptoms and treatment. Claimant's reports that all of her symptoms began on May 1, 205; that her symptoms were right sided prior to the May 1 event, and that she failed to report seeing Dr. Corenman through March 25, 2015, were misleading.

14. Dr. Fillmore assessed acquired sponydylolisthesis, and acute back pain with sciatica. Dr. Fillmore stated, "This is a different problem than she had from her August injury." Because the ALJ finds that Claimant's reports to Dr. Fillmore were inaccurate and misleading, the ALJ finds Dr. Fillmore's opinion that Claimant suffered a new injury on May 1, 2015 not persuasive.

15. On June 1, 2015, Claimant filed a claim for workers' compensation. It indicates she injured her lower back unpacking bunking gear and that the nature of her injury was "strain, disc bulge."

16. On June 16, 2015, Claimant returned to Dr. Koval. Dr. Koval's report of that visit describes Claimant's mechanism of injury as follows: "Despite the fact that it was a seemingly innocuous movement where she bent over to pick up a piece of bunker gear that was not particularly heavy." This reported mechanism of injury is inconsistent with Claimant's testimony that she was injured when she turned after dropping a piece of bunker gear. Dr. Koval remains remained of the opinion that Claimant's left-sided symptoms were new as of May 1. "To be clear, these left leg symptoms were not a part of her original back injury last August nor were they part of her ongoing presentation since then. They are new since May 1." In her report, Dr. Koval describes the May 1 event both as a new injury, and as a "worsening or aggravation of the previous injury." Dr. Koval recommended that Claimant schedule epidural steroid injections with Dr. Fillmore.

17. On June 16, 2015 Claimant also returned to Dr. Corenman. He identified the mechanism of injury as "simply moving and sorting firefighter clothes that could not have been over ten pounds with rotation and flexion." He noted that Claimant had new onset of left lower extremity pain and that she had never had a significant focus there. Dr. Corenman reviewed Claimant's new MRI and took x-rays which he assessed as showing "degeneration mild to moderate at the L4-L5 and L5-S1 disks with a degenerative slip at L4-L5 , which is slightly more pronounced." He opined that injury constituted an aggravation of a preexisting problem that would probably be permanent, but that it was hard to tell at that point.

18. On June 18, 2015, Respondent filed a notice of contest pending investigation.

19. On July 28, 2015, Claimant returned to Dr. Koval. She had undergone an epidural steroid injection by Dr. Fillmore and had not experienced relief. Dr. Koval's report continues to insist that Claimant's left sided symptoms began on May 1 are work related, taking on a tone of advocacy.

20. The ALJ finds that Dr. Koval misapprehended that Claimant's left sided symptoms started on May 1. Dr. Koval was not aware that prior to May 1: Claimant's symptomology was predominantly left sided; Claimant's symptoms had increased to the point that she felt she could no longer live with the pain she was experiencing; and Dr. Corenman had ordered an MRI due to Claimant's change in symptoms. The ALJ does not find Dr. Koval's opinion on relatedness to be persuasive.

21. On August 11, 2015, Claimant followed up with Dr. Koval. Dr. Koval's report notes Claimant did not have relief from the injections and that she and Dr. Fillmore recommend that Claimant follow up with Dr. Corenman for a consultation type of discussion regarding surgical options.

22. On September 29, 2015, Claimant returned to Dr. Corenman.

- Dr. Corenman describes two different mechanisms of injury on May 1: (1) "She was just rotating to hand some clothes to another firefighter and her pain became much more significant." And (2) "She had a Work Comp injury secondary in May where she was working at the firehouse sorting clothes under light duty and she had increased pain."

- Dr. Corenman expressed that He continued to believe that Claimant's *August 2014* injury was work related: "I still feel to this day that that was a Work Comp injury." He also wrote, "I have to state that it appears that both Work Comp's are related and I do believe this is a Work Comp based injury."

- Dr. Corenman provided no explanation for how rotating or sorting could have caused a new injury. Dr. Corenman, without identifying what he reviewed, states, "Further reveal of images indicated her degenerative slip at L4-L5 became a little more significant." Dr. Corenman does not specifically attribute the change to a new injury or distinguish it from the natural progression of Claimant's pre May 1 pathology.

23. Dr. Corenman reported, "I have not scheduled her back obviously because she has Kaiser Insurance but I would be happy to see her back in the future for further consultations or further workup."

24. Dr. Robert Messenbaugh testified at trial as an expert in orthopedic surgery with Level II certification. He performed a records review and report on August

16, 2015, and performed a Respondent sponsored independent medical examination of Claimant on March 10, 2016, issuing his report the next day. Dr. Messenbaugh's history reported by Claimant indicates that after Claimant's alleged injury, she rested for about ten minutes and then returned to distributing gear and continued in that activity until the conclusion of her regularly scheduled shift. He explained that the onset of pain can happen while simply standing, but that the onset of pain does not necessarily indicate a new injury. He opined that Claimant did not sustain a new injury on May 1, 2015, because there was insufficient activity to create new pathology and that her objective findings did not change after May 1. He also testified that were at most "exquisitely minimal" changes on the second MRI.

25. The ALJ finds that Claimant has not met her burden of proving by a preponderance of the evidence that she suffered a compensable injury on May 1, 2015 arising out of and in the course of her employment, and entitling her to reasonable and necessary medical treatment.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A Claimant in a worker's compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a worker's compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A worker's compensation case is decided on its merits. Section 8-43-201, C.R.S.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and

bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

A claimant must prove by a preponderance of the evidence that his injury arose out of the course and scope of his employment with employer. *Section 8-41-301(1)(b), C.R.S.; see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). An injury "arises out of and in the course of" employment when the origins of the injury are sufficiently related to the conditions and circumstances under which the employee usually performs his or her job functions to be considered part of the employee's services to the employer. *General Cable Co. v. Industrial Claim Appeals Office,* 878 P.2d 118 (Colo. App. 1994).

A preexisting condition does not disqualify a Claimant from receiving worker's compensation benefits. Rather, where the industrial injury aggravates, accelerates, or combines with a preexisting disease or infirmity to produce the need for treatment, the treatment is a compensable consequence of the industrial injury. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App.1990). The mere experience of symptoms at work does not necessarily require a finding that the employment aggravated or accelerated the preexisting condition. Resolution of that issue is also one of fact for the ALJ. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985).

Claimant's pre-existing low back pain complaints were documented as increasing in the months prior to the alleged incident of May 1, 2015. Specifically, Dr. Corenman, submitted a letter to Claimant's Kaiser insurance detailing new symptoms of radiation into the left leg and an obvious change in Claimant's pathology in his request for a new MRI mere days before the May 1, 2015 incident. Therefore, the ALJ finds that Claimant's pre-existing low back condition precipitated any alleged increase in symptoms that took place on May 1, 2015. Consequently, the ALJ must assess whether the alleged May 1, 2015 incident caused, aggravated or accelerated this pre-existing condition.

The ALJ finds the testimony of Dr. Messenbaugh as to the issues of causation of the low back pain and left leg pain symptoms credible and persuasive. This ALJ accepts Dr. Messenbaugh's opinion that Claimant's minor activity of moving jackets and pants across a floor without engaging in bending or twisting is an insufficient activity to constitute a causal connection between Claimant's low back pain and her work activities.

The ALJ accepts the opinions of Dr. Messenbaugh as more credible and persuasive than the opinions of Dr. Corenman. In reading Dr. Corenman's reports, it is clear that he believes Claimant had a work-related back injury in August 2014 for which she should have been compensated. However, this injury was never asserted by claimant and was never determined to be compensable. Dr. Corenman does not provide a causation analysis in his report as to how the May 1, 2015 alleged event caused, aggravated, or accelerated Claimant's underlying condition beyond stating that she experienced increased pain and a generalized statement that "her degenerative slip at L4-L5 became a little more pronounced." Dr. Corenman's report does not specifically attribute any alleged changes in the MRI to the May 1, 2015 incident.

Dr. Messenbaugh disagreed with Dr. Corenman’s interpretation of the MRI findings. Dr. Messenbaugh testified that there were no significant changes which would explain claimant’s increase in symptom complaints between the MRIs completed prior to and subsequent to the May 1, 2015 alleged incident.

This ALJ finds that the causation and relatedness opinions expressed by Drs. Koval and Fillmore in their respective reports were predicated, at least in part, on claimant’s inaccurate description of the May 1, 2015 incident and the weight of the items she was allegedly lifting. Further, it was clear during claimant’s testimony, that she was not actually lifting anything at the specific time of the alleged onset of the increase in low back pain. Claimant did not provide any mechanism of actual injury in her testimony as she specifically stated that she was not lifting, bending, or twisting at the time that she experienced the alleged increase in pain.

The ALJ accepts Dr. Messenbaugh’s opinion that the alleged activities of May 1, 2015 did not cause, aggravate, or accelerate claimant’s documented underlying low back condition.

The ALJ finds that claimant has failed to sustain her burden of proof to establish a compensable injury to her low back on May 1, 2015.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for workers' compensation benefits arising out of the alleged May 1, 2015 injury is hereby denied and dismissed.

2. Any issues not determined in this decision are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. ***For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.***

DATED: June 13, 2016

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Respondents have produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of David Orgel, M.D. that Claimant has not reached Maximum Medical Improvement (MMI) and suffered a 23% whole person impairment for his November 11, 2014 lower back injury.

2. Whether Claimant has demonstrated by a preponderance of the evidence that the request for lumbar fusion surgery as recommended by Michael E. Janssen, D.O. is reasonable, necessary and causally related to his September 11, 2014 admitted industrial injury.

3. Whether Claimant has made a "proper showing" for a change of physician to Michael E. Janssen, D.O. pursuant to §8-43-404(5)(a), C.R.S.

FINDINGS OF FACT

1. Claimant worked for Employer as a Field Welder. On September 11, 2014 he was performing his job duties, slipped on a piece of rebar and twisted his back. Although he did not fall to the ground, he immediately experienced pain in his lower back from the twisting motion.

2. Claimant was diagnosed with a lumbar strain/sprain. He initially underwent medical treatment with Authorized Treating Physician (ATP) Dee Jay Beach, D.O. Claimant received conservative care that included diagnostic studies, medications, physical therapy, numerous injections, a radiofrequency abulation procedure and pool therapy.

3. Nicholas K. Olsen, D.O. subsequently became Claimant's ATP. Dr. Olsen referred Claimant to Brian E. Reiss, M.D. for a surgical consultation. On February 19, 2015 Claimant visited Dr. Reiss for an evaluation. After considering Claimant's history and conducting a physical examination Dr. Reiss diagnosed Claimant with spondylolysis, spondylolisthesis and back pain. He determined that Claimant's physical examination demonstrated "multiple nonphysiologic factors and his psychological screening indicate[d] likely somatic disorder." Dr. Reiss recommended against surgical intervention or any invasive procedures. Instead, he suggested a psychological evaluation and a continued exercise program.

4. On April 28, 2015 Claimant visited Dr. Olsen for a re-examination of his lumbar spine. Dr. Olsen recounted that Claimant had visited Bryan Andrew Castro, M.D. on April 25, 2015 for a surgical consultation. Dr. Castro had concluded that surgery would not be Claimant's "best option" and recommended additional

conservative measures including taking a more active role in improving his condition. Dr. Olsen diagnosed Claimant with a work-related lumbar strain/sprain. He remarked that an MRI had revealed a “grade I spondylolisthesis at L5-S1 with the presence of a possible pars defect” and a “central disc protrusion at L4-L5 lateralizing to the right.”

5. Dr. Olsen determined that Claimant had reached Maximum Medical Improvement (MMI) and assigned a 7% whole person impairment rating for a radiofrequency neurotomy pursuant to Table 53 of the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised) (AMA Guides)* and the Colorado Division of Workers’ Compensation *Impairment Rating Tips*. However, he deferred assigning a rating for range of motion deficits because range of motion measurements were “not considered physiologic” nor consistent with prior examinations. Dr. Olsen permitted Claimant to return in one week for additional range of motion testing. He released Claimant to light duty work that included restrictions of no lifting, carrying, pushing and pulling in excess of 10 pounds. Dr. Olsen noted that Claimant was entitled to receive medical maintenance benefits that included a repeat EMG/nerve conduction study if his symptoms persisted for one year.

6. On May 12, 2015 Claimant returned to Dr. Olsen for an impairment evaluation. Dr. Olsen conducted range of motion measurements on Claimant’s lumbar spine and assigned a 5% whole person impairment for lumbar extension deficits. Combining Claimant’s 7% rating for a specific disorder of the lumbar spine with the 5% impairment for range of motion deficits yields a total 12% whole person impairment rating.

7. On July 16, 2015 Claimant underwent an evaluation with Michael E. Janssen, D.O. Dr. Janssen reviewed Claimant’s medical records and conducted a physical examination. He diagnosed Claimant with work-related bilateral spondylolysis at L5 and a disc herniation at L5-S1. Dr. Janssen explained that patients suffering from an unstable spine with a pars defect fracture and associated disc pathology have mechanical and neurological instability. He commented that non-surgical modalities were not the “best line of treatment” for Claimant. Dr. Janssen noted that Claimant could undergo surgery to stabilize his unstable spine segment. He remarked that injections and rhizotomies “are of extremely low yield in a patient with a bilateral pars fracture and disc herniation such as this.” He could not comment on the psychiatric aspect of Claimant’s case but suggested that a detailed psychological evaluation might be appropriate to verify that Claimant had realistic surgical goals. Dr. Janssen mentioned that Dr. Reiss’ examination was ‘not enough to hang your hat on when making psychological decisions regarding somatization and indications for surgery.”

8. On September 22, 2015 Claimant underwent a Division Independent Medical Examination (DIME) with David Orgel, M.D. Dr. Orgel recounted that Claimant slipped on rebar and strained his back on September 11, 2014. A September 22, 2014 MRI revealed “an L4-L5 central disc protrusion crowding both lateral recesses and affecting both L5 nerve roots.” Claimant reported continued back pain and numbness throughout his right leg. After conducting a physical examination and reviewing Claimant’s medical history, Dr. Orgel explained that Claimant had a “stable, but

significant, spondylolisthesis" and muscle spasms in his foot that were likely associated with a radiculopathy in his back. He commented that Claimant's symptoms were related to his work for Employer because they began after his work accident on September 11, 2014. Dr. Orgel was uncertain about whether there were other options to reduce Claimant's pain and sought additional information. He thus concluded that Claimant had not reached MMI. He specifically addressed Dr. Janssen's surgical recommendation and noted that "[t]here was apparently some instability on his x-rays, and this would be a surgical problem."

9. Dr. Orgel recommended an "extensive psychological assessment" to determine whether Claimant was an appropriate surgical candidate. Dr. Orgel stated that, if Claimant was deemed a good surgical candidate, he required repeat EMG testing to ascertain whether he had a bilateral radiculopathy and determine the cause of his muscle spasms. Dr. Orgel explained that, if Claimant was suffering from radicular symptoms, he could follow-up with the surgeon of his choice. He assigned Claimant an 8% whole person impairment rating for his spondylolisthesis and a 16% whole person rating for lower back range of motion deficits. Combining the ratings yields a 23% whole person impairment.

