25. Claimant alleges she suffered a left hip injury on October 14, 2018 while lifting bags of cat and dog food. Claimant reported the incident to co-manager Melody Metz that same day. Ms. Metz completed a claim form listing the incident description as "was lifting dog and cat food onto the GHS cart and hurt her left hip." Ms. Metz and Claimant also completed an Associated Incident Report on October 14, 2018, indicating Claimant was lifting dog food and cat food and hurt her left hip. After completing her shift, Claimant sought care at Concentra and was diagnosed with a left hip strain by Mary Nolan, M.D. and released to work with restrictions.

26. Claimant returned to Concentra on October 15, 2018 and was evaluated by Dr. Rossi. Claimant reported having a left-sided hip injury from the day prior that Dr. Rossi opined was likely nothing more than a "simple strain" based on Claimant's exam and mechanism of injury. She noted Claimant's right hip condition was unchanged. Dr. Rossi continued Claimant on restrictions related to the February 8, 2017 work injury. No treatment was prescribed for Claimant's left hip.

27. On October 25, 2018, Dr. Rossi noted Claimant had failed multiple lengthy treatment modalities for the right hip. She did not recommend Claimant undergoing any further surgery under any circumstances.

28. Dr. White evaluated Claimant on October 31, 2018. Claimant reported continued deep pain in the groin. Dr. White opined that Claimant's repeat right hip MRI was suggestive of a re-torn labrum or a labrum that did not completely heal. He

reviewed intraoperative photographs and noted, “Her labrum is quite small. I just think it was a poor quality labrum that, though repaired well, did not heal well and is still an irritant in the joint.” Dr. White opined Claimant is a reasonable candidate for revision hip arthroscopy and conversion to labral reconstruction. Dr. White requested prior authorization of a right hip arthroscopy revision to full labral reconstruction with PRP for healing augmentation.

29. Dr. Rossi reevaluated Claimant on November 1, 2018, noting Dr. White’s recommendation for right hip reconstruction surgery. She expressed her concern regarding Claimant undergoing “another more extensive surgery with a typical 4-month recovery time and if that didn’t work a total hip replacement. Can’t predict how Claimant will recover and response to another surgery.” She stated she did not feel qualified to “weigh the risks and benefits of the surgery and will leave this to Dr. White and the Adjuster.” Dr. Rossi did not recommend further physical therapy due to Claimant’s lack of functional improvement. She maintained Claimant on restrictions.

30. On December 21, 2018, Claimant presented to Medical Center of Aurora with chief complaint of worsening right hip pain. Claimant underwent a CT of the pelvis. Impression was a lower sacral fracture involving the sixth segment and a healed fracture involving the fifth sacral segment.

31. Claimant returned to Dr. Rossi on December 24, 2018. She noted a recent CT showed a nondisplaced S-6 fracture and healed S-5 fracture. She recommended Claimant follow up with her primary care physician, noting she would see what happens at the upcoming IME. Dr. Rossi noted an anticipated MMI date of April 1, 2019.

32. On January 3, 2019, Timothy S. O’Brien performed an IME at the request of Respondents, reviewing medical records and physically examining Claimant. Dr. O’Brien opined that the only injury Claimant incurred as a result of the February 8, 2017 work injury was a minimally displaced sacrococcygeal fracture that healed within three months without permanent disability or any need for ongoing medical treatment. He opined that Claimant did not sustain a right hip injury, including a labral injury. Dr. O’Brien opined that the reported mechanism of injury would not produce an intraarticular labral tear of the hip, and concluded that the right hip MRI findings were most consistent with a normal age-related genetically-induced labral area of degeneration. He further opined that Claimant’s delayed onset of right hip pain was nonorganically-based and generated by the secondary gain issues inherent to all workers’ compensation claims. He disagreed with Drs. Faulkner and White regarding Claimant’s diagnosis and need for surgery, noting both physicians did not Claimant’s medical records. Dr. O’Brien stated Claimant was never a surgical candidate, and the surgery recommended by Dr. White is “categorically contraindicated” and will fail.

33. Dr. O’Brien subsequently reviewed additional medical records in connection with the alleged October 14, 2018 left hip injury and issued two supplemental IME reports dated January 29, 2019. He opined Claimant did not sustain a work-related injury on October 14, 2018, as there was no objective evidence an injury occurred.

34. Claimant continues to work as a personal shopper with restrictions. Claimant testified at hearing she informed her treating physicians of her right hip pain towards the beginning of her treatment, but was not initially offered treatment for her right hip. She testified continues to experience right hip symptoms, including sharp and shooting pains, cramping, pinching, and throbbing, which are symptoms also present in her left hip. Claimant testified she wants to undergo the right hip surgery recommended by Dr. White to help with pain and function. Claimant testified she has received unauthorized chiropractic treatment for her left hip.

35. Dr. Rossi testified at hearing on behalf of Respondents. Dr. Rossi testified Claimant has had no sustained pain relief or functional improvement from any of the treatment provided, and stated there were concerns of delayed recovery. She acknowledged she had not reviewed Dr. White's medical report, but opined Claimant would not recover well from the proposed surgery. Dr. Rossi stated she had not examined Claimant since December 24, 2018 and had yet to place Claimant at MMI, but agreed with Dr. O'Brien reached MMI on May 1, 2017. She stated she did not place Claimant at MMI at such time because Claimant continued to report right hip issues. Dr. Rossi testified she relied on Dr. Faulkner's determination that Claimant suffered a labral tear as a result of the February 8, 2017 work injury, but that she now agrees with Dr. O'Brien that Claimant only suffered a sacral fracture and labial laceration as a result of the February 8, 2017 work injury. Dr. Rossi opined that the treatment Claimant received after May 2017 exceeded the standards set forth in the Colorado Medical Treatment Guidelines. Regarding Claimant's alleged left hip injury, she testified she had no reason to think Claimant did not sustain an injury on October 14, 2018, but based her opinion on Claimant's subjective reports.

