66. Dr. Roth credibly and persuasively opined claimant is now as he would have been whether or not these injuries occurred. "His pain, his need for treatment, whether or not that treatment works, is not a reflection of an injury sustained on September 5, 2012." Tr at 48-49. While the injuries may have caused pain complaints, Claimant eventually reverted back to baseline. Treatment initially directed at the complaints caused by the injury eventually transitioned to treatment of claimant's underlying degenerative arthritis.

67. The ALJ is not persuaded that Dr. Shank expressed ambiguity regarding Claimant's MMI status. To the contrary, during his deposition testimony, Dr. Shank was clear when he testified as follows:

> Well, I think if – if we're proceeding with a total knee, he is not at MMI. You know, it – upon review of the medical records, I think their goal was to get him better with a knee scope and place him at MMI. So, if he – if the treatment plan involves a knee replacement, he is not at maximum medical improvement. If workers' comp is not going to approve the knee replacement or state that it is work-

> related, then he is probably at maximum medical improvement, or was so on the October date that we dictated in the chart.

68. There was no outstanding recommendation for a right total knee arthroplasty at the time of the DIME. Consequently, the ALJ finds that Claimant was unambiguously placed at MMI by Dr. Shank during the DIME performed March 6, 2014.

69. The persuasive evidence demonstrates Claimant attained MMI on October 3, 2013; he failed to present sufficient evidence to prove he is not at MMI for either injury. Likewise, Claimant failed to prove total knee replacement surgery for either knee is reasonable, necessary or related to the respective knee injuries. Further, Claimant failed to prove conversion of his scheduled ratings to whole person awards is warranted.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. C.R.S. § 8-40-102(1). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimant nor in favor of rights of respondents. §8-43-201, C.R.S. (2005). A preponderance of the evidence is that which leaves the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

C. When determining credibility, the fact finder should consider, among other things the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline,* 57 P.2d 1205 (1936). A Workers' Compensation case is decided on its merits. Section 8-43-210, C.R.S. As found, Claimant is a credible witness and his testimony is both persuasive and consistent with the medical records in the case. Furthermore, the ALJ concludes that Dr. Fall's testimony to be contradicted by the more persuasive opinions of Drs. Larimore and Jones.

Overcoming the DIME

D. Claimant bears the burden of proof to overcome the MMI opinions of Dr. Shank by clear and convincing evidence. *Lambert & Sons, Inc. v. Indus. Claim Appeals Office*, 984 P.2d 656 (Colo. App. 1998). "Clear and convincing" evidence has been defined as evidence which demonstrates that it is "highly probable" the DIME physician's opinion is incorrect. *Qual-Med, Inc., v. Indus. Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). Whether the DIME physician properly applied the AMA Guides in determining MMI, and whether the rating was overcome by clear and convincing evidence are issues of fact for the ALJ's determination. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995.).

E. A party meets the burden of overcoming the DIME conclusion on MMI only if the party demonstrates that the evidence contradicting the DIME physician is "unmistakable and free from serious or substantial doubt." *Leming v. Indus. Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). The instant case involves complex questions concerning medico-legal causation. Clamant has received extensive treatment, including surgical intervention and has been evaluated by multiple providers who have expressed various opinions regarding his appropriateness for additional surgery. Nonetheless, the evidentiary record supports the conclusion that following his treatment, Claimant was placed at MMI and provided a rating for both injuries. Knee replacement surgery was reviewed, but not recommended, before his treating provider declared Claimant at MMI. The evidentiary record also supports the conclusion that after Claimant was placed at MMI, the determination of MMI was challenged through the DIME process. The DIME considered MMI and the causal relationship of a total left knee replacement to the September 5, 2012 injury and could not support relating any need for a total knee replacement to that injury. The DIME considered the opinion of Dr. Duffy and did not change his opinion. To the extent that Dr. Duffy's opinions concerning MMI diverge from those expressed by Dr. Shank, the ALJ concludes those discrepancies constitute a professional difference of opinion. A mere difference of opinion between physicians fails to constitute error. *See Gonzales v. Browning Farris Indust. of Colorado*, W.C. No. 4-350-356 (ICAO March 22, 2000). Consequently, Claimant has failed to prove that it is highly probable that Dr. Shank was highly probably incorrect when he placed Claimant at MMI for both knee injuries involved in these consolidated cases.

F. Claimant's request for medical benefits in the form of a total knee arthroplasty for either the right or left knee is denied and dismissed. Claimant bears the burden of establishing entitlement to medical treatment. *See Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997); *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). Once a claimant has established a compensable work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable and necessary medical care to cure and relieve the effects of the work injury. *Section 8-42-101, C.R.S.*; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo.App. 1990).

G. However, a claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his/her need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949). Ongoing benefits may be denied if the current and ongoing need for medical treatment or disability is not proximately caused by an injury arising out of and in the course of the employment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). In other words, the mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability were caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those that flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970). Based upon the evidence presented, the ALJ credits the opinions of Dr. Roth to conclude that Claimant's immediate need for a left total knee replacement, as well as any future right knee replacement procedure is, more probably than not, related to an underlying progressive degenerative osteoarthritis of his knees.

H. Claimant's request for conversion of his scheduled lower extremity impairment to impairment of the whole person is denied and dismissed. When a claimant's injury is listed on the schedule of disabilities, the award for that injury is limited to a scheduled disability award. Section 8-42-107(1)(a), C.R.S. This is true because the term "injury" as used in § 8-42-107(1)(a)-(b), C.R.S., refers to the part parts of the body which have been impaired or disabled, not the situs of the injury itself or the medical reason for the ultimate loss. *Walker v. Jim Fucco Motor Co,* 942 P.2d 1390 (Colo. App. 1997); *see also Strauch v. PSL Swedish Healthcare System,* 917 P.2d 366 (Colo. App. 1996). Thus, while ratings issued under the AMA Guides are relevant to determining the issue, they are not decisive as a matter of law. *Strauch v. PSL Swedish Healthcare System, supra*. Whether a claimant has sustained a scheduled injury within the meaning of § 8-42-107(2), C.R.S. or a whole person impairment compensable under § 8-42-107(8), C.R.S. is a factual question for the ALJ and depends upon the particular circumstances of the individual case. *Walker v. Jim Fucco Motor Co, supra*. Here, conversion of Claimant's scheduled lower extremity impairment to impairment of the whole person is not warranted. The persuasive evidence demonstrates that Claimant's complaints and treatment were associated with and directed to his knees. Claimant did not testify and the medical records do not support that Claimant's knee injuries have resulted in any decreased capacity to meet his personal, social or occupational demands. Consequently, the ALJ concludes that Claimant has not sustained a "functional impairment" of bodily function not listed on the scheduled of disabilities which would warrant conversion.

ORDER

It is therefore ordered that:

1. Claimant's request to set aside the Division IME's opinion that MMI was attained on October 3, 2013 in W.C. Nos. 4-898-537 and 4-897-278 is denied and dismissed.

2. Claimant's request for medical benefits in the form of total knee replacement surgery on the left knee under W.C. No. 4-898-537 is denied and dismissed.

3. Claimant's request for medical benefits in the form of total knee replacement surgery on the right knee under W.C. No. 4-891-278 is denied and dismissed.

4. Claimant's request for conversion of his scheduled rating to a whole person award on W.C. No. 4-898-537 is denied and dismissed.

5. Claimant's request for conversion of his scheduled ratings to a whole person award is denied and dismissed.

6. Any and all issues not determined herein are reserved for future decision.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

WORKERS' COMPENSATION NO. WC 4-893-705-01

ISSUES

The issues to be determined by this decision are:

A. Reopening the claim;
B. Medical Benefits.

STIPULATION

The parties stipulated that if the case is reopened, Dr. Orgel is an authorized provider.

FINDINGS OF FACT

1. Claimant's date of birth is January 18, 1965. He began working as a transportation maintenance worker for Employer on November 1, 2008. Claimant's job duties include all aspects of highway and vehicle maintenance including heavy equipment operation, blacktop and asphalt overlays, pothole repair, guard rail repair and snow removal. Claimant's job duties include driving snowplows, gravel trucks, dump trucks, and tandem dump trucks.

2. On July 16, 2012, Claimant sustained an admitted industrial injury while stepping down from a loader.

3. On July 17, 2012 Claimant was initially seen by Amber Payne, PA, at Concentra. Ms. Payne reported that, "he states that there was no accident. He reports, no twisting, I didn't get off the loader wrong. I stepped and felt a sharp pain." Claimant denied previous knee pain and injuries. Ms. Payne informed Claimant that walking does not correlate to a work-related injury and she urged Claimant to follow up with his primary care physician and have x-rays done. Claimant did see a Kaiser doctor on July 18, 2012.

4. On July 24, 2012 Claimant saw Dr. David Orgel at Concentra. He reported to Dr. Orgel that when he was coming down off the loader, his left foot was on the bottom rung of the ladder and his right foot was planted as he twisted left to step down off the ladder and that as he twisted left with his right foot planted, he developed pain in the right knee. The ALJ finds that Claimant's report of how the injury occurred is not consistent with what he told Ms. Payne the day before;

although this finding is not relevant to compensability because that issue has already been determined, it does relate to Claimant' credibility. Dr. Orgel reported that he discussed the situation with the employer, stating that he felt that the claim should be evaluated as a work-related condition. Dr. Orgel referred Claimant for an MRI and authorized a return to work for July 24, 2012 with restrictions of no lifting over 10 lbs. and no squatting and/or kneeling. As a result, the claim was admitted and payment of temporary total disability benefits began on July 17, 2012.

5. On July 30, 2012, Claimant underwent a right knee MRI. He was diagnosed with a complex tear of the medial meniscus, moderate degenerative changes of the patellofemoral compartment, mild to moderate degenerative changes within the medial compartment and mild to moderate thinning of the cartilage overlying the medial femoral condyle.

6. On August 2, 2012, Dr. Orgel referred Claimant to an orthopedist. On August 3, 2012, Claimant saw Dr. William Ciccone who reported that Claimant had right knee pain with a severity level of 10. Claimant reported that he had physical therapy which helped minimally and that his pain was persistent with walking. Dr. Ciccone reported that Claimant had persistent right-side medial joint line pain consistent with a meniscal tearing and that he had been unresponsive with conservative treatment, including physical therapy. Dr. Ciccone discussed the meniscal tearing with Claimant as well as the fact that there were some degenerative changes within the right knee.

7. On August 20, 2012, Dr. Ciccone performed surgery to repair the medial meniscal tear. His post operative diagnosis included right knee meniscal tear, Grade 3, chondromalacia patellae and Grade 3 chondromalacia of the medial femoral condyle. Dr. Ciccone performed a right knee arthroscopy with partial medial meniscectomy with chondroplasty of the medial femoral condyle. Dr. Ciccone documented that while probing with a scope he found no further flaps of the meniscus, however, he did find articular cartilage flaps along the medial femoral condyle with Grade 3 chondromalacia. He performed a chondroplasty in this area utilizing a shaver.

8. In a September 19, 2012 post operative report, Dr. Ciccone reports that Claimant is doing well. Claimant reported to Dr. Ciccone that he was feeling much improved and happy with his result.

9. On October 4, 2012, Claimant saw Dr. Orgel and reported noted improvement but continued pain. Claimant expressed his desire to return to work without restrictions. Dr. Orgel reported that he discussed this with the physical therapist

who agreed that Claimant was able to return to work full duty. Dr. Orgel reported normal gait and good range-of-motion. His assessment was that Claimant was improved and could return to work full duty.

10. Claimant's final post operative visit with Dr. Ciccone occurred on October 24, 2012. Claimant reported that he was back to work full duty with some occasional pain along the joint line which is much resolved, and that he feels improved. Dr. Orgel determined MMI and assigned a 14% scheduled rating, which included a 9% for loss of range-of-motion and 5% for a partial meniscectomy. Dr. Orgel discharged Claimant with the impairment and determined that no follow-up or maintenance was required.

11. Respondents filed a Final Admission of Liability on November 2, 2012 consistent with Dr. Orgel's October 24, 2012 report.

12. On December 17, 2012, Claimant returned to Dr. Orgel with complaints that his right knee is more painful than at discharge in October 2012 and the pain is with activity. Dr. Orgel placed Claimant on work restrictions and referred him for a repeat MRI.

13. Claimant had a repeat MRI on December 24, 2012. The radiologist, Dr. Tanya Tivorsak, reported that no displaced medial meniscal tear was present but that Claimant had a subchondral fracture and Grade 4 full-thickness chondral loss. Areas of high-grade partial thickness, chondral loss was reported in the medial femoral condyle, as well as postsurgical changes of partial medial meniscectomy and degeneration of the medial and lateral meniscus. Dr. Tivorsak also noted scarring of the anterior cruciate ligament (ACL) from an old injury related to the right knee.

14. On January 2, 2013, Claimant was seen by Dr. Sarah Harvey at Concentra on as a follow-up of the repeat MRI. Dr. Harvey reported, "Dr. Orgel has informed the insurance company that the finding in the MRI is not work-related. Patient is so informed."

15. On January 7, 2013, Claimant was seen by Dr. Robert Rhodes at Kaiser and reported that he has been weight bearing without pain and ready to return to work. Dr. Rhodes noted that Claimant was upset, angry, and worried that he would be fired from his job because he did not have much FMLA time remaining. It was recommended that Claimant be seen by an orthopedist for evaluation prior to being given a full duty work release.

16. Claimant had bilateral knee x-rays at Kaiser on January 10, 2013, which showed mild degenerative changes to both knees, right greater than left. The left knee x-ray showed patellar spurring, small ossicles projected adjacent to the left proximal tibia, which may represent interarticular loose bodies. The radiologist determined there was no fracture.

17. Claimant was seen by Dr. David Gladu, an orthopedist at Kaiser, on January 10, 2013. He reported to Dr. Gladu that he was "really minimally symptomatic, once or twice a week that he has some aching in his knee and takes some over-the-counter ibuprofen for this with very good relief." After a review of the x-rays, Dr. Gladu reported that Claimant did not have a true subchondral fracture but noted that Claimant has degenerative changes in the right knee with a loss of nearly 50% of the joint space and a subchondral lesion in the medial femoral condyle which correlates well with what was in the MRI report. He encouraged a weight management program for Claimant and advised that Claimant not return to any high-impact exercise so that the arthritis does not progress rapidly. Dr. Gladu gave Claimant a full-duty work release. Dr. Gladu reported that Claimant's symptoms fit with changes sometimes seen in osteoarthritis. There is nothing in Dr. Gladu's report indicating that he thought Claimant's arthritic change was due to his work injury or his injury-related surgery.

18. Claimant returned to Kaiser on April 4, 2013 with complaints of right knee pain. He stated that he minimized his pain at the January 2013 appointments because he wanted to return to work. The ALJ gives this record very little weight due to credibility issues with Claimant. On May 10, 2013, Claimant was seen at Kaiser and received a right knee injection.

19. On May 10, 2013, Claimant was seen at Kaiser and received a right knee injection.

20. Kaiser records indicate that Claimant is obese and could benefit from a weight management program or surgery. Claimant expressed an interest in weight management particularly because he believed it may help his knee condition.

21. On September 20, 2013, Claimant saw Dr. Orgel with complaints of right knee pain and his desire to have maintenance treatment under the work-related injury claim. After review of the Kaiser records, Dr. Orgel reported that Claimant had a permanent aggravation of his underlying arthritis and that his claim should be reopened.

22. Claimant testified that he continued to work full duty and that his co-workers often helped him with job duties due to his knee pain. The ALJ is not persuaded by

this testimony regarding assistance from co-workers. Other than Claimant's testimony, there was no other evidence or testimony presented that Claimant's co-workers assisted him with his job duties.

23. Claimant returned to Concentra on July 16, 2014 with complaints of right knee pain. He saw Nurse Practitioner, Keith Meier who recommended that the work-related injury claim from July 2012 be reopened.

24. On July 17, 2014, Dr. Orgel signed a State of Colorado Medical Certification Form (Employee's Health Condition) on behalf of Claimant.

25. Claimant's last day of employment with Employer was July 16, 2014.

26. Claimant testified that prior to his last day of employment, he had been getting good quarterly evaluations by Employer. However, sometime prior to July 16, 2014, Claimant lost his Colorado Commercial Driver's License (CDL) due to being charged with a DUI.

27. Having a CDL is a requirement of Claimant's job and at the point he lost the license he was no longer able to perform all of the duties associated with his position. At hearing, Claimant denied that he was facing a disciplinary hearing due to the loss of his CDL. The ALJ finds that Claimant is not credible in his testimony regarding such and no other evidence was presented to support Claimant's testimony.

28. In the first half of July 2014, Claimant testified that he rode his bike to work for national bike day. Claimant testified that on July 16, 2014, he told a co-worker "I can't take another step."

29. The ALJ finds the timing of pain that was so severe that Claimant could not take another step is suspicious when considered with the timing of Claimant losing his CDL and his inability to perform all of his work duties due to losing the license.

30. The ALJ finds that Claimant was able to work following MMI doing physically difficult work until July 16, 2014, with the exception of work restrictions by Dr. Orgel in December 2012. The ALJ finds that Claimant's symptoms seemed to wax and wane depending on who he was talking to about his right knee. For instance, when Claimant saw both Drs. Rhodes and Dr. Gladu in January 2013, he was minimally symptomatic and ready to return to work. However, in the month before, in December, 2012, Claimant was complaining of right knee issues and pain to Dr. Orgel.

31. Despite Claimant's assertion at hearing of right knee pain that continued to get worse post-MMI, Claimant did not seek regular treatment for his knee. Claimant testified that he did not seek treatment due to not having the time off to do so, finances, and not wanting to lose his job. However, even after his last day of employment with Employer on July 16, 2014, Claimant did not seek regular treatment for his right knee except for prescription medications.

32. From July 16, 2014 through the end of October 2014, Claimant was on temporary disability. Claimant could have sought medical treatment under the temporary disability coverage and did not do so.

33. At hearing, Claimant testified that he told Dr. Gladu in January 2013 that he was minimally symptomatic, when in reality, he was having more pain than he represented. The fact that Claimant was not truthful regarding his knee condition in the past presents a problem for his credibility at hearing.

34. On January 16, 2014, Claimant saw Dr. Joel Gonzales, an orthopedic surgeon, due to Respondents' request for an Independent Medical Examination (IME). Dr. Gonzales agreed that the December 24, 2012 MRI did not show an acute fracture of the medial aspect of the knee after personally reviewing the images. He felt that Claimant had Grade 4 degenerative changes on the medial compartment of the knee. Claimant reported that he continues to work full duty and does heavy work with increased pain, which is mainly activity related. Dr. Gonzales reported that Claimant has a significant amount of arthritis but continues to perform a very demanding job without restrictions. He opined that Claimant's BMI is 44, which equates to severe obesity. His treatment recommendations include weight loss, activity modifications, anti-inflammatories and possibly cortisone injections or visco supplementation injections. He went on to report:

> …
>
> "I do not believe that these should be related to the claimant's July 16, 2012, claim. I believe that the patient sustained a meniscus tear on July 16, 2012, and that it was treated appropriately with surgery and the patient improved after the surgery and was returned to work full-duty.
>
> I do not believe the claimant's condition has worsened since he was put at MMI on October 2012.
>
> …

> It is my medical opinion that the current symptoms Mr. Young is experiencing are consistent with the natural history of the progression of degenerative joint disease."

35. Dr. David Orgel testified by evidentiary deposition on November 18, 2014. Dr. Orgel is Board Certified in Internal and Occupational Medicine and is Level II certified as well. Dr. Orgel's opinion was that Claimant sustained a permanent aggravation of his underlying arthritic condition. It is Dr. Orgel's opinion that when Dr. Ciccone repaired Claimant's meniscus, he also performed a chondroplasty to smooth out the medial femoral condyle. The chondroplasty of the medial femoral condyle was to treat Claimant's degenerative condition. Had Dr. Ciccone not gone in to treat the meniscus injury, he would not have treated the medial femoral condyle. He believed that it was the chondroplasty that accelerated Claimant's underlying arthritic condition because it thinned the cartilage. However, Dr. Orgel also testified, in the context of whether Claimant's situation would be improved by weight loss, that weight accelerates arthritic changes.

36. Dr. Orgel finished his testimony by indicating that but for the meniscal injury and surgery, Claimant's knee would not be in the position it currently is based only on the natural progression of the degenerative changes.

37. Dr. Joel Gonzales testified by evidentiary deposition on December 4, 2014. Dr. Gonzales is Board Certified by the American Board of Orthopedic Surgery and also Board Certified for Sports Medicine. When he saw Claimant in January 2014, Claimant was not limping or using an assistance device, he had good range-of-motion with no swelling in the right knee and there was nothing very remarkable on exam. Dr. Gonzales agrees that Claimant did not have a subchondral fracture. However, his opinion is that Claimant had preexisting arthritis in his knee, and then had an acute injury which was the tearing of the meniscus that was treated appropriately by Dr. Ciccone. He testified that Claimant returned to baseline, his injury was taken care of and Claimant's continuing symptoms were due to arthritis in his knee.

38. Dr. Gonzales agrees with Dr. Orgel, that if Claimant had not had the meniscus injury and arthroscopic repair, the chondroplasty would not have taken place. Dr. Gonzales testified that the Grade 3 chondromalacia was preexisting. He discussed that there were some flaps of cartilage and Dr. Gonzales cannot say one way or another whether the injury made those flaps worse. Dr. Gonzales also testified that the flaps may have been created when Claimant twisted his knee, and in that case, the condition that prompted the chondroplasty could be related to the acute work injury. The ALJ finds there is not sufficient medical

evidence or testimony to show that the flaps were created when Claimant injured his right knee at Employer or that the flaps are related to the acute work injury.

39. Dr. Gonzales does not agree with Dr. Orgel's opinion that the chondroplasty accelerated Claimant's degenerative arthritis. Dr. Gonzales testified that he has done probably close to 1000 chondroplasties, if not more. It is not typical that this procedure would accelerate a patient's arthritis. The fact that Claimant has Grade 3 chondromalacia at the time of the surgery means that there had been significant degeneration of the cartilage in the compartment of the knee. Grade 4 is when there is no cartilage left and it is just raw bone and Grade 3 is just when there is a little bit left. It would not be unusual for Claimant's chondromalacia to progress from Grade 3 at the time of Dr. Ciccone's surgery to Grade 4, which was demonstrated on the December 24, 2014 MRI. The ALJ finds this testimony persuasive.

40. Dr. Gonzales testified that Claimant's current symptoms are consistent with arthritis, which he had before, and even if he Claimant was asymptomatic prior to the work-related injury, Claimant would have had the symptoms either way given the condition of his right knee. Dr. Gonzales testified that Claimant's weight is a factor which contributes to his current symptoms.

41. The ALJ finds that Claimant weighed approximately 320 lbs. at the time of the work-related injury. All doctors who expressed opinions regarding Claimant's weight agree that Claimant is obese and that being obese contributes to knee problems.

42. Weighing the evidence against Claimant's burden of proof in this case, the ALJ is more persuaded by the testimony and medical records of Dr. Gonzales and medical records from Dr. Gladu than the testimony and medical records from Dr. Orgel. The ALJ finds that Claimant is not credible or persuasive due to his admitted dishonesty and inconsistent reporting of symptoms showing a willingness and ability to be dishonest for advantage and/or benefit.

43. Medical records document the following: On October 24, 2012, when Claimant was placed at MMI, he reported some occasional pain as high as 3/10, with some locking and crepitation in the knee. On December 17, 2012, Claimant reported to Dr. Orgel that he had episodes of locking and knee pain with activity and the exam showed mild effusion. By January, 2013, he reported to Dr. Rhodes that he was weight bearing on the knee and ready to return to work; his right knee exam was normal. Also in January 2013, Claimant gave a similar account to Dr. Gladu, Dr. Gladu noted no obvious effusion. One year later, in January 2014, Dr. Gonzales documented no effusion in the right knee or

increased warmth. The chronology suggests that Claimant's right knee condition was similar in January 2013 to what it was at MM in October 2012, and even improved by January 2014. The timing of pain so severe in July 2014 that Claimant could not take another step correlates with pending employment issues due to Claimant's loss of his CDL and potential disciplinary proceedings rather than a worsened or changed condition in the right knee.

44. Claimant has failed to show by a preponderance of the evidence that his right knee complaints are causally connected to the admitted industrial injury or that his condition has changed or worsened.

45. Thus, the ALJ finds that Claimant's work-related injury was treated and Claimant stabilized and returned to baseline. The ALJ finds that it is more probably true than not that any continued right knee pain is due to Claimant's preexisting degenerative condition/osteoarthritis and the natural progression of the degenerative changes as well as Claimant's weight. Additionally, Claimant's preexisting condition was not aggravated or accelerated by the industrial injury or treatment thereof.

CONCLUSIONS OF LAW

Based on the Findings of Fact enunciated above, the undersigned ALJ makes the following Conclusions of Law:

a. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

b. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

c. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

d. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010); *Brownson-Rausin v. Indus. Claim Appeals Office*, 131 P.3d 1172 (Colo. App. 2005). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Clam Appeals Office*, 224 P.3d 397, 399-400 (Colo. App. 2009).

e. The burden to prove that a claim should be reopened rests with the claimant to demonstrate that reopening is warranted by a preponderance of evidence. *Anderson v. Longmont Toyota, Inc.,* 102 P.3d 323 (Colo. 2004). Pursuant to Section 8-43-303(1), C.R.S., a "change of condition" refers to a "change in the condition of the original compensable injury or a change in Claimant's physical or mental condition which can be causally connected to the original compensable injury." *Chavez v. Industrial Commission*, 714 P.2d 1328 (Colo. App. 1985).

f. A preexisting condition does not disqualify a claimant from receiving workers' compensation benefits. Rather, where the industrial injury aggravates, accelerates, or combines with a preexisting disease or infirmity to produce the need for treatment, the treatment is a compensable consequence of the industrial injury. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App.1990). Resolution of that issue is one of fact for the ALJ. *F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). Claimant has failed to show by a preponderance of the evidence that his preexisting condition was aggravated or accelerated by the industrial injury.

g. Claimant has failed to demonstrate by a preponderance of the evidence that it is more probably true than not that his injury-related condition has worsened or changed since being placed at MMI on October 24, 2012. The opinions of Dr. Gonzales are more compelling than those of Dr. Orgel. Here, it is undisputed, that Claimant's injury-related condition was a meniscal tear. Drs. Gonzales and Orgel agree that the claim-related meniscus remains intact, has not worsened

and is not a basis for reopening this claim. What is at issue here, is whether a surgical procedure, specifically a chondroplasty, performed by Dr. Ciccone to repair an underlying, not related chronic condition, to repair for cartilage of the medial femoral condyle accelerated Claimant's arthritic condition. Dr. Gonzales' opinion that Claimant's current condition is due to a natural progression of the claimant's underlying arthritic condition is more persuasive. The fact that Claimant had a Grade 3 chondromalacia when Dr. Ciccone performed surgery on August 20, 2014, is persuasive in the undersigned ALJ's determination that Claimant had a severe underlying arthritic condition preexistent to Claimant's work-related meniscal tear, and the preexisting condition progressed naturally to a Grade 4 chondromalacia.

h. When Dr. Orgel first saw Claimant after the December 24, 2012 MRI, he opined that Claimant's condition was unrelated and that his claim should not be reopened, notwithstanding the fact that it was reported that Claimant's chondromalacia had advanced to Grade 4.

i. Dr. Gladu, the Kaiser orthopedist, saw Claimant on January 10, 2013 and reported that Claimant did not have a true subchondral fracture and that what was seen on x-ray was a change in Claimant's osteoarthritis. He reported that Claimant's symptoms fit the condition of what is seen with osteoarthritis. There is nothing in Dr. Gladu's report indicating that he thought Claimant's arthritic change was due to his work injury or his injury-related surgery.

ORDER

It is therefore ordered that:

1. Claimant's Petition to Reopen Claim is denied and dismissed.

2. Any issues not determined in this decision are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-907-349-03

IINITIAL MATTERS

At the beginning of hearing the ALJ determined that Respondents had not copied Claimant's counsel on their Response to Application for Hearing. As a result Claimant was not informed that Respondents would call Dr Brian Lambden as a live witness. To avoid any prejudice to Claimant, the ALJ granted Claimant up to January 15, 2015 to submit additional evidence based on testimony taken at hearing from Dr. Lambden. Claimant submitted no additional evidence.

The ALJ admitted into evidence Claimant's hearing exhibits 1-17 and 19, over Respondents standing objection based on the parol evidence rule. The ALJ overruled Respondents' objection because Claimant's exhibits were used to establish a mutual mistake of material fact and not to alter the terms of the unambiguous contract. To the extent Respondents continue to raise that same objection, it is overruled for the same reason.

STIPULATION

The parties stipulated that the settlement documents in this case were based on the Division-approved form promulgated under the Rules. The parties also stipulated that Respondents' Exhibit B (also Claimant's Exhibit 17) is a true and accurate copy of the settlement documents, signed by Claimant while represented by previous counsel.

ISSUES

- Whether Claimant established by a preponderance of the evidence that he is entitled to a reopening of the settlement agreement based on a mutual mistake of material fact?

- Whether Claimant established by a preponderance of the evidence that his post settlement medical treatment was provided by an authorized provider?

- Whether Claimant established by a preponderance of the evidence that his post settlement medical treatment was reasonably necessary?

- Whether Claimant established by a preponderance of the evidence his average weekly wage?

- Whether Claimant established by a preponderance of the evidence his entitlement to temporary total disability benefits?

FINDINGS OF FACT

General

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a 60 year old driver who began working for Employer on April 29, 2012, delivering butane gas.

2. On December 29, 2012 Claimant slipped on ice and fell backward while delivering a load of butane gas to a location in Sinclair, Wyoming.

3. As a result of Claimant's December 29, 2012 injury, Claimant filed a workers' claim for compensation and Employer filed a first report of injury. Respondents then filed two general admissions of liability, the first on January 24, 2013 and the second on February 6, 2013. Respondents admitted to an average weekly wage of $1162.38 and to temporary partial disability benefits at a varying rate.

4. Claimant received treatment and evaluation for his work injury including approximately three weeks of physical therapy which increased his pain. Claimant obtained an MRI scan of his right shoulder which showed irreparable rotator cuff pathology. Claimant was referred to Dr. John Papilion who performed a reverse total shoulder arthroplasty on February 20, 2013. Post surgery Claimant's shoulder dislocated on one or more occasions requiring him to seek emergency medical attention. Dr. Papilion preformed a revision arthroplasty on May 1, 2013 using a larger ball and thicker plate to prevent further injury. The plate was secured onto Claimant's scapula with a number of screws.

Settlement

5. Following his May 1, 2013 surgery, Claimant continued to experience severe pain and instability in his shoulder joint and blade. Claimant testified he had terrible right-sided pain between the middle and top of his shoulder blade, his shoulder did not improve after the second surgery, and he continued to have pain and feelings of instability in his right shoulder. Claimant credibly testified he thought his continuing symptoms were part of the healing process and that the pain would resolve over time.

6. On July 30 2013, Dr. Lambden performed a Respondents' IME. In his report he stated he anticipated Claimant reaching MMI within two to three months.

7. Respondents offered Claimant $35,000 to settle his claims. Respondents' counsel stated in Respondents' position statement that, "*A $35,000 settlement for an injury contemplates a potential impairment rating and waiver of potential medical benefits.*" Respondents were represented by the same counsel during the settlement negotiations. The ALJ finds that this amount is consistent with Dr. Lambden's report and further supports a finding that at the time of settlement Respondents believed and understood that Claimant was recovering from his revision surgery and would soon reach MMI.

8. The ALJ infers from Claimant's testimony, Respondents' counsel's representation, and from Dr. Lambden's report of anticipated MMI that the parties mutually understood Claimant to be recovering from his revision surgery with the expectation that he would soon reach MMI.

9. Claimant and Respondents entered into a settlement before Claimant was actually placed at MMI. However, the record is void of any credible evidence that any parties' expectation that Claimant would soon be at MMI ever changed. The ALJ thus finds that when the parties entered into the settlement, they mutually understood that Claimant was recovering from a revision arthroplasty and approaching MMI.

10. Claimant was represented by counsel when he entered into the settlement. The settlement details were provided on the Division of Workers' Compensation mandated form and were approved by an Order dated September 12, 2013. Claimant understood that once the case settled that his claim was closed.

Post Settlement

11. Post settlement, Claimant continued to have right shoulder pain and instability and eventually sought treatment in mid-October 2013 at a Kaiser facility through his private health insurance. Claimant was referred to Dr. Michael Gallagher, an orthopedic specialist. Dr. Gallagher obtained an x-ray on October 15, 2013 which revealed a fracture in Claimant's right scapula.

12. Claimant credibly testified that the October 15 x-ray was the first indication he had of a fracture in his right scapula. He testified further that if he had been aware of the fracture in his scapula, he would not have settled his worker's compensation case.

13. Because no evidence of the fractured scapula existed prior to October 15, the ALJ finds that Respondents could not have known at the time of settlement that Claimant had a fractured right scapula.

14. After the shoulder fracture was diagnosed, Dr. Gallagher recommended surgical repair which was performed November 20, 2013. The surgery was unsuccessful and the fracture remained unhealed.

15. When Claimant sought to reopen his claim, Insurer sent him back to Dr. Papilion who referred Claimant to Dr. Hatzidakis, another shoulder surgical specialist, for evaluation and treatment. Dr. Hatzidakis did a follow-up surgery in September 2014 and at the time of the hearing Claimant was scheduled for another surgery with Dr. Hatzidakis on January 16, 2015.

Expert Testimony

16. Dr. Gallagher is board certified in orthopedic surgery with a specialty in fracture management. Dr. Gallagher opined that Claimant's fracture was the result of a screw used in the surgical repair of this right shoulder creating a stress fracture. Dr. Gallagher opined:

> Claimant's scapular fracture was likely due to a stress riser created by one of the screws from his right shoulder reverse arthroplasty.

> The tip of at least one of the screws was seen on radiographs taken on 10/15/2013, to be in the scapular spine fracture, suggesting it played a role. . . . Claimant denied further trauma to the shoulder subsequent to his shoulder surgeries.

Dr. Gallagher further testified that the tip of a screw was right in the fracture site.

17. Dr. Gallagher testified the larger ball and socket put in during the revision surgery also may have played a role by creating greater tension. Dr. Gallagher testified the best method to see an early stress fracture is a bone scan or MRI [which were not performed] rather than plain x-ray, and that the location of the scapular fracture would not typically have been seen on the MRI taken on June 1, 2013.

18. According to Dr. Gallagher, the first objective evidence of an actual fracture became available on October 15, 2013. Prior to then, there was no way for anyone to know that the scapula fracture existed. While Dr. Gallagher acknowledged he could not state the exact date when the stress fracture began, he stated that a stress fracture is something that develops over time and, more likely than not, in this case it took several months to develop. The natural course of a stress fracture is that it begins so small that it is invisible, and then develops over time into a true or open fracture.

19. Both Dr. Gallagher and Dr. Papilion agreed that the stress fracture is related to the workers' compensation case. The doctors disagreed, however, about what caused the stress fracture: Dr. Papilion believed that the fracture occurred when Claimant's shoulder dislocated; Dr. Gallagher believed the stress fracture was likely due to the reverse shoulder arthroplasty, although he acknowledged that Dr. Papilion's theory could be true and reasonable. Both doctors agreed that the scapular fracture was not caused in the initial fall in December of 2012, and that the stress fracture developed *before* the settlement was finalized.

20. Dr. Papilion specifically opined "the scapular fracture likely occurred at the dislocation of his total shoulder prosthesis and was not visualized at revision surgery." Dr. Papilion explained that one would not normally be able to be visualize the scapular spine during a revision surgery. Dr. Papilion also opined that "the treatment for this fracture and subsequent arthroplasty is related to [Claimant's] worker's compensation claim."

21. Dr. Lambden performed two Respondents' IMEs on Claimant, one before the settlement and one after the fracture was discovered. Dr. Lambden is a physical medicine and rehabilitation specialist. He is not an orthopedist or an orthopedic surgeon. Dr. Lambden opined there were four possible causes of the fracture. He believed (1) a small stress fracture might have existed undetected after the dislocation following Claimant's first shoulder surgery, or (2) the fracture occurred in the response to the screw penetration after the revision procedure following the dislocation. Dr. Lambden explained the fracture identified on October 15, 2013 may have been caused by the screw because the screw passes through the fracture. Dr. Lambden also opined (3) the fracture could have

occurred after the revision surgery due to a trauma, or (4) the fracture could have been due to progression of a post-revision trauma.

22. Dr. Lambden admitted that the scapular fracture could have occurred as early as August 2013. Specifically, Dr. Lambden testified that "in my mind there is a stress fracture, and then there was an obvious acceleration of the stress fracture to create an actual [open] fracture evident on plain x-rays." Dr. Lambden also acknowledged the likely culprit was a screw that created a stress point or stress riser: "I think we can say that the screw, more likely than not, was the cause." Dr. Lambden agreed that there is no report of trauma in the initial Kaiser medical record in October of 2013 and that Claimant reported no new injury in that record. While Dr. Papilion's records contain a hand written notation that Claimant fell on May 13, 2014, Claimant credibly testified that he did not suffer any such fall and that he contacted Dr. Papilion's office to correct the record. Dr. Lambden acknowledged there were no other medical records documenting any kind of fall by Claimant at any time other than at the initial fall.

23. Claimant credibly testified that following the work-related fall in December 2012, he did not have any other falls or injuries to his right shoulder and he never reported any falls to any doctors. After the settlement, Claimant did not have any falls or injuries to his right shoulder and did not report any falls or injuries to his right shoulder. The ALJ finds it more likely than not that trauma did not cause or exacerbate his scapula fracture, thus eliminating Dr. Lambden's causation options (3) and (4).

24. Dr. Lambden stated that an individual with Claimant's shoulder range of motion could not do a semi-truck driving job. Dr. Lambden also agreed that the surgeries by Dr. Gallagher and Dr. Hatzidakis to address the scapula fracture and the non-union have been reasonable and appropriate to treat Claimant's condition. The ALJ finds this opinion to be credible and persuasive.

25. Dr. Lambden stated that as of the date of the hearing, Claimant would not be considered at MMI from his recovery from his September 2014 surgery with Dr. Hatzidakis. The ALJ finds this opinion to be credible and persuasive.

26. Doctors Gallagher and Papilion both opined the fracture identified on Claimant's October 15, 2013 x-ray was related to Claimant's original work injury in December 2012.

27. In large part, Dr. Gallagher and Dr. Lambden agree on the source of the fracture: a screw created a stress riser that created a stress fracture that developed into an actual [open] fracture over time. That actual fracture was not discovered until October 15, 2013. Nevertheless, it was the type of fracture that develops over time, absent trauma. Dr. Gallagher opined that this type of fracture would take months to develop. Dr. Lambden opined that the fracture could have existed as early as August of 2013, more than a month prior to the settlement. Ultimately, the ALJ finds the opinions of the orthopedic specialist, Dr. Gallagher, to be more credible and persuasive. To the extent Dr. Lambden's opinions are consistent with the opinions of Dr. Gallagher, they are also

accepted. To the extent Dr. Lambden's opinions differ from Dr. Gallagher's opinions, the ALJ rejects them as less persuasive.

28. At the time of the settlement, Claimant had an existing, undiagnosed, and undiscovered fracture in his scapula consistent with the medical opinions of Dr. Gallagher. Neither party sought or paid consideration for the unknown fracture for the precise reason that no one knew of its existence. Thus the ALJ finds that the parties entered into the settlement without being fully informed concerning the "extent, severity and likely duration" of Claimant's shoulder injury.

29. Additionally, Claimant attended school only through the eighth grade. The ALJ observed Claimant often had difficulty understanding even his own attorney's questions. The ALJ also observed Claimant express that he often had difficulty understanding things generally.

30. At the hearing, after Claimant rested, Respondents moved for a directed verdict arguing a lack of evidence that Respondents settled Claimant's case on a mutual mistake of material fact and a lack of evidence that Claimant's shoulder was fractured on the day of settlement, or that any party had knowledge of a fracture that existed in Claimant's shoulder on the day of settlement. The ALJ reserved ruling and now denies that motion.

31. Based on the above findings, the ALJ finds that the parties were mutually mistaken at the time of the settlement because they believed Claimant's continued pain was attributable to his recovery from the revision arthroplasty and that he was approaching MMI. While in actuality at the time of settlement Claimant had an undisclosed and undiagnosed scapula fracture stemming from his work injury and surgeries, which was unknown to any party at the time of the settlement.

32. The ALJ further finds that the scapula fracture was material because it required numerous surgeries to attempt to repair, it prevented Claimant from being able to return to work, and at the time of the hearing the status of Claimant's fracture remained uncertain.

33. As mandated by the Act and the Director, paragraph 4 of the settlement agreement provides for reopening based on mutual mistake of material fact. Section 8-43-204(1) is an explicit legislative directive to favor a just result over Respondents' interest in finality under the facts in this case.

34. Based on the factual findings above, the ALJ finds that Claimant has satisfied his burden of establishing that the settlement agreement was reached based upon a mutual mistake of material fact as provided for by C.R.S. section 8-43-204(1).

REMAINING ISSUES

35. Dr. Papilion, an authorized treating physician in the claim, referred Claimant to Dr. Hatzidakis for treatment. Dr. Hatzidakis is thus an authorized provider.

36. The credible testimony of doctors Gallagher, Papilion, and Lambden supports a finding that all of the medical treatment received by Claimant for his right shoulder on and after October 15, 2013 has been reasonable, necessary, and related to his worker's compensation injury or the surgeries he received for that injury.

37. Claimant was off of work as a result of the work injury and was receiving TTD benefits at the time of the settlement. Since his first surgery Claimant has been unable to perform his regular job duties with Employer. He also has continued to be on restrictions since the settlement date.

38. Dr. Lambden's testimony supports a finding that Claimant remains unable to perform his regular duties as a semi-truck driver for Employer. He remains on restrictions that prevent him from performing his regular job. Claimant has not worked in any other capacity since the settlement.

39. Respondents admitted to an average weekly wage of $1162.38. However, the evidence Claimant presented at hearing shows it to be more likely that Claimant's gross earnings from his work for the employer in the 11.86 weeks leading up to the injury totaled $14,010.09. This results in an average weekly wage of $1181.29. Thus, Claimant has established his entitlement to an average weekly wage of $1181.29 for the entire claim.

40. Claimant has been receiving a Social Security Disability benefit in the monthly amount of $1,387.60 awarded back to the date of the initial injury plus the five month waiting period. Claimant also received $35,000 in compensation pursuant to the settlement agreement.

41. Respondents are entitled to a credit for a proper Social Security offset and the amount paid at the time of settlement.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General

The purpose of the Workers' Compensation Act of Colorado is to insure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. § 8-40-102(1), C.R.S.

It is the ALJ's sole prerogative to assess the credibility of witnesses and the probative value of the evidence to determine whether a party has met its burden of proof.

A workers' compensation case is decided on its merits. § 8-43-201, C.R.S. The requirements of proof for civil non-jury cases in the district courts apply in workers' compensation hearings. § 8-43-210, C.R.S. The ALJ's factual findings concern only evidence that is dispositive of this issues involved; the ALJ has not addressed every piece of evidence that may lead to a conflicting conclusion and has rejected evidence contrary to the above findings as

unpersuasive. *See Magnetic Engineering Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). It is the ALJ's prerogative to weigh the evidence, and that the ALJ might have reached a contrary conclusion is immaterial on review. *Mountain Meadows Nursing Center v. Indus. Claim Appeals Office*, 990 P.2d 1090 (Colo. App. 1999). The ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

Mutual Mistake of Material Fact

By legislative mandate, every workers' compensation settlement is subject to reopening on the grounds of mutual mistake of material fact. C.R.S. section 8-43-204(1) provides:

> An injured employee may settle all or part of any claim for compensation, benefits, penalties, or interest. If such settlement provides by its terms that the employee's claim or award shall not be reopened, such settlement shall not be subject to being reopened under any provisions of articles 40 to 47 of this title other than on the ground of fraud or mutual mistake of material fact.

Paragraph 4 of the settlement document at issue incorporates the required language from the statute: "The parties stipulate and agree that this claim will never be reopened except on the grounds of fraud or mutual mistake of material fact."

The reopening provisions of the Act are based on a strong legislative policy favoring a just result over litigants' interest in achieving a final resolution of their dispute. *Padilla v. ICAO*, 696 P.2d 273, 278 (Colo. 1985); *Travelers Insurance Co. v. industrial Commission*, 646 P.2d 389 (Colo. App. 1981). Contrary to Respondents' arguments, section 8-43-204(1) is the General Assembly's explicit resolution of the tension between respondents' interests in finality, and claimants' interests in reopening where settlements are founded on mutual mistakes of fact. *See Cary v. Chevron, U.S.A., Inc.*, 867 P.2d 117 (Colo. App. 1993).

The claimant has the burden of proof in seeking to reopen a claim. *Richards v. Indus. Claim Appeals Office*, 996 P.2d 756 (Colo. App. 2000). The reopening authority is permissive, and whether to reopen a prior award when the statutory criteria have been met is left to the sound discretion of the ALJ. *Renz v. Larimer County Sch. Dist. Poudre R–1*, 924 P. 2d 1177 (Colo. App. 1996). The question of whether the claimant has proven a mutual mistake of material fact is one of fact to be decided by the ALJ. *Maryland Casualty Co. v. Buckeye Gas Products Co., Inc.*, 797 P.2d 11 (Colo. 1990).

A mistake may be found where parties settle a claim without being fully informed concerning the "extent, severity and likely duration" of the injury. *Gleason v. Guzman*, 623 P.2d 378 (1981). In this regard, the mistake must pertain to a past or present fact not an opinion or prophecy about the future. *Guzman*, 623 P.2d 378 (1981) (a "mutual mistake of material fact" is one which relates to the "nature" of a known injury rather than a prediction about the future course and effects of the injury). Further, a mutual mistake is one which is reciprocal and

common to both parties to an agreement. *Maryland Casualty Co. v. Buckeye Gas Products Co.*, 797 P.2d 11 (Colo. 1990); *Cary v. Chevron U.S.A., Inc.*, 867 P. 2d 117 (Colo. App. 1993).

Claimant has met his burden of establishing the grounds for reopening based on mutual mistake of a material fact. The only plausible inference from the evidence is that the mistake was mutual. Both parties entered into the settlement with the understanding that Claimant was recovering from his revision arthroplasty and soon would reach MMI. Both testifying doctors agreed that the first objective evidence of the scapula fracture was discovered on October 15, 2013, approximately a month *after* approval of the settlement. Claimant testified he would not have settled his claim if he had known of the fracture. Further, neither party sought or paid consideration for the unknown fracture for the precise reason that no one knew of its existence. Respondents' offer of $35,000 does not reasonably reflect the value of a claim which would involve numerous surgeries and a lengthy if not permanent period of disability. The settlement was based upon a mistake concerning the existence of the scapula fracture which existed at the time of settlement which constitutes a past or present fact and not an opinion or prophecy about the future. In addition, the evidence compels the conclusion that the mistake was material. The undisclosed and undiagnosed fracture has resulted in three additional surgeries, an unresolved medical condition, and Claimant's inability to work as a result of the fracture and the surgeries.

In *Gleason v. Guzman*, *supra,* the court indicated that, for a "general release" to be effective against unknown injuries, "It must appear from the circumstances surrounding the transaction that such was [the releasor's] clear intention." The court went on to state that a party could not be found to have intended to release "future unknown injuries or the later consequences of known or unknown injuries where there is evidence that he was not fully aware of the basic character of the primary injury for which the release was sought and executed." *Gleason v. Guzman*, 623 P.2d at 387. Here, the ALJ concludes that Claimant could not have intended to release Respondents because the evidence shows that Claimant could not have been aware of the scapula fracture -- the basic character of the primary injury -- until October 15, 2013 when the fracture was discovered by x-ray.

Moreover, paragraph (4) of the settlement agreement explicitly states, as it must, that the settlement is subject to section 8-43-204(1). Thus, the parties recognized that Claimant retained the right to reopen based upon mutual mistake of material fact, and, contrary to Respondents' arguments, the settlement agreement cannot be construed to abrogate the claimant's statutory right. *See Padilla v. Industrial Commission*, 696 P.2d 273 (Colo. 1985) ("under the Act claims resolved by settlement agreements remain subject to the reopening provisions of the statute in the same manner as claims resolved by the granting of an award, and that parties may not by private agreement modify this strong legislative policy").

Parol Evidence

Paragraph 4 of the settlement agreement is clear and unambiguous. Claimant did not seek to admit any evidence regarding the interpretation of that unambiguous language. Instead, as the ALJ ruled, Claimant presented evidence to establish a mutual mistake of material fact. The parol evidence rule has no application in this situation. *See Boyer v. Karakehian*, 915 P.2d 1295, 1299 (Colo. 1996), *as modified on denial of reh'g* (May 20, 1996).

Remaining Issues

To prove entitlement to temporary total disability (TTD) benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a), *supra*, requires claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his/her prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his/her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo.App. 1998).

Based on the ALJ's findings of fact, Claimant has established his entitlement to TTD benefits from the date after the settlement (September 13, 2013) forward and continuing. Subject to a credit for the amount paid at the time of settlement and a proper Social Security offset, Respondents shall pay TTD benefits from September 13, 2013 and continuing.

The ALJ must determine an employee's average weekly wage (AWW) by calculating the money rate at which services are paid the employee under the contract of hire in force at the time of injury, which must include any advantage or fringe benefit provided to the employee in lieu of wages. *Celebrity Custom Builders v. Industrial Claim Appeals Office*, 916 P.2d 539 (Colo. App. 1995). The overall objective of calculating AWW is to arrive at a fair approximation of claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 1997).

The ALJ concludes Claimant's average weekly wage is $1181.29 with a corresponding TTD rate of $787.53. This average weekly wage and corresponding TTD rate applies back to the date the claim was opened. Respondents shall pay back due benefits with interest using this TTD rate. TTD benefits shall continue until terminated by law or order pursuant to sections 8-42-105 and 8-42-103, C.R.S.

Dr. Hatzidakis is an authorized treating provider based on a referral for treatment by Dr. Papilion. Respondents are liable for all medical treatment provided by Dr. Papilion, Dr. Hatzidakis, and their referrals, as all of their treatment has been reasonable, necessary, and related to the work injury. *See* section 8-43-404(9), C.R.S.

While Respondents noticed for hearing the issue of attorney fees, they did not pursue the claim at hearing and have not addressed it in their position statement. Respondents' claim for attorney fees is deemed abandoned and as such is denied and dismissed.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claim 4-907-349 is reopened.
2. Claimant's average weekly wage is $1181.29 with a corresponding TTD rate of $787.53. Respondents shall pay past due benefits back to the initial entitlement to TTD in the claim and interest using this TTD rate.
3. Claimant is entitled to TTD beginning September 13, 2013 and continuing, subject to a credit for the amount paid at the time of settlement and a proper Social Security offset.
4. Dr. Papilion and Dr. Hatzidakis is an authorized treating physician, and so are his referrals.
5. Respondents are liable for all medical treatment provided to Claimant by Dr. Papilion, Dr. Hatzidakis, and their referrals.
6. Respondents' request for attorney fees is DENIED and DISMISSED;
7. Respondent shall pay interest at the statutory rate of 8% on all benefits not paid when due.
8. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether Respondents have overcome the DIME's opinion on MMI by clear and convincing evidence?
    - Whether Respondents have overcome the DIME's opinion that Claimant's right shoulder complaints are related to her industrial injury of November 28, 2012?
    - If so, whether Respondents have overcome the DIME's opinion that Claimant's depression is attributable to her shoulder complaints?
- If not, whether Clamant is entitled to TTD from February 28, 2014, ongoing, payable at the rate of $848.82 per week?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

At the opening of the hearing, Respondents entered the deposition transcript of Claimant's Authorized Treating Physician (ATP), Dr. John Raschbacher into evidence. Based upon the evidence in the record, the Judge enters the following findings of fact:

1. Claimant was employed for nineteen years by the City of Littleton as a firefighter on the date of her injury. On November 28, 2012, Claimant was reloading fire hoses overhead and suffered a compensable injury. She eventually underwent surgery on June 24, 2013, for cervical disc problems.

2. Claimant was treated by ATP Dr. Raschbacher and released by him at MMI on February 28, 2014. Dr. Raschbacher rendered an opinion that Claimant had suffered a 22% whole person impairment. Claimant has not worked and has been under restrictions and treatment since being placed at MMI on February 28, 2014. Respondents issued a Final Admission of Liability ("FA") on March 28, 2014, to which a timely objection was filed.

3. The parties have agreed to a temporary total disability benefit rate of $848.82, based on admissions showing an average weekly wage of $1,590.47.

4. Prior to the November 28, 2012 injury, Claimant had a previous right shoulder injury, specifically a right labral tear and bone spur in 2006. Dr. Steven Horan treated Claimant in 2007 by debriding the labral tear and completing an arthroplasty for impingement.

5. On December 12, 2012 Claimant sought medical treatment for her November 28, 2012 injury. PA Karen Matusik at Arbor Occupational Medicine evaluated her. The history from the initial intake indicates that Claimant reported an exacerbation of her pre-existing neck pain with complaints of pain down the right side and pain over the right cervical paraspinal muscles and facets.

6. Claimant returned to Arbor on December 28, 2012, and was diagnosed with cervical sprain/strain, and was referred for chiropractic treatment and a surgical consultation.

7. Claimant reported right shoulder and extremity pain; however, Dr. Raschbacher decided Claimant's right shoulder complaints were due to her cervical injury. Dr. Raschbacher did not veer from that decision as the case evolved over time.

8. Claimant underwent x-rays and a cervical MRI. On January 8, 2013, Claimant saw Dr. Sean Markey, who, upon review of Claimant's imaging and history, found significant degenerative findings and foraminal stenosis at C4-C5 and C6-C-7. Ultimately, Dr. Markey recommended a three level spinal fusion from C-4 to C-7.

9. On January 15, 2013, Claimant returned Dr. John Raschbacher and requested a second opinion from an orthopedic spinal surgeon to explore the possibility of a disc arthroplasty. Dr. Raschbacher referred Claimant to Dr. Michael Janssen.

10. On January 24, 2013, Dr. Janssen evaluated Claimant, and found that Claimant's work related injury required surgery.

11. On June 24, 2013, Claimant underwent surgery for her neck. The surgery was complex, but consisted primarily of a one level fusion at C6-7 and total disc arthroplasties following decompressions and reconstructions at the two adjacent levels.

12. After surgery, Claimant began a course of physical therapy (PT) with Performax Physical Therapy. Claimant testified that she performed many shoulder exercises during PT and that she was unable to extend her arm above her head. Claimant's testimony about shoulder pain and complaints during PT are supported by numerous PT records admitted into evidence.

13. Four months after surgery, Claimant reported to Dr. Raschbacher that her physical therapist told her she may have some impingement in her right shoulder. At the time, Dr. Raschbacher again noted that she was not doing strenuous, repetitive, overhead activities, and that Claimant did not present with any risk factors for impingement syndrome. Dr. Raschbacher found that Claimant had tenderness at her right AC joint, but concluded the symptoms in the shoulder were not related to her November 28, 2012, injury.

14. On November 26, 2013, Claimant returned to Dr. Raschbacher with continued complaints of right shoulder pain. Dr. Raschbacher acknowledged a note from the physical therapist's office regarding right shoulder involvement, and that Claimant stated she could not progress very well with neck rehabilitation because her

right shoulder was bothersome. Dr. Raschbacher discussed with Claimant that her right shoulder was not a body part under treatment in this claim. However, Dr. Raschbacher's note reflected Claimant had a positive impingement sign and decreased and painful internal rotation.

15. Dr. Raschbacher's November 26, 2013 note contains the following remark,

> We discussed the fact that the right shoulder is not a body part under treatment in this claim and no liability has been accepted by the carrier for the right shoulder. Additionally, the neck is what has been treated and one would not like to presume that cervical spine surgery was done when in fact the shoulder should have been addressed. This is unlikely as she clearly has cervical pathology. She has improved after the surgery, but has pain at the front and the top of the right shoulder which is aggravated with activity.

Despite the fact that Dr. Raschbacher knew of Claimant's prior labral injury, was aware that Claimant had consistently reported the onset of should symptoms during physical therapy and acknowledged Claimant's shoulder complaints, he remained committed to his original impression that only Claimant's neck was involved. Confronted with substantial information that Claimant's shoulder could be involved, he viewed the situation as either neck or shoulder, and since the neck had been treated, was not open to any other possible injury. The ALJ finds that Dr. Raschbacher's failure to consider whether Claimant's shoulder injury was related to her claim because he had previously identified a neck injury limits the persuasiveness of his opinions.

16. On December 17, 2013, Claimant had a recheck visit with Dr. Raschbacher who noted, "It appears her right shoulder, at least by description, is interfering with rehabilitation of the neck. . . . She is stuck in rehabilitation, with respect to the shoulder. She states that the shoulder happened in physical therapy. She was doing physical therapy at Performax and states that this is where the right shoulder became a problem."

17. On January 2, 2014, Claimant reported to Dr. Raschbacher who noted that he had reviewed the records and that there had initially been "some right shoulder symptomology," but he attributed it to her neck injury, without explanation. "She states that she hurt the right shoulder doing shoulder shrugs and similar exercises in physical therapy. It is still sore and she is still not able to progress well for rehabilitating the neck with the limitations at the upper right extremity."

18. On January 17, 2014, Claimant returned to Dr. Raschbacher noting that her right shoulder was interfering with the rehabilitation of her neck. Dr. Raschbacher explained his opinion that it was unlikely that Claimant could have suffered any intrinsic anatomic pathology in her shoulder from the physical therapy, including shoulder shrugs. Despite his belief that there was no pathology, he ordered an MRI to support

his contention, rather than for the purposes of diagnosis or treatment. He also noted that the MRI might be denied because Claimant's shoulder had never been part of the accepted claim. Insurer denied the MRI as unrelated.

19. On February 10, 2014, Claimant returned to Dr. Raschbacher continuing to state that whatever happened to her shoulder happened in physical therapy.

20. Dr. Raschbacher placed Claimant at MMI on February 28, 2014 with a 22% whole person impairment.

21. Claimant testified that she was suffering from these same shoulder complaints when Dr. Raschbacher found her at MMI.

22. Claimant timely objected to the Final Admission and obtained a DIME with Dr. Edwin Healy.

23. At hearing, Dr. Swarsen offered expert testimony that DIME Dr. Healey performed his DIME examination consistently with the directives of the DOWC, the AMA *Guides* and its medical records. He also testified that DIME Dr. Healey's MMI opinion is supported by the totality of the evidence, specifically the documentation found in those records addressing treatment post-MMI.

24. Dr. Healy was "specifically requested by [Claimant's] attorney to evaluate specific body parts and conditions including chronic pain, neck pain, right should pain, right trapezius and scapular pain, cervical pain and neurological radiating pain and to determine if any additional diagnostic testing was necessary and to recommend medical maintenance treatment if required." The chief complaint listed for the DIME was "chronic right shoulder pain."

25. During his examination of Claimant, Dr. Healy found diffuse tenderness over her right shoulder, particularly over the right bicipital tendon and subacromial bursa and mildly over the acromioclavicular joint. He noted decreased range of motion in her right shoulder and crepitus and popping with adduction of the right shoulder.

26. Based on his review of the medical records, his history from Claimant and his examination, Dr. Healy concluded that Claimant was not at MMI for her November 28, 2012 injury. His report included the following diagnoses: (1) right shoulder pain occurring during rehabilitation of her cervical spine, with ongoing chronic pain, stiffness and crepitus of her right shoulder; (2) Prior history of right shoulder injury in 2006, requiring arthroscopy, subacromial decompression, labral tear repair and impairment rating; (3) Intermittent dysphagia and hoarseness after intubation for cervical surgery; and (4) Adult adjustment disorder with depression and anxiety due to chronic pain and disability.

27. During her DIME, Claimant reported that she had similar shoulder problems associated with her 2006 work related injury. She stated that when she was injured on November 28, 2012, she had been lifting hoses overhead when she had the onset of neck and right upper extremity pain and weakness. Claimant reported she was

not certain if she injured her shoulder at that time but noticed her shoulder pain was particularly aggravated by various activities she did in physical therapy. She reported that her symptoms of pain and stiffness progressed over time. The ALJ credits Claimant's statements made during her DIME as credible, consistent with her earlier reports, and consistent with the medical records in evidence. The ALJ particularly credits Claimant's testimony relating her current symptoms with her earlier labral tear as she had personal experience of that injury.

28. Dr. Healy opined that Claimant's prior right labral tear was aggravated by extensive physical therapy treatment she underwent. His opinion was based on claimant's report and the medical records which indicate that her right shoulder symptomology began in physical therapy. Dr. Healy recommended Claimant undergo an MRI of her right shoulder and see an orthopedic spinal surgeon for evaluation and treatment of her right shoulder pain and disability as a result of her rehabilitation for her November 28, 2012 work injury. Dr. Healy opined that treatment of Claimant's right shoulder would also improve her function and help her depression.

29. Dr. Healy opined that Claimant's adult adjustment disorder was caused by her chronic pain, inability to sleep, and other psychosocial factors relating to the loss of her career. He recommended Claimant undergo psychological evaluation and some psychological counseling to help her cope with her depression and anxiety. Dr. Healy postulated that treatment of Claimant's shoulder should result in significant improvement of her depression.

30. Dr. Healy determined that Claimant continued to experience difficulty swallowing, and recommended Claimant see an ENT physician for evaluation of her swallowing problem to determine whether anything else could be done to treat it.

31. Dr. Healy provided a provisional impairment rating which included a combined specific impairment of her cervical spine plus a loss of cervical range of motion, for a combined 19% whole person impairment of her cervical spine; a whole person impairment for loss of range of motion for her right shoulder of 4%; a mental impairment rating of 3% whole person. Dr. Healy assigned Claimant a combined 24% whole person impairment, noting that she had not yet reached MMI for her shoulder, or her depression, and that she might require an impairment rating for her dysphagia.

32. The ALJ finds Dr. Healy's opinions and conclusions, especially his opinion that Claimant's shoulder injury was related to the treatment of her November 28, 2012 injury to be persuasive, credible, and well supported by a great weight of the evidence.

33. Prior to hearing, Claimant underwent the MRI recommended by Dr. Healey. On October 31, 2013 Dr. Horan, who previously treated Claimant's right shoulder in 2006, reviewed the MRI and found "a little tendinitis in the rotator cuff and maybe *a little irritation of the anterior labrum*, but these are minor." (emphasis supplied). While Dr. Horan's findings do not provide strong support for Dr. Healy's relatedness opinion, they do note irritation of the labrum.

34. Claimant returned to Dr. Horan on December 12, 2014 and received an injection of Kenalog into her right shoulder joint. Claimant received a second injection at a later date. Claimant testified that the injections provided her with pain relief and greater mobility. The ALJ finds that Claimant's improvement with injections supports Dr. Healy's opinion that her shoulder was not at MMI.

35. Prior to hearing, the parties deposed Dr. Raschbacher who described the difference between his speculation about Dr. Healy's opinion concerning aggravation of a labral tear and the actual MRI finding which showed mild tendonitis with chondromalacia of the humeral head. On cross-examination and in contrast to Dr. Horan's note mentioning irritation of the anterior labrum, Dr. Raschbacher stated that the MRI did not show labral pathology. Dr. Raschbacher opined Claimant's diagnosed right shoulder tendonitis was not related to her work injury of November 2012 or the physical therapy after her surgery.

36. Dr. Raschbacher testified by deposition that chondromalacia, defined by Meriam-Webster's Medical Desk Dictionary, revised edition, as "abnormal softness of cartilage" is "essentially an arthritis" which commonly becomes symptomatic idiopathically, and was not caused by any specific action of the Claimant. However, Dr. Raschbacher did not explain why the idiopathic onset of chondromalacia was more likely to have occurred than the aggravation of a prior shoulder condition, especially in light of Claimant's continued and specific complaints of pain with activity and the onset of such pain occurring during physical therapy which involved shoulder exercises.

37. In addition, the record supports an inference that Dr. Raschbacher was not familiar with the exercises Claimant was required to do during physical therapy. For example, when asked the basis for his opinion that physical therapy had not caused significant intrinsic anatomic pathology, he responded, "I imagine that it would be based primarily on some knowledge of what people do for rehabilitation…" This response is both speculative and not tied to Claimant's case. Dr. Raschbacher further testified that he was unsure who had ordered the physical therapy. When asked if he was aware of what physical therapy Claimant was undergoing, he responded, "Well, the basic therapy would be as stated in the therapy goals – decreased pain, increased motion, increased strength." Again, his answer was not specific as to Claimant's therapy, and did not indicate that Dr. Raschbacher was at all familiar with Claimant's actual exercises and therapy.

38. In Dr. Raschbacher's opinion, the MRI ordered by Dr. Healey does not support his diagnosis and conclusion that Claimant's right shoulder pain was related to her work-related injury or therapy. Both Dr. Horan, who interpreted the MRI, and Dr. Raschbacher who explained Dr. Horan's findings contradict Dr. Healey's DIME opinion.

39. Because the ALJ has found Dr. Healy's opinions to be supported by the greater weight of evidence, and that Dr. Raschbacher's opinions were less persuasive and motivated by his desire to not expand Claimant's claim, the ALJ further finds that Dr. Raschbacher's and Dr. Horan's opinions constitute only a disagreement of opinion and do not rise to the level of clear and convincing evidence of an error in Dr. Healy's

conclusions and opinions. The ALJ finds Claimant's shoulder injury is related to her industrial injury of November 28, 2012

40. Dr. Healy only partially related Claimant's depression to her continuing right shoulder pain, also attributing it to Claimant's inability to sleep, and other psychosocial factors relating to the loss of her job. Therefore, his opinion concerning the causal relatedness of the depression to the work-injury of November 28, 2012, is not rebutted by the opinions of Dr. Horan and Dr. Raschbacher.

41. Subsequent to the DIME opinion of Dr. Healey, Claimant was referred to Dr. Jeffrey Cutler for evaluation and treatment of her swallowing difficulties. Dr. Cutler performed a pharyngoscopy and diagnosed Claimant with both dysphagia and globus. Dr. Culter then referred Claimant for a barium swallow, speech therapy, and a follow up appointment after speech therapy.

42. At the hearing, Claimant testified about her complaints of right shoulder pain and how it began during physical therapy. She testified credibly that although she raised the issue on numerous occasions with Dr. Raschbacher, he was not open to the idea that her right shoulder complaints could possibly be related to her work injury or her rehabilitative therapy. Claimant also testified about her depression and difficulty swallowing, her treatments post DIME, and the relief they had provided.

43. None of the physical therapy notes admitted into evidence indicate what exercises or therapy Claimant performed during her PT appointments.

44. Clamant is entitled to TTD from February 28, 2014, ongoing, payable at the rate of $848.82 per week.

CONCLUSIONS OF LAW

The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. A Workers'' Compensation case is decided on its merits. §8-43-201, C.R.S.

The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. Industrial Claims Comm'n.*, 5 P. 3d 385, 389 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and

bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

Section 8-42-107(8), C.R.S., provides that the determination of MMI and impairment by a DIME physician selected through the Division of Workers' Compensation shall only be overcome by clear and convincing evidence. Because both determinations inherently require the DIME to assess whether a claimant's medical condition is related to an industrial injury, the DIME's opinion on causation is binding unless overcome by clear and convincing evidence. *Cordova v. Indus. Claim Appeals Office*, 55 F.3d 186 (Colo. App. 2002). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). Clear and convincing evidence is highly probable and free from serious or substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A fact or proposition has been proved by clear and convincing evidence if, considering all the evidence, the trier-of-fact finds it to be highly probable and free from serious or substantial doubt. *Metro Moving & Storage Co. v. Gussert*, *supra*. A mere difference of opinion between physicians fails to constitute error. *See, Gonzales v. Browning Ferris Indust. of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

The ALJ has found that the opinions of Dr. Horan and Dr. Raschbacher are less persuasive than those of Dr. Healy. The mere difference of opinion between the physicians fails to constitute error. The difference between their opinions does constitute clear and convincing evidence that Claimant's right shoulder complaints are not causally related to this claim or the treatment which Claimant received in recovering from her cervical surgery.

Because the ALJ finds and concludes that Claimant's shoulder injury is related to her claim, Respondents' argument that her depression is caused by her unrelated shoulder claim fails. Additionally, as found, Dr. Healy only partially related Claimant's depression to her continuing right shoulder pain, also attributing it to Claimant's inability to sleep, and other psychosocial factors relating to the loss of her job. Therefore, his opinion concerning the causal relatedness of the depression to the work-injury of November 28, 2012, is not rebutted by the opinions of Dr. Horan and Dr. Raschbacher.

DIME physician Dr. Healey's opinion states that Claimant's difficulty swallowing is causally related to her industrial injury. No persuasive evidence was offered to overcome this opinion.

To obtain TTD benefits, a claimant must establish a causal connection between a work-related injury and a subsequent wage loss. §8-42-1 03(1)(a), C.R.S. To demonstrate entitlement to TTD benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, which she left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability," connotes two elements:

(1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by a claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). A claimant suffers from an impairment of earning capacity when she has a complete inability to work or there are restrictions that impair her ability to effectively and properly perform her regular employment. *Ortiz v. Charles J. Murphy & Co*., 964 P.2d 595 (Colo. App. 1998). A respondent's liability for TTD benefits ceases on the date when the claimant has attained MMI. §8-42-1 05(3)(a), C.R.S.

In this case, Respondents have not overcome the DIME opinion concerning the causal relatedness of Claimant's right shoulder pain, depression, and difficulties swallowing. Claimant has not been placed at and is entitled to TTD benefits from February 28, 2014, ongoing, payable at the rate of $848.82 per week.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents have failed to overcome by clear and convincing evidence the DIME's opinion that Claimant is not at MMI.

2. Claimant is not at MMI and continues under disability. She is entitled to TTD benefits commencing February 28, 2014, ongoing, at the rate of $848.82 per week, ongoing, until terminated by statute.

3. Respondent shall pay to Claimant interest at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All other issues are reserved.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-912-371-01

ISSUE

1. Whether Claimant has proven by a preponderance of the evidence that he is permanently totally disabled?

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. The Claimant has an 11th grade formal education, but has obtained his G.E.D.

2. Prior to working for Respondent-Employer, the Claimant's work experience included work as a manager at an Elk's lodge, where he placed orders for the lodge, scheduled the bartending staff, ran the cash register, worked as a bartender, and cooked occasionally. He also had his own body shop, where he did auto body work and administrative work, such as estimates, final billing and deposits. The Claimant also has experience as an estimator at an auto body shop, where he would look at vehicles and estimate the damages and costs to repair.

3. The Claimant sustained an admitted workers' compensation injury on February 25, 2013 when he fell off a ladder while he was employed as an HVAC technician for the Respondent-Employer. The Claimant's job duties required him to climb ladders, run wire and pipe, and put in switches.

4. The Claimant began treating with Concentra, the authorized treating provider, on February 26, 2013 and was diagnosed with multiple rib fractures, pneumothorax, and chest wall/back contusion (Respondents' Exhibit D, pgs. 166 & 157).

5. Dr. Robert Nystrom, of Concentra, referred the Claimant to Dr. Kathy McCranie for a physiatric evaluation and pain management.

6. As part of his treatment, the Claimant received physical therapy, injections, and a psychological evaluation. The physical therapy reports indicate the Claimant was able to lift 45 lbs. from July 23, 2013 through September 18, 2013 (Respondent's Exhibit I, pgs. 214-235).

7. The Claimant explained he was able to perform in physical therapy because he was taking "lots of Percocet" which allowed him to do more than normal.

8. On January 10, 2014 the Claimant was referred to Dr. Albert Hattem, a delayed recovery specialist at Concentra (Respondents' Exhibit D, pgs. 103-106). Dr. Hattem examined the Claimant on February 17, 2014 and agreed with Dr. McCranie that the Claimant was approaching maximum medical improvement (MMI). The Claimant was to follow-up with Dr. McCranie for an impairment rating. Dr. Hattem did not believe that a Functional Capacity Evaluation (FCE) was needed (Respondents' Exhibit E, pg. 173).

9. Dr. McCranie placed the Claimant at MMI on March 3, 2014 and provided him with a 5% whole person rating for his thoracic spine. It was noted that his rib fractures had healed and the pneumothorax had resolved. She noted that the Claimant indicated his goal was to retire and not return to work. Dr. McCranie further noted that the Claimant was lifting up to 45 lbs. in physical therapy and did not believe that an FCE was necessary. Dr. McCranie referred the Claimant to Dr. Hattem for final discharge and to assign any permanent work restrictions (See Respondents' Exhibit C, pgs. 038-041).

10. On March 24, 2014, the Claimant returned to Dr. Hattem for a final evaluation. Dr. Hattem noted that the Claimant continued to complain of mid back pain, and that the Claimant wanted him to document that he had left hip discomfort, as well as, bilateral ulnar digit numbness. The Claimant also reported to Dr. Hattem that he was unable to lift more than 30 lbs. without experiencing mid back pain. Dr. Hattem agreed with Dr. McCranie's impairment rating and provided the Claimant with permanent work restrictions of 30 lbs. lifting limit (Respondents' Exhibit E, pgs. 169-173).

11. The Claimant attended a Division Independent Medical Examination (Division IME) on July 17, 2014 with Dr. Linda Mitchell. Dr. Mitchell was asked to evaluate the Claimant's multiple rib fractures, collapsed lung, left hip, left shoulder, and middle back (Respondents' Exhibit B, pg. 013). Dr. Mitchell noted the Claimant's current complaints as back pain, hip pain, numbness and tingling in his arms, mid back pain that radiated up to his neck and gave him headaches and radiated down the back of his legs to his knees (Respondents' Exhibit B, pg. 019).

12. Dr. Mitchell agreed that the Claimant reached MMI on March 3, 2014. She opined that the Claimant's hip pain, low back pain, upper extremity numbness, tingling and weakness, and lower extremity tingling were not attributable to the work injury. Dr. Mitchell provided the Claimant with an 8% whole person impairment rating for his thoracic spine and opined that the Claimant was capable of working a medium category job (25 lbs. of force frequently and 50 lbs. of force occasionally for lifting, carrying, pushing, or pulling), but that he should avoid frequent bending or twisting of the thoracic region (Respondents' Exhibit B, pgs. 012-022).

13. Dr. McCranie, accepted by the ALJ as an expert in physiatry, physical medicine and rehabilitation, and pain medicine who is Level II Accredited, testified that the Claimant was referred to her from Concentra for pain medication management and to start him in a rehabilitation program when appropriate. She stated that she agrees

with the Division IME that the Claimant's hip issues, cervical issues, upper extremity symptoms and lower extremity symptoms were not related or attributable to the Claimant's work injury. Dr. McCranie testified that she only attributed the rib fractures, pneumothorax, and thoracic strain to the work injury. As the rib fractures and pneumothorax had fully resolved (the Claimant confirmed this resolution), she provided the Claimant with an impairment rating for his thoracic spine.

14. Dr. McCranie also testified that, contrary to the Claimant's contention, he was not on Percocet the entire time he was in physical therapy. She stated that the Claimant had discontinued Percocet five days prior to August 30, 2013, well before the physical therapy report of September 11, 2013 which showed the Claimant lifting up to 45 lbs. She further testified that she did not believe an FCE was necessary in the Claimant's case because she found they were only helpful for patients who are trying to prove they can go back to work. In the Claimant's case, he specifically told her he had no intention of going back to work, therefore she didn't believe an FCE was necessary and did not think it would show his true functional potential.

15. The Respondents filed a Final Admission of Liability based on Dr. Mitchell's report on August 8, 2014 (Respondents' Exhibit L).

16. The Claimant's counsel represented to this ALJ that the Claimant did not challenge the PPD, MMI and causation opinions of the Division IME. Therefore, the Division IME's opinions on these issues are binding.

17. The Claimant, of his own volition, had an FCE done during the first week of November 2014. The FCE results showed the Claimant had a 10 lb. infrequent lifting limit, could sit and stand 10-15 minutes at a time, and could walk 5-15 minutes at a time.

18. Additionally, the Claimant testified that he could not sit, stand or lay for long periods of time. He stated when sitting he tries to make it to a half an hour, but said he moves around a lot, and can't stay in one position. The Claimant testified that if he stands too long his hip bothers him and his back burns. He stated his injury has affected his ability to do his job because he can't squat, bend over, or lift the weight he was required to lift. He testified he was in pain every day and could not sleep at night, generally only getting 1-3 hours of sleep. He stated he was generally very uncomfortable and hurt, with some days being worse than others. He said when the pain was at its worst he experienced a burning, aching, and pinching sensation. The Claimant stated his pain was an average of 8 out of 10, almost every day and he had 6-7 "bad days" per week. He testified since his injury he avoids cleaning and stairs, and only goes shopping when he has to. The Claimant stated that his neighbor, his son and his daughter-in-law help him with the things he can't do.

19. The Claimant further testified that he lives in Thornton, has a working car and can drive, occasionally goes shopping, can carry light bags, and is capable of getting gas for his vehicle.

20. Louis C. Phillips was accepted as an expert in vocational rehabilitation counseling. Mr. Phillips completed a vocational evaluation on the Claimant's behalf on November 18, 2014. Mr. Phillips obtained an educational history and work history from the Claimant similar to the Claimant's testimony. Mr. Phillips testified that he identified a number of skills that the Claimant has acquired from his past employment that could transfer from one job to another. He relied primarily on the FCE results in his evaluation, because he stated the FCE was one of the best ways to determine what a person could do and contained built in tests to determine if the individual is putting forth full effort. He found the FCE results were consistent with the Claimant's report of his abilities. He also reviewed the medical records.

21. Mr. Phillips testified that the FCE placed the Claimant in the sub-sedentary category of work, which is less than the lowest level of work. This could indicate that the individual could not work at all. In his opinion, the Claimant should be considered permanently totally disabled, because based on the Claimant as a whole, he cannot return to work. The factors he considered were Claimant's age, his self-reported limitations, tested work tolerances through the FCE which show limitations on sitting, standing and walking, the Claimant's inability to return to any prior work. In his opinion, the Claimant was not able to utilize any transferable skill he has obtained and due to his physical condition was unlikely to be hired by anyone.

22. However, Mr. Phillips conceded that if the Claimant was able to work at a minimum of sedentary level he could be employable, if no other factors were considered. He acknowledged that the Claimant had previous sedentary work experience as an estimator. He also agreed that if Dr. Hattem's 30 lb. permanent lifting restriction was accurate that the Claimant would be able to work.

23. Katie G. Montoya was accepted as an expert in vocational rehabilitation and consulting. Ms. Montoya completed a vocational evaluation of the Claimant on behalf of Respondents on December 16, 2014. Ms. Montoya relied on the physical restrictions provided by the Claimant's treating providers, Dr. Hattem and Dr. McCranie, and the physical restrictions provided by the Division IME, Dr. Mitchell. She testified that none of these doctors placed sitting, standing or laying restrictions on Claimant. Ms. Montoya also did a transferable skills analysis and, similar to Mr. Phillips, found the Claimant had multiple transferable skills, including estimator skills, management, computer skills, and customer service. She agreed with Mr. Phillips that if any of the restrictions provided by the treating doctors were correct the Claimant would be employable. She based her opinion on the fact that even considering Dr. Hattem's 30 lb. permanent restrictions, which was the lowest the Claimant was provided from his treating providers or the Division IME, would put him in a light to medium work classification and approximately 90% of jobs were classified as medium or under. She testified that even unskilled workers could find activities they could perform in these work categories.

24. Ms. Montoya also agreed that even if the Claimant had sedentary work restrictions that he could return to work as he had experience as an estimator so could

return to some aspects of that work, and his customer service and other skills he has obtained through his previous employment would allow for sedentary work activities. She further testified that the Denver metro area's unemployment rate was low and she found several positions during a labor market sampling which would fall within a sedentary work classification that were consistent with the Claimant's background. She testified that the vocational opinions have been consistent that if the Claimant was found to have permanent restrictions of sedentary work or greater he would be employable.

25. The ALJ finds that the results of the Claimant's FCE are significantly at odds with the opinions of both Drs. McCranie and Hattem, the Claimant's treating physicians, and the Division IME. The physical therapy reports support that the Claimant can lift more than 10 lbs. Additionally, this ALJ observed the Claimant in the courtroom throughout the course of the hearing and found that, while he may appear to be in some discomfort, the Claimant can sit in excess of that noted in the FCE. Therefore, the ALJ is not persuaded by the Claimant's FCE results and does not find the FCE reliable.

26. The ALJ does not find Mr. Phillips' opinion that the Claimant is permanently totally disabled persuasive or credible. Mr. Phillips testified that he relied primarily on the FCE in formulating his opinion. As the ALJ find the results of the FCE do not accurately depict the Claimant's physical capabilities, Mr. Phillips' reliance on the FCE in his determination that the Claimant is unemployable is neither persuasive nor credible based on the finding that the FCE does not accurately reflect the Claimant's physical abilities and is therefore not reliable.

27. Both Mr. Phillips and Ms. Montoya opined that the Claimant had numerous transferable skills from his employment background. Additionally, Mr. Phillips and Ms. Montoya agreed that if any of the permanent work restrictions provided by the Claimant's treating providers, Drs. McCranie and Hattem, or the Division IME were correct then the Claimant would be employable. Furthermore, the testimony of the vocational rehabilitation experts indicate that even if the Claimant had sedentary restrictions he would be employable. The ALJ finds the opinions of Drs. McCranie and Hattem, who were the Claimant's treating physicians for almost a year, regarding the Claimant's permanent restrictions to be more persuasive and accurate than the FCE. Drs. McCranie and Hattem's permanent restrictions place the Claimant's physical capabilities into the sedentary work category, and may very well put the Claimant into the light work category and possibly even into the lower medium category.

28. The Claimant is 58 years old, has experience in management of an Elk's lodge, auto body work, and owned his own auto body business, which included estimating damages and costs. The ALJ credits the testimony of Ms. Montoya that a number of the Claimant's transferable skills fall within the sedentary and light work categories. In fact, both vocational experts agree that there would be positions available for the Claimant within the sedentary category. Additionally, the ALJ finds the Claimant lives in Thornton, Colorado which is within the Denver metro area, which has a relatively low unemployment rate, as testified to by both Mr. Phillips and Ms. Montoya. The ALJ

further finds that there is an availability of work that the Claimant could perform within the commutable labor market.

29. The Claimant has failed to prove by a preponderance of the evidence that he is unable to earn wages in his same or other employment.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. §8-40-102(1). The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Permanent Total Disability

Permanent total disability, as defined in § 8-40-201(16.5), C.R.S., means an "employee is unable to earn any wage in the same or other employment." When the statute was amended in 1991, it established a strict definition of permanent total disability. The intention of the amendments was to create a real and non-illusory bright line rule for the determination whether a claimant has been rendered permanently and totally disabled. *Lobb v. Indus. Claim Appeals Off.*, 948 P.2d 115 (Colo. App. 1997). A claimant must also establish that the industrial injury was a significant causative factor by showing a direct causal relationship between the industrial injury and the permanent

total disability. *Joslins Dry Goods Co. v. Indus. Claim App. Off*., 21 P.3d 866 (Colo. App. 2001)*; Seifried v. Industrial Commission,* 736 P.2d 1262 (Colo. App.1986).

It is the claimant's burden of proof to establish that he is permanently totally disabled by a preponderance of the evidence. The question of whether claimant has the ability to earn any wages is one of fact for resolution by the administrative law judge. *Best-Way Concrete Co. v. Baumgartner,* 908 P.2d 1194 (Colo. App. 1995). For purposes of permanent total disability, "any wages" means more than zero. *McKinney v. Indus. Claim Appeals Off.*, 894 P.2d 42 (Colo. App. 1995). In *McKinney* the Court held that the ability to earn wages in "any" amount is sufficient to disqualify a claimant from receiving permanent total disability benefits. It is not necessary that the claimant be able to return to previous employment. If wages can be earned in some modified, sedentary or part-time employment, a claimant is not permanently and totally disabled for the purpose of the statute. *See also Christie v. Coors Transportation*, 933 P.2d 1330 (Colo. 1997). Although, if the evidence establishes that a claimant is not physically able to sustain post-injury employment, or that such employment is unlikely to become available to a claimant in the future in light of particular circumstances, an ALJ is not required to find a claimant is capable of earning wages. *Joslins,* supra; *Holly Nursing Care Center v. Industrial Claim Appeals Office, 992 P.2d 701, (Colo. App. 1999).*

The determination of whether a claimant is permanently and totally disabled is made on a case by case basis and varies according to the particular abilities and circumstances of the claimant. In determining whether a claimant is permanently totally disabled, the ALJ may consider various "human factors" such as mental capabilities, physical ability, education, vocational training, overall physical condition, former employment, and availability of work a claimant can perform within a commutable labor market. The overall objective is to determine whether employment exists that is reasonably available to a claimant under her particular circumstances. *Weld County School Dist. RE-12 v. Bymer*, 955 P.2d 550 (Colo. 1998); *Holly Nursing v. ICAO*, 992 P.2d 701, 703 (Colo. App. 1999).

In the present case, the Claimant is 58 years old, has numerous skills from his experience in management of an Elk's lodge, auto body work, his own auto body business, which included estimating damages and costs. The ALJ credits the persuasive testimony of Ms. Montoya that a number of the Claimant's transferable skills fall within the sedentary and light work categories. In fact, both vocational experts agree that there would be positions available for the Claimant within the sedentary category. Additionally, the Claimant lives in Thornton, Colorado which is within the Denver metro area, which has a relatively low unemployment rate, as testified to by both Mr. Phillips and Ms. Montoya. Therefore, the evidence proves there is an availability of work that the Claimant could perform within the commutable labor market.

Moreover, the medical restrictions from the treating doctors and Division IME all place claimant in at least the light to medium category of work. Dr. Hattem indicated that the Claimant could lift up to 30 pounds, Dr. McCranie provided a 45 pound restriction and the Division IME had that lifting up to 50 pounds may be permissible.

The FCE that the Claimant had performed lacks credibility and does not accurately describe the Claimant's physical abilities. The Claimant has the ability to perform even sedentary work based on his transferrable skills and this ALJ finds the Claimant has the physical ability to perform medium duty work based on the opinions from the medical doctors on this case. As a result, the Claimant has failed to prove that he is permanently and totally disabled.

ORDER

IT IS, THEREFORE, ORDERED THAT:

1. The Claimant's claim for permanent total disability benefits is denied and dismissed with prejudice.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Date: February 23, 2015

Kimberly Allegretti
Administrative Law Judge
Office of Administrative Courts
1525 Sherman St., 4th Floor
Denver, CO 80203

ISSUE

Whether Claimant's 8% scheduled impairment rating for his left shoulder injury incurred on February 28, 2013 should be compensated as a whole person pursuant to § 8-42-107(8)(d), C.R.S., or remain a scheduled rating.

STIPULATIONS

1. The parties stipulated that there is no permanent impairment for the left elbow in relation to this claim.

2. The parties stipulated that the upper extremity 8%, or 5% whole person rating, given by Dr. Shih for Claimant's left shoulder injury is not challenged. However, the parties disagree over whether this injury should be compensated as a whole person.

FINDINGS OF FACT

1. Claimant is a 58 year-old man who has been a tractor trailer driver for UPS for approximately 27 years. Most of his job involves breaking down freight. Additionally, he drives, loads and unloads the truck, and attaches and detaches the trailer.

2. On February 28, 2013, Claimant was at work and was having difficulty with a frozen fifth wheel hitch. He was pulling it toward himself with his left, dominant side, when he felt a pop and deep pain in his left shoulder blade.

3. Claimant reported his injury to Employer, and on March 1, 2013 he underwent initial treatment with authorized treatment provider Dr. Jonathan Bloch, D.O., at Concentra Medical Center.

4. On March 11, 2013, Claimant underwent a left shoulder MRI, which found a partial thickness tear of the anterior joint of the left shoulder, mild tendinosis and a type II acromion.

5. On March 21, 2013, Claimant saw Dr. Mark S. Failinger, M.D., a board certified orthopedic surgeon, for evaluation. After seeing Dr. Failinger, Claimant underwent a regimen of conservative therapy and steroid injections.

6. During a follow-up visit on August 1, 2013, Claimant indicated significant improvement as the result of a July 11, 2013 injection. Dr. Failinger wrote that the injection was "in some ways, miraculous for him." Dr. Failinger also noted that

Claimant's range of motion was improved, and that treatment at that time was largely just for pain.

7. Claimant's injections gave him some relief; however, he continued to be symptomatic and therefore, on October 22, 2013, Claimant underwent surgery with Dr. Failinger. Dr. Failinger performed a left shoulder examination under anesthesia, an arthroscopic debridement and subacromial decompression of the left shoulder, and left shoulder manipulation under anesthesia. Dr. Failinger stated that Claimant had "left shoulder glenoid degenerative joint disease with grade 4 chondromalacia in the superior and posterior head."

8. Claimant saw Dr. Bloch on February 17, 2014, after which Dr. Bloch wrote "history of present illness: pain is with overactivity, a tolerable dull ache located at left shoulder. Patient has had physical therapy and feels better. Patient has been taking their [sic] medications and has noted improvement."

9. Claimant pointed to his entire shoulder to over his back when he was telling Dr. Bloch where his pain was located.

10. On March 10, 2014, Dr. Bloch released Claimant to full work duty with no restrictions.

11. On April 9, 2014, Dr. Bloch placed Claimant at MMI, with an impairment rating of 8% on Claimant's left shoulder, which he converted to a 5% whole person impairment.

12. In April of 2014 Claimant went back to work at UPS, where he still works.

13. On July 8, 2014, Claimant saw Dr. Eric Ridings, M.D., for an Independent Medical Exam. Dr. Ridings opined that, as a result of the February 28, 2013 work injury, Claimant sustained a partial-thickness rotator cuff tear and an aggravation of significant preexisting left shoulder adhesive capsulitis.

14. Dr. Ridings agreed with the MMI date of April 9, 2014.

15. On July 15, 2014, Claimant underwent a DIME with Dr. Franklin Shih, M.D. Dr. Shih found that the Claimant was at MMI on April 9, 2014 and accorded him an 8% upper extremity rating which he converted to a 5% whole person.

16. Dr. Shih performed a physical examination and found, among other things, that Claimant had suffered loss of range of motion with diffuse discomfort around the shoulder girdle anteriorly over the rotator cuff and along the bicep tendon.

17. On July 24, 2014, Respondents filed an Amended Final Admission of Liability ("FAL") admitting for an 8% scheduled impairment rating of the upper extremity.

18. Claimant timely filed an Application for Hearing seeking to have his impairment compensated as a whole person.

19. At hearing, Claimant credibly testified, and it is found as fact, that the work injury of February 28, 2013 has caused him the following ongoing and current difficulties:

a. He is left hand dominant. Prior to his injury, Claimant used his left shoulder to carry things; he currently cannot carry objects on his left shoulder.

b. He sleeps on his side, and because of pain from his injury, he wakes up to roll over on average two times per night.

c. Claimant has difficulty using his left shoulder to lift objects above his head.

d. Claimant has to pull a garage-type door up and down as part of his job and he is unable to do that in the same way in which he was able to prior to his injury. Now, to open the door he has to use a 16 inch long strap that he holds onto to pull the door up. He ties a rope onto the door to close it. He cannot use his left shoulder to pull the door down like he used to.

e. Part of Claimant's job involves stacking pallets, which requires him to reach over his head, which causes pain.

f. Claimant has difficulties steering and viewing vehicles when he is driving the UPS tractor trailer. UPS drivers abide by the "Smith System" when driving, in which they scan their mirrors every five to eight seconds. Claimant's tractor trailer has four mirrors that he scans. He begins driving at 4:00 A.M., and by 10:00 or 11:00 A.M. he has to move his entire upper body instead of just his head in order to scan the mirrors due to his left shoulder pain.

20. Using a pain diagram, Claimant indicated that he experienced numbness, burning, and aching in his posterior left shoulder, and numbness, burning, the feeling of pins and needles, and aching in the anterior of his left shoulder.

21. Dr. Ronald J. Swarsen, M.D. is Level II accredited and was admitted as an expert in occupational medicine at hearing. Dr. Swarsen had not performed a physical examination of Claimant but did review his medical records. Dr. Swarsen testified on behalf of Claimant.

22. Using an anatomical diagram, Dr. Swarsen credibly testified, and it is found as fact, that all of Claimant's pathology and treatment in connection with his work

injury was to the left shoulder, and not to the left arm. He further credibly testified, and it is found as fact, that the situs of Claimant's functional impairment was at his shoulder.

23. Dr. Swarsen testified, and it is found as fact, that the areas impacting Claimant's function were part of the shoulder girdle, which is located above the glenohumeral head of the left arm.

24. Dr. Swarsen opined to a reasonable degree of medical certainty that Claimant's impairment should be converted to a whole person.

25. Dr. Ridings is Level II accredited, and was admitted as an expert in physical medicine and rehabilitation at hearing. He testified on behalf of Respondents.

26. Dr. Ridings testified that loss of ability to sleep is not ratable as a permanent impairment under the AMA Guides.

27. Dr. Ridings also testified that reaching overhead and the ability to carry objects on the shoulder are activities which primarily involve the arm. He testified that the July 11, 2013 steroid injection that Claimant received was diagnostic in nature, and that Claimant's subsequent temporary relief and improvement indicated his symptomatology was derived from anatomical areas proximal to the function of the arm.

28. Dr. Ridings testified that the shoulder serves to support the functions of the arm and operates as part of the upper extremity. He further testified that Claimant had significant degenerative arthritis of the left shoulder contributing to his ongoing symptoms which would not be expected to have resulted from the work-related mechanism of injury involved in this claim. Dr. Ridings was ultimately of the opinion that Claimant's permanent functional impairment pertained only to limited range of motion of the shoulder, which primarily impacts the use of Claimant's arm.

29. Dr. Ridings also testified that there was strong indication that situs of injury was Claimant's shoulder joint.

30. Dr. Ridings testified that Claimant's injury, according to the AMA Guides, was to his upper extremity, and that no permanent impairment was warranted because the situs of injury was at the joint. He testified that his opinions were to a reasonable degree of medical certainty.

31. On cross-examination, Dr. Ridings testified that the pathology was to Claimant's left shoulder, all of his treatments were to his left shoulder, and that Claimant's functional loss was to his left shoulder.

32. However, while Dr. Ridings was ultimately of the opinion that Claimant's permanent functional impairment pertained only to limited range of motion of his

shoulder, he opined that that impairment primarily impacted the use of Claimant's arm, which is on the schedule of permanent impairment.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge enters the following conclusions of law:

1. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275; 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S.

3. Section 8-42-107, C.R.S., sets forth two different methods of compensating medical impairment. Subsection (2) provides a schedule of disabilities and subsection (8) provides for whole person ratings. The threshold issue is application of the schedule and this is a determination of fact based upon a preponderance of the evidence. The question of whether Claimant sustained a whole person medical impairment compensable under § 8-42-107(8), C.R.S., is one of fact for determination by the ALJ. The application of the schedule depends upon the "situs of the functional impairment" rather than just the situs of the original work injury. *Langton v. Rocky Mountain Health Care Corp.,* 937 P.2d 803 (Colo. App. 1996); *Strauch v. PSL Swedish Health Care System*, 917 P.2d 366 (Colo. App. 1996).

4. Pain and discomfort which limit a claimant's ability to use a portion of the body is considered functional impairment for purposes of determining whether an injury is off the schedule. *See Langton v. Rocky Mountain Healthcare Corp.*, *supra*; *Mader v. Popejoy Construction Co., Inc*., W.C. No. 4-198-489 (August 9, 1996).

5. Here, the issue to be determined is whether Claimant's injury resulted in a "loss of an arm at the shoulder" or whether Claimant has proven that the situs of his functional impairment extends beyond the "arm at the shoulder."

6. Claimant has met his burden of proof that the situs of his functional impairment extends beyond the arm at the shoulder. Claimant credibly testified that there are many things he cannot do because of pain in his left shoulder that he used to be able to do, such as carrying things on top of his left shoulder, using his left shoulder

to help him lift objects over his head, using his left shoulder to pull a garage-type door, and having to turn his entire body to scan his mirror while driving. These difficulties are all due to pain in Claimant's shoulder, not in his arm. Both Respondents' and Claimant's medical experts testified that Claimant's pathology was to his left shoulder, his treatments were to his left shoulder, and that Claimant's functional loss was to his left shoulder. There was no testimony or evidence that Claimant's pathology or treatments were to his left arm.

7. The ALJ does not find persuasive Dr. Ridings' opinion that Claimant's permanent functional impairment primarily impacted the use of his arm, thus making his injury scheduled. The persuasive and credible evidence pointed to the fact that Claimant's permanent functional impairment was to his shoulder. The fact that the shoulder joint affects arm mobility, or that the arm and shoulder's functions may be to some degree intertwined, does not mean Claimant sustained only a "loss of arm at the shoulder." Claimant has ongoing functional impairment of his left shoulder which causes the problems stated in paragraph 6 above, all involving his shoulder much more than his arm, which the ALJ concludes makes Claimant's injury beyond his "arm at the shoulder." Accordingly, Claimant's impairment is not on the schedule of permanent impairment and he is entitled to a rating for the whole person at 5% based on the impairment rating assessed by Dr. Shih.

ORDER

1. Claimant has sustained a functional impairment of 5% of the whole person for his left shoulder injury incurred on February 28, 2013. Medical impairment benefits shall be calculated under § 8-42-107(8)(d), C.R.S., based upon a 5% whole person rating.

2. The insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

DATED: February 19, 2015.

Denver, CO 80203

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within

twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

The issues to be determined herein are:

1. Compensability;

2. Medical benefits; and,

3. A contest to the denial of authorization for surgery.

Based upon the findings and conclusions below that the claim is not compensable, the ALJ does not reach a decision on the remaining issues.

FINDINGS OF FACT

1. The claimant testified that while working his regular job he began to notice a problem with pain in his arm. The pain was keeping the claimant up at night.

2. The claimant saw a Nurse Practitioner who recommended the claimant see Dr. Idler, a hand specialist.

3. The claimant was seen by Dr. Idler who referred the claimant to Dr. Leppard for an EMG diagnostic study. The claimant was assessed with a severe left carpal tunnel syndrome.

4. Once the claimant had been diagnosed he believed that the condition must be work related because he did not think he engaged in any specific activities outside of work.

5. The claimant testified that he does a lot of lifting, moving, and holding with his left arm when engaged in his work activities. The claimant works 40-hours per week.

6. The claimant was seen by the respondent-employer's workers' compensation doctor and a work-site evaluation was conducted by a Ms. Porter.

7. The claimant took the results to the doctor.

8. The claim was ultimately denied by the respondent-insurer.

9. The claimant is a 54-year old man who began working for the respondent-employer in 2012.

10. The claimant's duties involve working with extruded aluminum products. The claimant's is in the position of Head Stretcher. He is involved in the stretching and cutting of the extruded aluminum to ensure it meets required specifications. Once the product is cut it is moved to a table. The claimant uses his right arm to engage and disengage the product from the stretching machine; his left arm is used to maneuver the product.

11. The claimant does play golf on a regular basis. He regularly plays a round of golf on Fridays. When golfing the claimant does use his left wrist. He did not think that golf was the cause of his condition and therefore did not report that activity to the doctors.

12. Once the claimant's ENG results were in Dr. Jones had concerns that the results of the EMG did not correspond to the claimant's symptoms.

13. The claimant indicated that his duties do not require him to bend his wrist up and down. Additionally, his elbow is not bent a lot.

14. Dr. Jonathan Sollender conducted an independent medical evaluation og the claimant and issued a report dated June 26, 2013. Dr. Sollender reviewed the medical records as well as the results of the work place evaluation and examined the claimant.

15. Dr. Sollender also spoke directly with Ms. Porter the author of the work place evaluation.

16. Dr. Sollender opined that the work place evaluation was flawed in several respects and did not accurately assess the conditions under which the claimant was working.

17. Dr. Sollender opined that the cliamant's work conditions did not meet the Medical Treatment Guidelines for Cumulative Trauma to establish causality.

18. Dr. Sollender opined that the claimant's left arm condition was not caused by hie employment duties.

19. The ALJ finds that Dr. Sollender's opinions are credible and persuasive and entitled to great weight.

20. There is no medical evidence definitively opining that the claimant's condition is work related.

21. The ALJ finds that the claimant has failed to establish that it is more likely than not that his condition arose out of and in the course of his employment with the respondent-employer.

CONCLUSIONS OF LAW

1. According to C.R.S. § 8-43-201, "a claimant in a workers' compensation claim shall have the burden of proving entitlement to benefits by a preponderance of the evidence; the facts in a workers' compensation case shall not be interpreted liberally in favor of either the rights of the injured worker or the rights of the employer, and a workers' compensation case shall be decided on its merits." *Also see Qual-Med, Inc. v. Indus. Claim Appeals Off.,* 961 P.2d 590, 592 (Colo. App. 1998) ("The Claimant has the burden of proving an entitlement to benefits by a preponderance of the evidence."); *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915, 918 (Colo. App. 1993) ("The burden is on the claimant to prove his entitlement to benefits by a preponderance of the evidence."). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.,*104 P.3d 273, 275 (Colo. App. 2004).

2. For an injury to be compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Off.,* 919 P.2d 207, 210, 210 (Colo. 1996); *Schepker v. Daewoo North*, W.C. No. 4-528-434 (ICAO April 22, 2003). An injury "arises out of" employment when the origins of the injury are sufficiently related to the conditions and circumstances under which the employee usually performs his or her job functions as part of the employee's services to the employer. *See Schepker, supra.* "In the course of" employment refers to the time, place, and circumstances of the injury. *Id.* There is no presumption that an injury arises out of employment when an unexplained injury occurs during the course of employment. *Finn v. Indus. Comm'n,* 165 Colo. 106, 108-09, 4437 P.2d 542 (1968).

3. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1)(c) C.R.S.*; Faulkner v. Indus. Claim Appeals Off.,* 12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for the determination by the ALJ. *Faulkner,* 12 P.3d at 846.

4. In deciding whether claimant has met his burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Kroupa v. Indus. Claim Appeals Off.*, 53 P.3d 1192, 1197 (Colo. App. 2002). When considering credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). The decision need not address every item contained in the record. Instead, incredible evidence, unpersuasive testimony, evidence or arguable inferences may be implicitly rejected. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Off.*, 5 P.3d 385 (Colo.App. 2000).

5. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

6. An "occupational disease" is defined by §8-40-201(14), C.R.S., as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

7. Under this statute the claimant bears the burden to prove that the disease was "directly and proximately caused" by the employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claims Office*, 989 P.2d 251 (Colo. App. 1999). A claimant is entitled to recovery if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993).

8. The ALJ concludes that Dr. Sollender's opinions are credible and entitled to great weight.

9. As found above, the claimant has failed to establish by a preponderance of the evidence that he sustained a compensable injury or occupational disease arising out of and in the course of his employment on or about April 15, 2013.

ORDER

It is therefore ordered that:

The claimant's claim for benefits under the Workers' Compensation Act of Colorado is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATE: February 11, 2015

Donald E. Walsh
Administrative Law Judge
Office of Administrative Courts
1259 Lake Plaza Drive, Suite 230
Colorado Springs, CO 80906

ISSUES

- Whether Claimant's right shoulder injury resulted in functional impairment beyond that found in the schedule of impairments under § 8-42-107(2)(a), C.R.S., or whether Claimant's impairment is limited to his right upper extremity.

- Whether Respondent has overcome the DIME opinion by clear and convincing evidence.

STIPULATION

At hearing the parties stipulated that Respondent will pay $899.62 for temporary disability benefits for the period between July 18, 2013 and July 28, 2013, inclusive. The stipulation resolves the issue of temporary disability benefits that Claimant endorsed for hearing.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge finds as fact:

1. Claimant is 49 years old and his date of birth is May 31, 1965. He has worked for Employer for approximately eighteen years. He works full-time in maintenance at a vehicle repair facility.

2. Claimant sustained an admitted compensable injury to his right shoulder on April 18, 2013. He initially received medical treatment at Concentra with Dr. Kirk Holmboe.

3. After being seen at Concentra, Claimant was referred for an MRI which took place on May 6, 2013. The MRI found that the Claimant had numerous problems impacting his right shoulder, i.e., tendinopathy of the supraspinatus, infraspinatus and subscapularis tendons, a large full-thickness tear of the distal fibers of the supraspinatus and infraspinatus tendons (rotator cuff tear), high grade partial-thickness articular surface tear of the distal fibers of the subscapularis tendon, tendinopathy and partial tearing of the long head of the biceps tendon, mild concave under surface type II acromion with mild anterior down sloping.

4. Claimant was eventually referred to Dr. Michael Hewitt, an orthopedist, who first evaluated Claimant on May 20, 2013. On June 4, 2013, Claimant underwent the following surgical procedures with Dr. Hewitt: right shoulder arthroscopic rotator cuff

repair, arthroscopic subacromial decompression, distal clavicle co-planing, superior labral debridement, and right shoulder manipulation. Dr. Hewitt discharged Claimant with instructions to return in a week for a wound check and begin formal physical therapy.

5. After the surgery, Claimant's medical treatment was managed by Dr. Holmboe and Claimant participated in physical therapy. Claimant also saw Dr. Hewitt on occasion.

6. On November 14, 2013, Claimant returned to Concentra and saw Dr. Steve Danahey. Prior to November 14, 2013, Dr. Danahey had not treated Claimant. Dr. Danahey determined that Claimant reached maximum medical improvement ("MMI") on November 14, 2013. He noted that Claimant had mild motion limitations with respect to the right shoulder and rated 2% for flexion, 1% for extension, 0% for adduction, and 1% for abduction. Internal rotation was measured and rated at 1% and external rotation was measured and rated at 0%. Dr. Danahey determined a 5% upper extremity impairment rating, and he noted that if applicable, it may be converted to a 3% whole person impairment from Table 3.

7. Dr. Danahey noted that Claimant was comfortable working on his exercises at home and had already returned to his regular duty job without any problems. He documented that Claimant reported that overhead repetitive motion bothers him and reaching behind him is problematic. Dr. Danahey noted that Claimant was aware that he may have orthopedic follow-up with Dr. Hewitt on a maintenance basis up to two times within the next year.

8. On December 4, 2013, Respondents filed a Final Admission of Liability consistent with Dr. Danahey's report. Claimant subsequently applied for a Division Independent Medical Examination ("DIME").

9. The DIME occurred on February 27, 2014, which Dr. Ronald J. Swarsen performed. He agreed with the authorized treating physician that Claimant reached MMI on November 14, 2013 with respect to his right shoulder. Dr. Swarsen's report demonstrates his proper use of the AMA *Guides* and appropriate methods of measuring range of motion. He concluded Claimant had range of motion deficits in his right shoulder in flexion, extension, abduction, adduction, and internal/external rotation that resulted in a 12% upper extremity impairment rating which he converted to a 7% whole person rating. He noted that apportionment was not applicable.

10. Dr. Swarsen's report reflects that Claimant reported that he can lift his arm, but has trouble with overhead work and a lot of difficulty with internal rotation and reaching behind his back. Claimant reported off and on pain at night when he sleeps on the shoulder and he awakens with marked stiffness; he stated that his pain was usually around 4/10 (with 1 being almost not noticeable) and Claimant stated that at its worst, his pain is an 8/10. Claimant expressed concern that his main treating physician, Dr. Holmboe was not the physician who did his impairment rating.

11. In his report, Dr. Swarsen opined that the differences between his ratings and Dr. Danahey's ratings were due to discontinuation of formal physical therapy rehabilitation or the possible development of adhesive capsulitis. He recommended a more directed maintenance program.

12. Claimant returned to Dr. Danahey on June 3, 2014 for a maintenance evaluation at Dr. Danahey's suggestion. Claimant reported that he is doing very well and that everything is good and work is not aggravating his shoulder. Claimant did note that he has trouble shooting 3-pointers in basketball and had trouble reaching back.

13. Following Dr. Swarsen's DIME and report, Respondent requested an Independent Medical Examination ("IME") and it was performed by Dr. John S. Hughes. He examined Claimant on July 16, 2014 and agreed that Claimant reached maximum medical improvement on November 14, 2013. He noted that Claimant had Type II diabetes. He noted crepitation in both shoulders. He determined that Claimant had range of motion deficits in internal and external rotation, flexions and extension, and abduction and adduction. These deficits amounted to a 7% impairment of the right upper extremity. Dr. Hughes characterized Dr. Swarsen's 12% impairment rating as an "outlier."

14. Dr. Hughes also noted that Claimant had full strength to manual testing in both arms. He noted that other upper extremity joint examinations were normal. Claimant had a slight decrease in left lateral flexion and rotation of the head and neck but no symptoms and no palpable right-sided trapezius hypertonicity. Claimant told Dr. Hughes that he had no symptoms of pain but had difficulty with activities that required internal rotation of the right arm at the shoulder. Claimant had no restrictions on any occupational activities.

15. At hearing, Dr. Hughes testified as an expert in occupational medicine who is fully Level-II accredited. He testified about the location of the pathology in Claimant's shoulder and generally described the procedures that were performed. He explained that Claimant might have adhesive capsulitis and that people with diabetes are more likely to have this problem.

16. Dr. Hughes testified that the April 18, 2013 injury did not cause functional impairment above Claimant' arm. Rather, that injury has caused small limitations on right arm range of motion, but did not functionally impair any structures above the arm.

17. Dr. Hughes discussed that Claimant has undergone considerable physical therapy and has had a good post-surgical recovery from the industrial injury.

18. The record contains documentation from twenty-four physical therapy sessions, beginning in June 2013 and ending in September 2013, although it appears that Claimant may have had additional physical therapy sessions after October 8, 2013. During Claimant's twenty-four physical therapy sessions, he frequently reported pain in his right shoulder when sleeping and with internal rotation activities.

19. Claimant's right shoulder concerns seemed to improve with regular physical therapy, but he still had some limitations on internal rotation when he returned to Dr. Holmboe on October 8, 2013.

20. At hearing Claimant testified that he has functional loss in the area of his right shoulder and that he suffers both pain and dysfunction when performing various activities at work, including overhead work when he is changing valets or repairing hoses. He also testified that he has problems sleeping on his right side. He stated that when he sleeps on his right side he wakes up with pain in the area between his shoulder joint and the base of his neck. He is also limited in carrying objects on his right shoulder; and avoids using his right shoulder, relying extensively on his left shoulder to perform this activity.

21. Although Claimant's testimony may seem contradictory in reference to statements made to Dr. Hewitt on August 26, 2013 and October 7, 2013, and his statement to Dr. Hughes on July 16, 2014, and finally his statement to Dr. Danahey on June 3, 2014, all regarding shoulder pain or the lack thereof and sleep issues; the ALJ finds that Claimant's testimony is not inconsistent with the medical records and on and off complaints regarding his right shoulder. Hi testimony is not in conflict with his statements to Dr. Swarsen on February 27, 2014.

22. On February 27, 2014 Claimant reported to Dr. Swarsen that he can lift his arm, but has trouble with overhead work and a lot of difficulty with internal rotation and reaching behind his back for dressing and for hygiene. He reported that he cannot shoot overhead in basketball the way he used to. Claimant also reported that he has off and on pain at night when he sleeps on his right shoulder and then awakens with marked stiffness. Finally, Claimant reported to Dr. Swarsen that he returned to full duty work and was doing well with it but does have some trouble with sustained resisted activity with the right upper extremity and overhead work, but is accommodating himself reasonably well. The ALJ reconciles the differing statements by recognizing and finding that Claimant has had off and on pain with sleeping at night and that his pain waxes and wanes with certain activities, including work activities and whether he is doing his regular job duties.

23. At hearing, Dr. Swarsen testified as an expert in occupational medicine who is fully Level-II accredited. He testified that Claimant's injury was to his right shoulder and that the Claimant's functional impairment was to that shoulder. He also testified that the Claimant's arm is not his shoulder and that the Claimant's right shoulder is functionally impaired. Thus, a whole person rating is warranted.

24. In response to Dr. Hughes' testimony that Claimant was not entitled to a whole person impairment because his functional impairment did not include loss to the neck or thoracic spine, Dr. Swarsen agreed that there was no loss to the neck or thoracic spine. However, Dr. Swarsen opined that there was loss to the shoulder girdle which is not the same as a loss to the arm. Thus, a whole person rating is appropriate.

25. Dr. Swarsen described the shoulder as the scaffolding upon which the arm operates and that the arm cannot function without the shoulder girdle. Further, he testified that the Claimant's functional impairment was to his right shoulder and that there was no evidence in the record of injury to the Claimant's right arm. The Judge finds this testimony persuasive.

26. Dr. Swarsen's opinion was that Claimant's testimony concerning the Claimant's functional loss was consistent with the nature of the Claimant's right shoulder pathology and surgical intervention. He agreed with Dr. Hughes concerning the anatomical location of the Claimant's problems. Dr. Hughes noted in his report that he agrees with the opinion that Claimant has impaired ranges of motion of his right shoulder.

27. Both Dr. Swarsen and Dr. Hughes agreed that there were no tonicity problems in the area of the Claimant's trapezius. Dr. Swarsen testified that this was not inconsistent with the fact that the Claimant suffers functional loss when attempting to use his right shoulder girdle for lifting and carrying objects or sleeping on his right side.

28. Dr. Hughes' disagreement with Dr. Swarsen's findings and ratings does not constitute clear and convincing evidence that Dr. Swarsen is incorrect. The opinions and conclusions of Dr. Hughes regarding the situs of functional impairment and impairment rating are a difference of medical opinion only and are insufficient to overcome Dr. Swarsen's opinion and rating.

29. The ALJ finds that the report and testimony of Dr. Swarsen is more persuasive than the report and testimony of Dr. Hughes and that Dr. Swarsen obtained a valid impairment rating on February 27, 2014. The Judge is not convinced that Dr. Swarsen's impairment rating is an "outlier" or that his impairment rating is in error compared to the ratings of Dr. Hughes and Dr. Danahey. Both Drs. Hughes and Swarsen testified that with impairment ratings for range of motion deficits there are reasonable degrees of variance. Dr. Swarsen testified that things can be different on different days.

30. Based on the credible and persuasive testimony and report of Dr. Swarsen, and the credible testimony of Claimant, the ALJ finds that Claimant's right shoulder injury resulted in functional impairment beyond that found in the schedule of impairments under § 8-42-107(2)(a), C.R.S. Thus, Claimant's impairment is not limited to his right upper extremity. The situs of Claimant's functional impairment extends beyond the "arm at the shoulder."

31. Respondents have failed to overcome the DIME opinion regarding a whole person rating by clear and convincing evidence to show that it is highly probable that Dr. Swarsen is incorrect.

32. Claimant has suffered a 12% upper extremity impairment rating which is appropriately converted to a 7% whole person rating as a result of the April 18, 2013 industrial accident and resulting right shoulder injury.

33. At hearing, Claimant withdrew the issue of medical maintenance benefits.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge enters the following conclusions of law:

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a worker's compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 592 P.2d 792, 800 (Colo. 1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

4. Section 8-42-101(3.7) mandates that physicians rating injured workers' impairments follow the AMA *Guides*.

5. A DIME physician's findings concerning a claimant's whole person impairment rating are binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S. 2006; *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186-90, 189 (Colo. App. 2002). Clear and convincing evidence means "evidence which is stronger than a mere 'preponderance'; it is evidence that his highly probable and free from serious and substantial doubt**."** *Metro Moving & Storage Co v. Gussert,* 914 P.2d at 414 (citing CJI-Civ. 3d 3:2 (1988). A party meets this burden only by demonstrating that the evidence contradicting the DIME is "unmistakable and free from

serious or substantial doubt." *Leming v. Indus. Claim Appeals Office*, 62 P.3d 1015, 1019 (Colo. App. 2002).

6. The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). Since the DIME physician is required to identify and evaluate all losses and restrictions which result from the industrial injury as part of the diagnostic assessment process, the DIME physician's opinion regarding causation of those losses and restrictions is subject to the same enhanced burden of proof. *Id.*

7. The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (Nov. 17, 2000). To overcome Dr. Swarsen's DIME opinion, Respondent was required to present clear and convincing evidence, i.e. evidence which is unmistakable and free from serious or substantial doubt. *De Leo v. Koltnow,* 613 P.2d 318 (Colo. 1980). Respondent has not met this burden through Dr. Hughes' testimony. Dr. Hughes did not demonstrate that Dr. Swarsen erred in his application of the AMA *Guides* and rating. Whether the physician properly applied the AMA *Guides* is a question of fact for the ALJ. *Metro Moving and Storage v. Gussert*, 914 P.2d 411 (Colo. App. 1995). As found, Dr. Swarsen's report demonstrates his proper use of the AMA *Guides* and appropriate methods of measuring range of motion. He concluded Claimant had range of motion deficits in his right shoulder in flexion, extension, abduction, adduction, and internal/external rotation.

8. Section 8-42-107, C.R.S., sets forth two different methods of compensating medical impairment. Subsection (2) provides a schedule of disabilities and subsection (8) provides for whole person ratings. The threshold issue is application of the schedule and this is a determination of fact based upon a preponderance of the evidence. The question of whether the Claimant sustained a whole person medical impairment compensable under § 8-42-107(8), C.R.S., is one of fact for determination by the ALJ. The application of the schedule depends upon the "situs of the functional impairment" rather than just the situs of the original work injury. *Langton v. Rocky Mountain Health Care Corp.,* 937 P.2d 803 (Colo. App. 1996); *Strauch v. PSL Swedish Health Care System*, 917 P.2d 366 (Colo. App. 1996).

9. The fact that the AMA *Guides* do not provide for a method to rate a particular condition as a whole person is not dispositive of whether the Claimant suffered compensable functional impairment not enumerated on the schedule of disabilities. Thus, the ALJ may find functional impairment not listed on the scheduled of disabilities. See *Cordova v. Industrial Claims Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

10. Where the Claimant suffers an injury not enumerated in section 8-42-107(2), C.R.S., the Claimant is entitled to whole person impairment benefits under section 8-42-107(8), C.R.S. In the context of section 8-42-107(1), C.R.S. the term "injury" refers to

the manifestation in a part or parts of the body which have been functionally impaired or disabled as a result of the industrial accident or injury. *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366 (Colo. App. 1996); *Martinez v. Albertsons*, W.C. # 4-692-947 (ICAO 6/30/08). The determination of the situs of the functional impairment is one of fact and is distinct from the Claimant's medical impairment rating. As a matter of law, upper extremity impairment ratings contained in the AMA *Guides* may, or may not, be consistent with the scheduled injury ratings contained in section 8-42-107(2), C.R.S. *See Mountain City Meat Co. v. Oqueda*, 919 P.2d 246 (Colo. 1996).

11. Pain and discomfort which limit a Claimant's ability to use a portion of the body is considered functional impairment for purposes of determining whether an injury is off the schedule. See *Langton v. Rocky Mountain Healthcare Corp.*, *supra*; *Mader v. Popejoy Construction Co., Inc*., W.C. No. 4-198-489 (August 9, 1996). Functional impairment need not take any particular form. Accordingly, discomfort which interferes with the Claimant's ability to use a portion of the body may be considered "impairment". *Mader v, Popejoy Construction Co., Inc.* W.C. No. 4-198-489 (ICAO 8/9/96). aff'd, *Popejoy Construction Co., Inc.* (Colo. App. No. 96CA1508, February 13, 1997) (not selected for publication) (Claimant sustained functional impairment of the whole person where back pain impaired use of arm).

12. Here, Claimant has functional loss to his right shoulder, and the use of Claimant's right shoulder is impaired. Claimant suffers both pain and dysfunction when performing various activities at work, including overhead work when he is changing valets or repairing hoses. Claimant has problems sleeping on his right side. When he sleeps on his right side he wakes up with pain in the area between his shoulder joint and the base of his neck. He is also limited in carrying objects on his right shoulder; and avoids using his right shoulder, relying extensively on his left shoulder to perform this activity. Claimant's shoulder joint itself is impaired because it does not function as it did before his injury. The mere fact that the shoulder joint affects arm mobility does not mean Claimant sustained only a "loss of arm at the shoulder." The situs of Claimant's functional impairment extends beyond the "arm at the shoulder."

13. Accordingly, Claimant's impairment is not on the schedule of permanent impairment and he is entitled to a rating for the whole person at 7% based on impairment rating assessed by Dr. Swarsen.

ORDER

It is therefore ordered that:

1. Respondents have failed to overcome the DIME physician's opinions by clear and convincing evidence.

2. The Respondents shall pay permanent partial disability benefits to the Claimant based upon a whole person impairment rating of 7%.

3. The Respondent (self-insured) shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 12, 2015

/s/ Sara L. Oliver

_____

SARA L. OLIVER
Administrative Law Judge
Office of Administrative Courts
1525 Sherman St., 4th Floor
Denver, CO 80203

ISSUES

The issues to be determined are as follows:

1. Whether the Claimant has proven that his request for cervical injections and a cervical/upper extremity EMG recommended by Dr. Bhavesh Patel is reasonable, necessary and related to his work-related injury of June 8, 2013[1];

2. Whether the Claimant has proven that his request for injections and discectomy at the L5-S1 level of his lumbar spine recommended by Dr. Michael Karnasiewicz is reasonable, necessary and related to his work injury of June 8, 2013.

3. Whether the Claimant has proven that he is entitled to temporary total disability benefits from December 19, 2013 ongoing.

PROCEDURAL MATTERS

Following the hearing, the ALJ permitted the parties to complete the testimony of Dr. Karnasiewicz by telephone. That deposition was completed and the transcript has been submitted. In addition respondents were given the opportunity to depose Dr. Paz and Dr. Walker as part of their case in chief. In lieu of completing those depositions the parties agreed to submit a supplemental report authored by Dr. Paz that addresses the reasonableness, relatedness, and necessity of the lumbar surgery recommended by Dr. Karnasiewicz. That report was submitted to the ALJ and entered into evidence.

FINDINGS OF FACT

1. The Claimant is 23-year-old male who was hired by Employer in March 2013 to repair and maintain pools and spas.

2. On June 8, 2013, the Claimant was hanging over a pool while unscrewing and opening steel jet covers. He was in the process of removing a metal plate from the

[1] The Claimant's Case Information sheet noted that "Pursuant to ALJ Felter's Order dated May 7, 2014, the issues to be heard at this hearing are (1) the authorization of the recommendations of the Connecticut authorized treating provider (ATP), Bhavesh Patel, M.D. for a lumbar fusion, (2) a cervical EMG, (3) a cervical traction unit, and (4) physical therapy for Claimant's whole body. However, these issues were not all pursued at hearing (except the Claimant mentioning the EMG for his upper extremity and cervical), and, in the Claimant's post hearing brief, the Claimant did not seek redress on the remaining issues, but rather only the 3 issues listed above.

jet with the use of a screw driver and when he lifted himself out of the pool, he experienced pain in his left mid back just to the left of his spine (Claimant's Exhibit 1, p. 3, ¶3, excerpt from Order of ALJ Felter dated December 3, 2013).

3. The Respondents initially admitted for injuries including the thoracic and cervical spine, but contested injury to the lumbar spine which included a herniated disc (Claimant's Exhibit 1, p. 3,¶ 4, excerpt from Order of ALJ Felter dated December 3, 2013). ALJ Felter determined that the weight of the medical evidence established that the Claimant's lumbar spine condition was causally related to the admitted injury of June 8, 2013 (Claimant's Exhibit 1, p. 6, ¶¶ 18-19 and p. 10, excerpt from Order of ALJ Felter dated December 3, 2013). ALJ Felter ordered that, "Respondents shall pay the costs of medical care and treatment for the Claimant's thoracic and low back injuries of June 8, 2013, subject to the Division of Workers Compensation Medical Fee Schedule (Claimant's Exhibit 1, p. 12, ¶A, excerpt from Order of ALJ Felter dated December 3, 2013).

4. The Claimant originally received medical care from Dr. Sander Orent and Dr. Sharon Walker at Arbor Medical Clinic. The initial history provided by the Claimant on June 11, 2013 was "back pain" (Claimant's Exhibit 10, p. 72; Respondents' Exhibit E, p. 17). On June 12, 2013, Dr. Sander Orent assessed the Claimant with "thoracic strain, in an otherwise healthy young man" (Claimant's Exhibit 10, p. 78; Respondents' Exhibit E, p. 18). On June 18, 2013, the Claimant was still complaining of a good deal of pain. Dr. Orent noted that, on review of imaging studies, "there is evidence of an old T7 compression fracture, although there is no history thereof, so it may be a lot more acute than what we realize based on the imaging finding itself." As for the Claimant's symptoms, Dr. Orent noted "some numbness at the ends of his hands. It is worse with certain positions. He is complaining of some discomfort in the neck as well. The primary pain, though, is right over the T7 area in the central portion of the spine." Dr. Orent further noted that the Claimant was taking enough narcotics for the pain that he should not be driving or working, even at sedentary activities in the work place (Claimant's Exhibit 10, p. 83; Respondents' Exhibit E, p. 19). On June 28, 2013, the Claimant came to Dr. Orent's clinic to report that he was going to be moving to Connecticut. As Dr. Orent was out, the Claimant was seen by P. A. Clint Dillard. The Claimant continued to report pain in the thoracic region and reported lumbar pain. P.A. Dillard noted that there were no radicular symptoms. P.A. Dillard felt the Claimant had a "myofascial spasm" and questioned the need for a lumbar spine MRI as P.A. Dillard did not see any indications on physical exam on that date.

5. The Claimant moved to Connecticut on July 12, 2013 and transferred his care briefly to Concentra Medical Center where he was seen by Dr. Victor Cohen, and Dr. Victor Wasilauskas. On July 16, 2013, the Claimant told Dr. Cohen, "I was hanging over the edge pulling steal jet covers off when I pulled myself out I pulled my back out – I have pain up and down my back, but mid and upper back is unbarable [sic]." Dr. Cohen assessed thoracic strain, trapezius strain and lumbar strain. On July 29, 2013, the Claimant saw Dr. Wasilauskas and reported "pain located on neck and middle back" and "no radicular pain noted." Dr. Wasilauskas referred the Claimant for a neurosurgical

consultation for his neck and thoracic spine conditions. On August 26, 2013, Dr. Wasilauskas noted that the Claimant was still reporting thoracic pain and low back pain but no radicular symptoms were noted. Dr. Wasilauskas also noted that the Claimant had been seen by Dr. Karnasiewicz and he did not feel that the Claimant needed surgery but would benefit from physical therapy (Claimant's Exhibits 15 and 16; Respondents' Exhibit F).

6. The Claimant saw Dr. Karnasiewicz on August 8, 2013. Dr. Karnasiewicz noted that the Claimant reported that he currently has "bilateral upper extremity pain right greater than left that he describes as 'pressure.' He states this is into the bilateral upper trapezius, lateral and posterior arm throughout into the lateral hand and lateral third through fifth digits. He admits to paresthesias right greater than left into the posterior arm and hand. He denies any frank weakness into the upper extremities bilaterally. He also admits to right mid back flank pain. He states that he also has lower back pain and bilateral lower extremity pain throughout the buttock, posterior and anterior thigh. He admits to paresthesias into the dorsal feet bilaterally. He also admits to weakness into the lower extremities bilaterally stating that his knees give out on him on occasion. He states that the severity of his pain is 7/10 and is alleviated with physical therapy and lying supine. Dr. Karnasiewicz assessed the Claimant with a "diffuse spinal injury" and noted "at the present time surgery is not recommended." Dr. Karnasiewicz recommended continued physical therapy and medication refill (Claimant's Exhibit 3; Respondents' Exhibit H).

7. The Claimant flew back out to Colorado for an IME with Dr. Paz which took place on September 10, 2013. Dr. Paz prepared a report dated October 7, 2013, in which he determined that the Claimant reached MMI with respect to his June 8, 2013 event and determined that the Claimant's current symptoms were not related to the work injury, stating, "[the Claimant's] differential diagnosis includes myofascial pain in the thoracic and lower chest wall. However, the natural history of a myofascial strain of the thoracic region would be to improve and resolve of 4-6 weeks. The history, in this particular case, is inconsistent with the natural history of myofascial pain of the thoracic region and chest wall. The "spread" of symptoms from the thoracic region to the cervical and lumbar region is inconsistent with myofascial strain" (Respondents' Exhibit I). In a prior Order on compensability issues and causal relatedness, ALJ Felter found this IME opinion of Dr. Paz "lacking in credibility and outweighed by the totality of the medical opinions of each of the Claimant's authorized treating physicians" (Claimant's Exhibit 1, p. 6, ¶ 19, excerpt from Order of ALJ Felter dated December 3, 2013).

8. Subsequently, the Claimant's care was then transferred to Dr. Bhavesh Patel at US MedGroup who took over as the Claimant's primary care provider in Connecticut. On September 12, 2013, Dr. Patel noted that upon examination and after review of an MRI scan of the Claimant's lumbar spine performed on 08/29/2013, there was evidence of a small left L5-S1 disk herniation encroaching the left S1 nerve root. And a small disc bulge at the L4-L5 level. Dr. Patel also noted that the Claimant's thoracic spine MRI done on 06/19/2013 revealed evidence of a right sided C4-C5 disk protrusion with mild indentation of the retro aspect of the cord. Dr. Patel assessed

cervicalgia associated with motion, rule out left C6 radiculopathy, mild stenosis, mechanical back pain and left L5-S1 radiculitis secondary to a small herniated disc. Dr. Patel recommended "a left L5-S1 transforaminal epidural steroid injection to help his back and left radicular leg pain which favors the L5-S1 distribution (Claimant's Exhibit 4, Respondents' Exhibit G).

9. The Claimant saw Dr. Patel again on October 10, 2013 continuing to complaint of "pain to the lower back and left leg and also, pain in his neck and left arm." The Claimant was recommended for lumbar injections and further workup including an EMG of his left upper extremity, but Dr. Patel notes that "this was denied through Workers' Compensation." Dr. Patel continued to opine that the Claimant would benefit from a lumbar epidural injection to help with his left leg pain and he further recommended continued light duty work and physical therapy and medication distribution (Claimant's Exhibit 4, Respondents' Exhibit G).

10. Per a Physician Work Activity Status Report by Dr. Cohen dated December 19, 2013, the Claimant's work status is "no activity" (Claimant's Exhibit 6, p. 61). Also note that, in a letter dated June 13, 2014, the Claimant requested that Dr. Patel clarify his opinion that Claimant's working restrictions was "no activity." The letter was answered by Dr. Barinder Mahal on June 18, 2014, indicating that "Patient with symptomatic cervical & lumbar radiculopathy with restrictions lifting, pushing, pulling, standing, & sitting. His restrictions should remain "No Activity"(Claimant's Exhibit 6, p. 62). The Claimant has not returned to any type of employment. It is noted that ALJ Felter previously found that the Claimant had voluntarily left modified employment with Employer to return to Connecticut to be with family and that he was responsible for termination due to his decision to abandon medically approved modified work provided by the Employer (Claimant's Exhibit 1, pp. 6-8, Order of ALJ Felter dated December 3, 2013). However, the "no activity" work status occurs on December 19, 2013 after ALJ Felter's Order as does the further clarification on June 18, 2014.

11. As of January 2, 2014, Dr. Patel notes that the Claimant's range of motion in his cervical spine and lumbar spine is restricted bilaterally and straight leg raising causes localized low back pain and left leg pain (Claimant's Exhibit 4, Respondents' Exhibit G).

12. On January 16, 2014, due to the continued pain symptoms and continuing restrictions on range of motion, Dr. Patel referred the Claimant back to see Dr. Karnasiewicz, the neurosurgeon, for re-evaluation of the lower back and leg pain (Claimant's Exhibit 4, Respondents' Exhibit G).

13. The Claimant continued to see Dr. Patel for pain management, and as of May 1, 2014, Dr. Patel recommended a cervical injection for his neck and right arm pain and an injection to help his lumbar pain, pending surgery. The Claimant was continuing to take Percocet and was started on Neurontin (Claimant's Exhibit 4, p. 52).

14. After the Claimant's condition did not improve with physical therapy and treatment by Dr. Patel, he returned to Dr. Karnasiewicz on February 11, 2014 for re-evaluation. At this visit, Dr. Karnasiewicz reviewed the lumbar MRI scan noting it showed a herniated disc that was abutting the left S1 nerve root and a concomitant annular tear. At that point in time, since the Claimant had not received any type of improvement in spite of considerable conservative care including over 40 sessions of therapy, a microdiskectomy was recommended. Complications of the surgery were discussed, and the Claimant wished to proceed with surgery (Claimant's Exhibit 3, pp. 19-20).

15. Respondents denied the surgery and sent the Claimant for a medical examination with Dr. Michael Rauzzino in Colorado. Dr. Rauzzino, in his May 17, 2013 written report stated that he agrees with Dr. Paz's earlier opinion that was rejected in the December 3, 2013 Order by ALJ Felter, that there was no compensable workers' compensation injury and that the problems with the Claimant's lumbar spine were more likely related to previous activities. Dr. Rauzzino opined that the Claimant sustained no structural injury to his spine on June 8, 2013, but only myofascial strain. He further stated that he did not believe the Claimant needed any sort of surgery and does not have a true S1 radiculopathy. This was in spite of the fact that Claimant had pain radiating down his left leg, has breakaway weakness in the muscles of his left leg, and very noticeable atrophy in his left leg. The atrophy was visibly noticeable and was observed by this Court. Dr. Rauzzino believes the Claimant is at MMI and his case should be closed with no impairment. Dr. Rauzzino also found that the Claimant had positive Waddell's signs and also based his report on video surveillance footage which showed the Claimant doing tricks on his bicycle approximately two (2) to three (3) years prior to Claimant's injury on the job (Respondents' Exhibit P). The video, taken significantly prior to the incident does not show the Claimant suffering a spinal injury nor does it negate the fact that two (2) years later, the Claimant sustained an admitted work injury and by his December 3, 2013 Order, ALJ Felter determined that the claim was compensable and the Respondents were responsible for medical care for the Claimant's cervical, thoracic and lumbar spine conditions.

16. Dr. Rauzzino also testified by deposition on June 30, 2014. Dr. Rauzzino is board certified in neurosurgery with an active clinical practice taking care of patients with both brain and spinal disorders (Depo. Tr. Dr. Rauzzino, pp. 5-6). Dr. Rauzzino characterizes the Claimant's lumbar MRI as showing "a fairly small disc protrusion at L5-S1, which contacted, but didn't put the specific amount of pressure on the S1 nerve root (Depo. Tr. Dr. Rauzzino, p. 7). Dr. Rauzzino testified that he did not believe that these structural abnormalities came from the Claimant's described mechanism of injury on June 8, 2013 since his initial complaints were not directed to the lumbar spine but to his neck and upper back (Depo. Tr. Dr. Rauzzino, p. 8). Dr. Rauzzino testified that the initial treating physicians ordered neck and thoracic MRIs initially but did not image his lumbar spine at that time since they did not feel that his symptoms at that time were consistent with a lumbar injury (Depo. Tr. Dr. Rauzzino, p. 9). Then, the pattern of his symptoms changes and he complained of pain radiating down his leg and there were x-rays taken in August of 2013 (Depo. Tr. Dr. Rauzzino, p. 9). Dr. Rauzzino testified that if

the Claimant had suffered a structural injury to his low back on June 8, 2013 then the symptoms would have shown up within a few days, 4-5 at the most, not 4 weeks later (Depo. Tr. Dr. Rauzzino,pp. 13). Dr. Rauzzino testified that the surgery that is being proposed is designed to treat a lumbar disc herniation, putting pressure on a nerve and radicular pain that goes down the leg in the distribution of the nerve which is being affected by the disc. He does not believe the Claimant should have this surgery because he thinks the Claimant is "a bad surgical candidate, in the sense that I don't know that surgery is likely to make him getter. If he has a very clear presentation that makes sense and has very significant radiographic findings, then one might consider to operate on him." However Dr. Rauzzino did not see clear-cut evidence of the specific nerve being bothered when he examined the Claimant (Depo. Tr. Dr. Rauzzino, p. 14). Dr. Rauzzino opines that the Claimant's responses to pain were exaggerated and out of proportion and not consistent with a specific nerve and a specific distribution (Depo. Tr. Dr. Rauzzino, p. 15). In general, Dr. Rauzzino testified that he agreed with the opinion of Dr. Paz but felt that his own opinion was a little more detailed in terms of causation (Depo. Tr. Dr. Rauzzino, pp. 32-34). On cross-examination, Dr. Rauzzino testified that it was his opinion that the Claimant had degenerative changes due to injuries before his June 8, 2013 work injury. However, he agreed that there were no medical records that supported prior injuries, except to the extent that Dr. Rauzzino noted radiographic evidence of chronic injury to his spine (Depo. Tr. Dr. Rauzzino, pp. 48-50).

17. In addition to IME's that the Respondent has requested the Claimant undergo, Respondents have requested peer reviews from several physicians for review of the requests of Dr. Patel and Dr. Karnasiewicz.

- On February 12, 2014, Dr. Anjmum Sharma reviewed the Claimant's medical presentation and found that the recommended treatment for disc and nerve pathology was not necessary nor related to the injuries the Claimant suffered on June 8, 2013. Specifically, Dr. Sharma felt that the Claimant's mechanism of injury was not significant enough to result in the injury that he is reporting of chronic, unmitigating cervical, thoracic and lumbar pain. Dr. Sharma opined the Claimant is at MMI and required no further treatment based, in part, on video surveillance that he reviewed showing the Claimant walking, talking on a cell phone and getting into a car and closing the door and raising the hood of the car (Respondents' Exhibit B, pp. 2-5).

- On September 23, 2013, Dr. Deborah Saint-Phard reviewed and found the requests for additional physical, therapy epidural steroid injections and EMG requested on September 8, 2013, to be not related to the injuries the Claimant may have suffered on June 8, 2013 (Respondents' Exhibit B, p. 6).

- On December 11, 2013, Dr. Fillmore also opined that the request for an upper extremity EMG should be denied based on Dr. Paz' IME and the other medical records that Dr. Fillmore may have reviewed (Respondents'

Exhibit B, p. 7).

- Dr. James Ogsbury, neurosurgeon, reviewed the case as of January 9, 2014. He noted that while requests were forthcoming to treat low back problems, the requests should be denied until medical necessity is fully explored in spite of his recognition that the hearing officer found the low back condition a compensable work-related injury. He also noted all cervical treatment is denied as not work-related (Respondents' Exhibit B, p. 9).

18. The Claimant testified at the hearing. He testified that prior to June 8, 2013 he worked Monday – Saturday performing heavy lifting, including huge bags on his shoulders while he worked for Employer and he never had any problems before. He identified himself as the person riding a bike and performing tricks, riding up and down stairs, in a DVD entered into evidence at Exhibit Q. He testified that he did not fall very often because he stayed close to the ground. He testified that after the video was prepared, he worked at an asphalt company working 70+ hours per week and then 50+ hours per week at Employer and there were never physical problems or limitations. He testified that prior to the injury he never had the pain and now he has it all the time. The Claimant testified that his low back pain and leg pain is ongoing. The pain from his upper left buttocks travels down the back of his butt, down the quad, down past the knee and sometimes down the calf and occasionally reaches his foot. It is constant and he never has relief. Sitting and putting pressure on his low back makes it worse. The Claimant exhibited his right leg and left leg for observation in the court. His right leg appeared to have regular muscle definition. His left leg showed visible atrophy and little muscle definition. The circumference of his calf was smaller on the left than the right. He testified that his doctor has recommended surgery for his lumbar spine because of a disk sitting on a nerve root. The Claimant also testified that he would like to proceed with cervical injections because his hands and fingers go numb and hurt. He also testified that his doctors have recommended an EMG for his upper extremities/cervical. He would like to pursue the lumbar surgery recommended by his doctors. The Claimant's testimony regarding his symptoms and his ability to work without restrictions or limitations prior to his June 8, 2013 injury was credible and persuasive and is found as fact.

19. Dr. Karnasiewicz testified at the hearing and continued his testimony in a deposition of July 28, 2014. Dr. Karnasiewicz is a neurosurgeon in Connecticut who not only treats patients, but performs medical examinations for the Workers' Compensation Board in Connecticut. He is appointed by judges to render opinions in cases when there is a question on compensability and the reasonableness and necessity of surgical intervention. Here, Dr. Karnasiewicz testified that the first time he saw the Claimant, he noted diffuse spinal complaints but did not have the benefit of lumbar imaging and he did not recommend surgery. When the Claimant was referred back a second time, Dr. Karnasiewicz testified that the pain complaints, which were more specific and with radiation down the left leg, along with the MRI of the lumbar spine, changed his recommendation. With the clinical presentation, visible leg atrophy, and the MRI, which

clearly showed that the disc was herniated and had been abutting the nerve root, this pathology was a reasonable explanation for the Claimant's lower back pain and left leg pain. Dr. Karnasiewicz opined that his explanation for why the Claimant's complaints changed from his first visit to his second was that the tear in the annulus had progressed. While the herniation in the MRI is small, it is in the location to compress and abut the nerve root. Considering the Claimant's clinical findings, complaints of pain which are consistent with a herniated disc, along with a MRI which shows the herniated disc itself, Dr. Karnasiewicz opined that the surgery would more likely than not improve the Claimant's condition. Dr. Karnasiewicz has no other medical treatment to offer Claimant other than surgical intervention. He opined that it is reasonable and that there is no other option that will relieve the Claimant's symptoms and those symptoms will not abate on their own. Dr. Karnasiewicz also testified that the mechanism of injury described by the Claimant is consistent with the symptoms the Claimant is experiencing. He disagrees with the opinion of Dr. Rauzzino on the issue of radiculopathy noting the Claimant has signs and symptoms of left L5-S1 radiculopathy and he also notes that he did not find evidence of positive Waddell's signs in his examinations of the Claimant.

20. At the completion of his testimony by deposition on July 28, 2014, Dr. Karnasiewicz testified that he felt strongly enough that the Claimant's symptoms were coming from the pathology on the lumbar MRI that he is willing to operate (Depo. Tr. Dr. Karnasiewicz, p. 4). He did not find it probable that the Claimant's symptoms were coming from somewhere else (Depo. Tr. Dr. Karnasiewicz, p. 4). He testified that "there is hard neurological evidence of compression of the S1 nerve root. Atrophy, which is consistent with longstanding compression, doesn't happen in a matter of weeks. It takes several months, sometimes a year for that to happen (Depo. Tr. Dr. Karnasiewicz, p. 21). Since there is radiographic findings and clinical signs that are consistent with S1 radiculopathy, Dr. Karnasiewicz opines that "it all fits together" (Depo. Tr. Dr. Karnasiewicz, p. 22). Dr. Karnasiewicz also testified that he is not overly concerned with the opinions of the earlier treating physicians in Colorado in this case because he didn't find any Waddell's signs and the Claimant "has a very straightforward problem" (Depo. Tr. Dr. Karnasiewicz, p. 32). While he understood that Dr. Rauzzino was an expert hired by Respondent, Dr. Karnasiewicz did not feel that this was a reason to hold this against his opinion, since he, himself, does IMEs as well. Rather, Dr. Karnasiewicz testified that their findings were different. In the end, Dr. Karnasiewicz testified that some of the Claimant's other symptoms were resolving on their own, but the herniated disk on the MRI at L5-S1 is clearly displacing the left S1 nerve root and causing the Claimant's low back and leg symptoms (Depo. Tr. Dr. Karnasiewicz, p. 44).

21. On August 19, 2014, Dr. Paz, was asked to render an additional opinion as to the reasonable necessity of the surgical recommendation and he issued a written report which was submitted into evidence in lieu of further deposition testimony. Dr. Paz noted that before a surgical recommendation should be followed through with, both organic and non-organic causes of symptoms need to be fully evaluated. He opined that the clinical course he reviewed prior to the Claimant leaving Colorado did not support a finding that the symptoms the surgery seeks to relieve are related to the disc

pathology seen on MRI. Therefore, he opined that the surgery is not reasonable nor necessary to treat the Claimant's condition. Moreover, the evidence strongly suggests that the symptoms the surgery intends to treat are not related to the abnormalities seen at the L5-S1 level. Dr. Paz opines that the fluctuating signs and symptoms seen in the Claimant's medical records are more consistent with a non-organic low back pain condition. Moreover, Dr. Paz considered the Colorado Medical Treatment Guidelines for Chronic Pain which include additional diagnostic procedures and psychological evaluation in cases like this. Dr. Paz also notes that with respect to the Colorado Medical Treatment Guidelines in Rule 17, Exhibit 1 for Low Back Pain, it specifically states, "in order to justify operative interventions, clinical findings, clinical course and the diagnostic tests must all be consistent resulting in a reasonable likelihood of at least a measurable and meaningful functional and symptomatic improvement." With respect to these Guidelines, Dr. Paz finds the absence of objective findings to support disk herniation with radiculopathy of the lumbar spine prior to July 13, 2013. Thus, he finds that the records do not support an organic etiology which is likely to improve with surgical intervention. As a result, Dr. Paz concludes that "the proposed surgery is not reasonable, necessary and causally related to the June 8, 2013 reported event." See Dr. Paz Supplemental Report, June 8, 2013.

22. There are a number of conflicting medical opinions in this case. However, the ALJ finds the opinions of Dr. Karnasiewicz and Dr. Patel more persuasive than the opinions of the peer review physicians and the opinions of Drs. Paz and Rauzzino.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's

testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *Robinson v. Youth Track*, 4-649-298 (ICAO May 15, 2007).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Benefits – Related and Reasonably Necessary

Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. C.R.S. § 8-42-101. However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. C.R.S. § 8-41-301(1)(c); *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 2993. A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 293 (1951).

All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970). However, no compensability exists when a later accident or injury occurs as the direct result of an independent intervening cause. An unrelated medical problem may be considered an independent intervening cause even where an industrial injury impacts the treatment choices for the underlying medical condition. *Owens v. Industrial Claim Appeals Office*, 49 P.3d 1187 (Colo. App. 2002); *Post Printing & Publishing Co. v. Erickson,* 94 Colo. 382, 30 P.2d 327 (1934).

In order to prove causation, it is not necessary to establish that the industrial injury was the sole cause of the need for treatment. Rather, it is sufficient if the injury is a "significant" cause of the need for treatment in the sense that there is a direct relationship between the precipitating event and the need for treatment. A preexisting condition does not disqualify a claimant from receiving workers' compensation benefits. Rather, where the industrial injury aggravates, accelerates, or combines with a preexisting disease or infirmity to produce the need for treatment, the treatment is a compensable consequence of the industrial injury. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001); *H and H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Seifried v. Industrial Commission,* 736 P.2d 1262 (Colo. App. 1986). However, where an industrial injury merely causes the discovery of the underlying disease to happen sooner, but does not accelerate the need for the surgery for the underlying disease, treatment for the preexisting condition is not compensable. *Robinson v. Youth Track*, 4-649-298 (ICAO May 15, 2007).

Although Respondents are liable for medical treatment that is reasonably necessary to cure and relieve the effects of the industrial injury, Respondents may, nevertheless, challenge the reasonableness and necessity of current or newly requested treatment notwithstanding its position regarding previous medical care in a case. *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002), (upholding employer's refusal to pay for third arthroscopic procedure after having paid for multiple surgical procedures). The question of whether a particular medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office, supra*; *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P.2d 251 (Colo. App. 1999). The claimant bears the burden of proof to establish the right to specific medical benefits. *HLJ Management Group, Inc. v. Kim,* 804 P.2d 250 (Colo. App. 1990). Factual determinations related to this issue must be supported by substantial evidence in the record. Section 8-43-301(8), C.R.S. Substantial evidence is that quantum of probative evidence which a rational fact finder would accept as adequate to support a conclusion without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert,* 914 P.2d 411, 415 (Colo. App. 1995).

Pursuant to W.C. Rule of Procedure 17-2 (A), 7 Code Colo. Regs. 1101-3, health care practitioners are to use the Medical Treatment Guidelines referenced as Exhibits at W.C. Rule of Procedure 17-7, 7 Code Colo. Regs. 1101-3 (the “Medical Treatment Guidelines”) when furnishing medical aid under the Workers’ Compensation Act. The ALJ may also appropriately consider the Medical Treatment Guidelines as an evidentiary tool. *Logiudice v. Siemans Westinghouse,* W.C. 4-665-873 (ICAO January 25, 2011). However the ALJ is not required to grant or deny medical benefits based upon the Medical Treatment Guidelines. *Thomas v. Four Corners Health Care,* W.C. 4-484-220 (ICAO April 27, 2009). The Medical Treatment Guidelines are not definitive, but merely guidelines, and the ALJ has the discretion to make findings and orders which follow or deviate from the Medical Treatment Guidelines depending upon the evidence presented in a particular case. *Jones v. T.T.C. Illinois, Inc.,* W.C. 4-503-150 (ICAO May 5, 2006), *aff’d Jones v. Industrial Claims Appeals Office,* N. 06CA1053 (Colo. App.

March 1, 2007)(not selected for official publication); *Nunn v. United Airlines,* W.C. 4-785-790 (ICAO September 9, 2011).

In this claim, the Claimant testified credibly that the onset of his low back pain and his cervical/upper extremity symptoms corresponded temporally with his work injury. He also testified that prior to the June 8, 2013 work injury, the Claimant did not have the symptoms and there are no persuasive medical records to indicate that the Claimant treated for his current symptoms prior to this claim. Respondents try to correlate the Claimant's trick bike-riding activities from 2 years prior to the incident to his symptoms and/or pathology with no persuasive medical evidence. In the alternative, Respondents' experts have opined that the Claimant's symptoms and reports of pain do not correlate with the objective pathology.

Drs. Karnasiewicz and Patel reasonably relate the Claimant's current symptoms to the pathology seen in the Claimant's MRIs. Dr. Karnasiewicz testified that the first time he saw the Claimant, he noted diffuse spinal complaints but did not have the benefit of lumbar imaging and he did not recommend surgery. When the Claimant was referred back a second time, Dr. Karnasiewicz testified that the pain complaints, which were more specific and with radiation down the left leg, along with the MRI of the lumbar spine, changed his recommendation. With the clinical presentation, visible leg atrophy, and the MRI, which clearly showed that the disc was herniated and had been abutting the nerve root, this pathology was a reasonable explanation for the Claimant's lower back pain and left leg pain. Dr. Karnasiewicz opined that his explanation for why the Claimant's complaints changed from his first visit to his second was that the tear in the annulus had progressed. While the herniation in the MRI is small, it is in the location to compress and abut the nerve root. Considering the Claimant's clinical findings, complaints of pain which are consistent with a herniated disc, along with a MRI which shows the herniated disc itself, Dr. Karnasiewicz opined that the surgery would more likely than not improve the Claimant's condition. Dr. Karnasiewicz has no other medical treatment to offer Claimant other than surgical intervention. He opined that it is reasonable and that there is no other option that will relieve the Claimant's symptoms and those symptoms will not abate on their own. He did not find it probable that the Claimant's symptoms were coming from some other pain generator (or none at all, as has been suggested). Dr. Karnasiewicz testified credibly and persuasively that "there is hard neurological evidence of compression of the S1 nerve root and the presence of atrophy. Atrophy, which is consistent with longstanding compression, doesn't happen in a matter of weeks. It takes several months, sometimes a year for that to happen. Since there are radiographic findings and clinical signs that are consistent with S1 radiculopathy, Dr. Karnasiewicz opines that "it all fits together" and the Claimant "has a very straightforward problem." Dr. Karnasiewicz testified that while his findings were different. In the end, Dr. Karnasiewicz testified that the herniated disk on the MRI at L5-S1 is clearly displacing the left S1 nerve root and causing the Claimant's low back and leg symptoms.

The medical records and the opinions of Drs. Karnasiewicz and Patel as well as the testimony of the Claimant, establish that the Claimant underwent extensive

conservative treatment but nothing offered sustained relief from the cervical and lumbar symptoms that the Claimant continues to suffer. Dr. Karnasiewicz persuasively opines that the pathology at L5-S1 on the Claimant's lumbar MRI is more likely than not the pain generator for the Claimant's symptoms and that the proposed surgery is more likely than not to provide relief and improvement from the lumbar and leg symptoms.

Crediting the opinions of Dr. Karnasiewicz it is found the proposed surgical intervention is the Claimant's best opportunity for relief and Claimant is a reasonable candidate for the proposed surgery. The Claimant has proven by a preponderance of the evidence that the findings at L5-S1 are causally related to the Claimant's June 8, 2013 work injury and that the surgery recommended by Dr. Karnasiewicz is reasonably necessary. The Claimant has also established that the medical requests by Dr. Patel at issue in this matter are reasonable and necessary.

Temporary Disability Benefits

To prove entitlement to temporary total disability ("TTD") benefits, the Claimant must prove: that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). C.R.S. § 8-42-103(1)(a), requires a claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*.

In this case, the Claimant established that he suffered a compensable injury on June 8, 2013 and that he has missed work and suffered a wage loss since that time as a result of the June 8, 2013 work injury. The Claimant's initial treatment was conservative, and he was authorized to continue to work with restrictions. Later, per a Physician Work Activity Status Report by Dr. Cohen dated December 19, 2013, the Claimant's work status is "no activity." This status is later confirmed in a letter dated June 13, 2014, when the Claimant requested that Dr. Patel clarify his opinion that Claimant's working restrictions was "no activity." The letter was answered by Dr. Barinder Mahal on June 18, 2014, indicating that "Patient with symptomatic cervical & lumbar radiculopathy with restrictions lifting, pushing, pulling, standing, & sitting. His restrictions should remain "No Activity." The Claimant has not returned to any type of employment. It is noted that ALJ Felter previously found that the Claimant had voluntarily left modified employment with Employer to return to Connecticut to be with

family and that he was responsible for termination due to his decision to abandon medically approved modified work provided by the Employer. Thus, ALJ Felter ordered that the claim for temporary disability benefits from July 12, 2013 through the date of the hearing (November 21, 2013) was denied and dismissed (Claimant's Exhibit 1, pp. 6-8, Order of ALJ Felter dated December 3, 2013). However, the "no activity" work status occurs on December 19, 2013 after ALJ Felter's Order as does the further clarification on June 18, 2014. Claimant has not been released from his "no activity" work status yet and the opinions of Drs. Rauzzino and Paz that the Claimant is (and has been) at MMI are not found to be credible or persuasive. Therefore, the Claimant has not worked since December 19, 2013 due to the disability related to his June 8, 2013 work injury and he has suffered a wage loss entitling him to receive temporary total disability benefits until one of the occurrences listed in § 8-42-105(3), C.R.S.

ORDER

It is therefore ordered that:

1. The L5-S1 discectomy recommended by Dr. Karnasiewicz is reasonably necessary to cure and relieve the Claimant from the effects of his June 8, 2013 lumbar spine work injury.

2. The CESI injection C-Spine recommended by Dr. Patel is reasonably necessary to cure and relieve the Claimant from the effects of his June 8, 2013 cervical spine work injury.

3. The cervical/upper extremity EMG recommended by Dr. Patel is reasonably necessary to cure and relieve the Claimant from the effects of his June 8, 2013 cervical spine work injury.

4. Respondent's liability shall specifically include medical treatment consisting of the above surgery, EMG and injection and all related medical treatment required for appropriate preparation for the surgery, as well as reasonably necessary post-surgical follow-up treatment per the Division of Workers Compensation Medical Fee Schedule.

5. Respondents shall pay the Claimant temporary total disability ("TTD") benefits for the time period commencing December 19, 2013 until one of the occurrences listed in § 8-42-105(3), C.R.S.

6. Respondents shall pay the Claimant statutory interest at the rate of 8% per annum on all amounts not paid when due.

7. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 6, 2015

Kimberly A. Allegretti
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant is entitled to temporary total disability benefits.

2. Whether Claimant is responsible for the termination of her employment and resulting wage loss.

3. Whether the stipulated temporary partial disability benefits owed to Claimant shall terminate as of October 14, 2014.

STIPULATIONS

The parties made the following stipulations at the outset of the hearing

1. Claimant's average weekly wage is $825.16, with a corresponding temporary total disability (TTD) rate of $550.11.

2. Claimant was injured April 2, 2013. She continued to work thereafter until August 7, 2013.

3. Claimant was off work and paid TTD benefits from August 7, 2013 through November 22, 2013.

4. Claimant returned to work on November 22, 2013 and worked through June 6, 2014. No claim is being made for TTD or temporary partial disability (TPD) benefits during this timeframe.

5. Claimant has been off work since June 7, 2014.

6. As a result of the Claimant's separation from employment, she was offered COBRA benefits commencing on July 1, 2014. Those benefits are in the amount of $1,137.38 per month and are being paid by Claimant.

7. If Claimant is successful in asserting a right to receive TTD benefits, her average weekly wage would be increased to $1,087.63 effective July 1, 2014, and the TTD rate would be $725.09.

8. Claimant received unemployment benefits for three weeks from June 15, 2014, through July 5, 2014, in an amount of $481.00 per week for a total payment of $1,443.00, which would be offset 100 percent from any amount found to be due and owing by Respondents.

9. The Respondents' job offer to Claimant, which is the basis for their contention that no TTD benefits are due and owing, was at a rate $2.60 less than the Claimant's rate as of June 6, 2014. Therefore, the Claimant would be entitled to TPD benefits at two-thirds (2/3) of $104.00 per week, or a total amount of $69.33 per week from June 7, 2014, and ongoing until the restrictions are removed, Claimant is released at MMI, or Respondents are entitled to terminate pursuant to rule or statute.

FINDINGS OF FACT

1. Claimant was employed by Employer from May of 2010 until June 6, 2014. Claimant suffered an admitted work related injury on April 2, 2013. At the time of her injury, Claimant's title was Team Lead-Special Projects.

2. As Team Lead-Special Projects, Claimant's job duties were primarily customer service in nature. Claimant was also a supervisor and was responsible for coaching, managing, and providing direction to a team of customer service associates. The physical requirements of the job indicated that Claimant would be required to remain in the seated position for up to 90% of a shift. The physical requirements of the job description also indicate that reasonable accommodations may be made to enable individuals with disabilities to perform the essential functions. *See* Exhibit A.

3. Due to the admitted work related injury on April 2, 2013, Claimant underwent hip surgery in August of 2013 and returned to work on November 23, 2013.

4. Upon her return, Claimant had work restrictions provided by John Papilion, M.D. The restrictions included: lifting no more than 10 pounds; no walking more than 2 hours per day, no sitting more than 6 hours per day, and no standing more than 1 hour per day. *See* Exhibit 2.

5. Employer accommodated Claimant's restrictions upon her return and Claimant continued working in the same position for Employer through June 6, 2014. Claimant worked full time and received her regular pre-injury pay. During this time Claimant was allowed to modify her job, as needed, to accommodate the restrictions given to her by Dr. Papilion.

6. In late May of 2014 Employer began making changes to Claimant's department due to the termination of a contract with a particular vendor. At the same time, a new contract had been executed and individuals within Claimant's department were being transferred from the contract that was ending to the new contract.

7. Claimant was aware of the changes going on and knew that positions within her department were being eliminated and that employees were being transferred to the new contract.

8. On June 2, 2014 Claimant emailed Employer's human resource department and inquired as to whether she was eligible to apply for any current job listings within the company due to her restrictions, including the 6 hour limitation on

sitting. The email was sent to Megan Cramer, Human Resources Recruiter, and Dawn Hart, Human Resources Business Partner. Claimant did not receive a reply to her inquiry by email. *See* Exhibit 5.

9. Two days later, on June 4, 2014, Claimant's inquiry was answered by Ms. Hart at a meeting held where Claimant and 14 other employees were present.

10. At the meeting, Claimant and the 14 other employees were advised that their contract was being downsized and that all of them, including Claimant, were being offered transfer positions to a new contract.

11. The employees were advised that they could accept the new transfer position or choose to end their employment with Employer. They were advised that the job offers for the transfer positions would be sent by email the following day.

12. The employees, including Claimant, were also advised by Ms. Hart that any work restrictions or accommodations would continue into the transfer position. At the meeting there were four or five individuals, including Claimant, who had current restrictions. Ms. Hart did not go into each restricted employees' details or schedules, but assured the entire group that the restrictions would be accommodated in the new positions.

13. Ms. Hart advised the employees that the job offers they would receive would be generic offers that would not outline or detail individual restrictions, but that once the job transfer was made, the employees would work with their new supervisors to make sure their restrictions continued to be accommodated.

14. Following the meeting, Claimant approached Ms. Hart in the elevator. Claimant asked Ms. Hart whether her restrictions would be accommodated during the three day training for the transfer position. Ms. Hart advised Claimant that it would not be a problem.

15. The testimony of Ms. Hart is found credible and persuasive.

16. The next day, on June 5, 2014, Claimant received the job offer discussed above via email from Ms. Cramer. The offer was for the position of Mortgage Servicing Specialist. The job duties again were primarily customer service in nature. The main difference between Claimant's position and the transfer position was that the transfer position was not a supervisory role. Ms. Cramer's email indicated Claimant must reply either accepting or declining the offer by 8:00 a.m. on June 6, 2014. *See* Exhibit 4.

17. The physical requirements listed in the transfer position required the employee to remain in the seated position for a minimum of 85% of their shift. The remaining requirements were essentially the same as Claimant's prior position. Like Claimant's prior position, the transfer job description also stated under physical requirements that "reasonable accommodations may be made to enable individuals with disabilities to perform the essential functions." *See* Exhibit 4.

18. The transfer position job offer did not specify the number of days or number of hours that the Claimant was to work. The offer, on its face, did not violate Claimant's restrictions of sitting no more than 6 hours per day as imposed by Dr. Papilion.

19. On June 6, 2014 at 7:30 a.m. Claimant responded to the transfer position offer, declining the position. Claimant's email stated, "since one of the physical requirements for this position is to be seated for 85% of the time and that exceeds my restriction of sitting no more than 6 hours and there was no mention of what, if any, accommodations would be made, I need to decline this offer…" *See* Exhibit 4.

20. Several of Employer's employees who had restrictions in place accepted transfer positions and continued to work for Employer and their individual restrictions continued to be accommodated in the transfer positions.

21. Claimant's email declining the transfer position was a voluntary separation of her employment. Claimant's testimony is not logically credible or persuasive.

22. The transfer position would have resulted in a wage loss of $104.00 per week due to an hourly rate difference of $2.60 per hour, and would have started June 7, 2014.

23. Due to her voluntary separation of employment from Employer, Claimant lost health insurance benefits and began paying for COBRA benefits on July 1, 2014 in the amount of $1,137.38 per month.

24. Claimant received unemployment benefits from June 15, 2014 through July 5, 2014 in the amount of $481.00 per week.

25. On October 14, 2014 Claimant saw Dr. Papilion. Dr. Papilion indicated under assessment/plan that Claimant was ready to return to work. Dr. Papilion indicated his belief that Claimant was approaching MMI with regard to her hips and knee and noted that he would see her as needed. *See* Exhibit C.

26. Dr. Papilion did not remove Claimant's work restrictions nor did he place Claimant at MMI.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. (2014). The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201, C.R.S. (2014).

Respondent bears the burden of establishing any affirmative defenses. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979) The facts in a workers' compensation case shall not be interpreted liberally in favor of either the rights of the injured worker or the rights of the employer and a worker's compensation case shall be decided on its merits. § 8-43-201, C.R.S. (2014).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

Responsible for Termination

Section 8-42-103(1)(g), C.R.S. (2014), and § 8-42-105(4)(a), C.R.S. (2014), provide that if a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury. Because these statutes provide a defense to an otherwise valid claim for TTD benefits, the respondents shoulder the burden of proof by a preponderance of the evidence to establish each element of the defense. *Gilmore v. Industrial Claim Appeals Office,* 187 P.3d 1129 (Colo. App. 2008); *Brinsfield v. Excel Corp.,* W.C. No. 4-551-844 (I.C.A.O. July 18, 2003). Whether an employee is at fault for causing a separation of employment is a factual issue for determination by the ALJ. *Gilmore v. Industrial Claim Appeals Office*, *supra.*

In *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061 (Colo. App. 2002), the court held the term "responsible" as used in the termination statutes reintroduces the concept of "fault" as it was understood prior to the Supreme Court's decision in *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995). Fault requires a volitional act or the exercise of some control in light of the totality of the circumstances. *Padilla v. Digital Equipment Corp.,* 902 P.2d 414 (Colo. App. 1994), opinion after remand, 908 P.2d 1185 (Colo. App. 1995); *Lozano v. Grand River Hospital District,* W.C. No. 4-734-912 (ICAO, February 4, 2009). However, an employee is not responsible for a termination from employment if the physical effects of the industrial injury preclude the performance of assigned duties and cause the termination. *See Gilmore v. Industrial Claim Appeals Office, supra; Colorado Springs Disposal v. Industrial Claim Appeals Office, supra* (concept of responsible for termination does not

refer to the claimant's injury or injury producing conduct); *Lozano v. Grand River Hospital District, supra.*

Here, Claimant was not terminated due to her injury. In fact, the evidence shows that Employer continued to employ Claimant and accommodated her work restrictions without issue upon her return from surgery in November of 2013. The evidence also establishes that Employer would have continued to accommodate Claimant's restrictions in the transfer position that they offered her when her position was being downsized. The transfer position offered to Claimant was almost identical in terms of hours worked, work that was mostly sedentary, and work that was also customer service in nature. The evidence establishes that Employer made accommodations not only for Claimant but for other employees before the offer of the transfer position and that Employer continued to accommodate those employees who accepted the transfer positions. Respondents have met their burden to show, more likely than not, that if Claimant had accepted the transfer position instead of resigning she would remain Employed by Employer at this time and her restrictions would have continued to be accommodated by Employer.

Further, Claimant was advised at the June 4, 2014 meeting that her restrictions would continue to be accommodated in the transfer position. In addition to this advisement at the June 4, 2014 meeting, the transfer job position stated on its face in the job description that reasonable accommodations may be made to enable individuals with disabilities to perform the essential functions of the job duties. Further, the job offer on its face does not indicate that it would require Claimant to sit for more than 6 hours per day, only that it would require sitting for 85% of a shift. It is not logically credible that Claimant believed she had to decline the job offer because it would not accommodate her restrictions. Claimant had been working with restrictions and with no problem for Employer from November of 2013 until June of 2014. Her position, similar to the transfer offer, indicated under job description that reasonable accommodations may be made and Employer had made accommodations to allow Claimant to continue working following her return from surgery. With a transfer job offer that was almost identical in terms of duties and an almost identical job description also indicating reasonable accommodations may be made, Claimant's testimony that she believed she would not be accommodated in the transfer position is not credible or persuasive.

Claimant's testimony that at the June 4, 2014 meeting there was no discussion of accommodations for work restrictions is also not credible or persuasive. It is illogical to conclude that following the meeting Claimant would have asked Ms. Hart in the elevator about accommodations during the three day training period for the transfer position and not about the transfer position generally if Claimant had concerns that were not covered at the general meeting surrounding the position itself. Logically, one would be more concerned with the job accommodations than the training accommodations.

Claimant's resignation was the cause of her separation of employment from Employer. Her choice to resign was not caused by her injury. Further, as found above, the transfer position did not require or specifically list hours that would exceed Claimant's medical restrictions on its face. Claimant's argument that she had to resign

because she could not perform the job duties as listed in the job offer is not persuasive. Respondents have met their burden, by a preponderance of the evidence, to show that Claimant's separation of employment was due to her own volitional act of resigning. Claimant was aware of the transfer position duties, knew they were similar to her prior job duties, and was advised her restrictions would continue to be accommodated. Yet, she made a volitional decision to resign employment. Based on her resignation, the termination and separation of employment was the fault of Claimant. Claimant's resulting wage loss is not attributable to her injury and she therefore is not entitled to TTD payments.

Temporary Partial Disability

Pursuant to the parties' signed stipulation offered to the court, temporary partial disability (TPD) benefits in the amount of $69.33 per week starting June 7, 2014 are owed to Claimant until the restrictions are removed, Claimant is released at maximum medical improvement, or Respondents are entitled to terminate benefits pursuant to rule or statute.

Although Respondents stipulated that TPD is owed, Respondents argue that the TPD benefits should end as of October, 14, 2014 and argue that at that time, Claimant was given a full release to return to work. This argument is not found persuasive. At the October 14, 2014 appointment Dr. Papilion merely indicated that Claimant was ready to return to work and was approaching MMI. Claimant's restrictions have not been removed, nor does the evidence show that Dr. Papilion has placed Claimant at MMI. Thus, there is insufficient evidence to support termination of the stipulated TPD benefits. In accordance with the parties' stipulation that TPD benefits are owed, Respondents must continue to pay TPD until termination consistent with § 8-42-106, C.R.S., (2014).

ORDER

It is therefore ordered that:

1. The claim for temporary total disability benefits is denied and dismissed.

2. Claimant was responsible for the termination of her employment and the resulting wage loss.

3. Pursuant to the stipulation of the parties, Respondents shall pay temporary partial disability benefits at a rate of $69.33 per week from June 7, 2014 and ongoing until termination consistent with § 8-42-106, C.R.S. (2014).

4. Pursuant to the stipulation of the parties, Respondents are entitled to an offset against temporary partial disability benefits for the

unemployment benefits Claimant received from June 15, 2014 through July 5, 2014.

5. Insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 10, 2015

Denver, Colorado, 80203

STIPULATIONS AND PROCEDURAL MATTERS

A portion of testimony during the Claimant's cross-examination and redirect was not recorded due to error. The ALJ provided a transcription of her notes from this brief period of testimony on August 13, 2014 and the parties stipulated that the notes from the testimony missing from the digital recording accurately reflected the testimony and would substitute for the testimony or the need to retake the testimony. The ALJ's notes are made part of the record of the testimony in addition to the testimony that was available from the digital recording.

ISSUES

The following issues were submitted for determination at hearing:

1. Whether the Claimant proved, by a preponderance of the evidence, that she suffered a compensable injury in the course and scope of her employment on May 22, 2013.

2. If the Claimant's claim is compensable, whether she proved, by a preponderance of the evidence, that any or all of the medical treatment that she received was authorized, causally related and reasonably necessary to cure and relieve the effects of her work injury.

3. If the Claimant's claim is compensable, whether the Claimant proved, by a preponderance of the evidence, that she is entitled to temporary total disability indemnity benefits from September 1, 2013 ongoing.

4. If the Claimant's claim is compensable and she establishes that she is entitled to TTD benefits, whether Respondents proved, by a preponderance of the evidence, that the Claimant failed to timely report her injury to the Employer in compliance with C.R.S.§8-43-102, and if so, the amount of the penalty.

FINDINGS OF FACT

1. The Claimant is a 36 year old female who was last employed by Employer. The last day that she worked was September 1, 2013 and she has not worked for Employer or anyone else since that date.

2. The Claimant has a long pre-existing history of low back pain with bilateral hip and lower extremity pain. The Claimant's medical records show pain in her low back associated with her fibromyalgia dating back 15 years. The medical records since 2008

demonstrate the Claimant's ongoing pain complaints and multiple associated symptoms. The Claimant was seen on December 10, 2008 at Memorial Emergency Department for five days of pain in her right buttocks running down the back of her leg to her foot. The Claimant complained of constant pain in her back. The Claimant listed sciatica and low back pain. The Claimant was again seen at Memorial on March 28, 2009 for her low back. On December 20, 2010, the Claimant was seen by her primary care doctor for an evaluation regarding chronic/constant back, lumbar, knee and left shoulder pain that she had been experiencing for the past 10 years. The Claimant also noted being nearly blind in her right eye and she has suffered from headaches since 2005 (Claimant's Exhibits 7, 9, 11,13 and 20; also see Respondents' Exhibit B, pp. 16-17). The Claimant underwent another examination with her primary care physician on December 9, 2011. At that examination, the Claimant stated she had low back and leg pain that was aggravated by ascending stairs, daily activities, rolling over in bed, sitting, standing, and walking. The Claimant noted that she has declined back surgery for years (Claimant's Exhibit 11, p. 581; Respondents' Exhibit C, p. 108). The Claimant had another follow-up examination with her primary care doctor on May 10, 2012. It was noted the Claimant had mild spinal stenosis at L4-5 and was again referred to a surgeon (Claimant's Exhibit 11, p. 604; Respondents' Exhibit B, p. 18). The Claimant's symptoms associated with her low back pain include a loss of balance, decreased mobility, limping, tingling in the legs, joint instability, joint tenderness, swelling and leg weakness. These are documented in the medical reports dated October 10, 2012 and July 18, 2012 (Claimant's Exhibit 11, p. 612 and p. 625; Respondents' Exhibit C, p.66 and p. 78). The Claimant was again seen on April 5, 2013 complaining of pain to the bilateral buttock, bilateral calf, bilateral hip, and bilateral thigh (Claimant's Exhibit 11, p. 643; Respondents' Exhibit B at p. 19). Thus, the Claimant testified inconsistent with her medical records that she has never complained about her hip (Hearing Tr. 08/13/2014 at p. 63). The Claimant had associated symptoms that included leg numbness, leg pain, spasms, and tightening and numbness in her extremities (Claimant's Exhibit 20; Respondents' Exhibit B at p.19). The pain was described as aching, discomforting and dull. The Claimant's medical records are replete with the symptoms associated with her low back pain. On December 10, 2012, the Claimant was examined by Dr. Shriver for nausea, anxiety and low back pain (Claimant's Exhibit 11, p. 632; Respondents' Exhibit C at 58). The Claimant presented with anxious/fearful thoughts, excessive worry, racing thoughts and relentlessness. The Claimant's anxiety is aggravated by conflict or stress. The Claimant described pain in her middle and low back that radiated into her legs. Claimant described the pain as an ache, discomforting, sharp, shooting and throbbing (Claimant's Exhibit 11, p. 632; Respondents' Exhibit C at 58). On March 7, 2013, the Claimant returned for a follow-up regarding her anxiety and back pain (Claimant's Exhibit 11, p. 639; Respondents' Exhibit C at p. 51). The Claimant stated the location of the pain was in her upper, middle, and lower back. The Claimant described the pain as burning, deep, sharp, shooting and stabbing. The Claimant was examined by Dr. Shriver again on April 5, 2013 for her anxiety and degenerative disc disease (Claimant's Exhibit 11, p. 643; Respondents' Exhibit C, p. 47). The Claimant described the location of pain in her bilateral lower back and bilateral lumbar area. The Claimant noted the pain radiated into her bilateral buttock, bilateral calf, bilateral foot and bilateral thigh. The Claimant described the pain as aching, discomforting and dull. Aggravating factors

included bending and standing. Associated symptoms included leg numbness, leg pain, numbness in extremities, spasms, tightening in legs, tightening in thighs and tenderness (Claimant's Exhibit 11, p. 643; Respondents' Exhibit C, p. 47). On May 2, 2013, the Claimant described her low back pain as deep and diffuse (Claimant's Exhibit 11, p. 647; Respondents' Exhibit C, p. 43).

3. In addition to the medical records, the Claimant testified regarding her extensive history of low back pain radiating down her right leg. The Claimant also testified regarding blurred vision and blindness in her right eye. The Claimant also testified that she has experienced numbness in her right leg. The Claimant testified there are some portions of her leg that she cannot feel and gets electric feelings in her feet. Claimant stated she had concerns regarding her leg and back pain that she wore special Doc Martin shoes to prevent her from falling (Hearing Tr. 8/13/2014 at p. 67).

4. The Court notes that the Claimant testified inconsistently from the medical records in that she stated she had never been referred for a surgical consultation for her back condition (Hearing Tr. 08/13/2014 at p.65). The Claimant further inconsistently testified that she only had intermittent leg pain in the past although the medical records document consistent leg pain (Hearing Tr. 08/13/2014 at p. 64). When asked whether her low back pain was chronic the Claimant testified that it was not chronic (Hearing Tr. 08/13/2014 at p.68). The Claimant also denied, inconsistent with her medical records, that daily activities such as walking aggravated her leg pain. The Claimant's medical records show that she had constant chronic back pain and had declined surgical recommendations multiple times in the past. Medical records show the Claimant's pain is aggravated by daily living activities outside of work.

5. The Claimant worked for the Employer as a nighttime sales associate. The Claimant's job duties for the Employer included working as a sales associate during business hours, then, once the store closed to the public, cleaning the bathroom, sweeping the floors, wiping down countertops, organizing and straightening up the store. The Claimant testified that she was working on the night of May 22, 2013 from 5 to 10 pm. (Hearing Tr. 8/13/2014 at p.19). Claimant testified that around 9:00 p.m. on May 22, 2013, "Josh" was the manager on duty that evening and he was closing up the front cash register. The Claimant testified that she was headed back to the break room to hang her apron up. Upon leaving the break room to head back out to the sales floor, the Claimant stated she made a right hand turn in the stockroom and her right leg came out from under her. The Claimant testified that she fell so hard she hit the ground and bounced back up to her feet (Hearing Tr. 8/13/2014 at pp. 19-20). The Claimant testified that she hit the side portion of her right knee and her right hip and buttocks area and the area of impact was mainly in the right side of her buttocks (Hearing Tr. 8/13/2014 at p. 20). The Claimant testified that due to the layout of the store and a wall separating the area where she fell and the front of the store, the manager on duty would not have had a direct line of site so as to view the Claimant's alleged fall (Hearing Tr. 8/13/2014 at p. 20). The Claimant testified that she did not slip on anything in particular, including water, but that she just slipped on the concrete (Hearing Tr. 8/13/2014 at pp. 23-24). The Claimant testified that her knee did not buckle and she was not having back

pain that night that caused her to fall (Hearing Tr. 8/13/2014 at p. 24). She testified that she was wearing a pair of Doc Marten shoes to prevent a slip since she does have a preexisting back and knee condition (Hearing Tr. 8/13/2014 at p. 25). The Claimant attributed her fall simply to the sealed concrete floor that she testified was "quite slick" with a "high shine to it" (Hearing Tr. 8/13/2014 at p. 25).