10. On October 14, 2015 Claimant underwent a neurological consultation with Patricia Soffer, M.D. EMG testing revealed "both lower extremities and lumbar paraspinals were normal. There was no electrophysiologic evidence of neuropathy or radiculopathy." Claimant also exhibited normal strength and reflexes in both lower extremities.

11. On December 22, 2015 Claimant underwent a psychological evaluation with Stephen A. Moe, M.D. In determining whether Claimant was a candidate for lumbar spine surgery, Dr. Moe interviewed Claimant and reviewed his medical history. Although there were no "strictly psychiatric contraindications" to proceeding with surgery, Dr. Moe expressed significant concerns about a positive outcome. He thus recommended continued discussion of treatment options among individuals with the requisite medical expertise. Dr. Moe recognized that patients deserve autonomy in the decision-making process but was concerned that Claimant's hope of relief from a surgical procedure could distort his judgment about the risk of a negative surgical outcome.

12. On February 1, 2016 Claimant visited Bryan Andrew Castro, M.D. for a surgical consultation. He recounted that Dr. Reiss did not recommend surgery but Dr. Janssen suggested surgical intervention. Dr. Castro noted that Claimant's EMG was negative. He stated that Dr. Orgel concluded that Claimant had not reached MMI and Dr. Moe had concerns about surgical intervention. Dr. Castro determined that Claimant exhibited congenital findings and did not have any lumbar instability. He thus reasoned that Claimant's imaging findings were not caused by the September 11, 2014 industrial incident. Dr. Castro recommended a CT scan of "the bony anatomy in the lower lumbar segments" but deferred additional recommendations pending the imaging studies.

13. On February 12, 2016 Claimant underwent a psychiatric evaluation with Carol M. Newlin, M.D., Ph.D. Dr. Newlin considered Claimant's medical history and conducted an interview. She noted that Claimant was not desperate to "do anything" and hoped that surgery would permit him to engage in former recreational activities and increase his lifting restrictions. Dr. Newlin summarized that Claimant appeared to be a good surgical candidate if surgery was recommended by the orthopedic surgeon.

14. On February 22, 2016 Claimant returned to Dr. Janssen for an examination. Dr. Janssen commented that Claimant's MRI reflected the "loss of structural integrity to the disc and a 'vertical' instability at the L5-S1 level and the L4-L5 level demonstrating two levels of degenerative disc disease and anatomical abnormalities." He explained that when patients exhibit findings similar to Claimant "they tend not to result in an anterior translational instability with a unilateral defect." Dr. Janssen was not convinced that Claimant's findings were truly "congenital" because hyperextension stress can cause a unilateral fracture. He summarized that Claimant was suffering from lower back and leg pain and had realistic goals about possible surgical intervention. Claimant sought pain reduction and improved functionality from lower back surgery. Dr. Janssen concurred with Dr. Orgel's DIME opinion that Claimant had not reached MMI. He also determined that Claimant is a reasonable candidate for a surgical fusion from L4 to the sacrum.

15. On February 24, 2016 Claimant returned to Dr. Castro for a CT scan review. Dr. Castro noted that the CT scan revealed "a pars defect unilaterally left side L5-S1." He specifically explained that Claimant suffered from degenerative changes at L4-L5 and L5-S1 with mild disc desiccation and denervation but without severe neural encroachment at the L4-L5 level. Dr. Castro noted more significant findings that included isthmic spondylolysis at the L5 level and foraminal stenosis on the left side of the L5-S1 level. He explained that Claimant had exhausted conservative treatment and "followed the work comp guidelines up to this point appropriately." Dr. Castro remarked that surgical intervention in the form of a two-level or single-level surgical fusion should be considered.

16. Dr. Reiss testified at the hearing in this matter. He explained that Claimant suffered a lumbar strain/sprain injury at work on November 11, 2014. Dr. Reiss recounted that during his examination Claimant had exhibited exaggerated pain behaviors and a dramatic presentation. He commented that diagnostic studies did not reveal any reasons for the proposed surgical intervention. Dr. Reiss specifically noted that imaging studies did not reflect any instability in Claimant's lumbar spine. Relying on the Division of Workers' Compensation *Medical Treatment Guidelines* (*Guidelines*), Rule 17, Exhibit 1 Low Back Pain G.4(e), Dr. Reiss explained that lower back surgery is not appropriate unless the patient has completed appropriate conservative care, a pain generator has been clearly identified, the patient exhibits spinal stenosis with instability or disc pathology, the proposed surgery is designed to yield functional improvement and the patient has undergone a psychological evaluation. However, he commented that Claimant has not exhausted conservative treatment, a clear pain generator has not been identified, non-surgical treatment would provide a better functional outcome, Claimant has not exhibited spinal instability and Claimant's psychological evaluations

were mixed. Dr. Reiss thus summarized that Claimant is not a good surgical candidate. Moreover, he remarked that Dr. Orgel had not reviewed Claimant's medical records that revealed pre-existing symptoms. Accordingly, Dr. Reiss agreed with Drs. Beach and Olsen that Claimant reached MMI in May 2015. Accordingly, he reasoned that Dr. Orgel had erred in concluding that Claimant has not reached MMI.

17. On April 22, 2016 the parties conducted the post-hearing evidentiary deposition of Claimant. Claimant testified that he has difficulty walking because his left leg "gives out" and he loses stability as a result of his September 11, 2014 lower back injury. He recounted that surgeons have proposed either one-level or two-level fusion surgery of his lumbar spine. Claimant explained that he would prefer a two-level fusion because he would not have to undergo a subsequent lower back surgery. He has discussed the risks and benefits of the proposed surgical procedure and does not expect to be pain-free but is hoping to gain functional improvement. Claimant noted that he has requested a change of physician to Dr, Janssen but Dr. Castro would also be fine. Dr. Castro has always been "up front" and straightforward with him.

18. On April 25, 2016 the parties conducted the post-hearing evidentiary deposition of Dr. Olsen. Dr. Olsen determined that Claimant is not an appropriate candidate for either a one-level or two-level lumbar fusion. He explained that Claimant exhibited non-physiologic pain behaviors and the inconsistencies in his physical examination did not suggest that he was someone who required lumbar fusion surgery. Citing a study entitled *Long Term Outcomes For Single Fusions and Workers' Compensation* mentioned in Rule 17, Exhibit 1 Low Back Pain G.4(e) of the *Guidelines,* Dr. Olsen commented that only 26% of Workers' Compensation patients who undergo fusions return to work while 67% of non-operated patients return to work. Therefore, the likely surgical outcome for Claimant is not positive. Moreover, after reviewing Claimant's lumbar flexion and extension x-rays, Dr. Olsen remarked that there was a zero difference or no instability in Claimant's lumbar spine. Regarding Dr. Janssen's theory of "vertical instability," Dr. Olsen agreed with Dr. Reiss that "this is a concept that is not well accepted. There is no discussion of vertical instability anywhere in the Medical Treatment Guidelines, and it has nothing to do with flexion extension films that we described, which ultimately don't demonstrate any instability." Moreover, Dr. Olsen also stated that, because Claimant's pain generator has not been identified, surgery is unwarranted pursuant to the *Guidelines*.

19. Dr. Olsen also disagreed with Dr. Orgel's determinations in his DIME report. He remarked that Claimant has reached MMI and that the EMG recommended by. Dr. Orgel yielded normal results. Dr. Olsen specifically explained that Dr. Orgel was erroneous in concluding that Claimant had not reached MMI because MRI films did not demonstrate any lumbar spine instability. Finally, Dr. Olsen commented that Dr. Orgel erroneously assigned an impairment rating for Claimant's spondylolisthesis because medical records reveal that the condition preceded the September 11, 2014 industrial injury.

20. On April 29, 2016 the parties conducted the post-hearing evidentiary deposition of Dr. Castro. Dr. Castro recounted that he had diagnosed Claimant with a

lumbar strain/sprain and ongoing lumbago. After reviewing additional medical records and Claimant's lumbar MRI he determined that Claimant was not an appropriate candidate for lumbar surgery as recommended by Dr. Janssen. Dr. Castro noted that the reference to "instability" in the *Guidelines* refers to dynamic movement on flexion/extension x-rays. However, he agreed with Drs. Reiss and Olsen that there has never been any "instability" in Claimant's spine. Regarding Dr. Janssen's theory of "vertical instability," Dr. Castro remarked that "[i]t's not a concept. There's no such thing as vertical instability." He remarked that the MRI and CAT scans reveal that Claimant has minimal disc space height loss. Dr. Castro referenced Rule 17, Exhibit 1 Low Back Pain G.4(d)(iii) of the *Guidelines,* in explaining that instability is required to warrant fusion surgery. The section specifically provides that, "[b]ecause surgical outcomes are less successful when there is neither stenosis, nor instability, the requirements of pre-operative indications must be strictly adhered to for this category of patients."

21. Respondents have failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Orgel that Claimant has not reached MMI and suffered a 23% whole person impairment for his November 11, 2014 lower back injury. Dr. Orgel was uncertain about whether there were other options to reduce Claimant's pain and sought additional information. He thus concluded that Claimant had not reached MMI. He specifically addressed Dr. Janssen's surgical recommendation and noted that "[t]here was apparently some instability on his x-rays, and this would be a surgical problem." Dr. Orgel recommended an "extensive psychological assessment" to determine whether Claimant was an appropriate surgical candidate. He stated that, if Claimant was deemed a good surgical candidate, he required repeat EMG testing to ascertain whether he had a bilateral radiculopathy and determine the cause of his muscle spasms. Dr. Orgel also commented that, if Claimant was suffering from radicular symptoms, he could follow-up with the surgeon of his choice. He assigned Claimant an 8% whole person impairment rating for his spondylolisthesis and a 16% whole person rating for lower back range of motion deficits. Combining the ratings yields a 23% whole person impairment.

22. Dr. Olsen disagreed with Dr. Orgel's MMI and impairment determinations. He remarked that Claimant has reached MMI and that the EMG recommended by Dr. Orgel yielded normal results. Dr. Olsen specifically explained that Dr. Orgel erroneously concluded that Claimant had not reached MMI because MRI films did not demonstrate any lumbar spine instability. Finally, Dr. Olsen commented that Dr. Orgel incorrectly assigned an impairment rating for Claimant's spondylolisthesis because medical records reveal that the condition existed prior to Claimant's September 11, 2014 industrial injury. Dr. Reiss also explained that Claimant is not a good surgical candidate. He remarked that Dr. Orgel had not reviewed Claimant's medical records that revealed pre-existing symptoms. Furthermore, Dr. Reiss agreed with Drs. Beach and Olsen that Claimant reached MMI in May 2015. He thus reasoned that Dr. Orgel erred in concluding that Claimant has not reached MMI. Finally, Dr. Castro agreed with Drs. Reiss and Olsen that there has never been any "instability" in Claimant's spine and Claimant was not a surgical candidate.

23. Multiple physicians have disagreed with Dr. Orgel’s MMI and impairment determinations. Moreover, Claimant has undergone additional treatment and diagnostic testing since his DIME. Nevertheless, Respondents have failed to overcome Dr. Orgel’s DIME opinion. Initially, Dr. Janssen concurred with Dr. Orgel’s DIME opinion that Claimant had not reached MMI. He also determined that Claimant is a reasonable candidate for a surgical fusion from L4 to the sacrum. More importantly, doctors Reiss, Olsen and Castro failed to explain how Dr. Orgel’s determination that Claimant has not reached MMI and suffered a 23% whole person impairment for his November 11, 2014 lower back injury is clearly erroneous. The disagreement about whether Claimant is an appropriate surgical candidate does not constitute clear and convincing evidence to overcome Dr. Orgel’s DIME determination. The opinions of Drs. Reiss, Olsen and Castro merely constitute disagreements with Dr. Olsen regarding the remedy for Claimant’s lower back condition. Accordingly, Claimant has failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Orgel’s MMI and impairment determinations were incorrect.

24. Claimant has failed to demonstrate that it is more probably true than not that the request for lumbar fusion surgery as recommended by Dr. Janssen is reasonable, necessary and causally related to his September 11, 2014 admitted industrial injury. Dr. Janssen recommended a two level surgical fusion for Claimant. He commented that Claimant’s MRI reflected the “loss of structural integrity to the disc and a ‘vertical’ instability at the L5-S1 level and the L4-L5 level demonstrating two levels of degenerative disc disease and anatomical abnormalities.” Dr. Janssen explained that when patients exhibit findings similar to Claimant “they tend not to result in an anterior translational instability with a unilateral defect.” Dr. Janssen was not convinced that Claimant’s findings were truly “congenital” because hyperextension stress can cause a unilateral fracture. He summarized that Claimant was suffering from lower back and leg pain and had realistic goals about possible surgical intervention.

25. In contrast, Dr. Reiss commented that diagnostic studies did not reveal any reasons for the proposed surgical intervention. He specifically noted that imaging studies did not reflect any instability in Claimant’s lumbar spine. Relying on the *Guidelines*, Rule 17, Exhibit 1 Low Back Pain G.4(e), Dr. Reiss persuasively explained that lower back surgery is not appropriate unless the patient has completed appropriate conservative care, a pain generator has been clearly identified, the patient exhibits spinal stenosis with instability or disc pathology, the proposed surgery is designed to yield functional improvement and the patient has undergone a psychological evaluation. However, he commented that Claimant has not exhausted conservative treatment, a clear pain generator has not been identified, non-surgical treatment would provide a better functional outcome, Claimant has not exhibited spinal instability and Claimant’s psychological evaluations were mixed. Dr. Reiss thus summarized that Claimant is not a good surgical candidate.

26. Dr. Olsen also determined that Claimant is not an appropriate candidate for either a one-level or two-level lumbar fusion. He explained that Claimant exhibited non-physiologic pain behaviors and the inconsistencies in his physical examination did not suggest that he was someone who required lumbar fusion surgery. Moreover, after

reviewing Claimant's lumbar flexion and extension x-rays, Dr. Olsen remarked that there was a zero difference or no instability in Claimant's lumbar spine. Regarding Dr. Janssen's theory of "vertical instability," Dr. Olsen agreed with Dr. Reiss that "this is a concept that is not well accepted. There is no discussion of vertical instability anywhere in the Medical Treatment Guidelines, and it has nothing to do with flexion extension films that we described, which ultimately don't demonstrate any instability." Finally, Dr. Olsen remarked that, because Claimant's pain generator has not been identified, surgery is unwarranted pursuant to the *Guidelines*.

27. After reviewing additional medical records and Claimant's lumbar MRI Dr. Castro also determined that Claimant was not an appropriate candidate for lumbar fusion surgery as recommended by Dr. Janssen. Dr. Castro noted that the reference to "instability" in the *Guidelines* pertains to dynamic movement on flexion/extension x-rays. However, he agreed with Drs. Reiss and Olsen that there has never been any "instability" in Claimant's spine. Regarding Dr. Janssen's theory of "vertical instability," Dr. Castro remarked that "[i]t's not a concept. There's no such thing as vertical instability." He remarked that the MRI and CT scans reveal that Claimant has minimal disc space height loss. Accordingly, based on the persuasive reports and opinions of Drs. Reiss, Olsen and Castro, Claimant's request for lumbar fusion surgery as recommended by Dr. Janssen is denied and dismissed.