36. Dr. O'Brien testified by post-hearing deposition as a Level II accredited expert in orthopedics and orthopedic surgery. He testified consistent with his IME reports and continued to opine Claimant's labral tear was not caused or aggravated by the February 8, 2017 work injury. Dr. O'Brien reiterated his opinion that the surgery Dr. White requested is not reasonable, necessary, or related to the February 8, 2017 work injury. He testified that the surgery will not improve Claimant's function and likely will not relieve her pain, opining that the surgery recommended by Dr. White will categorically fail and potentially do so catastrophically. Regarding Claimant's alleged left hip injury, Dr. O'Brien testified that Claimant was complaining of left hip pain, greater than right prior to the alleged accident of October 14, 2018, and opined that it is not medically probable the incident of October 14, 2018 aggravated Claimant's pre-existing left hip complaints. Dr. O'Brien further opined that a simple hip strain will resolve with or without treatment, and testified that a patient with a simple hip strain will not lose time from work or suffer permanent physical impairment.

37. The opinions of Drs. Rossi and O'Brien regarding the necessity and reasonableness of ongoing right hip treatment and the proposed right hip surgery is found credible and persuasive, as is Dr. O'Brien's opinion regarding the alleged October 14, 2018 left hip injury.

38. Claimant failed to prove by a preponderance of the evidence that ongoing medical treatment, including the right hip surgery proposed by Dr. White, is reasonable, necessary and related to Claimant's February 8, 2017 work injury.

39. Claimant failed to prove by a preponderance of the evidence she suffered a compensable left hip injury on October 14, 2018.

40. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as

unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Treatment for the Right Hip

A respondent is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *See generally Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002).

Respondents argue Claimant never sustained a right hip injury as a result of the February 8, 2017 work injury thus, any ongoing treatment for the right hip, including the proposed surgery, is not related. The ALJ is persuaded Claimant did, more likely than not, suffer an initial right hip labral tear as a result of the February 8, 2017 work injury. The medical records reflect Claimant complained of symptoms in her right upper leg and pelvis as early as March 7, 2017; however, a right hip MRI was not obtained until May 24, 2017. The May 24, 2017 MRI provided objective evidence of a focal small nondisplaced partial anterior acetabular labral tear. Dr. Faulkner and Dr. Lotman (as well as Dr. Rossi, initially), all credibly opined Claimant's labral tear was caused by the February 8, 2017 work injury. Nonetheless, the preponderant evidence does not establish that ongoing treatment is reasonable, necessary and related to the February 8, 2017 work injury.

Claimant underwent extensive treatment for her right hip, including surgery and various conservative measures, all with no significant sustained improvement. Dr. White's request for the proposed surgery appears to be largely based on his opinion that the repeat right hip MRI was suggestive of a re-torn labrum or a labrum that did not completely heal. The opinion contradicts the credible and persuasive interpretation of the radiologist who read the MRI and specifically noted no recurrent labral tear. Dr. Faulkner credibly opined the repeat MRI showed an intact labrum and capsular repair with no fractures, minimal effusion, and no recurrent labral tear. In addition to a dispute regarding the objective basis for the proposed surgery, Drs. Rossi and O'Brien credibly and persuasively opined the surgery likely would not be successful for Claimant, considering concerns of non-organic pain and delayed recovery. Dr. O'Brien credibly opined the surgery would likely not lessen Claimant's pain or improve her function. Based on the totality of the credible and persuasive evidence, Claimant failed to prove it is more likely than not the right hip surgery proposed by Dr. White is reasonably necessary and causally related to the February 8, 2017 work injury.

Compensability of the Left Hip Injury

Claimant is required to prove by a preponderance of the evidence that at the time of the injury she was performing service arising out of and in the course of employment,

and that the alleged injury was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990).

However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

The question of whether the claimant met the burden of proof to establish a compensable injury is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

As found, Claimant failed to prove by a preponderance of the evidence she suffered a compensable left hip injury on October 14, 2018. The record reveals Claimant was complaining of left hip symptoms for months prior to the alleged October 14, 2018 incident even reporting, at times, left hip pain worse than right. The October 14 and October 15, 2018 diagnoses of a strain were based on Claimant's subjective reports to providers. Although the ALJ is persuaded Claimant experienced left hip symptoms while at work on October 14, 2018, the preponderant credible and persuasive evidence does not establish that her employment proximately caused, aggravated or accelerated Claimant's left hip issues, or caused any disability or need for treatment. The preponderant evidence establishes Claimant's left hip symptoms and subsequent treatment were the result of a pre-existing left hip issues.

ORDER

It is therefore ordered that:

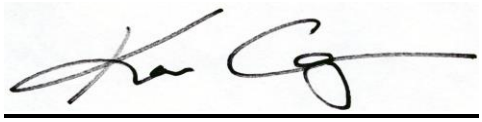
1. Claimant failed to prove she is entitled to ongoing right hip treatment, including the requested right hip surgery proposed by Dr. White. Claimant's request for prior authorization of the surgery is denied and dismissed.

2. Claimant’s claim for benefits arising out of an alleged October 14, 2018 left hip injury is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 16, 2019



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether Respondents have overcome Division Independent Medical Examination (DIME) physician Dr. Lindenbaum's opinion that Claimant is not at maximum medical improvement (MMI) by clear and convincing evidence.

2. Whether Respondents have overcome DIME physician Dr. Lindenbaum's opinion on Claimant's permanent partial disability (PPD) rating as a result of her work injury.

FINDINGS OF FACT

1. Claimant is employed by Employer as a car detailer. On May 8, 2017, while so employed, Claimant suffered a compensable work related injury.

2. On that date, Claimant was cleaning out a car with an air hose vacuum. The air hose broke and the hose was flailing about inside the vehicle that Claimant was working on. At the time, Claimant was on both knees inside the vehicle. Claimant attempted to quickly exit the vehicle to avoid being hit by the air hose. The air hose hit her on both legs, the right inner thigh, and the left knee. As she quickly exited the vehicle, Claimant testified that she felt immediate severe pain in her left knee. Claimant testified that she couldn't walk anymore with her left leg, couldn't stretch her leg, and couldn't stand on her leg. Claimant testified that she was told to go back to work and that she continued working.

3. On May 11, 2017, PA Jonathan Joslyn evaluated Claimant at Concentra. Claimant reported pain at a level of 8/10. Claimant reported that she was working in the interior of a vehicle at her employer's car wash when an air hose broke, was flailing about inside the vehicle, and hit her in the right thigh. Claimant reported she attempted to get out of the vehicle as soon as possible. PA Joslyn found swelling in the left knee and found the left knee to be tender diffusely over the anterior knee and diffusely tender over the medial knee. PA Joslyn also found ecchymosis on the right thigh. PA Joslyn assessed sprain of the medial collateral ligament of the left knee. He recommended ibuprofen, physical therapy three times per week for two weeks, and a knee sleeve. He recommended sitting 75% of the time, no squatting, no kneeling, no climbing stairs or ladders, and that Claimant wear the knee sleeve on her left lower extremity constantly. *See* Exhibit A.