6. Ms. Butler credibly testified about her knowledge of the area in which Claimant's alleged fall occurred. Ms. Butler stated the ground was flat concrete with no topical liquids or oils applied to it. (Tr. 2 at 19-20). Ms. Butler stated they have never had any complaints regarding the ground in the stockroom and break room being slippery. (Tr. 2 at 20).

7. The Claimant testified that she did not feel immediate pain when she fell. She stated that she was in shock more than anything else and embarrassed and had a slight discomfort on the right side of her leg (Hearing Tr. 8/13/2014 at p. 25). She testified that the discomfort was different than pain she had experienced in the past. It was in a different specific spot in her DI up on her top flank of her hip where there is a bulging knot on her right side (Hearing Tr. 8/13/2014 at pp. 28-29).

8. The Claimant testified that she did not report her fall to the manager, Josh, that evening because she felt very uncomfortable around him (Hearing Tr. 8/13/2014 at p. 26).

9. The Claimant testified that within a few days after the incident that the pain/discomfort progressed and she noticed discomfort when she put on her work belt and she felt an odd feeling in her back. The work belt rubbed a spot right on her SI (Hearing Tr. 8/13/2014 at pp. 29-30). On the date of the alleged injury the Claimant further testified that she was on pain medications for her pre-existing back pain. The Claimant stated she could not feel her back pain because she was on her medications (Hearing Tr. 8/13/2014 at p. 74). The Claimant claimed the only pain she felt after falling was from a small bruise on her right knee. She stated the fall was nothing big and did not find it was a big ordeal, she was just embarrassed (Hearing Tr. 8/13/2014 at p. 80). The Claimant testified no medical treatment was needed on the date of injury and she didn't have pain in her buttocks until a couple of days after the fall (Hearing Tr. 8/13/2014 at p. 82).

10. The Claimant's medical records also document a motor vehicle accident that occurred a few days after the fall at work (Claimant's Exhibit 11, p. 654; Respondents' Exhibit C, p. 37). During cross examination, the Claimant confirmed that she was in a motor vehicle accident after the fall at work, but before the first time she sought medical care for her alleged work injury. Although the Claimant testified that the MVA was minor and the car just bumped a guardrail at low speed and the Claimant only had a headache from this MVA and there was no aggravation to her back (Hearing Tr. 08/13/2014 pp. 86-88 and stipulated ALJ notes of testimony missing from digital recording).

11. There was considerable discrepancy between the testimony of the Claimant and the testimony of the Claimant's supervisors and co-workers as to how and when the Claimant reported a fall occurring on May 22, 2011.

12. Although the Claimant claimed she fell at work on the evening of May 22, 2013, the Claimant's supervisor Shelley Jocson testified that she reviewed time records for the store and determined the Claimant was not working on May 22, 2013 although she had worked on May 21, 2013. Additionally, according to Ms. Jocson, the manager "Josh" who the Claimant testified was working the night of her fall, did work on May 22nd but on May 21st, the date that the records show that the Claimant worked, he left at 6:30pm and he was not the closing manager. Instead, a female manager Lynn Henderson was the closing manager on May 21, 2013 (Hearing Tr. 10/6/2014 at p. 43).

13. The Claimant testified the first person to whom she reported the injury was Ms. Butler, an assistant store manager for the Employer, and she reported it the next time they worked together. The Claimant stated she was not sure what day this was, but it was within two days from the alleged date of injury (Hearing Tr. 08/13/2014 at p. 31). In that conversation, the Claimant testified Ms. Butler told her the store surveillance cameras were not working at the time (Hearing Tr. 08/13/2014 at pp. 32-33). However, Ms. Butler credibly testified that the Claimant never approached her and told her she fell in the two to three days following the injury (Hearing Tr. 10/6/2014 at p. 10). Ms. Butler stated that she never had a conversation with Claimant regarding security cameras (Hearing Tr. 10/6/2014 at pp. at 10-11).

14. The Claimant also testified that on June 9, 2013, when she attended a work party at P.F. Changs in the evening, she talked to Ms. Butler again about her fall and how she had gone to urgent care that morning and that the Claimant felt the problem was becoming worse (Hearing Tr. 08/13/2014 at p. 36). The Claimant stated that Ms. Butler sat up looked, gazed around and said "ok" (Hearing Tr. 08/13/2014 at p. 37). However, Ms. Butler credibly testified the Claimant never told her about her alleged fall at the June 9, 2013 Pier 1 work party. Ms. Butler stated that, had the Claimant told her she fell at work, she would have immediately told her supervisor, Shelly Jocson, who was sitting across the table from her (Hearing Tr. 10/6/2014 at p.12). Ms. Jocson further testified that neither Ms. Butler nor the Claimant told her anything about a back injury at the Pier 1 party on June 9, 2013 (Hearing Tr. 10/6/2014 at p. 39).

15. Ms. Butler credibly testified the first time the Claimant told her about a workplace event was in mid to late June (Hearing Tr. 10/6/2014 at p.12). The Claimant told Ms. Butler in a light hearted manor, akin to joking, about the fall (Hearing Tr. 10/6/2014 at p.14). Ms. Butler further testified that the Claimant told Ms. Butler that she was not hurt and was really just more embarrassed about the fall so she hurried up looked around to see if anyone was watching and kept walking (Hearing Tr. 10/6/2014 at p.14). At that time, Ms. Butler testified that she asked the Claimant if she tripped or slipped on anything, which the Claimant replied she had not (Hearing Tr. 10/6/2014 at p.14). Ms. Butler testified that she told Ms. Jocson the following day. Ms. Butler informed Ms. Jocson because the conversation with the Claimant struck her as "odd,"

she believed she should report the conversation (Hearing Tr. 10/6/2014 at p.18). Ms. Jocson, the store manager, credibly testified that the Claimant told Ms. Butler she fell in the stockroom in mid-June. Ms. Jocson knew something happened but did not have notice of an injury from the Claimant (Hearing Tr. 10/6/2014 at p.38).

16. The Claimant's primary care physician told her on June 24, 2014 that she should notify her human resources department about reporting a potential injury (Claimant's Exhibit 11, p. 653; Respondents' Exhibit C at p. 168). The medical note does not document that during this visit the Claimant told her physician she had already reported it twice.

17. The Claimant testified she reported her injury to Ms. Jocson, the general manager of the store, for the first time on the day before they put in the workers' compensation claim (Hearing Tr. 08/13/2014, pp. 38-39). There is a form completed by Ms. Jocson titled "Telephone Reporting Workers' Compensation Report." The report notes that the injury was reported to the Employer on July 1, 2013 with an injury date of May 22, 2013. The loss description was, "walking from breakroom to mop room to shut off water. Foot placement did not take hold and fell (Claimant's Exhibit 4, p. 15). The Employer's First Report of injury was completed by Ms. Jocson on July 2, 2013. In describing the injury it states, "EE walked into the stock room and fell, with no cause, she saw a doctor but her diagnosis is unknown, she complains of back pain…" (Respondents' Exhibit A, p. 1).

18. Overall, the more credible testimony and the documents support a timeline that the Claimant did not report her fall to Ms. Butler around late June 2012 and then to Ms. Jocson on July 1, 2013, after her June 24, 2013 visit with her primary care physician where the Claimant's doctor advised her to report the fall to her Employer.

19. The Claimant stated Ms. Jocson told her she could no longer work until they figured out what was going on. The Claimant testified Ms. Jocson provided her a list of physicians at that time (Hearing Tr. 08/13/2014 at pp.38-39).

20. In the midst of the confusion about the date the Claimant reported she fell at work, the Claimant had actually sought care two weeks following her alleged fall, before reporting it to her Employer and before a workers' compensation claim was commenced. There is a medical record dated June 9, 2013 at Memorial Urgent Care. The Claimant was examined by Dr. Stanley Johnson. The Claimant arrived on a Sunday, over two weeks following her alleged injury, talking about how terrible her hip pain was. The Claimant stated the bruising and pain in her leg were gone and denied ever having pain in her low sacrum or tailbone areas (Claimant's Exhibit 9, p. 453). It was noted that the Claimant had chronic pain troubles before, including fibromyalgia and migraines, as well as, surgery on her right knee along with a number of other medical issues (Claimant's Exhibit 9, p. 453). Dr. Johnson's examination showed the Claimant's thigh was negative to palpation with no loss of range of motion. The Claimant underwent X-rays on her hip and back which were negative (Claimant's Exhibit 9, p. 453). These medical records show no objective signs that an injury

occurred to her back, buttocks or hip.

21. The Claimant testified that her shoulder was a separate issue that had been going on "for years" and was not related to the motor vehicle accident (Hearing Tr. 08/13/2014 at p. 87). The Claimant had stated to Dr. Ridings she had been having recurrent left shoulder dislocations since age 17 and reported 19 dislocations over the past six years (Respondents' Exhibit B, p.14). However, Claimant's medical records for a year leading up to the alleged date of injury do not mention any shoulder problems (Respondents' Exhibit B).

22. The Claimant treated again after another two weeks passed, when she was seen by her primary care provider Dr. Phillip Shriver on June 24, 2013. Dr. Shriver noted that the Claimant should notify her human resource department at work as her pain could be work-related (Claimant's Exhibit 11, p. 653; Respondents' Exhibit C at p. 168). The Claimant was complaining of right hip pain that radiated down her leg that was piercing and sharp. Dr. Shriver noted that there was an injury and a motor vehicle accident according to the history given by the Claimant. The Claimant complained of a headache and left arm dislocation from the motor vehicle accident. The Claimant complained of tailbone pain from her fall at work. The Claimant described pain that hurts all the time and makes it difficult to sleep (Claimant's Exhibit 11, p. 654; Respondents' Exhibit C, p. 169).

23. The Claimant was seen by Dr. Shriver again on July 2, 2013. Claimant was seen at this visit for musculoskeletal pain and instability in her left shoulder. The Claimant was referred for physical therapy and referred to an orthopedic surgeon for a surgical evaluation for her left shoulder. There was discussion about a 15 year history of her shoulder history which she reported had increased significantly in the last 6 months. There was no mention of the Claimant relating back pain to her alleged injury on May 22, 2013, nor discussion of any back, hip or leg pain at this visit (Claimant's Exhibit 11, p. 656; Respondents' Exhibit C, p. 33).

24. The Claimant selected Concentra as her authorized treating provider. The Claimant presented no credible evidence that the Employer did not give her a list of two designated physicians. The Claimant was first examined on July 8, 2013 at Concentra by Dr. Daniel Peterson. Dr. Peterson reported that the Claimant described her injury as a slip and fall where she landed right on her right buttock cheek. He noted that the injury occurred about 7 weeks prior, but the Claimant did not file a workers' compensation claim until just recently. Dr. Peterson noted that the Claimant reported not having any trouble at the time of the fall, but that by June 9, 2013, the Claimant went to Memorial Urgent Care and they did an x-ray of her sacrum and coccyx which revealed only developmental (not acute) abnormalities and an x-ray of her right hip which was completely normal. Dr. Peterson noted, but did not explore in detail, Claimant's history of low back problems before the fall at work, noting a prior MRI scan that showed typical age-related mild disc degeneration at L4-5. There was no nerve root displacement or spinal canal compromise. Dr. Peterson also noted Claimant had a history of migraines degenerative disk disease, fibromyalgia, blindness in her right eye, blurred vision, eye

pain, head injuries, leg swelling, joint pain, back pain and joint stiffness and she claims that she has celiac disease. Dr. Peterson had the Claimant's lumbar spine X-rayed and noted it was read as normal. Dr. Peterson noted that Claimant stated this had been accepted as a workers' compensation claim because of the fall at work even though it did not occur in the performance of her work duty. He diagnosed the Claimant with a back contusion and a sacroiliac strain. Dr. Peterson additionally opined "this is the ridiculous thing; it could happen anywhere, but has been accepted apparently by the work comp insurance already (Claimant's Exhibit 15, pp. 690-691; Respondents' Exhibit F, pp. 147-148). Contrary to the Claimant's statements to Dr. Peterson, Respondents contested the claim.

25. On follow-up with Dr. Peterson on July 23, 2013, the Claimant stated her symptoms were only slowly getting better and that she had been working regular duty. The Claimant advised that she had been to physical therapy multiple times and this made her feel better. Dr. Peterson noted that the Claimant agreed that she has SI joint dysfunction. Dr. Peterson also noted the Claimant was frustrated with slow progress being made on her SI stabilization. Dr. Peterson also noted that in the meantime Dr. Topper planned for Claimant's left shoulder surgery (Claimant's Exhibit 15, p. 698; Respondents' Exhibit F, p. 144).

26. At a re-check appointment with Dr. Peterson on August 6, 2013, the Claimant was working regular duty but she reported her pattern of symptoms only slowly getting better although the medications provided relief. The Claimant reported that the SI joint was finally staying stable although she still reported a lot of pain in the SI area (Claimant's Exhibit 15, p. 701; Respondents' Exhibit F, p. 140).

27. The Claimant underwent an orthopedic evaluation for her left shoulder in August of 2013. Following the orthopedic evaluation, Ms. Butler testified she had a conversation with Claimant regarding her shoulder and her needing surgery. The Claimant came to her in tears and told Ms. Butler that she could not even lift a pillow. When Ms. Butler told the Claimant she needed to talk to Ms. Jocson about her shoulder, the Claimant protested stating she did not want to because Shelly would have to cut her hours, and she needed the money. Ms. Jocson testified that in late August, one of the last days Claimant worked, she came to work with a sling on her shoulder (Hearing Tr. 10/6/2014, pp. 21-22).

28. Dr. Peterson examined the Claimant again on August 29, 2013. The Claimant told Dr. Peterson that she had not been working because she chose not to work. Claimant took herself off of work for two weeks. Dr. Peterson reported that the Claimant did get an SI injection on the right side from PA Peter Brumlich and reported 100% temporary relief from the injection. Dr. Peterson did note that the Claimant was getting ready to have shoulder surgery for a non-workers' compensation issue (Claimant's Exhibit 15, p. 21; Respondents' Exhibit F, p. 135). The Claimant's statements about taking herself off work voluntarily is contrary to the testimony of Ms. Jocson who testified that the Claimant was off work because of her left shoulder (Hearing Tr. 10/06/2014, pp. 45-46).

29. Claimant underwent an arthroscopic left shoulder surgery on October 11, 2013 (Claimant's Exhibit 20, pp. 773; Respondents' Exhibit B, p. 15).

30. The Claimant was not seen again for her workers' compensation injury until November 7, 2013. The Claimant came in as a walk-in and saw Dr. Lori Rossi who noted the Claimant was reporting increased pain and that she felt "back to square one." A referral was made to PA Peter Brumlich for a repeat SI injection (Claimant's Exhibit 15, p. 709; Respondents' Exhibit F, p. 125).

31. On December 10, 2013, the Claimant saw Dr. Peterson again and reported her symptoms were no better. Claimant stated she was not working because there was no light duty available. Dr. Peterson referred the Claimant to a physiatrist and pain specialist. He also made a referral for "case review and management due to complexity and delayed recovery" (Claimant's Exhibit 15, p. 320; Respondents' Exhibit F, p. 124).

32. The Claimant saw Dr. Eric O. Ridings for an IME on January 6, 2014. In conjunction with the IME, Dr. Ridings reviewed extensive medical records and provided a thorough medical record review. He also conducted an interview with the Claimant about the history of her present illness and conducted a physical examination. Dr. Ridings opined that Claimant's description of the fall was not reasonable stating that her right leg shot out in front of her, then, she fell very hard onto her right buttocks which resulted in her bouncing back up again onto her two feet again, all in the same movement. Dr. Ridings further opined that her current complaints are consistent with those she has documented on many occasions and are related to her chronic pain syndrome for which she has been on daily opiates for years. Consistent with her prior medical history, Dr. Ridings notes that the Claimant reported no benefit with multiple conservative treatment interventions. He opined that his examination revealed "diffuse pain to palpation in the lateral lumbar region, not over spinal joints or the SI joint" and "diffuse non-dermatomal numbness in the bilateral lower extremities." Dr. Ridings opined that he did "not see any objective evidence of any ongoing injury that [he] can relate within a reasonable degree of probability to the patient's claimed fall at work on 05-22-13." Dr. Ridings further opined Claimant's evaluation was not consistent with pain of a discogenic, facet, SI joint or neurologic etiology. He essentially found the Claimant was at her long-term baseline and requires no additional treatment and suffered no aggravation of her pre-existing conditions (Claimant's Exhibit 20, p. 778; Respondents' Exhibit B, p. 20).

33. Dr. Ridings persuasively testified at hearing consistent with his written IME report dated January 6, 2014. Dr. Ridings was present during both days of testimony for this hearing and heard the testimony of the Claimant, Ms. Butler and Ms. Jocson. Dr. Ridings testified that he could not say whether the Claimant actually fell or not on May 22, 2013. However, he did testify that regardless of whether or not she fell, there was no evidence that would connect any of the Claimant's ongoing symptoms to a fall at work (Hearing Tr. 10/06/2014, pp. 74-75). Notwithstanding the Claimant's testimony that the pain she has is different somehow, Dr. Ridings testified that based on his examination,

his questioning of her about where she was having pain, and his review of the medical records, the symptoms that the Claimant attributes to a fall occurring on May 22, 2013 are, in reality, the same symptoms that have been documented for years (Hearing Tr. 10/06/2014, pp. 75-79). Dr. Ridings also expressed concerns about the mechanism of the injury that the Claimant has described to several physicians and in her testimony. He opined that the description of her right foot being out in front of her then landing on her buttock and somehow also striking the outside of the knee in a position with her hip externally rotated and then bouncing back up to her feet would not be physically possible unless the fall was on a trampoline (Hearing Tr. 10/06/2014, p. 81). Dr. Ridings testified that, someone with fibromyalgia who hit the ground as the Claimant stated she did, would expect to have significant pain right away, not a couple days later as the Claimant had testified (Hearing Tr. 10/06/2014, p. 83). Dr. Ridings also testified that in reviewing the initial medical reports closest to the reported incident, there were fractures or bruising in any areas where she reported pain (Hearing Tr. 10/06/2014, pp. 82-84). Ultimately, Dr. Ridings testified that if the Claimant did fall, she did not sustain any injury as a result of that fall (Hearing Tr. 10/06/2014, p. 87).

34. Overall, the ALJ finds that the Claimant is not as credible a witness as Ms. Butler and Ms. Jocson. The Claimant also has credibility issues related to conflicts in her testimony and the extensive medical records in this case. The Claimant's testimony is also legitimately questioned due to the testimony of Dr. Ridings. Notably, the Claimant's description of her fall and the ensuing injury is not likely to have occurred in the manner the Claimant stated it did. The Claimant testified she stepped on flat concrete lost her footing and fell down bouncing back up onto her feet before coming to a stop. Dr. Ridings noted this simply was not physically possible. Dr. Peterson also noted this was "ridiculous." The Claimant also recalls conversations she had with her supervisor Ms. Butler that do not appear to have occurred. The Claimant testified the first person to whom she reported the injury was Ms. Butler, an assistant store manager for the Employer, the next time she worked. The Claimant stated she was not sure what day this was, but it was within two days from the alleged date of injury. In that conversation. The Claimant testified Ms. Butler told her the cameras were not working at the time. The Claimant testified she told Ms. Butler she took a fall in the stockroom and if she would replay the footage, she would "get a good laugh." The Claimant inconsistently testified she was not aware of there being any cameras in the backroom. The Claimant also testified she never had hip pain or chronic back pain prior to her workplace injury; however, the medical evidence showed the Claimant had an extensive prior history of chronic back and hip pain in the months and years prior to her alleged workplace injury. The Claimant further testified her usual back pain was not constant but was intermittent. The prior medical records show the Claimant had constant chronic back pain prior to her workplace injury. The Claimant testified she was given work restrictions for her workers' compensation claim and was never given work restrictions for her shoulder injury. The medical records indicate she received work restrictions for her shoulder. The Claimant testified it was her work restrictions from her alleged fall that Pier 1 took her off of work. The medical records and testimony from Dr. Ridings indicate the Claimant was taken off work for her shoulder injury. Testimony from Ms. Butler was that the Claimant was off work for her shoulder surgery. The Claimant made clear

misstatements to Dr. Peterson regarding the fact the insurance company had already accepted the claim when, in fact, it was not accepted.

35. There is no objective credible, or persuasive medical evidence that the Claimant suffered a new injury from her alleged slip and fall. Dr. Ridings noted in his report and testified that the Claimant was suffering from no new symptoms. While Claimant stated she had a "new pain that was sharp" and in a new area, the medical records showed the Claimant to have the same pain complaints she has had for the previous 10 years. The medical records indicate that the Claimant had prior hip pain, prior back pain, prior bilateral radiating leg pain, and bilateral buttock pain.

36. Overall, the Claimant's testimony was inconsistent and not generally substantiated by witnesses or the evidence. The testimony of Ms. Butler, Ms. Jocson and Dr. Ridings was generally found to be more credible and persuasive than that of the Claimant where there were conflicts in the testimony and evidence.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §8-40-101, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. §8-40-102(1). The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. §8-43-201. Respondent bears the burden of establishing any affirmative defenses. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. §8-43-201 (2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

Compensability

A claimant's right to compensation initially hinges upon a determination that the claimant suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. C.R.S. §8-41-301. Whether a compensable injury has been sustained is a question of fact to be determined by the ALJ. *Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo. App. 2009). It is the burden of the claimant to establish causation by a preponderance of the evidence. *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000). There is no presumption than an injury which occurs in the course of employment arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 2993. Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado, 717 P.2d 1000 (Colo. App. 1986).* The weight and credibility to be assigned expert testimony on the issue of causation is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

In order to prove causation, it is not necessary to establish that the industrial injury was the sole cause of the need for treatment. Rather, it is sufficient if the injury is a "significant" cause of the need for treatment in the sense that there is a direct relationship between the precipitating event and the need for treatment. A preexisting condition does not disqualify a claimant from receiving workers' compensation benefits. Rather, where the industrial injury aggravates, accelerates, or combines with a preexisting disease or infirmity to produce the need for treatment, the treatment is a compensable consequence of the industrial injury. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001); *H and H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Seifried v. Industrial Commission,* 736 P.2d 1262 (Colo. App. 1986). However, where an industrial injury merely causes the discovery of the underlying disease to happen sooner, but does not accelerate the need for the surgery for the underlying disease, treatment for the preexisting condition is not compensable. *Robinson v. Youth Track*, 4-649-298 (ICAO May 15, 2007).

In resolving whether the Claimant has met her burden of proof to establish that she suffered a compensable injury, the ALJ must examine the totality of the evidence and consider credibility. In addition to issues related to the initial reporting of the alleged work injury, there are other inconsistencies in the Claimant's statements to medical providers, supervisors and in her testimony. In addition, Dr. Ridings testified that the mechanism of injury the Claimant provided to him and during testimony at the hearing was medically improbable and, even if it did occur, it was not likely to be the cause of the symptoms that the Claimant was now attributing to the slip and fall. He further

testified that if the symptoms were related to the slip and fall, the pain would have had a more immediate onset than that reported by the Claimant. After hearing the Claimant's testimony and reviewing medical records, Dr. Ridings concluded that if the Claimant fell, she did not sustain any injury as a result of the fall.

The first red flag in this case is the Claimant's very description of her mechanism of injury. The Claimant's ATP Dr. Peterson who saw the Claimant approximately 7 weeks after the alleged fall noted that the claim was "ridiculous." Dr. Ridings also expressed concerns about the mechanism of the injury that the Claimant has described to several physicians and in her testimony. He opined that the description of her right foot being out in front of her then landing on her buttock and somehow also striking the outside of the knee in a position with her hip externally rotated and then bouncing back up to her feet would not be physically possible unless the fall was on a trampoline. Further, Dr. Ridings testified that, someone with fibromyalgia who hit the ground as the Claimant stated she did would expect to have significant pain right away, not a couple days later as Claimant had testified. Dr. Ridings also testified that in reviewing the initial medical reports closest to the reported incident, there were fractures or bruising in any areas where she reported pain. Dr. Ridings further opined that the Claimant's current complaints are consistent with those she has documented on many occasions and are related to her chronic pain syndrome for which she has been on daily opiates for years. Consistent with her prior medical history, Dr. Ridings notes that the Claimant reported no benefit with multiple conservative treatment interventions. He opined that his examination revealed "diffuse pain to palpation in the lateral lumbar region, not over spinal joints or the SI joint" and "diffuse non-dermatomal numbness in the bilateral lower extremities." Dr. Ridings opined that he did "not see any objective evidence of any ongoing injury that [he] can relate within a reasonable degree of probability to the patient's claimed fall at work on 05-22-13." Dr. Ridings further opined Claimant's evaluation was not consistent with pain of a discogenic, facet, SI joint or neurologic etiology. He essentially found the Claimant was at her long-term baseline and requires no additional treatment and suffered no aggravation of her pre-existing conditions Notwithstanding the Claimant's testimony that the pain she has is different somehow, Dr. Ridings testified that based on his examination, his questioning of her about where she was having pain, and his review of the medical records, the symptoms that the Claimant attributes to a fall occurring on May 22, 2013 are, in reality, the same symptoms that have been documented for years.

In addition to the issues over the mechanism of injury, the Claimant's testimony regarding the reporting of the incident and her initial treatment for injuries she attributed to the fall also raise concerns as to the Claimant's credibility and her recollection. Overall, the ALJ finds that the Claimant is not as credible a witness as Ms. Butler and Ms. Jocson. There were conflicts between the Claimant's testimony and the extensive medical records in this case. The Claimant also recalls conversations she had with her supervisor Ms. Butler that do not appear to have occurred. The Claimant testified the first person to whom she reported the injury was Ms. Butler, an assistant store manager for the Employer, the next time she worked. The Claimant stated she was not sure what day this was, but it was within two days from the alleged date of injury. In that

conversation, the Claimant testified Ms. Butler told her the cameras were not working at the time. The Claimant testified she told Ms. Butler she took a fall in the stockroom and if she would replay the footage, she would "get a good laugh." The Claimant inconsistently testified she was not aware of there being any cameras in the backroom. The Claimant also testified she never had hip pain or chronic back pain prior to her workplace injury; however, the medical evidence showed the Claimant had an extensive prior history of chronic back and hip pain in the months and years prior to her alleged workplace injury. The Claimant further testified her usual back pain was not constant but was intermittent. The prior medical records show the Claimant had constant chronic back pain prior to her workplace injury. The Claimant testified she was given work restrictions for her workers' compensation claim and was never given work restrictions for her shoulder injury. The medical records indicate she received work restrictions for her shoulder. The Claimant testified it was her work restrictions from her alleged fall that Pier 1 took her off of work. The medical records and testimony from Dr. Ridings indicate Claimant was taken off work for her shoulder injury. Testimony from Ms. Butler was that the Claimant was off work for her shoulder surgery. The Claimant made clear misstatements to Dr. Peterson regarding the fact the insurance company had already accepted the claim when, in fact, it was not accepted.

Ultimately, there is no objective credible or persuasive medical evidence that the Claimant suffered a new injury from her alleged slip and fall. Dr. Ridings noted in his report and testified that the Claimant was suffering from no new symptoms. While Claimant stated she had a "new pain that was sharp" and in a new area, the medical records showed the Claimant to have the same pain complaints she has had for the previous 10 years. The medical records indicate that the Claimant had prior hip pain, prior back pain, prior bilateral radiating leg pain, and bilateral buttock pain.

Based on the foregoing, it hereby determined that the Claimant's testimony with regards to critical elements related to the purported work injury on May 22, 2013 is not credible and persuasive. Given the circumstances, including the inconsistent statements made by the Claimant, and the contrasting and more persuasive testimony of other witnesses, and the extensive medical records, the ALJ determines that the Claimant has failed to meet her burden of proof to establish that she sustained a work injury on May 22, 2013. As such, the Claimant's claims for compensation for WC 4-928-545-01 is denied and dismissed.

Remaining Issues

The Claimant failed to prove that an unwitnessed slip and fall that she alleges occurred on May 22, 2013 resulted in a compensable injury requiring medical treatment or caused a disability that resulted in wage loss due to the inability to work. As such, the remaining issues regarding temporary disability benefits, medical benefits and penalties are moot.

ORDER

It is, therefore, ordered that:

1. The Claimant has failed to sustain her burden of proving by a preponderance of the evidence that she suffered a compensable injury resulting from work activities on May 22, 2013.

2. The Claimant's claims for benefits under the Workers' Compensation Act of Colorado under case number WC 4-928-545-01 are denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 18, 2015

Kimberly A. Allegretti
Administrative Law Judge

Denver, Colorado, 80203

STIPULATIONS

To the extent that the Claimant's alleged vertigo and hearing loss in his right ear are found to be related to the Claimant's February 19, 2013 work injury, the parties agree that, as of February 25, 2014, the Respondents would be liable for TTD benefits from that date ongoing.

ISSUES

The issues for determination are:

1. Whether the Claimant proved, by a preponderance of the evidence, that medical treatment for the Claimant's cognitive and memory issues, vertigo, and hearing loss in his right ear (including surgery performed on the right ear on March 5, 2014) is reasonably necessary and causally related to the Claimant's industrial injury on February 19, 2013.

2. Whether the Claimant proved, by a preponderance of the evidence, that he is entitled to temporary total disability indemnity benefits from April 5, 2013 ongoing.

3. If the Claimant proves that he is entitled to temporary total disability indemnity benefits, whether the Respondents' proved that the Claimant is responsible for his termination of employment and resulting wage loss.

FINDINGS OF FACT

1. The Claimant worked for Employer for about six years prior to a work related injury on February 19, 2013. He initially was employed as a building maintenance engineer, level I (Hearing Tr. 07/29/2014, p. 14). While he held this position, his job duties included general electrical, heating, air conditioning, painting, repair, hot tub chemistry, locks, window and doors and just general building maintenance. The Claimant was not initially a supervisor and his supervisor was Terry Kressler (Hearing Tr. 07/29/2014, p. 15). After some time, the Claimant was promoted to maintenance engineer II. In addition to his other duties, he provided his supervisor with more assistance with the paperwork and he had a few more responsibilities. The Claimant testified that his work ratings as maintenance engineer II were not as good as when he was a maintenance engineer I, but he still generally received a good report on his reviews (Hearing Tr. 07/29/2014, p. 16; Claimant's Exhibit 14, pp. 200-207). Then, in May of 2012, the Claimant's supervisor retired and recommended the Claimant for the position of chief engineer. The Claimant applied for the position and he was hired for it (Hearing Tr. 07/29/2014, pp. 16-17). The Claimant testified that he was concerned about some of the computer and paperwork aspects of the chief engineer position but

he was assured that he would be trained. However, due to management travelling off-site and management changes, the Claimant testified that he was not properly trained and the management was not available to discuss issues with the Claimant (Hearing Tr. 07/29/2014, pp. 17-18). The Claimant also testified that he was understaffed almost the whole time he was chief engineer, having not been able to fill his old position, so there was only him with 2 other engineers instead of 3 (Hearing Tr. 07/29/2014, pp. 19-20). The Claimant also testified that when he took over the chief engineer position he took it upon himself to tackle some larger, long-standing maintenance problems. So, he would get frustrated that his supervisor would stress small issues and not recognize the overall job that he was performing (Hearing Tr. 07/29/2014, p. 21).

2. Ms. Gina Weeks testified by telephone at the hearing on July 29, 2014. Ms. Weeks is the resort director for the Employer and is familiar with the Claimant. She worked with him for a number of years when she was working with the developer and then she was his manager when she was promoted to resort director. Ms. Weeks testified that when the Claimant was in the position of maintenance technician, he was a great employee, responding to all of his calls and doing what he was supposed to and even going beyond that to do extra stuff (Hearing Tr. 07/29/2014, p. 63). Ms. Weeks testified that the Claimant was promoted to chief engineer on June 19, 2012 (Hearing Tr. 07/29/2014, p. 63). As a result of this, the Claimant had about 30 days of on the job training with Terry Kressler, the outgoing chief engineer who was retiring. Ms. Weeks does not recall any other training provided to the Claimant (Hearing Tr. 07/29/2014, p. 64). Once the Claimant was in the chief engineer position, Ms. Weeks described his job performance as “very poor.” She testified that the main performance issue was the Claimant’s lack of urgency. He never did anything “now” but put everything on hold for a later day (Hearing Tr. 07/29/2014, p. 64). Ms. Weeks had a counseling session and issued a written warning to the Claimant on November 12, 2012. Ms. Weeks testified the write-up was for a few issues, the main issue being that “he showed male chauvinistic tendencies towards me being a manager” and that he had no sense of urgency. The remaining issues in the write-up were smaller issues (Hearing Tr. 07/29/2014, p. 65). The written warning is consistent with Ms. Weeks testimony. The Performance Improvement plan was for “[the Claimant] to work on his leadership skills and his sense of Now. These are 2 important [Employer] values that have not been present in [the Claimant’s] demeanor since his shift from Maintenance Tech to Chief Engineer.” It was noted that if the Claimant could not manage his staff and himself more efficiently, then the consequences could lead up to termination (Respondents’ Exhibit A, p. 3).

3. Ms. Weeks testified that when she returned to work on October 1, 2012, after having a baby, she came back to the Claimant having been promoted to chief engineer. She noticed that the Claimant hadn’t hired a maintenance tech to replace his old position and some other employees came into her office telling her that morale was down. Ms. Weeks testified that she approached the Claimant about this to let him know morale was down with the engineering staff and that they needed to hire someone sooner rather than later. She testified that the Claimant looked at her and asked if she thought that morale was down because they were working for a woman, which Ms. Weeks characterized as a statement “which came out of nowhere.” Ms. Weeks did not

agree with the Claimant's recollection of the conversation that they were "commiserating." She testified that she told the Claimant clearly that morale was down because they needed to hire somebody because everybody was feeling overworked (Hearing Tr. 07/29/2014, p. 65-66). The Claimant testified that he never indicated that the staff's morale was down because they worked for Gina who was a woman. The Claimant described the situation differently. He testified that Gina had come into the Claimant's office and mentioned that in her new position as property manager she wasn't getting much respect from some of the employees. In response to this, the Claimant asked if Gina thought that this might be because she was a woman and some men have a problem with working for women. The Claimant testified that he did not say he ever had a problem working for women, only that this may be the issue, and they were having this discussion in the context of commiserating with each other. Then, the Claimant testified, that they went on to discuss other things that day and he felt that in a later write-up the conversation was taken out of context to make it sound like the Claimant didn't respect her because she was a woman. He felt that his word had been twisted into something that couldn't be any farther from the truth (Hearing Tr. 07/29/2014, pp. 56-57).

4. Ms. Weeks testified that the Claimant's 2012 performance review done in January 2013 was not a good review and he was found to be below "partially meets expectations" (Hearing Tr. 07/29/2014, p. 68). Ms. Weeks testified that the problems the Claimant was having included, difficulty from transitioning from an hourly to a salary employee, a lack of urgency, and failure to take direction from Ms. Weeks (Hearing Tr. 07/29/2014, p. 69). The 2012 Performance review confirms Ms. Weeks testimony and the Claimant received marks of either "partially meets expectations" or "does not meet expectations" in 7 of 8 reviewed categories. As for his overall performance it was noted that [the Claimant] does a great job in Maintenance. When asked to perform a task, [the Claimant] gets it done to satisfaction. [The Claimant] is a great Maintenance Tech, however, [the Claimant] needs to be a great Chief Engineer. He needs to see the whole big picture of taking care of the building and taking care of his team (Claimant's Exhibit 14, pp. 221-222; Respondents' Exhibit A, pp. 5-6).

5. Ms. Weeks testified that the Claimant received another write-up on February 2, 2013 (Hearing Tr. 07/29/2014, p. 69). The written write-up is for performance transgression. The write-up specifically details that the sidewalk had not been shoveled after snowfall for the second day in a row. After asking the Claimant to do this, Ms. Weeks found out a different employee actually did the work. The Claimant had also failed to install breaks on the double doors at the front of the building. There were other examples of projects that the Claimant was slow to begin or complete that had to be completed by the resort manager. The resort manager also noted that the Claimant had difficulty working with Housekeeping Department and does not always communicate with the Front Desk in the way that he should. It also came to light that the Claimant was apparently drawing pictures and writing songs in the Engineering log when he should have been working (Respondents' Exhibit A, p. 8).

6. Ms. Weeks testified that the Claimant missed one day of work after his February 19, 2013 work injury and when he returned his work restrictions included not

being able to climb on a ladder. However, the Claimant did not follow that restriction (Hearing Tr. 07/29/2014, p. 70). Ms. Weeks testified that the Claimant's behavior following his February 19, 2012 work injury was not any different than before. Specifically, Ms. Weeks testified that he did not seem any more forgetful (Hearing Tr. 07/29/2014, p. 70). Ms. Weeks testified the Claimant's employment was ultimately terminated due 100% to his job performance, but not related to any one specific circumstance (Hearing Tr. 07/29/2014, pp. 70-71). On cross-examination, Ms. Weeks confirmed that in mid-2012 the Claimant was promoted to chief engineer, Rafe Sykes was promoted to regional general manager and Ms. Weeks, who was previously the assistant GM was promoted to resort director. She characterized this as natural progressions and testified that "none of it was a big surprise" (Hearing Tr. 07/29/2014, p. 72). Ms. Weeks agreed that the Claimant received good reviews as a maintenance tech and that he didn't have bad performance reviews until he was promoted to chief engineer (Hearing Tr. 07/29/2014, p. 73).

7. On cross-examination, the Claimant was questioned about write-ups the Claimant received for work performance. The Claimant did not initially recall the details a write-up from November 12, 2012, but he believed he did receive a write-up around that time, about 3 months after he had been promoted to chief engineer (Hearing Tr. 07/29/2014, p. 37). In discussing the issues listed in the November 12, 2012 write-up, the Claimant testified that he believes he set his priorities differently from his supervisor Gina and that he felt it was a disagreement about priorities (Hearing Tr. 07/29/2014, pp. 38-39). The write-up also noted that the Claimant came in late for shifts, left in the middle of shifts and left early from shifts. However, the Claimant testified that this was a rare occurrence that he left mid-shift and it only happened one time when he had to give medicine to a sick pet (Hearing Tr. 07/29/2014, p. 40). The write-up also noted that the Claimant was asked to work extra shifts, but instead, he had another staff member work overtime. Regarding this issue, the Claimant did not have a specific recollection but he recalled that it was an emergency situation (Hearing Tr. 07/29/2014, pp. 40-41). The Claimant was also questioned about a poor performance review in January 2012. The Claimant attributes the problems brought up in this review to being understaffed and not having enough workers to take care of all of the issue that came up, so he would have to prioritize (Hearing Tr. 07/29/2014, pp. 42-43). On February 2, 2013, the Claimant received a final written warning, and he testified that he was aware that this meant his job was on the line if his performance did not improve. He testified that the way that he felt was that it seemed like the harder he worked, the more mistakes he made. He testified that "it was not for a lack of effort. I just felt like the victim of circumstances that I couldn't control" (Hearing Tr. 07/29/2014, p. 44).

8. The Claimant testified that on February 19, 2013 ice fell right on the back of his head just below the crown. He reported the injury within a few minutes of it happening to Gina Weeks, his supervisor (Hearing Tr. 07/29/2014, p. 22). The Claimant testified that Ms. Weeks did not provide a list of 2 providers, but rather sent the Claimant to the Breckenridge Clinic which was about a mile away. The hotel's shuttle driver took the Claimant to the clinic as the Claimant couldn't drive due to the loud whistle going off in both ears, the double vision and the dizziness/vertigo he was experiencing (Hearing Tr. 07/29/2014, pp. 23-24). The Claimant testified that he saw Dr.

Hay, the attending physician and she took the Claimant off work for a couple of days. Then, she released him to modified duty (Hearing Tr. 07/29/2014, p. 25). On cross-examination Ms. Weeks confirmed that the Claimant wasn't given a list of two doctors because there is only one medical center in Breckenridge, but that if it were after hours or more urgent, then an employee can go to St. Anthony's Hospital in Frisco (Hearing Tr. 07/29/2014, p. 77).

9. The Claimant was initially seen by Dr. Erin Hay at High Country Health Care Breckenridge. Dr. Hay noted that the Claimant reported "working on a fence when a large piece of ice fell from the 5th story roof landing on posterior of patient's head. Ice then exploded into smaller pieces." The Claimant complained of ringing in ears, tunnel vision at the time of injury and some double vision at the time he was at the clinic, slight dizziness and some overall weakness. The Claimant reported his head was full with pressure, worse later than when the incident occurred. Dr. Hay assessed the Claimant with a mild concussion and encouraged hydration, rest and Tylenol or ibuprofen as needed. He was taken off work until a follow-up visit in 2 days. He was sent to the hospital for a CT scan of his head (Claimant's Exhibit 4, pp. 5-8; Respondents' Exhibit F, pp. 130-133). In follow up on February 21, 2013, the Claimant reported feeling much better but he still had the ringing in bilateral ears and a headache. The CT scan was negative. The Claimant was released to return to work but was not to climb until further follow up (Claimant's Exhibit 4, pp. 9-11; Respondents' Exhibit F, pp. 126-129).

10. The Claimant received another final written warning for job performance on February 22, 2013, three days after his work injury. This write up was for performance transgression again. While dated on February 22, 2012, all of the specific transgression items took place between 2/2/13 and 2/17/2013, prior to the Claimant's injury. The performance transgressions included: the common hot tubs being unusable and dirty with one out of order; a Christmas wreath still being up on 2/3/13; failure to paint a wall that Claimant was asked to paint for 2 months; walking into a guest room with a "do not disturb" sign and encountering a guest in the bathroom in his underwear and then telling the guests they could not use their bathroom, leaving the guests angry and requiring the front desk agent to refund their entire stay; continued failure to work with the Housekeeping Department; and on 2/17 giving two employees the same week off so that the third employee and the Claimant had to cover all of the shifts that week and requiring overtime (Claimant's Exhibit 14, pp. 223-224; Respondents' Exhibit A, pp. 16-17). The Claimant testified that he was able to draft a rebuttal to the write up addressing each of the points in the written warning. The Claimant testified that it took him a long time to write this rebuttal compared to the other ones that he had written to his prior written discipline (Hearing Tr. 07/29/2014, p. 45).

11. On March 1, 2013, the Claimant returned to see Dr. Hay at High Country Health Breckenridge and he reported constant tinnitus, with his left ear worse than the right. The Claimant reported occasional mild headaches that occurred every few days. The Claimant reported no dizziness and stated he felt like he could climb ladders. The Claimant was returned to work with no work restrictions (Claimant's Exhibit 4, pp. 12-15; Respondents' Exhibit F, pp. 122-125).

12. When the Claimant saw Dr. Hay on March 18, 2013, he reported that the headaches went away and he has no dizziness. The Claimant still had ringing in his ears and was going to see Dr. Mawn about that. Dr. Hay noted that her ear exam of the Claimant was unremarkable (Claimant's Exhibit 4, pp. 15-17; Respondents' Exhibit F, pp. 118-120).

13. The Claimant testified that while he was working modified duty until about March 31, 2013, he was having mental and physical difficulties performing his job. He testified that his short-term memory suffered and he would forget things he had done or forget to do things that he should have done (Hearing Tr. 07/29/2014, p. 25). The Claimant testified that the types of problems that he was having at work before his injury were very different from the types of problems he was having after the injury. On one occasion, he recommended an employee for a raise and put it into the computer, but he told the employee he gave him a much bigger raise than he actually had, since he did not remember what he had put into the computer (Hearing Tr. 07/29/2014, p. 26). The Claimant's employment was terminated and he testified that his last day was April 5, 2013.

14. A termination reference was drafted on April 5, 2013 but was not provided to the Claimant. This write-up included all of the performance issues between the last write-up and April 5, 2013. Many of the listed items are continuations of problems for which the Claimant received write-ups in the past including the failure to complete maintenance projects such as a leak into the parking garage between 4/1 and 4/4; failure to hold meetings and complete paperwork; continued failure to communicate effectively with the Housekeeping Department and the Front Desk and failing to answer his phone; arriving at work late on the day a new engineer was starting; failing to paint an area that the manager had been asking him to paint since last fall; hot tub maintenance issues; continued failure to shovel walkways; a continued lack of urgency and inability to assist with hotel guests who were angry; and working on ladders before he was cleared to go on ladders by his doctor. Many of these performance issues are the same issues that management had been addressing with the Claimant since November of 2012 (Respondents' Exhibit A, pp. 22-24). The Claimant testified that he recalled that Dr. Hay released him to work, but with the restriction that he was not to be on ladders. The Claimant testified that he violated this recommendation because he did not remember he wasn't supposed to be on a ladder. He remembers being dizzy on the ladder and not feeling safe, but he was so worried about losing his job he has doing things that he probably shouldn't have done (Hearing Tr. 07/29/2014, p. 47).

15. After the Claimant was terminated, the Claimant testifies that his memory problems continue and now he forgets things around the house and doesn't remember chores he has already done. The Claimant also testified that he continued to have dizzy spells in the morning (Hearing Tr. 07/29/2014, p. 27). When the Claimant was referred to Dr. Mawn, he testified that he told Dr. Mawn about the continuing dizziness as well as the tinnitus (Hearing Tr. 07/29/2014, p. 29). The Claimant then saw an audiologist who gave him hearing tests and told him that his hearing was good for his age, but diagnosed tinnitus in a lower frequency in his right ear and in a higher frequency in his left ear (Hearing Tr. 07/29/2014, p. 30). The Claimant testified that he was told there

was no effective treatment for tinnitus but he suggested a medication that was essentially a mood enhancer. The Claimant did not like the way the pills made him feel so he discontinued them after a few days. Dr. Mawn also suggested a white-noise generator to mask the tinnitus at night so it would be less bothersome and the Claimant could sleep better (Hearing Tr. 07/29/2014, p. 31). The Claimant testified that over the next months his cognition problems lingered and he became depressed (Hearing Tr. 07/29/2014, pp. 32-33).

16. On July 12, 2013, the Claimant saw Dr. Christopher Mawn on referral from Dr. Hay for evaluation of posttraumatic head injury tinnitus. The Claimant denied any hearing loss but reported headaches which were diffuse in nature and controlled with Motrin. The Claimant reported difficulty making decisions. Dr. Mawn stated, that he asked the Claimant about his memory and "he does not think that he has decreased memory." The Claimant reported nausea with no vomiting and no vision changes. With respect the ear examination, Dr. Mawn noted,

> The external ears are normal there are no deformities and no masses. The external auditory canals are normal. The tympanic membranes are normal they are in good position with a normal light reflex. There is no middle ear effusion and the tympanic membranes move well. The hearing is normal as estimated through our conversation.

From the audiology test, Dr. Mawn noted that there was hearing loss on the left at 6000 Hz and there is only one frequency with asymmetry. Dr. Mawn prescribed amitriptyline for his daily headache and to see if it would help with the tinnitus. Dr. Mawn recommended a neurology evaluation to someone who specializes in post concussive cognitive deficits (Claimant's Exhibit 7, pp.104-106; Respondents' Exhibit F, pp. 139-141).

17. The Claimant did not see Dr. Hay again until August 12, 2013. The Claimant returned to Dr. Hay because he was referred to a neurologist by Dr. Mawn due to complaints of memory loss. However, due to this being a workers' compensation matter, the Claimant needed to be evaluated by Dr. Hay before seeing the specialist. The Claimant reported being very frustrated as he reports he was laid off for memory issues, but he feels that the memory issues only started after his head injury. Dr. Hay referred the Claimant to Dr. Lynn Parry a neurologist who specializes in mild head trauma post concussive symptoms. Dr. Hay noted no work restrictions at this time (Claimant's Exhibit 4, pp. 20-23; Respondents' Exhibit F, pp. 114-117).

18. The Claimant saw Dr. Mawn again on August 23, 2013 and complained of worsening tenderness of the ears bilaterally, worse on the right. Dr. Mawn noted that the Claimant's tinnitus was secondary to his head trauma and post concussive syndrome. The Claimant stopped taking the medication Dr. Mawn prescribed at the last visit as it made him nauseous and dizzy. Dr. Mawn noted that the Claimant was now exhibiting depression secondary to his mental status changes. Dr. Mawn advised the Claimant to go back to Dr. Hay for evaluation of a different antidepressant and follow up with a neurology appointment. However, Dr. Mawn opined that he has nothing else to

help him since the Claimant was not interested in trying tinnitus masking (Claimant's Exhibit 7, pp.109-110; Respondents' Exhibit F, pp. 136-137).

19. On September 26, 2013, Dr. Hay notes that Dr. Parry provided a neurological evaluation on 9/5/2013, but the Claimant and Dr. Hay did not have the reports. Dr. Hay additionally noted that the Claimant was "really concerned about his memory loss since the injury. He was fired due to forgetfulness and he has to write things down to remember them. Long term memory ok but new memory and short term memory have deficits." Dr. Hay noted that the Claimant "clearly has a more flat affect now" due to stress from losing his job and his memory difficulty. The Claimant was referred to neurologist Dr. Moon and for an MRI of the brain (Claimant's Exhibit 4, pp. 26-30; Respondents' Exhibit F, pp. 109-112).

20. On October 25, 2013, Dr. Hay noted that she still did not have the notes from Dr. Lynn Parry and her evaluation of the Claimant so she referred the Claimant to Dr. Moon. Additionally, Dr. Hay noted "this patient is out of a job due to his memory loss after his head trauma and I think it is related. Unfortunately he lost his job and there was a large amount of time when I did not see him and he did not relay to me how much memory difficulty he was having until after he lost his job. Once I saw him again he had lost his job. Memory difficult all after his injury per patient and I do think there is true memory difficulty now and I see a different affect in [the Claimant] (Claimant's Exhibit 4, pp. 31-34; Respondents' Exhibit F, pp. 1104-107).

21. On November 11, 2013, the Claimant was evaluated by Dr. Justin S. Moon. The Claimant described his mechanism of injury consistent with prior reports. Dr. Moon notes the Claimant complained of having "dizziness with room spinning, lightheadedness, and a rocking sensation that were all mile but fairly frequent." The Claimant reported that Dr. Mawn diagnosed him with tinnitus, but no other findings. He reported that Dr. Lynn Parry, who saw him once, diagnosed him as having memory deficits. An MRI was unremarkable. The Claimant told Dr. Moon that what he is most concerned about is his cognition and memory. "He states that he went back to work and was making mistakes and was disoriented and was eventually fired." The Claimant also reported he has been depressed since the incident and has a daily bilateral temporal low-grade headache. He reports sleep problems and some nausea. Dr. Moon performed an examination reporting no abnormalities. He diagnosed the Claimant with concussion, postconcussion syndrome and memory impairment. Dr. Moon noted that the Claimant's primary complaint of memory and cognition seemed to be "greater than one would suspect in association with the other postconcussion syndrome symptoms. In most cases, patients with memory complaints following a concussive state improve once the headaches, sleep issues and dizziness are controlled, but in this case, I am not certain that is going to take place." Dr. Moon prescribed Nortripytyline for the headache and central vertigo (Claimant's Exhibit 8, pp. 115-116; Respondents' Exhibit E, pp. 94-95).

22. The Claimant saw Kevin Reilly, Psy.D., on December 11, 2013 for evaluation of his neuropsychological status to assist in diagnosis and treatment planning. Dr. Reilly conducted a clinical interview and administered the

Neuropsychological Assessment Battery (NAB), the Medical Symptom Validity Test (MSVT), the Memory Complaints Inventory (MCI) and the Minnesota Multiphasic Personality Inventory-2 (MMPI-2). In terms of validity and reliability, Dr. Reilly noted that the Claimant's pattern of performance on verbal learning tasks was indicative of inconsistent/poor effort. The MCI also demonstrated a pattern of magnified memory complaints. The Reliable Digit Span score was indicative of poor effort. Based on this, Dr. Reilly opined that the results of this evaluation "cannot be considered a valid and reliable estimate of the patient's 'true' neurocognitive capacities." Dr. Reilly's ultimate impression is that the results of the evaluation are indicative of non-organic/psychosocial factors contributing to symptom production and/or maintenance. Further, "while the neurophsychometrics cannot be considered a valid and reliable measure of the patient's 'true' cognitive abilities, they were not indicative of memory impairments." Dr. Reilly further opined that "the ongoing reported cognitive difficulties are not likely due to the patient's possible concussion in February of this year (Respondents' Exhibit I).

23. The Claimant returned to see Dr. Moon again on January 13, 2014. The Claimant reported that he did not try the Nortriptyline that Dr. Moon recommended previously. The Claimant continues to report headaches and dizziness with fluctuations in his sleep. Dr. Moon noted that formal neurocognitive testing "seemed to suggest psychosomatic issues relating to the patient's memory. He was very inconsistent in his testing, as per report from Dr. Kevin Reilly." The Claimant expressed disappointment in the neuropsychological report and Dr. Moon advised that the only option is to get a second opinion. To treat the symptoms of headache, dizziness and sleep problems, Dr. Moon again recommended Nortriptyline (Claimant's Exhibit 8, p. 120; Respondents' Exhibit E, p. 87).

24. On January 23, 2014, Dr. Carolyn Burkhardt performed an independent medical examination of the Claimant including a review of medical and employment records from February 19, 2013 to October 9, 2013 (Claimant's Exhibit 9, pp. 122-127; Respondents' Exhibit C, pp. 58-63). Dr. Burkhardt also conducted an interview and a physical examination of the Claimant. Dr. Burkhardt noted the medical records initially report dizziness, but by March 1, 2013, the Claimant denied dizziness although he reported he still had tinnitus and occasional mild headaches (Claimant's Exhibit 9, p. 58; Respondents' Exhibit C, p. 122). Dr. Burkhardt noted that the Claimant was referred to Dr. Chris Mawn, an ENT. Dr. Burkhardt notes that in a July 1, 2013 medical report, Dr. Mawn described the pain when he was first on the head "like an explosion" and then he had head pain for a number of days with vertigo that resolved. There was no hearing loss reported at that time and the Claimant had a complexly normal exam with a hearing test that showed only one frequency with asymmetry on the left at 6000 Hz. Dr. Burkhardt notes that Dr. Mawn diagnosed the Claimant with headache, tinnitus and traumatic brain injury (Claimant's Exhibit 9, pp. 123; Respondents' Exhibit C, pp. 59). Dr. Burkhardt notes that the Claimant saw Dr. Hay on August 12, 2013 and the Claimant reported memory issues with things that happened after his injury, but had no problem remembering things that happened before the injury. At this visit, Dr. Burkhardt notes the Claimant denied headaches but was frustrated because he was laid off from work for memory issues that he felt started only after the head injury. The Claimant was

assessed with post-concussive symptoms including memory difficulty and he was referred to Dr. Parry and for follow up with Dr. Mawn (Claimant's Exhibit 9, pp. 123; Respondents' Exhibit C, pp. 59). In follow up with Dr. Mawn, the Claimant was still having tinnitus and the trial of amitriptylline caused nausea and dizziness so the Claimant stopped it after a week. Dr. Burkhardt noted that at an appointment with Dr. Parry on September 5, 2013, the Claimant was felt to have depression due to mental status changes and issues with sleep (Claimant's Exhibit 9, pp. 123; Respondents' Exhibit C, pp. 59). Dr. Burkhardt notes that when the Claimant saw Dr. Hay on 9/26/2013, he was worried about his memory issues and was afraid he could not get another job. The Claimant was referred to Dr. Moon for a neurology consult and an order of a brain MRI (Claimant's Exhibit 9, p. 123; Respondents' Exhibit C, p. 59). Dr. Burkhardt then reviewed and commented on work evaluations and discipline from 11/12/2012, 1/3/2013, 2/2/2013, 2/22/2013 and 4/5/2013 (Claimant's Exhibit 9, pp. 123-127; Respondents' Exhibit C, pp. 59-63). In the patient interview with the Claimant, Dr. Burkhardt notes that the Claimant reports he doesn't recall his accident that well. He told Dr. Burkhardt that something struck him on the head and at first he thought there was an explosion or that he was shot. He advised her that his ears were ringing loudly and he developed tunnel vision. He advised Dr. Burkhardt that he saw a doctor who determined that the Claimant had a concussion. He was disoriented and confused and was off work for several days before returning. When the Claimant went back to work he would forget things and he told Dr. Burkhardt that he has a bad memory now and he gets dizzy in the morning when he sits up. He also has constant ringing in his ears. The Claimant advised Dr. Burkhardt that he has always had a good memory and now he is missing things he is supposed to do as part of his job because of his memory issues (Claimant's Exhibit 9, pp. 127-128; Respondents' Exhibit C, pp. 63-64). In reviewing the records, Dr. Burkhardt concludes that the Claimant's memory problems and the issues he was having with his job predate the injury date and that the Claimant was having difficulties before the injury that he now states occurred after the injury (Claimant's Exhibit 9, p. 130; Respondents' Exhibit C, p. 64). Ultimately, Dr. Burkhardt opines that none of the Claimant's complaints, including the memory problems are related to the injury other than the tinnitus/ringing in the ears (Claimant's Exhibit 9, p.130; Respondents' Exhibit C, p.64). Dr. Burkhardt put the Claimant's date of MMI at 8/23/2013, the date the ENT stated there were no further treatments for tinnitus. Dr. Burkhardt provides an impairment rating of 1% for the tinnitus which does not impair the Claimant's hearing. She found the complaints of dizziness to be "minimal" and falling into "Class I vestibular function" which does not merit a rating. She finds that any memory issues are unrelated to the injury and provided no rating for such. Dr. Burkhardt did suggest a work up for dementia outside the workers' compensation system (Claimant's Exhibit 9, p.131; Respondents' Exhibit C, p.64).

25. In January of 2014, the Claimant testified that the dizziness he had been experiencing became more frequent, not just in the mornings but when he was driving and at night (Hearing Tr. 07/29/2014, p. 33). Then, the Claimant began to hear a "swishing" sound in his right ear. He testified that it sounded exactly like the washing machine running at the other end of the house. After several days, the Claimant testified, he realized that the sound was his own blood rushing through his middle ear (Hearing Tr. 07/29/2014, p. 34). Then, on February 25, 2014, the Claimant testified the

rhythmical swishing sound in his right ear was louder than it had been and he started to experience mild dizziness. When he rolled over onto his right side, the Claimant testified that he heard a kind of thump, thump swishing sound and then he realized he had gone completely deaf in his right ear. He testified that when he sat up in bed the vertigo set in and the room was spinning uncontrollably and he began to vomit. The Claimant's stepson called an ambulance and they took him to St. Anthony's Hospital. They called Dr. Mawn to evaluate the Claimant and he determined that the Claimant had a perilymphatic fistula in his right middle ear (Hearing Tr. 07/29/2014, pp. 34-35). The Claimant was transferred to the St. Anthony's Hospital in Lakewood after several days and the Claimant testified that Dr. Mawn performed surgery on his ear. At that point the Claimant was taken completely off work and put on bed rest (Hearing Tr. 07/29/2014, p. 36).

26. Regarding his dizziness, the Claimant testified that sometimes it would get better for a period of days when the dizziness was not as intense, but some days would be worse. The Claimant testified that when Dr. Mawn reported in a medical note that the Claimant's initial vertigo resolved, he thinks this likely refers to the Claimant telling Dr. Mawn that he might have been feeling better for some period of time (Hearing Tr. 07/29/2014, pp. 49-50). So, if Dr. Mawn noted that the Claimant "denies any vertigo," the Claimant testified that if he wasn't feeling dizzy right at that time, he would have said he didn't feel dizzy (Hearing Tr. 07/29/2014, p. 51).

27. The Claimant testified that he began monitoring his blood pressure in January and February of 2013 because he was losing weight and feeling stressed so a friend lent him a blood pressure monitor. He did not directly relate his blood pressure to the swishing sound he was hearing in his ear. There were times when he took his blood pressure and it was high and there was no swishing sound and times when he noted his blood pressure was normal but he was hearing the swishing sound, so he did not think these were related symptoms (Hearing Tr. 07/29/2014, p. 53).

28. On March 5, 2014, Dr. Mawn performed surgery on the Claimant. He noted that complete hearing loss and vertigo was the indication for the surgery. He performed a right middle ear exploration and right round window perilymphatic fistula repair. Dr. Mawn did note that there was "no obvious fluid leak from the oval window." Although Dr. Mawn did note a small amount of fluid in one of the edges of the round window. After suctioning this, there was no immediate reaccumulation (Claimant's Exhibit 7, pp. 111-112; Respondents' Exhibit N, pp. 186-187). The Claimant was discharged on March 8, 2014 with worsening tinnitus in his right ear and dizziness. The Claimant suffered hearing loss that the surgery did not correct (Claimant's Exhibit 5; Respondents' Exhibit N). On May 21, 2014, Dr. Mawn responded to interrogatories from the Claimant's counsel that medical care and treatment that began on February 25, 2014, including ambulance service, hospitalization at St. Anthony's and surgery performed on March 5, 2014 was more likely than not related to the Claimant's head injury at work on February 19, 2013 (Claimant's Exhibit 7, pp. 113-114; Respondents' Exhibit G, pp. 134-135).

29. On March 17, 2014, the Claimant was evaluated by Dr. Alan Lipkin. Dr. Lipkin noted the Claimant had a fistula repair on the right ear several weeks prior and that the packing remains. The Claimant's vertigo symptoms have been gradually improving since the surgery. The Claimant has not been able to hear from the right ear since the acute worsening. Dr. Lipkin noted that the case presented a "complicated history of probably right sided labytinthine fistula with a repair of the possible fistula three weeks ago. Dr. Lipkin opined that the Claimant's hearing loss is likely permanent but that the tinnitus will hopefully become less bothersome with time. Dr. Lipkin found no additional medication, surgery or imaging warranted at this time. He recommended discontinuation of ear drops, keeping the right ear dry and vestibular rehabilitation to be referred by Dr. Mawn (Claimant's Exhibit 11; Respondents' Exhibit K).

30. On May 20, 2014, the Claimant was evaluated by Dr. Bennet I. Machanic to assess for maximum medical improvement and permanent partial impairment. Dr. Machanic interviewed the Claimant, provided a review of the medical records and performed a physical examination and a mental status exam. Dr. Machanic found that the Claimant was at maximum medical improvement as of May 20, 2014. Dr. Machanic rated the Claimant for permanent, very mild and subtle cognitive problems, posttraumatic emotional depression and complete hearing loss in the right ear associated with the perilymphatic fistula along with continued vestibular dysfunction. In reference to the AMA Guidelines, 3rd Edition, for the 100% hearing loss in the right ear, Dr. Machanic provided a rating of 6% whole person, a rating of 7% whole person for his balance issues, an 8% whole person impairment for complex integrated cerebral function and 1% for the tinnitus. In combining the 6%, 7%, 8% and 1%, Dr. Mechanic provides a 20% whole person impairment rating (Claimant's Exhibit 12; Respondents' Exhibit H).

31. On May 31, 2014, Dr. Alan Bruns evaluated medical records of the Claimant and prepared a written report of his record review. Dr. Bruns did not interview or perform a physical examination of the Claimant in conjunction with this record review (Claimant's Exhibit 13; Respondents' Exhibit D). Dr. Bruns reviewed medical records from February 19, 2013, the date when a large piece of ice fell from a fifth story roof and landed on the posterior part of the Claimant's head, through March 17, 2014 (Claimant's Exhibit 13, p. 81-84; Respondents' Exhibit D, p. 149-152). Dr. Bruns ultimately concludes that the Claimant's memory loss, hearing loss and vertigo are not related to the Claimant's work related injury on February 19, 2013. Rather, Dr. Bruns finds that it is more likely that in February of 2014, the Claimant's acute and sudden hearing loss with associated vertigo is more likely attributable to a viral or vascular event. Dr. Bruns does not associate the February 14, 2014 event with a perilymphatic fistula. In any event, Dr. Bruns opined that, regardless of the final diagnosis, the February 25, 2014 event is not temporally related and was not caused by the traumatic icicle injury that occurred on February 19, 2013 (Claimant's Exhibit 13, p. 154; Respondents' Exhibit D, p. 86).

32. At the hearing, Dr. Burkhardt testified as an expert who is board certified in neurology and Level II accredited. Dr. Burkhardt generally testified in accord with her written IME report and she maintained that by and large the Claimant's memory and

cognition issues were not related to the Claimant's February 2013 work injury (Hearing Tr. 07/29/2014, pp. 83-84). Subsequent to the IME she performed, Dr. Burkhardt reviewed a record related to a neuropsychological test that the Claimant underwent (Hearing Tr. 07/29/2014, p. 88). She testified that this testing confirmed her opinion regarding the non-relatedness of the Claimant's memory issues to the work injury (Hearing Tr. 07/29/2014, p.90). Dr. Burkhardt testified that partly this was due to the Claimant failing the validity testing, indicative of poor effort, and suggestive of symptom magnification and response bias. Also, in some of the detailed testing, the Claimant tested as average. Overall, Dr. Burkhardt felt that this did not present a clear pattern suggesting a post-concussive picture (Hearing Tr. 07/29/2014, p. 90).

33. Dr. Bruns testified by deposition in this matter on August 13, 2014. Dr. Bruns has practiced medicine for 24 years and is board certified in otolaryngology and testified as an expert in that field (Depo. Tr. Dr. Alan Bruns, pp. 4-6). Dr. Bruns testified that he conducted a record review of the Claimant's medical records and, in conjunction with that, he researched online medical literature related to tinnitus vertigo hearing loss and trauma (Depo. Tr. Dr. Alan Bruns, p. 7). Dr. Bruns testified that there can be a number of differential diagnoses for a sudden onset hearing loss, including a viral insult, a vascular incident, autoimmune disease, trauma, ototoxic drugs or tumors. Dr. Bruns testified that of the 8-10 patients per year that come in with a sudden hearing loss, about half of those have a viral etiology (Depo. Tr. Dr. Alan Bruns, p. 9). Dr. Bruns testified that vascular etiologies are likely the second most common cause of sudden hearing loss (Depo. Tr. Dr. Alan Bruns, p. 12). Dr. Bruns testified that as for perilymphatic fistulas, he believes that it may be hard to relate this to sudden onset symptoms, other than those related to barotraumas or a penetrating top trauma to the temporal bone (Depo. Tr. Dr. Alan Bruns, p. 13). Dr. Bruns testified that in about 30-60% of patients who experience sudden hearing loss, there is associated vertigo (Depo. Tr. Dr. Alan Bruns, pp. 14-15). In the Claimant's case, Dr. Bruns testified that his record review noted "dizziness" at the time of the February 19, 2013 icicle injury, but not necessarily vertigo contemporaneous with the initial incident. Additionally Dr. Bruns noted that the dizziness went away within a couple of days although the Claimant still had tinnitus (Depo. Tr. Dr. Alan Bruns, pp. 17-18). Then, Dr. Bruns notes that the Claimant's dizziness returned but was related to the medication taken for the tinnitus. Dr. Bruns also notes that it did not sound like the dizziness was accompanied by the "spinning sensation" that more describes vertigo (Depo. Tr. Dr. Alan Bruns, p. 18). Dr. Bruns notes that it is not until the event on February 24, 2014, as documented in the ER medical records on February 25, 2014, that the Claimant specifically complains of vertigo (Depo. Tr. Dr. Alan Bruns, p. 18). Dr. Bruns also testified that in that record, the Claimant made the comment that the vertigo was a newer sensation for him in terms of the way the dizziness felt (Depo. Tr. Dr. Alan Bruns, p. 19). Dr. Bruns testified that a perilymphatic fistula is a disruption of the membrane within the inner ear and the perilymph, which is the fluid on the outer side of the inner ear, starts to leak into the middle ear. This can happen in several places, but most notably would happen in the round window or the oval window (Depo. Tr. Dr. Alan Bruns, p. 20). Dr. Bruns testified that this is often documented in an airplane or scuba diving and there is a change in pressure and the inner ear doesn't adjust and can pop like a balloon causing immediate hearing loss and vertigo and usually ringing (Depo. Tr. Dr. Alan Bruns, p. 20-21). In

cases of direct trauma, a significant head trauma with temporal bone fractures can cause a perilymphatic fistula (Depo. Tr. Dr. Alan Bruns, p. 21). Dr. Bruns also testified that this is usually a sudden onset as opposed to delayed symptoms (Depo. Tr. Dr. Alan Bruns, p. 22). Dr. Bruns testified that typical treatment of a perilymphatic fistula is 4-5 days of bed rest, and if the symptoms did not resolve, then a surgical procedure where the disruption is closed or a blood patch is put over the oval window and the round window (Depo. Tr. Dr. Alan Bruns, p. 23). As to when a perilymphatic fistula may have occurred in the Claimant, if it did, Dr. Bruns testified that the Claimant did not initially have hearing loss at the February 2013 incident and about 5 months after that a hearing test showed normal hearing on that side, so Dr. Bruns does not think that it would make sense that he had a fistula at that time (Depo. Tr. Dr. Alan Bruns, p. 24). In reviewing Dr. Mawn's operative note, Dr. Bruns testified that there wasn't anything that he read in the report that objectively confirmed there was a fistula because Dr. Mawn didn't see any evidence of fluid coming from the inner ear. While Dr. Mawn did suction some fluid, there was no re-accumulation, so the initial fluid could have been drainage from surrounding tissues or from the local that was injected. However, Dr. Bruns conceded that there is not a lot of fluid in the inner ear and if it were to drain out, you probably wouldn't see it, which is why Dr. Bruns opines that the operation is a bit nebulous and whether or not it really helps is nebulous (Depo. Tr. Dr. Alan Bruns, pp. 25-26). Dr. Bruns ultimately opined that it is hard to say whether or not the Claimant had a perilymphatic fistula in February of 2014. However, even if that could be proven, Dr. Bruns opined that it would not be probable that it was the result of a head trauma that the Claimant had the year prior in February of 2013 (Depo. Tr. Dr. Alan Bruns, pp. 27-28). Dr. Bruns also finds the Claimant's vertigo unrelated to the event of February 2013 (Depo. Tr. Dr. Alan Bruns, p. 29). On cross-examination, Dr. Bruns agreed that he did not evaluate the Claimant and did not take a history from him (Depo. Tr. Dr. Alan Bruns, p. 30). Dr. Bruns did not agree that the surgery performed in February 2014 to treat a diagnosed fistula was necessary, but he did agree that it was reasonable (Depo. Tr. Dr. Alan Bruns, p. 31). While it is hindsight that the surgery didn't provide benefit to the Claimant, Dr. Bruns did acknowledge that this is simply a risk of surgery, that it might provide benefit and it might not (Depo. Tr. Dr. Alan Bruns, pp. 32-33). Because the initial complaint was dizziness and didn't mention spinning or nausea or hearing loss, Dr. Bruns does not believe the Claimant had vertigo after the February 2013 incident, and this is not merely because the specific term vertigo was not used, it is also because of the lack of other items associated with vertigo (Depo. Tr. Dr. Alan Bruns, pp. 34-35). While Dr. Bruns agreed that "certain convincing head traumas" can cause perilymphatic fistulas, this would be rare and usually associated with severe head trauma (Depo. Tr. Dr. Alan Bruns, p. 61).

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1), The claimant shoulders the burden of proving

entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. Respondent bears the burden of establishing any affirmative defenses. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201 (2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

Medical Benefits - Reasonable, Necessary and Causally Related

Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101, C.R.S. However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. § 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo.App.2000). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 2993. Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado, 717 P.2d 1000 (Colo. App. 1986).*

The weight and credibility to be assigned expert testimony on the issue of causation is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165

Colo. 504, 441 P.2d 21 (1968); *Robinson v. Youth Track*, 4-649-298 (ICAO May 15, 2007).

Although Respondents are liable for medical treatment that is reasonably necessary to cure and relieve the effects of the industrial injury, Respondents may, nevertheless, challenge the reasonableness and necessity of current or newly requested treatment notwithstanding its position regarding previous medical care in a case. *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002), (upholding employer's refusal to pay for third arthroscopic procedure after having paid for multiple surgical procedures). The question of whether a particular medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office, supra*; *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P.2d 251 (Colo. App. 1999). The claimant bears the burden of proof to establish the right to specific medical benefits. *HLJ Management Group, Inc. v. Kim,* 804 P.2d 250 (Colo. App. 1990). Factual determinations related to this issue must be supported by substantial evidence in the record. Section 8-43-301(8), C.R.S. Substantial evidence is that quantum of probative evidence which a rational fact finder would accept as adequate to support a conclusion without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert,* 914 P.2d 411, 415 (Colo. App. 1995).

This is an admitted claim and the Claimant has received conservative medical treatment for the initial symptoms that his treating physicians attributed to the February 19, 2013 industrial injury when a piece of ice fell from several stories up and landed on the posterior of the Claimant's head. The Claimant was initially seen by Dr. Erin Hay at High Country Health Care Breckenridge. Dr. Hay noted that the Claimant reported "working on a fence when a large piece of ice fell from the 5th story roof landing on posterior of patient's head. Ice then exploded into smaller pieces." At that time, the Claimant complained of ringing in ears, tunnel vision at the time of injury and some double vision at the time he was at the clinic, slight dizziness and some overall weakness. The Claimant reported his head was full with pressure, worse later than when the incident occurred. Dr. Hay assessed the Claimant with a mild concussion and encouraged hydration, rest and Tylenol or ibuprofen as needed. He was taken off work until a follow-up visit in 2 days. He was sent to the hospital for a CT scan of his head. The CT scan was negative. The Claimant was released to return to work but was not to climb until further follow up. On March 1, 2013, the Claimant returned to see Dr. Hay at High Country Health Breckenridge and he reported constant tinnitus, with his left ear worse than the right. The Claimant reported occasional mild headaches that occurred every few days. However, the Claimant reported no dizziness and stated he felt like he could climb ladders so he was returned to work with no work restrictions. When the Claimant saw Dr. Hay on March 18, 2013, he reported that the headaches went away and he has no dizziness. The Claimant still had ringing in his ears and was going to see Dr. Mawn about that. Dr. Hay noted that her ear exam of the Claimant was unremarkable.

The Claimant testified that while he was working modified duty until about March 31, 2013, he was having mental and physical difficulties performing his job. He testified

that his short-term memory suffered and he would forget things he had done or forget to do things that he should have done. The Claimant testified that the types of problems that he was having at work before his injury were very different from the types of problems he was having after the injury. However, in the initial medical records in February and March, the Claimant was not raising these complaints and the Claimant's ATP was not noting these issues independently.

The Claimant's employment was terminated on April 5, 2013. After the Claimant was terminated, the Claimant testifies that his memory problems continue and now he forgets things around the house and doesn't remember chores he has already done. The Claimant also testified that he continued to have dizzy spells in the morning When the Claimant was referred to Dr. Mawn, he testified that he told Dr. Mawn about the continuing dizziness as well as the tinnitus. The Claimant then saw an audiologist who gave him hearing tests and told him that his hearing was good for his age, but diagnosed tinnitus in a lower frequency in his right ear and in a higher frequency in his left ear. The Claimant testified that he was told there was no effective treatment for tinnitus but he suggested a medication that was essentially a mood enhancer. The Claimant did not like the way the pills made him feel so he discontinued them after a few days. Dr. Mawn also suggested a white-noise generator to mask the tinnitus at night so it would be less bothersome and the Claimant could sleep better. The Claimant testified that over the next months his cognition problems lingered and he became depressed. However, the Claimant only started to raise these memory and cognition complaints after his employment was terminated and he argued that this was the reason that he was terminated.

Yet, even in the summer of 2013, the Claimant made conflicting statements to his medical providers about the memory and cognition issues. On July 12, 2013, the Claimant saw Dr. Christopher Mawn on referral from Dr. Hay for evaluation of posttraumatic head injury tinnitus. The Claimant denied any hearing loss but reported headaches which were diffuse in nature and controlled with Motrin. The Claimant reported difficulty making decisions. Dr. Mawn stated, that he asked the Claimant about his memory and "he does not think that he has decreased memory." The Claimant reported nausea with no vomiting and no vision changes. With respect the ear examination, Dr. Mawn noted,

> The external ears are normal there are no deformities and no masses. The external auditory canals are normal. The tympanic membranes are normal they are in good position with a normal light reflex. There is no middle ear effusion and the tympanic membranes move well. The hearing is normal as estimated through our conversation.

From the audiology test, Dr. Mawn noted that there was hearing loss on the left at 6000 Hz and there is only one frequency with asymmetry. Dr. Mawn prescribed amitriptyline for his daily headache and to see if it would help with the tinnitus. Dr. Mawn recommended a neurology evaluation to someone who specializes in post concussive cognitive deficits. Essentially, at this point, the Claimant's initial symptoms following the injury had generally subsided other than the tinnitus and headaches and the Claimant

was likely aware that there was not much more that could be done medically to improve his condition.

It was only after this that the Claimant began to raise the cognitive issues and connect them with his injury. The problem with this is that although the Claimant perceives that he was fired for cognitive and memory issues that impacted his job performance only after the February 19, 2013 injury, the employment records tell a different story. In reviewing the employment records, it is clear that the Claimant's job performance actually altered at the time he was promoted from being an hourly maintenance technician to a salaried chief engineer and supervisor. The write-ups show that the types of things for which the Claimant was disciplined after the injury were actually the same types of incidents (in some cases a continuation of the very same incidents) that were occurring as early as October of 2013, shortly after his employment change. To the extent that the Claimant has memory and cognitive issues, if he does, then these issues were certainly manifesting themselves months prior to a February 19, 2013 work injury. However, the treating physicians did not have access to the employment records and disciplinary write-ups and reviews, and therefore, they took the Claimant at his word that the problems that he was having commenced after the injury date and had not been ongoing for quite some time.

As a result of the Claimant's memory and cognitive complaints, starting in August of 2013, the physicians began to focus more on these issues as opposed to the initial treatment focus. When the Claimant returned to see Dr. Hay after an absence of several months, he had to see her because he was referred to a neurologist by Dr. Mawn due to complaints of memory loss. However, due to this being a workers' compensation matter, the Claimant needed to be evaluated by Dr. Hay before seeing the specialist. The Claimant reported being very frustrated as he reports he was laid off for memory issues, but he feels that the memory issues only started after his head injury. The Claimant saw Dr. Mawn again on August 23, 2013 and complained of worsening tenderness of the ears bilaterally, worse on the right. Dr. Mawn noted that the Claimant's tinnitus was secondary to his head trauma and post concussive syndrome. The Claimant stopped taking the medication Dr. Mawn prescribed at the last visit as it made him nauseous and dizzy. Dr. Mawn noted that the Claimant was now exhibiting depression secondary to his mental status changes. However, Dr. Mawn opined that he has nothing else to help him since the Claimant was not interested in trying tinnitus masking.

As of October 25, 2013, Dr. Hay was of the opinion that the Claimant "is out of a job due to his memory loss after his head trauma and I think it is related." Again, Dr. Hay was relying on the Claimant's reports and not the employment records which told a different picture. On November 11, 2013, the Claimant was evaluated by Dr. Justin S. Moon. Dr. Moon performed an examination reporting no abnormalities. He diagnosed the Claimant with concussion, postconcussion syndrome and memory impairment. Dr. Moon noted that the Claimant's primary complaint of memory and cognition seemed to be "greater than one would suspect in association with the other postconcussion syndrome symptoms. In most cases, patients with memory complaints following a concussive state improve once the headaches, sleep issues and dizziness are controlled, but in this case, I am not certain that is going to take place." Dr. Moon

recommended a psych evaluation and the Claimant was sent to Kevin Reilly, Psy.D., on December 11, 2013 for evaluation of his neuropsychological status. Dr. Reilly conducted a clinical interview and administered the Neuropsychological Assessment Battery (NAB), the Medical Symptom Validity Test (MSVT), the Memory Complaints Inventory (MCI) and the Minnesota Multiphasic Personality Inventory-2 (MMPI-2). In terms of validity and reliability, Dr. Reilly noted that the Claimant's pattern of performance on verbal learning tasks was indicative of inconsistent/poor effort. The MCI also demonstrated a pattern of magnified memory complaints. The Reliable Digit Span score was indicative of poor effort. Based on this, Dr. Reilly opined that the results of this evaluation "cannot be considered a valid and reliable estimate of the patient's 'true' neurocognitive capacities." Dr. Reilly's ultimate impression is that the results of the evaluation are indicative of non-organic/psychosocial factors contributing to symptom production and/or maintenance. Further, "while the neurophsychometrics cannot be considered a valid and reliable measure of the patient's 'true' cognitive abilities, they were not indicative of memory impairments." Dr. Reilly further opined that "the ongoing reported cognitive difficulties are not likely due to the patient's possible concussion in February of this year.

On January 23, 2014, Dr. Carolyn Burkhardt performed an independent medical examination of the Claimant including a review of medical and employment records from February 19, 2013 to October 9, 2013. Ultimately, Dr. Burkhardt opines that none of the Claimant's complaints, including the memory problems are related to the injury other than the tinnitus/ringing in the ears. Dr. Burkhardt spent a good deal of time comparing the employment records with the medical records and concluded that the Claimant's reported memory problems and issues he was having with his job predated the injury. Dr. Burkhardt put the Claimant's date of MMI at 8/23/2013, the date the ENT stated there were no further treatments for tinnitus. Dr. Burkhardt provides an impairment rating of 1% for the tinnitus which does not impair the Claimant's hearing. She found the complaints of dizziness to be "minimal" and falling into "Class I vestibular function" which does not merit a rating. She finds that any memory issues are unrelated to the injury and provided no rating for such. Dr. Burkhardt did suggest a work up for dementia outside the workers' compensation system. At the hearing, Dr. Burkhardt generally testified in accord with her written IME report and she maintained that by and large the Claimant's memory and cognition issues were not related to the Claimant's February 2013 work injury. Subsequent to the IME she performed, Dr. Burkhardt reviewed a record related to a neuropsychological test that the Claimant underwent. Dr. Burkhardt testified that was due to the Claimant failing the validity testing, indicative of poor effort, and suggestive of symptom magnification and response bias, this did not present a clear pattern suggesting a post-concussive picture.

Then, in January of 2014, the Claimant testified that the dizziness he had been experiencing became more frequent, not just in the mornings but when he was driving and at night and he began to hear a "swishing" sound in his right ear. On February 25, 2014, the Claimant testified the rhythmical swishing sound in his right ear was louder than it had been and he started to experience mild dizziness. When he rolled over onto his right side, the Claimant testified that he heard a kind of thump, thump swishing sound and then he realized he had gone completely deaf in his right ear. He testified

that when he sat up in bed the vertigo set in and the room was spinning uncontrollably and he began to vomit. The Claimant's stepson called an ambulance and they took him to St. Anthony's Hospital. They called Dr. Mawn to evaluate the Claimant and he determined that the Claimant had a perilymphatic fistula in his right middle ear. The Claimant was transferred to the St. Anthony's Hospital in Lakewood after several days and the Claimant testified that Dr. Mawn performed surgery on his ear. At that point the Claimant was taken completely off work and put on bed rest.

On March 5, 2014, Dr. Mawn performed surgery on the Claimant. He noted that complete hearing loss and vertigo was the indication for the surgery. He performed a right middle ear exploration and right round window perilymphatic fistula repair. Dr. Mawn did note that there was "no obvious fluid leak from the oval window." Although Dr. Mawn did note a small amount of fluid in one of the edges of the round window. After suctioning this, there was no immediate reaccumulation. The Claimant was discharged on March 8, 2014 with worsening tinnitus in his right ear and dizziness. The Claimant suffered hearing loss that the surgery did not correct. On May 21, 2014, Dr. Mawn responded to interrogatories from the Claimant's counsel that medical care and treatment that began on February 25, 2014, including ambulance service, hospitalization at St. Anthony's and surgery performed on March 5, 2014 was more likely than not related to the Claimant's head injury at work on February 19, 2013.

On March 17, 2014, the Claimant was evaluated by Dr. Alan Lipkin. Dr. Lipkin noted the Claimant had a fistula repair on the right ear several weeks prior and that the packing remains. The Claimant's vertigo symptoms have been gradually improving since the surgery. The Claimant has not been able to hear from the right ear since the acute worsening. Dr. Lipkin noted that the case presented a "complicated history of probably right sided labytinthine fistula with a repair of the possible fistula three weeks ago. Dr. Lipkin opined that the Claimant's hearing loss is likely permanent but that the tinnitus will hopefully become less bothersome with time. Dr. Lipkin found no additional medication, surgery or imaging warranted at this time. He recommended discontinuation of ear drops, keeping the right ear dry and vestibular rehabilitation to be referred by Dr. Mawn.

On May 20, 2014, the Claimant was evaluated by Dr. Bennet I. Machanic to assess for maximum medical improvement and permanent partial impairment. Dr. Machanic interviewed the Claimant, provided a review of the medical records and performed a physical examination and a mental status exam. Dr. Machanic found that the Claimant was at maximum medical improvement as of May 20, 2014. Dr. Machanic rated the Claimant for permanent, very mild and subtle cognitive problems, posttraumatic emotional depression and complete hearing loss in the right ear associated with the perilymphatic fistula along with continued vestibular dysfunction. In reference to the AMA Guidelines, 3rd Edition, for the 100% hearing loss in the right ear, Dr. Machanic provided a rating of 6% whole person, a rating of 7% whole person for his balance issues, an 8% whole person impairment for complex integrated cerebral function and 1% for the tinnitus. In combining the 6%, 7%, 8% and 1%, Dr. Mechanic provides a 20% whole person impairment rating.

Shortly after this, on May 31, 2014, Dr. Alan Bruns evaluated medical records of the Claimant and prepared a written report of his record review. Dr. Bruns ultimately concluded that the Claimant's memory loss, hearing loss and vertigo are not related to the Claimant's work related injury on February 19, 2013. Rather, Dr. Bruns finds that it is more likely that in February of 2014, the Claimant's acute and sudden hearing loss with associated vertigo is more likely attributable to a viral or vascular event. Dr. Bruns does not associate the February 14, 2014 event with a perilymphatic fistula. In any event, Dr. Bruns opined that, regardless of the final diagnosis, the February 25, 2014 event is not temporally related and was not caused by the traumatic icicle injury that occurred on February 19, 2013. Dr. Bruns testified by deposition in this matter on August 13, 2014. Dr. Bruns testified that he conducted a record review of the Claimant's medical records and, in conjunction with that, he researched online medical literature related to tinnitus vertigo hearing loss and trauma. Dr. Bruns testified that there can be a number of differential diagnoses for a sudden onset hearing loss, including a viral insult, a vascular incident, autoimmune disease, trauma, ototoxic drugs or tumors. Dr. Bruns testified that about half of patients who suffer a sudden loss of hearing have a viral etiology and that that vascular etiologies are likely the second most common cause of sudden hearing loss. Dr. Bruns testified that as for perilymphatic fistulas, he believes that it may be hard to relate this to sudden onset symptoms, other than those related to barotraumas or a penetrating top trauma to the temporal bone. Dr. Bruns notes that it is not until the event on February 24, 2014, as documented in the ER medical records on February 25, 2014, that the Claimant specifically complains of vertigo and that the Claimant made the comment that the vertigo was a newer sensation for him in terms of the way the dizziness felt. Dr. Bruns testified that a perilymphatic fistula is a disruption of the membrane within the inner ear and the perilymph, which is the fluid on the outer side of the inner ear, starts to leak into the middle ear. This can happen in several places, but most notably would happen in the round window or the oval window. Dr. Bruns testified that this is often documented in an airplane or scuba diving and there is a change in pressure and the inner ear doesn't adjust and can pop like a balloon causing immediate hearing loss and vertigo and usually ringing. In cases of direct trauma, a significant head trauma with temporal bone fractures can cause a perilymphatic fistula. Dr. Bruns also testified that this is usually a sudden onset as opposed to delayed symptoms. Dr. Bruns testified that typical treatment of a perilymphatic fistula is 4-5 days of bed rest, and if the symptoms did not resolve, then a surgical procedure where the disruption is closed or a blood patch is put over the oval window and the round window. As to when a perilymphatic fistula may have occurred in the Claimant, if it did, Dr. Bruns testified that the Claimant did not initially have hearing loss at the February 2013 incident and about 5 months after that a hearing test showed normal hearing on that side, so Dr. Bruns does not think that it would make sense that he had a fistula at that time. In reviewing Dr. Mawn's operative note, Dr. Bruns testified that there wasn't anything that he read in the report that objectively confirmed there was a fistula because Dr. Mawn didn't see any evidence of fluid coming from the inner ear. While Dr. Mawn did suction some fluid, there was no re-accumulation, so the initial fluid could have been drainage from surrounding tissues or from the local that was injected. However, Dr. Bruns conceded that there is not a lot of fluid in the inner ear and if it were to drain out, you probably wouldn't see it, which is why Dr. Bruns opines that the operation is a bit nebulous and whether or not it really helps is nebulous.

Dr. Bruns ultimately opined that it is hard to say whether or not the Claimant had a perilymphatic fistula in February of 2014. However, even if that could be proven, Dr. Bruns opined that it would not be probable that it was the result of a head trauma that the Claimant had the year prior in February of 2013. Dr. Bruns also finds the Claimant's vertigo unrelated to the event of February 2013. Because the initial complaint was dizziness and didn't mention spinning or nausea or hearing loss, Dr. Bruns does not believe the Claimant had vertigo after the February 2013 incident, and this is not merely because the specific term vertigo was not used, it is also because of the lack of other items associated with vertigo.

Ultimately, based upon review of the medical records in conjunction with the employment records, and taking into account the credible testimony of Ms. Gina Weeks, it is clear that to the extent that the Claimant does exhibit a cognitive and/or memory condition, this was evident months prior to the February 19, 2013 work injury. In looking at the Claimant's job employment complaints subsequent to the work injury, there does not appear to be any substantial difference in the type or frequency of the complaints. Additionally, the objective testing performed by Dr. Reilly, as analyzed by both Dr. Moon and Dr. Burkhardt, point to a lack of significant cognitive problems and possible symptom magnification for secondary gain. Therefore, any cognitive or memory issues that the Claimant has are not related to the industrial injury.

As for the relation of the Claimant's possible perilymphatic fistula, or any other condition that resulted in his total loss of hearing in the right ear, the medical records and the persuasive opinion of Dr. Bruns point to this being an unfortunate, but ultimately unrelated, event that occurred a year after his injury and after most of the initial symptoms from the work injury had abated or stabilized. The only conditions that are related to the original injury are the tinnitus, occasional headaches and mild dizziness. While the surgery performed by Dr. Mawn on March 5, 2014 may have been reasonable to address the Claimant's condition at that time, the condition itself was not related to the work injury.

Temporary Disability Benefits – Responsible for Termination

To prove entitlement to temporary total disability ("TTD") benefits, the Claimant must prove: that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). C.R.S. § 8-42-103(1)(a), requires a claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his

regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*.

In this case, as the only medical conditions that were found to be related to the work injury were the tinnitus, headaches and dizziness, the Claimant's entitlement to temporary disability benefits hinges entirely on the issue of whether or not he was responsible for his own termination which would bar him from recovering temporary disability benefits under the Act. §§ 8-42-103(1)(g), 8-42-105(4). *Anderson v. Longmont Toyota, Inc*., 102 P.3d 323 (Colo. 2004). Because the termination statutes constitute an affirmative defense to an otherwise valid claim for temporary disability benefits, the burden of proof is on the Respondents to establish the Claimant was "responsible" for the termination from employment. *Henry Ray Brinsfield v. Excel Corporation,* W.C. No. 4-551-844 (I.C.A.O. July 18, 2003). Whether an employee is at fault for causing a separation of employment is a factual issue for determination by the ALJ. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129 (Colo. App. 2008). In *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061 (Colo. App. 2002), the court held the term "responsible" as used in the termination statutes reintroduces the concept of "fault" as it was understood prior to the Supreme Court's decision in *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995). Thus, a finding of fault requires a volitional act or the exercise of a degree of control by a claimant over the circumstances leading to the termination. *Gilmore v. Industrial Claim Appeals Office*, supra; *Padilla v. Digital Equipment Corp.,* 902 P.2d 414 (Colo. App. 1994), *opinion after remand*, 908 P.2d 1185 (Colo. App. 1995); *Brinsfield v. Excel Corp., supra.* Violation of an employer's policy does not necessarily establish the claimant acted volitionally with respect to a discharge from employment. *Gonzales v. Industrial Commission,* 740 P.2d 999 (Colo. 1987). Yet, a claimant may act volitionally if he is aware of what the employer requires and deliberately fails to perform accordingly. *Gilmore v. Industrial Claim Appeals Office, supra*. However, in any event, the word "responsible" does not refer to an employee's injury or injury-producing activity since that would defeat the Act's major purpose of compensating work-related injuries regardless of fault and would dramatically alter the mutual renunciation of common law rights and defenses by employers and employees alike under the Act. Hence, the termination statutes are inapplicable where an employer terminates an employee because of the employee's injury or injury-producing conduct. *Colorado Springs Disposal v. Industrial Claim Appeals Office of State of Colorado,* 58 P.3d 1061 (Colo. App. 2002).

At issue in this case is the Employer's allegation that the Claimant was terminated for cause for ongoing work performance issues. The Claimant argues that his termination was, instead, due to memory and cognitive issues that arose only after his February 19, 2013 work injury.

The work performance issues are well-documented in the record and there was credible and persuasive testimony from the Claimant's supervisor, Ms. Gina Weeks, to provide further support and details regarding the documented issues.

Ms. Gina Weeks testified by telephone at the hearing on July 29, 2014. Ms. Weeks is the resort director for the Employer and is familiar with the Claimant. She worked with him for a number of years when she was working with the developer and then she was his manager when she was promoted to resort director. Ms. Weeks testified that when the Claimant was in the position of maintenance technician, he was a great employee, responding to all of his calls and doing what he was supposed to and even going beyond that to do extra stuff. Ms. Weeks testified that the Claimant was promoted to chief engineer on June 19, 2012. Once the Claimant was in the chief engineer position, Ms. Weeks described his job performance as "very poor." She testified that the main performance issue was the Claimant's lack of urgency. He never did anything "now" but put everything on hold for a later day. Ms. Weeks had a counseling session and issued a written warning to the Claimant on November 12, 2012. Ms. Weeks testified the write-up was for a few issues, the main issue being that "he showed male chauvinistic tendencies towards me being a manager" and that he had no sense of urgency. The written warning is consistent with Ms. Weeks testimony. The Performance Improvement plan was for "[the Claimant] to work on his leadership skills and his sense of Now. These are 2 important [Employer] values that have not been present in [the Claimant's] demeanor since his shift from Maintenance Tech to Chief Engineer." It was noted that if the Claimant could not manage his staff and himself more efficiently, then the consequences could lead up to termination.

Ms. Weeks testified that the Claimant's 2012 performance review done in January 2013 was not a good review and he was found to be below "partially meets expectations." Ms. Weeks testified that the problems the Claimant was having included, difficulty from transitioning from an hourly to a salary employee, a lack of urgency, and failure to take direction from Ms. Weeks. The 2012 Performance review confirms Ms. Weeks testimony and the Claimant received marks of either "partially meets expectations" or "does not meet expectations" in 7 of 8 reviewed categories. As for his overall performance it was noted that the Claimant does a great job in Maintenance. When asked to perform a task, the Claimant gets it done to satisfaction. However, the Claimant needs to be a great Chief Engineer. He needs to see the whole big picture of taking care of the building and taking care of his team.

Ms. Weeks testified that the Claimant received another write-up on February 2, 2013. The written write-up is for performance transgression. The write-up specifically details that the sidewalk had not been shoveled after snowfall for the second day in a row. After asking the Claimant to do this, Ms. Weeks found out a different employee actually did the work. The Claimant had also failed to install breaks on the double doors at the front of the building. There were other examples of projects that the Claimant was slow to begin or complete that had to be completed by the resort manager. The resort manager also noted that the Claimant had difficulty working with Housekeeping Department and does not always communicate with the Front Desk in the way that he should.

Ms. Weeks testified that the Claimant's behavior following his February 19, 2012 work injury was not any different than before. Specifically, Ms. Weeks testified that he did not seem any more forgetful. Ms. Weeks testified the Claimant's employment was

ultimately terminated due 100% to his job performance, but not related to any one specific circumstance

On cross-examination, the Claimant was questioned about write-ups the Claimant received for work performance. The Claimant did not initially recall the details a write-up from November 12, 2012, but he believed he did receive a write-up around that time, about 3 months after he had been promoted to chief engineer. In discussing the issues listed in the November 12, 2012 write-up, the Claimant testified that he believes he set his priorities differently from his supervisor Gina and that he felt it was a disagreement about priorities. The Claimant was also questioned about a poor performance review in January 2012. The Claimant attributes the problems brought up in this review to being understaffed and not having enough workers to take care of all of the issue that came up, so he would have to prioritize. On February 2, 2013, the Claimant received a final written warning, and he testified that he was aware that this meant his job was on the line if his performance did not improve. He testified that the way that he felt was that it seemed like the harder he worked, the more mistakes he made. He testified that "it was not for a lack of effort. I just felt like the victim of circumstances that I couldn't control."

The Claimant received another final written warning for job performance on February 22, 2013, three days after his work injury. This write up was for performance transgression again. While dated on February 22, 2012, all of the specific transgression items took place between 2/2/13 and 2/17/2013, prior to the Claimant's injury. The performance transgressions included: the common hot tubs being unusable and dirty with one out of order; a Christmas wreath still being up on 2/3/13; failure to paint a wall that Claimant was asked to paint for 2 months; walking into a guest room with a "do not disturb" sign and encountering a guest in the bathroom in his underwear and then telling the guests they could not use their bathroom, leaving the guests angry and requiring the front desk agent to refund their entire stay; continued failure to work with the Housekeeping Department; and on 2/17 giving two employees the same week off so that the third employee and the Claimant had to cover all of the shifts that week and requiring overtime.

The Claimant testified that while he was working modified duty until about March 31, 2013, he was having mental and physical difficulties performing his job. He testified that his short-term memory suffered and he would forget things he had done or forget to do things that he should have done. The Claimant testified that the types of problems that he was having at work before his injury were very different from the types of problems he was having after the injury. However, the records paint a different picture and show that the types of problems after the work injury were generally the same types of problems that he was having since October of 2013, well before the injury.

A termination reference was drafted on April 5, 2013 but was not provided to the Claimant. This write-up included all of the performance issues between the last write-up and April 5, 2013. Many of the listed items are continuations of problems for which the Claimant received write-ups in the past including the failure to complete maintenance projects such as a leak into the parking garage between 4/1 and 4/4; failure to hold

meetings and complete paperwork; continued failure to communicate effectively with the Housekeeping Department and the Front Desk and failing to answer his phone; arriving at work late on the day a new engineer was starting; failing to paint an area that the manager had been asking him to paint since last fall; hot tub maintenance issues; continued failure to shovel walkways; a continued lack of urgency and inability to assist with hotel guests who were angry; and working on ladders before he was cleared to go on ladders by his doctor. Many of these performance issues are the same issues that management had been addressing with the Claimant since November of 2012.

The weight of the evidence establishes that with respect to the Claimant's termination from employment with Employer, the Claimant had been receiving progressive discipline related solely to job performance issues that were serious enough to warrant employment termination with this Employer. As early as November of 2013, the Claimant was put on notice that unless he addressed the job performance issues, he was subject to further employment discipline, up to and including termination of his employment. As the record documents, the Claimant did not correct his performance transgressions, but rather, continued in the same fashion over a period of months. Therefore, the Claimant's wage loss is the result of the Claimant's volitional acts, which are unrelated to the Claimant's injury, and the Claimant is not entitled to TTD benefits.

ORDER

It is therefore ordered that:

1. The Claimant's request for medical benefits to treat memory and cognitive issues, depression, vertigo, and hearing loss in the right ear is denied and dismissed as these conditions are not causally related to the February 19, 2013 work injury.

2. The Claimant is responsible for his termination and the Claimant's claim for total temporary disability benefits is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For

further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 19, 2015

_____

Kimberly A. Allegretti
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUE

The following issue was raised for consideration at hearing:

> Whether Claimant sustained his burden of proof to establish that he is entitled to an award of reasonably necessary and related medical benefits. Specifically, Claimant seeks an order finding that the proposed right shoulder arthroscopy, rotator cuff repair, biceps tenodesis, and possible need for a subscapular repair are related to the November 1, 2013, industrial injury.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant sustained an admitted industrial injury on November 1, 2013, when he was cleaning a Zamboni and he backed into the machinery and flipped over a low open door. A Zamboni is a large machine used to clean floors in a commercial setting. Claimant is a 63 year old man employed by Employer, a bulk food distributor. Claimant works for Employer performing plant and equipment maintenance.

2. On November 1, 2013, Claimant was using a water hose to clean the Zamboni when he backed into and flipped over the low open door with his right arm up above his head. Claimant landed directly on his elbow with his arm raised and behind his back. Claimant's testimony regarding the mechanism of injury is found credible and persuasive.

3. Claimant did not have right shoulder pain complaints, medical treatment, or impairment of the right upper extremity prior to this injury. No credible or persuasive evidence established that he sustained an intervening injury after the November 1, 2013, industrial injury. Claimant has a medical history which includes nicotine addiction, osteoporosis, chronic obstructive pulmonary disease, thyroid disease, and hypertension.

4. Claimant credibly testified that, on November 1, 2013, he fell backward landing on his arm outstretched. When asked on direct examination whether Claimant landed on the tip of his elbow, he testified that he landed on his arm outstretched. When Claimant was reminded during cross examination that

the medical records from Claimant's emergency room examination on November 2, 2013, reflected that he did not have shoulder pain, Claimant credibly explained that he did not report pain in the shoulder because he was focused on the pain in his elbow. Claimant credibly testified that he could not affirm that his shoulder was examined; however, he was aware that his right arm was examined in the emergency room.

5. To further explain Claimant's lack of awareness of his shoulder injury, Claimant testified that his arm was in a sling "all the time." The medical records on November 2, 2013, indicate that Claimant's arm was placed in a splint. Claimant had surgery on the elbow fracture on November 7, 2013, six days after the injury, and thereafter the records reflect that Claimant's arm was in a sling.

6. On November 6, 2014, Dr. Armodios M. Hatzidakis, MD, an orthopaedic specialist, opined, "In my opinion it is more likely than not that his [Claimant's] fall onto his right upper extremity in not only abduction/external rotation but also with axial load did cause his symptomatic rotator cuff tear. He had no shoulder symptoms whatsoever before that time and did not have any doctor visits for the shoulder and only had shoulder pain after the work-related injury."

7. Dr. Wallace K. Larson testified at hearing, and was qualified as an expert in orthopaedic surgery. When asked to identify the critical factors supporting his opinion that Claimant's right shoulder problems were neither caused, nor aggravated, by the November 1, 2013, fall, the doctor identified three concerns. They were, as follows: (1) the mechanism of the injury did not include trauma to the shoulder; (2) the pain complaints did not commence until the end of December 2013; and (3) the findings on the MRI.

8. Dr. Larson's understanding of the mechanism of injury contradicts Claimant's testimony and the medical records. It is undisputed in the medical records, and Claimant's testimony, that he fell backwards while backing up and landed on his elbow. Dr. Larson twice demonstrated during his testimony the mechanism of injury as Claimant hitting his elbow in front of him.

9. Dr. Larson testified that he could not state with certainty that Claimant's right shoulder was examined by medical personnel and that remarks in the medical records regarding the shoulder were based on thorough examination. He testified that he assumed that the reference to no shoulder pain in the November 2, 2013, emergency room report was an indication that Claimant right shoulder was examined, but he testified that he could not be sure of that. He explained that it could have been medical personnel reciting that Claimant was reporting no shoulder pain on November 2, 2013, when Claimant was in the emergency room for the more acute elbow fracture. Dr. Larson testified that in subsequent medical reports he also found it difficult to discern the

extent of the examination of the right shoulder. He testified the first report of shoulder problems came on December 6, 2013, when Claimant complained of "stiffness in the shoulder."

10. Claimant's shoulder pain complaints did not begin until the end of December 2013, however, the evidence established that Claimant's arm was "in a sling almost all of the time" following his injury on November 1, 2013, largely immobilized until December 20, 2013, when Claimant began physical therapy. Claimant first described his shoulder condition as painful on December 30, 2013; 10 day after physical therapy was started.

11. Claimant has demonstrated that it is more probably true than not that his right shoulder pain complaints and symptoms were caused and/or aggravated by the November 1, 2013, industrial injury. Claimant treated with Jonathan T. Bravman, M.D. for the right shoulder condition on August 15, 2014. Dr. Bravman proposed treatment for the right shoulder was shoulder arthroscopy, rotator cuff repair, bicep tenodesis and possible need for subscapularis repair. The proposed surgical treatment by authorized treating physician Jonathan Bravman is reasonable, necessary and related medical treatment.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S.

2. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P. 2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979); *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 (Industrial Claim Appeals Office (ICAO), March 20, 2002).

3. The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

4. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

5. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

6. In this case, the totality of the evidence, including Claimant's credible testimony and the medical record, supports the conclusion that Claimant's right shoulder pain complaints and symptoms were caused and/or aggravated by the November 1, 2013, industrial injury. The evidence credibly established that Claimant's shoulder pain complaints did not begin until the end of December 2013, however Claimant's right arm was "in a sling almost all of the time" following his injury on November 1, 2013, largely immobilized until December 20, 2013, when Claimant began physical therapy. Claimant testified that, initially, he was more focused on the fracture of his elbow. He testified that, although, he was conscious that the right arm was injured, he did not isolate the right shoulder pain until December 30, 2013, when he started physical therapy. Claimant's description of the mechanism of injury and his course of treatment supports the conclusion that the November 1, 2013, injury caused or aggravated the right shoulder injury.

7. Claimant has demonstrated that it is more probably true than not that his right shoulder pain complaints and symptoms were caused and/or aggravated by the November 1, 2013, industrial injury. Claimant treated with Jonathan T. Bravman, M.D. for the right shoulder condition on August 15, 2014. Dr. Bravman proposed treatment for the right shoulder was shoulder arthroscopy, rotator cuff repair, bicep tenodesis and possible need for subscapularis repair. The proposed surgical treatment by authorized treating physician Jonathan Bravman is reasonable, necessary and related medical treatment.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents shall be liable for Claimant's medical treatment for the right shoulder, specifically the proposed right shoulder arthroscopy, rotator cuff repair, biceps tenodesis, and possible need for a subscapular repair is granted.

2. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. ISSUES

The Claimant endorsed the following issues for hearing in her application: compensability, medical benefits, reasonably necessary, average weekly wage, disfigurement, temporary total disability benefits, temporary partial disability benefits, permanent partial disability benefits, permanent total disability benefits, and death benefits. The Employer did not file a response to the application for hearing, thus no issues were properly endorsed, although the issue of offsets was raised by the Employer at the commencement of hearing.

After a lengthy discussion between the parties, the issues presented for determination are whether Employer has established by a preponderance of the evidence that Claimant is an "independent contractor" pursuant to §8-40-202(2), C.R.S. If the Claimant is not an independent contractor, whether Claimant has established by a preponderance of the evidence that she sustained an injury while in the course and scope of her employment with the Employer, and whether she is entitled to medical benefits. The ALJ also determined that if the Claimant met her burden on compensability, the issue of penalties for failure to maintain insurance would be addressed. All of the remaining issues, including whether any offsets are applicable, were reserved for future determination.

FINDINGS OF FACT

Based on evidence presented at hearing, the Judge finds as fact:

1. The Claimant's native language is Spanish.

2. The Employer operates a cleaning business. The Employer's business involves cleaning both houses and business properties. The Employer's principal owner is Stephanie Hart. She started the business in 2011.

3. The business is set up as a Chapter S corporation and her Articles of Incorporation list only Ms. Hart as an employee.

4. Ms. Hart requires that the individuals who clean her clients' properties sign a Subcontractor Agreement.

5. Ms. Hart maintains that she cannot financially afford to operate her business in any manner other than through subcontracting workers.

6. The Employer does not maintain workers' compensation insurance. Ms. Hart testified that she applied for a waiver of the workers' compensation insurance

requirement to a committee within the Division of Workers' Compensation, and that her waiver request was granted. Ms. Hart provided no documentation to support this assertion. The ALJ is unaware of a process by which a company can request an exemption or waiver from the requirement to maintain workers' compensation insurance other than that available to sole proprietors, corporate officers or members of LLCs such as Ms. Hart pursuant to §8-41-202, C.R.S.

7. The Claimant was apparently introduced to Ms. Hart through Arturo Bueno who was also performing cleaning services for the Employer.

8. The Claimant admitted to receiving a copy of the Subcontractor Agreement. She denied understanding it because it was written in English. The Claimant did not sign the Subcontractor Agreement. Instead, she returned it to Ms. Hart unsigned.

9. Helen Montoya also provides cleaning services for the Employer through a Subcontractor Agreement. Ms. Montoya speaks both Spanish and English.

10. Ms. Montoya claims that she met with the Claimant before Claimant's first work assignment and explained, in Spanish, the contents of the Subcontractor Agreement to the Claimant. Ms. Montoya claims she explained to the Claimant that Claimant would not be an employee, there is no insurance coverage, the subcontractors work when they want to, they are not supervised, there is no training and they get paid for each job completed.

11. The Claimant denied that Ms. Montoya provided the explanation described in paragraph 10 above. Rather, the Claimant asserts that Ms. Montoya gave her the Subcontractor Agreement and told Claimant that she would explain it to her later. Claimant signed only a W-9 form and was never asked for identification. Claimant believed she was an employee.

12. The existence of the Subcontractor Agreement in and of itself is not sufficient to prove that Claimant was an independent contractor rather than an employee. The Subcontractor Agreement fails to comply with §8-40-202(2)(b)(IV), C.R.S., in that both parties did not sign the agreement.

13. The Employer paid the Claimant and other individuals a flat rate on a per job basis. There was little explanation at hearing concerning the bases for the rate per job. The wage records admitted into evidence reflect that the Employer paid the Claimant various rates of pay. For instance, the Claimant was paid $30 for cleaning a property on Ash Street, but paid $40 for a property on Elizabeth Street. The ALJ infers that the Employer set the rate for each work order and that the Claimant had no input into negotiating that rate.

14. The Claimant did not have a trade name, and there was no persuasive or credible evidence that Claimant operated her own cleaning business.

15. The Employer issued checks to the Claimant as an individual.

16. The Employer provided no training to the Claimant.

17. The Employer issued work orders to the workers with instructions detailing the areas within each property that required cleaning, and the time each work order should be performed.

18. A work order dated October 30, 2013, included the following language and instructions. The Claimant is identified as Patti:

> Nancy, Helen, Lisa, Patti, Connie, Pat meet at storage at 8 A.M. Helen drop Lisa, Nancy and Patti off at [Address] Fairgate Way and go to your crew's job one and then pick Lisa, Nancy, Patti up at finish. Then drop Lisa, Nancy and Patti off at their job 2 and call the homeowner when 30 minutes away and then go to your crew's job 2. Pick up Lisa, Nancy and Patti after their job 2.

19. For all of the work orders on October 30, 2013, each job had a lead crew member and three additional crew members. Each work order provided a detailed list of the areas to clean within the property, including which cleaning product to use on the floors.

20. Claimant denied having the freedom to decline work order requests made by the Employer.

21. Ms. Montoya testified that the workers were not supervised yet she was often designated as the lead crew member. In addition, Claimant credibly testified that Ms. Montoya supervised the quality of the work performed by Claimant and the other non-lead workers.

22. Ms. Montoya also testified that there was no pressure put on her or the other workers to arrive at job sites, and that she had the freedom to decide which clients to work for. This statement is contradicted by the language in the work orders that reflects the Employer identifying which locations the workers will perform work, what time to arrive at the locations, and that workers were dropped off at the clients' properties by Ms. Montoya herself. It follows that once a worker was dropped off at a site, she would be unable to leave that site unless she found some alternative form of transportation.

23. Claimant asserts, and the ALJ finds, that cleaning supplies were provided to her. There was no persuasive evidence that Claimant ever purchased or provided her own supplies in order to complete the work she performed for the Employer.

24. Ms. Montoya drove the Claimant to the jobs the Claimant performed during her tenure as a cleaner for the Employer.

25. The Claimant was not working for any other employer on or around November 4, 2013, although the Employer did not specifically preclude Claimant from obtaining other work.

26. According to the work order dated November 4, 2013, the Claimant met Nancy and Helen at "storage" at 8:30 a.m. From there, the three cleaned a property beginning at 9:00 a.m. on West 3rd Avenue. Job number two commenced at 10:30 a.m., followed by job number three which commenced between 12:30 and 1:00 p.m.

27. Also on November 4, 2013, Ms. Hart received a call from a client on Smokey Hill Road in Aurora around midday asking if she could arrange for cleaning services on that day. Ms. Hart contacted Ms. Montoya to ask if she, Nancy and the Claimant had time to clean an additional apartment. Ms. Montoya and Claimant agreed but Nancy was unable to clean the fourth property on that day. Because the client made a last minute request, no specific work order exists for the fourth job on November 4, 2013.

28. Claimant and Ms. Montoya arrived at the Smokey Hill apartment on November 4, 2013, between 3:00 and 4:00 p.m. As Claimant stepped down from a ladder she was using to clean lamps, she fell backward and fractured her left wrist.

29. Ms. Montoya drove the Claimant to St. Joseph's hospital emergency department where she was admitted for treatment.

30. Claimant sustained fractures to her left wrist that resulted in surgery, which Dr. Mordick performed on November 20, 2013. Following surgery, the Claimant underwent physical therapy, and attended follow-up medical appointments. It is Claimant's understanding that the screws and plates surgically installed into her wrist will need to be removed through a surgery sometime in the future.

31. Claimant attempted to make a claim against Travelers Insurance. It is unclear from the record which entity Travelers insured although there was some indication it was the property owner at the Smokey Hill apartment. In any event, Claimant selected Healthone as an authorized provider and had at least one appointment there on November 18, 2013. At that time, the physician released her to modified duty work which included no use of the left hand. She was referred to Dr. Davis for a surgical consultation.

32. The Claimant made several emergency room visits in addition to the initial visit on November 4, 2013. Claimant provided little or no explanation concerning the reasons for these visits.

33. The Claimant explained that she is still having some residual problems with her left wrist making it difficult for her to maintain any type of employment that requires the use of her hands. For instance, Claimant started working as a caregiver for an elderly lady but had difficulty lifting the lady due to her left wrist injury.

34. A review of Claimant's medical bills shows she was charged in excess of $40,000 for all of the medical care she has received. Claimant's medical bills to the various hospitals have been covered through a debt forgiveness program. However, the Claimant maintains that all of the expenses associated with her surgery were not covered. The Claimant did not explain how much she paid out-of-pocket for any of her medical expenses or how much she still owes, if any.

35. The Employer has failed to show that Claimant was free from direction and control in the performance of her duties or that she was customarily engaged in an independent business related to property cleaning. Although the Employer provided only minimal training to Claimant and did not require the Claimant to work exclusively for it, the Employer dictated specific times when Claimant was required to arrive at job sites, and dictated, in detail, the work to be performed. In addition, the Employer supervised the Claimant's work performance (including quality assurance) through the lead crew members assigned to each job. The Employer paid the Claimant a flat rate per job, at a non-negotiable rate. The Employer issued payment to Claimant, individually, rather than to a trade name. Balancing all of the factors enumerated in §8-40-202(2)(a), C.R.S. reflects that the Employer has failed to overcome the presumption, by a preponderance of the evidence, that Claimant was an employee under the Workers' Compensation Act.

36. Claimant has proven that on November 4, 2013, she sustained an injury to her left wrist within the course and scope of her employment. Claimant has also proven entitlement to medical benefits to cure and relieve her of the effects of her injury.

CONCLUSIONS OF LAW

Based on the foregoing Findings of Fact, the Judge enters the following conclusions of law:

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a worker's compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a worker's compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A worker's compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

Employment Status

4. Pursuant to §8-40-202(2)(a), C.R.S. "any individual who performs services for pay for another shall be deemed to be an employee" unless the person "is free from control and direction in the performance of the services, both under the contract for performance of service and in fact and such individual is customarily engaged in an independent . . . business related to the service performed." The "employer" may establish that the worker is an independent contractor by proving the presence of some or all of the nine criteria enumerated in §8-40-202(2)(b)(II), C.R.S. *See Nelson v. ICAO,* 981 P.2d 210, 212 (Colo. App. 1998). The factors in §8-40-202(2)(b)(II), C.R.S. suggesting that a person is not an independent contractor include whether the person is paid a salary or hourly wage rather than a fixed contract rate and whether the person is paid individually rather than under a trade or business name. Conversely, independence may be shown if the "employer" provides only minimal training for the worker, does not dictate the time of performance, does not establish a quality standard for the work performed, does not combine its business with the business of the worker, does not require the worker to work exclusively for a single entity, and is unable to terminate the worker's employment without liability. *In Re of Salgado-Nunez,* W.C. No. 4-632-020 (ICAP, June 23, 2006). Section 8-40-202(b)(II) creates a "balancing test" to ascertain whether an "employer" has overcome the presumption of employment in §8-40-202(2)(a), C.R.S. The question of whether the "employer" has presented sufficient proof to overcome the presumption is one of fact for the Judge. *Nelson v. Industrial Claim Appeals Office, supra.*

5. As found, The Employer has failed to show that Claimant was free from direction and control in the performance of her duties or that she was customarily engaged in an independent business related to property cleaning. Although the Employer provided only minimal training to Claimant and did not require the Claimant to work exclusively for it, the Employer dictated specific times when Claimant was required to arrive at job sites, and dictated, in detail, the work to be performed. In addition, the Employer supervised the Claimant's work performance through the lead crew members assigned to each job. The Employer paid the Claimant a flat rate per job, at a non-negotiable rate. The Employer issued payment to Claimant, individually, rather than to a trade name. Balancing all of the factors enumerated in §8-40-202(2)(a), C.R.S. reflects that the Employer has failed to overcome the presumption, by a preponderance of the evidence, that Claimant was an employee under the Workers' Compensation Act.

Compensability

6. A claimant must prove by a preponderance of the evidence that his injury arose out of the course and scope of his employment with employer. *Section 8-41-301(1)(b), C.R.S.; see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). An injury occurs "in the course of" employment where Claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991).

7. The Claimant has proven that she sustained an injury to her left wrist while in the course and scope of her employment with the Employer. The Claimant's testimony was credible and persuasive. Further, there was little dispute that the Claimant fell and injured her wrist while in the property belonging to Employer's client. Ms. Montoya, who was cleaning alongside the Claimant on November 4, 2013, drove the Claimant to the hospital after the Claimant fell. Further, the medical records support that Claimant injured her left wrist, and that her injury required surgery. No credible or persuasive evidence rebutted the testimony of the Claimant concerning the circumstances of her fall from a ladder while performing cleaning work for the Employer. As such, Claimant's claim for workers' compensation benefits is granted.

8. Pursuant to §8-42-101(1)(a), C.R.S., every employer shall furnish all medical treatment necessary at the time of injury or thereafter to cure and relieve employees of the effects of their injury. Claimant received medical treatment from various providers to cure and relieve her of the effects of her injury. The treatment Claimant has received thus far is authorized since the Employer did not refer Claimant to a physician. The treatment has also been reasonable and necessary to cure and relieve the Claimant of the effects of her injury. The Claimant is also entitled to future medical treatment to cure and relieve her of the effects of her injury.

9. This case presents a unique situation because much of Claimant's debt for medical expenses has been forgiven or written off. Regardless, it is the Employer who is responsible for the payment of the medical expenses associated with this claim. As such, no medical provider shall seek to recover such costs from the employee. Section 8-42-101(4), C.R.S. Further, the Employer is liable for any outstanding medical expenses associated with Claimant's injury. Claimant mentioned that not all of the expenses associated with her surgery were covered, but she did not specify a dollar amount. Finally, Claimant is likely to require an additional surgery.

Penalties – Failure to Maintain Insurance

10. In any case where the employer fails to comply with the insurance provisions of the Act, the amount of compensation or benefits an employee may claim shall be increased by fifty-percent. Section 8-43-408(1), C.R.S. It is not in serious dispute that the Employer failed to carry the requisite workers' compensation insurance. As such, Claimant is entitled to a fifty-percent increase in her compensation or benefits. Medical benefits, however, are not subject to the fifty percent increase. *See Jacobson v. Doan*, 319 P.2d 975 (Colo. 1957). Because this decision does not award a benefit that is subject to the fifty-percent increase, the penalty shall not be specifically imposed at this time but may be applicable to benefits awarded in the future.

ORDER

It is therefore ordered that:

1. The Claimant is an employee rather than an independent contractor.

2. Claimant sustained a compensable injury to her left wrist on November 4, 2013.

3. The Claimant is entitled to medical benefits, including all treatment which she has already received and future medical benefits that are reasonable, necessary and related to this claim. Because Employer is liable for payment of Claimant's medical costs associated with her work injury, no medical provider shall seek to recover such costs from the employee. Section 8-42-101(4), C.R.S.

4. The Employer failed to maintain workers' compensation insurance which shall subject the Employer to a penalty pursuant to § 8-43-408(1), C.R.S.

5. All matters not determined herein are reserved for future determination. Any additional issues that the parties wish to raise must be endorsed in a separate application for hearing.

6. In lieu of payment of the above compensation and benefits to the Claimant, the Employer shall:

   a. Within ten (10) days of the date of service of this order, deposit the sum of $10,000.00 with the Division of Workers' Compensation, as trustee, to secure the payment of all unpaid compensation and benefits awarded. The check shall be payable to: Division of Workers' Compensation/Trustee. The check shall be mailed to the Division of Workers' Compensation, P.O. Box 300009, Denver, Colorado 80203-0009, Attention: Sue Sobolik/Trustee; OR

   b. Within ten (10) days of the date of service of this order, file a bond in the sum of $10,000.00 with the Division of Workers' Compensation:

      (1) Signed by two or more responsible sureties who have received prior approval of the Division of Workers' Compensation; or

      (2) Issued by a surety company authorized to do business in Colorado. The bond shall guarantee payment of the compensation and benefits awarded.

IT IS FURTHER ORDERED: That the Employer shall notify the Division of Workers' Compensation of payments made pursuant to this order.

IT IS FURTHER ORDERED: That the filing of any appeal, including a petition to review, shall not relieve the employer of the obligation to pay the designated sum to the trustee or to file the bond. Section 8-43-408(2), C.R.S.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver,

CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUE

The issue raised for consideration at hearing is whether Respondents proved by clear and convincing evidence that the Division independent medical examination of Dr. Henke is most probably incorrect.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. On September 10, 2013, Claimant, a 59 year old male, employed with Employer as a truck driver, groundskeeper, and mechanic suffered an admitted work-related injury. On that day, while stepping from a mowing machine, Claimant slipped and fell approximately two feet striking his right lower back and posterior hip against a piece of steel. He reported the injury to his supervisor and proceeded to Lutheran Medical Center where he was examined in the emergency room.

2. Claimant returned to work and continued his regular duties until November 15, 2013, when he experienced pain in the low back radiating down the leg and thigh. Walking and standing were painful. He was not able to work, and went to Saint Joseph Hospital when his Employer did not refer him for medical evaluation.

3. On December 4, 2013, Claimant was referred to Dr. Craig Anderson for evaluation and treatment. Dr. Anderson opined that the injury was work-related based on Claimant's report. Dr. Anderson referred Claimant for physical therapy, MRI, and further treatment. Dr. Anderson stated in his December 4, 2013, report: "In my opinion, the development of right lower extremity pain that is possibly consistent with a radiculopathy at 2 months approximately post his work accident, and is probably consistent with a work-related mechanism of injury.

4. On December 13, 2013, Claimant saw Dr. Anderson again, this time "…with persisting pain to a moderate severe degree, and mild weakness in the right lower extremity.", according to Dr. Anderson's report. Additionally, Claimant experienced "…tingling and numbness at the bottom of the right foot." Straight leg raise test was found to be "… strongly positive on the right." A MRI was ordered by Dr. Anderson.

5. On January 2, 2014, Claimant again saw Dr. Anderson, who noted "…lumbar strain associated with radiating right leg pain, possibly consistent with a right-sided lumbar radiculopathy." Claimant reports a constant level of low back pain at 5/10 that is constantly present in the right leg, radiating into the S1 distribution. He has

occasional sharp radiating pains in the left lower extremity, but this is intermittent. Some days, the left leg is not involved." Dr. Anderson diagnosed Claimant with "… L4-5 and L5 nerve root impingement on the right."

6. As of March 7, 2014, two to three months prior to the anticipated maximum medical improvement (MMI) date, Dr. Anderson placed Claimant at MMI with no impairment rating and released Claimant from treatment, stating in his MMI report: "MRI evidence of degenerative disease, severe at L5-S1. …Probably not work-related." Yet, in Dr. Anderson's prior handwritten notes of December 4, 2014, December 13, 2014, December 18, 2013, January 17, 2014, January 20, 2014, January 31, 2014, February 21, 2014, and even March 7, 2014, in response to the question, "Are your objective findings consistent with history and work-related mechanism of injury/illness?" Dr. Anderson consistently indicated that objective findings were consistent with history and work-related mechanism of injury/illness. On the last page of his MMI report, Dr. Anderson indicates: "The more severe MRI findings do not correlate with clinical symptoms and signs of right leg pain. Right leg pain probably not due to a true radiculopathy." Dr. Anderson offers no explanation why he changed his mind from his earlier findings that Claimant's condition is work-related. Only at the time of MMI does Dr. Anderson find Claimant's condition to be, "Probably not work-related…."

7. Two weeks following his placement at MMI and release from restrictions to full duty employment, Claimant felt extreme pain when riding and bouncing on a piece of machinery called a "Bobcat." In the following weeks, Claimant went to the emergency room twice and saw Dr. Robert Springs, M.D., approximately six times.

8. On July 18, 2014, Claimant was seen by Dr. Clarence Henke for a Division independent medical examination (DIME) where he was found to be not at MMI. Dr. Henke's DIME report concludes that, consistent with Claimant's statements to Dr. Shih, Claimant sought post MMI medical treatment with Dr. Springs. on March 12, 2014, five days after he was released by Dr. Anderson. Dr. Springs ordered laboratory tests, x-rays and scheduled Claimant to return in two months on May 5, 2014. On May 5, 2014, Dr. Springs saw Claimant and indicated that Claimant had been to two emergency rooms since mid-April, and was treated with a Medrol Dosepak without benefit. On May 5, 2014, Claimant complained of the same pain in his back with radiation into his right leg, which he complained of throughout the course of his treatment, and again after his release and return to full-time duty.

9. On August 27, 2014, Dr. Franklin Shih was retained by Respondents to conduct an independent medical evaluation of Claimant. During the examination, Claimant reported to Dr. Shih that he had doubts about Dr. Anderson's decision to place him at full duty, that he experienced severe pain after being returned from restricted duty to full-duty while riding a Bobcat, and that he went to the emergency room twice, and Dr. Springs several times in succession, for treatment of his back pain. In Dr. Shih's report regarding Claimant, the doctor describes Claimant's history as inconsistent.

10. Dr. Shih prepared a written report dated August 27, 2014, opining that he relied on Dr. Anderson's medical records finding the doctor's records were more credible than Claimant's oral history. Dr. Shih concluded that it was not within medical probability to relate Claimant's complaints to the September 20, 2013, work injury.

11. On November 21, 2014, at his deposition, Dr. Anderson testified that Claimant had no impingement and no radiculopathy. Dr. Anderson reports as support for his opinion of no impingement and no radiculopathy, "… we don't have any mention of displacement of the nerve roots or impingement of the nerve roots, which would be indicative of a true radiculopathy." Yet, in Dr. Anderson's earlier written reports of January 2 and 31, 2014, Dr. Anderson reports that Claimant has L4-5 and L5 nerve root impingement on the right. Significantly, Claimant complained of pain radiating into the right leg throughout the course of his treatment.

12. At hearing, Dr. Shih testified that his role was to resolve discrepancies in the medical history. Dr. Shih opined that he disagreed with Dr. Henke's determination that Claimant was not at MMI. He further testified that Dr. Henke's report was not performed in accordance with the *AMA Guides because* Dr. Henke did not provide impairment rating worksheets and that he did not measure Claimant's range of motion three times. Dr. Shih credibly testified that his opinion that Dr. Henke's MMI determination is incorrect amounts to a difference of opinion between physicians and does not constitute clear and convincing evidence that the DIME is most probably incorrect.

13. Dr. Henke's DIME determination that Claimant is not at MMI has not been overcome. Dr. Henke recommends: 1. Bilateral lower level extremity EMG (electromyogram) examination; 2. Neurosurgical consultation; 3. Restricted work activities of lift limit 10 pounds, avoid bending, lifting or ladder climbing; and 4. Continue current medications for pain relief. Dr. Henke's recommendations are intended to cure and relieve Claimant of the effects of the industrial injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

1. The purpose of the Act is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimant shoulders the burden of proving by a preponderance of the evidence that he/she sustained an injury arising out of and within the course of his/her employment. Section 8-41-301(1), C.R.S.; *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. Respondents contend that it overcame the opinion of the DIME by clear and convincing evidence on the issue of MMI. Claimant takes the opposite position arguing that Respondents failed to sustain their burden of proof to establish that the DIME is most probably incorrect, he is not at MMI and the DIME properly determined that he is not at MMI. It is concluded that Respondents failed to sustain their burden of proof to establish by clear and convincing evidence that Dr. Henke's opinion of MMI is most probably incorrect.

4. Section 8-42-107(8)(b)(III) and (c), C.R.S. provides that the finding of a DIME physician selected through the Division of Workers' Compensation shall only be overcome by clear and convincing evidence. Clear and convincing evidence is highly probable and free from serious or substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A fact or proposition has been proved by clear and convincing evidence if, considering all the evidence, the trier-of-fact finds it to be highly probable and free from serious or substantial doubt. *Metro Moving & Storage Co. v. Gussert*, *supra*. A mere difference of opinion between physicians fails to constitute error. *See, Gonzales v. Browning Ferris Indust. of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

5. The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). Whether a particular component of Claimant's overall medical impairment was caused by the industrial injury is an inherent part of the rating process under the *AMA Guides*. *See Askew v. Industrial Claim Appeals Office*, 927 P.2d 1333 (Colo.1996) (a rating of overall medical impairment necessarily includes consideration of apportionment of the impairment to other causes). Indeed, the *AMA Guides* specifically require the treating physician to determine the cause or causes of Claimant's overall impairment. See, *AMA Guides* ch. 2.2. Since the DIME physician is required to identify and evaluate all losses and restrictions which result from the industrial injury as part of the diagnostic assessment process, the DIME physician's opinion regarding causation of those losses and restrictions is subject to the same enhanced burden of proof. *Qual-Med v. Industrial Claim Appeals Office*, *supra.*

6. Dr. Henke determined that Claimant is not at MMI and requires additional treatment to cure and relieve him of the effects of the industrial injury.

7. Dr. Shih testified for Respondents after conducting an independent medical examination and providing a written report. Dr. Shih credibly testified that his opinion that Dr. Henke's MMI determination is not correct amounts to a difference of opinion between physicians. As such, it is concluded that Dr. Shih's opinion is not clear and convincing evidence that the DIME is most probably incorrect. The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician *Javalar v. Monte Vista Head Start, Inc.* W. C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004). Further, even if the ALJ finds the DIME physician deviated from the rating protocols of the *AMA Guides*, the party challenging the rating must still demonstrate that the deviation casts substantial doubt on the overall validity of the rating. *Schrameck v. USA Waste Management*, W.C. No. 4-407-221 (ICAO May 18, 2001), *Rivale v. Beta Metals, Inc*., W.C. No. 4-2655-360 (April 16, 1998), *aff'd. Rivale v. Industrial Claim Appeals* Office, (Colo. App. No. 98CA0858, January 28, 1999) (not selected for publication). Deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect*. In Re Gurrola*, W.C. No. 4-631-447 (ICAP Nov. 13, 2006) Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings*. Id.*

8. Dr. Anderson's testimony and medical reports were found to be less credible and persuasive than Claimant's testimony regarding his pain and other symptoms. Dr. Anderson's written reports are internally inconsistent, and inconsistent with his deposition testimony. Dr. Anderson indicates throughout his reports that there is a radiculopathy, until the date of release at MMI, when he finds that there is not a true radiculopathy. Dr. Anderson says in his reports that there is nerve root impingement, but then at deposition says that there is no nerve root impingement. Dr. Anderson noted moderate to severe pain consistent with the mechanism of injury throughout his reports, and then on the date of Claimant's release at MMI, Dr. Anderson said that the MRI findings do not correlate with clinical symptoms and signs of right leg pain.

9. Despite the fact that Dr. Shih indicated at hearing that his role was to resolve discrepancies, the above described discrepancies in Dr. Anderson's record and testimony regarding Claimant were never resolved by Dr. Shih. By contrast, Claimant's testimony at hearing is found to be consistent and credible. Claimant's testimony is consistent with the evidence contained in medical reports, and consistent with Dr. Henke's findings. Throughout his medical history, Claimant consistently complained of low back pain, hip pain, pain into the buttocks, and pain radiating down the right leg, and occasionally into the left leg. Claimant never deviated to other parts of the body which were not anatomically related to his pain complaints. Further, Claimant reported to Dr. Shih that he began to have pain two weeks after he returned to work full duty.

10. Dr. Henke's rating has not been overcome by clear and convincing evidence. Dr. Henke recommends: 1. Bilateral lower level extremity EMG (electromyogram) examination; 2. Neurosurgical consultation; 3. Restricted work

activities of lift limit 10 pounds, avoid bending, lifting or ladder climbing; and 4. Continue current medications for pain relief. Dr. Henke's recommendations are intended to cure and relieve Claimant of the effects of the industrial injury.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents have failed to produce clear and convincing evidence to overcome the Division Independent Medical examination and opinion of Dr. Clarence Henke, M.D. that Claimant is not at MMI.

2. Issues not expressly decided herein are reserved to the parties for future determination.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUE

Whether the Claimant has established by a preponderance of the evidence that Dr. Kristin Mason's prescription for a modification to the Claimant's home providing an emergency exit from the Claimant's bedroom with an extended porch is reasonably necessary and related to the injury pursuant to C.R.S. 8-42-101(1)(a).

FINDINGS OF FACT

1. The Claimant was born on October 2, 1953 and he is 61 years old.

2. The Claimant was driving a forklift in the Employer's warehouse when the forklift malfunctioned and ran into a column. The Claimant suffered an industrial injury to his C2 spinal cord with central cord syndrome along with a moderate traumatic brain injury and lacerations to the front and back of his head during the course and scope of his employment on November 29, 2013 (Claimant's testimony and Claimant's Exhibit 6, p. 18).

3. The Claimant has been assessed as C2-3 tetraplegia with preservation of more muscle groups in the lower extremities than upper extremities and he is status post C3 through C7 posterior spinal decompression and fusion along with other complications from his injury and current condition (Claimant's Exhibit 6, pp. 20-21).

4. The Claimant was initially hospitalized at Medical Center for the Rockies and later transferred to Craig Hospital on March 6, 2014. The Claimant was then transferred to a facility called CareMeridian (Claimant's Exhibit 6, p. 18).

5. The Claimant's family purchased a home that was modified to make it accessible for him. He has a definitive electric wheelchair with Tilt-in-Space feature and requires a Hoyer lift for toilet transfers. On May 2, 2014, Dr. Mason notes that the Claimant is medically delicate and opined that "the best thing for him, both physically and psychologically, is to complete home modifications with due haste and get him into a different care environment (Claimant's testimony and Claimant's Exhibit 6, pp. 18-19).

6. On May 23, 2014, Dr. Kristin Mason issued a note prescribing an emergency exit from the Claimant's bedroom in case of fire. On this note, she was asked the reasons that the emergency exit is medically reasonable and necessary. Her response is below:

> "The patient feels strongly he needs an exit door in his bedroom that is ramped for emergency escape in case of fire, and I believe that is fairly obvious and agree with that as medically reasonable and necessary" (Claimant's Exhibit 6, p. 27.)

7. The Claimant submitted the original 3/19/2014 proposed modification to the Claimant's home (Claimant's Exhibit 4) and the 5/13/2014 Amended Modified Floor plan which illustrates the actual modification to the Claimant's home for the emergency exit from the Claimant's bedroom (Claimant's Exhibit 5).

8. Dr. Mason did express opinions in the medical records that the Claimant was experiencing "situational depression and anxiety" due to his living situation in the care facility and not being able to be in his home while construction modifications were progressing but not completed. After the Claimant transitioned to his own home in December of 2014, Dr. Mason's follow up medical note no longer references the situational depression and anxiety (Claimant's Exhibit 6).

9. At hearing, the Claimant testified that he was not currently diagnosed or taking any medication for anxiety or depression nor is he in treatment with a psychologist or psychiatrist.

10. At hearing, the Claimant testified that other home modifications were completed, including carpet removal, hall and door widening, and air conditioning installation.

11. At hearing, the Claimant testified that he would like the emergency exit in his bedroom prescribed by Dr. Mason. Importantly, the Claimant testified that he was concerned about a fire and being able to get out of the house, since the only other exit that would accommodate him goes through hallways past the kitchen. He testified that the emergency exit would provide him with peace of mind as the second exit would allow him to get straight out of the house from his bedroom. This exit also provides him the ability to exit the home for medical appointments and allows his at-home medical care staff to enter and exit.

12. On cross examination, the Claimant testified that he has twenty-four hour nursing care in his home and that the nurses are able to use a medical lift to get him from his bed into his wheelchair.

13. The Claimant did not testify that without the exit, medical providers could not access him for medical care. The Claimant did not testify that the exit was necessary in order for him to leave his home to obtain medical care. The Claimant did not testify that the lack of the second exit would have a negative effect on his physical condition related to the work injury.

14. Based on the testimony and the documents in evidence, the ALJ finds that while an emergency exit would provide peace of mind for a tetraplegic and would provide an alternative exit from the home in the event of a fire, the proposed home modification does not provide a therapeutic benefit.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. Respondent bears the burden of establishing any affirmative defenses. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201 (2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

Medical Benefits – Reasonably Necessary

Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101, C.R.S; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). Although Respondents are liable for medical treatment that is reasonably necessary to cure and relieve the effects of the industrial injury, Respondents may, nevertheless, challenge the reasonableness and necessity of current or newly requested treatment notwithstanding its position regarding previous medical care in a case. *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002), (upholding employer's refusal to pay for third arthroscopic procedure after having paid for multiple surgical procedures). The question of whether a particular medical treatment or modality is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office, supra*; *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P.2d 251 (Colo. App. 1999); *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

Employers are required to provide services which are either medically necessary for the treatment of a claimant's injuries or incidental to obtaining such treatment. *See Bellone v. Indus. Claim Appeals Office*, 940 P.2d 1116, 1117-18 (Colo. App. 1997) (upholding child care services as medical in nature because they relieved the symptoms and effects of the injury and were directly associated with claimant's physical needs). However, in interpreting the scope of C.R.S. 8-42-101(1)(a), the Colorado Court of Appeals has narrowly construed the Act by stating that an apparatus must be necessary for the treatment of the injury or it must provide therapeutic relief from the effects of the injury. *Cheyenne Cnty. Nursing Home v. Indus. Claim Appeals Office*, 892 P.2d 443, 446 (Colo. App. 1995) (upholding employer's refusal to pay for a stair glider as being a medical apparatus because it did not provide a therapeutic benefit to the disabling injury although it provided peace of mind and access to lower levels of a home in a tornado-prone area). If the apparatus is not medically necessary for the treatment of a claimant's injuries or incidental to obtaining such treatment then the employer will not be liable to pay for it. *See ABC Disposal Servs. v. Fortier,* 809 P.2d 1071, 1073 (Colo. App. 1990) (upholding employer's refusal to pay for a snow blower because it was not prescribed as a medical aid to cure or relieve claimant from the symptoms of his injury but rather provided an easier way to accomplish a household chore). In other recent cases, the courts have likewise denied an "apparatus" or a service where it was not found to be medically necessary, but was rather prescribed as a means to achieve an independent lifestyle or provided peace of mind in emergencies. *Bogue v. SDI Corporation, Inc.,* 931 P. 2d. 477 (Colo. App. 1996)(holding that a wheelchair accessible van was not medically necessary and therefore beyond the intent of C.R.S. 8-42-101(1)(a)); *Robertson v. Vincam Staff Administrators,* WC 4-389-907 (ICAO January 10, 2007)(a cell phone denied because it was not prescribed for therapeutic relief but for medical emergency needs); *Hillen v. Tool King,* 851 P.2d 289 (Colo. App. 1993)(Although lawn care services necessitated by Claimant's work-related condition, they are unrelated to physical condition and the lawn care was not prescribed to cure or relieve Claimant of symptoms of the injury, but simply to relieve the Claimant of the rigors of yard work).

In the Colorado cases where an apparatus or services were authorized, the courts found that the apparatus or service was medically necessary. *Bellone,* supra; *Atencio v. Quality Care,* 791 P.2d 7 (Colo. App. 1990)(housekeeping services allowed where Claimant had severely restricted use of hands and could not perform activities of daily living or chores without assistance); *City and County of Denver, School District 1 v. Indus. Claims Appeals Office,* 682 P.2d 513 (Colo. App. 1984)(Hot tub installed in home found medically necessary where Claimant's work hours prevented use of health club and hot tub was prescribed to cure and relieve the Claimant from the effects of his work injury).

The claimant bears the burden of proof to establish the right to specific medical benefits. *HLJ Management Group, Inc. v. Kim,* 804 P.2d 250 (Colo. App. 1990). Factual determinations related to this issue must be supported by substantial evidence in the record. Section 8-43-301(8), C.R.S. Substantial evidence is that quantum of probative evidence which a rational fact finder would accept as adequate to support a conclusion without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert,* 914 P.2d 411, 415 (Colo. App. 1995).

Here, the Claimant has failed to establish by a preponderance of the evidence that the emergency exit prescribed by Dr. Mason is reasonable and necessary to cure or relieve the effects of his industrial injuries. Dr. Mason prescribed the emergency exit door in his bedroom stating that "I believe that is fairly obvious and agree with that as medically reasonable and necessary." In contrast, the Claimant testified that he does not have a diagnosis or take any medication for anxiety or depression. Rather, Claimant stated that the emergency exit would provide him with peace of mind. However, the Claimant's home already has an exit that would enable him to exit the home in an emergency, paired with the fact that he is provided with twenty-four hour medical care. The main exit to the home also allows Claimant to exit the home for medical appointments and allows for his homecare medical staff to enter and exit his home. As there is no therapeutic benefit to the proposed modification to the Claimant's home, the Claimant's claim for this specific medical benefit is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. The Claimant's request for an emergency exit from his bedroom as prescribed by Dr. Kristin Mason is hereby denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 18, 2015

Kimberly A. Allegretti
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

The issues for determination are:

1. The respondents' request to withdraw admissions of liability based on fraud;

2. Medical benefits;

3. Average weekly wage ("AWW");

4. Temporary disability benefits; and

5. Overpayment.

FINDINGS OF FACT

1. On December 23, 2008, the claimant was seen by Michael Messner, D.O. for right elbow pain and swelling which he reported began two months earlier without any specific injury. The claimant reported the pain would shoot down the arm and wake him at night. Dr. Messner diagnosed lateral epicondylitis and recommended ice, rehabilitation, and an elbow sleeve.

2. On August 12, 2012, the claimant reported right elbow pain, and he underwent right elbow x-rays which did not reveal any acute problems.

3. On September 28, 2012, the claimant was seen by Dr. Messner and reported pain in both shoulders, which he related to his job duties at his additional job at Safeway. Dr. Messner also diagnosed a right wrist contusion, for which he recommended wrist/forearm physical therapy.

4. At the hearing, the claimant testified that he did not have any right shoulder problems prior to the work-related accident. The claimant also testified that he had right elbow pain just "one time" before the alleged accident, which had existed for only two days before he underwent a single evaluation for the condition.

5. On Thursday, December 5, 2013 the claimant sustained a minor injury involving the right upper extremity while he was shoveling snow and working for the

respondent-employer. The claimant completed his regular shift that day. The School was closed on the following day due to the weather.

6. The claimant reported his accident to Angel Thomas and Paula Prater (employees of the respondent-employer), individually, on December 5, 2013. The ALJ finds the testimony of Ms. Thomas and Ms. Prater to be credible.

7. Frank Beeman (who sometimes volunteers for the respondent-employer) had a conversation with the claimant on December 10, 2013 during which the claimant reported injuring himself while shoveling snow at the School. The ALJ finds the testimony of Mr. Beeman to be credible.

8. At the time of the accident, the claimant was working for the respondent-employer (a school) as a custodian from Monday through Friday, for an average of approximately 40 to 45 hours per week. The claimant's gross annual wages with the respondent-employer were approximately $25,494.58, which equates to an AWW of $490.28.

9. The claimant had two other jobs at the time of the accident. In addition to his job with the respondent-employer, he was working as a custodian for a cleaning company named Paramount Building Solutions ("Paramount"), and as a server for a restaurant named Fiesta Mexicana ("Fiesta").

10. The claimant worked for Paramount every night, where he averaged approximately 37 hours of work per week over the four weeks preceding the accident. The claimant's job duties with Paramount included waxing and cleaning the floors of the Safeway store in Woodland Park. To wax the floors, the claimant used a mop to apply a stripping solution. To clean the floors, the claimant would guide a large floor cleaning machine up and down every aisle. The machine frequently broke down and required repairs, which the claimant would perform by laying on the floor and pushing and pulling a drive chain with his arms until it returned to the correct position.

11. The claimant worked at Fiesta on Fridays, Saturdays, and Sundays, where he averaged 15 hours of work per week over two weeks preceding the accident. The claimant worked at Fiesta over the weekend following the work-related accident, on December 6, 7, and 8, 2013. There is no dispute that the claimant's AWW with Fiesta was $241.85.

12. The claimant first sought treatment for the injury on December 11, 2013, at Penrose-St. Francis, where he reported worsening right shoulder and elbow pain. Douglas Smith, FNP diagnosed rotator cuff strain, shoulder bursitis, and lateral

epicondylitis. Mr. Smith assigned temporary restrictions which essentially prohibited the claimant from using his right upper extremity. Despite these restrictions, the claimant continued working for Paramount.

13. On December 13, 2013, the claimant participated in a recorded telephone conversation with Jeni Schietzelt, who is the respondent-insurer's claim representative assigned to this case. The claimant made the following representations during that conversation: he had no right shoulder or right elbow problems before the accident; he worked at Fiesta on the three days following the accident; and he was not working anywhere else.

14. On December 30, 2013, the respondent-insurer filed the first general admission of liability. The respondents have since admitted liability for an AWW of $732.13, based on the claimant's earnings with Fiesta ($241.85) and the respondent-employer ($490.28), in addition to ongoing temporary disability benefits beginning on December 6, 2013.

15. On December 31, 2013, Dr. Messner assigned a "total work restriction." Despite this restriction, the claimant continued working for Paramount.

16. On January 14, 2014, the claimant was seen by Dr. Messner, who reported that the claimant's lateral epicondyle tenderness had improved. Dr. Messner diagnosed lateral epicondylitis (which he had previously diagnosed in 2008), and did not make any mention of medial epicondyle symptoms.

17. On January 16, 2014, the claimant underwent a right shoulder MRI, which did not reveal any acute abnormalities.

18. On January 22, 2014, the claimant returned to work with the respondent-employer in a modified position.

19. On February 17, 2014, the claimant underwent an initial evaluation by Ronald Fisher, PT. The claimant reported being employed by the respondent-employer, but he apparently did not disclose his job with Paramount.

20. On February 19, 2014, Dr. Messner noted that the claimant's shoulder and lateral epicondyle tenderness were still improving. That same day, Dr. Messner released the claimant to modified duty, with a restriction of no overhead arm/hand placement.

21. On March 17, 2014, the claimant was seen by Dr. Snyder and reported that his elbow was swollen and his pain was worse.

22. On March 19, 2014, the claimant was seen by Dr. Messner and reported that his elbow pain had increased over the last week. Dr. Messner observed increased tenderness at the lateral epicondyle and added a 15-pound lifting restriction.

23. On March 31, 2014, the claimant was examined by Katherine Leppard, M.D. and reported worsening elbow pain. Dr. Leppard diagnosed myofascial shoulder pain based on the normal MRI.

24. Dave Gordon (a co-worker employed by the respondent-employer) prepared a written statement dated April 16, 2014 regarding a conversation he had with the claimant around the same time that his symptoms were worsening:

> Jesus has told me that he also works at Safeway. He does hard surface floor maintenance there. One morning when Jesus came in for morning Crossing Guard duty he told me that he had been working all night at Safeway and had just gotten off. He said that he had only been off for about one hour and that his arm was hurting him very badly. He even had me look at it pointing out that it was swollen. He said that he had been stripping and re-waxing the floors at Safeway and that he had been mopping all night and that was why his arm was hurting so badly. He said it hurt so badly that he couldn't even lift it. I pointed out that he did not hurt it here at [the respondent-employer] because he is on very light duty. He did agree at that time that it was not from anything he did at [the respondent-employer] but was from mopping all night at Safeway.

25. Mr. Gordon was uncertain of the exact date on which the conversation occurred, but it was sometime in March or April of 2014, and he overheard the claimant have a similar conversation with Melanie Carter in March or April of 2014. The ALJ finds the testimony of Mr. Gordon to be credible.

26. Melanie Carter also testified, via deposition on November 13, 2014 regarding a similar conversation which she had with the claimant around the same time. Ms. Carter is employed by a company named Chartwells and she works in the same building as the claimant. Ms. Carter had a conversation with the claimant sometime in March or April of 2014 (before the April 5, 2014 MRI noted below), which occurred in the presence of Dave Gordon. During that conversation, the claimant reported pain and swelling above and about the elbow, he related his symptoms to "mopping and doing floors all night at Safeway," and Ms. Carter observed swelling of the elbow. Ms. Carter

also testified that she likes the claimant and was concerned about his medical condition. The ALJ finds the testimony of Ms. Carter to be credible.

27. Notably, the number of hours which the claimant worked for Paramount increased after the accident. As compared to the 37 hours he had previously averaged, the claimant averaged roughly 40 hours of work per week over the two-week pay period ending December 27, 2013 and roughly 42 hours of work per week over the following three pay periods. The claimant's work with Paramount peaked over the next five pay periods, when he averaged at least 46 hours per week.

28. Andres Yarasca was the claimant's supervisor at Paramount; the claimant was the only person who would perform the basic floor cleaning duties at the Safeway in Woodland Park; and the claimant's job responsibilities for Paramount remained the same after his accident until he quit in April 2014, though he was encouraged to do "light" work. Mr. Yarasca could only speculate why the claimant resigned. The ALJ finds the testimony of Mr. Yarasca to be credible.

29. Brandon Heedt previously worked with the claimant at the Safeway in Woodland Park, while Mr. Heedt was employed by Safeway as a night crew manager. Mr. Heedt observed that the claimant's job duties with Paramount stayed the same after the accident, though he would sometimes get help when moving large items after his elbow symptoms worsened. Mr. Heedt testified that the operator of the floor cleaning machine must "push the bar down" to move it, some pushing and pulling is required to turn the machine, and mopping the floor requires repetitive use of the upper extremities. The ALJ finds the testimony of Mr. Heedt to be credible.

30. Matthew Maconachy is the head night clerk at the Safeway in Woodland Park. He worked with the claimant at the Safeway during the period of December 2013 through April 2014; the claimant continued performing his regular job duties for Paramount during that timeframe*;* and the claimant commonly performed those duties without assistance. Mr. Maconachy observed that the claimant began reporting increased right arm pain in March or April 2014; the claimant told him that those symptoms could be due to his job duties with Paramount, including waxing floors and operating the machine; and the claimant did not attribute those symptoms to his injury with the respondent-employer initially. When asked whether pushing and pulling the chain was difficult, Mr. Maconachy said "it was always a pain." Mr. Maconachy further observed that the claimant's explanation regarding the cause of his increased symptoms later changed: "It seemed like it was more in the direction of things that had happened at Safeway, and then, it seemed as though he had finally come to a conclusion that he had actually hurt himself at the [respondent-employer]. . . . He hurt

himself at Safeway, until he said that: He might have hurt himself at the [respondent-employer]." The claimant informed Mr. Maconachy that he might need to testify on his behalf, and, during that conversation, the claimant asked, "You have never seen me waxing floors at Safeway, just supervising, right?" Mr. Maconachy had in fact seen the claimant waxing floors, however. The ALJ finds the testimony of Mr. Maconachy to be credible.

31. On April 5, 2014, the claimant underwent a right elbow MRI, which revealed a partial tear of the common flexor tendon with edema/hemorrhage tracking into the flexor carpi radialis muscle. The radiologist, Nicholas Moore, M.D., diagnosed tendinopathy, sprain of the common extensor tendon and radial collateral ligament, and mid distal biceps insertional tendinopathy.

32. On April 16, 2014, the claimant was seen by Karl Larsen, M.D., who diagnosed lateral and medial epicondylitis, and assigned work restrictions of no use of the right arm.

33. On April 17, 2014, the claimant participated in a second recorded telephone conversation with Ms. Schietzelt, during which he made the following representations: He was "so pissed off" about having to shovel the snow; he had not performed any work besides his modified job with the respondent-employer; and the only wages he was earning were with the respondent-employer. Upon being confronted by Ms. Schietzelt regarding his job with Paramount which the respondent-insurer had learned about through an investigation, the claimant admitted that he had lied about his employment status.

34. On April 17, 2014, the claimant resigned from Paramount. The corresponding paperwork from Paramount does not suggest he resigned due to medical problems.

35. On May 21, 2014, Dr. Snyder opined that the claimant had exacerbated his condition possibly due to "continued repetitive motion activity." Dr. Snyder later opined it was reasonable to assume that the claimant's condition "was aggravated by certain activities between his visit on February 10, 2014 and March 17, 2014."

36. On June 20, 2014, the claimant was evaluated by Scott Primack, D.O., who diagnosed a right shoulder strain, right elbow strain, and lateral epicondylitis. Dr. Primack opined that no further medical treatment was reasonably necessary for the work-related injury, because the claimant's injury had improved before his job duties with Paramount significantly aggravated his elbow and shoulder conditions.

37. On July 29, 2014, the claimant was seen by Derek Purcell, M.D., who opined that the MRI findings indicate that the claimant's "shoulder is essentially within normal limits with no evidence of rotator cuff tear."

38. On November 14, 2014, Dr. Messner testified via deposition. Dr. Messner explained that a "total work restriction" means no work whatsoever; he verbally advised the claimant of the "total work restriction" both times that he assigned it; and he was unaware of the claimant's job with Paramount despite asking him about his employment status. The ALJ finds these factual portions of Dr. Messner's testimony to be credible, but the ALJ also finds that the causation opinions offered by Dr. Messner were not credible, in light of the credible and persuasive medical evidence to the contrary.

39. On November 20, 2014, Dr. Purcell testified via deposition. Dr. Purcell diagnosed AC joint osteoarthritis and rotator cuff tendinitis (i.e. impingement syndrome), and explained that this diagnosis was based on his physical examination given the minimal MRI findings. For impingement syndrome, Dr. Purcell typically recommends conservative treatment. Dr. Purcell testified that osteoarthritis is very common, and patients with osteoarthritis can become symptomatic from a wide range of activities. Besides the MRI report dated January 16, 2014 and Dr. Primack's report, Dr. Purcell did not review any other medical records before testifying. The ALJ finds that the causation opinions offered by Dr. Purcell were not credible, in light of the credible and persuasive medical evidence to the contrary.

40. Dr. Primack testified that the two months' of nighttime elbow pain which the claimant had leading up to the September 28, 2012 visit with Dr. Messner was suggestive of a recurrent and degenerative condition such as osteoarthritis or arthritic pain. Dr. Primack also testified that the imaging of the claimant's right shoulder revealed only common degenerative changes. Dr. Primack explained that the MRI from April 5, 2014 confirms that another injury must have occurred after the work-related accident, because it revealed an acute tear of the medial epicondyle with effusion, rather than the lateral epicondylitis which Dr. Messner had previously diagnosed. Dr. Primack reasoned that, although shoveling snow could cause an injury, the claimant's repetitive and demanding job duties with Paramount were the most likely cause of his shoulder and elbow problems, based on his failure to promptly seek treatment for what would have been a very painful torn tendon, his heightened workload with Paramount after the accident, and his conversations with Mr. Gordon and Mr. Carter regarding his job at Paramount being the cause of the increased symptoms. The ALJ finds the testimony of Dr. Primack to be credible and persuasive, except that the ALJ rejects Dr. Primack's opinion that claimant did not sustain a compensable injury in the first instance.

41. Ms. Schietzelt testified that the respondent-insurer had paid the claimant $17,859.95 in compensation benefits prior to the hearing. The ALJ finds the testimony of Ms. Schietzelt to be credible.

42. With the exception of the claimant's original injury complaint, the ALJ finds that the claimant is not credible. The ALJ specifically finds the claimant's testimony regarding the existence of any disability or need for medical treatment beyond December 11, 2013 which are causally related to the work-related accident to not be credible.

CONCLUSIONS OF LAW

1. The respondents have the burden to prove that the claimant committed fraud by a preponderance of the evidence. *Section 8-43-201(1), C.R.S.* A preponderance of the evidence is that which would lead the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). "Fraud" is a "knowing misrepresentation of the truth or concealment of a material fact to induce another to act to his or her detriment." *Wolford v. Pinnacol Assurance*, 107 P.3d 947 (Colo. 2005)*, citing Black's Law Dictionary* 685 (8th ed. 2004). When a claimant has supplied materially false information upon which a respondent relied in filing an admission of liability, the admission may be withdrawn retroactively in addition to prospectively. *Vargo v. ICAO,* 626 P.2d 1164 (Colo. App. 1981). Here, the ALJ concludes that respondents failed to carry their burden of proof on the issue of fraud and are therefore not permitted to withdraw their admission of liability for the initial accident.

2. The claimant had the burden to prove his entitlement to additional medical benefits by a preponderance of the evidence*. §8-43-201, C.R.S.* The respondents are only liable for the medical treatment which is reasonable and necessary to cure and relieve the alleged work-related injury. *§8-42-101(1)(a), C.R.S.* Even after an admission of liability is filed, the respondents retain the right to dispute the relatedness of the need for continuing treatment. This principle recognizes that the mere admission that an injury occurred cannot be construed as a concession that all subsequent conditions and treatments were caused by the admitted injury. *HLJ Management Group, Inc. v. Kim*, 804 P.2d 250 (Colo. App. 1990); *Snyder v. ICAO,* 942 P.2d 1337 (Colo. App. 1997). Here, the ALJ concludes that the claimant failed to carry his burden of proof to establish that any further medical treatment is reasonably necessary for and related to the December 5, 2013 work-related injury, and any need for medical

treatment which the claimant had after December 11, 2013 was most likely caused by his preexisting condition or his job duties with Paramount. This conclusion is bolstered by the testimony of Dr. Primack, Mr. Heedt, Mr. Maconachy, Ms. Carter, and Mr. Gordon.

3. The respondents have the burden to establish that the claimant's temporary disability benefits should be terminated by a preponderance of the evidence. *§8-43-201, C.R.S.* An injured worker is only entitled to temporary disability benefits to compensate for wage loss which is causally related to the work-related injury. *See, generally, sections 8-42-105 and 8-42-106, C.R.S.* Here, the ALJ concludes that the respondents carried their burden of proof and the claimant's temporary disability benefits should be terminated as of December 11, 2013, because the work-related injury was minor in nature, any disability caused by the work-related injury ended by December 11, 2013, the claimant continued working for Paramount after December 11, 2013 despite the restrictions he was assigned, and any disability which the claimant had after December 11, 2013 was most likely caused by his job duties with Paramount. This conclusion is bolstered by the testimony of Dr. Primack, Mr. Heedt, Mr. Maconachy, Ms. Carter, and Mr. Gordon.

4. If a temporarily disabled injured worker is earning wages which are less income than his AWW, then TPD benefits are payable rather than TTD benefits, and the respondents are entitled to offset the TPD benefits payable based on any such partial earnings. *Section 8-42-106(1), C.R.S.* Here, because the claimant earned some wages during the period of disability which was caused by the work-related injury (i.e. December 6, 2013 through December 11, 2013), claimant is entitled to TPD benefits from December 6, 2013 through December 11, 2013, and respondents are entitled to offset their corresponding TPD liability based on the wages which the claimant earned during this period.

5. The responsible for termination of employment defense created by section 8-42-103(1)(g), C.R.S. applies to subsequent employers. *Garbiso v. Wal-Mart Stores, Inc.*, W.C. No. 4-695-612 (ICAO 2008); *Colorado Springs Disposal v. ICAO*, 58 P.3d 1061 (Colo. App. 2002). The ALJ concludes that this issue is moot based on his conclusion that claimant does not have any ongoing disability which is causally related to the December 5, 2013 work-related injury.

6. The claimant had the burden to establish by a preponderance of the evidence that the admitted AWW should be increased. *Section 8-43-201, C.R.S.* An injured worker's AWW should be fair. *Section 8-42-102(3), C.R.S.* When a worker is concurrently employed, an ALJ has the discretion to exclude the concurrent wages from

the AWW. *Broadmoor Hotel and Continental Ins. Co. v. ICAO*, 939 P.2d 460 (Colo. App. 1996); *Coleman v. National Produce Service*, W.C. No. 4-601-676 (ICAO July 12, 2005) (disagreeing with the ALJ's conclusion that the worker's concurrent wages needed to be included in the AWW). Here, the ALJ concludes that the claimant failed to carry his burden of proof to increase the admitted AWW, the admitted AWW fairly reflects claimant's earnings with the respondent-employer and Fiesta at the time of the accident, and it would be unfair to include the claimant's wages with Paramount in the AWW in light of his intentional concealment of that employment from the respondent-insurer.

7. The respondents have the burden to prove their entitlement to an overpayment or an offset by a preponderance of the evidence. *Section 8-43-201(1), C.R.S.; Quintana v. Sunstrand Aviation*, W.C. No. 3-062-456 (ICAO Sep. 24, 2007). An "overpayment" is defined as "money received by a Claimant that exceeds the amount that should have been paid, or which the Claimant was not entitled to receive, or which results in duplicate benefits because of offsets that reduce disability or death benefits payable under said articles." *Section 8-40-201(15.5), C.R.S.* Repayment of any overpayment is now required even in the absence of fraud. *Simpson v. ICAO,* 219 P.3d 354 (Colo. App. 2009), *rev'd on other grounds by Benchmark/Elite, Inc. v. Simpson* 232 P.3d 777 (Colo. 2010); *see also Haney v. Shaw*, W.C. No. 4-796-763 (ICAO 2011). Here, the ALJ concludes that the claimant was paid temporary disability benefits in excess of what he should have been paid and was entitled to receive. The ALJ further concludes that the respondents are entitled to recoup the overpayment from the claimant, and the overpayment shall be calculated by subtracting the amount of TPD benefits owed for the period of December 6, 2013 through December 11, 2013 from the total amount of indemnity benefits which have been paid in the claim.

[The Order continues on the following page.]

ORDER

It is therefore ordered that:

1. The respondents' request to withdraw their admission of liability for the initial accident based on fraud is denied and dismissed.

2. The claimant's request to increase the admitted AWW is denied and dismissed. The AWW shall remain $732.13.

3. The claimant's requests for additional medical benefits for his right shoulder and right elbow conditions are denied and dismissed. No further medical benefits are payable for the work-related injury.

4. The respondents' request to terminate the claimant's temporary disability benefits is hereby granted. The claimant is entitled to temporary partial disability benefits from December 6, 2013 through December 11, 2013, but respondents are not liable for any temporary disability benefits after December 11, 2013.

5. The respondents are hereby awarded an overpayment in an amount equal to the indemnity benefits which have been paid in this claim minus the temporary partial disability benefits which are payable for the period of December 6, 2013 through December 11, 2013. The respondent-insurer shall file an admission of liability in which the overpayment shall be claimed consistent with this Order. The respondent-insurer is then entitled to repayment of the overpayment, though the claimant may file an application for hearing concerning how the overpayment shall be repaid or to contest whether the calculation of the overpayment is consistent with this Order.

6. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For

statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATE: February 19, 2015

Donald E. Walsh
Administrative Law Judge
Office of Administrative Courts
1259 Lake Plaza Drive, Suite 230
Colorado Springs, CO 80906

ISSUES

1. Whether the claimant has established by clear and convincing evidence that he is not at maximum medical improvement (MMI) for his December 12, 2013 compensable injury.

2. If the claimant is at MMI, whether the respondents have overcome the impairment rating provided by the Division IME, Dr. William Griffis, by clear and convincing evidence.

3. If the claimant is not at MMI, whether the claimant is entitled to temporary total disability (TTD) or temporary partial disability (TPD) benefits.

4. Whether the claimant has established his average weekly wage.

FINDINGS OF FACT

1. The claimant is a 48 year old man. His date of birth is November 16, 1966. He was 47 years old on December 12, 2013 when he sustained a compensable injury while working for the respondent-employer.

2. On December 12, 2013, the claimant was performing his typical work duties when an industrial sized clamp came loose and struck him in the head. There was two to three tons of pressure on the clamp when it came loose. The force of the impact split open the claimant's eyebrow and left orbital rim.

3. The claimant sought immediate emergency treatment at Penrose St. Francis Hospital. He was instructed to follow up with an otolaryngologist.

4. The claimant posted on his Facebook page on December 14, 2013 that he was "still wicked dizzy" from the incident. After the incident, the claimant was experiencing headaches, dizziness, vertigo, and memory loss.

5. The claimant began treatment with a workers' compensation physician on December 19, 2013. He saw Dr. Walter Larimore at Concentra. The claimant complained of dizziness when he would stand too quickly.

6. The claimant was not seen by a physician again until March 7, 2014, when he was examined by Dr. Randall Jones. The claimant complained to Dr. Jones of ongoing headaches. Dr. Jones placed the claimant at MMI on that date, March 7, 2014.

7. Dr. Jones' March 7, 2014 report states that the claimant was no longer experiencing dizziness. The claimant disagreed with this report and believes that he was still experiencing dizziness at this time, but that he was feeling overall better than he had been months ago.

8. The respondents filed a Final Admission of Liability on April 14, 2014.

9. On April 13, 2014, the claimant walked into his garage to smoke a cigarette. While stepping into the garage, he felt a strong vertigo sensation and it "was like the whole room was spinning." He fell into a refrigerator and hit his head. The claimant believes that this sensation that caused him to fall was the same sensation that he had been experiencing since his injury on December 12, 2013.

10. The claimant began experiencing increased dizziness and vertigo while at work on April 14, 2014. The respondent-employer sent him to the emergency room for an evaluation.

11. The claimant returned to Dr. Jones on April 21, 2014. He explained to Dr. Jones that his headaches and dizziness have increased in both frequency and intensity since being placed at MMI the previous month. Dr. Jones stated that the claimant was medically unable to work. He further referred the claimant to Dr. Bowser for a neurology evaluation and also for a NeuroPsych evaluation. Dr. Jones opined that the claimant was no longer at MMI and that MMI would not be reached for another three to six months.

12. Dr. Eric Ridings, a physiatrist, performed an independent medical examination (IME) at the request of the respondents on July 16, 2014. Dr. Ridings opined that the medical record does not support that the claimant suffered a brain injury due to the accident. Dr. Ridings further stated that the claimant did in fact reach MMI on March 7, 2014 and he remains at MMI.

13. Dr. Ridings further opined that the dizziness and vertigo that the claimant was experiencing prior to his April 14, 2014 emergency room visit was not related to his December 12, 2013 incident. Despite Dr. Ridings being of the opinion that none of the

claimant's current complaints were work related, he urged the claimant to seek further evaluation for his condition outside of the workers' compensation system.

14. The claimant underwent a Division IME with Dr. William Griffis on August 11, 2014. The claimant complained to Dr. Griffis of ongoing, moderately severe headaches, occurring four to five times per week. The claimant also complained of short-term memory loss and difficulty concentrating.

15. Dr. Griffis diagnosed the claimant with posttraumatic concussion headaches and a closed head injury with cognitive deficits. He provided the claimant with a 10% whole person rating for Episodic Neurologic Disorders.

16. Dr. Griffis recommended that the claimant receive a neuropsychological evaluation to further investigate the claimant's cognitive deficits including short-term memory loss and difficulty concentrating. However, Dr. Griffis recommended this be performed as maintenance care and found the claimant to be at MMI.

17. Dr. Bennett Machanic, a specialist in neurology, performed an IME of the claimant at the request of the claimant's counsel on November 24, 2014. The claimant reported dizziness, vertigo, falling due to the vertigo, headaches, memory loss, and mood swings.

18. Dr. Machanic's examination demonstrated the claimant's difficulty recalling items over a three minute time period. Dr. Machanic performed a modified Hallpike procedure that supported the claimant's subjective complaints of vertigo. The claimant's tandem gait was very unsteady and he veered forward while walking.

19. Dr. Machanic believes that the December 12, 2013 incident was associated with a mild cerebral concussion. Although the forehead laceration was repaired, the claimant continues to have problems with the left suborbital branch of the trigeminal nerve. He finds the more important issue to be the effect of the injury on the claimant's headaches, and on his vestibular and cognitive functions.

20. Dr. Machanic diagnosed the claimant as having posttraumatic muscle contraction headaches and posttraumatic vestibular dysfunction. He explained that "the possibility of a more extensive traumatic brain injury has not been excluded to date."

21. Dr. Machanic concluded that he is "quite concerned" about the claimant's situation. "I fully disagree that [the claimant] has reached any semblance of maximum

medical improvement and I do think that his Workers' Compensation case should immediately be reopened and I would suggest strongly that [the claimant] be evaluated thoroughly and fully by an otolaryngologist."

22. Dr. Machanic indicated that the claimant's impairment rating would be "very close to 30%," but opined that it is not appropriate to provide an impairment rating at this point given the claimant's need for further treatment.

23. Brian Gessel testified at hearing that he is the General Manager of the Motor City branch of the respondent-employer. He verified that the claimant continued working with the respondent-employer after the injury. He did recall an event wherein the claimant told him he was experiencing dizziness and headaches. He instructed the claimant at that time to "go back and have it checked out."

24. Mr. Gessel testified that the claimant continued to work with the respondent-employer through April 14, 2014. He had no interaction with the claimant after that date. Mr. Gessel testified that the claimant told him that he was resigning because he found a new job.

25. The notes of Dr. Jones indicate that the claimant told him that he quit his job because he does not like it.

26. The ALJ finds that the claimant quit his job voluntarily and not as a result of the effects of his industrial injury.

27. Dr. Ridings testified at hearing for the respondents as an expert in physical medicine and rehabilitation. He is not a neurologist. He testified that the natural history of a closed head injury is to have maximum problems shortly after the injury and then a gradual decrease in symptoms.

28. Dr. Ridings testified that it was his opinion that the claimant's symptoms in April of 2014 were not related to his original, December 12, 2013 trauma. It was his ultimate opinion that the claimant obtained MMI on March 7, 2014 without any permanent impairment.

29. Dr. Ridings acknowledged at hearing that the claimant only had two visits with two different doctors before being placed at MMI. He testified that his report stated the claimant did not have a brain injury, but testified that dizziness can be a sign of a head injury.

30. Dr. Ridings testified that if a person were to have balance problems caused by a head injury, it would be reasonable to send that person to an ENT doctor. If the claimant's ongoing symptoms are related to the December 12, 2013 incident, Dr. Ridings agreed he should be evaluated by an ENT doctor under workers' compensation and also have a neuropsych evaluation as recommended by Dr. Griffis.

31. Dr. Ridings agreed that there is some evidence in the record to suggest that the claimant's headaches had never fully resolved prior to his examination with Dr. Griffis. Dr. Ridings testified that headaches often do not have objective findings and are solely documented through subjective complaints. The diagnosis would have to be based solely on the history of the patient and the medical record. Dr. Ridings agreed that the claimant's own history documented ongoing headaches and that the medical record documented ongoing headaches to a degree.

32. The claimant has continued to experience symptoms that he attributes to the December 12, 2013 incident. He has ongoing dizziness/vertigo, headaches, memory loss, and mood swings.

33. Prior to December 12, 2013, the claimant never had problems with recurring headaches. The record is absent of any documentation of headaches prior to December 12, 2013.

34. The claimant has never had dizziness, vertigo, or memory issues prior to December 12, 2013. The record is absent of any documentation of dizziness, vertigo, or memory issues prior to December 12, 2013.

35. The claimant's symptoms continue to cause him to fall and he has fallen recently. He recently fell attempting to use his home bathroom and struck his hip on the toilet. He explained this to be the same sensation that caused his fall on April 13, 2014. The claimant testified that he had never had issues with falling prior to December 12, 2013.

36. The claimant was hired on November 25, 2013. There is only one pay stub available from his employment with the respondent-employer prior to his December 12, 2013 date of injury. The claimant earned $1,965.95 between November 25, 2013 and December 8, 2013. $1,965.95 divided by 2 weeks equals $982.98.

37. The ALJ finds the claimant to be credible with respect to his medical condition.

38. The ALJ finds that the claimant has established that Dr. Griffis' opinion determining that the claimant was at MMI on March 7, 2014 is clearly erroneous.

39. The ALJ finds that the claimant is not at MMI for his industrial injury.

40. The ALJ finds that the claimant has failed to establish that it is more likely than not that he is entitled to temporary indemnity benefits.

41. The ALJ finds that the claimant has established that it is more likely than not that his average weekly wage is $982.98 per week.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado in §8-40-101, et. seq. C.R.S. (2013) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers without the necessity of litigation. See §8-40-102(1).

2. A worker's compensation case is decided upon its merits. See §8-43-102, C.R.S.

3. Facts in a workers' compensation case must be interpreted neutrally neither in favor of the rights of a claimant nor in favor of the rights of the respondents. See §8-43-201, C.R.S.

4. The Judges' factual findings concern only evidence that is dispositive of the issues involved: the Judge cannot address every piece of evidence that might lead to a conflicting result. See *Magnetic Engineering, Inc. v. ICAO*, 5. P.3d 285 (Colo. App. 2000).

5. When determining credibility the fact finder should consider among other things the consistency or any inconsistencies of the witnesses testimony or actions; the reasonableness or unreasonableness (probability or improbability) of the testimony or actions; the motive of the witness: and whether the testimony would have been contradicted and bias, prejudiced, or in any. See *Impure Prudential Insurance Co. v. Coin*, 57 P.2d 1205 (1936)

6. The findings of a Division Independent Medical Examiner (DIME) may be overcome only by clear and convincing evidence. § 8-42-107(8)(c), C.R.S. "Clear and

convincing" evidence is stronger than a preponderance, is unmistakable, and is free from serious or substantial doubt. *Martinez v. Triangle Sheet Metal, Inc.* (W.C. 4-595-741, ICAO October 8, 2008), *citing Dilco v. Koltnow,* 613 P.2d 318 (1980). A mere difference of medical opinions is insufficient. *Medina-Weber v. Denver Public Schools* (W.C. 4-782-625, ICAO May 24, 2010).

7. The question whether a party has overcome the DIME by clear and convincing evidence is one of fact for the ALJ's determination. *Metro Moving and Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995). "[A] mere difference of medical opinion does not constitute clear and convincing evidence that the DIME physician's opinion is incorrect or in error." *Patterson v. Comfort Dental East Aurora*, (W.C. No. 4-874-745-01, ICAO February 14, 2014); *See also Javalera v. Monte Vista Head Start, Inc.,* (W.C. No. 4-532-166, ICAO July 19, 2004); *Gonzales v. Browning Industries of Colorado*, (W.C. No. 4-350-356, ICAO March 22, 2000).

8. The ALJ concludes that that the opinions of Dr. Machanic and Dr. Jones, that the claimant is not at MMI, are more credible and more persuasive than medical opinions to the contrary, and that Dr. Griffis clearly erred when finding the claimant to be at MMI as of March 7, 2014. The ALJ concludes that this is not a mere difference of opinion but a clear error on Dr. Griffis' part.

9. As found above, the ALJ concludes that the claimant has established by clear and convincing evidence that the claimant is not at MMI.

10. As a result of the conclusion that the claimant is not at MMI, the respondents' challenge to the impairment rating is moot.

11. According to *Romayor v. Nash Finch Co.,* W.C. No. 4-609-915 (ICAO March 17, 2006), "the claimant has the burden to prove a causal relationship between a work-related condition or injury and the wage loss for which compensation is sought." In order to receive temporary disability benefits, claimant must establish a causal connection between the injury and the loss of wages. *Turner v. Waste Management of Colorado*, W.C. No. 4-463-547 (ICAO July 27, 2001).