28. Claimant has failed to make a "proper showing" to warrant a change of physician pursuant to §8-43-404(5)(a), C.R.S. Claimant testified that he has requested a change of physician to Dr. Janssen but Dr. Castro would also be fine. He noted that Dr. Castro has always been "up front" and straightforward with him. However, evaluating Claimant's need for reasonable and necessary medical treatment while protecting Respondents' interest in being apprised of the course of treatment for which it may ultimately be liable suggests that Claimant has received reasonable and necessary medical care from his authorized providers. Furthermore, because Claimant has failed to demonstrate that he is entitled to the recommended fusion surgery there is no need to transfer care to Dr. Janssen. Accordingly, Claimant's request for a change of physician is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Overcoming the DIME

4. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAP, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

5. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAP, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAP, Apr. 16, 2008).

. 6. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.*, W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004); *see Shultz v. Anheuser Busch, Inc.*, W.C. No. 4-380-560 (ICAP, Nov. 17, 2000).

7. As found, Respondents have failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Orgel that Claimant has not reached MMI and suffered a 23% whole person impairment for his November 11, 2014 lower back injury. Dr. Orgel was uncertain about whether there were other options to reduce Claimant's pain and sought additional information. He thus concluded that Claimant had not reached MMI. He specifically addressed Dr. Janssen's surgical recommendation and noted that "[t]here was apparently some instability on his x-rays, and this would be a surgical problem." Dr. Orgel recommended an "extensive psychological assessment" to determine whether Claimant was an appropriate surgical candidate. He stated that, if Claimant was deemed a good surgical candidate, he required repeat EMG testing to ascertain whether he had a bilateral radiculopathy and determine the cause of his muscle spasms. Dr. Orgel also commented that, if Claimant was suffering from radicular symptoms, he could follow-up with the surgeon of his choice. He assigned Claimant an 8% whole person impairment rating for his spondylolisthesis and a 16% whole person rating for lower back range of motion deficits. Combining the ratings yields a 23% whole person impairment.

8. As found, Dr. Olsen disagreed with Dr. Orgel's MMI and impairment determinations. He remarked that Claimant has reached MMI and that the EMG recommended by Dr. Orgel yielded normal results. Dr. Olsen specifically explained that Dr. Orgel erroneously concluded that Claimant had not reached MMI because MRI films did not demonstrate any lumbar spine instability. Finally, Dr. Olsen commented that Dr. Orgel incorrectly assigned an impairment rating for Claimant's spondylolisthesis because medical records reveal that the condition existed prior to Claimant's September 11, 2014 industrial injury. Dr. Reiss also explained that Claimant is not a good surgical candidate. He remarked that Dr. Orgel had not reviewed Claimant's medical records that revealed pre-existing symptoms. Furthermore, Dr. Reiss agreed with Drs. Beach and Olsen that Claimant reached MMI in May 2015. He thus reasoned that Dr. Orgel erred in concluding that Claimant has not reached MMI. Finally, Dr. Castro agreed with Drs. Reiss and Olsen that there has never been any "instability" in Claimant's spine and Claimant was not a surgical candidate.

9. As found, multiple physicians have disagreed with Dr. Orgel's MMI and impairment determinations. Moreover, Claimant has undergone additional treatment and diagnostic testing since his DIME. Nevertheless, Respondents have failed to overcome Dr. Orgel's DIME opinion. Initially, Dr. Janssen concurred with Dr. Orgel's DIME opinion that Claimant had not reached MMI. He also determined that Claimant is a reasonable candidate for a surgical fusion from L4 to the sacrum. More importantly, doctors Reiss, Olsen and Castro failed to explain how Dr. Orgel's determination that Claimant has not reached MMI and suffered a 23% whole person impairment for his November 11, 2014 lower back injury is clearly erroneous. The disagreement about whether Claimant is an appropriate surgical candidate does not constitute clear and convincing evidence to overcome Dr. Orgel's DIME determination. The opinions of Drs. Reiss, Olsen and Castro merely constitute disagreements with Dr. Olsen regarding the remedy for Claimant's lower back condition. Accordingly, Claimant has failed to

produce unmistakable evidence free from serious or substantial doubt that Dr. Orgel's MMI and impairment determinations were incorrect.

Medical Benefits

10. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

11. As found, Claimant has failed to demonstrate by a preponderance of the evidence that the request for lumbar fusion surgery as recommended by Dr. Janssen is reasonable, necessary and causally related to his September 11, 2014 admitted industrial injury. Dr. Janssen recommended a two level surgical fusion for Claimant. He commented that Claimant's MRI reflected the "loss of structural integrity to the disc and a 'vertical' instability at the L5-S1 level and the L4-L5 level demonstrating two levels of degenerative disc disease and anatomical abnormalities." Dr. Janssen explained that when patients exhibit findings similar to Claimant "they tend not to result in an anterior translational instability with a unilateral defect." Dr. Janssen was not convinced that Claimant's findings were truly "congenital" because hyperextension stress can cause a unilateral fracture. He summarized that Claimant was suffering from lower back and leg pain and had realistic goals about possible surgical intervention.

12. As found, in contrast, Dr. Reiss commented that diagnostic studies did not reveal any reasons for the proposed surgical intervention. He specifically noted that imaging studies did not reflect any instability in Claimant's lumbar spine. Relying on the *Guidelines*, Rule 17, Exhibit 1 Low Back Pain G.4(e), Dr. Reiss persuasively explained that lower back surgery is not appropriate unless the patient has completed appropriate conservative care, a pain generator has been clearly identified, the patient exhibits spinal stenosis with instability or disc pathology, the proposed surgery is designed to yield functional improvement and the patient has undergone a psychological evaluation. However, he commented that Claimant has not exhausted conservative treatment, a clear pain generator has not been identified, non-surgical treatment would provide a better functional outcome, Claimant has not exhibited spinal instability and Claimant's psychological evaluations were mixed. Dr. Reiss thus summarized that Claimant is not a good surgical candidate.

13. As found, Dr. Olsen also determined that Claimant is not an appropriate candidate for either a one-level or two-level lumbar fusion. He explained that Claimant exhibited non-physiologic pain behaviors and the inconsistencies in his physical examination did not suggest that he was someone who required lumbar fusion surgery.

Moreover, after reviewing Claimant's lumbar flexion and extension x-rays, Dr. Olsen remarked that there was a zero difference or no instability in Claimant's lumbar spine. Regarding Dr. Janssen's theory of "vertical instability," Dr. Olsen agreed with Dr. Reiss that "this is a concept that is not well accepted. There is no discussion of vertical instability anywhere in the Medical Treatment Guidelines, and it has nothing to do with flexion extension films that we described, which ultimately don't demonstrate any instability." Finally, Dr. Olsen remarked that, because Claimant's pain generator has not been identified, surgery is unwarranted pursuant to the *Guidelines*.

14. As found, after reviewing additional medical records and Claimant's lumbar MRI Dr. Castro also determined that Claimant was not an appropriate candidate for lumbar fusion surgery as recommended by Dr. Janssen. Dr. Castro noted that the reference to "instability" in the *Guidelines* pertains to dynamic movement on flexion/extension x-rays. However, he agreed with Drs. Reiss and Olsen that there has never been any "instability" in Claimant's spine. Regarding Dr. Janssen's theory of "vertical instability," Dr. Castro remarked that "[i]t's not a concept. There's no such thing as vertical instability." He remarked that the MRI and CT scans reveal that Claimant has minimal disc space height loss. Accordingly, based on the persuasive reports and opinions of Drs. Reiss, Olsen and Castro, Claimant's request for lumbar fusion surgery as recommended by Dr. Janssen is denied and dismissed.

Change of Physician

15. A claimant is not entitled to medical treatment by a particular physician. *Colorado Compensation Insurance Authority v. Nofio,* 886 P.2d 714 (Colo. 1994); *Vigil v. City Cab Co.,* W.C. No. 3-985-493 (ICAP, May 23, 1995). Section 8-43-404(5)(a), C.R.S. permits the employer or insurer to select the treating physician in the first instance. Once the respondents have exercised their right to select the treating physician, the claimant may not change the physician without the insurer's permission or "upon the proper showing to the division." §8-43-404(5)(a), C.R.S.; *In Re Tovar,* W.C. No. 4-597-412 (ICAP, July 24, 2008). Because §8-43-404(5)(a), C.R.S. does not define "proper showing" the ALJ has discretionary authority to determine whether the circumstances warrant a change of physician. *Jones v. T.T.C. Illinois, Inc.,* W.C. No. 4-503-150 (ICAP, May 5, 2006). The ALJ's decision regarding a change of physician should consider the claimant's need for reasonable and necessary medical treatment while protecting the respondent's interest in being apprised of the course of treatment for which it may ultimately be liable. *Id.*

16. As found, Claimant has failed to make a "proper showing" to warrant a change of physician pursuant to §8-43-404(5)(a), C.R.S. Claimant testified that he has requested a change of physician to Dr. Janssen but Dr. Castro would also be fine. He noted that Dr. Castro has always been "up front" and straightforward with him. However, evaluating Claimant's need for reasonable and necessary medical treatment while protecting Respondents' interest in being apprised of the course of treatment for which it may ultimately be liable suggests that Claimant has received reasonable and necessary medical care from his authorized providers. Furthermore, because Claimant has failed to demonstrate that he is entitled to the recommended fusion surgery there is

no need to transfer care to Dr. Janssen. Accordingly, Claimant's request for a change of physician is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents have failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Orgel.

2. Claimant's request for lumbar fusion surgery as recommended by Dr. Janssen is denied and dismissed.

3. Claimant's request for a change of physician is denied and dismissed.

4. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

1. Whether Claimant has established that gastric sleeve surgery is reasonable, necessary, and causally related medical treatment for his June 23, 2014 industrial injury.

FINDINGS OF FACT

1. Claimant was employed by Employer as a garden associate. On June 23, 2014 he suffered a compensable injury to his right hip while at work.

2. On July 31, 2014 Claimant underwent an MRI of his right hip that revealed a full-thickness anterior labral tear of 8 to 12 mm very near the midequatorial line. *See* Exhibit 2.

3. On August 19, 2014 Claimant was evaluated by Shawn Karns, PA-C. PA Karns noted that Claimant weighed 270 pounds and was 5 feet 11 inches tall. PA Karns noted that Claimant's MRI was reviewed with Dr. White and that it showed a labral tear. PA Karns noted that Claimant was a candidate for hip arthroscopy moving forward and that he discussed at great length with Claimant weight loss measures to make the hip arthroscopy surgery safe moving forward. PA Karns noted that Dr. White's goal would be to have Claimant around 240 pounds with a pant size of 40 or less. Claimant reported he wanted to go ahead with the surgery scheduling and was aware of the weight loss requirements. *See* Exhibit 3.

4. On October 10, 2014 Claimant underwent an independent medical evaluation performed by Allison Fall, M.D. Dr. Fall noted that Claimant was 308 pounds and Claimant reported to Dr. Fall that he had not been working on losing weight. *See* Exhibit A.

5. On October 22, 2014 Claimant underwent an independent medical evaluation performed by Edwin Healey, M.D. Dr. Healey opined that Claimant required the hip surgery recommended by Dr. White and that if Claimant did not have the hip surgery, Claimant would have increasing, ongoing degenerative changes in the right hip and would eventually need a right hip replacement. Dr. Healey opined that Claimant needed to be referred to a dietician to help with weight loss so that Claimant could reach the 240 pound level of weight recommended by Dr. White and that Claimant also needed a health club membership with a pool so that Claimant could do exercises to help him lose weight. *See* Exhibit 5.

6. On February 27, 2015 Claimant was evaluated by Greg Smith, D.O. Dr. Smith noted that Claimant had a labral tear in the right hip and that the problem was that surgery could not be performed until Claimant lost weight. Dr. Smith discussed that weight loss was not part of the work comp regimen. Dr. Smith opined that Claimant needed to find a surgeon who performed band therapy to assist Claimant with losing weight. Dr. Smith noted that Claimant needed to lose approximately 50 pounds in order to have surgery and noted that Claimant would follow up with Dr. Weaver regarding band surgery. Dr. Smith also prescribed Claimant a six month gym membership to 24 hour fitness for weight loss. Dr. Smith noted he anticipated that Claimant's right hip would worsen. *See* Exhibit 4.

7. On March 11, 2015 Dr. Smith responded to a letter from Respondent. Dr. Smith opined that he agreed to refer Claimant to a nutritionist and provided the information and phone number of a nutritionist. *See* Exhibit 4.

8. On March 30, 2015 Claimant was evaluated by John Weaver, M.D. Dr. Weaver noted that Claimant had been referred by Dr. Smith for consultation regarding the adjustable gastric band surgery as well as vertical gastric sleeve surgery. Claimant reported he had some success at losing weight, but was unable to keep it off and had a yo-yo weight loss fashion. Claimant reported needing help to lose weight to be healthier and to qualify for his hip repair. Dr. Weaver noted that Claimant was currently at his greatest weight and noted his weight to be 318 pounds, 8 ounces. Dr. Weaver opined that Claimant was an excellent candidate for bariatric surgery. Dr. Weaver noted that Claimant had been suffering from weight problems for the past 5-10 years and was currently at the highest weight of his life. Dr. Weaver opined that patients typically lose 70-75% of their excess weight at 6 months to 1 year with the sleeve gastrectomy and 55-65% of their weight with the lapband at 2 years. Dr. Weaver opined that the sleeve gastrectomy would likely result in quicker weight loss and would qualify Claimant for his hip repair much sooner than lapband. Dr. Weaver noted he would submit the paperwork for approval through work comp and that if approved Claimant would be part of a multi-disciplinary preparatory bariatric regimen. *See* Exhibit 6.

9. On July 8, 2015 Claimant was evaluated by Dr. Smith. Dr. Smith noted that Claimant was at 270 pounds and that he needed to lose 20 more pounds to undergo surgery and that Dr. White would like Claimant to be at 260 pounds to schedule the surgery. Claimant reported he was working out two days per week and working with a trainer. Claimant also reported working out at home two to three days per week, and walking around the park four to five times per week. Dr. Smith noted that the plan would be for Claimant to lose 10 more pounds and then schedule the surgery with Dr. White. *See* Exhibit 4.

10. On July 22, 2015 Claimant was evaluated by Brian White, M.D. Dr. White noted Claimant had continued pain. Claimant reported he had been working hard to lose weight but Dr. White noted that Claimant weighed approximately 320 pounds at the appointment based on two separate scales. Dr. White opined that surgery would be challenging given Claimant's body habitus and opined that Claimant really needed to

lose the weight. Dr. White opined that Claimant needed to get to the 250 to 260 pound range before it would be safe to do the surgery and noted that Claimant would keep them posted as to his weight loss. *See* Exhibit 3.

11. On September 18, 2015 Claimant was evaluated by Dr. Bloch. Dr. Bloch noted that it was now approximately 15 months post injury and that Claimant's weight still did not make him a good candidate for surgery. Dr. Bloch noted that Claimant had missed appointments and that Claimant had not shown any reasonable efforts of losing weight. Dr. Bloch noted that Claimant was 8 pounds heavier than he was only two to three months prior. Dr. Bloch opined that Claimant was at maximum medical improvement and would remain there until and unless Claimant could come down in weight and be a candidate for surgery. *See* Exhibit C.