4. On May 11, 2017, Claimant underwent x-rays of her left knee. The results showed no fractures, no dislocation, and no effusion. *See* Exhibit A.

5. On May 31, 2017, PA Valerie Skvarca evaluated Claimant. Claimant reported pain at a 7/10. Claimant reported that she continued to have increased pain and decreased range of motion and that physical therapy was not helping much. Claimant reported that an air hose struck her knee as it was flailing in the car. PA Skvarca noted Claimant was limping and complaining of pins and needles in the affected wound area. On examination, PA Skvarca found tenderness diffusely over the lateral knee and in the undersurface of the patella. PA Skvarca ordered an MRI to assess for ligament tear. *See* Exhibit B.

6. On July 11, 2017, Amanda Cava M.D. evaluated Claimant. Claimant reported pain at a level of 8/10. Claimant reported that the pain was improving in the left medial knee but that she was still having a lot of pain in the medial calf and posterior knee. Claimant reported that the air hose hit her in multiple spots in the left knee, calf, and right inner thigh. Dr. Cava noted that Claimant's gait demonstrated antalgia on the left and limping on the left and that claimant appeared uncomfortable. Dr. Cava found joint hypertrophy in the left knee. Dr. Cava found swelling in the proximal posterior knee/calf, tenderness in the posterior and proximal, and noted mild firmness/cord? With pain in the left lower leg. Dr. Cava assessed pain and swelling of the left lower leg. Dr. Cava planned to do a Doppler duplex to rule out deep vein thrombosis/venous injury to the left lower extremity due to the pain and swelling in the left lower leg. Dr. Cava also planned for an ultrasound of the soft tissue to be performed for gastrocnemius strain of the left. *See* Exhibit C.

7. On July 19, 2017, Jerald Solot, D.O. evaluated Claimant. Claimant reported some improvement but still a lot of pain. Claimant reported that a hose broke at work striking her in the left knee and left lower leg. Dr. Solot noted that Claimant had a negative knee MRI and negative ultrasound of the left calf. Dr. Solot noted that an MRI of the left lower leg had been requested. Claimant reported the pain to be mostly in the left calf with occasional pain in the left medial aspect of the knee and Dr. Solot noted that Claimant was wearing a knee brace. Dr. Solot noted on exam a mild resolving ecchymosis on the left anterior shin, no appreciable swelling of the left calf, left calf tenderness, and mild pain in the medial aspect of the left knee. Dr. Solot assessed gastrocnemius strain. *See* Exhibit D.

8. On August 22, 2017, Cary Motz, M.D. evaluated Claimant. Dr. Motz noted that Claimant was returning for follow up after an MRI of the left lower extremity. Dr. Motz noted that the results showed no evidence of significant Baker's cyst, neurovascular issues, compartment swelling, or significant soft tissue contusions. Dr. Motz noted that a prior MRI of the left knee showed moderate degenerative changes in all three compartments with an expected medial meniscal tear. Dr. Motz provided the impression of left knee contusion, degenerative arthritis, and degenerative medial meniscal tear. Dr. Motz noted that the recent MRI of the left calf was essentially negative. Dr. Motz noted that Claimant had two MRIs of the knee and opined that they showed degenerative changes. Dr. Motz opined that Claimant was not a candidate for arthroscopy and it would be unlikely to improve her symptoms. Dr. Motz also noted that the mechanism of injury was a direct blow with an air hose to the knee, which would not cause a meniscal tear or

cause arthritis. Dr. Motz noted that they had treated the arthritis to the extent they could and that there was really nothing further to offer Claimant. *See* Exhibit E.

9. On October 23, 2017, Michael Hewitt, M.D. evaluated Claimant. Claimant reported that she was injured on May 8, 2017 when she was inside a car cleaning and the power hose on the vacuum broke and forcibly flipped around the car. Claimant reported that she exited the car as quick as possible and noted increasing pain within the hour. Claimant reported continued pain with medial and posterior pain and swelling. Dr. Hewitt found moderate knee diffusion and significant medial joint line tenderness. Dr. Hewitt reviewed imaging studies. He opined that Claimant had patellofemoral and medial compartment arthritis but a well preserved medial joint space. Dr. Hewitt noted he discussed treatment options with Claimant and that the final treatment option was arthroscopy and noted Claimant understood arthroscopy does not significantly alter the natural history of arthritis. Dr. Hewitt noted that Claimant was six months from the injury with MRI documented changes in the medial meniscus and focal medial sided knee pain. Dr. Hewitt noted that Claimant would follow up as needed. *See* Exhibit 2.

10. On February 27, 2018, Wallace Larson, M.D. performed an independent medical examination. Claimant attended with a Spanish interpreter. Claimant reported that on the date of injury she was working inside a car with her right knee bent over the seat and the left knee bent while vacuuming. Claimant demonstrated a position that Dr. Larson noted was about 45 degrees of flexion of the left knee. Claimant reported that the hose ripped and hit her left knee on the medial aspect, then hit the right knee, and reported that the hose was going everywhere so she got out of the car and turned off the air supply. Claimant reported that she could not extend her leg or straighten her leg afterwards and that she had a lot of pain in her leg. Claimant reported that Dr. Hewitt recommended surgery for a torn meniscus but that it had not been approved. Claimant reported that she keeps her leg in a brace and uses ice and continued to have pain. Claimant reported no prior knee problems. *See* Exhibit F.

11. On physical examination, Dr. Larson noted that Claimant subjectively reported diffuse left knee tenderness. Claimant used a crutch for ambulation and would not walk without the crutch. Dr. Larson found Claimant to be hyper reactive to palpation and opined that she had significant pain behavior including groaning and hyper reaction. Dr. Larson noted no left knee joint effusion and no muscle atrophy. Dr. Larson noted severe antalgic gait even while using the crutch. In addition to performing a physical examination, Dr. Larson also reviewed medical records. *See* Exhibit F.