12. The ALJ concludes that the claimant voluntarily quit his employment with the respondent-employer and that the wage loss is therefore not attributable to the industrial injury.

13. The statutory term "wages" is defined as the money rate at which services are paid under the contract of hire at the time of hire for accidental injuries. C.R.S. 8-40-201(19)(a), See Also Section 8-42-102(5)(a), C.R.S. 2010 Colo. Sess. Laws, ch. 310, p.

1457. The objective of wage calculation is to reach a fair approximation of the claimant's actual wage loss and diminished earning capacity. *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993).

14. The claimant was hired on November 25, 2013. There is only one pay stub available from his employment with the respondent-employer prior to his December 12, 2013 date of injury. The claimant earned $1,965.95 for the two week period from November 25, 2013 to December 8, 2013. $1,965.95 divided by 2 weeks equals $982.98.

[The Order continues on the following page.]

ORDER

It is therefore ordered that:

1. The respondents' request to overcome the opinion of the DIME physician is denied and dismissed.

2. The claimant is not at maximum medical improvement and the respondent-insurer shall provide medical care necessary to cure or relieve the claimant from the effects of his industrial injury.

3. The claimant's request for temporary indemnity disability benefits is denied and dismissed.

4. The claimant's average weekly wage is $982.98.

5. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUE

Whether the need for the arthroscopic shoulder surgery recommended by Dr. Weinstein is causally related to Claimant's October 22, 2013 industrial injury.

FINDINGS OF FACT

1. The claimant was employed as a Correctional Officer I on October 22, 2013 when he was called to a unit to help restrain an inmate who was refusing medications. The claimant used a 2 x 6 plastic shield weighing between 6½ and 10 pounds to help gain control of a restrained inmate. The claimant used the handles on either side of the shield to hold the shield up to about shoulder level for the 1½ minutes that it took to gain control of the restrained inmate. About 30 seconds into the confrontation the claimant felt a pop in his left forearm. The claimant did not seek medical treatment and finished out his shift.

2. The claimant delayed seeking any medical treatment for approximately two and a half months at which time, on January 7, 2014, he then sought treatment at CCOM. The claimant reported that while pinning an offender to the wall with a shield, he left a "pop" in his left forearm with immediate pain in the back of his left elbow. On January 7, 2014, the claimant complained of pain, weakness and swelling in the left forearm and hand. Dr. Schwender noted that the claimant's pain diagram included left elbow/forearm pain. The claimant did not report any symptoms or problems regarding his left shoulder to Dr. Schwender and did not document any left shoulder problems on his pain diagram. On physical examination, the claimant's shoulders revealed full range of motion. Dr. Schwender diagnosed the claimant with left medial epicondylitis, recommended occupational therapy, and released the claimant to return to work with no restrictions.

3. The claimant returned to CCOM on January 22, 2014, February 26, 2014, and March 19, 2014 for his left elbow. At each visit the claimant only complained of left elbow pain and only noted pain in his left elbow down to his left hand on his pain diagrams. Dr. Nanes continued to release the claimant to work with no restrictions.

4. The claimant saw Dr. Leppard on February 28, 2014 for an EMG study. The claimant's chief complaint was left elbow pain and hand numbness. The claimant

reported having persistent left inner elbow pain since his injury on October 22, 2013. The claimant did not report any left shoulder pain or problems. Dr. Leppard did not note any left shoulder problems arising out of her physical examination and did not provide the claimant with a diagnosis for his left shoulder.

5. The claimant saw Dr. Larsen on February 3, 2014, March 3, 2014, and April 2, 2014. The claimant only complained of left elbow pain. Dr. Larsen did not note that the claimant had any left shoulder complaints or problems, did not document any left shoulder complaints or problems during his physical examination, and did not provide the claimant with a diagnosis related to his left shoulder on any of those dates.

6. The claimant had continued to work his regular job for over 5 months from October 22, 2013 through April 8, 2014 when he underwent surgery on his left elbow.

7. The claimant initially testified that he first reported having left shoulder pain when he came out of his sling approximately 4-5 days following his left elbow surgery. The claimant later testified that his left shoulder pain had always been present since the October 22, 2013 injury but that his elbow was his primary concern.

8. The claimant completed a pain diagram on April 14, 2014, 6 days following his left elbow surgery. The claimant only circled the area around his left elbow. The claimant did not mark any symptoms in his left shoulder.

9. The claimant returned to CCOM on April 16, 2014, 8 days following his left elbow surgery complaining of left elbow pain only. Dr. Nanes did not note any left shoulder complaints from the claimant on that date.

10. The claimant saw Dr. Larsen for a surgical follow-up on April 21, 2014, 13 days following his surgery. Dr. Larsen did not note any left shoulder problems or complaints at that time.

11. The first notation of left shoulder problems in the claimant's medical records appears in Dr. Nanes' May 14, 2014 chart note. Dr. Nanes noted that the claimant "continues to have considerable pain and discomfort in the left elbow and actually in the left upper extremity including the left shoulder."

12. The claimant saw Dr. Larsen on May 21, 2014 for a surgical follow-up. Dr. Larsen did not note any left shoulder problems or complaints.

13. The claimant saw Dr. Gray at CCOM on May 28, 2014. The claimant's only complaint at that time was left elbow pain. Dr. Gray did not note any left shoulder problems or complaints.

14. On June 11, 2014, Dr. Nanes noted that the claimant "has developed left shoulder limitation [and] discomfort and Dr. Larsen feels that this was from the prolonged wearing of his cast." This is not consistent with Dr. Larsen's records which do not document any left shoulder complaints or attribute any left shoulder problems to the prolonged wearing of a cast. This is also inconsistent with the claimant's testimony that he developed left shoulder pain 4-5 days after his left elbow surgery. On July 16, 2014, Dr. Nanes offered an opinion that the claimant's left shoulder condition "is due to his injury of the left elbow and was probably caused by wearing his brace for a prolonged period." Dr. Nanes did not opine that the claimant injured his left shoulder during the October 22, 2013 incident and his opinion that the claimant's left shoulder condition is due to the prolonged wearing of a brace is not consistent with the claimant's testimony that his left shoulder started hurting 4-5 days after his left elbow surgery.

15. The claimant had a left shoulder MRI on July 24, 2014.

16. The claimant saw Dr. Weinstein on one occasion, August 16, 2014, for an orthopedic consultation. The claimant reported to Dr. Weinstein that he had a twisting injury to his left arm with immediate pain in his left shoulder as well as his left elbow. This history is not consistent with the claimant's medical records or his testimony at hearing. Dr. Weinstein's report does not summarize or refer to any of the claimant's prior medical records or otherwise indicate that he had any of the claimant's prior medical records to review as part of his consultation. Dr. Weinstein diagnosed the claimant with left rotator cuff tendinitis and left superior labral/biceps inflammation/tear. Dr. Weinstein recommended left shoulder surgery given that the claimant "has been symptomatic over a year despite rest, modification of activity, physical therapy and anti-inflammatory medication". This is not consistent with the claimant's medical records or his hearing testimony. According to his testimony and his medical records, the claimant did not become symptomatic until after his left elbow surgery in April, only 4 months before seeing Dr. Weinstein. Prior to that time, the claimant had been working full duty with no rest or modification of his activities. Dr. Weinstein did not offer an opinion on the cause of the claimant's left shoulder condition or specifically relate the need for the surgery to either the incident on October 22, 2013 or the prolonged wearing of a cast/sling.

17. Dr. Ciccone performed an Independent Medical Evaluation (IME) for Respondent on November 12, 2014. As part of the IME, Dr. Ciccone reviewed copies

of the claimant's medical records, took a history from the claimant, and performed a physical examination. The claimant told Dr. Ciccone that at the time of injury, he felt a pop on the lateral side of his left elbow that radiated up to the shoulder but that he noted mostly forearm pain at the time. Dr. Ciccone opined that the claimant's testimony of first experiencing shoulder pain after his elbow surgery was consistent with his review of the claimant's medical records. However, the claimant told him that he notified CCOM of his shoulder problems when he first obtained treatment on January 7, 2014. This is not consistent with the claimant's medical records or his testimony at hearing. Dr. Ciccone credibly testified that he did not question the claimant's veracity, that he agreed with Dr. Weinstein's diagnoses, and that the shoulder surgery recommended by Dr. Weinstein was reasonably necessary. Dr. Ciccone credibly and persuasively testified that the MRI was essentially normal revealing only generative changes and no acute injury.

18. Dr. Ciccone credibly and persuasively opined that the need for the surgery was not causally related to the claimant's October 22, 2013 injury. The claimant's MRI showed only degenerative changes with no acute injury. Dr. Ciccone credibly explained that if the claimant had injured his shoulder on October 22, 2013, he would have complained of left shoulder pain initially. Rather, two and a half months after the injury, the initial visit at CCOM revealed no shoulder complaints, no shoulder problems were noted on the pain diagram, and physical examination showed full range of motion in the claimant's bilateral shoulders.

19. Dr. Ciccone's opinion that the recommended surgery is not related to the claimant's October 22, 2013 injury is found to be more credible and persuasive than the written opinion of Dr. Nanes that the claimant's left shoulder condition was the result of the prolonged wearing of a cast/sling following the claimant's left elbow surgery. Dr. Weinstein did not offer an opinion on the cause or need for the recommended surgery. Moreover, it does not appear that Dr. Weinstein had the benefit of the claimant's medical records. The history that Dr. Weinstein documented was inconsistent with a review of those medical records and with the claimant's testimony at hearing.

20. The claimant has failed to establish that it is more likely than not that the need for the left shoulder surgery recommended by Dr. Weinstein is causally related to his October 22, 2013 industrial injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured

workers at a reasonable cost to employers, without the necessity of any litigation. § 8-40-102 (1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592, P .2d 792 (1979); *People v. M.A.,* 104 P .3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A workers' compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P .3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. The respondent is liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. § 8-42-101 (1)(a), C.R.S. (2009); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P. 2d 362 (Colo. App. 1995). The claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997), *cert. denied* September 15, 1997. The burden is on the claimant to prove a causal relationship between his employment and his injury or condition. *See, Industrial Comm'n v. London & Lancashire Indem. Co.,* 135 Colo. 372, 311 P.2d 705 (1957). Where a claimant's entitlement to benefits is disputed, the claimant has the burden to prove a casual relationship between a work-related injury and the condition for which benefits or compensation are sought. *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo.App. 1997). Whether the claimant sustained his burden of proof is generally a factual question for resolution by the ALJ. *City of Durango v. Dunagan*, 939 P .2d 496 (Colo.App. 1997).

5. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. *Faulkner v. Indus. Claim Appeals Office*, 12 P3d 844, 846 (Colo. App. 2000); Section 8-41-301(1)(c), C.R.S. The evidence must establish the causal connection with reasonable probability, not medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission, 491 P.2d 106 (Colo. App. 1971)*. Reasonable probability exists if the proposition is supported by substantial evidence, which would warrant a reasonable belief in the existence of facts supporting a particular finding. *F.R. Orr Construction v. Rinta, 717 P.2d 965 (Colo. App. 1985)*. An award of benefits may not be based upon or denied upon speculation or conjecture. *Deines Bros. v. Indus. Comm'n,* 125 Colo. 258, 242 P.2d 600 (1952); *Indus. Comm'n v. Havens,* 136 Colo. 111, 134 P.2d 698 (1957).

6. The ALJ concludes that Dr. Ciccone's opinion that the recommended surgery is not related to Claimant's October 22, 2013 injury is found to be more credible and persuasive than the written opinion of Dr. Nanes that Claimant's left shoulder condition was the result of the prolonged wearing of a cast/sling following Claimant's left elbow surgery.

7. As found, the claimant has failed to establish by a preponderance of the evidence that the need for the left shoulder surgery recommended by Dr. Weinstein is causally related to his October 22, 2013 industrial injury.

[The Order continues on the following page.]

ORDER

It is therefore ordered that:

1. The claimant's request for surgery as recommended by Dr. Weinstein is denied and dismissed.

2. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATE: February 24, 2015

/s/ original signed by:
Donald E. Walsh
Administrative Law Judge
Office of Administrative Courts
1259 Lake Plaza Drive, Suite 230
Colorado Springs, CO 80906

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he is entitled to temporary total disability (TTD) benefits from February 4, 2014 to June 17, 2014 and from July 24, 2014 to August 26, 2014.

2. Whether Respondents have established by a preponderance of the evidence that Claimant was responsible for his termination from employment on November 5, 2014

FINDINGS OF FACT

1. Claimant was employed by Employer as a courtesy clerk.

2. On January 7, 2014 Claimant suffered an admitted industrial injury to his right knee and low back when a customer backed into a row of grocery carts that Claimant was pushing.

3. On January 8, 2014 Claimant was evaluated by Jonathan H. Bloch, D.O. Dr. Bloch assessed Claimant with contusions of both knees, contusions of both wrists, and lumbar strain. Dr. Bloch assigned work restrictions of: no significant kneeling, crawling, squatting, or climbing; limit bending to less than 6 times per hour; and no ongoing lifting greater than 15 pounds. *See* Exhibit 4.

4. On January 13, 2014 Claimant was evaluated by Terrell R. Webb, M.D. Claimant reported to Dr. Webb that his knee and wrist symptoms had resolved but that he continued to have mild pain in the low back. Claimant reported he was not working as there was no light duty work available with Employer. Dr. Webb assessed: contusion of knee, resolved; contusion of wrist, resolved; and lumbar strain, improving. Dr. Webb released Claimant to a trial of regular duty work, and scheduled a follow up visit for one week later. *See* Exhibit 4.

5. In late January or early February, Claimant slipped and fell on ice on his way to school. In the slip and fall he aggravated his knee injury and had additional pain for approximately one week before his knee returned to its baseline condition. The slip and fall did not cause a new injury but merely aggravated his already injured knee for approximately one week.

6. Claimant attended school during both the fall semester of 2013 and the spring semester of 2014. In the fall semester he took a tai chi class and also, on occasion during this time period, practiced martial arts in the park with his friends.

7. On February 4, 2014 Claimant was evaluated by Glen D. Peterson, P.A. P.A. Peterson noted that Claimant was improving when he fell on the ice. P.A. Peterson noted no significant change in subjective complaints from prior visits, and assessed Claimant with lumbar strain. P.A. Peterson assigned work restrictions of: no squatting and/or kneeling; must wear brace; should be sitting 50% of the time; and no climbing stairs or ladders. *See* Exhibit 4.

8. Claimant provided a copy of the restrictions to Employer and Employer was unable to accommodate the restrictions or provide work that Claimant could do within the restrictions.

9. On March 4, 2014 Claimant was again evaluated by P.A. Peterson. Claimant's work restrictions were not changed. P.A. Peterson noted that Claimant had slight improvement in his condition and ordered a left knee MRI to rule out internal derangement. *See* Exhibit 4.

10. On March 19, 2014 Claimant again saw P.A. Peterson and his work restrictions were continued. *See* Exhibit 4.

11. On May 2, 2014 Claimant was evaluated by Matthew Miller, M.D. Dr. Miller assessed Claimant with Chondromalacia. Claimant reported to Dr. Miller that he was not working as no work was available. Dr. Miller assigned work restrictions of: no repetitive lifting over 20 pounds; no pushing/pulling over 20 pounds of force; no squatting; no kneeling; and should be sitting 50% of the time. *See* Exhibit 4.

12. On May 13, 2014 Claimant saw P.A. Peterson who assessed Claimant with lumbar sprain. PA Peterson noted Claimant's bilateral knee and lower back pain was getting better. PA Peterson assigned work restrictions of: no repetitive lifting over 20 pounds; no pushing/pulling over 30 pounds of force; no squatting; and no climbing. *See* Exhibit 4.

13. On May 27, 2014 Claimant saw PA Peterson. PA Peterson again assessed lumbar sprain. PA Peterson noted that Claimant was doing better. PA Peterson released Claimant to a trial of regular full duty work with a limit of 4 hours per day. PA Peterson noted Claimant would follow up in 1-2 weeks for less restrictions and possibly a trial of 8 hours per day. *See* Exhibit 4.

14. On June 17, 2014 Claimant saw PA Peterson. PA Peterson assessed lumbar sprain, chondromalacia, and ACL injury tear. PA Peterson released Claimant to regular full duty work with no activity restrictions and advised Claimant to wear knee brace when working. *See* Exhibit 4.

15. Claimant returned to work for Employer at this time, but was not able to perform his normal job duties due to the pain in his knees and back.

16. On July 24, 2014 Claimant saw PA Peterson. PA Peterson assessed lumbar sprain and ACL injury tear. PA Peterson assigned new work restrictions of 6 hours per day. *See* Exhibit 4.

17. Claimant had further visits on July 30, 2014, August 11, 2014, and August 27, 2014 where his work restrictions of 6 hours per day were not changed or lifted. *See* Exhibit 4.

18. Claimant is unsure as to whether or not he worked for Employer subsequent to July 24, 2014 and indicated in his testimony that the records would show.

19. Employer records show that Claimant worked on July 27, 2014, then called in sick for two shifts, then worked a shift, then called in sick again. Employer records show that Claimant worked on August 9, 2014 and that August 9, 2014 was his last day of work. Claimant called Employer on August 15, 2014 indicating he could not work for two weeks as he had to watch his niece. *See* Exhibit G, Exhibit I.

20. From July 24, 2014 through August 26, 2014 Employer provided Claimant the opportunity to work within his restrictions of 6 hours per day.

21. Employer had a policy that required all employees on leave due to work-related injuries to present up to date documentation from their physicians. Claimant was aware of the policy and submitted paperwork from his physicians to Employer on February 4, 2014 and March 4, 2014.

22. Claimant failed to provide paperwork from his physician in April and was contacted by Employer. Claimant assured Employer that he would provide the documentation. *See* Exhibit G.

23. Claimant failed to do so. On April 28, 2014 store manager Kevin Quigley sent Claimant a letter stating that Claimant must contact him or one of the two assistant store managers within three days to discuss his status with King Soopers. The letter advised Claimant that if he failed to contact them within three days, his employment would be terminated for being absent without leave. *See* Exhibit F.

24. Claimant responded to the April 28, 2014 letter from Mr. Quigley. Claimant contacted Employer and provided updated paperwork from his physicians.

25. On October 2, 2014 Claimant sent a fax to Employer with a note on the cover page stating “Sorry about the lack of contact on my part. Depression and my injuries have made it hard for me to leave my house lately. Here is my schedule and I will send a document from my doctor soon.” *See* Exhibit J.

26. On October 23, 2014 Mr. Quigley once again sent Claimant a letter. The letter indicated Claimant must contact him or an assistant store manager within three days to discuss his status with King Soopers. The letter advised Claimant if he failed to contact Employer within three days that he would be terminated. *See* Exhibit K.

27. Claimant received the October 23, 2014 letter. Claimant did not respond to the letter or contact Employer within three days.

28. Claimant testified that he did not contact Employer within three days because he did not have an updated doctor's note and thought Employer needed that. Claimant did not call Employer to ask if they needed a doctor's note and made the decision not to respond to the letter.

29. After failing to respond to the October 23, 2014 letter, Claimant was terminated from employment, effective November 5, 2014. *See* Exhibit L.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. (2014). The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201, C.R.S. (2014). Respondent bears the burden of establishing any affirmative defenses. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979) The facts in a workers' compensation case shall not be interpreted liberally in favor of either the rights of the injured worker or the rights of the employer and a worker's compensation case shall be decided on its merits. § 8-43-201, C.R.S. (2014).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

Temporary Disability Benefits

To prove entitlement to temporary total disability ("TTD") benefits, the Claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until the first occurrence of any one of the following: the employee reaches maximum medical improvement; the employee returns to regular or modified employment; the attending physician gives the employee a written release to return to regular employment; or the attending physician gives the employee a written release to return to modified employment, such employment is offered to the employee in writing, and the employee fails to begin such employment. § 8-42-105(3), C.R.S. (2014).

Here, Claimant was under restrictions that impaired his ability to effectively and properly perform his regular employment from February 4, 2014 through June 17, 2014. During this time, Employer was unable to offer modified employment that met Claimant's work restrictions and claimant was unable to resume his prior work. Claimant's slip and fall on the way to school occurred just prior to February 4, 2014 and only aggravated his underlying work related injury for one week. Even after he returned to baseline, Claimant remained unable to perform his regular employment duties and remained under restrictions until June 17, 2014. Claimant has established by a preponderance of the evidence that during this time, he suffered an impairment of earning due to his work injury and thus has met his burden to show entitlement to TTD benefits from February 4, 2014 through June 17, 2014.

However, during the period from July 24, 2014 through August 26, 2014, Claimant has failed to meet his burden to show loss of wages attributed to his injury. As found above, Claimant was unable to establish or recall any specific dates that he missed work due to his injury. Employer records show that he in fact worked during this time period, and that he missed work during this time for various reasons not related to his injury. As found above, he missed two weeks during this period of time due to his need to care for his nieces. He also missed work during this time due to unspecified sickness. Employer records also show that he worked on July 27, 2014, called in sick for two shifts, then worked, then again called in sick. Although Claimant clearly suffered a compensable injury on January 7, 2014 Claimant has failed to meet his burden to show that he suffered a loss of wages between July 24, 2014 and August 26, 2014 due to his injury. It is just as likely that the wage loss during this time period was a result of other events including unrelated illnesses and Claimant's choice to take time off to care for his nieces. Further, Employer records indicate on certain dates during this time period that Claimant actually worked, which contradicts his claim of total wage loss. Claimant has failed to meet his burden and has not shown an entitlement to TTD

benefits during this period time and has not met his burden to show that the loss of wages from July 24, 2014 through August 26, 2014 was more likely than not due to his injury.

Responsible for Termination

A claimant found to be responsible for his or her own termination is barred from recovering temporary disability benefits under the Act. §§ 8-42-103(1)(g), 8-42-105(4). *Anderson v. Longmont Toyota, Inc*., 102 P.3d 323 (Colo. 2004). Because the termination statutes constitute an affirmative defense to an otherwise valid claim for temporary disability benefits, the burden of proof is on the Respondents to establish the Claimant was "responsible" for the termination from employment. *Henry Ray Brinsfield v. Excel Corporation,* W.C. No. 4-551-844 (I.C.A.O. July 18, 2003). Whether an employee is at fault for causing a separation of employment is a factual issue for determination by the ALJ. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129 (Colo. App. 2008).

In *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061 (Colo. App. 2002), the court held the term “responsible” as used in the termination statutes reintroduces the concept of “fault” as it was understood prior to the Supreme Court’s decision in *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995). Thus, a finding of fault requires a volitional act or the exercise of a degree of control by a claimant over the circumstances leading to the termination. *Gilmore v. Industrial Claim Appeals Office, supra; Padilla v. Digital Equipment Corp.,* 902 P.2d 414 (Colo. App. 1994), *opinion after remand*, 908 P.2d 1185 (Colo. App. 1995). A claimant may act volitionally if he is aware of what the employer requires and deliberately fails to perform accordingly. *Gilmore v. Industrial Claim Appeals Office, supra*.

However, in any event, the word "responsible" does not refer to an employee's injury or injury-producing activity since that would defeat the Act's major purpose of compensating work-related injuries regardless of fault and would dramatically alter the mutual renunciation of common law rights and defenses by employers and employees alike under the Act. Hence, the termination statutes are inapplicable where an employer terminates an employee because of the employee's injury or injury-producing conduct. *Colorado Springs Disposal v. Industrial Claim Appeals Office of State of Colorado,* 58 P.3d 1061 (Colo. App. 2002).

Here, Claimant was not terminated due to his injury. In fact, the evidence shows that Employer continued to employ Claimant and gave him several chances to remain employed by simply communicating with Employer. Claimant, as found above, failed to adequately communicate with Employer over the course of several months. Claimant missed work for many non-injury related reasons and often called in sick without specific information as to whether he could not work due to his injury or do to other illnesses. Employer had to go the extreme of sending Claimant a letter in April of 2014 advising Claimant he would be terminated if he did not contact them within three days. Claimant responded to this letter, but later his communication again became

inadequate. In early October Claimant apologized for the lack of communication on his part. Later that month, and on October 23, 2014 Employer again had to send a letter to Claimant surrounding his lack of communication. Claimant received this letter, which explained that he would be terminated if he did not contact management within three days, and unlike in April, this time Claimant failed to respond to the letter.

Claimant's decision not to respond to the October 23, 2014 letter was a volitional decision and volitional act on his part. Claimant could have simply contacted management in response to the letter. Had Claimant responded to the letter by contacting management, it is likely he would remain employed. Claimant knew his employment would be terminated if he did not contact management, and he made that choice. Respondents have shown that Claimant had a history of poor communication with Employer and that Employer had to send letters to Claimant twice, in attempts to get Claimant to communicate. Although Claimant responded to the April letter, he failed to respond to the October letter despite knowing it would lead to his termination. Therefore, Respondents have met their burden of showing that Claimant's termination was justified. Any wage loss after the termination date of November 5, 2014 was due to the fault of Claimant and he is not entitled to any benefits following his at fault termination.

ORDER

It is therefore ordered that:

1. Claimant has met his burden to show entitlement to temporary total disability benefits for the time period of February 4, 2014 through June 17, 2014.

2. Claimant has failed to meet his burden to show entitlement to temporary total disability benefits for the time period of July 24, 2014 through August 26, 2014. The claim for temporary total disability benefits during this time period is denied and dismissed.

3. Respondents have met their burden to establish that Claimant was responsible for his termination from employment on November 5, 2014.

4. Insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 13, 2014

/s/ Michelle E. Jones

ISSUES

- Did the claimant prove by a preponderance of the evidence that the respondents are subject to penalties because they failed timely to deny a request for prior authorization for surgery as provided in WCRP 16?

- If the respondents failed timely to deny authorization for surgery is the proposed surgery "deemed" authorized by operation of WCRP 16-10(E)?

- If the surgery was not "deemed" authorized did the claimant prove by a preponderance of the evidence that carpal tunnel release surgery is reasonable, necessary and related to the industrial injury of January 12, 2014?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant's Exhibits 1 through 15 were admitted into evidence. Respondents' Exhibits A through H were admitted into evidence. The deposition of Wallace Larson, M.D., was received into evidence.

2. On October 9, 2008 the claimant was seen at Poudre Valley Health System for a report of groin pain. At that time the claimant gave a history of "hand surgery." The report does not state which hand was operated on or what the diagnosis was.

3. In July 2011 the claimant was treated for a bite to his right little finger. There is no credible or persuasive evidence in these records that the claimant was complaining of wrist symptoms or numbness in his first three digits.

4. On January 12, 2014 the claimant sustained an admitted injury to his right hand and wrist. The respondents filed a General Admission of Liability (GAL) for this injury on February 18, 2014. The GAL admitted for medical benefits. The GAL was filed by Ms. Shannon Browne (Browne) for the insurer in care of Sedgwick Claims Management Services, Inc. (Sedgwick). The ALJ infers that Sedgwick is the respondents' third-party adjusting firm.

5. The claimant testified as follows concerning the admitted injury. On January 12, 2014 he was employed as a driver taking passengers to and from the airport. In this capacity he was unloading a 50 pound bag that began to fall from the back of a vehicle. He grabbed the luggage handle to keep the bag from falling. The bag pulled his hand downwards and he felt an immediate "pop" in his wrist and also

experienced immediate pain. Within one hour his right hand became numb except for his little finger. He was not experiencing these symptoms prior to January 12, 2014. The claimant immediately reported the injury to the employer and was referred to Concentra Medical Centers (Concentra) for medical care.

6. On January 13, 2014 the claimant was seen at Concentra by Robert Nystrom, D.O. Dr. Nystrom noted the claimant had "no previous injuries to the right wrist or hand." Dr. Nystrom noted the claimant gave a history that he was pulling luggage out of the back of a shuttle vehicle. The claimant had his hand on the handle of the suitcase and it started to fall. The claimant reported that he "felt a pop in his right wrist." The claimant also reported some immediate pain and shortly thereafter, swelling. On physical examination Dr. Nystrom noted diffuse swelling around the right wrist and to a lesser extent the right hand. He also noted some altered sensation to pinprick and soft touch of the first 3 digits of his right hand and some pain to palpation over the ventral aspect of the wrist. An x-ray of the right wrist showed no "bony abnormality." Dr. Nystrom assessed a "right wrist sprain". He prescribed a wrist brace, ibuprofen and occupational therapy. Dr. Nystrom imposed restrictions of no lifting over 5 pounds and no pushing or pulling with greater than 5 pounds of force. Dr. Nystrom wrote that he would have a "low threshold" for performing and MRI if there was not improvement in the claimant's condition.

7. On January 13, 2014 the claimant completed a medical history questionnaire at Concentra. The claimant answered affirmatively to the question of whether he had prior surgeries. The claimant wrote on a line describing the type of surgery performed but his writing is illegible and indecipherable. The claimant mentioned having symptoms in his "right hand." It is not clear if the claimant was indicating past or present symptoms in the right hand.

8. The claimant returned to Dr. Nystrom on January 16, 2014. The claimant reported his wrist wasn't any better and he could hardly grasp with the right hand. Dr. Nystrom noted diffuse pain and swelling of the right wrist and decreased range of motion (ROM) and grip strength. Dr. Nystrom ordered an MRI "on [an] urgent basis" and referred the claimant to hand surgeon Jeffrey Chapman, M.D.

9. The claimant underwent an MRI of the right hand on January 22, 2014. The radiologist's impression was small cortical erosions of the third and fifth metacarpal heads.

10. Dr. Chapman examined the claimant on January 28, 2014. The claimant gave a history of injuring his hand when lifting a bag out of the back of a van on January 12, 2014. He reported numbness and tingling since as well as some diffuse pain. The claimant reported no history of numbness or tingling in the upper extremities. Dr. Chapman reviewed the MRI and noted some "STT arthritis, pisotriquetral effusion but otherwise no real findings." On physical examination Dr. Chapman noted a "minimally positive Tinel's over the median nerve at the wrist and a negative Phalen's test. The claimant had decreased sensation in a classic median distribution and "severe weakness of the APV on the right." Dr. Chapman opined that the claimant had

sustained a neurapraxic injury of the median nerve. He recommended that an EMG/nerve conduction studies be considered if there was no improvement within one month.

11. On February 25, 2014, Dr. Chapman again examined the claimant. The claimant reported continued numbness and tingling in the thumb, index and long fingers. Dr. Chapman noted that the patient had a positive Tinel's from the middle of the forearm up into the palm with the median nerve. There was "decreased sensation in the median distribution and a very weak APB." Dr. Chapman diagnosed median nerve neurapraxic injury. Because it had been 6 weeks since the injury and the claimant still had a significant median nerve deficit Dr. Chapman and ordered an EMG/nerve conduction study. Dr. Chapman recommended a restriction of no repetitive use of the right upper extremity.

12. On March 11, 2014 Eric Hammerberg, M.D., performed electrodiagnostic testing of the claimant's right upper extremity. Dr. Hammerberg reported that nerve conduction velocity "studies showed a delayed and attenuated distal motor response (recording from the 2nd lumbrical muscle) and no distal sensory response in the right median nerve." Other nerves tested were normal. Dr. Hammerberg also noted that needle EMG "studies of the upper extremity showed signs of acute partial denervation in the opponens pollicis muscle." Other tested muscles were normal. Dr. Hammerberg wrote that the findings were "compatible with the clinical diagnosis of a severe acute" right carpal tunnel syndrome (CTS).

13. Dr. Chapman examined the claimant again on March 25, 2014. The claimant still had complaints of numbness in the median distribution. On examination Dr. Chapman noted the EMG/ nerve studies suggested "acute carpal tunnel syndrome." However, Dr. Chapman wrote "that it certainly would be unusual to have a single injury cause such an abrupt severe carpal tunnel syndrome". Dr. Chapman assessed right "median nerve neuropathic injury versus acute carpal tunnel syndrome." The claimant elected to try a steroid injection which Dr. Chapman performed.

14. On April 1, 2014 Virginia Hrywnak, D.O., examined the claimant at Concentra. The claimant reported he was not doing any better and was described as "frustrated." The claimant denied a history of diabetes or thyroid conditions but thought he had "been injected on in the past." He reported "no change at all" in response to the steroid injection administered by Dr. Chapman. Dr. Hrywnak assessed CTS, right wrist sprain, lesion median nerve and right hand pain. She recommended fasting blood work to rule out diabetes and thyroid conditions.

15. Dr. Chapman examined the claimant on April 8, 2014 and completed an office note concerning this examination. Dr. Chapman wrote the claimant reported the injection "helped with his feeling of fullness" but he was still experiencing numbness and weakness. On examination Dr. Chapman noted "dense median nerve sensory loss as well as weakness of his abductor pollicis brevis." He assessed right "median neuropathy, likely carpal tunnel syndrome." Dr. Chapman wrote that he discussed with the claimant "his EMG nerve conduction study results as well as the fact he did get

some response to the steroid injection." Dr. Chapman recommended a "carpal tunnel release" and discussed "endoscopic versus open release" as well as possible complications from these procedures.

16. On April 9, 2014 Rosalinda Pineiro, M.D., examined the claimant at Concentra. She took a history that the claimant was "in a motor vehicle accident on January 12, 2014" and felt his wrist popped. She noted he had undergone three months of medications, restrictions and physical therapy but still had pain and reduced grip. Dr. Pineiro noted the claimant had an EMG that showed "acute carpal tunnel," that he responded positively for 2 or 3 days to an injection and had positive Phalen's and Tinel's tests of the right wrist. Dr. Pineiro diagnosed a motor vehicle accident and "traumatic acute carpal tunnel syndrome." Dr. Pineiro continued light duty restrictions and noted the claimant was awaiting approval for surgery by Dr. Chapman. She also referred the claimant to Dr. Joel Cohen for evaluation of depression.

17. Ms. Amanda Bluel (Bluel) testified as follows. She is employed by Dr. Chapman's office to perform scheduling and requests for surgical authorization. On April 9, 2014 she received from Dr. Chapman an order for surgery. On April 9 she contacted Concentra to obtain their referral and notes. On April 10, 2010 she faxed to Browne a request for prior authorization for surgery. The request included a Pre-Authorization Request for Surgery form requesting permission to perform a right endoscopic carpal tunnel release. The request also included a Patient Referral form in which Dr. Chapman noted diagnoses of a lesion of the median nerve and wrist sprain and referred the claimant for surgery. The request also included Dr. Chapman's office note of April 8, 2014. The request for prior authorization did not include a copy of Dr. Hammerberg's electrodiagnostic study results. Ms. Bluel explained that if the fax had not been received her office would get a "kickback message" stating that the fax had not gone through. However, no kickback message was received after she transmitted the request on April 10, 2014.

18. Bluel further testified as follows. On April 17, 21, 23 and 30, 2014 she telephoned Browne to check on whether the request for prior authorization had been received and the status of the request. She left voice mail messages for Browne but Browne did not call back. On April 23 Browne's voice mail message stated she would be out of the office until "Monday." On May 6, 2014 Bluel called Browne as well as Sedgwick's "main number" but no one answered.

19. Bluel testified that on May 7, 2014 she called the Sedgwick switchboard to check on the prior authorization request. She spoke to an operator who stated that Sedgwick had just received the request for prior authorization from claimant's attorney on April 29, 2014 and it had not yet been determined. Bluel advised the operator that she had faxed the request for prior authorization on April 10 and the operator replied that Sedgwick had "some internal fax problems" on April 10 and 11 and perhaps that was why the April 10 request for prior authorization had not been received. Bluel told the operator that she had left several unreturned voicemails with Browne. The operator transferred the claimant to Browne's supervisor and Bluel left a voicemail regarding the unreturned calls. Later that day Browne called Bluel and stated that Browne had

decided to deny the request for prior authorization because the need for surgery was not work related. Bluel stated that this was the first time she spoke with Browne.

20. Bluel kept business notes documenting her actions regarding the request for prior authorization that she allegedly faxed to Browne. These notes indicate the request was faxed to Sedgwick on April 10, 2014. The notes reflect that she called Browne on April 17, 21, 23 and 30, 2014 and left messages. The notes further indicate she called Sedgwick's switchboard operator on May 7, 2014 and was advised that "they were having internal fax issues on 04-10." The May 7 note further reflects that Bluel told the operator that it was "unacceptable" that she made 4 phone calls to Browne and had not received a call back. The notes also state that she left a message for Browne's supervisor and then received a call from Browne. Browne advised that a decision had been made to deny the request for prior authorization "as not work related."

21. Browne testified as follows. She has been employed with Sedgwick since 2002. She has adjusted workers' compensation claims for nearly twenty years. She handled Colorado claims between 1995 and 1998 and from 2012 onward. She did not receive the request for prior authorization allegedly faxed by Bluel on April 10, 2014. Browne explained that faxes to Sedgwick are received by an outside vendor that then routes the fax to the correct adjuster in an electronic format similar to email. If the vendor routes the fax to the wrong adjuster that adjuster may determine the correct adjuster and forward it, or may send the fax to a "default" system which then determines the correct adjuster. The alleged request for prior authorization faxed on April 10, 2014 has not "emerged" in the employer's system. Browne did not have any knowledge of calls made to her by Bluel between April 17, 2014 and April 30, 2014. She was in her office on all of the days of the alleged calls except for April 23, 2014.

22. Browne further testified as follows. She received the request for prior authorization faxed by claimant's counsel on April 28, 2014. She testified that in her opinion the request was not "complete" within the meaning of WCRP 16 because Dr. Chapman's note did not explain the reasonableness and necessity for the requested surgery. Nevertheless Browne submitted the request to Wallace Larson, M.D., for an opinion and denied the request for prior authorization on May 7, 2014. Even though Browne did not believe the request was "complete" she denied it because she was "proactive." Browne acknowledged that claimant's counsel used Sedgwick's correct fax number (303 713-6056) to send the April 28 request for prior authorization. Browne does not know what fax number Bluel may have dialed on April 10, 2014.

23. At the respondents' request Dr. Larson conducted a WCRP 16 records review. Dr. Larson is a hand specialist, board certified in orthopedic surgery and level II accredited. Dr. Larson authored a report dated May 1, 2014. Dr. Larson reviewed medical records from January 13, 2014 through April 9, 2014. Dr. Larson opined the claimant had "severe right carpal tunnel syndrome, not related to occupational exposure." He stated the diagnosis of CTS "is not consistent with the described injury". Rather, the claimant's condition was "consistent with a history of long-standing pre-existing carpal tunnel syndrome". According to Dr. Larson, the claimant's CTS "was not caused or aggravated by his occupational exposure."

24. On May 7, 2014 Browne wrote a letter to Dr. Chapman denying the request for surgery received by Sedgwick on "4/28/14." The letter stated the request was being denied for both medical and non-medical reasons. Specifically the letter states the proposed surgery is "not reasonable and necessary to address the alleged work injury." The letter further stated Dr. Larson's May 1, 2014 report that supports "the fact that the requested surgery may not be reasonable and necessary under the circumstances of this case."

25. On May 13, 2013 Dr. Nystrom wrote that he was going to refer the claimant for a second opinion regarding his hand. Dr. Nystrom assessed CTS and reactive depression. He wrote that CTS "can be caused by repetitive use, but anything that causes swelling can also cause it." Dr. Nystrom opined the claimant had an "injury to his wrist and developed carpal tunnel symptoms for the first time following his work-related injury." Dr. Nystrom stated that he considered the claimant's injury and CTS symptoms "temporally related."

26. On May 28, 2014 Mark Durbin, M.D., performed a surgical consultation at Orthopaedic & Spine Center of the Rockies. Dr. Durbin noted a history that the claimant suffered a "traumatic injury to his right hand" when trying to "catch a suitcase when it fell from the truck and it pulled on him." Dr. Durbin's physician's report of injury notes the date of injury as January 12, 2014. The claimant reportedly experienced severe numbness and tingling throughout his thumb, index and middle finger. The claimant advised that a "long time ago" he had a "nerve study" that showed "mild carpal tunnel" but denied "any history of problems with his carpal tunnel" before the injury. Dr. Durbin noted the "recent nerve study that shows significant injury to the [the claimant's] median nerve as well as the opponens muscle" and that the claimant was "getting significantly weaker." Dr. Durbin diagnosed "right median nerve traumatic injury with swelling in the forearm." He opined the claimant had a "traumatic injury to his median nerve with swelling that is now causing him almost compartment carpal tunnel type syndrome." Dr. Durbin recommended the claimant undergo a "right median nerve neurolysis and decompression at the wrist level" secondary to the January 12, 2014 injury.

27. On May 30, 2014 Dr. Durbin's office submitted to Sedgwick a request for prior authorization to perform the recommended surgery.

28. Browne submitted Dr. Durbin's request to Dr. Larson. Dr. Larson issued a report on June 4, 2014 stating he had reviewed Dr. Durbin's report as well as the medical records. Dr. Larson again opined that the claimant's CTS was not "occupationally related." He explained that "objective evidence" does not indicate that the claimant sustained an injury to his nerve. Dr. Larson opined the mechanism of injury "would possibly" cause a "strain or sprain" of a wrist ligament but would not be the cause of CTS.

29. On June 5, 2014 Browne sent a letter to Dr. Durbin denying the request for surgery. The letter stated the request was being denied based on Dr. Larson's June 4, 2014 report that supports "the fact that the requested surgery may not be reasonable and necessary under the circumstance of this case."

30. Dr. Larson testified by deposition. Dr. Larson stated his opinion to a reasonable degree of medical probability that the claimant's CTS was not caused or aggravated by the work-related injury of January 12, 2014. Dr. Larson explained that the vast majority of CTS cases are idiopathic in origin. Another set of CTS cases is caused by metabolic disorders. Dr. Larson agreed that CTS can be traumatic in origin where people experience wrist fractures, dislocations of the lunate bone and severe crush injuries. He explained that such injuries cause pressure on the median nerve or bleeding in the carpal tunnel as a result of the deformity or fracture. Dr. Larson opined the claimant's CTS was not traumatic in origin because there was no evidence of a fracture or a clotting disorder that would cause inordinate bleeding in the carpal tunnel. He further stated there was nothing "objective" in the medical records that "would indicate trauma sufficient to be posttraumatic acute carpal tunnel."

31. On cross-examination Dr. Larson was asked if agreed that a wrist sprain could cause acute carpal tunnel syndrome. He replied that he supposed he "would need to look at that in context to see what kind of strain that someone is looking at." However, he opined that a minor strain of the wrist would not cause carpal tunnel syndrome." Dr. Larson agreed that "severe sprains, such as ligamentous ruptures" of the wrist can cause CTS. Dr. Larson agreed that in cases of traumatic CTS paresthesias can occur in the fingers within an hour or two of the precipitating event. Dr. Larson opined that the word "acute" does not necessarily eliminate something that is longstanding but "it does, by its nature, imply something very recent."

32. The respondents are not subject to a penalty for violation of WCRP 16-10(A) as alleged by the claimant. The request for prior authorization was not a "completed request" within the meaning of WCRP 16-9(F) because it did not include "supporting documentation" including "documents used in the provider's decision making process to substantiate the need for the requested treatment." Here, it is clear from Dr. Chapman's April 8, 2014 office note that he considered Dr. Hammerberg's "EMG nerve conduction study findings" in formulating his recommendation that the claimant undergo surgery for his CTS. However, Ms. Bluel admitted that she did not include a copy of Dr. Hammerberg's test results when she allegedly submitted the request for prior authorization on April 10, 2014. Thus, the April 10 request for prior authorization was not a "completed request" for purposes of WCRP 16-10(A) and there was no rule violation on which to predicate an award of penalties.

33. The claimant proved it is more probably true than not that his CTS and need for surgery were proximately caused by the industrial injury of January 12, 2014.

34. The claimant credibly testified that on January 12, 2014 he experienced a pop in his wrist and the immediate onset of pain when he grabbed the handle of a heavy piece of luggage as it was falling from a vehicle. He also credibly testified that within one hour of this event he experienced the onset of numbness in his right hand except for his little finger. The claimant credibly testified that he was not experiencing similar symptoms prior to this incident. Although there is some evidence the claimant may have had prior symptoms of CTS in the remote past, the record does not contain any persuasive medical documentation that the claimant was reporting or seeking treatment

for right upper extremity symptoms between 2011 (when his right small finger was bitten) and January 2014.

35. Dr. Durbin credibly opined the claimant sustained a "right median nerve traumatic injury" that was causing "almost compartmental carpal tunnel type syndrome." Dr. Durbin received an accurate description of the onset of the claimant's symptoms after trying to catch the suitcase. Dr. Durbin was even aware the claimant reported a history of an old "nerve study" showing "mild carpal tunnel." Considering the claimant's history, the absence of CTS symptoms before the injury, the "recent nerve study" showing "significant injury" to the median nerve and the progression of the claimant's symptoms, Dr. Durbin persuasively opined that the claimant's CTS was the result of the January 12, 2014 injury.

36. Dr. Durbin's opinion is corroborated by the persuasive opinions of Dr. Chapman, Dr. Pineiro and Dr. Nystrom. Dr. Nystrom, who was the first physician to examine the claimant after the injury, persuasively opined that there was a causal relationship between the CTS and the injury. Dr. Nystrom persuasively argues that the temporal relationship between the onset of the claimant's symptoms and the occurrence of the injury supports the existence of a causal relationship between the two events. Even Dr. Larson agreed that in cases of traumatic carpal tunnel syndrome numbness may appear in the hands within one to two hours of the precipitating event. Although Dr. Chapman does not elaborate, he did request prior authorization to perform surgery and listed the date of injury as January 12, 2014. The ALJ infers from these facts that it is Dr. Chapman's opinion that the claimant's CTS resulted from the January 12 injury.

37. Dr. Durbin's opinion is also corroborated by the results of Dr. Hammerberg's electrodiagnostic testing. Dr. Hammerberg credibly stated that the test results were "compatible" with "severe acute right carpal tunnel syndrome." Dr. Larson admitted that the term "acute" implies something "very recent." Thus, the electrodiagnostic tests reinforce the inference that there is a significant temporal relationship between the industrial injury and the development of the CTS.

38. Dr. Larson's opinion that there is no relationship between the admitted wrist injury and the development of the CTS is not persuasive. Dr. Larson did not persuasively refute the inference that the temporal relationship between the injury and the development of the "acute" CTS argues for a finding of a causal relationship. Dr. Larson did not deny that CTS can be traumatic in origin; he merely stated that trauma is a less common cause than other etiologies such as idiopathic disease. For the reasons stated above, the particular facts of this case support the inference that the claimant's CTS is traumatic in origin.

39. Based on the reports of Dr. Chapman and Dr. Durbin, the claimant proved it is more probably true than not that carpal tunnel release surgery constitutes reasonable and necessary medical treatment to cure and relieve the effects of the injury-related CTS.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), §§8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A Workers' Compensation case is decided on its merits. Section 8-43-201(1). The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions.

PENALTIES FOR ALLEGED VIOLATION OF WCRP 16

The claimant seeks the imposition of penalties against the "respondents" pursuant to § 8-43-304(1), C.R.S. Specifically the claimant argues that on April 10, 2014 Bluel submitted to Sedgwick a "complete" request for prior authorization of surgery within the meaning of WCRP 16-9(F). The claimant further alleges the respondents failed to contest the request for prior authorization for surgery within seven (7) business days, or by April 21, 2014, as required by WCRP 16-10(A). The claimant contends that the respondents' conduct constituted the violation of an "order" within the meaning of § 8-43-304(1). The respondents argue the claimant failed to prove that the request for prior authorization was received by Sedgwick until claimant's attorney faxed the request on April 28, 2014. Thus, the respondents assert Browne's May 7, 2014 denial of the request was timely and there was no violation of the rule. The respondents further contend the evidence establishes that Dr. Chapman's request for prior authorization was not "completed" within the meaning of WCRP 16-10(A) and WCRP 16-9(F). Therefore, the respondents reason the rule did not obligate them to respond and there was no violation of the rule that could subject them to penalties. The ALJ concludes that because the request for prior authorization was not "complete" within the meaning of the rules no penalties may be imposed.

Section 8-43-304(1) authorizes the imposition of penalties of not more than $1000 per day if an insurer "fails, neglects, or refuses to obey any lawful order made by

the director or panel." An order is defined as including "any decision, finding and award, direction, rule, regulation, or other determination arrived at by the director or an administrative law judge." Section 8-40-201(15), C.R.S. Thus, violation of a rule of procedure constitutes violation of an "order." *Spracklin v. Industrial Claim Appeals Office*, 66 P.3d 176 (Colo. App. 2002).

Whether statutory penalties may be imposed under § 8-43-304(1) involves a two-step analysis. First, the ALJ must first determine whether the insurer's conduct constituted a violation of a rule of procedure. If so, the ALJ must determine whether the action or inaction constituting the violation was objectively unreasonable. The reasonableness of the insurer's action depends on whether it was based on a rational argument based in law or fact. *Jiminez v. Industrial Claim Appeals Office,* 107 P.3d 965 (Colo. App. 2003); *Gustafson v. Ampex Corp.,* W.C. No. 4-187-261 (I.C.A.O. August 2, 2006), *but see, Pioneers Hospital v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005) (standard is less rigorous standard of "unreasonableness"). However, there is no requirement that the insurer know that its actions were unreasonable. *Pueblo School District No. 70 v. Toth,* 924 P.2d 1094 (Colo. App. 1996).

WCRP 16-10(A), the rule that the claimant alleges was violated by the respondents, provides as follows:

> If the payer contests a request for prior authorization for non-medical reasons as defined under 16-11(B)(1), the payer shall notify the provider and parties, in writing, of the basis for the contest within seven (7) business days from receipt of the provider's completed request as defined in 16-9(F). A certificate of mailing of the written contest must be sent to the provider and the parties.

WCRP 16-9(F) provides as follows:

> To complete a prior authorization request, the provider shall concurrently explain the reasonableness and necessity of the services requested, and shall provide relevant supporting medical documentation. Supporting medical documentation is defined as documents used in the provider's decision making process to substantiate the need for the requested service or procedure.

The question of whether the provider has submitted a "completed request" for prior authorization is one of fact for determination by the ALJ. *Lichtenberg v. J.C. Penny Corp.,* WC 4-814-897 & 4-842-102 (ICAO July 19, 2012); *Skelly v. Wal-Mart Stores, Inc.,* WC 4-632-887 (ICAO July 31, 2008). If a provider fails to submit a completed request for prior authorization, as defined by the rules, the insurer's duty to respond is not triggered and its failure to do so does not subject it to penalties. *Skelly v. Wal-Mart Stores, Inc., supra.*

The ALJ concludes that the respondents, through Browne, took the position that the request for prior authorization allegedly submitted on April 10, 2014 should be denied, at least in part, for the "non-medical reason" that the need for the carpal tunnel release surgery was not causally related to the admitted industrial injury. See WCRP 16-11(B)(1) (non-medical reasons for contesting prior authorization include contention that services are not related to the admitted injury). This was the clear import of Dr. Larson's May 1, 2014 report and the Browne's' May 7, 2014 letter denying prior authorization for Dr. Chapman's proposed surgery. (Findings of Fact 23 & 24). For this reason the ALJ concludes that the provisions of WCRP 16-10(A) were triggered.

However, as determined in Finding of Fact 32, the respondents did not violate WCRP 16-10(A) by failing to deny the request for prior authorization within 7 business days of its alleged receipt on April 10, 2014. WCRP 16-10(A) requires respondents to deny a request for prior authorization within 7 days of receipt of a "completed request" for prior authorization. A "completed request" is defined by WCRP 16-9(F) to include "documents used in the provider's decision-making process to substantiate the need" for the requested procedure. Bluel admitted that the request for prior authorization she allegedly submitted on April 10, 2014 did not include a copy of Dr. Hammerberg's electrodiagnostic study results. As found, the ALJ is persuaded by Dr. Chapman's April 8, 2014 note that he relied on these results when arriving at his conclusion that the claimant should undergo the proposed carpal tunnel release surgery. Because Dr. Hammerberg's results were not included in the request for prior authorization the ALJ finds and concludes that the April 10, 2014 request for prior authorization was not "complete" within the meaning of WCRP 16-9(F), and the respondents had no obligation to respond to it under WCRP 16-10(A). For this reason there was no violation of an order of the Director under which penalties could be imposed. *Skelly v. Wal-Mart Stores, Inc., supra.*

In light of this determination the ALJ need not address the respondents' contention that the evidence fails to establish that Sedgwick "received" the request for prior authorization on April 10, 2014. The ALJ further notes that the claimant does not argue that the respondents failed timely to contest any of the subsequent requests for prior authorization.

MEDICAL BENEFITS

The claimant contends the evidence establishes that he is entitled to reasonable and necessary medical benefits in the form of the carpal tunnel release surgery recommended by Dr. Chapman and Dr. Durbin. The ALJ agrees with the claimant.

The claimant first argues that because the respondents failed timely to contest the April 10, 2014 request for prior authorization the surgery proposed by Dr. Chapman is "deemed" authorized by operation of WCRP 16-10(E). That rule provides that the payer's failure "timely to comply in full with the requirements of 16-10(A) or (B), shall be deemed authorization for payment of the requested treatment" except in certain circumstances.

The ALJ notes that the ICAO has held that WCRP 16-10(E) should not be read as depriving ALJ's of their statutory jurisdiction to determine whether medical treatment is reasonable and necessary to cure and relieve the effects of an industrial injury. *See Lichtenberg v. J.C. Penny Corp., supra*. In any event, as determined above the respondents did not violate WCRP 16-10(A) as the claimant alleges. Consequently, by its own terms WCRP 16-10(E) does not operate to "deem" the surgery authorized. Because the proposed surgery is not "deemed" authorized by operation of law the ALJ must determine whether it can be awarded as a medical benefit under the standard legal principles.

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

Further, the claimant is required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed need for treatment and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any preexisting condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a preexisting condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Expert medical opinion "is neither necessary nor conclusive in determining causation." However, when expert medical opinions are presented it is for the ALJ to determine the weight to be accorded such opinions. *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990).

As determined in Findings of Fact 33 through 38 the claimant proved it is more probably true than not that his CTS was proximately caused by the admitted wrist injury sustained on January 12, 2014. The ALJ is persuaded by Dr. Durbin's opinion that the claimant sustained traumatic CTS as a result of the January 12 injury. Dr. Durbin credibly and persuasively based his opinion on the history of the accident, the absence of CTS symptoms before the injury, Dr. Hammerberg's electrodiagnostic studies showing "significant injury" to the median nerve and the progression of the claimant's symptoms after the injury. Further, as determined in Finding of Fact 36, Dr. Durbin's opinion regarding the cause of the CTS is corroborated by the credible opinions of Dr.

Nystrom, Dr. Pineiro and Dr. Chapman. Dr. Durbin's opinion is also corroborated by Dr. Hammerberg's opinion that the March 2014 electrodiagnostic studies demonstrate "severe acute right carpal tunnel syndrome." For the reasons stated in Finding of Fact 38 the ALJ is not persuaded by the opinions of Dr. Larson.

As determined in Finding of Fact 39 the claimant proved it is more probably true than not that carpal tunnel release surgery recommended by Dr. Chapman and Dr. Durbin constitutes reasonable and necessary medical treatment to cure and relieve the effects of the CTS.

ADMISSIBILITY OF DEPOSTION EXHIBIT 1

The ALJ reviewed the parties' written arguments concerning the admissibility of Deposition Exhibit 1 offered by the claimant at the conclusion of Dr. Larson's deposition. The ALJ agrees with the respondents that the documents contained in Deposition Exhibit 1 are hearsay. The ALJ further agrees with the respondents that on review of the deposition transcript Dr. Larson never testified that the documents contained in the exhibit constitute "reliable authorities" so as to be admissible as "Learned treatises" within the meaning of CRE 803(18). Dr. Larson merely stated that he had read one of the documents "quite a while" ago (Hoppenfeld's book) but otherwise did not testify that it was a medically reliable source. Otherwise, Dr. Larson was asked if he agreed or disagreed with statements contained in the documents but was never asked to vouch for their reliability.

The ALJ declines the claimant's invitation to take judicial or administrative notice of the "reliability" of the documents contained in Deposition Exhibit 1. Applying CRE 201 (b) the ALJ concludes that the question of whether these documents are medically reliable authorities is not "generally known within the territorial jurisdiction" of the court or capable of accurate and ready determination by resort to sources whose accuracy cannot reasonably be questioned.

The ALJ concludes Deposition Exhibit 1 is not admissible in evidence because it is hearsay that is not subject to any cited exception, including CRE 803(18).

ORDER

Based upon the foregoing findings of fact and conclusions of law, the ALJ enters the following order:

1. The claimant's request for the imposition of penalties against the "respondents" for an alleged violation of WCRP 16 is denied.

2. The insurer shall pay for reasonable and necessary medical benefits in the form of carpal tunnel release surgery and related expenses.

3. Issues not addressed in this order are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable mental impairment during the course and scope of his employment with Employer.

2. Whether Claimant has proven by a preponderance of the evidence that the medical treatment he has received was authorized, reasonable and necessary to cure or relieve the effects of a work-related injury.

3. Whether Claimant has demonstrated by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period January 11, 2013 through March 2, 2014.

4. Whether Respondents have established that Claimant is subject to a penalty for late reporting pursuant to §8-43-102(2), C.R.S.

STIPULATION

The parties agreed that Claimant earned an Average Weekly Wage (AWW) of $1,256.54.

FINDINGS OF FACT

1. Claimant is a 63 year old male who works as a Social Work Counselor at Employer's Limon Correctional Facility. He began working for Employer in June 2012. Claimant's job duties involve providing mental health therapy and treatment to inmates in the Facility.

2. Claimant explained that when he initially began working for Employer he was one of two mental health counselors aiding medium and closed custody inmates at Employer's Limon Correctional Facility. In December 2012 Employer hired a female psychologist to also help treat inmates. However, by May 2013 Employer instituted policy changes that involved transferring medium custody offenders out of the facility and bringing closed custody offenders into the facility. Claimant remarked that approximately 25-40 closed custody inmates were brought into the Limon Facility each week. He commented that closed custody inmates are typically more violent offenders and have greater mental health needs. They require more daily monitoring and counseling.

3. In October 2013 the female psychologist left employment with Employer. Claimant's caseload thus increased to approximately 150 inmates.

4. On January 11, 2014 Claimant was at home taking down Christmas decorations and carrying boxes up stairs when he experienced dizziness and shortness of breath. He visited the Littleton Hospital Emergency Room. Claimant was admitted to the hospital for testing. The tests did not reveal any acute abnormalities and Claimant was discharged on January 12, 2014.

5. On January 17, 2014 Claimant again visited the Littleton Hospital Emergency Room because he was experiencing dizziness and shortness of breath. He underwent additional testing and was discharged on the same day.

6. On January 21, 2014 Claimant again reported to the Littleton Hospital Emergency Room because he was suffering shortness of breath. Testing again did not reveal any acute abnormalities. Claimant reported significant work stress and associated anxiety.

7. On January 23, 2014 Claimant underwent a psychiatry consultation with Clinical Nurse Specialist (CNS) Adriana Frazier. Under chief complaint CNS Frazier noted that Claimant stated "[y]ou're going to help me with dealing with my stress…work and my family is sick." Claimant reported a history of depression and that he had stress associated with his family life. CNS Frazier detailed:

> [Claimant] states that he has quite a bit of stress, especially over the last 2 years: wife has colitis, which has changed some of their lifestyle; daughter is in remission after breast cancer; another daughter has Chron's disease; and the youngest daughter has fibromyalgia and will undergo a hysterectomy within the next 2 weeks. The latter daughter (youngest) has moved in back home (which he does not identify as a stressor). He works as a social worker in a federal prison, which requires his being away from home for a week and a half at a time. He's been doing that for a least 1 and a half years, living in one bedroom room in Limon. His job is quite stressful, and over the last week he found out that his supervisor may be fired.

Claimant also explained that his work was stressful and thinking about work could lead to anxiety. Claimant added that he has a very large caseload and no clinical supervision. CNS Frazier determined that Claimant had significant stress associated with his family situation and job. The stress manifested itself with physical symptoms including shortness of breath. CNS Frazier diagnosed Claimant with major depressive disorder, anxiety and seasonal affective disorder. She recommended outpatient counseling.

8. From January 28, 2014 through February 25, 2014 Claimant received treatment from Bob Whitehouse, Ed.D. Claimant detailed his work history and responsibilities. Claimant's symptoms resolved through treatment.

9. On February 27, 2014 Claimant filed a claim for Workers' Compensation benefits. Claimant attached a written statement detailing the circumstances of his

injury. He stated that beginning in May 2013 he experienced increased job-related stress and anxiety. As a result he suffered a physical breakdown in January 2014. Claimant noted that, because of his stress and anxiety, he experienced severe shortness of breath, dizziness, chronic fatigue, chronically reduced energy and physical stamina, impaired concentration and memory/decision making, agitation and irritability. Claimant related his increased stress and anxiety, as well as his related symptoms, to Employer's policy decisions. The policy decisions changed the make-up of the inmate population. He specifically noted that medium custody offenders were transferred out of the Limon Correctional Facility while closed custody offenders were transferred into the Facility. Claimant explained that closed custody offenders, who are the highest risk and most dangerous inmates, require significantly more work than medium custody offenders. The process increased Claimant's caseload from 125 to 190 inmates. Claimant summarized that, because of the changes and stress associated with working with closed custody offenders, he experienced significant anxiety that prevented him from working.

10. On March 3, 2014 Claimant resumed full-time employment for Employer without restrictions. Claimant explained that he had simply needed to be off of work.

11. On November 20, 2014 Claimant underwent an independent medical examination with Psychiatrist Stephen A. Moe, M.D. Claimant reported that he works as a counselor at a correctional facility. He noted that he feels comfortable with the intensity of working in a prison. Claimant explained that in May 2013 Employer made a policy decision to transfer closed custody offenders into the prison and transfer medium custody offenders out of the Facility. He remarked that the change in the makeup of the inmate population increased his work demands. Claimant stated that his work demands became so overwhelming that he was unable to effectively perform his job duties. By January 2014 he suffered an acute onset of shortness of breath, dizziness and lightheadedness. Claimant attributed his physical symptoms to his increased job duties and work stress.

12. Dr. Moe agreed that physical symptoms in January 2014 were "significantly influenced" by emotional stress. He remarked that Claimant experienced progressively greater emotional stress as a result of his escalating work demands. However, Dr. Moe disagreed that Claimant's emotional stress in the fall of 2013 and early 2014 was primarily caused by his job demands. He thus concluded that Claimant did not meet the legal criteria for a work-related mental stress claim. He explained that

> excessive work demands are not explicitly mentioned among the exclusions listed in the statute, which include disciplinary action, work evaluation, job transfer, lay-off, demotion, promotion, termination and retirement. However, even as it should not be minimized as an important cause of emotional stress, feeling overwhelmed by one's assigned duties is a stressor similar in kind to those that are specifically listed in the statute as exclusions to bringing a mental stress claim, each of which can also be a significant cause of emotional stress.

13. Dr. Moe summarized that Claimant's mental stress concerns relating to his job were simply related to increased work demands common to all forms of employment. He explained:

> Although [Claimant] worked in an intense and potentially dangerous setting of a prison where his decision had important consequences, the fundamental symptom-causing issues he described – demands that he regarded as too voluminous and too intense to meet – are common to all forms of employment. In other words, the type of work he did, and the setting in which he worked, are not meaningful elements of his claim. [Claimant's] claim boils down to a straightforward 'excessive-work-demands narrative.'

14. Dr. Moe also testified at the hearing in this matter. He reiterated that Claimant failed to meet the legal criteria for a work-related mental stress claim. He considered the effect of work stress as opposed to other factors on Claimant's condition. Dr. Moe explained that, in the Workers' Compensation context, there are three separate influences on an individual's stress level: 1) work-related stressors; 2) personal attributes, which are the individual's own subjective tendencies or vulnerabilities to feel anxious or depressed; and 3) non-work related stressors. He gave equal weight to each element. Dr. Moe commented that Claimant's main stressors outside of work were his medical condition, family-related concerns involving his wife and three daughters and his living arrangement apart from his family. He also noted Claimant's history of treatment for mental health conditions and stress reactions to previous jobs. Dr. Moe determined that it is probable that the work stress had less influence than the other two elements in causing Claimant's stress reaction during January 2014.

15. Claimant has failed to establish that it is more probably true than not that he suffered a permanent mental impairment from an accidental injury arising out of and in the course and scope of his employment. Claimant's contention that he suffered from a mental impairment is predicated upon his increased work demands as a Social Work Counselor at Employer's Limon Correctional Facility. He explained that by May 2013 Employer instituted policy changes that involved transferring medium custody offenders out of the Facility and bringing closed custody offenders into the Facility. Claimant remarked that approximately 25-40 closed custody inmates were brought into the Limon Facility each week. He commented that closed custody inmates are typically more violent offenders and have greater mental health needs. They require more daily monitoring and treatment from the counselors.

16. By January 2014 Claimant experienced several episodes of dizziness and shortness of breath. He visited the Littleton Hospital Emergency Room and testing did not reveal any acute abnormalities. The medical records reflect that Claimant's physical symptoms were caused by emotional stress. The record reveals that Claimant was not only experiencing work stress but family health concerns. In January 2014 CNS Frazier determined that Claimant had significant stress associated with his family situation and job. The stress manifested itself with physical symptoms including shortness of breath.

CNS Frazier diagnosed Claimant with major depressive disorder, anxiety and seasonal affective disorder.

17. Dr. Moe persuasively concluded that Claimant did not meet the legal criteria for a work-related mental stress claim. He explained that, although excessive work demands are not specifically delineated in the mental health statute, they are "similar in kind to those that are specifically listed in the statute as exclusions to bringing a mental stress claim." Dr. Moe detailed that in the Workers' Compensation context there are three separate influences on an individual's stress level: 1) work-related stressors; 2) personal attributes, which are the individual's own subjective tendencies or vulnerabilities to feel anxious or depressed; and 3) non-work related stressors. Dr. Moe testified that it is probable that the work stress had less influence than the other two elements in causing Claimant's stress reaction. Dr. Moe gave equal weight to each element. He noted Claimant's history of treatment for mental health conditions and stress reactions to previous jobs. Based on the medical records and persuasive testimony of Dr. Moe, Claimant has failed to demonstrate that he suffered from a permanent mental impairment as a result of a psychologically traumatic event that was outside of a similarly situated worker's experience while working as a Social Work Counselor for Employer.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that she suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. The Workers' Compensation Act has authorized recovery for a broad range of physical injuries, but has "sharply limited" a claimant's potential recovery for mental injuries. *Mobley v. King Soopers*, WC No. 4-359-644 (ICAP, Mar. 9, 2011). Enhanced proof requirements for mental impairment claims exist because "evidence of causation is less subject to direct proof than in cases where the psychological consequence follows a physical injury." *Davidson v. City of Loveland Police Department*, WC No. 4-292-298 (ICAP, Oct. 12, 2001), *citing Oberle v. Industrial Claim Appeals Office*, 919 P.2d 918 (Colo. App. 1996). A claimant experiencing physical symptoms caused by emotional stress is subject to the requirements of the mental stress statutes. *Granados v. Comcast Corporation*, WC No. 4-724-768 (ICAP, Feb. 19, 2010); *see Esser v. Industrial Claim Appeals Office*, 8 P.3d 1218 (Colo. App. 2000), affd 30 P.3d 189 (Colo. 2001); *Felix v. City and County of Denver* W.C. Nos. 4-385-490 & 4-728-064 (ICAP, Jan. 6, 2009).

6. Section 8-41-301(2)(a), C.R.S. imposes additional evidentiary requirements regarding mental impairment claims. The section provides, in relevant part:

> A claim of mental impairment must be proven by evidence supported by the testimony of a licensed physician or psychologist. For purposes of this subsection (2), "mental impairment" means a recognized, permanent disability arising from an accidental injury arising out of and in the course of employment when the accidental injury involves no physical injury and consists of a psychologically traumatic event that is generally outside of a worker's usual experience and would evoke significant symptoms of distress in a worker in similar circumstances. A mental impairment shall not be considered to arise out of and in the course of employment if it results from a disciplinary action, work evaluation, job transfer, lay-off, demotion, promotion, termination, retirement, or similar action taken in good faith by the employer.

The definition of "mental impairment" consists of two clauses that each contains three elements. The first clause requires a claimant to prove the injury consists of: "1) a recognized, permanent disability that, 2) arises from an accidental injury involving no physical injury, and 3) arises out of the course and scope of employment. *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023, 1030 (Colo. 2004). The second clause requires the claimant to prove the injury is: "1) a psychologically traumatic event, 2)

generally outside a worker's usual experience, and 3) that would evoke significant symptoms of distress in a similarly situated worker." *Id.*

7. As found, Claimant has failed to establish by a preponderance of the evidence that he suffered a permanent mental impairment from an accidental injury arising out of and in the course and scope of his employment. Claimant's contention that he suffered from a mental impairment is predicated upon his increased work demands as a Social Work Counselor at Employer's Limon Correctional Facility. He explained that by May 2013 Employer instituted policy changes that involved transferring medium custody offenders out of the Facility and bringing closed custody offenders into the Facility. Claimant remarked that approximately 25-40 closed custody inmates were brought into the Limon Facility each week. He commented that closed custody inmates are typically more violent offenders and have greater mental health needs. They require more daily monitoring and treatment from the counselors.

8. As found, by January 2014 Claimant experienced several episodes of dizziness and shortness of breath. He visited the Littleton Hospital Emergency Room and testing did not reveal any acute abnormalities. The medical records reflect that Claimant's physical symptoms were caused by emotional stress. The record reveals that Claimant was not only experiencing work stress but family health concerns. In January 2014 CNS Frazier determined that Claimant had significant stress associated with his family situation and job. The stress manifested itself with physical symptoms including shortness of breath. CNS Frazier diagnosed Claimant with major depressive disorder, anxiety and seasonal affective disorder.

9. As found, Dr. Moe persuasively concluded that Claimant did not meet the legal criteria for a work-related mental stress claim. He explained that, although excessive work demands are not specifically delineated in the mental health statute, they are "similar in kind to those that are specifically listed in the statute as exclusions to bringing a mental stress claim." Dr. Moe detailed that in the Workers' Compensation context there are three separate influences on an individual's stress level: 1) work-related stressors; 2) personal attributes, which are the individual's own subjective tendencies or vulnerabilities to feel anxious or depressed; and 3) non-work related stressors. Dr. Moe testified that it is probable that the work stress had less influence than the other two elements in causing Claimant's stress reaction. Dr. Moe gave equal weight to each element. He noted Claimant's history of treatment for mental health conditions and stress reactions to previous jobs. Based on the medical records and persuasive testimony of Dr. Moe, Claimant has failed to demonstrate that he suffered from a permanent mental impairment as a result of a psychologically traumatic event that was outside of a similarly situated worker's experience while working as a Social Work Counselor for Employer.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's claim for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUE

Whether Respondents have produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Brian Shea, M.D. that Claimant reached Maximum Medical Improvement (MMI) on July 15, 2014 and suffered a 15% whole person permanent impairment as a result of her August 8, 2012 industrial injury.

FINDINGS OF FACT

1. On August 8, 2012 Claimant suffered an admitted industrial injury to her lower back during the course and scope of her employment with Employer. Claimant had been carrying a heavy roll of plastic weighing approximately 100-150 pounds with a coworker when she experienced a "pull" in her lower back. Employer referred Claimant to the Workwell Occupational Medical Clinic for an evaluation.

2. On August 9, 2012 Claimant visited Kerry Kamer, D.O. at Workwell for an examination. He diagnosed Claimant with a lumbar spine sprain. Dr. Kamer prescribed medications, physical therapy and chiropractic treatment. He assigned work restrictions of lifting, carrying and pulling not to exceed 10 pounds constantly, 20 pounds frequently and 30 pounds occasionally. Claimant did not lose any time from work as a result of her lumbar strain and thus did not receive any temporary partial or total disability benefits.

3. On August 16, 2012 Claimant visited Frederick Scherr, M.D. at Workwell for an evaluation. Claimant reported lower back pain with some intermittent pain radiating down her right leg. Dr. Scherr referred Claimant to Scott Parker, D.C. for chiropractic treatment. He limited Claimant's work activities to no lifting in excess of 10 pounds.

4. On September 17, 2012 Claimant returned to Dr. Scherr for an evaluation. Dr. Scherr remarked that Claimant continued to improve through physical therapy and chiropractic treatment with Dr. Parker. He decreased Claimant's work restrictions so that she could lift, carry, push and pull up to 25 pounds.

5. On September 28, 2012 Claimant was involved in a non-work-related motor vehicle accident. She was rear-ended while stopped at a red light and could not move by the next morning. On the following Monday Claimant visited Associates of Family Medicine and was diagnosed with whiplash.

6. On October 2, 2012 Claimant returned to Dr. Scherr for an evaluation. She continued to improve with physical therapy and chiropractic treatment but mentioned her September 28, 2012 motor vehicle accident. Dr. Scherr noted "[a]ll

symptoms are gradually improving. ROM is better. She has no new complaints. She tolerated the 25 pounds and was doing well until she was rear ended on Friday. She now has neck and upper back issues. Her low back and hip issues remain stable. It does not appear that the accident made the low back or hip worse. She is going to see her PCP in regards to this recent accident and her neck and upper back." Dr. Scherr released Claimant to regular duty.

7. On October 16, 2012 Claimant returned to Dr. Kamer for an examination. Dr. Kamer reported Claimant "is better. Chiro and PT have really helped. She is no longer taking any medication." Dr. Kamer also noted that "all symptoms are improving. ROM is better. She has no new complaints. She tolerated full duty and is doing well." Dr. Kamer also commented that Claimant had been rear-ended in a motor vehicle accident and continues to have neck and upper back issues but her "low back and hip issues remain stable." Dr. Kamer stated that: "[i]t does not appear that the accident made the low back or hip worse. She is going to see her PCP in regards to this recent accident." Dr. Kamer determined that Claimant had reached MMI with no impairment. He also released Claimant to full duty employment. Claimant did not request or receive any subsequent medical care for her August 8, 2012 work injury.

8. Claimant continued to receive physical therapy at Advanced Spine and Rehabilitation for injuries sustained in her non-work-related motor vehicle accident. On October 8, 2012 Claimant reported neck and scapular pain. She also experienced trapezius, shoulder and headache symptoms. By. November 15, 2012 Claimant suffered a worsening of lower back pain and pain on both sides of her pelvis.

9. In April 2013 Claimant visited Brooke Bennis, D.O. for an examination. Dr. Bennis remarked that Claimant had lower back and right hip pain. She had undergone an SI joint injection on the right without significant relief. An MRI revealed a disk extrusion at L4-5. He diagnosed Claimant with the following: an L4-5 disk extrusion; right SI joint dysfunction; right hip pain; right trochanteric pain; myofascial pain; radicular symptoms and lumbar facet pain. Dr. Bennis commented that, if Claimant continued to have back pain, she might require additional procedures in the form of medial branch blocks. Dr. Bennis referred Claimant to lumbar spine surgeon Douglas Beard, D.O.

10. On April 11, 2013 Claimant visited Dr. Beard for an examination. Claimant reported mid to lower back pain and right hip pain that moved down the legs, under the buttocks and into the left hip. Claimant explained that following the motor vehicle accident, she felt neck pain, lower back pain and right groin pain. Since the accident Claimant had relative resolution of her neck pain, but her lower back, buttock and inguinal pain had worsened. Dr. Beard diagnosed Claimant with right-sided sciatica and right anterior inguinal pain.

11. During May 2013 Claimant continued to visit Dr. Bennis and report lower back and hip pain. Dr. Bennis thus referred Claimant to surgeon Joshua Snyder, M.D. for an examination.

12. On June 4, 2013 Claimant visited Dr. Snyder for an evaluation of her hip pain. Dr. Snyder commented that Claimant had been suffering right hip pain since her September 2012 motor vehicle accident. He summarized that, after the motor vehicle accident, Claimant suffered "right leg pain and she has been dealing with some other right-sided back pain and occasionally right-sided leg pain and left-sided leg pain as well. She has had injections into the back which give her fleeting relief, but she has never had complete relief of pain that is in her right groin. Apparently, Dr. Bennis obtained an MRI of her right hip and found that she did have a labral tear and therefore sent her over here." Dr. Snyder diagnosed Claimant with a traumatic tear from the motor vehicle accident that had not resolved with conservative treatment. He thus recommended a right hip arthroscopy and labral repair surgery.

13. On June 17, 2013 Claimant underwent a right hip arthroscopy and labral repair surgery. Claimant did not request authorization for the surgery in her Workers' Compensation claim. Moreover, no physician has determined that Claimant's need for surgery was related to the admitted industrial injury in the present case.

14. On August 19, 2013 Dr. Beard recommended a lumbar arthroplasty at L4-L5 for Claimant. He reported that Claimant had been experiencing increasing lower back pain and pain radiating into her right leg as a result of the September 28, 2012 motor vehicle accident.

15. On October 29, 2013 Claimant underwent an anterior lumbar arthroplasty at L4-L5. Claimant did not request authorization for the surgery in her Workers' Compensation claim. Moreover, no physician has determined that Claimant's need for surgery was related to the admitted industrial injury in the present case.

16. On March 3, 2014 Respondents filed a Final Admission of Liability (FAL) based on Dr. Kamer's determination that Claimant had reached MMI with no impairment on October 12, 2012.

17. Claimant retained Ryan H. Heatherman, Esq. to represent her in her motor vehicle accident case against the insurance company. He wrote a letter to the insurance company. The letter provided that Claimant "continues to experience significant and persistent hip and low back pain due to the collision." The letter details that the "collision occurred Friday September 28, 2012 while [Claimant] was stopped for a red light, facing North in her jeep at an intersection" when [her] jeep was rear-ended. According to the letter "[t]he forces from the impact of [the other driver's] truck caused severe injuries to [Claimant's] neck, hips and lower back . . . " Claimant "has so far had 60 different medical visits since the collision in September 2012, including multiple injections in the lower back, hip surgery and low back surgery." The letter provided that "[p]rior to the collision, [Claimant] experienced low back and hip pain while moving a heavy object for her job on 8 August 2012. She was in the final stages of recovery for pre-existing low back and hip pain . . . before the collision. This accident caused much more severe symptoms in the lower lumbar and hip as well as new injuries to the neck and back."

18. Claimant testified that she had not previously reviewed the letter from Mr. Heatherman but stated that the delineated facts were incorrect. She specified that she did not suffer any new injuries to her back or hip during the motor vehicle accident. Claimant remarked that she underwent hip and back surgery through her private health insurance because she was unaware that she could pursue the surgeries through Workers' Compensation. She commented that her back and hip problems did not worsen as a result of her motor vehicle accident but instead arose from her August 8, 2012 industrial incident.

19. Claimant challenged Dr. Kamer's determination that she reached MMI on October 16, 2012 with no permanent impairment. She underwent a DIME with Brian Shea, M.D. on July 15, 2014. Dr. Shea recounted that Claimant had been placed at MMI on October 16, 2012 but "[n]o impairment rating was done." He noted that Claimant had undergone two surgeries since reaching MMI. Dr. Shea explained that "[t]he first surgery was for a right hip joint labral tear repair on 6/17/13. A second surgery was done 10/29/13 for a lumbar disk repair and replacement." He thus concluded that Claimant reached MMI on July 15, 2014 and assigned a 15% whole person impairment rating. The impairment consisted of 5% for a specific disorder of the lumbar spine, 7% for loss of range of motion from spine surgery and 3% for right hip surgery.

20. However, Dr. Shea did not engage in a causality assessment regarding Claimant's need for hip or back surgery. Dr. Shea lacked medical records regarding the hip or back surgery in order to perform a causality determination. Moreover, Dr. Shea did not have copies of x-rays or MRI's of the lumbar spine or right hip joint. He assigned Claimant a rating for the back and hip surgeries because he was under the impression that both surgeries pertained to the Workers' Compensation claim. Claimant did not request authorization for the surgeries as part of her Workers' Compensation claim. Finally, no physician has determined that Claimant's need for surgery was related to the admitted industrial injury in the present case.

21. On September 29, 2014 Claimant underwent an independent medical examination with John Raschbacher, M.D. Dr. Raschbacher also testified at the hearing in this matter. Dr, Raschbacher explained that Dr. Shea erroneously assigned Claimant an impairment rating for her hip and back surgeries because they were not related to her August 8, 2012 industrial injury. He specifically noted that Claimant did not seek care for her back and hip for quite a period of time after she was discharged from treatment on October 16, 2012 in her Workers' Compensation claim. Prior to her discharge from medical care Claimant was progressing and had returned to regular work status.

22. Dr. Raschbacher detailed Dr. Shea's errors in performing the DIME. Initially, Dr. Shea assigned Claimant a 15% whole person impairment rating based on his impression that her lumbar disc disease and hip joint pathology were related to her August 8, 2012 admitted industrial injury. However, no physicians have determined that Claimant's surgeries were related to her industrial injury.

23. Second, Dr. Shea did not have the medical records of Claimant's treatment in 2013. Dr. Raschbacher explained that Dr. Shea rated two body parts for which he did not have adequate records. It would thus not have been possible for Dr. Shea to perform a rating based on objective pathology because he did not know the objective symptoms or causes. Dr. Raschbacher remarked that there was no clear, objective basis for Dr. Shea's ratings other than knowing that surgery had been performed and Claimant's subjective history. Dr. Shea did not request operative reports or medical records and therefore could not have known Claimant's specific medical diagnoses.

24. Dr. Raschbacher explained that Dr. Shea simply failed to delineate between Claimant's admitted August 8, 2012 Workers' Compensation claim and her September 28, 2012 non-work-related motor vehicle accident. Although Claimant reported a worsening of her symptoms during 2013, Dr. Shea could not assess whether the increased symptoms were caused by the natural progression of Claimant's industrial injuries or the intervening motor vehicle accident. Dr. Raschbacher summarized that providing an impairment rating for Claimant's back and hip in the absence of medical records and a causation analysis was erroneous. In assigning Claimant a 15% whole person impairment rating and determining that she did not reach MMI until July 15, 2014, Dr. Shea's analysis failed to comply with Table 53 II, B of the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised)* (*AMA Guides*) or the *Impairment Rating Tips*.

25. Respondents have produced clear and convincing evidence to overcome the DIME opinion of Dr. Shea that Claimant reached MMI on July 15, 2014 and suffered a 15% whole person permanent impairment as a result of her August 8, 2012 industrial injury. On August 8, 2012 Claimant suffered an admitted industrial injury to her lower back during the course and scope of her employment with Employer. On September 28, 2012 Claimant was involved in a non-work-related motor vehicle accident. After undergoing conservative treatment for the Workers' Compensation claim, Dr. Kamer determined that Claimant had reached MMI with no permanent impairment on October 12, 2012. On June 17, 2013 Claimant underwent a right hip arthroscopy and labral repair surgery. On October 29, 2013 Claimant underwent an anterior lumbar arthroplasty at L4-L5. Claimant did not request authorization for the surgeries in her Workers' Compensation claim. Moreover, no physician has determined that Claimant's need for the surgeries was related to her admitted industrial injury.

26. On July 15, 2014 Claimant underwent a DIME with Dr. Shea. He concluded that Claimant reached MMI on July 15, 2014 and assigned a 15% whole person impairment rating. The impairment consisted of 5% for a specific disorder of the lumbar spine, 7% for loss of range of motion from spine surgery and 3% for right hip surgery. However, Dr. Shea did not engage in a causality assessment regarding Claimant's need for hip or back surgery because he lacked medical records regarding the surgeries. Moreover, Dr. Shea did not have copies of x-rays or MRI's of the lumbar spine or right hip joint. He assigned Claimant a rating for the back and hip surgeries because he was under the impression that both surgeries pertained to the Workers' Compensation claim.

27. Dr. Raschbacher persuasively explained that Dr. Shea erroneously assigned Claimant an impairment rating for her hip and back surgeries because they were not related to her August 8, 2012 industrial injury. Dr. Shea lacked the medical records of Claimant's treatment in 2013 and failed to perform a causation analysis. Dr. Raschbacher remarked that Dr. Shea simply failed to delineate between Claimant's admitted August 8, 2012 Workers' Compensation claim and her September 28, 2012 non-work-related motor vehicle accident. Although Claimant reported a worsening of her symptoms during 2013, Dr. Shea could not assess whether the increased symptoms were caused by the natural progression of Claimant's industrial injuries or the intervening motor vehicle accident. Dr. Raschbacher summarized that providing an impairment rating for Claimant's back and hip in the absence of medical records and a causation analysis was erroneous. In assigning Claimant a 15% whole person impairment rating and determining that she did not reach MMI until July 15, 2014, Dr. Shea's analysis failed to comply with Table 53 II, B of the *AMA Guides* or the *Impairment Rating Tips*. Accordingly, based on Dr. Kamer's determination, Claimant reached MMI on October 16, 2012 with no permanent impairment as a result of her August 8, 2012 industrial incident.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial*

Claim Appeals Office, 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAP, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

5. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAP, Nov. 17, 2000).

6. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAP, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAP, Apr. 16, 2008).

. 7. As found, Respondents have produced clear and convincing evidence to overcome the DIME opinion of Dr. Shea that Claimant reached MMI on July 15, 2014 and suffered a 15% whole person permanent impairment as a result of her August 8, 2012 industrial injury. On August 8, 2012 Claimant suffered an admitted industrial injury to her lower back during the course and scope of her employment with Employer. On September 28, 2012 Claimant was involved in a non-work-related motor vehicle accident. After undergoing conservative treatment for the Workers' Compensation claim, Dr. Kamer determined that Claimant had reached MMI with no permanent impairment on October 12, 2012. On June 17, 2013 Claimant underwent a right hip arthroscopy and labral repair surgery. On October 29, 2013 Claimant underwent an anterior lumbar arthroplasty at L4-L5. Claimant did not request authorization for the surgeries in her Workers' Compensation claim. Moreover, no physician has determined that Claimant's need for the surgeries was related to her admitted industrial injury.

8. As found, on July 15, 2014 Claimant underwent a DIME with Dr. Shea. He concluded that Claimant reached MMI on July 15, 2014 and assigned a 15% whole person impairment rating. The impairment consisted of 5% for a specific disorder of the lumbar spine, 7% for loss of range of motion from spine surgery and 3% for right hip

surgery. However, Dr. Shea did not engage in a causality assessment regarding Claimant's need for hip or back surgery because he lacked medical records regarding the surgeries. Moreover, Dr. Shea did not have copies of x-rays or MRI's of the lumbar spine or right hip joint. He assigned Claimant a rating for the back and hip surgeries because he was under the impression that both surgeries pertained to the Workers' Compensation claim.

9. As found, Dr. Raschbacher persuasively explained that Dr. Shea erroneously assigned Claimant an impairment rating for her hip and back surgeries because they were not related to her August 8, 2012 industrial injury. Dr. Shea lacked the medical records of Claimant's treatment in 2013 and failed to perform a causation analysis. Dr. Raschbacher remarked that Dr. Shea simply failed to delineate between Claimant's admitted August 8, 2012 Workers' Compensation claim and her September 28, 2012 non-work-related motor vehicle accident. Although Claimant reported a worsening of her symptoms during 2013, Dr. Shea could not assess whether the increased symptoms were caused by the natural progression of Claimant's industrial injuries or the intervening motor vehicle accident. Dr. Raschbacher summarized that providing an impairment rating for Claimant's back and hip in the absence of medical records and a causation analysis was erroneous. In assigning Claimant a 15% whole person impairment rating and determining that she did not reach MMI until July 15, 2014, Dr. Shea's analysis failed to comply with Table 53 II, B of the *AMA Guides* or the *Impairment Rating Tips*. Accordingly, based on Dr. Kamer's determination, Claimant reached MMI on October 16, 2012 with no permanent impairment as a result of her August 8, 2012 industrial incident.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents have produced clear and convincing evidence to overcome the DIME opinion of Dr. Shea that Claimant reached MMI on July 15, 2014 and suffered a 15% whole person permanent impairment as a result of her August 8, 2012 industrial injury. Based on Dr. Kamer's determination, Claimant reached MMI on October 16, 2012 with no permanent impairment as a result of her August 8, 2012 industrial incident.

2. Any issues not resolved by this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative

Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUE

Whether Claimant has established by a preponderance of the evidence that he suffered a compensable injury on January 13, 2014.

STIPULATIONS

Claimant endorsed the issue of temporary benefits for hearing. Respondents endorsed the affirmative defense of responsibility for termination. Evidence was taken on both issues. Subsequent to hearing, Claimant withdrew his claim for temporary benefits, therefore the issue of temporary benefits and responsibility for termination is moot.

FINDINGS OF FACT

1. Claimant worked for Employer as the director of maintenance from November of 2004 to March of 2014.

2. Employer is a long-haul trucking company. As the director of maintenance Claimant's duties included overseeing Employers' trucks, trailers, forklifts, and working on equipment as needed.

3. On December 23, 2006 Claimant sustained a torn left rotator cuff when he slipped and fell shoveling snow for Employer. Claimant reported the injury to Employer's general manager, Don Losasso, within three days of the injury and Claimant was immediately referred for medical treatment.

4. On March 9, 2007, Claimant underwent arthroscopic repair of his supraspinatus and infraspinatus tendons. Claimant reached maximum medical improvement for that injury on October 10, 2007. Claimant continued to work for Employer following this injury.

5. Following his 2007 surgery Claimant frequently complained to his co-workers and Employer's co-owner Mark Nolan about ongoing pain and discomfort in his left shoulder. Claimant occasionally left work early due to his shoulder pain complaints.

6. On January 13, 2014 Employer was undergoing an audit by Commerce City. Claimant was tasked on that day with finding and retrieving three file boxes that were believed to be in a storage trailer on Employer's property.

7. Employer stored records in a semi trailer in file boxes, stacked on wooden pallets and wrapped in shrink wrap. The file boxes were stacked up to six feet high and were on four separate pallets with the boxes facing outwards so that the date of the information contained within the box could be read.

8. Claimant went to the trailer to search for the three requested boxes. Claimant had to climb over the front pallets to get to the rear pallets and to look at the dates on the boxes.

9. Claimant found two of the three requested file boxes while in the storage trailer. Claimant moved the two boxes, one at a time, to the door of the storage trailer. While moving the second box from one stack to another Claimant alleges that he reached his arm above his head and backward when he felt a sharp pain in his left shoulder.

10. Claimant then brought the two boxes to Employer's co-owner Mike Reilly and advised Mr. Reilly that he could not find the third box. Claimant did not tell Mr. Reilly that he had injured his left shoulder. Mr. Reilly's testimony was credible that if Claimant had made a report of injury, he would have been referred to Mr. Losasso to fill out a report.

11. Claimant then went to lunch with Mr. Nolan. Claimant did not tell Mr. Nolan that he had injured his left shoulder. Mr. Nolan's testimony was credible that if Claimant had made a report of injury, he would have been referred to Mr. Losasso to fill out a report or if Mr. Losasso was unavailable, that Mr. Nolan would have filled out a report himself.

12. After lunch, Claimant pulled the storage trailer up to Employer's main office space. Mr. Nolan used a pallet jack to move the pallets from the back of the trailer to the front of the trailer so they could be unloaded to the ground. The pallets full of the file boxes were unloaded to the ground and the third file box was located by Mr. Reilly.

13. Claimant did not report his alleged left shoulder injury to Mr. Losasso until March 13, 2014.

14. Claimant worked for two days following January 13, 2014 and then went to Florida due to the death of his father-in-law. While in Florida, Claimant and Claimant's daughter's boyfriend performed maintenance at his mother-in-law's home including pulling weeds, putting in landscaping rock and paving stones, and repairing an air conditioner. While in Florida, Claimant sent a text message to Mr. Nolan describing all the above maintenance that he and his daughter's boyfriend performed. Claimant did not mention any left shoulder pain in this text message.

15. Claimant returned to work on January 31, 2014. Claimant made no mention of left shoulder pain or the January 13, 2014 alleged injury upon his return to work.

16. On February 4, 2014 Claimant was involved in a physical altercation with another employee, Jim Barnes. Claimant had used Mr. Barnes' truck cab to conduct a road test for a prospective employee. Mr. Barnes had a cat and kept a litter box in the truck cab. Claimant removed the litter box prior to the road test and forgot to replace it afterwards and left it outside.

17. When Mr. Barnes arrived at work and noticed the litter box outside he was upset and confronted Claimant. The two exchanged words and Mr. Barnes went outside to prepare for a trip. Claimant stated he was leaving to get breakfast and drove toward the exit of Employer's premises.

18. Claimant saw Mr. Barnes preparing for a trip. Claimant did an abrupt u-turn in his vehicle, sped toward Mr. Barnes, stopped abruptly, and got out of his truck to approach Mr. Barnes. The two got into a physical altercation, and struck one another. Claimant struck Mr. Barnes with his left arm, and knocked out one of Mr. Barnes' teeth.

19. Both Claimant and Mr. Barnes were suspended for three days and were required to complete anger management training before returning to work.

20. Employer made a decision to terminate Claimant's employment based on a number of factors including Claimant's poor attendance record, history of anger issues and physical altercations with other employees, and declining job performance.

21. Claimant was terminated on March 12, 2014. Employer asked Claimant to remain on the job to assist in training his replacement.

22. After being notified he was being terminated, Claimant asked about his left shoulder injury. This was the first time Claimant informed Employer of his left shoulder injury that allegedly occurred on January 13, 2014, the day of the audit.

23. As this was Claimant's first report of an alleged injury, Claimant was referred to Mr. Losasso to fill out paperwork. Claimant met with Mr. Losasso on March 13, 2014 and advised Mr. Losasso that he had injured his left shoulder in January when searching for the audit boxes. Mr. Losasso asked Claimant why it took Claimant almost two months to make the report of injury and Claimant stated "I know this doesn't look good."

24. Mr. Losasso filled out a first report of injury and provided Claimant with a designated provider list. *See* Exhibit Z.

25. The same day, and on March 13, 2014 Claimant saw Michael Ladwig, M.D. Claimant told Dr. Ladwig that he was moving boxes overhead from pallet to pallet

when he felt injured his left shoulder. Dr. Ladwig noted that x-rays showed no acute changes. Dr. Ladwig diagnosed left shoulder strain and opined based upon Claimant's description of the mechanism of injury that the injury was work related. Dr. Ladwig imposed work restrictions of no lifting, repetitive lifting, carrying, pushing, or pulling with left arm. He also imposed no reaching overhead or away from body with left arm. *See* Exhibit 2.

26. Claimant was referred to orthopedic surgeon Michael Hewitt, M.D. Dr. Hewitt ordered an MRI. Dr. Hewitt noted Claimant's prior rotator cuff repair seven years prior and Claimant reported to Dr. Hewitt that he had no postoperative issues, no problem with overhead reaching, and had minimal shoulder pain prior to the January 2014 incident. Dr. Hewitt recommended surgical repair of the rotator cuff. *See* Exhibit 6.

27. On April 8, 2014 Claimant underwent an MRI which showed: near complete undersurface supraspinatus tendon tear with mild retraction near its myotendinous junction with a single bursal sided fiber possibly intact; severe infraspinatus tendinopathy including partial-thickness undersurface tear; moderate-severe subscapularis tendinopathy including high grade partial thickness undersurface tear; posterior superior subluxation of the humeral head; and moderate tendinopathy of the intact long head of the biceps tendon. *See* Exhibit 3.

28. Insurer denied the claim and Claimant went forward with treatment under his own medical insurance.

29. On July 14, 2014 Nicholas Olsen, D.O. performed an Independent Medical Examination on Claimant. Dr. Olsen opined that Claimant's left shoulder injury was chronic in nature rather than acute. Dr. Olsen opined that there was no marked edema on the April 2014 MRI that would be noted with an acute rotator cuff injury. Rather, Dr. Olsen noted that there was severe atrophy and fatty infiltration of the supraspinatus muscle consistent with chronic degenerative condition that extended from the 2007 surgical repair/injury. *See* Exhibit E.

30. Dr. Olsen opined that if Claimant in fact suffered an acute rotator cuff tear in January, Claimant would not have been able to strike Mr. Barnes with sufficient force to knock out a tooth in February. Dr. Olsen opined that on the day of the fight with Mr. Barnes, Claimant's shoulder was functioning at a high level and that Claimant did not therefore sustain a torn rotator cuff on January 13, 2014.

31. Dr. Olsen opined that it was not physically possible for Claimant to have generated enough force to knock out a tooth even if Claimant was in "fight or flight" mode as adrenaline only works when there is an intact muscle available for the adrenaline to act on. Dr. Olsen opined that because a punch requires the arm be extended at or above shoulder height, that Claimant did not have a completely torn rotator cuff prior to the February fight.

32. Dr. Olsen is found credible and persuasive.

33. On October 20, 2014 Claimant saw PA-C Brandon Kolodzek. Claimant reported to PA-C Kolodzek that he felt that he tore his left shoulder rotator cuff while unloading boxes at work. Surgery was discussed with Claimant and Claimant chose to schedule surgery with Robert Greenhow, M.D. *See* Exhibit 4.

34. On November 3, 2014 Elizabeth Bisgard, M.D. performed an Independent Medical Examination on Claimant. Dr. Bisgard diagnosed Claimant with left rotator cuff tear with severe tendinopathy. Dr. Bisgard opined that based on the history given by Claimant, there was a specific injury in January of 2014 that caused a substantial worsening of underlying shoulder pathology. Dr. Bisgard opined that Claimant was asymptomatic until the incident lifting boxes in January of 2014 and was working full time and full duty without difficulty. Dr. Bisgard noted that the MRI showed chronic changes, but despite the chronic changes Claimant was asymptomatic until January of 2014 when the incident lifting boxes occurred. *See* Exhibit 1.

35. Dr. Bisgard opined based on a reasonable degree of medical probability that Claimant sustained a work related left shoulder injury. *See* Exhibit 1.

36. On November 18, 2014 Claimant had surgery on his left shoulder performed by Robert Greenhow, M.D. Dr. Greenhow found a left shoulder full-thickness rotator cuff tear and a superior labral tear which he repaired. *See* Exhibit 5.

37. Claimant's testimony is not credible or persuasive. The medical doctors who opined that the injury was work related based their opinion on Claimant's history of injury. Therefore, the opinions of Dr. Ladwig and Dr. Bisgard are also not found persuasive as they rely upon Claimant's incredible description of injury

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. (2013), is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. (2014). The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. (2013). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for

the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

The claimant is required to prove by a preponderance of the evidence that at the time of the injury he was performing service arising out of and in the course of the employment, and that the injury was proximately caused by the performance of such service. § 8-41-301(1)(b) & (c), C.R.S. (2014) The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000). To recover benefits under the Worker's Compensation Act, the Claimant's injury must both occur "in the course of" employment and "arise out of" employment. *See* § 8-41-301, C.R.S. (2013). The course of employment requirement is satisfied when it is shown that the injury occurred within the time and place limits of the employment relation and during an activity that had some connection with the employee's job-related functions. *Popovich v. Irlando*, 811 P.2d 379 (Colo. 1991); *Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The arising out of requirement is satisfied when it is shown that there is a causal connection or nexus between the conditions and obligations of employment and the employee's injury. *Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo.2001).

In the present case, Claimant has failed to meet his burden to show that he suffered an injury that arose out of his employment or occurred in the course of his employment on January 13, 2014. The opinion of Dr. Olsen is persuasive that the injury to Claimant's left shoulder was not acute in nature as shown by MRI. Additionally, the Claimant's course of action following his alleged injury on January 13, 2014 is not logically consistent with an injury on that date. Claimant suffered a similar injury in 2006 and reported the injury immediately, spoke with general manager Losasso immediately, filled out an incident report, and was referred for treatment. In the present case, despite allegedly suffering a similar injury to the 2006 injury, Claimant did not make any report of injury for approximately two months. This does not make logical sense considering Claimant was familiar with the process to report a work injury.

The evidence also establishes that Employer promptly responded to Claimant's 2006 injury and referred him for treatment. Similarly, in this case, Employer promptly filled out a "first report of injury" and referred Claimant for treatment when Claimant finally made a report of injury in this case in March of 2014. The evidence and testimony shows that it was Employer's practice to act promptly upon notification of any injury from any Employee. Claimant's testimony that he reported the injury to several people at work on the date of injury is not credible or persuasive. It is incredible that Claimant made would have made several reports of a left shoulder injury with no response from Employer. The testimony of Mr. Reilly, Mr. Nolan, and Mr. Losasso is credible that if Claimant had reported an injury in January of 2014, they would have referred him to fill out a report of injury and would have referred him for treatment immediately.

Further, the evidence shows that Claimant performed maintenance work at his mother in law's home, returned to work for two months and struck a co-worker with enough force to knock out a tooth following his alleged injury with no problems or reported complaints of left shoulder pain. If Claimant had a left shoulder injury that he suffered on January 13, 2014 it would logically follow that striking someone with enough force to knock out a tooth would cause significant pain to an already "injured" shoulder. Yet, after striking Mr. Barnes in early February, Claimant still did not report any pain or any alleged injury for another month. Despite Claimant's prior immediate treatment following an injury in 2006, in this case Claimant did not make a report or see any medical provider for approximately two months following his alleged injury. As found above, Claimant did not report any alleged injury until the day he was terminated by Employer.

Although the evidence shows that at the time of Claimant's MRI in early April of 2014 he had an almost complete tear of his rotator cuff, the explanation by Claimant of when and where this occurred is not found credible or persuasive. Claimant has failed to link the tear shown on the MRI to the time and place limits of his employment or to an employment related activity. The ALJ concludes that the tear did not occur acutely on January 13, 2014 as the action by Claimant following this date are inconsistent with someone who has suffered an acute injury. Claimant has failed to show, more probably than not, that he suffered a work related injury on January 13, 2014.

ORDER

It is therefore ordered that:

1. Claimant has failed to meet his burden to show that he suffered a compensable work injury on January 13, 2014.

2. Claimant's claim for benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 3, 2015

/s/ Michelle E. Jones

_____

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

- Did Claimant prove by a preponderance of the evidence that she sustained an injury to her right arm, right shoulder, and cervical spine on March 19, 2014 that was proximately caused by the performance of service arising out of and in the course of employment?

- If Claimant proved she sustained a compensable injury, whether Claimant proved that she is entitled to an award of reasonable, necessary, and authorized medical benefits as a result of the alleged work injury.

- If Claimant proved she sustained a compensable injury, whether Claimant proved that she is entitled to an award of temporary total disability benefits from March 19, 2014 and continuing.

STIPULATION

The parties stipulated Claimant's average weekly wage was $423.97.

PROCEDURAL ISSUES

Maria Bravo acted as an interpreter for Claimant during the hearing. She was properly sworn at the beginning of the proceeding.

Claimant requested a sequestration order which the Court granted. A potential Employer witness was excluded from the courtroom.

Claimant's exhibits 1-21 and Respondents' exhibits A-F, excluding Bates Nos. 81-84 under Exhibit D, were admitted into evidence.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a laborer who began working for Employer, a temporary work company, on February 12, 2014. Claimant alleges she was injured on March 19, 2014, less than five weeks after she was hired.

2. Claimant's job on the date of alleged injury required her to take cake pops (small balls of cake) from a conveyer belt end point and transfer the pops to trays. The conveyer moved cake pops to a stationary table top landing in front of Claimant and other workers who loaded trays with the pops. Claimant testified that on the date of her alleged injury, two other women worked in the same space also transferring cake pops from the conveyer landing to the trays. Both other workers were away from the area

when Claimant was allegedly injured, and the alleged injury was unwitnessed.

3. Claimant's last day of work for Employer was March 19, 2014. She remained unemployed as of the hearing date.

CAUSATION

4. Claimant provided inconsistent versions of how she was allegedly injured on March 19, 2014. Initially, Claimant alleged her right upper extremity was compressed in the machine between the roller and the plate; the compression on her right forearm caused an injury in the form of a bruise slightly larger than a quarter in size. Claimant testified that she showed the bruise to co-workers and her supervisor. Employer's first report of injury is consistent with such an injury. In addition, after Claimant reported her injury to her supervisor, she spoke with a triage nurse who had Claimant treat the bruise with first aid and return to work.

5. Claimant later alleged her arm was trapped long enough to cause her to panic and try to free her arm from the machine using all of her bodily force. She claimed such force caused an injury to her right shoulder and cervical spine in addition to her right arm. Claimant variably testified her arm was stuck in the machine for "seconds" and her arm was caught for "an instant."

6. Video of the machine was submitted into evidence. It shows a regular back and forth motion of plates to the sides of the conveyor belt. When the machine moves to the tightest position, there is an opening of at least three or four inches. The machine then immediately opens wider. The entire cycle takes approximately one second.

7. There is a gap that widens and narrows as the belt moves back and forth. Only with great difficulty was Claimant able to describe what parts of the machine "trapped" her arm, causing what she describes as a crush or compression injury and a subsequent pulling injury to her right shoulder and neck.

8. The video demonstrates how it is possible for Claimant to have sustained a bruise on her forearm, if she put her hand in the machine in the space between the roller (that moves back and forth) and the side-rail of the machine.

9. Claimant was unable to explain how she became stuck or trapped in a machine that had a wide enough gap and fast enough movement to instantly release her hand even if her forearm was momentarily compressed.

10. Even if Claimant had the time to react to the machine closing by beginning to pull her arm away, the machine would be open and her hand would have been free by the time she started pulling.

11.

12. Claimant testified inconsistently at hearing about the onset of her alleged shoulder and neck injuries. One version was that she had immediate onset of shoulder and neck pain. For example, Claimant testified when the machine let her go, "that's when I felt all the pain." "When I pulled really hard was [when] I felt the pain all the way up to my ear." Claimant also testified "when I pulled my hand was when I felt the pain go up." "When I pulled my arm out of the machine, when I pulled against the machine so hard that's when I hurt myself."

13. However, later in her direct examination, Claimant testified to a second version: that her shoulder and neck pain came on two hours after the incident with the machine. She testified that she did not tell co-workers about her other injuries because she did not discover pain in her neck and shoulder area until approximately two hours after the alleged injury "because [her] arm had gotten – grown cold."

14. In addition, versions one and two of Claimant's hearing testimony were inconsistent with her third version that those symptoms did not develop until the next day. Claimant reported during her IME with Dr. Paz that her neck and shoulder symptoms developed "the day following" the alleged injury.

15. Claimant testified she told Dr. Paz her right upper extremity was trapped in the machine, and when the machine moved she was able to free herself from the machine. Dr. Paz performed Respondents' IME on June 9, 2014 and his report is dated July 7, 2014. He testified as an expert in occupational medicine at the hearing.

16. Claimant reported her alleged injury to her supervisor, Tito Texidor, within twenty to thirty minutes. His written statement indicated that Claimant complained of pain in her forearm and a bruise beginning on her forearm. She did not report any other pain to Mr. Texidor or to the triage nurse at MedCor who advised her by telephone to ice her forearm and take some pain medication. Mr. Texidor's written statement provided he sent Claimant home for the day to do so. His statement indicates that Claimant called back that day requesting to go to the hospital because the pain in her forearm was increasing. Again, nothing in Mr. Texidir's report indicates Claimant reported any injury other than a bruise on her forearm and pain in her forearm.

17. MedCor documented the call in a March 19, 2014 record. Claimant spoke about her complaint through an interpreter. Claimant said she put her arm into the machine, the machine moved, and her forearm was caught between the machine and a plate. Claimant reported 9/10 pain that restricted her activities, including movement of her thumb. MedCor documented Claimant was to use minor first aid on the bruise. Claimant called back through her son-in-law after work because her arm was "swollen and tingly." MedCor provided her with the designated provider information.

18. Claimant testified that later that afternoon she spoke with Michelle Donnel, Employer's safety manager, and reported, "I had a lot of pain in my arm; that it was hurting so bad and that it was hurting all the way to – to below my ear and my neck." While Ms. Donnel sent Claimant for medical treatment, when she completed Employer's First Report of Injury dated March 31, 2014, she reported that Claimant's injury was to her "lower arm" and did not mention Claimant's alleged report of pain extending from her forearm up to her ear.

19. Claimant was initially treated on March 20, 2014 by Dr. Lorenzo Ladwig at Aviation Occupational Medicine. Claimant reported that the machine had stopped when "she went to grab the pops" and "the machine suddenly started and caught her right forearm." Contrary to Dr. Ladwig's report, Claimant testified that she never said that the machine stopped and then started suddenly. Claimant reported pain in her neck radiating into her right shoulder and then into her right hand and fingers. She also reported tenderness on range of motion testing. A quarter size bruise was present. X-rays of Claimant's cervical spine, right shoulder, and right forearm were all negative for

acute changes. Thus, while Claimant had subjective reports of pain, the objective evidence was positive only for a small bruise.

20. Regardless of the objective evidence, Dr. Ladwig's report diagnosed cervical radiculopathy, lumbar radiculopathy, and "dorsal strain." However, it appears from Dr. Ludwig's handwritten notes that the actual diagnoses were cervical radiculopathy, right shoulder strain, and right forearm strain. The ALJ finds that Dr. Ladwig including inaccurate diagnoses on his report reflects poorly on his credibility and makes his reports less persuasive.

21. Based on his diagnoses, Dr. Ladwig's report concluded -- in quotation marks -- that based on the patient's history, mechanism of injury, and objective findings on examination, that it was his medical opinion that there is a greater than 51% probability that this is a work-related injury or condition. Dr. Ludwig prescribed anti inflammatories, muscle relaxants, and pain medications; he also restricted Claimant to no use of her right arm.

22. On March 27, 2014 Claimant had a follow-up exam with Dr. Hector Brignoni, also with Aviation Occupational Medicine. He noted that Claimant's symptoms had not improved despite being off work and on medications. Claimant testified at hearing that pain medications helped her, however her testimony is contradicted by Dr. Brignoni's account that she continued to report pain even while on pain medication. He referred Claimant to physical therapy and continued her restrictions.

23. On April 4, 2014 Claimant followed up with Dr. Brignoni again. He continued her temporary restriction of no right arm use and continued her medications. He noted that Claimant had pain magnification with only mild movement. He also continued to note that medications, not working, and physical therapy were not helping.

24. On April 8, 2014 Claimant followed up with Dr. Ladwig. She reported her pain level as 8/10 while on pain medication and that pain only lets her sleep for a couple of hours at a time. Dr. Ladwig continued her temporary restriction of no right arm use and continued her medications, despite Claimant's statements that they were not providing her with relief.

25. On April 16, 2014 Claimant returned for another follow up. She reported that she was not improving because she was not receiving physical therapy. She reported that her pain remained the same despite not working and medications which "only help for a little while."

26. Claimant's May 1, 2014 visit was the same – Claimant reported no change in her condition and that her pain medications only worked for short periods of time.

27. On May 28, 2014 Claimant reported to Dr. Brignoni that her cervical and right shoulder problems were "mostly gone" but that she was having pain radiating down to the palm of her hand. In contrast though, during a June 2, 2014 physical therapy session, Claimant reported increased pain in her right shoulder at a level of 9/10.

28. On June 4, 2014, Dr. Ladwig recommended an MRI of Claimant's cervical spine after her pain was "really high this weekend." Claimant reported she almost went to the emergency room for the pain.

29. On June 13, 2014 an MRI of Claimant's cervical spine was performed. It showed no evidence of an objective pain generator and no acute findings.

30. Dr. Ladwig discussed the MRI with Claimant on June 16, 2014. The results of the MRI were "essentially benign." Dr. Ladwig discussed Claimant's need for a physiatry referral and Claimant was sent to Dr. Franklin Shih.

31. In testimony, Claimant denied telling Dr. Ladwig that the machine stopped before she put her hand inside it. In her initial report to Dr. Ladwig, Claimant asserted the machine stopped, she put her hand into the machine, and then suddenly it restarted without warning trapping her hand. Again, the machine did not close sufficiently to trap Claimant's hand (which claimant asserts caused her to violently struggle to free herself, injuring her shoulder and neck). But Claimant's allegation the machine stopped and then started suddenly is abandoned in later medical records, including Dr. Paz's IME, and in Claimant's testimony. Claimant's story evolved after this initial report to Dr. Ladwig. This change in the "mechanism of injury" makes Dr. Ladwig's determination that Claimant sustained a work-related injury less reliable and less persuasive. He relies on a version of the story which Claimant denied at hearing. Dr. Ladwig never corrected the mechanism of injury in his reports to harmonize it with Claimant's revised mechanism of injury, as stated to Dr. Paz or as reported by Claimant in her testimony.

32. Dr. Shih, a physiatrist, evaluated Claimant for the first time on July 2, 2014. Claimant described her alleged injury as occurring when she reached across a sorting table when a sweeping device pinched her right hand. Claimant did not report to Dr. Shih that she pulled so hard to free her hand from the machine that she sustained right shoulder and neck injury. Instead, Claimant told Dr. Shih her "symptoms evolved" to encompass her "entire right upper extremity" with pain extending to her right upper trunk and neck area. In contrast, Claimant had told Drs. Ladwig and Dr. Brignoni she had cervical and shoulder complaints because she attempted to pull her trapped arm out of the machine.

33. Dr. Shih diagnosed claimant with a "non-specific" right upper extremity pain complex. Claimant had no acute distress. Claimant's cervical range of motion was "within functional limits." Palpation by Dr. Shih was remarkable for nonspecific tenderness in the upper trunk on the right. The tenderness was "diffuse and non-focal."

34. Dr. Shih noted that Claimant's history was remarkable for previous back injury and a laceration to her right elbow area.

35. Claimant's complaints "did not fall into a specific peripheral nerve or nerve root distribution." Dr. Shih concluded Claimant had a "relatively nonspecific examination." Claimant was given the options of trying to progress back to work, to try alternative treatments such as chiropractic or acupuncture, or to return to physical therapy. She chose acupuncture with Dr. Shih.

36. Regarding causation, Dr. Shih never stated Claimant's complaints were work-related. Instead, Dr. Shih left blank the boxes where he was asked to opine whether Claimant's symptoms were consistent with a work related injury. His characterization of the complaints as "nonspecific" is consistent with his finding that Claimant had "diffuse" pain complaints that followed "no specific nerve root or

distribution" pattern.

37. Dr. Shih again did not characterize Claimant's pain complaints as work related when he saw her on July 8, 2014. In that examination, Dr. Shih expressed his hope Claimant's examination would "become more focal."

38. Claimant's final appointment with Dr. Shih was on July 15, 2014. Again, Dr. Shih refused to state that objective findings were consistent with a "work related mechanism of injury."

39. On July 7, 2014, Dr. Mark Paz performed an independent medical examination at Respondents' request. Dr. Paz was asked to perform a causation analysis to determine whether Claimant's reported mechanism of injury was consistent with the complaints she alleges were caused by the mechanism of injury. Dr. Paz testified as an expert in occupational medicine.

40. Claimant had difficulty providing Dr. Paz with a history of her complaints and what may have caused them. Dr. Paz spent 53 minutes of his examination time gathering a history from Claimant.

41. Claimant's description of how the machine allegedly injured her was inconsistent with what Dr. Paz saw in the video showing the machine in operation. Claimant told Dr. Paz she was trapped in the machine. While a contusion could have resulted from Claimant putting her hand in the machine, Claimant told Dr. Paz she also developed right shoulder and neck pain.

42. Claimant told Dr. Paz the shoulder and neck pain did not develop until the day after the alleged injury.

43. Dr. Paz considered whether Claimant's description of the mechanism of alleged injury could have caused shoulder and neck problems. He concluded he could not. "For a causation analysis, you need both a mechanism of injury as well as a diagnosis. For the symptoms in the neck and the shoulder and . . . right arm, there is no medical diagnosis." While there may have been a contusion, the persistence of symptoms is not consistent with the natural progression of a contusion.

44. Diagnostic tests did not confirm the presence of an injury, according to Dr. Paz. Dr. Shih's evaluation demonstrated diffuse, non-specific complaints which are consistent with Dr. Paz's findings. "Given the information available [to Dr. Paz], there continues to be no medical diagnosis of the neck, shoulder, or distal right upper extremity [that] is consistent with an injury."

45. Dr. Paz opined that both a mechanism of injury and a medical diagnosis are required when conducting a causation analysis. Further, the mechanism of injury and diagnosis must be related. Dr. Paz stated it was improbable that Claimant sustained a compensable injury to the neck, right shoulder or right arm on March 19, 2014.

46. While it is possible Claimant may have sustained a contusion, it required first aid at most, not medical treatment. First aid is providing a band-aid or an ice pack. Claimant did not need medical treatment for any contusion.

47. Further, the machine's constant cycling from open to less open is

inconsistent with the trapping of a body part as Claimant reported to Dr. Paz. As observed in the video and as Dr. Paz testified, the machine would have fully opened by the time an individual would have realized the machine was in its least open capacity. There was not sufficient time for an individual to react and generate a pull on one's upper extremity before the machine cycled to its fully open position. Claimant's allegation that she injured her shoulder and neck by pulling at her trapped arm is not medically probable given a body's reaction time. Even if Claimant pulled her arm, there would have been no counterforce that would have created the energy [resistance] necessary to injure Claimant's body. Viewing the totality of the evidence, the ALJ finds it unlikely that Claimant could have been trapped for seconds in the machine. Rather, the ALJ finds it likely that the machine compressed Claimant's forearm for an instant and immediately began opening upon reaching its most closed position.

48. The ALJ finds Claimant to be a poor and inconsistent historian regarding the onset, extent, and cause of her alleged injuries, other than the bruise on her forearm, and does not credit her testimony.

49. Claimant failed to present evidence that establishes it is more likely than not that she sustained a compensable work related injury. At most, Claimant may have suffered a bruise on her forearm that did not require medical treatment or compensation benefits.

50. No objective test showed any acute injury requiring medical treatment.

51. Dr. Paz credibly and persuasively testified it is not medically probable that Claimant sustained a work related injury on March 19, 2014. Dr. Paz concluded the mechanism of injury would not have caused the symptoms Claimant reported. The Judge finds Dr. Paz's opinions related to causation to be more credible and persuasive than Dr. Ladwig's.

52. Dr. Paz testified consistently with his report. The ALJ finds Dr. Paz's testimony provided a credible and persuasive assessment that Claimant's self-described mechanism of injury would not cause a work related injury.

53. Dr. Ladwig's reports rely on a mechanism of injury Claimant abandoned in her testimony. To the extent that Dr. Ladwig was unaware of Claimant's inconsistent reports, the ALJ finds his conclusions to be less persuasive than those of Dr. Paz.

54. The ALJ finds it more likely true than not that Claimant's allegation of an injury on March 19, 2014 is not credible given the above findings of fact. Claimant's allegation of an injury while stacking cake pops is less likely true than not given the credible and persuasive medical evidence that Claimant's mechanism of injury would not cause her cervical, right shoulder and right arm complaints.

55. Claimant bears the burden of proving by a preponderance of the evidence that she sustained a compensable injury on March 19, 2014. The Judge finds that Claimant has not met this burden.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), §§8-40-101, *et seq.*, C.R.S. (2014), is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimant shoulders the burden of proving by a preponderance of the evidence that he/she sustained an injury arising out of and within the course of his/her employment. Section 8-41-301(1), C.R.S.; *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimant nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

The claimant was required to prove by a preponderance of the evidence that at the time of the injury she was performing service arising out of and in the course of the employment, and that the injury was proximately caused by the performance of such service. Section 8-41-301(1) (b) & (c), C.R.S.

The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the judge. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000).

As found, Claimant's hearing testimony was both internally inconsistent and inconsistent with information she provided to Dr. Paz. Dr. Paz's opinions regarding the mechanism of injury being unable to cause the injuries she claimed, combined with a lack of any objective findings of injury, cause the ALJ to conclude that Claimant did not sustain an injury on March 19, 2014. To the extent that Claimant suffered a bruise requiring minor first aid, the ALJ concludes that such bruise does not rise to the level of an injury requiring medical treatment as contemplated by statute. The ALJ concludes that based on the totality of the evidence, Claimant failed to meet her burden of proof.

In light of this determination the Judge need not reach the other issues.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the ALJ enters the following order:

1. Claimant's claim for workers' compensation benefits in WC 4-946-453-01 is denied.

DATED: February 23, 2015

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

The issues presented for determination are whether Claimant suffered a right knee injury in the course and scope of her employment on March 19, 2014; whether Claimant is entitled to medical benefits; and whether Claimant is entitled to temporary total disability (TTD) benefits commencing on March 21, 2014 and ongoing.

The parties stipulated that if the claim is compensable, the applicable average weekly wage is $985.37. The parties also stipulated that James Genuario, M.D., and Matthew Lugliani, M.D., are authorized treating physicians.

FINDINGS OF FACT

1. Claimant has been employed by Employer as a Customer Service Agent for the past 14 years. As a part of her work-related duties, Claimant is required to squat down to pick up luggage or put tags on luggage and other carry-on items on a regular basis.

2. On March 19, 2014, at approximately 10 a.m., Claimant squatted down to put a tag on a customer's stroller. While Claimant arose from the squatted position, she turned to speak to the customer that she was assisting. She felt a pop in her right knee that was followed immediately by severe pain and swelling. Claimant managed to continue working for two or three hours after the injury, but due to the severe pain she was experiencing she requested to perform her duties from a seated position, which is generally not permitted by Employer. Claimant was also able to work her scheduled shift on March 20, 2014, but she was in such severe pain that she was unable to stay and complete the mandatory overtime shift.

3. The Claimant had experienced some minor aches in her right knee before March 19, 2014, but she had never experienced any symptoms as severe as those she felt after the squatting incident.

4. On March 21, 2014, Claimant sought treatment for her right knee symptoms with James Genuario, M.D. at Steadman Hawkins Clinic. During her visit, the Claimant completed a patient history form in which she reported that her right knee pain had begun "about a month earlier" with swelling in her right knee. Dr. Genuario's note indicated that Claimant was experiencing catching and sharp stabbing pain with the knee giving way when she attempted to walk. Dr.

Genuario ordered a MRI of Claimant's right knee, and the MRI showed a grade III chondral fissure of the median patellar ridge and acute lateral edema.

5. On March 28, 2014 On March 28, 2014, Dr. Genuario's assistant, Jeremy Smith, PA, saw Claimant and discussed the results of Claimant's right knee MRI. Claimant's right knee MRI revealed some cartilage thinning in the medial patellar facet with mild edema and no evidence of meniscus tear. PA Smith indicated that he reviewed Claimant's medical history with Claimant and that there were no changes from the information contained in the chart on file. There is no mention in the report of a squatting injury on March 19, 2014.

6. When Claimant saw Dr. Genuario on March 31, 2014, Dr. Genuario reported that Claimant had noticed increasing symptoms with twisting activities at work. Dr. Genuario stated that if Claimant failed conservative measures, she would be a good candidate for right knee lateral release surgery. Dr. Genuario recommended that Claimant seek further medical treatment through the workers' compensation system.

7. Shortly thereafter, Claimant reported her injury to the Employer on April 2, 2014. She reported that she injured her right knee while bending down to tag a customer's stroller.

8. After Claimant reported the injury, the Employer referred the Claimant for medical treatment. Claimant elected to pursue treatment at Healthone.

9. On April 2, 2014, the Claimant first saw Matthew Lugliani, M.D. at Healthone. Claimant reported that she injured her right knee at work on March 19, 2014 when she bent down to put a tag on a stroller. After completing a physical examination of Claimant, Dr. Lugliani diagnosed Claimant with chondromalacia and knee pain, and noted that in his professional opinion there was greater than 50% medical probability that Claimant's injuries were causally and proximally related to the March 19, 2014 accident at work. Dr. Lugliani referred Claimant back to Dr. Genuario for further evaluation and treatment.

10. On April 14, 2014, Dr. Genuario diagnosed right knee patellofemoral syndrome. Dr. Genuario also who opined that Claimant's condition failed to improve with non-operative treatment, and recommended an arthroscopic debridement and lateral release, which Claimant underwent on May 9, 2014.

11. Claimant's preoperative diagnosis was acute chondral defect of the patella with patellofemoral pain syndrome. Dr. Genuario's pre-operative report stated that Claimant suffered an acute injury while at work when she lifted baggage.

12. During surgery, Dr. Genuario noted that the cartilage surrounding Claimant's chondral defect looked smooth and healthy, and that the bone exposed under Claimant's chondral defect did not look sclerotic, or hardened.

13. Dr. Genuario testified by deposition. He explained that patellofemoral pain syndrome is a generic term for pain in the patellofemoral joint, and that it can be caused by a number of different conditions. In Claimant's case, the patellofemoral pain syndrome was caused by the chondral defect in the cartilage of Claimant's right kneecap. There are two types of chondral defects, those caused by degenerative changes and those caused by an acute injury. When chondral defects are caused by degenerative changes, the cartilage surrounding the patella will appear broken down and cracked upon arthroscopic exam. When chondral defects are caused by an acute injury, the cartilage surrounding the defect will look smooth and healthy. Dr. Genuario opined that because the area surrounding Claimant's chondral defect appeared smooth and healthy upon arthroscopic exam, it is clear that Claimant's chondral defect was caused by an acute injury rather than by degenerative changes.

14. Dr. Genuario also testified that when bone is exposed for a prolonged period of time it will become sclerotic, or hardened. Upon arthroscopic exam, the bone under Claimant's chondral defect did not look sclerotic, but instead looked like fresh bone that had recently been exposed. Dr. Genuario felt that the fresh bone was indicative of an acute injury.

15. Dr. Genuario noted that the edema present on Claimant's March 21, 2014 MRI provides further evidence that Claimant suffered from an acute injury.

16. At the Respondents' request, Claimant was evaluated by Wallace K. Larson, M.D. on July 29, 2014. Claimant told Dr. Larson that she injured her right knee when she bent down to tag a stroller and that by the time she left work her pain was severe and brought her to tears the following day**.** Dr. Larson opined that Claimant had not likely suffered an acute trauma at work and that, instead, Claimant's symptoms were due to patellofemoral pain syndrome. Dr. Larson opined that Claimant's diagnosis was unrelated to work and Claimant's symptoms were the product or a naturally progressing pre-existing condition.

17. Both Dr. Larson and Dr. Genuario testified that patellofemoral pain syndrome can be caused by cartilage defects, leg muscle weakness/imbalance, and arthritis. Both Dr. Larson and Dr. Genuario testified that women are more prone to developing patellofemoral pain syndrome than are men because of the angle of their hip compared to the knee joint and that development of this syndrome may have a genetic component.

18. After he acknowledged that he recalled Claimant's testimony describing her job duties, Dr. Larson testified that Claimant's right knee

patellofemoral syndrome was not caused by Claimant's work duties or the squatting event of March 19, 2014. When he was directed to WCRP 17, Exhibit 6 of the Medical Treatment Guidelines, Dr. Larson testified that the factors set forth for in the guidelines for determining the occupational relatedness of patellofemoral pain syndrome were not sufficiently present in Claimant's employment to establish an occupational relationship between Claimant's patellofemoral syndrome and her work.

19. Dr. Genuario opined that Claimant suffered an acute injury to her right knee because during surgery, he visualized a focal chondral defect where the damaged cartilage flap was still attached and surrounding cartilage was smooth and non-sclerotic**.** Dr. Genuario stated that right knee swelling prior to March 19, 2014 might be indicative of ongoing cartilage wear.

20. According to Dr. Larson, the occurrence of a focal chondral defect in Claimant's right knee does not establish that Claimant suffered a traumatic injury. Dr. Larson agreed that trauma can, in fact, cause a focal chondral defect but that the trauma would likely be in the nature of a dislocation of the patella or knee cap caused by an impact. Dr. Larson testified that Claimant's alleged injury of March 19, 2014 did not involve that kind of trauma. Dr. Larson opined that progressive degenerative changes associated with anatomic variation, unrelated to trauma, could account for the chondral defect in Claimant's right knee. Dr. Larson noted that the anatomy in Claimant's right knee is probably similar, if not identical, to the anatomy in Claimant's left knee, and Claimant suffered, previously, from patellofemoral pain syndrome in the left knee with cartilage involvement.

21. In June 2012, Claimant suffered an injury to her left knee when a piece of luggage struck her in the knee. Claimant's diagnosis for the injury was left patellofemoral pain syndrome. Claimant had lateral release surgery to her left knee on August 20, 2012.

22. Dr. Larson testified that if Claimant had suffered a dislocated knee cap that might constitute a traumatic explanation for the focal chondral defect in her right knee, Claimant would have, likely, experienced significant pain and would be certain that something serious had occurred in her right knee.

23. Dr. Larson also testified that healthy cartilage that is not suffering from degenerative changes usually looks smooth, and that it is possible to see hardening, or sclerosis, of a bone upon arthroscopic exam. However, Dr. Larson stated that in his opinion, this evidence is not enough to definitively state that Claimant suffered from an acute injury, and that even if she did, the findings do not necessarily pinpoint the exact date that the injury occurred. Because Dr. Larson believes that a dislocation of the knee is the most typical way in which an acute chondral defect is created, he refused to acknowledge that Claimant's

squatting and twisting motion on March 19, 2014 could be the mechanism of injury in this case.

24. Dr. Larson opined that Claimant suffered from a pre-existing condition in her right knee that was not aggravated by her work duties. Dr. Larson opined that Claimant suffers from an anatomical variation in both of her knees that predisposes her to patellofemoral pain syndrome and chondral defects. At hearing, Dr. Larson opined that in order for Claimant to have suffered an aggravation of a pre-existing condition, she must suffer a permanent change in her symptoms or a structural change to the injured body part. Dr. Larson's opinion concerning the standard for aggravation of a pre-existing condition is incorrect. Nevertheless, the Claimant did sustain a permanent change in her symptoms in that her symptoms were significantly worsened as a result of the squatting incident on March 19, 2014, such that she required surgery.

25. Claimant testified that in order to perform her work related duties for Employer she must squat down at least 30 times throughout each shift. At home, Claimant squats down very infrequently, and she does not engage in any sports or hobbies outside of work that require squatting on a regular basis.

26. Claimant testified that for approximately one month prior to March 19, 2014, she occasionally experienced minor aches, pains, and swelling in her right knee. However, prior to March 19, 2014, Claimant never experienced pain or swelling in her right knee that kept her from performing activities of daily living or made it difficult to perform her work-related duties. Claimant never sought medical treatment for her right knee prior to March 19, 2014, nor did she mention problems with her right knee to the medical providers that she was seeing for unrelated issues. This testimony is supported by medical records from Concentra Medical Center and Denver Vail Orthopedics for 2012 and 2013 that do not show any complaints or treatment for Claimant's right knee.

27. Claimant testified that she has no experience, knowledge, or training regarding how preexisting conditions are treated under the Colorado workers' compensation system. Given that Claimant was experiencing light aches, pains, and swelling in her knee for the month leading up to the March 19, 2014 injury, Claimant assumed that she could not report her injury as work-related, so she sought treatment on her own from Dr. Genuario. It was not until March 31, 2014, when Dr. Genuario informed her that her right knee injuries were caused by an acute injury at work, that Claimant knew she needed to report her injury to Employer.

28. Claimant testified regarding the questionnaire that she completed during her first appointment at Dr. Genuario's office on March 21, 2014. Claimant explained that in response to the question regarding when her problem started, she responded that her knee became swollen a month ago, and also put a question mark next to the question that asked if her injury was work related,

because she was not sure whether the mild swelling in the weeks leading up to March 19, 2014 was related to the sudden onset of severe right knee pain and swelling that she experienced on March 19, 2014 or not.

29. Claimant has been under work restrictions from Dr. Genuario since her first appointment with him on March 21, 2014, and that at her first appointment with Dr. Lugliani on April 2, 2014, Dr. Lugliani retroactively assigned work restrictions to Claimant that date back to her date of injury.

30. At the time of the hearing in this matter, Claimant had not worked for the Employer since March 20, 2014, and that she had not yet been released to return to work. Upon reporting her injury to the Employer, Employer told her that that they would not accommodate her work restrictions.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge enters the following conclusions of law:

General Legal Principles

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

Compensability

4. A claimant must prove by a preponderance of the evidence that his injury arose out of the course and scope of his employment with employer. Section 8-41-301(1)(b), C.R.S.; *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). An injury occurs "in the course of" employment where claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arise out of " requirement is narrower and requires claimant to show a causal connection between the employment and injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. *See id.*

5. An industrial aggravation of a preexisting medical condition can result in a compensable injury as long as the aggravation is the proximate cause of the need for treatment. *H&H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990). However, when a claimant experiences symptoms while at work it is for the ALJ to determine whether subsequent need for treatment was caused by an industrial aggravation of a pre-existing condition or by the natural progression of the pre-existing condition. The mere experience of symptoms at work does not necessarily require a finding that the employment aggravated or accelerated the pre-existing condition. Resolution of that issue is also one of fact for the ALJ. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985).

6. The Claimant has proven that she sustained an injury to her right knee while in the course and scope of her employment. The Claimant had experienced only mild symptoms in her right knee in the past. After the March 19, 2014 work incident, the Claimant had significant symptoms that required treatment including surgery. The ALJ credits the opinions of Drs. Genuario and Lugliani over those of Dr. Larson. As the Claimant's surgeon, Dr. Genuario credibly explained that during the surgery he performed on Claimant's right knee, he visualized various structures in Claimant's knee that led him to conclude she suffered an acute injury. Even if Claimant did not suffer an acute injury, the credible and persuasive evidence reflects that Claimant suffered an aggravation or exacerbation of any pre-existing condition. Claimant was able to work full duty prior to March 19, 2014, and had only experienced mild symptoms in her knee before that day. After the squatting and twisting incident of March 19, 2014, Claimant required surgery. Dr. Larson's opinion that a claimant must suffer a permanent change in her symptoms or a structural change to the injured body part in order to establish a compensable aggravation of a pre-existing condition is inaccurate. Regardless, the Claimant did suffer a permanent change in her symptoms or a structural change to the injured body part in that after March 19, 2014, her symptoms became so severe that she could no longer work and she required medical treatment including surgery. The Claimant is, therefore, entitled to benefits under the Workers' Compensation Act for her right knee injury.

Medical Benefits

7. A claimant is entitled to authorized medical treatment that is reasonable and necessary to cure and relieve the effects of the injury. § 8-42-101(1)(a), C.R.S.; *Yeck v. Industrial Claims Appeals Office,* 996 P.2d 228 (Colo.App. 1999). A claimant bears the burden to prove by a preponderance of the evidence the causal relationship between the work-related injury and the condition for which treatment is sought. *Snyder v. Industrial Claims Appeals Office,* 942 P.2d 1337 (Colo. App. 1997).

8. The Claimant has proven entitlement to medical treatment to cure and relieve her of the effects of her right knee injury, including treatment she has already received at Healthone with Dr. Lugliani, and with Dr. Genuario. The treatment Claimant thus far received is reasonable, necessary and related to her work injury. Per the stipulation of the parties, Dr. Lugliani and Dr. Genuario authorized treating providers although Dr. Genuario did not become an authorized provider until after Dr. Lugliani referred the Claimant back to him on April 2, 2014.

Temporary Total Disability Benefits

9. To prove entitlement to temporary total disability benefits, a claimant must prove the industrial injury caused a "disability." § 8-42-103(1), C.R.S.; *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability" connotes two elements. The first is "medical incapacity," which is evidenced by loss or impairment of bodily function. The second is temporary loss of earning capacity, which is evidenced by the claimant's inability to perform his pre-injury full duty job. *Culver v. Ace Electric,* 971 P.2d 641 (Colo. 1999). Whether the claimant has proved a disability is a question of fact for the ALJ. *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo.App. 1997).

10. Claimant has not worked since March 21, 2014. Dr. Genuario and Dr. Lugliani imposed work restrictions dating back to the date of injury that prevented Claimant from performing her normal job duties as a customer service agent for the Employer. Claimant testified that Employer indicated they would not accommodate her restrictions. The Claimant has suffered a disability that prevented her from performing her normal job duties. Accordingly, the Claimant is entitled to TTD at the stipulated average weekly wage commencing on March 21, 2014 and ongoing until terminated pursuant to law.

ORDER

1. Claimant suffered a compensable injury while working for Employer on March 19, 2014, and therefore, is entitled to benefits and compensation.

2. Respondents are responsible for the medical treatment Claimant received from Healthone Occupational Medicine and for the medical treatment Claimant received from Steadman Hawkins Clinic after Dr. Lugliani's April 2, 2014 referral, including Claimant's May 9, 2014 surgery.

3. Respondents shall pay for ongoing reasonable and necessary medical treatment needed to cure and relieve the effects of the March 19, 2014 injury.

4. Respondents shall pay Claimant temporary total disability benefits from March 21, 2014 and ongoing until terminable by law. The disability benefits will be calculated based on the average weekly wage of $985.37.

5. Respondents shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

6. All other issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. ISSUES

- Whether claimant has proven by a preponderance of the evidence that she sustained a compensable occupational disease to her left elbow arising out of and in the course of her employment with employer?

- The parties stipulated prior to the hearing that if claimant does prove a compensable occupational disease, respondents would be liable for the reasonable and necessary medical mileage pursuant to the Colorado Medical Fee schedule.

FINDINGS OF FACT

1. Claimant is employed with employer as a student information systems specialist. Claimant testified her job duties include data entry involving a computer keyboard. Claimant testified at hearing that she generally works 40 hours per week, but has a busy period from August to November when she works 50 to 60 hours per week and is constantly keyboarding. Claimant testified that she is in charge of overseeing 15-20 data bases and keeping the information updated and that her work load increases at the beginning of each school year requiring her to be constantly keyboarding while at work.

2. Claimant testified at hearing that she has noticed 2 years ago during her busy period that symptoms develop in her left elbow. Claimant testified she reported the symptoms to her physician and received a cortisone shot in her left elbow. Claimant testified that the cortisone shot provided her with relief for approximately 6-7 months.

3. Claimant was seen by Dr. Salmen on January 12, 2012. Claimant was diagnosed with lateral epicondyliits of the left elbow. Claimant was provided with a cortisone shot and instructed to stretch hourly at work. Claimant testified her pain returned again in the fall with her increased hours and constant data entry. Claimant testified she reported her symptoms to her employer and her employer sent her back to the doctor.

4. According to the medical records, claimant returned to Dr. Salmen on December 21, 2012, after another busy season, and was again complaining of left lateral epicondylitis and extensor tendonosis symptoms. Dr. Salmen noted that claimant's symptoms were related to her intensive daily keyboard activity at work. Dr. Salmen again performed a cortisone injection and recommended physical therapy and work restrictions.

5. Claimant returned to Dr. Salmen on January 22, 2013 and reported that her symptoms had markedly improved. Dr. Salmen recommended claimant continue physical therapy. Claimant was re-evaluated by Dr. Salment on February 25, 2013 and was placed at MMI. Claimant testified at hearing that after the cortisone injection, her symptoms again receded for another 6-7 months.

6. Claimant testified that in August 2013, claimant had another extremely busy work month. Claimant testified her symptoms in her left elbow again returned and were far worse this time. Claimant testified she reported the injury to her employer and they again sent her back to the doctor.

7. Claimant was examined by Dr. Salmen on February 3, 2014. Dr. Salmen noted that this was claimant's third annual episode and opined that claimant's condition was related to her work with employer. Dr. Salmen again diagnosed claimant with left elbow epicondylitis and referred claimant to Dr. Golden for evaluation.

8. Claimant was examined by Dr. Golden on February 12, 2014. Dr. Golden noted claimant's ongoing complaints of left chronic tennis elbow that had been treated with 2 elbow injections and 2 courses of physical therapy. Dr. Golden noted that because this was claimant's third recurrence that she was recommending a different course of treatment. Dr. Golden recommended claimant undergo a PRP injection. Claimant testified at hearing that the PRP injection relieved her symptoms.

9. Claimant testified that in the Fall of 2013, her symptoms worsened, then got a bit better when she was off of work for 3 weeks. Claimant testified that her symptoms again returned after her three weeks off when she returned in December 2013.

10. Claimant testified her claim was then denied and she was not allowed to finish her physical therapy. Claimant testified she did not follow up with her doctor appointments because she advised by insurer that her claim was denied.

11. Respondents had Mr. Van Iderstine perform a job site analysis April 11, 2014. Mr. Van Iderstine issued a report dated May 19, 2014 and indicated claimant reported she typically worked from 7:30 a.m. until 5:30 p.m. form Monday through Thursday and 8:00 a.m. until 12:00 p.m. on Friday. Mr. Van Iderstine reported that claimant's workstation was redesigned approximately 2 years ago after insurer provided an occupational therapist to ergonomically reconstruct the work station. Mr. Van Iderstine reported that claimant typically spent 2/3 of her day keyboarding with the remaining time utilizing her mouse. The report also mentions tripad use by claimant. The ALJ finds that the reference to "tripad" use refers to a track pad claimant testified she used instead of a mouse.

12. Following the job site analysis, respondents had Dr. Sollender perform a physician advisory opinion on June 25, 2014. Dr. Sollender opined that the jobs demands analysis identified the presence of the only risk factor of computer work listed

as “7 hours of keyboard and tripad use.” Dr. Sollender noted this was an insufficient job site analysis.

13. Mr. Van Iderstine issued an addendum to the job analysis narrative on June 27, 2014 that indicated that claimant’s job duties require 7 hours of daily keyboarding and utilization of a tripad instead of using a mouse. Mr. Van Iderstine indicated that the specific breakdown was 4.7 hours keyboarding and 2.3 hours per day of tripad use.

14. Claimant testified that the job site analysis was not performed during her busy season and testified that she disagreed with some conclusions in the job site analysis. Claimant testified that she worked 10 your days during the fall and felt the amount of time on the keyboard was underestimated. The ALJ finds claimant’s testimony in this regard to be credible and persuasive.

15. Dr. Sollender issued another physician advisory opinion on July 9, 2014. Dr. Sollender reviewed the June 25, 2014 addendum and opined that the claimant’s job did not have the presence of any risk factor and therefore, claimant’s claims for injuries related to her occupation were unfounded.

16. Dr. Sollender subsequently performed an independent medical examination (“IME”) of claimant on October 28, 2014. Dr. Sollender issued a report in connection with his IME dated November 26, 2014. Claimant reported to Dr. Sollender during the IME that she works 10 hour days from August through November and during which all she does is “push and pull data on her computer”. Dr. Sollender noted that claimant reported she only does typing with her left hand and estimated that 95% of her work was performed on her computer. Dr. Sollender noted that in reviewing her records from her busy time from August 1, 2013 to November, there were numerous days with work hours of 10, 11 and up to 12 hours per day.

17. Dr. Sollender indicated in his report that he remained uncertain as to if claimant’s work was the cause of her condition because of discrepancies between claimant’s report versus the vocational expert report. Dr. Sollender noted that each would result in mutually different results. Dr. Sollender concluded that if you credited the vocational report, claimant’s condition was not caused by her work based on an analysis of the Colorado Medical Treatment Guidelines set forth by the Division of Workers’ Compensation. Dr. Sollender effectively concluded that if the vocational report is accurate, claimant’s time spent keyboarding is insufficient to cause her condition.

18. Dr. Sollender noted, however, that if you credited claimant’s report of her work activities as accurate, claimant would meet the exposure requirements to make her work a primary risk factor in causing her lateral epicondylitis. Dr. Sollender noted that this decision as to which report of work activities is accurate would be left up to a decision in the hearing involving the compensable nature of claimant’s condition.

19. The ALJ credits the testimony of claimant and determines that her report of her work activities during her busy period of August through November is an accurate description of her work with employer. The ALJ rejects the findings in the job site analysis as being less credible that claimant's testimony. The ALJ notes that the job site analysis was performed during a period of time in which claimant's work was not as busy. The ALJ further notes that Dr. Sollender indicated in his IME report that the issue of compensability in this case came down to which set of data is determined to be most accurate regarding claimant's work activities. In this regard, the ALJ finds claimant's description of her work activities to be more credible and persuasive that the Job Analysis Report.

20. The ALJ concludes that claimant has proven that it is more likely than not that her left lateral epicondylitis is a compensable occupational disease arising out of and in the course of her employment with employer. The ALJ credits the testimony of claimant regarding her work duties along with the opinions of Dr. Salmen, Dr. Golden and Dr. Sollender in coming to this conclusion.

21. The ALJ further credits claimant's testimony that her symptoms increase with her busy season each year as credible and persuasive. The ALJ notes that claimant's testimony in this regard is supported by the medical records, including the records from Dr. Salmen dated December 21, 2012 and February 25, 2013. The ALJ also credits claimant's testimony that her condition improved after taking three weeks off while her symptoms returned when she came back to work in December 2013 as credible evidence that her lateral epicondylitis is related to her work with employer.

22. Respondents shall pay for the medical mileage for the February 3, 2014 medical appointment with Dr. Salmen and the February 12, 2014 evaluation with Dr. Golden pursuant to the Colorado Medical Fee Schedule set forth by the Division of Workers' Compensation.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2006. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with "a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

4. The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation*, 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by Section 8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

5. As found, claimant has proven by a preponderance of the evidence that she suffered an occupational disease arising out of and in the course of her employment as a result of her data entry and keyboarding. As found, the opinions expressed by Dr. Salmen and Dr. Sollender are credible and persuasive regarding the relatedness of claimant's left elbow epicondylitis to her work with employer. As found, claimant's testimony regarding her work duties is found to be more credible and persuasive than the Job Analysis Reports provided by Mr. Van Iderstine.

6. As found, pursuant to the stipulation of the parties, respondents shall pay for the reasonable and necessary medical mileage for the February 3, 2014 appointment with Dr. Salmen and the reasonable and necessary medical mileage for

the February 12, 2014 medical appointment with Dr. Golden pursuant to the Colorado Medical Fee Schedule.

ORDER

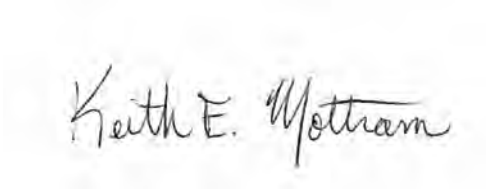
It is therefore ordered that:

1. Respondents shall pay for the reasonable and necessary medical mileage pursuant to the Colorado Medical Fee Schedule for the medical appointment with Dr. Salmen on February 3, 2014and Dr. Golden on February 12, 2014.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 6, 2015



Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-949-727-02

ISSUES

- Did Claimant prove by a preponderance of the evidence that she sustained an injury on May 8, 2014 that was proximately caused by the performance of service arising out of and in the course of employment?

- If Claimant proved she sustained a compensable injury, whether Claimant proved that she is entitled to an award of reasonable, necessary, and authorized medical benefits as a result of the alleged work injury.

- If Claimant proved she sustained a compensable injury, whether Claimant proved that she is entitled to an award of temporary total disability benefits from May 9, 2014 and continuing.

STIPULATION

The parties stipulated Claimant's average weekly wage was $281.80.

PROCEDURAL ISSUES

Claimant requested a sequestration order. Fact witnesses for the employer, with the exception of an advisory witness, were excluded from the courtroom. Dr. D'Angelo, an expert witness called by Respondents, remained in the courtroom for the testimony of the fact witnesses.

Respondents took the evidentiary deposition of Carol Hulse, Business Manager for Employer. The transcript of Ms. Hulse's evidentiary deposition was received by the Court and admitted into evidence.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

Braking Incident

1. Claimant has worked as a school bus driver for Employer since 2006.

2. Claimant alleges she injured her neck while driving her morning route on May 8, 2014. Claimant was stopped at Colfax. When she began to proceed slowly into the intersection, Claimant applied the bus's brakes to avoid a vehicle with the right-of-way. There was no collision. Claimant alleges the application of brakes caused her to have neck pain, headaches and left arm numbness.

3. Claimant described her stopping the bus as slamming on the brakes of the bus to avoid the vehicle on Colfax. Claimant testified she was looking to the right when

she slammed on the brakes; she felt like the braking caused her to go "forward and backwards." Claimant testified she was upset and wanted to make sure the passengers in the bus were okay. She radioed her manager and asked that she meet her at the bus.

4. Claimant testified she became nauseated, developed a headache and "a little ways down the line [her] neck started hurting." Claimant testified she was almost "in shock."

5. Claimant prepared a statement of what happened on May 8, 2014 for Employer. Claimant reported she "had to put the brakes on very hard to keep from having an accident." Claimant described the stop was hard enough to "[throw] me forward and backwards."

6. Ms. Overholser, a paraprofessional who helped a special needs student on the bus, testified the bus was stopped at the stop sign. Claimant began pulling away from the stop sign when another vehicle was approaching the intersection. Claimant "pressed on the brakes." The vehicle went by and the bus proceeded through the intersection.

7. Ms. Overholser testified Claimant's pressing on the brakes created a "little bit of a jolt, there was motion, but nothing too strong or hard." Ms. Overholser did not believe anyone on the bus sustained an injury when Claimant stopped the bus at the Colfax intersection.

8. Claimant testified that the special needs student went to the hospital later in the day. However, Ms. Overholser checked on the student and did not believe she sustained any injury as a result of Claimant applying the brakes.

9. Employer maintains three cameras on the bus Claimant drove. Video from the bus shows the interior of the bus from three views: Claimant in her seat as she drives, the front section of the bus, and the rear of the bus. Respondents' F, BN 175A is the 59 minute copy of the video from the bus on the morning of May 8, 2014. Claimant testified the actions around the 51:27 mark show the stop that allegedly caused her cervical spine injury.

10. The video depicts absolutely no movement in Claimant's upper body, much less any whiplash type of movement, when she applies the brakes. It does not even appear that the braking was sufficient to cause Claimant's shoulder restraint to tighten. While the video does show students sliding somewhat forward in their seats, no one on the bus appeared to sustain any injury. The video does not show Claimant being thrown forward and backwards in her seat. Rather, it depicts the bus accelerating slowly from the stop and then Claimant applying the brakes with no resulting movement in her body. The video shows no movement of Claimant's cervical spine. Claimant's neck remains rigid.

11. Braking and forces associated with braking appear on the video. But the braking is not violent or severe. Claimant brakes, then immediately looks left and right with no apparent restricted range of motion. She looks up with no apparent restricted range of motion and asks if everyone is okay. She proceeds with the route. She opens and closes the door. She continues to look up at her mirror and to talk to occupants of

the bus. Claimant does not demonstrate any behaviors that would indicate she sustained a neck injury. The video depicts no sign that Claimant is in pain. There is no sign of a headache or nausea. At 57:41, Claimant places her left hand on the left side of her neck, but she does not rub or massage her neck, and she drops her hand seconds later. She continues driving and moving her head freely left, right, up and down.

12. Although Claimant does not move in the video, she points to the two students riding in the front seat of the bus as evidence of the force caused by Claimant's braking. The students appear to be sleeping in the video with their feet up on the seats. As Claimant applies the brakes, they slide forward on their seats and wake up. They do not appear to be injured in any way and they are not thrown off of their seats.

13. Video of Claimant's alleged injury is wholly inconsistent with her statements to Employer and treatment providers that she was thrown forward and backward.

14. Claimant's description of what happened to her on May 8, 2014 on the bus is not credible or persuasive when compared to the video of the alleged injury and the testimony of Ms. Overholser, and Dr. D'Angelo below.

15. Respondents denied liability for the alleged injury. Claimant has preexisting degeneration in her cervical spine. Her cervical spine was treated regularly, along with her back, by a chiropractor. Diagnostic studies are consistent with pain from degenerative disc disease, not any acute injury. Video of the alleged injury does not support Claimant's allegation of injury.

16. David Spiller, Employer's information technology director, and Lora Blake, the transportation director, testified the video of the alleged injury was taken from the bus after Claimant reported she was hurt. The video was copied and the original was placed in a safe. The video is contained on a removable hard drive. Mr. Spiller testified there are no gaps on the video.

17. Ms. Blake, Claimant's supervisor, testified Claimant called her on the radio on May 8, 2014. Claimant indicated she had to step on the brakes hard and wanted Ms. Blake to meet her to check on the students. Claimant had asked if all of the kids were okay and they stated they were. When the bus reached the school, Ms. Blake and Claimant talked to the students and they all said they were okay.

18. Claimant came into Ms. Blake's office after finishing unloading the students. Ms. Blake asked if she needed medical treatment. Claimant did not want to travel into Denver. Ms. Blake offered to take her to a clinic in Strasburg. Claimant initially refused treatment but went back into the office a few minutes later and said she wanted treatment because her husband said she should be checked out. Ms. Blake suggested if the stop were severe enough to cause her to be treated; Claimant should call the mother of the special needs child on the bus. Claimant called the mother while Ms. Blake called Ms. Hulse, the business manager for the school, to arrange Claimant's treatment.

19. Ms. Blake reviewed the video with Mr. Spiller after the video was removed

from the bus.

20. Carol Hulse, business manager for the school district, testified via evidentiary deposition on January 15, 2015 that she took a history from Claimant on May 9, 2014. Claimant told Ms. Hulse "she had to slam on the brakes to avoid hitting a car . . . [*The] force from braking the bus was so hard that it had thrown her into the steering wheel, and then back into the back of the seat*." Video from the alleged injury does not show Claimant being thrown into the steering wheel and then back into the seat. Claimant's statements are not consistent with what is seen on video.

Medical Treatment

21. Employer provided Claimant with immediate medical attention.

22. Ms. Hulse's assistant, Teri Boon, took Claimant to Plains Medical Center on the morning of May 8, 2014.

23. Claimant told Dr. DeBuck at Plains Medical Center that braking caused her head to move forward and backwards. "Driving bus this morning had to apply brakes really hard. Went forward and back hard in seat." "Patient presents for neck pain following slamming on her school bus brakes very hard, flying forward and then back very hard." In the narrative report from Plains Medical Center, Claimant reported: "She was at a stop sign and went to accelerate but saw a car coming and had to slam on the brakes and her head went forward and backwards." The provider at Plains Medical Center described the injury as a "whiplash injury." On a July 22, 2014, medical report, Claimant's alleged injury was described as a "whiplash." On August 5, 2014, Claimant's description of injury was "slammed brakes on school bus – whiplash."

24. Claimant reported to Dr. Knight at Denver-Vail Orthopedics that she had to suddenly apply the brakes very hard. Dr. Knight described the alleged injury as a "Whiplash."

25. Claimant also reported a whiplash injury to her physical therapist at Pro Active physical therapy. "Patient slammed brakes hard, felt like whiplash." Claimant's description of the injury led her physical therapist to describe Claimant as presenting with "whiplash like symptoms."

26. Claimant's description of a whiplash injury led her medical providers to believe Claimant sustained a whiplash – from her head violently moving forward and back. They treated her for whiplash. Kathleen D'Angelo, M.D., Respondents' IME, credibly testified Claimant's head movement on May 8, 2014 is inconsistent with whiplash. Dr. D'Angelo credibly and persuasively testified the video of the alleged injury is inconsistent with the development of any work related condition. Claimant has preexisting osteoarthritis. She treated for this osteoarthritis for years. While she denies treatment for the neck after 2002, the records from her chiropractor demonstrate Claimant was in active treatment for her cervical spine through at least August 2011.

27. Contrary to Claimant's testimony that her neck pain developed "a little ways down the line," she told Plains Medical Center that she had "immediate pain in the neck." She also told Dr. D'Angelo she had immediate neck pain after the stop.

Respondent's Independent Medical Examination

28. On August 18, 2014 Claimant was examined by Dr. D'Angelo at Respondents request for an independent medical evaluation. Dr. D'Angelo testified at hearing as an expert in occupational and internal medicine.

29. Dr. D'Angelo asked Claimant to describe the mechanism of alleged injury. Claimant reported, "I had to put the brakes on very hard to stop, so we would not get hit. The seat belt tightened across my shoulder [and] it threw students out of their seats. I felt like I was moved back and forth." "I saw just out of the corner of my eye . . . I saw a blue van so I slammed, I . . . I, mean slammed the brakes on."

30. Dr. D'Angelo reviewed the video of the alleged injury and compared it with Claimant's description of the alleged injury. Whiplash, according to Dr. D'Angelo, "involves the forceful forward and then back motion of the neck." What Dr. D'Angelo saw on the video was not whiplash. "I didn't see movement of the head," Dr. D'Angelo testified.

31. Dr. D'Angelo stated she could not correlate the complaints Claimant associates with driving the bus on May 8, 2014 with what was seen in the video.

32. According to Dr. D'Angelo, Claimant has degenerative spine disease. An MRI shows Claimant has disc bulges, sclerosis and spondylosis in her cervical spine which correlate with Claimant's prior examinations, including chiropractic records and Department of Transportation exams.

33. At almost every visit prior to August 2011, Claimant's chiropractor indicated Claimant "had tenderness to her cervical spine," or had some procedure, treatment plan, or complaint associated with her cervical spine.

34. Dr. D'Angelo noted Claimant has osteoarthritis throughout her spine.

35. Dr. D'Angelo reviewed the mechanism of injury as described by Claimant and compared it with what she saw on video.

> Also, of interest, was the discrepancy between the patient's account of the severity of the incident and the video recording I was able to view of the patient during the time of the alleged incident . . . The incident was very brief . . . Of significance, [Claimant] did not appear to be jostled at all during the actual incident and for the remainder of the video was moving her neck and head normally and without apparent discomfort except for one brief moment when [Claimant] turned to the left to look at traffic after which she reached for her left neck area. Following this, she continued to drive, turn her head, and look into the mirror to view the passengers, to whom she was talking."

36. Dr. D'Angelo continued: "At no time during the video did [Claimant] or any of the passengers appear to be in distress. Following the incident, the children and the paraprofessionals were seen laughing and smiling . . . . .[Claimant] does not appear to be in any discomfort except for that one brief moment during which she reached for her neck. . . [Claimant] reported that she had to slam her brakes on the school bus very hard, playing forward and then backwards very hard, and had resultant neck pain. As

mentioned previously, this was not appreciated on video."

37. As part of her causation analysis, Dr. D'Angelo next determined the diagnosis she would apply to Claimant's complaints and findings. Dr. D'Angelo determined Claimant has osteoarthritis in the cervical and thoracic spine. Claimant has had headaches and left arm numbness for many years. Claimant had no work related diagnosis.

38. The final step of Dr. D'Angelo's causation analysis was to determine whether there was any correlation between Claimant's diagnosis and the mechanism of injury. Dr. D'Angelo testified, "Clearly in this video I do not see a mechanism of injury."

39. Dr. D'Angelo opined within medical probability that Claimant "did not suffer a cervical strain or cervical neck injury as a result of applying her brakes abruptly on May 8, 2014." Dr. D'Angelo continued: "In viewing video documentation of the incident, [Claimant] was not jostled or moved in anyway. Furthermore, the motion of the passengers suggests this was not a severe event. The passengers did not appear to be in any distress during or after the incident." Dr. D'Angelo could not see any indication why any person on the bus would have been injured as a result of the stop.

40. Claimant's osteoarthritis is not linked to her occupation. Claimant's degenerative changes are related to osteoarthritis. Claimant had "identical complaints following her 1990 fall at work."

41. Claimant's osteoarthritis was symptomatic prior to the alleged injury on May 8, 2014. Claimant's report of neck pain, headaches and left arm numbness predate the alleged injury.

42. Dr. D'Angelo asked Claimant about her prior history of neck problems. Claimant initially told Dr. D'Angelo that treatment she received from her chiropractor prior to the alleged injury was for her back, not her neck. Review of the records show the treatment by Cooper Chiropractic clearly included treatment of the neck and complaints of headaches with left arm numbness.

43. After Dr. D'Angelo showed Claimant the prior records documenting neck, left arm, and headache complaints prior to the alleged May 8, 2014 injury, Claimant conceded she did have neck problems before, but they went away in after 1992. Dr. D'Angelo opined the records do not support Claimant's contention that the neck problems went away in 1992. In fact, the last chiropractic record from August 19, 2011 showed Claimant was treated for neck pain.

44. Claimant admitted to Dr. D'Angelo that her left arm numbness has been a problem since she fell in 1990. Claimant reports a neck injury in 1990 when a chair rolled out from underneath her. Also, prior to 1990, Claimant reported to Dr. D'Angelo, she had a motor vehicle accident where she experienced whiplash.

45. Dr. D'Angelo noted Claimant "underwent a decade of treatment for neck pain following a minor injury in 1990."

46. After review of the records with Claimant, Dr. D'Angelo noted in her report that Claimant "insisted" her treatment with the chiropractor was limited to the thoracic and lumbar spine. This is clearly inconsistent with the records from Cooper

Chiropractic.

47. Dr. D'Angelo's examination of Claimant demonstrated Claimant had normal symmetrical musculature of the cervical spine. There was no muscle spasm. Palpation of the cervical spine revealed no tenderness. Range of motion for the cervical spine was almost full, but definitely functional without apparent discomfort. Claimant's Spurling's test was negative. Neurologically, Claimant had normal muscle strength. Claimant had an "essentially normal examination today except for some subjective [complaints of pain] with palpation over the medial left parascapular muscles." Neurologically the patient was intact at the time of her initial evaluations and was intact in the examination conducted by Dr. D'Angelo.

48. Dr. D'Angelo's description of the video is consistent with Ms. Overholser's account of what happened that day on the bus and what the ALJ observed on the video.

49. Dr. D'Angelo considered whether Claimant's movement on video could have caused Claimant to have neck problems. She persuasively and credibly concluded the alleged mechanism of injury is inconsistent with a work related diagnosis. Dr. D'Angelo's opinion that the "described mechanism of injury did not cause the patient's present symptoms" is consistent with the totality of the evidence. The opinion is persuasive and credible. Treating provider opinions regarding causality are faulty because they are based on Claimant's reports of whiplash, which are inconsistent with the video of Claimant on the bus when she was allegedly injured.

50. The lay witnesses who testified for Respondents regarding the process and safeguards taken by Employer following the alleged injury, including securing the video that Claimant admits shows her on the alleged date of injury, are credible and persuasive. Ms. Overholser's testimony is consistent with the video showing what happened on the bus on the morning of May 8, 2014. Ms. Blake, Mr. Spiller, Ms. Peek, Ms. Hulse, and Ms. Boon all credibly testified to the events occurring after Claimant alleged she was injured.

51. Claimant's testimony is not credible. She repeatedly reported to Employer and her treatment providers movement of her body that is inconsistent with what is seen on video. Her history of prior complaints is inconsistent with the medical records.

52. The Judge finds it more likely true than not that Claimant's allegation of an injury on May 8, 2014, while braking her school bus, is not credible given the above findings of fact. Claimant's allegation of an injury while braking her school bus is less likely true than not given the credible and persuasive evidence that Claimant's mechanism of injury would not cause her cervical and extremity complaints and headaches.

53. Claimant bears the burden of proving by a preponderance of the evidence that she sustained a compensable injury on May 8, 2014. The ALJ finds that Claimant did not meet this burden.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), §§8-40-101, *et seq.*, C.R.S. (2014), is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), *supra*. Claimant shoulders the burden of proving by a preponderance of the evidence that he/she sustained an injury arising out of and within the course of his/her employment. Section 8-41-301(1), *supra*; *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimant nor in favor of the rights of respondents. Section 8-43-201, *supra*.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). As found above, Claimant is not credible. Dr. D'Angelo's opinions on causation are more credible than those of Claimant's treatment providers because Dr. D'Angelo viewed the videotape and diagnosed Claimant based on what objectively occurred. Claimant's treatment providers based their diagnoses on her misrepresentations of having suffered a whiplash injury.

A workers' compensation case is decided on its merits. Section 8-43-201, *supra*. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

The claimant was required to prove by a preponderance of the evidence that at the time of the injury she was performing service arising out of and in the course of the employment, and that the injury was proximately caused by the performance of such service. Section 8-41-301(1) (b) & (c), C.R.S. As found, Claimant did not establish she suffered any injury when she applied the brakes as described above.

The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the judge. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000).

Claimant has the burden of proving an injury that was proximately caused by the performance of service arising out of and in the course of her employment with the employer on May 8, 2014. As found, Claimant failed to meet this burden of proof.

In light of this determination the ALJ need not reach the other issues raised by the parties as they are now moot.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. The claim for workers' compensation benefits in WC 4-949-727-02 is denied and dismissed.

DATED: February 24, 2015

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable right knee injury on May 13, 2014 during the course and scope of his employment with Employer.

2. Whether Claimant has demonstrated by a preponderance of the evidence that he is entitled to receive authorized medical treatment that is reasonable and necessary to cure or relieve the effects of his industrial injury.

3. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive Temporary Partial Disability (TPD) benefits for the period May 14, 2014 through June 10, 2014.

STIPULATIONS

1. The parties agreed that Claimant earned an Average Weekly Wage (AWW) of $915.00.

2. If the claim is compensable Claimant is entitled to receive TPD benefits for the period May 14, 2014 through June 10, 2014. However, the parties reserved the right to litigate specific amounts owed to Claimant during the period if they are unable to reach an agreement.

FINDINGS OF FACT

1. Claimant works for Employer as a Crane Technician. His job duties involve general maintenance and repair of large, hydraulic crane mechanisms.

2. On May 13, 2014 Claimant was repairing the hydraulic suspension struts on a crane. He had been working on the same piece of equipment for approximately one week. Claimant punched in to work that morning at 6:57 a.m. and began working on the crane. He repeatedly crawled underneath the equipment to align the bolts that attach the struts. Claimant was kneeling and standing during the repair. The underbody of the crane was elevated about 30 inches off the ground during the process.

3. While Claimant was down on both knees he tried to stand up and his right knee "popped." As he attempted to "walk it off" his knee continued popping and grinding. Claimant reported his injury to Service Manager Troy Nevergall. Employer's Safety Coordinator then directed Claimant to Aviation and Occupational Medicine for medical treatment.

4. Claimant visited Michael Ladwig, M.D. on the day of the incident for an examination. Dr. Ladwig recorded that Claimant reported "a right knee injury secondary to getting up from a kneeling position. The patient states he was kneeling down and when he stood up he felt a pop in his knee." Dr. Ladwig noted that Claimant continued to experience grinding and popping in his right knee. X-rays revealed no acute findings in Claimant's right knee. He diagnosed Claimant with a right knee strain and determined that there was a "greater than a 51% probability that this is a work-related injury or condition." Dr. Ladwig assigned work restrictions of no lifting or repetitive lifting in excess of 10 pounds, and no crawling, kneeling, squatting or climbing.

5. On May 19, 2014 Claimant underwent a right knee MRI. The MRI revealed multiple ligament strains and a mostly horizontal tear of the medial meniscus.

6. On May 28, 2014 Claimant visited Orthopedic Surgeon Mark S. Failinger, M.D. for an examination. Dr. Failinger diagnosed Claimant with a "right knee, complex tear of the medial meniscus, posterior horn." Based on Claimant's presentation, pain symptoms and MRI findings, Dr. Failinger recommended right knee surgery.

7. On June 4, 2014 Albert Hattem, M.D. performed a physician advisor review. He determined that Claimant merely "stood up" from a seated position and injured his right knee. Dr. Hattem explained that "standing up" is a "ubiquitous activity not unique to the workplace." Moreover, he commented that the mere act of "standing up" would not be expected to cause a meniscus tear. Accordingly, Dr. Hattem concluded that Claimant did not suffer a work-related injury to his right knee.

8. Claimant worked light duty because of his work restrictions until June 10, 2014. At his June 10, 2014 examination with Dr. Ladwig Claimant sought a full duty release because Employer was running out of light duty positions around the shop.

9. On August 26, 2014 Orthopedic Surgeon James P. Lindberg performed an independent medical examination of Claimant and testified at the hearing in this matter. He reviewed the medical records, including actual MRI films, and conducted a physical examination. Claimant reported right knee pain as a result of the May 13, 2014 work incident. Dr. Lindberg commented that he agreed with Dr. Hattem that standing up and feeling a right knee pop would not likely have caused Claimant's meniscus tear.

10. Dr. Lindberg testified that the specific tear sustained by Claimant is not the type of meniscal tear most commonly associated with acute, work-related injuries. Rather than being torn around the rim (a vertical tear) Claimant exhibited a horizontal, internal tear, also known as a "shear tear." Dr. Lindberg drew an illustration that was admitted into evidence in order to explain the nature and uniqueness of the tear.

11. The meniscus, which is a c-shaped cartilage between the femur and the tibia, usually tears vertically if a traumatic or acute injury occurs. Claimant had a shear or horizontal tear that was confirmed on the MRI. Dr. Lindberg explained that the form of tear is significant because, as a general rule, a shear tear is "chronic" not acute. The symptoms from a shear tear manifest as popping and grinding when the patient is using

the knee for walking, standing, kneeling or squatting. Dr. Lindberg explained that there is only a 10% chance that a shear tear would be caused by standing up from a kneeling position. He therefore concluded that Claimant's work activities on May 13, 2014 did not cause his right knee symptoms.

12. Dr. Lindberg commented that the MRI also revealed a mild collateral ligament strain, a mild medial collateral ligament strain, a mild posterior lateral corner strain/sprain and a mild strain of the popliteus. The popliteus is located in the posterior, lateral corner of the knee. Dr. Lindberg remarked that there was a 0% chance that the preceding types of strains could be caused by standing from a kneeling position.

13. Dr. Lindberg explained that the most likely scenario for Claimant's right knee injury required a significant lateral force on the knee or a major stress from lateral to medial that would have elicited significant acute pain. He testified that Claimant's description of his right knee injury did not constitute sufficient stress or force to cause the MRI findings. There is simply no mechanism of injury described in the medical records that would account for Claimant's injuries. Dr. Lindberg noted that examples of the types of lateral forces that would be necessary to cause Claimant's injuries would be a football-type event when a patient is hit on the side of the knee or a skiing injury in which the skier falls and the bindings do not release. Simple twisting would not cause the injuries revealed on Claimant's MRI. Dr. Lindberg thus concluded that there is substantial evidence that a force more significant than merely squatting and kneeling caused the medial collateral ligament strains and other strains identified on the MRI. Finally, he determined that there is no evidence that Claimant sustained an acute aggravation of the meniscus tear or any other condition in the right knee that caused or accelerated his need for medical treatment.

14. Dr. Lindberg remarked that Dr. Failinger did not address whether Claimant's right knee condition was related to his work for Employer or otherwise provide a causation analysis. He explained that, as a treating surgeon, Dr. Failinger's job is to care for the patient, repair the injury and advocate for the patient regardless of how the injury occurred. In contrast, the job of an independent medical examiner is to review the record, perform a physical examination of the patient and form an unbiased medical opinion regarding the diagnoses, mechanism of injury and causation.

15. Dr. Lindberg testified extensively regarding the various histories provided by Claimant as to the mechanism of injury. Nothing in Dr. Ladwig's reports mentions Claimant crawling around under a crane or squatting. Dr. Ladwig's report simply stated that Claimant stood up from kneeling and felt a pop. Dr. Failinger's report noted that Claimant "stepped up" and had pain and discomfort. Claimant then told Dr. Lindberg that he was crawling around under a crane, kneeled down, felt a pop and then stood up. The version of events as sworn by Claimant in his discovery responses was also different. Claimant's comments that he was repeatedly kneeling and standing up prior to the work accident on May 13, 2014 did not change Dr. Lindberg's opinions regarding causation. Finally, although Dr. Lindberg reviewed medical reports at the time of the hearing that he had not seen before, he explained that the additional information did not change his causation opinion.

16. Claimant has failed to establish that it is more probably true than not that he sustained a compensable right knee injury on May 13, 2014 during the course and scope of his employment with Employer. Claimant explained that on May 13, 2014 he was repairing the hydraulic suspension struts on a crane. He was down on both knees, tried to stand up and his right knee "popped." As he attempted to "walk it off" his knee continued popping and grinding. X-rays on the day of the incident revealed no acute findings in Claimant's right knee. Dr. Ladwig diagnosed Claimant with a right knee strain and determined that there was a "greater than a 51% probability that this is a work-related injury or condition." Orthopedic Surgeon Dr. Failinger subsequently diagnosed Claimant with a "right knee, complex tear of the medial meniscus, posterior horn." Based on Claimant's presentation, pain symptoms and MRI findings, Dr. Failinger recommended right knee surgery.

17. In contrast, Dr. Lindberg persuasively determined that Claimant's right knee condition was not caused by his work activities for Employer on May 13, 2014. Dr. Lindberg considered the various histories provided by Claimant as to the mechanism of injury. He explained that the specific tear sustained by Claimant is not the type of meniscal tear most commonly associated with acute, work-related injuries. Rather than being torn around the rim (a vertical tear) Claimant has a horizontal, internal tear, also known as a "shear tear." Dr. Lindberg detailed that the form of tear is significant because, as a general rule, a shear tear is "chronic" not acute. The symptoms from a shear tear manifest as popping and grinding when the patient is using the knee for walking, standing, kneeling or squatting. Dr. Lindberg explained that there is only a 10% chance that a shear tear would be caused by standing up from a kneeling position. Moreover, Dr. Lindberg remarked that there was a 0% chance that Claimant's right knee strains revealed on the MRI were caused by standing from a kneeling position. Furthermore, Dr. Lindberg testified that Claimant's description of his right knee injury did not constitute sufficient stress or force to cause the MRI findings. There was simply no mechanism of injury described in the medical records that accounted for Claimant's injuries. Dr. Lindberg noted that examples of the types of lateral forces necessary to cause Claimant's injuries would be a football-type event when a patient is hit on the side of the knee or a skiing injury in which the skier falls and the bindings do not release. Simple twisting would not cause the injuries revealed on Claimant's MRI. Dr. Lindberg thus concluded that there is substantial evidence that a force more significant than merely squatting and kneeling caused the medial collateral ligament strains and other strains identified on the MRI. Dr. Lindberg summarized that there is no evidence that Claimant sustained an acute aggravation of the meniscus tear or any other condition in the right knee that caused or accelerated his need for medical treatment. Finally, Dr. Lindberg remarked that Dr. Failinger did not address whether Claimant's right knee condition was related to his work for Employer or otherwise provide a causation analysis. The temporal proximity of Claimant's symptoms at work does not establish a causal connection to his work activities. Claimant has thus failed to establish that his work activities on May 13, 2014 aggravated, accelerated or combined with a pre-existing condition to produce a need for medical treatment.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18,

2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between claimant's injury and his work.

7. As found, Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable right knee injury on May 13, 2014 during the course and scope of his employment with Employer. Claimant explained that on May 13, 2014 he was repairing the hydraulic suspension struts on a crane. He was down on both knees, tried to stand up and his right knee "popped." As he attempted to "walk it off" his knee continued popping and grinding. X-rays on the day of the incident revealed no acute findings in Claimant's right knee. Dr. Ladwig diagnosed Claimant with a right knee strain and determined that there was a "greater than a 51% probability that this is a work-related injury or condition." Orthopedic Surgeon Dr. Failinger subsequently diagnosed Claimant with a "right knee, complex tear of the medial meniscus, posterior horn." Based on Claimant's presentation, pain symptoms and MRI findings, Dr. Failinger recommended right knee surgery.

8. As found, in contrast, Dr. Lindberg persuasively determined that Claimant's right knee condition was not caused by his work activities for Employer on May 13, 2014. Dr. Lindberg considered the various histories provided by Claimant as to the mechanism of injury. He explained that the specific tear sustained by Claimant is not the type of meniscal tear most commonly associated with acute, work-related injuries. Rather than being torn around the rim (a vertical tear) Claimant has a horizontal, internal tear, also known as a "shear tear." Dr. Lindberg detailed that the form of tear is significant because, as a general rule, a shear tear is "chronic" not acute. The symptoms from a shear tear manifest as popping and grinding when the patient is using the knee for walking, standing, kneeling or squatting. Dr. Lindberg explained that there is only a 10% chance that a shear tear would be caused by standing up from a kneeling position. Moreover, Dr. Lindberg remarked that there was a 0% chance that Claimant's right knee strains revealed on the MRI were caused by standing from a kneeling position. Furthermore, Dr. Lindberg testified that Claimant's description of his right knee injury did not constitute sufficient stress or force to cause the MRI findings. There was simply no mechanism of injury described in the medical records that accounted for Claimant's injuries. Dr. Lindberg noted that examples of the types of lateral forces necessary to cause Claimant's injuries would be a football-type event when a patient is hit on the side of the knee or a skiing injury in which the skier falls and the bindings do not release. Simple twisting would not cause the injuries revealed on Claimant's MRI. Dr. Lindberg thus concluded that there is substantial evidence that a force more significant than merely squatting and kneeling caused the medial collateral ligament strains and other strains identified on the MRI. Dr. Lindberg summarized that there is no evidence that Claimant sustained an acute aggravation of the meniscus tear

or any other condition in the right knee that caused or accelerated his need for medical treatment. Finally, Dr. Lindberg remarked that Dr. Failinger did not address whether Claimant's right knee condition was related to his work for Employer or otherwise provide a causation analysis. The temporal proximity of Claimant's symptoms at work does not establish a causal connection to his work activities. Claimant has thus failed to establish that his work activities on May 13, 2014 aggravated, accelerated or combined with a pre-existing condition to produce a need for medical treatment.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's claim for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: February 9, 2015.

1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

The issues to be determined by this decision are the following:

1. Whether the claimant proved by a preponderance of the evidence that she sustained a compensable injury arising out of and in the course of her employment duties for the respondent-employer on May 15, 2014;

2. If so, whether the claimant has proven by a preponderance of the evidence that she is entitled to TTD benefits from June 11 until June 20, 2014, and July 28 until August 15, 2014, when she was released to full duty without restrictions.