12. On October 7, 2015 Claimant was evaluated by Dr. White. Dr. White noted that Claimant had gotten to the point where Claimant could not effectively lose weight and was frustrated. Dr. White noted that Claimant was considering lab band surgery and opined that was a reasonable consideration. Dr. White again opined that as Claimant started to lose weight it would be fine to schedule him for hip arthroscopy and that he would like Claimant to be in the 240 pound range for the procedure. *See* Exhibit 3.

13. On December 28, 2015 Claimant was evaluated by Kevin Page, PA-C. PA Page noted that both he and Dr. Bloch spoke with Claimant and that Claimant now wanted to undergo bariatric surgery. At the appointment, Claimant weighed approximately 310 pounds. PA Page noted that Dr. Bloch did not necessarily recommend that the surgery be covered through work comp, but had no objections to the surgery and reiterated that Claimant would not be a candidate for hip surgery until Claimant was at least down to 260 pounds and preferably 240 pounds or less. PA Page noted that the hip surgery was still on hold as Claimant had not reached the weight goal and that bariatric surgery might be the only option to get Claimant to the point where they could proceed with the hip labral repair. *See* Exhibit 4.

14. On January 4, 2016 Claimant was evaluated by Dr. Weaver. Dr. Weaver again noted that Claimant needed to lose weight to qualify for hip repair and that Claimant had tried to lose weight over the last 10 months but had not been successful. Claimant reported trying diet, exercise, and a personal trainer. Dr. Weaver noted Claimant's weight to be 322 pounds, 8 ounces. Dr. Weaver again opined that Claimant was a good candidate for sleeve gastrectomy surgery and that Claimant had been unsuccessful with weight loss through diet and exercise. Dr. White opined that patients typically lose 70% of their excess weight at 6 months to 1 year with the sleeve gastrectomy and opined that they would likely be able to get Claimant ready for hip surgery within 3-6 months of weight loss surgery. *See* Exhibit 6.

15. On January 5, 2016 Dr. Weaver submitted a request for surgery authorization for laparoscopic sleeve gastrectomy and EGD. *See* Exhibit 6.

16. On January 6, 2016 Dr. Fall performed a Rule 16 Review regarding Claimant and the request for gastric banding or gastric sleeve surgery. Dr. Fall noted that the medical treatment guidelines discussed occasions where surgery may be contraindicated due to obesity including with hip arthroscopy. Dr. Fall noted that the guidelines provided that where surgery was contraindicated due to obesity, it may be appropriate to recommend a weight loss program if the patient was unsuccessful losing weight on their own and that coverage for weight loss would continue only for motivated patients who demonstrated continued progress with weight loss. *See* Exhibit B.

17. Dr. Fall opined that the sleeve gastrectomy surgery was not medically reasonable, necessary, or related to the work injury. Dr. Fall opined that there was no medical reason why Claimant could not pursue weight loss without surgery. Dr. Fall opined that it did not make sense to perform one surgery with inherent risks in order to pursue hip surgery. Dr. Fall also noted that the medical records indicated Claimant had been able to lose weight and had been successful losing weight, but then regained it back. Dr. Fall opined that if Claimant were unable to lose weight on his own, then under the medical treatment guidelines, a weight management program could be started. *See* Exhibit B.

18. On January 20, 2016 Dr. White issued a letter to Claimant's attorney. Dr. White noted in the letter that Claimant was frustrated about losing weight and that Claimant felt as though he needed to move forward with a gastric bypass procedure. Dr. White agreed with Claimant and opined that Claimant made no progress with regard to diet, weight loss, working out and opined that Claimant's ability to work out to lose weight was adversely affected by his hip. Dr. White opined that Claimant needed the hip surgery and that with Claimant's current body habitus it would be very challenging to access the hip. Dr. White opined that the hip surgery was absolutely necessary and that weight loss was absolutely necessary to be able to make the surgery perfect so that Claimant could have a good long term result. Dr. White opined that as Claimant lived with his hip longer and longer it would only hurt his hip and cartilage more. *See* Exhibit 3.

19. On March 2, 2016 Claimant underwent a Division Independent Medical Evaluation performed by Lloyd Thurston, D.O. Claimant reported that his weight was 290 pounds. Dr. Thurston opined that the labral tear was a work related injury and would not heal without arthroscopic repair. Dr. Thurston opined that the more time that passed without repair would provide further damage and degenerative changes in the hip. Dr. Thurston opined that the bariatric gastric sleeve procedure was appropriate and necessary so that Claimant could have the hip surgery. Dr. Thurston opined that after hip surgery Claimant's impairment rating should be significantly less with significantly less restrictive permanent work restrictions. *See* Exhibit 7.

20. Dr. Healey testified at hearing. Dr. Healey opined that the medical treatment guidelines established by the Division were advisory and education but that practice can deviate as needed based on patients' needs. Dr. Healey noted that Claimant could maybe lose weight on a strict program with a dietician and weekly weigh

ins, but opined that Claimant was confused about the basic tenants of weight loss and was unable to lose weight on his own. Dr. Healey opined that weight loss surgery at this point was reasonable and necessary because of Claimant's deteriorating condition and pain. Dr. Healey opined that it might have been appropriate 1.5 years ago to try weight watchers or an alternative program, but that at this point it was no longer an appropriate option due to Claimant's deterioration. Dr. Healey recognized that the gastric sleeve surgery was a major procedure and listed the risks to include diarrhea, infection, deep vein thrombosis, blood clots, and vitamin deficiencies. Dr. Healey opined that the risks associated with the gastric sleeve surgery were not as great as the risks of continued deterioration with delay in the needed hip surgery.

21. Dr. Fall testified at hearing. Dr. Fall opined that the gastric sleeve surgery was not reasonable, necessary, or related treatment. Dr. Fall opined that Claimant had not yet failed at weight loss and that Claimant could undergo a dietary regimen and eat less and achieve the same results without the need for surgery. Dr. Fall opined that gastric sleeve was a major surgery with risks of infection, diarrhea, malnutrition, and leakage from staples pulling loose. Dr. Fall noted that the medical treatment guidelines say that if someone is unsuccessful losing weight on their own then they should be referred to a weight loss program. Dr. Fall opined that Claimant had not yet been through a weight loss program and that the main part of losing weight is diet. Dr. Fall acknowledged that Claimant could not lose weight on his own and that he should undergo a weight watchers program or undergo a personal program one on one with a nutritionist. Dr. Fall opined that the surgical procedure was not necessary because Claimant could achieve the same results with a much less invasive option. Dr. Fall opined that if Claimant underwent a program with weight watchers or a nutritionist, he would have a similar rate of weight loss as he would have if he underwent the gastric sleeve procedure. Dr. Fall opined that the gastric sleeve surgery would not result in a faster rate of weight loss than a diet if Claimant were on a good diet plan.

22. Claimant also testified at hearing. Claimant testified that he has changed his eating habits, but admitted he did not have a basic understanding of how many calories he needed to consume per day to achieve his weight loss goals. Claimant's testimony included the following changes in his diet: used to eat large bowls of cereal nightly, now eats small bowls; used to drink 2-3 cups of milk at night, now drinks 1 cup; used to eat fast food 2-3 times per week and would order 4 chicken sandwiches, now eats fast food 1-2 times per week and only eats 1 chicken sandwich; used to eat hot cheetos often, now eats them not as much. Claimant has never kept a food log, has never read books, magazines, or articles on weight loss, and has never worked directly with a nutritionist.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of

litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). Respondents have been required to provide ancillary “pre-operative treatment” for non-industrial conditions if the evidence establishes that such ancillary care is a reasonably necessary prerequisite to surgery and must be given to achieve optimum treatment of the compensable injury. *Public Service Co. v. Industrial Claim Appeals Office,* 979 P.2d 584 (Colo. App. 1999). The question of whether the claimant has established that the need for ancillary treatment is a reasonably necessary prerequisite to achieve optimal treatment is one of fact for the ALJ. *Public Service Co. v. Industrial Claim Appeals Office, supra*.

The Colorado Division of Workers' Compensation has issued Guidelines under Rule 17, W.C.R.P., as evidence of professional standards. *See* Rule 17-1(A), W.C.R.P. Although an ALJ is not bound to the treatment guidelines in the determination of whether a particular treatment is reasonable and necessary, an ALJ may consider the Guidelines in determining the reasonableness and medical necessity of a particular treatment. The Guidelines provide for surgical intervention for labral tears that, "in cases where surgery is contraindicated due to obesity, it may be appropriate to recommend a weight loss program if the patient is unsuccessful losing weight on their own. Coverage for weight loss would continue only for motivated patients who have demonstrated continual progress with weight loss." *See* Rule 17, Exhibit 6, section E.3.h.vi.C.

Claimant has failed to establish that gastric sleeve surgery is reasonable and necessary treatment for his June 23, 2014 work injury. The gastric sleeve surgery proposed is not a reasonably necessary prerequisite to performing right hip surgery for Claimant's compensable injury. Although weight loss generally is a necessary prerequisite for optimum treatment of Claimant's compensable right hip injury, Claimant has failed to establish that the gastric sleeve procedure as a method of weight loss is reasonable or necessary at this time. Rather, the evidence establishes that there are significantly less invasive methods for Claimant to lose weight that would result in the same or similar outcome as the more invasive gastric sleeve procedure.

Although Claimant testified that he has tried to lose weight on his own for over a year without success, the testimony and evidence clearly demonstrates that Claimant lacks understanding of what is required to lose weight and lacks understanding of the basic tenants of weight loss. As found above, Claimant needs right hip surgery and needs to lose a considerable amount of weight before the hip surgeon will perform the procedure. Although gastric sleeve surgery would be one method of losing the required weight, Claimant has not yet attempted a weight loss program that is a more reasonable method of losing weight in order to move forward with the necessary hip surgery. The ancillary treatment that Claimant needs is weight loss. However, weight loss by an invasive surgical procedure with significant risks is not necessary at this time. There are other practical and less invasive methods of weight loss that Claimant has not yet tried. Claimant has failed to establish that the gastric sleeve surgery is reasonable or necessary.

Further, Dr. Fall is credible and persuasive that the gastric sleeve procedure would not result in a much faster rate of weight loss than a diet/nutritionist program if Claimant were to participate in a program. The evidence established that even with the gastric sleeve surgery, the weight loss would still take approximately 3-6 months before Claimant would be at a weight appropriate for undergoing hip surgery. Dr. Fall's testimony that Claimant could lose weight in a weight loss program in a similar timeframe is persuasive. It is clear from the past that Claimant has the ability to lose weight and he has gone up and down in his weight throughout treatment for his right hip injury. Here, the evidence establishes that there are significantly less invasive methods of losing weight besides the gastric sleeve procedure and that a weight loss program without surgery could achieve the same results in a similar time frame. At this time without having tried a weight loss program, Claimant has failed to establish that the proposed gastric sleeve surgery is reasonable or necessary.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish that gastric sleeve surgery is reasonable and necessary medical treatment for his June 23, 2014 industrial injury.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 10, 2016,

/s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

- Did Claimant prove by a preponderance of the evidence that on November 29, 2015 he sustained a compensable injury proximately caused by the performance of service arising out of and in the course of his employment?

- What is Claimant's average weekly wage?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. At hearing Claimant's Exhibits 1 though 6 were admitted into evidence. Claimant's Exhibit 7 was also admitted into evidence for consideration of questions 2,4,11 and 13 and the Claimant's answers to those questions. Respondents' Exhibits A through G were admitted into evidence.

2. At hearing the parties stipulated that if the claim is found to be compensable the medical treatment provided by Concentra Medical Centers, John Aschberger, M.D., and Don Aspergren, D.C., is authorized.

3. At hearing the parties stipulated that if the claim is found to be compensable Claimant is entitled to temporary total and/or temporary partial disability benefits for the period December 1, 2015 through January 31, 2016.

4. Claimant testified as follows concerning the events of November 29, 2015. On that date Claimant was working two shifts in his capacity as an airline operations agent. At approximately 10:00 p.m. Claimant and his immediate supervisor, Claire Petras (Petras), were lifting a passenger from a motorized wheelchair to an "aisle chair." The "aisle chair," unlike the passenger's wheelchair, was small enough to travel down the aisle of the aircraft and allow the passenger to be moved into his onboard seat. Claimant lifted the passenger from behind and Petras lifted the passenger's feet. As Claimant lifted the passenger he felt a "strain" in his back and immediately told Petras that he had hurt himself. Once inside the aircraft Claimant again told Petras that he had injured himself. After this incident Claimant continued working the shift until he reported the injury to Dave Lester (Lester). When Claimant reported the injury to Lester he filled out some "paperwork" and was referred to Concentra Medical Centers (Concentra) for medical treatment. However, Claimant did not go to Concentra until the next day.

5. Claimant testified that on November 29, 2015 he spoke with Petras prior to the time he reported the injury. Claimant explained that Petras introduced herself as the supervisor for the night and told Claimant to call if he needed her. Claimant also

recalled that Petras came up and gave him a radio. Claimant denied having any other conversations with Petras prior to the alleged injury.

6. Claimant denied that he had any conversations with Lester prior to the time that he reported the injury to Lester.

7. On cross-examination Claimant admitted that in his answers to interrogatories he denied having any low back injury prior to November 29, 2015.

8. Claimant testified that he was involved in a motor vehicle accident (MVA) in January 2015. Claimant testified that as a result of the accident he sustained a minor concussion, confusion and a cut on his right hand. However, Claimant testified that he did not recall the January 2015 MVA caused a back injury. Claimant explained that because of the concussion he does not "remember a lot from that day" and did not recall injuring his back until his attorney showed him documents the day before the hearing.

9. Petras testified as follows. On November 29, 2015 Petras was the ground operations supervisor in the "zone" where Claimant was working. On November 29 and prior to the alleged injury Petras met with Claimant for twenty minutes. The purpose of the meeting was for Petras to discuss with Claimant a "difference of opinion" that Claimant had with a "couple of [the Employer's] customer service agents." Petras also discussed Claimant's failure to report to a flight. Petras opined that during this conversation Claimant was "dismissive" and was "refusing to take responsibility for any of his actions."

10. Petras testified that Claimant called her to a gate to help lift the passenger. Petras stated that when she arrived at the gate Claimant already had the passenger "by the arm pits" and indicated Petras should lift the passenger's feet. Petras then helped Claimant lift the passenger from the wheelchair into the aisle chair. Petras testified that Claimant did not report any injury during the process of transferring the passenger to the aisle chair and then placing the passenger in his seat. Neither did Petras observe the Claimant engaged in any "pain behaviors" while transferring the passenger.

11. Petras stated that Claimant first informed her of the alleged back injury 30 to 45 minutes after the passenger was placed on the aircraft. At that time Petras also noticed Claimant had "his hands on his lower back." Petras recalled that during this 30 t0 45 minute period of time there was a "wind shear" event at the airport and she was "working with the manager of the control center to make sure the aircraft was not pushed off of the gate." Petras stated that after Claimant reported the injury she told Claimant that an injury form would have to be completed. However, before the form could be completed Petras was called to another gate. Petras stated that after Claimant reported the injury she requested Claimant to go to a nearby gate and "drive the jet bridge" to receive an aircraft.