12. Dr. Larson opined that Claimant sustained a very minor contusion to the knee, which was the type of injury that would typically not require any treatment at all. Dr. Larson noted that Claimant had MRI evidence of a degenerative meniscal tear completely unrelated to her occupational exposure. Dr. Larson also opined that Claimant had a tremendous amount of pain behavior and non-physiologic signs and symptoms. Dr. Larson opined that Claimant's symptoms were non-physiologic in nature with multiple non-anatomic complaints and that none of the current complaints were related to the occupational exposure. Dr. Larson opined that Claimant was at maximum medical

improvement and that the most likely date of MMI was the date of injury or, at the extreme, a very minor contusion such as Claimant's could take 10 days to resolve which would place her date of MMI at May 18, 2017. Dr. Larson recommended no further treatment and opined that Claimant had no ratable impairment. *See* Exhibit F.

13. On October 6, 2018, Stephen Lindenbaum, M.D. performed a Division Independent Medical Evaluation (DIME). Claimant was present with her nephew who provided translation. Claimant reported that while she was working inside of a car the vacuum cleaner hose came detached and was flying around in the car. Claimant reported that she was afraid the hose was going to hit her head and that she jumped out of the car rapidly and twisted on her left knee. Claimant reported no prior knee problems. Claimant reported that the hose struck her just above her thigh on the left side. Claimant reported that her left knee still bothered her, predominantly over the medial joint line. Dr. Lindenbaum reviewed medical records and performed a physical examination. *See* Exhibits 1, G.

14. Dr. Lindenbaum noted that Dr. Hewitt thought Claimant should consider an arthroscopy of the knee to evaluate the medial compartment of the left knee and the meniscal tear. Dr. Lindenbaum noted that psychologist Dr. Cohen did not see any significant red flags concerning Claimant. Dr. Lindenbaum opined that Claimant had underlying arthritis not related to this trauma. Dr. Lindenbaum opined that it appeared that Claimant's MRI showed some degenerative changes of the medial compartment, but that Claimant had a torn medial meniscus that was causing her discomfort. Dr. Lindenbaum opined that Claimant had not yet reached MMI and felt it imperative that Claimant follow up with Dr. Hewitt again and that if he felt Claimant was a candidate for medial meniscal arthroscopy, it should be done before Claimant was placed at MMI. Dr. Lindenbaum opined that if Dr. Hewitt did not feel the surgery would be of benefit, he would give Claimant the rating of 10% lower extremity based on the torn medial meniscus. *See* Exhibits 1, G.

15. On December 31, 2018, Dr. Larson issued a medical records review report after reviewing the DIME report of Dr. Lindenbaum. Dr. Larson opined that his prior report was correct and that Claimant did not have an occupationally related disorder. Dr. Lindenbaum opined that the imaging findings were most consistent with a degenerative medial meniscal tear rather than a traumatic meniscal tear. Dr. Larson also opined that Claimant's physical examination findings could not be explained on the basis of relatively minor contusion or degenerative or even traumatic medical meniscal tear and that Claimant demonstrated multiple non-physiologic findings. Dr. Larson opined that Dr. Lindenbaum's report was not correct and that it was not appropriate to assign an impairment rating based on a degenerative tear especially one that does not correlate with the mechanism of injury or physical examination findings. *See* Exhibit H.

16. Dr. Larson testified by deposition on February 27, 2019. Dr. Larson is a board certified orthopedic surgeon. Dr. Larson noted that when he examined Claimant, she reported diffuse tenderness beginning about 4 inches above the left knee and extending to about 4 inches below the knee and reported the tenderness was all around

the entire knee and not localized. Dr. Larson testified that after meeting with Claimant he reviewed on the MRI report that Claimant had moderate changes of osteoarthritis in all three knee compartments and a tear of the meniscus that was most likely degenerative. Dr. Larson noted that the physicians did not diagnose a meniscal tear as part of the traumatic injury and that the initial reports looked like a relatively minor contusion. Dr. Larson testified that a degenerative meniscal tear is very different from a meniscal tear due to injury. Dr. Larson opined that there was nothing on the MRI scan indicating trauma to Claimant's knee. Dr. Larson opined that, in all likelihood, if Claimant had an MRI scan one month before the incident at work, the MRI would have looked just exactly the same with some arthritis and the most likely degenerative meniscal tear.

17. Dr. Larson testified that there was significant inconsistency in the range of motion Claimant demonstrated to the DIME physician and to him. Dr. Larson also noted that DIME physician Dr. Lindenbaum seemed to defer an opinion to Dr. Hewitt rather than generate an opinion. Dr. Larson also noted that without apparent explanation, Dr. Lindenbaum said that the meniscus tear was related to the work incident. Dr. Larson noted that they knew well beyond a reasonable degree of medical probability that the meniscus tear was not caused or aggravated by Claimant's work related injury and thus would not be something that would result in assignment of an impairment rating. Dr. Larson testified that on examination, Claimant's symptoms and reports and exaggerated responses were far out of proportion to what would ever be anticipated by any known or suspected physical abnormality and even from what would be normal for someone who had severe arthritis, or a torn meniscus.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been

contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo.App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo.App. 2000).

Overcoming the DIME opinion on MMI

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Under the statute MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007). A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (I.C.A.O. March 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Abeyta v. WW Construction Management,* W.C. No. 4-356-512 (ICAO May 20, 2004); *Hatch v. John H. Garland Co.,* W.C. No. 4-638-712 (ICAO August 11, 2000). Thus, a DIME physician's findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI. Therefore, the DIME physician's opinions on these issues are binding unless overcome by clear and convincing evidence. *See Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). The question of whether the party challenging the DIME physician's finding regarding MMI has overcome the finding by clear and convincing evidence is one of fact for the ALJ.

Respondents have overcome DIME physician Dr. Lindenbaum's opinion by clear and convincing evidence. It is highly probable Dr. Lindenbaum is incorrect and erred by finding that Claimant's meniscal tear was related to the work incident on May 8, 2017. Rather, as noted by multiple other physicians, the meniscal tear shown on the knee MRIs was a degenerative tear and was not due to any work-related explanation. Claimant's reports, overall, are not consistent. Although Claimant reported to Dr. Lindenbaum a twisting mechanism of the knee, prior reports to multiple providers simply mention being hit with the vacuum hose and exiting the vehicle quickly. Claimant's pain complaints and physical examinations cannot be explained and are not consistent with the expected pain or complaints related to a meniscal tear. The pain she is reporting is not consistent with a meniscal tear.