3. If so, whether the claimant, has proven that the medical treatment received from and provided by C.C.O.M., Colorado Sport and Spine Center, and the Penrose Imaging MRI scan of June 22, 2014, is causally related to this claim's injury and is reasonable and necessary to treat this claim's injury.

Based upon the findings and conclusions below that the claim is not compensable the ALJ does not reach a decision on the remaining issues.

FINDINGS OF FACT

1. The claimant was a full time residence associate hired by the respondent-employer on July 16, 2013.

2. On May 15, 2014 the claimant was with a resident at the respondent-employer's facility, while the resident was in her bathroom.

3. The resident was sitting on her toilet. When the claimant turned to reach for a piece of toilet tissue she experienced pain in her lower back. This pain was very brief, lasting less than a second. It then disappeared.

4. The claimant continued to work her normal job tasks. The claimant was not lifting anything at the time this pain arose and immediately disappeared. She was not touching, lifting, or assisting the resident. She was not in an awkward position, was

not bending, was not stooping, and was not doing anything other than simply reaching for the piece of toilet tissue.

5. The claimant said she had no symptoms while continuing to work after this event. Approximately 5 minutes afterwards the claimant was standing still at the front door at the facility entering a code to open a door to allow a person to exit the facility. The claimant's left leg suddenly went out, and she went down to her knee. She did not injure herself while going down to her knee. She was not walking, twisting, shifting, or doing anything other than standing at the keypad when this second alleged incident occurred. The claimant reported this claim's injury to the respondent-employer after the incident at the door occurred, and completed paperwork to report the claim to the respondent-employer.

6. Eric Ridings, M.D. documented in his independent medical examination (IME) report, and testified at hearing, that the claimant received no relief with the exhaustive conservative treatment she was provided at through C.C.O.M. While the claimant alleged the pool therapy had been helpful, Dr. Ridings explained the alleged improvement was, "[B]arely perceptible . . . ." Dr. Ridings opined that this shows there is not an anatomic, identifiable injury or diagnosis.

7. The claimant's physical exam revealed non-anatomic findings, such as nondermatomal distribution of sensation, giveway weakness, invalid straight leg raising testing results, normal muscle tone despite pain complaints, range of motion differing substantially between formal testing and when tested while seated, severely self-limited and invalid range of motion of the lumbar spine, and pain to only light palpation and brushing of the skin. Other than subjective pain behaviors, claimant's physical examination was, "[B]enign."

8. Dr. Ridings found the claimant "[D]oes not describe any activity at the time of onset of symptoms that within a reasonable degree of medical probability would cause any injury."

9. Dr. Ridings opined that the slight bending to get the piece of toilet tissue would not stress the low back, and is an activity preformed numerous times daily. The slight motion would not have caused any injury to claimant's low back anatomy. The claimant's report of pain while standing still is also not injurious and could not cause any actual injury to her lower back. Again, he opined this is an idiopathic activity and did not injure claimant.

10. The claimant's history, Dr. Ridings wrote, "[I]s not consistent with a disc injury, or even a muscle strain, neither of which would cause a sharp pain lasting less than a second." The claimant's MRI showed no abnormalities or injury. Dr. Ridings wrote, and testified at hearing, "In my opinion within a reasonable degree of medical probability, the patient's symptoms are most likely related to psychological factors, particularly stress, leading to somatization."

11. The claimant's allegation that all her pain disappeared, but only temporarily, with trigger point injections supports this conclusion Dr. Ridings explained, and showed there is no anatomic basis for claimant's symptoms or any injury. Dr. Ridings opined that the claimant has no injury from her work duties and activities on May 15, 2014, as alleged in this claim.

12. Dr. Timothy Hall conducted an IME of the claimant and produced a reort dated November 14, 2104 in which he opined that the claimant's injury was work-related.

13. The ALJ finds that Dr. Ridings' opinions are credible, and more persuasive than medical opinions to the contrary.

14. The ALJ finds that the claimant has failed to establish that it is more likely than not that on May 15, 2014 she suffered an injury arising out of and in the course of her employment with the respondent-employer.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado ("Act") is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. § 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge need not address every piece of evidence that might lead to a conflicting conclusion and need not reject every piece or item of evidence contrary to the findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Claimant in a workers' compensation claim shall have the burden of proving entitlement to benefits by a preponderance of the evidence; the facts in a workers' compensation case shall not be interpreted liberally in favor of either the rights of the injured worker or the rights of the employer, and a workers' compensation case shall be decided on its merits. *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590, 592 (Colo. App. 1998) ("Claimant has the burden of proving an entitlement to benefits by a preponderance of the evidence."); *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915, 918 (Colo. App. 1993) ("The burden is on the claimant to prove his entitlement to benefits by a preponderance of the evidence."). Proof by a preponderance of the evidence requires claimant to establish that the existence of a contested fact is more probable than its nonexistence. *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 (ICAO March 20, 2002).

5. Where a party presents expert opinion on the issue of causation, the weight, and credibility, of the opinion is a matter exclusively within the discretion of the ALJ as the fact-finder. *Cordova v. Industrial Claim Appeals Office*, P.3d (Colo. App. No. 01CA0852, February 28, 2002); *Rockwell International v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990).

6. A compensable injury is one that arises out of and in the course of employment. § 8-41-301(1) (b), C.R.S. The "arising out of" test is one of causation. It requires that the injury have its origin in an employee's work-related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. In this regard, there is no presumption that injuries which occur in the course

of a worker's employment arise out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968); see also, *Industrial Commission v. London & Lancashire Indemnity Co.,* 135 Colo. 372, 311 P.2d 705 (1957).

7. The Workers' Compensation Act creates a distinction between the terms “accident” and “injury.” The term "accident" refers to an, “Unexpected, unusual, or undesigned occurrence.” § 8-40-201(1), C.R.S. In contrast, an “injury” refers to the physical trauma caused by the accident. In other words, an "accident" is the cause and an “injury” is the result. *City of Boulder v. Payne,* 162 Colo. 345, 426 P.2d 194 (1967). No benefits flow to the victim of an industrial accident unless the “accident” results in a compensable "injury." *Romine v. Air Wisconsin Airlines*, W. C. No. 4-609-531 (October 12, 2006)

8. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. C.R.S. §8-41-301(1) (c); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000). In other words, claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores v. Industrial Claim Appeals Office,* 989 P.2d 521 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997).

9. To satisfy her burden of proof on compensability, claimant must prove that the industrial accident is the proximate cause of claimant's need for medical treatment or disability. § 8-41-301 (1) (c), C.R.S. An industrial accident is the proximate cause of a claimant's disability if it is the necessary precondition or trigger of the need for medical treatment. *Subsequent Injury Fund v. State Compensation Insurance Authority,* 768 P.2d 751 (Colo. App. 1988).

10. The mere fact that symptoms appear during an employment event does not require a conclusion that the employment was the cause of the symptoms, or that the employment aggravated or accelerated a preexisting condition. Instead, the appearance of symptoms may be the logical and recurrent consequence of a preexisting condition *Jiron v. Express Personnel Services*, W.C. No. 4-456-131 (ICAO February 25, 2003); *F.R. Orr Construction v. Rinta*, 717 P.2d 965, 968 (Colo. App. 1985). As noted in *Martinez v. Monfort, Inc*., W.C. No. 4-284-273 (ICAO August 6, 1997), “The fact that the claimant’s job duties may have intensified her pain does not

compel a different result because the ALJ was persuaded that it is the underlying condition which prevents the claimant from returning to work."

11. The question of whether the claimant met the burden of proof to establish the requisite causal connection between the industrial injury and the need for medical treatment is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

12. The ALJ concludes that the opinions of Dr. Ridings are credible and more persuasive than medical evidence to the contrary.

13. The ALJ concludes, as found above, that the weight of the lay and medical evidence establishes that the claimant has failed to establish by a preponderance of the evidence that she sustained an injury arising out of and in the course of her employment with the respondent-employer.

ORDER

It is therefore ordered that:

The claimant's claim for benefits under the Workers' Compensation Act of Colorado is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATE: February 6, 2015

/s/ original signed by:
Donald E. Walsh
Administrative Law Judge
Office of Administrative Courts
1259 Lake Plaza Drive, Suite 230
Colorado Springs, CO 80906

ISSUES

The issues presented for determination are whether the Claimant is entitled to temporary total disability benefits from June 28, 2014 ongoing; and whether Claimant was responsible for the termination of his employment pursuant to § 8-42-103 and/or § 8-42-105, C.R.S.

STIPULATIONS

The parties stipulated that Claimant's wage at the time of his termination was $622.00 per week. The parties reserved the issue of any change to Claimant's average weekly wage for future determination.

The parties also stipulated that Claimant had a right to designate his own physician pursuant to Rule 8, and the parties agreed to Dr. Greg Reichhardt as the new authorized treating physician.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant worked for the Employer for approximately five years. He became a shipping supervisor sometime in 2010.

2. Claimant's job duties involved shipping windows and doors. He coordinated shipping and delivery with customers, warehouse workers and transportation companies. He also packaged the products in preparation for shipping.

3. Claimant's job required heavy lifting up to approximately 120 pounds on his own and at times, heavier objects with the assistance of other employees.

4. On May 1, 2014, Claimant sustained an admitted injury to his back. As a result of his injury, the authorized treating physician, Dr. Terrell Webb, assigned a 30-pound lifting restriction, no climbing, and no kneeling/squatting.

5. Claimant returned to work and Employer provided modified duty.

6. Claimant did not miss any work as a result of his injury.

7. Claimant testified that after returning to work, his supervisor, Tom Hassell frequently asked him to perform tasks in excess of his restrictions, including lifting items that weighed more than 30 pounds and raising items above his head.

8. Claimant also testified that Hassell consistently criticized Claimant's job performance after returning to modified duty.

9. Hassell is Employer's production and operations manager and was Claimant's direct supervisor. Hassell testified that Employer was able to accommodate Claimant's restrictions, and that only part of Claimant's job duties involved lifting over 30 pounds, kneeling and/or squatting. Hassell testified that other employees pitched in to perform those tasks Claimant was unable to perform himself.

10. Hassell denied ever asking Claimant to perform tasks that exceeded his restrictions and denied constant criticism of Claimant. Rather, Hassell testified that he would ask Claimant to return to work only when observing Claimant taking unauthorized breaks or surfing the internet while not on break.

11. Hassell testified that Claimant never complained to him that he was being made to perform tasks exceeding his restrictions nor did any other employee complain to him about having to perform Claimant's job duties.

12. Hassell testified that it did not cause Employer any problems or hardship to allow Claimant to work modified duty.

13. Doug Wichlacz is Employer's general manager and oversees all Employer operations. Wichlacz observed Claimant working modified duty numerous times.

14. Wichlacz frequently reminded Claimant to work within his restrictions. Claimant never complained to Wichlacz that he was made to perform tasks in excess of his restrictions.

15. Wichlacz testified that it did not cause Employer any problems or hardship to allow Claimant to work modified duty.

16. In early June, Employer performed reviews for all employees, including Claimant.

17. Claimant's review occurred on June 6, 2014, after he had returned to work on modified duty.

18. Wichlacz and Hassell performed Claimant's review which was generally positive. Wichlacz specifically noted improvement in Claimant's attitude and ability to adjust to situations where Claimant felt he had been wronged.

19. Claimant's comments on the Employee Performance Evaluation form were, "Getting help for tasks; talked about scheduling. Will work on." Wichlacz recalled that he likely had a discussion with Claimant regarding getting Claimant more help.

20. At approximately the same time, Employer decided to give certain employees pay raises, including Claimant. The pay raises were scheduled to go into effect on June 23, 2014.

21. Wichlacz and Hassell reviewed each employee to determine whether each employee would receive a pay increase, and if so, the amount. After making the final determination, they would meet with the employee individually to discuss the increase.

22. On June 20, 2014, Hassell sent Employer's payroll manager, Cindy Serafin, an email with the final increase amounts for all employees receiving pay increases. Claimant's increase was included in this email, and went into effect on June 23, 2014.

23. Claimant was on vacation on June 23 and June 24, 2014. As a result, Hassell and Wichlacz were not able to meet with him prior to Friday, June 27, 2014.

24. Wichlacz and Hassell both testified that they intended to meet with Claimant to discuss his pay increase, but were unable to do so due to Claimant's vacation and the press of business.

25. Hassell did not discuss pay increases with any employee, including the Claimant, prior to June 23, 2014.

26. Claimant testified that both Hassell and Wichlacz told him that he would not be receiving a pay raise.

27. On June 27, 2014, Claimant sent Hassell an email stating "So everyone on the Production floor gets a raise and I get shit. That's real nice guys!"

28. Upon receipt of the email, Hassell attempted to find Claimant to discuss the matter. However, Claimant had already gone to lunch. Hassell sent Claimant an email response asking that the Claimant see him when he returned from lunch.

29. After returning from lunch, Claimant went to see Hassell and Wichlacz.

30. Wichlacz and Hassell both testified that Claimant was upset and angry during the meeting. Claimant's voice was raised and he became belligerent. Wichlacz questioned Claimant why he believed he was not receiving a pay raise. According to Wichlacz, Claimant did not answer the question, and instead demanded to know if it was true or not. Wichlacz testified that he was not willing to discuss Claimant's raise in light of Claimant's attitude and temper issues. Wichlacz asked the Claimant if he really wanted to "go down that road" meaning whether Claimant wanted to be angry and belligerent about something which he knew nothing about.

31. Wichlacz and Hassell both testified that Claimant stated he would contact his attorney and walked out of the meeting.

32. Claimant testified that he did not lose his temper or become upset during the meeting. He also testified that the main topic of the meeting was Employer's inability to continue meeting his restrictions. Claimant testified that Wichlacz advised that continuing to meet Claimant's restrictions was causing Employer difficulty and therefore Employer had to terminate Claimant. Claimant testified that he asked Wichlacz to bring

Cindy Serafin into the meeting at that point, and Wichlacz declined the request. Claimant testified that after he was terminated, Hassell escorted him from the building.

33. Wichlacz testified that the issue of Claimant's restrictions never came up during the meeting, and that Claimant never requested Cindy Serafin be part of the meeting.

34. Hassell confirmed Wichlacz's testimony in great part, testifying that Claimant was angry and agitated during the meeting. Also, Claimant's restrictions were never discussed during the meeting, nor did Claimant ever ask Cindy Serafin to attend the meeting.

35. After Claimant left the meeting, Hassell followed him out in an attempt to discuss the matter further with Claimant. Hassell asked Claimant if he was sure he wanted to leave like this. Claimant stated again that he would be contacting his attorney, and left the premises.

36. Later that same day, Claimant sent a text message to Hassell asking if he should return the keys to Employer's facility. In response, Hassell stated, "Yes please that would be good. Can you bring them to me today?" Claimant's response was, "I will bring my keys when I pick up my last check." Hassell responded by stating, "We would like to get the keys back and if you are willing would like to sit down and talk to you this afternoon." Claimant declined the meeting for Friday afternoon because he had sent his child care provider home already. The Claimant agreed to a meeting for Monday morning at 10:00 a.m.

37. At no time during the exchange of text messages on Friday did Claimant raise the issue of his restrictions or Employer's alleged inability to accommodate them.

38. On Saturday, June 28, 2014, in the afternoon, Claimant sent another series of text messages to Hassell. The first message stated "Tom when we last spoke you fired me because I was not willing to bend the rules due to my restrictions." Claimant then wrote to Hassell that he was "Sorry it had to end like this."

39. Hassell testified that he was astounded at Claimant's allegations and that he didn't know the basis for them. Both Wichlacz and Hassell testified that Claimant was not terminated for any reason, but that he had walked off the job.

40. Hassell further testified that based on Claimant's text messages he believed Claimant no longer wished to work for Employer and that he was abandoning his employment.

41. Claimant did not report for work on Monday, June 30, 2014. That same day, Employer sent Claimant a letter indicating that he was no longer employed by Employer due to his failure to finish his shift on Friday, June 27, 2014 and failure to report for work on Monday, June 30, 2014.

42. The ALJ finds that based on the credible evidence, the Claimant abandoned his job when he left the meeting with Hassell and Wichlacz on Friday, June 27, 2014 then failed to report for work on Monday, June 30, 2014. The ALJ is not persuaded by contrary evidence presented by the Claimant that the Employer terminated his employment due to the Claimant's work restrictions.

43. Claimant failed to present any credible evidence that Employer had any difficulty accommodating his restrictions. The undisputed evidence is that no other employee complained about having to perform some of Claimant's job duties and that accommodating Claimant's restrictions did not cause Employer any hardship or harm. Thus, Claimant's contention that he could no longer continue working for the Employer because the Employer refused to abide by his work restrictions also lacks credibility.

44. The tone of the email Claimant sent concerning his lack of a pay raise supports Wichlacz's testimony that Claimant often became upset and agitated when he believed he was being wronged, and that he would lash out as a result.

45. In addition, the text exchange between the Claimant and Hassell on Friday, June 27, 2014 suggests that Claimant's employment was not terminated. Hassell suggested that Claimant return to work on June 27 to return the building keys but also to talk. The ALJ infers that Hassell would not initiate a meeting to talk if he or Wichlacz had just terminated Claimant's employment. To the contrary, such an invitation would suggest that Claimant walked off the job, leaving in anger, as Hassell and Wichlacz testified.

46. The text messages sent by Claimant on June 28, 2014 are telling. Out of nowhere on a Saturday afternoon, the Claimant sent a text message to Hassell stating that Hassell had fired him for failing to work outside of his restrictions. The Claimant reiterated the alleged basis for his termination, and then advised the Employer to cease all communications with him and speak to his lawyer. These comments make no sense given that Hassell had invited the Claimant to talk about things on Monday, and Claimant had agreed to the meeting. The text messages from June 28 do not read as a natural continuation of the previous events, and thus lack credibility.

47. Based on the above findings of fact, Claimant was responsible for the termination of his employment. He voluntarily walked off the job on Friday, June 27, 2014, and failed to return on Monday. These actions are clearly volitional, and resulted in the loss of his employment.

48. Claimant's work restrictions changed on July 3, 2014. Dr. Webb imposed restrictions that included no repetitive lifting over 20 pounds, no pushing/pulling over 30 pounds of force, no bending more than five times per hour, no squatting, kneeling or climbing, and sit as needed. Claimant testified that his back had gotten worse around June 30.

49. Dr. Webb's July 3 note also states that Claimant has had "little change in his symptoms." The note did not indicate that Claimant reported an increase in his pain or

other symptoms. The note also does not appear to reflect any increase to his medications.

50. Based on the foregoing, the ALJ is not persuaded that the change in Claimant's work restrictions re-establishes a causal connection between Claimant's wage loss and his work injury, or that it represents a worsening of his condition. Claimant has failed to prove by a preponderance of the record evidence that he suffered a worsened condition following his termination from employment or that any such worsened condition, instead of his voluntary resignation, caused his wage loss.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Section 8-42-105(4)(a) states "In cases where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury." A Claimant must act volitionally or exercise a degree of control over the circumstances of the termination in order to be found responsible for the termination. *Richards v. Winter Park Recreational Assoc.,* 919 P.2d 933 (Colo. App. 1996). Respondents shoulder the burden of proving by a preponderance of the evidence that claimant was responsible for his or her termination. *See Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office*, 20 P.3d 1209 (Colo. App. 2000). An employee is "responsible" if the employee precipitated the employment termination by a volitional act, which an employee would reasonably expect to result in the loss of employment. *Patchek v.*

Colorado Department of Public Safety, W.C. No. 4-432-301 (September 27, 2001). Thus, the fault determination depends upon whether claimant performed some volitional act or otherwise exercised a degree of control over the circumstances resulting in termination. *See Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1994), *opinion after remand*, 908 P.2d 1185 (Colo. App. 1995).

5. As found, the Claimant precipitated the loss of his employment. His actions in sending an insubordinate email to his supervisor and general manager, becoming agitated and raising his voice during the meeting with his supervisors, walking off the job prior to finishing his shift on Friday, June 27, 2014 and failing to return to work on Monday, June 30, 2014 were voluntary. Claimant's voluntary actions in terminating his employment are further supported by the fact that he agreed to return to work on June 30 to meet with Employer to discuss his raise and attitude, yet failed to attend the meeting.

6. Claimant's contention that he was terminated due to Employer's inability to continue accommodating his restrictions is not credible. Employer gave Claimant a positive work evaluation and a pay raise while providing Claimant with modified duty, actions it likely would not have taken if it was having difficulty accommodating Claimant's restrictions. Further, the unrebutted testimony of Hassell and Wichlacz established that Employer did not encounter any difficulty in accommodating Claimant's restrictions, and that no other employee complained about having to assist Claimant with his duties.

7. *Anderson v. Longmont Toyota*, Colo. 102 P.3d 323 (Colo. 2004) held that section 8-42-105(4), C.R.S. was not a permanent bar to receipt of TTD benefits and such benefits could be awarded if claimant's worsened condition caused the wage loss. As found, Claimant has failed to prove by a preponderance of the record evidence that he suffered a worsened condition following his termination from employment or that such worsened condition, instead of his voluntary resignation, caused his wage loss. Consequently, Claimant's claim for TTD benefits commencing June 28, 2014 is barred.

ORDER

It is therefore ordered that:

1. Claimant's claim for temporary benefits is DENIED and DISMISSED.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUE

- Claimant's Average Weekly Wage (AWW)

FINDINGS OF FACT

1. Claimant began working for Employer in June of 2011 as an installer, installing and building large industrial freezer and cooler systems for businesses, industries, and the United States government.

2. On June 23, 2014 Claimant suffered an admitted work related injury.

3. Respondents filed a General Admission of Liability on July 22, 2014 admitting to an average weekly wage of $885.29, with a temporary total disability (TTD) rate of $590.19. *See* Exhibit C.

4. It is unclear how Respondents came to the calculation of $885.29.

5. On November 21, 2014, Respondents filed a Petition to Modify, Terminate, or Suspend Benefits and asserted that their prior admission of AWW was too high. Respondents sought to modify the AWW to $626.07, with a TTD rate of $417.38.

6. In the Petition to Modify, Terminate, or Suspend Benefits Respondents indicated that they had received updated wage information showing Claimant made gross wages of $32,555.42 during the period of 6/23/13 through 6/22/14, which is how they arrived at the AWW of $627.07 ($32,555.42/52 weeks = $626.07).

7. Based on submission of wage records, Respondents statement in the Petition to Modify, Terminate, or Suspend Benefits is incorrect. From June 23, 2013 through June 22, 2014 Claimant made **net** wages of $32,555.42, not gross wages as stated in the Petition. *See* Exhibit D.

8. Attached to the Petition are email messages between Kelly Huck, an employee of Employer and Trudy Spratta, Senior Claims Specialist for Liberty Mutual Insurance. In these emails, Ms. Huck indicated in error that Claimant's **gross** wages were $32,555.42. *See* Exhibit B.

9. The printout of wage records for Claimant clearly shows that Ms. Huck erred when stating that $32,555.42 was the amount for gross wages. Rather, this

amount is the amount of net wages Claimant earned in the four quarters prior to his injury.

10. Claimant's gross wages in the four quarters prior to his injury amounted to $42,251.62. *See* Exhibit D.

11. In the third quarter of 2013, Claimant made gross wages of $10,141.05. In the fourth quarter of 2013, Claimant made gross wages of $10,915.30. In the first quarter of 2014, Claimant made gross wages of 8,693.88. In the second quarter of 2014, Claimant made gross wages of $12,501.39. *See* Exhibit D.

12. The gross wages Claimant earned in the four quarters prior to his injury show a total of $42,251.62 earned in a period of 50 weeks. *See* Exhibit D.

13. $42,251.62 divided by 50 weeks is $845.03.

14. Claimant's work involved significant overtime that fluctuated depending on the type of job he was working on.

15. At the time of his injury, Claimant was working on a job assignment for American Pet Foods and was working as many hours of overtime as he could due to the customer's sense of urgency to complete the job.

16. In the second quarter of 2014 and in the twelve weeks prior to his injury, Claimant's gross wages were higher than they were for the prior three quarters due to working more overtime hours for the American Pet Foods job.

17. The job for American Pet Foods was expected to last for a total period of one year. Although Claimant was expected to maintain a significant amount of overtime hours while assigned to this job, the job assignment and hours were not guaranteed by Employer.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. (2014). The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201, C.R.S. (2014). Respondent bears the burden of establishing any affirmative defenses. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979) The facts in a workers' compensation case shall not be interpreted liberally in favor of either the rights of the injured worker or the rights of the

employer and a worker's compensation case shall be decided on its merits. § 8-43-201, C.R.S. (2014).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

Average Weekly Wage

Section 8-42-102(2), C.R.S., requires the ALJ to base the claimant's AWW on his earnings at the time of injury. However, under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Avalanche Industries, Inc. v. Clark,* 198 P.3d 589 (Colo. 2008); *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Specifically, § 8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra.*

The ALJ concludes that the best way to reach a fair approximation of Claimant's wage loss in this matter is to use the discretionary authority granted by § 8-42-103(3), C.R.S. (2014) and to use the total gross wages earned by Claimant in the four quarters prior to his injury. Although at the time of injury, and in the quarter prior to injury, Claimant was making a higher salary than normal due to the urgency of the American Pet Foods job assignment, this job assignment was not permanent. Claimant's wages were not expected to continue at that high rate permanently nor would it provide a fair approximation of Claimant's diminished earning capacity by basing the AWW on this temporary job assignment. Although the testimony was that the job was expected to last one year, Claimant was not guaranteed wages by Employer at the high rate shown in the second quarter of 2014. The high wages earned in the second quarter of 2014 could have ended at any point and Claimant would then return to a more regular and normal work schedule. As shown by the year prior to Claimant's injury, his wages varied greatly based upon the number of overtime hours worked. As found above, in the first quarter of 2014 Claimant's earnings were overall less than average. Just as it would be an inaccurate approximation of his lost wages if the AWW were based on this quarter and the lull in Claimant's earnings, it would also be an inaccurate approximation

of Claimant's lost wages to base his AWW on the peak earnings period in the second quarter of 2014. With varied wage records, the ALJ concludes that the best way to come to a fair approximation is to use the four quarters preceding the injury (50 weeks available from submitted wage records).

As found above, Claimant's gross wages for the 50 weeks prior to his injury amount to $42,251.62. This makes his average weekly wage $845.03. Respondents filed a Petition to Modify, Terminate, or Suspend Benefits that was based on Claimant's net wages and not gross wages. This was clear error on Respondents part. When reviewing the wage records in Exhibit D, the amount calculated by Respondents in their Petition is based on Claimant's net wages. As this is clear error, their Petition to modify the Average Weekly Wage to $626.07 is not correct or persuasive. Although the Petition is in error, Average Weekly Wage was placed at issue at hearing and after reviewing all the evidence, the ALJ concludes that Claimant's Average Weekly Wage based on the records is $845.03. The Average Weekly Wage shall be modified from November 21, 2014 and ongoing to reflect this order.

ORDER

It is therefore ordered that:

1. Claimant's Average Weekly Wages is $845.03. The Average Weekly Wage previously admitted to shall be modified to reflect this wage starting November 21, 2014 and ongoing.

2. Insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures

to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 24, 2015

Denver, Colorado, 80203

ISSUES

- Did the claimant prove by a preponderance of the evidence that he sustained an injury proximately caused by the performance of service arising out of and in the course of employment?

- Did the claimant prove by a preponderance of the evidence that he is entitled to an award of temporary total disability benefits commencing June 21, 2014?

- Did the claimant prove by a preponderance of the evidence that he is entitled to an award of reasonable, necessary and authorized medical benefits?

- What is the claimant's average weekly wage?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant's Exhibits 1 through 8 were admitted into evidence. Respondents' Exhibits A through D and F through L were admitted into evidence.

2. The claimant testified as follows. On June 20, 2014 he had been working for the employer for approximately one and a half years. His main duty was to use the "Archer Tool" to tear down drill bit assemblies for servicing. He explained that the Archer is a 5 and ½ foot steering unit for drill bits. The Archer consists of sub-parts including a "steering sleeve" that weighs approximately 60 pounds and a "bit box" that connects the drill bit to the archer. At approximately 4:00 p.m. on Friday, June 20 he lifted a bit box off of a three foot high table and "twisted" to place it on a four foot high cart. He felt a "little sudden stab" in his back.

3. The claimant also testified as follows. He underwent safety training provided by the employer. The employer has a policy that requires a worker to report an injury right away no matter how minor. He did not report the injury to the employer until Sunday June 22, 2014. On June 22 he called his supervisor, Mr. Matt Wilson (Wilson), and told Wilson that he had hurt his back and needed to get checked by a doctor. The employer referred him to Concentra for medical treatment. However, he was not able to get hold of "workers comp" for several days and first sought treatment from David Doig, M.D., his family physician.

4. On July 11, 2014 the claimant gave a statement to American Claims Services, Inc. At that time the claimant reported that "he had been working hunched over a bench for some time, when he picked up a steering sleeve, and noted the onset

of low back pain." The claimant further reported that his "pain was so bad the next morning" that he could not move.

5. Wilson, the claimant's supervisor, testified as follows. He was at a National Guard meeting when he received a call from the claimant on June 22, 2014. Because he was in a meeting, he declined the call and texted the claimant that he couldn't talk. The claimant texted Wilson that his back was "messed up" and he needed to go to a doctor. Wilson sent a text to the claimant asking if the injury happened at work. The claimant texted back that he injured his back at work on Friday and had gotten worse and could not stand upright. Wilson asked how. The claimant texted back that the benches are low for him and he was hunched over and turned to do something and wrenched it. Wilson responded by texting an expletive and stated he would contact "HSE." Wilson stated that he used the expletive because on-the-job injuries are a headache and require a lot of paperwork.

6. Wilson further testified that he was unable to reach HSE and called the claimant to ask how he injured himself. Wilson recalled the claimant stated that he was working on the Archer bench, picked up a steering sleeve, turned to put the steering sleeve on a cart and wrenched his back.

7. However, Wilson later learned the claimant reported to "HSE" that he injured his back while lifting a "steering sleeve clamp" (also known as a "bit box"). For Wilson this raised a "red flag" because the steering sleeve and the steering sleeve clamp are removed from the Archer assembly at the "breakout machine" (Respondents' Exhibit F) before the Archer is taken to the Archer bench (Respondents' Exhibit J) for teardown. Also, when the steering sleeve clamp is removed from the Archer assembly it is immediately taken by cart to another area known as the inspection and wash bay area. Thus, in Wilson's opinion there would be no reason for a steering sleeve clamp to be at any bench including the Archer bench. Wilson also learned that the claimant told HSE that he lifted the steering sleeve clamp off of the bias bench (Respondents' Exhibit I) or the teardown bench (Respondents' Exhibit K). Thus, Wilson testified that the claimant's statement about where the injury occurred had changed over time and this raised another "red flag."

8. Wilson testified that all employees are trained to report injuries immediately no matter how minor they may be.

9. Mr. Raymond Mascarenas (Mascarenas) testified as follows. He is the claimant's co-worker. On June 20, 2014 he was filling in for Wilson who was away on National Guard duty. Mascarenas stated the steering sleeve and steering sleeve clamp are removed from the Archer assembly at the breakout machine and immediately transported by cart to the inspection area. The only exception is that the steering sleeve might be transported to a bench to measure the "wear plates." Therefore there is no need for steering sleeve clamps to be on benches.

10. Mascarenas testified that on June 20, 2014 the claimant was not working on the Archer bench but was refurbishing hand tools in the area of the benches shown

in Respondents' Exhibits H & K. Mascarenas noticed that Mr. Casey Hill (Hill) was working the Archer bench.

11. Mascarenas testified the claimant did not report any injury to him on June 20, 2014 and he did not notice the claimant was having any physical problems that day. Instead, near the end of the day the claimant asked Mascarenas if he needed help within anything.

12. Hill testified as follows. He is employed as a maintenance technician trainee and works on the Archer tool teardown and assembly. In this job he works on the breakout machine shown in Respondents' Exhibit F and the Archer bench shown in Respondents' Exhibit J. He explained that the steering sleeve and steering sleeve clamp are removed from the Archer assembly at the breakout machine and put on a cart for transport to the inspection/wash bay area. The Archer shaft is then moved by cart to be disassembled at the Archer bench. He explained there is no reason for the steering sleeve clamp to be at the Archer bench (Respondents' Exhibit J). On June 20, 2014 Hill recalled that he worked at the breakout machine early in the day and on the Archer bench in the afternoon where he tore down two Archer shafts. He does not recall the claimant working with him at the Archer bench. He does not recall seeing the claimant lift a steering sleeve clamp on to and off of the Archer bench and place the clamp on a cart. Hill knows of no reason why the claimant would have performed such a task. Hill recalls that on June 20 the claimant was refurbishing hand tools and assembling them into kits.

13. Following the testimony of the respondents' witnesses (Wilson, Mascarenas and Hill) the claimant was recalled in rebuttal. The claimant testified that on June 20, 2014 he performed a number of jobs including refurbishing parts and tools. He worked at the Archer bench (Respondents' Exhibit J) and the bias bench (Respondents' Exhibit I). The claimant further testified that on June 20 multiple steering sleeve clamps came out of the wash bay and the "threads" were cracked. The claimant stated that he helped Mascarenas ship these clamps to the machine shop for rethreading. The claimant stated that in order to complete this task he had to place the steering sleeve clamps on the Archer bench (Respondents' Exhibit J) so he could copy down the serial numbers and insert them into the employer's computerized parts tracking system. The claimant explained that it was during this course of this process that he lifted a steering sleeve clamp and injured his back.

14. Wilson testified in response to the claimant. Wilson stated that heard the claimant's rebuttal testimony and that the claimant's description of how the injury occurred was nothing like what the claimant told him. Wilson explained that when he talked to the claimant the claimant said he was refurbishing parts on the Archer bench, twisted to set one on a cart and injured his back. Wilson further testified that in his time working for the employer that he had seen only two cracked steering sleeve clamps. Further Wilson explained that once a steering sleeve clamp is cracked there is nothing to be done and it is "junk." Therefore, there would be no reason for the claimant to be performing the task he described on rebuttal.

15. The claimant was examined by Dr. Doing on June 23, 2014. He complained of low back pain since lifting a heavy metal object at work on "Friday." Dr. Doing noted tenderness to palpation in the paravertebral lumbar regions bilaterally and limited and range of motion "secondary to pain." Dr. Doing prescribed oxycodone and warned the claimant "regarding the possible addictive nature of narcotic medications and to use them sparingly and only when needed for pain."

16. On June 24, 2014 Darla Draper, M.D., examined the claimant at Concentra. The claimant reported bilateral low back pain rated 8 on a scale of 10 (8/10). The onset of pain was described as "sudden." The claimant gave a history that the injury began at work when he picked "up a 70 pound object from a low bench and moved it to a cart that was" 2 inches above the bench and located afoot or two from the bench. Dr. Draper assessed a lumbar strain. She continued oxycodone and referred the claimant for physical therapy 2 times per week.

17. On June 20, 2014 Dr. Draper completed a WC 164 and placed an "x" in a box indicating that her "objective finings" were consistent with history and/or work related mechanism of injury. Dr. Draper indicated the claimant was unable to work from June 24, 2012.

18. On July 3, 2014 it was noted the claimant was unable to tolerate any physical therapy exercise or soft tissue massage of the lumbar paraspinals.

19. On July 11, 2014 the claimant underwent a lumbar MRI. The radiologist's impression was multilevel disc degeneration of the lumbar spine greatest in severity at L5-S1. At L5-S1 the radiologist noted disc desiccation with loss of disc space height and mild diffuse posterior disc bulging and a very shallow disc protrusion. There were very small bilateral facet joint effusions and no central canal stenosis. There was mild bilateral foraminal stenosis.

20. On July 18, 2014 the claimant was examined by Yusuke Wakeshima, M.D. Dr. Wakeshima assessed "axial low back pain" and opined the claimant's history, examination and mechanism of alleged injury were "cost consistent with sacroiliac joint dysfunction." Dr. Wakeshima recommended SI joint injections.

21. On July 23, 2014 physical therapy was stopped by PA-C Casey McKinney because there had been "minimal improvement." Restrictions were changed to no lifting over 10 pounds and no pushing/pulling with over 10 pounds of force.

22. On July 31, 2014 the claimant underwent sacroiliac (SI) joint injections performed by Samuel Chan, M.D. On August 6, 2014 the claimant reported to Dr. Wakeshima that he did not experience any improvement from the bilateral SI joint injections and his pain had "become more profound." The claimant reported he was taking Percocet "5/325 three per day."

23. On August 18, 2014 Dr. Wakeshima noted the claimant was still reporting "profound axial low back pain." Dr. Wakeshima noted there was no improvement after the SI joint injections and that there were "minimal findings" on MRI of the lumbar spine.

Dr. Wakeshima stated the claimant's clinical history and examination were suggestive of a lumbar "strain/sprain/myofascial pain." Dr. Wakeshima also noted there were "significant discrepancies on urine toxicology study." Dr. Wakeshima noted that the last two toxicology studies "demonstrated no oxycodone and oxymorphone" were detected and stated that in light of these results another study was not indicated. Dr. Wakeshima wrote that the claimant informed him "that he last took oxycodone a day and a half before his last urine drug screen, which is contrary to what he informed me on our appointment on August 6, 2014 where he reported that he was taking Percocet 5/325 three per day." Dr. Wakeshima opined the claimants symptoms appeared out of proportion to his studies.

24. The claimant testified that he did not know why the prescribed medications were not detected during the urine tests because he was taking them

25. On October 25, 2014 the claimant was examined by Fredric Zimmerman, D.O. Dr. Zimmerman noted the claimant's evaluation was complicated by "unexpected results on urine drug screens." He noted the claimant underwent three drug tests that showed unexpectedly little or no oxycodone and oxymorphone in his system despite reportedly taking "oxycodone 10/325 up until one or two days before urine collection on each test." Dr. Zimmerman referred the claimant for testing to determine if the claimant was a rapid metablolizer of opioid medications which might explain the unexpected urine drug test results.

26. On October 30, 2014 the claimant was again seen by Dr. Zimmerman. He noted the claimant had drug results from October 30, 2014 which were a "combination of unexpected and expected findings." Unexpected findings included hydrocodone, hydromorphone, oxycodone, oxymorphone and tramadol. Dr. Zimmerman indicated the claimant is not a candidate for narcotic analgesics. Genetic testing showed the claimant was an essentially normal metabolizer. Dr. Zimmerman performed trigger point injections and the claimant reportedly experienced 40 % relief of his muscular pain. Dr. Zimmerman suggested for further diagnostic purposes that the claimant undergo L4-5 and L5-S1 medical branch blocks that might lead to radiofrequency neurotomy if there was a diagnostic response.

27. The claimant failed to prove it is more probably true than not that he sustained a low back injury proximately caused by the performance of service arising out of and in the course of his employment.

28. Combining the claimant's testimony on direct examination and on rebuttal, he stated that he injured his back when he lifted a bit box (also known as a steering sleeve clamp) off of the Archer bench to place it on a cart. On rebuttal the claimant explained the steering sleeve clamps were on the Archer bench because they were cracked and he was recording their serial numbers in preparation for transporting them to the machine shop for repair. However, the claimant's testimony is not credible and persuasive. The claimant's hearing testimony is contradicted by various other reports and statements which he has made since the alleged injury. Mr. Wilson credibly testified that when he spoke to the claimant on June 22, 2014 the claimant stated that

he injured himself when lifting a steering sleeve (not a steering sleeve clamp) off of the Archer bench. However, Wilson subsequently learned that the claimant reported to the employer's "HSE" that he injured his back while lifting a steering sleeve clamp off of the bias bench. Moreover, when the claimant made the July 11, 2014 report to American Claims Services, Inc. he reported that he injured his back picking up a "steering sleeve," not a steering sleeve clamp or "bit box."

29. The claimant's credibility is significantly contradicted and undermined by the credible testimony of Mascarenas, Hill and Wilson. These witnesses credibly testified that there was no reason for a steering sleeve clamp to be on the Archer bench since that part is removed at the breakout bench for transport to the inspection/wash bay before the Archer assembly is taken to the Archer bench. Mascarenas credibly testified that he was present on June 22, 2014 and the claimant was refurbishing hand tools and preparing kits, and it was Hill who was working on the Archer bench. Mascarenas did not state the claimant was asked to record serial numbers on cracked steering sleeve clamps in preparation for transporting them to the machine shop. Hill credibly testified that on the afternoon of June 22 he was working at the Archer bench disassembling two Archer units and the claimant was not there assisting him. Moreover, Hill credibly testified that he did not see the claimant lift any steering sleeve clamps off of the Archer bench on the afternoon of June 22. Wilson credibly testified that it is unusual for a steering sleeve clamp to crack, but if it does it is "junk." The ALJ infers from Wilson's testimony that it is improbable that the claimant lifted steering sleeve clamps onto the Archer bench in order to record their serial numbers prior to their movement to the machine shop for repair. Rather, the ALJ is persuaded that cracked steering sleeve clamps are irreparable and therefore constitute "junk" as testified by Wilson. The ALJ also considers it significant that there is no credible or persuasive evidence that the claimant ever told anyone before his rebuttal testimony that his injury resulted from lifting cracked steering sleeve clamps in preparation for transporting them to the machine shop.

30. The claimant's credibility is further undermined by the fact that he failed immediately to report his alleged back injury. The claimant was admittedly aware of the company policy requiring an immediate report of any injury no matter how minor. In this case he failed to report the injury until two days after it allegedly occurred. The claimant's credibility is also undermined by failure truthfully to inform his doctors about his use and failure to use prescribed narcotics. The claimant's untruthfulness is documented by multiple drug tests. The claimant was even tested to insure that he was not a "rapid metabolizer" of opioids. The claimant is a normal metabolizer and the drug test results cannot be explained by some biological abnormality.

31. Evidence and inferences contrary to or inconsistent with these findings are not credible and persuasive.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), §§8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A Workers' Compensation case is decided on its merits. Section 8-43-201(1). The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions.

COMPENSABILITY

The claimant alleges that a preponderance of the evidence establishes that he sustained a low back injury while lifting a "steering sleeve clamp" or bit box while performing his duties at work. The respondents contend the claimant's testimony is not credible. The ALJ agrees with the respondents and concludes the claim for benefits must be denied.

The claimant was required to prove by a preponderance of the evidence that at the time of the injury he was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

As determined in Findings of Fact 27 through 30, the claimant failed to prove it is more probably true than not that on June 22, 2014 he sustained a low back injury proximately caused by the performance of service arising out of and in the course of his employment. As found the claimant's testimony that he sustained an injury while lifting a steering sleeve clamp from the Archer bench is contradicted by and inconsistent with various statements the claimant made to other employees and American Claims

Services, Inc. The claimant's credibility is also undermined by the credible testimony of Wilson, Mascarenas and Hill as set forth in Finding of Fact 29. Finally, the claimant's credibility is undermined by his failure timely to report the injury in accordance with company policy and his misstatements to physicians concerning his use and non-use of narcotic medications.

In light of these determinations the claim for benefits must be denied. The ALJ need not address the other issues raised by the parties.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the ALJ enters the following order:

1. The claim for workers' compensation benefits in WC 4-956-748 is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable occupational disease to his cervical spine during the course and scope of his employment with Employer.

2. Whether Claimant has demonstrated by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period December 20, 2012 until terminated by statute.

FINDINGS OF FACT

1. Claimant is a 32 year old male who formerly worked for Employer as a Bus Driver. He began employment with Employer in June 2011. Claimant's job duties involved inspecting his designated bus before and after his shift and driving his assigned route. His duties were primarily sedentary in nature and involved sitting while operating the bus. Claimant was not responsible for any maintenance work or significant lifting.

2. On May 3, 2012 Claimant sought treatment for mild neck pain. Because Claimant was a student he obtained treatment at the Auraria Health Center. He did not report any specific neck trauma. The medical examination revealed minimal neck pain upon movement and no tenderness on palpation. Claimant was advised to report his injury to Employer if his symptoms were work-related.

3. On September 17, 2012 Claimant again sought medical treatment for his neck pain. By this time Claimant was only driving buses for Employer one day each week. He did not demonstrate any neck pain with movement and his cervical spine did not reveal any tenderness on palpation. Claimant was again instructed to report his neck concerns to Employer if his condition was work-related.

4. Claimant explained that on December 20, 2012 he reported his neck symptoms to Employer. He contended that he suffered neck pain as a result of performing his job duties as a Bus Driver.

5. On January 22, 2013 Claimant again sought medical treatment for his neck pain. Claimant exhibited full range of motion with no cervical spine pain. X-rays revealed the minor degenerative finding of mild disc height loss at C6-C7.

6. On February 6, 2013 Claimant sought chiropractic treatment for his continuing neck pain. He completed an intake form and noted that his condition was not related to his work for Employer.

7. Claimant subsequently underwent physical therapy, chiropractic treatment and injections for his continuing cervical symptoms. However, his neck pain persisted.

8. Claimant testified that his neck symptoms began approximately 8-10 months after beginning his job as a Bus Driver with Employer. He attributed his cervical symptoms to sitting in the bus and constantly checking the mirrors while driving. Claimant explained that he decreased his work hours to one day each week because of his persistent neck pain. Nevertheless, he acknowledged that he has never received any work restrictions from his physicians for his condition. Claimant ceased working for Employer in October 2014.

9. On December 29, 2014 Claimant underwent an independent medical examination with F. Mark Paz, M.D. Claimant reported that he began experiencing neck pain while working as a Bus Driver for Employer. He specifically explained that turning his head right, left and vertically in an upward direction to look in the rearview mirror while driving certain buses caused his neck symptoms. Claimant stated that he began suffering intermittent neck pain that resolved after he completed his work shift. However, the neck pain subsequently became constant. Claimant noted that he nevertheless continued to drive buses and did not miss work as a result of his neck symptoms. He commented that, although he ceased working for Employer in October 2014, he continued to receive injections for his ongoing neck pain.

10. Dr. Paz conducted a physical examination of Claimant, reviewed medical records, obtained Claimant's job description and considered the mechanism of injury. He concluded that Claimant suffered neither an acute trauma nor an occupational disease to his cervical spine during the course and scope of his employment with Employer. Dr. Paz maintained that Claimant's neck symptoms were likely consistent with early cervical degenerative disc disease and/or cervical degenerative joint disease. He determined there was no mechanism of injury that causally related Claimant's medical diagnosis and work-related exposure. Moreover, there was no work exposure that aggravated or accelerated Claimant's pre-existing cervical spine degenerative disc disease or joint disease. Dr. Paz explained that Claimant experienced pain while driving because of the degenerative condition but there was no cause and effect between the work activities and condition.

11. Dr. Paz testified at the hearing in this matter. He maintained that Claimant's job duties for Employer did not cause his cervical symptoms. Dr. Paz reiterated that Claimant suffered from cervical degenerative disc disease and/or cervical degenerative joint disease. He explained that it was not medically probable that Claimant's described mechanism of injury of turning his head left, right and upwards while driving a bus would have caused neck pain. Dr. Paz also determined that there was insufficient work exposure to have aggravated or accelerated Claimant's pre-existing cervical spine condition. He testified that, while the x-rays revealed some degenerative changes at the C6-7 level, the affected location of the neck from turning the head was at the C1-2 position. Dr. Paz thus concluded that Claimant's medical treatment for his neck was not reasonable, necessary or causally related to his work as a Bus Driver for Employer. Furthermore, Dr. Paz commented that, if Claimant's neck

pain was related to his job duties for Employer, his symptoms would not have persisted or worsened when he began working fewer hours and ultimately ceased employment. Finally, Dr. Paz explained that Claimant might experience cervical pain anytime he moves his neck because of his underlying degenerative condition. Claimant's symptoms constituted the natural progression of his underlying degenerative cervical condition.

12. Claimant has failed to establish that it is more probably true than not that he sustained a compensable occupational disease to his cervical spine during the course and scope of his employment with Employer. Claimant testified that he began to suffer neck symptoms approximately 8-10 months after beginning his job as a Bus Driver with Employer. He attributed his cervical symptoms to sitting in the bus and constantly checking the mirrors while driving. Claimant specifically noted that turning his head right, left and vertically in an upward direction to look in the rearview mirror while driving certain buses caused his neck symptoms. Claimant initially sought treatment for his neck symptoms in May 2012 and reported his symptoms to Employer on December 20, 2012.

13. Dr. Paz performed an independent medical examination of Claimant and testified at the hearing in this matter. He concluded that Claimant suffered neither an acute trauma nor an occupational disease to his cervical spine during the course and scope of his employment with Employer. Dr. Paz maintained that Claimant's neck symptoms were likely consistent with early cervical degenerative disc disease and/or cervical degenerative joint disease. He explained that it was not medically probable that Claimant's described mechanism of injury of turning his head left, right and upwards while driving a bus would have caused neck pain. Dr. Paz also determined that there was insufficient work exposure to have aggravated or accelerated Claimant's pre-existing cervical spine condition. He testified that, while the x-rays revealed some degenerative changes at the C6-7 level, the affected location of the neck from turning the head was instead at the C1-2 position. Dr. Paz thus concluded that Claimant's medical treatment for his neck was not reasonable, necessary or causally related to his work as a Bus Driver for Employer. Dr. Paz explained that Claimant might experience cervical pain anytime he moves his neck because of his underlying degenerative condition. Claimant's symptoms constituted the natural progression of his underlying degenerative cervical condition. Based on the medical records and persuasive testimony of Dr. Paz, Claimant has failed to demonstrate that the hazards of his employment as a Bus Driver for Employer caused, intensified, or, to a reasonable degree, aggravated his cervical spine condition.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering

all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. The test for distinguishing between an accidental injury and an occupational disease is whether the injury can be traced to a particular time, place and cause. *Campbell v. IBM Corp.*, 867 P.2d 77, 81 (Colo. App. 1993). "Occupational disease" is defined by §8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

5. A claimant is required to prove by a preponderance of the evidence that the alleged occupational disease was directly or proximately caused by the employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251, 252 (Colo. App. 1999). Moreover, §8-40-201(14), C.R.S. imposes proof requirements in addition to those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819, 824 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

6. The mere fact that a claimant experiences symptoms while performing work does not require the inference there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The Panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work.

7. As found, Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable occupational disease to his cervical spine during the course and scope of his employment with Employer. Claimant testified that he began to suffer neck symptoms approximately 8-10 months after beginning his job as a Bus Driver with Employer. He attributed his cervical symptoms to sitting in the bus and constantly checking the mirrors while driving. Claimant specifically noted that turning his head right, left and vertically in an upward direction to look in the rearview mirror while driving certain buses caused his neck symptoms. Claimant initially sought treatment for his neck symptoms in May 2012 and reported his symptoms to Employer on December 20, 2012.

8. As found, Dr. Paz performed an independent medical examination of Claimant and testified at the hearing in this matter. He concluded that Claimant suffered neither an acute trauma nor an occupational disease to his cervical spine during the course and scope of his employment with Employer. Dr. Paz maintained that Claimant's neck symptoms were likely consistent with early cervical degenerative disc disease and/or cervical degenerative joint disease. He explained that it was not medically probable that Claimant's described mechanism of injury of turning his head left, right and upwards while driving a bus would have caused neck pain. Dr. Paz also determined that there was insufficient work exposure to have aggravated or accelerated Claimant's pre-existing cervical spine condition. He testified that, while the x-rays revealed some degenerative changes at the C6-7 level, the affected location of the neck from turning the head was instead at the C1-2 position. Dr. Paz thus concluded that Claimant's medical treatment for his neck was not reasonable, necessary or causally related to his work as a Bus Driver for Employer. Dr. Paz explained that Claimant might experience cervical pain anytime he moves his neck because of his underlying degenerative condition. Claimant's symptoms constituted the natural progression of his underlying degenerative cervical condition. Based on the medical records and persuasive testimony of Dr. Paz, Claimant has failed to demonstrate that the hazards of his employment as a Bus Driver for Employer caused, intensified, or, to a reasonable degree, aggravated his cervical spine condition.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's claim for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: February 27, 2015.

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable occupational disease in the form of Carpal Tunnel Syndrome (CTS) to his right hand and wrist during the course and scope of his employment with Employer.

2. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable right hand and wrist injury on July 26, 2014 during the course and scope of his employment with Employer.

3. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive authorized medical treatment in the form of a right carpal tunnel release that is reasonable and necessary to cure or relieve the effects of a work-related injury.

4. Whether Claimant has established by a preponderance of the evidence that the medical treatment he received at University of Colorado Hospital was authorized and Respondents are liable for payment of the treatment.

FINDINGS OF FACT

1. On May 12, 2014 Employer hired Claimant to work as a Tank Engine Driver. Claimant has alleged either an occupational disease of right hand and wrist CTS or an acute injury to his right hand and wrist on July 26, 2014. The date of injury is approximately 10 weeks after Claimant began employment with Employer. For six of his ten weeks of employment Claimant underwent training.

2. Claimant's job as a Tank Wagon Driver consists of 14 hour shifts. Claimant would report to Employer's Wellington Yard in Wellington, CO to start his shift. He began working there at 4:00 p.m. on July 26, 2014. Claimant then drove to Greeley, CO to pick up co-worker Frac Tech Clayton Jones on July 26, 2014. Claimant and Mr. Jones then drove to the fracking site in Fort Lupton, CO. Claimant testified that driving took approximately 2.5 to 3 hours to complete.

3. After Claimant arrived at the fracking site in Fort Lupton he would receive a "pass on" from the prior crew. The crew informed Claimant of fuel levels in equipment and the number of gallons that the site was burning per hour. Claimant then typically conducted a safety meeting with Mr. Jones. After the safety meeting, Claimant would strap on to both trucks at the site and climb on them to check the fuel levels in order to verify the information from the prior crew. The process required Claimant to wear fall

equipment, gloves, and eye protection. He climbed a ladder and used a wooden measuring stick to check fuel levels.

4. To fill a piece of equipment or pump with fuel, Claimant drove the fuel truck into position. After checking fuel levels, Claimant and Mr. Jones prepared the hoses. The hoses are two inches in diameter. Mr. Jones would then carry the hose out to the equipment to fill it with fuel. Claimant would assist him by feeding out the hose from the truck. After the hose was out to the equipment approximately 150 to 200 feet away, Claimant then walked back to the truck and turned on the pump. Mr. Jones then filled up the piece of equipment with fuel. While Mr. Jones was filling up the equipment with fuel, Claimant recorded data and watched for fuel leaks.

5. After finishing a round of fueling Claimant would sit in his truck, complete paperwork and log all of the fuel information. He would not get a formal break but would eat his lunch while completing the paperwork. Claimant typically completed paperwork for 40 to 45 minutes before he and Mr. Jones would start another round of fueling. The paperwork was in addition to the documentation Claimant completed while each piece of equipment was being fueled. Claimant explained that no more than four rounds of fueling per shift could be completed at the Fort Lupton fracking site.

6. Claimant explained that on July 26, 2014 multiple machines on the fracking site required fueling. Claimant demonstrated the hand over hand motion to distribute and retract the approximately 150 to 200 foot fuel hose. Claimant remarked that he spent a significant portion of his day extending and retracting the fuel hose on July 26, 2014. Because Mr. Jones was a new employee he filled the equipment completely and thus caused the hose to click. Claimant noted that when the hose clicked it would "snap like a snake" in his hands. He commented that the jerking occurred multiple times while fueling equipment on July 26, 2014. Claimant explained that he suffered tingling in his right hand as a result of the jerking hose and reported his symptoms to Driver Manager Jason Martinez. Claimant did not immediately seek medical treatment but after he went home he called Mr. Martinez to tell him he was going to obtain medical treatment at an emergency room.

7. On July 26, 2014 Claimant sought medical treatment at the University of Colorado Hospital Emergency Room. Claimant reported a two-day history of numbness with sharp, shooting pains to his right fingers. The examining physician could not determine a mechanism of injury.

8. On August 18, 2014 Claimant visited Hope Edmonds, M.D. for an examination. Claimant reported numbness, tingling and shooting pain in his right hand. Dr. Edmonds noted "there was not acute injury or trauma." She diagnosed Claimant with right wrist flexor tenosynovitis and right CTS. Dr. Edmonds remarked that medical causation was not known at the time and ordered a job site analysis to evaluate causation. She recommended physical therapy and released Claimant to light duty.

9. On September 12, 2014 Claimant visited Bret Peterson, M.D. for an orthopedic consultation. Claimant reported right hand discomfort that he attributed to a

workplace injury. Dr. Peterson determined that Claimant had symptomatology consistent with a median compressive lesion that might represent CTS. Dr. Peterson recommended electrodiagnostic testing to determine if Claimant had CTS, cervical pathology or rotator cuff pathology due to shoulder weakness.

10. On September 25, 2014 Claimant underwent EMG/NCV testing. The testing revealed moderate to severe right median neuropathy at the wrist without denervation but no evidence of cervical radiculopathy or brachial plexopathy. Based on the EMG/NCV results Dr. Peterson diagnosed Claimant with moderate to severe right CTS.

11. On October 16, 2014 Vocational Case Manager William E. George conducted a job site analysis of Employer's Fort Lupton fracking site. He could not observe Claimant perform his duties as a Tank Wagon Driver because Claimant was still on modified duty. Nevertheless, he observed other employees in the position lifting, carrying and dragging hoses, lifting wheel chalks to block truck tires, lifting fire extinguishers, gripping and coupling hoses, placing gas nozzles into gas tanks, climbing ladders, driving trucks and completing paperwork. Mr. George noted that employees will sit for one hour after a round of fueling is completed and that an employee may sit for a total of 4 to 6 hours during one shift. He concluded that the job duties of a Tank Wagon Driver do not meet any of the Colorado risk criteria regarding lifting, using hand tools, wrist flexion and extension or vibration. Mr. George reviewed each of the risk factors enumerated in the *Medical Treatment Guidelines* (*Guidelines*) Rule 17, Exhibit 5 regarding cumulative trauma conditions. He concluded that none of Claimant's job duties met any of the criteria regarding primary or secondary risk factors outlined in Rule 17, Exhibit 5.

12. On December 16, 2014 Mr. George testified through a post-hearing evidentiary deposition. Mr. George considered Claimant's hearing testimony about his job duties and maintained that the job duties did not meet any of the criteria regarding primary or secondary risk factors outlined in Rule 17, Exhibit 5 of the *Guidelines*. Mr. George testified that when he calculated the amount of time an employee sits during a shift he included the time the employee was completing paperwork.

13. On October 29, 2014 Karl Larsen, M.D. conducted an independent medical examination of Claimant. He also testified through a post-hearing evidentiary deposition in this matter. Dr. Larsen explained that Claimant worked at four to five different sites for multiple hours and operated refueling hoses. Claimant specifically moved a heavy, stiff hose frequently because it often jumped and twisted. Based on Claimant's description of his job duties of "very heavy, forceful, repetitive gripping and pulling activities at work," Dr. Larsen concluded "I think this is very clearly related to his work activities and is a work-induced or exacerbated carpal tunnel syndrome. I say this because we do not know what any sort of baseline examination would have looked like, but he absolutely denies any problems before this work event." In reaching his opinion Dr. Larson did not review the EMG/NCV testing, job site analysis or Claimant's job description. Moreover, Dr. Larson did not consider W.C.R.P. Rule 17, Exhibit 5 regarding cumulative trauma conditions in rendering his opinion.

14. Dr. Edmonds reviewed the job site analysis performed by Mr. George and issued a letter on October 30, 2014. Dr. Edmonds concluded that Claimant's "carpal tunnel syndrome does NOT meet criteria for a cumulative trauma injury as defined by the Division of Workers' Compensation for the state of Colorado. Mr. George reports NO primary or secondary risk factors present."

15. On October 31, 2014 Claimant underwent an independent medical examination with Carlos Cebrian, M.D. Claimant reported right hand numbness, tingling and pain. Dr. Cebrian considered Claimant's job duties in great detail. He noted that on July 26, 2014 Claimant was completing paperwork approximately 8 to 10 hours into his shift after having finished three rounds of fueling when he began to experience pain and numbness in his right fingers. Dr. Cebrian explained that Claimant's job duties involved driving a fuel truck from Wellington to pick up a co-worker, then driving to Fort Lupton, staging a tank wagon, dispensing fuel and operating a fuel hose. Dr. Cebrian remarked that Claimant was required to complete a large amount of paperwork including a pre-trip check, a 705 equipment form and an asset tracker. The paperwork took Claimant 20 to 30 minutes to finish per round of fueling. A round of fueling lasted approximately two to three hours. He would complete the paperwork while sitting in his truck. Moreover, Claimant calculated the amount of fuel used during the fueling process while the frac tech was fueling equipment.

16. Dr. Cebrian explained that in order to perform a medical causation analysis for a cumulative trauma condition pursuant to the *Guidelines*, the first step is to make a diagnosis, the next step is to clearly define the job duties and the final step is to compare the job duties with the delineated primary risk factors. Dr. Cebrian concluded that Claimant had right CTS with EMG evidence of moderate to severe right median nerve compression.

17. Dr. Cebrian compared Claimant's job duties with the delineated primary risk factors in the *Guidelines*. He reviewed the Primary Risk Factor Definition Table for Force and Repetition/Duration. Dr. Cebrian noted that the Table requires 6 hours of greater than 50% of individual maximum force with task cycles 30 seconds or less, or sufficient force is used for at least 50% of a task cycle. Additional risk factors are 6 hours of lifting 10 pounds greater than 60 times per hour or 6 hours of use of hand held tools weighing two pounds or greater. Dr. Cebrian concluded that Claimant did not engage in forceful and repetitive activity for an amount of time that meets the minimum threshold in the *Guidelines*. Although Claimant engages in forceful activities at times in his job, his duties do not meet the minimum threshold of force, repetition and duration. Dr. Cebrian noted that Claimant performed several different activities throughout the day and many of the activities do not meet the minimal force or time duration requirements.

18. Dr. Cebrian noted that an additional Primary Risk Factor category is Awkward Posture and Repetition/Duration. The factor requires 4 hours of wrist flexion greater than 45 degrees, extension greater than 30 degrees, or ulnar deviation greater than 20 degrees, 6 hours of elbow flexion greater than 90 degrees, or 6 hours of supination/pronation with task cycles 30 seconds or less or awkward posture is used for

at least 50% of a task cycle. Additional Primary Risk Factors include computer work for more than 7 hours per day or at a non-ergonomically correct work station, continuous mouse use of greater than 4 hours or use of a handheld vibratory power tool for 6 hours or more. Dr. Cebrian determined that Claimant's job duties did not meet any of the Primary Risk Factors. Moreover, Dr. Cebrian explained that Claimant's work activities did not meet the Secondary Risk Factors enumerated in the *Guidelines*

19. Dr. Cebrian remarked that the manifestation of symptoms while at work does not establish a causal relationship with job duties. He explained:

> Carpal tunnel syndrome is a disease process of the median nerve as it travels through the carpal tunnel in the wrist. This disease process occurs over several years. … [T]he majority of cases of carpal tunnel syndrome are in fact not caused by work. In assessing the possible work relatedness of carpal tunnel syndrome, it is imperative to utilize a scientific based methodology to determine if there is a work-related causal relationship. The Colorado Division of Workers' Compensation has utilized a scientific based methodology in assisting physicians in determining whether carpal tunnel syndrome is work-related or not. Four-hundred and sixty-nine medical articles were utilized in establishing Guidelines for Cumulative Trauma Conditions.

Dr. Cebrian thus concluded that Claimant's right CTS was not caused by his work activities for Employer.

20. On December 15, 2014 Dr. Cebrian testified through an evidentiary deposition in this matter. Dr. Cebrian discussed the Primary and Secondary Risk Factors enumerated in the *Guidelines*. He testified that the key to the *Guidelines* is that the tasks have to be a combination of the force, repetition and duration for a minimum time period. Different activities are not included in calculating the time period. Dr. Cebrian testified that Claimant's job duties do not meet the Primary Risk Factors because he does not get into a repetitive cycle of doing a forceful activity. He also testified that Claimant's job duties do not meet the Secondary Risk Factors because they do not involve continuous, repetitive activity. Finally, Dr. Cebrian testified that the combination of repetition, force and cycle time in Claimant's duties as a Tank Engine Driver failed to meet the causation requirements for CTS outlined in Rule 17, Exhibit 5 of the *Guidelines*.

21. Claimant has failed to establish that it is more probably true than not that he sustained a compensable occupational disease in the form of right CTS during the course and scope of his employment with Employer. Although Claimant attributed his right hand and wrist symptoms to his work activities, a review of his job duties reflects that they lacked the requisite force or repetition to cause his CTS. Claimant engaged in a variety of numerous tasks throughout each shift. The record reflects that Claimant's tasks as a Tank Wagon Driver included driving a truck, completing a pre-trip inspection, checking tank levels, helping the frac tech stage hoses, fire watching, recording fuel levels, winding the hose and completing paperwork. Although Claimant's job duties

sometimes exceeded the minimum force requirements under the *Guidelines*, his job duties did not exceed the force requirements for the required repetition and time periods. Rule 17, Exhibit 5 of the *Guidelines* requires a combination of force, repetition and duration. However, Claimant's job duties fail to meet all of the criteria in the *Guidelines* for a cumulative trauma condition.

22. Relying on Rule 17, Exhibit 5 of the *Guidelines*, Dr. Cebrian testified that the combination of repetition, force and cycle time in Claimant's duties as a Tank Wagon Driver failed to meet the causational requirements for CTS. He persuasively explained that Claimant did not suffer CTS as a result of his work activities for Employer. To constitute a cumulative trauma disorder pursuant to the *Guidelines,* Claimant must have worked more than six hours per day with the requisite force and repetition. Dr. Cebrian testified that Claimant's job duties did not meet the Primary Risk Factors because he did not engage in a repetitive cycle activity with the requisite force. He also testified that Claimant's job duties did not meet the Secondary Risk Factors because they did not involve continuous repetitive activity. Finally, Dr. Cebrian testified that the combination of repetition, force and cycle time in Claimant's duties as a Tank Engine Driver failed to meet the causation requirements for CTS outlined in the Rule 17, Exhibit 5 of the *Guidelines.* Based on Claimant's job duties, Dr. Cebrian also determined that he would not be maintaining the types of postures for the requisite time periods as outlined in the *Guidelines*. He remarked that Claimant was simply not performing his job duties for a continuous repetitive cycle.

23. The job site analysis completed by Mr. George supports the opinion of Dr. Cebrian. Mr. George also concluded that the job duties of a Tank Wagon Driver do not meet any of the Colorado risk criteria regarding lifting, using hand tools, wrist flexion and extension or vibration. He reviewed each of the risk factors enumerated in Rule 17, Exhibit 5 of the *Guidelines* regarding cumulative trauma conditions. He concluded that none of Claimant's job duties met any of the criteria regarding primary or secondary risk factors outlined in Rule 17, Exhibit 5. Mr. George also found that Claimant's job duties fail to the meet the requirement for force, repetition, and duration required by the *Guidelines.* He testified that even assuming that Claimant lifted and pulled hoses as frequently as he testified and that the hose jerked as often as Claimant asserted, his job duties still did not meet the requirements of the *Guidelines* for the Primary or Secondary Risk Factors.

24. In contrast, Dr. Larsen concluded that Claimant's work activities for Employer caused him to develop right CTS. However, in reaching his opinion Dr. Larson did not review the EMG/NCV testing, job site analysis or Claimant's job description. Moreover, Dr. Larson did not consider W.C.R.P. Rule 17, Exhibit 5 regarding cumulative trauma conditions in rendering his opinion. Accordingly, Claimant has failed to demonstrate that the hazards of his employment caused, intensified, or, to a reasonable degree, aggravated his right CTS. Claimant has failed to prove that his right CTS was directly or proximately caused by his employment or working conditions.

25. Claimant has failed to demonstrate that it is more probably true than not that he suffered a compensable right hand and wrist injury on July 26, 2014 during the

course and scope of his employment with Employer. The medical records are replete with evidence that Claimant did not suffer an acute injury while he was working as a Tank Engine Driver for Employer. On July 26, 2014 Claimant sought medical treatment at the University of Colorado Hospital Emergency Room. Claimant reported a two-day history of numbness with sharp, shooting pains to his right fingers. The examining physician could not determine a mechanism of injury. On August 18, 2014 Claimant visited Dr. Edmonds and reported numbness, tingling and shooting pain in his right hand. Dr. Edmonds noted "there was not acute injury or trauma." Although Claimant may have manifested right CTS symptoms while working for Employer on July 26, 2014, the record contains insufficient evidence to establish that his work activities caused an acute development of CTS.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Occupational Disease

4. The test for distinguishing between an accidental injury and an occupational disease is whether the injury can be traced to a particular time, place and cause. *Campbell v. IBM Corp.*, 867 P.2d 77, 81 (Colo. App. 1993). "Occupational disease" is defined by §8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

5. A claimant is required to prove by a preponderance of the evidence that the alleged occupational disease was directly or proximately caused by the employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251, 252 (Colo. App. 1999). Moreover, §8-40-201(14), C.R.S. imposes proof requirements in addition to those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819, 824 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

6. The *Guidelines* provide, in relevant part:

> Indirect evidence from a number of studies supports the conclusion that task repetition up to 6 hours per day unaccompanied by other risk factors is not causally associated with cumulative trauma conditions. Risk factors that are likely to be associated with specific CTC diagnostic categories include extreme wrist or elbow postures, force including regular work with hand tools greater than 1 kg or tasks requiring greater than 50% of an individual's voluntary maximal strength, work with vibratory tools at least 2 hours per day; or cold environments.

W.C.R.P. Rule 17, Exhibit 5, p.16. The duration of force and repetition as a primary risk factor must be greater than six hours at 50% of individual maximum force with task cycles of 30 seconds or less.

7. "Good" but not "strong" evidence that occupational risk factors cause CTS, as set forth in the *Guidelines*, include a combination of force, repetition, and vibration, or a combination of repetition and force for six hours, or a combination of repetition and forceful tool use with awkward posture for six hours, or a combination of force, repetition, and awkward posture. "Some" evidence of occupational risk factors for the development of CTS include wrist bending or awkward posture for four hours, mouse use more than four hours, and a combination of cold and forceful repetition for six hours. W.C.R.P. Rule 17, Exhibit 5, pp. 23-24.

8. As found, Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable occupational disease in the form of right CTS during the course and scope of his employment with Employer. Although Claimant attributed his right hand and wrist symptoms to his work activities, a review of his job duties reflects that they lacked the requisite force or repetition to cause his CTS. Claimant engaged in a variety of numerous tasks throughout each shift. The record reflects that Claimant's tasks as a Tank Wagon Driver included driving a truck, completing a pre-trip inspection, checking tank levels, helping the frac tech stage hoses, fire watching, recording fuel levels, winding the hose and completing paperwork. Although Claimant's job duties sometimes exceeded the minimum force requirements under the *Guidelines*, his job duties did not exceed the force requirements for the required repetition and time periods. Rule 17, Exhibit 5 of the *Guidelines* requires a combination of force, repetition and duration. However, Claimant's job duties fail to meet all of the criteria in the *Guidelines* for a cumulative trauma condition.

9. As found, relying on Rule 17, Exhibit 5 of the *Guidelines*, Dr. Cebrian testified that the combination of repetition, force and cycle time in Claimant's duties as a Tank Wagon Driver failed to meet the causational requirements for CTS. He persuasively explained that Claimant did not suffer CTS as a result of his work activities for Employer. To constitute a cumulative trauma disorder pursuant to the *Guidelines,* Claimant must have worked more than six hours per day with the requisite force and repetition. Dr. Cebrian testified that Claimant's job duties did not meet the Primary Risk Factors because he did not engage in a repetitive cycle activity with the requisite force. He also testified that Claimant's job duties did not meet the Secondary Risk Factors because they did not involve continuous repetitive activity. Finally, Dr. Cebrian testified that the combination of repetition, force and cycle time in Claimant's duties as a Tank Engine Driver failed to meet the causation requirements for CTS outlined in the Rule 17, Exhibit 5 of the *Guidelines.* Based on Claimant's job duties, Dr. Cebrian also determined that he would not be maintaining the types of postures for the requisite time periods as outlined in the *Guidelines*. He remarked that Claimant was simply not performing his job duties for a continuous repetitive cycle.

10. As found, the job site analysis completed by Mr. George supports the opinion of Dr. Cebrian. Mr. George also concluded that the job duties of a Tank Wagon Driver do not meet any of the Colorado risk criteria regarding lifting, using hand tools, wrist flexion and extension or vibration. He reviewed each of the risk factors enumerated in Rule 17, Exhibit 5 of the *Guidelines* regarding cumulative trauma conditions. He concluded that none of Claimant's job duties met any of the criteria regarding primary or secondary risk factors outlined in Rule 17, Exhibit 5. Mr. George also found that Claimant's job duties fail to the meet the requirement for force, repetition, and duration required by the *Guidelines.* He testified that even assuming that Claimant lifted and pulled hoses as frequently as he testified and that the hose jerked as often as Claimant asserted, his job duties still did not meet the requirements of the *Guidelines* for the Primary or Secondary Risk Factors.

11. As found, in contrast, Dr. Larsen concluded that Claimant's work activities for Employer caused him to develop right CTS. However, in reaching his opinion Dr.

Larson did not review the EMG/NCV testing, job site analysis or Claimant's job description. Moreover, Dr. Larson did not consider W.C.R.P. Rule 17, Exhibit 5 regarding cumulative trauma conditions in rendering his opinion. Accordingly, Claimant has failed to demonstrate that the hazards of his employment caused, intensified, or, to a reasonable degree, aggravated his right CTS. Claimant has failed to prove that his right CTS was directly or proximately caused by his employment or working conditions.

Acute Injury

12. For a claim to be compensable under the Act, a claimant has the burden of proving that she suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

13. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

14. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he suffered a compensable right hand and wrist injury on July 26, 2014 during the course and scope of his employment with Employer. The medical records are replete with evidence that Claimant did not suffer an acute injury while he was working as a Tank Engine Driver for Employer. On July 26, 2014 Claimant sought medical treatment at the University of Colorado Hospital Emergency Room. Claimant reported a two-day history of numbness with sharp, shooting pains to his right fingers. The examining physician could not determine a mechanism of injury. On August 18, 2014 Claimant visited Dr. Edmonds and reported numbness, tingling and shooting pain in his right hand. Dr. Edmonds noted "there was not acute injury or trauma." Although Claimant may have manifested right CTS symptoms while working for Employer on July 26, 2014, the record contains insufficient evidence to establish that his work activities caused an acute development of CTS.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's claim for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

The issues raised for the hearing included a determination of dependents of Claimant Jeffrey Stromberger and the amount of benefits to be paid pursuant to Sections 8-41-501 and 8-41-503, C.R.S.

FINDINGS OF FACT

Having considered the evidence presented at hearing, the following Findings of Face are entered.

1. On August 29, 2014, Claimant was involved in a motor vehicle accident in the course and scope of his employment while employed by Employer. On August 29, 2014, at approximately 10:53 a.m., while southbound on highway 385 near mile post 206, Claimant was involved in a rollover accident causing his death.

2. Kristyn N. Stromberger filed a Dependent's Notice and Claim for Compensation for which a Notice of Contest was filed by Respondents on November 5, 2014. Respondents have agreed that the Notice of Contest is hereby withdrawn and have stipulated that Claimant's death did arise out of the course and scope of employment in the motor vehicle accident on August 29, 2014.

3. Respondents have obtained information through the Colorado State Patrol Accident Reports, mechanical investigation, autopsy report and confirming letters from Colorado State Patrol Trooper Seth Soukup regarding the cause of the accident. As a result of this investigation, and documents submitted, there was no safety rule violation that would have affected the outcome in regard to this accident.

4. Employer records have been obtained regarding wages earned by Claimant from January 1, 2014, through August 29, 2014. The parties have stipulated, and from the records it appears proper, that Claimant's wages for that period of time including any fringe benefits was $42,388.78. Based on the gross wages for that period of time, the average weekly wage is determined by taking the $42,388.l78, divided by 241 days, and multiplying by seven days per week which equals $1,231.21. As a result, the temporary total disability rate to determine dependent benefits would be two-thirds of that amount or $820.81 per week.

5. Based on the marriage certificate produced by Kristyn N. Stromberger, and her testimony, which the Court finds credible, the Court finds that Kristyn N. Stromberger is the widow of the decedent, Claimant Jeffrey Stromberger, and was living in the same household at the time of his death and therefore is entitled to dependent's benefits.

6. Based on the certificate of live birth for Pacyn K. Stromberger and the testimony of Kristyn N. Stromberger, which has been found credible, it is determined that Pacyn K. Stromberger is a minor child who relied on support of Claimant Jeffrey Stromberger entitled to dependent's benefits.

7. Kristyn N. Stromberger testified that she has had access to all financial accounts of Claimant Jeffrey Stromberger. She testified that she is aware of the content and that there has not been any payments made to, or for the benefit of, any other individual for the purpose of support. Additionally, she testified that she would be aware if Claimant Jeffrey Stromberger had any other children and there are no other children.

8. Kristyn N. Stromberger testified that Employer continued to pay full wage benefits through September 30, 2014. Additionally, she testified that the funeral benefit of $7,000 has already been paid.

9. The record shows that the Social Security Administration has awarded to Kristyn N. Stromberger, for her minor child, Pacyn K. Stromberger, an entitlement to a Social Security benefit in the amount of $1,464.40 per month.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following conclusions of law.

1. The injured worker has the burden of proof by a preponderance of evidence establishing entitlement to benefits. Sections 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office*, 24 P.3d 29 (Colo. App. 2000). A "preponderance of evidence" is a quantum of evidence that makes a fact, or facts, more reasonably probable or improbable, than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.,* 104 P.3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc*., W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2012]. Also *see Ortiz v. Principi*, 274 F.3d 1361 (D.C. Cir. 2001).

2. In deciding whether an injured worker has met the burden of proof the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192, 1197 (Colo. App. 2002; *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of a witness. *Arenas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000

3. Section 8-41-503(1), C.R.S entitled, "Dependency and Extent Determined-How" provides, that:

> (1)Dependents and the extent of their dependency shall be determined as of the date of the injury to the injured employee, and right

to death benefits shall become fixed as of said date . . . . Death benefits shall be directly payable to the dependents entitled thereto or to such person legally entitled thereto as the Director may designate.

4. Section 8-41-501(1)(a), C.R.S. entitled "Persons Presumed Wholly Dependent," provides, "that the following described persons shall be presumed to be wholly dependent (however, such presumption may be rebutted by competent evidence) :

(a) Widow or widower, unless it is shown that he or she was voluntarily separated and living apart from the spouse at the time of injury or death or was not dependent in whole or in part on the deceased for support .

(b) Minor children of the deceased under the age of eighteen years, including posthumous or legally adopted children."

5. It is determined that decedent Claimant Jeffrey Stromberger died in the course and scope of his employment on August 29, 2014. As a result, Claimant Jeffrey Stromberger has two surviving dependents. They are his widow, Kristyn N. Stromberger, and his minor daughter whose date of birth is July 25, 2013. There are no other dependents.

6. At the time of Claimant Jeffrey Stromberger's death, his average weekly wage was $1,231.21 with a TTD benefit rate used for the dependents' benefit rate of $820.81 per week. It is the determination of this Court that 50% of the benefit shall go to Kristyn N. Stromberger and 50% to Pacyn K. Stromberger. In regard to the benefits owed to Pacyn K. Stromberger, her benefits shall be reduced pursuant to law by 50% for the Social Security offset. Taking the $1,464.40 Social Security benefit rate per month times 12 months, dividing that by 52 weeks, and taking 50%, the Court finds the weekly reduction shall be $168.97. This offset shall continue pursuant to law.

7. Based on the documents submitted and testimony in this case, the funeral benefits have been paid and it is believed there are no outstanding medical bills at this time. It is also found that Employer continued to pay Claimant's wages until September 30, 2014.

ORDER

It is therefore ordered that:

1. Respondents shall pay to Kristyn N. Stromberger $410.41 per week until her death or until remarriage or otherwise pursuant to law.

2. It is determined that Pacyn K. Stromberger is entitled to $410.40 per week until she reaches the age of 18, or 21 as provided by statute, or otherwise terminated by law. This amount shall be reduced by $168.97 for the Social Security offset which

would provide a weekly benefit of $241.43 per week. This amount shall be paid to Kristyn N. Stromberger for the benefit of Pacyn K. Stromberger.

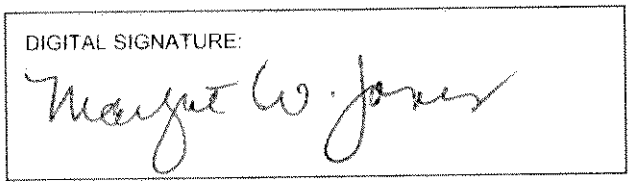
3. As a result of the continued payment of wages for Claimant Jeffrey Stromberger through September 30, 2014, the benefits due and payable to the dependents shall begin October 1, 2014, and continuing pursuant to law.

4. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 6, 2015_



Margot W. Jones, Administrative Law Judge
Office of Administrative Courts
1525 Sherman St., 4th Floor
Denver, CO 80203

ISSUE

Whether Claimant has established by a preponderance of the evidence that she suffered a compensable injury arising out of and in the course of her employment with Employer in August of 2014.

FINDINGS OF FACT

1. Claimant works for Employer as an Eligibility Advocate with duties including assisting uninsured and underinsured patients secure healthcare benefits. In her position, Claimant interviews patients, makes phone calls, and inputs data. Claimant has been employed in this position for approximately four years.

2. In August of 2014, Claimant began experiencing pain and discomfort in her bilateral hands and wrists.

3. On August 14, 2014, Claimant informed Employer of the pain, indicating that she began experiencing pain in both wrists and hands one week prior on August 7, 2014. *See* Exhibit A.

4. Employer filled out an Employer's First Report of Injury and referred Claimant for treatment. *See* Exhibit A.

5. On September 3, 2014 Claimant saw John Stephen Gray, M.D. Claimant had bilateral hand and wrist pain. Claimant was convinced that her pain was caused by her work, but noted no specific accident or injury. Claimant indicated that data history and writing caused her hand pain. Claimant denied any prior problems with her hands. Claimant indicated no significant change in her job recently to explain the onset of her symptoms. *See* Exhibit F.

6. Claimant had a positive history for hypertension, hypothyroidism, asthma, vitamin D deficiency, and bilateral pedal edema. Claimant also had a positive family history of gout. *See* Exhibit F.

7. Claimant had very minimal swelling over the MCP joints of the third metacarpals bilaterally and tenderness over the CMC joints of the thumbs with a positive grind test bilaterally, right greater than left. *See* Exhibit F.

8. Dr. Gray diagnosed bilateral hand and wrist pain, work relatedness unclear. Dr. Gray opined that causation was at issue, that there was no clear-cut

mechanism of injury, and that Claimant did not seem to meet the criteria for high repetitions nor high force nor awkward positioning. *See* Exhibit F.

9. On September 17, 2014 Claimant again saw Dr. Gray. Dr. Gray reviewed the results of Claimant's laboratory tests with her. Claimant's tests showed a high uric acid level, an elevated sedimentation rate, and an elevated C-reactive protein level. *See* Exhibit F.

10. Dr. Gray diagnosed Claimant with bilateral hand and wrist pain, probably related to an inflammatory condition such as gout/hyperuricemia and opined that it was probably not work related. *See* Exhibit F.

11. Dr. Gray opined that causation was somewhat more clear at that time, and that it appeared that Claimant had an inflammatory condition that is probably related to her pain and is probably not work related. Dr. Gray advised Claimant to see her primary care physician and to get a referral to a rheumatologist for appropriate diagnosis and treatment. *See* Exhibit F.

12. On October 15, 2014 Claimant again saw Dr. Gray. Claimant had similar complatints of bilateral hand and wrist pain that she indicated was severe following her last visit. Claimant questioned whether the diuretic she was taking for her blood pressure might be affecting her uric acid levels. Claimant's examination showed essentially no changes. *See* Exhibit F.

13. Dr. Gray again diagnosed bilateral hand and wrist pain and opined that it was probably related to an inflammatory condition such as gout/hyperuricemia and opined that he doubted work relatedness. *See* Exhibit F.

14. On October 22, 2014 Respondents filed a Notice of Contest alleging the injury/illness was not work related. Claimant then filed an Application for Expedited Hearing on November 26, 2014. *See* Exhibits B, C.

15. Claimant appeared pro se at hearing and testified that she was still experiencing pain and discomfort in her bilateral hands and wrists, believed the pain to be related to her employment, and believed there was not enough information for a conclusion that her pain is not work related.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. (2014), is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. (2014). The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201,

C.R.S. (2014). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

Where a Claimant's entitlement to benefits is disputed, the Claimant has the burden to prove a causal relationship between a work-related injury and the condition for which benefits or compensation are sought. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Whether the Claimant sustained the burden of proof and whether a compensable injury has been sustained is generally a factual question for resolution by the ALJ. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997); *Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo. App. Div. 5 2009). To recover benefits under the Worker's Compensation Act, the Claimant's injury must both occur "in the course of" employment and "arise out of" employment. *See* § 8-41-301, C.R.S. (2014). The Claimant must establish that the injury meets this two pronged requirement by a preponderance of the evidence. *See* § 8-43-201(1), C.R.S. (2014).

The course of employment requirement is satisfied when it is shown that the injury occurred within the time and place limits of the employment relation and during an activity that had some connection with the employee's job-related functions. *Popovich v. Irlando*, 811 P.2d 379 (Colo. 1991); *Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). In the present case, Claimant has failed to establish that her bilateral hand and wrist pain occurred due to her work as an eligibility advocate. Rather, as found above, Dr. Gray diagnosed Claimant with bilateral hand and wrist pain, probably related to inflammatory condition such as gout/hyperuricemia and opined that it was probably not work related. Claimant's testing, as found above, showed a high uric acid level and an elevated sedimentation rate and c-reactive protein. Claimant also had a past history of hypertension, hypothyuroidism, asthma, vitamin D deficiency, bilateral pedal edema, and a family history positive for gout. Although Claimant testified that she believes the pain in her wrists and hands is due to her work and believes it was caused by her work, Claimant has failed to prove more probably than not, that the bilateral hand and wrist pain was due to her employment. Claimant did not present any evidence or testimony as to her daily activities, any repetitive motion, or any information to support a conclusion that an injury to her bilateral hands and wrists occurred as a result of her employment. Dr. Gray opined that Claimant's job duties did not appear to meet criteria for high repetition nor high force nor awkward positioning. Claimant's duties included interviewing patients over the first several hours of her work then intermittently inputting data and making phone calls. Claimant did not establish how these job duties that she has performed over the last four years suddenly caused an onset of pain in her bilateral wrists and hands.

The opinion of Dr. Gray that Claimant's bilateral wrist and hand pain is probably due to an inflammatory condition and that it was doubtful that it was work related is found persuasive. Claimant has numerous non-work related risk factors as shown by the medical records and she has failed to prove any causal relationship between her pain and her employment. In her testimony and case presentation, Claimant argued that she believed there was not enough information to conclude that the condition was not work related. Claimant appears to be misplacing the burden. It is not Respondents burden to prove the bilateral hand and wrist pain is not work related. Rather, it is Claimant's burden to prove that the bilateral hand and wrist pain is work related. The medical reports do not support such a conclusion and doubt the work relatedness of Claimant's pain. Claimant has not established or presented sufficient evidence or testimony to support her claim and to prove by preponderant evidence the compensability of her bilateral hand and wrist pain.

ORDER

It is therefore ordered that:

1. Claimant has failed to meet her burden to show she suffered a compensable injury in August of 2014. The claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 4, 2015

/s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

FINDINGS OF FACT

Based on the undisputed evidence contained in the file, pleadings and exhibits, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. All notices to the Respondent were sent to its address on file with the DOWC and have not been returned as undeliverable. Therefore, there is a legal presumption of receipt and the ALJ so finds.

2. Hearing in the above-captioned matter is presently scheduled for April 14, 2015, in Denver, Colorado.

3. On December 4, 2014, the Petitioner filed an Application for Hearing and Notice to Set pursuant to Office of Administrative Courts Rules of Procedure (OACRP), Rule 8, 1 CCR 104-1 and § 8-43-409 (1), C.R.S.

4. The Notice of Hearing was mailed to the Respondent at its last known address on file with the Division of Workers' Compensation (hereinafter "DOWC").

5. On January 12, 2015, the Petitioner filed a Motion for Entry of Summary Judgment and Motion for Issuance of Order to Cease and Desist, pursuant to OACRP, Rule 17 and § 8-43-409, C.R.S. Pursuant to OACRP, Rule 17, the Respondent had 20 days after the filing of the Motion within which to file an objection and/or respond to the Motion. The Respondent failed to file a timely response to the Motion for Summary Judgment. Therefore, there are no genuine issues of disputed material fact for hearing.

Findings

6. The Respondent employs employees for whom it must carry workers' compensation insurance under the provisions of the Act.

7. The Respondent does not have a policy of workers' compensation insurance in effect.

8. The Respondent continues to operate its business in the absence of workers' compensation insurance.

9. The Respondent received notice of the hearing set before the Office of Administrative Courts for April 14, 2015.

10. The Respondent is in default of its workers' compensation insurance obligations under the Act.

11. There is no genuine issue of disputed material fact with respect to Findings 1 through 9 herein above.

12. The Motion for Summary Judgment is supported by documents and affidavits.

13. The Respondent is currently operating its business without a policy of workers' compensation insurance in effect, and has been operating its business without workers' compensation insurance since at least January 1, 2007, thus, exposing its existing employees to real, immediate, sand irreparable harm from an on-the-job injury that would not be covered by insurance.

14. In an Order, dated February 13, 2012, the Director of the DOWC imposed a fine in the amount of $18,530.00 against the Respondent for failing to maintain workers' compensation insurance from at least January 1, 2007 through the date of the Order.

15. The Director's Order was recorded as a judgment in the Denver District Court on May 17, 2012 (Denver Dist. Ct. Case No. 12CV3004).

16. The Petitioner has demonstrated by a preponderance of the evidence that there is no genuine disputed issue of material fact and the Petitioner is entitled to summary judgment on the cease-and-desist issue.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Notice

a. As found, all notices of to the Respondent, unreturned as undeliverable, establish a legal presumption of receipt, warranting a finding of receipt by the Employer. *See Olsen v. Davidson,* 142 Colo. 205, 350 P. 2d 338 (1960). *See also Campbell v. IBM Corp.,* 867 P. 2d 77 (Colo. App. 1993).

Jurisdiction

a. The ALJ has jurisdiction of the subject matter and over the parties to this action pursuant to the Workers' Compensation Act of Colorado.

Summary Judgment

b. OACP, Rule 17, "any party may file a motion for summary judgment seeking resolution of any endorsed issue for hearing." The Rule allows a party to support its Motion with affidavits, transcripts of testimony, medical reports, or employer records. A motion for summary judgment may be supported by pleadings, depositions, answers to interrogatories, and admissions on file. C.R.C.P. 56; *See also Nova v. Indus. Claim Appeals Office*, 754 P.2d 800 (Colo. App. 1988) [C.R.C.P. and C.R.E. apply insofar as they are not inconsistent with the procedural or statutory provisions of the Act]. As found, the Motion for Summary Judgment is supported by documents and affidavits.

c. Summary judgment is appropriate when the pleadings show that there is no genuine issue as to any material fact and that the moving party is entitled to judgment as a matter of law. C.R.C.P. 56(c); *Churchey v. Adolph Coors Co.*, 759 P.2d 1336 (Colo. 1988). This rule allows the parties to pierce the formal allegation of the pleadings and save the time and expense connected with trial when, as a matter of law, based on undisputed facts, one party could not prevail. See *Drake v. Tyner*, 914 P.2d 519 (Colo. Ct. App. 1996). As found, the attachments and the Affidavit of Nikki Gwin establish that there is no genuine issue of disputed material fact with respect to the Findings herein above.

d. Once the moving party shows specific facts probative of a right to judgment, it becomes necessary for the non-moving party to set forth facts showing that there is a genuine issue for hearing. *See Miller v. Van Newkirk*, 628 P.2d 143 (Colo. App. 1980). As found, the Respondent did not file a timely response to the Motion. Therefore, the allegations in the Motion for purposes of summary judgment are deemed true and accurate.

Cease-and-Desist

d. As found, the Respondent failed to provide a written response with supporting documentation to the Petitioner's Motion for Entry of Summary Judgment. Accordingly, the facts set forth in the Petitioner's Motion and in the supporting affidavit attached to the Motion are undisputed. *WRWC, LLC v. City of Arvada*, 107 P.3d 1002, 1006 (Colo. App. 2004).

e. The Respondent is in violation of § 8-44-101 (1), C.R.S., by failing to maintain workers' compensation insurance for its covered employees, and is therefore subject to penalties under § 8-43-409.

f. Section 8-43-409 (1) (a), C.R.S., provides that an employer in default of its workers' compensation insurance obligations shall be ordered to cease and desist immediately from continuing its business operations during the period such default continues.

g. The issuance of an order requiring the Respondent to cease and desist business operations while in default of its workers' compensation insurance obligations is an appropriate penalty for failure to keep workers' compensation insurance in force.

Burden of Proof

h. The burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P. 2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Petitioner has sustained its burden that employees of the Respondent will suffer immediate and irreparable harm in the event of an on-the-job injury unless the Respondent is ordered to cease-and-desist doing business, immediately and forthwith.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Summary Judgment is hereby granted and Respondent shall cease and desist , immediately, from continuing its business operations during the period it remains in default of its mandatory, legal obligation to carry workers' compensation insurance.

B. The scheduled hearing of April 14, 2015 is hereby vacated.

DATED this 9th day of February 2015.

EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Respondents, giving counsel for the Claimant 3 working days after receipt thereof to file electronic objections as to form. The proposed decision was filed, electronically, on January 20, 2014 On January 21, 2015, counsel for the Claimant filed comments on the proposed decision with counsel for the Respondents, which were forwarded to the ALJ on the same date. The comments were proofreading edits and not objections. The edits are well taken. After a consideration of the proposed decision and the editing comments, the ALJ has modified the proposal and hereby issues the following decision.

ISSUE

The sole issue to be determined by this decision concerns the Claimant's request for post maximum medical improvement (MMI) medical benefits (*Grover* medicals), including hip replacement surgery.

The Claimant bears the burden of proof, by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The ALJ has jurisdiction to hear the issue of whether the Claimant is entitled to an order awarding medical benefits after MMI.

2. The Claimant is a fifty-one year old male who was injured on March 10, 2011, when he fell from a ladder while installing vent covers. He sustained right arm radial and ulnar fractures and a right acetabular (hip) fracture. As a result of these injuries and the treatment thereto, the Claimant also developed a sciatic nerve condition.

3. The Respondents filed a Final Admission of Liability (FAL), dated April 1, 2014, admitting for temporary disability benefits through January 16, 2012; and, for scheduled permanent partial disability (PPD) benefits of 13% of the right upper extremity (RUE) and 27% of the right lower extremity (RLE); and, denying *Grover* medicals, pursuant to the opinion of Division Independent Medical Examiner (DIME), Franklin Shih, M.D. Medical benefits were provided to the Claimant to treat the injuries he sustained. He had surgery and follow up care for his injuries through his authorized

treating physician (ATP), Amy Sheeder, M.D., and her referrals. The FAL contained language advising the Claimant that he must file an objection and an Application for Hearing on any disputed issues within 30-days, which was substantially done as herein below found. The ALJ finds that the statute, § 8-43-203 (2) (b) (UII) (A), C.R.S., does not require any particular format in the request for hearing—only that the request be filed within 30-days.

Medical

4. On August 19, 2013 Edward Jonassen, M.D., an orthopedic surgeon, stated that the Claimant had reached MMI [Resp. Exhibit J, Bates stamp 58].

5. Dr. Sheeder agreed with the MMI opinion of Dr. Jonassen, and she referred the Claimant to Gary Hess, M.D., who is Level II accredited, for an impairment rating. [Resp. Ex. H, Bates stamp 40-41.] On October 15, 2013, Dr. Hess was of the opinion that the lingering effects of the sciatic nerve injury kept the Claimant from being at MMI [Resp. Ex. F, Bates stamp 23]. Dr. Sheeder agreed with Dr. Hess and stated that the Claimant was not at MMI [Resp. Ex. H, Bates stamp 38].

6. Dr. Hess noted at the time of the above evaluation that the Claimant has arthritis in his right hip [Resp. Ex. F, Bates stamp 23]. Dr. Hess stated: "It should be noted that this patient has evidence of posttraumatic arthritis in the right hip and will someday require hip replacement surgery **if he becomes more symptomatic**." (emphasis supplied) [Resp. Ex. F, Bates stamp 24].

The Division Independent Medical Examination (DIME) of Dr. Shih

7. A DIME was requested by the Respondents, pursuant to § 8-42-107 (8) (a) (II), C.R.S., and it was performed by Dr. Shih on March 11, 2014. Dr. Shih placed the Clamant at MMI as of August 9, 2013. He assigned a RUE impairment of 13% and a RLE impairment of 27%. The FAL herein above referenced was filed, based on DIME Dr. Shih's opinion.

Subsequent to the DIME

8. The Claimant was seen in follow up by Dr. Hess's partner, Jared L. Michalson, M.D., on March 20, 2014. Dr. Michalson noted x-ray results confirming "mild degenerative changes" in the right elbow and hip. Regarding the right hip, Dr. Michalson stated, "I would not expect either of these areas in terms of arthritic changes to improve and would expect gradual worsening over time as consistent with posttraumatic arthritis." [Resp. Ex. G, Bates stamp 28].

9. Medical benefits were denied in the FAL, based on the post-DIME follow up evaluation with Dr. Sheeder on March 31, 2014. Dr. Sheeder discussed the DIME

report of Dr. Shih. Under the "Plan" section of her chart note, Dr. Sheeder stated "no follow up needed at present as at MMI with no intermittent care needed" [Resp. Ex. H, Bates stamp 32]. Dr. Sheeder completed the M164 form report and stated under Return Appointment – **"None needed"** (emphasis supplied). Dr. Sheeder also checked the box to indicate **no maintenance care after maximum medical improvement was required** (emphasis supplied) [Resp. Ex. H, Bates stamp 34]. The Claimant was self-represented at the time he received the FAL. The FAL contains language which advises the Claimant to file an application or hearing with the Office of Administrative Courts (OAC) on any disputed issue. [Resp. Ex. D, Bates stamp 05].

10. The Claimant seeks to obtain a determination that potential hip replacement in the future will be prospectively authorized if an ATP subsequently determines that it will be reasonably necessary at some future, undermined time.

Timely Objection, and Request for Hearing: The Final Admission of Liability

11. The Claimant wrote a letter to the Division of Workers' Compensation (DOWC) on April 25, 2014, objecting to the Final Admission [Claimant's. Ex. 6]. The letter indicates it was copied to the claims representative at Pinnacol Assurance. The ALJ finds that the Claimant's letter constitutes a timely objection to the FAL.

12. Also, on April 25, 2014, the Claimant wrote a letter addressed to DOWC and the OAC in which he requested a hearing in this claim [Claimant's. Ex. 5]. The ALJ notes that this letter was not copied to Pinnacol Assurance. Date stamps on the letter indicate that it was first received by DOWC on May 2, 2014 and by OAC on April 30, 2014. This ALJ finds that the April 25, 2014 letter constitutes a valid and timely notice that the Claimant wished to proceed with a hearing to contest certain portions of the FAL.

13. Because the Claimant had not completed the proper form to request a hearing pursuant to OAC Rules of Procedure (OACRP), Rule 8 (A), 1 CCR 104-1, which requires that the application "...shall be on a form provided by the OAC, or on a substantially similar form," DOWC wrote to the Claimant on May 28, 2014 and explained the deficiency in his pleadings, providing him at that time with the correct form for requesting a hearing [Claimant's. Ex. 7].

14. The Claimant completed the Application for Hearing form and filed it on July 31, 2014 [Claimant's. Ex. 8]. The form reflects that a copy was exchanged with Pinnacol Assurance. The ALJ finds that this Application relates back to the Claimant's timely letter request for a hearing.

15. In the present case, the ALJ finds that the Claimant timely advised the OAC through a written letter received by the OAC on April 30, 2014 that he requested a hearing to contest the April 1, 2014 FAL. Rather than a full rejection by the OAC clerk,

the Claimant was advised in writing that a form application for hearing should be filed. The Claimant completed the form and sent copies of this form to Pinnacol Assurance. The ALJ finds that although the actual form was completed past the thirty day filing deadline, the Claimant was in substantial compliance with the requirements of § 8-43-203 (2) (b) (II) (A), C.R.S., and OACRP, Rule 8 to contest the FAL and have an ALJ determine the disputed issues at a merits hearing.

Ultimate Findings

16. The Claimant was in substantial compliance with the requirements of timely objecting to a FAL and timely requesting a hearing. Consequently, a petition to reopen on the issue of *Grover* medicals is unnecessary.

17. A hip replacement is not presently contemplated by any ATP. Medical providers are of the opinion that a hip replacement will become necessary at some future, undetermined time. Not only is the need for a hip replacement **not** imminent, the idea of a hip replacement is speculative at this point. There is **not** substantial evidence that a hip replacement is a present certainty and reasonably necessary at present, or at a future determinable time. There is no present course of treatment recommended to maintain the Claimant at MMI and to prevent a deterioration of his condition.

18. The medical recommendations in this case are speculative and do not rise to the level of recommendations to cure and relieve the effects of the injury or to prevent deterioration of the Claimant's condition. The Claimant has therefore failed to establish, by a preponderance of the evidence that he is entitled to an award of post-MMI maintenance medical benefits.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Substantial Compliance with Timely Request for Hearing

a. In order to support a finding of substantial compliance with a regulatory mandate, there must be evidence of a genuine effort to comply with statutory requirements. *See Pinon v. U-Haul*, W.C. No. 4-632-044 [Indus. Claim Appeals Office (ICAO), April 25, 2007], *aff'd sub. nom. Pinon v. Indus. Claim Appeals Office* (Colo. App. 07CA0922, April 3, 2008) (NSOP) [substantial compliance requires party intent or to actually make good faith or colorable effort to comply with statutory requirements]. As found, the Claimant's actions under the particular circumstances of this case constitute substantial compliance with the statutory requirement that he request a hearing at OAC within thirty days of the FAL. Although the Claimant's initial letter requesting the hearing

does not reflect that it was copied to Pinnacol Assurance, Pinnacol did receive a copy of the Claimant's objection to the FAL and it was aware of the arguments the Claimant alleged as to why he disputed portions of the FAL.

Credibility: The Reasonable Necessity of a Hip Replacement

b. As found, it is undisputed that a hip replacement is not presently contemplated by any ATP. Medical providers are of the opinion that a hip replacement will become necessary at some future, undetermined time. Not only is the need for a hip replacement **not** imminent, the idea of a hip replacement is speculative at this point. *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony.

Future Medical Benefits

c. An award of future medical benefits is proper when there is substantial evidence in the record to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent a deterioration of a claimant's condition. *See Grover v. Indus. Comm'n*, 759 P.2d 705 (Colo. 1988). As found, there is not substantial evidence to support a determination that hip replacement is reasonably necessary at a future determinable time.

d. If the evidence in a particular workers' compensation case establishes that, but for a particular course of medical treatment, a claimant's condition can reasonably be expected to deteriorate, so that he will suffer greater disability than he has sustained thus far, such medical treatment, irrespective of its nature, must be looked upon as treatment designed to relieve the effects of injury or to prevent deterioration of a claimant's present condition under the statute requiring the employer to provide medical treatment that is reasonably required to relieve a claimant from the effects of injury. *Milco Construction v. Cowan,* 860 P.2d 539 (Colo. App. 1992.) To determine this issue, an ALJ must determine whether the medical evidence constitutes substantial evidence that further medical treatment will be reasonably necessary. The ALJ must therefore determine in this case whether substantial evidence has been presented that future hip replacement surgery will be necessary. As found, such a determination at present would be speculative

e. In *Stollmeyer v. Indus. Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995), the Court of Appeals considered the question of whether evidence of potential for future degenerative changes would suffice to establish the need for future medical treatment as required to support an award of ongoing medical benefits. The Court first concluded that a particular or specific course of treatment need not be anticipated or articulated at the time of the order awarding ongoing medical benefits to workers' compensation claimant. The Court, however, went on to state that before an order for

future medical benefits may enter, there must be substantial evidence in the record to support a determination that future medical treatment will be reasonably necessary to relieve workers' compensation claimant from the effects of injury or to prevent further deterioration of his or her condition. The claimant in *Stollmeyer* requested an order for future medical treatment based on medical opinions that there was a chance of degeneration in the ankle in the future which may lead to the need for surgery. The claimant in *Stollmeyer* asked the Court to equate medical evidence indicating the likelihood of future degeneration, for which there was record support, with the need for medical treatment. The Court of Appeals, citing the *Milco Construction* decision, declined to do so, stating: "...This we cannot do. A showing of need for treatment is not met by simply proving that degenerative changes will occur. It is entirely possible that an ALJ, within the exercise of his discretion, could determine that no treatment could prevent or relieve certain types of degeneration. If so, an award of ongoing medical benefits would be inappropriate." *Stollmeyer, supra,* at 611. The facts of the present case are similar to those in *Stollmeyer*. Here, the medical evidence supports a finding that future degeneration is an anticipated consequence of the industrial injury. In the present case, there are no specific recommendations for treatment to cure and relieve the effects of the injury or to prevent deterioration of the Claimant's condition. The only statement regarding future medical treatment is authored by Dr. Hess who stated that the Claimant has arthritis in the hip "...and will someday require hip replacement surgery if he becomes more symptomatic."
As found, the medical recommendations in this case are speculative and do not rise to the level of being recommendations to cure and relieve the effects of the injury or to prevent deterioration of the Claimant's condition.

Burden of Proof

f. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 (ICAO, March 20, 2002). *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has failed to sustain his burden with respect to post-MMI maintenance medical benefits.

ORDER

IT IS, THEREFORE, ORDERED THAT:

Any and all claims for post-maximum medical improvement maintenance medical benefits, including hip replacement, are hereby denied and dismissed.

DATED this 22 day of January 2015.

EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. (as amended, SB 09-070). For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

Claimant's Exhibits 1 through 9, with the exception of a portion of Exhibit 1 concerning a Christo appointment, were admitted into evidence, without objection. Respondents' Exhibits A through W, with the exception of Exhibits U and V which were withdrawn, were admitted into evidence, without objection.

By Procedural Order, dated January 15, 2015, the ALJ established the following briefing schedule: Claimant's opening brief was due, electronically, within 5 days of the Procedural Order, Respondents' answer brief was due, electronically, within 5 days of the opening brief; and, the Claimant's reply brief, if any, was due, electronically, within 2 days of the answer brief. The Claimant's opening brief was filed on January 20, 2015. The Respondents' filed a document entitled "Full Findings of fact, Conclusions of Law and Order," despite the fact that the ALJ has not yet made a decision, on January 26, 2015. Consequently, the document will be construed as the Respondents' answer brief as originally ordered in the above-mentioned Procedural Order. No timely reply brief was filed. Consequently, the matter was deemed submitted for decision on January 29, 2015.

ISSUE

The sole issue designated in both parties Case Information Sheets (CISs) concerns the Claimant's request to overcome the Division Independent Medical Examination (DIME) of Kevin K. Nagamani, M.D., with respect to his determination that the Claimant had reached maximum medical improvement (MMI) on November 27, 2013 [with a scheduled rating of 35% of the left lower extremity (LUE)]. Medical benefits and temporary disability benefits were **not** designated as issues for the October 28, 2014 hearing by either party.

The Claimant bears the burden of proof on the designated issue, by clear and convincing evidence

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant worked as a mechanic for the Employer at the time of the admitted industrial accident of July 4, 2012.

2. The Respondents filed a Final Admission of Liability (FAL), dated June 18, 2014, admitting compensability; an average weekly wage (AWW) of $818.50; temporary disability benefits through November 26, 2013; an MMI date of November 27, 2013; and, scheduled permanent

partial disability of 35% of the LUE, based on the DIME opinion of DIME Dr. Nagamani. The Claimant filed a timely objection and request for hearing to challenge Dr. Nagamani's DIME opinion concerning MMI. The FAL was silent concerning post-MMI medical maintenance benefits.

3. Dr. Nagamani, M.D., was of the opinion that the Claimant reached MMI on November 27, 2014 and he recommended some continued pain management.

4. According to the Claimant, his chronic, severe, and unrelenting pain interferes with essentially all of his activities and precludes him from being able to return to work to support his family, t

5. All of the Claimant's treating physicians have diagnosed probable Complex Regional Pain Syndrome (CRPS), including Brian Beatty, D.O., Stephen Lindenbaum M.D., Benjamin Schnell, M.D., David Hahn, M.D., Robert Guirguis, D.O. and Rasheed Singelton, M.D.

6. Edwin M. Healey, M.D., the Claimant's expert, asserts that the correct diagnosis is CRPS and that the Division of Workers Compensation (DOWC) "Complex Regional Pain Syndrome Medical Treatment Guidelines," as admitted into evidence, provide the guidance as to what testing and treatment ought to be provided for CRPS..

7. The above-referenced DOWC Guidelines for CRPS, page 16, paragraph 3 state:

> "(3) At least one sign at time of evaluation in two or more of the following categories:
>
> -*sensory:* evidence of hyperalgesia (to pinprick) and/ or allodynia (to light touch and/ or deep somatic pressure and/ or joint movement
> - *Vasomotor:* evidence of temperature asymmetry and/ or skin
> color changes and/or asymmetry. Temperature asymmetry
> should ideally be established by infrared thermometer measurements showing at least a 1 degree Celsius difference between the affected and unaffected extremities.
>
> -*Motor/trophic:* evidence of decreased range of motion and/ or motor dysfunction (weakness, tremor, dystonia) and/ or trophic changes (hair,

nail, skin).

(4) No other diagnosis that better explains the signs and symptoms." The evidence in this matter shows that none of the required tests to determine CRPS were performed because the Respondents denied authorization therefore.

8. Apparently, no other diagnosis better explains the Claimant's symptoms than the diagnosis CRPS. The ALJ finds that the DIME physician was in error by establishing the MMI date, based upon an incorrect diagnosis.

9. The DOWC Guidelines for CRPS **require** the following diagnostic testing:

a) A clinical diagnosis meeting the above criteria.

b) At least 2 positive tests from the following categories of
diagnostic tests:

i. Trophic tests

comparative X-rays of both extremities including the distal phalanges

Triple Phase Bone Scan.

iii. Vasomotor/Temperature test-infrared Stress Thermography

iv. Sudomotor test- Autonomic Test Battery with an emphasis on QSART 10. The Claimant's treating physicians clinically diagnosed CRPS but were unable to obtain the required testing by the Respondents. The basis for the treating physician's consensus CRPS diagnosis is rooted in the classical history of a talar dome fracture, followed by surgery, followed by progressive pain, temperature changes and edema leading to the clinical diagnosis of CRPS without reliance on any particular objective testing. The testing that did occur is consistent with CRPS and, apparently, there is no other condition that describes the symptoms as found by objective testing.

10. Contrary to the DIME's opinion, the radiographic testing in this case is consistent with the diagnosis of CRPS. That testing includes a July 13, 2012 X-ray which revealed a fibular closed avulsion fracture, an August 9,2012 CT scan which revealed a 7 mm osteochondral injury to the medial talar dome, a diagnostic arthroscopy on August 28,2012 by Stephen Lindenbaum, M.D. which showed a medial talar dome lesion with a possible depressed fragment or loose body, followed by micro fracture of the talar dome, and an October 30,2012 MRI (magnetic resonance imaging) again showing a talar dome lesion along with marked tears of the peroneal tendons. Dr. Hahn also reviewed x -rays taken on September 9, 2013 and found disuse osteopenia or bone loss in the left ankle. These objective studies alone do not prove CRPS but rather are consistent with the classical history of the CRPS diagnosis.

11. Following diagnostic and therapeutic arthroscopic surgery by Dr. Lindenbaum on August 17, 2012 involving debridement of a cartilaginous injury followed by micro-fracture of the left talar dome, the Claimant suffered recalcitrant symptoms consistent with CRPS. There has been lack of improvement despite conservative care that included sympathetic block injections, opiate pain medications, non- weight-bearing, crutches and restriction from work activities begining on July 5, 2012 and continuing to the present. Because the Claimant's CRPS condition has been resistant to treatment, further studies and a more focused aggressive approach is warranted.

12. In a report dated December 19, 2012 Dr. Lindenbaum stated that before surgery most of the left ankle pain was anterior only but that after surgery [Claimant] pointed to the entire ankle from the medial around to the lateral and poster lateral malleolus as being severely painful. Dr. Lindenbaum stated that he was concerned about doing further surgery and referred the Claimant to David Hahn, M.D., a foot and ankle limb preservation specialist and orthopedic surgeon, for a second opinion.

13. On January 2, 2013 Claimant presented to David Hahn M.D., a board certified orthopedic surgeon. Dr. Hahn was provided the history following the surgery:

> "the patient was placed in a boot, did six weeks of physical therapy but did not improve. Now at this point.., about six months out from his surgery, he complains still of severe pain in his ankle joint, which has begun to radiate to the surrounding parts of his

distal leg and foot. He describes this pain as a sharp pain, sometimes nerve pain, with burning and electrical qualities to it. He also describes being quite hypersensitive to touch as well, pretty much globally in his foot, having difficulty wearing any sort of shoe or sleeping with his foot under the bed sheets at night. He complains of his foot being very cold all of time, despite his efforts to keep it warm. He also notes that there have been some color changes as well. He rates his pain as between 7-8/10. It is made slightly better with Vicodin as well as when he uses his physical therapy TENS unit" (Claimant's Exhibit 2, p. 1).

14. Dr. Hahn's physical examination on January 2, 2013 revealed moderate atrophying of the calf muscle and a left ankle that showed discoloration that envelopes his entire foot". Dr. Hahn described the left foot CRPS symptoms on that date as follows:

"the patient's foot and leg look to me very icy cold in comparison to the contralateral leg which feels normal body temperature. His passive range of motion with this ankle dorsi flexion to about neutral position with about 20 degrees of planter flexion, very minimal inversion and eversion, all limited by pain. His active range of motion is from about -5 degrees dorsi flexion 1 0 t020 degrees of plantar flexion and no inversion or eversion. His light touch sensation appears to be diminished globally below the ankle. His pulses are diminished as well. His posterior tibia pulse is 1 +. The contra lateral side is 2+. I was not able to palpate the dorsal is pedals pulse today"

He notes that he was in a fiberglass cast for approximately 6 weeks following arthroscopic surgery. Thereafter when he came out of the cast he notes that his ankle was very stiff and very difficult to mobilize. He was however able to go to physical therapy but that does not seem to have been terribly helpful to him. Because he continues to have discomfort and lack of function and mobility, he is here today.

I should note that a small osteochondral defect was noted by Dr. Lindenbaum at the surgery and

performed and this was taken care of with debridement and micro fracturing. There is also some history of a fibular fracture which sounds like an undisplaced spiral type fracture which I do not quite understand but seems to have been a problem at one point. The other issue has to do with a fairly recent MRI that showed evidence for peroneal tendinopathy which did not seem to be a problem prior to this incident.

My examination today reveals a left limb that is very cold to palpation. His right leg is nice and warm as one would expect but the left is probably' about 25 degrees cooler than the left and very noticeably so. He has discomfort to palpation of almost every area on his foot and ankle but he does not react in a hysterical manner. He has a mild amount or swelling around his lateral ankle. He has very little motion in the ankle subtalar joints themselves.

After talking to him about his situation and examining his foot and ankle I do feel that his sympathetic nervous system is not functioning appropriately and that I believe is the main cause for his symptoms. "

I also spoke on the phone with Dr. Lindenbaum about the situation and told him that I did not feel that further surgical intervention at this point was indicated. It does not seem as though the patient's ankle is locked but rather just very stiff from a combination of issues. I do think and Dr. Lindenbaum agrees that the sympatheticdystrophy issue is primary importance and that further treatment of that issue is most important and would probably achieve the greatest benefit for this most pleasant gentleman."

15. On January 16, 2013 the Claimant was referred to Rasheed Singe1ton, M.D., a pain management specialist. Dr. Singleton noted on examination that Claimant demonstrated allodynia of his left lower extremity, swelling and coldness to palpation, which are primary symptoms consistent with a diagnosis of complex regional pain syndrome. Other symptoms found by Dr. Singleton at that time consistent with CRPS included, autonomic symptoms, distal swelling, edema and a cold affected extremity with range of motion reduction and muscle strength diminishment. Dr. Singleton assessed

Complex Regional Pain Syndrome and chronic pain syndrome.

16. Dr. Singleton recommended a CRPS series of lumbar sympathetic nerve blocks and CRPS directed physical therapy for strength and conditioning of the left lower extremity. Dr. Singleton stated that Claimant had signs and symptoms of left lower extremity reflex sympathetic dystrophy. Dr. Singleton also recommended a QSART test for THE Claimant's CRPS symptoms including the swelling, edema and coldness found on exam (Respondents' Exhibit C, bate stamp 033). The QSART is a test required by the DOWC guidelines for CRPS. It measures the volume of sweat produced by stimulation. Despite confirmation by. Moshe Lewis, M.D., the Respondents declined to authorize the QSART test. (Claimant's Exhibit 7, February 28, 2013 --Report of Dr. Lewis, page 1-2).

17. At one point Dr. Singleton questioned the diagnosis of CRPS. On his last examination of August 14, 2013, however, Dr. Singelton again confirmed the diagnosis of CRPS. Dr. Singleton found on his most recent physical exam allodynia, swelling, an antalgic gait, weakness, signs of vasomotor, psuedomotor and trophic changes. These signs of vasomotor, psuedo motor and trophic changes are consistent with the DOWC treatment guidelines for CRPS (Respondents' Exhibit C, bates stamp 052).

18. On February 1, 2013 the Claimant returned to Benjamin Schnell, D.O., primary treating physician who also concurred with the diagnosis of CRPS. Dr. Schnell recommended ongoing CRPS directed physical therapy and a series of sympathetic nerve blocks. By this time, none of this was authorized by the Respondents.

19. On April 26, 2013 Dr. Schnell noted that the Claimant presents with symptoms of CRPS and a delayed recovery. It was noted that all treatment and testing for CRPS was stopped and awaiting authorization from the insurance carrier (Respondents' Exhibit H, bates stamp 185,186). The Claimant also complained that he was doing his home exercise program but that his pain was better controlled when he was active in physical therapy. The Claimant expressed that he was very discouraged and worried about his family's financial future. Thereupon, Dr. Schnell referred the Claimant to William Boyd, Ph.D., a clinical psychologist, for his depressed mood. On April 26, 2013 Dr. Schnell noted that except for medications, all treatment was cut off, including Dr. Singleton, physical therapy and additional testing. On his last visit with Dr. Singleton, April 30, 2014, Dr. Singleton again diagnosed CRPS and chronic pain syndrome finding that the Claimant's condition had not changed (Claimant's Exhibit 3 –the April 30, 2014 visit.

20. Because the treating physicians diagnosed CRPS and because the QSART test is designed to detect that condition, on March 4, 2013 Moshe Lewis, M.D., Board Certified in Physical Medicine & Rehabilitation after reviewing the records noted the following history:

> "After the surgery he has had swelling, sweating, and intense pain to the touch at the left foot and ankle .... Clinical findings on 1/24/13 show sensory deficit to pinpoint stimulation throughout
>
> L2-S1. There is allodynia in the left lower extremity with mild swelling and coldness to palpation. The claimant was seen on 2/28/13 noting that the left sympathetic ganglion block did not benefit him significantly. He has chronic pain due to CRPS which is unimproved with conservative management. Now a test for RSD is requested.
>
> REVIEW OUESTION (S):
>
> 1. Is a Qzart Test medically necessary?
>
> Yes, a Qzart Test is medically necessary.
>
> The guidelines support the use of this modality to diagnose the claimant's underlying condition. Therefore, a Qsart Test is medically necessary" (Claimant's Exhibit 7).

21. The Claimant returned to see Dr Guirquis on April 2, 2013. It was noted that the Claimant was still at baseline pain in the left ankle and a second lumbar sympathetic nerve block had been denied by the Respondents as well as physical therapy. The denial of the recommendations by an ATP was prior to a scheduled second opinion Independent medical Exam (IME) appointment. Thereafter on April 17, 2013 the Respondents sent a notice setting and IME with Neil Pitzer, M.D. for June 3, 2013 but the IME actually occurred on July 3, 2013.

22. On April 2, 2013, Dr. Guirguis examined the Claimant and found that the left foot still showed swelling and there was allodynia and that Claimant had chronic intractable chronic pain in the left ankle. Dr. Guirguis diagnosed complex regional pain syndrome and a chronic pain syndrome. Dr. Guirguis opined that chronic opioid therapy may be

continued indefinitely and that Claimant would be reassessed at regular office visits (Claimant's Exhibit 4).

23. On March 12, 2013, the Claimant underwent a comprehensive pain psychological evaluation at the request of William Boyd, Ph.D. The psychological testing of the Claimant revealed that the Claimant's somatization score was close to the average for a pain patient suggesting that he is concerned about and attentive to his health-related problems and symptoms, but somatic issues did not appear to occupy an undue amount of the Claimant's attention and that individuals with a clearly defined organic basis for pain often respond in this manner. Dr. Boyd was of the opinion that although the Claimant was cognitively and emotionally distressed by his physical symptoms, his score suggested that the Claimant has the ability to actively participate in a treatment plan for pain relief without major interference from excessive somatic thought and his level of somatic complaints should not seriously interfere with his treatment program. Dr. Boyd concluded that the Claimant suffered moderate levels of depression and anxiety in response to the stress of his chronic pain, not working and decreased functioning. Dr. Boyd diagnosed a claim related adjustment disorder with anxiety and depressed mood (Claimant's Exhibit 5).

Independent Medical Examination (IME) by Neil Pitzer, M.D.

24. Dr. Pitzer conducted two separate IMEs of the Claimant, at the behest of the Respondents. The first IME was on July 3, 2013, and the second IME on August 28, 2014. On July 3, 2013, Dr. Pitzer's exam found that even mild resistance on strength testing caused significant pain in the Claimant's left foot and ankle and that dystrophic changes were present with mild discoloration of the skin in the left distal foot and ankle area. There was2+ pitting edema to the foot with a markedly abnormal gait. Nonetheless, Dr. Pitzer was the first physician to disagree with the consensus opinion of the numerous treating physicians who diagnosed probable CRPS. Dr. Pitzer recommended anti-inflammatories and knee-high compression stockings along with aggressive pool therapy. Dr. Pitzer also recommended amitriptyline at night for sleep and follow-up with Dr. Lindenbaum to see if additional surgery would be recommended before placing Claimant at MMI. Dr. Pitzer was of the opinion that a more aggressive course of medication management, pool therapy and additional lumbar sympathetic nerve block to rule out a sympathetic component causing CRPS were medically necessary.

25. After the July 3, 2013, exam, Dr. Pitzer recommended further treatment for the Claimant including another lumbar sympathetic block,

an anti-inflammatory for joint pain and swelling, and a knee high compression stocking. He also recommended aggressive pool therapy for independent walking. Dr. Pitzer originally concluded that the Claimant did not have a picture consistent with CRPS, "as the pain is limited to the ankle and proximal foot area and does not involve the hip, knee, proximal calf or toe." The Claimant also had a negative response to lumbar sympathetic blocks and local ankle joint injection.

26. The Claimant underwent a second lumbar sympathetic block on August 23, 2013. Dr. Pitzer performed another exam and reviewed additional medical records on August 28, 2014. By this time, the Claimant had been placed at MMI by Dr. Beatty, undergone the DIME with Dr. Nagamani and an IME by Dr. Healey. Dr. Pitzer noted that the Claimant had diminished sensation from the ankle joint with some numbness along the lateral aspect of the peroneal nerve but he did not demonstrate any allodynia to light touch, no hyperalgesia to pinprick and no pain with light touch throughout the leg. There was no significant dystrophic changes of the hair, skin or nails as compared to the right foot. Dr. Pitzer's observations differ with the observations of several other physicians.

27. Dr. Pitzer noted that his exam was somewhat different than that of the Claimant's medical expert, Dr. Healey, in that Dr. Pitzer did not elicit hyperalgesia to pinprick and there was no allodynia to light touch. Dr. Pitzer again concluded that the Claimant did not meet the physical exam findings for criteria of reflex sympathetic dystrophy (RSD) or CRPS. Dr. Pitzer made the non-medical conclusion that there was a significant component of symptom magnification. Dr. Pitzer agreed with Dr. Nagamani's methodology for the impairment rating by using ankle range of motion. The opinions of Respondents' IME, Dr. Pitzer, are at odds with the consensus opinions of most other physicians, with the exception of DIME Dr. Nagamani's opinions. The ALJ makes a rational choice to accept the opinions of Dr. Healey and the other physicians who diagnosed probable CRPS, and to reject the opinions of Dr. Pitzer as not based on substantial evidence.

28. Dr. Pitzer stated that one of the reasons the Claimant's symptoms are not consistent with a CRPS diagnosis is that the Claimant's pain does not extend beyond the site of his injury. Dr. Pitzer's diagnosis was osteochondral joint pain and disuse atrophy. (Pitzer Depo. Tr. p. 19-20).

29. According to Dr. Pitzer, the Claimant is not a good candidate for a neurostimulator because the Claimant has an undiagnosed

condition (according to Dr. Pitzer). The ALJ finds this observation of Dr. Pitzer to be inconsistent with Dr. Pitzer's opinion supporting DIME Dr. Nagamani's MMI date and the statutory concept that MMI is when a **determinable** medical condition is stable. *See* §8-40-201 (11.5), C.R.S. Dr. Pitzer added that the Claimant is not likely to be a successful candidate for this procedure (Depo. Tr. p. 22). The Claimant has undergone numerous treatments thus far from at least seven separate treatment providers and nothing has relieved his pain (Depo. Tr. p. 22). Dr. Pitzer was unable to make any objective findings consistent with the diagnosis of CRPS during either of his physical exams of the Claimant (Depo. Tr. p 16).

30. When asked about the workers' compensation Medical Treatment Guidelines regarding the diagnosis of CRPS, Dr. Pitzer stated the following:

> I'm not sure that additional testing would be helpful. If we are looking at treatment of CRPS, I do not think it is going to matter in this case. You can never rule out CRPS, you can never rule it in absolutely. It is a nebulous diagnosis with vague diagnostic criteria and that is what the leading pain centers talk about, there is not a good way to rule it in or rule it out.

31. The ultimate opinions of Dr. Pitzer are not credible for the reasons herein above stated.

Additional Medical

32. On August 15, 2014, the Claimant returned to Dr. Lindenbaum, who continued to support the diagnosis of probable Reflex Sympathetic Dystrophy (RSD), recommending more aggressive treatment (Respondents' Exhibit G, bate stamp 124).

33. On August 16, 2013, the Claimant underwent an EMG nerve conduction study, interpreted by John Aschberger, M.D., who noted that there was difficulty in obtaining adequate sensory testing likely due to significant swelling of the left ankle (Respondents' Exhibit D, bate stamp 60).

34. On September 13, 2014, the Claimant presented for a physical therapy (PT) evaluation at Select Physical Therapy. The record from Select PT indicates that the Claimant developed severe stiffness and pain in the left ankle. At that time, the assessed pain level was 8/10 at worst and 6/10 at best. The Range of Motion (ROM) in the left ankle

was markedly restricted on dorsi-flexion
compared to the right. There was moderate to severe edema in the left ankle and foot with tenderness throughout. Strength testing revealed major strength deficiencies of -3/5 to the left foot compared to 5/5 on the right foot (Respondents' Exhibit S, bate stamp 370-371).

35. On September 9, 2013, the Claimant returned to Dr. Hahn who examined the Claimant and observed significant left ankle edema or fluid stiffness and pain. Claimant remained non-weight bearing and used crutches to get around. Dr. Hahn was of the opinion, after a review of x-rays taken on that date, that the Claimant suffered disuse osteopenia or bone loss in the left ankle. Dr. Hahn's continued impression was of a pain syndrome such as RSD and that the Claimant would benefit from treatment of this condition. Dr. Hahn again recommended Allison Franklin, M.D. Dr. Hahn suggested surgery to allow the Claimant to move his ankle more which would give him protection for the purpose of increasing activity levels.

36. On November 21, 2013, the Claimant underwent a functional capacity evaluation (FCE) by Christine Couch, occupational therapist. The evaluation noted that the Claimant demonstrated a consistency of 14 out of 14 tests including the standard J - Mar dynamometer testing, Rapid Grip Exchange and J-mar Maximum Voluntary Effort. Couch noted that the Claimant demonstrated consistency with the two internal consistency measures (Respondents' Exhibit 0, bate stamp 258). The testing revealed deficiencies in sitting, standing and walking without crutches which placed the Claimant and that his overall scores indicate that Claimant perceives himself below the sedentary Work group, below the 5th percentile of employed and unemployed healthy males (Respondents' Exhibit 0, bate stamp 258-262).

Impairment Rating by Brian Beatty, D.O.

37. The Claimant was seen for an impairment rating and discharge evaluation by Brian Beatty, D.O., on November 27, 2013. Dr. Beatty reviewed the records of Dr. Boyd, Dr. Hahn, Dr. Lindenbaum and Dr. Franklin. On examination, Dr. Beatty found an antalgic gain with marked restriction of motion in the left ankle demonstrated by - 10 degrees of dorsi flexion, 30 degrees plantar flexion, 10 degrees inversion and 5 degrees eversion. Dr. Beatty noted that the foot demonstrated diffuse tenderness and swelling, weakness and pain, 1 + edema. Dr. Beatty also noted that the November 21, 2013 FCE revealed that the Claimant could primarily perform seated activities and

limited lifting and carrying because of his inability to bear weight on his left foot.

38. Dr. Beatty listed a diagnosis of closed fibular fracture and provided an impairment rating using the *AMA Guides*, which included a 10 % whole person impairment due to CRPS. Dr. Beatty placed permanent restrictions of primarily seated activities with limited standing and walking. Dr. Beatty recommended that the Claimant receive maintenance medication care for one year (Claimant's Exhibit 6).

39. On follow-up on January 20, 2014, Dr. Beatty noted that the Claimant still required crutches to walk and that there continued to be ongoing swelling of the left foot which was quite cool. Dr. Beatty noted that the Claimant still required Vicodin and recommended an ongoing home exercise program.

Division Independent Medical Examination (DIME) by Kevin Nagamani, M.D.

40. On April 15, 2014, the Claimant underwent a Division Independent Medical Examination (DIME) by Kevin Nagamani, M.D. a general orthopedic surgeon. Dr. Nagamani noted that Dr. Lindenbaum and Dr. Hahn were of the opinion that there was evidence of sympathetic dysfunction in the Claimant's left ankle and that a surgical procedure was unlikely to be beneficial. .

41. Dr. Nagamani noted that a peer review report by Dr. Frank Polanko M.D., dated February 28,2013, sought approval for obtaining a QSART test for the purpose of diagnosing the sweat changes found in clinical exam that were consistent with CRPS. Although the QSART is required according to the DOWC Guidelines for CRPS, Dr. Nagamani failed to comment on the failure to authorize the QSART. Based on this failure, the ALJ infers and finds that Dr. Ngamani is not knowledgeable about the DOWC Guidelines regarding CRPS nor does he have an understanding of the significance of the QSART test.

42. Dr. Nagamani examined Claimant and found that the Claimant keeps his foot in a plantar flexed position when walking with crutches; that Claimant had only an active dorsiflexion to -5 degrees on the left with full dorsi flexion on the right. With regard to inversion and eversion; that the Claimant had only about 5 degrees of active motion. Active strength testing was diminished in all directions with give way with resisted movements, presumably due to pain. Dr.

Nagamani assessed left ankle osteochondral lesion at the talus sustained as a result of the compensable work related injury of July 4, 2012 with chronic pain and disability of the ankle. Using the *AMA Guides to Evaluation of Permanent Impairment,* 3rd Ed. Rev., Dr. Nagamani assigned a 35 % impairment of the lower extremity, and due to a normal EMG study, Dr. Nagamani rendered anionopine that no neurological dysfunction would apply. Dr. Nagamani converted the 35% impairment of the lower extremity to a 14 % whole person impairment (*See* Respondents' Exhibit A).

43. Dr. Nagamani concurred with Dr. Beatty that November 27, 2013 was the date of MMI. Dr. Nagamani indicated that it was difficult for him to establish a firm diagnosis because the Claimant did not respond to the sympathetic nerve blocks or EMG yet from a physical exam there were demonstrated signs of CRPS that certainly explains his condition today. Dr. Nagamani stated the following opinion:

> *"clearly there* is some *pain syndrome involved in claimant's condition; however I do not feel comfortable assigning a diagnosis of complex regional pain syndrome based on his poor response to sympathetic block as well as lack of objective testing to support the diagnosis* ".

44. Dr. Nagamani prescribed permanent restrictions of only sedentary work, concurring with the limitations stated in the FCE. Dr. Nagamani gave the following work restrictions: of a job that is at a minimum 80% seated with no more than 20% ambulation as appropriate with no standing or ambulating of more than 5 minutes at a time. Dr. Nagamani noted that the Claimant had responded poorly to conservative measures other than pain management.

Claimant's Independent Medical Examination (IME) by Edwin M. Healey, M.D.

45. On July 15, 2014, the Claimant underwent an IME with Edwin Healey, M.D., board certified in Occupational Medicine/Neurology and Pain Medicine, at the behest of the Claimant. Dr. Healey disagreed with the conclusions of Dr. Nagamani. In particular, Dr. Healey was of the opinion that the Claimant sustained CRPS and that the Claimant was permanently and totally disabled unless he has significant

improvement of his symptoms and function (*See* Claimant's Exhibit 1, p. 23).

46. Dr. Healey testified on October 28, 2014 and provided his twenty two page report along with Rule 17, Exhibit 7, "Complex Regional Pain Syndrome/Reflex Sympathetic Dystrophy" DOWC Medical Treatment Guidelines, and an article entitled "Demystifying CRPS: What Clinicians Need to Know", all of which were admitted into evidence. Dr. Healey noted that Claimant's medical findings met all the requirements of the DOWC Guidelines stating that Claimant meets the requirements of the DOWC Medical Treatment Guidelines as follows:

> "The requirements of the DOWC at the time of evaluation include the following: Sensory evidence of hyperalgesia to pinprick and/ or allodynia to light touch or deep somatic pressure and joint movement; he meets these criteria; vasomotor evidence of temperature asymmetry and/ or skin color changes and symmetry; pseudo motor edema; evidence of edema and/or sweating changes or sweating asymmetry; motor or trophic changes including evidence of decreased range of motion and motor dysfunction with weakness and, finally, no other diagnosis that would better explain the signs and symptoms." (*See* Claimant's Exhibit 1 p. 20).

Dr. Healey is of the opinion that the Claimant meets all four criteria as documented by various medical providers during his clinical course.

47. Dr. Healey states that there is no definitive test that exists for CRPS. The diagnosis must be made by exclusion (Claimant's Exhibit 1, p. 20). The hallmark of diagnosis is thorough clinical evaluation of symptoms and signs. Testing, however, including EMG or nerve conduction testing to rule out peripheral neuropathy; MRI and x-rays to identify soft tissue trauma or bone disorders can be helpful; pseudo-motor testing such as QSART to assess resting and provoked sweat output of the painful versus unaffected limbs may indicate abnormal sympathetic activity (disturbances in blood flow). QSART is also helpful in identifying allodynia which is a symptom

common to CRPS and which was consistently found on the examinations of the various treating physicians in this case (*See* article, "Demystigying CRPS", Claimant's Exhibit 1, p. 52)

48. Dr. Healey is of the opinion that under diagnostic components needed to confirm CRPS, that even though the medical treatment guidelines require specific positive testing, that the consensus of the academic pain community is that CRPS is a clinical diagnosis rather than dependent on specific tests as required by the DOWC. Every single treating physician in this case diagnosed Claimant as suffering from an industrial accident causing CRPS. Those physicians include Dr. Schnell, Dr. Beatty, Dr. Singleton, Dr. Lindenbaum and Dr. Hahn. Even the insurance carrier's peer review pain expert, Dr. Moshe Lewis, agreed a QSART test was medically necessary for Claimants CRPS. Dr. Lewis stated: "The claimant was seen on 2/28/2013 noting that the left sympathetic ganglion block did not benefit him significantly. He has chronic pain due to CRPS which is unimproved with conservative management. Now a test for RSD is requested.

49. With respect to diagnostic testing, Dr. Healey states:

> "In regards to testing, it is required that tropic tests including comparative x-rays of both extremities including distal phalanges or a triple-phase bone scan be done. Neither of these tests have been done: however, the x-rays of his left ankle indicates osteoporosis. Other testing includes a vasomotortemperature test with infrared stress thermography. This has never been done by any of this treating physicians. Another test, recommended by the peer review consultant for the insurance company, was a pseudo motor test with autonomic battery with emphasis on QSART; that test has never been performed" (Claimant's Exhibit 1, p. 20).

50. Dr. Healey commented on the Claimant's negative responses to the sympathetic blocks as follows:

> "There is no statement regarding sympathetic blockade. It should be noted that not all people who have complex regional pain syndrome do respond to sympathetic blockade. This is well known, again,

in the pain community. Therefore, the fact that he did not have significant pain relief with sympathetic nerve blocks does not rule out the diagnosis of complex regional pain syndrome". Also see article "Demystifying CRPS: What Clinicians Should Know", page 53, where a study found only one-third of patients undergoing sympathetic nerve blocks obtained complete relief of symptoms" (Claimant's Exhibit 1).

51. Rather, Dr. Healey supported the diagnosis of CRPS as a clinical diagnosis that had all the signs and symptoms from all the visits to the treating physicians. In this regard Dr Healey states the following opinion:

> "[Claimant] presents with a classical history of complex regional pain syndrome with a talar dome fracture, followed by surgery, followed by progressive pain, temperature changes and edema. His initial treating physicians opined that his problem was probably complex regional pain syndrome. This has been questioned by Dr. Pitzer, and at one point by Dr. Singleton; however, in his last notes Dr. Singleton continues to maintain that [Claimant] has complex regional pain syndrome and I concur with his opinion" (Claimant's Exhibit 1, p. 20).

52. Dr. Healey's physical exam included:

> "Examination of the left ankle and foot reveals 1 + edema. There is a noticeable difference in temperature between his left ankle and foot and his right ankle and foot in that his left foot and ankle are extra ice cold to palpation. Even light palpation of his left ankle and foot causes complaints of severe pain and withdrawal. He notes decreased light touch, but there is hyperalgesia with pinprick testing involving the left ankle and left foot up to the medial malleolus and lateral malleolus. Motor testing is not possible due to the fact that any attempt to bear weight or heel or toe walk he is not able to perform due to complaints of stiffness and pain in his left ankle. The pain elicited on palpation

is diffuse and involves the medial lateral and dorsal ankle and plantar foot. He has markedly decreased range of motion of his left ankle, with 5 degrees of dorsi flexion, 10 degrees of plantar flexion, 3 degrees of eversion and inversion."

53. Dr. Healey diagnosed: "complex regional pain syndrome type 1, rule out central sensitization pain syndrome" (Claimant's Exhibit 1, p. 20).

54. Dr. Healey asserts that the Claimant's CRPS has been:

" recalcitrant to treatment, including sympathetic nerve blocks and medications which he has had difficulty tolerating. He has undergone psychological counseling but continues to be depressed and anxious over his chronic, severe, unrelenting pain that interferes with essentially all activities and precludes him from being able to return to work to support his family."

55. With respect to Dr. Nagamani's DIME opinion, Dr. Healey states:

"Dr. Nagamani, appeared to equivocate in his report as to whether or not [Claimant] had complex regional pain syndrome but had no other explanation for it, and he notes that he had a normal

EMG/nerve conduction velocity, which is not uncommon with complex regional pain syndrome since the pain fibers, the A -delta and unmyelinated C fibers are small fibers and frequently will not be positive with an EMG/ nerve conduction velocity test; therefore, it is irrelevant whether or not he had a positive EMG/ nerve conduction velocity test of his left lower extremity for making the diagnosis of complex regional pain syndrome."

56. Dr. Healey questions Dr. Nagamani's familiarity with the DOWC CRPS diagnostic guidelines. As Dr. Healey states in his report:

There is not documentation or evidence of

> familiarity by Dr. Nagamani with DOWC CRPS diagnostic guidelines which include a triple-phase bone scan, x-rays, infrared stress thermography and pseudo motor Qsart testing, which are additional tests required in order to make the diagnosis. Therefore, I do not find Dr. Naganami's opinion credible because he does not appear in his report to have in-depth knowledge of complex regional pain syndrome or the medical treatment guidelines promulgated by the Division of Workers' Compensation on complex regional pain syndrome. It should be noted that lumbar sympathetic nerve blocks are not part of the required diagnostic criteria promulgated by the Division of Worker's Compensation, and this appears to be one of the major reasons that Dr. Nagamani did not agree with the treating physicians that [Claimant] has complex regional pain syndrome."

57. For the treatment of Claimant's CRPS, Dr. Healey recommended a trial of spinal cord stimulation for his left lower extremity CRPS as well as aggressive treatment of his chronic pain with opioids, which [Claimant] may need indefinitely. In addition Claimant is having problems with depression. Dr. Healey recommends anti-depressants and ongoing psychological counseling concurring with Dr. Singletons' recommendation for additional physical therapy and water therapy.

58. Dr. Healey also is of the opinion that the Claimant may have a chronic centralized pain disorder as described on page 5 under C. Introduction to Chronic Pain in Rule 17, Exhibit 9, DOWC Chronic Pain Disorder Medical Treatment Guidelines. Central pain is recalcitrant to treatment but may be significantly improved with high dose opioid medication.

59. Regarding Impairment, Dr. Healey is of the opinion that the Claimant is not at MMI. Dr. Healey states that the Claimant can stand and walk only on level surface using a crutch without bearing weight on left lower extremity. Dr. Healey concluded that under the facts of this case as follows:

The Claimant's Testimony

60. The Claimant testified at the hearing of October 28, 2014. He that he has not been able to walk without crutches since the date of the initial injury, despite the treatment offered herein. He is severely limited in his ability to bend, stoop, or pick anything up anything off the floor because he cannot stand on his left foot and cannot balance on his right foot. He can stand for approximately 4-5 minutes before needing to sit for approximately 15 minutes, at which time, he can stand again. After walking a short distance, the Claimant needs to sit and rest for approximately 15 minutes to give his aching left shoulder and right knee a break, at which time he can get back up and walk. He can't kneel or crouch or twist while using his crutches. He can drive for approximately half an hour before needing to take a fifteen minute break. In addition, The Claimant feels constant, severe pain in his left ankle which swells and freezes up. Claimant has very little range of motion in his left ankle and has trouble moving it. The ALJ finds the Claimant's testimony credible and un-refuted.

61. The Claimant testified to his daily routine. He has three children that he takes and picks up from school. With the assistance of his wife and his children, and because he is able to take breaks and sit as needed, he is able to help his children get snacks, do their homework and get ready for bed. When his pre-school child takes a nap in the middle of the day, he gets on coloradojobdepartment.com web site and searches for work. He has trouble playing with his children and can't do anything that requires putting pressure on his left foot. Claimant is not unemployed because he isn't motivated to take care of his family, he is unemployed because he has a severely painful CRPS condition which completely disables him from regular employment.

Ultimate Findings

62. The ALJ finds the Claimant's presentation and testimony credible, contrary to Respondents' IME Dr. Pitzer's psychological opinions. Further, the ALJ finds the opinions of all the physicians who indicate that the Claimant probably has CRPS and that a QSART Test is warranted are more credible than the opinions of Dr. Pitzer and DIME Dr. Nagamani.

63. Between conflicting medical opinions, the ALJ accepts the opinions of Dr. Healey and the other physicians who indicate that the Claimant may have CRPS and rejects the opinions of Respondents' IME Dr. Pitzer and DIME Dr. Nagamani. It is insufficient, however, to simply reject DIME Dr. Nagamani's opinion on MMI. It must be shown that it is highly probable, unmistakable and free from serious and substantial doubt that Dr.

Nagamani's opinions are erroneous.

64. Dr. Nagamani, the DIME physician, misdiagnosed the underlying medical condition of the Claimant when he failed to assign the diagnosis of CRPS disorder to this case. Dr. Nagamani's report itself demonstrates that the he was unfamiliar with both the diagnosis and treatment of CRPS but also the DOWC CRPS Medical Treatment Guidelines. The basis of his opinion was either the lack of response to EMG testing or sympathetic block injections, both tests which cannot rule out CRPS. The one test that was required by the DOWC Guidelines, the QSART, was never addressed in the DIME's report, even though the Respondents' own peer review expert, Dr. Lewis, agreed that this test should be performed. As Dr. Healey stated, Dr. Nagamani's opinion lacks credibility because he did not appear, in his report, to have an in-depth knowledge of CRPS or the Medical Treatment Guidelines promulgated by the DOWC. For example, even though Dr. Nagamani stated that the Claimant clearly had the signs and symptoms of CRPS, he did not feel comfortable in assigning an impairment rating because of the lack of positive response to the sympathetic nerve blocks and any objective testing. This statement reveals that Dr. Nagamani's opinion is not based on substantial evidence and that it is clearly erroneous. Additionally, Dr. Nagamani did not mention the objective tests required by the DOWC Guidelines.

65. As found, herein above, the Claimant has proven that it is highly probable, unmistakable and free from serious and substantial doubt that DIME Dr. Nagamani's opinion that the Claimant reached MMI on November 27, 2013 is erroneous. As Dr. Healey observed, Dr. Nagamani ignored accepted tests for CRPS, including the QSART Test.

66. The issues of medical benefits, AWW and temporary disability benefits were **not** designated as issues. Therefore, the Respondents had not received advance notice of these issues. Thus, they were not afforded a meaningful opportunity to be heard on these issues at the October 28, 2014 hearing.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. *Arenas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As found, the Claimant's presentation and testimony was credible, contrary to Respondents' IME's, Dr. Pitzer's,

credibility opinions. Further, the opinions of all the physicians who indicated that the Claimant probably has CRPS, and that a QSART Test is warranted, are more credible than the opinions of Dr. Pitzer and DIME Dr. Nagamani.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions, the ALJ accepted the opinions of Dr. Healey and the other physicians who indicated that the Claimant may have CRPS and rejected the opinions of Respondents' IME Dr. Pitzer and DIME Dr. Nagamani. It is insufficient, however, to simply reject DIME Dr. Nagamani's opinion on MMI. It must be shown that it is highly probable, unmistakable and free from serious and substantial doubt that Dr. Nagamani's opinions are erroneous.

Maximum Medical Improvement (MMI)

c. MMI is defined as the point in time when any medically **determinable** physical or medical impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition. § 8-40-201(11.5), C.R.S. *Donald B. Murphy Contractors, Inc. V. Indus. Claim Appeals Office*, 916 P.2d 611 (Colo. App. 1995). Diagnostic procedures that constitute a compensable medical benefit must be provided prior to MMI if such procedures have a reasonable prospect of diagnosing or defining a claimant's condition so as to suggest a course of further treatment. As found, the QSART test was recommended to definitively determine if the Claimant has CRPS and, thus, what a proper course of treatment for it would be. *See*

In the Matter of the Claim of William Soto, Claimant, W.C. No. 4-813-582 [Indus. Claim Appeals Office (ICAO), October 27, 2011]. .As found, the Claimant has overcome DIME Dr. Nagamani's opinion that the Claimant is at MMI.

Overcoming the DIME of Dr. Nagamani

d. The party seeking to overcome a DIME physician's opinions bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). *Also see Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475 (Colo. App. 2005). The DIME physician's determination of MMI is binding unless overcome by "clear and convincing evidence." *Metro Moving & Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995); *See also Peregoy v. Indus. Claim Appeals Office,* 87 P.3d 261 (2004); and § 8-42-107(b)-(c), C.R.S. *Also see Whiteside v. Smith,* 67 P.3d 1240 (Colo. 2003). Where the threshold determination of compensability is not an issue, a DIME physician's conclusion that an injured worker's medical problems were components of the injured worker's overall impairment constitutes a part of the diagnostic assessment that comprises the DIME process and, as such the conclusion must be given presumptive effect and can only be overcome by clear and convincing evidence. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475, 482 (Colo. App. 2005); *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 400 (Colo. App. 2009). "Clear and convincing evidence" is evidence, which is stronger than preponderance, is unmistakable, makes a fact or facts highly probable or the converse, and is free from serious or substantial doubt. *Metro Moving & Storage Co. v. Gussert, supra; Leming v. Indus. Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). In other words, a DIME physician's finding may not be overcome unless the evidence establishes that it is "highly probable" that the DIME physician's opinion is incorrect. *Postelwait v. Midwest Barricade,* 905 P. 2d 21 (Colo. App. 1995). To overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt". *Adams v. Sealy, Inc.,* W.C. No. 4-476-254 [Indus. Claim Appeals Office (ICAO), Oct. 4, 2001]. A mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.,* W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Bush, Inc.,* W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). As found, Dr. Nagamani, the DIME physician, misdiagnosed the underlying medical condition of the Claimant when he failed to assign the diagnosis of probable CRPS disorder to this case. Dr. Nagamani's report itself

demonstrates that the he was unfamiliar with both the diagnosis and treatment of CRPS but also the DOWC CRPS Medical Treatment Guidelines. As found, the basis of his opinion was either the lack of response to EMG testing or sympathetic block injections, both tests which cannot rule out CRPS. The one test that was required by the DOWC Guidelines, the QSART, was never addressed in the DIME's report, even though the Respondents' own peer review expert, Dr. Lewis, agreed that this test should be performed. As Dr. Healey stated, Dr. Nagamani's opinion lacked credibility because he did not appear in his report to have an in-depth knowledge of CRPS or the Medical Treatment Guidelines promulgated by the DOWC. For example, even though Dr. Nagamani stated that the Claimant clearly had the signs and symptoms of CRPS, he did not feel comfortable in assigning an impairment rating because of the lack of positive response to the sympathetic nerve blocks and any objective testing. This statement reveals that Dr. Nagamani's opinion is not based on substantial evidence and that it is clearly erroneous. Additionally, Dr. Nagamani did not mention the objective tests required by the DOWC Guidelines.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Claimant has overcome the Division Independent Medical Examiner's (Kevin Nagamani, M.D.) opinion that the Claimant reached maximum medical improvement on November 27, 2013, by clear and convincing evidence.

B. The Claimant has not yet reached maximum medical improvement.

C. Any and all issues not determined herein, including medical benefits, average weekly wage and temporary disability, are reserved for future decision.

DATED this 29 day of January 2015.

EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. (as amended, SB 09-070). For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of the portion of a proposed decision concerning compensability to counsel for the Claimant to be submitted, electronically, within 5 working days, giving counsel for the Respondents 2 working days after receipt thereof to file electronic objections as to form. The ALJ referred the portion of the proposed decision concerning penalties to counsel for the Respondents to be filed , electronically, within 5 working days, giving Claimant's counsel 2 working days within which to file objections. The portion of the proposed decision concerning compensability was filed on January 13, 2015. The portion concerning penalties was filed, electronically, on the same date. No timely objections were filed by either party. After a consideration of the two portions of the proposed decision, the ALJ has synthesized and modified them and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern compensability of injuries sustained in an automobile accident on October 7, 2013, specifically, were the injuries sustained as a result of the motor vehicle accident (MVA) in the course and scope of employment and arising out of employment; medical benefits; and, penalties versus the Respondents, pursuant to § 8-43-304(1), C.R.S., because the insurance carrier allegedly did not file a timely Notice of Contest for alleged failure to timely admit or contest liability.

At the conclusion of the Claimant's case-in-chief, the Respondents moved for judgment in the nature of a directed verdict. After hearing the arguments of counsel, the ALJ granted the Respondents' motion for judgment in the nature of a directed verdict.

The Claimant bears the burden of proof on all issues by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

General Finding

1. The parties stipulated and the ALJ finds that the Claimant's average weekly wage (AWW) is $703.03.

Compensability –The Claimant's Job Duties

2. The Claimant worked as a Regional Supervisor for the Employer and supervised five branches in Colorado and three branches in Utah.

3. The Employer provided the Claimant with a company vehicle to travel to each branch and the Employer paid for the vehicle and the gasoline. The Employer also provided the Claimant with a company cell phone.

4. The Claimant was paid a salary and did not need to clock in and out of work. She was expected to be available to take care of any issues that arose with any of the branches, such as if the security alarm went off, if a computer went down at a branch, or if an employee called in sick.

5. The Claimant's job duties included, hiring and firing associates for each branch, setting up the associates schedules, training new associates, and traveling daily to the branches to provide them with supplies.

6. The Claimant has a work office set up at her home with a computer to address work issues throughout the day. The Claimant also keeps work supplies at her home to distribute to the different branches that need supplies.

7. The Claimant's regular schedule is to wake up in the morning and to check her cell phone, from home, to determine if she has received any emails or phone calls from work to which she would needed to respond. The Claimant is responsible to make sure that all the employees at each branch are working, or to get another employee to cover the shift, if needed. She is expected to check the security emails to make sure each branch has opened. Then the Claimant is expected to drive to each branch to supervise, train the associates, and bring them any supplies they need.

8. As part of her job duties, the Claimant was suppose to travel to five Colorado branches and three Utah branches to bring work supplies, to train associates and to cover shifts when associates were sick. On October 7, 2013, when she was involved in the car accident, she was traveling to the Commerce City branch to cover a shift.

Compensability – The Injury Incident

9. On October 7, 2013, the Claimant woke up around 6:30 or 7 AM and picked up her cell phone and responded to work emails. Her plan that day was to drive to the Aurora branch which was located at 1450 Havana Street in Aurora, Colorado to drop off supplies for the branch, and then drive to the Commerce City branch to cover a shift.

10. While heading north on I-225, toward the Aurora branch, the Claimant changed her mind and remembered she had already gone to the Aurora Branch on October 4, 2013, so she did not need to go to that branch that day. Therefore, she stayed on northbound I-225, in order to head to the Commerce City branch which was located at 5640 East 64th Avenue, Commerce City, Colorado.

11. While on northbound I-225, the Claimant was trying to get onto westbound I-70, to head to the Commerce City branch, when she was hit by a semi-truck (T-boned) [Claimant's Ex. 7 pp. 17-18].

12. At the time of impact, the airbags erupted and the Claimant hit her head, neck, left shoulder, left arm, back, and left leg.

13. The Claimant was given a company cell phone, and on the morning of October 7, 2013 she checked her work emails and voice messages, and responded to work emails from home. The Claimant then, got into the company provided vehicle, and planned to take supplies to the Aurora branch. As she was driving, she changed her mind and decided to drive to the Commerce City branch to cover a shift when she was involved in a car accident injuring her head, neck, left shoulder, arm, back and left leg. Therefore, her official work duties began that morning at home.

Medical –Emergent Care

14. The Claimant was taken by ambulance with Rural/Metro of Central Colorado, to the University of Colorado Hospital (Claimant's Ex. 8 p. 30).

15. On October 7, 2013, Michael C. Overbeck, M.D., at the University of Colorado Hospital noted that the Claimant was in a motor vehicle collision and had pain in her head, neck and left hip. On physical examination, he noted positive for neck pain, back pain, laceration on her head and left arm and left leg pain (Claimant's Ex. 11 pp. 79-80).

16. On October 7, 2013, Dr. Overbeck recommended an x-ray of the Claimant's cervical spine, pain management and laceration repair (Claimant's Ex. 11 p. 95).

17. On October 7, 2013, Jeremy Voros, M.D., a resident at the University of Colorado Hospital, recommended for the Claimant to be off of work for three days (Claimant's Ex. 11, p. 96).

18. On October 7, 2013, the Claimant called and reported the injury to her supervisor, Jose Estrada, who is the Regional Director.

19. On October 9, 2013, Dr. Overbeck, performed a laceration repair at the University of Colorado Hospital (Claimant's Ex. 11, p. 103).

20 On October 11, 2013, Dr. Ryan, a resident at the University of Colorado Hospital, removed the sutures from the laceration (Claimant's Ex. 11, p. 114).

Medical –Authorization and Treatment

21. The Employer referred the Claimant to Concentra.

22. On October 11, 2013, Robert J. Dixon, M.D., at Concentra, who became the Claimant's authorized treating physician (ATP), noted that the Claimant was in a motor vehicle accident and she hit her left forehead, left chest and has pain in her neck, left shoulder, left arm and lower back. He noted on physical exam that she had tenderness in her neck, thoracic area, lumbar area, and left upper arm. (Claimant's Ex. 13 pp. 123-124)

23. On October 11, 2013, Dr. Dixon recommended a CT scan of the Claimant's head, physical therapy (PT) of her neck and back, and he assessed that it was "Greater than 50% likely work related" (Claimant's Ex. 13 p. 125). The ALJ infers and finds that Dr. Dixon has expressed an opinion that to a reasonable degree of probability that the Claimant's injury was work-related. Nonetheless, the determination of compensability rests on the Claimant's job duties as of the time of the accident and the fact that she had entered into the course and scope of employment as of the time she left home. Therefore, the Claimant's was not "going to" work (outside the course and scope). She was already working at the time of the accident.

24. On October 11, 2013, Dr. Dixon recommended no lifting over 10 pounds, and no pushing and/or pulling over 20 pounds (Claimant's Ex. 13 p. 126).

25. The Claimant received PT and Dr. Dixon referred her to Alison Fall, M.D., for further medical treatment.

26. On March 24, 2014, Dr. Fall noted that the Claimant was at maximum medical improvement (MMI) and gave her a zero percent impairment rating (Claimant's Ex. 15, p. 245).

27. On December 10, 2014, John S. Hughes, M.D., performed an independent medical examination (IME) at the Claimant's behest, and he was of the opinion that the Claimant injured her head, chest, neck, upper back and lower back in the MVA, and he recommended that the Claimant needed a non-contrast MRI (magnetic resonance imaging) of her cervical and thoracic spine regions (Claimant's Ex. 16 p. 249).

Penalties

28. After the MVA, the insurance carrier promptly and continually paid for the Claimant's medical treatment as a result of the MVA up to and including the April 25, 2014 date of MMI. The Claimant was placed at MMI on April 25, 2014 by John Burris, M.D., and was discharged from care with no permanent impairment, no work restrictions, and no medical maintenance care recommended.

29. As a result of her injuries, the Claimant only missed three days of work for which she was paid in full by Employer: October 7, 8, and 9, 2013.

30. On June 2, 2014, the Claimant's counsel, Ms. McClure, completed a Worker's Claim for Compensation on behalf of the Claimant, which was then entered by the Division of Workers' Compensation (hereinafter "DOWC") on June 9, 2014.

31. At the hearing, the Claimant alleged that the insurance carrier was required to either admit or deny liability within twenty days of the filing of the Workers' Claim for Compensation pursuant to § 8-43-203(1) (a), C.R.S. On August 7, 2014, Paul Tauriello, Director of the DOWC, issued an Order requiring the insurance carrier to submit an Admission of Liability or Notice of Contest within fifteen days of the date his Order was mailed. The Respondents timely filed a Notice of Contest on August 19, 2014, pursuant to Director Tauriello's Order. Apparently, the Claimant's theory is that Director Tauriello' order retroactively bootstrapped an obligation for the respondents to admit or contest in the past tense. This theory is rejected by the ALJ.

32. In her August 6, 2014, Application for Hearing, the Claimant endorsed § 8-43-304(1), C.R.S., as the applicable penalty provision, seeking penalties of up to $1,000 per day from the time the admission/denial was allegedly due to when the admission/denial was filed.

33. After the Claimant rested her case-in-chief, the Respondents moved for a ruling in the nature of a directed verdict on the issue of penalties.

Ultimate Findings

34. The Claimant presented and testified credibly. Specifically, the ALJ finds the Claimant credible when she testified at hearing that she was heading to the Aurora office but changed her mind and diverted to start heading to the Commerce City Office by starting to get onto the ramp from I-225 to I-70, where the MVA occurred.

35. The Claimant's has proven, by a preponderance of the evidence that the MVA of October 7, 2013 was in the course and scope of her employment and arose out of it. Therefore, the Claimant sustained compensable injuries as a result of the MVA. Travelling from branch to branch was contemplated by the implicit contract of the

Claimant's employment. Also, going from branch to branch created a "special zone of danger," as opposed to merely going from home to the office.

36. The Claimant has proven, by preponderant evidence that all of her medical care and treatment was authorized, within the chain of authorized referrals, of an emergent nature, causally related to the injuries sustained in the MVA and reasonably necessary to cure and relieve the effects thereof. The medical causality opinions are undisputed.

37. As an academic matter at this point in time, the Claimant's AWW is $703.03.

38. The Claimant failed to prove, by a preponderance of the evidence entitlement to penalties against the respondents for alleged failure to timely admit or contest because the Claimant was temporarily disabled for three (3) days or less, and the Respondents were not legally obliged to admit or contest. As found, the Respondents paid medical benefits without taking a position, which they were allowed to do under the Workers Compensation Act (hereinafter the "Act").

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. *Arenas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions

(this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As found, the medical causality opinions are, essentially, undisputed. As further found, the Claimant was credible in her testimony concerning the nature of her job duties, and her testimony in this regard was, essentially undisputed. Consequently, the Claimant's testimony supports the fact that her MVA was in the course and scope of her employment and arose out of it. Therefore, it supports compensability of her injuries.

Compensability

b. The Claimant's right to compensation initially hinges upon a determination that "at the time of the injury, the employee is performing service arising out of and in the course of the employee's employment." § 8-41-301(1) (b), C.R.S. The "arising out of" test is one of causation which requires that the injury have its origins in an employee's work-related functions. There is no presumption than an injury which occurs in the course of employment arises out of the employment. *Finn v. Indus. Comm'n,* 165 Colo. 106, 437 P.2d 542 (1968). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Indus. Comm'n*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Indus. Comm'n v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 293 (1951). A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Indus. Comm'n of Colorado v. Jones,* 688 P.2d 1116 (Colo. 1984); *Indus. Comm'n v. Royal Indemnity Co., supra.* As found, the Claimant's injuries arose out of and were within the course and scope of her employment.

c. Compensable injuries involve an "injury" which requires medical treatment or causes disability. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970). Whether a compensable injury has been sustained is a question of fact to be determined by the ALJ. *Eller v. Indus. Claim Appeals Office*, 224 P.3d 397 (Colo. App. 2009). As found, the Claimant's MVA necessitated medical treatment. Therefore, her injuries were sufficient to be compensable.

d. The general rule is that injuries sustained by employees going to and from work are not compensable. *Berry's Coffee Shop, Inc. v. Palomba*, 423 P.2d 212 (Colo. 1967). An exception to this general rule exists when "special circumstances" create a causal relationship between the employment and the travel, beyond the sole fact of the employee's arrival at work. *Madden v. Madden v. Mountain West Fabricators*, 977 P.2d 861 (Colo. 1999). The courts have listed four factors which are relevant in determining whether "special circumstances" have been established which create an exception to the "going to and coming from" rule. The factors are:

- Whether travel occurred during working hours;
- Whether travel occurred on or off the employer's premises;
- Whether travel was contemplated by the employment contract; and
- Whether obligations or conditions of employment created a "zone of special danger" out of which the injury arose.

Madden v. Mountain West Fabricators, *id.* As found, travel was contemplated by the Claimant's implicit employment contract. The Claimant's travel on October 7, 2013 was at the Employer's express or implied request and such travel conferred a benefit on the Employer beyond the sole fact of the employee's arrival at work. *See Electric Mutual Liability Insurance Co. v. Indus. Comm'n,* 154 Colo. 491, 391 P.2d 677 (1964). As found, the Claimant was given a company cell phone, and on the morning of October 7, 2013 she checked her work emails and voice messages, and responded to work emails from home. The claimant then, got into the company provided vehicle, and planned to take supplies to the Aurora branch. As she was driving, she changed her mind and decided to drive to the Commerce City branch to cover a shift when she was involved in a car accident injuring her head, neck, left shoulder, arm, back and left leg. Therefore, her official work duties began that morning and it is found she was within the course and scope of employment when she was involved in the MVA. The Claimant's travel to the different branches was contemplated by her employment contract and a substantial part of the service to the Employer. As part of her job duties, the claimant was suppose to travel to five Colorado branches and three Utah branches to bring work supplies, to train associates and to cover shifts when associates were sick. On October 7, 2013, when she was involved in the car accident, the claimant was traveling to the Commerce City branch to cover a shift. Claims have been deemed compensable when the employee's travel is at the employer's express or implied request or when such travel confers a benefit on the employer beyond the sole fact of the employee's arrival at work. *See Electric Mutual Liability Insurance Co. v. Indus. Comm'n*, 154 Colo. 491, 495, 391 P.2d 677, 679 (1964) [holding that when an employee uses his own car to perform services for or at the direction of his employer, the employee remains in the course of his employment until he returns home].

e. Furthermore, as found, the Employer provided the company vehicle and also paid for the gasoline. Claims have also been compensable when the employer provides

transportation or pays the cost of the employee's travel to and from work. *See Indus. Comm'n v. Lavach*, 439 P.2d 359 (Colo. App. 1968). As ultimately found, the Claimant has prove that she was within the course and scope of employment on October 7, 2013 when she was involved in the car accident injuring her head, neck, left shoulder, arm, back and left leg.

Medical

f. As found, the claimant went to the ER at the University of Colorado Hospital where Dr. Overbeck recommended x-rays, pain management, laceration repair and she was put off of work for three days. § 8-42-101(1) (a), C.R.S., provides:

> Every employer ... shall furnish ... such medical, hospital, and surgical supplies, crutches, and apparatus as may reasonably be needed at the time of the injury ... and thereafter during the disability to cure and relieve the employee from the effects of the injury.

g. A medical emergency allows an injured worker the right to obtain treatment without undergoing the delay inherent in notifying the employer and awaiting approval. However, once the emergency has ended, the employee must give notice to the employer of the need for continuing care. *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the ambulance and ER at the University of Colorado Hospital was emergent care, exempt from the specific medical authorization requirements.

h. To be a compensable benefit, medical care and treatment must be causally related to an industrial injury or occupational disease. *Dependable Cleaners v. Vasquez,* 883 P. 2d 583 (Colo. App. 1994). As found, Claimant's medical treatment is causally related to her injuries sustained in the MVA of October 7, 2013. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's medical care and treatment as reflected in the evidence was and is reasonably necessary.

i. To be authorized, all referrals must remain within the chain of authorized referrals in the normal progression of authorized treatment. *See Mason Jar Restaurant v. Indus. Claim Appeals Office,* 862 P. 2d 1026 (Colo. App. 1993); *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P. 2d 501 (Colo. App. 1995); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). As found, all of the Claimant's medical care and treatment for the injuries sustained in the MVA of October 7, 2013 was within the authorized chain of referrals.

Average Weekly Wage (AWW)

j. It was stipulated and found that the Claimant's AWW is $703.03.

Penalties

k. When a tribunal is the trier of fact, a motion for a "directed verdict" is actually a motion to dismiss pursuant to C.R.C.P. 41(b). *Campbell v. Commercial Credit Plan, Inc.*, 670 P.2d 813 (Colo. App. 1983). Under C.R.C.P. 41(b) (1), after a plaintiff in a civil action tried without a jury has completed the presentation of the evidence, the defendant may move for a dismissal on the grounds that the plaintiff has failed to present a prima facie case for relief. *Romero v. Tristar Drywall, Inc.*, W.C. No. 4-745-833 [Indus. Claim Appeals Office (ICAO), May 24, 2010]. A motion for a directed verdict is an appropriate procedural step to test the sufficiency of a party's case in a workers' compensation proceeding. *Romero v. Tristar Drywall, Inc.*, *supra*; *see also* Office of Administrative Courts (OACRP), Rule 2 (B), 1 CCR 104-1 (stating the Colorado Rules of Civil Procedure apply to Workers' Compensation hearings unless they are inconsistent with these rules and the provisions of the Workers' Compensation Act). The tribunal is not required to view the evidence in the light most favorable to the plaintiff. *Rowe v. Bowers*, 417 P.2d 503 (Colo. 1966); *Blea v. Deluxe/Current, Inc.*, W.C. Nos. 3-940-062, 4-279-268 (ICAO, June 18, 1997) [applying these principles to workers' compensation proceedings]. Rather, the test is whether in light of all the evidence, judgment should be entered for the movant. *Smith v. Weindrop,* 833 P.2d 856 (Colo. App. 1992); *Campbell v. Commercial Credit Plan, Inc.*, *supra*; *Blea v. Deluxe/Current, Inc.*, *supra.* As found, the Claimant's evidence could not get any better as of the conclusion of her case-in-chief and she had not established entitlement to penalties by a preponderance of the evidence. Therefore, it was appropriate to grant the Respondents Motion for Judgment in the nature of a Directed Verdict on the issue of penalties for alleged failure to timely admit or contest.

l. Penalties under § 8-43-304 (1), C.R.S. can be assessed for violations of the Colorado Workers' Compensation Act ("the Act") where there is no other penalty provision provided or for violating a Director's Order. The statute provides:

> Any employer or insurer, or any officer or agent of either, or any employee, or any other person who violates any provision of articles 40 to 47 of this title, or does any act prohibited thereby, or fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or panel, for which no penalty has been specifically provided, or fails, neglects, or refuses to obey any lawful order made by the director or panel or any judgment or decree made by any court as provided by said articles shall be subject to such order being reduced to judgment by a court of competent

> jurisdiction and shall also be punished by a fine of not more than one thousand dollars per day for each such offense.

§ 8-43-304(1), C.R.S. is not a legal remedy available to a claimant. If penalties were available to the Claimant, they would be limited to § 8-43-203(1) (a), C.R.S.

As found, the Claimant requested that the ALJ grant her an award of penalties under § 8-43-304 (1), C.R.S., for the insurance carrier's alleged late filing of a Notice of Contest. Nevertheless, § 8-43-203 (1) (a) and § 8-43-203 (2) (a), C.R.S., establish the only penalty provision that could be applicable. Because the Claimant is not legally entitled to relief under the statute she cited, no relief should be granted. Nonetheless, if the Claimant had sought penalties under the correct statute, § 8-43-203 (2) (a), C.R.S., she would not be entitled to relief because she was never entitled to disability benefits, and Respondents timely filed its Notice of Contest in response to the Director's Order.

m. Under § 8-43-101, C.R.S, certain types of injuries must be specifically reported to the DOWC . § 8-43-101(2), C.R.S states:

> [I]njuries to employees that result in no more than three days' or three shifts' loss of time from work, or no permanent physical impairment, or no fatality to the employee shall be reported by the employer only to the insurer of said employer's workers' compensation insurance liability, which injuries and exposure the insurer shall report only by monthly summary form to or as otherwise requested by the division.

Indeed, an employer or carrier may pay medical benefits without admitting or contesting if three (3) days or less time off work is involved. The duty to admit or deny liability does not arise under the statute until the insurer has obtained knowledge that would reasonably lead it to believe that a claimant sustained an injury resulting in **more than three days of lost time**, if there is evidence of permanency, or in the event of a fatality. Workers Compensation Rules of Procedure (WCRP), Rule 5-2 (B), 7 CCR 1101-3; *Palmer v. Borders Group, Inc.*, W.C. Nos. 4-751-397; 4-723-172 (ICAO, Nov. 28, 2008). Additionally, disability indemnity benefits are not recoverable in all cases where an employee misses time from work. *See* § 8-42-103 (1) (a), C.R.S. That section provides, "If the period of disability does not last **longer than three days** (emphasis supplied) from the day the employee leaves work as a result of the injury, no disability indemnity shall be recoverable except the disbursement provided in articles 40 to 47 of this title for medical, surgical, nursing, and hospital services, apparatus, and supplies. . . ." § 8-42-103 (1) (a), C.R.S. As found, the Claimant missed only three days from work—not more than three days. She sought no temporary disability benefits. Additionally, the insurance carrier had no obligation to file an admission of liability or a notice of contest with the DOWC because none of the scenarios requiring an insurer to submit a filing existed. *See* § 8-43-101 (1)-(2), C.R.S; *see also* § 8-43-203 (1) (a),

C.R.S. The carrier, however, filed a timely the Notice of Contest after the Director's Order was issued. Though the Director issued an Order requiring a position statement, Claimant's injuries carried no reporting requirement. *See* § 8-43-101 (2), C.R.S. Regardless of whether the insurance carrier filed a Notice of Contest on August 19, 2014 when Claimant alleges it was due on June 29, 2014, an obligation to file earlier did not exist because the Claimant was being treated under a medical-only claim.

n. When construing the Act, an ALJ's goal is to effectuate the intent of the General Assembly, and it is the General Assembly's intent that the Act be interpreted so as to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without resorting to litigation. § 8-40-102 (1), C.R.S.; *Dillard. v. Indus. Claim Appeals Office*, 134 P.3d 407 (Colo. 2006). The insurance carrier herein promptly and efficiently paid the Claimant's medical benefits as a result of the MVA and did so up until she was discharged at MMI by an ATP, Dr. Fall. Forcing the insurance carrier to file an admission of liability or notice of contest in a medical-only claim when disability was not at issue would be at odds with the General Assembly's intent and could tend to hinder the Claimant's receipt of medical care. Taken to its logical end, the Claimant's argument that the insurance carrier was required to file a Notice of Contest in a medical-only claim would have forced the carrier to take a position on compensability early on, which may have delayed the Claimant's treatment and forced litigation.

Burden of Proof

o. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained her burden on compensability, medical benefits and AWW. She has failed to sustain her burden on the issue of penalties against the Respondents.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Respondents shall pay the costs of all authorized, causally related and reasonably necessary medical care and treatment for the Claimant's injuries, sustained in the motor vehicle accident of October 7, 2013, subject to the Division of Workers Compensation medical Fee Schedule.

B. The Claimant's average weekly wage is $703.03.

C. Any and all issues not determined herein are reserved for future decision.

DATED this 16 day of January 2015.

EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. (as amended, SB 09-070). For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

Exhibit B was rejected. Otherwise, the remainders of Exhibits A through C were admitted into evidence without objection.

At the conclusion of the hearing, the ALJ established a post-hearing briefing schedule: Claimant's opening brief to be filed, electronically, within 5 working days; Respondents' answer brief to be filed, electronically, within 5 working days of the opening brief; and, the Claimant's reply brief to be filed within 2 working days of the answer brief. On December 18, 2014, the Claimant filed a document labeled (Findings of Fact, Conclusions of Law and Order." On December 30, 2014, the ALJ entered a procedural order indicating that the Claimant's document would be construed as an opening brief. On December 30, 2014, the Respondents filed a document labeled "Respondents' Proposed Findings of Fact, Conclusions of Law and Order." The ALJ will construe this document as the Respondents' answer brief. No timely reply brief was filed. The ALJ is uncertain about what the parties do not understand about "briefs." In light of the fact that the ALJ has not yet decided the case, it would seem to be presumptuous to offer the ALJ proposed decisions at this juncture.

ISSUES

The issues to be determined by this decision concern whether the Claimant suffered compensable injuries on May 28, 2014, specifically, among other things, alleged mental injuries resulting from the physical injuries, or mental injuries resulting from work-related mental trauma, during the course and scope of his employment; if so, whether Claimant has established that he is entitled to reasonably necessary medical benefits, causally related to his May 28, 2014 injuries;. if so, whether selection of the authorized medical provider passed to the Claimant; and, if so, whether the Claimant is entitled to temporary disability temporary total disability (TTD) benefits from August 4, 2014 and continuing until terminated by law, in addition to TTD and temporary partial disability (TPD) benefits for the periods stipulated. The Claimant bears the burden of proof, by a preponderance of the evidence on the above stated issues.

The Respondents raised the affirmative defense that the Claimant was "responsible for his termination," effective June 6, 2014, with the Respondents asserting that the Claimant is barred from further temporary disability benefits, effective June 7, 2014. The Respondents bear the burden of proof, by preponderant evidence of this issue.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The parties stipulated, and the ALJ finds, that, if the claim is compensable, the Claimant's average weekly wage (AWW) is $443.21. The ALJ finds that this AWW results in a TTD benefit rate of $295.47 per week, or $42.21 per day.

2. The parties further stipulated, and the ALJ finds, that, if the claim is compensable and if the Claimant was not responsible for termination, the Claimant is owed TTD benefits from June 7, 2014 to June 15, 2014 and June 21 to July 20, 2014; and he is owed temporary partial disability (TPD) benefits from June 16 to June 20, 2014, and from July 21 through August 3, 2014.

3. Prior to May 28, 2014, the Claimant had no symptoms of tinnitus, headaches, dizziness, chest pains, eye pain, depression, or anxiety. He had been an employee of the Employer for approximately 10 years, performing duties of a maintenance worker. His responsibilities included mowing the lawn, weeding, trimming trees, painting, and fixing pipes, among other duties. The Employer's premises was a complex of over 600 homes, including the Claimant's home.