12. On November 29, 2015 Lester was working for the Employer as a ground operations supervisor. He was one of Claimant's supervisors on November 29. Lester testified he called Claimant to "extend" Claimant's shift beyond the scheduled conclusion. Lester explained the Employer has a contractual right to extend employees' shifts based on "operational need." Lester opined that Claimant was "not very in favor" of the extension. Lester stated that he informed Claimant of the shift extension before Claimant reported the alleged injury.

13. Lester testified that at approximately 11:00 p.m. on November 29, 2015 he was "positioned in the command center." At that time Claimant came to the command center and reported that "he had hurt his lower back trying to help a customer with at lift – or assisting to lift a customer." Lester told Claimant that it was necessary to call paramedics. However, Lester recalled that Claimant did not want to call the paramedics and expressed a desire to call his grandmother or mother to pick him up.

14. Lindsey Williams (Williams) testified as follows. Williams is the claims adjuster assigned to handle the claim for benefits. On January 13, 2016 she spoke with Claimant over the telephone and took a "formal statement" concerning the alleged injury. During this conversation Williams took notes concerning Claimant's answers to questions posed by Williams. (These notes were admitted into evidence as Respondents' Exhibit G). Williams has some independent recollection of the January 13 conversation with Claimant but admits Exhibit G is the "best record" of what was said during the conversation.

15. Exhibit G reflects that Williams asked Claimant how the injury occurred. Exhibit G (grammar, spelling and punctuation in the original) reflects that Claimant answered as follows:

> "reported that claire told him to ask her for help if I needed help. Said he had a lift to assist a handicap passenger from the wheelchair to the isle chair from the isle chair to the seat. Passenger told him how to properly due the lift in his most comfort. Said that he asked claire to put his arm around his legs and lift at the same time. when they lifted the first time he was not completely on the aisle chair and they had to lift him again and as they lifted him again he felt pain in his back and completely got him on the chair. He told claire that he hurt his bag. She looked concerned about the plane getting out in time and showed no regard to his injury and she told him to push him into the plane. He pushed him into the plane and was felling pain in his back and she told him to take of jacket and lanyard to do the lift. Said he was still in alot of pain and claire told him that he needed to lift him from the aisle chair to the seat and he lifted him again to the seat. As they walked off the pane he told her again that he injured his back. Said that she told him that he needed to move his 300 lb lift chair to be sent down to the jetbridge and she

> would not help him she made him lift it by himself. Said that she helped him with the lifts but not with the mobility wheelchair. Said that she made him finish the flight for 143 passenger. said she walked away and he finished the flight. He said she asked him to go work another gate and he did as he was going to report the injury. Said that he did the other flight. He went and told Dave and he told him that he told claire and she wouldnt do anything for him and then Dave started the process for him."

16. Williams testified and Exhibit G reflects that Claimant denied sustaining any back injury prior to November 29, 2015. Williams testified and Exhibit G reflects that Claimant reported that he was involved in a motor vehicle accident (MVA) approximately 2 years prior to the interview but was not injured. Williams testified that Claimant never mentioned that he was involved in an MVA in 2015, that he sustained a concussion in the 2015 MVA or that he had trouble recalling some details of the MVA.

17. Claimant's Exhibit 7 is "Claimant's Answers To Respondents' Interrogatories." This document was offered and admitted into evidence for consideration of interrogatory questions and answers numbered 2, 4, 11, and 13. Claimant provided verified answers to these interrogatories on March 8, 2016.

18. In interrogatory 11 Claimant was asked to identify "any health care provider" who has treated his lumbar back "at any time." In response Claimant identified the providers that have treated him for the alleged work related injury since November 30, 2015.

19. In interrogatory 13 Claimant was asked to "describe in detail all motor vehicle accidents in which" he had been involved including a description of the vehicles involved, what body parts were hurt and the names and addresses of all medical providers that treated his injuries. In response Claimant reported that he was involved in an MVA in 2015 where he was driving a Honda and the other vehicle was a PT Cruiser. Claimant stated that his only injuries were "a minor concussion, confusion, and a cut on my hand." Claimant stated that his worst pain "from the accident was a headache for two days." Claimant stated he has had no symptoms since then. Claimant wrote that he received treatment for these injuries at North Suburban Medical Center (NSMC).

20. On November 30, 2015 Nancy Strain, D.O., examined Claimant at Concentra. Claimant gave a history that he was "lifting someone out of a wheelchair last night when he felt a pull in his low back and then low back pain started." Claimant also stated that he had "no previous back injuries." Claimant reported right-sided back pain and stiffness, neck pain and numbness in both arms. On physical examination (PE) Dr. Strain noted diffuse tenderness of the left and right paraspinals. Dr. Strain palpated the lumbar spine and noted "left-sided muscle spasms." Dr. Strain assessed a "lumbar strain." Dr. Strain commented that the "history and mechanism of injury were obtained directly from the" Claimant and appeared "to be consistent with presenting

symptoms and physical exam." She prescribed cyclobenzaprine, ibuprofen and physical therapy (PT). Dr. Strain imposed restrictions of lifting, pushing and pulling no more than 20 pounds occasionally. Dr. Strain also limited Claimant to "occasional bending" and required Claimant to remain sitting for 80% of the time.

21. Claimant underwent PT on November 30, 2015. On PE of the bilateral paraspinal muscles PT Darwin Abrams noted moderately increased muscle tone and tenderness.

22. Claimant underwent PT on December 4, 2015. At that time Claimant reported "a high level of pain and poor standing and sitting tolerance." On PE of the bilateral paraspinal muscles DPT Cody Moldenhauer noted moderately increased muscle tone and tenderness.

23. On December 8, 2015 PA-C Stephanie Missey examined Claimant at Concentra. Claimant reported bilateral lower back pain rated 8 on a scale of 10 (8/10). The pain radiated into the right thigh. The symptoms were reportedly worsening. On PE PA-C Missey noted tenderness in the left lumbar paraspinal muscles and right-sided muscle spasms. PA-C Missey assessed a lumbar strain and referred Claimant for acupuncture and chiropractic treatments. The December 8 records are contradictory with regard to whether or not PA-C Missey imposed any restrictions or released Claimant to return to work without restrictions. The office note indicates that Missey imposed restrictions of occasional bending and walking. The Concentra "Physician Work Activity Status Report" indicates Claimant was released to return to work on December 9, 2015 with "restrictions" of "constantly" bending and walking. The "Physician's Statement" to the Employer indicates that Claimant could stand "occasionally" and was limited to lifting, pushing and pulling 11 to 20 pounds.

24. On December 14, 2015 Candice Sobanski, M.D., examined Claimant at Concentra. Claimant reported experiencing increased back pain after returning to work. Claimant rated his back pain as 9/10 and stated he was having "trouble with shifts because of pain." On PE Dr. Sobanski noted the lumbosacral spinal alignment exhibited a "loss of normal lordosis." There was right and left paraspinal tenderness and on palpation of the lumbar spine Dr. Sobanski noted "bilateral muscle spasms." Dr. Sobanski assessed a lumbar strain, sciatica and muscle spasm. She prescribed ibuprofen and metaxalone. Dr. Sobanski referred Claimant for a lumbar MRI because of "radicular symptoms." Dr. Sobanski imposed restrictions of lifting, pushing and pulling up to 10 pounds occasionally, sitting 50% of the time, frequent breaks and no bending.

25. On December 22, 2015 Claimant underwent an MRI of the lumbar spine. The radiologist reported that the MRI was "normal" with no focal disc herniation, no significant central canal narrowing and no significant neural foraminal narrowing.

26. On December 24, 2015 Dr. Sobanski again examined Claimant. Claimant reported that PT was helpful but acupuncture was not. Claimant reported his pain level was 8/10 and he was observed to be limping. On PE Dr. Sobanski noted tenderness of

the left and right paraspinal muscles. On palpation of the lumbar spine Dr. Sobanski noted “bilateral muscle spasms.” Dr. Sobanski prescribed additional PT, cancelled acupuncture and referred claimant for massage therapy.

27. On January 21, 2016 Amanda Cava, M.D., examined Claimant at Concentra. Claimant reported bilateral lower back pain rated at 4/10. Claimant also gave a history that his symptoms were improving and requested a reduction in his restrictions so that he could return to light duty work. Claimant was not taking his medications as prescribed because of the improvement in his symptoms. On PE Dr. Cava noted tenderness in the upper lumbar spine and tenderness in the left and right paraspinal muscles. On palpation of the lumbar spine Dr. Cava noted bilateral muscle spasms. Dr. Cava imposed restrictions that permitted Claimant to lift 25 pounds frequently, to push and pull 30 pounds frequently, and to bend, stand and walk frequently.

28. On February 24, 2016 Scott Richardson, M.D., examined Claimant at Concentra. Claimant reported bilateral low back pain rated at 4/10. Claimant also reported he was still attending PT and massage therapy and these treatments were helping. On PE of the lumbar spine Dr. Richardson reported there was no tenderness and that Claimant’s range of motion was full except for limited flexion and extension. Dr. Richardson continued PT and massage therapy. Dr. Richardson also referred Claimant to a “delayed recovery specialist” because of “slow progress.”

29. Dr. Cava examined Claimant on March 17, 2016. Claimant reported bilateral low back pain rated at 2/10. There was no radiation and Claimant advised that his symptoms were improving. Dr. Cava noted some tenderness of the lumbar spine but no muscle spasms. Dr. Cava stated that Claimant’s range of motion was full. Dr. Cava stopped PT because Claimant felt it was making his symptoms worse and stopped acupuncture because Claimant reported there was not benefit from this treatment. Dr. Cava released Claimant to a trial of full duty beginning March 20, 2016.

30. On March 17, 2016 John Aschberger, M.D., examined Claimant on referral from Dr. Richardson. Claimant gave a history that he experienced pulling in his back while transferring a passenger from a “chair to aisle seat.” Claimant stated that despite the injury his supervisor had him continue with the transfer and then push out the chair, which resulted in some additional aggravation.” Claimant denied any “previous back injury.” Dr. Aschberger assessed a lumbosacral strain and noted elements of the PE suggested facet irritation. Dr. Aschberger opined Claimant was responding well to treatment. Dr. Aschberger recommended that Claimant continue with his home exercise program and that he receive PT to treat “tight hamstrings.”

31. On April 1, 2016 John Burris, M.D., examined Claimant for evaluation of “delayed recovery issues.” Claimant reported he was experiencing “episodic” low back pain rated at 2/10. On PE of the lumbar spine Dr. Burris noted full range of motion in all planes and no muscle spasm or trigger points. Dr. Burris stated Claimant’s workup had been “negative” and “his examination is benign with no objective findings.” Dr. Burris assessed “low back pain.” He opined Claimant should “remain active” with a home

exercise program and continue rehabilitation. Dr. Burris further recommended that Claimant continue performing “full work duties.”

32. Claimant was involved in a motor vehicle accident (MVA) on January 24, 2015.

33. The Thornton Fire Department (TFD) responded to the accident scene and provided emergency care to Claimant. Emergency response documentation from the TFD reflects that on January 24, 2015 Claimant’s chief complaints were left lateral lumbar pain, left arm pain and midline cervical spine pain on palpation. Claimant also advised that he “may have hit his head” in the accident although there “were no obvious signs of trauma to his head or neck.” Claimant was able to “answer questions appropriately” and denied loss of consciousness. However, Claimant’s overall affect “appeared abnormal.” A member of Claimant’s family who was present at the scene of the accident reported that Claimant’s speech pattern was slower than normal and he was “possibly confused.” Claimant was placed in a cervical collar and a “long spine board” and transported to NSMC for treatment.

34. At the NSMC emergency department (ED) Claimant was treated by PA Cameron Nelson and Julianna Batizy Morley, D.O. Claimant complained of head pain, left lateral back pain, neck pain and left shoulder pain. Claimant’s aunt, who was apparently present in the ED, advised that Claimant was “not acting normally” and was “delayed” when answering questions. Claimant underwent CT scans of the head, cervical spine, lumbar spine and chest. The radiologists reported no abnormalities were shown on the CT scans. An x-ray of the left shoulder showed no fracture or dislocation. Dr. Morley wrote that during treatment at the ED Claimant “became slightly combative and anxious and repeating self – confused.” However, after imaging Dr. Morley noted the Claimant was neurologically intact, alert and oriented. The primary clinical impression was “concussion” and the secondary impressions included lumbar sprain and left shoulder sprain. The Claimant was discharged home in the care of family and given concussion instructions.

35. On January 26, 2015 PA Kari Cao examined Claimant at Clinica. Clinica is Claimant’s family medical provider. PA Cao’s office note reflects Claimant presented for follow-up after an MVA on January 24, 2015. The note states that Claimant’s chief complaint was back pain but there is no mention any head or concussion symptoms. Claimant stated that his back pain was relieved by flexeril, naproxen and Percocet, but he wanted to stop these medications because they made him sleepy. Claimant advised that he was feeling “much better” and needed a letter clearing him to “return to work at airport lifting bags and taxiing airplanes.” PA Cao reviewed the records of the imaging studies performed at NSMC on January 24. PA Cao assessed a strain of the lumbar paraspinal muscles with “Nml exam.” She released Claimant to return to work without restrictions but stated that he should wear a “brace support” in light of “heavy lifting.” PA Cao discontinued Percocet, continued Claimant’s other medications and recommended one or two sessions of physical therapy to teach “preventative exercises.”

FINDINGS OF FACT REGARDING COMPENSABILITY

36. Claimant proved it is more probably true than not that on November 29, 2015 he sustained a low back strain arising out of and in the course of and proximately caused by his employment as a ground operations worker for the Employer's airline.

37. Claimant credibly testified that on November 29, 2015 he and Petras were lifting a passenger from a wheelchair to an "aisle chair" when Claimant felt a "strain" in his low back. Claimant credibly testified that he requested medical treatment for the back injury and was referred to Concentra for treatment.

38. Claimant's testimony that he felt this strain is consistent with the fact that he reported it to Petras within at least 30 to 45 minutes of its occurrence and to Lester within approximately one hour of the occurrence. The ALJ recognizes that the testimonies of Claimant and Petras differ as to whether Claimant reported the injury contemporaneous with its occurrence, but the ALJ does not place great weight on this discrepancy. It is clear from the testimony of Lester and Petras that Claimant's alleged injury occurred during a busy time and Petras may not have recognized Claimant's statements (whatever their precise content) to be a report of injury. In any event, the credible and persuasive evidence establishes that Claimant timely reported the injury to his Employer before he left work late in the shift on November 29, 2015.

39. Claimant's testimony that he sustained a low back injury is generally corroborated by the contemporaneous medical records. When Dr. Strain examined Claimant on November 30, 2015 he gave a history of injuring his back while lifting a passenger out of a wheelchair. Not only did Dr. Strain note subjective complaints of tenderness, she also recorded that she "palpated" the lumbar spine and detected "left-sided muscle spasms." Dr. Strain credibly and persuasively opined that Claimant's history and reported mechanism of injury were consistent with the symptoms and PE.