Although it is clear from imaging that Claimant has degeneration in her left knee, Dr. Lindenbaum noted the degeneration but did not distinguish how the degeneration impacted his overall conclusion. Several providers and the MRI noted that the meniscal tear was likely degenerative, but Dr. Lindenbaum did not explain why he believed the tear was acute or aggravated acutely by Claimant's work incident. Overall, there is a lack of evidence supporting a traumatic or acute meniscal tear, aggravation, or injury in this case. Dr. Lindenbaum erred by failing to adequately provide a causation analysis. The analysis performed by Dr. Larson is more persuasive and consistent with the overall weight of the evidence and with the inconsistencies in Claimant's presentation. Respondents have established by clear and convincing evidence that Claimant is at maximum medical improvement and has been at maximum medical improvement since April 4, 2018.

Overcoming the DIME opinion on Permanent Impairment

A DIME physician must apply the AMA Guides when determining the claimant's medical impairment rating. Section 8-42-101(3.7), C.R.S.; §8-42-107(8)(c), C.R.S. The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

The questions of whether the DIME physician properly applied the AMA Guides, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000). A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

As found above, DIME physician Dr. Lindenbaum provided a provisional rating of 10% lower extremity impairment, although he ultimately opined that Claimant was not yet at MMI. Respondents have overcome the MMI opinion and Claimant was at MMI as of the date of April 4, 2018 when placed at MMI by her authorized treating provider. The ALJ finds that Claimant has sustained no permanent impairment as a result of her work related injury. Claimant's rating, provided by the DIME physician, was based entirely on a meniscal tear which, as found above, is a degenerative tear. Although the rating was only provisional, Respondents have established by clear and convincing evidence, that the rating was in error as it rated a degenerative condition.

ORDER

It is therefore ordered that:

1. Respondents have overcome DIME physician Dr. Lindenbaum's opinions by clear and convincing evidence.

2. Claimant reached maximum medical improvement on April 4, 2018 and has no permanent impairment as a result of her May 8, 2017 injury.

3. Any issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 16, 2019

ISSUES

- Did Claimant prove the ACL reconstruction and meniscus repair surgery recommended by Dr. Hunter is causally related to his July 2, 2018 industrial accident?

FINDINGS OF FACT

1. Claimant started working for Employer on May 29, 2018 as a general construction laborer. The work was heavy and entailed tasks such as excavating, setting and removing concrete forms, and shoveling dirt.

2. Claimant suffered an admitted injury to his left knee on July 2, 2018 while his crew was mud jacking a concrete floor at the YMCA in Pueblo. The mud jacking process entails drilling multiple 1-inch diameter holes several feet deep through the concrete slab and injecting a mixture of cement, sand, and mud at very high pressure to level the slab. Claimant was assigned to operate the hose, which entailed placing a metal hose fitting into each hole and holding it while the mud mixture was pumped into the ground. Claimant typically stood over the holes with his knees flexed at approximately 30° and pushed down with considerable strength to keep the nozzle from pushing out of the hole.

3. Occasionally rocks or debris prevented the mud from going completely into the hole, resulting in back pressure and causing the nozzle to "blow out." After filling approximately twelve holes, a "blow out" occurred. Claimant was standing over the hole with the hose between his legs. He lost control of the hose and it started whipping around due to the high pressure. The hose struck the inside his left foot or lower leg such that the leg was forcibly abducted and twisted, which swept Claimant off his feet. The iron fitting at the end of the hose also struck the medial aspect of Claimant's left knee.

4. Claimant felt immediate severe pain in his left knee and remained on the ground for approximately 15 minutes. Eventually, a co-worker helped him get up and walk to another room so he could sit in a chair. Claimant could not bear weight on the left knee and had difficulty straightening or flexing the knee. A coworker brought him some ice, and he sat in the chair with his leg elevated for several hours. A co-worker then helped him hobble out to the company truck to speak with his manager.

5. Claimant's manager told him to go home and take it easy over July 4th holiday, and if his knee was still bothering him on the 5th they would send him to the doctor.

6. Claimant rested the next two days at home, icing and elevating his leg. He went back to work on July 5 and spoke to his manager. His knee was still very painful,

causing him to limp and making it difficult to climb stairs. Employer referred him to Dr. Lakin at Southern Colorado Clinic.

7. Claimant saw Dr. Lakin's PA-C, Terry Schwartz, at the initial visit on July 5, 2018. He was limping and favoring the left knee and rated his pain at 6/10. Range of motion was painful and limited to 10-110°. Mr. Schwartz appreciated no ligamentous laxity, no erythema, and no ecchymosis. The report also notes "mild" swelling about the knee. At hearing, Claimant disagreed with the characterization of the swelling as "mild," and testified he perceived "significant swelling." The report also states Claimant "denies twisting knee," which Claimant also disputed. X-rays showed joint effusion but no fractures. Mr. Schwartz opined Claimant "would be expected to improve over [the] next few days, no obvious bruising to knee, maybe some effusion on x-ray." He advised Claimant to continue icing and elevating the knee and taking ibuprofen. He restricted Claimant to primarily seated work and anticipated he would be better by his next appointment in two weeks.

8. Claimant saw Dr. Lakin at his next appointment on July 17, 2018. He stated there was "no improvement so far," and his knee was "still quite painful, stiff." Claimant was walking with a limp. Dr. Lakin noted "mild" effusion and limited range of motion from 10-90°. McMurray's test was negative, and Dr. Lakin noted, "[I] cannot get [joint line] clicking or movement to free extension." He noted the ligaments were "stable in all planes." Dr. Lakin referred Claimant to physical therapy, ordered an MRI, and referred him to Dr. Robert Hunter for an orthopedic evaluation. He continued the work restrictions of primarily seated duties with no kneeling, crawling, climbing, ladders, and limited stairs.

9. At his July 24 appointment, Claimant was no better. He was still limping and reported 7/10 pain. The MRI was pending in a few days.

10. Claimant had the MRI on July 31, 2018. It showed a tear of the posterior horn of the medial meniscus, a "subacute" complete tear of the anterior cruciate ligament, a minimal "subacute" nondisplaced avulsion fracture underlying the ACL insertion at the tibia, and a small residual joint effusion.

11. Claimant saw Dr. Hunter on August 7, 2018. Dr. Hunter noted Claimant had been "struck aggressively by a nozzle of a high-pressure hose while at work on July 2. He has been treating himself with ice and feels as though the swelling has gotten better and he is feeling a bit more comfortable. He still complains of the medial pain and diffuse interior pain. Prior to this event, he had no previous history for injuries to the knee." Physical examination showed "mild" effusion and medial joint line tenderness to palpation. ACL testing showed "Losee is 2, Lachman's is 3, posterior drawer is 1." Dr. Hunter recommended an ACL reconstruction and medial meniscus repair.