4. On July 29, 2014, the Respondents filed a Notice of Contest, stating that further investigation was needed for a determination of compensability and time lost.

Compensability

5. While performing his work duties on May 28, 2014, the Claimant was mowing the lawn of a park located on the Employer's property. He was using a small tractor-type riding lawn mower. The area that he was mowing had overgrown grass and weeds, which was covering a gas service pipe that protruded from the ground approximately around 4 inches but no more than 6 inches.

6. As the Claimant was mowing and attempting to turn the lawn mower, the wheels of the mower slipped due to the grass being wet and the Claimant lost control of the lawn mower. The blades of the mower, located directly underneath the mower, went over a protruding gas pipe and cut off a portion of the pipe, causing the pressurized gas to explode upward and engulfing the mower and the Claimant. The pipe was struck on the left side of the mower. The pipe was a metal pipe approximately ½ to ¾ of an inch wide. The pipe began immediately releasing natural gas.

7. The Claimant did not realize how close he was to the gas pipe because of the overgrowth that covered the gas pipe and, because there were no markers indicating the location of the pipes. The Employer had previously ordered the posts removed which had before provided notice of the placement of the gas pipes and served as protective barriers.

8. When the gas line was cut, the gas exploded with sufficient force to rock the mower. The force additionally caused the Claimant to be nearly knocked off the mower. Claimant testified the mower rocked a bit when it struck the pipe, initially stating it was the force of the gas. On cross-examination, the Claimant could not be sure whether it was the gas or the mower striking the pipe that caused the mower to rock. Either way, the Claimant remained seated in the mower. He moved the mower to the side to evaluate the damage.

9. The explosion of gas, the force and burst of noise from the gas pressure releasing as the pipe was severed created an extremely loud blast, with the gas completely enveloping the Claimant. The Claimant inhaled the gas, both through his nose and mouth.

10. The Claimant sustained several injuries. Most notably, he developed tinnitus from the damage to his auditory system as a result of being exposed to the blast of the pressurized gas.

11. Immediately after the incident, the Claimant sought a way to cover the pipe. He attempted to place a one foot square heavy brick over the pipe, further exposing himself to the gas, but the force of the escaping gas kept the brick suspended and did not permit the brick to stay on the pipe.

12. Unable to temporarily seal the pipe, the Claimant left the area and went to the maintenance shop to report the accident to Michael Slyker, his manager. Instead of demonstrating concern for the Claimant, Slyker became angry with the Claimant. In his testimony regarding this encounter, Stryker skirted the issue and made no persuasive denial of the Claimant's version of this encounter.

13. The Claimant returned to the site while Slyker went into the shop to look for fittings and tools to fix the pipe. Slyker arrived at the site, exited his truck, and could hear the noise of the escaping gas even though he came no closer to the gas line than approximately 20 to 25 feet. He looked over to where he heard the gas and observed the Claimant crouching over the ruptured gas pipe. After seeing the extent of the damage, Slyker realized that the pipe could not be repaired by them. Slyker took pictures and left, assigning the Claimant duties with the co-worker, Gregorio Garcia. The Claimant remained at the site, where he continued to be exposed to the gas.

14. According to Slyker, it may be possible to cap a broken gas pipe with tools they have in the shop. If they are unable to do so, however, the utility company must be called. When Slyker arrived at the site, he observed the Claimant near the broken pipe. According to Slyker, It was quickly apparent to him that the break would require repair by the utility company. According to Slyker, he instructed the Claimant to get away from the pipe, go on his lunch break and go work on the other side of the property, away from the leak, with Gregorio Garcia, another employee. Slyker called the office and asked that the utility company be notified. A handyman who was often working around the property, but not an employee of the Employer, ultimately plugged the pipe with a piece of wood.

15. Shortly, thereafter, a coworker arrived at the site with a piece of wood to plug the gas pipe. As the coworker hammered the wood inside the pipe, the Claimant held the wood in place, increasing his exposure to the gas.

16. There is conflicting testimony regarding what happened at the site of the leak. According to the Claimant, Slyker took a photo and left the scene right away. Claimant further stated that he held a piece wood in place while it was hammered into place. The Claimant's version of events was in conflict with the testimony of Slyker. Additionally, Gregorio Garcia testified that, while he observed that the Claimant was exposed to the gas, he did not observe him holding wood in place while the leak was plugged. The fact that Garcia did not observe the Claimant holding wood in place while the leak was plugged does not mean it did not happen. Indeed, the Claimant was there. To the extent that conflicting versions were presented regarding what happened while examining the broken pipe, the ALJ credits the testimony of the Claimant more than Slyker's and Garcia's testimony since Slyker was only there for a short while after the fact and Garcia was observing, sporadically, while the Claimant was right there.

Responsibility for Termination

17. The Claimant exhibited initial symptoms of severe nausea, vomiting, and anxiety. Despite these symptoms, he finished his working day as scheduled and subsequently returned every day for his scheduled shift until he was fired. On the day of the incident, the Claimant returned to work following the lunch break and worked the remainder of the day. He worked the rest of the week, and all of the following week, through June 6, 2014. According to Slyker, the Claimant did not report an injury during this time. Slyker stated that he did not observe any difference in the Claimant's behavior such as nervousness, shaking hands, or anything of that nature. Based on Slyker's lack of medical and psychological training, the ALJ infers and finds that Slyker's failure to observe medical or psychological symptoms bears very little weight. The Claimant may have been "smiling on the outside, and hurting on the inside."

18. On June 6, 2014, the Claimant reported to Slyker that he was experiencing symptoms from the gas explosion, including nausea, vomiting, dizziness,

and hand tremors. Slyker denies that this happened. The ALJ credits the Claimant's version in this regard and rejects Slyker's version, Slyker did not refer the Claimant to a medical provider. Consequently, the Claimant self-referred to the People's Clinic in Boulder (Clinica Family Health Services).

19. On the same date, Slyker fired the Claimant from his employment stating to the Claimant that there simply was no more work for him.

20. The Employer's stated reason for firing the Claimant was due to the damage to the Employer's property.

21. At the hearing, Slyker testified by telephone that the Claimant had numerous performance issues, concerns over safety, attention to detail, and damage to property and equipment that culminated in the decision to end the employment relationship. The culmination of Claimant's work performance resulted in the decision to terminate Claimant. The ALJ infers and finds that the Claimant's employment was terminated on June 6, 2014 because the Claimant failed to measure up because of poor performance, however, the Respondents failed to demonstrate a volitional act on the Claimant's part that would have led the Claimant to believe that he would be fired if he committed the act.

22. The Claimant stated that he reported his symptoms to Slyker on June 6, 2014, when he was informed that he was fired. Slyker testified that no symptoms or conditions were reported to him on June 6, 2014. Slyker stated that the first time he was made aware of any alleged symptoms or conditions was when he was notified of the claim by corporate headquarters near the end of July 2014. The Respondents' implied theory is that the Claimant "manufactured" a workers' compensation claim after he was fired. This theory is significantly compromised by the fact that there is medical corroboration of the facts of the Claimant's injuries and it would be a substantial threat to theorize that the Claimant had been exposed to gas fumes outside of work in light of the totality of the evidence herein. The ALJ resolves this conflict in the testimony in favor of the Claimant reporting a work-related injury on June 6, 2014, at the time that he was fired.

23. The Claimant did **not** exercise a degree of control over the circumstances leading up to his termination from employment. He was what he was –an unsatisfactory employee who did not measure up to Michael Slyker's standards

Authorization of Medical Treatment

24. Slyker did not refer the Claimant to a medical provider. Consequently, the Claimant self-referred to the People's Clinic in Boulder, Clinica Family Health Services (hereinafter "Clinica"). Clinica made generalized referrals to an opthamologist and a psychiatrist/psychologist. In response to these referrals, the Claimant saw Robert

Krone, O.D. (optometrist) and Michael Dow, Psy.D., a clinical psychologist. Both were in the chain of authorized referrals.

Medical

25. On June 9, 2014, the Claimant presented to Clinica Family Health Services (People's Clinic on Boulder) and was seen by Amy Alper, PA-C. Alper noted that since the incident, the Claimant had been constantly nauseous and could not eat. He continued to hear the gas exploding in his ears when he slept, and he had trouble sleeping due to the trauma. This had also been making him shaky. Alper noted that gas covered the Claimant, and got into his eyes. The Claimant's vision was blurry and burning. Alper assessed the Claimant as having eye pain, insomnia, and dizziness/vertigo. Alper prescribed Omeprazole and Trazodone HCL.

26. On June 9, 2014, the Claimant also saw Dr. Dow, Psy.D. He noted that Claimant had trouble sleeping, eating, nausea, and would wake up hearing hissing. Dr. Dow reported advising the Claimant about the normal effects of trauma, in the Claimant's case which were exacerbated by lack of support, and explicit additional negative consequences. Dr. Dow implied, and the ALJ finds, that the Claimant's mental problems were caused by the traumatic event of May 28, 2014 (*See* Claimant's Exhibit 4).

27. On June 25, 2014, Dr. Krone, O.D., diagnosed the Claimant with unspecified tear film insufficiency/dry eye syndrome, stating, that it "may have been caused by explosion."

28. On July 28, 2014, Amy Alper, PA-C, reported the Claimant's diagnoses as depression, anxiety, vertigo, and vision discomfort. She restricted the Claimant to sedentary duty, including lifting no more than 10 pounds, no motor vehicle operation, no driving greater than 0 minutes, no working around machinery, no ladder or stair climbing, no pole climbing, no exposure to chemicals/irritating inhalants.. Alper referred the Claimant to an ophthalmologist and a psychiatrist. She noted that the Claimant was not able to return to his regular duties without restrictions.

29. On September 11, 2014, Alper reported the Claimant's work restrictions as including no lifting over 20 pounds, no working around machinery, no pole climbing, and no exposure to chemicals/irritating inhalants. Alper continued to state that the Claimant should see an ophthalmologist, and was that he was unable to return to his regular duties without restrictions.

Claimant's Independent Medical Examination (IME) by Caroline Gellrick, M.D.

30. On October 31, 2014, Dr. Gellrick diagnosed the Claimant as: "Status post gas explosion work-related injury on the job, which occurred May 28, 2014,

loud noise exposure causing:

- Tinnitus, right greater than left ear, question decreased sensory neural hearing loss.

- Persistence of cephalalgia from concussive-type force to the chest and face, which nearly knocked him off the lawnmower.
- Chest wall discomfort, consistent with costochondritis versus anxiety.
- Anxiety with elements of PTSD.
- Conjunctivitis of the eyes persistent, with redness seen today. The patient complaining of dry eye syndrome, ophthalmology insufficient tear film active dry eye syndrome, with some nuclear sclerosis per ophthalmology.
- Occasional dizziness."

(Dr. Gellrick's Report of October 31, 2014, p. 4).

31. Dr. Gellrick recommended that the Claimant get a baseline EKG to ensure the cardiac status is normal. She stated, "I suspect the chest discomfort is due to anxiety and may be costochondritis, not a cardiac etiology." With regard to the Claimant's hearing and tinnitus, Dr. Gellrick stated that the Claimant needs a full evaluation with ENT and "they can also evaluate the dizziness with further vestibular testing." With regard to the anxiety and depression, Dr. Gellrick stated that the Claimant needs evaluation with psychology to include modalities of EMDR. Dr. Gellrick was of the opinion that the Claimant may benefit from the use of a short-acting topical steroid for the ophthalmological problem, but definitely needs repeat evaluation for irritation under workers' compensation (based on this reference, the ALJ infers and finds that Dr. Gellrick is of the opinion that all of the above medical problems are work-related). Dr. Gellrick stated that the Claimant is currently not at maximum medical improvement (MMI) for his work-related injuries, but needs further intensive evaluation with the specialists mentioned above. Dr. Gellrick stated that the Claimant should not lift over 10 pounds, should have no loud noise exposure, and should avoid mechanized equipment. Dr. Gellrick also stated that the Claimant should not drive if he is dizzy. Dr. Gellrick concluded, "It is suspected when the patient's anxiety dissipates, his cephalalgia symptoms will dissipate, but in the interim he can certainly use the preferred NSAID of Celebrex to decrease cephalalgia symptoms." (Dr. Gellrick's Report, p. 4). The ALJ infers and finds that Dr. Gellrick's opinion in this regard establishes that the cephalagia is generated by the Claimant's anxiety, a mental phenomenon.

Independent Medical Examinations of the Respondents

32. On November 12, 2014, Sharon R. Walker, M.D., performed an IME at the Respondents' request. The Claimant described the loud sound as an initial loud sound followed by hissing of leaking gas. He reported gas getting into his eyes, nose, ears and face. The Claimant was wearing safety goggles. He stated the whole incident left him shaken and scared, but he could not explain why he was scared (the ALJ takes administrative notice of, and infers and finds, that the classical definition of "anxiety" is related to fear of that which one knows not). The Claimant described nightmares of his manager knocking on the door or window and telling him to come to work, but he does not have nightmares of the actual event. The Claimant reported that most of his current symptoms began 15-20 days after the May 28, 2014, event. The Claimant also reported itchy eyes, bilateral ear pain that starts in his right ear, goes through his head, and to his other ear, followed by his whole head hurting. The Claimant reported memory loss beginning approximately 1 and ½ months after the accident. (Respondents'Exhibit. A, pp. 1-12).

33. Dr. Walker diagnosed exposure to natural gas. Natural gas was identified as a simple asphyxiant with no systemic toxicity. According to Dr. Walker, this means in a confined space natural gas displaces oxygen, but in an open air environment, there is no toxic effect. Dr. Walker is of the opinion that natural gas is not identified as irritating to the eyes or skin. Dr. Walker noted that there was no explosion meaning no noise loud enough to cause tinnitus. To the extent that the mower striking the pipe would have caused a loud noise, Dr. Walker noted that the Claimant complained of right sided tinnitus, though his left ear was closer to the sound. Further, the Claimant did not notice tinnitus until 15-20 days after the accident. Dr. Walker concluded within a reasonable degree of medical probability "based on the properties of natural gas, nature of tinnitus, lack of true explosion, delay in onset of symptoms and discrepancies in his description of the event that none of [Claimant's] complaints are the result of exposure to natural gas (Respondents' Exhibit A, pp. 10-11).

34. On November 19, 2014, Robert E. Kleinman, M.D., a psychiatrist, performed a psychiatric an IME at the Respondents' request. Dr. Kleinman noted that the Claimant reported feeling depressed and having "flashbacks." According to Dr. Kleinman, the flashbacks described, however, were not a physiologic response, but rather memories accompanied by vague feelings. The Claimant reported having recurrent dreams of his boss knocking on the window and telling him to go to work.

35. Dr. Kleinman is of the opinion that Claimant catastrophized (a verb that is apparently not used in the *Diagnostic and Statistical Manual of Mental Disorders (DSM-5,* but apparently used by Dr. Kleinman in support of his opinion that the Claimant does **not** suffer from a "work-related" psychiatric condition) the event by continuing to refer to the event as an explosion, when no explosion occurred. According to Dr. Kleinman while the Claimant exhibited signs of depression, anxiety and situational adjustment disorder, the source of this was related to the loss of the job and resulting financial hardship, not the result of exposure to natural gas. According to Dr. Kleinman, stress related to the loss of the job is indicated by the content of the Claimant's reported

dreams. For instance, the Claimant had bad dreams that his boss came to his home to make him go back to work. To the reasonably prudent lay person, this dream would seem to indicate a fear of returning to work because of the trauma to which the Claimant was exposed. For a reason not adequately explained, this dream indicates to Dr. Kleinman that the trauma is related to the Claimant's firing (dreaming about the boss forcing the Claimant back to work seems to be inconsistent with trauma caused by being fired). Dr. Kleinman noted that the Claimant's reported symptoms were inconsistent through the records and his own review, and appear to be over reported. As another example, according to Dr. Kleinman (who apparently has no expertise in Opthamology), the Claimant reported ophthalmological conditions that would be unrelated to gas exposure. Further, according to Dr. Kleinman, the Claimant's restrictions appear to be correlated to the over-reporting of symptoms and are not likely to be necessary. The ALJ infers and finds that the totality of Dr. Kleinman's opinions have a foundation in his theory that the Claimant is "catastrophizing," exaggerating and, although not explicitly stated, magnifying his symptoms. Dr. Kleinman does not go so far as to opine that the Claimant is consciously malingering. Nonetheless, Dr. Kleinman's opinions are overshadowed by his implied theory of "symptom magnification," an interesting phenomena in psychiatry if this is not a conscious process. Presumably, it may all depend on an individual and what triggers depression and anxiety in an individual with a specific make-up. Indeed, some war veterans, all exposed to the same stressors, returned with PTSD and others did not. The ALJ, however, infers and finds that Dr. Kleinman's opinions support the proposition that the Claimant's mental problems did **not** arise out of the physical injuries of May 28, 2014.

36. Dr. Kleinman did not express any opinions concerning whether the Claimant was malingering or lying. Dr. Kleinman, however, implied that the Claimant was unconsciously exaggerating, "catastrophising, thus, magnifying symptoms or the Claimant's condition was encapsulated under a dome of functional overlay. There is no indication that Dr. Kleinman's overarching foundational opinion is supported by any objective tests of scientific validity. Consequently, the ALJ has concerns about the overall credibility of Dr. Kleinman's opinions, with the exception that Dr. Kleinman's opinions do not support the proposition that the Claimant's bad dreams, anxiety and depression arose out of his physical injuries of May 28, 2014.

Claimant's Employment Subsequent to Injury

37. The Claimant found employment with J&W Five Star General Construction Company from June 16, 2014 to June 20, 2014, both dates inclusive, a total of 5 days. The Claimant was paid $460 (Claimant's Exhibit 5), or $92 per day, which yields a weekly wage of $644 for this period of time, which exceeds the AWW. He was performing work in construction, including painting but he was having problems with dizziness and lifting, so he was forced to quit this job. Consequently, the Claimant experienced no temporary wage loss during this period of time.

38. The Claimant found another job working for Colterra Restaurant from

July 21, 2014 to August 3, 2014, as a kitchen helper, but he was unable to continue to perform this job because of the heavy mats he was required to lift and he was forced to quit this job. This employer, however, advised the Claimant that when he no longer had restrictions, he could return to work. There is no persuasive evidence that the Claimant experienced a temporary wage loss during this period of time.

39. The Claimant continues to experience decreased sound tolerance, ringing and hissing in his ears, dry eyes, dizziness, chest pains, bad dreams, though not as frequent as before. He also suffers from depression and anxiety caused by the traumatic incident, caused by the explosion.

40. Based on the totality of the evidence, the ALJ infers and finds that the Claimant's depression and anxiety have been directly caused by the explosion incident, and **not** by the Claimant's physical injuries, *i.e.,* decreased sound tolerance, ringing and hissing in the ears, dry eyes, dizziness and chest pains, thus, the depression and anxiety are mental-mental phenomena.

41. The ALJ finds that the Claimant's mental injuries did **not** arise out a disciplinary action, work evaluation, job transfer, lay-off, demotion, promotion, termination, retirement, or similar action taken in good faith by the employer. Moreover, his mental injuries arose primarily from his then occupation and place of employment, specifically, his mental reaction and trauma caused by the gas leak and explosion of May 28, 2014.

Temporary Disability

42. The Claimant was temporarily and totally disabled from June 7, 2014 to June 15, 2014 and June 21 to July 20, 2014. He was **not** temporarily and partially disability from June 16 to June 20, 2014, and from July 21 through August 3, 2014. Additionally, the Claimant has not yet been release to return to his pre-injury work without restrictions, he has not actually returned to his pre-injury work, he has not been declared to be at MMI by an authorized treating physician, and he has earned no wages, other than those earned in his brief and unsuccessful attempts at work, during which times he was temporarily and partially disabled.

Ultimate Findings

43. The Claimant presented as a credible witness insofar as his testimony contributes to the ultimate resolution of the questions involving the compensable consequences of the Claimant's injuries of May 28, 2014. As found, the ALJ has resolved the credibility conflicts in favor of the Claimant and against Michael Sylker, his supervisor. Further, the ALJ finds the opinions of the Claimant's treating providers and IME Dr. Gellrick, more persuasive and credible than the opinions of Respondents' IMEs, Dr. Walker and Dr. Kleinman, with the exception of the proposition that Dr. Kleinman's

opinions do **not** support that the Claimant's mental injuries arose out of the physical injuries of May 28, 2014.

44. Between conflicting testimony and medical opinions, the ALJ makes a rational choice to accept the Claimant's testimony and to reject Michael Slyker's testimony; and, to accept the opinions of the Claimant's treating providers and IME Dr. Gellrick, and to reject the opinions of the Respondents' IMEs, Dr. Walker and Dr. Kleinman, with the exception of the proposition that Dr. Kleinman's opinions do **not** support that the Claimant's mental injuries arose out of the physical injuries of May 28, 2014.

45. The Claimant has proven, by a preponderance of the evidence that he suffered compensable physical injuries resulting from the work-related gas line break, consisting of experience decreased sound tolerance, ringing and hissing in his ears, dry eyes, dizziness and chest pains. As a separate matter, the Claimant has proven that he sustained mental injuries consisting of bad dreams, depression and anxiety caused by the traumatic incident of May 28, 2014. The Claimant has **failed** to prove, by preponderant evidence that the mental injuries were caused by the physical injuries. Moreover, the mental injuries were caused by the mentally traumatic event.

46. The parties stipulated, and the ALJ found, if the case was determined compensable as it now is, the AWW is $443.21, which yields ATTD rate of $295.47 per week, or $42.21 per day. The AWW also is the baseline from which to measure temporary wage loss and concomitant TPD benefits, if any.

47. The parties further stipulated, and the ALJ found, if the case was compensable as it now is, the Claimant was temporarily and totally disabled from June 7, 2014 through June 15, 2013, both dates inclusive, a subtotal of 9 days; and, from June 21, 2014 through July 20, 2014, both dates inclusive, a subtotal of 30 days. The parties stipulated, and the ALJ found, that the Claimant was temporarily and partially disabled from June 16 through June 20, both dates inclusive; and, from July 21, 2014 through August 3, 2014, both dates inclusive. There was no persuasive evidence of a temporary wage loss during these periods of time. Indeed, Claimant's Exhibit 5 establishes that the Claimant's weekly wage from June 16 through June 20, 2014, exceeded the Claimant's AWW. In light of the stipulation of the parties, the issue of TPD from July 21, 2014 through August 3, 2014 remains open and upon a satisfactory showing of wages at Colterra Restaurant, if less than the AWW, the Claimant would be entitled to 2/3rds of his temporary wage loss during this period of time.

48. The Claimant has proven, by preponderant evidence that significant contributing factors to his TTD from August 4, 2014 and continuing are the physical injuries consisting of decreased sound tolerance, ringing and hissing in his ears, dry eyes, dizziness, chest pains. Indeed, Dr. Gellrick's present and prevailing restrictions are primarily tied into the physical injuries sustained on May 28, 2014.
The medical treatment provided by Clinica and its generalized referrals to Dr. Dow,

Psy.D., and Dr. Krone, O.D., were authorized and within the chain of authorized referrals. Further, the medical treatment for the Claimant's physical injuries of May 28, 2014 was and is causally related thereto and reasonably necessary to cure and relieve the effects thereof.

49. The Respondents have failed to prove, by a preponderance of the evidence that the Claimant was responsible for his termination through a volitional act, or acts, on his part that would lead a reasonable person to believe that he would be fired. Indeed, as found, the reasons for the Claimant's firing involved "poor performance," specifically, he did not measure up.

50. As found herein above, the Claimant's mental injuries did **not** arise out a disciplinary action, work evaluation, job transfer, lay-off, demotion, promotion, termination, retirement, or similar action taken in good faith by the employer. Moreover, his mental injuries arose primarily from his then occupation and place of employment, specifically, his mental reaction and trauma caused by the gas leak and explosion of May 28, 2014. His mental injuries are separate and apart from his physical injuries and did not arise there from.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. *Arenas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon

appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant presented as a credible witness insofar as his testimony contributed to the ultimate resolution of the questions involving the compensable consequences of his injuries of May 28, 2014. As found, the ALJ resolved the credibility conflicts in favor of the Claimant and against Michael Sylker, his supervisor. Further, the ALJ found the opinions of the Claimant's treating providers and IME Dr. Gellrick, more persuasive and credible than the opinions of the Respondents' IMEs, Dr. Walker and Dr. Kleinman, , with the exception of the proposition that Dr. Kleinman's opinions do **not** support that the Claimant's mental injuries arose out of the physical injuries of May 28, 2014.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting testimony and medical opinions, the ALJ made a rational choice to accept the Claimant's testimony and to reject Michael Slyker's testimony; and, to accept the opinions of the Claimant's treating providers and IME Dr. Gellrick, and to reject the opinions of the Respondents' IMEs, Dr. Walker and Dr. Kleinman, with the exception of the proposition that Dr. Kleinman's opinions do **not** support that the Claimant's mental injuries arose out of the physical injuries of May 28, 2014.

Compensability

c. In order for an injury to be compensable under the Workers'

Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Office,* 919 P.2d 207, 210, 210 (Colo. 1996). There is no presumption that an injury arises out of employment when an unexplained injury occurs during the course of employment. *Finn v. Indus. Comm'n,* 165 Colo. 106, 108-09, 4437 P.2d 542 (1968). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1) (c), C.R.S. *See Faulkner v. Indus. Claim Appeals Office,* 24 P.3d 844 (Colo. App. 2000)*; Eller v. Indus. Claim Appeals Office*, 224 P.3d 397, 399 (Colo. App. 2009); *Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277, 1279 (Colo. App. 2008). The question of causation is generally one of fact for determination by an ALJ. *Faulkner* at 846; *Eller* at 399-400. As found, the Claimant established that he sustained compensable injuries, specifically, he suffered compensable physical injuries resulting from the work-related gas line break, consisting of decreased sound tolerance, ringing and hissing in his ears, dry eyes, dizziness and chest pains. As a separate matter, the Claimant has proven that he sustained mental injuries consisting of bad dreams, depression and anxiety caused by the traumatic incident of May 28, 2014. The Claimant has **failed** to prove, by preponderant evidence that the mental injuries were caused by the physical injuries. Moreover, the mental injuries were caused by the mentally traumatic event.

Mental Injuries

d. A claim for mental injuries may be compensable under the provisions of. § 8-41-301 (2) (a), C.R.S., which states:

> "A claim of mental impairment must be proven by evidence supported by the testimony of a licensed physician or psychologist. For purposes of this subsection (2), "mental impairment" means a recognized, permanent disability arising from an accidental injury arising out of and in the course of employment when the accidental injury involves no physical injury and consists of a psychologically traumatic event that is generally outside of a worker's usual experience and would evoke significant symptoms of distress in a worker in similar circumstances. A mental impairment shall not be considered to arise out of and in the course of employment if it results from a disciplinary action, work evaluation, job transfer, lay-off, demotion, promotion, termination, retirement, or similar action taken in good faith by the employer. The mental impairment that is the basis of the claim shall have

arisen primarily from the claimant's then occupation and place of employment in order to be compensable.

The ALJ concludes that the weight of the credible evidence supports the fact that the Claimant suffered a mental injury arising out of a mental trauma that occurred on May 28, 2014. As further found, the opinion of clinical psychologist, Michael Dow, Psy.D., supports the compensability of the mental-mental injury. Furthermore, the portion of Dr. Kleinman's opinion that was credited, **does not** support that the mental injuries arose out of the physical injuries of May 28, 2014. As further found, the Claimant's mental injuries did **not** arise out a disciplinary action, work evaluation, job transfer, lay-off, demotion, promotion, termination, retirement, or similar action taken in good faith by the Employer. Moreover, the Claimant's mental injuries arose primarily from his then occupation and place of employment, specifically, his mental reaction and trauma caused by the gas leak and explosion of May 28, 2014.

e. The additional compensability requirements for a mental injury [as specified in § 8-41-301 (2) (a), C.R.S.] do not apply to a mental or emotional injury which is a natural consequence of a physical injury. *See Jakco Painting Contractors v. Indus. Comm'n,* 702 P.2d 755 (Colo. App. 1985). As found, the Claimant has failed to establish that his mental injuries which arose out of his physical injuries. They were not natural consequences of his hearing hissing sounds, ringing in the ears and blurred vision. The mental injuries were a natural consequence of psychological trauma caused by the incident of May 28, 2014 itself.

f. The 12-week limitation on mental-mental disability benefits applies only to (permanent) medical impairment benefits **but not** to temporary disability benefits. *City of Thornton v. Replogle,* 888 P.2d 782 (Colo. 1995); *Rendon v. United Airlines,* 881 P.2d 482 (Colo. App. 1994). As found, only temporary disability benefits are at issue now.

Authorization of Medical Treatment

g. Because this matter is compensable, the Respondents are liable for medical treatment which is reasonably necessary to cure or relieve the effects of the industrial injury. § 8-42-101(1) (a), C.R.S; *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). Pursuant to § 8-43-404 (5) (a) (I) (A), C.R.S., the employer is required to furnish an injured worker a list of at least two physicians or two corporate medical providers, in the first instance. An employer's right of first selection of a medical provider is triggered when the employer has knowledge of the accompanying facts connecting the injury to the employment. *Jones v. Adolph Coors Co.,* 689 P. 2d 681 (Colo. App. 1984). As found, this was not done. An employer must tender medical treatment forthwith on notice of an injury or its right of first selection passes to the injured worker. *Rogers v. Indus. Claim Appeals Office,* 746 P.2d 565 (Colo. App. 1987). As found, the right of selection passed to the Claimant and he selected Clinica, which was authorized.

h. To be authorized, all referrals must remain within the chain of authorized referrals in the normal progression of authorized treatment. *See Mason Jar Restaurant v. Indus. Claim Appeals Office,* 862 P. 2d 1026 (Colo. App. 1993); *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P. 2d 501 (Colo. App. 1995); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997 As found, the referrals to Clinical Psycholgist Dow and Optometrist Krone were within the chain of authorized referrals and the Respondents are liable for the treatment causally related to the compensable physical injuries, and the compensable mental-mental injuries.

Medical Care and Treatment

i. To be a compensable benefit, medical care and treatment must be causally related to an industrial injury or occupational disease. *Dependable Cleaners v. Vasquez,* 883 P. 2d 583 (Colo. App. 1994). As found, Claimant's medical treatment is causally related to his physical injuries of May 28, 2014, and to his mental-mental injuries of May 28, 2014. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's medical care and treatment, as reflected in the evidence was and is reasonably necessary to cure and relieve the effects thereof.

Average Weekly Wage

j. As found, based on the stipulation of the parties, the Claimant's AWW is $443.21. The ALJ finds that this AWW results in a TTD benefit rate of $295.47 per week, or $42.21 per day.

Temporary Disability

k. As found, based on the stipulation of the parties, the Claimant was temporarily and totally disabled from June 7, 2014 through June 15, 2013, both dates inclusive, a subtotal of 9 days; and, from June 21, 2014 through July 20, 2014, both dates inclusive, a subtotal of 30 days. As further found, based on the stipulation of the parties, the Claimant was temporarily and partially disabled from June 16 through June 20, both dates inclusive, however, he experienced no temporary wage loss during this period and, therefore, is entitled to no TPD benefits for this period of time. The parties further stipulated that the Claimant was temporarily and partially disabled from July 21, 2014 through August 3, 2014, both dates inclusive, however, no persuasive evidence concerning a temporary wage loss, if any, was presented. In light of the stipulation, the issue of TPD for this later period should remain open.

l. To establish entitlement to temporary disability benefits, a claimant must prove that the industrial injury has caused a "disability," and that he has suffered a wage loss that, "to some degree," is the result of the industrial disability. § 8-42-103(1), C.R.S; *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). When a temporarily disabled employee loses his employment for other reasons which are not his responsibility, the causal relationship between the industrial injury and the wage loss necessarily continues. Disability from employment is established when the injured employee is unable to perform the usual job effectively or properly. *Jefferson Co. Schools v. Headrick*, 734 P.2d 659 (Colo. App.1986). This is true because the employee's restrictions presumably impair his opportunity to obtain employment at pre-injury wage levels. *Kiernan v. Roadway Package System*, W.C. No. 4-443-973 [Indus. Claim Appeals Office (ICAO), December 18, 2000]. The Claimant's termination in this case was not his fault, under the test for "responsibility for termination." There is no statutory requirement that a claimant must present medical opinion evidence from of an attending physician to establish her physical disability. See *Lymburn v. Symbois Logic*, 952 P.2d 831 (Colo. App. 1997). Rather, a claimant's testimony alone is sufficient to establish a temporary "disability." *Id.* As found, the Claimant's temporary disability and resultant wage loss was caused by the compensable injuries of May 28, 2014.

m. Once the prerequisites for TPD and/or TTD are met (*e.g.,* no release to return to full duty, MMI has not been reached, a temporary wage loss is occurring in modified employment or modified employment is no longer made available, and there is no actual return to work), TPD and TTD benefits are designed to compensate for temporary wage loss. TTD benefits are designed to compensate for a 100% temporary wage loss. *See Eastman Kodak Co. v. Indus. Comm'n,* 725 P. 2d 107 (Colo. App. 1986); *City of Aurora v. Dortch,* 799 P. 2d 461 (Colo. App. 1990). As found, the Claimant was temporarily and totally disabled from June 7, 2014 through June 15, 2013, both dates inclusive, a subtotal of 9 days; and, from June 21, 2014 through July 20, 2014, both dates inclusive, a subtotal of 30 days. As further found, the Claimant was temporarily and partially disabled from June 16 through June 20, both dates inclusive, however, he sustained **no** temporary wage loss during this period and is, therefore **not** entitled to TPD benefits for this period of time. The parties stipulated that the Claimant was temporarily and partially disabled from July 21, 2014 through August 3, 2014, both dates inclusive, however, there was no persuasive evidence concerning his temporary wage loss during this period. Therefore, the issue of TPD for the later period should remain open.

n. As found, the Claimant has been temporarily and totally disabled since August 4, 2014 and continuing [the period from August 4, 2014, through the hearing date, December 11, 2014, both dates inclusive, equals 130 days].

Affirmative Defense of Responsibility for Termination

o. Section 8-42-105 (4), C.R.S., provides that an employee responsible for his/her own termination is not entitled to temporary disability benefits. This statutory provision has been interpreted to mean that "responsibility for termination" must be through a volitional act on the part of the terminated employee. *Colorado Springs Disposal v. Indus. Claim Appeals Office,* 58 P. 3d 1061 (Colo. App. 2002). A finding of fault requires a volitional act or the exercise of a degree of control by a claimant over the circumstances leading to termination. *Gilmore v. Indus. Claim Appeals Office,* 187 P.3d 1129, 1132 (Colo. App. 2008); *Apex Transport, Inc. v. Indus. Claim Appeals Office,* **2014 COA 25.** In determining whether the claimant is responsible, the ALJ may be required to evaluate competing factual theories concerning the actual reason or reasons for the termination. *See Rodriguez v. BMC West*, W.C. No. 4-538-788 [Indus. Claim Appeals Office (ICAO), June 25, 2003]. The Supreme Court has determined that the "responsibility for termination" defense is not absolute and is vitiated when a worsening of condition occurs. *Anderson v. Longmont Toyota,* 102 P. 3d 323 (Colo. 2004). As found, Respondents failed to satisfy their burden of proof on the affirmative defense that Claimant was responsible for his termination through a volitional act on his part and/or that Claimant exercised ad degree of control over the circumstances leading to termination.

Burden of Proof

p. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). Also, the burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P. 2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has met his burden on all designated issues, with the exception of the mental injuries having been caused by the physical injuries of May 28, 2014, and TPD from June 16 to June

20, 2014. The Respondents have failed to meet their burden with respect to the affirmative defense of "responsibility for termination."

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Any and all claims that the Claimant's mental injuries were caused by his physical injuries of may 28, 2014 are hereby denied and dismissed, however, the claim that his mental injuries were caused by the mentally traumatic exposure to the gas leak explosion of May 28, 2014, is hereby allowed.

B. The Respondents shall pay the costs of all medical and psychological care and treatment for the Claimant's injuries of May 28, 2014, subject to the Division of Workers Compensation Medical Fee Schedule.

C. As of the present time, the 12-week limitation on indemnity benefits does **not** apply because the Claimant's temporary disability as of this time is causally related to the **physical** injuries of May 28, 2014, and the limitation does not apply to temporary disability benefits.

D. The Respondents shall pay the Claimant temporary total disability benefits in the amount of $295.47 per week, or $42.21 per day disabled from June 7, 2014 to June 15, 2014, both dates inclusive, a subtotal of 9 days; and, from June 21 to July 20, 2014, both dates inclusive, a subtotal of 30 days, in the aggregate subtotal amount of $1,646.19, which is payable retroactively and forthwith. For the period from August 4, 2014 through the hearing date, December 11, 2014, both dates inclusive, a subtotal of 130 days, Respondents shall pay the Claimant the subtotal amount of $5,487.30, which is payable retroactively and forthwith. In summary, the Respondents shall pay the Claimant aggregate temporary total disability benefits through the hearing date of in the aggregate amount of $7,134.09, which is payable retroactively and forthwith.

E. Any and all claims for temporary partial disability benefits from June 16 to June 20, 2014 are hereby denied and dismissed.

F. The respondents shall pay the Claimant temporary partial disability benefits from July 21 through August 3, 2014, in an amount equal to 2/3rds of his temporary wage loss.

G. The Respondents shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts of indemnity benefits due and not paid when due.

H.. Any and all issues, including which indemnity benefits will be attributable to the Claimant's mental-mental injuries, are reserved for future decision.

DATED this 5 day of January 2015.

EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. (as amended, SB 09-070). For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

The issues presented for determination are whether the claim should be reopened and Respondents permitted to withdraw their general admission of liability based on allegations of fraud. Alternatively, Respondents seek to reopen Claimant's permanent total disability award based on an allegation that Claimant has the ability to return to employment. Respondents also seek applicable offsets and claim an overpayment.

Claimant filed a response to application for hearing alleging penalties pursuant to § 8-43-304, C.R.S., for Respondents' alleged failure to pay permanent total disability benefits as ordered by ALJ Cannici on February 1, 2010. Claimant also alleges penalties pursuant to § 8-43-304, C.R.S., for Respondents' alleged failure to comply with Rule 5-8 regarding permanent total disability benefits alleging Respondents terminated permanent total disability benefits without a hearing. Claimant also alleges penalties pursuant to § 8-43-304, C.R.S. for Respondents alleged failure to pay medical benefits consistent with the fee schedule in WCRP Rule 18.

The response to application for hearing alleges the defenses of WCRP Rule 7-3 (A) alleging Respondents failed to meet reopening requirements, waiver, estoppel, issue preclusion, claim preclusion, res judicata, doctrine of laches, statute of limitations, § 8-43-303, C.R.S. (2005), costs pursuant to § 8-42-101 (5), C.R.S., and attorney's fees pursuant to § 8-43-211 (2)(d),C.R.S. for endorsing issues not ripe for adjudication, C.R.S. § 8-43-203 (2), *Lewis v. Scientific Supply*, 897 P.2d 905 (Colo. App. 1995) and appeal of prehearing orders.

In response to the penalty allegations, Respondents moved to endorse the issue of 'cure' pursuant to C.R.S. § 8-43-304 (4), which was granted on February 25, 2013.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge finds as fact:

1. The Claimant worked for the Employer as a hairstylist and manager.

2. On August 28, 2005, the Claimant completed an Employer's First Report of Injury and reported that on August 28, 2005, she injured her left arm. She reported that she was changing loads of towels, spilled water on the floor, fell and hurt her left lower arm. She indicated she had a strain and limited mobility. No one witnessed the accident.

3. The Claimant went to the Boulder Medical Center on August 28, 2005 and reported that she slipped in water and put arm out to break her fall. According to the treatment note, the Claimant had a contusion and possible fracture. She was released to return to work with restrictions.

4. The Respondents admitted liability on October 17, 2005, and the Claimant underwent medical treatment and continued to work for the Employer in a modified duty capacity until May 5, 2007, when the Claimant began experiencing pain in her thoracic spine. A separate workers' compensation claim was initiated.

5. The Claimant underwent treatment for her thoracic spine symptoms until she was placed at maximum medical improvement (MMI) on August 9, 2007.

6. By stipulation of the parties which was approved by the Judge on January 3, 2008, the 2005 claim was re-opened and the 2007 thoracic spine claim was incorporated into the 2005 left arm claim.

7. The Claimant has received a significant amount of medical treatment for her injuries, including a spinal cord stimulator.

8. On February 10, 2010, after a contested hearing, ALJ Peter J. Cannici found that Claimant was permanently and totally disabled. The Respondents did not appeal ALJ Cannici's decision.

9. Claimant has continued to receive maintenance care from her authorized treating physicians.

Findings related to fraud allegation

10. Kimberly Workman, the adjuster on this claim, testified that prior to July 26, 2010, Respondents had not received any information that would suggest Claimant had not suffered an injury at work on August 28, 2005, but rather suffered her injury the day before at Water World. Workman testified that, if at the time of the filing of the original General Admission of Liability, Respondents had information that Claimant had actually suffered an injury to the same body part the day before at Water World, Respondents would have never admitted liability in this claim. Rather, Respondents would have filed a Notice of Contest.

11. On July 26, 2010, Workman received a phone call from the fraud unit with the DOWC notifying Respondents that a tipster had called stating that Claimant did not have an injury at work, but rather injured herself the day before at Water World. Workman testified that she relayed this information to the adjuster who then notified defense counsel. Specifically, the e-mail that Workman sent to the adjuster is dated July 26, 2010. The e-mail stated the following:

Hi Cathy,

> I just got a call from the fraud department at the DOWC. They received a tip (we think it is from the ex-husband) stating that EE never got hurt at work. She was hurt at Water World. In attendance were her ex-husband, ex-mother-in-law, and brother. Apparently, EE is driving to California right now to take the kids to Disney Land. "Herman" (our tipster) can be reached at 303-591-5456.
>
> You may want to pass this along to defense counsel. Thanks.

12. H. Armenta was Claimant's husband from April 2001 through May 2009.

13. H. Armenta provided a statement to a private investigator on October 5, 2010. During that recorded statement, H. Armenta stated that the day before Claimant filed a Workers' Compensation claim, Claimant, Claimant's daughter, Claimant's brother, James, and H. Armenta went to Water World. Water World is a water park in the Denver metro area.

14. H. Armenta stated that at Water World, the Claimant, H. Armenta, and Claimant's brother, were in inner tubes floating in the wave pool. When the waves started to come, Claimant reached out to get hold of her brother's tube and when the wave hit, it separated her away from her brother's tube. In that process, she hurt her left arm because she was holding on to H. Armenta's tube and her brother's tube at the same time, and H. Armenta and her brother went separate ways. In this recorded statement, H. Armenta also stated that on August 28, 2005, he received a phone call from Claimant stating that Claimant was in the hospital because she had just fallen at work. When H. Armenta asked her what happened, Claimant stated that it was just from yesterday, that she was hurt at Water World and that she had just filed it as a Workers' Compensation claim. In the recorded statement, H. Armenta also stated that Claimant had decided the night of August 27, 2005 that she would report this injury to her left arm as a work-related injury the next day because it was best for the family.

15. At hearing, H. Armenta testified that on August 27, 2005, he was at Water World with Claimant, Claimant's brother, James, and her mother as well as their daughter, Alexa. H. Armenta testified that Claimant, Claimant's brother, James, and he were in the large wave pool. H. Armenta testified that when the wave hit their tubes, Claimant was pulled in both directions. As a result, Claimant began complaining of pain in her left arm, neck, and back. H. Armenta testified that immediately following this incident, they left Water World because Claimant was in too much pain to stay there. Claimant was experiencing pain in these areas on the night of August 27, 2005, as well as the morning of August 28, 2005.

16. H. Armenta has denied that he has ever contacted the fraud unit at the Division of Workers' Compensation despite the many references to the contrary. In three separate documents, Respondent's counsel referred to H. Armenta as the reporting party. Further, the comments made by Workman to the former claims adjuster are telling. Armenta's first name was specifically mentioned. It is apparent, despite his vehement denials, that Armenta called the DOWC fraud line.

17. The allegation regarding Water World surfaced on July 26, 2010. By then, H. Armenta and Claimant had been divorced for over a year. Armenta reported to the fraud tip line that Claimant was on her way to Disneyworld with her two children. H. Armenta is their father.

18. The evidence presented suggested that the Claimant's divorce from H. Armenta was contentious. The two argued about custody of their two children, child support, and visitation schedules.

19. Martha Armenta is H. Armenta's mother. M. Armenta gave a statement to an investigator on October 5, 2010. She stated that Claimant told her that after Claimant had been drinking margaritas at a Broncos party, that Claimant actually injured herself at Water World. M. Armenta also stated that H. Armenta had told her at one time that Claimant injured herself at work.

20. M. Armenta also made inconsistent statements concerning when she learned Claimant was allegedly injured at Water World rather than at work. She also testified at hearing that Claimant told her at the Broncos party that Claimant injured herself at work then changed it and said she meant to say Water World.

21. M. Armenta's testimony is equivocal and unpersuasive.

22. H. Armenta's testimony and reports of fraud lack credibility. H. Armenta had motivation to fabricate the reports made to the DOWC. Further, his repeated denial that he contacted the DOWC fraud tip line renders his testimony wholly incredible.

23. The testimony of Claimant's family members concerning how Claimant injured herself is of little consequence and will not be recited in this order. The evidence presented by Respondents to support the fraud claim is not persuasive and lacks credibility.

Reopening – No longer PTD

24. In rendering his decision concerning PTD, ALJ Cannici relied on work restrictions issued by Dr. Justin Green on June 9, 2009. Dr. Green opined that Claimant should not engage in repetitive lifting with her left upper extremity; no lifting greater than five pounds on an intermittent basis with the left upper extremity; no prolonged standing greater than 30 minutes; no working greater than 90 minutes continuous sitting without a 15-minute rest break. Dr. Green recommended no greater than 1-2 hours of work per day. Dr. Green based his restrictions on a June 2009 Functional Capacity Evaluation (FCE) and on his clinical judgment.

25. Since Claimant was determined permanently and totally disabled, the Respondents have conducted video surveillance of the Claimant. The ALJ reviewed all of the video surveillance admitted into evidence.

26. In the September 6, 2010 video, the ALJ observed the following: The Claimant was shopping at Wal-Mart. She picked up an item with her left hand. She

held a greeting card in her right hand. Neither item appeared to be particularly heavy. The Claimant was in the store for approximately 45 minutes. As she was leaving, she was leaning on the grocery cart and pushing it slowly.

27. In the video taken on January 26, 2011, in the span of eight minutes, the Claimant left her house, placed her purse down in the front of a minivan, and lifted a child into the back of a minivan.

28. Five months later on May 30, 2011, the Judge observed the Claimant smoking cigarettes using her left hand. She picked up a young child who she primarily held with her right hand (and not her left arm contrary to Dr. Olsen's noted observations). The Claimant walked out of the camera view with the child and reappears within seconds. The Claimant was next observed holding a spray bottle for week killer (which appeared to be a one-gallon size) in her right hand which was attached to a hose and sprayer which the Claimant held with her left hand. She sprayed some weeds while bent at the waist. At one point she pumped the spray bottle with her left hand and then held the bottle with her left while holding the sprayer with her right arm. After spraying weeds for approximately ten minutes, the Claimant began using garden loppers to cut weeds or plants. She bent over at the waist to make the cuts and used her right hand to pick up the debris. The Claimant performed this activity for approximately six minutes before taking a break. While taking a cigarette break, the Claimant helped lower her older child out of a tree. The Claimant raised her arms over her head for a few seconds to help the child. The Claimant does not return to gardening activities in this video.

29. Later on May 30, 2011, the Claimant went for a walk with three children, two of whom she pulled in a wagon. The walk lasted approximately 24 minutes. The Claimant pulled the wagon with her right arm for the first eight minutes, she switched to her left arm for approximately ten seconds then switched right back to pulling with her right arm. The Claimant primarily pulled the wagon with her right arm and used her left arm for seconds at a time on two occasions. The Claimant occasionally raised her left hand and arm to her head to keep her hat from blowing away due to the obvious wind.

30. In the video taken on June 11, 2011, the Claimant walked a short distance with some papers in her left hand. On June 14, 2011, the Claimant walked a short distance with some papers in her left hand. She appeared to walk with a slight limp. The Claimant is next observed walking out Target carrying a bag of items with her left arm and hand.

31. On June 23, 2011, video surveillance shows the Claimant walking to a store with a wallet under her left arm. She purchased cigarettes then walked home carrying the cigarettes in her left hand. The total time of this video is seven minutes.

32. On June 24, 2011, video surveillance shows the Claimant walking to the store with two young girls (presumably her daughters). At one point, she bent down to put a cigarette out using her left arm. She bent at the waist as well as bending her legs. They enter the store and Claimant returns with a plastic bag which she initially carried

on her right arm. She switched the bag to her left arm at point and also held her daughter's hand with her left hand. She walked while carrying the bag in her left hand for about five minutes before bending down again to put a cigarette out on the curb. The Claimant switched bag back to her right hand for the next five to six minutes. She carried the bag in her left hand again very briefly before entering her house.

33. On August 29, 2011, video surveillance shows the Claimant lifting her younger child into a minivan. The Claimant bends slightly at the waist into the van. Later on August 29, 2011, the Claimant crouches down for approximately two to three minutes to put new tags on a truck. She also bent down on the waist to complete the task. The Claimant also bent at the waist to pull some weeds for approximately two minutes.

34. On August 30, 2011, very little footage was obtained. The Claimant stood for a few minutes reading some papers she held with her left hand while she smoked a cigarette with her right hand.

35. On March 21, 2013, Dr. Green issued a report wherein he noted that he had reviewed surveillance video taken of the Claimant, a report from Dr. Nicholas Olsen, and a repot from Starting Point dated February 11, 12, and 13, 2013. Dr. Green also examined the Claimant on that day. Based on the information before him at that time, Dr. Green opined that Claimant's had improved. He recommended work restrictions of maximum lifting 20 pounds floor to knuckle; no greater than 10 to 15 pounds of repetitive lifting; no prolonged standing greater than 30 minutes without a 10 minute posture break; and no greater than 90 minutes of continuous sitting without a 15 minute rest break. Dr. Green recommended that Claimant work for no greater than 3 to 4 hours per day.

36. Counsel for Claimant sent a copy of the Starting Point evaluation to Dr. Phil Cambe in a letter dated February 20, 2013. In a report dated February 27, 2013, Dr. Cambe put a check by the following statement purportedly prepared by counsel for Claimant:

> I have been treating [Claimant] for her work injury for many years. I agree with the findings in the Starting Point evaluation dated February 16, 2013 and signed by Pat McKenna. [Claimant's] condition has not substantially changed. The work restrictions provided by Dr. Green on June 9, 2009 are still appropriate.

37. The Claimant underwent a Work Performance and Occupational Feasibility Evaluation at Starting Point with Pat McKenna on February 11, 12, and 13, 2013. Ms. McKenna concluded that Claimant could lift 10 pounds from floor to chin level on a very rare basis; 5 pounds from floor to overhead on an infrequent basis with her right arm; and four pounds from floor to overhead on a rare basis with her left arm.

38. Ms. McKenna also made the following observations based on the Work Performance and Occupational Feasibility Evaluation:

> Claimant could not complete one minute of the assembly test which is bilateral, lifting pegs, not dissimilar to those on a cribbage board and placing them in holes in the board in front of her.
>
> If Claimant's left hand had to be engaged at all in a task, her pain became so severe that it would have made it impossible for her to concentrate well.
>
> Claimant was only able to flex her right shoulder 66 degrees and abduct her right shoulder 106 degrees.
>
> Claimant was only able to sit for 20 minutes at a time and two hours in a eight hour day.
>
> Claimant was only able to stand one to ten minutes at a time and 30 minutes an entire day.
>
> Claimant was only able to walk for 20 minutes at a time and two hours in an eight hour day.
>
> Claimant, with her left arm, was unable to tolerate even light lifting on a repetitive basis (such activity would cause a significant increase in her pain)
>
> Claimant was very limited in reaching above her shoulder level, reaching from waist to chest level, and reaching below waist level.
>
> Claimant, with grasping activities, was limited to extremely limited.

39. Ms. McKenna stated that, based on Claimant's evaluation, Claimant would be so limited in her ability to use her left hand and arm that it would be very difficult for her to even get ready for work.

40. Ms. McKenna ultimately concluded that she agreed with Dr. Green's restrictions in his March 21, 2013 report, and opined that Claimant would not be able to sustain any job in a manner that an employer would be able or willing to tolerate.

41. Doris Shriver evaluated the Claimant on October 1, 2009. Based on the restrictions Dr. Green had imposed on June 9, 2009, and on other factors, Ms. Shriver opined that Claimant was unable to work in any capacity.

42. Ms. Shriver evaluated the Claimant again on April 29, 2013. During the hearing, Ms. Shriver testified that she had reviewed the medical records from Dr. Green,

Dr. Cambe, Dr. Olsen, as well as the Starting Point evaluation dated February 16, 2013. Based on the review of these medical records, it was Ms. Shriver's opinion that she believed Claimant was doing slightly worse than how Claimant presented during the October 2009 evaluation. Ms. Shriver disagreed with Dr. Green's restrictions in his March 21, 2013 report.

43. The video surveillance taken of the Claimant did not impact Ms. Shriver's opinions. Ms. Shriver pointed out that the video surveillance merely represents a "snapshot" of Claimant's life on a particular day and should not be used as a measure of potential work performance.

44. Dr. Nicholas Olsen issued a report dated September 20, 2012, and another report dated December 11, 2012. In the September 20, 2012 report, Dr. Olsen documents reviewing video surveillance as part of his overall evaluation of Claimant. Dr. Olsen documented his observations in his report dated December 11, 2012. Dr. Olsen opined that Claimant's current permanent restrictions should be: 40 pound maximum lifting limit and a 25 pound repetitive lifting limit. No limits on her ability to work overhead. No limits in sitting, standing, or walking. Dr. Olsen also indicated that these would represent Claimant's minimal capability.

45. At hearing, Claimant testified as to her ongoing restrictions that she believes are attributable to this injury. Claimant testified that she does not have any "good" days, only "bad" days or "average" days. In the course of a week, she believes she has 2-3 average days a week, the rest being "bad." When she is having a "bad" day, she can barely stand or walk at all. Claimant does not believe she can do any lifting when she is having a "bad" day. Claimant does not believe that she can do any pushing and pulling with her left arm when she is having a "bad" day. Claimant does not believe that she can do any lifting when she is having a "bad" day. Claimant does not believe that she can do any pushing and pulling with her left arm when she is having a "bad" day. Claimant does not believe that she can do any fine manipulation with her left upper extremity on a "bad" day. Claimant does not believe that she can reach above her shoulder when she is having a "bad" day.

46. On an "average" day, Claimant does not believe that she can stand more than 15 minutes before she begins to experience pain. Claimant does not believe she can walk for more than 45 minutes before she needs to discontinue that activity. Claimant does not think that she can lift more than 10 pounds on an "average" day. On an "average" day, Claimant still does not believe that she can lift overhead with her left arm. Claimant does not believe that she can push or pull at all with her left arm on an "average" day.

47. As part of her evaluations with Dr. Cambe, Claimant has completed Brief Pain Inventories over the period of time from August 9, 2010 through February 26, 2013. In the Brief Pain Inventory forms, Claimant was asked to rate how her pain interferes with the following activities: general activities, walking ability, normal work (includes both work outside the home and house work), and sleep. Claimant was asked to rate on a scale of 0 to 10 with 0 being no interference in that activity and 10 being

complete interference in that activity. As these inventory forms reflect, Claimant has consistently indicated to Dr. Cambe that her pain has resulted in complete interference of general activities, walking abilities, normal work activities, and sleep.

48. During Claimant's evaluation with Dr. Olsen on September 20, 2012, Claimant also provided a description of her perceived limitations. Specifically, Ms. Deane stated the following to Dr. Olsen: She is unable to carry anything using both hands and unable to use her left hand. With regards to yard work, Claimant attempted to plant flowers on Mother's Day, but her mother had to finish the task. At a store, Claimant pushes the cart with her right arm and waist while she rests her left arm on the cart. Claimant rarely grips with her left arm. Claimant is not able to use the left hand to turn a grocery cart.

49. In addition, during Dr. Olsen's physical examination of Claimant, Claimant was only able to demonstrate forward flexion in her left shoulder of 90 degrees and 120 degrees in her right shoulder. Claimant was unable to lift her right arm above head height and left arm above shoulder height. In her upper extremities, Claimant was only able to demonstrate 1/5 strength at wrist grip, and 2/5 at wrist flexion and extension. Dr. Olsen indicated this was for both of her upper extremities.

50. Dr. Olsen explained that on a scale of 0 to 5 with grip strength, 0 is no strength whatsoever and 5 is full strength with maximum resistance. With 1/5 grip strength, a physician can see contractibility, but there would be no range of motion initiated by the patient. With 2/5 grip strength, a patient would require some assistance to complete full range of motion. Dr. Olsen testified that he asked Claimant to squeeze his index finger with each of her hands. He could see that Claimant was trying to contract her hands but there was really no significant force.

51. Margot Burns was retained by Respondents as their vocational expert. Ms. Burns issued a report dated March 20, 2013. Based on the restrictions that Dr. Olsen had placed on Claimant in his September 20, 2012 report, Ms. Burns opined that based on these updated restrictions, Claimant would be able to return to work as a hair stylist. Additional occupational choices that Claimant would be able to perform given Dr. Olsen's restrictions included receptionist, customer service representative, security guard, host/greeter, and movie theatre employee. As part of Ms. Burns' evaluation, labor market research was done to determine whether these positions were readily available in the Denver labor market. Based on this labor market research performed specifically for this claim, as well as labor market research that Ms. Burns continuously performs as a vocational expert, it was her opinion that positions within these occupations were readily available in the Denver labor market.

52. Ms. Burns also provided her vocational opinions based on Dr. Green's permanent restrictions identified in Dr. Green's March 21, 2013 report. Ms. Burns rendered the opinion that Claimant could perform the occupations of receptionist, greeter, or a customer service person. In some of these positions, Ms. Burns indicated that an employer may need to provide an accommodation in order to comply with Dr. Green's restrictions. However, Ms. Burns stated that it has been her experience that

nearly every employer will accommodate a person if that person is still able to perform the essential functions of the job. For instance, if a person is taking tickets, that person could perform the job sitting on a stool, or standing. Consequently, as long as the restrictions do not change the scope of the job or the essential functions of the job, employers are consistently willing to accommodate those restrictions.

53. Doris Shriver also performed an evaluation of Claimant and issued an updated report dated April 29, 2013. Ms. Shriver did not meet with Claimant for this updated evaluation, but she did review the Starting Point evaluation, and had a conversation with the Claimant about the surveillance videos. Ms. Shriver testified that the Starting Point evaluation was consistent with the initial evaluation she conducted in 2009.

54. Ms. Shriver opined that Claimant is unable to work for a full eight-hour work day. She also testified that Claimant is unable to work three to four hours per day consistently. Ms. Shriver also testified that some employers may allow flex time, but no employer will consistently allow an employee to arrive late, choose a schedule, lie down or leave if the employee is unable to continue working. Ms. Shriver ultimately opined that Claimant continues to remain unemployable.

55. As noted above, Ms. Shriver disagreed with the restrictions that Dr. Green provided for Claimant in his March 21, 2013 report. However, Ms. Shriver agreed that Claimant would be employable if Dr. Olsen's restrictions in his September 20, 2012 medical report were accurate.

56. The ALJ finds that Claimant is likely present herself to treatment providers and evaluators as more disabled than she actually is; however, the video surveillance does not demonstrate that Dr. Olsen's restrictions are appropriate. The video surveillance shows short snapshots of Claimant's life, and nothing in the videos demonstrates that Claimant should have no limits on her ability to work overhead or no limits in sitting, standing, or walking. The restrictions imposed by Dr. Green on March 21, 2013 are the most appropriate. He reviewed the video surveillance as well as additional medical reports when he provided the updated work restrictions making his opinion well-informed.

57. Based on the restrictions issued by Dr. Green on March 21, 2013, both Ms. McKenna and Ms. Shriver have opined, and the ALJ agrees, that Claimant cannot sustain employment. Ms. Burns' opinion to the contrary is not persuasive. In addition, Dr. Cambe consistently evaluates the Claimant and he has opined that Dr. Green's initial restrictions from 2009 are most appropriate. Under either set of restrictions, the ALJ finds that Respondents have failed to prove that Claimant has engaged in activities that would indicate she can return to employment.

Penalty Claims

58. Following ALJ Cannici's February 10, 2010 Order, Respondents filed a Final Admission of Liability on May 5, 2010.

59. In a Notice of Award dated October 1, 2011, the Social Security Administration notified Claimant that she had received an award of Social Security disability benefits. Specifically, Claimant was determined to be entitled to permanent total disability benefits beginning July 2009 and ongoing. Claimant's monthly benefit amount equaled $1,314.00. Because of the retroactive award of Social Security disability benefits, Claimant had been overpaid permanent total disability benefits in the amount of $21,789.96.

60. Respondents filed a Final Admission of Liability on April 17, 2012. In that Final Admission of Liability, Respondents stated the following:

> Per the attached Social Security disability award dated October 1, 2011, Claimant began receiving Social Security disability benefits in the amount of $1,314 per week effective July 1, 2009. Respondents shall, prospectively, take the statutorily allowed Social Security disability offset of $151.62 per week. In addition, because of Claimant's award of Social Security disability benefits is retroactive to July 1, 2009, Claimant has been overpaid $21,789.96. By agreement of Claimant through counsel, in counsel for Claimant's letter dated January 23, 2012, Claimant is agreeable to allowing Respondents to taking an additional $75.81 per week to recoup the overpayment. Consequently, the total offset that Respondents will take against Claimant's permanent total disability award is $227.43.

As a result, beginning February 6, 2012, Claimant was receiving a weekly PTD rate of $15.87. The Claimant did not object to this Final Admission of Liability.

61. At hearing, John Messner, the adjuster that filed the April 17, 2012 Final Admission of Liability, stated that he had a copy of the January 23, 2012 letter from counsel for Claimant that was referenced in the Final Admission of Liability. At hearing, Claimant testified that she authorized the offer allowing Respondents to take the offset of $151.62 per week and the additional amount of $75.81 per week consistent with the January 23, 2012 letter from her counsel.

62. Claimant, in her Response to Application for Hearing dated May 16, 2013, identified the following as the penalty claim that she was alleging against Respondents concerning adjustment of payment of her permanent total disability. Penalties pursuant to C.R.S. Section 8-43-304 for failing to pay PTD benefits as ordered by ALJ Cannici in an Order dated February 1, 2010 (penalty dates from February 5, 2012 ongoing or August 15, 2012 ongoing) (the amount of PTD benefits were reduced in February 2012 and were stopped in August 2012 in violation of the ALJ's Order dated February 1, 2010). Penalties pursuant to C.R.S. Section 8-43-304 for failing to comply with Rule 5-8 regarding permanent total disability benefits (penalties date from August 15, 2012 ongoing – Respondents terminated PTD benefits without a hearing in August 2012 in violation of Rule 5-8).

63. The Claimant failed to prove that the reduction in PTD in February 2012 was inappropriate under the circumstances. This is especially true given that Claimant failed to notify the Insurer about the reduction until she filed a response to an application for hearing alleging penalties in February 2013. It is apparent that the Claimant expected the reduced amount and only complained about it once the Respondents alleged that she committed fraud by filing this workers' compensation claim. She also never objected to the April 17, 2012 Final Admission of Liability.

64. The Claimant testified that the Respondents ceased all PTD payments in August 2012. The payment log reflects a gap in PTD payments from August 20, 2012 through February 7, 2013. If payments are made every two weeks, payment would have been due on September 3, 2012, subjecting the Respondents to penalties for 157 days.

65. The Claimant admitted that she has been receiving PTD checks subsequent to February 2013 in the amount of $31.74 every two weeks.

66. The Respondents offered no explanation for the failure to timely issue PTD payments to the Claimant for approximately six months. In a claim file note dated February 5, 2013, a notation was made that PTD had not been paid since August and that 20 weeks was owed to the Claimant. The adjuster made an additional note about claim reserves, but did not state that the failure to confirm reserves was the reason for the failure to pay the PTD. In any event, the Respondents admitted, through that claims file notation, that they did not pay PTD for 20 weeks.

67. Claimant failed to notify the Respondents that she had not received PTD checks until she filed a response to an application for hearing on February 4, 2013. Claimant offered no explanation for the delay.

68. In a Prehearing Conference Order from PALJ McBride dated June 20, 2013, Claimant was allowed to add the issue of penalties for hearing pursuant to C.R.S. Section 8-43-304 for failure to pay medical benefits consistent with the fee schedule in W.C.R.P. Rule 18. At the commencement of the hearing, Respondents confirmed that the penalty that Claimant was requesting was for improper fee scheduling of certain bills as opposed to non-payment of certain bills from Dr. Bennett.

69. Jody Wasserman is the billing and collection manager for Dr. Bennett. In a letter dated June 11, 2013 from Ms. Wasserman to counsel for Claimant, Ms. Wasserman attached a spreadsheet reflecting how certain bills for certain dates of service were either not paid or, in her opinion, were not paid pursuant to the fee schedule.

70. On May 3, 2010, Dr. Bennett's office billed the Insurer for a date of service of April 28, 2010. The Insurer paid only $429.29 on June 1, 2010. Ms. Wasserman initially testified that Dr. Bennett's office did not receive the rest of the payment until August 3, 2013. She later testified that the Insurer or third party administrator paid all outstanding bills by July 1, 2013.

71. It is not abundantly clear from the record that the basis for the underpayment was due improper fee scheduling. The April 28, 2010 date of service involved a right sided radiofrequency procedure, but Claimant offered no explanation concerning how that procedure should have been fee scheduled other than Ms. Wasserman's testimony that Respondents owed more than $429.29 for performing the procedure.

72. In Ms. Wasserman's letter to counsel for Claimant dated June 11, 2013, Ms. Wasserman stated that she had recently completed an audit of Claimant's claims. Ms. Wasserman testified that she did not complete the audit for determining whether the remaining bills were properly fee scheduled until sometime in June 2013. Ms. Wasserman testified that prior to performing this audit, she was unaware that Dr. Bennett's medical bills for dates of service referenced in her spreadsheet were improperly fee scheduled. Ms. Wasserman confirmed that as of July 1, 2013, Dr. Bennett's bills had been paid in full. Ms. Wasserman also confirmed that once the third party administrator was notified of the billing problems, she received 16 checks within a reasonable period of time which cleared up the outstanding accounts.

CONCLUSIONS OF LAW

Based on the findings of fact, the Judge enters the following conclusions of law:

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A Claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo.App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

Waiver

4. The Claimant asserts that Respondents waived their right to seek reopening of this claim because Respondents filed two final admissions of liability admitting for permanent total disability benefits in 2012, which was after the alleged fraud first surfaced and after the Respondents had taken surveillance video of the Claimant. The ALJ disagrees that the doctrine of waiver applies under these circumstances. Under § 8-43-303(1), C.R.S., a party may file a petition to reopen on the ground of fraud at anytime within six years after the date of injury. In addition, when a claimant has been determined to permanently and totally disabled, the award may be reopened at any time to determine if the claimant has returned to employment or has participated in activities which show that the claimant has the ability to return to employment. Section 8-43-303(3), C.R.S. The ALJ concludes that filing admissions of liability concerning The filing of a final admission of liability merely for the purpose of claiming an offset does not constitute waiver.

Reopening - Fraud

5. Section 8-43-303(1), C.R.S., provides:

> At any time within six years after the date of injury, the director or an administrative law judge may … review and reopen any award on the ground of fraud, an overpayment, an error, a mistake, or a change in condition ….

6. In this case, the Respondent bears the burden of Claimant shoulders the burden of proving by a preponderance of the evidence the Claimant fraudulently induced the filing of an admission of liability for an injury the Respondents allege occurred outside the course and scope of Claimant's employment with the Employer. Section 8-43-201, C.R.S. The Respondents have failed to prove that Claimant fraudulently induced the filing of a general admission of liability when she initially filed this claim in August 2005. The evidence Respondents rely upon lacks credibility and is not persuasive. The motivation of Claimant's former husband, Herman Armenta, is highly questionable. Mr. Armenta's testimony that he was not in fact the person who notified the Division of Workers' Compensation lacks credibility in light of the other evidence to the contrary. The ALJ also does not believe the testimony of Martha Armenta. She appeared confused.

Reopening - Ability to Work

7. Cases in which a claimant is determined to be permanently and totally disabled may be reopened to determine if a claimant has returned to employment or if the claimant has participated in activities which indicate the claimant has the ability to return to employment. If either circumstance is proven, claimant's permanent total disability award shall cease. Section 8-43-303(3), C.R.S. Respondent bears the

burden of proof to establish that Claimant has engaged in activities which would indicate that she has the ability to return to employment.

8. Respondents failed to meet their burden of proof. The Starting Point evaluation, the OT Resources evaluation from 2009, Dr. Green's restrictions from 2009, and the functional capacity evaluation done by Shari Barta in 2009 are all relatively consistent with regards to Claimant's functional ability. Dr. Cambe still believes the 2009 restrictions by Dr. Green are appropriate. In March 2013, Dr. Green altered the weight restriction and the amount of time Claimant can work, but this alteration was still highly inconsistent with the work restrictions proposed by Dr. Olsen. Respondents' own vocational expert, Margot Burns, testified that an employer would have to modify a job position to fit within Dr. Green's 2013 restrictions. As found, such modification means that jobs are not available on the open labor market. Doris Shriver persuasively testified that employers would not modify a position to fit Claimant's restrictions. Dr. Olsen opined that Claimant can engage in activities that would enable Claimant to work; however, no persuasive evidence supported Dr. Olsen's opinions regarding appropriate restrictions or that Claimant can engage in such activities on a consistent basis in work environment.

9. The three-day evaluation done at Starting Point is persuasive as is the report of treating physician Dr. Cambe who adopted this report. Dr. Cambe is the only physician who is seeing Claimant on a regular basis at this point. Given that fact, his opinion that Claimant's condition has not substantially changed is highly persuasive.

Penalties

10. Section 8-43-304, C.R.S., governs when penalties may be imposed in a workers' compensation matter and provides in relevant part, that any employer or insurer:

> who violates any provision of [the Workers' Compensation Act], or does any act prohibited thereby, or fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or panel…, or fails, neglects, or refuses to obey and lawful order…, shall be subject to … a fine of not more than five hundred dollars per day for each such offense.

First, it must be determined whether a party has violated any provision of the Workers' Compensation Act or an Order. If a violation is found, it must then be determined whether the violator acted reasonably. §8-43-304, C.R.S.; *see also Allison v. Indus. Claim Appeals Office*, 916 P.2d 623 (Colo. App. 1995). In this case, the Claimant seeks penalties for three reasons: Respondents' failure to pay PTD to the Claimant when owed; unilateral reduction of PTD payments; and failure to properly pay Dr. Bennett's bills consistent with the DOWC fee schedule.

11. As found above, the ALJ declines to impose penalties for the reduction in the PTD amount which occurred in January 2012. It is apparent the Claimant anticipated

the reduction based on her agreement to have her payments reduced to repay an overpayment. She made no complaints about the reduction until well after it had begun. As such, the Claimant has not proven that penalties should be imposed against the Respondents for issuing a reduced PTD check starting in January 2012.

12. The Respondents admittedly failed to pay PTD to Claimant when owed over a period of 20 weeks which totaled $317.40. As such, penalties are appropriate. After considering the factors set forth in *Associated Business Products v. Industrial Claim Appeals Office*, 126 P.3d 323 (Colo. App. 2005), the ALJ imposes a penalty of $50.00 per day for a period of 157 days (September 3, 2012 through February 7, 2013) for a total penalty of $7,850.00. The Claimant offered no testimony that the failure to receive the PTD payments presented a hardship for her, and she failed to even notify the Respondents that she was not receiving the payments until her attorney filed a response to an application for hearing in February 2013. Respondents offered no credible explanation about why the payments were not made. Yet, they cured as soon as they were notified. As such, a minimal penalty is warranted.

13. Regarding Claimant's claim of penalties for Respondents' failure to pay Dr. Bennett's bill consistent with the fee schedule, the ALJ declines to impose penalties. Ms. Wasserman believed the underpayment was due to inappropriate fee scheduling, but no persuasive evidence was offered to show how the procedure should have been billed. The Claimant made no specific reference to WCRP Rule 18 and which procedure applies to this penalty claim. Although the ALJ has no reason to doubt the veracity of Ms. Wasserman's testimony, she simply did not make it clear as to why she felt that the Respondents improperly fee scheduled the April 28, 2010 procedure Claimant underwent. Thus, Claimant's claim for penalties on that basis is denied.

Remaining Issues

14. In light of the findings and conclusions made herein concerning the issue of waiver, Claimant's claim for attorney's fees and costs is denied. The Respondents did not file applications for hearing on issues that were not ripe. In addition, there is insufficient evidence in the record to support Claimant's claim for costs pursuant to §8-42-101(5), C.R.S. The issue of overpayment is also moot.

ORDER

It is therefore ordered that:

1. The Respondents' petition to reopen based on fraud is denied and dismissed.

2. The Respondents' petition to reopen based on Claimant's ability to return to employment is denied and dismissed.

3. Claimant is entitled to ongoing PTD payments consistent with the April 17, 2012 Final Admission of Liability.

4. Claimant's claim for penalties concerning the reduction in PTD beginning in February 2012 is denied and dismissed.

5. Claimant's claim for penalties concerning the failure of Respondents to pay PTD for 157 days is GRANTED. Respondents shall pay penalties in the amount of $7,850.00 to Claimant. None of the penalty shall be apportioned to the Subsequent Injury Fund.

6. Claimant's claim for penalties concerning the alleged failure of Respondents to properly fee schedule the procedure Dr. Bennett performed on April 28, 2010 is denied and dismissed.

7. Claimant's claim for attorney's fees and costs is denied and dismissed.

8. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether claimant has overcome the Division-sponsored Independent Medical Examination ("DIME") physician regarding the issue of whether claimant's right shoulder injury was caused by the admitted industrial injury by clear and convincing evidence?

- Whether claimant has overcome the DIME physician regarding the issue of whether claimant's right wrist injury was caused by the admitted industrial injury by clear and convincing evidence?

- Whether respondents have overcome the DIME physician by clear and convincing evidence regarding his opinion that claimant's need for oxygen is causally related to hiss work injury?

- Whether claimant has proven by a preponderance of the evidence that he is entitled to an award for disfigurement?

FINDINGS OF FACT

1. Claimant sustained a work related injury on March 19, 2010 when was riding as a passenger with a co-worker in a vehicle, when the co-worker lost control of the car and they were broad-sided by a pickup truck going about 65 to 70 miles per hour. Claimant testified at hearing that at the time of the injury, he was a passenger in a sports car and was wearing a seat belt. Claimant testified that at the time of impact, his hands hit the dashboard and the dashboard caved in. Claimant testified he injured his head, right shoulder; right arm, wrist and fingers, left hip, left knee and lower back in the accident.

2. Claimant received medical treatment at the scene of the accident. The EMS personnel noted that claimant complained of midline neck pain and the C5-6 level, thoracic pain anterior and posterior, right clavicle pain, left hip pain and left knee pain. Claimant was transferred to Littleton Adventist Hospital where he was treated for a concussion and right shoulder, neck, right chest, left clavicle, left knee and left hip pain.

3. Claimant began treating with Dr. Welling on March 26, 2010. Dr. Welling noted that claimant complaints of pain on palpation to his left thigh, and pain to his neck and low back. Dr. Welling recommended medications and released claimant to return to work full duty.

4. Claimant testified that when he returned home, his treatment was initially focused on the lower back and neck. Claimant testified he first noticed pain in his right wrist and thumb when he was back at work, still on crutches and had problems opening and closing valves because of pain in his wrist. Claimant testified he discussed his pain with Dr. Welling's office in April or possibly later. Claimant testified he noticed pain in his shoulder and could not reach to get supplies off the top shelf when he was back at work.

5. Claimant denied injuring either his right wrist, thumb or shoulder after the motor vehicle accident.

6. Claimant continued to treat with Dr. Welling for problems with his left hip, neck and back. Claimant was referred for chiropractic treatment. The chiropractic notes document claimant having ongoing complaints involving his neck and back areas. By April 9, 2010, claimant reported to Dr. Welling that he was feeling 100% better, but still reported a little soreness.

7. Claimant returned to Dr. Welling on May 21, 2010 and reported some problems with his memory. Dr. Welling recommended a referral to a neurological specialist.

8. Claimant returned to Dr. Welling on June 3, 2010 with continued complaints of memory problems and bilateral wrist pain. Dr. Welling recommended an electromyelogram ("EMG") of the right upper extremity and a brain magnetic resonance image ("MRI"). The EMG and MRI were both performed and interpreted to be negative.

9. Claimant was evaluated by Dr. Rivera on December 7, 2010 with complaints of neck pain and extremity pain right greater than left. Claimant reported having problems with his neck, right shoulder and arm and sometimes his left wrist. Claimant reported numbness in his firth forearm and hand. Dr. Rivera diagnosed myositis, cervicalgia and cervical radiculopathy and recommended a cervical MRI and physical therapy.

10. Respondents initially denied the claim to determine whether the claim was compensable. Respondents ultimately file a General Admission of Liability ("GAL") dated January 11, 2011 admitting for medical benefits only. Claimant did not receive medical treatment for his injury between July 14, 2010 and December 7, 2010 because of the denial of the claim.

11. Claimant returned to Dr. Rivera on January 13, 2011 and reported less numbness in his left hand and arm pain after physical therapy. Dr. Rivera diagnosed claimant with pain in his shoulder region. By February 24, 2011, Dr. Rivera noted claimant was complaining of continued neck pain with pain radiating down his right upper extremity in a C6-7 distribution. Dr. Rivera noted he might consider a repeat

EMG if claimant's symptoms persisted. Dr. Rivera recommended a cervical epidural steroid injection ("ESI").

12. Claimant returned to Dr. Rivera on March 29, 2011 with complaints of some residual right thumb pain. Claimant noted that the ESI provided relief for his other symptoms, but not the right thumb pain. Dr. Rivera referred claimant to Dr. Cortgageorge for counseling and continued claimant's medications. Dr. Rivera recommended an x-ray of claimant's right thumb.

13. On April 6, 2011, Dr. Rivera noted the x-ray revealed a carpal cyst of the scaphooid bone. Dr. Rivera noted this could be a result of trauma. Dr. Rivera referred claimant to an orthopedist for further evaluation.

14. Claimant was examined by Dr. Anderson with Durango Orthopedics on May 23, 2011. Dr. Anderson noted claimant complained of pain with a mild amount of swelling at the STT joint on the right side. Dr. Anderson noted claimant's x-ray revealed a nearly complete obliteration of the STT joint articulation space for the distal pole scaphoid cyst. Dr. Anderson recommended an injection to treat the severe arthritis.

15. Claimant returned to Dr. Anderson on July 7, 2011. Claimant noted he did well following the injection, but became severely symptomatic the previous weekend. Dr. Anderson recommended voltaren gel and a possible repeat injection.

16. Claimant was eventually referred to Dr. Orndorff in January 2012 by Dr. Anderson. Dr. Orndorff noted claimant's continued complaints of neck and shoulder pain with headaches and depression. Dr. recommended a repeat MRI of the cervical spine that was obtained on February 13, 2012. The MRI showed multilevel degenerative disc disease with facet joint arthropathy. Dr. Orndorff noted on his evaluation of claimant on February 13, 2012 that claimant continued ot have complaints of cervical spondylosis and cervical radiculopathy. Dr. Orndorff recommended a C4 to C7 cervical discectomy and fusion with interbody cage, allograft bone followed by laminectomy decompression and posterior instrumented fusion to address the central canal stenosis.

17. Claimant eventually underwent cervical spine surgery on December 14, 2012 under the auspices of Dr. Orndorff. The surgery included an anterior cervical decompression of the spinal cord at C5-C6, C6-C7 as well as C4-C5, anterior discectomy and arthodesis at C4-C5, C5-C6 and C6-C7, application of a PEEK interbody cage at C4-C5, C5-C6 and C6-C7, anterior instrumentation at C4-C5, C5-C6 and C6-C7, with allograft bone graft extender. This procedure was followed by a posterior approach with application and removal of Mayfield tongs and posterior instrumentation with Stryker Oasis cervical screws at C4, C5, C6 and C7, posterolateral cervical arthrodesis at C4-C5, C5-C6 and C6-C7, laminectomy and decompression of C4-C5, C5-C6 and C6-C7.

18. Dr. Dempsey was consulted following the surgery due to the fact that claimant's surgery took ten (10) hours and when claimant was extubated he was having significant pain and was given fentanyl and Dilaudid to help with his pain. Dr. Dempsey noted that claimant obstructed his airway and was not able to ventilate correctly. Dr. Dempsey noted that claimant's pre-operative screening was highly suggestive of sleep apnea and the sleep apnea was predisposing him to airway collapse when he received narcotics for his postoperative pain. Dr. Dempsey diagnosed post-operative respiratory failure and recommended claimant undergo an outpatient sleep study after his discharge.

19. The medical records contain documentation the claimant had a possible sleep apnea issue prior to the surgery, including the report from PA-C Baumchen dated September 21, 2012. Claimant denied at hearing having been diagnosed with sleep apnea prior to his surgery.

20. Following claimant's surgery, claimant began to complain of increasing problems with his right wrist. Claimant was examined by PA-C Gardner on February 4, 2013 with complaints of dorsal wrist pain after being transferred from a cast to a thumb spica brace following his surgery.

21. Claimant underwent an MRI of his right wrist on March 26, 2013. The MRI revealed a large tear of the central triangular fibrocartilage. Dr. Lindauer reviewed the MRI and diagnosed presumed postsurgical changes centered at the triscaphe articulations with severe arthrosis with a diffuse wrist synovitis. Dr. Lindauer also diagnosed a large tear of the central triangular fibrocarilage disc, moderate distal radioulnar joint arthrosis and mild tenosynovitis of the flexor tendons and 1st through 4th extensor compartment tendons at the level of the wrist that Dr. Lindauer noted was likely reactive.

22. Claimant underwent injections and physical therapy as treatment for the right wrist.

23. The medical records also document claimant developing right shoulder pain. PA-C Baumchen noted on July 18, 2013 that claimant reported increasing pain with tenderness over the bicipital groove and AC joints. Baumchen obtained x-rays of the right shoulder and noted that the x-rays showed degenerative changes with arthritic change though the AC joint. Claimant also began complaining of left shoulder pain and x-rays of the left shoulder showed mild AC arthritis. Claimant underwent an injection into the right shoulder on July 18, 2013.

24. Claimant was eventually placed at maximum medical improvement ("MMI") by Dr. Jernigan on January 24, 2014. Dr. Jernigan noted claimant's mechanism of injury and his cervical disc injury resulting in surgery along with this right hand STT injury complicating arthritic problems in the hand now status post surgery. Dr. Jernigan further diagnosed claimant with a closed head injury, a history of depression that was

now stabilized and a low back injury that was likewise stabilized. Dr. Jernigan provided claimant with a PPD rating of 33% whole person. The impairment rating considered of 27% for the cervical spine. Dr. Jernigan also provided an impairment rating of 14% upper extremity for the wrist, that converted to an 8% whole person impairment rating. This combined with the 27% of the cervical spine for the 33% whole person impairment rating. Dr. Jernigan further noted that claimant continued to use a TENs unit and a CPAP unit and recommended both of these should be maintained as they were related to the injury.

25. Claimant returned to Dr. Anderson on May 23, 2014 with continued complaints of right shoulder pain. Dr. Anderson diagnosed claimant with a long head of biceps tendinitis with consideration for tendon sheath injection. Dr. Anderson noted that the physical findings were not consistent with a rotator cuff team, but referred claimant for an MRI of the shoulder. The MRI was performed on June 6, 2014 and demonstrated a near complete full thickness tear of the supraspinatus tendon retracted to the glenohumeral joint level. Dr. Anderson recommended shoulder surgery and noted that claimant had only very mild shoulder pain prior to the car accident and opined that the nature of the shoulder pain and severity increased dramatically after the injury.

26. In response to an inquiry from claimant's counsel, Dr. Jernigan opined on June 24, 2014 that there was a greater than 50% chance that the right shoulder rotator cuff injury did occur with the motor vehicle accident. Dr. Jernigan further recommended claimant undergo the surgery recommended by Dr. Anderson.

27. Dr. Jernigan issued another report on June 27, 2014 after examining claimant and noted that claimant was on crutches from his injury and reported his hip and shoulder have been sore since the accident and had not really improved that much. Dr. Jernigan recommended claimant continue with the CPAP machine and reiterated his opinion that claimant's right shoulder condition was related to his work injury.

28. Claimant underwent a DIME with Dr. Castrejon on July 2, 2014. Dr. Castrejon reviewed claimant's medical records, obtained a medical history from the claimant and performed a physical examination in connection with his DIME. Dr. Castrejon notes in his report with regard to the right shoulder that there is a lack of consistency with regard to the right shoulder complaints, noting that in some areas the records reflect complaints to the right shoulder and other records document complaints to the left shoulder. Dr. Castrejon notes that the initial records document complaints of shoulder pain, there is also documentation that the shoulder pain resolved following treatment that allowed for claimant to be released at MMI on April 9, 2010. Dr. Castrejon opined that this would be consistent with resovlement of uncomplicated straining injuries. Dr. Castrejon further noted that there was no further mention of should problems until the evaluation by Dr. Rivera on December 7, 2010, nine months after the injury.

29. Dr. Castrejon ultimately opined that claimant's shoulder condition was not related to the work injury of March 19, 2010. In coming to this conclusion, Dr. Castrejon noted that while claimant initially complained of some issues with his shoulder, he reported improvement following the chiropractic care and then didn't complain of ongoing shoulder problems until nine months post-accident. Likewise, Dr. Castrejon opined that claimant's wrist and thumb complaints were not causally related to the March 19, 2010 injury. Dr. Castrejon noted that osteoarthritis most commonly presents in the STT join which is often confused, clinically, with first CMC joint arthritis. Dr. Castrejon noted that while this can be related to trauma, he did not a sufficient reference to an acute injury to either wrist following the motor vehicle accident. Dr. Castrejon notes that the first reference to wrist pain was approximately 2 ½ months post accident. Dr. Castrejon noted that if the motor vehicle accident were responsible for claimant's wrist symptoms "coming to light", he would expect the symptoms would present themselves before 2 ½ months post accident. For these reasons, Dr. Castrejon opined that the motor vehicle accident did not aggravate claimant's underlying degenerative condition. Dr. Castrejon opined that it was medically probable that claimant experienced injuries to multiple parts of his body in the motor vehicle accident, but concluded that most of these injuries were minor strains and contusions that expectedly improved and subsequently resolved.

30. With regard to claimant's sleep apnea, Dr. Castrejon noted that claimant denied any preoperative respiratory issues. Dr. Castrejon further noted that following claimant's surgery, a critical care consult from Dr. Dempsey documents claimant having post operative respiratory failure requiring BIPAP. Dr. Castrejon noted that it was his opinion that were it not for the increase risk that claimant was subjected to during and following surgery the claimant would not have required treatment for an underlying asymptomatic sleep apnea.

31. Dr. Castrejon also noted that based on the neuropsychological evaluation that was completed, claimant would not qualify for the diagnosis of a mild traumatic brain injury as there had been no permanent sequelae. Dr. Castrejon provided claimant with a permanent impairment for the cervical spine that amounted to 27% whole person. Dr. Castrejon recommended maintenance medical care as recommended by Dr. Jernigan.

32. The ALJ notes that Dr. Castrejon's opinions regarding the causal relationship between claimant's wrist and shoulder injuries and the motor vehicle accident are based on the temporal relationship between claimant's accident and when he sought treatment for his injuries. This is likewise somewhat complicated by the fact that claimant did not receive medical treatment between July 2010 and December 2010 due to the fact that claimant's claim had been denied.

33. The ALJ finds the testimony of claimant to be credible and persuasive that he hit his hands on the dashboard during the motor vehicle accident. The ALJ further finds the testimony of claimant credible that he experienced pain in his hands and

shoulder shortly after the motor vehicle accident. The ALJ finds that claimant has sufficiently explained the lack of documentation in the medical records and finds that claimant has overcome the opinion of the DIME physician by clear and convincing evidence regarding the relatedness of the wrist and shoulder complaints.

34. The ALJ notes that the initial medical records from Littleton Adventist Hospital document claimant complaining of right shoulder pain. The ALJ further credits claimant's testimony that he noticed continued problems in his right shoulder when returning to work and being unable to lift supplies off the higher shelves. The ALJ therefore finds that claimant has demonstrated that it is likely true and free from substantial doubt that he injured his shoulder and wrist in the March 19, 2010 motor vehicle accident.

35. Respondents argue that Dr. Castrejon's opinion that claimant's need for oxygen for his sleep apnea issues has been overcome by clear and convincing evidence. The ALJ is not persuaded.

36. Dr. Castrejon's opinion regarding relatedness of the sleep apnea is again based on the temporal relationship between claimant's onset of symptoms that resulted in the need for the sleep apnea treatment and the surgery that included and extended period of anesthesia. While claimant may have had issues with sleep apnea symptoms prior to the surgery, there was no need for treatment for the possible sleep apnea until after the surgery. Therefore, the ALJ finds that respondents have failed to demonstrate that Dr. Castrejon's opinion regarding the cause of the sleep apnea has been overcome by clear and convincing evidence.

37. As a result of claimant's surgery, claimant has a surgical scar on the back of his neck measuring six (6) inches in length and one (1) inch in width. Claimant also has a surgical scar on the front of his neck measuring three (3) inches in length and 1/8 inch in width. The ALJ finds that claimant has proven that he suffered disfigurement that is normally exposed to public view as a result of his injury. Claimant likewise has a surgical scar measuring 2 ½ inches in length and 1/8 inch in width on his right wrist. Due to the fact that the ALJ finds that the claimant has overcome the opinion of Dr. Castrejon regarding the relatedness of the right wrist, the ALJ will award disfigurement for the right wrist scar.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo.

306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2006. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. Section 8-42-107(8)(b)(III) and (c), C.R.S. provides that the DIME physician's finding of MMI and permanent medical impairment is binding unless overcome by clear and convincing evidence. Clear and convincing evidence is highly probable and free from substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it is highly probably the DIME physician is incorrect. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A fact or proposition has been proved by clear and convincing evidence if, considering all of the evidence, the trier-of-fact finds it to be highly probable and free from substantial doubt. *Metro Moving & Storage, supra.* A mere difference of opinion between physicians fails to constitute error. See *Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-356 (March 22, 2000).

4. The ALJ may consider a variety of factors in determining whether a DIME physician erred in his opinions including whether the DIME appropriately utilized the Medical Treatment Guidelines and the AMA Guides in his opinions.

5. As found, the ALJ credits the testimony of claimant regarding the onset of his symptoms in his right shoulder and right wrist and determines that claimant has proven by clear and convincing evidence that the right shoulder and right wrist are causally related to the industrial injury.

6. As found, respondents have failed to overcome the opinion of Dr. Castrejon by clear and convincing evidence regarding the relatedness of claimant's sleep apnea condition.

7. Pursuant to Section 8-42-108, C.R.S., 2009 Claimant is entitled to a discretionary award up to $4,286.00 for his serious and permanent bodily disfigurement that is normally exposed to public view. Considering the size, placement, and general

appearance of Claimant's scarring, the ALJ concludes Claimant is entitled to disfigurement benefits in the amount of $1,714.40, payable in one lump sum.

ORDER

It is therefore ordered that:

1. Claimant's wrist and shoulder injuries are a compensable component of the March 19, 2010 industrial injury.

2. Respondents shall pay $1,714.40 to claimant for disfigurement for the scars to claimant's neck and wrist.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 6, 2015

ISSUES

The issue for determination is the reasonableness and necessity of medical benefits to include the toxicology screen by Rapid Tox Screen for the date of service of June 16, 2014, topical cream prescriptions for AB8 Ketamine 10%, BB3 Tramadol 10%, MS2-MethylPyridHydrox and AB5-KGDBLC, as well as the reasonableness and necessity of continued Lyrica, Morphine, and Celebrex.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant was injured on or about June 7, 2011. Claimant sustained a back injury and underwent a L3-L5 decompression.

2. Claimant takes Lyrica and Celebrex twice per day and Flexeril at night for pain relief. The medications help with his aches and pains in his back and legs. He uses Morphine sparingly and only in cases of extreme pain caused by increased activity. If he goes without Lyrica and/or his Celebrex, for two to three days, his pain levels increase, especially in his back and legs. Claimant testified that he has "good days" and "bad days." On a good day, claimant deals with his pain, runs errands and does things around the house. On bad days claimant is laid up on the couch using heat/ice to assist in managing his pain. The ALJ finds from claimant's testimony that he likely takes Morphine on bad days in order to control his pain levels in an effort to remain as functional as possible. Based upon the medical records documenting the nature and extent of Claimant's injury and his subsequent treatment, the ALJ finds Claimant's testimony regarding his need for ongoing medications and the effectiveness of previously prescribed medications credible and persuasive.

3. Dr. Ridings placed claimant at MMI on June 6, 2012. Claimant was provided maintenance medication consisting of Lyrica, Morphine and Diclofenac.

4. By report dated June 28, 2012, Dr. Ridings reviewed video surveillance. Based on the videotape surveillance, Dr. Ridings reevaluated claimant's medication needs, his impairment rating, and retracted his previous opinion regarding claimant's need for possible additional surgery.

5. On July 10, 2012, drug testing was performed which did not detect the presence of Morphine.

6. On July 13, 2012, Dr. Ridings issued a report indicating that he prescribed Morphine (60 tablets) on April 3, May 1, May 23 and June 20, 2012. He indicated Morphine doses should be decreased if claimant did not need them within the two- to four-day window, which Dominion Diagnostic states that Morphine would be detectable by the assay.

7. Dr. Ridings indicated on July 19, 2012 he was decreasing claimant's Morphine as he was concerned about claimant's lack of severe functional limitations which were not apparent on recent surveillance videotape and his need for Morphine.

8. On October 24, 2012, claimant underwent a Division IME with Dr. Sandell. On that date, claimant reported pain levels of 7/10 at rest, and 8-9/10 with activity. Physical examination showed tenderness in the paraspinal muscles of the lumbosacral region bilaterally. Claimant had no focal trigger points, good motor strength without any focal motor weakness or muscle atrophy, grossly intact light sensation, and diminished reflexes bilaterally. Claimant had a negative straight leg raise on the right and a positive straight leg raise on the left. Dr. Sandell provided the claimant with 15% whole person impairment.

9. On December 12, 2012, Dr. Ridings noted that he was not convinced that claimant really required opiates, given the issues discussed at length regarding the surveillance videotape. Additionally, on his most recent urine drug test screen at a time when claimant told Dr. Ridings he was taking Morphine daily, Morphine was not found in his urine on two separate tests.

10. Dr. Ridings retired from active practice. Consequently, claimant's ongoing care was transferred to Dr. George Johnson. Dr. Johnson first saw the claimant on June 3, 2013. At that time, claimant reported pain levels 9/10 at worst, and 8/10 on average. Dr. Johnson recommended physical therapy and injections and referred claimant to Dr. Joseph Brooks.

11. Dr. Brooks' specialty is in interventional pain management. He is board certified in internal medicine and pain management. He evaluated claimant on July 29, 2013. During this appointment claimant reported pain radiating down both legs, worse with prolonged sitting or standing and driving a car. He was taking Lyrica, Celebrex and opiates (Morphine) sparingly. Drug testing performed on that day was positive for Lyrica and Morphine.

12. On November 5, 2013, claimant continued to report pain levels of 8/10 at worst, and 8/10 on average. Claimant was taking Lyrica, Celebrex, Morphine and was also prescribed Flexeril. By letter dated November 18, 2013, Dr. Johnson indicated that he had not prescribed any narcotic medication.

13. Dr. Brooks saw the claimant again on December 16, 2013 and requested a drug test. On that day, claimant's pain levels were 8/10.

14. Drug testing performed on December 16, 2014 was negative for Morphine and positive for Lyrica and Flexeril.

15. Dr. Brooks reevaluated claimant on June 16, 2014 during which appointment claimant reported his pain level was 9/10. Physical examination revealed tenderness in the right back and buttock. The remainder of the examination was normal. Dr. Brooks renewed claimant's Lyrica, Flexeril and Morphine and added a prescription of topical creams, including MS2-Methyl Pyrid Hydrox, AB8 Ketamine 10%, AB5-KGDBLC, and BB3 Tramadol 10%.

16. Dr. Brooks requested drug testing, which was performed on June 16, 2014. The testing was negative for all drugs previously prescribed.

17. Dr. Bisgard performed an independent medical examination (IME) for respondent on January 13, 2014. Dr. Bisgard has a specialty in physical medicine and rehabilitation (PM&R). While she treats patients with chronic pain conditions, she is not board certified in pain management. During his IME claimant reported 8-9/10 level pain with increased activity. On the date of his examination, claimant reported a pain level of 8/10. Dr. Bisgard's reached the following diagnostic impression following completion of her IME: L3-4 and L4- 5 disc bulge with mild retrolisthesis, bilateral lower extremity paresthesias, deconditioning, and possible Charcot-Marie-Tooth syndrome. Claimant was taking Lyrica, Cyclobenzoprine (Flexeril), Celebrex, and Morphine. Regarding the continued use of medications previously prescribed, Dr. Bisgard originally recommended tapering and discontinuing the use of Morphine but recommended that claimant continue taking Celebrex "as it is reasonable". Dr. Bisgard also recommended Lyrica be continued, as "He appears to be getting the best relief with Lyrica." However, Dr. Bisgard has since changed her opinion regarding the continued use of Lyrica and Celebrex.

18. In a subsequent report and during her testimony, Dr. Bisgard indicated it was difficult to determine how much pain and limitation claimant actually had. She reviewed the video surveillance from November 2013 in which claimant was observed sitting and standing at a football game without apparent discomfort. He was also observed sitting in a forward flexed position on a split rail fence without apparent difficulty. Dr. Bisgard testified that physicians determine if prescribed drugs are effective, by a decrease of pain and a corresponding increase in function. Function is not based solely on return to work, but on ability to function with activities of daily living. It was her opinion that at no point did claimant demonstrate pain behaviors, and even when reporting his pain level at 8/10, he did not display any behavior suggesting pain at that level. Consequently, Dr. Bisgard noted: "Due to lack of benefit with the medications including pain relief and/or functional improvement, I recommend the morphine be tapered and stopped as well as the Celebrex." In the final paragraph of her report, Dr. Bisgard expands this list to include Morphine, Celebrex, Lyrica, and Flexeril, stating as the medications are not reducing pain or increasing function, they should be discontinued. Dr. Bisgard recommended a home exercise program, over-the-counter medication, and Flexeril PRN. The ALJ is not persuaded by respondent's suggestion

that Claimant's negative drug testing results is conclusive evidence that the aforementioned medications are not reasonably necessary. Given claimant's testimony that he uses Morphine sporadically, has addiction concerns and has good days and bad days, the ALJ is not surprised by the results of claimant's drug testing. Based upon the evidence presented, including claimant's testimony, the ALJ finds, more probably than not, that the aforementioned medications are likely helping with pain control and maintaining his level of functioning. The ALJ finds that without these medications, including the occasional dosage of Morphine, claimant's average pain levels will likely increase on a daily basis and his level of functioning will deteriorate. Accordingly, the ALJ finds the continued use of Lyrica, Celebrex, Morphine and Flexeril reasonably necessary and related to claimant's industrial injury.

19. The cost of a 30 day supply of the aforementioned topic drugs prescribed is as follows: MS2-Methyl Pyrid Hydrox, $5,825.10; AB8 Ketamine 10%, $903.60; AB5-KGDBLC, $2,756.40; BB3 Tramadol 10%, $1,465.80. The total cost of a 30-day supply of these prescriptions is $10,950.90.

21. Dr. Brooks testified that claimant's diagnosis was radiculopathy and low back pain. During his deposition, Dr. Brooks explained that Ketamine 10% is a topical compound for pain control. Dr. Brooks testified that he routinely prescribes this compound, as part of his standard practice, to his patients with success. Dr. Brooks also testified the Tramadol 10% was prescribed as an additional topical medication to alleviate pain and prevent the need for stronger opiate medications. According to Dr. Brooks this medication is to be used in conjunction with the Ketamine. Dr. Brooks also addressed the prescription for MS2-methyl pyrid hydrox. Per Dr. Brooks, this prescription is for nerve pain and contains a high amount of folic acid, B12 and B6 vitamins and is reasonably necessary to address/treat Claimant's ongoing nerve pain. Dr. Brooks testified that the use of the aforementioned topical creams in this case would be considered an off label use of the medications. He testified that he prescribed the creams in an effort to focus treatment to the regional area of claimant's pain and avoid the side effects attendant with oral medications.

22. Dr. Bisgard testified that she was not familiar with these particular topical medications and had no experience with them. In fact, Dr. Bisgard had to look up the medications and call a pharmacist to investigate the compounds in question. After conducting her investigation, Dr. Bisgard was informed as to what active components were in the compounded creams. She testified that the topical creams contain duplication within the different prescriptions written by Dr. Brooks. Specifically, there is Ketamine in two of the creams, and two muscle relaxers in one of the creams - Cyclobenzoprine and Baclofen. According to Dr. Bisgard, the creams also contained medications which the claimant was also taking orally –Gabapentin-Lyrica (oral); Cyclobenzaprine/Baclofen-Cyclobenzaprine (oral), Diclofenac-Celebrex (oral). Dr. Brooks testified to these same facts. After determining what was in the compounded creams, Dr. Bisgard preformed a medical literature review to determine the use and effectiveness of these topical agents in the treatment of back pain and/or radiculopathy. Based on the medical studies that Dr. Bisgard reviewed, she testified that there was no

support for the use of these topical medications for radiculopathy or low back pain. Dr. Bisgard testified that the *Medical Treatment Guidelines* limit the use of topical Ketamine to neuropathic disorders such as CRPS. According to Dr. Bisgard, claimant does not have neuropathic pain or CRPS and the topical use of this drug (Ketamine) would not help treat radiculopathy because a topical compound cannot penetrate to the level of the nerve root. Per Dr. Bisgard the *Medical Treatment Guidelines* do not recommend the use of topical agents for the specific conditions claimant has. In addition, the *Medical Treatment Guidelines* stated that no studies identified evidence for the effectiveness of compounded topical agents other than those recommended. Therefore, other compounded topical agents were not generally recommended. Based upon the fact that the some of the medications in the topical creams were duplicates of each other and the oral medications claimant had already been prescribed and because claimant did not have a medical condition for which the use of topical medications were recommended or effective in treating, Dr. Bisgard testified that the topical agents prescribed by Dr. Brooks were not reasonable or necessary.

23. Dr. Brooks also requested a drug test through Rapid Tox Screen. The test was comprised of a panel of 48 drugs including common street drugs, such as heroin and ecstasy. Dr. Brooks indicated this extensive drug testing was needed to make sure patients are not using drugs or other medications that they are not telling him about. He requested this confirmatory laboratory testing because he is dealing with patients with chronic pain. Because the claimant was taking Morphine sporadically, Dr. Brooks indicated the test would be either positive or negative. Based on a negative test, he is looking for confirmation of a minute amount of the medication in the system. He also indicated that this population has a higher risk of abusing drug and although he had no suspicion the claimant was actually abusing drugs, he suspects everyone he prescribes opiates to. Although Dr. Brooks indicated that he could narrow the panel to give him information needed, he testified that he casts a "broad network" with every patient that he sees to assure that patient is not "diverging" from what they tell us by using illicit medications/drugs. The cost of the Dr. Brooks drug test was $5,210.00.

24. By letter dated October 9, 2014, Ms. Madsen denied the drug-screening test from Rapid Tox Screen. Respondent sought review of Dr. Brooks request for a 48 panel drug test by Dr. Alan Burgess.

25. Dr. Burgess reviewed the 48-drug panel requested and opined that the number of tests and the cost of the evaluation exceeded necessary medical monitoring and the testing was out of proportion to the number of drugs being given. Claimant was being prescribed three medications, only one of which was a scheduled II drug – Morphine. Per Dr. Burgess, the other 47 drugs tested for were excessive, unnecessary, and the cost was unreasonable. Dr. Burgess testified that testing included drugs not prescribed, metabolites of drugs not prescribed and drugs that were outdated and not in use any longer. He noted that claimant really wasn't following through in filling his prescriptions, which was exactly the opposite of what usually happens when physician drug-monitored testing is requested. He indicated that a 10-panel drug test is the standard for assuring compliance with health care opiates. According to Dr. Burgess, A

10-panel test covers the main illicit drugs, main prescription drugs, and major prescription drugs of abuse. A 10-panel drug test costs in the range of $11.50-$15.00. This would include all of the physical characteristics of the urine, which are included for free. Dr. Burgess opined that it would be reasonable for a physician to limit a confirmatory test to a specific drug. A confirmatory test would cost in the range of $150.00. The ALJ credits Dr. Burgess' testimony to find that a 48-panel drug test under the circumstances presented in this case is unreasonable.

26. Claimant has failed to prove by a preponderance of the evidence that the topical drugs AB8 Ketamine, BB3 Tramadol, AB5-KGDBLC and MS2 Methyl Pyrid Hydrox are reasonable and necessary. The ALJ finds Dr. Bisgard's testimony that claimant does not have a medical condition which would be amenable to treatment with the use of topical agents persuasive. Moreover and importantly, while the Medical Treatment Guidelines are advisory and can be deviated from when appropriate, Claimant has failed to make a persuasive case that the use of topical agents is reasonably or necessary here. To the contrary, outside of Ketamine, the medications in the compounded creams are duplicative of those oral medications, which have proven effective in treating and maintaining his condition. Regarding the need for Ketamine, Claimant testified that he rarely uses an opiate for pain control. He is not contending that the Morphine is ineffective in controlling his pain. Rather, he testified that the Morphine is very helpful for him. He has requested an order for ongoing Morphine as it has assisted in controlling his pain and given him the benefit of improved function. Accordingly, the ALJ is convinced that it is unnecessary to add another potent pain medication to claimant's treatment regime. Also, it is persuasive that MS2 Methyl Pyrid Hydrox is a vitamin B12 complex for which Dr. Brooks cited only anecdotal medical literature as bestowing pain relief properties.

27. Claimant has failed to prove by a preponderance of the evidence that the Rapid Tox Screen 48-panel drug test is reasonable and necessary. The opinion of Dr. Burgess is persuasive that the testing was out of proportion to the number of drugs being prescribed and the circumstances in this case. While it is reasonable for Dr. Brooks to request drug testing to confirm the appropriate use of medications prescribed in this case, the ALJ finds, absent a reasonable suspicion that claimant is abusing or diverting his medications, casting a "broad network" as wide as that thrown here unreasonable. Dr. Brooks made no effort to tailor the requested testing in this case to the actual scheduled II drug in which the claimant was being prescribed. Rather, he simply indicated that he is suspicious of anyone he prescribes to. The ALJ finds such assertion incredible to support a request for a 48-panel drug test in light of the circumstances in this case, including those cited by Dr. Burgess.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

A. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. C.R.S. § 8-41-301(1)(c); *Faulkner v. ICAO*, 12 P.3d 844 (Colo. App. 2000). In other words, claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Walmart Stores v. Industrial Claim Appeals Office*, 989 P.2d 521 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). This includes establishing entitlement to medical treatment. *See Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

B. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondent. § 8-43-201(1).

C. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, civil 3:16 (2005).

D. Claimant is entitled to medical benefits that are reasonably necessary to cure or relieve the effects of the industrial injury. *See* § 8-42-101(1), C.R.S. 2003; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The question of whether the need for treatment is causally related to an industrial injury is one of fact. *Walmart Stores, Inc. v. Industrial Claims Office, supra*. Similarly, the question of whether medical treatment is reasonable and necessary to cure or relieve the effects of an industrial injury is one of fact. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003).

E. In deciding whether Claimant has met her burden of proof, the ALJ is empowered: "To resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to testimony, and draw plausible inferences from the evidence." *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002). The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge need not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

F. The mere occurrence of a compensable injury does not require an ALJ to find

that all subsequent medical treatment and physical disability were caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those which flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970); § 8-41-301(1)(c), C.R.S. 2013.

G. As found, the evidence in the instant case demonstrates that prescriptions for Celebrex, Lyrica, Flexeril and Morphine are likely helping claimant with pain control and are responsible to his level of function. The ALJ is not convinced that claimant's pain levels and functionality would be the same with or without these medications. The ALJ concludes that without these medications, including the occasional dose of Morphine, claimant's average pain levels will likely increase on a daily basis and his level of functioning will deteriorate. Accordingly, the ALJ concludes that the continued use of Lyrica, Celebrex, Morphine and Flexeril is reasonably necessary and related to claimant's industrial injury.

H. However, the addition and administration of topical creams, including MS2-ethyl Pyrid Hydrox are not reasonable or necessary to maintain MMI. The use of the MS2-Methyl Pyrid/Hydrox, AB8 Ketamine, AB5-KGDBLC, and the BB3 Tramadol are off-label use of the drugs prescribed. The use of such compounds to treat claimant's conditions in this case is not supported by studies or by the *Medical Treatment Guidelines*. Moreover, these topical creams contain the same medications proven to be effective in treating claimant's pain and maintaining his current level of function. Consequently, the ALJ concludes it is not reasonably necessary to add additional medications to his treatment regime. Furthermore, while it is reasonable for Dr. Brooks to request drug testing to confirm the appropriate use of medications prescribed in this case, his request for 48-panel drug testing is unreasonable in light of the circumstances presented in this case. As found, the ALJ credits the testimony of Dr. Burgess to conclude that a 10-panel drug test which would covers the main illicit drugs, main prescription drugs, and major prescription drugs of abuse followed by a confirmatory test was all that was necessary in the instant case.

ORDER

It is therefore ordered that:

1. Claimant's claim for medical benefits in the form of the topical creams and the MS2-Methyl Pyrid/Hydrox is denied and dismissed.

2. Claimant's claim for medical benefits in the form of payment for the Rapid Tox Screen drug testing is denied and dismissed.

3. Respondent's shall pay for ongoing prescriptions of Celebrex, Lyrica, Morphine Sulfate and Flexeril as these medications continue to be reasonably necessary to cure and relieve claimant of the effects of his industrial injury.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 5, 2015

/s/ Richard M. Lamphere
Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
1259 Lake Plaza Drive, Suite 230
Colorado Springs, CO 80906

ISSUES

1. Whether Respondents have established by a preponderance of the evidence that Claimant has fraudulently obtained benefits and compensation by willfully misrepresenting her physical condition to her treating physicians in violation of §8-43-402, C.R.S.

2. If Claimant has committed fraud in violation of §8-43-402, C.R.S., whether Respondents are entitled to the retroactive recovery of indemnity and medical benefits paid to Claimant.

3. Whether Respondents have demonstrated by a preponderance of the evidence that Claimant's July 24, 2013 physical altercation with Marie Friedstein constituted a subsequent intervening event that permits them to withdraw their admission of liability.

4. Whether the temporary disability benefits that Respondents have paid Claimant since the July 24, 2013 altercation constitute an overpayment.

5. Whether Claimant has proven by a preponderance of the evidence that the requested surgical procedures for her shoulder, hip and ankle from the physicians at Western Orthopedics are reasonable, necessary and related to her October 6, 2011 industrial injuries.

FINDINGS OF FACT

1. Employer is a major food distribution and restaurant supply corporation headquartered in Houston, Texas. Claimant worked for Employer in its Denver, Colorado facility as a Product Demonstrator and Sales Marketing Associate for approximately four months. Claimant no longer works for Employer.

2. On October 6, 2011 Claimant slipped and fell on a wet floor on Employer's premises during the course and scope of her employment. Claimant sustained contusions to her right shoulder, right wrist, right elbow and right hip. Respondents admitted liability for the claim and Claimant presented to her authorized treating physicians for conservative treatment and management of her injuries.

3. Claimant's main concerns in the months following her injuries were her right shoulder and right upper extremity. Claimant's complaints to her right wrist and right elbow dissipated but she had persistent pain over the posterolateral shoulder with elevation of her arm. She eventually obtained an MRI of her right shoulder on December 20, 2011. The MRI revealed a non-displaced SLAP type labral tear from the biceps labral anchor throughout the posterior superior quadrant. There was no

extension of the tear into the biceps tendon. Claimant was eventually referred to Rajesh Bazaz, M.D. for an evaluation. He recommended arthroscopic surgery to repair the tear in the right shoulder.

4. On January 26, 2012 Claimant underwent an MRI of her right hip. The MRI revealed moderate osteoarthritis of the hip. There was a small focus of degenerative subcoritcal cystic change in the anterior lateral femoral head neck junction but no focal bony bump or other definitive findings for femoral acetabular impingement pattern.

5. On February 23, 2012 Claimant underwent right shoulder surgery. She was placed in a sling and subsequently received conservative care from her treating physicians. On March 20, 2012 Respondents filed a General Admission of Liability (GAL) acknowledging Temporary Total Disability (TTD) benefits from the date of surgery and continuing.

6. Following surgery Claimant experienced continued discomfort in her right shoulder and increasing pain in her right hip. Throughout the rest of 2012 Claimant continued to receive conservative care from her treating physicians. She underwent a series of nerve blocks without a positive response. Claimant's pain continued to increase and her treating physicians suspected possible Chronic Regional Pain Syndrome (CRPS).

7. On November 20, 2012 Claimant visited Ricky Artist, M.D. for a follow-up evaluation. Claimant reported to Dr. Artist that on November 17, 2012 her right hip "locked-up" and she fell to the ground severely spraining her left ankle. X-rays of Claimant's left ankle showed no evidence of a bony injury.

8. On December 13, 2012 Claimant underwent an MRI for her left ankle. The MRI revealed that Claimant had a tear in her anterior talofibular ligament and partial tearing of the peroneus longus tendon.

9. On March 11, 2013 Claimant visited Tashof Bernton, M.D. for an evaluation and CRPS testing. Based on the testing results Dr. Bernton concluded that Claimant did not meet the Medical Treatment Guidelines for diagnosis of CRPS because she had only one out of three positive tests. Dr. Bernton noted that Claimant had potential frozen shoulder. Claimant continued to receive conservative treatment during the remainder of 2013.

10. On July 24, 2013 Claimant was involved in a public altercation in Cherry Creek at approximately 10:30 p.m. with another woman. Cell phone video captured the altercation. Court documents from the City and County of Denver District Attorney's Office identify Claimant and Marie Friedstein as the individuals fighting in the video.

11. Claimant testified at hearing that she is depicted in the video wearing beige high heel stiletto shoes and a dress. Claimant identified the other woman in the video as Ms. Friedstein. Claimant is seen on the video wrestling Ms. Friedstein to the ground. On a second clip Claimant is seen approaching Ms. Friedstein from behind,

grabbing her by the shoulders and throwing Ms. Friedstein forcibly to the ground. Claimant then sits on top of Ms. Friedstein in a straddling position and proceeds to use her right upper extremity to repeatedly punch her in the head and upper torso area. Claimant delivers approximately 11 punches to Ms. Friedstein without any hesitation, pain, or restriction of motion in her right upper extremity. She also walks freely with both of her lower extremities, has no problems with her left ankle and, on several occasions, is able to plant her lower extremities and rotate her body.

12. On August 28, 2013 Claimant presented to Kevin Smith, M.D. for a follow-up examination. She reported that she was continuing to have pain and difficulties with her right upper extremity. Claimant specifically noted that she was having such sensitivity with her right upper extremity that "anything even lightly touching her skin" would cause bothersome symptoms. Claimant also noted to Dr. Smith that she had a previous sprain of her left ankle "which had mostly resolved." Claimant did not report the July 24, 2013 altercation.

13. On October 10, 2013 Claimant underwent an independent medical evaluation with L. Barton Goldman, M.D. Dr. Goldman determined that Claimant did not have CRPS but instead had myofascial pain and upper trunk plexus irritation. He expressed concerns that Claimant was suffering from right adhesive capsulitis or frozen shoulder. Dr. Goldman also remarked that Claimant suffers from "right hip osteoarthritis pre-existing and aggravated by work related injury October 6, 2011 with acetabular impingement." Dr. Goldman summarized that Claimant's mechanism of injury was most consistent with "contusions of the right upper trunk of the brachial plexus, the right shoulder and right hip." He expressed "significant concerns" regarding whether Claimant would tolerate invasive interventions because of her conflicted responses to suggestions and pain management struggles.

14. On November 11, 2013 Claimant underwent an independent medical examination with Floyd O. Ring, M.D. Dr. Ring agreed that Claimant did not meet the definition of CRPS pursuant to the Medical Treatment Guidelines. He also noted that Claimant demonstrated inconsistencies between her presentation and ranges of motion. Dr. Ring commented that Claimant walked with a significant antalgic gait favoring the right lower extremity. He viewed surveillance video of Claimant in which she was walking in high-heeled boots without any apparent difficulties. Dr. Ring expressed concerns of "possible symptom magnification, secondary gain issues or somatization versus malingering." Dr. Ring was unaware of the altercation that took place on July 24, 2013 and the existence of any video of the event.

15. On May 19, 2014 Claimant underwent an independent medical examination with Carlos Cebrian, M.D. Dr. Cebrian released his report on July 10, 2014. Dr. Cebrian was aware of the cell phone video of the altercation involving Claimant and Ms. Friedstein that had surfaced shortly after his examination took place. Dr. Cebrian reviewed additional surveillance of Claimant that had been referenced by Dr. Ring in November 2013. He concluded that Claimant was at Maximum Medical Improvement (MMI) and she did not require additional treatment for her injuries. Dr. Cebrian determined that Claimant's subjective complaints were out of proportion to the

objective findings especially in light of the video showing the July 24, 2013 altercation and the surveillance footage of Claimant from 2013. Dr. Cebrian noted that Claimant had provided exaggerated and inaccurate information to her medical providers throughout the claim. Based upon the inconsistencies in the videos, surveillance of Claimant and her statements to treating physicians, Dr. Cebrian was concerned with symptom magnification, secondary gain issues, somatization and malingering. Dr. Cebrian also noted that none of Claimant's subjective complaints constituted injury-related conditions but were maladaptive coping mechanisms as noted by Dr. Goldman.

16. On July 9, 2014 Dr. Ring issued a second report based on the review of additional medical records and two videos of the July 24, 2013 altercation involving Claimant and Ms. Friedstein. Dr. Ring noted that in the July 24, 2013 video Claimant "shows no decreased range of motion involving the hip, ankles or right upper extremity." He emphasized that Claimant's actions in the videos were inconsistent with her medical records and his physical examination. Dr. Ring specifically noted that Rajesh Bazaz, M.D. had requested surgical intervention based on Claimant's right adhesive capsulitis or frozen shoulder. However, because the videos depicted Claimant "repetitively flex[ing], extend[ing] and abduct[ing]" her right shoulder she did not have any right shoulder limitations and any shoulder surgery was not causally related to her October 6, 2011 industrial injuries.

17. On August 12, 2014 Claimant underwent an examination with Kevin Nagamani, M.D. regarding her left ankle condition. Dr. Nagamani recommended surgery to Claimant's left ankle involving arthroscopy and debridement of the lateral portion of the ankle and a Brostrom repair. He was not aware of the altercation on July 24, 2013, cell phone video and surveillance footage taken in 2013.

18. On October 7, 2014 the parties conducted the pre-hearing evidentiary deposition of Dr. Nagamani. He received the opportunity to review the November 4, 2013 surveillance footage as well as video of the July 24, 2013 altercation. Dr. Nagamani maintained that Claimant had objective evidence and pathology in the left ankle requiring surgical repair. However, after reviewing the videos, he could not state within a reasonable degree of medical probability that the objective pathology of Claimant's left ankle was related to the November 17, 2012 event in which Claimant's hip "locked up." Dr. Nagamani stated that the videos demonstrate that Claimant did not have an altered gait, appeared to walk fluidly and did not demonstrate instability in her left ankle.

19. On October 10, 2014 the parties conducted the pre-hearing evidentiary deposition of Dr. Bazaz. Dr. Bazaz recounted that he had performed right shoulder surgery on Claimant on February 23, 2012. She then visited him a few more times until June 18, 2012. He had diagnosed Claimant with frozen shoulder and attributed her condition to the October 6, 2011 industrial slip and fall. Dr. Bazaz did not again see Claimant until June 2014. Dr. Bazaz stated that Claimant demonstrated greater flexion and extension with her right shoulder than she did during subsequent examinations with him in 2014. He noted that objective pathology was present in Claimant's shoulder and he suspected adhesive capsulitis. Dr. Bazaz explained he could not make a

determination as to Claimant's exact pathology until the shoulder was manipulated through a surgical procedure. He declined to provide an opinion regarding causation of Claimant's right shoulder complaints.

20. Claimant testified at the hearing in this matter. She explained that she was still having problems with her right upper extremity and particularly her right shoulder. Claimant also remarked that her right hip pain has worsened in the last several months and she is still experiencing pain in her left ankle. She requested authorization for the procedures recommended by Drs. Bazaz and Nagamani as well as treatment for her right hip.

21. Dr. Ring testified at the hearing in this matter. He consistently maintained that Claimant's current right shoulder symptoms are not related to her October 6, 2011 industrial injury. Dr. Ring specifically detailed that Claimant underwent right shoulder surgery, her symptoms resolved and she has no ongoing shoulder pathology. He specified that right shoulder manipulation under anesthesia will not benefit Claimant because her shoulder symptoms either resolved prior to the July 24, 2013 altercation or her symptoms were aggravated as a result of the altercation. Dr. Ring explained that Claimant's subjective complaints were grossly disproportionate to the objective evidence in the videos of the altercation and the surveillance of Claimant in 2013. He testified that the functional abilities of Claimant on the video of the altercation are significant because she would have guarded her upper extremity or refrained from using her upper extremity if her subjective complaints were legitimate. Dr. Ring testified that Claimant exhibited no pain behaviors and demonstrated complete use of her upper extremity during the altercation. He noted that Dr. Bazaz failed to perform a causation analysis prior to recommending right shoulder surgery. Dr. Ring commented that Claimant would benefit from an EMG to rule out any potential conditions to her right shoulder.

22. Marie Friedstein testified in this matter by video deposition. She explained that she was involved in an altercation with Claimant on July 24, 2013. Ms. Friedstein remarked that Claimant attacked her and wrestled her down to the ground. She commented that Claimant repeatedly punched her in the face. Ms. Friedstein testified that she sustained three cracked ribs, broke her collarbone in four places and suffered five contusions to her head. She explained that Claimant did not appear to have any injuries to her right shoulder, right hip, or left ankle.

23. Ms. Friedstein also testified regarding Claimant's other activities during the time Claimant was disabled and receiving TTD. Ms. Friedstein confirmed that Claimant was present at the CU Boulder dorms in August 2012 along with herself, her husband and other individuals. Ms. Friedstein testified that Claimant was helping to move certain belongings into the dorm rooms. One of the items was a large loveseat. Ms. Friedstein testified that several people assisted in the moving of the loveseat since it had become lodged between the doors in the hallway leading into the dorm room. Ms. Friedstein confirmed that Claimant was assisting in the moving of the loveseat using her right upper extremity in an unrestricted manner. She testified that Claimant was not wearing a sling and did not appear to have any pain in her right upper extremity or right hip.

24. Dr. Cebrian testified through a post-hearing evidentiary deposition in this matter on November 8, 2014. He explained that the recommended procedures from Drs. Bazaz and Nagamani, as well as additional treatment to Claimant's hip was not reasonable, necessary or related to her October 6, 2011 industrial injuries. Dr. Cebrian testified that Claimant's ongoing pathology in her right shoulder is likely due to adhesive capsultitis. He remarked that,. based upon the evidence in the video, Claimant's functional abilities and the medical records, the ongoing pathology in the right shoulder is not related to the original October 6, 2011 slip and fall. Dr. Cebrian also explained that Claimant's right hip pathology is likely related to the natural progression of a degenerative condition not related to the original October 6, 2011 event. With regard to the left ankle, Dr. Cebrian explained it was unlikely that Claimant's right hip "locked-up" causing her to fall and twist her ankle. He maintained that treatment for the left ankle is not related based on the functional abilities that Claimant demonstrated during the altercation on July 24, 2013 and the surveillance footage from November 4, 2013.

25. Respondents have failed to establish that it is more probably true than not that Claimant has fraudulently obtained benefits and compensation by willfully misrepresenting her physical condition to her treating physicians in violation of §8-43-402, C.R.S. On October 6, 2011 Claimant slipped and fell on a wet floor on Employer's premises during the course and scope of her employment. Claimant sustained contusions to her right shoulder, right wrist, right elbow and right hip. Respondents admitted liability for the claim and Claimant presented to her authorized treating physicians for conservative treatment of her injuries. On February 23, 2012 Claimant underwent right shoulder surgery but subsequently continued to experience right shoulder symptoms. Claimant's physicians considered whether she was suffering from CRPS but determined through testing that she did not have the condition. Because subsequent conservative measures failed, Claimant's treating doctors ultimately sought authorization for surgery for her shoulder, hip and ankle. Although Respondents have produced evidence through physicians that surgery is not reasonable, necessary and related to Claimant's October 6, 2011 industrial injury, they have failed to demonstrate that Claimant has fraudulently obtained medical benefits. Specifically, Respondents have failed to prove that Claimant falsely misrepresented a material fact to obtain indemnity and medical benefits. Accordingly, Respondents are not entitled to retroactive recovery of benefits paid to Claimant.

26. Respondents have failed to demonstrate that it is more probably true than not that Claimant's July 24, 2013 physical altercation with Ms. Friedstein constituted a subsequent intervening event that permits them to withdraw their admission of liability. On July 24, 2013 Claimant was involved in a public altercation with Ms. Friedstein. Cell phone video captured the altercation. Claimant is seen approaching Ms. Friedstein from behind, grabbing her by the shoulders and throwing Ms. Friedstein forcibly to the ground. Claimant then sits on top of Ms. Friedstein in a straddling position and proceeds to use her right upper extremity to repeatedly punch her in the head and upper torso area. She also walks freely with both of her lower extremities, has no problems with her left ankle and, on several occasions, is able to plant her lower extremities and rotate her body. Dr. Ring maintained that Claimant's shoulder symptoms either resolved prior to the July 24, 2013 altercation or were aggravated as a

result of the altercation. Dr. Cebrian remarked that, based upon the evidence in the video, Claimant's functional abilities and the medical records the ongoing right shoulder, right hip and left ankle symptoms are not related to the original October 6, 2011 slip and fall. Although the video depicts Claimant engaging in activities that suggest significant functional abilities, the July 24, 2013 incident did not constitute a subsequent intervening event that severed the causal connection from the October 6, 2011 industrial injury. The July 24, 2013 altercation did not cause Claimant's need for medical treatment but merely reflected an increase in her functional abilities. Accordingly, the July 24, 2013 altercation was not an efficient intervening cause that warrants withdrawal of the admission of liability.

27. Claimant has failed to prove that it is more probably true than not that the requested surgical procedures for her shoulder, hip and ankle from the physicians at Western Orthopedics are reasonable, necessary and related to her October 6, 2011 industrial injuries. Dr. Nagamani maintained that Claimant had objective evidence and pathology in the left ankle requiring surgical repair. Dr. Bazaz noted that objective pathology was present in Claimant's shoulder and he suspected adhesive capsulitis. He explained that he could not make a determination as to Claimant's exact pathology until the shoulder was manipulated through a surgical procedure. Claimant explained that she was still having problems with her right upper extremity and particularly her right shoulder. She also remarked that her right hip pain has worsened in the last several months and she is still experiencing pain in her left ankle. Claimant requested authorization for the procedures recommended by Drs. Bazaz and Nagamani as well as treatment for her right hip.

28. In contrast, Dr. Ring persuasively maintained that in the July 24, 2013 video Claimant "shows no decreased range of motion involving the hip, ankles or right upper extremity." He emphasized that Claimant's actions in the videos were inconsistent with her medical records and his physical examination. Dr. Ring specifically noted that Dr. Bazaz had requested surgical intervention based on Claimant's right adhesive capsulitis or frozen shoulder. However, because the videos depicted Claimant "repetitively flex[ing], extend[ing] and abduct[ing]" her right shoulder she did not have any right shoulder limitations. He consistently maintained that Claimant's current right shoulder symptoms were not related to her October 6, 2011 industrial injury. Dr. Ring specifically detailed that Claimant underwent right shoulder surgery, her symptoms resolved and she has no ongoing shoulder pathology. Moreover, Dr. Cebrian explained that the recommended procedures from Drs. Bazaz and Nagamani, as well as additional treatment to Claimant's hip was not reasonable, necessary, or related to her October 6, 2011 industrial injuries. Dr. Cebrian testified that Claimant's ongoing pathology in her right shoulder is likely due to adhesive capsultitis. He remarked that, based upon the evidence in the video, Claimant's functional abilities and the medical records, the ongoing pathology in the right shoulder is not related to the original October 6, 2011 slip and fall. Dr. Cebrian also explained that Claimant's right hip pathology is likely related to the natural progression of a degenerative condition not to the original October 6, 2011 event. Dr. Cebrian explained that treatment for the left ankle is not related based on the functional abilities that Claimant demonstrated during the altercation on July 24, 2013 and the surveillance footage from November 4, 2013.

29. Drs. Nagamani and Bazaz provided equivocal accounts regarding the cause of Claimant's current symptoms. After reviewing the videos, Dr. Nagamani could not state within a reasonable degree of medical probability that the objective pathology of Claimant's left ankle was related to the November 17, 2012 event in which Claimant's hip "locked up." Dr. Nagamani also noted that the videos demonstrate that Claimant did not have an altered gait, appeared to walk fluidly and did not demonstrate instability in her left ankle. Dr. Bazaz explained he could not make a determination as to Claimant's exact pathology until the shoulder was manipulated through a surgical procedure. He declined to provide an opinion regarding causation of Claimant's right shoulder complaints. Based on the persuasive opinions of Drs. Ring and Cebrian, the video of the July 24, 2013 altercation and the equivocal statements from Drs. Nagamani and Bazaz regarding the cause of Claimant's continuing symptoms, Claimant's request for surgical procedures on her shoulder, hip and ankle is denied.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Fraud

4. Respondents assert that, because it relied on Claimant's materially false representation in filing its admissions of liability, it is entitled to the retroactive recovery of its payments. An ALJ may permit an insurer to withdraw a general admission of liability and order repayment of benefits paid under the admission if the claimant

supplied materially false information upon which the insurer relied in filing the admission. *Arenas v. Industrial Claim Appeals Office,* 8 P.3d 558 (Colo. App. 2000); *Vargo v. Industrial Commission,* 626 P.2d 1164 (Colo. App. 1981). Because admissions of liability may not ordinarily be withdrawn retroactively, the respondents bear the burden of proof to establish the preceding conditions by a preponderance of the evidence. *See Pacesetter Corp. v. Collett,* 33 P.3d 1230 (Colo. App. 2001) (admission may not be withdrawn unilaterally).

5. To establish fraud or material misrepresentation a party must prove the following:

> (1) A false representation of a material existing fact, or a representation as to a material fact with reckless disregard of its truth; or concealment of a material existing fact; (2) Knowledge on the part of one making the representation that it is false; (3) Ignorance on the part of the one to whom the representation is made, or the fact concealed, of the falsity of the representation or the existence of the fact; (4) Making of the representation or concealment of the fact with the intent that it be acted upon; [and] (5) Action based on the representation or concealment resulting in damage.

In Re Arczynski, W.C. No. 4-156-147 (ICAP, Dec. 15, 2005). Where the evidence is subject to more than one interpretation, the existence of fraud is a factual determination for the ALJ. *Id.*

6. As found, Respondents have failed to establish by a preponderance of the evidence that Claimant has fraudulently obtained benefits and compensation by willfully misrepresenting her physical condition to her treating physicians in violation of §8-43-402, C.R.S. On October 6, 2011 Claimant slipped and fell on a wet floor on Employer's premises during the course and scope of her employment. Claimant sustained contusions to her right shoulder, right wrist, right elbow and right hip. Respondents admitted liability for the claim and Claimant presented to her authorized treating physicians for conservative treatment of her injuries. On February 23, 2012 Claimant underwent right shoulder surgery but subsequently continued to experience right shoulder symptoms. Claimant's physicians considered whether she was suffering from CRPS but determined through testing that she did not have the condition. Because subsequent conservative measures failed, Claimant's treating doctors ultimately sought authorization for surgery for her shoulder, hip and ankle. Although Respondents have produced evidence through physicians that surgery is not reasonable, necessary and related to Claimant's October 6, 2011 industrial injury, they have failed to demonstrate that Claimant has fraudulently obtained medical benefits. Specifically, Respondents have failed to prove that Claimant falsely misrepresented a material fact to obtain indemnity and medical benefits. Accordingly, Respondents are not entitled to retroactive recovery of benefits paid to Claimant.

Withdrawing the Admission of Liability/Intervening Cause

7. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; In re Swanson, W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. Faulkner v. Industrial Claim Appeals Office, 12 P.3d 844, 846 (Colo. App. 2000); Singleton v. Kenya Corp., 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. Faulkner, 12 P.3d at 846.

8. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

9. The court of appeals has previously concluded that the burden of proof to establish compensability remained on the claimant even when an employer was attempting to withdraw an admission of liability. However, the Colorado Workers' Compensation Act has since been amended to change the burden of proof when respondents are attempting to withdraw admissions of liability. Specifically, respondents must now prove by a preponderance of evidence that the claimant did not suffer a compensable injury as defined under Colorado law. §8-43-201(1) (2013), C.R.S. Respondents admitted that Claimant sustained industrial injuries on October 6, 2011 while working for Employer. Accordingly, Respondents have the burden of proving by a preponderance of the evidence that Claimant did not sustain injuries to withdraw the admissions.

10. The existence of a weakened condition is insufficient to establish causation if the new injury is the result of an efficient intervening cause. *Owens v. Industrial Claim Appeals Office,* 49 P.3d 1187, 1188 (Colo. App. 2002); *In Re Lang,* W.C. No. 4-450-747 (ICAP, May 16, 2005). If the need for medical treatment occurs as the result of an independent intervening cause, then the subsequent treatment is not compensable. *Owens,* 49 P.3d at 1188. The new injury is not compensable "merely because the later accident might or would not have happened if the employee had retained all his former powers." *In Re Chavez,* W.C. No. 4-499-370 (ICAP, Jan. 23, 2004). The determination of whether an injury resulted from an efficient intervening cause is a question of fact for the ALJ. *Id.*

11. As found, Respondents have failed to demonstrate by a preponderance of the evidence that Claimant's July 24, 2013 physical altercation with Ms. Friedstein constituted a subsequent intervening event that permits them to withdraw their admission of liability. On July 24, 2013 Claimant was involved in a public altercation with Ms. Friedstein. Cell phone video captured the altercation. Claimant is seen

approaching Ms. Friedstein from behind, grabbing her by the shoulders and throwing Ms. Friedstein forcibly to the ground. Claimant then sits on top of Ms. Friedstein in a straddling position and proceeds to use her right upper extremity to repeatedly punch her in the head and upper torso area. She also walks freely with both of her lower extremities, has no problems with her left ankle and, on several occasions, is able to plant her lower extremities and rotate her body. Dr. Ring maintained that Claimant's shoulder symptoms either resolved prior to the July 24, 2013 altercation or were aggravated as a result of the altercation. Dr. Cebrian remarked that, based upon the evidence in the video, Claimant's functional abilities and the medical records the ongoing right shoulder, right hip and left ankle symptoms are not related to the original October 6, 2011 slip and fall. Although the video depicts Claimant engaging in activities that suggest significant functional abilities, the July 24, 2013 incident did not constitute a subsequent intervening event that severed the causal connection from the October 6, 2011 industrial injury. The July 24, 2013 altercation did not cause Claimant's need for medical treatment but merely reflected an increase in her functional abilities. Accordingly, the July 24, 2013 altercation was not an efficient intervening cause that warrants withdrawal of the admission of liability.

Requested Surgeries

12. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

13. Claimant has failed to prove by a preponderance of the evidence that the requested surgical procedures for her shoulder, hip and ankle from the physicians at Western Orthopedics are reasonable, necessary and related to her October 6, 2011 industrial injuries. Dr. Nagamani maintained that Claimant had objective evidence and pathology in the left ankle requiring surgical repair. Dr. Bazaz noted that objective pathology was present in Claimant's shoulder and he suspected adhesive capsulitis. He explained that he could not make a determination as to Claimant's exact pathology until the shoulder was manipulated through a surgical procedure. Claimant explained that she was still having problems with her right upper extremity and particularly her right shoulder. She also remarked that her right hip pain has worsened in the last several months and she is still experiencing pain in her left ankle. Claimant requested authorization for the procedures recommended by Drs. Bazaz and Nagamani as well as treatment for her right hip.

14. In contrast, Dr. Ring persuasively maintained that in the July 24, 2013 video Claimant "shows no decreased range of motion involving the hip, ankles or right

upper extremity." He emphasized that Claimant's actions in the videos were inconsistent with her medical records and his physical examination. Dr. Ring specifically noted that Dr. Bazaz had requested surgical intervention based on Claimant's right adhesive capsulitis or frozen shoulder. However, because the videos depicted Claimant "repetitively flex[ing], extend[ing] and abduct[ing]" her right shoulder she did not have any right shoulder limitations. He consistently maintained that Claimant's current right shoulder symptoms were not related to her October 6, 2011 industrial injury. Dr. Ring specifically detailed that Claimant underwent right shoulder surgery, her symptoms resolved and she has no ongoing shoulder pathology. Moreover, Dr. Cebrian explained that the recommended procedures from Drs. Bazaz and Nagamani, as well as additional treatment to Claimant's hip was not reasonable, necessary, or related to her October 6, 2011 industrial injuries. Dr. Cebrian testified that Claimant's ongoing pathology in her right shoulder is likely due to adhesive capsultitis. He remarked that, based upon the evidence in the video, Claimant's functional abilities and the medical records, the ongoing pathology in the right shoulder is not related to the original October 6, 2011 slip and fall. Dr. Cebrian also explained that Claimant's right hip pathology is likely related to the natural progression of a degenerative condition not to the original October 6, 2011 event. Dr. Cebrian explained that treatment for the left ankle is not related based on the functional abilities that Claimant demonstrated during the altercation on July 24, 2013 and the surveillance footage from November 4, 2013.

15. Drs. Nagamani and Bazaz provided equivocal accounts regarding the cause of Claimant's current symptoms. After reviewing the videos, Dr. Nagamani could not state within a reasonable degree of medical probability that the objective pathology of Claimant's left ankle was related to the November 17, 2012 event in which Claimant's hip "locked up." Dr. Nagamani also noted that the videos demonstrate that Claimant did not have an altered gait, appeared to walk fluidly and did not demonstrate instability in her left ankle. Dr. Bazaz explained he could not make a determination as to Claimant's exact pathology until the shoulder was manipulated through a surgical procedure. He declined to provide an opinion regarding causation of Claimant's right shoulder complaints. Based on the persuasive opinions of Drs. Ring and Cebrian, the video of the July 24, 2013 altercation and the equivocal statements from Drs. Nagamani and Bazaz regarding the cause of Claimant's continuing symptoms, Claimant's request for surgical procedures on her shoulder, hip and ankle is denied.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents' request for retroactive recovery based on fraudulently obtained indemnity and medical benefits paid to Claimant is denied and dismissed.

2. Respondents' request to withdraw their admission of liability and recover an overpayment of TTD benefits because Claimant's July 24, 2013 physical altercation with Ms. Friedstein constituted a subsequent intervening event is denied and dismissed.

3. Claimant's request for surgical procedures on her shoulder, hip and ankle from the physicians at Western Orthopedics is denied and dismissed.

4. Any issues not resolved by this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

- Whether respondents have proven by clear and convincing evidence that the determination of Division-sponsored Independent Medical Examination ("DIME") physician Dr. Weaver on the issue of permanent partial disability ("PPD").

- Whether claimant has proven by clear and convincing evidence that the determination of DIME physician Dr. Weaver that claimant is at maximum medical improvement ("MMI") is incorrect.

- Whether claimant has proven by a preponderance of the evidence that the medical treatment recommended by Dr. Janssen is reasonable and necessary to cure and relieve claimant from the effects of the work-related injury sustained December 7, 2010?

FINDINGS OF FACT

1. Claimant is employed by the Mesa County Sheriff's Department as a Deputy Sheriff. Claimant sustained an admitted workers' compensation neck injury December 7, 2010 when he reached into his patrol vehicle and attempted to retrieve a weapon that was still locked or stuck in the vehicle's weapons' rack locking apparatus, causing a neck strain and aggravating claimant's pre-existing cervical disc disease.

2. Claimant underwent conservative care until a two level neck surgery was performed January 25, 2012 by Dr. Janssen. Dr. Janssen performed a two level procedure including artificial disc replacement at C5-6 and revision of a prior fusion at C4-5, which was diagnosed by him as a pseudoarthrosis, and was therefore not considered to be a "stable platform" by Dr. Janssen for the adjacent disc replacement procedure at C5-6.

3. Claimant had previously undergone a fusion at C4-5 October 29, 2007 by Dr. Tice. Claimant testified that after he recovered from that procedure he returned to full duty with no impairment. Dr. Tice released Claimant to full duty December 17, 2007. Claimant's testimony in this regard is found to be credible and persuasive and supported by the medical records entered into evidence.

4. Claimant testified that after his initial recovery from the 2012 surgical revision and disc replacement he began to develop left sided symptoms in the latter part of 2012. Claimant testified these symptoms included weakness and pain affecting his left shoulder and left upper extremity.

5. Review of the medical records entered into evidence by the parties demonstrate that Dr. Stagg, Dr. Clifford, Dr. Lewis, and Dr. Janssen document Claimant complaining of left sided neck pain and symptomatology, including shoulder pain, in a similar pattern to the left upper extremity symptoms that re-appeared in late 2012 and continued into 2013 and 2014 for which surgery at C3-4 was proposed by Dr. Janssen.

6. Dr. Janssen testified at hearing in this matter. Dr. Janssen testified that he initially attempted to do the most minimal surgery in 2012 to address a significant neck injury, including the necessary fusion revision at C4-5 and disc replacement at C5-6, but that the initial injury likely also aggravated any pre-existing degenerative disc disease at the C3-4 level, which now requires surgical intervention attributable to the workplace injury. Dr. Janssen's opined that the surgery now proposed at C3-4 was a compensable consequence and natural progression of the admitted neck injury December 7, 2010.

7. On February 16, 2013, Dr. Janssen requested authorization for an artificial disc replacement at C3-4, which was denied by respondents.

8. On February 10, 2014 Dr. Stagg placed Claimant at MMI and provided a 15% whole person impairment after apportioning or deducting 9% attributable to the 2007 surgery. The non-apportioned whole person rating would have been 23%. Dr. Stagg opined the surgery proposed at C3-4 was non-work related but more likely resulted from the 2007 neck injury.

9. Dr. Weaver performed a DIME May 15, 2014. Dr. Weaver opined claimant reached MMI, and opined that the proposed surgery at C3-4 was the result of a pre-existing condition. Dr. Weaver opined that Claimant's current complaints were much the same as the symptoms in 2007 following his prior injury. Dr. Weaver opined claimant was at maximum medical improvement ("MMI") as of Febraury 1, 2013 and provided claimant with a 21% whole person impairment rating.

10. In the May 15, 2014 report, Dr. Weaver diagnosed claimant with a C3-4 disc degeneration with resultant stenosis and nerve root irritation, status post fusion of C4-5 and disc replacement at C5-6, possible SLAP lesion of the left shoulder and gastrointestinal reflux disease ("GERD"). Dr. Weaver opined that apportionment should be considered in this case based on claimant's pre-existing cervical spine disease including two previous operations. Dr. Weaver opined that claimant's surgical stabilization at C4-5 contributed to the progression of disc degeneration at C3-4. Dr. Weaver noted that claimant's current symptoms were the result of the C3-4 disc degeneration. Dr. Weaver opined that of claimant's 21% whole person impairment rating, 60% was related to his pre-existing condition. Therefore, Dr. Weaver opined that a 9% whole person impairment rating was related to the December 7, 2010 injury. Dr. Weaver recommended ongoing medical care based on claimant's continued complaints of pain.

11. However, Dr. Weaver subsequently issued a summary sheet dated June 9, 2014 that indicated that apportionment was not applicable and provided claimant with a 21% whole person impairment rating.

12. Claimant was referred to Dr. Rauzzino by respondents for an independent medical examination ("IME") on or about August 3, 2013. Dr. Rauzzino reviewed claimant's medical records, obtained a medical history and performed a physical examination in connection with his IME. Dr. Rauzzino issues a report and opined that Claimant's proposed surgery at C3-4 is the result of the prior 2007 injury and surgery, and not related to the December 7, 2010 injury. Dr. Rauzzino further opined that the surgical revision of the pseudoarthrosis at C4-5 performed by Dr. Janssen was simply coincidental, and not medically necessary due to the 2010 injury causing the need for a second neck surgery.

13. Dr. Stagg testified by deposition in this case. Dr. Stagg opined during his deposition that the apportionment he performed was not incorrect because the prior fusion in 2007 would have constituted permanent impairment, and was therefore "disabling" whether the condition was actually causing any symptoms, or lost time, or medical restrictions immediately prior to the 2010 injury.

14. Dr. Stagg testified he disagreed with Dr. Weaver's initial opinion that claimant PPD rating should be apportioned 60% to a pre-existing condition. Dr. Stagg testified that the Division of Workers' Compensation has indicated that in accessing apportionment, the physician should not use an arbitrary number, which it appeared Dr. Weaver used in his apportionment application.

15. Dr. Weaver testified by deposition in this case. Dr. Weaver noted claimant had a history of pre-existing problems with his neck prior to his December 7, 2010 work injury, including the cervical surgery performed by Dr. Tice. Dr. Weaver testified that he indicated in his report that apportionment would be appropriate because he felt that claimant would not have had the current problems and need for further surgery if he hadn't had the pre-existing cervical disk disease.

16. Dr. Weaver testified that after he issued his report, he was sent an incomplete notice from the Division of Workers' Compensation. Dr. Weaver testified he issued the second DIME summary sheet following the receipt of the incomplete notice. Dr. Weaver testified that he was being forced to comply with the rules of Workers' Comp legislation. Dr. Weaver explained that the rules involving apportionment indicated that the physician should not apportion an injury unless there is a previous documented and rated impairment, but you cannot simply pick a number for apportionment as he did. Dr. Weaver acknowledged during the deposition that this rule applies to injuries after July 1, 2008, such as the injury in this case.

17. Dr. Weaver noted that the 2007 injury involved a surgery that claimant apparently had through his private insurance and did not result in documentation of an actual impairment.

18. The ALJ finds that Dr. Weaver determined he should not apportion the PPD rating based on the DIME summary sheet dated June 9, 2014. The basis of why Dr. Weaver determined he should not apportion the impairment rating is based on his determination after receiving the incomplete notice that apportionment was not applicable under the Colorado Medical Treatment Guidelines applying to apportionment for injuries after July 1, 2008.

19. Nonetheless, the opinion from Dr. Stagg that apportionment is appropriate in this case appears to be a difference of medical opinion between Dr. Stagg and Dr. Weaver. While Dr. Stagg determined that apportionment was appropriate, there is a lack of evidence in this case that Dr. Stagg's apportionment was based on a prior documented impairment. The ALJ therefore determines that respondents have not overcome the opinion of Dr. Weaver by clear and convincing evidence on the issue of the PPD rating provided by Dr. Weaver.

20. With regard to the proposed surgery recommended by Dr. Janssen, Dr. Weave opined that this proposed surgery was not related to the work injury of December 7, 2010. This opinion is supported by the opinion of Dr. Stagg noted in his February 18, 2014 report that it was related to the 2007 injury and not to the December 7, 2010 injury.

21. The ALJ notes that the relatedness of the proposed surgery is intertwined into the decision by Dr. Weaver that claimant is at MMI. Therefore, claimant is held to overcoming the opinion of Dr. Weaver regarding MMI by clear and convincing evidence. Based on the evidence presented at hearing, the ALJ cannot conclude that claimant has overcome this increased burden.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S., 2011. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider,

among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. Section 8-42-107(8)(b)(III) and (c), C.R.S. provides that the DIME physician's finding of MMI and permanent medical impairment is binding unless overcome by clear and convincing evidence. Clear and convincing evidence is highly probable and free from substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it is highly probably the DIME physician is incorrect. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A fact or proposition has been proved by clear and convincing evidence if, considering all of the evidence, the trier-of-fact finds it to be highly probable and free from substantial doubt. *Metro Moving & Storage, supra.* A mere difference of opinion between physicians fails to constitute error. See *Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-356 (March 22, 2000).

4. The ALJ may consider a variety of factors in determining whether a DIME physician erred in his opinions including whether the DIME appropriately utilized the Medical Treatment Guidelines and the AMA Guides in his opinions.

5. As found, respondents have failed to overcome the DIME physician regarding his opinion on claimant's PPD rating by clear and convincing evidence.

6. As found, claimant has failed to overcome the DIME physician regarding his opinion on MMI.

7. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Even though an admission of liability is filed, the claimant bears the burden of proof to establish the right to specific medical treatment. *HLJ Management Group, Inc. v. Kim,* 804 P.2d 250 (Colo. App. 1990).

8. As found, claimant has failed to establish that the proposed medical treatment recommended by Dr. Janssen is reasonable and necessary to cure and relieve claimant from the effects of his work injury.

ORDER

It is therefore ordered that:

1. Respondents shall pay claimant PPD benefits based on the 21% whole person impairment rating provided by Dr. Weaver.

2. Claimant's attempt to overcome the DIME physician on the issue of MMI is denied.

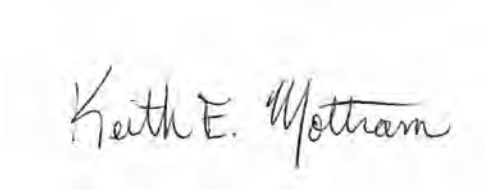
3. Claimant's request for authorization of the cervical surgery recommended by Dr. Janssen is denied.

4. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 7, 2015



Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

1. Whether the claimant's Application for Hearing and Notice to Set should be stricken as having been untimely filed.

2. If not, whether an Interlocutory Order should issue in which the Administrative Law Judge notes that the treating physicians as well as the DIME physician have considered the role of the claimant's chemical sensitivity in formulating treatment protocols for the claimant's admitted back injury.

For the reasons stated below the claimant's Application for Hearing and Notice to Set is stricken, and , therefore, the ALJ does not reach a decision on the second issue.

FINDINGS OF FACT

1. The instant hearing was set pursuant to the claimant's June 25, 2014 Application for Hearing and Notice to Set concerning the endorsed issues of permanent partial disability benefits and "claimant is going to cancel the Division Independent Medical Examination request related to the Final Admission of Liability filed on May 16, 2014. It was claimant's intent that the parties would enter into a stipulation regarding consolidating both claims and allowing claimant to undergo one Division IME once she had recovered from her knee surgery which took place on June 17, 2014. Claimant further seeks to overcome the DIME opinions of Dr. Hua Chen in connection with the impairment rating and MMI for her back as well as claimant's entitlement to medical benefits and impairment for her chemical sensitivity if any, which was not addressed by Dr. Chen."

2. The respondent filed a timely response to Application for Hearing on July 16, 2014 endorsing the additional issue of "C.R.S. 8-43-201(2)(b)(II) for the claimant's failure to timely file an Application for Hearing following respondent's May 16, 2014 Final Admission of Liability.

3. At the commencement of the hearing, the claimant's counsel withdrew the issues of overcoming the DIME as to maximum medical improvement and permanent impairment and indicated that the only issue is the "consideration" of the claimant's pre-

existing chemical sensitivity for further treatment of the underlying February 16, 2012 low back claim.

4. The respondent had previously filed a Motion for Summary Judgment which was denied. The respondent reiterated its objection to proceeding on the merits of the issues presented based upon the claimant's late Application for Hearing, which jurisdictionally barred the claimant from proceeding on the issues endorsed in her June 25, 2014 Application for Hearing and Notice to Set.

5. The ALJ finds that the issues of permanent partial disability benefits, overcoming the DIME as to MMI and permanent impairment, and the "claimant's entitlement to medical benefits and impairment for her chemical sensitivity" were closed by the Final Admission of Liability dated May 16, 2014, when the claimant failed to apply for a hearing on these issues within 30 days.

CONCLUSIONS OF LAW

1. C.R.S. 8-43-203(2)(b)(II) provides that a Final Admission must contain a statement that the claim will automatically be closed as to the issues admitted, "if the claimant does not, within 30 days after the date of the Final Admission, contest the Final Admission in writing and request a hearing on any disputed issues that are ripe for hearing." The courts have previously treated provisions for objecting to and contesting a Final Admission as jurisdictional. *Roddam v. Rocky Mountain Recycling*, WC No. 4-367-003 (January 24, 2005). *Pete Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261 (Colo. App. 2004). If the claimant fails to file her Application, the issues admitted in the Final Admission are closed.

2. It is undisputed in this case that the claimant's Application for Hearing was not filed within 30 days of the date of the May 16, 2014 Final Admission of Liability. In fact, the claimant's Application for Hearing filed on June 25, 2014 was filed 40 days after the date of the filing of the Final Admission of Liability.

3. Claimant's endorsed issues of permanent partial disability benefits, overcoming the DIME as to maximum medical improvement and impairment, and "medical benefits and impairment for her chemical sensitivity" were issues in dispute at the time of the filing of the respondent's May 16, 2014 Final Admission of Liability and accordingly struck.

ORDER

It is therefore ordered that:

1. The claimant's Application for Hearing and Notice to Set, dated June 25, 2014 is hereby stricken and the issues stated therein are denied and dismissed.

2. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATE: January 8, 2015

Administrative Law Judge
Office of Administrative Courts
1259 Lake Plaza Drive, Suite 230
Colorado Springs, CO 80906

ISSUES

- Whether respondents have overcome the findings of the Division-sponsored Independent Medical Exam ("DIME") physician by clear and convincing evidence on the issue of permanent partial disability ("PPD") benefts?

- Whether claimant has proven by a preponderance of the evidence that she is entitled to temporary total disability ("TTD") benefits for the period of November 23, 2013 through the date of maximum medical improvement ("MMI")?

- Whether respondents have proven by a preponderance of the evidence that Claimant committed a volitional act that resulted in termination of her employment?

- Whether Claimant has proven by a preponderance of the evidence that Claimant is entitled to a general award of post-MMI medical benefits?

- Whether Claimant has proven by a preponderance of the evidence that Dr. Price is authorized to provide medical treatment for her industrial injury?

- Whether claimant has proven by a preponderance of the evidence that her average weekly wage ("AWW") should be increased based on the cost of continuing her coverage under Employer's group health insurance plan effective March 1, 2013, and if so, to what extent it should be increased?

- Whether respondents have proven by a preponderance of the evidence that they are entitled to an offset against TTD and PPD benefits owed to claimant for compensation provided to claimant in the Separation Agreement and Waiver ("the Agreement")?

FINDINGS OF FACT

1. Claimant sustained a compensable injury on February 7, 2012 when she tripped and fell in a parking lot. The claim was initially denied by respondents but was found compensable following a hearing. During the same hearing, claimant's claim for compensation resulting from an occupational disease resulting in carpal tunnel syndrome was denied by the court. At that hearing, the parties had stipulated to an AWW of $651.30.

2. Claimant initially sought medical treatment following the injury with her personal physicians at Western Medical Associates on February 9, 2012 and was

evaluated by Ms. Saunders, a nurse practitioner. Claimant provided a consistent accident history and reported that she was sore in her neck, right shoulder and knees. Claimant was provided with prescription medications. Claimant returned to Western Medical Associates on February 15, 2012 and complained of continuing pain in her right shoulder. Claimant was diagnosed with degenerative problems involving the lumbar and thoracic spine and a shoulder sprain.

1. Claimant was evaluated by Dr. Lewis on March 1, 2012 following a referral from Ms. Saunders. Claimant reported a history of low back pain with radiation into her right lower extremity. Claimant reported she had a history of low back pain following an incident after a cholecsystectomy in 2006 when she fell and struck her right hip sustaining a substantial contusion and hematoma formation. Claimant also reported that three weeks ago she fell forward when tripping in a parking lot and related that this fall exacerbated her pain. Claimant complained of pain in her right shoulder, cervicalgia and occipital head pain following her fall. Dr. Lewis noted Claimant had undergone a magnetic resonance image ("MRI") of the lumbar spine in 2006 and again in October 2011. Dr. Lewis recommended an epidural steroid injection ("ESI") which was accomplished on March 5, 2012.

2. Dr. Lewis spoke to Claimant over the phone on March 8, 2012 and noted Claimant experienced an acute exacerbation of pain following her ESI. Claimant reported feeling much better as of March 8, 2012. Claimant returned to Dr. Lewis on March 13, 2012 and reported some limited improvement in her low back following the ESI, she also reported worsening in her neck and upper extremity symptoms. Dr. Lewis noted that he suspected Claimant to have either a cervical radiculopathy or myelopathy and recommended an MRI of her cervical spine, which was accomplished on March 13, 2012. The MRI showed a small right C6-7 disk herniation laterally in the C7 foramen. Dr. Lewis opined that the herniated disk was likely contributing to claimant's right upper extremity symptoms and recommended neurosurgical consultation.

3. Claimant was referred by employer to Dr. Stagg after claimant requested medical treatment in March 2012. Claimant subsequently was allowed to change her choice of physician to Dr. McLaughlin. Dr. McLaughlin initially evaluated claimant on April 25, 2012. Dr. McLaughlin noted that there was no clear etiology as to why claimant fell and recommended that claimant follow up with Ms. Saunders at Western Medical Associates. At the prior hearing in this case, it was determined that Dr. McLaughlin had refused to provide treatment for claimant for non-medical reasons and the claimant was allowed to continue to treat with Ms. Saunders as an authorized provider based on Dr. McLaughlin's refusal to treat.

4. Claimant continued to follow up with Ms. Saunders and also continued to treat with Dr. Lewis who provided claimant with injections into her low back. Dr. Lewis noted on June 5, 2012 that claimant had a specific right upper extremity problem that seemed to fit well with the C7 nerve distribution. Dr. Lewis noted that claimant's MRI of her cervical spine demonstrated a right sided disc prolapsed into the exiting

neuroforamen at the C7 level, but fortunately there was no electrical evidence of a significant permanent neurologic injury. Dr. Lewis referred claimant to Dr. Tice.

5. Dr. Tice initially evaluated claimant on June 13, 2012. Dr. Tice noted claimant had a right C6-7 disk herniation, but noted Claimant's symptoms would not be completely explained by the herniation. Dr. Tice recommended an electromyelogram ("EMG") to determine if her symptoms were caused by her cervical spine or carpal tunnel. Dr. Tice continued to treat claimant for her low back and shoulder pain.

6. Claimant underwent a C6-7 cervical epidural steroid injection ("ESI") on June 22, 2012 under the auspices of Dr. Lewis. Dr. Lewis performed a repeat ESI on July 24, 2012. Claimant returned to Dr. Lewis on August 16, 2012 and reported some improvement (about 60%) in her right upper extremity symptoms following the two ESI's. Dr. Lewis noted claimant was requesting a referral for physical therapy, which was provided by Dr. Lewis.

7. Claimant returned to see Dr. Tice on November 26, 2013. Dr. Tice discussed the fact that Claimant had been through litigation and her fall in the parking lot was deemed to be work-related, but the carpal tunnel condition was not. Dr. Tice further noted that claimant was reporting that when she fell, she struck her hands in the parking lot and had significant pain in her neck and her arms. Dr. Tice noted that his opinion was unchanged and that claimant had a work injury when she fell in the parking lot on her outstretched hands. Dr. Tice opined that claimant had a carpal tunnel syndrome and cervical and lumbar myofascial symptoms as a result of the fall. Dr. Tice noted he could not "precisely assess her clinically" after an inconsistent physical exam. Dr. Tice noted Claimant was quite disturbed as a result of her recent litigation and job loss. Dr. Tice recommended that claimant be evaluated for possible psychological manifestations as a result of her injury and referred claimant for physical therapy. Dr. Tice took claimant off of work completely as a result of his exam on November 26, 2013.

8. Claimant testified at hearing that at the time she saw Dr. Tice, she had pain in many parts of her body and was a wreck emotionally.

9. Claimant testified that she requested Dr. Tice to refer her to Dr. Price for pain management treatment. Claimant testified that she was aware that Dr. Price did acupuncture and laser treatments she wanted to try alternatives to narcotics for her pain management.

10. On December 30, 2013, Claimant returned to see Dr. Winnefeld at Western Medical Associates. Claimant had previously been referred to Dr. Winnefeld for treatment of her carpal tunnel syndrome before that claim was found to be not compensable. Dr. Winnefeld noted that Claimant was complaining of left shoulder, neck, low back, and bilateral leg pain. Dr. Winnefeld noted that the prior order concluded that her fall and subsequent pain from the fall was compensable under the

Colorado Workers' Compensation Act. Dr. Winnefeld noted that it was his understanding that the decision determined that the fall did not cause claimant's carpal tunnel syndrome. Therefore, Dr. Winnefeld limited his exam to the workers' compensation injury, and not for carpal tunnel syndrome.

11. Dr. Winnefeld further noted that it was still his opinion claimant's carpal tunnel syndrome was work-related and that claimant was not at MMI. Dr. Winnefeld noted that clamant was complaining of neck pain, shoulder pain, and thigh pain and reported she had a herniated disc in her neck. Dr. Winnefeld noted that his interpretation of the MRI performed in March 2012 did not show a herniated disc. Dr. Winnefeld opined that Claimant was at MMI for the February 7, 2012 work injury and referred claimant to Dr. Price for an impairment rating.

12. Dr. Winnefeld noted that claimant should be restricted from working due to her severe emotional issues and pain symptoms. Dr. Winnefeld noted that the was little if any objective evidence of the pain symptoms, but nonetheless provided claimant with restrictions based, at least in part, on her pain symptoms.

13. Claimant testified that she asked Dr. Winnefeld to refer her to Dr. Price because she already had a visit scheduled with Dr. Price, on referral from Dr. Tice. Claimant testified that at that point in time, she did not know what was involved with a permanent impairment rating.

14. Claimant returned to Dr. Tice on January 14, 2014. Dr. Tice noted that claimant had an appointment with Dr. Price for a disability rating. Dr. Tice noted that claimant had minor symptoms regarding the cervical and lumbar spine which were related to her work injury. Dr. Tice further noted claimant's ongoing complaints with regard to her carpal tunnel and ulnar neuropathy. Dr. Tice sent a copy of his report to Dr. Price.

15. Dr. Price initially evaluated claimant on January 15, 2014. Dr. Price noted claimant's accident history of falling on pavement on February 7, 2012. Claimant reported pain complaints to Dr. Price involving her neck, low back and shoulder. Dr. Price recommended claimant begin Cymbalta and referred claimant to Dr. Cohen for her psychiatric condition. Dr. Price performed acupuncture and referred claimant for physical therapy. Dr. Price opined that claimant should be off of work for at least a month until she can see her again and return her slowly back to sedentary or light duty.

16. Claimant returned to see Dr. Lewis on January 27, 2014. Dr. Lewis performed a left-sided epidural steroid injection at the C6-C7 level and noted Claimant needed to return in two weeks for reevaluation.

17. Dr. Price later noted on January 29, 2014 that claimant was referred to her by Dr. Tice for consultation for pain management and initially I was meant to see her under her general medical care. Dr. Price noted that she was informed by the attorney

for respondents that the referral was for an impairment rating only. Dr. Price further noted that she had been provided with Dr. Winnefeld's December 30, 2013 medical report placing claimant at MMI. Dr. Price noted that she had not yet determined if claimant was at MMI, nonetheless, Dr. Price performed an impairment rating.

18. Dr. Price ultimately provided an impairment rating of 28% whole person. The 28% whole person rating was comprised of 14% cervical spine impairment, 13% lumbar spine impairment, and 4% whole person impairment to the shoulder.

19. The ALJ credits the report of Dr. Price along with the testimony of claimant and finds that claimant was referred to Dr. Price by Dr. Tice for treatment of her work related injury. The ALJ therefore determines that claimant has established that it is more likely than not that Dr. Price is authorized to provide treatment related to her work injury.

20. Claimant returned to see Dr. Lewis on February 6, 2014. Dr. Lewis noted claimant had improvement following the injection and had been doing physical therapy. Dr. Lewis noted that if claimant's symptoms did not improve with cervical epidural steroid injections, an additional MRI may be needed since her last MRI took place on March 13, 2012.

21. Following Dr. Price's impairment rating, Respondents requested a DIME, and Dr. James Regan was selected as the DIME physician. Dr. Regan was scheduled to meet with Claimant on May 2, 2014. However, it appears from the records that the date of the appointment was subsequently changed to June 6, 2014. In any event, Dr. Regan reviewed claimant's medical records and the prior order from the ALJ in connection with his DIME, obtained a medical history and performed a physical examination in connection with his DIME. Dr. Regan ultimately opined that claimant was at MMI as of June 6, 2014, and provided a 30% whole person impairment rating. The 30% whole person impairment rating consisted of a 15% cervical spine impairment, 12% lumbar spine impairment, and 6% whole person impairment for Claimant's psychological condition related to her depression.

22. With regard to the psychological impairment, Dr. Regan completed the Division of Workers' Compensation Mental Impairment Rating Report Work Sheet and provided claimant with a DSM diagnosis of depression. Dr. Regan provided scores for various areas of function, including activities of daily living; social functioning; thinking, concentration, and judgment; and adaptation to stress. Dr. Regan averaged the two highest area of function ratings to a total of 2, applied the number 2 to the category conversion table, and arrived at the final rating of 6% whole person for Claimant's depression.

23. Respondents filed a timely application for hearing to overcome Dr. Regan's DIME opinion. The ALJ notes that the issue of MMI, including the date of MMI, was not raised by either party before the ALJ. Therefore, as discussed at the

commencement of the hearing, the ALJ lacks jurisdiction to make any ruling involving the finding of MMI by Dr. Regan.

24. Dr. Bernton testified at hearing on behalf of Respondents consistent with his various independent medical examination ("IME") reports. Dr. Bernton performed two IME's in this case. The first on June 26, 2013, before the prior hearing and on March 26, 2014, after Dr. Price's impairment rating. Dr. Bernton testified that claimant's fall in the parking lot did not lead to disability or impairment. Dr. Bernton opined that Dr. Regan's physical impairment rating did not properly follow the directives of the AMA Guides, 3rd Edition, (Revised) because the impairment rating did not properly consider the guides instructions regarding causation. Dr. Bernton opined that the discussion regarding impairment must include a discussion of the pathophysiology of the particular condition and of the pertinent host characteristics. Dr. Bernton noted that the existence of an impairment does not create a presumption of the contribution by a factor with which the impairment is often associated. Dr. Bernton testified that Dr. Regan's rating of 25% for the neck and the back was flawed due to a failure to reach an assessment of a reasonable pathophysiology that could have occurred from the February 7, 2012 fall, and a failure to establish that the force and magnitude of any injury that may have occurred on February 7, 2012 was sufficient to create the impairment measured by Dr. Regan more than two years later. According to Dr. Bernton, the rating provided by Dr. Regan was not consistent with the history, and not compliant with the causation principles of the AMA Guides.

25. Dr. Bernton testified that he agreed with Dr. Kleinman that Dr. Regan was wrong in asserting that claimant had no pre-existing depression. Dr. Bernton testified that there was no evidence of the type of methodology required to assess mental impairment, and, in this case, there was no evidence of treatment of the condition rated by the authorized physicians in this case. Dr. Bernton also noted that he had performed psychological testing on June 28, 2013 that showed a 98% job dissatisfaction. Dr. Bernton testified that the claimant's job dissatisfaction was not insignificant in the course of this claim. Dr. Bernton testified that he wouldn't expect a trip and fall injury to result in the type of impairment described in Dr. Regan's DIME report because Dr. Bernton felt that claimant had only sustained a minor injury on February 7, 2012.

26. The ALJ finds the testimony of Dr. Bernton to be unpersuasive in determining the issue of PPD. The ALJ notes that the opinion of Dr. Bernton represents a difference of medical opinion as to whether the permanent impairment measured by Dr. Regan was related to the February 7, 2012 fall. Dr. Bernton opined that it was not based on the findings of inconsistencies by the medical providers and his opinion that claimant's fall represented only a minor injury. The ALJ finds that these opinions do not serve to overcome the contrary opinions of Dr. Regan by clear and convincing evidence.

27. With regard to claimant's treatment for psychiatric issues, claimant testified that employer offered its employees six free visits with a counselor as an employment benefit. Claimant testified that she began seeing a therapist, Ms. Starbird, in June 2012 after her work injury because she felt the attitude of managers had become more negative towards her and she was in significant pain at work and would often cry during working hours. The therapy records indicate that claimant complained of being was overwhelmed, stressed, hurt, and frustrated following her injury.

28. Claimant continued to treat with the therapist through the summer of 2012 and noted Claimant had FMLA, but had used all of her sick time and all of her vacation time. The records also document claimant's ongoing personal issues involving her family and issues with work not related to her work injury. The records also document claimant complaining to the therapist that her anxiety was higher because of increased pain.

29. Claimant testified that Ms. Starbird referred her to Dr. Bishop a clinical psychologist who saw her initially on September 25, 2012. Dr. Bishop noted in his description of her presenting problem that claimant sustained an accident at work while on a smoking break when she tripped and fell in the parking lot, and suffered injuries to her wrists, a disc in her neck, and her knees. Claimant reported to Dr. Bishop that since the injury she states that she has been treated differently at work.

30. Claimant continued to see Dr. Bishop through the end of 2012 and into 2013. In a letter dated May 15, 2013, Dr. Bishop wrote that Claimant had reported to him that her long career with employer had been "rather suddenly interrupted by an injury she suffered at work." Dr. Bishop noted that the unsupportive relationship with her immediate supervisor and other senior employees was more instrumental in the development and maintenance of Claimant's clinical depression. Dr. Bishop noted that Claimant reported she was frustrated with her inability to be as productive as she had for many years due to her injuries. Dr. Bishop noted that her stress and frustration was increased by the lack of "institutional and emotional support" she received for her injuries.

31. As noted above, Dr. Price had referred claimant to Dr. Cohen on January 15, 2014. The referral was initially denied by respondents. Dr. Price noted in her report that claimant's stress level and anxiety needed treatment and was impairing her recovery.

32. Following the DIME evaluation with Dr. Regan, claimant was evaluated by Dr. Cohen on June 11, 2014. Dr. Cohen noted that claimant had sustained injuries in her fall with employer and had sought treatment for her non-work related carpal tunnel syndrome through Medicaid. Dr. Cohen noted that claimant had been referred to his office for behavioral education around helping her deal with residual pain. Dr. Cohen noted claimant's ongoing issues involving her financial situation, her prior marriage and

her work injury. Dr. Cohen recommended claimant continue with 6-8 focused psychotherapy visits related to the aspects of her workers' compensation claim.

33. The ALJ finds the opinions of Dr. Cohen to be credible and persuasive.

34. Claimant returned to Dr. Bishop on June 2, 2014. Claimant reported some improvement in her mood which she attributed to Cymbalta. Dr. Bishop re-evaluated claimant on June 24, 2014 and noted she was feeling an increased amount of depression and that the insurer was fighting her impairment rating from the DIME physician. Dr. Bishop recommended claimant further develop and improve her skills at mindfulness and relaxation and work on her procrastination. Claimant again returned to Dr. Bishop on July 8, 2014. Dr. Bishop noted that he and Claimant had processed her interactions with physicians around her disability, and her desire to recover from her injuries. Dr. Bishop noted Claimant was struggling with the idea that she was disabled and that she wanted to go back to work.

35. Dr. Kleinman performed a psychiatric IME on July 11, 2014. Dr. Kleinman issued a report in connection with his IME evaluation and documented claimant's work history and psychological issues with her work. Claimant reported to Dr. Kleinman that she believed her supervisor's opinion of her changed after her work injury. Claimant also noted that around this same time there were errors on a "storm" report that claimant felt she was being blamed for, while claimant felt the errors were attributable to her supervisor.

36. Dr. Kleinman reviewed claimant's medical records and noted that the mental health notes from 2012 and 2013 indicated that claimant's stress was related to family problems, employment problems, litigation issues and personal problems. Dr. Kleinman opined that there was very little mention in the records of psychological issues and stress related to claimant's pain from the trip and fall. Dr. Kleinman noted that claimant was very concerned with how she was treated at work, but Dr. Kleinman opined that claimant's work stress would be present in all fields of employment as it related to reprimands and termination. Dr. Kleinman diagnosed claimant with a major depressive episode that was recurrent. Dr. Kleinman opined that the depression was related to other issues and not related to the trip and fall at work.

37. On July 11, 2014, Dr. Cohen noted that Claimant had undergone the independent medical examination with Dr. Kleinman, but that she should not review Dr. Kleinman's reports and allow her attorney to handle those issues. Dr. Cohen noted that the larger issues revolved around the fact that she has some chronic physical issues which were long standing in nature that claimant will have to accept and learn to live with.

38. Dr. Robert Kleinman testified at hearing on behalf of Respondents consistent with his report dated July 14, 2014. Dr. Kleinman testified that Dr. Regan's psychological impairment rating was invalid because Dr. Regan did not perform a

psychiatric evaluation or diagnosis, and did not follow the correct steps to provide an impairment rating under the Division of Workers' Compensation rules. Dr. Kleinman testified that Dr. Regan provided an impairment rating without discussing how he came to that rating. Dr. Kleinman testified that Dr. Regan only provided a one sentence history of claimant's psychiatric condition. Dr. Kleinman noted that Dr. Regan provided claimant with a diagnosis of depression, but testified that Dr. Regan didn't analyze the diagnosis. Dr. Kleinman further took issue with the fact that claimant had a prior history of major depression. Dr. Kleinman noted that Dr. Regan's finding that claimant was not depressed prior to the fall was factually wrong. Dr. Kleinman relied on records from Ms. Saunders in March 2010 that indicated that claimant was on Prozac as of that date and the records failed to show that the Prozac was discontinued.

39. The ALJ rejects the testimony of Dr. Kleinman at hearing as unpersuasive. Dr. Kleinman relied on records from Dr. Bishop and noted that claimant was not treated for psychiatric issues related to the workers' compensation claim following her injury. However, this finding ignores the fact that there was significant confusion regarding the compensability of claimant's work injury after it occurred and resulted in Dr. McLaughlin refusing to treat claimant for her work injury until after a finding of compensability was obtained by claimant. Even after her claim was found to be compensable, insurer denied the initial referral to Dr. Cohen provided by Dr. Price.

40. The ALJ further finds that claimant made references to her psychiatric problems as being related to her pain from her work injury to Dr. Bishop and Ms. Starbird. While claimant also had other psychological issues during this same period of time, the ALJ cannot state that the opinions, as expressed by Dr. Kleinman, and the basis for his opinions, overcome the contrary opinions expressed by Dr. Regan that claimant had a ratable psychological disorder related to her work injury by clear and convincing evidence.

41. Claimant testified that Dr. Regan provided an impairment rating for her depression because her pain following the work injury prevented her from working and enjoying activities. Claimant testified that she was not depressed prior to the fall, although there were some periods of time where she had mental health problems. Claimant testified that previously she could always work and provide for herself and her family, and after this injury she has been unable to do that. Claimant testified that she had some periods of depression when she was divorced 29 years prior and when her mother died 10 years prior. Claimant testified that those periods of time were not as bad as the periods of time after this injury, because she was unable to handle challenges in her life. Claimant testified that after her injury and termination, she had difficulty communicating and being intimate with her husband, and had difficulty engaging in activities she used to enjoy like swimming and playing with her grandchildren. Claimant testified she was prescribed Prozac in 2010, but did not continue the prescription until after her work injury. The ALJ credits the testimony of claimant and finds it to be credible and persuasive.

42. Claimant testified that she was asked to submit her resignation on February 27, 2013. She testified that her supervisor told her she was being terminated because of her performance. Claimant testified that she had recently received a performance evaluation giving her a low score. Claimant testified that she had received the review a few weeks before she was terminated. Claimant testified that she was not threatened by the fact that she had received a low score because employer previously would offer training to help improve weaknesses in job performance. Claimant testified that she responded to the low score on the performance review with a three-page email response to her supervisor clarifying why she did things the way she did. Claimant testified that some of the policies for employer had changed, and she was asked to do work tasks in a different way than she had done them previously.

43. Claimant testified that prior to her termination, she had undergone some training to improve her work, especially in the areas of coordination of benefits and eligibility. She testified that these were small-group trainings with her supervisor Ms. McKinney and later with Ms. Marden. Claimant testified that she was not worried that she had to do training, because ongoing training was standard in her work with employer. Claimant testified that she had received a $300 merit bonus for her work for employer in 2012. Claimant testified that not all employees receive merit bonuses.