40. Dr. Strain was not the only medical provider to detect lumbar muscle spasms shortly after the alleged injury. On November 30, 2015 and December 4, 2015 Claimant's physical therapists reported "increased muscle tone" of the lumbar paraspinal muscles. On December 8, 2015 PA-C Missey noted "right-sided muscle spasms" of the right lumbar paraspinal muscles. On December 14, 2015 and December 24, 2015 Dr. Sobanski noted "bilateral muscle spasms" when she palpated Claimant's lumbar spine. Dr. Cava reported bilateral muscle spasms when she examined Claimant's back on January 21, 2016, but not when Dr. Cava re-examined Claimant on March 17, 2016. Based on this medical evidence the ALJ finds that for approximately 2 months after the injury Claimant exhibited objective findings of lumbar muscle spasm that were noted by several qualified medical providers.

41. The ALJ finds there is no credible or persuasive evidence that the Claimant's back symptoms commencing November 29, 2015 were caused by a pre-existing condition or a prior injury. In this regard the ALJ notes that no physician has credibly opined that the Claimant's symptoms of back pain and muscle spasm were caused by some pre-existing degenerative condition. Indeed, the lumbar MRI taken on

December 22, 2015 was reportedly "normal." While there is evidence that Claimant sustained a back injury in the January 2015 MVA, there is no indication that after January 26, 2015 Claimant sought or received any kind of treatment for his low back until he was seen by Dr. Strain on November 29. Rather the evidence is that on January 26, 2015 PA Cao released Claimant to return to regular employment knowing that the employment required "heavy lifting." The ALJ infers from this evidence that there is a persuasive temporal relationship between the onset of Claimant's low back symptoms and the events of November 29, 2015.

42. The ALJ is not persuaded by Respondents' contention that Claimant's testimony should be found incredible because he failed to disclose the January 2015 back injury to the insurance adjuster (Williams), in his answers to interrogatories and to doctors Strain and Aschberger. Although it is clear from the TFD, NSMC and Clinica records that Claimant in fact sustained a back injury as a result of the January 2015 MVA, there is no credible or persuasive evidence that this back injury caused any prolonged symptoms and/or interfered with Claimant's ability to return to his regular job. Thus, the ALJ infers that the January 2015 back injury was not of much significance to Claimant and would not necessarily be recalled nearly a year later. Moreover, when Claimant answered interrogatories he disclosed the January 2015 MVA and that he was treated for the MVA at NSMC. The ALJ finds it improbable that if the Claimant were deliberately trying to conceal the January 2015 back injury from Respondents that he would have disclosed in answers to interrogatories the identity of a provider (NSMC) that possessed specific documentation of the back injury. Moreover, the ALJ declines to discredit Claimant's testimony that he does not recall the back injury because he sustained a concussion and consequent impaired memory from the January 2015 MVA. The ALJ notes that both the TPD records and the NSMC records document that Claimant's appeared to be somewhat impaired after the accident and during his treatment. The TPD documents note that Claimant's "affect" was abnormal and that a relative noticed he was answering questions slowly. At NSMC Dr. Morley specifically documented that during treatment Claimant "became slightly combative and anxious and repeating self – confused." Dr. Morley's "primary" impression was a "concussion" and lumbar strain was merely a "secondary" impression.

43. The ALJ is not persuaded by Respondents' contention that Claimant's testimony should be found incredible because Petras "disciplined" Claimant early in the shift and/or because Lester "extended" Claimant's shift. The ALJ infers that Respondents are contending that Claimant falsely reported the back injury in retaliation for the actions of Petras and Lester. However, the ALJ notes that there is no credible or persuasive evidence that Petras imposed or threatened to impose any kind of significant discipline on Claimant as a result of the issues that she discussed with him. Moreover, Lester credibly testified that the Employer had a contractual right to extend Claimant's shift and that such extensions had occurred in the past based on operational needs. In these circumstances the ALJ is not persuaded that the actions of Petras and Lester were sufficiently offensive to Claimant that they prompted him to make a false report of injury.

FINDINGS REGARDING AVERAGE WEEKLY WAGE

44. At hearing the parties agreed that based on Claimant's earnings during the 90 days prior to the date of injury Claimant's average weekly wage (AWW) would be $412.34. The parties further agreed that based on Claimant's earnings during the year prior to the date of injury Claimant's AWW would be $454.51. The parties disagreed as to which period of time should be used to calculate Claimant's AWW.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), §§8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A Workers' Compensation case is decided on its merits. Section 8-43-201(1). The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions.

COMPENSABILITY

Claimant contends that he proved it is more probably true than not that on November 29, 2015 he sustained a compensable injury that was proximately caused by the performance of service arising out of and in the course of his employment as a ground operations worker. Respondents contend that Claimant's testimony concerning the alleged injury is not credible. The respondents also assert that if there was an incident on November 29 Claimant failed to prove the incident caused a "compensable" injury.

The Claimant was required to prove by a preponderance of the evidence that at the time of the alleged injury he was performing service arising out of and in the course of the employment, and that the alleged injury was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arising out of" element is narrower and requires claimant to show a causal connection between the employment and the injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. *See Triad Painting Co. v. Blair*, *supra.* The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

The Act creates a distinction between an “accident” and an “injury.” The term “accident” refers to an “unexpected, unusual, or undesigned occurrence.” Section 8-40-201(1), C.R.S. In contrast, an “injury” contemplates the physical or emotional trauma caused by an “accident.” An “accident” is the cause and an “injury” is the result. No benefits flow to the victim of an industrial accident unless the accident causes a compensable “injury.” A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.,* W.C. No. 4-650-711 (ICAO February 15, 2007).

As determined in Findings of Fact 36 through 43, Claimant proved it is more probably true than not that on November 29, 2015 he sustained a low back strain arising out of and in the course of his employment and proximately caused by the employment. Claimant credibly testified that on November 29 he sustained a low back strain while lifting a passenger from a wheelchair to an “aisle chair.” Claimant’s testimony that he sustained a back injury is supported by the credible and persuasive opinion of Dr. Strain that Claimant’s history and reported mechanism of injury were consistent with his symptoms and PE. Claimant’s testimony is also corroborated by the lack of credible evidence showing that Claimant sought any medical treatment for back complaints between January 26, 2015 and November 30, 2015, and the medical records showing that after November 29 multiple medical providers assessed back strain and noted muscle spasms on palpation of the lumbar spine. Insofar as Respondents argue Claimant’s testimony is not credible, the ALJ disagrees for the reasons stated in Findings of Fact 42 and 43.

Respondents argue that even if there was an “incident” on November 29, 2016 Claimant failed to prove that the incident caused a “compensable injury.” In support of this proposition Respondents rely on Dr. Burris’s report stating that Claimant’s workup had been negative and “his examination is benign with no objective findings.” In the first place, the ALJ does not understand Dr. Burris to have opined that Claimant did not sustain a back strain as diagnosed by Dr. Strain, PA-C Missey and Dr. Sobanski and Dr. Aschberger. Rather, the ALJ understands that Dr. Burris opined that Claimant’s workup, including the MRI, did not reveal any structural injury and that there were no objective findings when Dr. Burris examined Claimant on April 1, 2016. Dr. Burris did not state that Claimant never exhibited any objective signs of injury or that Claimant had never sustained any injury. In any event, Dr. Strain credibly opined that Claimant sustained a back strain and credibly and persuasively prescribed treatment for that condition. Based on Dr. Strain's credible opinions the record establishes that the November 29, 2015 injury caused a need for medical treatment and is therefore "compensable."

Moreover, the Respondents stipulated at hearing that if the claim is found compensable then Claimant is entitled to temporary total and/or temporary partial disability benefits, with the amount to be determined, from December 1, 2015 through January 31, 2016. (Finding of Fact 3). The ALJ concludes that this stipulation amounts to an admission by Respondents that the Claimant's injury caused temporary disability and rendered the injury "compensable."

AVERAGE WEEKLY WAGE

Section 8-42-102(2), C.R.S., requires the ALJ to calculate the claimant's AWW based on the earnings at the time of injury as measured by the claimant's monthly, weekly, daily, hourly or other earnings. This section establishes the so-called "default" method for calculating the AWW. However, if for any reason the ALJ determines the default method will not fairly calculate the AWW § 8-42-102(3), C.R.S., affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. Section 8-42-102(3) establishes the so-called "discretionary exception." *Benchmark/Elite, Inc. v. Simpson,* 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra.*

The ALJ concludes that Claimant's AWW is most fairly determined based on his earnings for the entire year prior to the date of injury. As established by Lester's testimony, the length of Claimant's shifts and his earnings vary based on the "operational needs" of the Employer. Indeed, the Employer has negotiated for the right to extend the hours of employees based on operational considerations. As a result, Claimant may be required to work extra hours on some days and may leave early on others.

In these circumstances the ALJ concludes that fairness requires that the ALJ consider as many weeks of earnings as possible when determining the Claimant's AWW. Moreover, Respondents have not posed any persuasive argument why Claimant's AWW is best determined by limiting consideration of Claimant's earnings to the 90-day period immediately prior to November 29, 2015. Indeed, the ALJ concludes that limiting consideration to the wages Claimant earned in the 90 days prior to November 29 runs a risk of skewing the AWW by failing to consider seasonal variations in the Employer's demand for Claimant's services. Conversely, consideration of Claimant's entire year of earnings avoids or limits the risk of seasonal variations.

The ALJ determines that Claimant's AWW is $454.51.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the ALJ enters the following order:

1. Insurer shall pay claimant interest at the rate of 8% per annum on compensation benefits not paid when due.

2. On November 29, 2015 Claimant sustained a compensable injury arising out of and in the course of his employment.

3. Based on the parties' stipulation, Claimant is entitled to temporary total and/or temporary partial disability benefits for the period December 1, 2015 through January 31, 2016. The exact amount of these benefits remains to be determined.

4. Issues not resolved by this order are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether the claimant has proven entitlement to permanent total disability (PTD) benefits by a preponderance of the evidence.

2. Whether the claimant has proven entitlement to disfigurement benefits by a preponderance of the evidence.

FINDINGS OF FACT

1. The claimant is a 51 year-old woman who was employed with the respondent-employer at the time of her July 8, 2009 industrial injury.

2. The claimant had worked for the respondent-employer for more than thirteen years, and on July 8, 2009 the claimant's position entailed that she operate heavy machinery, specifically the claimant operated "triples," which are large forklifts designed to transport large amounts of freight at once. The claimant sustained a compensable injury to her left knee and shoulder on July 8, 2009 when the triple the claimant was driving struck a row of pallets.

3. The claimant underwent a left knee patellofemoral joint replacement on September 28, 2009 with Dr. Matthew P. Simonich.

4. The claimant returned to Dr. Simonich on February 8, 2010. He interpreted a post-surgery-MRI of the knee as being in excellent position with no evidence of loosening. However, this later proved to be in error, requiring revision surgery.

5. The claimant was seen for a Division IME (DIME) with Dr. Gregory Reichhardt on February 3, 2010. Dr. Reichhardt concluded that the claimant's left knee pain and left shoulder pain were related to her accident of July 8, 2009. Dr. Reichhardt did not find evidence of Complex Regional Pain Syndrome (CRPS). He did note a bone scan or stress thermogram would be reasonable, as well as a psychological evaluation. He opined that the claimant was not at MMI, but did provide a provisional rating of 3%

upper extremity for the shoulder and 16% for the knee. He recommended physical therapy for the left shoulder and evaluation with a pain psychologist.

6. The claimant underwent an EMG of the lower extremities which was interpreted to be normal by Dr. Sunku, a neurologist on March 15, 2010.

7. The claimant began treatment with Dr. Melody Denham on September 8, 2010, who ultimately diagnosed her with CRPS.

8. The claimant was evaluated by Dr. John Ogrodnick on September 12, 2012. She reported to Dr. Ogrodnick that she had “incredible pain” rated at 15/10 intensity while seated at rest. The claimant also complained that blue jeans rubbing against her knee was painful.

9. The claimant underwent a revision surgery to the left knee on July 24, 2012 and again on November 8, 2012.

10. The claimant underwent an MRI of the left shoulder which did not show any evidence of a rotator cuff tear, but instead showed mild bursitis and tendinosis with a degenerative cyst.

11. The claimant was seen by Annette Long, Ph.D. on November 12, 2012. The claimant underwent an MMPI, the results of which showed that she “presented with constant physical symptoms without adequate physical pathology.” However, Dr. Long opined that because the claimant had CRPS, her symptoms had an organic etiology rather than an emotional cause or other reason, thereby militating against the resulting profile of the MMPI.

12. The claimant returned to Dr. Reichhardt for a follow-up Division IME on February 13, 2013. Dr. Reichhardt noted the claimant had an EMG after his initial Division IME, which was normal.

13. The claimant returned again to Dr. Reichhardt on May 29, 2013. He opined that it is not medically probable that the claimant had a diagnosis of CRPS.

14. Dr. Reichhardt noted the psychological evaluation of Dr. Long and the results of the MMPI in her November 16, 2012 report. Dr. Reichhardt specifically noted that “contrary to Dr. Long’s assertion that a diagnosis of CRPS has been established, the diagnosis of CRPS has not been established.”

15. Dr. Reichhardt also noted that the claimant continued to take opioids contrary to the provisions of the Medical Treatment Guidelines.

16. Dr. Reichhardt opined the claimant was not at MMI pending his review of additional records regarding her knee surgery and psychological evaluation.

17. The claimant returned again to Dr. Reichhardt on October 2, 2013. The claimant reported to Dr. Reichhardt that:

- it was “impossible” to stand on her left leg.
- worst pain level of “15+”
- used to hunt and ride horses but “all that is gone now”
- inability to stand on leg for more than one minute without increasing pain
- gave up travel activity due to pain
- has to use a wheel chair for any public events

18. Dr. Reichhardt noted the August 21, 2013 evaluation of Dr. Jorge Klajnbart, wherein he noted that although the claimant was sensitive to light touch in her thigh, she is able to wear pants over the skin in the area, and is able to touch her own thigh without difficulty. Dr. Klajnbart also noted no atrophy in the lower extremity and that the claimant’s “vise-grip” sensation is quite subjective and out of proportion to physical findings to document, 15+ pain on a scale of 0-10.

19. Dr. Reichhardt concluded in his examination that there was no atrophy of her left lower extremity. Upon testing for range of motion of her shoulder and left knee, he noted he had concerns about whether the claimant was providing full effort on her examination, as he was unable to find a medically probable explanation for her presentation. Dr. Reichhardt issued a scheduled impairment rating for the left knee (39%), left shoulder (7%), and a mental impairment (6%). Dr. Reichhardt did not find that the claimant had CRPS.

20. The respondent filed a final admission of liability on December 3, 2013, after issuance of Dr. Reichhardt’s report. The claimant timely objected and filed an application for hearing.

21. The claimant presented to OTR Resources (Doris Shriver) at her attorney’s request on February 27, 2014.

22. Ms. Shriver concluded:

> The injuries that [the claimant] sustained on July 8, 2009 have eliminated work in the fork lift driving and home care fields, her work for 17 to 20 years. Any work requiring left upper extremity reaching, handling and fingering would be prohibitive for her due to pain.