12. Everyone agrees Claimant needs the recommended surgery. But Respondents' liability for the surgery is confounded by a motorcycle accident Claimant had a few months before the accident at work.

13. In approximately early April 2018, Claimant crashed his dirt bike when his front tire caught a rut in the trail. Claimant was in second gear and estimated he was traveling approximately 25 m.p.h. He laid the bike down on its left side and landed with his left leg under the bike. He was wearing protective gear including hinged knee braces that covered his knees and clipped into his motorcycle boots. After the accident, Claimant's knee felt painful, stiff, and became swollen. He rode back to his truck and loaded his motorcycle into the truck without assistance.

14. At the time of the motorcycle accident, Claimant was working as a roughneck for a water well drilling company. The job was very physically demanding. After the motorcycle accident, he took a couple of days off work while he iced his knee and "took it easy." He then returned to work and worked for the drilling company for approximately three or four weeks before leaving due to "personal differences."

15. During that month, Claimant's knee remained swollen and somewhat painful. Eventually his father urged him to get it checked out. On May 2, 2018, Claimant saw Dr. Edward Jonassen, an orthopedist in Salida, who documented the following history,

> He was riding his motocross bike at high speed about 3 weeks ago when he crashed landing on his left side. Says his left knee was pinned between his motocross bike and the ground. He was wearing a protective knee brace at the time but he had pain on both sides of his knee and anteriorly. He was unable to weight-bear without significant pain . . . . [H]is knee swelled up a bit but was not huge and he lost the ability to extend his knee fully and bend it fully. Now, he is able to walk on his left leg without pain but he still has inability to extend his knee fully and flex it fully. He still has some swelling of his knee, still has pain when he tries to extend his knee . . . . He denies any medial or lateral joint pain, instability, or crepitus.

16. Physical examination showed no joint tenderness, no ecchymosis, but showed a 2+ joint effusion. Flexion and extension were limited due to pain, and there was a 10° contracture. McMurray's and Lachman's tests were negative, as were valgus and varus stress tests. Dr. Jonassen felt the knee was "stable." Dr. Jonassen concluded,

> He has persistent effusion of his left knee with inability to extend fully or flex fully. He has no definite tenderness over the medial meniscus. However, I am suspicious he may have a medial meniscal tear. He could in fact have a bucket handle tear with displacement. His knee x-rays are normal but this does not rule out knee contusion are called fracture. We discussed the fact that he feels his left knee has gotten better but because of the concern of persistent effusion and contracture of his knee, an MRI is indicated to rule out meniscus tear. The MRI could be delayed to see if he has further improvement of his knee or should be done sooner because of the contracture. He elected to go ahead with MRI of his left knee.

17. The MRI was scheduled for May 25, 2018.

18. Claimant did not get the MRI or pursue further treatment. He testified the knee continued to improve over the next few weeks and he no longer perceived the need for additional workup or treatment.

19. Claimant applied for work with Employer on May 25, 2018. His application states he stopped working for the drilling company in March 2018. At hearing, he testified he must have made a mistake on the date, and was confident he worked "three or four weeks" for the drilling company after the dirt bike accident.

20. Claimant started his job with Employer on May 29, 2018. He did heavy physical labor with no difficulty or limitation for approximately one month before the "blowout" incident on July 2. No persuasive evidence was presented to show he was limited in any way by knee pain or problems before July 2.

21. Dr. John Douthit, an orthopedic surgeon, performed a Rule 16 review of Dr. Hunter's surgery request. He agreed surgery was appropriate, but opined, "the history is murky and the cause of the injury is disputable." He noted there was some evidence to support a causal connection to the July 2 accident, particularly the fact that Dr. Jonassen found no evidence of instability in his exam on May 2. He stated Claimant's physical condition when he was hired by Employer was "unknown." Ultimately, he concluded the pathology shown on MRI was more likely related to the motorcycle accident, which "presumably" was a "twisting injury." He thought it less likely the direct blow to the knee from the hose on July 2 would cause a fracture and ACL tear. He did not mention the other aspect of the hose incident, namely having his left leg forcefully abducted and being "swept off his feet."

22. Dr. Lakin met with Claimant on September 10, 2018 to discuss Dr. Douthit's report. Dr. Lakin thought the limited flexion and extension at the time of Dr. Jonassen's exam suggested a meniscal tear. Nevertheless, he opined, "I believe the most important issue was he hired and working at full duty without apparent left knee issues prior to this injury, and if witnesses corroborate the MOI that occurred in a manner for a left knee injury, this would be a WC injury."

23. On October 18, 2018, Dr. Hunter and Dr. Douthit had a "lively discussion" about the case, and each wrote a report addressing the causation question. Dr. Hunter noted,

> We both agree now there is no question [Claimant has] an ACL deficient knee that needs and merits attention and reconstruction. The question remains was this injury caused by his work-related trauma or was it caused by a pre-existing motorcycle injury . . . . The dynamic from my perspective is that Dr. Jonassen, in his evaluation, found that there was no instability with Lachman's testing . . . he still had some swelling in his knee and pain when he tried to extend his knee but he denied any medial or lateral joint line pain, instability or crepitus at that time. My exam definitely confirmed anterior cruciate ligament insufficiency to be present, which was confirmed on the MRI that was read at that time.

24. Dr. Douthit opined Dr. Jonassen could have missed the torn ACL because "in my career which began before the advent of MRIs, we missed at least 50% of acute anterior cruciate ligament tears . . . . MRI changed our ability to diagnose ACL tears." He had reviewed the x-rays and MRI and had spoken with the radiologist, who confirmed there was no way to determine the age of the pathology from the imaging studies. He opined Claimant's instability was "nuanced," which explains why Dr. Jonassen missed it. He stated, "The difference of the exams by the 2 orthopedic surgeons is significant and should be considered, but as it is the only fact in support of the argument that the injury occurred at work it cannot prevail . . . ." He ultimately concluded it was more than 50% likely the injury did not occur at work on July 2, 2018, but acknowledged, "I think there is room for differences of opinion."