44. Claimant testified that prior to her termination, she was never warned that she needed to perform a specific act or she would be terminated. Claimant testified that she was not aware of any employer rules or regulations that she violated that caused her to be terminated. Claimant testified that there was never a discussion of her termination prior to the day she was terminated. Claimant testified that she was surprised when she heard the reasons given to her for her termination because she had been working with employer for more than twelve years and knew her job inside and out.

45. Ms. McKinney, the supervisor of the claims department for employer, testified at hearing. Ms. McKinney testified that she may have started supervising Claimant in 2011, but was unsure of when exactly she started as claimant's supervisor. Ms. McKinney testified that claimant had a lot of errors in her work. Ms. McKinney testified that there were some changes in the system and that the examiners were looking at more difficult claims. Ms. McKinney testified that in February 2013 she was asked for feedback regarding claimant's performance and reported that she was not seeing improvement in claimant's performance. Ms. McKinney admitted on cross-examination that some of the claimant's mistakes were due to the programming change that happen each year. Ms. McKinney testified that she was not present for the meeting involving claimant's termination. Ms. McKinney testified that she was not aware of whether claimant received a merit bonus, but that the bonuses are given out based on merit and not to every employee.

46. Ms. Burke, the director of human resources for employer, testified at hearing. Ms. Burke testified that she was involved in the decision to terminate claimant.

Ms. Burke testified that claimant was testified for poor performance. Ms. Burke testified that claimant was retrained and did not improve her performance. Ms. Burke did not identify an incident or a violation of employer's policies that led to claimant's termination.

47. The ALJ concludes that claimant was terminated as a result of poor job performance. However, respondents have not proven that claimant was terminated as a result of a volitional act. The ALJ cannot state based on the testimony of Ms. Burke and Ms. McKinney that claimant committed a volitional act that resulted in her termination of employment. Claimant appears, based on the testimony of Ms. Burke and Ms. McKinney, to have been terminated based on an inability to adequately perform the functions of her job, and not based on a volitional act.

48. Claimant testified that after her termination she was offered a severance package, but that she did not accept it until approximately a year later. Claimant signed the Agreement on February 27, 2014. The Agreement provides that claimant would be paid a lump sum of $8,060 as a severance payment in exchange for claimant waiving any and all claims under the ADEA and release employer from liability under several employment laws. The Agreement states: "Notwithstanding any other provision in this Agreement, this Agreement shall not be construed to limit or modify [claimant's] Workers' Compensation rights for the claims designated as W.C. No. 4-914-529 and 4-890-670." The Agreement makes no reference to the basis for claimant's termination, but notes in paragraph one that claimant voluntarily resigns and separates from employment with employer effective February 27, 2013 which is thereafter referred to as her "Termination Date".

49. Claimant testified that she signed the Agreement because she did not think that employer would ever hire her back, and because she thought that her workers' compensation claim was nearly completed.

50. Claimant testified that she continues to receive medical treatment, including treatment from Dr. Price and physical therapists, to treat the ongoing symptoms from her February 7, 2012 injury. Claimant testified that the treatment she receives improves her symptoms. Claimant testified she hopes to continue receiving treatment so that she can improve her symptoms and return to work.

51. The ALJ finds that Dr. Regan's DIME report provides an impairment rating for claimant's specific disorder diagnoses and loss of range of motion in her cervical and lumbar spine to her work injury. The ALJ finds that the range of motion testing and the Table 53 diagnoses during the DIME were similar and consistent with the determinations of Dr. Price in her permanent impairment rating. Although Dr. Bernton opined that no permanent impairment rating is warranted for Claimant's lumbar or cervical spine, The ALJ cannot state that it was clearly erroneous for Dr. Regan to include specific disorder diagnoses under Table 53 or the range of motion testing results in his final impairment rating.

52. Dr. Regan's report also indicates that he relates claimant's depression and its effect on her activities of daily living, socialization, cognition, judgment, and adaptation to stress to her February 7, 2012 work injury. The ALJ notes that Dr. Kleinman opined that no permanent impairment is warranted for claimant's depression because Claimant's depression is not related to the work injury. Dr. Kleinman also opined that Dr. Regan did not perform a proper psychological evaluation. The ALJ finds this testimony not persuasive. The ALJ credits the testimony of claimant at hearing along with the medical reports and opinions from Ms. Starbird, Dr. Bishop, Dr. Cohen, Dr. Price, and finds that it was not clearly erroneous for Dr. Regan to include a psychological rating for depression in his impairment rating.

53. Respondents argue that the psychiatric rating should not be included because the rating relates to litigation stress. The ALJ is not persuaded. The ALJ notes that claimant initially sought counseling outside of the workers' compensation system in June 2012 after her work injury and reported that she was having issues related to, among other issues, the fact that she was in pain while at work and would often cry during work hours. The ALJ notes that claimant's attempts to receive treatment for her psychiatric condition was frustrated by respondents' denial of the claim and denial of her referrals for psychiatric treatment. The fact that these denials may have caused issues for claimant which she discussed with her treating physicians does not make her entire psychiatric claim not compensable under a theory that it is related to litigation stress. Instead, the ALJ finds that claimant's psychiatric issues, as noted by Ms. Starbird in her initial evaluation, are related to claimant experiencing significant pain as a result of her work injury.

54. The ALJ credits the testimony of claimant and the medical records in evidence, including the records of Dr. Tice, Dr. Price, Dr. Cohen and Dr. Regan and determines that Claimant has proven it is more likely than not that she is entitled to a general award of post-MMI medical benefits arising out of the admitted February 7, 2012 injury.

55. The ALJ notes that Ms. McKinney and Ms. Burke both testified that Claimant was terminated as the result of poor performance, and notes that neither could identify a distinct incident that resulted in Claimant's termination. The ALJ finds that Respondents failed to prove by a preponderance of the evidence that Claimant performed a volitional act that resulted in termination of her employment.

56. The ALJ credits Claimant's testimony and the medical records from Dr. Price and determines that Dr. Price is an authorized treating provider who is within the chain of authorized referrals by virtue of her referral from Dr. Tice.

57. The ALJ notes that Dr. Tice provided a no-work restriction for Claimant on November 26, 2013. The ALJ also notes that Dr. Winnefeld and Dr. Price provided work restrictions for claimant on December 30, 2013 and January 15, 2014, respectively, taking claimant off of work completely. The ALJ finds that claimant has

proven it is more likely than not that her injury resulted in a disability lasting more than three work shifts, and resulting in the no-work restrictions from Dr. Tice, Dr. Winnefeld, and Dr. Price. The ALJ therefore finds that claimant is entitled to temporary total disability benefits beginning November 26, 2013 and continuing until June 6, 2014 when claimant was placed at MMI by the DIME physician. The ALJ notes that the MMI date4 was not raised as an issue by the parties and was not subject to litigation.

58. The ALJ credits the testimony of Ms. McKinney and Ms. Burke and notes that claimant was terminated from her employment. The ALJ notes that while the Agreement in this case makes representations regarding a voluntary resignation, the testimony presented at hearing establish that there was no voluntary resignation in this case. The ALJ further finds that the $8,060 provided to claimant in the Agreement was to settle any potential employment lawsuits and will not have any effect on claimant's rights to workers' compensation benefits, including her right to TTD benefits.

59. Respondents contend that Claimant was paid wages in the form of a lump sum payment after claimant signed the Separation Agreement and Waiver. Respondents contend that they are entitled to an offset for the amount of the lump sum payment pursuant to the Separation Agreement against temporary disability benefits. The ALJ is not persuaded.

60. The ALJ credits Claimant's testimony that the $8,060.00 was paid pursuant to the negotiated agreement for Claimant for not filing or pursuing certain legal actions outside of her workers' compensation claims. This is also reflected in the plain language of the Agreement. The ALJ finds that the amount paid was not wages and should not, in any way, effect claimant's right to workers' compensation benefits.

61. Claimant testified that the group health plan provided by Employer covered herself and her entire family during her employment. The cost of continuing the coverage she received during her employment is $1,462.44 per month, which would have covered her family. Claimant testified she received the COBRA notice in March 2013. Claimant testified that she elected to continue health coverage for only herself for one month following her termination, but could not afford to pay for any additional continuation coverage. The cost for the continuing health care that claimant purchased for one month was $585.04.

62. The parties agree that the claimant's AWW should be increased in the present case based on claimant's entitlement to COBRA. Respondents argue that claimant's COBRA increase is limited to the single coverage claimant elected and maintained for one month. Respondents argument is without merit.

63. The Colorado Supreme Court held in *Ray v. Industrial Claim Appeals Panel*, 145 P.3d 661 (Colo. 2006) that the cost of continuing the injured workers' health insurance should be included in calculating the AWW of an injured worker, regardless of whether the injured work elects to continue coverage.

64. In this case, claimant testified she had health insurance through her employer for her family. According to the COBRA letter entered into evidence, the cost of continuing the health insurance coverage for her entire family was $1,462.44 per month. Claimant testified she did not continue the coverage for her entire family because she could not afford it. Instead, she continued coverage for herself for one month. Respondents appear to concede in their position statement that if claimant makes no payment for any continuing COBRA benefit, claimant's AWW is increased by the full amount. Respondents argue that where the injured worker makes a reduced payment for continuing COBRA coverage for an individual as opposed to the family, however, the reduced payment is the amount that should be used for increasing the AWW under Section 8-40-201(19)(b).

65. Respondents argument would effectively reduce the COBRA coverage that should be included in the AWW in any case where an injured worker, such as the claimant in this case, elects to select coverage only for herself and not her family for financial reasons. This is not the intent of the Act. Because the Colorado Supreme Court has held that the cost of continuing the COBRA health insurance should be included in the AWW calculation regardless of whether the injured worker selects coverage, than the full cost of continuing the COBRA coverage should be included where the injured worker elects to limit the extent of the COBRA coverage.

66. It should also be noted that claimant in this case had health insurance for her entire family through her a health insurance plan provided by employer. The mere fact that claimant could not afford to continue this plan after she was terminated, and while her claim was still pending during a period of time in which claimant faced a significant financial hardship, should not serve to reduce claimant's COBRA calculation.

67. The ALJ finds that claimant's cost of continuing the health insurance coverage she actually received during her employment with employer is $1,462.44 per month, or $336.56 per week. The ALJ credits the COBRA letter entered into evidence in coming to this finding. The ALJ finds that combining the $336.56 for claimant's COBRA coverage to the previously stipulated AWW of $651.30, results in a new AWW of $987.86.

68. The ALJ credits the medical reports from Dr. Tice and Dr. Price and finds that the ongoing medical treatment provided by Dr. Price is reasonable and necessary to maintain claimant at MMI. The ALJ rejects the contrary opinions expressed by Dr. Bernton as unpersuasive in coming to the finding.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving

entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2006. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Pursuant to Section 8-43-404(5), C.R.S.,

4. "Authorization" refers to the physician's legal authority to treat, and is distinct from whether treatment is "reasonable and necessary" within the meaning of Section 8-42-101(1)(a), C.R.S. 2008. *Leibold v. A-1 Relocation, Inc.*, W.C. No. 4-304-437 (January 3, 2008). Section 8-43-404(5)(a) specifically states: "In all cases of injury, the employer or insurer has the right in the first instance to select the physician who attends said injured employee. If the services of a physician are not tendered at the time of the injury, the employee shall have the right to select a physician or chiropractor."

5. As found, based on the testimony of claimant at hearing and the corresponding medical records from Dr. Price dated February 7, 2014, claimant has proven by a preponderance of the evidence that she was referred by Dr. Tice to Dr. Price for consultation for pain management treatment. Claimant was also referred to Dr. Price by Dr. Winnefeld for an impairment rating. However, the referral from Dr. Winnefeld does not limit that referral claimant received from Dr. Tice to Dr. Price for medical treatment.

6. As found, respondents are liable for the cost of the medical treatment provided by Dr. Price as she is an authorized provider within the chain of referrals. Respondents are liable for the cost of the treatment provided by Dr. Price pursuant to the Colorado Medical Fee Schedule.

7. Section 8-42-107(8)(b)(III) and (c), C.R.S. provides that the DIME physician's finding of MMI and permanent medical impairment is binding unless overcome by clear and convincing evidence. Clear and convincing evidence is highly probable and free from substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it is highly probably the DIME physician is incorrect. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A fact or proposition has been proved by clear and convincing evidence if, considering all of the evidence, the trier-of-fact finds it to be highly probable and free from substantial doubt. *Metro Moving & Storage, supra.* A mere difference of opinion between physicians fails to constitute error. See *Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-356 (March 22, 2000).

8. The ALJ may consider a variety of factors in determining whether a DIME physician erred in his opinions including whether the DIME appropriately utilized the Medical Treatment Guidelines and the AMA Guides in his opinions.

9. As found, the ALJ credits the opinions of Dr. Regan in his DIME report and finds that respondents have failed to overcome the opinions of Dr. Regan regarding the issue of permanent impairment by clear and convincing evidence. As found, the opinions of Dr. Regan are supported by the medical records and impairment rating provided by Dr. Price and are found to be credible and persuasive. As found, the ALJ credits the opinion of Dr. Regan regarding the cause of claimant's psychiatric condition and impairment and finds that respondents have failed to overcome the opinion by clear and convincing evidence. As found, claimant's psychiatric issues are related to her pain from the work injury and not related to "litigation stress".

10. To prove entitlement to temporary total disability (TTD) benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a), *supra*, requires claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no statutory requirement that claimant establish physical disability through a medical opinion of an attending physician; claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo.App. 1998).

11. As found, claimant has proven by a preponderance of the evidence that she was under work restrictions set forth by Dr. Tice and Dr. Winnefeld and was unable to resume her prior work due to the restrictions. As found, claimant has proven by a preponderance of the evidence that the restrictions were related to her February 7, 2012 work injury.

12. Sections 8-42-105(4) and 8-42-103(1)(g), C.R.S., contain identical language stating that in cases "where it is determined that a temporarily disabled employee is responsible for termination of employment the resulting wage loss shall not be attributable to the on-the-job injury." In *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P3d 1061 (Colo. App. 2002), the court held that the term "responsible" reintroduced into the Workers' Compensation Act the concept of "fault" applicable prior to the decision in *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Hence, the concept of "fault" as it is used in the unemployment insurance context is instructive for purposes of the termination statutes. *Kaufman v. Noffsinger Manufacturing*, W.C. No. 4-608-836 (Industrial Claim Appeals Office, April 18, 2005). In that context, "fault" requires that the claimant must have performed some volitional act or exercised a degree of control over the circumstances resulting in the termination. *See Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1995) *opinion after remand* 908 P.2d 1185 (Colo. App. 1995).

13. As found, respondents have failed to establish by a preponderance of the evidence that claimant committed a volitional act that led to claimant's termination of employment. As found, the ALJ credits the testimony of Ms. Burke and Ms. McKinney and finds that claimant was terminated after her work performance failed to improve, but not due to any volitional act on the part of claimant.

14. As found, the Agreement entered into evidence establishes that claimant was terminated as of February 27, 2013. The ALJ does not find that claimant voluntarily resigned her position in connection with the signing of the Agreement.

15. Section 8-40-201(19)(b), C.R.S. provides that the average weekly wage of an injured employee shall include the amount of the employee's cost of continuing the employer's group health insurance plan. The replacement cost of health insurance to the claimant shall be included in the claimant's average weekly wage. *State Compensation Insurance Authority v. Smith*, 768 P.2d 1256 (Colo. App. 1988). The plain language of Section 8-40-201(19)(b), C.R.S., says nothing that would require claimants to purchase health insurance in order for the cost of the insurance to be included in the average weekly wage, and the statute does not require the actual purchase of health insurance for the full amount to be included in the average weekly wage. *Ray, supra.* 145 P.3d at 668.

16. As the Colorado Supreme Court noted in *Ray*, the employer's argument that the injured worker be required to purchase the COBRA benefit fails to consider the significant delay that may occur between the time of employment termination and the

actual receipt of workers' compensation benefits. In this case, claimant was under active medical care for a denied workers' compensation claim at the time she was terminated. As found, claimant testified at hearing that she did not elect the full COBRA coverage due to the fact that she could not afford the full cost of continuing COBRA coverage. The ALJ finds that these facts are consistent with the findings of the Supreme Court in *Ray* to substantiate claimant's claim that her AWW should be based on the full cost of COBRA benefits as opposed to the limited coverage she elected for one month.

17. As found, claimant's cost of continuing the coverage she actually received during her employment with Employer is $1,462.44 per month, or $336.56 per week. Combining the $336.56 to the previously stipulated AWW of $651.30, results in a new AWW of $987.86.

18. The need for medical treatment may extend beyond the point of maximum medical improvement where claimant requires periodic maintenance care to prevent further deterioration of her physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1999); *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an order for future treatment if supported by substantial evidence of the need for such treatment. *Grover v. Industrial Commission*, *supra.*

19. As found, claimant has proven by a preponderance of the evidence that the proposed medical treatment recommended by Dr. Price is reasonable and necessary to maintain claimant at MMI.

ORDER

It is therefore ordered that:

1. Respondents shall pay claimant TTD benefits from November 26, 2013 and continuing until June 6, 2014 when claimant was placed at MMI.

2. Claimant's new AWW based on the cost of continuing her health insurance is $987.86. The AWW is effective February 27, 2013, her termination date.

3. Respondents shall pay claimant PPD benefits based on the impairment rating provided by Dr. Regan.

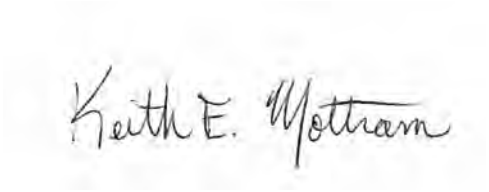
4. Respondents shall admit for post-MMI medical benefits.

5. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 16, 2015



Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable right hand injury during the course and scope of his employment with Employer on September 2, 2014.

2. Whether Claimant has established by a preponderance of the evidence that he is entitled to receive reasonable, necessary and related medical benefits for his September 2, 2014 right hand injury.

3. Whether Concentra Medical Centers is Claimant's authorized treating provider.

4. Whether Claimant has proven by a preponderance of the evidence that medical treatment in the form of a right hand closed reduction procedure to be performed by Craig Davis, M.D. is reasonable, necessary and related to his September 2, 2014 industrial injury.

FINDINGS OF FACT

1. Employer is a correctional facility. Claimant worked for Employer as a Maintenance Supervisor. He performed general maintenance duties.

2. Claimant testified that on September 2, 2014 he was applying caulk between the floor and walls in the dining halls of Employer's facility. He reported that he was injured when he "stood up and struck his head on a metal box on the wall. It made him mad so he punched the box, and broke his hand."

3. Claimant reported the injury to supervisor Captain Christopher Todd Phillips on September 2, 2014. Captain Phillips explained that he gave Claimant a designated provider list on September 2, 2014. Claimant reported to Captain Phillips that he intended to seek medical attention for the injury to his right hand at Concentra Medical Centers.

4. On September 2, 2014 Captain Phillips also completed a Questionable Claim Notice regarding the September 2, 2014 incident. Captain Phillips documented in the Notice that Claimant came to his office and stated "You know that metal sick call box on the wall in the DRDC Dining Hall, I stood up and hit my head. I got mad and punched the box. Look at my hand."

5. Captain Phillips testified that Claimant's right hand injury occurred because Claimant was upset and punched the metal call box. Captain Phillips remarked that Claimant reported to him the only injury he incurred on September 2,

2014 was to his right hand. In his written and signed description of the incident completed on September 2, 2014 Claimant stated: "I was caulking the wall/floor joint when I stood up I hit my head on the sick call box. I retaliated by punching it. Result was an injury to my right hand smallest digit area."

6. Claimant testified that he had hit his head on the metal call box two times prior to striking it a third time and incurring an injury. Claimant commented that he took no action in response to the first time he hit his head on the metal call box. After the second time Claimant hit his head on the metal call box he retaliated by striking it with his right hand. The third time Claimant hit his head on the metal call box he again struck it with his right hand and fractured his fifth metacarpal.

7. Captain Phillips stated that "punching a metal call box is not part of any maintenance work duty." Claimant testified that he agreed punching the metal call box would not be included on any list of his job duties. However, he stated he believed it was a job duty because he was required to caulk the floor that caused him to be in the area where he eventually punched the metal call box.

8. Claimant remarked that he was aware the call box was metal and very hard before he punched it. He noted that he fractured the fifth metacarpal in his right hand because he intentionally punched the metal call box.

9. On September 2, 2014 Claimant obtained medical treatment at Concentra Medical Centers. Claimant was evaluated by Matt Miller, M.D. Dr. Miller documented that Claimant told him the injury occurred when "[p]atient stood up and hit head on box. In frustration, then punched the metal box with right hand." X-rays of Claimant's right hand demonstrated an angulated distal shaft fracture of the fifth metacarpal bone. Dr. Miller referred Claimant to Craig Davis, M.D. for anticipated right hand surgery.

10. On September 3, 2014 Claimant was evaluated by Dr. Davis at Colorado Orthopedic Consultants. Dr. Davis documented that Claimant reported the injury occurred when "he struck his hand on a box resulting in a fifth metacarpal neck fracture." During the office visit Dr. Davis performed a closed reduction followed by placing a cast with a fairly firm mold over the fracture. He noted that post reduction x-rays showed some improvement but Claimant still had a significant angulation and step-off on the oblique view. Dr. Davis remarked "I don't think this is an adequate reduction. I therefore recommend open reduction internal fixation." On September 12, 2014 Respondent filed a Notice of Contest because claimant's right hand injury was not work-related.

11. Claimant has failed to demonstrate that it is more probably true than not that he suffered a compensable right hand injury during the course and scope of his employment with Employer on September 2, 2014. The persuasive evidence reflects that Claimant's September 2, 2014 right hand injury was self-inflicted.

12. Claimant testified that on September 2, 2014 he was applying caulk between the floor and walls in the dining halls of Employer's facility. He reported that he

was injured when he "stood up and struck his head on a metal box on the wall. It made him mad so he punched the box, and broke his hand." Captain Phillips credibly explained that Claimant's right hand injury occurred because Claimant was upset and punched the metal call box. In his written and signed description of the incident completed on September 2, 2014 Claimant detailed: "I was caulking the wall/floor joint when I stood up I hit my head on the sick call box. I retaliated by punching it. Result was an injury to my right hand smallest digit area."

13. Based on Claimant's written documentation, reports to his doctors, statements to Employer and testimony at hearing, he hit his head three times and actually used his right hand to hit the metal box twice. Claimant's confirmation that he hit his head three times and punched the box more than once demonstrates that Claimant thought about what had happened and made the conscious decision to punch the metal call box in retaliation. The persuasive evidence in the record supports the finding that Claimant did not hit the metal call box with his right hand immediately but only after the second time he hit his head. By the third time Claimant hit his head he already recognized that the call box was very hard and made of metal. Claimant thus had significant time to consider the action he was going to take. He did not react immediately without thinking after the first time he hit his head, but instead waited and did not punch the metal box in retaliation until after he had taken time to carefully consider his options. Claimant's action in punching the metal box was thus self-inflicted, intentionally motivated and retaliatory in purpose.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and

bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. The Act specifically provides that the right to recovery shall obtain "where the injury or death is proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment and is not intentionally self-inflicted." §8-41-301(1)(c), C.R.S. Self-inflicted injuries are thus not compensable.

6. In *Leon v. Environmental Abatement Services*, W.C. No. 4-438-030 (ICAP, May 13, 2002).the Industrial Claim Appeals Office determined that Claimant's injury, incurred when he punched a window, was voluntarily self-inflicted and not compensable. The ALJ had concluded that "punching the broken window with a bare fist was almost certain to cause injury and evidences more than merely a failure to realize the probable consequences of a foolish act." *Id*. ICAP remarked that Claimant's motivation to strike the window was to "retaliate" against the employer. ICAP stated it was important to the evaluation of whether the injury was self-inflicted that Claimant did not instantaneously strike the window upon being directed to change jobs but instead first began walking to the new work station. *Id*.

7. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he suffered a compensable right hand injury during the course and scope of his employment with Employer on September 2, 2014. The persuasive evidence reflects that Claimant's September 2, 2014 right hand injury was self-inflicted.

8. As found, Claimant testified that on September 2, 2014 he was applying caulk between the floor and walls in the dining halls of Employer's facility. He reported that he was injured when he "stood up and struck his head on a metal box on the wall. It made him mad so he punched the box, and broke his hand." Captain Phillips credibly explained that Claimant's right hand injury occurred because Claimant was upset and punched the metal call box. In his written and signed description of the incident completed on September 2, 2014 Claimant detailed: "I was caulking the wall/floor joint when I stood up I hit my head on the sick call box. I retaliated by punching it. Result was an injury to my right hand smallest digit area."

9. As found, based on Claimant's written documentation, reports to his doctors, statements to Employer and testimony at hearing, he hit his head three times and actually used his right hand to hit the metal box twice. Claimant's confirmation that

he hit his head three times and punched the box more than once demonstrates that Claimant thought about what had happened and made the conscious decision to punch the metal call box in retaliation. The persuasive evidence in the record supports the finding that Claimant did not hit the metal call box with his right hand immediately but only after the second time he hit his head. By the third time Claimant hit his head he already recognized that the call box was very hard and made of metal. Claimant thus had significant time to consider the action he was going to take. He did not react immediately without thinking after the first time he hit his head, but instead waited and did not punch the metal box in retaliation until after he had taken time to carefully consider his options. Claimant's action in punching the metal box was thus self-inflicted, intentionally motivated and retaliatory in purpose.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's request for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

The issues presented for determination are whether the Claimant sustained a compensable injury to his right shoulder on January 20, 2011; whether he is entitled to medical treatment for that injury; whether the surgery he underwent on September 13, 2012 was related to the January 20, 2011 injury; and whether Dr. Horan is an authorized provider.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. The Claimant was involved in an incident on January 20, 2011, when he fell on ice while performing a rescue exercise. Claimant reported to the Employer that he injured his right shoulder and elbow to the Employer. He reported landing on his right elbow and jarring his right shoulder.

2. On January 21, 2011, Respondent timely provided Claimant with a designated provider list from which Claimant selected Dr. Elizabeth Bisgard. He was familiar with Dr. Bisgard and had received treatment from her many times in the past. While Claimant elected Dr. Bisgard, he conceded at hearing that he declined any medical treatment at that time.

3. On January 21, 2011, Kurt Muehler, the adjuster handling Claimant's workers' compensation claim documented Claimant's election to decline medical treatment and specifically informed Claimant that if he changed his mind to contact Respondent.

4. On January 26, 2011, Claimant saw his primary care physician, Dr. Louis Kasunic, at which time Claimant reported headaches and did not mention any shoulder complaints. Dr. Kasunic manipulated Claimant's cervical spine during this visit. At hearing, Claimant admitted that he did not report or treat for any type of shoulder complaints at that time, which was just six days after the slip and fall.

5. Claimant admitted that he did not seek any medical treatment for his right shoulder until he saw Dr. Steve Horan in June 2012.

6. It is undisputed that while Dr. Bisgard was the designated physician to the purported January 20, 2011 injury, Dr. Bisgard did not provide any treatment related to such incident.

7. While Claimant did not seek treatment with Dr. Bisgard for the right shoulder between January 20, 2011 and June 2012, he did see Dr. Bisgard for other body parts and underwent a fit-for-duty evaluation with her.

8. Claimant saw Dr. Bisgard on August 25, 2011, for a lumbar sprain, and made no shoulder complaints.

9. On November 23, 2011, Claimant underwent a fit-for-duty evaluation with Dr. Bisgard and did not mention any shoulder complaints. At that time, Claimant specifically denied having any numbness or pain in his arms, denied having any musculoskeletal problems, weakness in his arms, and specifically denied having any difficulty moving his arms.

10. On August 31, 2012, Claimant returned to Dr. Bisgard for a subsequent back injury. Claimant again conceded at hearing that he did not report any shoulder complaints.

11. On September 6, 2012, Claimant saw Dr. Bisgard for the back injury and did not report any shoulder problems nor did he report that he had seen Dr. Horan.

12. Claimant admitted that he did not seek treatment with Dr. Bisgard for his shoulder from January 20, 2011 through June 2012, but he initially testified that he did treat with Dr. Bisgard between January 2011 and June 2012 because "the shoulder pain got worse."

13. Claimant concedes that he did not receive any treatment from Dr. Bisgard for the January 20, 2011 injury, but he testified that he saw Dr. Bisgard prior to seeing Dr. Horan, but he could not recall when. While Claimant could not recall when, he testified that it was in person and in her office, yet Claimant acknowledged that there was no medical record documenting such appointment.

14. It is undisputed that the medical records are devoid of a referral from Dr. Bisgard to Dr. Horan. Further, when questioned about a referral, Claimant testified he did not need Dr. Bisgard to refer him to Dr. Horan because he had free choice through the Employer's policy to pick a surgeon.

15. Claimant testified that the Employer has written a policy that allows a claimant in a workers' compensation claim to select a physician of his own choosing. He recalled receiving this policy via e-mail through the Employer's read files that were distributed to all employees. Claimant did not submit a copy of the purported policy and ultimately conceded there was no written policy.

16. Claimant initially saw Dr. Horan on June 22, 2012, and underwent surgery on September 13, 2012. The Claimant provided his private health insurance information to Dr. Horan's office. Claimant conceded that he did not request authorization for surgery from Respondent and that it was CIGNA that authorized the surgery, and it was CIGNA that paid for it.

17. Claimant saw Dr. Bisgard on October 2, 2012 as part of his follow-up care and for another fitness for duty evaluation. Claimant reported to Dr. Bisgard that his shoulder injury dated back to high school when he fractured his clavicle but that he had done well since then up until January 2010. Claimant told Dr. Bisgard that he fell on his outstretched right hand while in his dive gear at work and that the incident occurred in January 2010. He told her that he had symptoms at that time which never resolved. Dr. Bisgard opined that Claimant's need for shoulder surgery related back to the January 2010 fall, and that she could not understand why the claim was not accepted.

18. On October 25, 2012, Claimant sustained a compensable injury to his right shoulder. Claimant received a designated provider list from Respondent and again selected Dr. Bisgard. Claimant sought and received treatment with Dr. Bisgard for such injury. It was after this injury that Dr. Bisgard referred Claimant back to his surgeon, Dr. Horan, to ensure that he had not torn anything from his prior surgery.

19. Dr. Nicholas Olsen testified as an expert in physical medicine and rehabilitation. Dr. Olsen evaluated Claimant and prepared a report dated December 19, 2013. During the hearing, Dr. Olsen clarified that due to Claimant's report that the injury occurred in 2010 rather than in 2011, he initially prepared his report with the understanding that the injury occurred in 2010. Once the date of injury was clarified, Dr. Olsen reissued his report which was not altered in any substantive manner. He merely disregarded some of the medical records as irrelevant because they predated the injury of January 20, 2011. Dr. Olsen issued his subsequent report on April 11, 2014.

20. Dr. Olsen testified that the September 13, 2012 surgery to repair Claimant's right shoulder did not relate to the January 20, 2011 incident. Claimant suffered a temporary aggravation of symptoms of his shoulder on January 20, 2011, which resolved within days after the injury.

21. In support of his opinions, Dr. Olsen testified that Claimant reported that he felt pain at 8-9 out of 10 at the time of the January 20, 2011 fall, but that Claimant continued to complete the training exercise "which included diving through this hole, pulling along a rope, and completing his maneuvers which would have been quite difficult to do if one had acutely torn the rotator cuff or labrum." Dr. Olsen testified that Claimant completed those activities and reported that within 24-48 hours, his pain level decreased to a 2 out of 10.

22. Dr. Olsen also pointed out that Claimant delayed treatment for 18 months while continuing to perform all of the duties of a firefighter, as well as heavy workouts. Claimant also reported participation in fairly aggressive activities which would require use of his upper extremities including snowboarding, and possible remodeling of homes. Dr. Olsen noted that Claimant appeared to be functioning at a high level for the18-month period between the slip and fall and the time he sought treatment with Dr. Horan.

23. Dr. Olsen testified when Claimant's right shoulder became symptomatic such that he needed surgery, it was the conditions at that time that led to his surgery, which is simply the degenerative process or wear and tear.

24. Dr. Olsen relied upon the operative report which he opined clearly reflects that there is no acute pathology, but instead reflects a degenerative shoulder. The Claimant has a similar history with respect to his left shoulder. Dr. Olsen noted that the operative report did not reflect any pathology that he could link to the type of fall that Claimant reported. Dr. Olsen explained that Claimant had a very large subacromial spur, which was pressing onto his rotator cuff space, into the labral area, which was surgically removed, which stemmed from a prior clavicular fracture. Dr. Olsen testified that "the size of the spur indicates that it had been there for a long time, it was chronic, and it developed over many years following an injury like a clavicular fracture."

25. According to Dr. Olsen, the type of pathology demonstrated on the operative report was very consistent with the wear and tear history that Claimant provided concerning his left shoulder, for which he had undergone a similar surgery.

26. As found above, Claimant saw his personal physician Dr. Kasunic within one week of the January 2011 slip and fall incident. Dr. Kasunic manipulated Claimant's cervical spine during that visit yet Claimant mentioned no right shoulder pain. Dr. Olsen found it significant that the record reflects no complaints of shoulder pain, because based on his experience as an osteopathic physician who performs manipulations, he finds it necessary to know whether a patient is having problems with his shoulders because it is essential to move the arms as you treat the neck, and if there is an underlying condition, he would want to know about it. Dr. Olsen would have expected Claimant to mention such injury just six days later to Dr. Kasunic in light of the fact that Dr. Kasunic was performing manipulation of Claimant's neck.

27. Dr. Olsen testified that had Claimant sustained a type of lesion for which surgery was performed in September 2012, he would not have expected Claimant to pass a fitness-for-duty evaluation in November 2011, nor would he have expected the Claimant to engage in the recreational activities described above.

28. The opinions of Dr. Olsen are credible and persuasive regarding the causal relatedness of the Claimant's need for treatment to the right shoulder to the January 20, 2011 incident. Dr. Bisgard's opinions to the contrary are not persuasive. She failed to address Claimant's failure to report to her on four separate occasions that he had ongoing right shoulder pain stemming from a January 2011 work incident. She also failed to account for Claimant's ability to work full duty and engage in physically demanding recreational activities a period of 18 months without any significant functional limitation.

29. Claimant testified that he did not tell medical providers everything that was wrong with him at every appointment. He stated that he complained about the physical problem that prompted him to set the appointment.

30. The Claimant recalled that he had a specific moment when he tried to drink coffee and as he raised the cup with his right arm to drink, he felt shearing pain. He testified at that moment he realized that the motion he made with his arm was essential to his job.

31. The Judge is not persuaded by Claimant's explanations concerning his lack of treatment for 18 months or his failure to report shoulder pain to any medical provider, particularly Dr. Bisgard on four separate occasions (one of which was just one week prior to his right shoulder surgery). He knew he had selected Dr. Bisgard as a treating provider for his shoulder so it would make sense he would notify her of his right shoulder problems had they progressed as he described. His explanations concerning the Employer's physician referral policies also lack credibility.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge enters the following conclusions of law:

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

4. A claimant must prove by a preponderance of the evidence that his injury arose out of the course and scope of his employment with employer. Section 8-41-301(1)(b), C.R.S.; *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). An injury occurs "in the course of" employment where claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arise out of " requirement is narrower and requires claimant to show a causal connection between the employment and injury such that the

injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. *See id.*

5. Claimant has failed to prove that the incident on January 20, 2011, produced the need for treatment especially the right shoulder surgery he underwent on September 13, 2012. The remoteness of the work incident to the date on which the Claimant initially sought treatment presents serious doubts as to whether the incident produced the need for medical treatment. In addition, during the 18-month period between January 2011 and June 2012, the Claimant continued to work full duty as a firefighter, and engage in physical recreational activities. It is apparent Claimant's function was not significantly impaired during this period of time. Further, the Judge credits Dr. Olsen's testimony and opinions concerning the degenerative changes in Claimant's right shoulder found during the surgery. The opinions of Dr. Bisgard and Claimant's testimony were not persuasive for the reasons set forth above.

ORDER

It is therefore ordered that Claimant's claim for benefits under the Colorado Workers' Compensation Act is denied and dismissed. The remaining issues are rendered moot.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

L. Broniak

LAURA A. BRONIAK
Office of Administrative Courts
1525 Sherman St., 4th Floor
Denver, CO 80203

ISSUES

The issues to be determined by this Order are:

1. Whether the claimant proved, by a preponderance of the evidence, that the treatment she received on July 15, 2013 and July 16, 2013 at the Memorial Hospital was reasonable, necessary, and related to the admitted September 26, 2012 industrial injury; and

2. Whether the claimant proved, by a preponderance of the evidence, that the July 16, 2013 services provided by Ute Pass Regional Ambulance District were reasonable, necessary, and related to the admitted September 26, 2012 industrial injury.

FINDINGS OF FACT

1. The claimant is a 62-year-old woman with an October 26, 1952 date of birth.

2. The claimant was hired by the respondent-employer on June 28, 2005 to work as a cashier.

3. The claimant was initially injured in an admitted accident on November 17, 2009, when, while walking in the parking lot coming to work, she slipped on some ice, landing on her back, and hitting her head and left elbow. A magnetic resonance image ("MRI") performed in December 2009 showed herniated or bulging discs in the lumbar spine and cervical spine. The claimant received conservative care from Dr. James and Dr. Bjork, including epidural steroid injections. The claimant complained to Dr. James about headaches.

4. In 2008, the claimant received treatment for migraine headaches. At hearing, the claimant denied ever experiencing, or receiving treatment for, migraine headaches prior to the November 17, 2009 injury.

5. On January 16, 2012, Dr. James placed the claimant at maximum medical improvement (MMI) from the November 17, 2009 injury, as of August 23, 2011. He

imposed permanent restrictions against lifting over five pounds or performing any overhead reaching.

6. The November 17, 2009 accident is the subject of W.C. No. 4-812-192, and is not currently at issue.

7. On September 26, 2012, the claimant suffered the subject injury when she tripped on a mat in the fitting room area and fell straight down on her right knee. The claimant denied headache, dizziness, or visual disturbances, but was complaining of pain at a level 10/10 in the lumbar spine region. The claimant was transported by Ute Pass Regional Ambulance to Pikes Peak Regional Hospital, where she was diagnosed with a right knee strain and a low back strain. X-rays of the right knee and lumbar spine were obtained. The x-rays were read as showing degenerative changes, without evidence of acute injury.

8. Dr. Matthew Young was designated to treat the claimant's injuries arising out of the September 26, 2012, accident. On February 4, 2013, the claimant presented to Dr. Young and reported her low back pain was at pre-injury baseline, but "she had a new symptom of headache". The claimant denied any prior history of migraines.

9. On July 15, 2013, the claimant presented to the Memorial Hospital Emergency Room complaining of a headache. The claimant had "some difficulty narrowing down her onset, progression, or length of her symptoms." Ultimately, the claimant stated she "has had headaches most of her life." The claimant also reported noticing some blood on a swab from her ear three days prior, with pressure in her ear ever since. On review of symptoms, the claimant complained of ear pain and global headache, with no neck pain. On physical exam, the TM showed erythema and some blood in the ear canal. A CT of the head was obtained, with the indication "new and changing headache". The CT was read as unremarkable. The claimant was discharged home with ear drops, antibiotics, and Percocet for pain. The claimant's discharge diagnoses included, "headache" and "left otitis media with possible small tympanic membrane perforation."

10. Neither the claimant nor the attending physicians related the claimant's July 15, 2013 headache and ear pain to the September 26, 2012 industrial accident. Memorial Hospital's July 15, 2013 treatment notes do not reference the claimant's September 26, 2012 work injury.

11. On discharge, the claimant guaranteed payment of the July 15, 2013 Memorial Hospital ER bill, with no indication her complaints were related to a work injury, with the respondent-insurer being responsible for payment.

12. The claimant returned to the Memorial Hospital Emergency Room, on July 16, 2013, transported by Ute Pass Regional Ambulance, at approximately 9:56 p.m. The claimant stated she was experiencing a headache that started at 8:30 or 9:00 p.m., the previous night. The claimant complained of light flashes and severe ringing in the ears that was "worse than normal." The attendant's impression was "pain – nontraumatic." The assessment was "HA of unknown etiology." Neither the claimant, nor the ambulance attendants, related the claimant's July 16, 2013 headache to the September 26, 2012 work injury. Ute Pass' July 16, 2014 notes do not reference the claimant's September 26, 2012 work injury.

13. At the Memorial Hospital Emergency Room on July 16, 2013, the claimant gave a history of headache that was "a little more abrupt in onset than her typical migraine headache." The attending ER doctor noted the claimant had treated for headache on July 15, 2013, but the claimant thought the July 16, 2013 headache was "different." The claimant's husband felt the headaches were "similar."

14. The claimant took only one of the Percocet prescribed on July 15, 2013, before returning to the ER on July 16, 2013. In the approximate 24-hour period after her July 15, 2013 ER visit and the July 16, 2013 ER visit the claimant did not contact, nor seek treatment with, Dr. Young, the physician authorized to treat the September 26, 2012 work injury.

15. At the ER on July 16, 2013, the claimant again reported a long history of migraine, "since 2005." The claimant wondered if the July 15, 2013 headache was "just a migraine." The claimant denied any neck pain or neck stiffness, as well as any recent trauma to the head.

16. On physical exam, the claimant was not in any acute distress. The claimant was calm and appropriate, with a normal physical and neurological exam, save a "very abnormal TM" due to prior surgery and radiation. The claimant was discharged home to follow up on an outpatient basis. The attending physician's clinical impression was "headache, most likely migrainous in etiology." Neither the claimant, nor any treating provider, related the claimant's July 16, 2013 headache to her September 26, 2012 work injury. .

17. On discharge, the claimant guaranteed payment for the July 16, 2013 treatment at the Memorial Hospital ER, with no indication the treatment was related to a work injury, and the respondent-insurer was liable for payment. Memorial Hospital's July 16, 2013 treatment notes do not reference the claimant's September 26, 2012 work injury.

18. At the time she underwent ambulance transport and ER treatment on July 16, 2013, the claimant herself did not relate her symptoms to the September 26, 2013 accident. The claimant testified she thought her July 16, 2013 symptoms might have been caused by a "stroke."

19. The claimant initially related the onset of headache to the November 17, 2009 accident, not the September 26, 2012 accident.

20. The claimant's testimony that she had no history of migraine prior to September 26, 2012 is not credible or persuasive.

21. The claimant's testimony that her need for medical treatment on July 15, 2013 and July 16, 2013 and ambulance transport on July 16, 2013, is related to the September 26, 2012 accident is not credible or persuasive.

22. The claimant failed to prove, by a preponderance of the evidence, that the treatment she received at the Memorial Hospital on July 15, 2013 for blood in the ear and headache was reasonable, necessary, and related to the September 26, 2012 accident.

23. The claimant failed to prove, by a preponderance of the evidence, that the ambulance transport to Memorial Hospital Emergency Room on July 16, 2013 for a headache of "unknown etiology" was reasonable, necessary, and related to the September 12, 2012 industrial accident.

24. The claimant failed to prove, by a preponderance of the evidence, that the treatment received at the Memorial Hospital Emergency Room on July 16, 2013, was reasonable, necessary, and related to the September 26, 2012 industrial injury.

25. The claimant took no steps to obtain treatment from the authorized treating physician in connection with either her July 15, 2013, or subsequent July 16, 2013, trip to the Memorial Hospital Emergency Room. The claimant took only one of

her prescribed pain pills in the 24-hour period following her initial ER visit, before returning to the ER.

26. The claimant failed to prove, by a preponderance of the evidence, that the Memorial Hospital July 15 and 16, 2013 treatment was a *bona fide* emergency, and that her condition was so acute, and the need for treatment so immediate, she could not wait and obtain treatment from the ATP.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq*. C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witnesses' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice or interests. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936).

3. A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

4. The claimant has the burden of proving entitlement to medical benefits by a preponderance of the evidence. Section 8-43-201, C.R.S; *City of Boulder v. Streeb,* 706 P.2d 786 (Colo. 1985). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

5. As found, the claimant failed to prove, by a preponderance of the evidence, that the treatment she received at the Memorial Hospital Emergency Room on July 15, 2013 and July 16, 2013, was reasonable, necessary, and related to the September 26, 2012 accident.

6. As found, the claimant failed to prove, by a preponderance of the evidence, that the July 16, 2013 ambulance transport by Ute Pass Regional Ambulance to the Memorial Hospital Emergency Room was reasonable, necessary, and related to the September 26, 2012 accident.

7. Medical services provided in a *bona fide* emergency are an exception to the normal requirement that the claimant obtain authorization for all treatment of the industrial injury. *Larson's Workers' Compensation Law*, § 94.02[6] (1999); *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990).

8. Awards of emergency medical treatment where the claimant's condition was so acute, and the need for treatment so immediate, that the claimant could not reasonably wait for authorization or a hearing to obtain permission for the treatment**.** *See Lucero v. Jackson Ice Cream*, W.C. No. 4-170-105 (January 6, 1995); *Ashley v. Art Gutterson*, W.C. No. 3-893-674 (January 29, 1992).

9. As found, the claimant failed to prove, by a preponderance of the evidence, that the treatment received July 15, 2013 and July 16, 2013, at the Memorial Hospital Emergency Room was a *bona fide* emergency.

[The Order continues on the following page.]

ORDER

It is therefore ordered that:

1. The claimant's request for an award of medical benefits for treatment received July 15, 2013 and July 16, 2013 at the Memorial Hospital is denied and dismissed.

2. The claimant's request for an award of medical benefits for treatment received July 16, 2013 through Ute Pass Regional Ambulance District is denied and dismissed.

3. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant sustained a compensable injury to his left knee under W.C. No. 4-903-327-02 as a consequence of his right knee injury.

2. Whether Claimant sustained a compensable injury to his low back under W.C. No. 4-903-327-02 as a consequence of his right knee injury.

3. Whether Claimant sustained a compensable injury to his neck under W.C. No. 4-903-327-02 as a consequence of his right knee injury.

4. Whether Claimant sustained a compensable injury to his left knee on March 22, 2013 in W.C. No. 4-948-409-01.

5. Whether Claimant sustained a compensable injury to his low back on January 19, 2014 in W.C. No. 4-940-620-01.

STIPULATIONS

1. If Claimant's left knee injury is found compensable, in either W.C. No. 4-903-327-02 or W.C. No. 4-948-409-01, then the treatment Claimant received for his left knee was reasonable, necessary, and causally related to the injury.

2. If Claimant's low back injury is found compensable, in either W.C. No. 4-903-327-02 or W.C. No. 4-940-620-01, then the physical therapy recommended by his authorized treating physician is reasonable, necessary, and causally related to the injury.

FINDINGS OF FACT

1. Claimant worked for Employer as a night clerk with duties including unloading pallets from trucks, breaking down truck deliveries, taking grocery products to the proper aisles of the grocery store, and stocking items on the store shelves.

2. As a part of his job duties, Claimant lifted merchandise in excess of 100 pounds, pushed and pulled pallets using both automated and non automated jacks, and placed merchandise at low and high shelf levels.

3. On October 31, 2012 Claimant was seen by Elena Weinstein, M.D. at Centura Health. Claimant complained of intermittent, but very frequent swelling and pain in his bilateral hands, knees, ankles, wrists, and shoulders for most of his life. Claimant reported to Dr. Weinstein that he had back pain, joint pain, joint swelling, limited range of motion, neck pain, muscle aches, and stiffness. On examination, Claimant had pain with range of motion of his cervical spine. The abduction and external rotation of both of Claimant's hips was limited by pain as was his lumbosacral flexion. Claimant had tenderness in both knees, tenderness of the thoracic spine, and tenderness over both sacroiliac joints. *See* Exhibit L.

4. Dr. Weinstein's impression was inflammatory polyarthropathy disorder, characterized by back pain, multiple joint pain, and neck pain. *See* Exhibit L.

5. On November 7, 2012 Claimant sustained an admitted work related injury to his right knee. Claimant twisted his knee while unloading pallets off a truck, felt a pop sensation, and had an immediate onset of pain.

6. On November 8, 2012 Claimant sought treatment for his right knee at Kremmling Memorial Hospital Emergency Department. Claimant did not report a prior history of pain in his bilateral knees when receiving treatment. *See* Exhibit 12.

7. On November 8, 2012 Claimant also saw Mark Paulsen, M.D. who assigned work restrictions of no weight bearing. On November 14, 2014 Claimant saw Meghan R. Mont, D.O. who returned Claimant to light duty work. Claimant did not report to Dr. Paulsen or Dr. Mont his prior history of bilateral knee pain. *See* Exhibit 6.

8. On December 10, 2012 an MRI showed that Claimant had a torn medial meniscus and Claimant was referred to Alexander K. Meininger, M.D. Dr. Meininger eventually performed an arthroscopic partial medial meniscectomy on January 11, 2013. *See* Exhibit 7.

9. On February 12, 2013 Claimant was seen by Dr. Meininger for follow up. Claimant was noted to be doing well post surgery. As part of the exam, Claimant's lower left extremity was noted to have full hip, knee, and ankle range of motion with no tenderness, no instability, no effusion, and 5/5 strength from proximal to distal. *See* Exhibit 7.

10. Claimant returned to work on February 12, 2013.

11. On March 14, 2013 a physical therapy note indicated Claimant was having increased pain in his left knee when squatting or attempting to put pressure on his left knee. *See* Exhibit 14.

12. On March 19, 2013 a physical therapy note indicated Claimant's left knee range of motion was reduced by 5% and that Claimant was receiving treatment to increase left leg extension. *See* Exhibit 14.

13. On March 22, 2013 Claimant alleges an acute injury to his left knee while stocking shelves. Claimant alleges while breaking down a pallet and going from a squatting to a walking position he twisted and felt pain and a loud pop in his left knee. He alleges give-way of his left knee.

14. Witness Brooks testified that on March 22, 2013 he was working with Claimant unloading a pallet when he heard a box fall and Claimant say, "ow." Witness Brooks made sure Claimant was okay and they both kept working.

15. On March 26, 2013 Claimant had a follow up visit with Dr. Meininger. Dr. Meininger noted that Claimant's right knee following surgery was resolved without any complaints of pain or instability. Dr. Meininger then noted that Claimant had recurrent left knee pain with increasing activities. The location of the pain was medially based and associated with clicking and loss of motion. Dr. Meininger noted forced knee flexion and positive medial joint line tenderness. Dr. Meininger noted that Claimant was not having any instability to giving away episodes. *See* Exhibit 7.

16. Claimant did not report to Dr. Meininger that he had a specific give way incident or acute injury to his left knee a few days prior.

17. On April 3, 2013 Claimant reported to Dr. Paulson that he was ambulating at work on March 22, 2013 and carrying a 35 pound item when his left knee gave way and he heard a pop. Claimant complained of sharp left knee pain anterior/medial in nature and location. *See* Exhibit 14.

18. On April 3, 2013 Claimant slid a note under his supervisor's door that stated, "on or about 3-22 I was walking and I was stocking aisle 3 when I felt my left knee give out, I'm not sure what happened but my left knee is bothering me. I am putting a lot of weight on it to counter my right knee. I have told my supervisor about this when it happened and I need to have it seen before it gets worse. My left knee is not as strong as it use to be and it is getting harder to get up and down from the floor when stocking." *See* Exhibit R.

19. On April 3, 2013 store manager Tonja Kelm filled out an Employee Incident Questionable Claim Form stating that Claimant left a note under her office door that morning. Ms. Kelm indicated that at this time, Claimant did not want to file a claim and that Claimant felt as though his left knee was sore from using it more due to surgery on his right knee in late 2012. Ms. Kelm noted that Claimant was going to see his primary care physician for treatment. *See* Exhibit R.

20. On April 11, 2013 Claimant saw Dr. Mont for his left knee pain. Dr. Mont assessed left knee pain and believed it was new pain that she suspected was related to compensatory walking due to Claimant's original right knee injury. Dr. Mont noted Claimant had no history of left knee pain or injury in the past. Claimant reported subjectively that the pain in his left knee began on March 22, 2013 but did not report to

Dr. Mont a specific incident on March 22, 2013, just that the pain began on that date. *See* Exhibit 6.

21. At the April 11, 2013 appointment Dr. Mont was unaware of and did not document Claimant's prior history of bilateral knee pain and swelling for most of his life. Dr. Mont was unaware of and did not document a specific acute injury to Claimant's left knee that occurred on March 22, 2013. Dr. Mont noted that Claimant's was now having knee pain in the opposite knee as he had surgery on and that his left knee pain was worse with load bearing, squatting, and after sitting or working for a long period of time and that it began on March 22, 2013. *See* Exhibit 6.

22. Dr. Mont is not level II accredited and has not taken level II accreditation courses on the process for determining medical causation. In her testimony, Dr. Mont could not say with confidence that she knew what happened to cause Claimant's left knee pain. However, after a review of the medical reports, Dr. Mont opined that Claimant's left knee pain was caused both by overuse/overcompensation related to Claimant's original right knee injury and due to a specific incident on March 22, 2013.

23. At the April 11, 2013 appointment, Dr. Mont ordered an MRI of Claimant's left knee. *See* Exhibit 6.

24. On April 29, 2013 an MRI of Claimant's left knee was performed by Frederick Jones, M.D. Dr. Jones concluded that Claimant had a horizontal degenerative tear in the posterior horn of the medial meniscus that appeared to communicate with the undersurface and free edge of the meniscus near the posterior meniscal root. *See* Exhibit 10.

25. On June 25, 2013 Claimant underwent left knee surgery with Dr. Meininger. Dr. Meininger performed a left knee arthroscopy with partial medial meniscectomy. Claimant reported to Dr. Meininger that he was performing a squat on March 22, 2013 when he noticed an immediate onset of left knee pain that he reported was identical to the pain he had in his right knee when he suffered his right knee injury. *See* Exhibit O.

26. The report to Dr. Meininger on June 25, 2013 of a specific incident on March 22, 2013 with an immediate onset of left knee pain was very different from Claimant's earlier report to Dr. Meininger made on March 26, 2013 when Claimant reported recurrent left knee pain with increasing activities and no specific give way episode.

27. On July 30, 2013 Claimant had a follow up appointment with Dr. Meininger. Dr. Meininger did not note any injury to Claimant's back or neck during the course of the appointment. *See* Exhibit 7.

28. On July 31, 2013 Claimant saw Dr. Mont. Dr. Mont noted that Claimant woke up that morning very sore from his waistband up to his neck, and Claimant alleged

he was injured during his appointment the day prior with Dr. Meininger. Dr. Mont did not document nor did Claimant explain exactly how or when during his appointment with Dr. Meininger for follow up for his left knee surgery he suffered an injury from his waistband up to his neck. *See* Exhibit 6.

29. On September 9, 2013 Dr. Mont again saw Claimant. Claimant complained of low back pain, upper back pain, and neck pain. Dr. Mont suspected that due to his right sided knee/leg pain, Claimant might be overcompensating using his upper extremities, causing a strain. *See* Exhibit N.

30. Dr. Mont testified that she thought Claimant's back pain could be work related.

31. On January 8, 2014 Claimant underwent and Independent Medical Evaluation with John Hughes, M.D. Claimant reported to Dr. Hughes that after returning to work following his right knee surgery, his left knee began to hurt. Claimant attributed this to work-related activities and noted that he was not injured per se but had the gradual onset of left knee pain and weakness in the left leg. Claimant also reported to Dr. Hughes that he had the onset of interscapular and low back pain due to his antalgia of gait, that the back pain emerged since his left knee issues in March of 2013, and that the low back pain continued to be symptomatic. Claimant did not report to Dr. Hughes a sudden onset of low back pain on July 31, 2013 following his appointment with Dr. Meininger. Dr. Hughes opined that Claimant's lumbar spine and interscapular pain were of unclear etiology. *See* Exhibit V.

32. On January 19, 2014 Claimant alleges he suffered a new specific injury to his low back and that he felt a sharp pain when unloading a pallet in the back of a delivery truck.

33. Witness Brooks testified that the pallet they were attempting to unload was in tight and they were having trouble getting it out. While taking a "breather" witness Brooks indicated that Claimant stated his back was starting to hurt.

34. On January 24, 2014 Claimant saw Dr. Paulson who documented that Claimant felt a sharp pain in his lower back five days prior.

35. On February 3, 2014 Claimant underwent an Independent Medical Evaluation with J. Raschbacher, M.D. Dr. Raschbacher found no objective findings at either knee other than healed surgical scars. Dr. Raschbacher noted Claimant had pre-existing degenerative changes at both of his knees, a diagnosis of rheumatoid arthritis that can affect knee joints, and a history of chronic pain. Dr. Raschbacher opined that Claimant did not injure his left knee by "overcompensating" for his right knee injury as medical literature does not support the overcompensation theory and as the left knee MRI on April 29, 2013 showed a degenerative tear. Claimant reported to Dr. Raschbacher that Claimant's back pain began after a specific incident on January 19, 2014 and that he did not have back pain prior to that date. *See* Exhibit W.

36. Claimant did not report to Dr. Raschbacher the low back pain documented by Dr. Weinstein in October of 2012, did not report the sudden onset of low back pain documented by Dr. Mont in July of 2013, nor did he report the low back pain beginning in March of 2013 documented by Dr. Hughes.

37. Dr. Raschbacher opined that Claimant's left knee complaints and his lower back complaints were not work related, and that the only work related component to Claimant's admitted industrial injury was Claimant's right knee and that the other injuries were non-occupational. *See* Exhibit W

38. Dr. Raschbacher is level II accredited. He opined that there is no scientific medical support for the proposition that favoring one leg could damage another leg. Dr. Raschbacher also noted that Claimant had documented complaints of pains at his hands, knees, ankles, wrists, and shoulders for most of his life. Also noted was that Claimant had medical conditions of gout and rheumatoid arthritis that can cause pain and tissue injury at multiple joints. Finally, Dr. Raschbacher noted that Claimant provided inaccurate medical histories.

39. Dr. Raschbacher opined that Claimant's failure to be truthful regarding the prior problems in his left and right knees reported to him and to other medical providers compromises the ability to assess the situation and perform a causation analysis.

40. Claimant's testimony and reports to medical providers is found inconsistent and incredible. Claimant has provided multiple explanations and theories for the pain in his left knee, low back, and neck. Claimant failed to report symptoms, pain, and events to different medical providers and when viewing the inconsistencies in whole, the Claimant is found not credible or persuasive.

41. Multiple medical providers relied upon Claimant's explanations of mechanism of injury and onset of pain in forming their opinions. The medical opinions that relied upon Claimant's statements, which after a review of all the evidence were clearly inconsistent, are therefore not found persuasive or reliable as they are based on conflicting information provided by Claimant.

42. The opinion of Dr. Raschbacher after reviewing all of Claimant's records and inconsistent statements that Claimant's left knee pain, low back pain, and neck pain were not work related or compensable is found credible and persuasive.

43. On August 12, 2014 Dr. Hughes issued a supplemental report to his IME report. Dr. Hughes noted in this report that he was puzzled by Claimant's history of the gradual onset of left knee pain since Dr. Hughes found documentation that Claimant sustained a left knee injury performing a squat on March 22, 2013. Despite the direct report to Dr. Hughes that Claimant made of having a gradual onset of left knee pain, Dr. Hughes opined in his supplemental report that Claimant sustained a discrete left knee injury on March 22, 2013 and opined that it was work related. *See* Exhibit V.

44. The opinion of Dr. Hughes is not credible or persuasive and does not account for Claimant's multiple inconsistencies and reports to multiple providers of different onsets of pain.

45. The opinion of Dr. Mont is not credible or persuasive and does not account for Claimant's multiple inconsistencies and reports to multiple providers of different onsets of pain. Dr. Mont does not provide specific information to support her belief that overcompensation for a right knee injury caused Claimant's low back pain or neck pain.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. (2014), is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. (2014). The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. (2013). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. V. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence

contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

Whether a compensable injury has been sustained is a question of fact to be determined by the ALJ. *Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo. App. Div. 5 2009). To recover benefits under the Worker's Compensation Act, the Claimant's injury must both occur "in the course of" employment and "arise out of" employment. *See* § 8-41-301, C.R.S. (2014). The Claimant must establish that the injury meets this two pronged requirement by a preponderance of the evidence. *See* § 8-43-201(1), C.R.S. (2014).

The course of employment requirement is satisfied when it is shown that the injury occurred within the time and place limits of the employment relation and during an activity that had some connection with the employee's job-related functions. *Popovich v. Irlando*, 811 P.2d 379 (Colo. 1991); *Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The arising out of requirement is satisfied when it is shown that there is a causal connection or nexus between the conditions and obligations of employment and the employee's injury. *Horodyskyj v. Karanian*, 32 P.3d 470 (Colo. 2001). There is no presumption than an injury which occurs in the course of employment arises out of the employment. *Finn v. Industrial Commission,* 437 P.2d 542 (Colo. 1968). An injury "arises out of" employment when it has its "origin in" an employee's work-related functions and is "sufficiently related to" those functions so as to be considered part of employment. *Popovich v. Irlando*, 811 P.2d 379 (Colo. 1991); *Horodyskyj v. Karanian*, 32 P.3d 470 (Colo. 2001). The mere fact that a claimant experiences pain at work does not necessarily require a finding of a compensable injury. Pain is a typical symptom caused by the aggravation of a pre-existing condition. However, an incident which merely elicits pain symptoms caused by a pre-existing condition does not compel a finding that the claimant sustained a compensable aggravation. *Miranda v. Best Western Rio Grande Inn*, W.C. No. 4-663-169 (ICAO April 11, 2007).

Left knee

Claimant has failed to meet his burden to show that he suffered an injury to his left knee that occurred in the course of and arose out of his employment with employer. The ALJ is not persuaded by Dr. Mont's conclusion that Claimant's left knee injury occurred both due to overcompensating due to Claimant's right knee injury and that the left knee injured occurred also due to a specific incident on March 22, 2013. Rather, the ALJ credits the opinion of Dr. Raschbacher that any injury to Claimant's left knee was related to the natural progression of Claimant's preexisting degenerative left knee condition, as shown by MRI. Dr. Mont and Dr. Hughes, who both opined that Claimant's left knee condition was related to his employment, based their opinions in part on subjective information provided by Claimant as far as how and when his left knee pain began. Claimant, however, is found not credible or persuasive. As the medical opinions on causation were based in part on Claimant's unreliable reports, the opinions are not found persuasive.

Claimant has failed to meet his burden to show, more probably than not, that he suffered a discrete injury to his left knee on March 22, 2013. Claimant's allegation of a specific incident where he injured his left knee while unloading a pallet and either twisting, walking, or squatting on March 22, 2013 is not found credible. Claimant reported to Dr. Meininger that the left knee pain he suffered on March 22, 2013 was an immediate pain that was identical to the pain Claimant had experienced when he previously injured his right knee. Despite this report to Dr. Meininger, Claimant did not seek emergent treatment for his left knee and did not even mention this discrete incident a few days later at his March 26, 2013 appointment. This is not reasonable nor is it logically credible. When Claimant suffered his right knee injury, Claimant sought emergent treatment a day later. If the pain in fact was identical to his right knee injury, it is illogical that Claimant would not have sought treatment for four days and when he sought treatment four days later, it is illogical that Claimant would not even have mentioned the specific incident that caused his alleged onset of left knee pain. In fact, as found above, Claimant did not even report this March 22, 2013 incident that allegedly caused him immediate left knee pain until April 3, 2013. Claimant also reported to Dr. Hughes that he had not been injured per se, but that after his return to work following his right knee surgery, his left knee began to hurt. Medical records show Claimant had constant and chronic left knee pain and swelling prior to March of 2013, and show degenerative changes in Claimant's left knee. Claimant's medical history, combined with his inconsistent reports of onset of pain, fails to establish more likely than not that there is a causal connection between his left knee pain and his employment. Claimant has failed to meet his burden to show he suffered a discrete left knee injury on March 22, 2013.

Claimant has also failed to prove, by a preponderance of the evidence that his left knee pain was due to "overuse" or overcompensation as related to his compensable right knee injury and surgery. Rather, as found above, the opinion of Dr. Raschbacher is persuasive and credible that there is no medical support for this theory. Dr. Mont failed to identify medical support for this theory and her opinion was not made with sufficient support or explanation. Dr. Raschbacher is found more credible and persuasive than Dr. Mont and Claimant has failed to meet his burden to show more likely than not that his left knee pain was due to overuse or overcompensation.

Lower back

Claimant has failed to meet his burden to show that he suffered a compensable injury to his low back on January 19, 2014. As found above, Claimant had numerous reports of low back pain with different dates of the onset of pain. Claimant reported an onset of low back pain that started and was consistent from the time of his left knee pain and from March 2013 and ongoing. Claimant also reported an immediate onset of low back pain on July 31, 2013 that he believed was due to testing performed on his knee by Dr. Meininger on July 30, 2013. Finally, Claimant reported an immediate onset of low back pain on January 19, 2014 while unloading a pallet at work. Witness Brooks testified surrounding the January 19, 2014 event that Claimant reported his low back was starting to hurt while they were unloading a pallet at work. Even if Claimant's back started to hurt on January 19, 2014 while at work, Claimant has failed to show that he

suffered a discrete work injury. An incident which merely elicits pain symptoms caused by a pre-existing condition does not compel a finding that the claimant sustained a compensable aggravation. *Miranda v. Best Western Rio Grande Inn*, W.C. No. 4-663-169 (ICAO April 11, 2007). As found above, the evidence clearly establishes that Claimant had low back pain prior to January of 2014.

Claimant reported in October of 2012 to Dr. Weinstein that he had back pain. Dr. Weinstein noted on examination that Claimant's lumbosacral flexion was limited by pain, and that Claimant had tenderness of the thoracic spine. Claimant next reported on July 31, 2013 to Dr. Mont that he injured his neck and back at an appointment the day prior with Dr. Meininger when Dr. Meininger was performing testing on Claimant's injured knee. Despite this specific report of injury to neck and back, Dr. Mont opined that due to Claimant's right sided knee/leg pain Claimant was overcompensating using his upper extremities, which had caused a strain. Dr. Mont opined that the July 2013 report of back pain could be work related due to overcompensation. Claimant then reported to Dr. Hughes on January 8, 2014 that his low back pain began in March of 2013 when his left knee pain started and that he thought it was due to antalgia of gait. Claimant reported on January 8, 2013 that his low back pain continued to be symptomatic. Claimant did not report to Dr. Hughes the low back pain that he had since October of 2012 nor did he report to Dr. Hughes the specific onset of back pain that he allegedly suffered on July 30, 2013 at an appointment with Dr. Meininger. Claimant next underwent an IME with Dr. Raschbacher where Claimant reported that his low back pain began on January 19, 2014 and that he did not have back pain prior to January 19, 2014. This is directly contradicted by Claimant's own reports of back pain in October, 2012, March of 2013, and July of 2013.

Claimant's numerous contradicting statements render him incredible. Based upon medical reports, the ALJ concludes that Claimant had low back pain prior to January 19, 2014. With documented low back pain as early as October of 2012, and with an incredible and inconsistent report of the onset of pain, Claimant has failed to meet his burden to show he suffered a work injury on January 19, 2014 that either caused or accelerated his pre-existing low back pain. Claimant's theory of overuse and overcompensation as related to his lower back pain is also not found credible or persuasive. Dr. Mont is not found persuasive in opining that Claimant may have been overcompensating using his upper extremities due to his right sided knee/leg pain. Her opinion is not explained thoroughly nor is it made with medical certainty as to the cause of his low back pain, but rather, Dr. Mont thinks the pain "may" have been due to overcompensation. Claimant has failed to establish by a preponderance of the evidence a causal connection between his low back pain and his employment or that his low back pain was causally related to his original right knee injury.

Neck

Claimant has failed to meet his burden to show that he suffered an injury to his neck that arose out of and in the course of his employment with Employer. Claimant alleges that his neck was injured during a medical appointment for his knee on July 30,

2013. It is undisputed that injuries sustained during treatment of an industrial injury are compensable under the "quasi-course of employment" doctrine. *Excel Corp. v. Industrial Claim Appeals Office*, 860 P.2d 1393 (Colo. App. 1993). Although the medical appointment on July 30, 2013 may arguably be covered under the quasi course of employment doctrine, Claimant has failed to present evidence that he suffered an injury during that medical appointment or due to that medical appointment. Although Claimant reported waking up the next day with stiffness and soreness in his back and neck, he failed to identify what at that appointment may have caused his stiffness/soreness in his back and neck or that he suffered a compensable injury during that appointment. Rather, the medical history shows that Claimant had stiffness and soreness in his back and neck for most of his life and the evidence does not support a conclusion, more likely than not, that Claimant suffered a compensable injury during this medical appointment. Additionally, although Dr. Mont noted that Claimant may have been overcompensating using his upper extremities, due to his right side knee/leg pain, Claimant failed to present evidence of overcompensation and Dr. Mont's statement was without specificity and is not persuasive that Claimant actually suffered a neck injury due to overcompensation. Claimant has failed to establish by a preponderance of the evidence a causal connection between his neck pain and his employment or that his neck pain was causally related to his original right knee injury.

ORDER

It is therefore ordered that:

1. Claimant did not suffer a left knee injury in W.C. No. 4-903-327-02 as a consequence of his prior right knee injury. His claim for compensation is denied and dismissed.

2. Claimant did not suffer a low back injury in W.C. No. 4-903-327-02 as a consequence of his prior right knee injury. His claim for compensation is denied and dismissed.

3. Claimant did not suffer a neck injury in W.C. No. 4-903-327-02 as a consequence of his prior right knee injury. His claim for compensation is denied and dismissed.

4. Claimant did not sustain a compensable injury to his left knee on March 22, 2013 in W.C. No. 4-948-409-01 and his claim for compensation is denied and dismissed.

5. Claimant did not sustain a compensable injury to his low back on January 19, 2014 in W.C. No. 4-940-620-01 and his claim for compensation is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 22, 2015

Denver, CO 80203

BASIS FOR SUPPLEMENTAL ORDER

A Petition to Review was filed by Respondents on October 29, 2014. Respondents base the petition on the grounds that conflicts in the evidence were not resolved in the AL's order and that the ALJ's findings of fact did not support the order. In the initial order, the ALJ, on some occasions, summarized more lengthy testimony regarding a finding of fact. To further clarify and assist the parties, the ALJ has added direct testimony from the transcript of the hearing to establish the basis for her summaries or reasonable inferences and made other clarifications. The paragraphs in the findings of fact that have been modified are paragraph #s 8, 9, 22, 23, 24 and 25.

ISSUES

1. Whether the Claimant proved by a preponderance of the evidence that he sustained a worsening of his condition that would entitle him to a reopening of W.C. 4-903-504 under Section 8-43-303(1), C.R.S.

2. If the Claimant proved that his condition worsened, whether the Claimant proved, by a preponderance of the evidence, that the right shoulder surgery recommended by Dr. Gersoff is reasonably necessary and causally related to the Claimant's September 14, 2012 admitted work injury.

FINDINGS OF FACT

1. On September 14, 2012 the Claimant sustained an admitted traumatic injury to his right shoulder when, as part of his job duties, he was pushing six to seven shopping carts when they flipped over due to an irregularity in the pavement in the parking lot outside of the retail location operated by Respondent. The Claimant felt immediate pain in his right shoulder and reported the incident to his supervisor immediately (Hearing Tr., p. 27, l. 13 – p. 28, l. 2).

2. After completing a report about the injury, the Claimant was advised to call the nurse hotline. Based on advice from the nurse on the hotline, the Claimant took ibuprofen and iced his shoulder and he waited to see if it would resolve and did not initially request that he be seen by a doctor for his shoulder injury. Subsequent to this the Claimant was terminated from employment on October 15, 2012 for a reason unrelated to his work injury. After his termination, the Claimant asked if he could still see the doctor and was told to see Dr. Beatty (Hearing Tr. p, 28, l. 21 – p. 29, l. 17; p. 45, l. 24 – p. 46, l. 18).

3. The Claimant saw Dr. Brian Beatty on November 12, 2012 and, consistent with his testimony at the hearing, the Claimant reported that "he was pushing in grocery carts. The grocery carts started to fall and when he grabbed them and pulled his right shoulder and he felt a pop with the onset of pain. He thought it would resolve but it has persisted and he is here for evaluation." The injury was diagnosed as a shoulder impingement (Claimant's Exh. 4, p. 5; Respondents' Exh. A). On December 5, 2012, Dr. Beatty referred the Claimant to Wayne Gersoff, MD for evaluation of the right shoulder (Claimant's Exh. 4, p. 9; Respondents' Exh. A).

4. An MRI of the Claimant's right shoulder was performed on November 19, 2012. The findings included mild arthritis and mild subacromial/subdeltoid bursitis, and mild tendinosis. The radiologist specifically noted that there was no rotator cuff tear and no labral tear (Claimant's Exh. 6, p. 25; Respondents' Exh. B).

5. The Claimant saw Dr. Gersoff on December 19, 2012. Dr. Gersoff notes that the Claimant reported continued pain and discomfort in his right shoulder. The examination revealed full range of motion in the shoulder. Upon review of the MRI, Dr. Gersoff opined that there was "rotator cuff tendinopathy without frank tearing or labral disruption." For the right shoulder, the treatment plan was to first try an injection with some home exercises. Dr. Gersoff further noted that if that did not help, the Claimant may, at some point need to have an arthroscopic and subacrominal decompression surgery. Dr. Gersoff noted that the Claimant was to report on his condition in 1 week's time (Claimant's Exh. 5, p. 18; Respondents' Exh.C).

6. The Claimant returned to Dr. Beatty for follow up on January 14, 2013 and Dr. Beatty noted that the Claimant reported that the right shoulder still hurt but that he felt 80-90% better after the injection. At this office visit, Dr. Beatty discharged the Claimant from treatment, found the Claimant at MMI with no impairment and noted no restrictions (Claimant's Exh. 4, pp. 10-12; Respondents' Exh. A).

7. Respondents filed their Final Admission of Liability on January 16, 2013 based on Dr. Beatty's report (Claimant's Exh. 2, p. 2). The position on medical benefits after MMI was a denial of post-MMI medical treatment on the grounds that it is not reasonable, necessary or related to the compensable injury. Per Dr. Beatty's report, there was no impairment and a release to activities without restrictions.

8. The Claimant testified that his symptoms never fully resolved but continued to flare up with activities involving the use of his right arm (Hearing Tr., p. 32, l. 18 – p. 33, l. 7). In the period from January through April of 2013, the Claimant began avoiding activities such as taking his daughters for walks with his dogs because they would yank the leash, or putting things up at the top of the cupboard because it would hurt his arm (Hearing Tr., p. 34). The Claimant chose to not return to work following his termination by Respondent on October 14, 2013 and after reaching MMI until the spring of 2013. During that period of time, from October, 2012 to April, 2013, the Claimant was a stay at home dad caring for his two daughters during the daytime. The Claimant's home activities included taking his children to the playground and lifting his daughters

onto playground equipment. That activity caused Claimant pain and he was forced to avoid such arm motion above his face level. He encountered similar problems when he worked around the house. The ALJ bases these findings of fact and inferences on the Claimant's testimony that,

> Q: Okay. During that period of time -- the period of time from January 14, 2013 up until you started work at King Soopers, would you describe for the judge the symptoms that you were experiencing in your right shoulder and any progression or worsening occurring at that time?
>
> A: I would characterize it as positional pain.
>
> Q: What does that mean?
>
> A: I would – you know, if I tried to use my drill, if I was showering, you know, like washing my hair, have my hand above my head, try to take the towel, you know, wipe your back, just taking my daughters to the park and not being able to lift them onto the monkey bars. (unintelligible) both hands.
>
> Q: Okay. You're gesturing to about chest level or face level?
>
> A: No, it was probably face level. Face level.
>
> (Hearing Tr., p. 32, l. 18 – p. 33, l. 12)
>
> .....
>
> Q: (BY MR. HOOK) You were describing the type of symptoms that you were experiencing from January through April 2013. Please continue, if there were further examples of these type of symptoms and what you were feeling.
>
> A: I refrained from taking my daughters for a walk because I have dogs, and if I took the dogs and they'd yank on the leash, it would hurt my arm. Just day-to-day chores, putting things up to the top of the cupboard, things like that.
>
> (Hearing Tr., p. 34, ll. 14-23).

Because of the type of symptoms about which he testified at the hearing, the Claimant avoided using his right arm for overhead work as much as possible, even during some home renovations to get his house ready for sale, leaving overhead work to his wife and a neighbor (Hearing Tr., p. 51, l. 22 – p. 54, l. 23).

9. On April 13, 2013, the Claimant returned to work with a different employer, King Soopers, as a stocking clerk on the night shift. The Claimant testified that he did not work at full duty at King Soopers during the first few weeks at the end of April, 2013 because he was in training (Hearing Tr., p. 38, ll. 5-10). With respect to his stocking duties, he also testified that,

> You know, I could do work on the ground, open up boxes. I could unload the pallet, it would hurt. I would drop things down, you know, because it's above your head, and then you take the box, and you open it up, and you have to stock above your head, face height or all the way to the floor. So, I was having pain when I did top-shelf stuff, height.
>
> (Hearing Tr., p. 37, l. 22 – p. 38, l. 4)

.....

> …for doing the job at King Soopers, you know, top-shelf kind of stuff. I would – I would go and get a stepladder, so it was like three or four high, so I would be working like I'd be looking down at the shelf, you know, instead of reaching up.
>
> (Hearing Tr., p. 40, ll. 10-15).

From the Claimant's credible testimony (above) about stocking items, the ALJ infers that the Claimant had difficulty performing stocking overhead due to pain so he developed his own work accommodations to avoid having to work overhead and guarded against making movements with his shoulder that would cause pain. Although, the Claimant testified credibly that, even though the job description had requirements of lifting greater than 30 lbs (see Respondents' Exh. I), the Claimant did not actually lift any product or merchandise weighing more than 30 lbs. nor did he lift overhead (Hearing Tr., p. 38, ll. 13-20).

10. The Claimant continued to take precautions during his employment at King Soopers but nevertheless experienced a progressive worsening of his right shoulder injury, so, he testified that he discussed this with Dr. Gersoff, whom he was still treating for his knee injury (Hearing Tr., p. 37, ll. 6 – 15).

11. The Claimant returned to see Dr. Gersoff on May 1, 2013 in what he characterized as a "combined visit" for his knee and shoulder (Hearing Tr., p. 37). At the visit, the Claimant reported that he had a "fairly good result after his last injection" but that he "was continuing to have some discomfort now with some decreased range of motion." Upon examination Dr. Gersoff noted a "fairly good range of motion with discomfort in internal and external rotation with abduction" with "some mild impingement." After the examination Dr. Gersoff concluded that the Claimant's diagnosis was "right shoulder pain due to chronic impingement." Dr. Gersoff provided a second shoulder injection (Claimant Exh. 5, p. 19; Respondents' Exh. C). There is no

mention of the shoulder condition in follow up visits with Dr. Gersoff on May 13, 2013 and June 10, 2013 (Claimant's Exh. 5, pp. 20-21; Respondents' Exh. C).

12. On July 10, 2013, the Claimant had a follow up evaluation for his right knee again with Dr. Gersoff. At this visit, he also reported some discomfort in his shoulder and wanted an injection for both his knee and shoulder. Upon examination, Dr. Gersoff again noted "some mild to moderate impingement." Dr. Gersoff agreed with the Claimant's request for another shoulder injection and performed it and noted the Claimant tolerated the procedure well (Claimant's Exh. 5, p. 22; Respondents' Exh. C).

13. On August 14, 2013, the Claimant and another employee at King Soopers were engaged in horseplay and the Claimant was hit hard enough to knock him to his knee and reported that the left side of his torso was injured. A first report of injury was completed on August 17, 2013 noting that the injury was reported on the day it occurred. The Report also indicates that the employee would seek medical treatment on August 18, 2013 (Respondents' Exhibit I). On August 28, 2013, King Soopers submitted a Notice of Contest denying the claim for an 8/14/2013 injury as not work-related (Respondents' Exhibit I). In the paperwork related to this incident entered into evidence in this case, there is not mention of injury to the right shoulder, just the left side of the Claimant's torso.

14. On September 4, 2013, the Claimant saw Dr. Gersoff for a follow up evaluation specifically for the right shoulder pain. The Claimant reported that the last cortisone injection helped for a very short period of time but that he was back to having pain, discomfort and functional limitations once again. Dr. Gersoff noted the Claimant sought recommendations for treatment. At that time Dr. Gersoff discussed further treatment options of operative versus nonoperative intervention and the Claimant elected to proceed with a right shoulder arthroscopy subacrominal decompression and debridement as indicated (Claimant's Exh. 5, p. 23; Respondents' Exh. C). Dr. Gersoff testified at deposition with reference to the medical note from the September 4, 2013 visit and the decision to proceed with surgery. Dr. Gersoff testified that the surgery option went from being a "consideration" to a "recommendation at the September 4, 2013 visit as the Claimant had tried nonoperative means of treatment, including injections, strengthening exercises and the shoulder had not gotten better and the pain returned after the injections (Depo. Tr., Wayne Gersoff, MD, pp. 13-14). Dr. Gersoff specifically testified that that the surgical recommendation was related to the original injury at Whole Foods (Depo. Tr., Wayne Gersoff, MD, p. 14).

15. The Claimant filed a Petition to Reopen WC Claim #4-903-504 on October 4, 2013.

16. The Claimant saw Dr. Beatty again on October 21, 2013 and Dr. Beatty noted that since he last saw the Claimant, the Claimant had been back to Dr. Gersoff on a couple of occasions for cortisone injections and that the Claimant gets less benefit with the injection each time he gets one. Dr. Beatty opined that, "since it appears his symptoms have been worsening" an MRI with contrast would be scheduled (Claimant's

Exh. 4, pp. 15-17; Respondents' Exh. A).

17. On October 25, 2013, the Claimant underwent another MRI of the right shoulder, this time done with contrast. In the opinion of the radiologist, Dr. David Solsberg, "there is no change since the prior study allowing for differences in technique since November 19, 2012" (Claimants' Exh. 7 p. 26; Respondents' Exh. B).

18. On October 28, 2013, the Claimant saw both Dr. Beatty and Dr. Gersoff. In the morning of October 28, 2013, Dr. Beatty noted that the Claimant reported "ongoing severe pain involving his right shoulder. He has difficulty lifting his arm without significant pain. He states he also lacks strength in the shoulder." Dr. Beatty further noted that "apparently Dr. Gersoff has recommended arthroscopic surgery." Dr. Beatty further noted that "there really appears to be no change in his MRI. The patient wants to reopen his case due to the recommendation by Dr. Gersoff for arthroscopic surgery" (Respondents' Exh. A). In the afternoon on October 28, 2013, Dr. Gersoff opined that, the Claimant had "right shoulder pain due to chronic rotator cuff tendinopathy without labral pathology seen on MRI." Dr. Gersoff further noted that, "his right shoulder has continued to get worse may at some point need to have surgical intervention. He is scheduled to be seen by an independent Worker's Compensation doctor and will follow up after that" (Claimant's Exh. 5, p. 24).

19. On December 17, 2013, the Claimant saw Dr. Rachel L. Basse for an Independent Medical Evaluation. Contrary to Dr. Beatty's medical record dated November 12, 2012, Dr. Basse notes that the Claimant told her he did not recall any "popping" sensation in his shoulder when he was pushing the grocery carts that were falling on 9/12/12. Dr. Basse notes that the Claimant reported that initially his symptoms were not extreme but he would experience activity-related pain. Dr. Basse noted that the Claimant reported limitations due to pain and that he received injections which would help. Dr. Basse also noted that the last injection the Claimant received did not work well, only decreasing symptoms by about 30% and only lasting 1-2 weeks. Dr. Basse reviewed the Claimant's medical records, both prior to and subsequent to the 9/12/12 incident with the shopping carts. Dr. Basse also questioned the Claimant about his work duties at King Soopers and his activities as a stay at home father and considered these in rendering her opinion. Ultimately, Dr. Basse appears to agree that the Claimant has an impingement syndrome and associated tendinitis. However, she finds that it is a degenerative process contributed to by life, leisure, social and vocational activities. She finds that "the single acute work aggravation at [Employer] greater than one year ago appears to have played a more minimal role in his current symptoms." Dr. Basse recommended follow up with Dr. Gersoff for consideration of a repeat injection and consideration of a change in his anti-inflammatory medication, physical therapy, and a psychologic evaluation. She did find that an acute impingement syndrome in the right shoulder was related to the work injury on 9/12/2012, but found that it responded appropriately to conservative treatment. Dr. Basse opined that the right shoulder arthroscopy subacromial decompression and debridement surgery recommended by Dr. Gersoff was not reasonable and necessary to cure and relieve the effects of the 9/12/12 work injury (Respondents' Exh. F).

20. On April 9, 2014, the Claimant met with Gary S. Gutterman, M.D. for a psychiatric consultation for an IME. Dr. Gutterman issued a written report dated April 15, 2014. After reviewing medical records and work records and records from the Mental Health Center of Denver, and two hour meeting with the Claimant, Dr. Gutterman opined that "if it is determined that the patient's anatomic and physiologic findings adequately support a diagnosis of impingement syndrome regardless of the etiology, I believe the patient probably would be a reasonable surgical candidate from a psychiatric perspective. Dr. Gutterman noted that, if the physiologic and anatomic findings support the diagnosis of impingement syndrome, what remained to be determined for the purposes of determining workers' compensation coverage was whether the physical findings supported a finding that the shoulder impingement syndrome was work related as Dr. Gersoff believed or if the impingement syndrome was unrelated to work as Dr. Basse believed (Respondents' Exh. G).

21. In addition to providing opinions in his written medical records, Dr. Gersoff testified by deposition on April 16, 2014. Dr. Gersoff testified that he first saw the Claimant with respect to the right shoulder condition on December 12, 2012 on referral from Dr. Beatty (Depo. Tr., Wayne Gersoff, MD, pp. 5-6). After reviewing an MRI from November 19, 2012 and conducting a physical examination, noting that there was no observable loss of range of motion at that time, Dr. Gersoff recommended a shoulder injection. The Claimant reported a good result from the injection and the effects lasted until approximately May of 2013 (Depo. Tr., Wayne Gersoff, MD, pp. 6-7). By July 10, 2013, Dr. Gersoff testified that the Claimant was feeling discomfort in his shoulder and physical examination demonstrated mild to moderate impingement signs without gross instability (Depo. Tr., Wayne Gersoff, MD, p. 10). By September 4, 2013, Dr. Gersoff testified that the Claimant was complaining of pain and discomfort along with functional limitations and Dr. Gersoff noted loss of range of motion consistent with a positive finding for impingement (Depo. Tr., Wayne Gersoff, MD, p. 11). Dr. Gersoff testified that, at this point he made the definitive recommendation for shoulder surgery since the Claimant had tried conservative treatment and the shoulder was not improved and the symptoms returned (Depo. Tr., Wayne Gersoff, MD, pp. 13-14). Upon reviewing a job description from the Claimant's position at King Soopers, Dr. Gersoff testified that the work "could have been the cause of renewed symptoms, but his prior injury also may have made him more prone to developing this" (Depo. Tr., Wayne Gersoff, MD, p. 19). Dr. Gersoff elaborated later in testimony that the frequency of the job activities at King Soopers would be a factor in determining if the return of symptoms was due to a re-injury. If the Claimant did not lift heavier items repetitively, then the job duties may not be significant. If the Claimant lifted heavier items repetitively every day, then this activity would have more significance (Depo. Tr., Wayne Gersoff, MD, p. 28). In considering other factors for the return of the Claimant's symptoms, and the recommendation for surgery Dr. Gersoff addressed the progression of the Claimant's response to injections as follows:

> The best way to describe that was that the inflammation and irritation in the tissue just was not responding as well to the injection. I think one of

the problems with an injection is everyone feels everyone feels better right after an injection. And the problem is that human nature is they have an injection, feel better, and they kind of say, I feel better, I can do things with my shoulder. And then gradually that wears off. And it's almost like a rebound phenomena where all of a sudden, it takes off and hurts significantly and so forth. And then you try another injection, and it may not respond as well. That's kind of, I think, what happens when you get that diminishing effect, which is why people wind up having surgery, because they are not getting better.

(Depo. Tr., Wayne Gersoff, MD, p. 30).

22. At his deposition, Dr. Gersoff noted a correlation between the increased inflammation, which causes more discomfort and so the shoulder wants to move less and indicated that this explained why before the Claimant had relatively full range of motion with some discomfort and now there is less range of motion due to more irritation, more inflammation and more discomfort (Depo. Tr., Wayne Gersoff, MD, p. 31). Dr. Gersoff also testified that the recommended surgery to the Claimant's right shoulder was and is reasonable and necessary based on objective findings correlating to the diagnosis of impingement (Depo. Tr., Wayne Gersoff, MD, p. 32). Specifically, Dr. Gersoff testified at the hearing as follows:

Q: So having gone through all this, I need to ask the question, Doctor, do you have an opinion on whether or not surgery to the left – to the right shoulder of [the Claimant] at this time would be reasonable and necessary under this workers' compensation case?

A: Yes.

Q: It would be?

A: Yes.

MR. WEINBERGER: I'm going to object to the extent that calls for a legal conclusion. And I'll follow up. It's for the judge to determine whether an aggravation is the cause of the need for surgery.

MR. HOOK: If there was an aggravation.

MR. WEINBERGER: We'll let the testimony go as is. Of course, we haven't taken the lay testimony or anything.

MR. HOOK: I understand the objection.

Q: (BY MR. HOOK) Just to address that, may I briefly ask, are you familiar with those issues as they relate to workers' compensation injuries, based

on your experience and practice?

A: Which issues?

Q: Whether or not something – a procedure is reasonable and necessary.

A: I'm not sure if I'm exactly certain of how workers' compensation defines it.

Q: How would you define it in your understanding?

A: My understanding whether something is reasonable and necessary is that if someone has subjective and objective findings that go along with the diagnosis and they've failed nonoperative treatment – if nonoperative treatment is an option, or if they've failed that – then operative treatment is indicated.

Concerning the Claimant's work at King Soopers, Dr. Gersoff testified that he couldn't say that the Claimant's symptoms in May were the result of his work in that job and that it was hard to say without knowing exactly what and how much he did at King Soopers. Dr. Gersoff pointed out that it would be important to consider the actual extent of the work duties performed by Claimant as opposed to the written job description (Depo. Tr., Wayne Gersoff, MD, p. 36). With respect to his actual work duties, the Claimant later testified at the hearing as follows:

Q: Despite the fact that this job description for your employment at King Soopers indicates that the job could or may require lifting in excess of 30 pounds, did you at any time during that employment lift anything greater than 30 pounds?

A: I don't think so.

MR. HOOK: That's all I have, Your Honor.

MR. WEINBERGER: One follow up.

THE COURT: All right.

RECROSS EXAMINATION BY MR. WEINBERGER

Q: Could you explain how you're able to indicate what weight you didn't lift or not up to 30 pounds.

A: Well, I know –

Q: One second.

-- at King Soopers? Would it be accurate that you didn't weigh the items?

A: No. But it has a label with a weight on it. It has the weight on the box. It has the weight on the product. Dog food has a weight, 5 pounds, 10 pounds, 15 pounds.

Q: Do all products have a weight.

A: Absolutely. Some of it is volume versus –

Q: Okay. That explains why you know the weight of that when picking something up and not the weight of your children when picking things (sic) up. Thank you.

(Hearing Tr., p. 60, l. 13 – p. 61, l. 16).

23. In addition to providing a written report, Dr. Basse also testified by deposition on April 22, 2014. Dr. Basse confirmed that she performed an IME of the Claimant on December 17, 2013 (Depo. Tr., Rachel Basse, MD, pp. 5-6). At the time of the IME, Dr. Basse took a history from the Claimant regarding his activities from January through May of 2013 (Depo. Tr., Rachel Basse, MD, p. 12). Based on activities involved in childcare for his two young children, Dr. Basse understood that the Claimant "would have increased symptoms with some general care activities that involved use of his shoulder. They would hurt him during that activity, but he would generally be okay between the activities" (Depo. Tr., Rachel Basse, MD, pp. 13-15). Dr. Basse specifically testified that,

Q: And what history did he provide you that you deemed to be relevant , or is it everything in your report that you would like to highlight some?

A: Both.

Q: Okay.

A: And I'm specifically looking for the time frame you discussed.

Q: Page 2, I think.

A: Because you were talking up to April?

Q: Yes. So did he give you a history that he had taken time off from work?

A: Yes.

Q: Okay. And that was prior to his working at King Soopers?

A: Correct.

Q: And did he talk about activities in regard to caring for his children?

A: Yes.

Q: Okay. And that was prior to his working at King Soopers?

A: Correct.

Q: And did he talk about his activities in regard to caring for his children?

A: Yes.

Q: How old were his children per his history?

A: At that time, approximately three and six.

Q: Did he describe the kind of things – did he indicate to you that at the time he was being Mr. Mom at home?

A: Yes.

Q: Okay. And did he tell you what he was doing in that capacity during that time period?

A: Yes.

Q: And what was that that he was doing?

A: All the usual activities: cooking, cleaning, laundry, did childcare.

Q: Did he provide a history that he would take his three- or six-yearold to the playground?

A: Yes.

Q: And that, as part of doing so, he would lift them so they could reach the monkey bars?

A: That would be his three-year-old. He would drop the six-year-old off at school and, on the way back, would hit the playground.

Q: And did he tell you whether those – that activity caused him discomfort?

A: Yes. He did tell me.

Q: And what did he – is that what he told you?

A: That he had daily pain that would last an hour or so.

Q: Did he tell you about how he was or what he was doing in March of 2013?

A: Yes. Up till then, he had been more limited. By March he had been able to catch up on his rest and was generally feeling okay. He still had issues, but he was feeling okay. He would have increased symptoms with some general care activites that involved use of his shoulder. They would hurt him during that activity, but he would generally be okay between the activities.

(Hearing Tr., p. 13, l. 1 – p. 15, l. 7)

With respect to work activities during employment at King Soopers starting around April of 2013, Dr. Basse understood from the Claimant that he was doing lighter work, stocking the lower shelves and then using a step stool to reach upper shelves so he wouldn't have to reach overhead (Depo. Tr., Rachel Basse, MD, p. 16). Dr. Basse specifically testified that,

I don't want to give the wrong history as this is an evidentiary deposition. I understood from him that he would do lighter things, not heavy things, and that he had no problems stocking lower shelves with these lighter things, and then he would use a step stool of some kind to reach the upper shelves so he wasn't having to reach overhead.

(Depo. Tr., Rachel Basse, MD, p. 16, ll. 15-21)

Dr. Basse opined that the Claimant immediately experienced symptoms upon these activities and that the activities and movement in his arm required to do his job caused pain (Depo. Tr., Rachel Basse, MD, p. 17). In considering the testimony of Dr. Gersoff that the Claimant's loss of range of motion was due to irritation, Dr. Basse opined that the irritation was due to his activities, including the work at King Soopers and daily activities of his life (Depo. Tr., Rachel Basse, MD, p. 19). Ultimately, Dr. Basse opined that the surgery recommended by Dr. Gersoff is not related to the Claimant's work exposure for Employer, but rather is an elective procedure based on the Claimant's pain levels and functional tolerances and is attributed to the activities that he needs to do that are causing him pain (Depo. Tr., Rachel Basse, MD, p. 20). Dr. Basse testified that she does not believe that the Claimant requires ongoing maintenance care related to the work injury at issue in this case (Depo. Tr., Rachel Basse, MD, p. 20). On cross-examination, Dr. Basse conceded that Dr. Gutterman had ruled out the

psychological aspect of symptom magnification and exaggeration (Depo. Tr., Rachel Basse, MD, pp. 26-27). Dr. Basse also agreed that she was not aware of any specific incident that occurred at King Soopers that caused a re-injury to the Claimant's right shoulder nor was she aware of any such activities outside of his work at King Soopers, testifying,

> Q: Okay. Isn't it true, to your knowledge, there was no specific incident that occurred at King Sooper's involving [the Claimant's] work performance that caused some sort of reinjury to his right shoulder; isn't that correct?
>
> A: Yes.
>
> (Depo. Tr., Rachel Basse, MD, p. 28, ll. 2-7)

Dr. Basse did not agree that the premise that work activities at King Soopers *aggravated* the Claimant's prior work injury, because it is Dr. Basse's opinion that the work injury at Employer "was done" (Depo. Tr., Rachel Basse, MD, p. 31). Dr. Basse did testify that she would agree that the Claimant's right shoulder condition worsened after he was placed at maximum medical improvement in January 2013, including increased pain and a decrease in range of motion by September 2013 (Depo. Tr., Rachel Basse, MD, p. 31). Dr. Basse testified that the surgery proposed by Dr. Gersoff is reasonable for the Claimant's shoulder condition, but she does necessarily find it necessary since she testified that it depends to what extent the Claimant could modify the demands on his shoulder (Depo. Tr., Rachel Basse, MD, p. 36).

24. Based upon the evidence submitted at the hearing, in particular, the persuasive opinion of Dr. Gersoff, coupled with the Claimant's credible testimony regarding his actual work activities at King Soopers, it is found that the Claimant experienced a worsening of the condition of his right shoulder that is related to his work-related injury of September 14, 2012 after being placed at maximum medical improvement on January 14, 2013. The ALJ recognizes that Dr. Basse provided a contrary opinion regarding the source of the worsening of the Claimant's right shoulder symptoms. However, the ALJ resolves the conflict by giving greater weight to the testimony and reports of Dr. Gersoff, when considered in connection with the factual testimony from the Claimant regarding limits to his work activities at King Soopers and other activities that he would refrain from doing relating to childcare and work around the house.

25. The opinion of Dr. Gersoff regarding the recommendation for the right shoulder arthroscopy subacromial decompression and debridement is also found to be credible and persuasive. Based on this opinion and the weighing of all of the evidence presented to the ALJ, the recommended surgery is found to be reasonably necessary to cure and relieve the Claimant from the effects of his September 14, 2012 work injury.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *Robinson v. Youth Track*, W.C. No. 4-649-298 (ICAO May 15, 2007).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Petition to Reopen

The Claimant filed his Petition to Reopen W.C. 4-903-504 on October 4, 2013 on the ground that his medical condition has worsened. The Claimant initially sustained work injuries on September 14, 2012 when he suffered an injury to his right shoulder

while pushing shopping carts. The Claimant now seeks medical benefits in the nature of a right shoulder arthroscopy subacromial decompression and debridement and other care for a worsening right shoulder condition that the Claimant alleges is causally related to his original admitted work injury.

Section 8-43-303(1), C.R.S., provides that an award may be reopened at any time within six years after the date on the ground of a change in condition. The claimant shoulders the burden of proving his condition has changed and his entitlement to benefits by a preponderance of the evidence. Section 8-43-201; *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Osborne v. Industrial Commission*, 725 P.2d 63 (Colo. App. 1986). A change in condition refers either to change in the condition of the original compensable injury or to a change in the claimant's physical or mental condition. *Jarosinski v. Industrial Claim Appeals Office,* 62 P.3d 1082 (Colo. App. 2002). Reopening is warranted if the claimant proves that additional medical treatment or disability benefits are warranted. Reopening is not warranted if once reopened, no additional benefits may be awarded. *Richards v. Industrial Claim Appeals Office,* 996 P.2d 756 (Colo. App. 2000); *Dorman v. B & W Construction Co.,* 765 P.2d 1033 (Colo. App. 1988).

As a threshold matter, the Claimant bears the burden of establishing that change in the Claimant's condition is causally related to the original injury. Section 8-41-301(1)(c), C.R.S.; *Chavez v. Industrial Commission,* 714 P.2d 1328 (Colo. App. 1985). The question of whether the claimant met the burden of proof to establish a causal relationship between the industrial injury and the worsened condition is one of fact for determination by the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). The weight and credibility to be assigned expert testimony on the issue of causation is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 2993. Moreover, medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado, 717 P.2d 1000 (Colo. App. 1986).*

In order to prove a causal relationship, it is not necessary to establish that the industrial injury was the *sole* cause of the need for treatment. Rather, it is sufficient if the injury is a "significant" cause of the need for treatment in the sense that there is a direct relationship between the precipitating event and the need for treatment. A preexisting condition does not disqualify a claimant from receiving workers' compensation benefits. Rather, where the industrial injury aggravates, accelerates, or combines with a preexisting disease or infirmity to produce the need for treatment, the treatment is a compensable consequence of the industrial injury. *Joslins Dry Goods Co. v. Industrial*

Claim Appeals Office, 21 P.3d 866 (Colo. App. 2001); *H and H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Seifried v. Industrial Commission,* 736 P.2d 1262 (Colo. App. 1986).

Colorado recognizes the "chain of causation" analysis holding that results flowing proximately and naturally from an industrial injury are considered to be compensable consequences of the injury. Thus, if the industrial injury leaves the body in a weakened condition and the weakened condition plays a causative role in producing additional disability or the need for additional treatment, such disability and need for treatment represent compensable consequences of the industrial injury. *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970); *City of Durango v. Dunagan*, *supra*. However, to the extent that the worsening of a condition occurs as the result of an independent intervening cause, then reopening would not be warranted as this is unrelated to the original compensable injury. Whether a particular condition is the result of an independent intervening cause is a question of fact for the ALJ. *Owens v. Industrial Claim Appeals Office,* 49 P.3d 1187, 1188 (Colo. App. 2002).

The Claimant has established, through his testimony and with the medical evidence, that the relief from right shoulder injections was wearing off by May 1, 2013 and that the periods of relief following the injections were diminishing with the each successive injection. Because that treatment was failing, and the Claimant's symptoms were increasing, Dr. Gersoff felt it reasonable and necessary to proceed with a surgical resolution. A comparison of Claimant's range of motion measurements from his date of MMI with those measured by Dr. Beatty and Dr. Gersoff in October, 2013 demonstrate the worsening of the shoulder condition. Respondents do not challenge the findings and conclusion that the Claimant's right shoulder condition worsened subsequent to attaining MMI in January, 2013.

To the extent that the Respondents offered an intervening cause for the worsening of the Claimant's condition, the Respondents failed to meet the burden to establish the Claimant's subsequent work duties at King Soopers or his childcare activities rose to the level of effective intervening causes severing the causal link between the Claimant's September 14, 2012 injury at Employer and his worsened condition subsequent to MMI. See *Kurtz v. King Soopers*, WC No. 4-648-488 (ICAO March 20, 2008).

Although the Claimant was placed at MMI on January 14, 2013, since that point, the Claimant has proved that his right shoulder condition has deteriorated. The medical opinions of Dr. Gersoff and Dr. Beatty support the Claimant's contention that the Claimant's condition has worsened and that this worsened condition is causally related to the original injury. Because the Claimant has proven by a preponderance of the evidence that his condition has changed and he is entitled to benefits, WC Claim No. 4-903-504 is reopened.

Medical Benefits – Reasonably Necessary

Once a claimant establishes the worsened condition is causally related, the claimant must prove the proposed medical treatment is reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101, C.R.S. Although Respondents are liable for medical treatment that is reasonably necessary to cure and relieve the effects of the industrial injury, Respondents may, nevertheless, challenge the reasonableness and necessity of current or newly requested treatment notwithstanding its position regarding previous medical care in a case. *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002), (upholding employer's refusal to pay for third arthroscopic procedure after having paid for multiple surgical procedures).

The question of whether a particular medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office, supra*; *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P.2d 251 (Colo. App. 1999). The claimant bears the burden of proof to establish the right to specific medical benefits. *HLJ Management Group, Inc. v. Kim,* 804 P.2d 250 (Colo. App. 1990). Factual determinations related to this issue must be supported by substantial evidence in the record. Section 8-43-301(8), C.R.S. Substantial evidence is that quantum of probative evidence which a rational fact finder would accept as adequate to support a conclusion without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert,* 914 P.2d 411, 415 (Colo. App. 1995).

Here, Claimant established by a preponderance of the evidence that the specific medical treatment consisting of right shoulder arthroscopy subacrominal decompression and debridement proposed for the Claimant's right shoulder by Dr. Gersoff is reasonably necessary to cure and relieve the effects of the September 14, 2012 industrial injury and the worsened condition from which the Claimant is now suffering. Although Dr. Basse disputes that the need for this surgery is related to the work injury, and disagrees that the surgery is necessary, she agreed that the Claimant is a surgical candidate and the surgery would be reasonable. Having found that the Claimant's condition has worsened since he was placed at MMI on January 14, 2013, it is further determined that the Claimant has proven that the surgery recommended by Dr. Gersoff is reasonably necessary to cure and relieve him from the effects of his work injury. The increased symptoms and decreased range of motion experienced by the Claimant are found to be a foreseeable consequence in this case following the failure of conservative treatment, including injections.

ORDER

It is therefore ordered that:

1. Workers' Compensation claim no. 4-903-504 is reopened.

2. Insurer is liable for the medical care the Claimant receives that is reasonably necessary to cure and relieve him from the effects of the

compensable injury that occurred on September 14, 2012, per his authorized treating physician and any authorized referrals, including, but not limited to, right shoulder arthroscopy subacromial decompression and debridement recommended by Dr. Gersoff.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 633 17th Street, Suite 1300, Denver, Colorado, 80202. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-906-908-02

ISSUES

- Whether Respondent has proven by a preponderance of the evidence that Claimant waived his right to a Division Independent Medical Evaluation (DIME).

STIPULATIONS

1. Claimant attempted to schedule the DIME within 50 days as required by statute.

2. Dr. Miller was scheduled to be out of the country during the 50 days in which the DIME needed to take place.

3. The adjuster agreed that Claimant could schedule the DIME outside of the 50 day time limit provided by statute.

4. Claimant has failed to schedule the DIME.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant sustained an admitted injury on December 27, 2012.

2. Claimant was placed at maximum medical improvement (MMI) on September 25, 2013. A Final Admission of Liability was filed on October 3, 2013. It has been more than 1 year since Claimant was placed at MMI.

3. Claimant timely objected to the Final Admission of Liability and requested a DIME.

4. The DIME Unit issued an IME Physician Confirmation on January 9, 2014 identifying Dr. Frederick Miller as the DIME physician and notifying Claimant that the DIME needed to be scheduled within 5 business days from the date of receipt of the IME Physician Confirmation and that the DIME needed to take place within 35 – 50 calendar days of the date the telephone call requesting the DIME appointment was made.

5. Claimant was unable to schedule the DIME to occur within 50 calendar days because Dr. Miller was going to be out of the country.

6. Lisa Biggs, the adjuster for the third party administrator handling this claim, agreed that Claimant could schedule the DIME to occur outside of the 50 day period. Claimant argues Ms. Biggs' agreement indefinitely extends his time to schedule the DIME. The ALJ disagrees with Respondent's contention and reasonably infers from the evidence that Ms. Biggs' agreement that the DIME could be scheduled to occur outside of the 50 day period was made to accommodate Dr. Miller's international travel schedule; not to indefinitely extend the scheduling or occurrence of the DIME.

7. In his position statement, Claimant seeks to excuse his failure to schedule the DIME by arguing trial strategy, a failed attempt to settle the claim, and assigning responsibility for the failure to Respondents. No evidence was offered at hearing to support these arguments and the ALJ finds they are without merit.

8. The DIME was not scheduled within 5 business days from the date of receipt of the IME Physician Confirmation even after Respondent agreed that the DIME could take place outside of the 35 - 50 calendar day timeframe.

9. Claimant testified at hearing that he did not know if his DIME had ever been scheduled and that he did not know whether or not he was notified of an appointment with Dr. Miller. It has been 11 months since the IME Physician Confirmation was issued. The ALJ finds that to date, no DIME has been scheduled.

10. On August 6, 2014 Respondent notified the Division of its intent to request cancellation of the DIME pursuant to Rule 11-3(I), WCRP and filed an Opposed Request for Cancellation of DIME and Motion to Strike Notice and Proposal.

11. The ALJ finds that Claimant, through his inaction in setting a DIME for nearly 1 year, has waived his right to a DIME. The period of time for the DIME to occur is provided by rule to further the legislative intent of providing the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. The period of time for the DIME to occur is also provided by rule to further the legislative intent that impairment is to be determined at the time of MMI. §8-42-107(8)(c), C.R.S. By failing to schedule a DIME for almost 1 year since the parties were notified of the selection of a DIME physician, Claimant frustrates the express legislative intent of the Workers' Compensation Act, unconscionably delays the statutory remedy available to him to have his claim reviewed by a DIME physician, and prejudices the Respondent's right to have Claimant's permanent medical impairment determined at or near the time Claimant was placed at MMI. Claimant, through his attorney, knew that a DIME needed to be scheduled within 5 business days of the date of receipt of the IME Physician Confirmation. The adjuster agreed that the DIME could occur outside of the 35 – 50 day time period provided by Rule. Despite this agreement, Claimant never scheduled the DIME. Claimant's failure to schedule a DIME for nearly 1 year is inconsistent with the assertion of his right to a DIME, manifests his intent not to pursue a DIME, and constitutes a waiver of that right.

12. The ALJ finds Respondent has proven by a preponderance of the evidence that Claimant waived his right to a DIME.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. A preponderance of the evidence is evidence which leads the trier-of fact, after conserving all of the evidence, to find a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (1979). Facts in a workers' compensation case are not interpreted liberally in

favor of either the injured worker or the employer. C.R.S. §8-43-201. The party asserting waiver carries the burden of proof. *Johnson v. Industrial Commission*, 761 P.2d 1140 (Colo. 1988); *Sholund v. Argenbright Security*, W.C. No. 4-415-403 (June 16, 2004).

Permanent medical impairment is to be determined at the time of MMI. §8-42-107(8)(c), C.R.S. As found, it has been more than 1 year since Claimant was placed at MMI.

Rule 11-2(A), W.C.R.P. provides, in relevant part, that *unless otherwise approved by both parties*, the DIME shall occur within 35 – 50 days from the telephone call requesting an appointment. Emphasis added. As stipulated by the parties, the adjuster agreed that the DIME could occur outside of the 35 – 50 day window because Dr. Miller was unable to perform the DIME within the 35 – 50 day window. As found, despite the adjuster's agreement that the DIME could occur outside the 35 – 50 day window, her agreement was not intended to indefinitely extend the time within which Claimant was to schedule the DIME. Claimant has not scheduled the DIME.

Rule 11-3(I), W.C.R.P. provides, in relevant part, that the date of the DIME shall be set in accordance with Rule 11-2(A) and that "[t]he requesting party shall call the IME physician within five (5) business days after providing and/or receiving notice of the final IME physician selection to schedule the examination, and shall immediately notify the Division and the opposing party by telephone, and confirm in writing, the date and time of the examination. Absent good cause as determined by the Director or an administrative law judge, failure to make the appointment and advise all parties within five (5) business days permits the opposing party, after notifying the Division of such failure, to either schedule the IME appointment or to request cancellation of the IME." As found, not only did Claimant fail to schedule the DIME within 5 business days of receipt of the January 9, 2014 IME Physician Confirmation but Claimant has failed to schedule the DIME at all.

Waiver is the intentional relinquishment of a known right. *Johnson, supra*. The exercise of a statutory right is always subject to equitable limitations. *Id.* Waiver may be implied as when a party engages in conduct which manifests an intention to relinquish the right or acts inconsistently with its assertion. *Id.; see also, Munoz v. JBS Swift & Company*, W.C. No. 4-780-871 (March 1, 2010); *Rodriguez v. Safeway Stores, Inc.*, W.C. No. 4-712-019 (June 3, 2009). A party may, through inaction, delay, or other similar conduct, waive the right to obtain a DIME. *Johnson, supra.; Munoz, supra.* Parties to a workers' compensation claim are presumed to know the applicable law. *Midget Consol. Gold Mining Co. v. Industrial Commission*, 193 P. 493 (Colo. 1920); *Paul v. Industrial Commission*, 632 P.2d 638 (Colo. App. 1981). A party may not use ignorance of the law as a defense to its legal duties. *Grant v. Professional Contract Services*, W.C. No. 4-531-613 (January 24, 2005).

As found, Claimant, through his inaction in setting a DIME for nearly 1 year, has waived his right to a DIME. The period of time for the DIME to occur is provided by rule to further the legislative intent of providing the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. The period of time for the DIME to occur is also provided by rule

to further the legislative intent that impairment is to be determined at the time of MMI. §8-42-107(8)(c), C.R.S. By failing to schedule a DIME for almost 1 year since the parties were notified of the selection of a DIME physician, Claimant frustrates the express legislative intent of the Workers' Compensation Act, unconscionably delays the statutory remedy available to him to have his claim reviewed by a DIME physician, and prejudices the Respondent's right to have Claimant's permanent medical impairment determined at or near the time Claimant was placed at MMI. Claimant, through his attorney, knew that a DIME needed to be scheduled within 5 business days of the date of receipt of the IME Physician Confirmation. The adjuster agreed that the DIME could occur outside of the 35 – 50 day time period provided by Rule. Despite this agreement, Claimant never scheduled the DIME. Claimant's failure to schedule a DIME for nearly 1 year is inconsistent with the assertion of his right to a DIME, manifests his intent not to pursue a DIME, and constitutes a waiver of that right.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has waived his right to a DIME. Claimant's October 4, 2013 Notice and Proposal to Select an Independent Medical Examiner is hereby stricken.

2. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 9, 2015

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman St., 4th Floor
Denver, CO 80203

ISSUES

1. Whether the Claimant proved, by a preponderance of the evidence, that he suffered a compensable work injury on December 15, 2012.

2. If the Claimant proved he sustained a compensable injury on December 15, 2012, whether the Claimant proved he is entitled to temporary disability benefits related to the December 15, 2012 injury.

3. If the Claimant proved he sustained a compensable injury on December 15, 2012, whether the Claimant proved that the medical treatment he received was reasonable and necessary to cure and relieve the Claimant from the effects of the December 15, 2012 injury.

4. Whether the Claimant proved, by a preponderance of the evidence, that he suffered a compensable work injury on January 10, 2013.

5. If the Claimant proved he sustained a compensable injury on January 10, 2013, whether the Claimant proved he is entitled to temporary disability benefits related to the January 10, 2013 injury.

6. If the Claimant proved he sustained a compensable injury on January 10, 2013, whether the Claimant proved that the medical treatment he received was reasonable and necessary to cure and relieve the Claimant from the effects of the January 10, 2013 injury.

7. If the Claimant is entitled to any temporary disability benefits, the calculation of the Claimant's average weekly wage.

8. If the Claimant has established that he is entitled to receive temporary disability benefits, have Respondents proven that the Claimant was terminated for cause.

9. If the Claimant is entitled to any temporary disability benefits, determination of any offsets for unemployment benefits.

FINDINGS OF FACT

1. The Claimant is a 54-year old man who worked for Employer as an extra board line haul truck driver starting on May 30, 2012.

Claimant's Prior Medical History

2. The Claimant reported some prior medical history to Dr. Lawrence Lesnak: a right knee arthroscopy in approximately 1985, three separate right ankle surgeries due to a work related injury in the early-mid 1990's; a left shoulder arthroscopy due to a work related injury in the mid-1990s; dental treatment for a 2009 incident when his four bottom teeth were knocked out and a January 25, 2010 injury to his left shoulder and low back. (Claimant's Exhibit 17; Respondents' Exhibit A, pp. 3-4).

3. On July 12, 2003, the Claimant underwent an MRI of the lumbar spine for complaints of low back pain. The findings were generally indicative of degenerative changes from L1 through S1 (Claimant's Exhibit 12).

4. On January 22, 2006, the Claimant presented to HealthOne North Suburban Medical Center complaining of injuries from an assault. The Claimant reported he was assaulted at a bar when several bouncers jumped him. He is unsure whether he lost consciousness or not. He reported that he was hit in the head and complained of neck pain, right shoulder pain, back pain and left knee pain. A CT scan of the Claimant's head was negative and a CT scan of his cervical spine was unremarkable (Respondents' Exhibit B, pp. 34-35).

5. On January 22, 2010, the Claimant slipped and fell at work. At the time, the Claimant was a truck driver and he reported that he was up on his semi and then found himself on the ground. "He states he may or may not have passed out. He does not know. He found himself on the ground after falling forward." The Claimant reported pain to the top of the head and to the cervical spine. His left shoulder was painful and difficult to move secondary to pain. He also reported lumbar spine pain and tingling into the coccyx. On January 27, 2010 the Claimant had stomach "gurgling" and had blood in his stool so he was sent to see Dr. Caroline Gellrick who further referred his that day to Exempla Lutheran for evaluation as to his shoulder (Respondents' Exhibit H, p.114). The Claimant was evaluated again on January 28, 2010 by Dr. Caroline Gellrick. The Claimant's shoulder was not dislocated but he still had left shoulder pain, back pain, tailbone pain and a headache (Claimant's Exhibit 9; Respondents' Exhibit H, p. 111).

6. The Claimant testified that he has had a history of going unconscious. However, he disputed that he had a history of passing out for no known reason. Prior instances he recalled, in 2001 and January of 2010, were due to ice or snow (Hearing Tr., p. 105).

Claimant's Documented Performance Issues Coincide with His Alleged Injuries

7. The Claimant has a history of performance issues which were significant and documented in his employment file which occurred right before the alleged work injuries.

8. On August 2, 2012, the Claimant was given a written warning for "unacceptable behavior, insubordination" and "violation of Company Policy or Work Standards," arising out of an alleged altercation between the claimant and another employee (Respondents' Exhibit J, pp. 174-177).

9. On November 14, 2012, the Claimant was provided a written warning for a "violation of Company Policy or Work Standards" arising out of his failure to timely get medically cleared to drive due to blurred vision. The Claimant was off from work November 6-14, 2012 (Respondents' Exhibit J p. 172 and 206).

10. On November 27, 2012, the Claimant was given a citation for a Department of Transportation ("DOT") vehicle inspection resulting in a left lane violation (Respondents' Exhibit J, p. 203).

11. On December 15, 2012, the Claimant was given a written warning for "poor performance" by Jason Gilbert, Inbound Supervisor, for failing to timely deliver freight from Salt Lake City to Denver. This violation occurred on the same date that the first of the alleged work injuries in this case occurred per the Claimant's testimony (Respondents' Exhibit J, p. 171).

12. On December 21, 2012, the Claimant was given a written warning for "poor performance" arising out of an inability to meet company standard run times (the expected time for a run to last). This performance issue occurred right at the time that the Claimant reported the first alleged work injury (Respondents' Exhibit J, p. 163 and 201). The Claimant disputed this written notice in the comments that he prepared and signed on December 21, 2012 and claims that this was a "witch hunt" to try to eliminate a good employee because he asked for a larger tractor to fit his body. The Claimant also argued that he was not provided with proper tools to meet his expected run times such as maps and good directions to a terminal (Respondents' Exhibit J, pp. 163-164 and 201-202).

Claimant's Employment with Employer and Two Reported Injuries

13. The Claimant is seven feet tall and testified that at the end of 2012, he weighed about 263 pounds (Hearing Tr., p. 31). The Claimant's duties while working for the Employer included driving a truck, pulling doubles and triples, hooking and breaking the sets of trailers, lifting up to 150 pounds (Hearing Tr., p. 32). The Claimant would typically drive long haul routes to destinations in other states and then continue with the next route he was dispatched or wait at the destination until he was dispatched to another destination (Hearing Tr., p. 33).

14. The Employer usually paid the Claimant by the mile, but was occasionally paid by the hour if they were working locally or when the vehicle broke down. The Claimant received a health insurance benefit and was provided with hotel accommodations on overnight drives (Hearing Tr., pp. 35-36). The Claimant testified that he would make an average of $1,100.00 - $1,500.00 per week (Hearing Tr., p. 35)

but that after October 26, 2012 his earnings dropped off considerably because he believed the Employer was limiting the hours on his schedule and not giving him as many routes as he was being more proactive about trying to get a larger truck to drive due to his body frame (Hearing Tr., pp. 36-37). The Claimant testified that between October 26, 2012 and December 14, 2013, the Claimant was at the same time requesting a larger cab to drive for longer distance drives. At the same time, he testified, he was not getting as many routes as he was accustomed to being scheduled even though he was requesting full time work (Hearing Tr., pp. 36-38).

15. The Claimant testified that he was usually assigned a day cab instead of the larger sleeper cab. When he was in the smaller cab his legs would be cramped and get tired and he had to adjust the seat to its highest position to accommodate his legs. However, the Claimant testified that when he adjusted the seat to that position, this put his head right up to the top of the cab (Hearing Tr., p. 38-40). Based on the accommodation request made by the Claimant, the Claimant was evaluated by Dr. Jonathan Block to determine fitness for duty due to the Claimant's complaint that he was having trouble fitting into his truck due to his height (Hearing Tr., p. 44). Dr. Bloch saw the Claimant for evaluation on November 27, 2012 and noted that the Claimant advised him that he was having trouble fitting into his truck. Dr. Bloch noted that the Claimant advised that he seemed to do better in a sleeper truck since he could adjust the seat back instead of just up and down. Dr. Bloch also noted that the Claimant reported that his back was starting to become sore from working in cramped trucks. Dr. Bloch recommended truck manuals be reviewed to see if there is a truck better designed/suited for a man of the Claimant's height, and if so if there are any appropriate reasonable accommodations (Claimant's Exhibit 6; Respondents' Exhibit D, pp. 54-56). The Claimant testified that he did not tell Dr. Bloch at that evaluation that he had problems with his neck or lower back (Hearing Tr., p. 42).

16. The Claimant's inbound supervisor, Jason Gilbert, gave the Claimant a Notice of Written Warning dated December 15, 2012. The written notice describes the misconduct as poor performance for a late delivery. Mr. Gilbert noted that "on 12/14/12 [the Claimant was] dispatched from Salt Lake City to Denver at 22:00 PM, due to arrive in Denver at 07:57 AM, according to the computer system. At approx 10AM I called you and found you had just reached Laramie WY which is 142 miles from the terminal…" (Respondent's Exhibit J, p. 171). At his deposition, Mr. Jason Gilbert testified he previously held the position of inbound supervisor although he is currently the outbound supervisor (Depo. Tr. Jason Gilbert, p. 5). Mr. Gilbert confirmed that the date of the Claimant's write up for lateness was December 15, 2012 (Depo. Tr. Jason Gilbert, p. 7)

Claimant's Alleged December 15, 2012 Injury

17. The Claimant testified that he was first injured while working for Employer on December 15, 2012. The Claimant testified that he was assigned to drive a route to and from Salt Lake City and he was on his way back, driving eastbound on I-80. As he was driving back, there was a blizzard and the overhead road signs were recommended reduced speeds, so the Claimant took longer than usual to get back (Hearing Tr., pp.

45-46). The Claimant testified that as he was approaching Laramie, there was quite a bit of snow on the road although the storm had passed. At this point he testified that he was back up to driving full speed when he hit a berm of snow in the road that he didn't see. He testified that as he hit the berm at a pretty high rate of speed he felt his seat go blat to the floor, squeeze down and the shoot back up. The Claimant's head hit the ceiling and he testified that in the process it jammed his neck up too. The Claimant testified that almost immediately he had an immense headache and pain in the top of his head, back of his neck, the upper trapezius areas and his shoulders and he it was hard to turn his head to either side (Hearing Tr., p. 47). The Claimant testified that he continued to drive the route but it took longer due to the previous weather and his injury. When he returned to Employer's terminal no one was there except for one security guard (Hearing Tr., p. 48).

18. The Claimant testified that supervisors are not at the terminal on Saturday afternoons, which is when he returned after his injury, and they are not there on Sundays. So, he reported his injury to his immediate supervisor Marty Kessler by phone on Monday morning since he didn't have a home number to call Mr. Kessler over the weekend. The Claimant testified that when he called he told Mr. Kessler that he injured himself when he hit a bump in the road and he jammed his neck. The Claimant testified that he asked if he could go to the doctor and Mr. Kessler told him he would get back to him (Hearing Tr., p. 49). The Claimant did not hear from the Employer until Wednesday when the dispatcher called him to do a run. He testified that was off on Monday and Tuesday and testified that he did not seek medical care on those days on his own because he was having financial issues and did not want to incur doctor bills that he couldn't afford to pay (Hearing Tr., pp. 50-51). However, the Claimant later testified that he did work on Monday, December 17th when he drove a local run to Grand Junction (Hearing Tr., p. 56). The Claimant testified that he requested medical care again and had a meeting with his supervisor Marty Kessler and the terminal manager Leo Raker on December 20, 2012 and they told the Claimant that if he was going to get medical care he had to go right away (Hearing Tr., pp. 51-52). On cross-examination, the Claimant's testimony becomes somewhat convoluted about when the injury was reported. The Claimant does insist that he always reported an injury occurring on December 15, 2012 (Hearing Tr., pp. 113-114), however, the supervisor investigation report for an employee injury completed by Marty Kessler states that the Claimant advised him on 12-21-12 that he needed to see a doctor for neck pain due to an injury that happened while driving from terminal 224 to 257 on I-70 near Grand Junction (see Respondents' Exhibit J, p. 197). The Employer's First Report of Injury form also indicates the injury date was 12-20-12 but there is a question mark next to it. It is noted that the injury was reported to management on 12-21-12. The injury was describe as happening when the Claimant was driving a day cab where the Claimant had the seat all the way up and when the tractor hit a dip he injured his head, neck and upper back. The report indicates he was on I-70 eastbound when the Claimant hit the dip in the road. The Claimant signed that he would go to Concentra on 12-21-12. The Claimant's signature is at the bottom of the form with the date of 12-21-12 (Respondents' Exhibit J, p. 193). Later on re-cross examination, the Claimant testified that although the signature on the bottom of the page is his and some of the handwriting on the form is his, some of

it is not his. Specifically, he did not write in the information at lines 1-6, someone else did, although the Claimant testifies that he wrote the question mark next to line 1. The Claimant testified that he does not know if he checked the box in line 7. The Claimant testified that he did write on lines 8, 10, 11, 12 a, b and c, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24 and 25. Just below line 25, the Claimant testified he did not write in the "check yes" and the 12-21-12 date and did not write Concentra. Then the printed name, signature, last 4 digits of his Social Security number and the date of 21 Dec 2012 was written by the Claimant (Hearing Tr., pp. 199-206).

19. There was testimony at the hearing and a note from Concentra that the Claimant was sent for a random drug screen. The record indicates the drug screen time in was 1:00 PM and the time out was 1:54 PM (Respondents' Exhibit J, p. 200). Based on the testimony and the later medical record from the same day, it appears that on December 21, 2012, the Claimant first was sent for a random drug screen, then came back to the Employer's property and had discussions with his supervisor and filled out paperwork for the injury that the Claimant insists occurred on December 15, 2012 but paperwork notes occurred on December 20, 2012. Then, the Claimant was sent back to the Concentra clinic for medical evaluation and treatment.

20. The Claimant went to Concentra on December 21, 2012 and saw Glenn Peterson, PA. The medical note indicates that the Claimant's time in to the clinic was 5:20 PM and his time out was 7:10 PM. Mr. Peterson noted that the Claimant reported that on December 15, he was driving to his farm and hit the bottom bumps while driving his cab near the speed limit and bumped his head up against the top of the cab. This happened several time resulting in neck pain. The Claimant reported no loss of consciousness but stated that since the incident, he has had a couple of episodes of blurred vision. The Claimant reported that it hurt to turn his head and he did not feel safe driving a big rig cab. PA Peterson assessed the Claimant with a closed head injury, a cervical strain and a thoracic strain. The Claimant was restricted from commercial driving, provided lifting restrictions, prescribed diclofenac and sent to physical therapy (Claimant's Exhibit 6; Respondents' Exhibit D, pp. 48-50). At the hearing, the Claimant testified that he was not driving to his farm at the time he was injured (Hearing Tr., p. 53).

21. The Claimant testified that after his 12/21/2012 appointment, he could not perform commercial driving and that he went to Concentra for physical therapy (Hearing Tr., pp. 57-58). The Claimant was given modified duty sweeping on the dock and his wages were reduced to $10 per hour. The Claimant testified that he performed the modified duty for a short time but he found it dangerous due to the cold and having to dart in between forklifts (Hearing Tr., pp. 60-61).

22. On January 2, 2013, the Claimant was reevaluated by PA Peterson when he came in as a walk-in appointment. The Claimant reported that he was working in a cold warehouse sweeping and his condition was worsening, with his neck tight and difficulty turning to the side with pain down the left arm with certain neck movements. The Claimant's work restriction of no commercial driving was continued as was the

lifting restriction and an additional restriction of no work in a cold environment was added (Claimant's Exhibit 6; Respondents' Exhibit D, pp. 46-47). The Claimant testified that after January 2, 2013, he no longer worked in a cold environment. He returned to work a couple of days later counting vehicles leaving the yard. He performed this duty for four or five days. His neck was painful at this point but he had only been to one physical therapy visit which helped because, he testified, the Employer was making it as hard as possible for the Claimant to schedule visits due to the hours they were scheduling him for work (Hearing Tr., pp. 62-63).

23. The Claimant was reevaluated on January 8, 2013 by Dr. Bloch who noted this was an "odd case" because the Claimant "was originally seen November 27 for evaluation of fit for duty vs. ADA as he is 7 [sic] tall and truck don't accommodate people that tall, he was then complaining of low back pain mostly from having to hunch into the regular sized cab" and "the then returned to check in for UC on 12/20 with added neck pain from having cramping into the cabs that also cause head to rub on top of cab" and "then he presented 12/21 for a specific injury that occurred on December 20th when he says he was driving the speed limit in his truck…he apparently specifically hit his head on the top of the cab while driving en route back from SLC and is now having said complaints." Dr. Bloch assessed the Claimant with cervical strain with subjective radiculopathy, subjective hip pain, subjective thoracic pain and PMH lumbar injury with IR and PWR. Dr. Bloch noted that he reviewed the Claimant's job functions and he did not find restrictions to activity necessary. He did note that a larger truck would be a reasonable accommodation for the Claimant and the Claimant was returned to regular duty. Dr. Bloch considered an MRI but noted that he did not see a "strong indication" due to a physical examination that was "more of an arthritic exam" and the "lack of objective neuritis" along with a "questionable history of actual traumatic injury" (Claimant's Exhibit 6; Respondents' Exhibit D, pp. 42-44).

24. On January 10, 2013, Dr. Bloch made an appended note to his January 8, 2013 medical note stating that,

> [the Claimant] is an incredibly difficult patient to treat. He incisively calls the clinic, at least 4 times today spending over an hour of our staffs time on the phone. He insists there are miscommunication [sic] that he wants to resolve, when there are none. He admits to recording these phone conversations. He has been offered ASAP appointments to come in and discuss with myself but refuses to schedule anything. He often just walks into the clinic instead….He often ends these phone conversations emotionally labile, angry and yelling….most of my staff expressed discomfort about having to work with him and they are requesting not to work with him. I personally fear him but am willing to see him. He made sexual advances at one of our colleagues. He wants to come to therapy 3x a week instead of the 2x per week that was ordered and is standard, but again won't come in for a doctor's visit to discuss….He insists he cannot come to therapy during our regularly scheduled hours, our head therapist Chris made arrangements to come in early, at 7:30 one morning,

to accommodate [the Claimant] and [the Claimant] did not arrive until after 8am.

At the hearing, the Claimant testified that he did not make sexual advances to one of his colleagues and he took issue with Dr. Bloch's statement that he feared the Claimant. The Claimant also denies that he was angry, yelling and emotional during phone conversations with staff. He testified that he did record every one of his conversations with them. The Claimant denied that he was offered meetings with Dr. Bloch that he refused and denied that he would walk into the clinic demanding to be seen. The Claimant testified that he thinks Dr. Bloch wrote his appended note because of a conflict of personality and because they just don't get along (Hearing Tr., pp. 64-66).

25. The Claimant testified that he was not able to return to work after the January 10, 2013 incident. The Claimant testified that he had a referral from the physician at North Suburban Medical Center to see his workers' compensation doctor on January 14th, but Dr. Bloch refused to see him (Hearing Tr., pp. 88-89).

26. A progress note from Dr. Bloch's office notes, "this claim was denied for reasons unbeknownst to me. Patient is as MMI today without any impairment. Patient has no permanent restrictions and is released to full duty activities today. No medical maintenance should be considered neccisary [sic]. A larger cab form [sic] one they may have vacant in their lot, to fit a larger person, is a reasonable accommodation. Case closure has been accomplished. Patient is released from care today"(Claimant's Exhibit 6; Respondents' Exhibit D, p. 41).

27 The Claimant testified that he went to Dr. Bloch's office on January 14, 2013 and was in the waiting room but he did not get to see Dr. Bloch (Hearing Tr., p. 91).

28. Respondents filed a Notice of Contest for WC claim # 4908381 for a date of injury of 12/20/2012 (Claimant's Exhibit 2).

29. The Claimant testified that he did not seek any medical care with his own providers related to the December 15, 2012 or January 10, 2013 incidents because he did not want to incur more bills that he could not afford to pay. The Claimant testified that he wants medical care for migraine headaches, neck pain and blurred vision (Hearing Tr., p. 93).

30. Dr. Lawrence Lesnak, who had performed an evaluation of the Claimant on March 25, 2014, testified that there were no objective findings with regard to the December 2012 alleged incident. He specifically opined that there was no medical evidence that the Claimant sustained any type of trauma to his neck in December 2012. (Hearing Tr., pp. 216-217). He later clarified: "What I'm saying is whatever happened [in December 2012], even if it did happen, it did not leave any signs of trauma or abnormalities [or] hazards out of that potential incident." (Hearing Tr., p. 234).

31. In considering the totality of the evidence presented, the ALJ credits Dr. Lesnak's opinions along with the supporting medical records and determines that the Claimant has not established that it is more likely than not that he sustained a compensable injury in December 2012 that resulted in the need for medical treatment. The ALJ finds that the objective medical evidence does not support that an injury occurred on December 15 or December 20, 2012. Additionally, the timing of the reporting of this injury is suspect based on the employment documents in evidence. Moreover, there is considerable inconsistency related to the Claimant's testimony, statements and documents in evidence and the Claimant's actions during the time frame from December 15, 2012 to December 21, 2012. Overall, the Claimant's testimony is not found to be credible in the face of more credible and reliable evidence that was presented in this case with respect to the allegations of a December 15, 2012 injury.

32. In the alternative, if there was any injury, the December 2012 incident did not result in the need for permanent impairment or medical care. As noted above, the Claimant was released to MMI with no permanent impairment on January 16, 2013, after just three evaluations. Any effects of the alleged incident were resolved as of that date (Respondents' Exhibit D, p. 40). Dr. Lesnak testified that he agreed that the Claimant did not sustain any permanent impairment as a result of the alleged December 2012 event. Specifically, he testified that there were no objective findings on which a physician could base any need for permanent impairment or medical treatment (Hearing Tr., p. 218). Further, The ALJ credits the medical records and the opinions of Dr. Lesnak and finds that Claimant has not proven that it is more likely than not that the claimant has demonstrated a need for medical treatment as a result of the December 2012 alleged injury. The ALJ determines that the Claimant has failed to establish that the medical care rendered in December 2012 and early January 2013 was reasonable and necessary medical treatment related to a compensable injury.

Claimant's Alleged January 10, 2013 Injury

33. The Claimant testified that on January 9, 2013 at about 9:30 at night he was called in by the dispatcher to do a run to Salt Lake City. He testified that he "felt pressured" by the Employer because they offered him a larger truck and said that he had to get on the road and that he was their best driver. The Claimant further testified that there is a company rule that whenever a driver is called, they have 2 hours from that time to get ready from their house and drive into work (Hearing Tr., pp. 66-67).

34. The Claimant testified that he reported to work on January 9, 2013 at approximately 11:30pm but that he suffered an injury as he was in the process of reporting. The Claimant testified that he was taking some essential items from his personal vehicle which was in the parking lot next to where the tractors are parked. The Claimant testified that he tripped and fell and hit his head on some steps and landed to the side of the steps in the dirt. The Claimant offered photograph which were entered into evidence as Exhibits 19, 20 and 21 to depict the stairs and the area where he

testified he fell (Hearing Tr., pp. 67-78 and Claimant's Exhibits 19, 20 and 21). As the Claimant was carrying items from his vehicle to the tractor he would be driving, he testified that he recalled feeling dizzy and lightheaded and as he felt his legs become weak he stumbled and hit one of the steps and fell forward. He testified that because he was carrying things, he didn't brace and he recalls falling face down in the dirt immediately to the left of the steps (Hearing Tr., p. 80). After this, the Claimant testified, he blacked out and does not have recollection after going unconscious until he woke up in the emergency room. He specifically testified that he does not recall the ambulance ride to the hospital (Hearing Tr., pp. 84-85).

35. Mr. Mark W. Passamaneck, a professional engineer working primarily in forensic engineering and analysis for twenty years, testified as an expert in the area of forensic engineering. Mr. Passamaneck was asked to comment on the location of the Claimant's body, found to the left of the stairs as indicated in witness statements and testimony in relation to the Claimant's testimony that he tripped as he was walking up the stairs. Mr. Passamanek opined that the Claimant's testimony does not make sense from a forensic engineering perspective because if the Claimant was walking up the stairs and he tripped and fell, he would have fallen onto the stairs. If the Claimant had attempted to guard against the fall, the Claimant's upper body would be further off the axis of the stairs in comparison to his feet but a drawing prepared by Jason Gilbert regarding the Claimant's body position in relation to the stairs shows the upper body closer to the stairs and the feet further away (Hearing Tr., pp. 272-273; Respondents' Exhibit J, p. 185). Mr. Passamaneck also noted that the medical information and statements that he read indicate that the Claimant did not suffer cuts or abrasions consistent with falling on cement stairs (Hearing Tr., p. 273). Mr. Passamaneck testified that there was nothing unusual in the area where the Claimant was reported to be found unconscious that would have caused a fall, it was just a gently sloping dirt hill (Hearing Tr., p. 273-274). On cross-examination, Mr. Passamaneck conceded that he did not know if there had been snow or ice on the stairs on the night when the Claimant was found unconscious (Hearing Tr., p. 276).

36. Jason Youmans was a shift coordinator/Class A mechanic in January of 2013. He no longer works for Employer and has worked elsewhere since about December 2013. However, Mr. Youmans was working for Employer the night of January 9, 2013 into the morning of January 10, 2013. Mr. Youmans testified that he was sitting in the office at the shop building taking care of paperwork when the Claimant came in and said, "I need you to call dispatch and tell them I've been here since 11:20." Mr. Youmans testified that he looked at the clock and saw that it was after midnight and he told the Claimant "I can't do that. I'm not going to lie to the company for you. I have no idea how long you've been here." Mr. Youmans testified that the Claimant next complained about not being able to find a particular truck and said that he's been walking around all night trying to find it. Mr. Youmans testified that he told the Claimant that the truck he was looking for was right out front parked along the side of the building they were in. Mr. Youmans testified that the Claimant didn't respond to that and kept talking about how much he disliked the Employer and that they were mean to him and Mr. Youmans testified that he asked the Claimant what was going on, but he didn't

respond to that either. So, Mr. Youmans suggested that if the Claimant was in trouble, the best thing to do was to get the tractor and go to work. Mr. Youmans testified that after a few seconds the Claimant turned around, said okay, and walked out. Mr. Youmans testified that he was concerned about the Claimant's behavior since he wasn't responding to anything Mr. Youmans had said and he didn't look normal; he looked pale and like he was getting sick (Hearing Tr., pp. 292-294). Mr. Youmans generally testified in accordance with the written statement that he had prepared contemporaneous with the events of January 9, 2013 – January 10, 2013 (Respondents' Exhibit J, p. 187A).

37. The Claimant testified in rebuttal that Mr. Youmans was lying and that the Claimant never asked him to lie about saying the Claimant had arrived at 11:20. The Claimant testified that he did have a discussion with Mr. Youmans about trying to find his tractor. The Claimant also disputes that he was complaining about Employer and that he didn't like the company (Depo. Tr. Claimant, pp. 4-6).

38. The Claimant's inbound supervisor, Jason Gilbert, was alerted after he had just arrived at work that the Claimant was found on the ground by the parking lot. Mr. Gilbert testified that he saw the Claimant lying on his stomach, face down, with his arms above his head facing towards the parking lot and up the hill next to the stairs (Depo. Tr. Jason Gilbert, pp. 8-9). Mr. Gilbert prepared a report into the investigation of the injury on January 10, 2013, noting that the time of injury was 12:40 AM. Mr. Gilbert obtained statements from other individuals and prepared his own statement as well (Respondents' Exhibit J, pp. 181-187a). Mr. Gilbert testified that there was no snow or ice at the time of the January 10, 2013 incident. He further testified that there was no blood or abrasions that he could see on the Claimant's face or hands and there was no blood on the stairs (Depo. Tr. Jason Gilbert, pp. 13-14). Although, Mr. Gilbert later conceded that it was night, there was no lighting on the stairs and he did not have a flashlight while examining the Claimant or the area (Depo. Tr. Jason Gilbert, pp. 33-34 and p. 45). Mr. Gilbert testified that he believed that the security guard, Mr. Brodie had a flashlight (Depo. Tr. Jason Gilbert, p. 55) but he was not certain about that (Depo. Tr. Jason Gilbert, p.46)

39. Mr. David Brodie works for a company providing security guard services. In January of 2013, he was working on the Employer's property providing security guard services (Depo. Tr. David Brodie, pp. 5-6). Mr. Brodie has had interactions with the Claimant while working as a security guard. Around 1:00 in the morning on January 10, 2013, Mr. Brodie saw the Claimant laying next to the stairway that went to the employees parking lot. Mr. Brodie testified that the Claimant was lying facedown with his arms raised above his head near his ears (Depo. Tr. David Brodie, pp. 7-8). Mr. Brodie testified that the Claimant was lying about 2 to 3 feet away from the stairs on the left side (Depo. Tr. David Brodie, p. 8). Mr. Brodie testified that he had a flashlight and used it to see the Claimant and did not see any blood or abrasions and did notice anything on the stairs (Depo. Tr. David Brodie, p. 9). Mr. Brodie reviewed the handwritten statement that he wrote shortly after the incident when he found the Claimant lying face down. In his written statement, Mr. Brodie states he was making rounds at 12:35 AM and at 12:45 AM he found the Claimant and tried to get a response

from him. He did not get a response so he called the dispatch office to tell them that there was a driver passed out at the parking lot and that Mr. Brodie was calling an ambulance (Depo. Tr. David Brodie, pp. 15-16; Respondents' Exhibit J, p. 183). Mr. Brodie testified that he called 911 and then two dispatchers, Mike Hashman and Jason Gilbert came to where the Claimant was unconscious. Then, Mr. Gilbert went to meet the ambulance drivers to show them where the Claimant was. The EMTs tried to talk to the Claimant but only got a little response and they put him on a stretcher and took him away in the ambulance (Depo. Tr. David Brodie, pp. 16-17; Respondents' Exhibit J, p. 183). Mr. Brodie testified that he did not see any snow or ice on the stairs but he did recall some erosion on the sides of the stairs (Depo. Tr. David Brodie, p. 20). Mr. Brodie testified that although he used his flashlight to look at the Claimant and the stairs, he did not do a very close examination (Depo. Tr. David Brodie, p. 21).

40. Mike Hashman is a supervisor for the Employer who dispatches line haul drivers. Mr. Hashman called the Claimant on the night of January 9, 2013 asking him to come in to work to deliver a load (Depo. Tr. Mike Hashman, p. 6). Mr. Hashman's notes prepared on January 9, 2013 indicate that he called the Claimant at 21:16 PM, left a message and the Claimant called him back at 21:17 PM. The Claimant arrived at 00:10 AM on January 10, 2013. Then at 00:25 AM, the Claimant called him from the yard and said he was feeling nauseated and ill and Mr. Hashman told the Claimant to go to North Suburban as the Claimant was not in a condition that he was fit for driving (Depo. Tr. Mike Hashman, pp. 6-8 and p. 28; Respondents' Exhibit J, p. 187). Because the Claimant was not punctual for his shift, Mr. Hashman filled out notice of written warning and signed it (Depo. Tr. Mike Hashman, pp. 9-10; Respondents' Exhibit J, p. 191). Mr. Hashman was later called by the security guard and went out to the steps leading to the employee parking lot and saw the Claimant laying on the ground (Depo. Tr. Mike Hashman, p. 11). Mr. Hashman testified that he saw the Claimant to the left of the stairs with his body generally perpendicular to the stairs(Depo. Tr. Mike Hashman, pp. 12-13).

41. Northglenn Ambulance responded to the Employer's location at approximately 1:00AM on January 10, 2013 noting that the Claimant was found lying prone on the ground and there was no obvious cause of the fall. As the Claimant was rolled onto a back board, it is noted that the Claimant began to arouse and could not remember falling. The Claimant was dizzy and nauseated. The note indicates that the Claimant complained of pain in his cervical spine. He was loaded into the ambulance and transported to North Suburban Medical Center without complication (Claimant's Exhibit 7; Respondents' Exhibit C).

42. The Claimant arrived and was admitted to HealthOne North Suburban Medical Center on January 10, 2013 at approximately 1:301 AM. The Claimant reported that he fell at approximately 12:00 am to 12:30 am in the morning at work. Per the EMS, the incident more likely occurred at around 1:00 am. Dr. Alexandra Villacres, the emergency room physician noted that the Claimant had missed a step and then fell face forward towards his left side. In addition to the syncopal episode, the Claimant complained of left-sided pain in his head and trapezius, neck and ribs (Claimant's

Exhibit 8; Respondents' Exhibit B, pp. 11-12). The Claimant was evaluated for possible etiologies for his syncopal episode and it was noted that he was significantly dehydrated with an elevated creatinine level. An MRI of the brain showed no abnormalities. A formal sleep study was recommended to evaluate for sleep apnea after a nocturnal pulse oximetry study performed on the Claimant was noted to be abnormal (Claimant's Exhibit 8; Respondents' Exhibit B, p. 13). A CT scan of the Claimant's cervical spine was positive for degenerative changes only and no acute fracture or subluxation was noted (Claimant's Exhibit 8; Respondents' Exhibit B, p. 17). The bills for HealthOne North Suburban Medical Center have not been paid (Hearing Tr., p. 87).

43. On March 25, 2014, the Claimant saw Dr. Lawrence Lesnak for an IME related to alleged injuries on 12/15/2012 and 01/10/2013 and Dr. Lesnak prepared a written report (Claimant's Exhibit 17; Respondents' Exhibit A). The Claimant testified that he has issues with Dr. Lesnak's IME and report because he saw Dr. Lesnak shut off his recorder before the IME was over and never saw him turn it back on. The Claimant testified that he recorded the entire IME encounter (Depo. Tr. Claimant, pp. 6-8).

44. Dr. Lesnak credibly testified that the Claimant's syncopal episode arose due to underlying dehydration. He testified that blood testing completed on January 10, 2013 definitively established that the claimant had elevated blood urea nitrogen ("BUN") and creatinine levels. Dr. Lesnak indicated that these levels measured kidney function and dehydration. He testified that the claimant had a BUN level of 25 and a creatinine level of 1.8. Normal ranges for those data points are 10-12 for BUN and 0.8-1.2 for creatinine. He testified that this objective testing met the medical criteria for a diagnosis of dehydration. Dr. Lesnak testified that the Claimant's January 10, 2013 event was not an unexplained incident, specifically, "he had a syncope, he passed out. The – he's dehydrated, dehydration causes syncope" (Hearing Tr., p. 212, p. 232 and p. 255).

45. The ALJ credits the medical records from North Suburban Medical Center and the testimony of Dr. Lesnak and finds that Claimant's syncopal event on January 10, 2012 was caused by dehydration.

46. Alternatively, the Claimant argues that his sycnopal episode on January 10, 2013 was related to the injury he alleges occurred on December 14, 2012. Dr. Lesnak credibly testified that neither the alleged December 2012 incident nor any medication prescribed during the evaluation of that incident caused the January 10, 2013 syncopal event. Specifically, Dr. Lesnak testified that, even assuming that an incident occurred in December 2012 and that incident caused a head injury, that incident did not cause the Claimant to have a syncopal event on January 10, 2013. First, Dr. Lesnak indicated that there was no indication that the Claimant had any symptoms consistent with a closed head injury. However, even assuming there was evidence of a closed head injury arising out of the December 2012 event, Dr. Lesnak testified that the symptoms would have been abating, not worsening on January 10, 2013. "So you're not going to have effects of a – any type of closed head injury blatant like that happen all of a sudden. In fact closed head injuries by definition … the worse

is the very first couple hours of the first day, it doesn't get worse later on it gets better" (Hearing Tr., p. 233 and p. 252). Thus, it is more likely than not that there was no relation between any event occurring on December 15, 2012 and the event of January 10, 2013, other than a temporal relationship Further, Dr. Lesnak testified that the medication prescribed to the claimant on January 8, 2013 – Diclofenac and Tizanidine – had no effect on the claimant's syncopal event or the dehydration that caused it. Dr. Lesnak indicated that Tizanidine is a "non-benzodiazepine muscle relaxant" with absolutely no effect on the kidneys and no real effect on elevation of BUN or creatinine levels. Consequently, Dr. Lesnak opined that the use of Tizanidine did not cause the claimant's dehydration or syncope. Dr. Lesnak further testified that while Diclofenac could cause a bump in creatinine (under rare circumstances where the individual was taking the drug for long period of time), it could not cause elevated BUN levels. As a result, Dr. Lesnak opined that the use of Diclofenac did not cause the claimant's dehydration or syncope. (Hearing Tr., p. 247).

47. The Claimant failed to present persuasive evidence that his syncopal event was caused by an alleged prior closed head injury or medications from that injury. The ALJ credits the medical records and opinion of Dr. Lesnak and finds that the Claimant did not establish that it is more likely than not that the January 10, 2013 syncope was caused by the earlier alleged incident or medication prescribed after that incident.

Claimant's Termination from Employer

48. The Claimant acknowledged that he was disciplined for infractions at work prior to January 8, 2013, but the Claimant testified that he believes they were "made up." The Claimant recalled that a December 20th write up was for failing to do his routes within a certain amount of time (Hearing Tr., p. 94).

49. The Claimant testified that he received a phone call from Mart Kessler on February 25, 2013 that his employment was terminated as his medical card was expired and his CDL was not current (Hearing Tr., p. 94). However, Claimant's Exhibit 22 indicates that the Claimant began receiving unemployment benefit payments beginning with the week ending January 26, 2013. The Claimant received the unemployment benefit payments in accordance with the Benefit Payment History dated February 12, 2014. The last unemployment benefits the Claimant received were for the week ending December 21, 2013.

Claimant's Subsequent Employment and Reported Injury

50. The Claimant testified that he went back to work in December of 2013 for Pro Drivers, which is a service supplying truck drivers to companies. The Claimant testified that he was assigned by Pro Drivers to work for Beco, Incorporated for a two week period (Hearing Tr., p. 99).

51. The Claimant informed ProDrivers that he "quit" his employment with the employer in February 2013 and that the reason he was not working between February 2013 and December 2013 was because he was looking for work. Although the Claimant testified that he did not fill in these portions of the application for employment and that the information was taken over the phone, the Claimant did attest (through his signature) that the application for employment "was completed by [him]" and the information contained within the application was true and complete (Hearing Tr. p. 162; Respondents' Exhibit K, pp. 219-223).

52. The Claimant testified that, when he applied for the position at ProDrivers, he informed them that he was physically capable of doing the job. He also testified that he did not tell ProDrivers that he had a prior injury or problem that would prevent his ability to perform the job, which he understood to include lifting in excess of a hundred pounds. The Claimant stated that he would do anything to get a job and if he told them about his prior injury and work restrictions he wouldn't get the job (Hearing Tr., p. 143).

53. The Claimant testified that while he was working for Pro Drivers, he had a subsequent injury on January 12, 2014. The Claimant testified that he was chaining up on Vail Pass while heading eastbound on I-70. The Claimant testified that he heard a car accelerating from behind him and he looked over his shoulder and lost his balance and he slipped and fell. The Claimant testified that he injured his right shoulder, left elbow and lower left buttocks area as a result of this fall. The Claimant testified that this injury did not affect his neck, blurred vision or headaches and they were the same as before the January 2014 injury (Hearing Tr., pp. 102-104).

54. The Claimant filed a workers' compensation claim for his January 2014 incident and it is an admitted claim and he is receiving medical care for that incident (Hearing Tr., p. 104).

55. The Claimant saw Dr. Michael Ladwig for an initial visit on January 14, 2014. Dr. Ladwig reports that the Claimant advised that he was chaining up his vehicle when he had to dive out of the way of a car and he slipped and injured himself. He reported feeling a "pop" in his right shoulder. He reports a right knee, left elbow, neck and mid-low back injury. Dr. Ladwig assessed the Claimant with cervical strain, dorsal strain, lumbar strain, right shoulder strain and left elbow strain. The Claimant was placed on work restrictions and taken off work (Claimant's Exhibit 14; Respondents' Exhibit G, pp. 99-105). The Claimant continued to treat with Dr. Ladwig who later referred him to Dr. Mark Failinger for right shoulder conditions (Claimant's Exhibits 14 and 15; Respondents' Exhibits E and G).

56. The Claimant's actions and statements with respect to obtaining a job and representations he made to his subsequent employer Pro Drivers further support the conclusions that the Claimant did not suffer compensable injuries on either December 15, 2012 or January 10, 2013. In addition, the Claimant's own admissions that he will say what he needs to in order to obtain the result that he seeks further damages his credibility overall.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. Respondent bears the burden of establishing any affirmative defenses. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201 (2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

Compensability

The Claimant's right to compensation initially hinges upon a determination that "at the time of the injury, the employee is performing service arising out of and in the course of the employee's employment." C.R.S. § 8-41-301(1)(b). The "arising out of" test is one of causation which requires that the injury have its origins in an employee's work-related functions. There is no presumption than an injury which occurs in the course of employment arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 2993. A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required.

Industrial Commission of Colorado v. Jones, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 293 (1951).

Compensable injuries involve an "injury" which requires medical treatment or causes disability. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970). In order to prove causation, it is not necessary to establish that the industrial injury was the sole cause of the need for treatment. Rather, it is sufficient if the injury is a "significant" cause of the need for treatment in the sense that there is a direct relationship between the precipitating event and the need for treatment. A preexisting condition does not disqualify a claimant from receiving workers' compensation benefits. Rather, where the industrial injury aggravates, accelerates, or combines with a preexisting disease or infirmity to produce the need for treatment, the treatment is a compensable consequence of the industrial injury. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001); *H and H Warehouse v. Vicory,* supra; *Seifried v. Industrial Commission,* 736 P.2d 1262 (Colo. App. 1986).

Whether a compensable injury has been sustained is a question of fact to be determined by the ALJ. *Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo. App. Div. 5 2009). The Colorado Supreme Court has identified three well-established and overarching types of risks that cause injuries to employees in the workplace: (1) employment risks, which are tied directly to the work itself; (2) personal risks, which are inherently personal or private to the employee; and (3) neutral risks, which are neither employment-related nor personal *City of Brighton v. Rodriguez,* 318 P.3d 496 (Colo. 2014).

December 15, 2012 Injury

Because the mechanism of this alleged injury reported by the Claimant was not witnessed and there were some issues with the timing of the injury, as well as the timing of the reporting of the injury to Employer, the credibility of the Claimant is a crucial component of this claim. The Claimant's credibility is first questioned due to the inconsistencies between his recollection of multiple events over a several month period as compared to reports and testimony of the other fact witnesses and the documents in evidence. The totality of the evidence does not support that the Claimant was injured on December 15, 2012 as alleged.

The Claimant testified that he was first injured while working for Employer on December 15, 2012. The Claimant testified that he was assigned to drive a route to and from Salt Lake City and he was on his way back, driving eastbound on I-80. As he was driving back, there was a blizzard and the overhead road signs were recommended reduced speeds, so the Claimant took longer than usual to get back. The Claimant testified that as he was approaching Laramie, there was quite a bit of snow on the road although the storm had passed. At this point he testified that he was back up to driving full speed when he hit a berm of snow in the road that he didn't see. He testified that as he hit the berm at a pretty high rate of speed he felt his seat go blat to the floor,

squeeze down and the shoot back up. The Claimant's head hit the ceiling and he testified that in the process it jammed his neck up too. The Claimant testified that almost immediately he had an immense headache and pain in the top of his head, back of his neck, the upper trapezius areas and his shoulders and he it was hard to turn his head to either side. The Claimant testified that he continued to drive the route but it took longer due to the previous weather and his injury. When he returned to Employer's terminal, he testified that no one was there except for one security guard. The Claimant testified that supervisors are not at the terminal on Saturday afternoons, which is when he returned after his injury, and they are not there on Sundays. So, he reported his injury to his immediate supervisor Marty Kessler by phone on Monday morning since he didn't have a home number to call Mr. Kessler over the weekend. The Claimant testified that when he called he told Mr. Kessler that he injured himself when he hit a bump in the road and he jammed his neck. The Claimant testified that he asked if he could go to the doctor and Mr. Kessler told him he would get back to him. The Claimant testified that did not hear from the Employer until Wednesday when the dispatcher called him to do a run. He testified that was off on Monday and Tuesday and testified that he did not seek medical care on those days on his own because he was having financial issues and did not want to incur doctor bills that he couldn't afford to pay. However, the Claimant later testified that he did work on Monday, December 17th when he drove a local run to Grand Junction. The Claimant testified that he requested medical care again and had a meeting with his supervisor Marty Kessler and the terminal manager Leo Raker on December 20, 2012 and they told the Claimant that if he was going to get medical care he had to go right away. The Claimant's story became more convoluted when he was cross-examined.

The Claimant's testimony is at odds with information that is contained in employment records relating to the injury that the Claimant agrees he signed and dated. However, the Claimant has unlikely explanations for the contradictions between his testimony and the records. With respect to the Employer's First Report of Injury, the Claimant argues that he did not complete all of the information and that someone else wrote it. This is similar to testimony that he later offers with respect to inconsistencies in information he provided on a job application for a subsequent employer. Moreover, the Claimant's alleged injury and the subsequent reporting of the injury happen in the middle of the Claimant receiving multiple disciplinary actions. The Claimant has argued that the Employer was out to get him in a witch hunt because he asked for a larger tractor to accommodate his height and body size. However, there is no evidence to support this and no persuasive evidence that the Employer was not amendable to providing a larger tractor for the Claimant's use as the Employer already had such a tractor available for his use at their property.

Even the Claimant's treating physician, Dr. Bloch noted this was an "odd case" because the Claimant "was originally seen November 27 for evaluation of fit for duty vs. ADA as he is 7 [sic] tall and truck don't accommodate people that tall, he was then complaining of low back pain mostly from having to hunch into the regular sized cab" and "the then returned to check in for UC on 12/20 with added neck pain from having cramping into the cabs that also cause head to rub on top of cab" and "then he

presented 12/21 for a specific injury that occurred on December 20th when he says he was driving the speed limit in his truck…he apparently specifically hit his head on the top of the cab while driving en route back from SLC and is now having said complaints." Dr. Bloch assessed the Claimant with cervical strain with subjective radiculopathy, subjective hip pain, subjective thoracic pain and PMH lumbar injury with IR and PWR. Dr. Bloch noted that he reviewed the Claimant's job functions and he did not find restrictions to activity necessary. He did note that a larger truck would be a reasonable accommodation for the Claimant and the Claimant was returned to regular duty. Dr. Bloch considered an MRI but noted that he did not see a "strong indication" due to a physical examination that was "more of an arthritic exam" and the "lack of objective neuritis" along with a "questionable history of actual traumatic injury."

Then, after the claim was contested, the Claimant testified that he did not seek any medical care with his own providers related to the December 15, 2012 incident. Dr. Lawrence Lesnak, who had performed an evaluation of the Claimant on March 25, 2014, testified that there were no objective findings with regard to the December 2012 alleged incident. He specifically opined that there was no medical evidence that the Claimant sustained any type of trauma to his neck in December 2012. He later clarified: "What I'm saying is whatever happened [in December 2012], even if it did happen, it did not leave any signs of trauma or abnormalities [or] hazards out of that potential incident."

In considering the totality of the evidence presented, the ALJ credits Dr. Lesnak's opinions along with the supporting medical records and determines that the Claimant has not established that it is more likely than not that he sustained a compensable injury in December 2012 that resulted in the need for medical treatment. The ALJ finds that the objective medical evidence does not support that an injury occurred on December 15 or December 20, 2012. Additionally, the timing of the reporting of this injury is suspect based on the employment documents in evidence. Moreover, there is considerable inconsistency related to the Claimant's testimony, statements and documents in evidence and the Claimant's actions during the time frame from December 15, 2012 to December 21, 2012. Overall, the Claimant's testimony is not found to be credible in the face of more credible and reliable evidence that was presented in this case with respect to the allegations of a December 15, 2012 injury.

In the alternative, if there was any injury, the December 2012 incident did not result in the need for permanent impairment or medical care. As noted above, the Claimant was released to MMI with no permanent impairment on January 16, 2013, after just three evaluations. Any effects of the alleged incident were resolved as of that date. The ALJ determines that the Claimant has failed to establish that the medical care rendered in December 2012 and early January 2013 was reasonable and necessary medical treatment related to a compensable injury.

The Claimant has failed to meet his burden of proving that he suffered an injury while performing services arising out of and in the course of his employment on December 15, 2012.

January 10, 2013 Injury

The causal relationship involving employment risks is generally intuitive and obvious and such risks are universally considered to "arise out of" employment and are compensable under the Act. The second category, personal risks, such as pre-existing idiopathic conditions unrelated to the employment, are typically found not to arise out of the employment and are generally not compensable, unless an exception to the rule applies. The final category is neutral risks, such as unexplained falls. Under *City of Brighton v. Rodriguez,* 318 P.3d 496 (Colo. 2014), the Supreme Court held that the "but for" test applies to these neutral risks. In such a case, an injury that arises from a neutral risk will be found to "arise out of" employment and be compensable if it would not have occurred but for the fact that the conditions and obligations of the employment placed a claimant in the position where he or she was injured.

If the precipitating cause of a fall at work is in the second category of risks, such as a preexisting health condition that is personal to the claimant, the injury does not arise out of the employment unless a "special hazard" of the employment combines with the preexisting condition to contribute to the accident or the injuries sustained. *Finn v. Industrial Commission*, supra; *Irwin v. Industrial Com'n*, 695 P.2d 763 (Colo. App. 1984); *National Health Laboratories v. Industrial Claim Appeals Office*, 844 P.2d 1259 (Colo. App. 1992); *Rice v. Dayton Hudson Corp.,* W.C. No. 4-386-678 (I.C.A.O. July 29, 1999). This rule is based upon the rationale that, unless a special hazard of the employment increases the risk or extent of injury, an injury due to the claimant's preexisting condition lacks sufficient causal relationship to the employment to meet the arising out of employment test. *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989). In order for a condition of employment to qualify as a "special hazard" it must not be a "ubiquitous condition" such as that generally encountered outside the work place. *Ramsdell v. Horn*, supra. Only if the precipitating cause of a fall or misstep at work is unexplained, and thus neutral, would the injury be compensable under the *City of Brighton* analysis without the existence of a special hazard.

Here, there is sufficient evidence to establish that the Claimant's syncopal episode on January 10, 2013 was due to his dehydration. Therefore, the event of January 10, 2013 was not an unexplained fall or neutral risk. Moreover, he was dehydrated as he arrived at work, not at the end of the shift. So, his work duties were not a contributing factor in his dehydration. Because this falls under the category of personal risk, it would generally not be compensable unless a special hazard of employment combined with the personal risk to contribute to the injury sustained by the Claimant.

The Claimant testified that he reported to work on January 9, 2013 at approximately 11:30pm but that he suffered an injury as he was in the process of reporting. The Claimant testified that he was taking some essential items from his personal vehicle which was in the parking lot next to where the tractors are parked. The Claimant testified that he tripped and fell and hit his head on some steps and landed to the side of the steps in the dirt. The Claimant offered photographs which were entered

into evidence as Exhibits 19, 20 and 21 to depict the stairs and the area where he testified he fell. As the Claimant was carrying items from his vehicle to the tractor he would be driving, he testified that he recalled feeling dizzy and lightheaded and as he felt his legs become weak he stumbled and hit one of the steps and fell forward. He testified that because he was carrying things, he didn't brace and he recalls falling face down in the dirt immediately to the left of the steps. After this, the Claimant testified, he blacked out and does not have recollection after going unconscious until he woke up in the emergency room. He specifically testified that he does not recall the ambulance ride to the hospital.

Mr. Mark W. Passamaneck, a professional engineer working primarily in forensic engineering and analysis for twenty years, testified as an expert in the area of forensic engineering. Mr. Passamaneck was asked to comment on the location of the Claimant's body, found to the left of the stairs as indicated in witness statements and testimony in relation to the Claimant's testimony that he tripped as he was walking up the stairs. Mr. Passamanek opined that the Claimant's testimony does not make sense from a forensic engineering perspective because if the Claimant was walking up the stairs and he tripped and fell, he would have fallen onto the stairs. If the Claimant had attempted to guard against the fall, the Claimant's upper body would be further off the axis of the stairs in comparison to his feet but a drawing prepared by Jason Gilbert regarding the Claimant's body position in relation to the stairs shows the upper body closer to the stairs and the feet further away. Mr. Passamaneck also noted that the medical information and statements that he read indicate that the Claimant did not suffer cuts or abrasions consistent with falling on cement stairs. Mr. Passamaneck testified that there was nothing unusual in the area where the Claimant was reported to be found unconscious that would have caused a fall, it was just a gently sloping dirt hill. On cross-examination, Mr. Passamaneck conceded that he did not know if there had been snow or ice on the stairs on the night when the Claimant was found unconscious. However, several other fact witnesses testified that there was not snow or ice in that area.

There was persuasive and credible testimony from other witnesses as to the Claimant's unusual behavior on the night of January 9th into the early morning of January 10th. Mr. Jason Youmans testified that the Claimant complained about not being able to find a particular truck that was right out front parked along the side of the building they were in. Mr. Youmans testified that while he was speaking with the Claimant , he was concerned about the Claimant's behavior since he wasn't responding to anything Mr. Youmans had said and he didn't look normal; he looked pale and like he was getting sick. Shortly after the encounter with Mr. Youmans, the Claimant was found face down in the dirt on the left side of stairs that led to the employee's parking lot.

Northglenn Ambulance responded to the Employer's location at approximately 1:00AM on January 10, 2013 noting that the Claimant was found lying prone on the ground and there was no obvious cause of the fall. As the Claimant was rolled onto a back board, it is noted that the Claimant began to arouse and could not remember falling. The Claimant was dizzy and nauseated. The note indicates that the Claimant

complained of pain in his cervical spine. He was loaded into the ambulance and transported to North Suburban Medical Center without complication. The Claimant arrived and was admitted to HealthOne North Suburban Medical Center on January 10, 2013 at approximately 1:301 AM. The Claimant reported that he fell at approximately 12:00 am to 12:30 am in the morning at work. Per the EMS, the incident more likely occurred at around 1:00 am. Dr. Alexandra Villacres, the emergency room physician noted that the Claimant had missed a step and then fell face forward towards his left side. In addition to the syncopal episode, the Claimant complained of left-sided pain in his head and trapezius, neck and ribs. The Claimant was evaluated for possible etiologies for his syncopal episode and it was noted that he was significantly dehydrated with an elevated creatinine level. An MRI of the brain showed no abnormalities. A formal sleep study was recommended to evaluate for sleep apnea after a nocturnal pulse oximetry study performed on the Claimant was noted to be abnormal. A CT scan of the Claimant's cervical spine was positive for degenerative changes only and no acute fracture or subluxation was noted.

On March 25, 2014, the Claimant saw Dr. Lawrence Lesnak for an IME related to alleged injuries on 12/15/2012 and 01/10/2013 and Dr. Lesnak prepared a written report. Dr. Lesnak also credibly testified that the Claimant's syncopal episode arose due to underlying dehydration. He testified that blood testing completed on January 10, 2013 definitively established that the claimant had elevated blood urea nitrogen ("BUN") and creatinine levels. Dr. Lesnak indicated that these levels measured kidney function and dehydration. He testified that the claimant had a BUN level of 25 and a creatinine level of 1.8. Normal ranges for those data points are 10-12 for BUN and 0.8-1.2 for creatinine. He testified that this objective testing met the medical criteria for a diagnosis of dehydration. Dr. Lesnak testified that the Claimant's January 10, 2013 event was not an unexplained incident, specifically, "he had a syncope, he passed out. The – he's dehydrated, dehydration causes syncope."

Crediting the medical records from North Suburban Medical Center and the testimony of Dr. Lesnak, the ALJ found that Claimant's syncopal event on January 10, 2012 was caused by dehydration.

Alternatively, the Claimant argues that his sycnopal episode on January 10, 2013 was related to the injury he alleges occurred on December 15, 2012. Dr. Lesnak credibly testified that neither the alleged December 2012 incident nor any medication prescribed during the evaluation of that incident caused the January 10, 2013 syncopal event. Specifically, Dr. Lesnak testified that, even assuming that an incident occurred in December 2012 and that incident caused a head injury, that incident did not cause the Claimant to have a syncopal event on January 10, 2013. First, Dr. Lesnak indicated that there was no indication that the Claimant had any symptoms consistent with a closed head injury. However, even assuming there was evidence of a closed head injury arising out of the December 2012 event, Dr. Lesnak testified that the symptoms would have been abating, not worsening on January 10, 2013. "So you're not going to have effects of a – any type of closed head injury blatant like that happen all of a sudden. In fact closed head injuries by definition … the worse is the very first couple

hours of the first day, it doesn't get worse later on it gets better." Thus, it is more likely than not that there was no relation between any event occurring on December 15, 2012 and the event of January 10, 2013, other than a temporal relationship Further, Dr. Lesnak testified that the medication prescribed to the claimant on January 8, 2013 – Diclofenac and Tizanidine – had no effect on the claimant's syncopal event or the dehydration that caused it. Dr. Lesnak indicated that Tizanidine is a "non-benzodiazepine muscle relaxant" with absolutely no effect on the kidneys and no real effect on elevation of BUN or creatinine levels. Consequently, Dr. Lesnak opined that the use of Tizanidine did not cause the claimant's dehydration or syncope. Dr. Lesnak further testified that while Diclofenac could cause a bump in creatinine (under rare circumstances where the individual was taking the drug for long period of time), it could not cause elevated BUN levels. As a result, Dr. Lesnak opined that the use of Diclofenac did not cause the claimant's dehydration or syncope. (Hearing Tr., p. 247).

The Claimant failed to present persuasive evidence that his syncopal event was caused by an alleged prior closed head injury or medications from that injury. The ALJ credits the medical records and opinion of Dr. Lesnak and finds that the Claimant did not establish that it is more likely than not that the January 10, 2013 syncope was caused by the earlier alleged incident or medication prescribed after that incident.

Based on the totality of the testimony and evidence, the Claimant's injury was more likely than not caused by dehydration. Further, there was not sufficient evidence to prove that any preexisting condition combined with a special hazard unique to his work situation. Thus, the Claimant failed to establish by a preponderance of the evidence that he suffered a compensable injury arising out of and during the course of employment with the Employer on January 10, 2013. The Claimant's injury was not unexplained, nor was there a special hazard that combined with his personal risk. As such, there is no persuasive evidence to support a finding of causation.

Remaining Issues

The Claimant's alleged injuries of December 15, 2012 and January 10, 2013 are not found to be compensable. As such, the remaining are moot.

ORDER

It is therefore ordered that:

1. The Claimant has failed to sustain his burden of proving by a preponderance of the evidence that he suffered a compensable injury on either December 15, 2012 or January 10, 2013.

2. The Claimant's claim for benefits under the Workers' Compensation Act of Colorado is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 28, 2015

ISSUES

Whether the surgery recommended by Dr. Philip Marin on July 14, 2014 for operative exploration of the claimant's dorsal fifth CMC region for debridement of the joint as necessary, synovectomy, and possible neuroma excision is reasonable and necessary medical treatment to cure or relieve the claimant from the effects of his admitted work injury.

FINDINGS OF FACT

1. The claimant is a fifty-five year-old man who works for the respondent-employer as a mechanic.

2. On January 8, 2013, the claimant was bitten by a dog in the course and scope of his employment duties. The claimant sustained puncture wounds on his right hand.

3. The claimant initially underwent medical treatment at the emergency department of Parkview Medical Center. X-rays of his right hand were negative for a fracture. The claimant's wound was sutured and he was released.

4. The claimant followed up with Dr. Philip Marin on January 16, 2013. Dr. Marin recommended surgical repair of both extensor tendons. Dr. Marin performed his first surgery on the claimant on January 17, 2013. The surgery consisted of excision of the wound, exploration with repair of tendon injuries to the small finger and extensor tendon.

5. In March 2013, the claimant complained of sensitivity over the wound site. Dr. Marin opined that the extreme sensitivities the claimant was having should resolve with time. If the sensitivity did not resolve, he opined that the claimant may have a small neuroma that may require surgery.

6. The claimant was referred to, and was examined by Dr. Kavi Sachar on May 1, 2013. The claimant presented with a complaint of right small finger numbness and painful nodules in the right palm. Dr. Sachar's diagnosis was pain and numbness in the right hand after extensor tendon repair and dog bite. He noted that the claimant had

significant pain and numbness along the dorsum of the hand with some tenderness along the volar portion of the hand with some small nodules. Dr. Sachar noted “I don’t know that this is something that we can make better. It may have to get better on its own.”) Dr. Sachar also opined that “at this point I don’t see any indications for further surgical intervention.”

7. Despite the recommendations by hand surgeon, Dr. Sachar, the claimant underwent two additional surgeries. The claimant’s condition has continued to get worse.

8. Dr. Marin performed an excision of scar tissue and neuroma from the claimant’s right wrist, and repair of the dorsal sensory branch of the ulnar nerve on January 2, 2014. Dr. Marin’s operative notes state there was a neuroma and inflammation on the dorsal sensory branch of the ulnar nerve. The neuroma appeared to be involving the entire width of the nerve. The neuroma was excised and the dorsal sensory branch was repaired.

9. The clamant followed up with Dr. Marin on January 23, 2014 and appeared to be healing well in the dorsal hand. However, he still had complaints of numbness involving the ulnar nerve distribution and as a result Dr. Marin requested a third surgery.

10. Dr. Marin performed an ulnar nerve decompression on February 13, 2014. The operative report provides; “as the nerve was unroofed it was significantly compressed in the Guyon canal. Once full decompression was performed, there was no obvious injury to the ulnar nerve noted.” Dr. Marin noted during the claimant’s first post-op visit that the ulnar nerve was starting to wake up again. The claimant was experiencing pain in the radial tunnel. Dr. Marin also commented that the claimant continued to have pain at the CMC joint of the fifth digit.

11. When the claimant followed up with Dr. Marin on July 14, 2014, the claimant had overall good sensation in the ulnar nerve area. He did complain that he had pain in the fifth CMC region and over the extensor mechanism in that region.

12. As a result of the claimant’s continuing pain in his hand, Dr. Marin recommended a fourth surgery. Dr. Marin recommended “operative exploration of the dorsal fifth CMC region for debridement of the joint as necessary, synovectomy, and possible neuroma excision as it is exquisitely tender.”

13. Dr. Wallace Larson provided an opinion regarding this request for surgery. At the time of Dr. Marin’s request to perform a fourth surgery on the claimant, Dr.

Larson was familiar with the claimant's condition. Dr. Larson had examined the claimant on June 17, 2014, less than a month before Dr. Marin's request for a fourth surgery. Dr. Larson noted that the back of the claimant's right hand was still very sensitive. The claimant reported numbness and pain in the distribution of the cutaneous sensory branch of the ulnar nerve.

14. On August 11, 2014, Dr. Larson issued a report that concluded any additional surgeries would be unlikely to help the claimant's pain and limitations. Dr. Larson also stated that there was no indication that a specific correctable condition had been identified. Dr. Larson also opined that the recommended surgery would not be beneficial to relieving or curing the effects of the industrial injury.

15. Dr. Larson also explained at hearing that Dr. Marin previously went in and removed the neuroma (a painful stump of the nerve) which had formed at the sensory part of the ulnar nerve, as a result of the original injury. The formation of a neuroma is the result of cutting any nerve. When a nerve is cut the tissue in the nerve try to grow out to find the other end of the nerve. When there is nothing connecting the nerve, the nerve fibers form a bit of a lump, similar to what scar tissue would be. These neuromas can be very sensitive. Although the claimant does have a painful neuroma on the end of his ulnar nerve, Dr. Larson opined that the likelihood of Dr. Marin being able to again remove the neuroma without further damaging the ulnar nerve is very slim. Rather, he opined, the requested surgery poses the risk of a new more painful neuroma forming at the end of the ulnar nerve, as well as the risk of further damaging the ulnar nerve itself.

16. Dr. Larson agreed that upon examination it appears claimant has a painful neuroma on his hand. However, he opines that going in and removing a neuroma for the second time is very unlikely to improve the situation.