> She cannot fully bear weight on her left leg. Her gross motor skills are ion the <0.1st percentile for workers, a score that mostly relates to endurance for work. She has emotional/behavioral challenges that would be evident to coworkers, supervisors and the general public. Workers traits are overall at the 2nd percentile compared to other workers or well below the expected level to earn any wage. When her current functional limitations are considered, [the claimant] is technically not capable of handling the mental and physical demands of a production pace for a full workday doing any work.
>
> At this time, [the claimant] is unfortunately not a good candidate for vocational rehabilitation. Her chronic pain levels and poor tolerance for activity make it impossible for her to engage in the vocational rehabilitation process.

23. The claimant testified at hearing that she experiences up to level “18-20” pain in her leg. She testified that “any pressure, even the slightest touch” to her knee causes an increase in pain. The claimant testified that jeans on her leg cause her “excruciating” pain. The claimant testified that just wearing her pants (not jeans) in the hearing room during her testimony caused her pain. The claimant also testified that sitting in a chair in court was more difficult for her than riding a horse. She further testified her pain simply sitting in court was a “13 out of 10”.

24. In September 2013, less than one month prior to the claimant’s evaluation with Dr. Reichhardt on October 2, 2013, the claimant traveled to Wyoming from Pueblo Colorado for a hunting trip. The claimant was photographed after having successfully taken an antelope. Despite the claimant’s allegation that any pressure caused increased pain her leg, and representation to Ms. Shriver that she only wears slip on shoes and cannot knee or use her left arm, she is photographed holding up the head of a pronghorn, resting on her left knee, smiling broadly for the photograph, and wearing hunting boots, not slip-ons. The claimant testified at hearing that she was “miserable” at the time the photograph was taken in.

25. Surveillance footage was admitted into evidence at the hearing. The surveillance taken on January 22, 2014 shows the claimant wearing jeans, cowboy boots and not using a cane while walking on uneven ground, as well as carrying material in both hands and bending.

26. Surveillance footage was admitted into evidence at hearing from March 18, 2014. The footage shows the claimant walking in what appears to be a barn area, with no cane. She is observed getting in and out of her vehicle without assistance and driving her vehicle even though her husband is with her and capable of driving instead. She is observed helping lift a piece of plywood and does not use a cane. She wears blue jeans and cowboy boots, swings her left arm above her head to put on a coat, and

closes the tail-gate of a pickup truck. She also uses her left hand to reach behind her to grab the seatbelt and laughs and smiles while driving with her husband riding in the passenger seat.

27. The claimant relies upon the opinions of Annette Long, Ph.D. in support of her claim for PTD. Ms. Long is a psychologist. She noted that the claimant tested within the normal range for intelligence. Dr. Long diagnosed the claimant with a mood disorder and opined that she did not believe the claimant was malingering.

28. The ALJ has weighed the testimony of Dr. Long and finds that the persuasiveness of her testimony is buttressed by her agreement with Dr. Reichhardt's analysis of the claimant's psychological condition. While Dr. Long's analyses were premised upon a diagnosis of CRPS, with which Dr. Reichhardt disagrees, the fundamental issue is that the claimant does experience consistent pain as a result of her industrial injury, regardless of how that pain is labeled.

29. Dr. Mann has been a treating physician for the claimant prior to her injury which is the subject of this claim and is an ATP in this matter. He testified regarding his records and treatment of the claimant. He opined regarding the claimant's restrictions, including documents he completed in 2011 for submission to the Social Security Administration (SSA) in support of the claimant's application for Social Security Disability (SSDI). He confirmed that the basis for his assignment of limitations was that the claimant had severe CRPS. He further noted that he issued restrictions for her in conjunction with her Social Security application based on the claimant's subjective report and without any physical exam of the shoulder.

30. The ALJ finds Dr. Mann's ultimate conclusions to be based upon the claimant's consistent pain complaints regardless of the nomenclature used to describe those pain complaints.

31. Dr. Mann testified that his understanding of the claimant's activity level and pain was based on her subjective report and what was memorialized in the reports of other physicians about the claimant's reports of pain and that his opinion is not complete without having an opportunity to review video surveillance of the claimant and photographs documenting her actual activities.

32. Dr. Mann testified that he would have to take into account the video and photographic evidence of the claimant's activities to ultimately determine if her complaints of pain were accurate.

33. Dr. Denham testified by deposition and live at hearing. Dr. Denham testified that the claimant's diagnosis was chronic pain from CRPS. She opined that the claimant actually had more severe limitations than indicated by Dr. Mann in his February 10, 2011 questionnaire submitted in connection with the claimant's application for Social Security benefits. Dr. Denham also endorsed the restrictions set forth in the report of Ms. Shriver.

34. Dr. Denham testified at hearing that the medications she has been prescribing for the claimant are appropriate, and she disagreed with any opinion to the contrary, including that of Dr. D'Angelo, who did not have Dr. Denham's "expertise."

35. The ALJ finds that Dr. Denham's testimony is credible and persuasive. Here again, the ALJ finds Dr. Denham's ultimate conclusions to be based upon the claimant's consistent pain complaints regardless of the nomenclature used to describe those pain complaints.

36. Dr. Kleinman testified as an expert in both psychology and forensic psychiatry. Dr. Kleinman was present for the claimant's hearing testimony, including the review of the video and photographic evidence submitted in the matter. He opined that the claimant has no limitations from a mental health perspective that would prevent her from working.

37. Dr. Kleinman opined that based on the evidence of the claimant's actual level of functioning, she was misrepresenting her capabilities. He noted that contrary to her represented capabilities, she is able to feed and work around horses with no cane, can be in a parade holding a flag with her left arm, and drives even when her husband is with her. Further, Dr. Kleinman noted that even if the claimant is taking the medications recommended by Dr. Denham, the objective evidence shows that she is capable of functioning. Further, he noted that she demonstrated no cognitive impairment, no difficulty remembering dates, was detailed and coherent, knew placement and had no evidence of cognitive impairment in her detailed court testimony.

38. Dr. Kleinman opined that he believed the claimant was consciously misrepresenting her symptoms. The ALJ does not find Dr. Kleinman's analyses and opinions credible or persuasive.

39. The ALJ has considered the totality of the evidence and finds to the extent that the claimant asserts that her medication regimen is hampering her functional/cognitive ability, the ALJ finds this is a work-related consequence of her injury since she does have chronic pain directly related to the industrial injury.

40. Katie Montoya was accepted by the court as an expert in vocational evaluation and assessment. She completed a vocational assessment on March 20, 2014 and issued a report on that date and an addendum on July 16, 2014. She testified that her assessment consisted of meeting with the claimant, reviewing records, completing vocational research and formulating her opinion. She also testified that she had reviewed the video and photographic evidence introduced at hearing in the matter. She testified that after completing her evaluation, it was her opinion that the claimant was capable of working in the relevant labor market. Ms. Montoya based her opinion on the claimant being limited to first Sedentary and later Light work per the opinion of Dr. D'Angelo.

41. The ALJ finds Ms. Shriver's analyses and opinions to be more credible and persuasive than that of Ms. Montoya.

42. The ALJ has also considered the lay witness testimony presented by the claimant apart from the claimant herself. This includes the testimony of the claimant's sister, daughter, husband, Debra Griggs, and Raymond DeViase. The ALJ has weighed the testimony of these witnesses, and finds the testimony is credible and persuasive.

43. The claimant is currently 51 years of age with a GED in 1985. Her employment background reveals that she has always done manual labor involving the ability to ambulate and lift heavy weights. The claimant's past relevant work is that of a housekeeper; personal care assistant; and warehouseman. Furthermore the claimant testified that she cared for an adult foster child for over 20 years who had the intellect of an 18 month old and due to her inability to lift and transfer this individual had to give her up. This was another emotional blow following from the claimant's injury that sent her into a deeper depression.

44. The ALJ finds that the claimant is credible with respect to the portions of her testimony and her presentations to physicians relevant to the finding of her inability to earn wages.

45. The ALJ has considered the evidence and finds the opinions of Drs. Long, Denham, Mann and Ms. Shriver to be more persuasive than the opinions of Drs. D'Angelo, Kleinman and Ms. Montoya. The great weight of the evidence indicates that the claimant is permanently incapable of earning a wage in her previous or other employment. The claimant's demonstrated activities through the video and photographs after her date of injury as observed by the ALJ does not persuasively discredit the claimant's premise that she is permanently and totally disabled pursuant to the Workers' Compensation Act of Colorado.

46. The ALJ finds, based upon a totality of the evidence, that the claimant has established that it is more likely than not that she cannot earn any wages at her former or other employment, and is thus, permanently and totally disabled.

47. The ALJ finds that as a result of her July 8, 2009 work injury, the claimant has a visible disfigurement to the body consisting of a surgical scar traveling vertically over the kneecap approximately 12 inches in length and three-quarters of an inch in width at its widest; the scar is discolored when compared to the surrounding tissue. The claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view, which entitles the claimant to additional compensation.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. § 8-40-102(1), C.R.S.

2. A claimant in a workers' compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004).

3. The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. § 8-43-201, C.R.S. A workers' compensation case is decided on its merits. § 8-43-201, C.R.S.

4. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. Indus. Claims Appeals Office,* 5 P.3d 385, 389 (Colo. App. 2000).

5. When determining credibility, the ALJ should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (1936).

6. In resolving inconsistencies the ALJ may credit all, part or none of an expert's testimony, and the ALJ's failure to cite an expert's opinion inherently reflects that the ALJ did not find it persuasive. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968); *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

7. It is within the ALJ's purview as the finder of fact to determine the credibility of the witnesses and resolve conflicts in the evidence. *Metro Moving & Storage v. Gussert*, 914 P.2d 411 (Colo. App 1995).

8. Permanent total disability is defined as the inability to earn "any wages in the same or other employment*." § 8-40-201(16.5) (a), C.R.S.; Christie v. Coors Transportation Co., 933 P.2d 1330 (Colo. 1997).* Under this statute, a claimant is not permanently and totally disabled if she is able to earn some wages in modified, sedentary, or part-time employment. *McKinney v. Indus. Claim Appeals Office, 894 P.2d 42 (Colo. App. 1995).* The claimant carries the burden of proof to establish permanent total disability by a preponderance of the evidence. The question of whether the claimant has proven permanent total disability is a question of fact for resolution by the ALJ. *Id.*

9. A claimant is required to prove a direct causal relationship between the industrial injury and the resulting permanent total disability, which necessitates a determination of the nature and extent of his residual impairment from the industrial injury. *Joslin Dry Goods Co. v. Indus. Claims Appeals Office, 21 P.3d 866 (Colo. App. 2001); Seifried v. Indus. Comm'n, 736 P.2d 1262 (Colo. App. 1986*).

10. In determining whether the claimant is unable to earn any wages, the ALJ may consider a number of "human factors." *Christie*, 933 P.2d 1330. These factors include the claimant's physical condition, mental ability, age, employment history, education and the "availability of work" the claimant can perform. *Weld County School District RE-12 v. Bymer*, 955 P.2d 550 (Colo. 1998). Another human factor is the claimant's ability to obtain and maintain employment within his physical abilities. *See Professional Fire Protection, Inc. v. Long*, 867 P.2d 175 (Colo. App. 1993). This is because the ability to earn wages inherently includes consideration of whether the claimant is capable of getting hired and sustaining employment. *See Christie,* 933 P.2d 1330; *Cotton v. Econ. Lub-N-Tune*, W.C. No. 4-220-395 (I.C.A.O., Jan. 16, 1997), *aff'd Econ. Lub-N-Tune v. Cotton*, No. 97CA0193, (Colo. App. July 17, 1997). The test for determining the "availability of work" is whether employment exists "that is reasonably available to claimant under his or her particular circumstances." *Christie,* 933 P.2d 1330*; Bymer*, 955 P.2d 550.

11. The overall objective of this standard is to determine whether, in view of all the other factors, employment is “reasonably available to the claimant under his or her particular circumstances.” *Bymer*, 955 P.2d 550. In order for an industrial injury to be the cause of permanent total disability, the injury must be “significant” in the sense that there is a direct causal relationship between the participating event and the resulting disability. *Seifreid*, 736 P.2d 1262.

12. The respondents are not required to prove the existence of a particular job, which a particular employer has made available to the claimant. *James V. Wetherfred, Affirmed v. Indus. Claim Appeals Office,* No. 96CA0275 (Colo. App. Sept. 5, 1996) (not selected for publication).

13. The ALJ has credited as persuasive the testimony of the claimant regarding her physical and cognitive impairments. As found, the persuasiveness of the claimant’s hearing testimony and reports of subjective symptoms and limitations to medical providers and vocational experts is buttressed by the totality of the evidence*.*

14. As found, Ms. Shriver’s conclusions regarding the claimant’s employability are credible and persuasive.

15. As found, the opinions of Drs. Long, Denham, Mann are credible and persuasive.

16. Ms. Montoya’s opinions identified several positions within claimant’s labor market which Ms. Montoya states are within the claimant’s permanent restrictions. The ALJ rejects these positions as not being “reasonably available to claimant under his or her particular circumstances.” *Christie,* 933 P.2d 1330*; Bymer*, 955 P.2d 550.

17. As stated above, the determination of permanent total disability benefits is based on the claimant’s physical condition, age, employment history, education and availability of work. *Christie*, 933 P.2d at 1330; *Weld County School District RE-12 v. Bymer*, 955 P.2d 550 (Colo. 1998). Using these factors, as found above, the ALJ concludes that the claimant is not capable of earning a wage in her former or other employment.

18. The totality of the evidence, as found by the ALJ, supports that the claimant has established by a preponderance of the evidence, that she is permanently totally disabled. *McKinney v. Indus. Claim Appeals Office, 894 P.2d 42 (Colo. App. 1995).*

19. The ALJ concludes that as a result of her July 8, 2009 work injury, the claimant has a visible disfigurement to the body as found above. The ALJ concludes that the claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view, which entitles the claimant to additional compensation. Section 8-42-108 (1), C.R.S. The ALJ concludes that the claimant is entitled to a disfigurement award of $1,200.00 as a result of that disfigurement.

ORDER

It is therefore ordered that:

1. The respondent shall pay the claimant permanent total disability benefits commencing on September 11, 2013, the date of MMI, subject to any applicable credits and offsets.

2. The respondent shall pay the claimant $1,200.00 for disfigurement. The respondent shall be given credit for any amount previously paid for disfigurement in connection with this claim.

3. The respondent shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

Whether the claimant's total right hip arthroplasty as recommended by Dr. Brian White is reasonable, necessary, and related to the claimant's industrial injury of June 14, 2014.

FINDINGS OF FACT

1. This is an admitted claim wherein the claimant suffered injuries to his right shoulder, neck, and hip as the result of a slip and fall on June 14, 2014.

2. On June 14, 2014 the claimant slipped on slick concrete flooring in the respondent-employer's store, landing on his right side. He fell mostly onto his right hip and right shoulder. The claimant felt right hip and right shoulder pain.

3. The claimant was seen at the emergency room at Pikes Peak Regional Hospital that same day. X-rays were performed on the claimant's right hip which revealed a "well corticated osseus fragment along the superior aspect of the acetabulum." The interpreting physician noted that the rim fracture was "well-corticated and . . . likely chronic." He noted there was no acute fracture.