25. Claimant saw Dr. Thomas Higginbotham for an IME at his counsel's request on November 23, 2018. Dr. Higginbotham obtained a detailed history regarding the July 2, 2018 incident, the motorcycle accident, and the condition of Claimant's knee leading up to the work accident. Dr. Higginbotham emphasized Claimant was working full duty at a heavy job and "there was no seemingly disabling condition of the left knee at the time of this injury event of 07/02/2018." He opined it was "unlikely" Claimant could have performed that work with the findings noted on the MRI. Dr. Higginbotham thought the described mechanism of injury was sufficient to cause meniscus and ACL tears, and wrote,

> I am impressed with the sudden forces from the work-related injury of 07/02/2018. At the time . . . he was leaning over with knees bent at about 30° when he was thrown abruptly away with his left leg under rotational stress and then contused hard about the medial aspect of his knee. With the mud jack's 4" diameter hose filled with mud with a cast-iron fitting on its end under high-pressure, a lot of force was received in a short, sudden period of time.

26. Dr. Higginbotham concluded, "beyond a reasonable degree of medical probability [ ] his left knee condition is causally related to the incident of 07/02/2018."

27. Dr. Timothy O'Brien performed an IME for Respondents on January 18, 2019. Dr. O'Brien opined that July 2 work accident did not cause the ACL tear or the meniscus tear, and indeed, caused no significant injury whatsoever. He emphasized Mr. Schwartz's July 5 report noting "mild" swelling, which he opined was inconsistent with an acute ACL or meniscus tear. He opined it was "virtually impossible" Claimant could have torn his ACL and meniscus three days earlier and not show "massive swelling in the knee joint and a large hemarthrosis or effusion." He opined "massive" swelling "occurs 100 percent of the time," and its absence was "proof positive that no ACL tear occurred, and no medial meniscus tear occurred on July 2, 2018." He also opined the described injury mechanism would not cause a torn ACL or torn meniscus, both of which require the foot to be planted and torsional force applied to the knee. He considered Claimant an "unreliable historian" because of "multiple inconsistencies," particularly his failure to mention the motorcycle accident to Mr. Schwartz or Dr. Hunter at the initial appointments. Dr. O'Brien concluded, "the surgery being recommended by Dr. Hunter, while appropriate,

should not be misconstrued as in any way being causally related to or necessitated by the July 2, 2018 incident which produced a very self-limited, self-healing contusion of the left leg."

28. Dr. Higginbotham testified at hearing consistent with his report. He continued to highlight the significant change in Claimant's "functionality" before and after the July 2 accident. He disagreed with the "absolutist" nature of Dr. O'Brien's opinions, which fail to account for varied and nuanced physical responses of individual bodies. He referenced medical literature showing a significant portion of ACL tears produce minimal or no swelling or effusion. He agreed ACL tears more commonly occur with a planting and twisting motion, but also opined the "significant valgus force" associated with Claimant's work accident "is a significant mechanism for an ACL tear." He also offered an alternative theory of causation: Claimant may have damaged his ACL and meniscus in the motorcycle accident, but the work accident substantially aggravated his condition and provided the catalyst for the recommended surgery.

29. Dr. O'Brien testified in a post-hearing deposition on March 26, 2019 consistent with the opinions expressed in his report. He maintained it is "virtually impossible to tear the ACL unless the foot is planted and the body rotates," and thought the likelihood the blow from the iron hose fitting caused the tear "is almost 0 percent." He opined the "subacute" findings from the July 31, 2018 MRI were much more likely related to the motorcycle accident than the work accident. He was not impressed that Claimant worked for Employer for a month, analogizing to competitive athletes who use knee braces to finish a season despite torn ACLs. He did not consider Dr. Jonassen's May 2 physical examination reliable or accurate. He agreed the work accident "could have" aggravated a pre-existing ACL and meniscal tears, but did not believe that happened in this case.

30. The ALJ credits the opinions of Dr. Hunter, Dr. Higginbotham and Dr. Lakin, and Claimant's testimony, over the contrary opinions of Dr. Douthit and Dr. O'Brien. More likely than not Claimant either tore his meniscus and ACL or substantially aggravated pre-existing tears at work on July 2, 2018. Given the substantial change in his level of symptoms and functional abilities after July 2 accident, the ALJ finds it unlikely the surgery is solely related to the motorcycle accident with no substantial contribution from the work accident.

31. Claimant proved by a preponderance of the evidence the surgery recommended by Dr. Hunter is causally related to the July 2, 2018 work accident.

CONCLUSIONS OF LAW

The respondents are liable for medical treatment that is reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997). Even if the respondents admit liability, they retain the right to dispute the relatedness of any particular treatment, and the mere occurrence of a compensable injury does not compel the ALJ to find that all subsequent treatment was caused by the industrial accident. *Snyder v. City*

of Aurora, 942 P.2d 1337 (Colo. App. 1997). Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove that an injury directly and proximately caused the condition for which he seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The existence of a preexisting condition does not disqualify a claim for compensation if an industrial accident aggravates, accelerates, or combines with the preexisting condition to produce disability or a need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). The claimant must prove entitlement to medical benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

As found, Claimant proved the knee surgery recommended by Dr. Hunter is causally related to the July 2, 2018 accident. The ALJ agrees with Dr. Higginbotham that the question of causation cannot be answered strictly by reference to medical factors, but must also account for the dramatic difference in Claimant's apparent level of symptomology and functional abilities before and after the work accident. In the ALJ's mind, this factor tips the scale in favor a causal connection. Dr. Douthit and Dr. O'Brien's opinions are less persuasive because they relied primarily on medical factors and heavily discount Claimant's input. Dr. Douthit never examined Claimant and had no opportunity to elicit or discuss information beyond that contained in medical records. Claimant appeared very credible at the hearing, and the ALJ is inclined to give him the benefit of the doubt regarding the condition of his knee after the motorcycle accident and the reason he did not mention the motorcycle incident to Dr. Hunter. The ALJ also notes no persuasive evidence was introduced to contradict Claimant's testimony he did physically demanding work for nearly 2 months after the motorcycle accident with no difficulty.