17. In addition, there is no indication for this surgery, such as an infection or inflammation in the joint that has been identified. Dr. Larson opines that this recommended surgery is very unlikely to improve the claimant's situation. It is mere conjecture by Dr. Marin that there is anything in that joint that can be made better. This surgery carries a high risk of making the claimant's joint more painful. Moreover, Dr. Marin has not even identified whether or not the 5th CMC joint is the source of the pain. Attempting to operate on this joint also poses a risk of damaging the nerve further. Even if Dr. Marin's goal is not to do anything to the nerve, it will be very difficult to protect the nerve from additional injury while attempting to get into the 5th CMC joint to take a look inside.

18. It is clear that claimant has some type of pain problems. However, any operation in that area tends to trigger some very aggressive pain responses and will make the pain worse.

19. Dr. Larson provided several reasons why the requested surgery is likely to increase claimant's pain and dysfunction and will not relieve the effects of claimant's hand injury. Dr. Marin has already performed a neuroma excision on January 2, 2014. This fourth requested surgery will not result in the resolution of his symptoms and there is a significant risk that this may increase his symptoms. Dr. Larson opined that any additional operation will cause more scar tissue and more irritation to his nerves. This will result in reduced motion of the tendons and increased stiffness and pain.

20. Based on Dr. Larson's report, the respondent-insurer denied the requested surgery by filing an Application for Hearing.

21. Based upon a totality of the medical evidence, the ALJ finds that the opinions of Dr. Larson concerning the reasonableness and necessity of the proposed surgery are more credible and persuasive than medical opinions to the contrary.

22. The ALJ finds that the claimant has failed to establish that it is more likely than not that the proposed surgery is reasonable and necessary to cure or relieve the claimant from the effects of his industrial injury.

CONCLUSIONS OF LAW

1. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. (2014) A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. (2014) A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S. (2014)

2. The respondents must provide medical benefits to cure or relieve the effects of the industrial injury. It is well established that a General Admission of Liability for medical benefits does not make the respondents liable for all of the claimant's subsequent medical treatment. *Rakestraw v. Amer. Med. Response,* W.C. No. 4-384-349 (I.C.A.O. Oct. 3, 2005). To the contrary, the respondents retain the right to dispute

liability for specific medical treatment on the grounds the treatment is not authorized or reasonably necessary to cure or relieve the effects of the industrial injury. *Snyder v. Indus. Claim Appeals Office*, 942 P.2d 1337 (Colo. Ct. App. 1997). This law acknowledges that even though an admission is filed, the claimant bears the burden of proving the right to specific medical benefits and the mere admission that an injury occurred and treatment is needed cannot be construed as an admission that all post-injury medical treatment is caused by the injury. *HLJ Mgt. Group Inc. v. Kim*. 804 P.2d 250 (Colo. Ct. App. 1990).

3. The respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio,* 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re Parker,* W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000)

4. It is solely within the ALJ's discretionary province to weigh the evidence and determine the credibility of expert witnesses. *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964 (Colo. App. 2012).

5. Dr. Marin's request for a fourth surgery consists of operative exploration of the dorsal fifth CMC region for debridement of the joint, a synovectomy, and possible neuroma excision.

6. Dr. Marin noted in his reports over the past year that he excised the neuroma, he decompressed the ulnar nerve, the ulnar nerve was without injury, the extensor tendons were in good condition, and the dorsal sensory branch was repaired.

7. Dr. Larson agreed that upon examination it appears claimant has a painful neuroma on his hand. However, he opines that going in and removing a neuroma for the second time is very unlikely to improve the situation.

8. In addition, there is no indication for this surgery, such as an infection or inflammation in the joint that has been identified. Dr. Larson opines that this recommended surgery is very unlikely to improve the claimant's situation. It is mere conjecture by Dr. Marin that there is anything in that joint that can be made better. This surgery carries a high risk of making the claimant's joint more painful. Moreover, Dr. Marin has not even identified whether or not the 5th CMC joint is the source of the pain. Attempting to operate on this joint also poses a risk of damaging the nerve further. Even

if Dr. Marin's goal is not to do anything to the nerve, it will be very difficult to protect the nerve from additional injury while attempting to get into the 5th CMC joint to take a look inside.

9. It is clear that claimant has some type of pain problems. However, any operation in that area tends to trigger some very aggressive pain responses and will make the pain worse.

10. Dr. Larson provided several reasons why the requested surgery is likely to increase claimant's pain and dysfunction and will not relieve the effects of claimant's hand injury. Dr. Marin has already performed a neuroma excision on January 2, 2014. This fourth requested surgery will not result in the resolution of his symptoms and there is a significant risk that this may increase his symptoms. Dr. Larson opined that any additional operation will cause more scar tissue and more irritation to his nerves. This will result in reduced motion of the tendons and increased stiffness and pain.

11. The claimant has not presented sufficient evidence that the requested procedures are reasonable and necessary or will help to relieve or cure the effects of the work injury.

12. The claimant has already undergone three surgeries by Dr. Marin. Another surgery, which poses a high risk of increase the claimant's pain and suffering is not reasonable or necessary medical treatment. Therefore, the respondents are not liable for this surgery request.

13. The ALJ concludes that the medical opinions of Dr. Larson are more credible and persuasive than medical opinions to the contrary.

14. The ALJ concludes that the claimant has failed to establish by a preponderance of the evidence that the proposed surgery is reasonable and necessary to cure or relieve the claimant from the effects of his industrial injury.

[The Order continues on the following page.]

ORDER

It is therefore ordered that:

1. The claimant's request for the recommended surgery is denied and dismissed.

2. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

The issues addressed in this decision involve Claimant's entitlement to disfigurement benefits and maintenance medical treatment.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant works for Respondent-Employer as a safety security officer on a psychiatric unit housing both civilly and criminally committed patients.

2. On March 8, 2013 Claimant was involved in a team restraint of a psychotic patient who had become aggressive on the unit. In the process of neutralizing the patient, Claimant injured his neck and right shoulder, resulting in pain and dysfunction.

3. On April 4, 2013 an MRI of the right shoulder was obtained, which demonstrated a "3 centimeter full thickness rotator cuff tear with tendinosis involving the infraspinatus and subscapularis components and a probable small partial tear of the distal subscapularis tendon and overlying rotator interval.

4. Claimant underwent right shoulder arthroscopic rotator cuff repair surgery performed by Dr. David Weinstein in June 2013 followed by post surgical physical therapy (PT).

5. Claimant reported substantial relief of his shoulder pain and improved range of motion following surgery and PT. He quickly transitioned to a home exercise program (HEP) for his shoulder. Nonetheless, Claimant's neck pain, particularly pain localized to the right lateral cervical region with radiation to the parascapular area persisted. Consequently, an MRI of the cervical spine was obtained on December 16, 2013. This imaging revealed "chronic C5-6 spondylosis, right-sided uncinate arthropathy and spurring with presumed disc herniation causing severe stenosis of the right neural foramen and right lateral recess and impingement of the C6 nerve.

6. Claimant was referred to Accelerated Recovery Specialists where he undertook treatment with Dr. Michael Sparr and Dr. Stephen M. Scheper for his neck complaints.

7. On December 18, 2013 Dr. Sparr opined that Claimant's ongoing neck pain

appeared to stem from a right C6 radiculopathy. Consequently, a cervical epidural steroid injection (ESI) was scheduled.

8. On February 20, 2014, Dr. Scheper administered a cervical facet joint injection at the right C2-3 and C3-4 levels.

9. On March 5, 2014 Claimant followed-up with Dr. Sparr. During this encounter, Claimant informed Dr. Sparr that he had realized no benefit from the injection provided by Dr. Scheper. He reported continued burning pain in the right lateral cervical region radiating into the scapula and intermittently into the right radial arm, thumb and index finger. Dr. Sparr scheduled an electrodiagnostic (EMG) study and recommended a second epidural steroid injection using a transforminal approach at C5-6.

10. Claimant's EMG completed March 17, 2014 was interpreted by Dr. Sparr as being mildly abnormal with "borderline to mild median mononeuropathy" at the level of the carpal tunnel, which was determined to be non-work related. Claimant's right transforaminal ESI at C5-6 was administered March 27, 2014. By report of Dr. Daniel Olson, the designated provider for this injury, Claimant had a "good, but very short response to the 2nd ESI."

11. In conjunction with his cervical spine treatment through Dr. Sparr, Claimant was referred for additional physical therapy for modalities, massage therapy (MT) and dry needling. Dr. Sparr also provided trigger point injections and Claimant received chiropractic care.

12. On May 9, 2014, Dr. Olson stopped Claimant's dry needling as it had not "provided any significant benefit and it is uncomfortable for [Claimant]." Dr. Olson also requested a surgical opinion concerning Claimant's neck. Claimant was referred to Dr. James Sceats.

13. On May 14, 2014 Claimant reported to Dr. Sparr that dry needling, massage therapy and trigger point injections combined with massage had not provided lasting benefit. Dr. Sparr indicated that Claimant continued to experience "persistent cervicothoracic pain which [had] not responded to a multiplicity of treatments including facet injections, epidural steroid injections, trigger point injections, massage therapy, physical therapy, chiropractic, and dry needling. Dr. Sparr had no further ongoing treatment suggestions and nothing left to offer.

14. On May 22, 2014, Claimant was evaluated by Dr. Sceats who assessed "neck pain secondary to degenerative spondylosis and myofascial neck pain with asymptomatic right C5-6 foraminal stenosis. Dr. Sceats did not feel that Claimant would benefit from surgical intervention and noted that "continued physical therapy may improve [Claimant's] cervical range of motion. No ongoing treatment recommendations were made.

15. Claimant attended an appointment with Dr. Olson on July 14, 2014 at which

time he reported constant aching pain in the neck made worse by sitting and standing. Claimant reported that his pain "improved with pain medicine" and that he was using "Aleve which usually gets him through the day."

16. Dr. Olson placed Claimant at MMI on August 12, 2014 with impairment. Concerning ongoing medical treatment, Dr. Olson noted as follows: "None anticipated. Respondents have denied liability for future reasonable, necessary and related medical benefits.

17. Claimant testified that he is working full duty, 3 days/week, 13 ½ hours/day. Claimant testified that he continues to have pain, headaches and muscle spasms on a daily basis. According to Claimant he gets muscle spasms originating on the right side of his neck upwards of six (6) times a day. He has generalized muscle tightness in the area of his neck and shoulder and experiences headaches that travel from the base of his skull upwards over his head.

18. Based upon complete and careful review of the medical records, the ALJ finds support for Claimant's testimony concerning his ongoing symptoms and spasms. The records outline tenderness and myofascial tightness in the right parascapular musculature including the trapezius, levator scapula and the rhomboids. There is reference in the medical record to Dr. Sparr wanting Claimant to proceed with massage therapy "again" to address Claimant's "scapular-thoracic spasms." The ALJ finds, from the evidentiary record that more probably than not, Claimant's ongoing symptoms/spasms are emanating from his neck.

19. Claimant testified that approximately eight (8) hours into his shift he becomes increasingly achy and sore. Claimant testified that he has been prescribed Flexeril for his muscle spasms in the past. He found it helpful in loosening the muscle tension associated with his spasms. Claimant also testified that he has been prescribed Vicodan which was useful in reducing the pain associated with his neck. The ALJ is unable to find any reference to Claimants need for or use of Vicodan in the records submitted as evidence in the case. Claimant wants the ability to obtain ongoing medications under his workers compensation claim to help relieve him of the ongoing effects/symptoms associated with his work-related injuries.

20. Claimant's medical records reveal that over the course of his treatment he has been prescribed medications to address the problems attendant with his injuries. A listing of Claimant's medications as provided for by Dr. Olson at the time Claimant was placed at MMI includes the following: Atenolol, Neurontin, Norvasc, Lorazepam, Robaxin, Flexeril, Prozac, Trazodone, and Motrin. On May 14, 2014 at the time Claimant saw Dr. Sparr for the last time, Dr. Sparr referenced the following regarding Claimant's use of medication: "He takes Neurontin 330 mg 3 times per day, Flexeril at night, ibuprofen as needed, trazodone 50 mg at night, and Prozac during the day." The ALJ finds Claimant's need for medication reasonably necessary to relieve him of the effects of the injury. Further, the ALJ finds Claimant's need for medication related to his

industrial injury. Without ongoing medication, the ALJ finds that Claimant's condition will likely deteriorate.

21. The ALJ credits the medical records and Claimant's testimony to find that Claimant is in need of maintenance medical treatment, including prescription medications.

22. Claimant has a visible disfigurement to the body consisting of four (4) lightly pigmented, 1/2 inch long by 1/16 inch wide arthroscopic surgical scars, in addition to moderate atrophy of the right shoulder girdle as a consequence of his right shoulder surgery.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16.

C. A workers' compensation case is decided on its merits. *Section 8-43-201*. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Maintenance Medical Benefits

D. Claimant is entitled to ongoing medical benefits after MMI if he presents substantial evidence that future medical treatment will be reasonably necessary to relieve the claimant of the effects of the injury or prevent deterioration of the claimant's condition. *Grover v. Industrial Commission,* 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995). While Claimant does not have to prove the need for a specific medical benefit, and respondents remain free to contest the reasonable necessity of any future treatment, Claimant must prove the probable need for some treatment after MMI due to the work injury. *Milco Construction v. Cowan*, 860 P.2d 539 (Colo. App. 1992). The question of whether the claimant met the burden of proof to establish an entitlement to ongoing medical benefits is one of fact for determination by the ALJ. *Holly Nursing Care Center v. Industrial* Claim Appeals Office, 992 P.2d 701 (Colo. App. 1999); *Renzelman v. Falcon School District,* W. C. No. 4-508-925 (August 4, 2003). Here, the ALJ concludes that Claimant has met his burden to establish his entitlement to maintenance medical treatment. The record evidence is replete with references to Claimant's limited response to active treatment designed to improve his condition. As a result, Claimant continues to suffer from ongoing pain and spasms which are relieved by the use of medication. Without ongoing treatment/medications Claimant's present condition will likely deteriorate further. Consequently, Claimant has proven, by a preponderance of the evidence that there is a probable need for treatment post MMI, which entitles him to an order for ongoing medical benefits.

E. An award of *Grover* medical benefits should be a "general order" awarding ongoing medical benefits. *Stollmeyer v. Industrial Claim Appeals Office, supra.* Even with a general award of maintenance medical benefits, however, the respondent still retains the right to dispute whether the need for medical treatment was caused by the compensable injury or whether it was reasonable and necessary. *See Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003) (a general award of future medical benefits is subject to the employer's right to contest compensability, reasonableness, or necessity). Indeed, Claimant has requested a general order for maintenance medical benefits subject to Respondent-Employer's right to dispute specific care.

F. In *Arkin v. Industrial Commission*, 145 Colo. 463, 358 P.2d 879 (1961), the Court held that the term "disfigurement" as used in the statute, contemplates that there be an "observable impairment of the natural person." As found in this case, Claimant has surgical scarring and atrophy of the shoulder girdle which alters the natural appearance of his right shoulder. The ALJ concludes Claimant's visible scarring and atrophy constitutes a disfigurement provided for by Section 8-42-108 (1), C.R.S.

ORDER

It is therefore ordered that:

1. Claimant is entitled to ongoing medical treatment reasonably necessary and related to his March 8, 2013 industrial injury to maintain MMI.

2. Respondent-Employer retains the right to dispute any treatment recommended on the basis that the need for treatment is not causally related to Claimant's March 8, 2013 work injury and/or whether any recommended treatment is reasonable and necessary.

3. Claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view, which entitles Claimant to additional compensation. Respondent-Employer shall pay Claimant $1,800.00 for that disfigurement. Insurer shall be given credit for any amount previously paid for disfigurement in connection with this claim.

4. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Respondent violated W.C.R.P. Rule 16-9(B) by failing to deny Peter Millett, M.D.'s June 11, 2014 request for authorization for left shoulder surgery or apply for a hearing within seven business days of June 11, 2014.

2. Whether Claimant has demonstrated by a preponderance of the evidence that medical treatment in the form of left shoulder surgery as recommended by Peter Millett, M.D. is reasonable, necessary and related to her March 10, 2013 admitted industrial injury.

FINDINGS OF FACT

1. Claimant is a 66 year old female who works for Employer as a Ski Instructor. On March 10, 2013 Claimant was struck by another skier and sustained admitted industrial injuries.

2. During March 2013 Claimant received medical treatment from Nurse Practitioner Lucia London at Vail Sports Medicine Physical therapy. NP London diagnosed Claimant with a closed head injury, left neck pain and left shoulder pain. She recommended medications and physical therapy. NP London also assigned work restrictions that included no skiing.

3. On April 22, 2013 Claimant visited NP London and reported "quite a bit of shoulder pain." Claimant remarked that she felt a clicking in her left shoulder with certain arm movements and her left shoulder pain wakes her up at night. Claimant also commented that the left shoulder pain radiates down under her left arm and up to the left side of her neck. NP London noted that Claimant still has a bump on the left side of her left upper arm and tenderness over her left biceps. NP London ordered an MRI of Claimant's left shoulder and referred her to Orthopedic Surgeon Peter Millett, M.D.

4. An April 25, 2013 MRI of Claimant's left shoulder revealed moderate to severe glenohumeral osteoarthritis with extensive high-grade and full thickness chondral loss, degenerative tearing and fraying of the glenoid labrum, a small partial-thickness tear of the supraspinatus and minimal medial subluxation of the biceps tendon at the bicipital groove.

5. On May 3, 2013 Claimant visited Dr. Millett for an examination. He diagnosed Claimant with left shoulder bicipital tendinitis, osteoarthritis and a partial supraspinatus tear. Dr. Millett injected the glenohumeral space in Claimant's left shoulder. He recommended continued physical therapy and medications.

6. On June 21, 2013 NP London noted that Claimant was gaining strength in her left upper extremity and increasing her range of motion. Claimant reported the injection she received from Dr. Millett provided 3-4 weeks of relief but then her pain returned. Claimant also noted popping in her left shoulder. NP London recommended six weeks of work conditioning and continued medications. She also recommended continued work restrictions.

7. On July 23, 2013 Claimant returned to Dr. Millett. She stated that overall her shoulder was doing much better. Physical examination revealed good grip strength along with full range of motion. Although the report references "right" shoulder it is undisputed that the injury is to the left shoulder. Dr. Millett assessed Claimant with osteoarthritis causing generalized joint pain.

8. On August 1, 2013 Claimant presented to Susan Lan, M.D. at Vail Valley Medical Center/Occupational Health (VVMC). Claimant reported that she was "much improved since her initial injury." Dr. Lan noted, "she was seen by Dr. Millett for the shoulder, who recommended additional physical therapy and follow-up only as needed, no surgical indication." Additionally, Dr. Lan remarked that Claimant had stated she is "significantly improved" but not back to baseline.

9. On October 1, 2013 Claimant returned to Dr. Millett for an evaluation. Claimant stated to Dr. Millett that "she has not had any improvements in her symptoms of her left shoulder. . ." Dr. Millett advised Claimant that the osteoarthritis in her left shoulder constituted a chronic condition that was "possibly" exacerbated by the injury in March. He recommended continued conservative treatment for the left shoulder but advised of the possibility of an arthroscopic procedure if she did not respond to the treatment. However, Dr. Millett remarked that a total shoulder arthroplasty would be a "definitive" treatment for Claimant's osteoarthritis.

10. On October 29, 2013 Lawrence Lesnak, M.D. conducted a records review of Claimant's claim. Dr. Lesnak determined that Claimant's March 10, 2013 industrial injury "did not result in any type of anatomic changes to any of her bones, joints, spine, nerves, etc." He remarked that Claimant's "previous and/or current left elbow complaints appear to be completely unrelated" to the March 10, 2013 industrial incident. Dr. Lesnak added that "it appears [Claimant] has essentially reached a state of maximum medical improvement." He commented that Claimant also did not require any specific work restrictions. Finally, Dr. Lesnak noted that Claimant did not have any permanent impairment.

11. On November 21, 2013 Claimant returned to Dr. Lan for an examination. Claimant stated that she had been walking uphill and began to experience increased pain in her left shoulder. Further, Claimant advised that she had undergone an evaluation in Denver with regard to thoracic outlet syndrome but did not have the condition. Dr. Lan observed that Claimant's left shoulder strain was "improving nicely."

12. On January 9, 2014 Claimant visited Dr. Lan for an examination. Claimant had returned to work as a ski instructor for up to three hours per day and "has done well

with this." She reported being able to do more things with her left shoulder, including pushing herself on her skis to traverse a hill, "which previously would have caused significant pain in the left shoulder." Physical examination revealed good range of motion with improved strength. Dr. Lan again noted that Claimant's left shoulder strain was improving.

13. On February 27, 2014 Claimant returned to Dr. Lan. She noted that Claimant was doing better but continued to have discomfort near her left elbow. Claimant completed a pain diagram and noted left shoulder pain, left upper arm pain, lower arm pain as well as pain in her upper back and neck area. Dr. Lan noted that Claimant continued to have pain with range of motion and weakness extending down the medial and posterior aspects of her left arm to the elbow. Dr. Lan recommended continued physical therapy, acupuncture, medications and six sessions of psychotherapy. She also recommended additional blood work regarding Claimant's chronic pain.

14. On March 14, 2014 Claimant presented to Dr. Millett. Claimant reported a deep aching left shoulder discomfort. Dr. Millett noted Claimant's examination was consistent with progressive glenohumeral arthritis with bicep tendonitis of her left shoulder. He discussed a potential arthroscopic surgery as opposed to a total shoulder replacement for Claimant. Dr. Millett did not affirmatively recommend a surgery but instead referred Claimant for an updated MRI.

15. On May 22, 2014 Claimant returned to Dr. Millett to discuss the MRI results. The MRI revealed grade 4 chondral changes of the glenohumeral joint. Claimant was still "bothered" by left shoulder pain with activities. However, she denied any neurological symptoms in the left upper extremity. Physical examination revealed crepitus with range of motion of the shoulder. Dr. Millett noted he spoke with Claimant regarding continued non-operative treatment versus a CAM procedure versus total shoulder arthroplasty. He advised Claimant that her "ultimate treatment" will be a total arthroplasty but he may be able to "buy her some additional time without an arthroplasty if she consents to the arthroscopy procedure." The medical note on May 22, 2014 does not contain a definitive recommendation with regard to the proposed procedure.

16. On June 11, 2014 Dr. Millett's office, The Steadman Clinic, faxed a request for prior authorization to third-party administrator Liberty Mutual. The fax cover sheet reflects that Dr. Millett requested authorization for an outpatient left shoulder arthroscopy, debridement, manipulation under anesthesia, capsular release, lysis of adhesions, removal of loose bodies, osteoplasty, axillary nerve neurolysis, intraoperative fluoroscopy, subacromial decompression and biceps tenodesis. The request for prior authorization was faxed to telephone number (603) 334-8096. Julie Pavelka, an adjuster at Liberty Mutual who had been handling Claimant's Workers' Compensation claim, testified that the preceding telephone number is the general fax number for the Liberty Mutual office in Irving, Texas. The request for prior authorization included a fax cover sheet that described the requested procedure. In addition, the request for prior authorization included Dr. Millett's note dated March 14, 2014 and an

MRI review note dated March 31, 2014. Finally, the request for prior authorization included the actual MRI report.

17. On June 17, 2014 insurance coordinator for The Steadman Clinic, Melissa Pohlman, emailed Ms. Pavelka and asked, "also wondering where we stand with authorization for surgery for [Claimant]." Ms. Pavelka responded she had not yet received a formal request. Ms. Pohlman advised one was faxed on June 11th and then asked "what a good fax number" would be to forward the request for prior authorization. Ms. Pavelka provided her personal fax number of (603) 334-3836. On June 17, 2014 Ms. Pohlman faxed the request for prior authorization directly to Ms. Pavelka.

18. On June 26, 2014 Orthpedic Surgeon Stephen D. Lindenbaum, M.D. reviewed Dr. Millett's request for prior authorization. Referencing the Colorado Medical Treatment Guidelines, Dr. Lindenbaum concluded that the procedure recommended by Dr. Millett was not medically necessary. He noted that Claimant has advanced degenerative changes in her left shoulder joint with concomitant associated pathology normally found with the degenerative process. Dr. Lindenbaum commented that the likelihood of long term improvement with Claimant's preexisting chronic problems was poor and therefore the request was not indicated. He summarized that "this Claimant has had long standing degenerative changes of the shoulder which present with usual accompanying problems including biceps pathology, cuff tears, decreased motion and loose bodies; the likelihood of lasting improvement from this request is small and most likely the Claimant would require some conservative treatment including intraarticular steroids until total left shoulder arthroplasty is indicated."

19. On June 26, 2014 Ms. Pavelka denied the request for prior authorization. On July 10, 2014 Claimant applied for a hearing seeking reasonably necessary medical benefits in the form of the requested left shoulder surgery. Moreover, Claimant sought penalties pursuant to DOWC Rule 16 for Respondent's failure to timely respond to Dr. Millett's June 11, 2014 surgical request.

20. On July 24, 2014 Claimant underwent the recommended left shoulder surgery through her private insurance.

21. During the period August through October 2014 Claimant continued to visit Drs. Lan and Millett for examinations of her left shoulder. Her shoulder condition continued to improve. On October 30, 2014 Dr. Millett noted that he could not rule out that Claimant's left shoulder condition was caused by her March 10, 2013 industrial injury.

22. On November 5, 2014 the parties conducted the pre-hearing evidentiary deposition of Dr. Lindenbaum. Upon reviewing Claimant's left shoulder MRI dated April 25, 2013 Dr. Lindenbaum testified that it showed significant arthritis in Claimant's glenohumeral joint. Additionally, the MRI revealed some irregularities to the bicep tendon and labrum. He concluded that Claimant's shoulder suffered from a degenerative condition and not an acute injury. Dr. Lindenbaum testified that the medical records reflected that Claimant had full range of motion of her left shoulder just

one month after her work injury. He explained that for a person of Claimant's age, the condition should be treated symptomatically. "If you need an occasional injection in your shoulder, we can do that. We can give you some home exercises to work on to make sure the shoulder doesn't get stiff, and if need be, even put you on a mild anti-inflammatory." Dr. Lindenbaum summarized that Claimant's degenerative joint symptoms in her left shoulder constituted the natural progression of an underlying condition.

23. Dr. Lindenbaum testified he was familiar with the Colorado Medical Treatment Guidelines regarding the upper extremity and surgical considerations. He noted that arthroscopic surgery may be considered in selective patients with moderate degrees of arthritis. He summarized that "[a]nd this is the area where I was concerned, because this [Claimant] has end-staged arthritis of her shoulder, and in my mind, the procedure she was being recommended - - was being recommended to her was one that might give her some temporary relief, but would not be long lasting and I think was not indicated. And that was the basis for my recommendation that she not have this surgery." Ultimately, Dr. Lindenbaum noted that Claimant's shoulder condition, "was treated, it seemed to be improving, and she was functionally fairly well."

24. Ms. Pavelka testified at the hearing in this matter. She explained that she has routinely dealt with the Steadman Clinic in her capacity as an insurance adjuster for Liberty Mutual. Ms. Pavelka testified that requests for prior authorization are faxed to the Liberty Mutual Utilization Management Department or to her personally. The fax number for the Utilization Management Department is (603) 334-0334. Ms. Pavelka's personal fax number is (603) 334-3836. In fact, her voicemail message contains the same instruction. She recounted that, in her experience working with The Steadman Clinic, she had never before seen a request for prior authorization be faxed to the community line. Ms. Pavelka remarked that faxing to the community line is an incorrect procedure because it is designed for any and all non-pressing matters. She commented that The Steadman Clinic routinely submitted requests for prior authorization to either Utilization Management or directly to the adjuster. For example, Ms. Pavelka noted that on October 8, 2013 The Steadman Clinic faxed a request for prior authorization to the Utilization Review Department in the present claim. She had no explanation as to why The Steadman Clinic chose to utilize the community line for Dr. Millett's prior authorization request.

25. Ms. Pavelka explained that, after Ms. Pohlman requested a "good" fax number on June 17, 2014, she received a request for prior authorization. Ms. Pavelka then obtained a medical review from Dr. Lindenbaum. Upon receipt of Dr. Lindenbaum's opinion that the requested surgical procedure was not reasonable and necessary, Ms. Pavelka filed a denial.

26. The June 11, 2014 fax from The Steadman Clinic did not constitute a completed request for prior authorization. The fax contains a list of the procedures being requested. The second page of the fax is a report from three months earlier, or March 14, 2014, in which Dr. Millett notes a discussion with Claimant regarding conservative treatment versus the potential for surgery. In the report Dr. Millett does not

recommend a surgical procedure but only discusses various potential options. Additionally, Dr. Millett recommended an MRI and the request for prior authorization contains the subsequent MRI report. Finally, the request for prior authorization includes an "MRI review" drafted by Dr. Millett. In the report, he discusses the MRI findings. Regarding the left shoulder, Dr. Millett explained, "results were conveyed to [Claimant] at length and again she is scheduled to have her knee operated on this coming Thursday, we will address the shoulder once her workers' compensation gets settled. This was conveyed to [Claimant] and we will continue to discuss further a plan with the shoulder." However, the note does not outline the plan. More specifically, Dr. Millett failed to explain the medical necessity of the recommended procedure. In fact, there is no medical documentation attached to the prior authorization request from the date of the MRI review report on March 31, 2014 through the date of the request on June 11, 2014. Accordingly, the fax and documentation sent to the Liberty Mutual community fax line on June 11, 2014 did not constitute a completed request for prior authorization. Because of the incomplete request for prior authorization Respondent did not violate Rule 16-9.

27. Claimant has failed to demonstrate that it is more probably true than not that medical treatment in the form of left shoulder surgery as recommended by Dr. Millett is reasonable, necessary and related to her March 10, 2013 admitted industrial injury. Dr. Millett sought prior authorization for an outpatient left shoulder arthroscopy procedure. On May 22, 2014 Dr. Millett had advised Claimant that her "ultimate treatment" will be a total arthroplasty but he may be able to "buy her some additional time without an arthroplasty if she consents to the arthroscopy procedure." However, Dr. Lindenbaum concluded that the procedure recommended by Dr. Millett was not medically necessary. He noted that Claimant has advanced degenerative changes in her left shoulder joint with concomitant associated pathology normally found with the degenerative process. Dr. Lindenbaum commented that the likelihood of long- term improvement with Claimant's preexisting chronic problems was poor and therefore the request was not indicated. Moreover, Dr. Lindenbaum testified he was familiar with the Colorado Medical Treatment Guidelines regarding surgical considerations and noted that arthroscopic surgery may be considered in selective patients with moderate degrees of arthritis. He summarized that the requested procedure might provide Claimant some temporary relief, "but would not be long lasting and I think was not indicated." Dr. Lindenbaum summarized that Claimant's degenerative joint symptoms in her left shoulder constituted the natural progression of an underlying condition. Based on Dr. Millett's acknowledged concerns about the long-term efficacy of the requested left shoulder procedure, the medical records and Dr. Lindenbaum's persuasive testimony, Claimant's request for prior authorization is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S.

A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Prior Authorization Request

4. Workers' Compensation Rule of Procedure 16-9(b) requires the respondents to respond to a request for prior authorization within seven business days from receipt of the provider's completed requests as defined in WCRP. 16-9(e). In order to complete a request for prior authorization, the provider must "concurrently explain the medical necessity of the services requested and shall provide relevant supporting medical documentation." Supporting medical documentation means "documents used in the provider's decision making process to substantiate the need for the requested service or procedure." WCRP 16-9(f). Accordingly, if the request for prior authorization is not a "completed request," then whether the respondents have timely responded is immaterial.

5. As found, the June 11, 2014 fax from The Steadman Clinic did not constitute a completed request for prior authorization. The fax contains a list of the procedures being requested. The second page of the fax is a report from three months earlier, or March 14, 2014, in which Dr. Millett notes a discussion with Claimant regarding conservative treatment versus the potential for surgery. In the report Dr. Millett does not recommend a surgical procedure but only discusses various potential options. Additionally, Dr. Millett recommended an MRI and the request for prior authorization contains the subsequent MRI report. Finally, the request for prior authorization includes an "MRI review" drafted by Dr. Millett. In the report, he discusses the MRI findings. Regarding the left shoulder, Dr. Millett explained, "results were conveyed to [Claimant] at length and again she is scheduled to have her knee operated on this coming Thursday, we will address the shoulder once her workers' compensation gets settled. This was conveyed to [Claimant] and we will continue to discuss further a plan with the shoulder." However, the note does not outline the plan. More specifically,

Dr. Millett failed to explain the medical necessity of the recommended procedure. In fact, there is no medical documentation attached to the prior authorization request from the date of the MRI review report on March 31, 2014 through the date of the request on June 11, 2014. Accordingly, the fax and documentation sent to the Liberty Mutual community fax line on June 11, 2014 did not constitute a completed request for prior authorization. Because of the incomplete request for prior authorization Respondent did not violate Rule 16-9.

Medical Treatment

6. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

7. As found, Claimant has failed to demonstrate by a preponderance of the evidence that medical treatment in the form of left shoulder surgery as recommended by Dr. Millett is reasonable, necessary and related to her March 10, 2013 admitted industrial injury. Dr. Millett sought prior authorization for an outpatient left shoulder arthroscopy procedure. On May 22, 2014 Dr. Millett had advised Claimant that her "ultimate treatment" will be a total arthroplasty but he may be able to "buy her some additional time without an arthroplasty if she consents to the arthroscopy procedure." However, Dr. Lindenbaum concluded that the procedure recommended by Dr. Millett was not medically necessary. He noted that Claimant has advanced degenerative changes in her left shoulder joint with concomitant associated pathology normally found with the degenerative process. Dr. Lindenbaum commented that the likelihood of long-term improvement with Claimant's preexisting chronic problems was poor and therefore the request was not indicated. Moreover, Dr. Lindenbaum testified he was familiar with the Colorado Medical Treatment Guidelines regarding surgical considerations and noted that arthroscopic surgery may be considered in selective patients with moderate degrees of arthritis. He summarized that the requested procedure might provide Claimant some temporary relief, "but would not be long lasting and I think was not indicated." Dr. Lindenbaum summarized that Claimant's degenerative joint symptoms in her left shoulder constituted the natural progression of an underlying condition. Based on Dr. Millett's acknowledged concerns about the long-term efficacy of the requested left shoulder procedure, the medical records and Dr. Lindenbaum's persuasive testimony, Claimant's request for prior authorization is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Because of the incomplete request for prior authorization Respondent did not violate WCRP Rule 16-9.

2. Claimant's request for prior authorization for left shoulder surgery is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

Whether Claimant has established, by a preponderance of the evidence that he is unable to earn a wage in the same or other employment, and is therefore, permanently and totally disabled as a consequence of his admitted April 20, 2013, industrial injury.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant injured his low back while working for Advantage Logistics on April 20, 2013.

2. Claimant had surgery on his low back on April 30, 2013.

3. Claimant's post-surgical care was primarily provided by Frank Polanco, M.D., and Paula Homberger, PA-C. Dr. Polanco found the Claimant to be at maximum medical improvement (MMI) on January 9, 2014, and provided him with a 19% whole person impairment rating.

4. Dr. Polanco assigned Claimant work restrictions of 15 pounds lifting and carrying and 40 pounds pushing and pulling.

5. Claimant completed a Functional Capacity Evaluation on November 27, 2013. A report was prepared outlining Claimant's demonstrated capabilities following that evaluation. The report provides as follows: "Patient displayed lifting/carrying capacities between sedentary and sedentary light on this date."

6. Claimant underwent a Division IME with John Ogrodnick, M.D., on June 19, 2014. Dr Ogrodnick agreed that Claimant was at MMI. Dr. Ogrodnick assigned 19% whole person impairment. Claimant uses a stationary bike, participates in a home exercise program and takes medications to maintain his current condition. Currently Claimant takes Narco, Lyrica and a "muscle relaxant", which he takes at night, on a regular basis. Claimant testified that he experiences side effects from his medications to include drowsiness and moodiness. According to Dr. Polanco at the time of his deposition, Claimant did not meet the medical treatment guidelines criteria of prescribing for Narco. Consequently, Dr. Polanco testified that weaning to meet the guidelines was being considered at the time of his deposition.

7. Tim Shanahan performed a vocational evaluation of Claimant at Respondents' request. Mr. Shanahan provided a report dated September 26, 2014. Based upon Claimant's FCE results and the physical restrictions assigned by Dr. Polanco (15 pounds lifting/carrying and 40 pounds pushing/pulling), Mr. Shanahan opined that employment opportunities existed for Claimant in the following positions: cashier, motel/hotel clerk, customer service representative, reservationist, dispatcher, security guard, and light industrial packaging and assembly. Mr. Shanahan concluded that Claimant is capable of performing the aforementioned positions and retained the ability to earn wages.

8. Mr. Shanahan testified consistently with his report; however, he agreed that those individuals possessing high school diplomas competing for jobs with Claimant would have an advantage over the him. Nonetheless, Mr. Shanahan testified that while it would not be easy for Claimant to get a job with his educational background, he still believed Claimant was capable of obtaining work.

9. Dr. Polanco was presented with a list of job descriptions provided by Mr. Shanahan, which included an assembler, cashier, courier, customer service representative/customer complaint clerk, dispatcher, hotel/motel clerk, hotel reservation clerk, information clerk, night auditor/clerk, customer service representative/order clerk, parking lot attendant, sort/pricer, and warehouse/record clerk. After reviewing the physical demands for each job, Dr. Polanco testified that he believed Claimant was physically capable of performing these jobs. Based upon the his review of the medical record, including the results of the FCE and his treatment of Claimant, the ALJ finds that Dr. Polanco is aware of Claimant's physical capabilities. The ALJ finds Dr. Polanco's testimony credible and persuasive.

10. Claimant retained Bruce Magnuson, M.A., for a vocational evaluation. Mr. Magnuson completed his evaluation and provided a report dated August 4, 2014. In his report Mr. Magnuson concluded: "Within a reasonable degree of vocational probability . . . Mr. Starks meets the criteria for permanent and total disability . . . and would not be capable of performing any work on a part- or full-time basis and sustain it in the regional economy." According to Mr. Magnuson, Claimant's limited education combined with significant physical limitation precludes work. However, during cross examination, Mr. Magnuson agreed that Claimant's physical restrictions fell at the "low end" of light duty capacity. Mr. Magnuson also admitted that while it will be "very, very difficult," he did not know if it was "impossible" for Claimant to obtain employment. Based on evidentiary record as a whole, the ALJ finds the opinions of Mr. Shanahan more convincing than the contrary opinions of Mr. Magnuson.

11. Claimant's date of birth is October 22, 1960, making him 54 years of age. He does not have a high school diploma having completed the 11th grade. Claimant has not obtained a GED but did serve in the U.S. Army for 7 ½ years attaining the rank of sergeant. He was honorably discharged. He has a valid Colorado driver's license and does drive.

12. Claimant has past employment experience as a janitor, commercial floor technician, stocker, and cold storage warehouseman. Claimant has worked for Employer for approximately 15 years in the positions of "case picker", "put away driver" and "fork lift operator." Claimant's past job positions required frequent bending, lifting and carrying. Based upon Claimant's testimony, the ALJ finds Claimant's prior jobs physically demanding. Claimant last worked for Employer on or about April 29, 2013. Based upon the evidence presented, the ALJ finds that Claimant is probably precluded from returning to his former occupation and similar positions he has held in the past.

13. Claimant testified that he has no formal computer skills. However, the ALJ finds from his testimony that he is able to get on line and maintain a Facebook page. Claimant also has familiarity with the tasks necessary to operate a computerized inventory system, having worked with such a system in the past while working for Employer. While Claimant has not had to complete substantial data entry, the ALJ finds that he has a basic working understanding of computers and a proven capacity to learn specific computer tasks.

14. Claimant testified that he applied for jobs identified by Mr. Shanahan but was unable to get past the on-line application procedure. According to Claimant, he needed his wife to assist with the on-line applications and at times was stopped in the application process because he did not have a high school diploma. Thus, he did not meet the minimum qualifications for the identified position. The ALJ finds Claimant's effort to complete some on-line applications to constitute a rudimentary job search only.

15. The ALJ credits the report and testimony of Mr. Shanahan to find that the representative sampling of sedentary to light sedentary positions he identified present a number of prospective job positions existing in the local labor market, which afford Claimant the opportunity to earn a wage. Based on the evidence presented, including the report and testimony of Mr. Shanahan, the ALJ finds that Claimant retains the ability to earn a wage in employment reasonably available to him within his physical restrictions and commutable labor market.

16. Claimant has failed to demonstrate, by a preponderance of the evidence, that he is incapable of earning any wage in the same or other employment as a result of his April 20, 2013, work injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

1. The purpose of the "Workers' Compensation Act of Colorado" (hereinafter "Act") is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that

which leads the trier-of-fact, after considering all of the evidence to find that a "contested fact is more probable than its nonexistence." *Page v. Clark*, 592 P.2d 792, 800 (Colo. 1979). Whether Claimant sustained his burden of proof is a factual question for resolution by the ALJ. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S. In this case, the undersigned ALJ concludes that claimant has failed to prove, by a preponderance of the evidence, that he meets the criteria of "permanent total disability" as that term is defined under the Act.

2. Under the applicable law, a claimant is permanently and totally disabled if he/she is unable to "earn any wages in the same or other employment." Section 8-40-201(16.5)(a), C.R.S. The term "any wages" means more than zero wages. *See Lobb v. Industrial Claim Appeals Office,* 948 P.2d 115 (Colo. App. 1997); *McKinney v. Industrial Claim Appeals Office,* 894 P.2d 42 (Colo. App. 1995). In *McKinney*, the Court held that the ability to earn wages in "any" amount is sufficient to disqualify a claimant from receiving permanent total disability benefits. If wages can be earned in some modified, sedentary or part-time employment, a claimant is not permanently and totally disabled for purposes of the statute. See *also, Christie v. Coors Transportation*, 933 P.2d 1330 (Colorado 1997).

3. Moreover, there is no requirement that Respondents must locate a specific job for a claimant to overcome a prima facie showing of permanent total disability. *Hennenberg v. Value-Rite Drugs, Inc.*, W.C. 4-148-050 (September 26, 1995); *Rencehausen v. City and County of Denver*, W.C. No. 4-110-764 (November 23, 1993); *Black v. City of La Junta Housing Authority*, W.C. No. 4-210-925 (December 1998); *Beavers v. Liberty Mutual Fire Ins. Co.*, W.C. No. 4-163-718 (January 13, 1996), aff'd., *Beavers v. Liberty Mutual Fire Ins. Co.*, (Colo. App. No. 96 CA0275, September 5, 1996)(not selected for publication); *Gomez v. Mei Regis*, W.C. No. 4-199-007 (September 21, 1998). To the contrary, a claimant fails to prove permanent total disability if the evidence establishes that it is more probable than not that he/she is capable of earning wages. *Duran v. MG Concrete Inc.*, W.C. No. 4-222-069 (September 17, 1998). As long as a claimant can perform any job, even part time, he/she is not permanently totally disabled. *Vigil v. Chet's Market*, W.C. No. 4-110-565 (February 9, 1995). Nonetheless, when determining whether a claimant is capable of earning wages, the ALJ must consider the claimant's unique "human factors", including age, education, work experience, overall physical/mental condition, the labor market where claimant resides and the availability of work within claimant's restrictions, among other things. *Weld County School Dist. RE-12 v. Bymer*, 955 P.2d 550 (Colo. 1998). Considering the human factors involved in the instant case, the ALJ is not convinced that Claimant is incapable of earning any wages in other employment. Rather, while it is more probably true than not, that Claimant is precluded from returning to his former occupation and similar positions he held in the past, the representative sampling of sedentary to light duty type positions identified by Respondents' vocational expert as being within Claimant's physical/mental capabilities present a number of perspective job

positions existing in the local labor market affording Claimant the opportunity to earn a wage. Furthermore, the ALJ is also not convinced that Claimant's age and limited education, in combination with his physical restrictions completely preclude his ability to earn a wage. Claimant has only attempted what the undersigned finds to be a rudimentary job search. In this regard, the ALJ credits the report and testimony of Respondent's vocational expert to conclude, that while it won't be easy for Claimant to secure employment with his educational background, his prior work history and military experience will help and jobs exist which Claimant can compete for and obtain. Indeed, Claimant's own vocational expert reached a similar conclusion, testifying that while it will be "very, very difficult" he did not know if it was "impossible." As found, the ALJ credits Mr. Shanahan's testimony and written report as establishing persuasively that Claimant retains the ability to earn a wage in employment reasonably available to him within his physical restrictions and commutable labor market. Accordingly, Claimant has failed to demonstrate by a preponderance of the evidence that he is incapable of earning any wage in the same or other employment as a result of his April 20, 2013 work injury.

ORDER

It is therefore ordered that:

1. Claimant's claim for permanent total disability benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: _January 12, 2015____

/s/ Richard M. Lamphere
Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
1259 Lake Plaza Drive, Suite 230
Colorado Springs, CO 80906

ISSUES

The issues to be determined by this decision are:

1. Whether the respondents have overcome the Division IME as to whether Dr. Griffis attributed the cause of the claimant's industrial injury to her pre-existing arthritis; and,

2. Whether the claimant has established by a preponderance of the evidence that the claimant is entitled to post-maximum medical improvement benefits in the form of Synvisc injections.

FINDINGS OF FACT

1. The claimant was working for respondent-employer as a Special Education Paraprofessional when she was injured her left knee on November 29, 2012 after a special education student she was working with threw a tricycle, causing her to trip over it and fall onto her knees.

2. The claimant treated with Dr. Richard Nanes at CCOM in Canon City. The work related diagnosis initially listed by Dr. Nanes was bilateral knee contusion. By the claimant's February 21, 2013 visit, the medical diagnoses were sprain to the left knee and leg, pain in the left knee with patellofemoral syndrome and contusion to the left knee. After the claimant's left knee surgery, the diagnosis of chondromalacia patella was added.

3. The claimant underwent physical therapy for her injury but it did not resolve the claimant's left knee pain, which was worsening when she saw Dr. Alex Romero on January 24, 2013. Dr. Romero gave the claimant a Kenalog injection on that date. After this injection and more physical therapy, the claimant reported her left knee had gotten much worse with a sharp pain in the anterior aspect of her knee. As Dr. Romero attempted a second cortisone injection on March 7, 2013.

4. After all conservative treatment had failed to relieve the pain in the claimant's knee she underwent left knee arthroscopy with chondroplasty of the patella

and lateral tibial plaeau, with a lateral release and removal of synovial chondromatosis. The claimant's pre- and post-operative diagnosis was left knee patellar chondromalacia with a tracking abnormality.

5. After this surgery, Dr. Romero noted that he had performed debridement of articular cartilage defects and removal of loose bodies in the left knee as well as the procedures described in his surgical notes. Despite the claimant reporting that she no longer had "the crunchy sensation in the front of her knee" she was still reporting soreness, especially if she were to overdo her daily activities.

6. Two months post surgery, the claimant was still noting anterior knee pain which was more noticeable when she was climbing stairs and kneeling, and that the pain was specifically "deep to the kneecap". The claimant's pain she was experiencing was different than she had experience prior to her surgery. Based upon these complaints, Dr. Romero recommended viscosupplementation to see if it would address the complaints.

7. On September 19, 2013, the claimant had an injection of Snyvisc-One. The injection was helpful in relieving the pain she had been experiencing since her surgery and this is noted in her next visit with Dr. Nanes on October 29, 2013.

8. On October 29, 2013, Dr. Nanes noted that he would do a rating in the next 4 weeks, that the claimant would need permanent restrictions, and that "the patient will require maintenance care and may need periodic Synvisc injections every 6 months if needed over the next 2 years."

9. During the claimant's next visit with Dr. Nanes on November 21, 2013, he placed her at maximum medical improvement, assigned an 11% left lower extremity impairment rating and stated "She does not need any further medical care or medications and has been released from our care."

10. On December 16, 2013, the respondent-insurer filed a final admission of liability admitting to an 11% scheduled impairment rating for the claimant's left lower extremity. No medical maintenance care was admitted and respondent-insurer, specifically denied "any and all liability for pre-existing and unrelated degenerative chondromalacia."

11. The claimant pursued a Division Independent Medical Examination. The exam took place with Dr. William Griffis on April 8, 2014. In his report, Dr. Griffis agreed with the claimant's authorized treatment provider, Dr. Richard Nanes, that the claimant

was at maximum medical improvement (MMI) as of November 21, 2013 and he assessed an 11% scheduled lower extremity impairment rating.

12. In his report, Dr. Griffis recommended maintenance care in the form of "up to 3 Synvisc injections over the next 18 months."

13. The respondents filed an application for hearing on April 23, 2014 with the stated issue being "Overcome the Division IME opinion of Dr. William Griffis on the issue of causation of the degenerative arthritis, if the court determines the Division IME attributed that condition to this injury; what is the true opinion of the Division IME; respondents agree with the Division IME's finding of impairment and MMI."

14. Nowhere within his report does Dr. Griffis address whether the claimant has degenerative arthritis of her left knee as a result of her industrial injury. There is no opinion issued regarding whether degenerative arthritis caused the claimant's initial injury on November 29, 2012 nor whether any type of arthritis was caused by the injury.

15. The ALJ finds that by not giving the claimant an impairment rating under Table 40 for arthritis, and by failing to so state in his report, that Dr. Griffis specifically found that the claimant's pre-existing arthritis was not caused by the claimant's industrial injury.

16. Dr. Griffis did find that Synvisc injections were helpful in relieving the pain the claimant was experiencing as a result of her industrial injury and therefore recommended maintenance care involving Synvisc injections.

17. The only significant evidence presented concerning degenerative arthritis was offered by the respondents' expert, Dr. James Lindberg. Dr. Lindberg opined that the claimant had degenerative joint disease and pre-existing osteoarthritis in her left knee and therefore any maintenance care was not necessary.

18. Neither party called Dr. Griffis as a witness.

19. The ALJ finds that the opinions of Dr. Griffis as found herein are credible and persuasive and are more credible than medical opinions to the contrary.

20. To the extent that the burden of proof may be by clear and convincing evidence, the ALJ finds, nonetheless, that the respondents have failed to establish that it is even more likely than not that Dr. Griffis attributed any of the claimant's industrial injury to her pre-existing arthritis.

21. The ALJ finds that the claimant has established that it is more likely than not that the claimant is entitled to medical maintenance care as recommended by Dr. Griffis.

CONCLUSIONS OF LAW

1. The respondents are seeking to overcome the DIME physician's opinion as to the relatedness of degenerative arthritis to the claimant's industrial injury. However, the DIME physician did not provide an opinion regarding degenerative arthritis relating to the claimant's left knee.

2. To receive workers' compensation benefits, an injured worker bears the threshold burden of establishing, by a preponderance of the evidence; that he or she has sustained a compensable injury proximately, caused by his or her employment. Section 8-41-301(1)(c), C.R.S. 2009; *Faulkner v. Indus. Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000) ("Proof of causation is a threshold requirement which an injured employee must establish by a preponderance of the evidence before any compensation is awarded..")

3. Litigants bear a higher burden of proof when challenging opinions rendered by a DIME physician. If a DIME physician has rendered an opinion regarding MMI or medical impairment, those opinions must be overcome by clear and convincing evidence. §§ 8-42-107(8)(b)(III), -107(8)(c), C.R.S.; *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186, 189 (Colo. App. 2002); *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998); *Leprino Foods Co. v. Indus. Claim Appeals Office*, 134 P.3d 475, 482 (Colo. App. 2005) ("DIME physician's opinions concerning MMI and permanent medical impairment are given presumptive effect ... [and] are binding unless overcome by clear and convincing evidence.").

4. "Clear and convincing evidence means evidence which is stronger than a mere 'preponderance'; it is evidence that is highly probable and free from serious or substantial doubt." *Metro Moving & Storage Co. v. Gussert*, 914 P,2d 411, 414 (Colo. App. 1995).

5. The party challenging a DIME physician's conclusion must demonstrate that it is "highly probable" that the DIME impairment rating or MMI finding are incorrect. *Qual-Med*, 961 P.2d at 592. A party has met the burden of establishing that a DIME impairment rating and diagnosis are incorrect if the party has demonstrated that the

evidence contradicting the DIME is “unmistakable and free from serious or substantial doubt.” *Leming v. Indus. Claim Appeals Office*, 62 P.3d 1015, 1019 (Colo. App. 2002).

6. Whether a party has met the burden of overcoming a DIME by clear and convincing evidence “is a question of fact for the ALJ's determination.” *Metro Moving & Storage*, 914 P.2d at 414. The factual determinations of an ALJ will be upheld on review if the decision is supported by substantial evidence in the record. § 8-43-301(8), C.R.S.; *Christie v. Coors Transp. Co.*, 919 P.2d 857, 860 (Colo. App. 1995), *aff'd*, 933 P.2d 1330 (Colo. 1997).

7. The threshold question of whether the claimant sustained any compensable injury is not at issue here. It was admitted by the respondents, who did not dispute that the claimant suffered an injury on November 29, 2012. Rather, the respondents are now contesting the nature and extent of the ensuing injuries and argued that some of the claimed conditions were not casually related to the industrial injury.

8. The respondents have not presented sufficient evidence to overcome or even clarify the opinion of the DIME physician as to the causation of the claimant’s left knee injury. The only information as to causation/relatedness is that the DIME doctor found that the claimant’s left knee injury was work related and his recommendation that she receive medical maintenance care in the form of 3 Synvisc injections over the next 18 months following his report demonstrated that he thought such injections would be useful for maintaining the claimant at MMI.

9. The ALJ concludes that the respondents have failed to establish by a preponderance of the evidence, let alone by clear and convincing evidence, that Dr. Griffis somehow attributed the claimant’s industrial injury to the claimant’s pre-existing arthritis.

10. The claimant is entitled to continuing medical benefits after MMI if the record contains substantial evidence “that future medical treatment will be reasonably necessary to relieve the injured worker from the effects of the work-related injury or occupational disease.” *Grover v. Industrial Commission, supra*. The questions of whether a particular condition is related to an industrial injury, and whether a proposed treatment is reasonable and necessary, are issues of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002); *Wal Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999).

11. As noted by Dr. Nanes in his October 29, 2013 medical report, he believed at the time that the claimant would benefit from Synvisc injections to her left knee. The DIME physician agreed that Synvisc injections would be helpful to keep the claimant at maximum medical improvement. The claimant has met the burden of showing by a preponderance of the evidence that the recommended medical maintenance care is necessary and related to her industrial injury of November 29, 2012.

ORDER

It is therefore ordered that:

1. The respondents' challenge to the findings of the DIME physician, Dr. Griffis, is denied and dismissed.

2. The respondent-insurer shall pay for post-MMI medical maintenance care as recommended by Dr. Griffis.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Colorado Springs, CO 80906

ISSUES

Did Claimant prove by a preponderance of the evidence that he sustained an occupational disease arising out of the course and scope of his employment?

STIPULATIONS

The parties stipulated that if this claim is determined compensable, the Health One occupational clinic closest to Denver International Airport will be Claimant's authorized treating provider.

The parties stipulated that if this claim is determined compensable, Respondents agree to reimburse Claimant for co-pays Claimant paid for the treatment of his knees during the period 05/02/2013-10/11/2013 with Greg Smith, D.O., Stephen Lindenbaum, MD, Stephen Gray, MD, Doug Hammond, MD, Rocky Mountain Family Medicine, and OccMed.

The parties stipulated that if this claim is found compensable and Claimant receives a demand for reimbursement or repayment from his health insurer asking Claimant to repay his health insurer for payments made to Greg Smith, D.O., Stephen Lindenbaum, MD, Stephen Gray, MD, Doug Hammond, MD, Rocky Mountain Family Medicine, or OccMed related to the treatment of Claimant's knees for the period 05/02/2013-10/11/2013, Respondent will either reimburse the health insurer, subject to the fee schedule, for payments the health insurer made to providers as described above or Respondents will pay the providers pursuant to the fee schedule and request that the providers reimburse the health insurer.

FINDINGS OF FACT

Based on the evidence presented at hearing the Judge finds as fact:

1. Claimant has worked as a ramp agent/baggage handler for Employer since June 1, 2010. He is currently employed with Employer doing the same job duties now as he did when first hired and has continued to work throughout the course of this case.

2. Claimant is twenty-five years of age. On May 2, 2013, Claimant was 6'3" tall and weighed approximately 245 lbs.

3. Claimant's job duties at Employer include loading luggage into aircraft bins, unloading luggage, driving luggage carts, moving luggage carts, and loading luggage carts. Claimant testified that his primary duty is loading the aircraft cargo bins with luggage and freight and during a typical shift, this duty takes about two hours per day. When working in aircraft bins, Claimant wears knee pads and moves about on his

knees. The compartment bin inside the airplane is compact (approximately four feet in height) and Claimant must move baggage weighing between a few pounds up to one hundred pounds.

4. In the first year of employment with Employer, Claimant worked extra mandatory shifts. He worked four, seventeen hour days, per week. During the extra mandatory shifts, Claimant was required to load and unload additional aircraft on numerous gates. Because of the additional shifts, Claimant was squatting and kneeling on his knees in the cargo bins more frequently and for longer periods of time.

5. About six months to a year after Claimant began working for Employer, he began to notice aching and grinding symptoms in his knees when working in aircraft bins. Claimant took ibuprofen to manage the pain. He testified at hearing that he just worked through it and thought it might go away. Claimant likes working for Employer.

6. Claimant did not report a knee injury to his employer until almost two years after his symptoms had begun because he believed the symptoms would resolve.

7. Claimant reported a work-related knee injury to the Employer on May 2, 2013 after which he was seen by authorized treating physician, Greg Smith, D.O., who, on May 2, 2013, diagnosed patella chondromalacia (softening or loss of cartilage). Claimant complained of painful grinding in both knees. On May 10, 2013, Dr. Smith revised Claimant's diagnosis to patella chondromalacia, right side greater than left. Dr. Smith checked the box on the Physician's Report of Worker's Compensation Injury affirming that his objective findings are consistent with history and/or work related mechanism of injury/illness.

8. Respondents filed a notice of contest on May 21, 2013 indicating the basis for the contest as "Injury/Illness Not Work-Related."

9. Claimant sought treatment for his knees through his personal health care providers at Rocky Mountain Family Medicine beginning on May 29, 2013 at which time he was diagnosed with "patellofemoral syndrome-probably work related" by Dr. J. Stephen Gray.

10. On August 1, 2013, Claimant was seen by Dr. Hammond at Rocky Mountain Family Medicine and Dr. Hammond referred Claimant for an orthopedic evaluation.

11. On August 1, 2013, Claimant had x-rays of his right and left knee both of which were deemed normal.

12. On August 14, 2013, Claimant treated with orthopedic specialist, Stephen Lindenbaum, MD who documented Claimant's knee pain as retropatellar pain, right more than left and assessed the knee pain as chondromalacia patella.

13. On September 7, 2013, Claimant had an MRI of his right knee. The MRI revealed full-thickness articular cartilage fissuring involving the lateral patellar facet with underlying marrow change, small reactive effusion.

14. Dr. Lindenbaum examined Claimant on September 4, 2013 and September 11, 2013. At the September 11, 2013 visit, Dr. Lindenbaum discussed surgical options with Claimant since physical therapy was not helpful for Claimant, and he discussed with Claimant that returning to full duties (at work) could aggravate his "situation."

15. Claimant returned to his personal care physicians on October 11, 2013 at which time he was evaluated by Dr. Gray who diagnosed bilateral patellofemoral syndrome-work related. Dr. Gray filled out Physician's Report of Worker's Compensation Injury and noted restrictions for Claimant of lifting no more than 50 lbs, no crawling, no kneeling, no deep squatting, and no climbing.

16. At Respondent's request, Claimant had an Independent Medical Examination by Wallace Larson, MD on February 3, 2014. Dr. Larson issued a report dated February 3, 2014 and diagnosed bilateral retropatellar knee pain. Retropatellar pain is another name for patellofemoral pain syndrome.

17. In his report, Dr. Larson opined that he did not believe that Claimant's work activities as a ramp agent caused, contributed to, or aggravated Claimant's knee problems. He noted that Claimant is not currently involved in any sports or athletic hobbies. He noted that previously, Claimant played high school football and one year of college football, and Claimant played lacrosse in high school, did shot put and discus in high school, and did fairly heavy weightlifting prior to his employment with Employer.

18. At hearing, Dr. Larson testified as an expert in Orthopedics. He is also Level II accredited. He opined that Claimant's patellofemoral pain syndrome is not caused by Claimant's work activities and that his condition is not aggravated or accelerated by work activities. Dr. Larson discussed knee structure and forces on the knee and ultimately opined that the fact that Claimant notices knee problems at work does not mean that work caused it. Dr. Larson testified that patellofemoral pain syndrome is pain that originates at the patellofemoral joint (the joint between the patella and the front of the knee) and also surrounding structures; it is generally thought to be a problem stemming from overloading or maltracking of the knee and is primarily a degenerative type of condition.

19. Dr. Larson testified that several things can cause patellofemoral pain syndrome including a genetically shallow "v" in the patellar bone. Other causes of this condition are the shape of the knee cap, maltracking of the patellar bone, excessive bodyweight, muscle imbalance, jumping sports, weightlifting/squatting, and other activities that put tremendous forces on the patellar region**.** In addition, genetic or developmental issues can cause this condition.

20. Although Dr. Larson agreed that Claimant's knees are subject to compressive forces when Claimant must squat down to get onto his knees to do aircraft bin work, he testified that in this case, the compressive forces from work activities are intermittent and would not *likely* cause or aggravate Claimant's knee

problems. (emphasis added). The ALJ views Dr. Larson's testimony as speculative and not credible.

21. Dr. Larson testified about Claimant's body mass index ("BMI") of 34 being problematic for Claimant and that when a person has a BMI over 30 or perhaps 28, there is a high incidence of knee and hip arthritis/damage. The ALJ is not persuaded that Claimant's weight is a factor here, as other treating doctors documented Claimant's weight and/or BMI and did not address the issue of Claimant's weight as a contributing factor to his bilateral knee condition.

22. Dr. Larson testified that chondromalacia is associated with patellofemoral pain syndrome. He opined that Claimant really does not exhibit signs of poor tracking but rather his condition is most likely something that developed over time with probably a triggering event such as football or weightlifting. Ultimately, Dr. Larson testified that Claimant did not suffer an acute injury, rather, his condition is due to a preexisting condition that was not caused or aggravated by work activities.

23. When he was asked about full thickness cartilage fissuring (initial stages of chondromalacia per Dr. Larson) identified in the MRI of Claimant's right knee, Dr. Larson testified that patellofemoral pain can cause cartilage damage and that the cartilage findings in Claimant's MRI suggest that the condition [patellofemoral pain syndrome] has been going on for a number of years. Dr. Larson did not specify any timeframe for the "number of years" he was referring to. Dr. Larson opined that Claimant's patellofemoral pain syndrome likely pre-existed Claimant's employment.

24. In Dr. Larson's opinion and pursuant to his testimony, each person has some anatomic or genetic predisposition, or not, to certain conditions, and in Claimant's case, "some things adding up against him." Dr. Larson mentioned football and weightlifting as factors that contributed to Claimant's knee condition. However, Dr Larson testified that even if Claimant had not done any of the aforementioned activities, he could not guarantee that Claimant would not have knee pain.

25. During cross examination by Claimant's counsel, Dr. Larson testified that certain activities were relatively inappropriate for Claimant or not advisable. Upon further questioning, Dr. Larson admitted inappropriate or inadvisable activities for Claimant would include being on his knees two hours a day in a four foot high airplane bin.

26. On cross examination, Dr. Larson agreed that Claimant's work activities of being on his knees two hours per day increased his symptomatology. He testified that Claimant "found activities that became symptomatic . . . because of his preexisting condition . . . his situation is such that if he does a lot of kneeling, he is probably going to have some pain, if he doesn't, he probably won't." Notwithstanding, Dr. Larson maintained that an increase in symptoms, or symptoms alone, does not indicate an aggravated condition. The ALJ does not agree and finds it incredible that Dr. Larson, could not or would not, recognize Claimant's job duties of kneeling/squatting in a compact cargo bin as factors that caused, contributed to, or aggravated Claimant's

knee problems especially since Dr. Larson noted in his February 3, 2014 report that "[Claimant] would probably benefit from activity modification to decrease kneeling and squatting . . . .".

27. Claimant credibly testified that prior to working for Employer; he did not have any knee problems or knee pain and never had treatment for his knees. He testified that he played football from the 6th grade through high school and one year of college. Claimant did engage in weight lifting, including squatting, in high school as well as lacrosse, shot put and discus. Claimant stopped weight training shortly after being employed with Employer due to the rigorous work schedule and physical nature of the job.

28. Dr. Larson's testimony regarding the likelihood that Claimant's patellofemoral pain syndrome likely pre-existed Claimant's employment with Employer is not persuasive. The ALJ finds there is not sufficient evidence in the record that Claimant had a preexisting knee condition to either knee. To the contrary, Claimant's credible and persuasive testimony is that he did not have knee problems or knee pain and never had treatment for his knees.

29. All of the physicians who examined Claimant, including Dr. Larson, essentially, agree that the diagnosis for Claimant's knees is patellofemoral pain syndrome. Dr. Gray attributed the patellofemoral pain syndrome to Claimant's work activities. Dr. Lindenbaum recognized that Claimant's return to full duties (at work) could aggravate his "situation."

30. Although the ALJ credits Dr. Larson's testimony that Claimant's bilateral knee condition is most likely something that developed over time with probably a triggering event, the ALJ finds that the timeframe in which Claimant worked for Employer before reporting the symptoms/injury fits within the non-specific timeframe described by Dr. Larson, especially considering that Claimant's first year of employment was equivalent to working approximately 1.7 jobs and compressed the timeframe for an occupational disease to become problematic and/or obvious.

31. The ALJ finds there were triggering events and a direct cause for Claimant's occupational disease. Claimant's work related activities of moving about on his knees, in a kneeling and/or squatting position, in a compact cargo bin while lifting baggage and freight of varying weights were the triggering events-not regarding aggravating a preexisting condition but pertaining to the onset of the occupational disease. Additionally, the ALJ finds that Claimant's excessive work schedule and duties in the first year of employment with Employer are the direct and proximate cause of the bilateral knee injury; Claimant's continued employment, with exposure to the same work duties, further acted to aggravate the injury and symptomatology to Claimant's knees resulting in an occupational disease.

32. Claimant credibly testified that he discontinued weight training shortly after being employed with Employer. Claimant's Answers to Interrogatories indicate that Claimant did not engage in any kneeling activities outside of work. Thus, the ALJ finds

that Claimant was not exposed to kneeling activities that could potentially aggravate his knees outside of the employment activities.

33. Claimant has proven that it is more probably true than not that he suffered a compensable industrial injury/ occupational disease to both knees while in the course and scope of his job duties that included repetitive activities as a ramp agent/baggage handler for Employer. The ALJ reaches this conclusion based on the credible, persuasive testimony of the Claimant as well as the opinions of Dr. Smith, Dr. Gray and Dr. Lindenbaum. The ALJ is not persuaded by Dr. Larson's contrary testimony and in particular, finds that Dr. Larson's testimony at hearing somewhat supports the finding that Claimant suffered an occupational disease due to his work activities as a ramp agent/baggage handler for Employer. There was no credible or persuasive evidence that Claimant's bilateral knee issues were caused by a hazard he was equally exposed to outside his work at Employer.

34. In light of the compensability findings, the Stipulations of the parties, as noted herein, are adopted by the Court.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge enters the following conclusions of law:

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

4. A claimant must prove by a preponderance of the evidence that his injury arose out of the course and scope of his employment with employer. *Section 8-41-301(1)(b), C.R.S.; see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). An injury occurs "in the course of" employment where claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arise out of" requirement is narrower and requires claimant to show a causal connection between the employment and injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. *See Id.*

5. An accident “arises out of” employment when there is a causal connection between the work conditions and the injury. *In re Question Submitted by the United States Court of Appeals for the Tenth Circuit,* 759 P.2d 17 (Colo. 1988). The determination of whether there is a sufficient “nexus” or causal relationship between the claimant’s employment and the injury is one of fact that the ALJ must determine based on a totality of the circumstances. *Moorhead Machinery & Boiler Co. v. DelValle,* 934 P.2d 861 (Colo. App. 1996).

6. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

7. The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation,* 867 P.2d 77 (Colo. App. 1993). An “occupational disease” means disease which results directly from the employment of the conditions under which work was performed, which can be seen to have followed as a natural incident of the work, and as a result of the exposure occasioned by the nature of the employment, and which be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would been equally exposed outside of the employment. C.R.S. § 8-40-201(14). A claimant seeking benefits for an occupational disease must establish the existence of the disease and that it was directly and proximately caused by the claimant’s employment duties or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P. 2d 251 (Colo. App. 1999).

8. Whether a compensable injury has been sustained is a question of fact to be determined by the ALJ. *Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo. App. Div. 5 2009).

9. In deciding whether the Claimant has met his burden of proof, the ALJ is empowered “to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to testimony, and draw plausible inferences from

the evidence." *See Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002).

10. As a matter of law, medical evidence is not required to establish causation, although it is a factor that may be considered in addressing that determination. See *Savio House v. Dennis,* 665 P.2d 141 (Colo. App. 1983).

11. As found, Claimant has established by a preponderance of the evidence that while in the course and scope of his employment he first began having knee pain/grinding and suffered an occupational disease while in the course and scope of his employment. Claimant first reported the injury on May 2, 2013 and credibly testified that his symptoms began within six to twelve months after starting employment with Employer on June 1, 2010.

12. Dr. Larson's testimony regarding that Claimant's patellofemoral pain syndrome likely pre-existed Claimant's employment with Employer is not persuasive. As found, there is not sufficient evidence in the record that Claimant had a preexisting knee condition to either knee. To the contrary, Claimant's credible and persuasive testimony is that he did not have knee problems or knee pain and never had treatment for his knees. All of the physicians who examined Claimant, including Dr. Larson, essentially, agree that the diagnosis for Claimant's knees is patellofemoral pain syndrome. Dr. Gray attributed the patellofemoral pain syndrome to Claimant's work activities. Dr. Lindenbaum recognized that Claimant's return to full duties (at work) could aggravate his "situation."

13. As found, the timeframe in which Claimant worked for Employer before first reporting the symptoms/injury fits within the non-specific timeframe described by Dr. Larson for a knee condition to develop, especially considering that Claimant's first year of employment was equivalent to working approximately 1.7 jobs and compressed the timeframe for an occupational disease to become problematic and/or obvious. As found, the triggering events were Claimant's work related activities of moving about on his knees, in a kneeling and/or squatting position, in a compact cargo bin while lifting baggage and freight of varying weights. Additionally, the ALJ finds that Claimant's excessive work schedule and duties in the first year of employment with Employer are the direct and proximate cause of the bilateral knee injury; Claimant's continued employment, with exposure to the same work duties, further acted to accelerate and aggravate the injury and symptomatology to Claimant's knees resulting in an occupational disease. Claimant had no other kneeling exposure to his knees outside of his employment with Employer.

14. If there is a compensable injury, the employer and its insurance carrier must provide all medical benefits, which are reasonably necessary to cure and relieve the work-related injury. C.R.S. §8-42-101; *Owens v. Industrial Claim Appeals Office of the State of Colo.,* 49 P.3d 1187, 1188 (Colo. App. 2002). To be a compensable benefit, the medical care and treatment must be causally related to a work injury. *Snyder v. Industrial Claim Appeals Office of the State of Colo.,* 942 P.2d 1337, 1339

(Colo. App. 1997). The right to medical benefits arises only when an injured worker establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. *Id.* The question of whether a Claimant has proven by a preponderance of the evidence that a contested medical treatment is reasonably necessary is one of fact for the ALJ. *City of Durango v. Dunagan,* 939 P.2d 496, 498 (Colo. App. 1997). Here, Claimant's work-related injury/occupational disease is compensable as established by a preponderance of the evidence. Respondents, however, retain the right to dispute liability for specific medical treatment on grounds the treatment is not authorized or reasonably necessary to cure or relieve the effects of the industrial injury. *See Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997); *Williams v. Industrial Commission*, 723 P.2d 749 (Colo. App. 1986).

15. The Stipulations of the parties, as noted herein, are adopted by the Court.

ORDER

It is therefore ordered that:

a. As proven by a preponderance of the evidence, Claimant suffered a compensable work related occupational disease to both of his knees while in the course and scope of his employment as a ramp agent/baggage handler for Employer.

b. Respondents are liable for the medical care Claimant receives/received from authorized providers which is/was reasonably necessary to cure and relieve Claimant from the affects of his occupational disease reported on May 2, 2013.

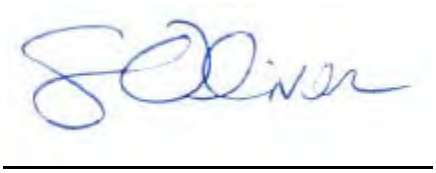
c. The Stipulations of the parties, as noted herein, are adopted by the Court.

d. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding

procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 16, 2015



Sara L. Oliver
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, Fourth Floor
Denver, CO 80203

ISSUES

The issue addressed in this decision concerns Claimant's entitlement to medical benefits. The specific question presented is whether a total left knee arthroplasty (i.e. total knee replacement surgery) requested by Dr. Purcell is reasonable, necessary, and related to Claimant's July 14, 2013 compensable injury?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant injured her left knee while working at Sonic Drive-In when she slipped on a tile floor on July 14, 2013. Despite wearing "anti-slip" shoes, excess water on the floor caused Claimant to lose her footing and twist her left knee feeling a "pop" in the process. Claimant completed her shift in pain and waited a week before she sought care through the emergency room (ER) at Penrose-St. Francis on July 21, 2013 for pain and swelling.

2. While in the ER, x-rays of the left knee were obtained which demonstrated compartmental osteoarthritis and a "possible ossified intra-articular body in the posterior knee." Claimant was diagnosed with "left knee sprain" and provided with a knee immobilizer and crutches. She was instructed to follow-up with her "regular doctor or Orthopedics" the following week.

3. On August 19, 2013 Claimant presented to the ER at Memorial Hospital after she twisted her left knee while at home. Claimant reported her history of injury to the knee while at work earlier in the summer, reported use of a knee brace and denied direct trauma to the knee during this encounter. Claimant was diagnosed with "acute exacerbation of chronic knee pain", given a prescription for Percocet and provided with an orthopedic referral. She was then discharged from the ER.

4. Claimant was evaluated by Dr. Derek Purcell on August 22, 2013. Dr. Purcell is an Orthopedist. Dr. Purcell reported Claimant's injury and treatment history noting specifically that Claimant denied "pervious problems" with her knee prior to July 14, 2013 injury. Following examination and review of Claimant's x-rays, Dr. Purcell reached the following impressions: 1. Left knee patellofemoral osteoarthritis; mild. 2. Left Knee possible loose body. 3. Left knee medial meniscus tear.

5. Dr. Purcell recommended MRI which was completed August 23, 2013. MRI

demonstrated “severe patellofemoral compartment osteoarthritis, moderate medial and mild to moderate lateral compartment osteoarthritis, degenerative fraying of both menisci without acute tear, intact knee ligaments and moderate knee joint effusion with extensive synovitis.

6. In follow-up with Dr. Purcell on September 10, 2013, Dr. Purcell and Claimant discussed the results of her MRI. Dr. Purcell noted that Claimant had “severe patellofemoral osteoarthritis with full-thickness cartilage loss” along with “high-grade cartilage loss in the medical compartment” of the left knee and some “mild extrusion of both the lateral and medial meniscus.” Conservative treatment measures were talked about including administration of corticosteroids and viscosupplementation after which Dr. Purcell gave Claimant a steroid injection into the left knee.

7. On October 31, 2013, Dr. Purcell administrated a second steroid injection and raised the potential for a “total-knee arthroplasty” should further conservative treatment measures fail.

8. Respondents filed a “med only” general admission of liability on March 21, 2014. In an attached stipulation to the general admission of liability dated March 12, 2014, Respondents’ agreed to a follow-up appointment between Claimant and Dr. Purcell.

9. Pursuant to the parties’ March 12, 2014 stipulation, Claimant returned for additional evaluation with Dr. Purcell on March 20, 2014. At this visit, Dr. Purcell recommended viscosupplementation injections. Overall, Claimant was provided three Orthovisc injections. This treatment did not provide lasting relief resulting in Dr. Purcell making a recommendation for total knee arthroplasty.

10. On June 12, 2014, Dr. Purcell’s office submitted, to the Insurer’s third party administrator, Gallagher Bassett Services, a “Surgery Authorization Request” for a left total knee arthroplasty. Respondents denied the request.

11. On June 22, 2014 Dr. Wallace Larson completed a WCRP Rule 16 records review of in support of Respondents’ denial of the requested left total knee arthroplasty. (Claimant’s Exh. pg. 196-197). In his report outlining Claimant’s medical records, Dr. Larson indicates that while Claimant is an “appropriate candidate for total left knee arthroplasty”, her need for surgery is not reasonably necessary or causally related to Claimant’s July 14, 2013 industrial injury. To the contrary, it is Dr. Larson opinion that Claimant’s need for surgery is the “result of the natural progression of a pre-existing condition”, specifically degenerative osteoarthritis.

12. Despite the reference in Dr. Purcell’s August 22, 2013 record that Claimant had no “previous problems” concerning her left knee, she testified to a remote history of “scope” surgery to both knees approximately 24 years prior to July 14, 2013. Claimant testified that she simply forgot this history when discussing her condition with Dr. Purcell. Respondents submitted medical records referencing Claimant’s prior surgical history and a motor vehicle accident occurring February 9, 2011, wherein Claimant

injured her left knee. Nonetheless, after careful review of the entire medical record, the ALJ finds no evidence to suggest that Claimant's left knee was symptomatic, that she was actively engaged in ongoing treatment for her left knee or that her left knee was functionally limiting prior to July 14, 2013. Consequently, the ALJ finds Claimant's July 14, 2013 injury caused Claimant's subsequent need for treatment.

13. Claimant testified that immediately prior to her July 14, 2013 injury she was neither taking medication nor was she getting treatment for her left knee. According to Claimant, the condition of her left knee did not limit her prior to her July 14, 2013 injury. She was able to walk her dogs, walk around at the flea market and never missed work. Since her July 14, 2013 injury, Claimant testified that she has good days and bad days. Although she has been able to work despite pain, Claimant is unable to sleep more than 2-3 hours per night and "can't really do what she used to." Dr. Purcell's medical records outline her difficulty with "stairs, steps, squatting, and bent-knee activities" as well as "prolonged standing" due to pain. On June 10, 2014 Claimant tearfully reported to Dr. Purcell that she was having "significant disfunction (sic) with simple activities of daily living, including prolonged standing or walking." The ALJ credits Claimant's testimony regarding the condition and function of her left knee pre and post injury to find that prior to July 14, 2013, Claimant's left knee was asymptomatic and that she was able to work full duty without limitations in the left knee caused by her pre-existing osteoarthritis. Based upon her testimony, the ALJ finds that Claimant has not returned to her previous baseline level of function despite significant conservative care.

14. The Lower Extremity Injury Medical Treatment Guidelines (Guidelines), Rule 17, Exhibit 6 was admitted into evidence. Regarding aggravated knee osteoarthritis the Guidelines provide the following:

i. Description/Definition: Swelling and/or pain in a joint due to an aggravating activity in a patient with pre-existing degenerative change in a joint.

ii. Occupational Relationship: The provider must establish the occupational relationship by establishing a change in the patient's baseline condition and a relationship to work activities including but not limited to physical activities such as repetitive kneeling or squatting and climbing, or heavy lifting.

Other causative factors to consider-Previous meniscus or ACL damage may predispose a joint to degenerative changes. In order to entertain previous trauma as a cause, the patient should have medical documentation of the following: menisectomy; hemiarthrosis at the time of the original injury; or evidence of MRI or arthroscopic meniscus or ACL damage. The prior injury should have been at least 2 years from the presentation for the new complaints and there should be a significant increase of pathology on the affected side in comparison to the

original imaging or operative reports and/or the opposite un-injured side or extremity.

15. Dr. Purcell testified by deposition that he is not Level II accredited and also that he was not familiar with the workers' compensation medical treatment guidelines. (Purcell depo, p. 13) Nevertheless, the ALJ finds Dr. Purcell to be an expert in orthopedic surgery.

16. Dr. Purcell testified that the high-grade chondroidal (sic) fissures noted on Claimant's MRI are seen in the presence of osteoarthritis and are not indicative of injury to the knee. (Purcell depo, p. 8) However, Dr. Purcell testified that the effusion in Claimant's knee would suggest an exacerbation of her osteoarthritis. (Id.) Consequently, Dr. Purcell testified that the work related injury exacerbated Claimant's underlying arthritis. (Purcell depo, pp. 19 and 20)

17. Consistent with the opinion of Dr. Larson, Dr. Purcell testified that the recommended surgery is reasonable and necessary. (Purcell depo, p. 20) Based upon the opinions of Dr. Larson and Dr. Purcell, the ALJ finds that the recommended total knee arthroplasty is reasonable and necessary.

18. Dr. Purcell testified that Claimant did not tell him about any prior surgery to her left knee which would be a relevant factor in trying to determine the relatedness of the surgery to her July 14, 2013 injury as "previous surgery would increase the likelihood of having problems with the left knee. (Purcell depo, p. 22) The evidentiary record indicates only that Claimant had surgery to her knees bilaterally. There is no reference to what structures of the knee prior surgery was directed to and/or the extent of injury to those structures. Dr. Larson similarly had no specific information regarding the nature and extent of Claimant's prior knee surgery. Based upon the evidence presented, the ALJ finds the impact that Claimant's prior injury/surgery may have had on the condition of her left knee and its causative role in the subsequent aggravation of her osteoarthritis to be unknown. Accordingly, the ALJ is not convinced that prior trauma/surgery played a causative role in the aggravation of Claimant's pre-existing osteoarthritis as contemplated by the Guidelines referenced above. The ALJ finds Dr. Larson's contrary opinions unpursuasive.

19. Dr. Purcell testified that the Claimant did not tell him about the automobile accident she had in February, 2011 in which she injured her knee. (Purcell depo, p. 22). Dr. Purcell testified that the incident the Claimant had on August 19, 2013 would not have changed the level of arthritis in her knee and he agreed that the amount of osteoarthritis would not have changed from the incident of July 14, 2013. According to Dr. Purcell, the August 19, 2013 incident, wherein Claimant twisted her knee at home would only constitute "an increase in the symptoms that where already there. Dr. Purcell testified that he would not be able to separate the effusion or swelling that she had between the time of the MRI and the two incidents where she injured her knee on July 14th and August 19th. (Purcell depo, p. 24).

20. The ALJ finds, based upon the evidence presented, that but for the activation of

symptoms in the left knee on July 14, 2013, Claimant likely would not have subsequently twisted this knee while getting around her home. Consequently, the ALJ finds that Respondent's have failed to establish, by a preponderance of the evidence, that Claimant suffered an "intervening injury" which would sever the causal relationship between Claimant's July 14, 2013 work injury and her need for a left total knee arthroplasty.

21. Dr. Purcell testified that the knee replacement surgery was to address the cartilage loss and the osteoarthritis. He agreed that the osteoarthritis was present prior to July 14, 2013. (Purcell depo, p. 25).

22. In analyzing whether Claimant engaged in any of the activities listed under Rule 17 which would serve to establish part of the relationship between her work activities and aggravation of her osteoarthritis, including repetitive kneeling, squatting, crawling, climbing or heavy lifting, Dr. Purcell testified that Claimant simply did not mention that activity as part of her job. (Purcell depo, pp. 25 and 26). Based upon the testimony of Dr. Purcell, the ALJ finds it unclear whether any discussion was had between Claimant and Dr. Purcell regarding the nature and extent of the physical activities required to perform Claimant's job duties. Consequently, the ALJ finds Respondents' suggestion that Claimant did not engage in such activities speculative and unsupported.

23. Dr. Larson testified that the arthritis in the Claimant's knee was there prior to her [work] incident (Larson depo, p. 9). Dr. Larson testified that the need for surgery has not met the recommendation under the medical treatment guidelines and he did not see any reason why this case should be an exception to the medical treatment guidelines (Larson depo, pp. 9 and 10). Dr. Larson testified: "I don't think she had an aggravation I think we are just dealing with osteoarthritis." He went on to state "I don't think she had any structural change in her knee as a result of her occupational exposure, no, I don't." (Larson depo, p. 18)

24. During his deposition testimony, Dr. Larson testified that prior to July 14, 2013, Claimant's baseline condition was simply "osteoarthritis of her knee." Dr. Larson admitted that he had no medical reports to establish the presence of swelling or medial joint line tenderness. Although he opined that the high grade chondral fissures present on MRI would have been present prior to July 14, 2013, Dr. Larson admitted that such tears can occur in the face of acute injury and that he had no previous imaging studies to compare with the August 23, 2013 MRI. Consequently, the ALJ finds there is no way to determine the nature and extent of chondral fissuring prior to August 23, 2013. While the ALJ is persuaded that Claimant had severe osteoarthritis in her left knee, with likely chondral fissuring prior to July 14, 2013, the totality of the evidence presented convinces the ALJ that this arthritis was asymptomatic and non-limiting. Even Dr. Larson, who had ample opportunity to detail the "baseline condition" of Claimant's left knee including probable limitation(s) therein given the degree of degenerative change demonstrated on MRI, elected to characterize it only as "osteoarthritis of her knee."

25. The ALJ finds that more likely than not, Claimant aggravated her previously

asymptomatic osteoarthritis on July 14, 2013 when she slipped on a wet floor twisting her left knee in the process. The undersigned finds that conservative treatment measures have failed and that Claimant's current need for a total knee arthroplasty flows proximately and naturally from the July 14, 2013 injury.

26. Claimant has proven by a preponderance of the evidence that she suffered a change in the baseline condition of her left knee as a direct consequence of her work duties. Consequently, the ALJ finds that Claimant has proven, by a preponderance of the evidence, that there is an occupational relationship between her aggravated left knee osteoarthritis and her need for a total knee arthroplasty. Claimant's need for a left total knee arthroplasty is related to her July 14, 2013 work injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S.* Claimant must prove that he is a covered employee who suffered an injury arising out of and in the course of employment. *Section 8-41-301(1), C.R.S.; See, Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo.App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo.App. 2001). Claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo.App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo.App. 1997), *cert. denied* September 15, 1997. Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. In this case, Claimant's testimony is generally consistent with the content of the medical records. Consequently, the ALJ finds Claimant to be a credible and persuasive witness.

C. A workers' compensation case is decided on its merits. *Section 8-43-201, C.R.S.* In accordance with *Section 8-43-215, C.R.S.,* this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo.App. 2000).

Medical Benefits

D. Claimant bears the burden of establishing entitlement to medical treatment. *See Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997); *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). Once a claimant has established a compensable work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable and necessary medical care to cure and relieve the effects of the work injury. *Section 8-42-101, C.R.S*.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo.App. 1990). However, a claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of the his/her need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949). Ongoing benefits may be denied if the current and ongoing need for medical treatment or disability is not proximately caused by an injury arising out of and in the course of the employment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). In other words, the mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability was caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those which flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970). As found here, Claimant has proven by a preponderance of the evidence that she sustained a compensable aggravation of her previously asymptomatic left knee osteoarthritis and that this aggravation is the proximate cause of Claimant's need for medical treatment, including her need for a total left knee arthroplasty. While it is true that none of the reports of Dr. Purcell specifically state that the recommended knee surgery is related to the incident of July 14, 2013, Dr. Purcell testified that the July 14, 2013 incident exacerbated her osteoarthritis and his reports outline Claimant's functional decline in the face of failed conservative treatment. Taken in its entirety, the ALJ finds that the evidentiary record contains substantial evidence to support a conclusion that Claimant's work duties and not a prior injury/surgery caused a change in the baseline level of her left knee, i.e. from asymptomatic to symptomatic directly resulting in her need for a total knee arthroplasty.

ORDER

It is therefore ordered that:

1. Respondents shall pay for all medical expenses to cure and relieve Claimant from the effects of her left knee condition, including, but not limited to the left total knee arthroplasty as requested by Dr. Derek B. Purcell.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 21, 2015

/s/ Richard M. Lamphere
Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
1259 Lake Plaza Drive, Suite 230
Colorado Springs, CO 80906

ISSUES

The issues presented for determination are:

- Whether the Respondents have overcome the Division Independent Medical Examination (DIME) physician's opinion, by clear and convincing evidence, regarding a sixteen percent whole person permanent physical impairment rating for Claimant?

- Subsequent to a Final Admission of Liability and Respondents' admission to post-maximum medical improvement (MMI) medical benefits; whether Respondents have proven by a preponderance of the evidence that Claimant is not entitled to an award of medical benefits post-MMI to maintain his condition at MMI?

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge finds as fact:

1. Claimant is a 29-year old man, with a May 5, 1985, date of birth.

2. Claimant was injured in the course and scope of his employment with the Employer on March 23, 2013, when he was hit in the neck and upper back by a tire that dropped from approximately eight to twelve feet above him.

3. On March 23, 2013, Claimant sought treatment at St. Anthony's Hospital Emergency Room, where his initial complaints in Triage as noted by a nurse, were neck and back pain, and numbness to bilateral fingers and feet with improvement when lying down. By the time Claimant saw the Emergency Room doctor, medical records documented that his chief complaint was back pain. The records note that Claimant complained of mild, dull pain to his lower neck and upper back without radiating pain. The numbness in his hands had resolved but the numbness in his feet had not resolved.

4. On March 23, 2013, CT scans of the cervical, thoracic and lumbar spine were obtained. All studies were read as showing no evidence of acute pathology. There were no neurological symptoms noted. Claimant was reported to have active prescriptions of oxycodone and hydrocodone, but the cause for the narcotics is not noted. Examination of the neck was "supple" with "mild paraspinous tenderness to palpation near the lower neck/upper thoracic area." Extremities were symmetric with full range of motion. Claimant was discharged home, to follow up with his personal physician

5. Claimant selected HealthOne Occupational Medicine as the provider designated to treat his work injuries. Dr. Dave Hnida first evaluated Claimant on March 25, 2013.

Dr. Hnida's notes reflect that Claimant reported pain at a level 4/10 to 5/10. Claimant's past medical history was positive for migraine headaches. In reviewing Claimant's symptoms, Dr. Hnida noted the only neurological symptom "may be the occasional tingling sensation to the right foot, which is not readily reproducible". Dr. Hnida's impression was contusion to the neck and upper back. Dr. Hnida re-ordered CT scans of Claimant's cervical and thoracic spine. Dr. Hnida kept Claimant off work pending the results of the diagnostic studies.

6. On March 26, 2013, Claimant returned to HealthOne where he was evaluated by Dr. David Orgel. As before, the CT scans were read as normal, except for a non-work related thyroid nodule. Dr. Orgel indicated, "although he has painful range of motion, it is actually pretty well maintained with most of his pain with rotation, very little with flexion, and only mildly worse with extension. Dr. Orgel assessed Claimant with cervical and thoracic strain and prescribed Flexeril, Ibuprofen and physical therapy and released Claimant to return work with restrictions of limited lifting and limited overhead work.

7. On March 29, 2013, Claimant was seen at HealthOne for a physical therapy evaluation. Dizziness was documented as a subjective complaint for Claimant.

8. Claimant continued treating with HealthOne and its referrals. On April 2, 2013, Dr. Orgel evaluated Claimant and documented "mildly reduced rotation to the left, mildly positive Spurling maneuver with pain in a C5 distribution. There is otherwise no cervical spine tenderness. . . ."

9. On April 5, 2013, Dr. Hnida evaluated Claimant on a walk-in basis. Claimant complained of continuing pain in the neck with radiation along the right-greater-than-left trapezius extending out to both shoulders. Claimant also discussed that he noticed some swelling in his hand, as well as some altered sensations in the fingertips.

10. On April 10, 2013, Claimant returned to HealthOne and was evaluated by Dr. George Kohake. The medical records note that Claimant "is now complaining of dizziness at times." His main symptoms were of upper back and neck pain with tight neck muscles.

11. On April 24, 2013, Claimant saw Dr. Orgel, who noted that Claimant's progressive symptoms of dizziness one month after injury "is unusual." Dr. Orgel ordered an MRI of Claimant's brain. Dr. Orgel also referred to Claimant to a neurologist, Dr. Samuel Chan. The MRI of the brain was normal.

12. On May 2, 2013, Dr. Chan evaluated Claimant. Claimant reported, "dizziness, shacki (*sic*) vision, severe headaches, back pain, neck mussles *(sic),* right leg giving up mid-walk. On physical exam, Dr. Chan reported axial loading and truncal rotations slightly exacerbated the pain complaint. Claimant reported tenderness with flexion of the cervical spine. There was no tenderness with extension or rotation of the cervical spine. Dr. Chan noted the diagnostics failed to show any significant permanent pathology. He opined, "The concern is the patient's description of diffuse and vague symptoms". Dr. Chan determined that, neurologically, Claimant was found to be within

normal limits. Dr. Chan did administer bilateral greater and lesser occipital nerve injections.

13. On May 7, 2013, Claimant returned to Dr. Orgel and reported a worsening of his headaches following the injections.

14. On a June 11, 2013 physical exam, Dr. Hnida noted that Claimant had full range of cervical motion. His assessment was ongoing neck pain with subjective complaints of dizziness.

15. On June 20, 2013, Dr. Chan re-evaluated Claimant. Dr. Chan noted a "slightly limited" cervical spine range of motion due to "subjective complaints of pain". Dr. Chan opined, "It is unclear why the patient continues to be symptomatic". He recommended an active exercise program and ordered cervical and thoracic spine MRIs. The cervical and thoracic spine MRIs were performed on June 24, 2013. The thoracic MRI was read as normal. The cervical MRI was read as showing only minimal changes of degenerative disc disease.

16. Dr. Chan performed EMG testing of the right upper extremity on August 1, 2013. As with all other tests, this diagnostic was also read as normal.

17. As part of his treatment for the industrial injury, Claimant was referred for physical therapy, massage, chiropractic, acupuncture, and occipital injections. Claimant was treated with multiple medications. None of the treatment provided Claimant any sufficient benefit.

18. On August 21, 2013, Dr. Chan performed a Functional Capacity Evaluation (FCE) and placed Claimant at MMI and assigned four percent whole person impairment per Table 53(II)(B) and three percent whole person impairment for loss of range of cervical motion. The combined impairment totaled seven percent whole person. Dr. Chan did not recommend medical treatment post-MMI to maintain the Claimant's condition at MMI.

19. On August 22, 2013, Dr. Hnida evaluated Claimant and agreed that Claimant was at MMI. Dr. Hnida opined no maintenance care after MMI is required.

20. On September 19, 2013, Respondents filed a Final Admission of Liability consistent with Dr. Chan's opinions on MMI and impairment, but admitted liability for medical treatment post-MMI.

21. On October 16, 2013, Claimant objected to the Final Admission of Liability and requested a DIME. Dr. Velma Campbell was selected as the Division Examiner.

22. On January 23, 2014, Dr. Campbell performed the DIME and generated a report. Her report notes that the last page of the record reviewed was a July 7, 2013 medical record from a visit with Dr. Chan.

23. Dr. Campbell agreed that Claimant reached MMI on August 21, 2013, but found that Claimant suffered sixteen percent permanent physical impairment as a result of the industrial injury.

24. Dr. Campbell assigned five percent permanent physical impairment for loss of range of cervical motion, four percent permanent physical impairment per Table 53(2)(B) for the cervical spine condition, and three percent impairment per Table 5 for injury to the greater occipital nerve. Dr. Campbell's total combined spinal impairment was twelve percent whole person permanent physical impairment. Dr. Campbell then assigned an additional five percent whole person impairment for vestibular disequilibrium, for a total combined impairment of 16 percent whole person.

25. Dr. Campbell was aware that the prior combined impairment rating by Dr. Chan totaled seven percent whole person.

26. Additionally, Dr. Campbell recommended maintenance medical care and identified a home electronic stimulation unit as helpful to Claimant; Claimant previously used a muscle stimulation machine while seeing Dr. Chan and had a transient decrease in pain.

27. Dr. Campbell also stated that medications as directed by Dr. Chan would be appropriate, especially if they minimize the need for opiates. She noted that chiropractic, massage, acupuncture, and physical therapy did not provide sufficient or even temporary subjective benefit for Claimant's symptoms, therefore, Dr. Campbell did not recommend a routine provision of those therapies, but did recommend that those therapies may be useful for occasional exacerbations.

28. Finally, Dr. Campbell, recommended that maintenance medical care continue for Claimant until Claimant has not needed medical care for at least six consecutive months.

29. Dr. Campbell noted that Claimant described his headaches post- industrial injury as different and more frequent than the migraines he suffered pre-industrial injury. Dr. Campbell assessed Claimant with cervicogenic/occipital headaches with migraine features, cervical vertigo, and chronic cervicothoracic myofascial dysfunction pertaining to the complications of the cervical contusion/sprain. Dr. Campbell noted Claimant's history of significant contusion and strain to the cervical and cervicothoracic region. She noted that physical therapy was not able to progress rapidly because of the dizziness and nausea with head and trunk motions.

30. Dr. Campbell rated Claimant's headaches according to occipital nerve impairment rather than the central nervous system due to, in her opinion, the stronger association with the cervicogenic mechanism of the headache than with a brain injury.

31. Dr. Campbell determined that the dizziness and vertigo as described by Claimant do continue to appear in the record after they first appear, and are also

consistent with cervical or cervicogenic vertigo. She noted this determination is supported by the absent Dix-Hallpike sign and some of the positional factors. Dr. Campbell wrote that the vertigo/disequilibrium is intermittent and interrupts Claimant's activities intermittently, and therefore does not prevent Claimant from engaging in the activities of daily living. However, Dr. Campbell noted there are some activities that Claimant should not perform at work due to the potential for unpredictable loss of balance.

32. Dr. Campbell found permanent partial impairment due to the conditions related to the March 23, 2013 industrial injury. She noted that the conditions include chronic cervical spine strain with spasm and myofascial pain due to the cervicothoracic contusion and strain, posttraumatic headaches with migraine features associated with occipital trigger points.

33. On April 23, 2014, Respondents filed a second Final Admission of Liability admitting to post-MMI medical benefits that are medically, reasonable, necessary, and related to the industrial injury of March 23, 2013; based on the report of Dr. Hnida dated August 22, 2013 and the report of Dr. Chan dated August 21, 2013. Respondents also awarded Claimant a permanent disability award consistent with the impairment rating and DIME report of Dr. Campbell.

34. On May 23, 2014, Claimant objected to the April 23, 2014 Final Admission of Liability and filed an application for hearing on the issues of average weekly wage, temporary total benefits, temporary partial benefits, permanent partial benefits, and overcoming the determination that Claimant had reached MMI.

35. At a pre-hearing conference on November 5, 2014, Claimant sought to withdraw the issues listed on his Application for Hearing dated May 23, 2014, including, overcoming the DIME. PALJ Clisham ordered that Claimant's issues on the May 23, 2014 Application for Hearing were stricken, without prejudice.

36. In their response to Claimant's application for hearing, Respondents endorsed the issues of medical benefits, reasonably necessary, permanent partial disability benefits, and "[o]vercoming opinions of DIME on issue of permanent physical impairment apportionment."

37. On July 21, 2014, Dr. Tashof Bernton performed an IME at the Respondents' request. In connection with his IME, Dr. Bernton performed psychological testing, Battery for Health Improvement 2. This test evaluates the presence of psychological factors when a person complains of chronic pain. Based on the results of the psychological testing, Dr. Bernton generated a report and opined, "Clinicians should take care to make decisions based upon objective findings, as subjective complaints are not likely to be a reliable guide to physically based pain generators. . . . In any case, with the high perseverance scale, this is an individual whose complaints are likely to persist even in the absence of physiologic basis and clinicians should take that into account in assessing and treating his complaints."

38. In his report, Dr. Bernton opined that the findings on psychological testing are consistent with either a strong somatoform (psychologically-based) contribution to the Claimant's pain presentation or possibly to some misrepresentation.

39. At hearing, Dr. Bernton testified as an expert in Occupational Medicine and Internal Medicine. He is Level II accredited and also Board Certified in both Occupational and Internal Medicine. Dr. Bernton testified that his full accreditation permits him to evaluate psychological impairment; he also received training from the author of the Battery for Health Improvement 2, Mr. Dan Bruns. He testified that somatoform disorders are not work-related, but instead are a maladaptive way of coping. Dr. Bernton testified that somatoform complaints are physical complaints that represent emotional conflict.

40. As part of the IME, Dr. Bernton also physically examined the Claimant and reviewed the medical records associated with the March 23, 2013 industrial injury. Dr. Bernton noted that Claimant demonstrated all five Waddell's signs, including complaints of pain at the cervicothoracic junction with minimal axial compression, complaints of lumbar pain with simulated rotation of the hips, pain complaints with skin rolling, inconsistent straight-leg raising, and give-way weakness on strength testing of the right upper extremity. In his opinion, Claimant's complaints represent multiple body systems with multiple non-accident related somatic complaints.

41. Dr. Bernton testified that his findings were consistent with Dr. Chan's findings in that, there were inconsistencies with testing results.

42. Dr. Bernton agreed with Dr. Orgel that Claimant's progressive symptoms of dizziness one month after injury "is unusual." Dr. Bernton testified that Dr. Chan documented full range of motion for Claimant on June 11, 2013 and July 23, 2013 and that his expectation of normal range of motion three months post-accident is resolution and a return to full function.

43. Dr. Bernton testified that range of motion is effort dependent; patients can give decreased but consistent range of motion. Dr. Bernton believed that Claimant did not give maximal effort in range of motion testing with Dr. Campbell. The ALJ finds this is speculation by Dr. Bernton and is not persuasive.

44. Dr. Bernton testified that the AMA Guides, 3rd Ed., Revised, require a physician to perform an analysis to determine that a specific injury is the cause of any impairments and describe the pathophysiology of the particular condition and pertinent host characteristics and establish that the type and magnitude of the factor was sufficient and bore the necessary temporal relationship to the condition.

45. Dr. Bernton testified that Dr. Campbell did not perform this analysis and that Dr. Campbell's evaluation did not meet the AMA Guides' required analysis of causation. He specifically stated that Dr. Campbell did not follow appropriate methodology. He testified that when there are inconsistencies in the medical record, one cannot just go

the AMA tables directly. Dr. testified that in this case, there are substantial discrepancies and that Dr. Campbell rated despite negative findings.

46. Dr. Bernton opined that Dr. Campbell rated for the occipital nerve even though it was documented in the medical records that the occipital nerve is not the cause of the headaches. He adamantly testified that the record does not support an occipital nerve rating because the Claimant underwent occipital nerve injections by Dr. Chan, and those injections worsened the Claimant's headache. Dr. Bernton testified, that if an occipital nerve injury were the cause of the Claimant's headache, the diagnostic occipital nerve injection would have provided pain relief. The ALJ finds this is a matter of differing medical opinions as Dr. Campbell acknowledged that the occipital injections actually made Claimant's condition worse, and yet, she did not terminate her analysis based on that one fact and ultimately determined that the occipital nerve played a role in Claimant's condition.

47. Dr. Bernton disagreed with Dr. Campbell's other ratings as well and testified that she is clearly wrong. Dr. Bernton read the AMA Methodology (page 6) into the record and testified that under the Workers' Compensation Act, it is not appropriate to rate subjective complaints without objective findings.

48. Dr. Bernton testified that the correct impairment rating for Claimant is zero. Although the ALJ finds Dr. Bernton credible in some of his testimony, the ALJ is not persuaded that the correct impairment rating for Claimant is zero.

49. Dr. Bernton testified that Claimant did not report dizziness until April 24, 2013. On cross-examination, Dr. Bernton was questioned about the fact that a March 29, 2013 medical record notes that Claimant complained of dizziness. Dr. Bernton testified that he had the March 29, 2013 when he examined Claimant and reviewed Claimant's medical records and that his opinion is unchanged despite the earlier record of dizziness.

50. On cross-examination, Dr. Bernton testified that a vestibular, or labyrinth, concussion, and other inner ear issues would be expected from a direct blow to the region of the head and neck. The ALJ finds that Claimant suffered a direct blow to his head and neck when the tire fell on him on March 23, 2013. This testimony by Dr. Bernton supports Dr. Campbell's finding of a vestibular issue.

51. Additionally, Dr. Bernton testified that vestibular issues would not show up in radiographic studies or EMG. The ALJ finds that this testimony by Dr. Bernton supports Dr. Campbell's rating for vestibular dysfunction despite the lack of objective findings in radiographic studies or EMG and despite some inconsistencies with other forms of testing.

52. The ALJ finds that Dr. Campbell thoroughly reviewed Claimant's medical records, physically examined Claimant, and conducted appropriate tests.

53. Claimant's records exhibit objective findings related to vestibular dysfunction during Claimant's treatment. Medical records from Dr. Orgel demonstrate that Claimant not only reported dizziness but Dr. Orgel observed nystagmus during his evaluation of Claimant. Claimant's HealthOne Rehabilitation Northwest records show that Claimant's symptoms were reproduced with cervical rotation, "head down", and cervical extension. Those records also state that symptoms were reproduced when Claimant was in the prone position.

54. Claimant's records demonstrate that his providers were treating Claimant for headaches related to occipital nerve impairment. During his treatment, Claimant was seen by Dr. Scott Parker, who noted trigger points in the cervicothoracic region and bilateral atlantooccipital region. Dr. Chan also noted tenderness to palpation over the bilateral greater and lesser occipital nerve insertion. Occipital nerve blocks were completed and Claimant experienced some temporary relief but then experienced increased symptoms. Dr. Chan also recommended acupuncture to treat Claimant's pain in the occiput area. In Claimant's records from HealthOne Rehabilitation Northwest, it is also noted that occipital skin stretch needed to be explored for possible pain relief.

55. As one example of her rationale, and as noted by Dr. Campbell, the AMA Guides provide the following on page 178 regarding a rating for disturbances of vestibular function:

> **Class 2- Impairment of the Whole Person 5-10%**
> A patient belongs in Class 2 when (a) signs of vestibular disequilibrium are present with supporting objective findings; and (b) the usual activities of daily living are performed without assistance, except for complex activities such as bike riding or certain activities related to the patient's work, such as walking on girders or scaffolds.
>
> *AMA Guides to the Evaluation of Permanent Impairment,* 3d Ed., Revised.

56. The ALJ finds that Dr. Campbell acknowledged inconsistencies in the medical record but also determined objective findings from her review of the records and examination of Claimant. Thus, the ALJ finds that there are sufficient and supporting objective findings by Dr. Campbell documented in her report to justify her impairment rating of 16% whole person and that she correctly utilized and applied the AMA Guides.

57. The ALJ finds the opinion of Dr. Campbell more credible and persuasive than that of Dr. Bernton. Dr. Bernton's differing medical opinion from that of Dr. Campbell is not sufficient to overcome Dr. Campbell's opinion.

58. Respondents have failed to overcome the DIME opinion by clear and convincing evidence to show that it is highly probable that Dr. Campbell is incorrect. Consequently, Claimant's appropriate impairment rating is 16% whole person.

59. Respondents have proven by a preponderance of the evidence that Claimant does not need post-MMI medical benefits to prevent deterioration of his physical condition caused by his work injury. Although Dr. Campbell recommended maintenance medical care for Claimant, her recommendation does not constitute substantial evidence of the need for such treatment and her opinion on this issue is not binding. Neither Dr. Chan nor Dr. Hnida recommended medical treatment post-MMI to maintain the Claimant's condition at MMI. Even Dr. Campbell noted that chiropractic, massage, acupuncture, and physical therapy did not provide sufficient or even temporary subjective benefit for Claimant's symptoms. She also noted that a home electric muscle stimulation machine only provided Claimant a transient decrease in pain. There is not sufficient evidence to find that the therapies or treatments recommended by Dr. Campbell are reasonable and necessary to maintain Claimant's condition at MMI and to prevent deterioration of his condition related to the industrial injury.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge enters the following conclusions of law:

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

4. Sections 8-42-107(8)(b)(III) and (c), *supra*, provide that the finding of a DIME selected through the Division of Workers' Compensation shall only be overcome by clear and convincing evidence. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." § 8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). Whether the DIME physician properly applied the

AMA Guides, and ultimately whether the rating has been overcome by clear and convincing evidence are issues of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 2002 (Colo. App. 2000).

5. Clear and convincing evidence is highly probable and free from serious or substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A fact or proposition has been proved by clear and convincing evidence if, considering all the evidence, the trier-of-fact finds it to be highly probable and free from serious or substantial doubt. *Metro Moving & Storage Co. v. Gussert*, *supra*. The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (Nov. 17, 2000).

6. The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). Since the DIME physician is required to identify and evaluate all losses and restrictions which result from the industrial injury as part of the diagnostic assessment process, the DIME physician's opinion regarding causation of those losses and restrictions is subject to the same enhanced burden of proof. *Id.*

7. The need for medical treatment may extend beyond the point of maximum medical improvement where a claimant requires periodic maintenance care to prevent further deterioration of her physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an order for future maintenance treatment if supported by substantial evidence of the need for such treatment. *Grover v. Industrial Commission*, *supra.*

8. "It is well settled that where the respondents file a final admission admitting for maintenance medical benefits pursuant to *Grover*, the respondents are not precluded from later contesting their liability for a particular treatment." *In re Claim of Dunn, 100113 COWC, 4-754-838-01* (October 1, 2013). *See also Synder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). Generally, when respondents contest liability for a particular medical benefit, the claimant bears the burden of proof that the contested treatment is reasonably necessary to treat the industrial injury and is related to the industrial injury. *See Grover, supra.* "Where, however, the respondents attempt to modify an issue that previously has been determine by an admission, they bear the burden of proof for such modification." *In re Claim of Dunn, 100113 COWC, 4-*

754-838-01 (October 1, 2013). *See also Salisbury v. Prowers County School District,* W.C. No. 4-702-114 (June 5, 2012). In 2009, § 8-43-201(1), C.R.S. was amended to reverse the effect of *Pacesetter Corp. v. Collett*, 33 P.2d 1230 (Colo. App. 2001). That decision held that while respondents could move to withdraw a previously filed admission of liability, they were not actually assessed with the burden of proof. As found in *Dunn*, the amendment placed that burden on respondents and the statute serves the same function in regard to maintenance medical benefits. In the case at bar, the effect of Respondents' argument at hearing is to terminate previously admitted maintenance medical treatment, and as such, Respondents have the burden by a preponderance of the evidence pursuant to § 8-43-201(1), C.R.S.

9. No persuasive or credible evidence was introduced showing that Claimant needs additional treatment to prevent deterioration of his physical condition caused by his work injury. On the contrary, Respondents have proven by a preponderance of the evidence that Claimant does not need post-MMI medical benefits to prevent deterioration of his physical condition caused by his work injury. The Judge notes that even if the burden had been assigned to Claimant, the outcome would be the same. The Judge acknowledges that Dr. Campbell recommended maintenance medical care for Claimant. However, Dr. Campbell's recommendation does not constitute substantial evidence of the need for such treatment, is not binding, and does not need to be overcome by clear and convincing evidence. § 8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). Neither Dr. Chan nor Dr. Hnida recommended medical treatment post-MMI to maintain the Claimant's condition at MMI. Dr. Campbell noted that chiropractic, massage, acupuncture, and physical therapy did not provide sufficient or even temporary subjective benefit for Claimant's symptoms. She also noted that a home electric muscle stimulation machine only provided Claimant a transient decrease in pain. There is not sufficient evidence to find that the therapies and treatments recommended by Dr. Campbell are reasonable and necessary to maintain Claimant's condition at MMI and to prevent deterioration of his condition related to the industrial injury.

10. For purposes of determining levels of medical impairment, a physician shall not render an impairment rating based on chronic pain without anatomic or physiologic correlation. Anatomic correlation must be based on objective findings. Sections 8-42-101(3.7), 8-42-107(8)(c), C.R.S.

11. The Judge is not persuaded by the opinion of Dr. Bernton that Claimant should be rated at zero and that his symptoms are consistent with either a strong somatoform (psychologically-based) contribution to the Claimant's pain presentation or possibly to some misrepresentation. The Judge is not persuaded by the opinion of Dr. Bernton that Dr. Campbell's opinion is clearly wrong and that she did not perform an appropriate analysis or that her evaluation failed to meet the AMA Guides' required analysis of causation. Dr. Campbell conducted a thorough review of Claimant's medical records and physically examined Claimant and conducted her own range of motion testing. Dr. Campbell acknowledged inconsistencies in the medical record but also determined objective findings from her review of the records and examination of Claimant. As found, there are sufficient and supporting objective findings by Dr. Campbell

documented in her report to justify her impairment rating of 16% whole person and that she correctly utilized and applied the AMA Guides.

12. Claimant has consistently complained of chronic pain as a result of the industrial injury. Claimant complained of dizziness/lightheadedness within six days of the industrial injury. Claimant's records exhibit objective findings related to vestibular dysfunction during Claimant's treatment. Medical records from Dr. Orgel demonstrate that Claimant not only reported dizziness but Dr. Orgel observed nystagmus during his evaluation of Claimant. Claimant's HealthOne Rehabilitation Northwest records show that Claimant's symptoms were reproduced with cervical rotation, "head down", and cervical extension. Those records also state that symptoms were reproduced when Claimant was in the prone position. Furthermore, Claimant's records demonstrate that his providers were treating Claimant for headaches related to occipital nerve impairment. During his treatment, Claimant was seen by Dr. Scott Parker, who noted trigger points in the cervicothoracic region and bilateral atlantooccipital region. Dr. Chan also noted tenderness to palpation over the bilateral greater and lesser occipital nerve insertion. Occipital nerve blocks were completed and Claimant experienced some temporary relief but then experienced increased symptoms. Dr. Chan also recommended acupuncture to treat Claimant's pain in the occiput area. In Claimant's records from HealthOne Rehabilitation Northwest, it is also noted that occipital skin stretch needed to be explored for possible pain relief.

13. Although different forms of testing revealed a lack of structural problems that correlate with the pain or dizziness, Dr. Bernton testified that a vestibular, or labyrinth, concussion, and other inner ear issues would be expected from a direct blow to the region of the head and neck (like Claimant had). He further testified that vestibular issues would not show up in radiographic studies or EMG. As found, his testimony supports Dr. Campbell's rating for vestibular dysfunction despite the lack of objective findings in radiographic studies or EMG and despite some inconsistencies with other forms of testing. Additionally, on August 21, 2013, Dr. Chan conducted a Functional Capacity Evaluation and placed Claimant at MMI and assigned four percent whole person impairment per Table 53(II)(B) and three percent whole person impairment for loss of range of cervical motion. Dr. Campbell also rated Claimant for loss of range of cervical motion. Both Dr. Campbell and Dr. Chan were aware that Claimant's range of motion tests had yielded differing results prior to their impairment rating, Notwithstanding, they determined a loss of range of motion.

14. The Judge is not persuaded by the opinion of Dr. Bernton that Dr. Campbell did not perform an appropriate analysis or that her evaluation did not meet the AMA Guides' required analysis of causation.

15. Accordingly, the Judge is persuaded by the opinion of Dr. Campbell and the Judge is not persuaded by the differing medical opinion of Dr. Bernton; his opinion does not constitute clear and convincing evidence that Dr. Campbell's opinion is incorrect.

16. Respondents have failed to overcome the DIME opinion by clear and convincing evidence to show that it is highly probable that Dr. Campbell is incorrect. Consequently, Claimant's appropriate impairment rating is 16% whole person.

ORDER

It is therefore ordered that:

1. Respondents have failed to overcome the DIME physician's opinions by clear and convincing evidence.

2. Respondents are bound by the 16% whole person impairment rating as determined by the DIME physician, Dr. Campbell.

3. Respondents have proven by a preponderance of the evidence that Claimant is not entitled to post-MMI medical maintenance benefits to prevent deterioration of his physical condition caused by his work injury or to maintain his condition at MMI.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 8, 2015

/s/ Sara L. Oliver
Sara L. Oliver
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, Fourth Floor
Denver, CO 80203

ISSUES

1. Whether the claimant was a statutory employee of the respondent-employer for purposes of workers' compensation coverage, i.e., whether a real estate broker can be a statutory employer of an employee of an independent contractor real estate agent when the statute providing for statutory employer specifically excludes real estate brokers and agents?

2. If the respondent-employer is determined to be a statutory employer, whether the claimant met her burden of proving:

a. Compensability;

b. Medical benefits;

c. Reasonably necessary;

d. Authorized provider;

e. Average weekly wage; and.

f. Penalties for being uninsured.

FINDINGS OF FACT

1. The claimant was hired by Jeff R. in November 2011 as an assistant. The claimant acknowledged that she was paid by Jeff R. through his personal business account and that she knew Mr. R. was an independent contractor of the respondent-employer.

2. The claimant worked as an assistant to Mr. R for over twenty (20) months prior to the subject accident. On August 14, 2013, at approximately 5:00 PM, the claimant was assisting her co-worker, Ted Bachara, move a chair at the office when her heel caught a rip in the carpet, causing her to trip. The claimant's face hit the arm of the chair, knocking out her front tooth and breaking her upper mandible bone.

3. The claimant reported the incident to her supervisor, Mr. R. via text

message the following morning, as well as to fellow member of the team, Jeff Johnson. Mr. R. advised the claimant to locate the workers' compensation information in the office kitchen and call the workers' compensation carrier directly. Shortly after contacting The Hartford, the claimant was informed that there was no workers' compensation coverage for employees.

4. The claimant sought treatment for her injuries at Meyer & Lydiatt Family Dentistry on August 20, 2013, where she had received dental care prior to this incident. Several years before the subject accident the claimant injured her front #8 tooth, which required placement of a crown. As a result of the subject accident, the claimant's #8 crown dropped and she sustained a fractured mandible.

5. The claimant's medical providers never gave her work restrictions as a result of her injuries.

6. The ALJ finds that the medical treatment provided to the claimant was reasonable, necessary, and related to the claimant's industrial injury herein.

7. Jeff R. testified via telephone that he is an independent contractor with the respondent-employer. He receives commissions only and is not an employee of the respondent-employer. The respondent-employer provides him with an office. He declined worker's compensation coverage in his contract with the respondent-employer. He owns his own corporation which pays its own taxes separate from the respondent-employer. He pays his own employees. For federal tax purposes, he is not considered an employee of the respondent-employer. He has no authority to hire employees for the respondent-employer.

8. Jeff R. hired the claimant as his personal assistant. He did not obtain prior approval from the respondent-employer to hire the claimant as stated in his contract. He paid the claimant from his personal business account. The claimant worked for him, exclusively, and not for the respondent-employer.

9. The claimant told Mr. R. that she knocked out her tooth but did not tell him initially that it happened at work. She did tell him it was work-related about two to three weeks later and asked him how to go about making a worker's compensation claim. He asked one of the employees from the respondent-employer and then referred her to the worker's compensation poster in the break room.

10. The claimant never provided Mr. R. with doctor restrictions regarding her injury. He terminated the claimant on August 15, 2014.

11. Joe C. testified that he is a real estate broker and his company is the respondent-employer. As a broker, he enters into independent contractor contracts with real estate agents, such as Jeff R. Jeff R. worked for commission only and waived workers' compensation coverage. Jeff R. had no authority to hire employees for the respondent-employer. Jeff R. was authorized to use the respondent-employer emblem for marketing purposes. Jeff R. acknowledged that he did not have workers' compensation coverage for the claimant.

12. The respondent-employer had an employee manual for its 20 office employees. The respondent-employer also had a policy manual for its agents. Agents were to provide workers' compensation coverage to their employees. The respondent-employer required agents to obtain prior approval for their employee hires. Jeff R. did not obtain prior approval and Joe Clement found out about the claimant's hire months later.

13. The respondent-employer maintains workers' compensation coverage for its employees as depicted in the caption to this claim..

14. The ALJ finds that the claimant is neither a licensed real estate sales agent nor a licensed real estate broker.

15. The ALJ finds that the claimant is the statutory employee of the respondent-employer.

16. The ALJ finds that section 8-40-301(2), which excludes licensed real estate sales agents and licensed real estate brokers from the definition of "employee" is inapplicable to the claimant.

17. The ALJ finds that the claimant performed services for pay for Jeff R. and is thus clearly an employee.

CONCLUSIONS OF LAW

1. According to C.R.S. §8-43-201, "(a) claimant in a workers' compensation claim shall have the burden of proving entitlement to benefits by a preponderance of the evidence; the facts in a workers' compensation case shall not be interpreted liberally in favor of either the rights of the injured worker or the rights of the employer, and a workers' compensation case shall be decided on its merits." *Also see Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590, 592 (Colo. App. 1998) ("The Claimant has the burden of proving an entitlement to benefits by a preponderance of the

evidence."); *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915, 918 (Colo. App. 1993) ("The burden is on the claimant to prove his entitlement to benefits by a preponderance of the evidence."). Proof by a preponderance of the evidence requires claimant to establish that the existence of a contested fact is more probable than its nonexistence. *Hosier v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 (ICAO March 20, 2002).

2. In deciding whether claimant has met her burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions; the motives of a witness; whether the testimony has been contradicted; and bias, prejudice or interest. *See Prudential Insurance Co. v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936).

3. An injury "arises out of" employment when the activity causing the injury is "sufficiently interrelated to the conditions and circumstances under which the claimant generally performs his job, that the activity may reasonably be characterized as an incident of employment." *Novak v. Pueblo County*, W.C. No. 4-251-989 (ICAO, October 12, 1995); *Price v. Industrial Claim Appeals Office*, 919 P.2d 207 (Colo. 1996); *City of Northglenn v. Eltrich*, 908 P.2d 139 (Colo. App. 1995).

4. An industrial accident is the proximate cause of a claimant's disability if it is the necessary precondition or trigger of the need for medical treatment. *Sarvestani v. Dale A. Wall, DDS*, W.C. Nos. 4-206-040; 4-464-407 (ICAO October 16, 2001).

> All that is necessary to warrant a finding of a causal connection between the accident and the disability is to show facts and circumstances which would indicate with reasonable probability that the injury or death resulted from or was precipitated by the 'accident.' *Colo. Fuel & Iron Corp. v. Indus. Comm.*, 380 P.2d 28, 30 (Colo. 1963).

5. The ALJ concludes the claimant is credible.

6. The ALJ concludes that Jeff R. did not carry workers' compensation insurance for his employees.

7. Under § 8-41-401(1)(a), C.R.S., a company that contracts out part or all of its work to any subcontractor is the statutory employer of the subcontractor's

employees. The purpose of the statute is "to prevent employers from avoiding responsibility under the workers' compensation act by contracting out their regular business to uninsured independent contractors." *Finlay v. Storage Technology Corp.*, 764 P.2d 62, 64 (Colo. 1988). The statutory scheme provides that it is the general contractor to whom the employees of all subcontractors may look for workers' compensation if their immediate employer is uninsured or financially irresponsible. *Edwards v. Price*, 550 P.2d 856 (Colo. 1976), appeal dismissed, 429 U.S. 1056 (1977). This distinguishes the general contractor from the subcontractor and is the rationale which sustains the different treatment accorded general contractors by statute. *Id.* In the event the independent contractor is uninsured, the statute permits employees of subcontractors or independent contractors to reach up-stream to the statutory employer to recover workers' compensation benefits. *Finlay, supra*; *Herriott v. Stevenson*, 473 P.2d 720 (Colo. 1970). Here, Mr. R. waived workers' compensation coverage for himself; however, his waiver does not extend to his employees.

8. The test for determining whether an employer has subcontracted out its regular business is set forth in *Finlay v. Storage Technology Corp.* The *Finlay* court noted that earlier decisions narrowly limited the definition of the contractor's "regular business" to the "primary business" of the contractor. *Finlay*, 764 P.2d at 67. However, the *Finlay* court significantly expanded that standard to the total business of the company's operation. *Id.*, *see also Shumiloff v. Frey*, W.C. No. 4-005-377 (April 24, 1992), *aff'd, Trinity Lutheran Church v. Shumiloff* (Colo. App. No. 92CA0794, April 29, 1993) (not selected for publication*).*

9. Under *Finlay*, the regular business test is satisfied if the contracted-out services are part of the employer's regular business as defined by its "total business operation," which considers "the elements of routineness, regularity, and the importance of the contracted service to the regular business of the employer." *Finlay*, 764 P.2d at 67. Furthermore, the importance of the contracted service can be demonstrated by showing that the employer would "find it necessary to accomplish the work by use of his own employees rather than forego the performance of the work." *Id.*; *see also Campbell v. Black Mountain Spruce, Inc.*, 677 P.2d 379, 381 (Colo. App. 1983).

10. Whether a person or entity has the status of statutory employer is generally a question of fact. *Thornbury v. Allen,* 991 P.2d 335, 339 (Colo.App.1999). Application of the regular business test is dependent on the facts of each individual case. *See Virginia Heritage Square Co. v. Smith*, 808 P.2d 366 (Colo. App. 1991). Consequently, an ALJ's findings must be upheld if supported by substantial evidence. C.R.S., § 8-43-301(8) (2014).

11. The facts are straightforward. The respondent-employer is a real estate brokerage. Buying and selling homes in the Rocky Mountain region is its regular business. The respondent-employer contracted with Jeff C. R. as an independent contractor real estate agent to further its business of buying and selling homes in the Rocky Mountain region. Mr. R. hired the claimant as an assistant to aid him in the business of buying and selling homes. Thus, the respondent-employer contracted out its regular business to Jeff C. R. and his employees. As a result the respondent-employer qualifies as the claimant's statutory employer pursuant to § 8-41-401(1)(a)(I), C.R.S. and is liable for the claimant's workers' compensation benefits.

12. The respondents submitted the legislative history of HB1052 (1985). The ALJ finds that the statute is clear on its face and there is no necessity to resort to legislative history.

13. The ALJ concludes that the claimant suffered her facial injuries arising out of and in the course of her employment with Mr. R. and thus by statute with the respondent-employer.

14. C.R.S. §8-42-101(1)(a) provides that respondents shall furnish medical care and treatment reasonably necessary to cure and relieve the effects of the injury. Claimant bears the burden of proof of showing that medical benefits are causally related to his work-related injury or condition. *Ashburn v. La Plata School District 9R,* W.C. No. 3-062-779 (ICAO May 4, 2007). As noted in *Bekkouche v. Riviera Electric*, W.C. No. 4-514-998 (ICAO May 10, 2007), "a showing that the compensable injury caused the need for treatment is a threshold prerequisite to the further showing that treatment is reasonable and necessary."

15. Pursuant to section 8-42-101(6)(a),

> If an employer received notice of injury and the employer or, if insured, the employer's insurance carrier, after notice of the injury, fails to furnish reasonable and necessary medical treatment to the injured worker for a claim that is admitted or found to be compensable, the employer or carrier shall reimburse the claimant, or any insurer or governmental program that pays for related medical treatment, for the costs of reasonable and necessary treatment that was provided.

16. Pursuant to section 8-42-101(6)(b),

> If a claimant has paid for medical treatment that is admitted or found to be compensable and costs more than the amount specified in the workers'

> compensation fee schedule, the employer...or…insurance carrier shall reimburse the claimant for the amount paid.

17. The ALJ concludes, as found above, that the ensuing medical treatment sought by the claimant subsequent to the injury was reasonable, necessary, and related to her industrial injury and thus payment for this treatment is the responsibility of the respondent-insurer.

18. According to *Romayor v. Nash Finch Co.,* W.C. No. 4-609-915 (ICAO March 17, 2006), "the claimant has the burden to prove a causal relationship between a work-related condition or injury and the wage loss for which compensation is sought." In order to receive temporary disability benefits, claimant must establish a causal connection between the injury and the loss of wages. *Turner v. Waste Management of Colorado*, W.C. No. 4-463-547 (ICAO July 27, 2001).

19. The ALJ concludes that the claimant has established by a preponderance of the evidence that on August 14, 2013 she sustained an injury to her face and teeth arising out of and in the course of her employment with the respondent-employer.

20. The ALJ concludes that the claimant has established by a preponderance of the evidence that the respondent-employer denied the claim and failed to provide medical treatment for non-medical reasons subsequent to the denial.

21. The ALJ concludes that the claimant has established by a preponderance of the evidence that the medical care received by the claimant, subsequent to the respondent's denial of medical treatment, was reasonable, necessary, and related to the claimant's industrial injury of August 14, 2013 and that the respondent-insurer is responsible for payment of that care in accordance with the Medical Fee Schedule.

22. The ALJ concludes that the claimant has failed to establish by a preponderance of the evidence that the claimant suffered a loss of wages, due to her industrial injury.

23. The ALJ concludes that based upon the totality of the evidence, the claimant has failed to establish by a preponderance of the evidence that the respondent-employer is uninsured and subject to penalties.

24. The ALJ concludes that based upon the totality of the evidence, this is a medical claim only and defers a decision on the claimant's average weekly wage until indemnity benefits are established.

ORDER

It is therefore ordered that:

1. The claimant's claim for benefits under the Workers' Compensation Act of Colorado is compensable.

2. The respondent-employer is the claimant's statutory employer.

3. The respondent-insurer is responsible for the claimant's medical treatment for the injuries sustained in the August 14, 2013 industrial accident.

4. The claimant's claim for indemnity benefits is denied and dismissed.

5. The claimant's claim for penalties is denied and dismissed.

6. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

7. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

1259 Lake Plaza Drive, Suite 230
Colorado Springs, CO 80906

ISSUES

- Whether claimant has proven by a preponderance of the evidence that he sustained a compensable injury arising out of and in the course of his employment with employer?

- If claimant has proven by a preponderance of the evidence that he sustained a compensable injury, whether claimant has proven by a preponderance of the evidence that he received medical treatment that was reasonable and necessary to cure and relieve claimant from the effects of the industrial injury?

- If claimant has proven by a preponderance of the evidence that he sustained a compensable injury, whether claimant has proven by a preponderance of the evidence that he is entitled to an award of temporary total disability ("TTD") benefits for the period of November 12, 2013 through May 2014?

- If claimant has proven by a preponderance of the evidence that he sustained a compensable injury, what is claimant's average weekly wage ("AWW")?

- If claimant has proven by a preponderance of the evidence that he sustained a compensable injury, whether respondents have proven by a preponderance of the evidence that claimant committed a volitional act that led to his termination of employment?

FINDINGS OF FACT

1. Claimant was hired by employer on or about November 7, 2013 as a laborer. Claimant testified he was paid $12 per hour when he was hired. Claimant further testified he was given a raise to $14 per hour on the day he was terminated. Claimant was required to pass a pre-employment drug screen prior to being hired.

2. Claimant testified his job duties included working on a rig and was eventually given the job of a driver where he would pick up people and/or parts from Denver and deliver them to Rifle, Colorado. Claimant testified that on November 11, 2013 he drove to Longmont, Colorado as part of his job duties for employer. Claimant testified he had driven at least 13 hours this day and had only slept 4 hours. Claimant testified he reported to work on November 12, 2013 and was too tired to drive. Claimant testified he went home and slept and returned to work and was told he would be driving to Odessa, Texas. Claimant testified that after speaking with his wife, he decided he was not going to drive to Texas for employer.

3. Claimant testified he returned to employer's shop and spoke with Mr. Brach, the owner. Claimant testified he informed Mr. Brach that he would prefer to work in the shop or on a rig. Claimant testified Mr. Brach told claimant employer was not going to use him and if he didn't leave he was fired. Claimant further testified that Ms. Ottman, the office manager, told claimant that they would be taking money out of his paycheck to pay for the pre-employment drug screen. Claimant testified that Mr. Brach then shoved claimant and said, "Get out of my office!" Claimant denied that he took a swing at Mr. Brach and denied that he informed Mr. Brach that he was quitting when he came back to employer on November 12, 2013.

4. Claimant testified he and Mr. Brach then began fighting and another employee, Mr. Hofius, then ran up the stairs to where claimant and Mr. Brach were fighting and jumped on claimant's back. Ms. Ottomann instructed another employee to call the police and Mr. Brach and Mr. Hofius then let claimant up. Claimant testified that after he was let up, an employee then hit claimant from the side causing claimant to fall down the stairs. Claimant testified when he got outside, he grabbed his skateboard from his vehicle and Mr. Brach grabbed a pipe before claimant got back into his vehicle and was driven home by claimant's wife.

5. Claimant denied on cross-examination telling Ms. Murray that he was quitting prior to speaking with Mr. Brach on November 12, 2013. Claimant's testimony was contradicted by the testimony of Ms. Murray who testified in detail that claimant came to work on November 12, 2013 and informed Ms. Murray that he was going to Texas as part of his assignment, before returning after going home and bringing his hard hat and shirt and said to Ms. Murray, "I can't do this. I quit." Ms. Murray testified that she said she would inform Mr. Brach and claimant said, "I'll tell him myself" before going upstairs to Mr. Brach's office.

6. On cross-examination, when questioned as to why claimant had brought his hard hat and other equipment with him if he wasn't intending on quitting, claimant testified he thought he was going to be fired when he turned down the assignment.

7. Claimant provided contradicting testimony regarding his attempts to return to work in 2014, including testimony that he returned to work sometime in May 2014, he believed. Claimant also testified that he did not recall what happened when he first attempted to return to work.

8. Mr. Brach testified at hearing in this case that he hired claimant in November 2013 to work as a driver. Mr. Brach testified that on November 12, 2013 claimant came in and said he was tired, so Mr. Brach sent him home. Claimant later returned to employer and Mr. Brach testified he offered claimant a job driving to Texas. Mr. Brach testified that claimant did not have clothes for the trip and left to go home and get clothes. Mr. Brach testified that when claimant returned he was in the office with Ms. Ottman when claimant came in and informed Mr. Brach that he was quitting. Mr. Brach testified that claimant demanded his paycheck immediately and was informed

that because he was quitting, he would receive his paycheck on the scheduled payday. Mr. Brach testified that he and Ms. Ottman informed claimant that his check would include certain deductions and claimant demanded that no deductions be taken from his check. Mr. Brach denied threatening claimant's job if he did not make the drive to Texas.

9. Mr. Brach testified claimant pushed him and took a swing at Mr. Brach before Mr. Brach was able to get claimant in a headlock. Mr. Brach testified he had claimant in a headlock while claimant was on top of him on the ground. Mr. Brach testified he was able to get claimant to calm down to the point that he was able to let him out of the headlock and followed claimant down the stairs and out the door. Mr. Brach testified that when claimant got outside the building, he went to his vehicle and got a skateboard and swung the skate board at Mr. Brach. Mr. Brach testified he then went and got a pipe for protection. Mr. Brach testified that claimant then said he was going to come back with a gun.

10. Claimant's threat to return with a gun was confirmed in testimony by Ms. Murray.

11. Mr. Brach testified that claimant left in his vehicle and the police eventually showed up. Mr. Brach testified claimant was subsequently arrested by the police running over fence posts on employer's property in his car.

12. Mr. Nick Hofius testified at hearing. Nick Hofius is the shop foreman for employer. Nick Hofius testified that on November 12, 2013 he was in the shop and hear a commotion and came into the office and witnessed claimant and Mr. Brach wresting. Nick Hofius testified he came up the stairs and saw Mr. Ottman holding claimant's left arm as he was on top of Mr. Brach. Nick Hofius denied hitting claimant and denied pushing claimant down the stairs. Nick Hofius testified that he heard Mr. Brach say to claimant, "calm down and we'll let you go." Nick Hofius testified claimant left the building and then began swearing at him and Mr. Brach and got a skateboard and began swinging it at Mr. Brach. Nick Hoifus testified he returned to the shot and heard loud bangs from the back of the shop and later noticed that the employer's fence posts that held an eight foot chain link fence were damaged.

13. Ms. Wright testified at hearing in this matter. Ms. Wright testified she was in her office across the hall from Mr. Brach's office when claimant came in on November 12, 2013 and informed Mr. Brach that he was quitting. Ms. Wright testified that she witnessed claimant take a swing at Mr. Brach. Ms. Wright testified she heard claimant say, "don't push me" but witnessed Mr. Brach with his hands up. Mr. Wright testified she did not see Mr. Brach push claimant.

14. Mr. Don Hofius testified at hearing. Don Hofius testified that he is not employed by employer but was visiting employer on November 12, 2013. Don Hofius testified claimant came in on November 12, 2013, went upstairs and came back down

approximately 10 minutes later and said, it looks like I'm going to Texas. Don Hofius testified claimant then came back to the office and had his hard hat, book and shirt and said, "I can't do this anymore. I quit."

15. Don Hofius testified claimant went upstairs and he later heard a thud and Ms. Ottman yell, "Call 911". Don Hofius testified he went to the stairs and saw Mr. Brach on the ground on his back with claimant on top of him in a headlock. Don Hofius testified Mr. Brach said, "If you calm down, I'll let you go." Don Hofius testified Mr. Brach let claimant go, claimant came downstairs and went outside. Don Hofius testified he went outside after claimant and saw claimant come back on the property with a skateboard that he was swinging. Don Hofius testified he heard claimant say he was going to get a gun.

16. Ms. Ottman testified at hearing regarding the incident of November 12, 2013. Ms. Ottman testified she informed claimant that he was scheduled to make a run to Texas in the evening of November 12, 2013. Claimant then left to get the things he would need from home. Ms. Ottman testified approximately 20 minutes later her phone rang and she was informed by the secretary that claimant had quit, but that he wanted to talk to Mr. Brach.

17. Ms. Ottman testified claimant came upstairs and said he wanted no hard feelings. Ms. Ottman testified claimant then asked about his check and was informed that he would be issued his check at the end of the week. Ms. Ottman testified claimant told Ms. Ottman that she wasn't going to take any money from his check and was informed by Mr. Brach that it was time to leave. Ms. Ottman testified claimant and Mr. Brach then began to scuffle and she was trying to hold claimant's arm down so that he did not strike Mr. Brach. Ms. Ottman testified Nick Hofius came upstairs and claimant was let go once by Mr. Brach after he settled down. Claimant then went down the stairs and outside. Ms. Ottman testified that Nick Hofius did not hit or kick claimant. Ms. Ottman testified that nobody pushed claimant down the stairs.

18. Ms. Ottman testified that when claimant got outside, he threw down his keys and took off his shirt and tried to get Mr. Brach and Nick Hofius to fight him. Claimant then went to his car and got a skateboard that he began swinging at Mr. Brach. Mr. Brach then got a metal pipe and claimant left.

19. Ms. Ottman testified that claimant was not given a raise to $14 per hour.

20. Claimant's testimony in this case is found to be not credible. Claimant's testimony is contradicted by multiple witnesses regarding his actions on November 12, 2013 and his own interrogatory answers. When questioned regarding his contradictory interrogatory answers, claimant maintained that he had not changed his answer, but instead made a mistake.

21. Claimant further testified that he was given a raise of $2 per hour after only one week on the job. Claimant's testimony in this regard was contradicted by the testimony of Ms. Ottman and not supported by any employment records.

22. Claimant's testimony that his job was threatened by Mr. Brach was likewise contradicted by Ms. Ottman. Claimant's testimony that he was knocked down the stairs was likewise contradicted by Ms. Ottman, Mr. Brach, Don Hofius and Nick Hofius. The ALJ cannot and does not credit claimant's testimony with regard to these actions in any manner.

23. Multiple witnesses for employer noted that claimant returned to employer's premises after being terminated and caused damage to employer's fence. Claimant denied that he was arrested for causing damage to employer's fence, but acknowledged on cross-examination that he was taken to jail for an unrelated outstanding charge. Claimant testified he went to St. Mary's Hospital for medical treatment approximately 30-45 minutes after the incident with employer. Claimant testified he again returned to the hospital after being released from jail.

24. The medical records entered into evidence document a history of claimant having prior medical treatment for physical altercations. Some of these altercations may have been related to mixed martial arts fighting and some to non-sanctioned physical altercations. Notably, claimant underwent evaluation for bipolar disorder on July 9, 2013 with Dr. Kevin Coleman. In this evaluation, it was noted that claimant has gotten into fights in the past.

25. In August 2013, claimant was referred for treatment with Mind Spring clinic by his mother. Claimant noted that he was there "to be diagnosed and to seek any help with my anger to keep me from getting into any fights." It was noted at this evaluation that claimant was using methamphetamines by smoking or snorting and had used this substance 15 times in the previous 30 days. It was reported claimant had used methamphetamines 365 days in the previous year. It was noted claimant had criminal charges pending against him and was facing a court date of November 2013. Claimant reported he began using drugs again in November 2012 following a break up with his girlfriend. It was recommended that claimant be referred for residential treatment for substance abuse, but claimant declined the referral.

26. At other parts of claimant's medical records, claimant reports a history of smoking methamphetamines on a daily basis, using marijuana on a daily basis and smoking crack cocaine on a weekly basis. On February 15, 2013 claimant reported that he experienced many fights and had a hard life.

27. Claimant was also examined on October 1, 2013 by St. Mary's Hospital with a complaint of flank pain. Claimant was diagnosed with acute renal colic and provided with prescription medications including Flomax, oxydodone, Zofran and ibuprofen.

28. Claimant was evaluated following his altercation with Mr. Brach at 8:01 p.m. at St. Mary's Hospital. Claimant reported to St. Mary's Hospital that he was involved in an altercation with his employer when his employer pushed him, and he fought back. Claimant reported he was hit in the face, left flank, left side of his back and abdomen. Claimant also reported he was pushed down a flight of stairs. Claimant underwent diagnostic testing and was diagnosed with 2 lumbar transverse process fractures at L2 and L3. There was no significant surrounding hematoma noted by the physicians. Claimant was diagnosed with a closed fracture of lumbar vertebra without mention of spinal cord injury and contusions of multiple sites, not elsewhere classified. It was reported in the records that claimant reported he had taken a Percocet prior to his arrival at the hospital. Claimant was eventually discharged from the hospital with instructions to follow up with his primary care physician.

29. Claimant returned to the hospital on November 13, 2013 and it was reported that after he was discharged the previous evening, he was taken to jail due to a restraining order. Claimant reported he had pain in his right hand and elbow due to hitting the door at the jail. Claimant was evaluated and a fracture was ruled out before claimant was discharged with a starter pack of 5 mg Percocet and 1mg Ativan.

30. Claimant sought treatment with Nancy Allen, a physical therapist, on December 12, 2013. Claimant reported he was repeatedly kicked during the fight and sustained transverse process fractures at the L1, L2 and L3 levels.

31. Claimant was evaluated by Christopher Ellis, a physical therapist, on January 7, 2014. Claimant reported to Mr. Ellis that he was involved in an altercation with his boss that resulted in him, somehow, falling down the stairs. Mr. Ellis diagnosed claimant with low back dysfunction and healed transverse process fractures at L2-3.

32. Claimant returned to St. Mary's Hospital on February 28, 2014 with continued complaints of low back pain. Claimant again reported he was kicked and pushed down a flight of stairs. Claimant reported taking oxycodone on a daily basis. Dr. Fox noted he reviewed a magnetic resonance image from January 9, 2013 (which is determined to be a typographical error and refers to 2014) that showed a normal central canal without evidence of herniated disk abnormality.

33. Claimant maintains that he was injured on November 12, 2013 during the altercation with Mr. Brach and other employees on that date. While it is true that injuries sustained during a physical altercation may be compensable if the altercation is related to a work related function, such as a paycheck, claimant must still prove by a preponderance of the evidence that his injury was related to the altercation.

34. In this case, claimant's testimony regarding the altercation is completely and wholly not credible. The ALJ finds that claimant was not kicked by employees and was not thrown down the stairs as he reported to his physicians. While claimant was diagnosed with a transverse process fracture at St. Mary's Hospital that evening,

claimant was witnesses swinging a skateboard and attempting to continue a fight with Mr. Brach and other employees after the altercation had ended.

35. The ALJ finds and concludes that claimant has failed to demonstrate that his injuries were sustained in the altercation with employer. The ALJ notes that claimant's accident history regarding the physical altercation was exaggerated to his physicians, including reports that he was kicked multiple times and thrown down the stairs is contradicted by the testimony of other witnesses present at the time.

36. Most significantly, claimant's actions of continuing to challenge Mr. Brach to fight and swinging a skateboard at him in a threatening manner following the altercation is found to be inconsistent with the reported injuries of a transverse process fracture at the L2-3 level.

37. Notably, respondents do not need to prove that claimant's injuries occurred at some other time or place, but testimony was presented that claimant, following the altercation, was damaging employer's fence. Regardless, the ALJ concludes that claimant's reported accident history involving being thrown down the stairs and kicked in the back strays so far from the testimony at hearing that the altercation involved a tumble to the floor in which claimant was on top of Mr. Brach while Mr. Brach had claimant in a head lock and Ms. Ottman was attempting to keep claimant from striking Mr. Brach, that the ALJ finds any medical opinions relating the L2-3 transverse process fractures to be related to the altercation to be unreliable.

38. Because claimant has failed to prove that his injuries arose out of the altercation with employer, claimant's claim for benefits is dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2006. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d

385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with "a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

4. As noted above, it is claimant's burden to establish by a preponderance of the evidence that his injury is related to a work injury. Where claimant's testimony is not credible regarding the actions leading to his injury, claimant faces a large burden in establishing that his claim is compensable.

5. In this case, the ALJ credits the testimony of Mr. Brach, Ms. Ottman, Ms. Murray, Nick Hofius and Don Hofius over the testimony of claimant. The ALJ finds and determines that the actions of scuffling with Mr. Brach on November 12, 2013 did not result in the need for claimant's medical treatment.

6. The ALJ notes that testimony was presented that claimant was swinging a skateboard and threatening employees after the scuffle. The ALJ finds that these actions are inconsistent with claimant having injuries noted in the medical records. The ALJ further notes that there was testimony presented that claimant returned to employer's premises and damaged the fence on employer's property. These actions are likewise inconsistent with claimant having injuries noted in the medical records.

ORDER

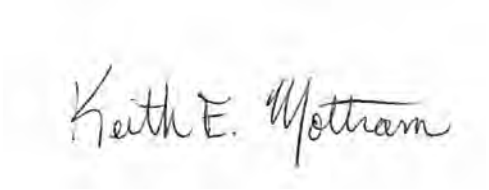
It is therefore ordered that:

1. Claimant's clam for benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the

certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 27, 2015



Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

- Did the claimant prove by a preponderance of the evidence that on July 1, 2014 he sustained a compensable injury arising out of and in the course of his employment?

- Did the claimant prove by a preponderance of the evidence that he is entitled to an award of temporary total disability benefits for the period of July 2, 2014 through July 9, 2014?

- Did the claimant prove by a preponderance of the evidence that he is entitled to an award of reasonable and necessary medical expenses for the alleged injury of July 1, 2014?

- Did the claimant prove by a preponderance of the evidence that he is entitled to an award of temporary total disability benefits for the period of July 11, 2014 through July 23, 2014?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant's Exhibits 1 through 18 were admitted into evidence. Claimant's Exhibit 19 was admitted into evidence except for page 1. Claimant's Exhibit 20 was admitted into evidence. Respondents' Exhibits A through K were admitted into evidence. The deposition of Christine Chase was admitted into evidence.

2. The claimant was employed at the employer's store as a grocery manager.

3. The claimant sustained an admitted injury to his low back on November 15, 2013. On February 24, 2014 the respondent employer filed a General Admission of Liability (GAL) for this injury admitting for temporary total disability from November 16, 2013 through February 18, 2014, and for temporary partial disability commencing February 19, 2014. The claim for this injury is assigned W.C. 4-935-186.

4. On November 15, 2013 the claimant received treatment at the emergency room. The records reflect that the claimant gave a history of "recurrent back injuries." He reported that he was at work walking down the stairs when a scanner gun fell from his belt and he stumbled on it. He fell forward and caught himself on the railing. The claimant reported low back pain but no subjective weakness or paresthesias. He advised that in the past he had similar back injuries and his symptoms were controlled

by pain killers and muscle relaxers including hydrocodone. The claimant reported he did not have a primary care physician (PCP) and had received these prescriptions in the "emergency department setting." The claimant was given a diagnosis of "back pain" and prescribed Percocet (oxycodone-acetaminophen).

5. The claimant was referred to Concentra Medical Centers (Concentra) for treatment. On November 16, 2013 he was seen by PA-C Jeffry Winkler. PA Winkler noted a history that the claimant twisted his back when he fell down some stairs at work. The claimant reported instant low back pain. PA Winkler noted decreased active range of motion in all directions with spasm of the lumbar spine at L2, L3, L4 L5 and S1. There was "myospasm with listing to the right." On November 16, 2013 Rosalinda Pineiro, M.D., completed a Physician's Report of Worker's Compensation Injury (WC 164). She prescribed Percocet, Valium and Ibuprofen. She placed the claimant on a "no activity status."

6. On December 5, 2013 the claimant underwent a lumbar MRI. The radiologist's impressions included: (1) Disk degeneration at the mid and the L4-L5 level with annular bulging and more focal right paracentral disk extrusion. There was extension of disk material into the right lateral recess with effacement and posterior displacement of the right exiting L5 nerve root. There was moderate right-sided subarticular recess stenosis; (2) There was disk degeneration at the L3-L4 level with annular bulging and central disk herniation, probable extrusion. An associated annular fissure was present There was effacement of the thecal sac with mild central canal and bilateral foraminal stenosis; (3) There was a transitional vertebral body at L5 and disk desiccation with annular bulging at the L5-S1 level. There was no evidence of herniation or stenosis.

7. On December 6, 2013 Dr. Pineiro reviewed the MRI results and referred the claimant for a physical medicine consult because of the "positive findings." She also noted the claimant had been given an "interferential unit" to help with his pain. Percocet and valium were continued for 10 more days. On December 20, 2013 Dr. Pineiro noted that the claimant could not be seen by physiatry until January 16, 2014 so she referred him for a neurosurgical consultation with Dr. Widdle or Dr. Coester. At this time Dr. Pineiro diagnosed low back pain with radiculopathy and noted that medication and physical therapy had not helped the claimant.

8. On January 16, 2014 Jeffrey Wunder, M.D. performed a physiatric consultation. The claimant reported central to right lumbosacral pain which he described as constant, aching and throbbing. He gave a history of falling and twisting his back on November 15, 2013, but his past history was reported as "unremarkable." Dr. Wunder assessed right L5 radiculopathy, right L4-5 disc protrusion and multilevel degenerative disc disease and bulges. Dr. Wunder recommended an L5 transforaminal epidural steroid injection.

9. On January 16, 2014 the claimant was examined by Hans Coester, M.D. Dr. Coester noted the claimant's history of falling and twisting his back resulting in spasm "so severe he could barely tolerate and was walking dramatically abnormally."

However the claimant reported he was getting progressively better. The claimant reported he had "no chronic medical problems." Dr. Coester reviewed the MRI and noted a "right-sided L4-5 disc protrusion that may contact the L5 nerve root" and a minor disc bulge at L3-4. Dr. Coester opined the L4-5 disc protrusion was probably responsible for the claimant's pain and recommended an epidural steroid injection at the L4-5 level to slow down inflammation. Dr. Coester did not recommend surgery since the claimant was "slowly getting better."

10. On January 27, 2014, Dr. Pineiro recommended an Empi machine (TENS unit) because the claimant reported pain reduction of between 20% - 50% through use of a TENS unit in physical therapy. Dr. Pineiro also recommended a decrease in Percocet with use of the unit. Dr. Pinero continued Valium and prescribed Lyrica. She indicated the claimant should remain on a no activity status pending injections.

11. On February 14, 2014 Dr. Wunder performed a right L5 transforaminal epidural steroid injection for spinal nerve block. On February 17, 2014 the claimant reported to Dr. Pineiro that the injection was helpful for the first 48 hours but his pain was returning. Dr. Pinero also altered the claimant's restrictions to no lifting or pushing over 5 pounds, change positions every hour and work 4 hours per day 5 days per week.

12. The claimant returned to work part-time on February 19, 2014. He performed light duty. He testified that it was difficult to stand and reach while performing these duties.

13. On February 20, 2014 Dr. Wunder recommended a second injection. Dr. Wunder also prescribed OxyContin and reduced the claimant's use of Percocet to no more than 2 per day for "breakthrough pain."

14. On March 13, 2014 Dr. Wunder noted the claimant initially had improvement after the injection but he has experienced extensive low back and right leg pain. Dr. Wunder opined the claimant was showing weakness again in the L5 myotome and that his response to the injection was "poor." Dr. Wunder recommended against further injections and advised the claimant to return to Dr. Coester for reevaluation. Lyrica was discontinued because of side effects.

15. On March 13, 2014 Joel Cohen, PhD performed a psychological evaluation of the claimant. Dr. Cohen assessed a pain syndrome associated with a general medical condition as well as psychological factors along with an injury-related diagnosis of adjustment reaction with mixed emotional features. Dr. Cohen recommended 6 to 8 sessions of psychotherapy "to assist with pain management and stress reduction."

16. On March 20, 2014 the claimant reported a sharp increase in pain and PA-C Julia Balderson took him off of work. On March 24, 2014 Dr. Pineiro continued the claimant's no activity status and recommended a new MRI.

17. On March 25, 2014 Dr. Coester again examined the claimant. The claimant reported increased pain after he returned to work and stated that he had

severe back pain going down his right leg to his foot. Dr. Coester's impression was L5 radiculopathy and he recommended a new MRI.

18. On April 7, 2014 the claimant underwent a repeat lumbar MRI. The results of this MRI were compared to the December 2013 MRI. The radiologist noted that the MRI findings were essentially unchanged.

19. On April 8, 2014 the respondents conducted video surveillance of the claimant. At 10:06 a.m. the video depicts the claimant carrying a dog in his right arm and walking from the back of his car to the driver's door. The claimant walks with a noticeable limp but without swinging his arms. At 10:15 a.m. the claimant gets out of his car. At this time he walks very slowly and with a noticeably worse limp. He swings his arms in a noticeable fashion. He comes to a complete stop when he approaches street curb, and it takes him several seconds to step up on the curb. At 10:25 a.m. the claimant is depicted leaving a building, and walking in the same manner as he did at 10:15 a.m. However, later in the day the claimant is depicted as walking with only a slight but noticeable limp. He also bends at the waist to reach into his car and deposit and remove various items of indeterminate weight. Later in the day the claimant is seen to walk into a building with a slight limp. Later he is taken from the building in a wheel chair and pushed to his car. The claimant walks slowly around the back of the car on two occasions and exhibits great difficulty when getting into the car.

20. On April 16, 2014 Dr. Wunder again examined the claimant. The claimant's major complaint was back pain and he reported that traction had largely alleviated his leg pain. Dr. Wunder noted that Dr. Coester had spoken to Dr. Pineiro and opined the claimant's pain level was disproportionate to the MRI findings. Dr. Coester was hesitant to perform surgery despite "some objective findings." Dr. Pineiro and Dr. Coester had agreed to send the claimant for a psychological evaluation. Dr. Wunder assessed right L5 radiculopathy and right L4-5 herniated nucleus pulposus. The claimant was referred to Dr. Cohen for a psychological evaluation.

21. On April 25, 2014 Dr. Wunder performed a right L5 transforaminal epidural steroid injection.

22. At the respondent's request Judith Weingarten, M.D., performed an independent psychiatric examination of the claimant on April 28, 2014. Dr. Weingarten issued a report on May 12, 2014. In connection with this report Dr. Weingarten interviewed the claimant, reviewed medical records and the surveillance video from April 2014. Dr. Weingarten diagnosed a "high probability of malingering," a probable "opioid disorder," a work injury with abnormal MRI and diagnosis of right L5 radiculopathy and a "previous history of back pain." Dr. Weingarten opined that the claimant does not have a work-related psychiatric condition. In support of this opinion she cited alleged inconsistencies between the claimant's statements to her and the contents of the medical records. For instance, she noted the claimant denied prior use of narcotics except for taking some Percocet for a knee injury. However, the medical records show the claimant told the emergency room (on November 15, 2013) that hydrocodone had helped control back pain in the past. She also opined that the "most

striking" inconsistencies involved the video surveillance where "within the same day [the claimant] walks with no apparent difficult at his own home, and doing errands and walks with a great deal of difficulty when he is at the medical center." Dr. Weingarten also noted that Dr. Wunder opined that the claimant's pain behavior was "disproportionate to the MRI findings."

23. Dr. Weingarten stated in her report that the diagnosis of malingering includes the "intentional production of grossly exaggerated symptoms." She stated that the claimant does have abnormal MRI findings but he could still be malingering by exaggerating his symptoms. Dr. Weingarten opined the "external incentives here are likely obtaining narcotic medications, avoiding work, or obtaining financial compensation." She suggested that the treating physicians review the surveillance video and inconsistencies in the claimant's history to see if they were "concerned about malingering." Dr. Weingarten also expressed concern the claimant was being prescribed opioid medications and diazepam. She cited the claimant's request for hydrocodone at the emergency room, the fact that he ran out of opioids "too soon" on at least one occasion and his continued reports of high degrees of pain despite the use of the medications.

24. The claimant returned to work at light duty on May 7, 2014. Sometime at the end of May or early June 2014 he began working full time.

25. On May 10, 2014 the claimant returned to Dr. Cohen. The claimant reported he had undergone another injection with Dr. Wunder which substantially reduced his lower extremity symptoms. Dr. Cohen noted the claimant had undergone the examination by Dr. Weingarten, although he had not seen her report. Dr. Cohen stated that from his perspective "there is no evidence to suggest malingering nor an inclination towards a symptom magnification." Dr. Cohen was aware the claimant had been videotaped and advised the claimant that the "inconsistencies" mentioned by Dr. Weingarten involved what the videotape showed the claimant could tolerate physically versus his complaints of pain. Dr. Cohen stated his objective was to stabilize the claimant's mood in reaction to the pain and he prescribed Cymbalta.

26. On June 3, 2014, John T. Sacha, M.D., examined the claimant at the request of Dr. Pineiro. The purpose of this examination was to make recommendations regarding further care and to "take over the opioid analgesics." Dr. Sacha's report records that the claimant gave a pre-injury history of "on and off mild back pain in the past but no specific injuries or care." Dr. Sacha documented 3/5 positive Wadell signs, moderate pain behaviors and frequent grimacing. Dr. Sacha's impressions included lumbosacral radiculopathy, adjustment disorder and opioid dependence. Dr. Sacha opined the claimant exhibited "significant symptoms that appear to outweigh the findings." Dr. Sacha recommended an EMG and expressed concern about the claimant's "need for higher amounts of opioid analgesics and other medications." Dr. Sacha discontinued OxyContin and Valium, and switched Claimant to Nucynta 150 and baclofen.

27. On June 11, 2014 Dr. Pineiro stated the claimant could work "modified activity." He was released to work 8 hours per day with no repetitive lifting over 10 pounds and no pushing or pulling with more than 10 pounds of force.

28. On June 18, 2014 Douglas Hemler, M.D. performed electrodiagnostic studies. Dr. Hemler reported the EMG studies were normal with "no current evidence to support lumbar radiculopathy."

29. The claimant testified he was working essentially full-time from the middle of May 2014 through June 2014.

30. On June 24, 2014, Dr. Sacha reviewed the EMG results. He recorded that that the results were "normal with no acute or chronic radiculopathy." Dr. Sacha stated that the claimant exhibited a "nonphysiologic presentation of ongoing symptoms" and opined he was likely at maximum medical (MMI) improvement without the need for further interventional procedures, injections, or surgery.

31. Medical records show that the claimant had received significant treatment for back pain prior to November 15, 2013.

32. In approximately 2006 the claimant sustained a non-industrial back injury while riding a motorcycle. On August 16, 2010 he sought treatment from his PCP, Jay M. Wolkov, D.O., of the Gunnison Family Medical Center (GFMC). Dr. Wolkov noted the history of the motorcycle accident and stated the claimant reported he had "done too much" over the weekend and was now experiencing moderate to severe back pain. Dr. Wolkov prescribed Valium, Ibuprofen and Vicodin for the back pain. On August 21, 2010, Dr. Wolkov wrote a note excusing the claimant from work from August 18-21, 2010. The medical records indicate the claimant did not return for treatment after August 16, 2010, but GFMC "called in" prescriptions for diazepam/Valium and Vicodin through May 5, 2011. On May 5, 2011, and again on June 27, 2011, the GFMC medical records indicate the claimant was advised that he would receive no further medication refills without returning to GFMC for an in-person visit. On July 1, 2011, the medical records indicate that GFMC called the claimant but his phone number had been disconnected.

33. On October 31, 2011 the claimant was examined at the Orthopaedic Center of the Rockies by William D. Biggs, M.D. The claimant reported a history of "a couple of episodes of back pain in the last five years or so where it has kept him out of work." On October 31 the claimant reported this pain had "started buggin him again" and had gotten worse over the last four weeks. X-rays showed a "sciatica type scoliosis curve" and disc degeneration at L5-S1. Dr. Biggs's impressions included disc degeneration, back pain and annular tearing. He opined most of the claimant's symptoms were attributable to muscle spasm" and prescribed a Medrol Dosepak, Flexeril and Vicodin.

34. On April 19, 2013 the claimant presented to Associates in Family Medicine, where he was examined by Steven Broman, M.D. The claimant reported a

history of intermittent back pain for 7 years and that riding in an auto all day had made it acutely worse. On physical examination, Dr. Broman documented that Claimant's gait was "stooped and antalgic bilaterally." There was lumbar paraspinal muscle tenderness. Dr. Broman assessed a "lumbar sprain" and prescribed cyclobenzaprine and hydrocodone-acetaminophen.

35. The claimant returned to Associates in Family Medicine on June 5, 2013 and was examined by Terry Scofield, PA-C. PA Scofield recorded that the claimant "was seen in urgent care by Dr. Bowman [sic] in April and since that time he has had several refills for pain medication and muscle relaxants." The claimant had been told there would be no more refills until he had an appointment. The claimant reported there had been a lot of physical activity to his job that was unexpected and this has worsened his condition. On physical examination the claimant exhibited a "normal gait" but reduced range of motion with extension and flexion. PA Scofield prescribed Vicodin and cyclobenzaprine but advised the claimant that if his pain persisted on such a chronic level for months at a time he needed to be in pain management. PA Scofield referred the claimant to Dr. Brad Sissons for this purpose.

36. There is no credible or persuasive evidence that the claimant ever scheduled an appointment with Dr. Sissons.

37. On June 30, 2014, Carlos Cebrian, M.D., authored a report based on his independent medical examination conducted at the request of the respondent. Dr. Cebrian examined the claimant on May 21, 2014. He also reviewed medical records of the claimant's back treatment prior to November 15, 2013, the medical records after the November 2013 injury, the surveillance video, Dr. Weingarten's report and Dr. Cohen's reports. Dr. Cebrian diagnosed lumbar spine pain, probable malingering "per Dr. Weingarten," chronic opioid use and obesity. Dr. Cebrian wrote that his physical examination was "unremarkable with the exception of mild discomfort and self-limited range of motion." Dr. Cebrian opined that since the November 2013 injury the claimant has exhibited "exaggerated responses." In support of this opinion Dr. Cebrian noted the claimant reported worsening pain despite the absence of an objective changes between the MRIs performed in December 2013 and April 2014. Dr. Cebrian also cited Dr. Coester's opinion that the claimant's symptoms were disproportionate to the MRI findings and the claimant's inconsistent pain behaviors depicted in the surveillance video. Dr. Cebrian opined the claimant had pre-existing degenerative disc disease for which he was treated with narcotic pain medication. Dr. Cebrian wrote that he was unable to "state within a reasonable degree of medical probability whether [the claimant] suffered an injury on" November 15, 2013. Dr. Cebrian further opined that at most the claimant "would have had a temporary aggravation of his underlying multi-level degenerative disc disease." He opined there was no "relationship between the current symptomatology and the work incident" of November 15, 2013. Dr. Cebrian recommended that any provider who is considering treatment watch the video surveillance in its entirety, review the psychiatric IME from Dr. Weingarten, and review then claimant's narcotic history before making any treatment recommendations.

38. The claimant alleges he sustained a compensable foot injury on July 1, 2014. The claim for this injury is assigned WC 4-955-722.

39. The claimant testified as follow concerning the foot injury. On July 1, 2014 he was at work. At approximately 7:00 a.m. he was backing a "power jack" out of a truck and lost his footing. The handle on the power jack then turned and his left foot was crushed against the trailer wall. The claimant opined that his low back problems contributed to this incident because the low back pain made him "unstable" and he did not have good balance. He also testified that the incident was caused by "walking backwards" and using the handle. The claimant stated he reported the injury to the assistant store administrator (Ms. Sheryl Rosell) and to the assistant store manager Christine Chase. The claimant testified that after this incident his left foot was sore and he could not put much weight on it. He also indicated he had intense low back pain.

40. On July 1, 2014 the claimant completed his shift and got off of work at approximately 1:00 p.m. He then went to see Dr. Pinero. The claimant testified he did not believe this was a scheduled visit.

41. Mr. Jesse Ketterman (Ketterman) testified as follows. He is the claimant's fellow employee. He was working on the loading dock on the morning of July 1, 2014. Although he did not see any accident he heard a loud noise like the power jack had hit something. He then saw the claimant who appeared to be in pain, although he could not tell if it was the claimant's foot or back that was hurting. Ketterman testified that prior to July 1, 2014 he observed the claimant had difficulty walking and tended to favor one side. On July 1, 2014 Ketterman observed the claimant was able to walk out of the truck trailer but he was limping much more than before. The claimant told Ketterman that he had mashed his foot but did not mention any back pain.

42. Ms. Christine Chase (Chase) testified as follows. On July 1, 2014 she was the assistant manager at the store where the claimant worked. When she arrived at work at 8:00 a.m. on July 1, 2014, she was advised by a secretary that the claimant had hurt his foot. She went to see the claimant who told her that he stumbled while moving a power jack and smashed his foot between the pallet and the trailer wall. The claimant complained of foot pain but did not mention any back pain. The claimant removed his shoe and sock to show Chase his foot, but she did not see any swelling or bruising. Chase asked the claimant to report back to her before the end of his shift, but he did not report back to her before leaving the store on July 1, 2014. Chase opined that the claimant's limp after July 1, 2014 was no different than it was before July 1.

43. Chase further testified that at approximately 3:00 p.m. on July 1, 2014 she received a call from the claimant stating he had a previously scheduled doctor's appointment for his low back. The claimant advised Chase that he reported to the doctor that he had hurt his foot at work that day. The claimant stated that an x-ray was taken of his foot and that he had suffered a contusion. She recalled the claimant stated that the doctor had taken him off work seven days because of his back and not for his foot.

44. Dr. Pineiro dictated a report concerning her examination of the claimant on July 1, 2014. With regard to the history of present illness she wrote the claimant was returning for a "recheck" of a low back injury and his pain level was 9 out of 10. The claimant reported his back pain was worsening and he did not feel safe at work. The claimant also gave a history that today "he was in the dock and he crush [sic] Lt foot and ankle between the trailer door and pallet." The resulting pain was "moderate." On examination of the lumbar spine Dr. Pineiro noted bilateral muscle spasms. The claimant's range of motion on flexion, extension, left and right lateral flexion and rotation were reportedly "restricted" but painless. Dr. Pineiro assessed a back contusion, radicular pain, foot contusion and ankle contusion. Dr. Pineiro wrote that "due to [the claimant's] severe pain low back and new injury foot and ankle he will not be able to return to work." She advised the claimant that the "ankle and foot would be considered a separate work related injury" that he needed to report.

45. On July 9, 2014 the claimant returned to Dr. Pineiro. He reported that his foot was "back to baseline" but his back pain was "8/10." On examination of the lumbar spine Dr. Pineiro noted bilateral muscle spasms and restricted range of motion that was painful. She noted the claimant was not working and could not work because of pain. She released the claimant to work with restrictions of no squatting and no climbing.

46. The claimant testified that he worked a full day on July 10, 2014. He did not work from July 11, 2013 through July 23, 2014. He stated that he felt sick on July 11 and went to see Dr. Pineiro. He stated that he had not been able to sleep, his face was flush and his neck was tingling and his respiration was not functioning normally. He stated that he had stopped taking his medications prior to July 11, 2014. The claimant explained that he stopped taking his medication because he was concerned the medications were damaging his internal systems.

47. Dr. Pineiro examined the claimant on July 11, 2014 at a "non-scheduled appointment." Dr. Pineiro noted a history that the claimant stopped his medication several days ago and was now experiencing numbness of the face, chest pain, right upper extremity numbness and was "afraid." On examination of the lumbar spine Dr. Pineiro noted no muscle spasms. Dr. Pineiro assessed withdrawal from opioids, radicular pain and back contusion. However, the claimant's range of motion was restricted. Dr. Pineiro placed the claimant on a "no activity" status for the following 24 to 48 hours "due to withdrawal." Dr. Pineiro wrote that at the last visit the claimant was warned he could go into withdrawal.

48. On July 21, 2014 Dr. Pineiro noted there had been a "Sams Conference" with counsel for both parties. There was a discussion of the claimant being off of work since July 1 because of "cervical and low back issues and symptoms were subjective." Dr. Pineiro noted that respondents' counsel would send reports of Dr. Sesin [sic], a psychiatrist and a "history of back issues and drug seeking, which [the claimant] did not report to this provider." She also noted that she would be given a copy of a video recorded in April.

49. On July 22, 2014 Dr. Pineiro again examined the claimant. Dr. Pineiro noted the foot and ankle injury had resolved and the claimant had no limitation from this injury. The claimant reported a pain level of 7/10 and that he was taking his medications as prescribed. He stated he had been unable to work because of back pain. In the lumbar spine Dr. Pineiro noted bilateral muscle spasms and restricted range of motion. Dr. Pineiro wrote that the claimant admitted he had injured his back in a motorcycle accident at home. Dr. Pineiro stated that she "agreed" the claimant had positive MRI findings and that the claimant's subjective symptoms "are not a good barometer to evaluate his condition." She stated that the MRI findings were inconsistent with the claimant's presentation and that this "is shown consistently with" Dr. Sacha, Dr. Coester and "today with myself." She placed the claimant on light duty with the expectation he would be "very limited." She imposed restrictions of no prolonged standing or walking, no repetitive lifting over 10 pounds, no pushing or pulling with over 10 pounds of force and no bending more than 2 times per hour. Dr. Pineiro stated she would refer the claimant for a Functional Capacity Evaluation (FCE).

50. On July 26, 2014 Dr. Pineiro dictated another note regarding the July 1, 2014 visit. She wrote the claimant was working under restrictions for his back when he crushed his left foot "between the truck door and his forklift." His pain was reportedly "9/10." With regard to the ankle she noted no swelling, full flexion, extension, inversion "and eversion but with pain in the foot." There was no discoloration. Diffuse tenderness was present. The claimant's gait was "antalgic." She noted that x-rays revealed no apparent fractures. Dr. Pineiro diagnosed a crush injury of the left foot. She opined to a reasonable degree of medical probability that the foot condition was the result of work-related injury. She further stated that "due to the fact the patient has zero back pain plus crushed foot, patient is going to be placed off work most due to his foot than his low back."

51. On July 29, 2014 Dr. Pineiro authored a WC 164 with regard to the claimant's reported ankle injury of July 1, 2014. She wrote that a as a result of this injury the claimant was unable to work from July 1, 2014 to July 9, 2014.

52. On August 1, 2014 the claimant underwent an FCE. The FCE placed the claimant in the "sedentary-light" work category. He scored 1/5 "by Waddell's protocol indicating that non organic signs are not present and he passed 20/22 validity criteria" which suggested "excellent effort and valid results which can be used for medical and vocational planning." The claimant did not participate in the "constant part of the FCE testing" due to not being safe in his participation in his occasional material testing, especially in his leg lifting, overhead lifting, one hand carrying and dynamic pushing and pulling. The FCE noted the claimant described his job as "very physical, and he is not able to perform his regular work related tasks."

53. On August 10, 2014 Dr. Pineiro issued a report opining the claimant had reached MMI on August 8, 2014 with a 17% whole person impairment rating. This included 7% impairment of the lumbar spine and 11% impairment for reduced range of motion in the lumbar spine.

54. Dr. Wunder reviewed the surveillance video from April 2014. He also reviewed Dr. Cebrian's report. In a report dated August 13, 2014 Dr. Wunder commented that the video did show "some mild limping occasionally. Therefore, he could not say the claimant had "absolutely no back pain." However, Dr. Wunder opined that there was "significant symptom magnification." Dr. Wunder further opined that that Dr. Pineiro's rating was correct "based on information given." Dr. Wunder also noted that the claimant underwent an FCE and he was given a restriction "in lifting, pushing, and pulling." However, Dr. Wunder stated the FCE reports that none of these activities were tested. Therefore Dr. wunder did not "necessarily agree with the physical restrictions."

55. The claimant proved it is more probably true than not than on July 1, 2014 he sustained an injury to his left foot arising out of and in the course of his employment. The claimant also proved it is more probably true than not that this injury proximately caused temporary total disability for the period July 2, 2014 through July 9, 2014.

56. The claimant credibly testified that on July 1, 2014 he was at work pulling a power jack out of a truck when the handle turned and crushed his foot against the trailer wall. The claimant's testimony that this event occurred is corroborated by the credible testimony of the claimant's co-employee Ketterman who was working on the loading dock and heard a loud noise like the power jack had hit something. Ketterman also credibly testified that he saw the claimant who appeared to be in pain and was limping worse than he had prior to this incident. Moreover, the claimant immediately advised Ketterman that he had hurt his foot. The claimant's testimony is further corroborated by Ms. Chase's testimony that the claimant reported the foot injury to her on the morning of July 1, 2014. The claimant's testimony is further corroborated by the history of a left foot injury that he gave to Dr. Pineiro when she examined him on the afternoon of July 1, 2014.

57. The claimant proved it is more probably true than not that the foot injury of July 1, 2014 proximately caused temporary total disability for the period of July 2, 2014 through July 9, 2014. Dr. Pinero credibly diagnosed a "foot contusion" when she examined the claimant on July 1, 2014 and credibly opined this was a "separate work related injury." She also credibly opined that in light of the claimant's back pain and new foot and ankle injury he would not be able to return to work. The ALJ infers from Dr. Pinero's statement that the claimant's restriction from work was at least partially caused by the pain resulting from the foot contusion. Dr. Pinero credibly opined based on the history the claimant gave on July 9, 2014 that the foot had "returned to baseline." Dr. Pineiro's comment is corroborated by her July 22, 2014 note stating the foot and ankle injury had resolved and the claimant was suffering from no limitations associated with this incident.

58. The claimant failed to prove it is more probably true than not that he is entitled to an award of TTD benefits for the period of July 11, 2014 through July 23, 2014.

59. Dr. Pineiro's note of July 11, 2014 indicates the claimant was taken off of work for 24 to 48 hours because of withdrawal symptoms caused by his stopping his medication. This is consistent with the claimant's testimony that he chose to stop his medication because he was concerned about the effects of the medication. The ALJ finds that a preponderance of the evidence establishes the claimant's decision to stop the medication, which led in turn to withdrawal symptoms and Dr. Pineiro's release from work, constituted an intervening cause of the claimant's wage loss between July 11, and July 13, 2014. The claimant's decision to stop his medication after being warned of the possible consequences was not caused by the natural progression of the industrial injury, but was instead caused by the claimant's intervening decision to stop his medication.

60. Dr. Pineiro's note of July 21, 2014 establishes that the claimant was also off of work because of back symptoms which were "subjective." This is consistent with Dr. Pineiro's note of July 22, 2014 which states the claimant gave a history that he was unable to work because of back pain.

61. A preponderance of the credible and persuasive evidence establishes that the cause of the claimant's failure to perform the modified duty that was available to him between July 11, 2014 and July 23, 2014 was not disability caused by injury-related back pain, but was instead his own decision to stop working while providing his treating physicians exaggerated claims of back pain. In this regard the ALJ credits the opinions of Dr. Cebrian and Dr. Weingarten that the claimant has a history of malingering in the sense that he exaggerates his back pain. The opinions of these physicians are supported by the video surveillance depicting wide differences in the claimant's pain behaviors over a brief period of time. These opinions are further supported by evidence from Dr. Weingarten and Dr. Pinero that the claimant failed to give them complete histories of his pre-injury back pain and treatment. Moreover, Dr. Coester credibly opined the claimant's reports of symptoms are disproportionate to his MRI findings, Dr. Sacha credibly opined that the claimant's symptoms outweigh his findings and Dr. Pineiro credibly opined the claimant's subjective symptoms are not a good barometer of condition. Dr. Wunder assessed significant symptom magnification. Further, the claimant was admittedly able to perform restricted duty of a full-time basis for more than a month prior to suffering the foot injury on July 1, 2014.

62. A preponderance of the credible evidence establishes the claimant did not injure or reinjure his back on July 1, 2014. Chase and Ketterman credibly testified that when they spoke to the claimant on July 1 he did not report any new back pain. Dr. Pinero's report of July 1, 2014 does not document a new back injury, but instead states the claimant had sustained a new foot and ankle injury that he would need to report. Dr. Pinero did not state the claimant needed to report a new back injury. In fact, Dr. Pinero states the purpose of the July 1visit was to "recheck" the prior back injury. To the extent the claimant's testimony would permit the inference that the July 1, 2014 constituted a new back injury the ALJ finds that testimony is not credible.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), §§8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A Workers' Compensation case is decided on its merits. Section 8-43-201(1). The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

COMPENSABILITY OF FOOT INJURY

The claimant contends he proved by preponderance of the evidence that on July 1, 2014 he sustained a compensable injury on July 1, 2014, and that this injury caused temporary total disability for the period of July 2, 2014 through July 9, 2014. The respondents contend the claimant's testimony concerning the foot injury and resulting disability are not credible. The ALJ concludes the claimant sustained a compensable left foot injury that proximately caused temporary total disability.