4. The claimant saw Dr. Michael Huang on July 21, 2014 for a surgical consultation. Dr. Huang ordered X-rays and MRIs of the claimant's right shoulder and right hip. With regard to the hip, Dr. Huang noted that the claimant had a superior labral cyst associated with a tear. He indicated that the tear would heal on its own. The ALJ infers that this means the tear was acute and directly related to his industrial injury. Dr. Huang discussed possible surgical treatment of the claimant's hip conditions in order to reduce the claimant's pain. Specifically, he discussed possible hip joint debridement and repair as well as surgery to address the claimant's cam lesion.

5. The claimant underwent arthroscopic shoulder surgery with Dr. Huang on October 16, 2014.

6. The claimant underwent right hip surgery on January 28, 2015. The claimant's January 28, 2015 arthroscopic hip surgery consisted of smoothing out the frayed area of the labrum, removal of a cyst next to the frayed labrum, and removal of

some of the boney degenerative changes in the hip bones.

7. The claimant followed up initially with Dr. Huang about a week later. The first hip surgery helped the claimant's pain for a little while. However, about two months after the surgery, the claimant saw Dr. Huang again and complained of tension and soreness in his hip. The claimant repeated his concerns to Dr. Huang one month after that. Following the hip surgery, the claimant observed that at first things seemed "OK" and he was slowly improving. But after a short period of time, the pain in his right hip joint began to return. His hip was very tender and when he would walk, he would feel a sharp pain in his hip and groin area. His hip pain has increasingly worsened since that time and he has never gotten his strength back. If he sits for long periods of time, his pain worsens. The claimant testified that told his physical therapist when his pain began to return. He also told Dr. Huang when his pain returned and he thought that Dr. Huang spoke with the physical therapist and changed his physical therapy protocol.

8. On January 30, 2015, the respondent-insurer filed an Amended General Admission of Liability (GAL), admitting for temporary disability benefits and medical benefits.

9. On June 22, 2015, the claimant's physical therapist noted that the claimant was at baseline with regard to his hip. The claimant denies that this was a correct assessment.

10. On October 27, 2015, the claimant presented to Dr. Albert Hattem at Concentra regarding his various injuries. The claimant complained of persistent right hip, right shoulder, and neck pain. Dr. Hattem performed a complete review of the claimant's medical history for his admitted injury. Given the claimant's poor recoveries from the hip and shoulder surgeries, Dr. Hattem recommended that the claimant not undergo cervical spine surgery. Dr. Hattem referred the claimant to Dr. Brian White for a second orthopedic opinion.

11. On December 2, 2015, the claimant saw Dr. White per Dr. Hattem's referral. Dr. White opined that another arthroscopic debridement would not likely succeed in improving the claimant's pain. Instead, Dr. White recommended a total hip replacement. With regard to relatedness, Dr. White stated, "I think that this should be authorized by Workers' Compensation because he has had the original surgery authorized and it just did not work."

12. On December 20, 2015, the claimant underwent cervical spine surgery to a C7 herniated disc in order to treat his ongoing shoulder pain.

13. In response to Dr. White's request for right hip replacement surgery, the respondent-insurer submitted the question to Dr. Marc Steinmetz for a peer review. Dr. Steinmetz, on December 24, 2015, issued his report addressing the reasonableness, relatedness, and necessity of the right hip replacement surgery. Dr. Steinmetz opined that the claimant was a poor surgical candidate for a right hip replacement. He noted that the claimant's poor responses to his prior shoulder and hip surgeries, as well as his diabetes, placed him at an increased risk of a poor outcome. Dr. Steinmetz also felt that the claimant's labral tear in his hip was a chronic, degenerative tear that predated the claimant's admitted injury.

14. The parties conducted a pre-hearing evidentiary deposition of Dr. Brian White, examining Dr. White with regard to his opinion as to why he believed a total hip replacement was reasonable, necessary, and related to the industrial injury. Dr. White testified at the request of the claimant. Dr. White opined that the mechanism of injury on 6/14/2014, as described by the claimant, is consistent with a labral tear injury. Dr. White agreed that the claimant probably had preexisting degeneration in his right hip but that this degenerative condition was asymptomatic prior to the fall. He explained "it makes sense to me that even if there was a preexisting condition to some degree, in other words if the labral tear, if it was asymptomatic before the fall and became symptomatic after the fall, then the fall has something to do with where he was functioning".

15. When asked whether it is common to see asymptomatic degenerative labral conditions in individuals who then have a trauma and are thereafter symptomatic, he stated "yes, we do see injuries that create asymptomatic hips-or symptomatic hips from something that was asymptomatic." He also opined that it is not unusual to see labral tears which are asymptomatic and don't cause the individual any problems. He further testified that evidence of a loose body consistent with an acetabular rim fracture also supports his theory that the claimant's preexisting condition was aggravated by the fall at work. He also testified that it is possible that the rim fracture was a result of the fall on June 14, 2014. He opined that if there is a piece of loose body floating in the hip joint (such as from an acetabular rim fracture), it is likely that loose body will cause pain because it is very destructive and can damage the joint more significantly than if it were not present.

16. Dr. White also opined that he would not recommend another revision hip scope on the claimant because the chances of it being successful are very slim. He testified that a revision hip scope is a "massive waste of money." Dr. White disagreed with Dr. Marc Steinmetz, the respondents' IME physician, on many issues. When asked whether he felt the claimant simply contused and sprained/strained his hip, he testified

that “a contusion and sprain wraps up in about two, three, four weeks. Usually doesn’t last beyond that.” He opined that what happened to the claimant’s hip was something greater than simply a strain or sprain.

17. When questioned about Dr. Steinmetz’ opinion that the labral tear was chronic and preexisting, Dr. White opined that the MRI did show that the labral tear was somewhat chronic, which was to be expected. He further stated that “even if the labral tissue appeared degenerative and appeared as though it is chronic....we don’t really have the ability, Number 1, to prove that. And Number 2, it certainly may have been but it certainly was not symptomatic.” He based this opinion on the fact that an MRI was not done prior to the claimant’s fall, so it is impossible to know exactly what was happening in the hip joint prior to 6/14/14. He further opined that the claimant’s fall has to be implicated as one of the causes of the claimant’s hip problems because the claimant was asymptomatic before the fall and became symptomatic after the fall.

18. Dr. White explained that he disagreed with Dr. Hattem’s assessment that the claimant is not a good surgical candidate because of his preexisting diabetic condition as well as his prior poor surgical outcomes. Dr. White testified that although there is a slightly higher increased rate of infection in diabetics, it’s less than 2 or 3 percent. The claimant’s preexisting diabetes does not make surgery a bad idea for him. With regards to Dr. Hattem’s recommendation of a psychological evaluation, Dr. White opined that “it is fine” if the claimant undergoes one but he doesn’t think it will play a big role in whether or not the claimant is a good candidate for surgery.

19. Dr. White also stated that, if the fall had never happened, it is impossible to predict that the claimant’s preexisting hip degeneration would have been progressive over time to the point he would ever need a hip replacement. If this fall had never happened and the claimant’s hip remained asymptomatic, Dr. White testified that he would not have recommended a hip replacement at this time.

20. Finally, Dr. White opined that the one physical therapy note in July 2015 (which stated the claimant had returned to baseline), was not concerning because many times an individual who has undergone hip arthroscopy will have a period where they are doing pretty well and then “it all falls apart.” He had a hard time believing that when he saw the claimant in his clinic that the hip he examined was perfectly normal and perfectly back to baseline three months before.

21. The ALJ finds that Dr. White’s analyses and opinions are credible and more persuasive than medical analyses and opinions to the contrary.

22. The ALJ finds the claimant to be credible.

23. The ALJ finds that the claimant has established that it is more likely than not that the total right hip arthroplasty recommended by Dr. White is reasonable, necessary, and related to the claimant's industrial injury of June 14, 2014.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado in §8-40-101, *et seq*. C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers without the necessity of litigation. See §8-40-102(1).

2. A workers' compensation case is decided on its merits. §8-43-201(1).

3. Facts in a workers' compensation case must be interpreted neutrally neither in favor of the rights of the claimant nor in favor of the rights of the respondents. See §8-43-201, C.R.S.

4. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved: The ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. The ALJ's decision need not address every item contained in the record. See *Magnetic Engineering, Inc., v. ICAO,* 5 P. 3d 385 (Colo. App. 2000).

5. The claimant has the burden of proof to establish the right to specific medical benefits by a preponderance of the evidence. §8-43-210, C.R.S. See, *Valley Tree Service V. Jimenez,* 787 P.2d 658 (Colo. App. 1990). A preponderance of the evidence is that which leads the trier of fact after considering all of the evidence to find that a fact is more probably true than not. See *Page v. Clark,* 593 P.2d 792 (Colo. 1979).

6. When determining credibility, the fact finder should consider among other things the consistency or any inconsistencies of the witnesses testimony or actions; the reasonableness or unreasonableness (probability or improbability) of the testimony or actions; the motive of the witness; and whether the testimony has been contradicted

and the bias or prejudice of the witness. See *Prudential Insurance Co. v. Cline,* 57 P.2d 1205 (1936).

7. Whether the moving party has met its burden of proof is a question of fact for resolution by the ALJ whose determinations are to be based upon substantial evidence in the record. See *Suetrack USA v. Industrial Claims Appeals Office,* 902 P.2d 864 (Colo. App. 1995).

8. The respondent is liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Snyder v. Industrial claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis,* 899 P. 2d 362 (Colo. App. 1995). Where a claimant's entitlement to benefits is disputed, the claimant has the burden to prove a causal relationship between a work-related injury and the condition for which benefits or compensation are sought. *Snyder,* supra. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before the request benefits are awarded. §8-41-301(1)(c) C.R.S. *Faulkner v. Indus. Claim Appeals Off.,* 12 P.3d 844, 846 (Colo. App. 2000). Whether the claimant has sustained his burden is a question of fact of fact for the ALJ. *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997).

9. The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission,* 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210. 236 P.2d 293 (1951). All results flowing proximately and naturally from an industrial injury are compensable. See, *Standard Metals Corp. V. Ball,* 172 Colo. 510, 474 P.2d 622 (1970).

10. In order to prove causation, it is not necessary to establish that the industrial injury was the sole cause of the need for treatment. Rather, it is sufficient if the injury is a "significant" cause of the need for treatment in the sense that there is a direct relationship between the precipitating event and the need for treatment. A preexisting condition does not disqualify a claimant from receiving workers' compensation benefits. Rather, where the industrial injury aggravates, accelerates, or combines with a preexisting disease or infirmity to produce the need for treatment, the treatment is a compensable consequence of the industrial injury. *Joslins Dry Goods Co. v. Industrial claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001); *H and H*

Warehouse v. Vicory, 805 P.2d 1167 (Colo. App. 1990); *Seifried v. Industrial Commission,* 736 P.2d 1262 (Colo. App. 1986).

11. The ALJ concludes that the claimant is credible.

12. The ALJ concludes that the analyses and opinions of Dr. White are more credible and persuasive than analyses and opinions to the contrary.

13. The ALJ concludes that the claimant has established by a preponderance of the evidence that the total hip arthroplasty recommended by Dr. White is reasonable, necessary, and related to the claimant's industrial injury of June 14, 2104.

[The Order continues on the following page.]

ORDER

It is therefore ordered that:

1. The respondent shall authorize and pay for treatment for the claimant's total right hip arthroplasty as recommended by Dr. White.

2. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATE: June 15, 2016

2864 S. Circle, Suite 810
Colorado Springs, CO 80906

ISSUES

1. Whether the claimant has established by a preponderance of the evidence that on November 28, 2015 he suffered a compensable injury arising out of and in the course of his employment with the respondent-employer; and,

2. If so, whether the claimant has established by a preponderance of the evidence that the surgeries recommended for his shoulder and biceps conditions are reasonable, necessary, and related to the injury.

3. The parties stipulated to an AWW of $653.85, if the claim is compensable.

FINDINGS OF FACT

1. The claimant began working for the respondent-employer as a chef on April 7, 2015. His job duties as a chef for the respondent-employer consisted of many physically demanding tasks such as lifting cases of potatoes, pots full of water, and other heavy items used in a kitchen to produce large quantities of food. He had no difficulties performing these strenuous duties from the beginning of his employment through November 28, 2015.

2. The claimant testified at hearing that on November 28, 2015, at approximately 5:30 p.m., he was moving items from the prep kitchen to the walk-in freezer. He explained that the primary kitchen used for cooking is upstairs, and that the prep kitchen and walk-in freezer are downstairs.

3. As the claimant was pulling a cart loaded with food into the walk-in freezer, the cart became caught on a small step leading into the freezer, causing him to slip and lose his balance. The claimant attempted to stop his fall by sticking his arm out to grab the large rack next to him. His arm became stuck in the rack, he fell to the ground, and twisted his arm.

4. The claimant immediately felt a popping sensation in his right biceps. He testified that he has had both of his biceps repaired in the past and the sensation he experienced on November 28, 2015 was a sensation he recognized from the past injuries.

5. The claimant did not believe anybody witnessed the actual fall, but a co-worker, Mr. Sean Gore, came to his aid quickly and helped him up off of the floor. The claimant and Mr. Gore had a brief discussion about what had just happened, at which time the claimant showed his arm to Mr. Gore.

6. Mr. Gore testified at hearing regarding his recollection of the events from the evening of November 28, 2015. He had worked with the claimant for the respondent-employer from approximately October through December of 2015 as a prep cook and would interact with the claimant "all the time" at work. Mr. Gore never witnessed the claimant have any physical problems performing activities with his right arm prior to November 28, 2015.

7. Mr. Gore testified that he recalled an event at work where the claimant had fallen in a freezer. He remembered that he had just crossed paths with the claimant on his way back upstairs when he heard the claimant "scream out" as he was turning the corner. Mr. Gore turned around, proceeded back to the freezer, and noticed the door was open and the claimant was on the floor. He helped the claimant up off of the ground.

8. Mr. Gore specifically recalled asking the claimant if he was okay, to which the claimant replied, "No, my arm is hurt."

9. The claimant testified that he immediately went upstairs to tell the manager, Ms. Debbie Neugebauer, about what had just occurred. She filled out a form and instructed the claimant to go to the hospital. The claimant called his wife to come get him to take him to the hospital.

10. The claimant presented to the emergency room at St. Thomas More hospital on the evening of November 28, 2015 and was admitted at 7:18 pm. The report states, "The patient is a 55 year old male, who presents to the ED with his wife complaining of back pain, and right arm pain. He states that he was working in (sic) pulling a food cart into the walk-in freezer when the wheels got caught and he fell, landing with his back against the step and twisting his right arm." It was documented that the claimant was complaining of right arm and mid-back pain. The claimant was forthcoming about the fact that he had previously ruptured his biceps in the past and has had rotator cuff surgery.

11. Pamela Drummond, NP, documented, "Based on the patient's physical assessment, it appears that the right bicep, has torn and ruptured." She advised him to ice the area to decrease the swelling. During a triage assessment at 7:36 pm, another