Section 8-41-301(1)(c), C.R.S., requires that an injury be "proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment." Thus, the claimant is required to prove a direct causal relationship between the injury and the alleged disability and need for treatment. However, the industrial injury need not be the sole cause of the disability if the injury is a significant, direct, and consequential factor in the disability. See *Subsequent Injury Fund v. Industrial Claim Appeals Office,* 131 P.3d 1224 (Colo. App. 2006); *Joslins Dry Goods Co. v. Industrial Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001); *Seifried v. Industrial Commission,* 736 P.2d 1262 (Colo. App. 1986).

An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arising out of" element is narrower and requires claimant to show a causal connection between the employment and the injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. *See Triad Painting Co. v. Blair*, *supra.*

As determined in Findings of Fact 55 and 56 the claimant proved it is more probably true than not that on July 1, 2014 he sustained a left foot injury arising out of and in the course of his employment. As found, the ALJ credits the claimant's testimony that this injury occurred when he stumbled while pulling a power jack while working in a trailer. The incident occurred when the stumble caused the handle to turn and pinned the left foot against the side of the trailer. The claimant's testimony concerning this incident is corroborated by the credible testimony of Mr. Ketterman as well as the near contemporaneous reports of injury to Ketterman, Chase and Dr. Pineiro. Evidence and inferences inconsistent with these findings and conclusions are not credible and persuasive.

TEMPORARY TOTAL DISABLITY BENEFITS FOR PERIOD JULY 2, 2014 THROUGH JULY 9, 2014

The claimant contends that he proved the left foot injury caused temporary total disability entitling him to temporary total disability (TTD) benefits for the period of July 2, 2014 through July 9, 2014. The ALJ agrees with this argument.

To prove entitlement to TTD benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*.

The existence of disability presents a question of fact for the ALJ. There is no requirement that the claimant produce evidence of medical restrictions imposed by an

ATP, or by any other physician. Rather, lay evidence alone may be sufficient to establish disability. *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997).

As determined in Finding of Fact 57, the claimant proved it is more probably true than not that the foot injury of July 1, 2014 caused a period of temporary total disability from July 2, 2014 through July 9, 2014. Dr. Pineiro credibly diagnosed a foot contusion that totally disabled the claimant from work for the period of July 2, 2014 through July 9, 2014. Although Dr. Pineiro also attributed some of the claimant's inability to work to back pain, it is clear from her credible reports that she believed the foot injury played a substantial causative role in the claimant's inability to work during the disputed period of time.

MEDICAL BENEFITS

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

The claimant proved it is more probably true than not that he is entitled to compensation for the treatment that Dr. Pineiro provided for the claimant's foot injury of July 1, 2014. Based on the reports of Dr. Pineiro the ALJ finds that this treatment was reasonable and necessary to cure and relieve the effects of the injury.

TEMPORARY TOTAL DISABLITY FOR THE PERIOD OF JULY 11, 2014 THROUGH JULY 23, 2014

The claimant contends he proved he is entitled to an award of TTD benefits for the period of July 11, 2014 through July 23, 2014. The claimant argues that the MRI scans demonstrate "objective medical evidence of [his] low back injury" and that he has "suffered significant symptoms" with respect to the low back injury from the date of injury and continuing through July 23, 2014. He also cites the permanent impairment rating issued by Dr. Pineiro and Dr. Wunder's comment that the surveillance video documents "some level of back pain." The claimant also cites the fact that Dr. Pineiro took the claimant off of work on July 11, 2014 because of increased low back pain, and symptoms of opioid withdrawal. The respondents argue that Dr. Pineiro's decision to restrict the claimant from work was due to his unreliable subjective complaints, and that Dr. Pineiro subsequently admitted that the claimant's subjective complaints are not a good barometer of his disability or lack thereof.

Here it is undisputed, and the ALJ finds, that the claimant returned to modified employment and worked a regular shift on July 10, 2014. Therefore, the claimant's entitlement to TTD benefits ended and he carried the burden of proof to re-establish entitlement to TTD benefits commencing July 11, 2014. Section 8-42-105(3)(b), C.R.S. (TTD benefits end when the claimant returns to regular or modified employment).

In order to receive additional TTD benefits the claimant is required to prove that as of July 11, 2014 the industrial injury of November 15, 2013 caused additional wage loss. Where the evidence establishes that a wage loss is caused by an intervening event the claimant is not entitled to additional TTD benefits. *See Roe v. Industrial Commission*, 734 P.2d 138 (Colo. App. 1986); *Caraveo v. David J. Joseph Co.,* WC 4-358-465 (ICAO 2010); *Collinge v. Safeway,* WC 4-680-590 (ICAO 2007). The question of whether alleged disability is the result of the effects of the industrial injury or some intervening cause is one of fact for determination by the ALJ. *Collinge v. Safeway, supra.*

As determined in Findings of Fact 59 through 61, the claimant is not entitled to an award of TTD benefits for the period of July 11, 2014 through July 23, 2014. As found, a preponderance of the evidence establishes that during this period of time the claimant's wage loss was caused first by his personal decision to stop taking his medications so as to produce withdrawal symptoms. The remainder of his wage loss was caused by his decision to avoid performing modified duty by making exaggerated claims of back pain to his treating physicians. As found, the claimant's wage loss during this period of time was not caused by the effects of the industrial injury.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the ALJ enters the following order:

1. Insurer shall pay claimant interest at the rate of 8% per annum on compensation benefits not paid when due.

2. The claimant sustained a compensable injury in WC 4-955-722.

3. As a result of the compensable injury in WC 4-955-722 the insurer shall pay temporary total disability benefits for the period of July 2, 2014 through July 9, 2014.

4. As a result of the compensable injury in WC 4-955-722 the insurer shall pay for reasonable and necessary medical expenses including those provided by Dr. Pineiro.

5. The claim for temporary total disability benefits from July 11, 2014 through July 23, 2014 is denied.

6. Issues not resolved by this order are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether claimant has proven by a preponderance of the evidence that employer is liable for penalties for failing to report an injury pursuant to Section 8-43-101(1)?

- Whether claimant has proven by a preponderance of the evidence that insurer is liable for penalties for failing to admit or deny liability in violation of Section 8-43-103(1)?

- Whether claimant has proven by a preponderance of the evidence that insurer is liable for penalties for failing to admit or deny liability in violation of Section 8-43-203?

- The parties stipulated prior to the hearing that claimant would be paid temporary total disability ("TTD") benefits for the period of July 24, 2013 through April 28, 2014 at an average weekly wage ("AWW") of $882.66 subject to the statutory offset for unemployment ("UI") benefits received by claimant.

FINDINGS OF FACT

1. Claimant was employed by employer as a hydro-operator III. Claimant sustained an admitted injury on July 23, 2013 when she tripped over a boulder while walking down to a lake in the course and scope of her employment with Employer. Claimant went to Mr. Way's office after the incident to report her injury. Claimant testified Mr. Way was on the phone when she arrived so she wrote a note to him and left the note on his desk. Claimant then went to her truck, drove back to the office, parked in the garage and went into the office to call the medical clinic to get medical treatment. Claimant testified that the medical clinic instructed claimant to go to the emergency room ("ER").

2. Claimant was evaluated at the ER on July 23, 2013 and referred for x-rays of the left wrist. Claimant was taken off of work through July 26, 2013 (the next Friday). Claimant called Mr. Way after leaving the ER and reported that she would be off of work the rest of the week. According to the WC 164 form signed on July 23, 2013, claimant was released to return to work without restrictions as of July 29, 2013. Claimant testified she dropped off a handwritten report of her injury to Employer on July 24, 2013.

3. Claimant testified she was scheduled to be off of work on July 27, July 28 and July 29, 2013. Claimant testified she returned to work on July 29, 2013 and was informed by Mr. Eddy that there was going to be restructuring and she was being laid off. Mr. Eddy advised claimant she could apply for unemployment.

4. Claimant returned to Dr. Britton on July 30, 2013 and reported she was still in a lot of pain. Claimant reported it was difficult for her to lift or grab anything and that is was hard for her to shampoo her hair. Dr. Britton diagnosed claimant with a left wrist sprain and provided claimant with work restrictions of 5 pounds for her left wrist.

5. Mr. Eddy testified at hearing that he became aware of claimant's injury when Mr. Way reported the injury to him on July 23, 2013. Mr. Eddy testified that he called Insurer and reported the injury to insurer after getting notice of the injury from Mr. Way. Mr. Eddy testified he did not speak to claimant after her injury until July 29, 2013 when he had claimant fill out an accident report. Mr. Eddy testified he was not aware of how to calculate the time lost for an injury.

6. Mr. Eddy testified he had a meeting with claimant on July 29, 2013 and informed claimant of the restructuring and the fact that she was being let go. Mr. Eddy testified that he later spoke with an adjuster from insurer and informed the adjuster that claimant was being let go for restructuring. Mr. Eddy testified that claimant was not at fault for her termination of employment.

7. Under cross-examination, Mr. Eddy acknowledged that the claims adjuster notes indicated that claimant had returned to work full duty as of July 24, 2013. Mr. Eddy noted that this was not true. Mr. Eddy confirmed that claimant could not perform her work with a five pound lifting restriction. According to the report of injury Mr. Eddy filled out for insurer, claimant returned to work on July 29, 2013 and Mr. Eddy reported that the injury was a lost time claim.

8. Ms. Woodrum testified on behalf of respondents. Ms. Woodrum is an adjuster for insurer. Ms. Woodrum testified that she began handling the claim in December 2013 and a different adjuster was assigned to the claim prior to that time. Ms. Woodrum testified that this claim was originally reported to insurer as a "not lost time" claim. Ms. Woodrum testified that when she took over the file in December 2013, the claim was still classified as a "not lost time" claim because claimant had been terminated for cause.

9. According to Ms. Woodrum, the claim notes document that as of July 29, 2013 claimant was terminated for performance and attendance issues and the employer was going to follow up with written confirmation. Ms. Woodrum testified that the written

confirmation was never received. Ms. Woodrum eventually filed a “medical only” general admission of liability on December 19, 2013.

10. Ms. Woodrum testified that when she filed the medical only general admission of liability she did not admit for temporary disability benefits because the notes in the file reflected that the claim was a no lost time claim due to the fact that claimant had been responsible for her termination of employment. Ms. Woodrum eventually filed a general admission of liability admitting for temporary disability benefits beginning May 14, 2014 after claimant underwent surgery and was restricted from work.

11. Respondents presented evidence of requests for information and medical releases that were not timely returned by claimant. However, the delay in receiving information from claimant does not provide a defense to the requirement in the statute that the respondents admit or deny liability in a case involving a lost time claim.

12. Respondents further argue that there was confusion initially in the claim regarding whether claimant was released to return to work and whether claimant was responsible for her termination of employment. However, based on the testimony of claimant and the testimony of Mr. Eddy, claimant did not return to work without restrictions prior to being terminated as a result of the restructuring. When claimant was terminated, she was under active restrictions from her treating physician that limited her ability to return to work.

13. Likewise, while insurer apparently believed that claimant was responsible for her termination of employment, there was no factual basis for this belief. Therefore, insurers reliance on the circumstances surrounding claimant’s termination as a basis for not filing the appropriate forms with the Division of Workers’ Compensation either admitting or denying liability is found to be not reasonable.

14. The ALJ finds, based on the evidence presented at hearing that employer reported the injury to insurer on July 23, 2013 when the first report of injury was filled out by employer and forwarded to insurer by Mr. Eddy. The ALJ finds that employer properly notified insurer based on the first report of injury that indicated that claimant had suffered a lost time injury.

15. However, Section 8-43-101(1), C.R.S. requires the employer to notify the Division of Workers’ Compensation of all injuries resulting in lost time from work in excess of three shifts. While employer appears to have relied on insurer to notify the Division of Workers’ Compensation of the lost time claim, there is insufficient evidence that Insurer notified the division of the injury pursuant to Section 8-43-101(1). Moreover, the plain language of Section 8-43-101(1) that places onus on the employer to notify the Division of Workers’ Compensation of lost time injuries does not allow the

employer to avoid the requirements of reporting lost time injuries by properly reporting said injuries to their insurance carrier.[1]

16. The ALJ therefore concludes that claimant has demonstrated that it is more probable than not that employer violated Section 8-43-101(1). Section 8-43-101(1) requires the employer to notify the division of injuries resulting in more than three shifts of lost time within ten (10) days of the date of the injury. Therefore, employer should have notified the Division of Workers' Compensation of the injury no later than August 2, 2013.

17. Likewise, Section 8-43-103(1), C.R.S. places the onus on employer to report an injury for which compensation and benefits are payable to the insurer and the Division of Workers' Compensation. While this section of the statute allows for the insurer to report the injury to the Division of Workers' Compensation, it does not absolve the employer of liability when the employer properly reports the injury to the insurer but does not properly report the injury to the Division of Workers' Compensation as required by the statute.

18. Crediting the testimony of Mr. Eddy, employer was aware as of July 29, 2013 that claimant had work restrictions that prohibited her from performing her job. Claimant was laid off pursuant to a restructuring, but that does not provide a defense to employer's obligation under Section 8-43-103(1) to notify the Division of Workers' Compensation of the injury as employer was aware as of that date that claimant had sustained a lost time injury. This is further evidenced by employer's first report of injury to insurer that acknowledges that the claim is a lost time injury.

19. The ALJ finds, based on the evidence presented at hearing, including the testimony of Mr. Eddy and the first report of injury entered into evidence, that insurer was notified of a lost time claim on July 29, 2013. Insurer may have incorrectly believed that the claim should have been classified as a non-lost time claim, but that does not provide a basis for their failure to either admit or deny liability pursuant to Section 8-43-203(1). The ALJ finds that this violation of the statute was resolved by virtue of the medical only general admission of liability filed by insurer on December 19, 2013.

20. Section 8-43-203(1), C.R.S. requires the insurer to notify the division as to whether liability was admitted or denied within twenty (20) days of the date the notice of injury was filed, or should have been filed with the Division of Workers' Compensation

[1] The ALJ notes that employer is likely in the best position to identify whether an injury has resulted in lost time to the injured worker, and this may explain why the statute places the onus on the employer to notify the Division of Workers' Compensation of injuries such as this. Regardless, however, the ALJ relies on the plain language of the statute and therefore, does not need to make any inquiry into the legislative intent of the statute to interpret it's meaning.

pursuant to Section 8-43-101, C.R.S. As indicated above, notice of the injury should have been provided to the Division of Workers' Compensation no later than August 2, 2013. The ALJ therefore concludes that claimant has demonstrated that it is more probable than not that insurer violated Section 8-43-203(1), C.R.S. for the period of August 22, 2013 (20 days after the period for which notice of the injury should have been filed with the Division of Workers' Compensation) until December 19, 2013 when the medical only general admission of liability was filed.

21. While Section 8-43-203(1), C.R.S., provides that notice to the employer is not considered notice to the insurer, the ALJ determines in this case that insurer was properly notified that this claim involved a lost time injury based on the first report of injury provided to insurer by Mr. Eddy and the testimony of Mr. Eddy at hearing. The mere fact that insurer believed claimant's case may involve a termination for cause scenario does not provide insurer with a basis to fail to admit or deny liability where the factual basis for such a defense is not established.

22. The ALJ notes that Section 8-43-203 allows that ALJ discretion to award a penalty of up to one day's compensation for each day respondents failed to notify the Division of Workers' Compensation and claimant of whether they were admitting or denying liability and respondents argue in their position statement that mitigating factors provide a basis for awarding less than a full days compensation for the violation of the statute. However, based on the evidence at hearing, the ALJ concludes that insurer knew or reasonably should have known that this case involved a lost time claim when employer did not provide insurer a written statement regarding claimant's termination of employment. Despite not receiving information that would support insurers' claim that claimant was responsible for her termination of employment, the evidence fails to establish that insurer made sufficient additional steps to obtain the appropriate information to support this position. As such, the ALJ finds that an award of one day's compensation is appropriate for this case.

23. Claimant argues in her position statement that the penalty period should run through May 14, 2014, the date the general admission of liability was filed admitting for temporary disability benefits. However, nothing in Section 8-43-203 requires the insurer to admit for temporary disability benefits. Therefore, the violation is ended by the date the medical only general admission of liability is filed (December 19, 2013).

24. Both claimant and respondent have made arguments in their position statements regarding potential penalties under Section 8-43-304(1), C.R.S. However, this penalty issue was not identified as an issue for hearing at the commencement of the hearing. Likewise, the affirmative defenses raised by respondents in their position statement were not addressed at the commencement of the hearing. The ALJ has reviewed the file in light of the issues raised by the parties in their position statements to

determine if such issues could have been tried by consent, but cannot, based on the statements made at hearing and the issues identified on the application for hearing and response to the application for hearing, make a finding that this issue was tried by consent. Due to the fact that there are issues with regard to whether this issue was properly identified at hearing and in the application for hearing, along with affirmative defenses raised by respondents, the ALJ determines that the issue is not properly before the court for resolution in this Order.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2006. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

3. Section 8-43-101(1), C.R.S., states in pertinent part:

> Every employer shall keep a record of all injuries that result in … lost time from work for the injured employee in excess of three shifts or calendar days.... Within ten days after notice or knowledge that an employee has contracted such … lost-time injury to an employee … the employer shall, upon forms prescribed by the division for that purpose, report said … lost-time injury … to the division. The report shall contain such information as shall be required by the director.

4. As found, claimant has proven by a preponderance of the evidence that employer was aware that claimant sustained a lost time injury and failed to report said injury to the Division of Workers' Compensation as required by the statute. As found,

the ALJ credits the testimony of Mr. Eddy and the first report of injury completed by employer that acknowledged that claimant had sustained a lost time injury to establish that employer was aware of claimant's lost time injury.

5. As found, while employer appears to have relied on insurer to provide the appropriate paperwork reporting the injury to the Division of Workers' Compensation, nothing in the statute provides a defense to the employer for the insurer's failure to notify the Division of Workers' Compensation of a lost time injury. Instead, the statute places the onus on the employer to notify the Division of Workers' Compensation of all lost time injuries. The fact that employer may have properly and timely reported the injury to insurer does not provide a defense to requirement of the statute.

6. Section 8-43-103(1), C.R.S., states in pertinent part:

> Notice of an injury, for which compensation and benefits are payable, shall be given by the employer to the division and insurance carrier, unless the employer is self-insured, within ten days after the injury…. If no such notice is given by the employer, as required by articles 40 to 47 of this title, such notice may be given by any person. Any notice required to be filed by an injured employee or, if deceased, by said employee's dependents may be made and filed by anyone on behalf of such claimant and shall be considered as done by such claimant if not specifically disclaimed or objected to by such claimant in writing filed with the division within a reasonable time. Such notice shall be in writing and upon forms prescribed by the division for that purpose and served upon the division by delivering to, or by mailing by registered mail two copies thereof addressed to, the division at its office in Denver, Colorado. Upon receipt of such notice from a claimant, the division shall immediately mail one copy thereof to said employer or said employer's agent or insurance carrier.

7. As found, claimant has proven by a preponderance of the evidence that she provided notice to employer of her injury on July 23, 2013. As found, the testimony of claimant and Mr. Eddy and the evidence at hearing establish that notice of the injury was given to employer on July 23, 2013. As found, employer promptly notified insurer of the injury and, by no later than July 29, 2013, of the fact that the injury was a lost time claim. Insurer mistakenly believed that either that the claimant had been returned to work without restrictions, or that she had been responsible for her termination. However, neither of these issues provide a defense to employer's responsibility to notify the Division of Workers' Compensation of claimant's injury where employer is aware that claimant had not returned to work and was not responsible for her termination of employment.

8. Section 8-43-203, C.R.S. states in pertinent part:

> (1)(a) The employer or, if insured, the employer's insurance carrier shall notify in writing the division and the injured employee or, if deceased, the decedent's dependents within twenty days after a report is, or should have been, filed with the division pursuant to section 8-43-101, whether liability is admitted or contested; except that, for the purpose of this section, any knowledge on the part of the employer, if insured, is not knowledge on the part of the insurance carrier. The employer or the employer's insurance carrier may notify the division electronically….
>
> (2)(a) If such notice is not filed as provided in subsection (1) of this section, the employer or, if insured, the employer's insurance carrier, as the case may be, may become liable to the claimant, if the claimant is successful on the claim for compensation, for up to one day's compensation for each day's failure to so notify; except that the employer or, if insured, the employer's insurance carrier shall not be liable for more than the aggregate amount of three hundred sixty-five days' compensation for failure to timely admit or deny liability. Fifty percent of any penalty paid pursuant to this subsection (2) shall be paid to the subsequent injury fund, created in section 8-46-101, and fifty percent to the claimant.

9. As found, claimant has proven by a preponderance of the evidence that a report should have been filed by August 2, 2013. As found, claimant has proven by a preponderance of the evidence that employer was aware that claimant had sustained a lost time injury on July 23, 2013. As found, claimant has proven by a preponderance of the evidence that insurer failed to timely admit or deny liability within twenty days of the date the report should have been filed.

10. As found, claimant has proven by a preponderance of the evidence that insurer did not file with the Division pursuant Section 8-43-203 notice of whether liability was admitted or denied until December 19, 2013. As found, claimant has proven by a preponderance of the evidence that the employer or insurance carrier may be liable for one day’s compensation for the period of August 22, 2013 through December 19, 2013 as a penalty for their failure to properly admit or deny liability. As found, 50% of the penalty shall be paid to claimant and 50% to the subsequent injury fund as required by statute.

ORDER

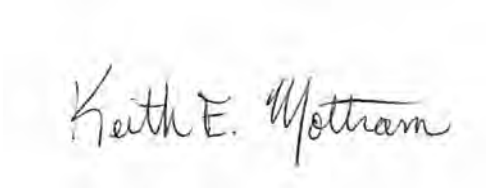
It is therefore ordered that:

1. Insurer shall pay claimant one day's compensation, based on claimant's stipulated AWW, for the period of August 22, 2013 through December 19, 2013, pursuant to Section 8-43-203(2)(a). As required by statute, 50% of this payment shall be made to claimant and 50% to the subsequent injury fund pursuant to Section 8-46-101.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 5, 2015



Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

The issues for determination are:

1. Whether the claimant proved by a preponderance of the evidence that she sustained a compensable injury to her low back on or about January 1, 2011;

2. If so, whether the respondents are responsible for medical benefits incurred prior to the claimant reporting the claim on December 13, 2013 as a work-related injury or occupational disease;

3. If so, and the claimant is entitled to temporary total disability benefits, whether there is a reduction of benefits for the claimant's failure to timely report the claim until December 13, 2013; and,

4. If so, is the claimant barred from recovery based on the statute of limitations since the claimant indicates that her injury began January 1, 2011 and did not report a claim until December 13, 2013, greater than two years after she knew or should have known the seriousness of her condition?

Based upon the findings and conclusion below that the claim is not compensable, the ALJ does not address the remaining issues.

STIPULATIONS

The parties stipulated to the following issues:

1. The average weekly wage (AWW) is $911.77 with a temporary total disability (TTD) rate of $606.85 per week.

2. The right of the respondents to offset for short-term and long-term disability benefits which are noted in respondents' exhibit packet, Exhibit SSS and TTT.

3. Short-term disability was paid to the claimant from December 2, 2013 through May 24, 2014 and long-term disability was paid to claimant from May 24, 2014

through September 25, 2014 and possibly continuing should the claim be deemed compensable.

FINDINGS OF FACT

1. The claimant worked at the respondent-employer's hospital from 2003 until the fall of 2013 as a respiratory therapist. She is currently considered to be on a per diem basis.

2. As part of claimant's duties as a respiratory therapist, she cared for 15 to 20 patients per day providing respiratory treatment. Her duties included positioning patients, responding to codes, and pushing a respiratory cart which weighed approximately 50 pounds.

3. The claimant opined that maneuvering the cart in and out of the elevators was difficult. She testified that she had to lift the cart in and out of the elevator. However, Larry Benner, claimant's supervisor, testified the carts were not difficult to maneuver and if necessary, one would tilt the cart to exit the elevator. He further testified that the initial force to initiate movement of the cart was 10 to 20 pounds.

4. The claimant testified that as a result of her job duties, she sustained a back injury which caused left leg pain radiating to her ankle. The claimant could not identify a specific time or activity in which her back pain actually occurred.

5. The claimant did not report to a supervisor that she had back pain or problems as related to her job duties. The claimant did not request a change in her job duties or accommodations in her job duties prior to her leaving her full-time employment in 2013.

6. The claimant did not file a worker's claim for compensation until December 13, 2013, indicating a date of injury of January 1, 2011. The worker's claim for compensation was not filed until the claimant was informed that her FMLA had run and that the claimant would be placed on PRN status.

7. The claimant owns horses and had previously been engaged in riding until recently.

8. The claimant has a long history of back problems:

9. January 16, 1995 – Her back problems relate back to a workers' compensation injury due to heavy lifting on the job. As a result, the claimant had severe back pain with inability to move and presented in a wheelchair. Her diagnosis was acute back pain and sacroiliitis.

10. Between 1995 and 2010 the claimant was seen in excess of a dozen times for complaints of severe back pain.

11. August 15, 2011 – It was noted that she had sacroiliac pain from an old injury and requested an injection. She was using a TENS Unit daily and was being prescribed Vicodin.

12. September 21, 2011 – The claimant received a sacroiliac injection and continued to receive treatment for a diagnosis of sciatica and SI joint dysfunction. Medication consisted of Lidoderm patches and Vicodin.

13. March 23, 2012 – The claimant wanted an SI joint injection. History provided was that she had a back injury 15 years ago with a recent exacerbation.

14. July 20, 2012 – The claimant had extreme back pain since yesterday from an old injury. She had pain from the left SI joint, down the posterior leg, to her foot. She did note pushing a cart was flaring her back more than usual.

15. July 31, 2012 – The claimant had received a trigger point injection which gave her temporary relief.

16. August 6, 2012 – MRI showed a large left paracentral L5-S1 disc herniation with left L5 and bilateral S1 nerve root impingement. She noted a history of back and leg pain for 1-2 years.

17. 2012 – She was provided with epidural steroid injections in September and December.

18. August 21, 2012 – The claimant asked to be released to work without restrictions and she wanted her paperwork "fudged" in order to return to work. Her diagnosis in 2012 was low back pain/sacroiliac joint inflamed.

19. The claimant returned to work performing her normal job duties without accommodations.

20. On July 23, 2013, claimant was seen at the emergency department. There is no indication from the medical record that the claimant reported this problem as related to her work or her work duties.

21. On August 14, 2013, the claimant was seen by Dr. Michael Brown. His note indicated she had severe recurrence of back pain three weeks ago without benefit from an epidural injection. There was no history of a work-related problem and he specifically notes that coughing and sneezing aggravate her pain. She also complained of numbness and tingling in her left hand.

22. He recommended an MRI which was performed on August 22, 2013. There was no significant difference between the August 6, 2012 and the August 22, 2013 MRI's.

23. Dr. Brown performed surgery consisting of a microdiscectomy on August 27, 2013. The claimant did fairly well until approximately October 14, 2013. She indicated that she had been riding in a car for approximately three hours and was having severe left gluteal pain extending into her leg.

24. An MRI was again performed on October 31, 2013 which revealed a recurrent disc protrusion. The claimant underwent a repeat microdiscectomy at L5-S1 on the left.

25. The claimant returned to work between the surgeries full-duty without restrictions and without accommodations.

26. The claimant underwent her third surgery consisting of a fusion on August 6, 2014.

27. Dr. Rauzzino saw the claimant on behalf of the respondents and issued a report dated August 2, 2014. Dr. Rauzzino reviewed all of the records from January 16, 1995 forward. Dr. Rauzzino testified that most disc problems occur idiopathically without injury. He further testified that disc herniations occur due to heavy lifting or axial loading. Dr. Rauzzino testified that horseback riding would create axial loading. Based on his review of the medical records, it was his opinion that the claimant had a disc herniation as early as 1997 and the progression of this disc expressed itself in symptomology consistent with leg pain. It was his opinion that SI joint problems do not manifest symptoms of leg pain or radiculopathy.

28. Dr. Rauzzino noted there was lack of documentation to suggest that the claimant's back problems occurred while at work for the respondent-employer or during

the performance of her duties as a respiratory therapist. It was his opinion that her work duties did not cause the disc herniation or aggravate or accelerate the disc herniation. It was his opinion that her problems are due to degenerative disc disease and the natural progression of the underlying disc herniation relating back to 1997. He also noted there was no specific event or activity which the claimant noted to account for the acute onset of low back pain radiating to her left leg, while she was at work or performing her work duties. Dr. Rauzzino did not believe that pushing a cart would cause or aggravate a herniated disc. He opined that the disc herniation progressed over time which was consistent with her medical history. He testified that any activities to include activities of daily living would increase her back pain.

29. Dr. Brown testified in deposition that he did not think that claimant's problems in 1995 were the same as the problems he saw her for in 2013. However, he conceded that he did not review any prior medical records nor did he know the history of her back complaints. However, he opined that the history provided to the medical providers was important in determining causation of an injury.

30. Dr. Brown further testified that without a specific episode which caused the disc herniation, it was unlikely related to claimant's work activities. He opined that her pain would be exacerbated by pushing the cart but also anything she did would likely increase her pain. He stated that it is the opinion of neurosurgeons that the discs can herniate idiopathically and without an injury. This statement and opinion was consistent with that of Dr. Rauzzino.

31. The ALJ finds that the opinions of Dr. Rauzzino are more credible than other medical opinions to the contrary.

32. The ALJ finds that the claimant has failed to establish that it is more likely than not that she suffered an injury arising out of and in the course of her employment with the respondent-employer.

CONCLUSIONS OF LAW

1. According to C.R.S. § 8-43-201, "a claimant in a workers' compensation claim shall have the burden of proving entitlement to benefits by a preponderance of the evidence; the facts in a workers' compensation case shall not be interpreted liberally in favor of either the rights of the injured worker or the rights of the employer, and a workers' compensation case shall be decided on its merits." *Also see Qual-Med, Inc. v. Indus. Claim Appeals Off.,* 961 P.2d 590, 592 (Colo. App. 1998) ("The Claimant has the

burden of proving an entitlement to benefits by a preponderance of the evidence."); *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915, 918 (Colo. App. 1993) ("The burden is on the claimant to prove his entitlement to benefits by a preponderance of the evidence."). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.,*104 P.3d 273, 275 (Colo. App. 2004).

2. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1)(c) C.R.S.*; Faulkner v. Indus. Claim Appeals Off.,* 12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for the determination by the ALJ. *Faulkner,* 12 P.3d at 846.

3. For an injury to be compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Off.,* 919 P.2d 207, 210, 210 (Colo. 1996); *Schepker v. Daewoo North*, W.C. No. 4-528-434 (ICAO April 22, 2003). An injury "arises out of" employment when the origins of the injury are sufficiently related to the conditions and circumstances under which the employee usually performs his or her job functions as part of the employee's services to the employer. *See Schepker, supra.* "In the course of" employment refers to the time, place, and circumstances of the injury. *Id.* There is no presumption that an injury arises out of employment when an unexplained injury occurs during the course of employment. *Finn v. Indus. Comm'n,* 165 Colo. 106, 108-09, 4437 P.2d 542 (1968).

4. A pre-existing disease or susceptibility to an injury does not disqualify a claim if the employment aggravates, accelerates, or combines with a pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of a natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Renta*, 717 P.2d 965 (Colo. App. 1995).

5. In deciding whether claimant has met his burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Kroupa v. Indus. Claim Appeals Off.*, 53 P.3d 1192, 1197 (Colo. App. 2002).

6. When considering credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). The decision need not address every item contained in the record. Instead, incredible evidence, unpersuasive testimony, evidence or arguable inferences may be implicitly rejected. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Off.*, 5 P.3d 385 (Colo.App. 2000).

7. The ALJ concludes that the claimant has failed to provide sufficient medical or lay evidence that her back condition is related to her job duties.

8. The credible medical evidence and opinions indicate that the claimant's condition is not work related. As found above, the ALJ concludes that the opinions of Dr. Rauzzino are credible and entitled to persuasive weight.

9. The claimant has failed to establish by a preponderance of the evidence that the claimant's carpal tunnel syndrome and her lateral epicondylitis, arose out of and in the course of her employment with the respondent-employer.

[The Order continues on the following page.]

ORDER

It is therefore ordered that:

The claimant's claim for benefits under the Workers' Compensation Act of Colorado is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Office of Administrative Courts
1259 Lake Plaza Drive, Suite 230
Colorado Springs, CO 80906

ISSUES

I. Whether Claimant is entitled to conversion of a scheduled impairment rating for hearing loss to impairment of the whole person.

II. Whether Claimant's scheduled impairment rating was properly limited to monaural left ear hearing loss.

III. Whether Claimant is entitled to disfigurement benefits pursuant to § 8-42-108(1) as a consequence of his need to wear a hearing aid secondary to his admitted industrial injury.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant is a long time employee of the Colorado Springs Police Department (CSPD), a separate department within the Self-Insured Respondent. Claimant has worked for Employer for approximately 14 years. As a patrol sergeant with CSPD, 50% of Claimant's duties involve administrative tasks. The remaining 50% of his time is spent working as a patrol officer where Claimant is subjected to traffic noise and sirens. Claimant is also exposed to the resonance and sound associated with gunfire while engaged in target practice required for his job. He also enjoys hunting with firearms. Claimant uses ear protection while shooting on the firing range; however, does not when hunting.

2. Prior his hire with the CSPD, Claimant worked as a patrol officer in Kansas where he had significant contact with traffic noise, sirens and gunfire while engaged in target practice.

3. Upon his appointment to the CSPD, Claimant's hearing was tested on October 24, 2000. Claimant's October 24, 2000 hearing test demonstrated minimal right ear hearing loss.

4. On or around October 24, 2013, Claimant reported increased difficulty with his hearing, especially the left ear, which he attributed to his use of ibuprofen to treat a separate work related injury.

5. Claimant underwent a hearing test at the City of Colorado Springs Occupational

Health Clinic on October 24, 2013, which demonstrated a "moderate loss in hearing." A work injury claim was taken and Claimant was referred to Dr. Joseph Hagarty by Employer's representative, Joanie Butero-Gay.

6. Dr. Hagarty evaluated Claimant on December 4, 2013 at which time a repeat audiogram was preformed. Claimant's December 4, 2013 audiogram demonstrated "minimally impaired" hearing on the right side and a "fairly large mid frequency" left ear hearing loss. In his report from December 4, 2013, Dr. Hagarty opined that Claimant's right sided hearing loss had remained "very similar over the past decade." He also opined that Claimant was suffering from "left noise induced hearing loss."

7. Liability for Claimant's left ear hearing loss was accepted by the Self-Insured Respondent.

8. Dr. Hagarty recommended a left ear hearing aid (HA) and diligent ear protection. Claimant was placed at maximum medical improvement (MMI) and assigned impairment by Dr. Hagarty. Dr. Hagarty's impairment calculation reflects that Claimant sustained 24% monaural hearing loss (impairment) in the left ear. As the average threshold readings for hearing in the right ear were less than 25 dB, Claimant had no ratable hearing loss in the right ear. (See Claimant's Exhibit 8, Bates Stamp page 35 and Claimant's Exhibit 9, Section 9.1a ¶ 7)[1] Consequently, the ALJ finds that Claimant has sustained a monaural hearing loss only. According to Dr. Hagarty's impairment rating report, 24% monaural hearing impairment equates to a 3% binaural hearing impairment[2]. Dr. Hagarty did not reflect the relationship of binaural hearing impairment to impairment of the whole person.

9. Claimant requested a Division Independent Medical Examination (DIME) which was completed by Dr. William S. Griffis on June 30, 2014. Dr. Griffis agreed with Dr. Hagarty's date of MMI. He also completed an impairment rating using Claimant's previously recorded audiogram readings and Tables 1, 2 and 3 of Chapter 9 of the *AMA Guides to the Evaluation of Permanent Impairment Third Edition (Revised)*(hereinafter the *AMA Guides*). Using the readings from Dr. Hagarty's audiogram, Dr. Griffis reached the same result concerning Claimant's monaural hearing loss as did Dr. Hagarty. Dr.

---

[1] Paragraph 7 of section 9.1a provides that "If the average hearing level at 500, 1,000, 2,000, and 3,000 Hz is 25 dB (ANSI-1969) or less, no impairment is presumed to exist in the ability to hear everyday sounds under everyday listening conditions. In this case, Claimant's average threshold reading for the right ear was 23 dB.

[2] According to Section 9.1a ¶ 8 a purely monaural hearing impairment "should be converted to binaural hearing impairment" using the formula provided for in the paragraph, with 0% hearing impairment for the better ear. Table 3 of Chapter 9 is derived from this formula. The formula is expressed as:

$$\text{Binaural Hearing Impairment, (\%)} = \frac{\text{5x\% hearing Impairment of better ear}}{6} + \text{\% hearing impairment of poorer ear}$$

In this case, Dr. Hagarty calculated Claimant's binaural hearing loss as follows: 0% + 16dB ÷ 6 = 2.6, which Dr. Hagarty rounded up to 3%.

Griffis also calculated Claimant's binaural hearing loss using the formula provided for by Chapter 9, § 9.1a ¶ 8; however, the ALJ finds that Dr. Griffis expressed Claimant's binaural hearing loss as 3% WP or whole person impairment. Dr. Griffis did not apportion any of Claimant's hearing loss to prior exposure(s) for the following reasons: insufficient medical information, the left ear hearing loss had not be treated previously and the left ear hearing loss had not been independently disabling at the time of Claimant's October 24, 2013 injury.

10. On July 23, 2014, Respondent filed a Final Admission of Liability (FAL) admitting to 24% scheduled impairment for monaural left ear hearing loss. While the FAL took a position regarding disfigurement benefits, it noted simply $0.00 in the benefit summary. Claimant objected to the FAL on August 21, 2014 and filed an application for hearing endorsing the issues of disfigurement and permanent partial disability (PPD) benefits. Claimant was careful to note in his application for hearing that he accepted the impairment rating by the DIME physician, but sought to convert the 24% scheduled rating to the 3% whole person rating expressed by Dr. Griffis on the grounds that he had sustained "functional impairment" beyond his monaural hearing loss. Claimant reiterated this position at hearing. Consequently, the ALJ finds Claimant's burden of proof concerning the "conversion" of PPD to be subject to a preponderance of the evidence standard. Absent conversion of his scheduled impairment to whole person impairment, Claimant asserted that his scheduled impairment should have been calculated at 139 weeks as provided for under C.R.S. § 8-42-107(2)(hh) as opposed to 35 weeks as provided for under C.R.S. § 8-42-107(2)(ii).

11. Claimant testified that since his injury, he is cognizant to position co-workers to his right side so their speech is directed into his right ear even with use of his hearing aid. According to Claimant, his hearing aid amplifies background noise making it more difficult to converse in crowded rooms and discern where specific sounds are coming from. Claimant testified that cold weather causes ringing in his ear and he must put his seat belt on before starting vehicles because the dinging sound associated with ignition, in the absence of being pre-belted, is particularly amplified, painful and bothersome. Claimant testified that he must purchase replacement batteries frequently and take the device out when he is on the shooting range. Despite the aforementioned adjustments, Claimant admitted during cross examination that he has returned to full duty work and is able to perform all functions required of his job and daily living. Based upon the evidence presented, the ALJ finds that, despite his hearing loss, Claimant has not experienced a decreased capacity to meet his personal, social or occupational demands. Accordingly, the ALJ finds that Claimant's "functional impairment" is limited the hearing in his left ear.

12. Claimant has failed to prove by a preponderance of the evidence that he has sustained functional impairment beyond the left ear which would warrant conversion of his 24% scheduled impairment rating to impairment of the whole person. Accordingly, the ALJ finds that Claimant sustained scheduled impairment only as a result of his October 24, 2013 work injury.

13. The ALJ is not persuaded by Claimant's assertion that his scheduled impairment

was improperly limited to one ear. Scheduled impairment for hearing loss is enumerated on the schedule set forth in subsection (2) of § 8-42-107, C.R.S. According to that schedule, injuries causing total deafness in both ears entitle such injured employees to receive compensation for a total of 139 weeks. Conversely, injuries which cause total deafness in one ear limit compensation to a period of 35 weeks. Claimant asserts that his scheduled impairment should have been calculated on the basis of 139 weeks (total deafness of both ears). As found at Findings of Fact, ¶¶ 8-9 above, Claimant has partial unapportioned[3] left monaural hearing loss only. While the hearing in Claimant's right ear is "minimally impaired", impairment for this loss is not measurable because it falls below the 25 dB threshold to qualify as an impairment in the ability to hear everyday sounds under everyday listening conditions. Moreover, simply because Dr. Hagarty and Dr. Griffis indicated that Claimant has 3% binaural impairment does not mean that Claimant suffers from binaural hearing loss.[4] To the contrary, the *AMA Guides* simply provide that purely monaural hearing impairments should be converted to binaural hearing impairment and converted further to impairment of the whole person for inclusion in the impairment rating report. In this case, Claimant's hearing loss is limited to his left ear. Consequently, the ALJ finds that compensation for Claimant's scheduled impairment was properly limited to the category of "total deafness of one ear" entitling him to receive compensation for 35 weeks as provided pursuant to § 8-42-107(2)(ii), C.R.S.

14. Claimant wears an artificial hearing device made up of two parts; a small clear plastic tube and a small gray battery pack containing a small antenna which Claimant places behind his left ear. While subtle, the device is visible, especially when viewed from the side and rear. Claimant's use of this artificial device constitutes an alteration of the "natural appearance" of his head. Consequently, the ALJ finds Claimant's use of a hearing aid to constitute a disfigurement contemplated by § 8-42-108(1), C.R.S. The ALJ finds that Claimant has proven his entitlement to disfigurement benefits by a preponderance of the evidence.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

A. When a claimant's injury is listed on the schedule of disabilities, the award for

[3] While Dr. Hagarty apportioned the percentage of Claimant's hearing loss to non-occupational factors, the evidence presented establishes that Respondent's accepted liability for Dr. Griffis unapportioned impairment rating.

[4] The ALJ finds that Dr. Griffis' expression that Claimant had a 3% whole person impairment is a clerical error and that he likely intended to reflect that Claimant had 3% binaural hearing loss as did Dr. Hagarty since he not reference that he utilized Table 4 of the AMA Guides to reflect the relationship of binaural hearing impairment to impairment of the whole person in his DIME report. Since Claimant's impairment is limited to scheduled monaural hearing impairment only, the ALJ finds Dr. Griffis error immaterial.

that injury is limited to a scheduled disability award. Section 8-42-107(1)(a), C.R.S. This is true because the term "injury" as used in § 8-42-107(1)(a)-(b), C.R.S., refers to the part parts of the body which have been impaired or disabled, not the situs of the injury itself or the medical reason for the ultimate loss. *Walker v. Jim Fucco Motor Co,* 942 P.2d 1390 (Colo. App. 1997); *see also Strauch v. PSL Swedish Healthcare System,* 917 P.2d 366 (Colo. App. 1996). Thus, while ratings issued under the AMA Guides are relevant to determining the issue, they are not decisive as a matter of law. *Strauch v. PSL Swedish Healthcare System, supra*. Whether a claimant has sustained a scheduled injury within the meaning of § 8-42-107(2), C.R.S. or a whole person impairment compensable under § 8-42-107(8), C.R.S. is a factual question for the ALJ and depends upon the particular circumstances of the individual case. *Walker v. Jim Fucco Motor Co, supra*. Here, conversion of Claimant's scheduled impairment to impairment of the whole person is not warranted. While Claimant's left ear hearing loss has resulted in simple adjustment to some activities, it has not resulted in any decreased capacity to meet his personal, social or occupational demands. Consequently, the ALJ concludes that Claimant has not sustained a "functional impairment" of bodily function not listed on the scheduled of disabilities which would warrant conversion.

B. In *Arkin v. Industrial Commission*, 145 Colo. 463, 358 P.2d 879 (1961), the Court held that the term "disfigurement" as used in the statute, contemplates that there be an "observable impairment of the natural person." As found in this case, Claimant wears a hearing aid which alters the natural appearance of his head constituting a disfigurement as provided for by Section 8-42-108 (1), C.R.S. *See also*, *Jane M. Felix v. The Griffith Center, Inc.,* W.C. 3-972-633 (ICAO January 12, 1998).

ORDER

It is therefore ordered that:

1. Claimant's request for conversion from scheduled impairment to impairment of the whole person is denied and dismissed.

2. Claimant's request for scheduled impairment calculated on the basis of 139 weeks is denied and dismissed.

3. Claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view, which entitles Claimant to additional compensation. Insurer shall pay Claimant $1,500.00 for that disfigurement. Insurer shall be given credit for any amount previously paid for disfigurement in connection with this claim.

4. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 12, 2015

Colorado Springs, CO 80906

ISSUES

- Did the claimant prove by a preponderance of the evidence that he sustained a compensable injury or occupational disease proximately caused by the performance of service arising out of and in the course of his employment?

- Did the claimant prove by a preponderance of the evidence that he is entitled to an award of temporary total disability benefits for the March 27, 2014 to September 5, 2014?

- Did the claimant prove by a preponderance of the evidence that he is entitled to an award of reasonable, necessary and authorized medical benefits for treatment of his low back condition?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant's Exhibits 1 through 10 and 12 through 13 were admitted into evidence. Respondents' Exhibits A through M were admitted into evidence.

2. The claimant's date of birth is January 20, 1959. Since 1990 the claimant has worked on and off for the employer as a ceiling installer. The claimant was so employed on September 2, 2013.

3. At the hearing on November 25, 2014 the claimant testified as follows. On September 2, 2013 he was installing ceiling tiles at a parking garage on Logan Street. This job required him to lift bundles of ceiling tiles from the floor and place them on a scaffold that was approximately 5 feet above the floor. The bundles contained 4 tiles and the bundles weighed 70 pounds. He would load approximately 20 bundles onto the scaffold and then put on stilts. Once on stilts he would install insulation and tiles. This portion of the work required him to reach down to the scaffold, pick up a tile and then lift it overhead to install in the roof.

4. The claimant further testified as follows. In March 2013 he tore his right rotator cuff. As a result of this injury and the physical circumstances of the Logan Street job he was required to modify the way he performed his work. The claimant explained that in order to lift the tiles to the scaffold he bent over, picked the tiles up with his left arm and then used his back to stand and lift the tiles. This required much more use of his back than was normal. When installing ceiling tiles he would get the tile to shoulder height on the right and then use his left arm to lift the tile up and slide it into place.

Because the floor of the garage sloped downwards it was a further to reach to the ceiling on the downhill side of his stilts.

5. The claimant testified as follows concerning the morning of September 2, 2013. He loaded the scaffold with tiles on three separate occasions. The claimant began to experience a tingling in his right leg. The claimant was not certain when this sensation began but it became very prominent at about 11:00 a.m. when he was loading tiles on the scaffold. The claimant described numbness as running from the middle of the calf into the foot. He had never experienced this type of numbness before. The claimant also mentioned he had pain in the leg. The claimant told his supervisor that he was not "feeling right" and was going home.

6. The claimant testified that he had a motorcycle accident in 2010 which caused rib and head injuries but no low back injury. He testified he had no back pain between 2010 and September 2, 2013. In fact the claimant testified that he had no back pain at all prior to September 2, 2013 except for undergoing some chiropractic treatments sometime in 1982, 1983 or 1984. The claimant testified he did not experience any back pain from September 2, 2013 until he underwent surgery on October 4, 2013 and the pain medications wore off.

7. The claimant testified as follows concerning the events of September 3, 2013. He woke up and felt no better than he did the day before. He then called the employer to give notification he would not be into work. At approximately 1:00 p.m. he lay down and then got up at 3:00 p.m. When he got up his right foot was paralyzed and his right leg was numb from the hip to the foot. The claimant then went to Swedish hospital at approximately 11:00 p.m.

8. Will Schell testified as follows. He has been the vice president of the employer for 20 years. He is familiar with the claimant's job duties and has performed them himself. The bundles of tile used by the claimant weigh approximately 32 pounds; thus each tile weighs 8 pounds. Mr. Schell estimated that the claimant would lift 40 bundles per day, but stated this varies greatly between workers. The claimant was not lifting 70 pounds of material 20 or more times per day, but he occasionally lifted 70 pounds.

9. Mr. Schell further testified as follows. The claimant never reported to Mr. Schell that he sustained a work related back injury in September 2013. Mr. Schell has no recollection that in September 2013 the claimant asked to be off work because of a work related back injury. On October 3, 2013 the claimant came to Mr. Schell and said he was going to have back surgery under the employer's private health insurance. On October 3 the claimant did not tell Mr. Schell that his back condition was work related.

10. Records from the Swedish Medical Center emergency room (ER) reflect that the claimant arrived at 47 minutes after midnight on September 5, 2013. The claimant gave a history that at about 4:00 p.m. "the day before yesterday" he experienced the abrupt onset of weakness on the right side of his face, mild right arm weakness and mild right leg weakness. He reported tingling in the right arm and right

leg and that he had trouble walking. The claimant was admitted to the hospital with a "clinical impression of cerebrovascular accident." The claimant underwent an MRI of the brain that was negative. Dr. Jeffrey Wagner, M.D., opined the claimant probably had not had a stroke but Dr. Wagner was suspicious of a seizure.

11. On September 5, 2013 while the claimant was in the hospital he was evaluated by Charles Koftan, M.D. Dr. Koftan notes a history that "around 12 noon" on September 4, 2013 the claimant noticed the onset of right foot weakness and trouble walking. The claimant also reported 2 days of low back pain. Dr. Koftan noted the claimant had undergone various tests for a stroke but all tests were normal "except for the MRI of the lumbosacral spine." Dr. Koftan recorded that the lumbar MRI showed "degenerative changes at the L4-L5 lumbar regions with diffuse disk bulge and osteophytic ridge and possible small left paracentral herniation extending inferiorly." Dr. Koftan opined the lumbar MRI findings could explain the claimant's right lower extremity symptoms of weakness, altered gait and foot drop. Dr. Koftan wanted to refer the claimant to neurosurgery for an evaluation but the claimant declined because he wanted to be discharged from the hospital. Dr. Koftan discharged the claimant on September 6, 2013 with instructions to see his primary care physician (PCP), Richard Jolly, D.O., for a possible neurosurgery referral.

12. The Swedish medical records of September 5 and 6, 2013 do not indicate the claimant gave any history that his right lower extremity symptoms began while he was working as a ceiling tile installer on September 2, 2013.

13. Dr. Jolly examined the claimant on September 10, 2013. The claimant gave a history of the sudden onset of weakness including the right foot, right forearm and fingers of 4 to 6 days' duration. The history contains no indication that the claimant reported the symptoms began while he was at work. Dr. Jolly referred the claimant for a neurosurgical evaluation and neurological evaluation.

14. The claimant testified that 3 or 4 days after he got out of the hospital he had a conversation with Elena Schell, who was at that time the majority owner of the employer. The claimant stated that he advised Ms. Schell that his back problem happened while he was on the job at the Logan Street parking garage. The claimant stated that Ms. Schell replied she did not know why he was trying to make a workers' compensation claim when private health insurance was already paying for treatment of his back condition.

15. On September 16, 2013 the claimant underwent surgery to repair the right rotator cuff injury.

16. On October 1, 2013 Derrick Cho, M.D., performed a neurosurgical consultation pursuant to the referral from Dr. Jolly. The claimant reported chief complaints of back pain and right foot weakness. Dr. Cho noted a history that on September 5, 2013 the claimant experienced the sudden onset of numbness in the right side of his body along with weakness of the right lower extremity. The note contains no mention that these symptoms began while the claimant was at work. Dr. Cho examined

the claimant and reviewed the lumbar MRI. He noted the MRI showed "L4-5 disc collapse with a right eccentric disc herniation" causing "important compromise of the L5 nerve root." Dr. Cho assessed a lumbar herniated disc including radiculopathy and recommended the claimant undergo surgery.

17. On October 2, 2013, George Kohake, M.D., performed a "followup recheck" of the claimant's right shoulder. Dr. Kohake noted the claimant's right rotator cuff, associated with the March 2013 injury, was repaired on September 16, 2013. Dr. Kohake further noted that the claimant told him he was "scheduled to have a nonwork-related lumbar spine surgery done this Friday on the date of October 4, 2013, in which he is going to have one or two levels of his lumbar vertebrae fused, as well as a decompression, because he has nerve impingement on the right side with a drop foot on the right leg."

18. On October 4, 2013 Dr. Cho performed surgery described as a minimally invasive right L4-5 laminoforaminotomy, medial facetectomy and microdiscectomy for nerve root decompression.

19. On December 16, 2013 the claimant completed a claim for compensation. On this claim form the claimant wrote that he sustained an injury or disease involving his back and right foot on September 2, 2013. He also wrote that he reported this injury to the employer on September 9, 2013.

20. On April 25, 2014 Allison Fall, M.D., performed an independent medical examination (IME). Dr. Fall is board certified in physical medicine and rehabilitation and is level II accredited. Dr. Fall took a history from the claimant, performed a physical examination and reviewed medical records. The claimant gave a history to Dr. Fall that he was at work on September 2, 2013 and "felt weird" around 11:00 a.m. Specifically he reported he experienced tingling in his right leg and foot. The claimant advised that his work required him to stand on stilts and lift insulation and tiles overhead. The tiles weighted 25 pounds. He advised Dr. Fall he had no back pain prior to undergoing surgery. Dr. Fall noted that the September 2013 lumbar MRI showed multilevel degenerative changes including a "mild disc bulge/osteophyte ridge and mild facet degenerative changes at L4-5" with a small paracentral disc herniation encroaching on the exiting L5 nerve roots. She also noted that on November 15, 2013 the claimant underwent lumbar spine x-rays that showed "pronounced degenerative change, most pronounced at L4-5 and L5-S1" with loss of disc space height at and endplate degenerative change "most pronounced at L4-5."

21. In her April 25, 2014 report Dr. Fall assessed the claimant as being status post "L4-5 decompression and microdiscectomy for right foot drop." Dr. Fall opined to a reasonable degree of medical probability that the onset of the foot drop, "which arose when he awoke from a nap, was not work-related." She explained that there was "no traumatic event at work" and the claimant had "significant underlying, degenerative changes, a history of numerous falls, and significant motorcycle accident." Dr. Fall noted the "initial medical records" did not indicate there had been a work related injury.

22. On September 5, 2014 L. Barton Goldman, M.D., performed an IME. Dr. Goldman was qualified as an expert in physical medicine and rehabilitation and is level II accredited. He has participated in the development of the Division of Workers' Compensation Medical Treatment Guidelines. In connection with the IME Dr. Goldman took a history from the claimant, performed a physical examination and reviewed certain medical records. However, in his report Dr. Goldman noted that he received "minimal pre-existing medical records" and that "many pre-existing and co-existing records were not reviewed" prior to the IME.

23. In his report Dr. Goldman noted the claimant gave a history that his job involved lifting up to 85 pounds 4 times per day and lifting 30 t0 50 pounds 1 to 2 dozen times per day. The claimant reported that on September 2, 2013 he was working "on stilts" in a parking garage and was required to lift up to 85 pound bundles of tile. Further the claimant was awaiting right shoulder surgery and was "modifying his activity in some ways" due to shoulder pain. The claimant reported that part way through his working day he "felt weird" and experienced tingling in the right leg. Dr. Goldman stated the claimant was "very specific in noting that he did not experience any specific back pain until after his surgery." The claimant denied a prior history of lower extremity injury or treatment and denied any prior low back pain and treatment. The only exceptions were that the claimant reported 2 back strains in the 1980's and some osteopathic treatments over the past 5 years that were rendered by Dr. Jolly to alleviate "back discomfort."

24. In his report Dr. Goldman assessed "Lumbosacral spondylosis pre-existing and aggravated by September 12, 2013 [sic] work related injury resulting in right L4-5 herniated nucleus pulposus confirmed on right L4-5 laminectomy operative report." He further assessed mild residual right L5 radiculopathy and chronic lumbosacral strain in conjunction with the September 2, 2013 occupational exposure or work related injury.

25. In his report Dr. Goldman noted that based on the claimant's MRI scan he did have some "predisposition to lumbosacral strain or degenerative disk disease" (DDD). However Dr. Goldman opined this was not symptomatic to a degree that required a vocational disability assessment. He further noted that based on the history provided by the claimant and review of the available records there was "nothing to indicate much in the way of significant low back pain." Dr. Goldman opined that the L4-5 disk herniation and right lower extremity symptoms "are more likely than not primarily due to occupational exposure occurring on or around September 2, 2013." He explained that based on the records he reviewed and the claimant's history his "essential job duties particularly on the day that his low back pain was most prospectively documented probably meet criteria for potential occupational exposure." Dr. Goldman stated the claimant was "doing medium/heavy work in an awkward posture for at least a third of the day." Also, the fact the claimant was recovering from a shoulder injury would "probably force him to stabilize asymmetrical through his core musculature further putting him at risk for a strain pattern that could decompensate and result in transmission of ground reactive forces through the disk and hence the herniation is documented." Dr. Goldman further stated the fact that the work site was hard and uneven would create "even more difficult challenges to core strength and

endurance that would predispose to a strain and in light of this underlying lumbosacral degenerative disk disease, a herniation as documented."

26. On October 10, 2014 Dr. Fall issued a "Supplemental Record Review and Report." Dr. Fall indicated she had reviewed Dr. Cho's September 24, 2013 neurological evaluation in which he noted a "history of insidious onset of numbness in the right side of the body with weakness in the right leg." Dr. Fall opined that an "insidious onset would essentially mean of unknown etiology and, therefore would not be work related."

27. In the October 10, 2014 report Dr. Fall also noted that she had reviewed Dr. Goldman's IME report. Dr. Fall stated that based upon the "Level II re-accreditation course where Dr. Mueller in the past has lectured on causation analysis," the available literature would not support that "repetitive activity including lifting up to a certain level causes degenerative changes in the lumbar spine." Dr. Fall further wrote that Dr. Mueller opined that "possibly repetitive lifting over 60 pounds could be considered an occupational exposure to the lumbar spine." However, Dr. Fall stated that Dr. Goldman's own history did not support the conclusion that the claimant's job exposed him to repetitive lifting over 60 pounds. Dr. Fall further opined that the duties described to Dr. Goldman, including "trying to heal from a shoulder injury," would not be considered to cause lumbar degeneration.

28. Dr. Goldman testified at the hearing. Dr. Goldman stated that his opinion "tilts" toward the view that the claimant sustained an occupational disease and that the "straw that broke the camel's back" occurred on September 2, 2013. Dr. Goldman stated that his opinion began with establishing a diagnosis. He opined and that Dr. Cho's operative report clearly establishes the diagnosis of a herniated nucleus pulposus (HNP) with nerve root impingement. Dr. Goldman stated the claimant had some pre-existing DDD but stated the history concerning the onset of the claimant's symptoms and the clinical picture was consistent with an HNP occurring on September 2, 2013. Dr. Goldman next considered whether the circumstances of the claimant's job could have caused or aggravated the HNP. In this regard Dr. Goldman agreed with Dr. Fall that there is very little research on the subject of lifting as a cause or aggravating factor for DDD. He explained most of the research focuses on upper extremity conditions. Dr. Goldman opined that it is more than 50% probable that the claimant's duties caused the HNP and associated back strain. He explained that the claimant was required to lift 30 to 50 pounds overhead while his right arm was disabled and while he was working on stilts on an uneven surface. Dr. Goldman opined that this combination of "ergonomic" factors caused an "asymmetrical challenge" to the claimant's core strength. He opined that this challenge to core strength either caused or contributed to the disc herniation and that the herniation would not have occurred when it did but for the claimant's employment. Dr. Goldman also testified his opinion is supported by the temporal relationship between the appearance of the claimant's symptoms and his work on September 2, 2013, the relief of lower extremity symptoms resulting from surgery and the lack of any preexisting "apportionable conditions."

29. Dr. Goldman stated he did not have any of the claimant's medical records prior to September 2013. He further stated he relied on the history provided by the claimant in arriving at his opinions.

30. Dr. Fall testified at the hearing. Dr. Fall opined that the claimant sustained a disc herniation at L4-5. However, in her opinion this herniation was the result of the natural progression of the claimant's preexisting degenerative back disease and not the duties of his employment. Dr. Fall stated that the preexisting degenerative back disease was "significant" as shown by the September 2013 MRI and the x-rays performed in November 2013. Dr. Fall testified that it is not uncommon for people to have herniated disks that are asymptomatic for a long time, and then, without accompanying trauma, the herniation becomes symptomatic. Dr. Fall stated that in her opinion the herniated disc existed before September 2, 2013. She further opined that if the claimant sustained the herniation while working on September 2, 2013 she would have expected the onset of immediate back pain because an acute herniation is like a "rubber band snapping." However, the claimant did not report experiencing back pain on September 2, 2013, he reported only right lower extremity tingling. In Dr. Fall's opinion this pattern of symptoms is most consistent with the natural progression of the preexisting disc herniation which caused chemical or mechanical inflammation of the nerve.

31. Dr. Goldman testified in rebuttal. Dr. Goldman stated that it often takes a couple of days for symptoms to build up after a disc herniation and that this is a classical pattern for older patients. He believed the claimant's history was consistent with a disc herniation occurring on September 2, 2013 and the gradual buildup of symptoms resulting in the claimant's presentation at the emergency room on September 5, 2013.

32. The claimant testified in rebuttal that the bundles of tile weighed 69.8 pounds. The claimant stated that he ascertained this information by having Home Depot contact the supplier. The supplier then reviewed a Materials Safety Data Sheet establishing the weight of the tiles.

33. Medical records establish that on October 20, 2009 the claimant completed a questionnaire in which he reported experiencing low back pain as well as neck and upper extremity symptoms. On June 23, 2010, while the claimant was being treated for his motorcycle accident he reported he was experiencing daily pain "in the inner thighs" and low back.

34. The claimant failed to prove it is more probably true than not that he sustained an injury or occupational disease proximately caused, intensified or aggravated by the performance of service arising out of and in the course of his employment.

35. The claimant's testimony that he began to experience right lower tingling in his right lower extremity while at work on September 2, 2013 is not credible and persuasive. The claimant's testimony that these symptoms began on the morning of

September 2, 2013 while he was installing ceiling tiles does not appear in the history which he provided to the Swedish Medical Center emergency room on September 5, 2013. The Swedish records indicate that the claimant gave a history that he experienced the abrupt onset of weakness in his right arm and leg at 4:00 p.m. the day before yesterday (or September 3, 2013). The claimant's testimony is also inconsistent with the history he reported to Dr. Koftan on September 5, 2013. Dr. Koftan noted a history of the onset of symptoms on September 4, 2013 at 12:00 noon. There is no mention of symptoms appearing at work on the morning of September 2, 2013. The claimant's testimony is also inconsistent with the history reported to Dr. Jolly on September 10, 2013. Dr. Jolly noted the sudden onset of symptoms of right foot and arm weakness that had lasted 4 to 6 days. Dr. Jolly's records do not indicate these symptoms developed while the claimant was at work. Moreover, if the symptoms had lasted 6 days they would have commenced on September 4 as the claimant reported to Dr. Koftan, not on September 2, 2013 while he was working. The claimant's testimony is also inconsistent with the history he reported to Dr. Cho on October 1, 2013. Dr. Cho noted the claimant gave a history that on September 5, 2013 he experienced the "sudden onset" of right-sided body numbness and right lower extremity weakness. Dr. Cho's note does not contain any history that these symptoms appeared while the claimant was working on September 2, 2013.

36. The claimant's testimony that his right lower extremity weakness commenced while he was at work on September 2, 2013 is also contradicted by Mr. Schell. Mr. Schell credibly testified the claimant never told him his back condition was work related. Schell credibly testified that on October 3, 2013 the claimant said he was going to have back surgery under the employer's health insurance plan. Mr. Schell's testimony is corroborated by Dr. Kohake's October 2, 2013 notation that the claimant reported he was to undergo "nonwork-related lumbar spine surgery" on October 4, 2013. This evidence persuasively establishes that as late as October 2, 2013 the claimant had not yet reported a work related back or lower extremity injury to the employer or to his medical providers. For much the same reasons the claimant's testimony that he reported a work related injury to Elena Schell is not credible.

37. Dr. Goldman's opinion that the claimant's herniated disc and lumbar sprain probably resulted from an injury or more probably an occupational disease is not persuasive. Dr. Goldman's opinion is that although the claimant had preexisting DDD, that condition was aggravated by a September 2, 2013 exposure to a combination of overhead lifting and ergonomic factors that placed stress on the claimant's "core" and caused a lumbar strain and disc herniation. Dr. Goldman further opined that the subsequent evolution of the claimant's symptoms was consistent with a disk herniation occurring on September 2, 2013. However, Dr. Goldman's opinion is significantly based on the claimant's history that his symptoms of right lower extremity numbness developed on September 2 while he was at work lifting tiles overhead while on stilts, standing on an uneven work surface while protecting his right arm. (Findings of Fact 23, 25, 28). As found, the claimant's testimony that he developed symptoms at work on September 2 is not credible. It follows that the history the claimant gave to Dr. Goldman concerning the development of his symptoms is not credible. It also follows that Dr. Goldman's opinion concerning the causal relationship between the ergonomic

conditions of the claimant's employment and the development of his back condition is founded on an inaccurate understanding of the temporal relationship between the symptoms and the exposure to the alleged ergonomic hazards of employment.

38. Dr. Fall credibly and persuasively opined that the claimant's herniated disc and related symptoms are the result of the claimant's preexisting DDD. Dr. Fall's opinion that the claimant had preexisting DDD is corroborated by the September 2013 MRI which showed "degenerative changes at the L4-5 lumbar regions" and the November 2013 lumbar x-rays showing pronounced degenerative disc disease at L4-5. Dr. Goldman agreed that there was preexisting DDD. Dr. Fall credibly opined that it is common for DDD to result in a disc herniation that is unrelated to any trauma. Dr. Fall credibly opined that if the claimant has suffered an acute herniation on September 2, 2013 it is probable that he would have experienced immediate back pain, but the claimant reported that his only symptoms on September 2 were "feeling weird" and numbness in the right lower extremity. Dr. Fall's opinion is all the more persuasive since the ALJ finds the claimant's testimony that he experienced right lower extremity symptoms while at work on September 2 is not credible. As found, the claimant's testimony that his symptoms began at work is inconsistent with his reported history contained in the medical records from September and October 2013 as well as his statements to Mr. Schell and Dr. Kohake. Dr. Fall persuasively noted this inconsistency in her April 2014 report where she observed that the "initial medical records" did not document any report of an alleged work related injury.

39. Dr. Fall credibly opined that the claimant did not describe any "traumatic event" on September 2, 2013 that would explain the development of a herniated disc. Dr. Goldman apparently agrees with Dr. Fall in this regard since he stated that he "tilts" toward a belief that the claimant sustained an occupational disease resulting from the exposure to ergonomic factors and repetitive lifting. Based on this evidence the ALJ finds the claimant did not sustain any occupational "injury" that is traceable to a particular time place and cause.

40. Evidence and inferences inconsistent with these findings are not credible and persuasive.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), §§8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation

case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A Workers' Compensation case is decided on its merits. Section 8-43-201(1). The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions.

COMPENSABILITY OF ALLEGED INJURY OR OCCUPATIONAL DISEASE

The claimant alleges that he sustained an injury or occupational disease as a result of performing his duties that entitles him to an award of temporary total disability benefits and compensation for the medical treatment provided by Swedish Hospital, Dr. Jolly, and Dr. Cho. Relying principally on his own testimony and the opinions of Dr. Goldman, the claimant argues that a preponderance of the evidence establishes that on September 2, 2013 he sustained an injury or “occupational exposure” that caused him to experience a herniated disc and back strain. The ALJ disagrees with this contention.

The claimant was required to prove by a preponderance of the evidence that at the time of the injury he was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. The question of whether the claimant met the burden of proof to establish causation is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000); *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251 (Colo. App. 1999).

The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation,* 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by § 8-40-201(14), C.R.S., as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

This section imposes additional proof requirements beyond those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards

associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). However, the existence of a preexisting condition does not defeat a claim for an occupational disease. *Id.* A claimant is entitled to recovery if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.*

As determined in Findings of Fact 34 and 39, the claimant failed to prove that he sustained any work related "injury" arising out of and in the course of his employment. The ALJ credits the opinion of Dr. Fall that the claimant did not describe any traumatic event on September 2, 2013 that could explain the occurrence of a herniated disc. Indeed, even Dr. Goldman explained that he "tilts" toward the belief the claimant's condition is the result of an occupational disease rather than a traumatic injury. It follows that the claimant did not experience any "injury" that is traceable to a specific time place and cause.

As determined in Findings of Fact 34 through 38, the claimant failed to prove that he sustained an occupational disease of the low back that was proximately caused, intensified or aggravated by the performance of service arising out of and in the course of his employment. As found, the claimant's testimony that he experienced symptoms of right lower extremity numbness while performing his duties on September 2, 2013 is not credible and persuasive. That testimony is inconsistent with the history recorded in the contemporaneous medical records and is inconsistent with statements the claimant made to Mr. Schell and Dr. Kohake. Further, Dr. Fall's opinion that the disc herniation and related symptoms resulted from the natural progression of the preexisting DDD is more credible and persuasive that Dr. Goldman's opinion. As found, Dr. Goldman's opinion is to a large extent based on the assumption that the claimant gave an accurate history that his symptoms began on September 2, 2013 while he was exposed to "ergonomic" factors that placed stress on the disc. However, the ALJ has discredited that history. Moreover, Dr. Fall credibly and persuasively opined that the onset of the claimant's symptoms is consistent with the natural progression of the preexisting DDD.

It follows that the claim for workers' compensation benefits must be denied. The ALJ need not address the parties' other arguments.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the ALJ enters the following order:

1. The claim for workers' compensation benefits in WC 4-917-643 is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUE

The issue whether Claimant's injury occurred within the course and scope of his employment was raised for consideration at hearing.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a 22 year old former employee of Employer who worked for respondent employer from January 3, 2014, through January 8, 2014. The job for which Claimant was hired to work consisted of building a pipeline that started in Stratton, Colorado and stretched southeast to Dighton, Kansas. The jobsite was essentially a "moving jobsite" in that work progressed at the rate of approximately two miles per day and the jobsite was not located in the exact same location each day. Claimant worked on the same pipeline for each of his six days of employment with Employer.

2. A truck allowance is extended to employees of Employer at the time of hire for use of their vehicles in transporting workers and supplies to the job site.

3. On January 9, 2014 Claimant was injured while driving to work after returning from a trip to the airport. Claimant had requested the morning off of work in order to take his fiancée to the airport and the trip to and from the airport was in no way related to his work for Employer.

4. At the time of his accident, Claimant was driving a truck owned by his fiancée, Rachel Cooper, who was a former employee for Employer.

5. Although Ms. Cooper applied for and requested that her vehicle be placed on Employer's payroll, neither Ms. Cooper nor Claimant received any truck pay for the vehicle because Employer never received the necessary insurance documents for the vehicle and never authorized use of the vehicle for transporting supplies and employees to the job site.

6. Dwight Brasseaux testified on behalf of Respondents. Mr. Brasseaux was the project superintendent for the job at which Claimant was working. He testified that he was the only person on the project with authority to approve work-related travel. He further stated that any time off for workers on the project should have been cleared with him because he needed to know where each of his workers

was during the work day. Mr. Brasseaux did not authorize Claimant to take his fiancé to the airport and did not authorize Claimant to be paid for that time. Mr. Brasseaux testified that the normal reporting time in the morning was 7:00 a.m. and that no employees were paid for travel to and from work. The only "travel" for which employees were paid was for travel from the warehouse to the jobsite. No employees were considered "on the clock" until they arrived at the warehouse/office or on the actual jobsite.

7. Mr. Brasseaux also testified that only vehicles that have been extended the truck allowance were authorized to be on the jobsite and any other vehicles on the jobsite were considered unauthorized.

8. According to Mr. Brasseaux, Ms. Cooper's vehicle was never extended the truck allowance because Employer never received the necessary insurance documents for Ms. Cooper's vehicle in order to properly extend the vehicle the allowance. Mr. Brasseaux also stated that even if Ms. Cooper had been extended the allowance, once Ms. Cooper's employment terminated, the allowance would have terminated.

9. Claimant testified that his immediate supervisor, Terry Cooper, had given him the morning off to take his fiancée, Mr. Cooper's daughter, to the airport. Claimant said that Mr. Cooper advised him to report to work after the trip. Claimant also testified that he called Mr. Cooper at approximately noon to get instructions on where to report to work and Mr. Cooper gave him the precise location to which he was to report. Claimant testified that his accident occurred on the road leading to the jobsite and that he was never able to locate the precise location to which he had been directed by Mr. Cooper.

10. Claimant also testified that although he never received the truck allowance, it was his understanding that Ms. Cooper's truck was nevertheless on payroll and he used the vehicle on the premises for work purposes.

11. Terry Cooper offered rebuttal testimony on behalf of Claimant. Like Claimant he testified that Claimant called him at approximately noon on January 9, 2014, and that he directed Claimant to a specific location for work and at that point considered Claimant to be working. Mr. Cooper testified he believed this was appropriate because it was consistent with how a workday normally started. According to Mr. Cooper, the crew was considered to be on the clock at 7:00 a.m. after they filled up their trucks at the designated fueling station and received their job assignments for the day. Hence, in Mr. Cooper's opinion, once he told Claimant his assignment for the day and Claimant was on his way to that assignment, Claimant was "on the clock" regardless of Claimant's physical location at the time.

12. Mr. Cooper also testified that he placed Ms. Cooper's truck on payroll and that it was in fact on payroll. Contrary to Mr. Brasseaux's testimony, Mr. Cooper stated

the necessary paperwork had been turned in and simply had not been processed. In fact, Mr. Cooper testified that he was aware that it could sometimes take up to a month for the paperwork on a truck to be properly processed and stated that he "needed that truck" and routinely made use of vehicles while awaiting approval from Employer.

13. Stephen Hamby provided a written statement regarding the January 9, 2014, incident. Mr. Hamby wrote that on January 9, 2014, Claimant did not show up for work. Mr. Cooper told Mr. Hamby that Claimant was expected at noon. According to Mr. Hamby at noon, Mr. Cooper called Mr. Hamby and said he had not heard from Claimant all day and could not reach Claimant. At about 3:00 p.m., Mr. Cooper received a call stating that Claimant had been in an accident and at that time Mr. Cooper told Mr. Hamby to put Claimant on the time sheet and pay him for 5 hours of work and that Mr. Brasseaux had approved it. Mr. Hamby was subsequently told to remove Claimant's name from the timesheet because Claimant had never been at work. At hearing, Mr. Cooper admitted to telling Mr. Hamby to put Claimant down for 5 hours of work but was never able to offer any explanation for how he had come up with 5 hours.

14. The testimony of Mr. Brasseaux is more credible and persuasive than that of Claimant and Mr. Cooper. The ALJ finds that the testimony of Claimant and Mr. Cooper was biased and reflected their personal interest in having the claim deemed compensable.

15. It is found that at the time of Claimant's accident Claimant was not performing any work-related function or traveling in a company vehicle at the time of his accident, and conferred no benefit on Employer beyond Claimant's arrival at work. Rather, Claimant was simply returning from a personal errand, traveling in a private vehicle while on his way to work when the accident occurred. Hence, Claimant has failed to carry his burden of proving that he was in the course and scope of his employment at the time of his accident.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

1. The purpose of the Workers' Compensation Act of Colorado (Act), §§8-40-101, *et seq.*, C.R.S. (2014), is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), *supra*. Claimant shoulders the burden of proving by a preponderance of the evidence that he/she sustained an injury arising out of and within the course of his/her employment. Section 8-41-301(1), *supra*; *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers'

compensation case must be interpreted neutrally, neither in favor of the rights of claimant nor in favor of the rights of respondents. Section 8-43-201, *supra*. A workers' compensation case is decided on its merits. Section 8-43-201, *supra*. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

2. In this case, the issue whether Claimant sustained his burden of proof rest upon credibility determinations regarding Claimant and his witness's testimony. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). As found, the testimony of Mr. Brasseaux was more credible than the testimony of Claimant and Mr. Cooper.

3. Travel to and from work that confers no benefit upon the employer beyond the sole fact of the employee's arrival at work, is not travel that occurs within the course and scope of employment and injuries that occur during such travel are not compensable. *Madden v. Mountain West Fabricators*, 977 P.2d 861 (Colo. 1999). Exceptions to this rule include travel at the express or implied request of the employer, *Berry's Coffee Shop, Inc. v. Palomba,* 161 Colo. 369, 423 P.2d 2 (1967), or when the travel confers a benefit on the employer beyond the mere fact of the employee's arrival at work. *Shandy v. Lunceford*, 886 P.2d 319 (Colo.App.1994). As found here, Claimant's travel to the jobsite conferred no benefit on Employer beyond Claimant's arrival at the jobsite. The testimony of Claimant and Mr. Cooper that Claimant may have been given any specific travel directions by Mr. Cooper was not credible.

4. Claimant has failed to carry his burden of proving that he was within the course and scope of his employment at the time of his accident. As a result, the claim is not found to be compensable.

ORDER

It is therefore ordered that:

Claimant's claim for workers' compensation benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUE

Whether Claimant sustained a compensable on-the-job injury while working for Employer.

PRELIMINARY MATTERS AND HEARING ISSUES

Claimant endorsed a number of hearing issues on the application for hearing including compensability, medical benefits, authorized provider, reasonably necessary, average weekly wage, temporary total disability benefits (from September 26, 2013 through a date to be determined), temporary partial disability benefits (from September 26, 2013 through a date to be determined), penalties (for Employer allegedly failing to acknowledge Claimant's claim when he first filed it), benefits, and termination.

Respondents endorsed compensability, medical benefits, authorized provider, reasonably necessary, average weekly wage, temporary total disability benefits (from September 26, 2013 through a date to be determined), temporary partial disability benefits (from September 26, 2013 through a date to be determined), failure to plead penalties with specificity under § 8-43-304(4), C.R.S., causation, relatedness of medical benefits, preexisting condition, intervening cause or event, safety rule violation pursuant to § 8-42-112(1)(b), C.R.S., voluntary termination of employment, responsibility for termination pursuant to §§ 8-42-103(1)(g) and 8-42-105(4)(a), alternative compensation including FMLA leave and STD/LTD benefits, and offsets.

Claimant initially filed two claims for compensation that generated two workers' compensation numbers, case number 4-944-662-02, which was Claimant's claim for back, shoulder, hands, and arm injuries due to alleged lifting injuries, and case number 4-944-671, which was for occupational disease stemming from Claimant's alleged exposure to radioactive materials. On May 13, 2014, these two claims were consolidated pursuant to WCRP 9-6 after a prehearing conference held on May 9, 2014 before prehearing ALJ Thomas DeMarino.

At the beginning of hearing, Claimant renewed a motion to continue the hearing that he had filed on October 9, 2014. The ALJ denied the motion pursuant to § 8-43-207, C.R.S.

FINDINGS OF FACT

Background

1. Claimant's physical complaints, injuries, and conditions that he attributes to his work for Employer due to lifting include back, shoulder, and arm pain, hand numbness, rotator cuff damage, muscle spasms on the left side of his back, and pain across his back. Claimant stated that he suffers from diverticulitis, an injury to his left

knee, rectal bleeding, body hives and/or cysts, and general malaise, which he believes were caused or exacerbated by his work for Employer.

2. Claimant also alleged injuries and conditions, including anxiety and depression, due to his exposure to radioactive material at Employer's workplace.

Claimant's Employment with Employer – Lifting

3. Employer hired Claimant on October 17, 2005 to work as a mechanical seal repair technician. In this position, Claimant dismantled, washed, polished, and refurbished seals that had been used in industrial pumps of various sizes. These seals were used in pumps primarily in the oil and gas industry, and also in the space industry.

4. Claimant performed approximately 90% of the cleaning, polishing, and refurbishing of the seals for Employer.

5. Claimant's job duties included tasks such as adjusting a "cheater bar" up to 20 times per day.

6. Another task was hand "lapping." Claimant performed about 90% of the lapping work for Employer. Claimant normally used a lapping machine, but at times he performed hand lapping. The lapping machine was between waist and chest high, and several times per year, Claimant "lapped" for two or three days in a row.

7. There was conflicting evidence about the weight of the seals Claimant had to lift. Claimant claimed he had to lift seals that weighed up to 120 pounds, while other evidence suggested that the heaviest seals he had to lift weighed 50 pounds. It is found as fact that the heaviest seals that Employer received weighed 120 pounds, which were the "Flexbox" seals. It is found as fact that the heaviest seals Claimant had to lift weighed 75 pounds.

8. Claimant would have to lift seals to approximately chest height in order to place them on an ultrasonic cleanser as part of his job. Claimant had to hold his arms chest-high when using this machine. Claimant was the employee who primarily performed this task.

9. The typical weight of seals Claimant worked on was between five and 30 pounds. Two to three times per week he would have to work on seals that weighed more than 30 pounds.

10. Employer had an engine hoist and carts available for its employees to use to lift heavy objects. The engine hoist and carts were available to Claimant for his use.

11. Employees wore gloves, safety glasses, and work boots when working on the seals.

Claimant's Employment with Employer – Alleged Exposure to Unacceptable Levels of Radiation

12. In the summer of 2013, one of Employer's customers, Sulzer, hired Employer to clean and refurbish seals that contained "naturally occurring radioactive material," known as "NORM."

13. Neither Colorado nor the federal government have established regulations concerning safe levels of NORM exposure. Companies must determine best practices for safe NORM levels.

14. Sulzer established 1000 parts per milligram ("ppm") as its acceptable NORM level.

15. In or around July of 2013, Employer received two sets of ten seals from Sulzer. The seals were delivered by regular UPS and not by any kind of hazardous materials delivery service.

16. Claimant opened one set of the Sulzer seals in July of 2013, and cleaned two of the seals.

17. Claimant wore gloves and a respirator when he cleaned the two Sulzer seals.

18. Sulzer hired Mr. Richard Block, an expert in workplace environmental studies, to test their seals for radiation levels. Mr. Block is an expert in acceptable levels of NORM, as well as levels of "technically enhanced naturally occurring radioactive material," known as "TENORM."

19. Mr. Block credibly testified, and it is found as fact, that NORM and TENORM are not considered hazardous materials, but that they need to be monitored to ensure they remain at acceptable levels.

20. Mr. Block credibly testified, and it is found as fact, that 1000 ppm is an acceptable NORM level, that it is no higher than people are exposed to in their everyday lives, and that 1000 ppm is a reasonable standard.

21. Employer also hired Mr. Block to inspect and measure the NORM levels at Employer's workplace. Mr. Block explained NORM and TENORM to Employer's employees, and instructed them on the use of Geiger counters to monitor NORM and TENORM levels.

22. Mr. Block inspected and measured the NORM and TENORM levels at Claimant's worksite and found that the levels were acceptable.

23. Mr. Block personally tested the Sulzer seals that are in question in this hearing. He credibly testified, and it is found as fact, that Claimant was completely safe

when he cleaned the two Sulzer seals and that there was no TENORM present in any of the Sulzer seals that Claimant was near.

24. Mr. Block further credibly testified, and it is found as fact, that Claimant breathed in less NORM at Employer's worksite than he did when he was outdoors or at his home.

25. Claimant filed complaints about Employer with OSHA and with the Colorado Department of public Health and Environment ("CDPHE").

26. OSHA conducted an onsite inspection of Employer, interviewed some of Employer's employees, and used a Geiger counter to check for radiation.

27. OSHA did not find any violations on the part of Employer and indicated it would not be conducting any additional investigation.

28. Claimant appealed OSHA's decision and his appeal was denied.

29. CDPHE inspected Employer, and its finding concerning radioactive levels at Employer's worksite was "no contamination."

30. CDPHE sent a letter to Claimant stating that there was no evidence of TENORM contamination at Employer's work site.

31. Claimant did not produce any expert testimony or objective evidence that he was exposed to toxic levels of chemicals or radiation at Employer's workplace.

32. Claimant failed to prove by a preponderance of the evidence that he suffered from exposure to unacceptable levels of NORM, TENORM, or any other type of chemical or radioactive substances at Employer's worksite.

33. Claimant failed to prove by a preponderance of the evidence that any level of NORM or TENORM that he was exposed to at Employer's worksite caused any medical illnesses, conditions, or occupational diseases.

Claimant's Medical and Psychological Conditions and Injuries

34. Dr. David Diffee is a licensed psychologist who has treated Claimant over the years, and who began treating him again on January 22, 2013.

35. Dr. Diffee was deemed an expert in psychology at hearing.

36. In Dr. Diffee's expert opinion, Claimant was depressed, anxious, upset, and confused about where he "fit in" with Employer. Claimant was also very fearful of his workplace situation, and about the fact that he believed Employer did not have his best interests at heart.

37. From January to July of 2013 Claimant saw Dr. Diffee about once per week.

38. Dr. Diffee opined that in January 2013, Claimant was very anxious about airborne particulate/material at his worksite.

39. Dr. Diffee administered the "Personality Assessment Inventory" ("PAI") to Claimant on April 7, 2014, three months prior to the Sulzer seals arriving at Claimant's worksite. Dr. Diffee explained that the PAI is the new standard for psychological testing.

40. Claimant scored high in "malingering" on the PAI.

41. Dr. Diffee testified that while he observed Claimant's emotional health deteriorate, and witnessed Claimant's anxiety and depression increase, he could not state that it was because of chemical exposure at Employer. He also testified that none of Claimant's "Axis I" diagnoses were caused by Employer.

42. Claimant testified that his physical conditions or illnesses included diverticulitis, curvature in his spine, rectal bleeding, high iron in his body, cysts on back of his ear, a baker cyst in his left knee, back, neck and arm numbness, and that his hips locked up impeding his ability to walk.

43. Claimant underwent an independent medical examination with Dr. Eric Ridings, a board certified physical medicine and rehabilitation specialist who is Level 2 accredited. Dr. Ridings examined Claimant on August 26, 2014 and September 18, 2014. He also reviewed Claimant's chiropractor's notes, and notes from a stay Claimant had at Littleton Adventist hospital.

44. Dr. Ridings was admitted as a medical expert at hearing.

45. Dr. Ridings' physical examination of Claimant revealed that Claimant did not have any injuries or medical conditions except for a thoracic kyphosis, which was unrelated to Claimant's employment with Employer.

46. Dr. Ridings credibly testified that he did not find any reason to relate Claimant's job for Employer to any of his alleged injuries or conditions to any degree of medical certainty whatsoever.

47. He further testified that any radiation Claimant was exposed to during his work for Employer did not cause or contribute to Claimant's alleged diverticulitis, knee fracture, curvature of the spine, or rectal bleeding.

48. Claimant did not produce any expert testimony or objective medical evidence that his work for Employer caused or contributed to any of his alleged medical conditions or illnesses.

49. Claimant failed to prove by a preponderance of the evidence that he suffered an injury or occupational disease as a result of lifting at Employer's work site.

50. Claimant failed to prove entitlement to temporary total or temporary partial disability benefits from September 26, 2013 forward. Claimant's alleged wage loss due to work injuries or conditions is not attributable to his work for Employer.

51. Claimant failed to prove a compensable claim or occupational disease secondary to his work for Employer.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S.

2. For a claim to be compensable under the Act, a claimant has the burden of proving by a preponderance of the evidence that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. § 8-41-301(1)(c) C.R.S.; *In re Swanson*, W.C. No. 4-589-645 (ICAP, Sept. 13, 2006).

3. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. § 8-43-201, C.R.S. A workers' compensation case is decided on its merits. *Id.*

4. In deciding whether a claimant has met the burden of proof, the ALJ is empowered to resolve conflicts in evidence, make credibility determinations, determine the weight to be accorded to testimony, and draw plausible inferences from the evidence. *See, Brodensleck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull*, 802 P.2d 1182, 1183 (Colo. App. 1990).

5. The ALJ is also charged with considering an expert witness's special knowledge, training, experience, or research in a particular field. *See, Young v. Burke*, 139 Colo. 305, 338 P.2d 284 (1959). Finally, the ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See, e.g.* § 8-43-210, C.R.S.; *One Hour Cleaners v. Industrial Claim Appeals Office*, 914 P.2d 501 (Colo. App. 1995).

6. An ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a

conflicting conclusion, and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

7. An injury occurs "in the course of" employment when the employee demonstrates that the injury occurred within the time and place of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991); *Popovich v. Irlando*, 811 P.2d 379 (Colo. 1991).

8. The "arising out of" element is narrower than the course of employment element, and requires a claimant to show a causal connection between the employment and the injury such that the injury had its origins in the employee's work-related functions, and is sufficiently related to those functions to be considered part of the employment contract. *Triad*; *Madden v. Mountain West Fabricators,* 977 P.2d 861 (Colo. 1999). It is generally sufficient if the injury arises out of a risk which is reasonably incidental to the conditions and circumstances of the particular employment. *Phillips Contracting, Inc. v. Hirst,* 905 P.2d 9 (Colo. App. 1995). The determination of whether there is a sufficient "nexus" or causal relationship between the claimant's employment and the injury is one of fact that the ALJ must determine based on a totality of the circumstances. *Moorhead Machinery & Boiler Co. v. DelValle,* 934 P.2d 861 (Colo. App. 1996).

9. Claimant has failed to prove by a preponderance of the evidence that any of his alleged injuries or conditions occurred in the course of his employment with Employer. Claimant has likewise failed to prove by a preponderance of the evidence that any of his alleged injuries arose out of his employment with Employer. Claimant did not introduce medical records, physician reports, or physician testimony establishing that he actually suffered from any of the ailments he attributed to working for Employer. This is not to say that Claimant does not suffer from these ailments – he may. However, because Claimant is not a medical doctor or medical expert, his testimony and opinions about his ailments, without corroboration by a medical doctor or by medical records, are insufficient to prove by a preponderance of the evidence that he does suffer from these conditions. Indeed, the one physician who did testify, Dr. Ridings, credibly testified that Claimant had no diagnoses except for thoracic kyphosis, which was unrelated to Claimant's employment with Employer.

10. Claimant likewise failed to introduce any evidence that his work for Employer caused or contributed to any health conditions that he attributed to exposure to toxic levels of NORM, TENORM, or any other chemical. OSHA and CDPHE investigated Employer and found no dangerous levels of NORM or TENORM or other contaminants. Mr. Block personally tested the Sulzer seals Claimant was concerned about, and did not find levels of NORM or TENORM higher than Claimant would have been exposed to outdoors or at his home. Finally, Claimant's high PAI score on malingering, while it does not prove that he is malingering, may explain to some extent why there is no objective medical evidence to support his allegations.

ORDER

It is therefore ordered that any and all of Claimant's claims for workers' compensation, and his request for penalties, are denied and dismissed. Any remaining issues are moot.

DATED: January 29, 2015.

Tanya T. Light
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, Fourth Floor
Denver, CO 80203

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that medical treatment in the form of a right total shoulder arthroplasty as recommended by Alireza T. Alijani, M.D. is reasonable, necessary and related to his February 24, 2014 industrial injury (W.C. No. 4-946-408).

2. Whether Claimant has established by a preponderance of the evidence that he should be permitted to reopen his January 9, 2012 Workers' Compensation claim (W.C. No. 4-888-893) based on a change in condition pursuant to §8-43-303(1), C.R.S.

FINDINGS OF FACT

1. Claimant is a 59 year old male who works for Employer as a Driver. His job duties involve shuttling vehicles around Employer's facility. Claimant acknowledged that he has had a lengthy history of right shoulder injuries and osteoarthritis.

2. On January 9, 2012 Claimant slipped and fell onto his right side and injured his right shoulder during the course and scope of his employment with Employer. Workers' Compensation number 4-888-893 was assigned to the claim. Respondents admitted the claim and referred Claimant for medical treatment. X-rays taken on January 10, 2012 revealed severe osteoarthritis with decreased glenohumeral space and evidence of chronic calcific tendinitis in the right shoulder. Claimant underwent physical therapy and injections.

3. On March 16, 2012 Claimant visited Michael Hewitt, M.D. for a surgical consultation. Dr. Hewitt reviewed a right shoulder MRI that revealed advanced glenohumeral arthritis. In discussing treatment options, Dr. Hewitt noted that Claimant "understands surgery would require a shoulder replacement and his glenohumeral arthritis is preexisting. He states he is not interested in surgery."

4. On April 24, 2012 Claimant reached Maximum Medical Improvement (MMI). Jeffrey Wunder, M.D. assigned Claimant an 8% right upper extremity impairment rating. Claimant subsequently returned to work for Employer.

5. On July 20, 2012 Respondents filed an Amended Final Admission of Liability (FAL) acknowledging Dr. Wunder's 8% right upper extremity impairment rating. Claimant did not seek a Division Independent Medical Examination (DIME) or otherwise object to the FAL.

6. On February 24, 2014 Claimant injured his right shoulder, left shoulder**,** left knee and left ankle while working for Employer. The injuries occurred when a co-

worker was driving a 15 passenger van and started moving before Claimant entered the vehicle. Claimant was in the process of pulling himself into the vehicle. He explained that he had his left foot on the running board and his right foot was about 18 inches off the ground. Claimant had his left hand on the door and was holding onto seat belts with his right hand when the driver pulled away. Claimant remarked that the motion of the van caused his body to swing abruptly to the side and he was slammed into the back door of the vehicle. .

7. Claimant commented that when the accident occurred he experienced a "pop" in his right shoulder. After initially treating his shoulder with ice, Claimant reported the injury to Employer. Employer referred Claimant to HealthOne Occupational Medical Centers for medical treatment.

8. Respondents admitted the claim and Claimant visited Christian O. Updike, M.D. at HealthOne on March 4, 2014 for an evaluation. Claimant expressed concerns about possible torn tendons in his right shoulder. Dr. Updike noted that Claimant underwent a right shoulder MRI in 2012 and doctors recommended surgery. He determined that Claimant had full active range of motion and diagnosed him with a right shoulder strain that appeared to be muscular. Dr. Updike explained that "[t]his is an unusual mechanism of injury. In the absence of fall, would not meet Colorado treatment guidelines for a rotator cuff tear in my opinion."

9. On March 21, 2014 Claimant underwent a right shoulder MRI. The reading physician compared the current MRI to the 2012 MRI and found "[p]rogression of degenerative change within the glenohumeral joint with bone-on-bone and bone remodeling." The physician also noted chronic degenerative changes within the shoulder joint without evidence of an acute injury. However, there was "a small partial bursal surface rim rent like tear of the cuff" that was new from the previous MRI.

10. On March 28, 2014 Claimant visited Robert White, M.D. for an examination. Dr. White reviewed Claimant's right shoulder MRI report and noted that there were no acute findings. He determined that Claimant suffered from "[c]hronic right shoulder pain. Right shoulder with simply progression of degenerative change with bone-on-bone disease."

11. On April 2, 2014 Claimant visited orthopedist Herbert J. Thomas, III, M.D. Dr. Thomas described the injury to the right shoulder as apparently caused by an abduction and flexion stress. Claimant had pain in the right shoulder area as well as swelling over the anterior and lateral chest region. He described his pain as constant, worsened by moving around and interfering with normal functions. Dr. Thomas noted that Claimant underwent approximately five sessions of physical therapy that did not seem to make any significant change in his symptoms and was subsequently discontinued. Dr. Thomas found that Claimant's range of motion was laterally restricted and he had a positive impingement sign. He also noted crepitus with motion against resistance. Dr. Thomas diagnosed a right shoulder muscle strain with severe degenerative changes. He stated that Claimant might be a candidate for total right shoulder arthroplasty if his symptoms persisted.

12. On April 17, 2014 Claimant visited Mark Failinger, M.D. for an examination. Dr. Failinger noted that Claimant had a significant history of right shoulder problems including arthritis and a recommendation for a total shoulder replacement. Claimant advised Dr. Failinger that he "had bone-on-bone for a long period of time, but [Claimant] thinks the collar bone is the biggest problem." Dr. Failinger diagnosed Claimant with "[r]ight shoulder beyond severe degenerative joint disease" and stated "[t]here is really nothing for the right shoulder other than maybe to live with it or get a shoulder replacement which they tried to convince him to do years ago but he said he did not want to do it because they were going to take down some muscles, so he declined."

13. On April 28, 2014 Claimant underwent an MRI of his clavicle. The imaging revealed degenerative changes in the glenohumeral, sternoclaviclular, and acromioclavicular joints.

14. On May 23, 2014 Claimant was evaluated by orthopedist Alireza T. Alijani, M.D. Dr. Alijani reported that Claimant was suffering pain and discomfort in the right shoulder area. Upon physical examination, Dr. Alijani noted that Claimant had range of motion deficits and crepitus. He diagnosed Claimant with right shoulder osteoarthritis. Dr. Alijani did not make any record of Claimant's mechanism of injury or determine whether his current complaints were related to the February 24, 2014 industrial incident. Dr. Alijani recommended a right shoulder arthroplasty and sought prior authorization from Insurer. Insurer denied the request.

15. On October 8, 2014 Dr. Alijani wrote to Claimant's counsel. He stated that Claimant's current condition is consistent with the diagnosis of right shoulder osteoarthritis. He noted that Claimant's degenerative condition is at an endstage with complete loss of cartilage surface. Dr. Alijani explained that "[i]n terms of his condition being caused by the accident, it is very difficult to say with any medical probability, but, I would say certainly that if he did not have the symptoms in the shoulder prior to the incident and developed them afterwards that, with a high degree of medical probability, the work-related circumstance exacerbated his underlying condition."

16. On August 21, 2014 Claimant underwent an independent medical examination with Neil L. Pitzer, M.D. On November 6, 2014 Dr. Pitzer testified through an evidentiary deposition this matter. After reviewing medical records and performing a physical examination, he concluded that Claimant's right shoulder condition constituted the natural progression of his underlying degenerative osteoarthritis. Dr. Pitzer explained that the force on Claimant's right shoulder during the February 24, 2014 incident was insufficient to cause ligamentous tearing, disruption of the cartilage in the shoulder joint or aggravation of an underlying condition. After reviewing Claimant's right shoulder MRI's taken on February 4, 2012 and March 21, 2014, Dr. Pitzer determined that there were no acute right shoulder changes and any differences were attributable to the progression of Claimant's underlying degenerative osteoarthritis.

17. Dr. Pitzer also explained that Claimant's need for right shoulder replacement surgery was entirely due to his pre-existing and severe degenerative

osteoarthritis and not the result of the February 24, 2014 incident. In his deposition Dr. Pitzer testified that Claimant's described mechanism of injury would not have caused an aggravation of his underlying osteoarthritis and that any pain symptoms Claimant experienced were due to the inevitable progression of severe degenerative osteoarthritis. Ultimately, Dr. Pitzer summarized that Claimant would have required a right shoulder replacement regardless of the February 24, 2014 accident.

18. Claimant testified at the hearing in this matter. He explained that from the time he was discharged at MMI for his January 9, 2012 injury until the present injury on February 24, 2014 he had no problems with his right arm aside from some therapy in approximately August 2012 after he pulled his shoulder while lifting a bucket at work. Claimant remarked that he had no functional limitations, could lift weights and was able to drive with his right arm. He commented that he did not have pain in his right shoulder.

19. Claimant's testimony is contravened by the medical records and opinions of his previous treating physicians. His long history of osteoarthritis is extensively documented in the medical records. Claimant's osteoarthritis was severe and degenerative enough to warrant a recommendation for a total right shoulder replacement in 2012. Further, Dr. Wunder expressed doubt in 2012 that Claimant's shoulder was asymptomatic prior to the January 9, 2012 injury because of the advanced state of his osteoarthritis.

20. Claimant has failed to demonstrate that it is more probably true than not that medical treatment in the form of a right total shoulder arthroplasty as recommended by Dr. Alijani is reasonable, necessary and related to his February 24, 2014 industrial injury. The medical records reflect that Claimant has severe, pre-existing, degenerative osteoarthritis in his right shoulder. A February 4, 2012 right shoulder MRI revealed advanced right shoulder degenerative osteoarthritis. Claimant's condition was severe and degenerative enough to warrant a recommendation for a total right shoulder replacement in 2012. Moreover, Dr. Pitzer persuasively explained that Claimant's right shoulder condition constituted the natural progression of his underlying degenerative osteoarthritis. Dr. Pitzer noted that the force on Claimant's right shoulder during the February 24, 2014 incident was insufficient to cause ligamentous tearing, disruption of the cartilage in the shoulder joint or aggravation of an underlying condition. After reviewing Claimant's right shoulder MRI's taken on February 4, 2012 and March 21, 2014, Dr. Pitzer determined that there were no acute right shoulder changes and any differences were attributable to the natural progression of Claimant's underlying degenerative osteoarthritis. Dr. Pitzer also explained that Claimant's need for right shoulder replacement surgery was entirely due to his pre-existing and severe degenerative osteoarthritis and not the result of the February 24, 2014 incident. Finally, Dr. Alijani explicitly stated that Claimant's need for shoulder surgery was solely related to his underlying osteoarthritis. There is almost no mention of Claimant's injury in Dr. Alijani's reports and he did not perform a causation analysis. Instead, Dr. Alijani simply stated that it is possible that the accident may have temporarily exacerbated Claimant's underlying osteoarthritis. Accordingly, Claimant's request for total right shoulder replacement surgery is denied.

21. Claimant has failed to establish that it is more probably true than not that he should be permitted to reopen his January 9, 2012 Workers' Compensation claim in W.C. No. 4-888-893 based on a change in condition pursuant to §8-43-303(1), C.R.S. Initially, Claimant's right shoulder condition was so severe that Dr. Hewitt recommended a total right shoulder replacement in 2012. Dr. Hewitt noted that Claimant's need for right shoulder surgery was not caused by the 2012 injury but rather his advanced osteoarthritis. Moreover, after reviewing Claimant's right shoulder MRI's taken on February 4, 2012 and March 21, 2014, Dr. Pitzer determined that there were no acute right shoulder changes and any differences were attributable to the progression of Claimant's underlying, degenerative osteoarthritis. Any deterioration in Claimant's right shoulder condition constitutes the natural progression of his degenerative condition and is not causally related to his January 9, 2012 industrial injury. Accordingly, Claimant's request to reopen W.C. No. 4-888-893 is denied.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Medical Treatment

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the

employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

5. As found, Claimant has failed to demonstrate by a preponderance of the evidence that medical treatment in the form of a right total shoulder arthroplasty as recommended by Dr. Alijani is reasonable, necessary and related to his February 24, 2014 industrial injury. The medical records reflect that Claimant has severe, pre-existing, degenerative osteoarthritis in his right shoulder. A February 4, 2012 right shoulder MRI revealed advanced right shoulder degenerative osteoarthritis. Claimant's condition was severe and degenerative enough to warrant a recommendation for a total right shoulder replacement in 2012. Moreover, Dr. Pitzer persuasively explained that Claimant's right shoulder condition constituted the natural progression of his underlying degenerative osteoarthritis. Dr. Pitzer noted that the force on Claimant's right shoulder during the February 24, 2014 incident was insufficient to cause ligamentous tearing, disruption of the cartilage in the shoulder joint or aggravation of an underlying condition. After reviewing Claimant's right shoulder MRI's taken on February 4, 2012 and March 21, 2014, Dr. Pitzer determined that there were no acute right shoulder changes and any differences were attributable to the natural progression of Claimant's underlying degenerative osteoarthritis. Dr. Pitzer also explained that Claimant's need for right shoulder replacement surgery was entirely due to his pre-existing and severe degenerative osteoarthritis and not the result of the February 24, 2014 incident. Finally, Dr. Alijani explicitly stated that Claimant's need for shoulder surgery was solely related to his underlying osteoarthritis. There is almost no mention of Claimant's injury in Dr. Alijani's reports and he did not perform a causation analysis. Instead, Dr. Alijani simply stated that it is possible that the accident may have temporarily exacerbated Claimant's underlying osteoarthritis. Accordingly, Claimant's request for total right shoulder replacement surgery is denied.

Reopening

6. Section 8-43-303(1), C.R.S. provides that a worker's compensation award may be reopened based on a change in condition. In seeking to reopen a claim the claimant shoulders the burden of proving her condition has changed and that she is entitled to benefits by a preponderance of the evidence. *Osborne v. Industrial Commission*, 725 P.2d 63, 65 (Colo. App. 1986). A change in condition refers either to a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition that is causally connected to the original injury. *Jarosinski v. Industrial Claim Appeals Office,* 62 P.3d 1082, 1084 (Colo. App. 2002). A "change in condition" pertains to changes that occur after a claim is closed. *In re Caraveo,* W.C. No. 4-358-465 (ICAP, Oct. 25, 2006). The determination of whether a claimant has sustained her burden of proof to reopen a claim is one of fact for the ALJ. *In re Nguyen,* W.C. No. 4-543-945 (ICAP, July 19, 2004).

7. As found, Claimant has failed to establish by a preponderance of the evidence that he should be permitted to reopen his January 9, 2012 Workers' Compensation claim in W.C. No. 4-888-893 based on a change in condition pursuant to §8-43-303(1), C.R.S. Initially, Claimant's right shoulder condition was so severe that Dr. Hewitt recommended a total right shoulder replacement in 2012. Dr. Hewitt noted that Claimant's need for right shoulder surgery was not caused by the 2012 injury but rather his advanced osteoarthritis. Moreover, after reviewing Claimant's right shoulder MRI's taken on February 4, 2012 and March 21, 2014, Dr. Pitzer determined that there were no acute right shoulder changes and any differences were attributable to the progression of Claimant's underlying, degenerative osteoarthritis. Any deterioration in Claimant's right shoulder condition constitutes the natural progression of his degenerative condition and is not causally related to his January 9, 2012 industrial injury. Accordingly, Claimant's request to reopen W.C. No. 4-888-893 is denied.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for authorization for his total right shoulder arthroplasty is denied and dismissed.

2. Claimant's request to reopen W.C. No. 4-888-893 is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

Denver, CO 80203

ISSUES

The issues to be determined are whether the Claimant sustained an injury to her left shoulder and arm in the course and scope of her employment with the Employer.

FINDINGS OF FACT

Based on the evidence presented during the hearing, the Judge finds as fact:

1. The Claimant worked for the Employer as a lobby attendant.

2. The Claimant alleges she suffered an injury to her left shoulder and left arm on February 17, 2014.

3. On February 17, 2014, Claimant filled out and signed an Employee Injury Report and Statement, stating that the injury occurred "walking to spa" and that "out of nowhere I got this pain on my side."

4. The Claimant also completed a written statement. The Claimant wrote, "I opened the door, started walking to the spa to take towels & I felt shortness of breathe [sic] & I got a weird pain on my side & it started to shoot up to my shoulder."

5. The Claimant completed the Employee Injury Report and Statement within a short period of time after she believed she sustained an injury. The Claimant did not attribute her sudden onset of pain to opening heavy doors while working.

6. Claimant testified that she notified Dora the supervisor of her pain on the day of the accident, and Dora filled out an accident form. Dora stated that "[Claimant] was seen by Todd, the laundry manager, holding her rib and bending over," and that "she states she feels a sudden sharp pain on her left side." Dora did not mention anything about Claimant's shoulder. Dora stated in response to the question asking her to identify all contributing factors to the accident that she was "not sure" and that Claimant "reports it happened suddenly and she was only carrying a basket of towels." Dora did not mention any door on the form.

7. Claimant reported the accident to a security person, Bob Sutter, on the day of the accident after speaking with Dora. Mr. Sutter noted that Claimant opened a door on her way to the spa and felt a sharp pain on her left side that radiated to her shoulder.

8. The Employer sent Claimant to Concentra on February 17, 2014 where she reported that she dropped off towels and started walking when she felt cramping, spasm

along her left side and into her left shoulder. She denied any direct trauma and did not attribute her symptoms to opening heavy doors.

9. The initial evaluation for therapy on February 17, 2014 notes that Claimant "opened the first door, the second door. She was fine. When she was walking to the spa she felt shortness of breath and felt a pulling, stabbing, burning pain in her flank and into her left shoulder."

10. Claimant reported to St. Anthony North Hospital on April 5, 2014 that she pulled open a heavy door and felt a pop and had immediate pain in her left shoulder.

11. Claimant reported to Dr. Hewitt on April 28, 2014 that she was repetitively opening or pulling open doors when she noted sharp pain in her scapula and posterior shoulder region.

12. Respondents referred Claimant to Dr. Elizabeth Bisgard for an independent medical examination on August 14, 2014. Claimant reported to Dr. Bisgard that she was retrieving towels from the basement for delivery to the spa, and that she carried towels in her right hand and used her left hand to open doors. Claimant pulled a door open with her left hand, and pushed another door open with her left hand. Claimant reported she had no issues at that time, with no immediate pain upon opening doors. Claimant also reported that she was with another co-worker.

13. During the hearing, Claimant testified that on February 17, 2014, she opened the basement two doors and felt fine. Next, she went upstairs through the third floor door. Claimant then went into the spa by opening the door, and went to give towels to the receptionist. She then felt something from her side to her shoulder.

14. The Claimant provided inconsistent reports to her supervisors and her healthcare providers as to what she was doing when she felt pain, where she felt the pain in her body, how the pain manifested itself and what activity allegedly caused the pain. As such, the Claimant's testimony as to the circumstances surrounding the alleged incident and how she was injured lacks credibility.

15. Claimant told Dr. Bisgard that the history from the Concentra physical therapist on the date of the accident was incorrect in that it noted Claimant was experiencing shortness of breath. Claimant indicated, however, in her own Employee Injury Report and Statement on the date of accident that she felt shortness of breath.

16. Claimant reported to her physical therapist in March 2014 that she slipped and fell down the stairs at home right before coming to therapy, landing on her back, and re-injuring her left shoulder. However, Claimant reported this incident to Dr. Bisgard, stating that her left shoulder gave out while she was holding onto the railing, and as a result she fell down five steps injuring her right shoulder.

17. In all, Claimant testified that four separate healthcare providers, and on eight

separate occasions, incorrectly wrote down what she reported to them.

18. Additionally, Claimant was in a car accident in April 2013 after which she had work restrictions of not lifting boxes over 10 pounds.

19. Claimant's December 2013 emergency room records state "moderate, diffuse left side back pain." Claimant also complained of a sensation of chest heaviness and that she could not get a complete breath for the prior 2-3 weeks.

20. Despite Claimant's complaints of pain, after analyzing Claimant's medical records (both pre and post alleged injury), Dr. Bisgard, found that there is no objective evidence of any actual injury and Claimant has no diagnosis. Dr. Bisgard based her opinions on the X-rays of Claimant's shoulders taken after the alleged injury which were normal; and an MRI on April 10, 2014 that showed no rotator cuff tear, no labral tear, no tendon tear and no muscle atrophy or edema. The MRI did reveal mild supraspinatus tendinopathy and a trace amount of fluid in the subacromial subdeltoid bursa suggesting mid bursitis. However, Dr. Bisgard opined that the MRI findings did not indicate any significant pathology that would warrant aggressive intervention.

21. Dr. Bisgard also testified that although Claimant has significant subjective pain complaints, there is no clear mechanism of injury, no pathology, and multiple inconsistencies.

22. Claimant complained of pain levels rated at 9 out of 10 when she had full shoulder range of motion.

23. Claimant complained of pain levels at 8 out of 10, but was observed pulling her hair into a ponytail with her left arm, and she had fluid movement without guarding. Pulling her hair into a ponytail requires overhead use, lifting the left arm, and engaging the shoulder muscles, so her subjective high pain levels were inconsistent with casual observation.

24. Claimant initially presented with pain in her flank area, which is just underneath the armpit, and along her flank which is the side, and to the muscles in her anterior chest wall. Claimant was given Ibuprofen for pain relief, and then a more powerful pain reliever, Tramadol, and Flexeril, which is a muscle relaxer. As Dr. Bisgard noted, the Claimant has not responded to these medications, which is a red flag that there is no pathology of physiology that is causing the pain. Physiologic-based pain would improve with Tramadol and Flexeril.

25. Claimant underwent physical therapy, massage therapy, injections, and took anti-inflammatory medications, narcotics, and muscle relaxers with no relief. Dr. Bisgard also explained that Claimant's lack of improvement with any of this treatment is a red flag that there is something other than pathology present.

26. Dr. Bisgard further testified that in an IME, when she is taking notes, she is

also talking out loud, so that the claimant has the opportunity to correct her if what she says is incorrect and so that it can be corrected in the notes for the IME report. She then testified that the Claimant told her, which she noted in the history section of her IME report, that Claimant was not experiencing any pain, discomfort, or problems during the process of opening or pushing doors and she stated that if the process of pushing or pulling an object is enough to cause pathology in the shoulder, there is immediate pain, not delayed pain. The physical force of pushing or pulling would result in immediate pain, not a delayed onset seconds or minutes later. Finally, Dr. Bisgard testified that it makes no sense that Claimant felt pain in her left shoulder after handing off the towels which she carried with her right hand.

27. Claimant exhibited non-physiological responses during Dr. Bisgard's examination. Dr. Bisgard testified that there is nothing to explain why barely touching the skin of Claimant's back would result in Claimant's describing burning pain; even a person with a significant rotator cuff tear would not have this reaction to touching their skin. Dr. Bisgard was not able to localize any specific area of Claimant's pain. Claimant's sensory changes did not correlate with any specific nerve pattern, which Dr. Bisgard again opined did not make sense. Finally, Dr. Bisgard's range of motion measurements showing limited motion made no sense given that the x-ray and MRI showed no specific pathology, and after comparison with the physical therapist's reports of full shoulder range of motion. Dr. Bisgard felt that Claimant exhibited no effort on testing.

28. Dr. Bisgard opined that Dr. Hewitt and Mr. Rassis, were reaching very far to make a diagnosis of bursitis. Dr. Bisgard stated that Claimant's symptoms were vague and nonphysiologic. Dr. Bisgard also stated that Claimant's MRI scan showing mild bursitis cannot account for her significant range of motion loss or subjective complaints. Initially, Claimant described pain in the serratus anterior along the left midaxillary line, with no glenohumeral joint pain and normal range of motion in her shoulder, but a month later she began describing pain and loss of motion in the glenohumeral joint. Dr. Bisgard found there to be no diagnosis to account for her varying symptoms.

29. Dr. Bisgard went to the Employer's premises to test the resistance of the doors Claimant pushed on February 17, 2014. Dr. Bisgard found that the doors Claimant refers to may be heavy in weight, but there is virtually no resistance. Dr. Bisgard was able to push and pull the doors open using only an index finger. Dr. Bisgard walked through and opened every door Claimant would have accessed from the basement to the spa, and some additional doors.

30. Dr. Bisgard concluded, and the Judge agrees, that Claimant did not sustain a work in any capacity around this timeframe. Dr. Bisgard opined that without a diagnosis, causality cannot be determined.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge enters the following conclusions of law:

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

4. A claimant must prove by a preponderance of the evidence that his injury arose out of the course and scope of his employment with employer. Section 8-41-301(1)(b), C.R.S.; *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). An injury occurs "in the course of" employment where claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991).

5. Claimant has failed to prove that she sustained a compensable work injury on February 17, 2014. The evidence does not support that any work activity brought on Claimant's subjective pain complaints. The credible and persuasive evidence in the record reflects that Claimant experienced the sudden onset of subjective symptoms in her left side (flank) and shoulder with no precipitating work-related incident. She admittedly did not feel symptoms until after she handed off some towels to another employee. Claimant believed it was the repetitive opening of doors with her left hand, but the evidence does not support that Claimant was repetitively opening doors with her left hand immediately prior to feeling the pain. In her written statement, she expressed that the pain came out of nowhere. The fact the Claimant experienced pain in the

workplace does not necessarily require a finding of a compensable injury. In *Miranda v. Best Western Rio Grande Inn*, W.C. No. 4-663-169 (ICAO April 11, 2007). In addition, Dr. Bisgard credibly opined that Claimant has no diagnosis, and merely has diffuse non-physiologic subjective complaints of pain, which are not attributable to any of Claimant's work activities. Dr. Bisgard's opinions are supported by Claimant's failure to improve with the various medical treatment the Claimant has received.

ORDER

It is therefore ordered that Claimant's claim for benefits under the Colorado Workers' Compensation Act is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 12, 2015

/s/ Laura A. Broniak

LAURA A. BRONIAK
Office of Administrative Courts
1525 Sherman St., 4th Floor
Denver, CO 80203

ISSUES

The following issues were raised for consideration at hearing:

1. Has Claimant established by a preponderance of the evidence that she sustained compensable industrial injuries that arose in the course and scope of her employment on January 22, 2014?

2. If the claim is deemed compensable, has Claimant established by a preponderance of the evidence that the need for a general award for medical benefits is reasonably necessary and causally related to Claimant's January 22, 2014, injury?

3. If the claim is deemed compensable, has Claimant established by a preponderance of the evidence that the need for medical treatment in the form of facet injections is reasonable, necessary, and causally related for treatment of her industrial injuries?

STIPULATIONS OF THE PARTES

1. If the claim is deemed compensable, the parties stipulate that Claimant's average weekly wage is $529.99.

2. Claimant stipulated that she is not asserting an occupational disease, but is only proceeding under the allegation that she sustained an industrial injury arising from a discrete accident.

3. Claimant withdrew the issue of temporary disability benefits at hearing.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is employed as a pad printer for the Employer. Claimant's primary job duty as a pad printer is to print or paint labels on small plastic parts with the use of high tech machinery.

2. Claimant alleges that on January 22, 2014, she sustained injuries to her low back and lumbar spine while working as a pad printer for the Employer. Claimant alleges that on January 22, 2014, she was working as a pad printer, standing and unpacking boxes with bags of parts. Claimant alleges that she lifted a bag of parts out of a box, the bag got stuck on the side of the box, and as she was pulling her body twisted and her body was pulled downward.

Claimant testified that during the incident she felt a “pricking” or “popping” sensation in her low back.

3. Claimant testified that she told her “supervisor” that she sustained work injuries. Employer has no record of Claimant reporting alleged injuries on January 22, 2014. Claimant finished her work shift on January 22, 2014.

4. The next day, January 23, 2014, Claimant testified that she called into work and indicated that she would not be present at work due to her work injuries.

5. In contrast to the Claimant’s testimony, the personnel manager from Employer, Cathy Cairns, testified credibly that she encountered Claimant around 8:30 a.m. on the morning of January 23, 2014. Ms. Cairns testified that when she encountered Claimant that morning, she was unaware that Claimant was asserting that she had sustained work related injuries. Ms. Cairns testified that she requested that Claimant meet with her in the personnel manager’s office to discuss a recent dispute with coworker, Maria Moto-Diaz.

6. Ms. Cairns testified that when she had the discussion with Claimant on January 23, 2014, Claimant became visibly angry. Claimant did not tell Ms. Cairns during this encounter that she was injured and needed to file a workers’ compensation claim. Ms. Cairns testified that Claimant did not appear during this conversation be injured or in pain.

7. Ms. Cairns testified that Claimant had been involved with a dispute with a coworker, Maria Moto Diaz, who alleged that Claimant was harassing her. Ms. Cairns became aware of the claim of harassment on January 22, 2014, after she left work for the day. Ms. Cairns spoke with Ms. Diaz via telephone on the afternoon of January 22, 2014, regarding the alleged harassment.

8. Claimant and Ms. Moto-Diaz have a history of work place disputes that predates her alleged date of accident in this case. Claimant agreed that her problems with Ms. Diaz became so upsetting for her that she stopped coming into work in February 2014. Ms. Cairns testified that in February 2014 she attempted to alleviate the problems between the Claimant and Ms. Diaz by putting them on different work, lunch and break shifts.

9. On Friday, January 24, 2014, Claimant worked her regular shift for the Employer. Sometime during the morning of January 24, 2014, Claimant reported to her supervisor, Gabriel Soto, that she had injured her back at work. Mr. Soto requested that Ms. Cairns come down to the factory production floor to discuss Claimant’s allegation.

10. Ms. Cairns testified that on January 24, 2014, she met with the Claimant and Gabriel Soto in the factory to discuss Claimant’s allegation of work related injuries. Ms. Cairns testified that she conferred with Mr. Soto and confirmed

that this reporting of the incident on January 24, 2014 was the first time that Mr. Soto was aware that the Claimant was alleging work related injuries.

11. Ms. Cairns filed an Employer's First Report of Injury on January 28, 2014, reflecting that the Employer had been notified of Claimant's claim for alleged work related injuries on January 24, 2014. *See Respondents' Exhibit A.*

12. Claimant testified that as a result of the work related injuries, she was experiencing pain located in the center of her back and radiating into the right side of her leg.

13. Claimant agreed that she had experienced the same pain complaints over the past four to five years. Claimant testified that her pain complaints over the past four to five years were in the same location as the pain complaints she had been experiencing since January 22, 2014. Claimant further testified that the type of pain complaints she was experiencing were the same type of pain that she had experienced over the past four to five years. Claimant testified that she believed that her pain had increased in severity after January 22, 2014, as compared to her pain complaints four to five years earlier.

14. Claimant testified that she experienced the onset of pain in her low back over the past four to five years as a result of performing work related duties for the Employer. Ms. Cairns testified that Employer had never been apprised of Claimant's allegation of prior work related injuries sustained sometime four to five years earlier. Ms. Cairns testified that she became aware of this allegation through the pending litigation for Claimant's January 22, 2014 workers' compensation claim. Ms. Cairns and Claimant regularly saw each other at work and have been friendly at work over the past four to five years. Claimant had numerous opportunities to report her prior low back injuries to Ms. Cairns and she never did so.

15. After Claimant reported her work related injuries on January 24, 2014, she commenced treating with Lynne Fernandez, M.D. Claimant's initial consult with Dr. Fernandez occurred on January 24, 2014. Claimant reported to Dr. Fernandez at her initial consultation that she had injured herself when she "lifted a machine at work" and developed pain in her low back and right groin. Claimant alleged pain complaints at level 9/10. Claimant admitted to Dr. Fernandez that her low back pain had initially onset four to five years earlier and had onset while lifting a machine in the same manner that she had done on January 22, 2014. Claimant's report of injury to Dr. Fernandez is inconsistent with the mechanism of injury that Claimant alleged at hearing.

16. Ms. Cairns testified that Claimant's job duties do not require that she lift any machines at work. Ms. Cairns explained that the Claimant works with very large expensive pad printing machines which are not routinely moved for any reason. Ms. Cairns explained that moving the machines can be difficult as the machines have to be perfectly balanced. Ms. Cairns was not aware of

any reason why the Claimant would have moved machines in 2014 or for any reason four to five years earlier.

17. Sara Nowotny testified at hearing regarding her formal job site analysis performed at Employer's factory. Her findings are summarized in a report dated October 9, 2014. Ms. Nowotny testified that she utilized an exertional scale and measured the force required to pull the bag of parts that the Claimant alleged that she lifted on January 22, 2014. The measurements confirmed that pulling the bag required 27 pounds of force. The bag of parts itself weighed 25 pounds and the degree of force required to pull the bag added 2 pounds. Ms. Nowotny's findings and testimony regarding the degree of force require to pull the bag is credited.

18. Ms. Nowotny testified that the Claimant's job position does not require her to move machines. Ms. Nowotny explained that moving the machinery is discouraged because the machinery is high precision machinery that has to be carefully balanced to operate correctly. Ms. Nowotny's job site analysis confirms that moving machinery is not a component of the Claimant's job duties.

19. Dr. Fernandez placed Claimant on work restrictions as of January 24, 2014, limiting her to 15 pounds of lifting. The Employer accommodated the Claimant's restrictions and has continued to accommodate Claimant's restrictions since January 24, 2014.

20. An x-ray of Claimant's lumbar spine taken on February 13, 2014, revealed degenerative changes at L4-5 and L5-S1. Claimant underwent an MRI of her lumbar spine on March 3, 2014, which confirmed additional degenerative changes at L4-5, L5-S1.

21. Claimant returned to Dr. Fernandez on March 11, 2014, for review of her MRI films. Dr. Fernandez opined that it was difficult to determine if the degenerative changes documented at L4-5, L5-S1 were the cause of Claimant's widespread diffuse low back pain complaints. Claimant noted 7/10 level pain, however, Dr. Fernandez noted normal range of motion except slight limitations with extension, no sensory deficit, normal gait, and normal motor findings.

22. On April 17, 2014, Claimant commenced chiropractic manipulations with Marc Cahn, D.C. Claimant described to Dr. Cahn that her injuries had resulted when she was "lifting bags of parts, putting them into carts and then moving the cart to a table where she places the parts. She developed back pain as a result of this repetitive activity." The mechanism of injury that Claimant alleged to Dr. Cahn is different than the mechanism of injury that she alleged at hearing. Claimant admitted to a past medical history significant for a work related lifting injury that occurred two years ago. Claimant did not report to

Dr. Cahn a specific event involving lifting a bag of parts that got caught on a box and feeling a prick or popping sensation as she testified to at the hearing.

23. On August 11, 2014, Claimant was evaluated by John Tobey, M.D. Dr. Tobey recommended consideration of bilateral L4-5, L5-S1 facet joint injections.

24. On September 4, 2014, Claimant underwent an independent medical evaluation with Dr. Carlos Cebrian. Dr. Cebrian testified at the hearing regarding his evaluation, review of Claimant's medical records, the job site analysis, and drafted a report, dated September 10, 2014, summarizing his opinions.

25. Claimant reported to Dr. Cebrian that she had longstanding back pain that was uncomfortable on an almost daily basis for years prior to January 22, 2014. Clamant described to Dr. Cebrian that she would take pain medication on a daily basis for her back pain and that her pain complaints would improve slightly over the weekend with rest. Claimant alleged that on January 22, 2014, she had a specific work related incident that increased her lumbar spine pain. Claimant described that she was opening a box and taking out a plastic bag full of parts when she pulled on the bag, the bag ripped and the parts fell down. Claimant alleged immediate pain in her lumbar spine after performing this activity.

26. Dr. Cebrian opined in his report and testified at hearing that he believed the longstanding daily discomfort that the Claimant experienced in her low back for 3-5 years prior to the date of accident was related to her degenerative changes and Grade 1 spondylolisthesis. Dr. Cebrian opined to a reasonable degree of medical probability that the Claimant did not sustain any injuries or aggravations as a result of the January 22, 2014, work event. Dr. Cebrian further testified that the Claimant's pain complaints in her spine would likely be identical to her presentation today even if she had never come to work for the Employer. Claimant's likelihood for developing back pain on an idiopathic basis are increased based on the fact that she is obese and has a high BMI of 30.9.

27. Dr. Cebrian explained that the experience of back pain at work in conjunction with certain work duties does not mean that there is an injury or aggravation to her lumbar spine. It is not uncommon for individuals with chronic back pain to wake up in the morning after a night of sleep with back pain. The experience of increased back pain in the morning does not mean that sleeping aggravates or accelerates an underlying back condition.

28. Dr. Cebrian explained that the single event of lifting a bag weighing 27 pounds is unlikely to aggravate or accelerate Claimant's pre-existing low back injuries. Dr. Cebrian noted that the Colorado Division of Workers' Compensation Medical Treatment Guidelines explain that for a lifting event to

be causal for back pain, lifting in the range of 50 to 55 pounds performed 10-15 times per day may be causal when performed over a cumulative number of years. By comparison, the discrete lifting event alleged by Claimant to cause her back pain is insignificant and unlikely to aggravate or accelerate pre-existing degeneration of the spine.

29. The medical causation opinion of Dr. Cebrian is credited. There is no other contrary medical opinion analyzing the mechanism of injury alleged by the Claimant at hearing and finding that this one time lifting incident aggravated or accelerated Claimant's low back injuries. Dr. Fernandez has not offered an opinion on causation that supports Claimant's theory because Claimant alleged an entirely different mechanism of injury when evaluated by Dr. Fernandez.

30. The persuasive medical evidence supports the finding that Claimant's back pain is the result of a long standing pre-existing medical condition. The single lifting event that Claimant alleges to have occurred on January 22, 2014, is unlikely to have aggravated or accelerated Claimant's pre-existing back pain. Claimant has alleged multiple mechanisms of injury to various medical providers, which supports the conclusion that Claimant herself does not know what caused her alleged back pain onset.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

1. The purpose of the Workers' Compensation Act of Colorado (Act), §§8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of respondents. Section 8-43-201(1).

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A Workers'

Compensation case is decided on its merits. Section 8-43-201(1). The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

3. Claimant alleges she proved it is more probably true than not that on January 22, 2014 she sustained an injury or aggravation to her low back and lumbar spine arising out of and in the course of her employment. The credible evidence presented at hearing does not support this conclusion.

4. Claimant was required to prove by a preponderance of the evidence that at the time of the alleged injury she was performing services arising out of and in the course and scope of the employment, and that the injury was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. The question of whether the Claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

5. An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arising out of" element is narrower and requires the claimant to show a causal connection between the employment and the injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. *See Triad Painting Co. v. Blair*, *supra.*

6. It is concluded that Claimant failed to establish that the lifting incident on January 22, 2014 caused, aggravated or accelerated her pre-existing degenerative condition in her low back. Claimant admits to have long standing pre-existing daily back pain. The mere occurrence of back pain when performing the lifting duties on January 22, 2014, does not render this event to have caused, aggravated, or accelerated Claimant’s underlying condition.

7. Since Claimant failed to establish a compensable work injury, Claimant has also failed to establish by a preponderance of the evidence that medical treatment generally, and more specifically in the form of facet injections, is reasonable, necessary and/or causally related for treatment of Claimant’s alleged aggravation to her low back and lumbar spine.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for workers' compensation benefits for an alleged January 22, 2014, injury is denied and dismissed.

2. The claim for a general award of medical benefits is denied and dismissed.

3. The claim for medical benefits in the form of facet injections and related expenses is denied and dismissed.

4. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether claimant has proven by a preponderance of the evidence that she injured her left on April 10, 2013?

- If claimant has proven she injured her left knee on April 10, 2013, whether claimant has proven by a preponderance of the evidence that the medical treatment she received to her left knee was reasonable and necessary to cure and relieve claimant from the effects of the industrial injury, including the physical therapy recommended by Dr. Krebs on July 15, 2013?

FINDINGS OF FACT

1. Claimant was employed by employer as a sales associate at their store located in Montrose, Colorado. Claimant began her employment with employer in June 2007. Claimant testified her job duties included providing customer service, setting up merchandise, and working the front registers.

2. Claimant sustained an admitted injury at work on April 10, 2013. Claimant testified that she was retrieving merchandise for a customer in a stockroom when she tripped and fell over fallen shelving. Claimant testified she landed on her backside and her head and right arm jerked backward. Claimant further testified she felt a popping in her left knee after she fell. Claimant reported the injury over the radio to a supervisor, Ms. Moreland, and filled out a report of her injury that day. Claimant testified that she did not initially ask to see a doctor because she thought her symptoms were minor and would improve.

3. Claimant testified that after the injury she experienced symptoms in her left knee, right shoulder, and the right side of her neck. Claimant denied at hearing having experienced symptoms in those parts of her body prior to the April 10, 2013 injury. Claimant testified that she had not seen a doctor for any problems in her left knee in the five years prior to the April 10, 2013 injury.

4. Claimant testified that a few days after the injury, she returned to Ms. Moreland, told Ms. Moreland she was feeling worse, and asked to see a doctor. Claimant testified that she still had pain in her right shoulder, neck, and left knee at that time. Claimant was referred to Dr. Krebs for medical treatment.

5. Claimant was initially evaluated by Dr. Krebs office on April 22, 2013. A nurse in Dr. Krebs's office noted: "On 4/10/13 while working for JC Penney, Connie was walking when she tripped over some shelving that had fallen. She did fall to the ground,

landing on her buttocks and hitting her back on the Sephora gate. She has not been to the ER." The nurse's note further reported that claimant was complaining of pain in her right knee, leg, hip, lower back, arms and mid-upper back. Claimant testified that she did not know why the nurse's report noted a "right" knee injury, and testified that she believed it was a misprint because the injury involved her left knee. In the same medical report, Dr. Krebs noted that claimant had pain in her left knee, low back, right shoulder, mid upper back and also left hip pain. Dr. Krebs diagnosed claimant with joint pain of the left leg. Dr. Krebs further noted that he could not rule out patellar tendinitis or intraarticular meniscal or ligament injury involving the left knee. Dr. Krebs referred claimant for physical therapy.

6. Claimant reported for physical therapy on April 23, 2013. The referral was noted to be for neck pain and right shoulder pain. Claimant reported to the physical therapist that she had neck pain, right shoulder pain, tightness in her upper extremity, left hip pain and low back pain. The physical therapy initial reports do not include a report of left knee pain.

7. Claimant returned to Dr. Krebs on April 30, 2013. Dr. Krebs again noted that claimant possibly had patellar tendinitis or intraarticular meniscal injury and ordered a magnetic resonance image ("MRI") of her left knee.

8. Claimant underwent the MRI of her left knee on May 8, 2013. The MRI showed mild patellar chondromalacia and a "trace popliteal cyst."

9. Dr. Krebs reviewed the MRI results with claimant on May 16, 2013. Dr. Krebs recommended claimant undergo physical therapy for her knee in an attempt to diminish inflammation and irritation to the undersurface of the kneecap. Dr. Krebs also noted that "left chondromalacia patellae" was a work related medical diagnosis in the WC 164 form filled out on May 16, 2013. Dr. Krebs recommended over the counter medications to treat the inflammation.

10. The physical therapy records demonstrate claimant began receiving physical therapy for her left knee by no later than May 20, 2013.

11. Claimant returned to Dr. Krebs on May 29, 2013. Dr. Krebs noted that claimant reported that her pain would come and go. Dr. Krebs noted that there were "days that she feels fine _____ if she goes up and down stairs." Claimant testified that the blank in Dr. Krebs's May 29, 2013 record should have read "worse." Dr. Krebs also noted the possibility of an injection to claimant's left knee.

12. On June 13, 2013, Dr. Krebs recommended four additional physical therapy visits for claimant's left knee symptoms. Dr. Krebs again noted in his Physician's Report that claimant's left knee chondromalacia patellae was a work related medical diagnosis.

13. Claimant returned to Dr. Krebs on July 11, 2013. Dr. Krebs noted: "Over the left knee, she is uncomfortable to palpate medially, laterally, superiorly and inferiorly over the left patella. There does appear to be some tenderness over the left patella as well." Dr. Krebs opined that claimant's symptoms were not surgical issues and should resolve with therapy. Dr. Krebs recommended additional physical therapy for claimant's left knee. During these visits, Dr. Krebs also provided medical care for claimant's ongoing right shoulder problems.

14. Claimant returned to Dr. Krebs on July 11, 2013. Dr. Krebs noted that he had been treating claimant for her left knee chondromalacia and right shoulder tendinitis bursitis. Dr. Krebs further noted on exam that claimant was uncomfortable to palpate medially, laterally, superiorly and inferiorly over the left patella.

15. Claimant again returned to Dr. Krebs on July 30, 2013. Dr. Krebs noted that claimant reported physical therapy was uncomfortable for her. Dr. Krebs recommended claimant hold off on occupational therapy for 2 weeks. This recommendation involved the therapy for claimant's knee and her left shoulder.

16. Claimant was referred at various times to Dr. Parker, Dr. Gilman (for an electromyelogram ("EMG")), and Dr. Heune during her claim for evaluation and treatment of her shoulder and neck symptoms. Claimant testified that she did not discuss her knee symptoms with any of those doctors because her knee symptoms had improved by that time, and because those doctors' care was focused on claimant's shoulder and neck symptoms. Claimant's testimony in this regard is found to be credible and persuasive.

17. Claimant continued to see Dr. Krebs for treatment of her shoulder and neck symptoms. The medical records from Dr. Krebs continue to note claimant's patellar chondromalacia while her medical treatment appeared to begin to focus more primarily on her left shoulder beginning in August 2013.

18. Notably, on September 16, 2013, claimant reported her knee was feeling better, but there was still some popping in the left knee.

19. Claimant underwent an independent medical examination ("IME") with Dr. Scott on October 16, 2013. Dr. Scott reviewed claimant's medical records, obtained a medical history and performed a physical examination in connection with his IME. Dr. Scott noted that claimant reported, with regard to her left knee, that she believed her knee popped when she fell at work on April 10, 2013. Dr. Scott noted that the MRI of the left knee showed no evidence for internal derangement of her left knee. Dr. Scott provided opinions related to claimant's shoulder, but did not provide opinions relating to the compensable nature of claimant's alleged knee injury.

20. On February 17, 2014, Dr. Krebs wrote to the nurse case manager for insurer and noted that he did not believe claimant's shoulder condition of left knee

condition were surgical issues. Dr. Krebs noted that claimant could be at maximum medical improvement ("MMI") in approximately 4-6 weeks.

21. On June 27, 2014, Dr. Krebs noted that claimant was complaining of some left knee discomfort. Dr. Krebs noted that the prior MRI scan demonstrating normal ligaments, no medial meniscus tear or lateral meniscus tear with mild chondral fissuring and softening of the medial eminence of the patella. Dr. Krebs noted that claimant was tender over the left and right anterior knee joint line and was tender beneath the left inferior pole of the patella. Dr. Krebs also noted that patella hesitation and patellar grind test are uncomfortable. Dr. Krebs noted claimant had chondromalacia patellae and pain in her lower leg joint. Dr. Krebs noted that claimant's left knee symptoms should be treated with conservative therapy, and recommended physical therapy and medications. Dr. Krebs noted in his Physician's Report that claimant's left knee pain was a work related medical diagnosis. Claimant testified that at the time of this report, her left knee symptoms had improved, but she had occasional symptoms and pain with certain positions.

22. Respondents filed a general admission of liability ("GAL") admitting for benefits resulting from the April 10, 2013 work injury limited to claimant's right shoulder injury on June 30, 2014.

23. Claimant testified that she underwent a right shoulder surgery in August 2014 as part of her claim. Claimant testified that she was off of work for approximately nine weeks, but had returned to light duty work for employer at the end of those nine weeks. Claimant testified that she still had symptoms in her right arm, right shoulder, neck, and left knee. Claimant testified that although her left knee symptoms had improved since the injury, she still had pain in her left knee in certain positions. She testified that her left knee symptoms had never gone away completely since the April 10, 2013 work injury. The ALJ finds the testimony of claimant to be credible and persuasive.

24. Claimant underwent an IME with Dr. Primack on September 24, 2014. The IME included claimant's shoulder condition. Dr. Primack reviewed claimant's medical records, obtained a medical history and performed a physical examination in connection with his IME. Dr. Primack noted that claimant did not complain of left knee symptoms during the examination. Dr. Primack opined that the plain film x-rays and left knee MRI were essentially unremarkable except for chondromalacia that was consistent with claimant's age. Dr. Primack provided a diagnosis for claimant's shoulder condition and opined that claimant should be at MMI by the end of November or early December 2014.

25. Dr. Primack testified at hearing, consistent with his September 24, 2014 independent medical examination report. Dr. Primack testified that knee chondromalacia is a degenerative condition that may or may not be symptomatic. He testified that knee chondromalacia could become symptomatic if there is an

aggravation. He testified that knee chondromalacia symptoms could begin in connection with an event or injury.

26. Dr. Primack testified at hearing consistent with his IME report. Dr. Primack testified that claimant was not complaining of knee symptoms when he examined her. Dr. Primack testified that claimant participated in physical therapy, and then stopped doing therapy when she was given exercises and stretches by Dr. Krebs to do at home.

27. The ALJ credits the medical opinions expressed by Dr. Krebs in his records over the contrary opinions expressed by Dr. Primack in his report and testimony and finds that claimant has proven that it is more likely than not that she suffered a compensable injury to her left knee arising out of and in the course of her employment with Employer.

28. The ALJ credits claimant's testimony that she did not experience knee symptoms in her left knee prior to falling while at work on April 10, 2013. The ALJ finds that claimant has proven that it is more likely than not that her left knee became symptomatic when she tripped and fell while at work on April 10, 2013.

29. As such, the ALJ finds that claimant has proven that it is more likely than not that she suffered an injury to her left knee in the course and scope of her employment with Employer on April 10, 2013. The ALJ credits the opinions of Dr. Krebs and the testimony of claimant and finds that claimant has proven that it is more likely than not that the fall at work on April 10, 2013 caused, aggravated, accelerated or combined with a pre-existing condition to result in the need for medical treatment to her left knee. The ALJ credits the reports from Dr. Krebs and finds that claimant has demonstrated that it is more probable than not that the treatment recommended by Dr. Krebs is reasonable and necessary to cure and relieve the claimant from the effects of the industrial injury.

30. The ALJ credits the medical opinions expressed by Dr. Krebs in his records and claimant's testimony over the contrary opinions expressed by Dr. Primack in his report and testimony and finds that claimant has proven that it is more likely than not that the medical treatment she received from Dr. Krebs and from the physical therapists for her left knee was reasonable and necessary to cure and relieve the claimant from the effects of her industrial injury. Specifically, the ALJ finds that the physical therapy recommended by Dr. Krebs on or about July 15, 2013 was reasonable and necessary to cure and relieve the claimant from the effects of the industrial injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving

entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2006. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with" a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

4. As found, claimant has proven by a preponderance of the evidence that the medical treatment provided by Dr. Krebs for her left knee condition is related to her April 10, 2013 work injury. As found, the work injury caused, aggravated, accelerated or combined with a pre-existing condition to result in the need for treatment.

5. As found, claimant has proven by a preponderance of the evidence that that medical treatment recommended by Dr. Krebs, including the physical therapy recommended on July 15, 2013, is reasonable and necessary to cure and relieve claimant from the effects of the work injury.

ORDER

It is therefore ordered that:

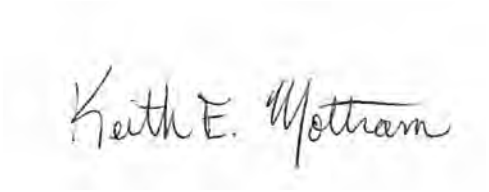
1. Respondents shall pay for the reasonable medical treatment necessary to cure and relieve claimant from the effects of the industrial injury related to her left knee.

2. Respondents shall pay for the physical therapy recommended by Dr. Krebs on July 15, 2013 pursuant to the Colorado Medical fee schedule.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 21, 2015



Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

- Whether claimant has proven by a preponderance of the evidence that she suffered a compensable injury arising out of and in the course of her employment with employer?

- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that the medical treatment she received was reasonable and necessary to cure and relieve claimant from the effects of the industrial injury?

- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that she is entitled to temporary partial disability ("TPD") benefits?

- If claimant has proven a compensable injury, what is claimant's average weekly wage ("AWW")?

FINDINGS OF FACT

1. Claimant was employed with employer in the meat and seafood department. Claimant testified she was at work on May 14, 2014 behind the counter in the meat and seafood department and was helping a customer with an order. Claimant testified she finished helping the customer and turned to change her gloves when she caught her right foot and fell awkwardly. Claimant was found unconscious on the floor by a co-worker.

2. Claimant was taken by ambulance to St. Mary's Hospital Emergency Room ("ER"). The hospital records note that claimant was an 82 year old female who was admitted with a chief complaint of loss of consciousness. The ER physician noted that claimant was in her usual state of health and went to work this morning and the next thing she remembers is waking up strapped to a gurney. Claimant reportedly was found by co-workers bleeding from her tongue and left ear. Claimant reported no prior history of syncope or seizures.

3. Claimant was diagnosed with a syncope and collapse and referred for an x-ray of her chest and computed tomography ("CT") scan of her cervical spine and head. The CT scan of her cervical spine showed some degenerative disc disease, but no traumatic fractures or acute alignment abnormalities. The CT scan of claimant's head showed no acute intracranial pathology, no intracranial hemorrhage or mass

lesion and no acute infarction. Claimant was diagnosed with a loss of consciousness with a suspected onset of new seizure given the abrupt loss of consciousness.

4. Claimant underwent a magnetic resonance image ("MRI") of the brain. The MRI showed no acute intracranial abnormality and no finding to explain a possible seizure. Claimant underwent an EEG exam that showed some left temporal spikes and was provided with a prescription for Keppra and given restrictions involving her driving.

5. According to the discharge summary from Dr. Gershten, claimant reported being very fatigued the previous day indicated that she had worked a shift the day before and then cleaned her house, following which she did not sleep well. Dr. Gershten noted that all of these activities could have lowered claimant's seizure threshold. Claimant denied having made these statements to Dr. Gershten and noted that she did not work the day prior to her injury. Claimant further testified that she did not recall having trouble sleeping the night before her injury.

6. Following her treatment at the ER, claimant was not referred by employer for medical treatment. Claimant sought treatment with Dr. Rademacher on May 23, 2014. Dr. Rademacher noted the EEG results and recommended that claimant be evaluated by a neurologist.

7. Claimant was examined by Dr. McDaneld on August 4, 2014. Claimant reported to Dr. McDaneld that she did not remember anything unusual leading up to her episode where she lost consciousness. Dr. McDaneld noted that claimant was sleep deprived prior to her episode. Dr. McDaneld diagnosed claimant with a seizure and noted the results of the EEG exam. Dr. McDaneld noted that the only possible provoking factor was some sleep deprivation, but noted claimant had not had a history of seizures and reported no seizures since the incident. Dr. McDaneld diagnosed claimant with a single unprovoked seizure. Claimant advised Dr. McDaneld that she did not tolerate the Keppra and had weaned herself off the medication. Dr. McDaneld recommended that claimant continue to abstain from driving for 3 months to ensure that she is seizure free and return in 3 months.

8. Claimant testified at hearing that she has remained off the Keppra and has not experienced any more seizures.

9. Claimant testified at hearing that she does not recall being taken to the hospital. Claimant testified that when she got to the hospital, the left side of her head hurt. Claimant testified she still has symptoms including soreness in her back and intermittent numbness in both upper extremities. Claimant testified she thinks she may have struck her head on the metal counter behind the counter when she fell.

10. Claimant was referred for an independent medical examination ("IME") with Dr. Bernton on September 10, 2014. Dr. Bernton reviewed claimant's medical records, obtained a medical history and performed a physical examination in connection with his IME. Dr. Bernton noted that claimant had an episode with loss of

consciousness which occurred at work and subsequently recovered. Dr. Bernton opined that it was very unlikely that claimant had a traumatic brain injury with a subsequent seizure.

11. Dr. Bernton testified at hearing consistent with his medical report. Dr. Bernton testified that the EEG showed a discharge consistent with a seizure. Dr. Bernton noted that the medical records could be consistent with claimant having an epileptic seizure and striking her head in the fall, but denied that the medical records would support a finding that the seizure was related to a traumatic event. Dr. Bernton diagnosed claimant with new onset epilepsy. Dr. Bernton acknowledged that this diagnosis is not common for elderly patients, but was the probable diagnosis.

12. Dr. Bernton testified that it was possible that claimant could have fallen and hit her head, but it was not probable. Dr. Bernton acknowledged that the ER records documented that claimant had abrasions and a posterior auricular hematoma. Dr. Bernton further acknowledged that claimant's symptoms following her injury could be consistent with a concussion that could occur with claimant striking her head on the table or floor.

13. Respondent maintains that claimant suffered a seizure while at work that was unrelated to her employment with employer. Respondent argues that the claim is therefore not compensable as the injury resulted from an idiopathic condition unique to claimant and not related to her employment. Claimant, meanwhile, maintains that the injury was a result of a fall at work and is therefore compensable.

14. The ALJ credits the testimony of claimant and the ER records entered into evidence that document claimant having abrasions and a auricular hematoma along with the fact that claimant was bleeding from her ear when she was found by co-workers and finds that claimant has established that she struck her head on the metal table. The ALJ further finds that the metal counter was a hazard of employment that is not ubiquitous and therefore, claimant's injury resulting from hitting her head during the fall are compensable.

15. The ALJ finds that claimant's injury constitutes a compensable injury as claimant was subject to an increased risk of injury particular to her employment by striking her head on the metal table when she fell. In so finding, the ALJ need not consider whether claimant's fall was unexplained or the result of an idiopathic condition as claimant's claim would be compensable under either scenario.

16. The ALJ finds that the medical treatment provided by Dr. McDaneld, Dr. Rademacher and the ER is reasonable and necessary to cure and relieve claimant from the effects of her injury. The ALJ finds that the treatment with the ER is compensable as emergency treatment and the treatment with Dr. Rademacher and Dr. McDaneld is authorized by virtue of employer failing to designate an authorized treating physician.

17. Claimant earned $7,584.66 in the 13 weeks she worked prior to her injury from February 15, 2014 through May 10, 2014. This equates to an AWW of $583.44.

18. Claimant argues that the AWW should be based on claimant's earnings in during the year of 2014 prior to her injury. The ALJ notes that claimant's calculation as argued in the position statement included the number of days in 2014, despite the fact that the wage records demonstrated that claimant's first week of work would have included some days from 2013. In any event, the ALJ finds that the appropriate calculation for her AWW should be based on the 13 weeks prior to her injury which constitute one quarter of a year's worth of wages.

19. Claimant argues that she is entitled to an award of temporary partial disability benefits. However, claimant has failed to establish that her loss of earnings following the injury are related to her work injury. The ALJ notes that the only restrictions provided to claimant by her treating physicians included a limitation on driving. Claimant has failed to establish how her work injury led to a loss of wages other than arguing that her hours with employer were reduced.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-43-201(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201(1), C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201(1), *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with "a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

4. In Colorado, only injuries arising out of and in the course of employment are compensable under the Workers' Compensation Act. *See* Section 8-41-301(1), C.R.S.; *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 2120(Colo. 1996). The terms "arising out of" and "in the course of" are not synonymous, and both conditions must be proven in order to establish entitlement to workers' compensation benefits. *In re Question Submitted by U.S. Court of Appeals*, 759 P.2d 17, 20 (Colo. 1988).

5. In order to satisfy the course of employment requirement, claimant must show that the injury occurred within the time and place limits of her employment and during an activity that had some connection with her job function. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991).

6. The Colorado Supreme Court recently determined that unexplained falls would be compensable under the Colorado Workers' Compensation Act as resulting from a neutral force and therefore being compensable under the positional risk doctrine. See *City of Brighton v. Rodriguez*, 318 P.3d 496 (2014). In so holding, the Colorado Supreme Court noted that the term "arising out of" refers to the origin or cause of an employee's injury. *Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo.2001). Specifically, the term calls for examination of the causal connection or nexus between the conditions and obligations of employment and the employee's injury. *Id*. The court noted that an injury "arises out of" employment when it has its "origin in" an employee's work-related functions and is "sufficiently related to" those functions so as to be considered part of employment. *City of Brighton, supra.* It is not essential, however, that an employee be engaged in an obligatory job function or in an activity resulting in a specific benefit to the employer at the time of the injury. *Id.,* citing *City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo.1985); and *In re Question*, 759 P.2d at 22 ("The employee need not necessarily be engaged in the actual performance of work at the moment of injury in order to receive compensation.").

7. Respondent argues that claimant's injury is not compensable as the injury was precipitated by a pre-existing condition (new onset epilepsy) brought by the claimant to the workplace. The ALJ is not persuaded. An otherwise compensable injury does not cease to arise out of employment because it is partially attributable to a pre-existing physical infirmity of the employee. *National Health Laboratories v. Industrial Claim Appeals Office*, 844 P.2d 1259 (Colo. App. 1992). Rather, an injury which results from the concurrence of a pre-existing condition and a special hazard of employment is compensable. *H&H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Thus, even if the direct cause of the accident is a preexisting idiopathic disease or condition, the resulting disability is compensable if the conditions or circumstances of employment have contributed to the accident or to the injuries sustained by the employment. *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989). To be an employment hazard for this purpose, the employment condition must not be a ubiquitous one; it must be a special hazard not generally encountered.

8. In this case, if the claimant was injured as a result of an idiopathic condition that claimant brought to the workplace (epiliepsy) that was unique to claimant,

her injury is not compensable. If claimant was injured as a result of an unexplained fall, the injury is compensable. Likewise, if claimant was injured because she struck her head on the metal counter when she fell, he claim is compensable, because even though claimant fell as a result of the seizure, claimant was placed at an increased risk of injury by virtue of the fact that that she struck the metal counter.

9. As found, claimant has proven by a preponderance of the evidence that she sustained an injury when she struck her head on the metal counter when she fell. Because the metal counter represents an employment hazard that is not ubiquitous, claimant's claim is compensable.

10. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Pursuant to Section 8-43-404(5), C.R.S., Respondents are afforded the right, in the first instance, to select a physician to treat the industrial injury. Once Respondents have exercised their right to select the treating physician, Claimant may not change physicians without first obtaining permission from the insurer or an ALJ. *See Gianetto Oil Co. v. Industrial Claim Appeals Office*, 931 P.2d 570 (Colo. App. 1996).

11. "Authorization" refers to the physician's legal authority to treat, and is distinct from whether treatment is "reasonable and necessary" within the meaning of Section 8-42-101(1)(a), C.R.S. 2008. *Leibold v. A-1 Relocation, Inc.*, W.C. No. 4-304-437 (January 3, 2008). Section 8-43-404(5)(a) specifically states: "In all cases of injury, the employer or insurer has the right in the first instance to select the physician who attends said injured employee. If the services of a physician are not tendered at the time of the injury, the employee shall have the right to select a physician or chiropractor." "[A]n employee may engage medical services if the employer has expressly or impliedly conveyed to the employee the impression that the employee has authorization to proceed in this fashion…." *Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985), *citing*, 2 A. Larson, *Workers' Compensation Law* § 61.12(g)(1983).

12. As found, claimant has established that the medical treatment at the ER is emergency treatment compensable under the Colorado Workers' Compensation Act. As found, claimant has established that the treatment from Dr. McDaneld and Dr. Rademacher was reasonable medical treatment necessary to cure and relieve claimant from the effects of the industrial injury. As found, claimant has proven that Dr. McDaneld and Dr. Rademacher are authorized to treat claimant for her injury due to the fact that employer failed to designate a treating physician.

13. To prove entitlement to temporary partial disability (TPD) benefits, claimant must prove that the industrial injury contributed to some degree to a temporary wage loss. See *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995).

14. As found, claimant has failed to establish that her injury resulted in her temporary wage loss related to her injury.

15. The ALJ must determine an employee's AWW by calculating the money rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office*, 916 P.2d 539 (Colo. App. 1995).

16. As found, claimant has established an AWW of $583.44.

ORDER

It is therefore ordered that:

1. Respondent shall pay for the medical treatment provided by St. Mary's Hospital, Dr. Rademacher, and Dr. McDaneld that is reasonable and necessary to cure and relieve claimant from the effects of the work injury.

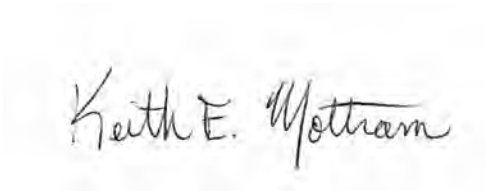
2. Claimant's AWW is $583.44.

3. Claimant's claim for TPD benefits is denied and dismissed.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 12, 2015



Keith E. Mottram

#JKS1AZYC0D1733v 2

Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUE

The following issue was raised for consideration at hearing:

The issue raised is whether the left elbow surgery is reasonable, necessary and related to Claimant's work injury of April 17, 2014.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a credible witness and his testimony is both persuasive and consistent with the medical records in the case.

2. Claimant was hired by Employer in July 1984. He has been a lineman for the past eighteen years.

3. On April 17, 2014, while cleaning the lift bucket on his truck to ensure that it could be operated safely, Claimant suffered a fall from a height of approximately 6 to 7 feet. He landed on his back on top of a toolbox in the bed of his truck. He had scrapes on both arms.

4. Claimant testified that following his fall he was hospitalized at the Medical Center of Aurora, where he was diagnosed with multiple rib fractures. He was hospitalized for three days and given narcotic medications. Claimant testified that as he weaned himself from the narcotics he began experiencing pain in his left elbow. The pain was such that he could barely lift light weight objects such as a coffee cup.

5. Claimant was referred to Dr. John Raschbacher and eventually had right shoulder surgery with Dr. James Genuario on August 14, 2014.

6. On May 9, 2014, Claimant underwent a MRI of his left elbow which showed that Claimant had a moderate flexor tendinosis with a fluid-filled longitudinal split delineating a small intrasubstance partial tear.

7. Claimant testified that prior to this MRI he had never undergone diagnostic testing which established the presence of a left elbow tear.

8. Claimant was seen by Dr. Genuario with the authorization of his adjuster on May 28, 2014, complaining of left elbow pain. The diagnosis of left elbow medial epicondylitis was confirmed by Dr. Genuario by the May 9, 2014, MRI.

9. On July 21, 2014, Dr. Genuario diagnosed left medial elbow pain with an added diagnosis of ulnar neuropathy. Claimant underwent an EMG on August 5, 2014, upon referral from Dr. Genuario. This established left ulnar neuropathy at the elbow consistent with cubital tunnel syndrome. Dr. Genuario recommended surgery for this problem.

10. Thereafter, Claimant was seen by Dr. Kavi Sachar on referral from his authorized treating physician (ATP) Dr. Raschbacher. Dr. Sachar evaluated Claimant on August 13, 2014. He described Claimant's left elbow injury consistent with the testimony of Claimant.

11. In response to a letter dated August 21, 2014, concerning left elbow causation, Dr. Sachar stated: "It is not unusual to sustain multiple injuries from a fall from a significant height. Therefore, within a reasonable degree of medical probability, I do believe the patient's left medial epicondylitis and left cubital tunnel are causally related to the injury he sustained on April 17, 2014."

12. Dr. Sachar issued an additional report on October 22, 2014, in which he noted that Claimant had treatment on his left elbow prior to this injury and suggested that Claimant be sent for yet another evaluation to determine causation. This was not done.

13. The medical records establish that the Claimant was evaluated by Dr. Genuario on March 17, 2014. At that time Dr. Genuario stated that Claimant was suffering "Right medial pain, consistent with medial epicondylitis." Additionally, Claimant was having problems in the left elbow for which he was prescribed an anti-inflammatory cream.

14. The pre-injury records from Dr. Genuario do not note the presence of either left ulnar neuropathy or cubital tunnel syndrome, both of which were found after Claimant's injury of April 17, 2014.

15. There is no specific reference to left elbow pain prior to the Claimant's injury of April 17, 2014. In fact, the reports from Dr. Genuario specifically refer to right medial elbow pain with difficulty experienced primarily on the right not the left.

16. Claimant credibly testified that following his appointment of March 17, 2014, he was given left elbow injections which provided him complete relief from left elbow pain. Claimant returned to see Dr. Genuario on April 16, 2014, continuing to complain of bilateral shoulder pain. However, the records from that date failed to show the presence of either right or left medial epicondyle pain.

17. During his direct testimony, Claimant testified that the problem that he was suffering in his left elbow on March 17, 2014, was numbness in the forearm. The report of April 16, 2014, only indicates some pain generally in bilateral arms when lifting.

18. Post injury on April 17, 2014, Claimant was reporting pain in his left elbow, not the numbness reported earlier.

19. The EMG performed by Dr. Joseph Fillmore on August 5, 2014, showed the Claimant was suffering both numbness and tingling in his left arm and had been referred to rule out ulnar neuropathy which was in fact found. Dr. Fillmore notes that the Claimant had a previous history of medical injections to the neck and the right forearm for pain in the past.

20. ATP Dr. Raschbacher has rendered an opinion that Claimant's left elbow ulnar neuropathy is not injury related. This appears to be based primarily on the fact that Claimant had pre-existing treatment for his left elbow. However, none of the treatment that the Claimant underwent in March 2014 was for ulnar neuropathy or cubital tunnel syndrome. Further, ATP Dr. Raschbacher candidly admitted that following his pre-injury left elbow treatment in March 2014, Claimant had no restrictions and that there is no evidence that Claimant was under restrictions at the time he suffered the fall from 6 to 7 feet on April 17, 2014.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

2. Respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of the industrial injury. Section 8-42-101 (1)(a), C.R.S. 2007; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P.2d 362 (Colo. App. 1995). Where the Claimant's entitlement to benefits is disputed, the claimant has the burden to prove a causal relationship between a work-related injury and the condition for which benefits or compensation is sought. *Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997).

3. The ALJ finds the opinions of Drs. Genuario and Sachar on causation credible. Claimant has demonstrated that the left elbow surgery recommended by Drs. Genuario and Sachar is reasonable, necessary and related to his injury of April

17, 2014. This is supported by the MRI of May 9, 2014, and the reports of both Drs. Genuario and Sachar.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents shall be liable for the recommended surgery for Claimant's left elbow, which is found to be reasonable and necessary medical treatment related to Claimant's April 17, 2014, work injury.

2. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did the claimant prove by a preponderance of the evidence that he sustained one or more occupational diseases proximately caused by the performance of service arising out of and in the course of his employment?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant's Exhibits 1 through 8 were admitted into evidence. Respondents' Exhibits A through H were admitted into evidence.

2. The parties stipulated that if the claim is found compensable the claimant's average weekly wage is $1210.69. They further stipulated that if the claim is found compensable the claimant is entitled to temporary total disability benefits commencing October 7, 2014 until reduced or terminated pursuant to the Act or WCRP. The parties further stipulated that Concentra Medical Centers and Tracy Wolf, M.D., are authorized treating medical providers. The parties further stipulated that the surgery performed by Dr. Wolf on October 8, 2014 constituted reasonable and necessary medical treatment. However, the respondents dispute whether the need for the surgery was proximately caused by any alleged occupational disease(s) arising out of and in the course of the claimant's employment.

3. The claimant has worked as a delivery driver for the employer for twenty-eight years. The claimant works four days per week for up to 14 hours. On Mondays he drives a large tractor-trailer from Denver to Canon City where he delivers food products to various restaurants and institutions. He also makes deliveries on Tuesday. He then drives to Pueblo where he picks up tortilla chips and returns to Denver. The claimant repeats this itinerary on Thursdays and Fridays.

4. The claimant testified as follows. When he is making deliveries he enters the trailer and unloads products onto a two wheeler. He then transports the products down a ramp from the truck and typically stacks them inside the customer's facility. He stated that he lifts 10,000 to 15,000 pounds of product per day. When delivering products he is required to grasp and lift bags and boxes weighing between 1 and 100 pounds. He estimates the average lift is 35 pounds. He makes 60 to 70 trips up and down the ramp per day. When he is driving the truck he experiences vibration from the steering wheel and the gear shift.

5. The claimant testified as follow concerning the events of April 4, 2014. He experienced pain in his elbows and hands which caused difficulty when moving cases of

product. His grip strength was reduced so that he dropped some items. He had experienced these symptoms prior to April 4 but the problem "came to a head" on this date and he believed he might need medical attention for his symptoms.

6. On April 15, 2014 Carrie Burns, M.D., examined the claimant at Concentra. The claimant gave a history that his job required loading and unloading of multiple boxes of varying weights. He had experienced problems with both arms over the "past few years" and was now complaining of bilateral elbow pain and swelling. The claimant also reported pain shooting pain from the "elbow to the palm with accompanying tingling of his pinky finger" and pain in the "knuckle" of his right middle finger. The claimant reported he received steroid injections many years ago for the finger problems. On examination Dr. Burns noted some "mild motor deficits with both ulnar and medial testing." There was mild bilateral swelling of the elbows with tenderness to palpation of the medial epicondyles on the right and left. Dr. Burns assessed bilateral epicondylitis, bilateral ulnar neuritis, "likely CTS" and right hand pain "at mcp of 3rd finger and thumb." Dr. Burns opined the claimant's bilateral hand and elbow problems likely resulted from "cumulative trauma from his job." Dr. Burns prescribed Naproxen, occupational therapy and an ergonomic evaluation. He released the claimant to return to work at regular duty and referred the claimant to "hand surgery."

7. On April 18, 2014 hand surgeon Tracy Wolf, M.D. examined the claimant. Dr. Wolf assessed bilateral medial epicondylitis, bilateral hand numbness most consistent with "probable ulnar neuropathy coming from the elbow and possible right middle trigger finger." Dr. Wolf stated that not much could be found with respect to the finger. With respect to the suspected ulnar neuropathy Dr. Wolf recommended "getting a nerve test" and stated surgery would be recommended if the findings were severe and the claimant was having "some motor changes."

8. On May 16, 2014 Colleen Waterous of Genex performed a job site evaluation of the claimant's duties. This was on referral from Concentra Medical Centers (Concentra). The claimant participated in the evaluation and provided information to Ms. Waterous. The report states that the claimant engaged in "frequent" lifting of 26 to 50 pounds and occasional lifting of 51 to 100 pounds. He frequently used a firm "power grip" while using the "hand truck," pulling himself into the cab of the truck and carrying product." He was frequently exposed to "flexion/extension/deviation." He was frequently exposed to hand and arm vibration when driving the truck. The report states the "frequent" exposure is one that occurs 34-66% of the time with 13 to 30 repetitions per hour and 101 to 245 repetitions per day.

9. The Genex report states that pursuant to the Colorado Medical Treatment Guidelines (MTG) the claimant was exposed to the "primary risk factor" of awkward posture and repetition/duration. Specifically he was exposed to 4 hours of wrist flexion greater than 45 degrees, extension of greater than 30 degrees or ulnar deviation greater than 20 degrees. The report also indicates the claimant was exposed to the "secondary risk factor" of force and repetition/duration. Specifically the claimant was exposed to 4 hours of lifting 10 pounds more than 60 times per hour.

10. On August 12, 2014 Scott London, M.D., performed nerve conduction testing of the claimant's upper extremities. His impressions included severe left ulnar entrapment at the elbow or cubital tunnel without evidence of median nerve dysfunction. He noted an absent left ulnar sensory response and chronic denervation from the distal ulnar innervated musculature. There was no evidence of right ulnar nerve entrapment.

11. Dr. Wolf examined the claimant on August 19, 2014 and reviewed the results of the electrodiagnostic study performed by Dr. London. On August 19 the claimant was complaining of pain at the inner aspect of his elbows. On the left there was numbness in the small and ring fingers and the claimant felt the left small finger was swollen. The right middle finger had not been "catching" since Dr. Wolf's last examination. Dr. Wolf assessed severe left ulnar neuropathy at the elbow and left epicondylitis. She recommended a left nerve release and medial epicondylectomy. She assessed "right ulnar nerve symptoms" and performed an injection for this.

12. On October 6, 2014 Jeffrey Wunder, M.D. performed an independent medical evaluation (IME) of the claimant at the respondents' request. Dr. Wunder is board certified in occupational medicine and is level II accredited. Dr. Wunder took a history from the claimant, reviewed medical records and performed a physical examination. Dr. Wunder noted that in 1990 the claimant had bilateral palmar pain and pain into the fifth digit. At that time he received an injection into the right wrist. He also received multiple injections for a right middle trigger finger. Dr. Wunder noted that in 2012 Dr. Kawasaki treated the claimant for neck pain with radiation into the right upper extremity after some bread products fell on him. The claimant reported pain and tingling in the right hand. The claimant had left interosseous muscle atrophy and a positive Tinel sign at the left elbow. Dr. Kawasaki reportedly diagnosed right C6 radiculopathy and left ulnar neuropathy "longstanding and probably not work related." The claimant underwent an MRI that showed foraminal stenosis at C5-6. He also underwent electrodiagnostic studies of both upper extremities. The right sided tests were negative and the left sided study revealed ulnar neuropathy "with both acute and chronic axonal change."

13. On October 6, 2014 Dr. Wunder noted the claimant reported bilateral upper extremity pain with the left worse than the right. There was pain at the medial left elbow but the claimant did not describe a lot of pain on the right side. The claimant also reported numbness and tingling on the ulnar side of the both palms going into the fifth digits. Dr. Wunder noted mildly positive Tinel's signs at the cubital tunnels on the right and left. The wrists were non tender. There was a positive carpal compression test but this was in the median nerve distribution rather than on the ulnar side of the hand. Dr. Wunder considered this finding to be "unexpected." There was no triggering in the fingers of either hand. Dr. Wunder assessed "nonspecific bilateral hand pain" and chronic left ulnar neuropathy at the elbow, "longstanding and unrelated to work activities." At the elbows there "was no tenderness either medially or laterally." Dr. Wunder opined the left-sided muscle atrophy was a longstanding issue that had not worsened since the claimant saw Dr. Kawasaki in 2012. Dr. Wunder stated there was no evidence of carpal tunnel syndrome, tendonitis or trigger finger. Dr. Wunder opined the claimant's work activities did not require forceful wrist mobility in combination with

unusual positions and he could "not attribute any diagnosis to his work-related activities."

14. On October 8, 2014 Dr. Wolf performed a left ulnar nerve release at the elbow with a medial epicondylectomy. On October 21, 2014 Dr. Wolf noted the claimant had restrictions of no repetitive wrist or elbow motion, no repetitive lifting, gripping or grasping with the left arm and a lifting restriction of 2 pounds on the left.

15. Dr. Wunder testified at the hearing. Dr. Wunder testified that since his report he had reviewed the Genex evaluation and heard the claimant testify concerning his work activities. Dr. Wunder testified that he believed he fully understands the claimant's job duties.

16. Dr. Wunder testified as follows concerning application of the WCRP 17, Exhibit 5, the Cumulative Trauma Conditions Medical Treatment Guidelines (MTG). Dr. Wunder explained that the MTG were prepared by a panel of physicians who reviewed the medical literature and latest studies to formulate a document to assist physicians in determining the cause of cumulative trauma conditions. Dr. Wunder explained the MTG are "advisory" with respect to a diagnosis and the ultimate diagnosis of a condition is to be made by the clinician.

17. Dr. Wunder testified that under the MTG the first step in identifying the cause of a cumulative trauma disorder is to make a diagnosis. Dr. Wunder opined the claimant's diagnosis is left ulnar neuropathy, also known as left cubital tunnel syndrome. Dr. Wunder opined this diagnosis is severe "end stage" disease in light of interroseous muscle weakening in the left hand. Dr. Wunder did not find evidence of right cubital tunnel syndrome or any other right-sided disease process. He noted that he performed a Tinel's test at the right wrist which produced symptoms in the 4^{th} and 5^{th} fingers. Dr. Wunder explained this was not an anatomically correct response to the test. Dr. Wunder did not find evidence of any right-sided trigger fingers and stated there was no evidence of carpal tunnel syndrome on EMG examination.

18. Dr. Wunder opined that the condition of left ulnar neuropathy is subject to a causation analysis under the MTG. He explained the next step is to compare the activities performed in the workplace to the cumulative trauma risk factors identified in the "Risk Factors Definitions" table contained in the MTG. The clinician then goes to the Diagnosis Based Risk Factors table to determine if there is literature supporting a causal relationship between the duties of employment and the particular diagnosis.

19. Dr. Wunder testified that in order to put the ulnar nerve at risk there is a requirement for forceful flexion of the elbow and he explained that when the elbow is relaxed there is no pressure on the ulnar nerve. In this regard he noted that the MTG state that a positive elbow flexion/ulnar compression test is one of the exam findings that will support a diagnosis of ulnar neuropathy. Dr. Wunder noted that the Genex report and the claimant's testimony identified exposure to the "primary risk factor" of "wrist activity." However, Dr. Wunder explained that wrist activity is not physiologically related to the diagnosis of ulnar neuropathy since wrist activity alone does not involve

elbow flexion. Dr. Wunder also explained that under the Genex evaluation the claimant was exposed to the "secondary risk factor" of 4 hours of lifting 10 pounds at least 60 times per hour. However, Dr. Wunder opined that lifting is not physiologically associated with ulnar neuropathy although it may be pertinent to other cumulative trauma disorders. Dr. Wunder also noted that the Diagnosis Based Risk Factors table states there is a study indicating that a combination of forceful tool use, repetition and probably posture for 6 hours (holding a tool in position with repetition) is associated with cubital tunnel syndrome. However, Dr. Wunder opined that this combination of factors is not present in the claimant's job duties.

20. Dr. Wunder opined to a reasonable degree of medical probability that the claimant's upper extremity symptoms are not the result of an injury or occupational disease caused by the duties of his employment. He explained that ulnar neuropathy may appear "spontaneously" without any identifiable cause.

21. Dr. Wunder testified that none of the Concentra providers, including Dr. Burns, applied the MTG in assessing the cause of the claimant's condition(s). He further noted that Dr. Wolf did not render any opinion concerning the cause of the claimant's diagnoses.

22. Dr. Wunder opined the surgery performed by Dr. Wolf is not related to his employment.

23. The claimant failed to prove that he suffers from any disease or disease process that was proximately caused, intensified aggravated or accelerated by exposure to any hazards of his employment.

24. Dr. Wunder credibly and persuasively testified that his physical examination and the results of the electrodiagnostic testing support only the diagnosis of left ulnar neuropathy (left cubital tunnel syndrome).

25. Dr. Wunder persuasively opined that the claimant does not exhibit any evidence of the disease of a right "trigger finger." This opinion is corroborated by Dr. Wolf who opined on April 18, 2014 that it was only "possible" the claimant had triggering of the right middle finger and "not much could be found" with respect to this condition. On August 19, 2014 Dr. Wolf noted the right middle finger had not been "catching" since the last examination and did not seem "to be a problem."

26. Dr. Wunder persuasively opined that on examination of the claimant he did not find evidence of any disease process except left ulnar neuropathy. Although Dr. Burns and Dr. Wolf diagnosed right and left medial epicondylitis, Dr. Wunder found no evidence of this condition on examination of the claimant. Indeed, the claimant reported no tenderness at the medial aspect of the elbows when he was examined by Dr. Wunder, just two days prior to the surgery performed by Dr. Wolf. The electrodiagnostic testing performed by Dr. London failed to demonstrate evidence of right ulnar neuropathy, and Dr. Wunder persuasively opined that the claimant exhibited

"unexpected" and anatomically incorrect symptoms in the right ulnar distribution when he performed a Tinel's test at the wrist.

27. The opinion of Dr. Wunder and the results of electrodiagnostic testing establish the claimant does not have carpal tunnel syndrome. Dr. Wunder's opinion is supported by Dr. Wolf who did not diagnosis left or right carpal tunnel syndrome.

28. Dr. Wunder persuasively opined that application of the MTG to the claimant's diagnosis of left ulnar neuropathy does not support a finding that there is a causal relationship between the claimant's employment and the disease process. The MTG provide that when the claimant "meets the definition of a sole Primary Risk Factor and the risk factor is physiologically related to the diagnosis, it is likely that the worker will meet causation for the cumulative trauma condition." The MTG further provide that where the "Primary Risk Factor identified is not physiologically related to the diagnosis, causation will not be established at this point and Step 4 needs to be considered." (Respondents' Exhibit A, p. 10). Dr. Wunder considered the Genex job analysis and the claimant's testimony and determined that the only "Primary Risk Factor" present in the claimant's job duties was "wrist activity." Dr. Wunder persuasively explained that "wrist activity" is not physiologically associated with the diagnosis of ulnar neuropathy because it does not involve elbow flexion and consequent stress to the ulnar nerve. Dr. Wunder also persuasively opined that although the claimant's job involved the "Secondary Risk Factor" of 4 hours of lifting 10 pounds more than 60 times per hour, that risk factor did not satisfy the specific criteria for the "Diagnosis Based Risk Factors" for Cubital Tunnel Syndrome. Dr. Wunder persuasively explained that Diagnosis Based Risk Factors table states there is a study indicating that a combination of forceful tool use, repetition and probably posture for 6 hours (holding a tool in position with repetition) is associated with cubital tunnel syndrome. However, Dr. Wunder credibly opined that this combination of factors is not present in the claimant's job duties. Dr. Wunder credibly opined that none of the risk factors identified by the Genex studies is associated with the diagnosis of ulnar neuropathy.

29. Dr. Wunder credibly explained that physical activity is not a prerequisite to the development of ulnar neuropathy and that the condition may appear "spontaneously" in some patients. The ALJ finds that this credible testimony and the persuasive evidence that the duties of the claimant's employment are not a causative or aggravating factor in the development of left ulnar neuropathy, that the most likely cause of the claimant's left ulnar neuropathy is the "idiopathic" appearance of the disease in the claimant's left elbow.

30. The ALJ places significant weight on the MTG causation analysis and Dr. Wunder's application of that analysis. Dr. Wunder credibly explained the MTG causation algorithm is based on review of the best studies and literature pertaining to the causes of cumulative trauma conditions. Dr. Wunder persuasively applied the MTG and explained his opinion that the MTG do not support a finding that there is a causal relationship between the claimant's left ulnar neuropathy and the conditions of his employment.

31. The ALJ further finds it significant that Dr. Wolf has not offered any opinion concerning the causes of her diagnoses. Therefore her opinions have no persuasive effect on the issue of the cause of the claimant's condition. Further Dr. Burns did not purport to apply the MTG when opining that the claimant has sustained several work-related cumulative trauma conditions. Therefore, Dr. Burns' opinions are not as credible and persuasive as those expressed by Dr. Wunder.

32. Evidence and inferences contrary to these findings are not credible and persuasive.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), §§8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1).