The persuasive evidence shows the work accident either caused MRI findings or substantially aggravated pre-existing damage. The aggravation theory offered by Dr. Higginbotham seems to best account for the pieces of the puzzle here. It is certainly possible Claimant partially tore his ACL in the motorcycle accident and tore the rest on July 2. That scenario would explain why Dr. Jonassen appreciated a 2+ joint effusion approximately three weeks after the accident. A partial tear would also explain the lack of instability in May 2018, both on exam and to Claimant's perception. The subsequent tearing of the remainder of the ACL on July 2 would not necessarily lead to the "massive" swelling posited by Dr. O'Brien because there was simply not enough remaining intact tissue. The same logic applies to the meniscus; if Claimant partially tore the meniscus in the motorcycle accident, further tearing from the work accident would not necessarily lead to significant swelling. And if the ACL were already partially torn, it would reasonably require less torsional force to tear it the rest of the way. In any event, regardless of whether the accident directly caused the tears or aggravated pre-existing tears, the ALJ is persuaded the July 2 accident is the proximate cause of Claimant's disability and need for surgery.

ORDER

It is therefore ordered that:

1. Insurer shall cover the ACL reconstruction and meniscus repair surgery recommended by Dr. Hunter.

2. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 16, 2019

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-062-035-002

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

[Redacted],

Claimant,

v.

[Redacted],

Employer,

and

[Redacted],

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on May 9, 2019, in Denver, Colorado. The hearing was digitally recorded (reference: 5/9/19, Courtroom 1, beginning at 8:30 AM, and ending at 12:15 PM).

The Claimant was present in person and represented by [Redacted], Esq. Respondents were represented by [Redacted], Esq.

Hereinafter [Redacted] shall be referred to as the “Claimant." [Redacted] shall be referred to as the “Employer.” All other parties shall be referred to by name.

Claimant’s Exhibits 1 through 8 were admitted into evidence, without objection. Respondents’ Exhibits A through F were admitted into evidence, without objection.

The evidentiary depositions of Charles Wenzel, D.O., taken on April 25, 2019; and, Matthew Lugliani, M.D., taken on April 25, 2019, were lodged with the ALJ, in lieu of live testimony, at the commencement of the hearing.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Respondents, which was filed, electronically, on May 14, 2019. On May 15, 2019, Claimant's counsel indicated that Claimant had no objection to the form of the proposed decision. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern the causal relatedness of the Claimant's esophageal rupture and the resulting medical care; and, if causally related, temporary total disability (TTD) benefits from January 6, 2018 to April 17, 2018.

The Claimant bears the burden of proof by a preponderance of the evidence .

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Stipulations and Findings Thereon

1. The parties stipulated as follows, and the ALJ finds: (1) should the esophageal rupture be determined to be a compensable component of the workers' compensation claim, the Claimant would be entitled to TTD benefits from January 6, 2018 to April 17, 2018 with a credit for temporary partial disability benefits paid during this time; and, (2) should Claimant fail to prove that the esophageal rupture is causally related to the Claimant's claim, the claim for TTD benefits from January 6, 2018 to April 17, 2018 would be denied and dismissed.

Preliminary Findings

2. The Claimant sustained an admitted work related injury, on November 6, 2017, to the left shoulder when she was assisting a patient in a home health care role. The Claimant was assisting a patient transfer to a toilet when the patient started falling. The Claimant caught the patient and felt pain in the left shoulder.

3. Ultimately, Respondents filed a General Admission of Liability (GAL), dated January 8, 2019, admitting for causally related and reasonably necessary medical benefits; a starting average weekly wage (AWW) of $861.15, raised to $1,027.94 for COBRA benefits; and, TTD benefits for the latest period of $685.29 from August 1, 2018 to "undetermined." The GAL remains in full force sand effect.

4. The Claimant sought treatment with Colorado Occupational Medical Partners on November 15, 2017, November 29, 2017, December 13, 2017, and

December 29, 2017. She completed the intake sheets and pain questionnaires for her treatment on each of these dates of service.

Chest Pain

5. On November 15, 2017, the Claimant mentioned chest pain, but she specifically attributed the cause of the chest pain to anxiety induced by a coworker. The ALJ finds that this mention of chest pain does not persuasively address the Claimant's subsequent esophageal rupture, but anxiety induced by a coworker, as outlined by the Claimant in the questionnaire and review of symptoms. On each of the subsequent intake sheets and pain questionnaire sheets, the Claimant did not list any chest pain, abdominal pain or other gastrointestinal issues.

6. According to the Claimant, she was instructed to not list the chest pain or intestinal issues when completing the intake sheets and questionnaire. The ALJ finds this testimony to fly in the face of reason and common sense for medical staffers to so advise a patient. This testimony is inherently incredible. The Claimant's own intake sheets, completed by her own hand, listed complaints and conditions not related to the left shoulder injury. These include the Claimant use of eye glasses, anxiety, blood pressure problems and sleep disorders. These listings internally contradict he Claimant's testimony that she was told not to list "chest pains."

7. According to the Claimant, she suffered chest pain from the date of injury forward. This testimony is not credible as the patient intake questionnaires and the review of systems forms completed by her for evaluation do not document the allegations of chest pain consistent with the esophageal rupture, although they document other un-related conditions.

8. Both Dr. Lugliani and Dr. Wenzel testified that the Claimant did not complain of chest pain during their evaluations of the Claimant, except the notation of chest pain on November 15, 2017, consistent with anxiety induced by a coworker.

9. Dr. Lugliani and Dr. Wenzel's narrative reports from the evaluations from the Claimant's allegation of a work-related esophageal rupture.

10. Dr. Lugliani testified that it is a "remote possibility" that Claimant's esophageal rupture is related to the work injury. This opinion is far short of an opinion "to a reasonable probability." Anything is possible but this opinion does **not** establish a causal relationship to the admitted work injury.

Independent Medical Examination (IME) by J. Tashof Bernton, M.D.

11. Respondents obtained an IME with Dr. Bernto, who reviewed the medical records, evaluated the Claimant, and rendered the opinion that Claimant's "abdominal complaints are unrelated to the occupational injury, both in terms of the mechanism of injury is (sic) not one which could reasonably be anticipated to result in that type of injury and, if that were the case, pain would've been immediate and significant, as noted

by Dr. Surfing. (sic)" The ALJ finds that Dr. Bernton's opinion that Claimant's esophageal rupture is not causally related to the work injury is credible and persuasive.

12. It is the Claimant's burden to prove that she is entitled to benefits, and this includes proving that the esophageal rupture is causally relate to the work injury. At best, the evidence shows that there is a **remote** possibility that Claimant's abdominal complaints, including the esophageal rupture, are related to the work-related injury. "Remote" does not even rise to the level of "reasonable suspicion," or "probable cause," much less "reasonable probability."

13. The ALJ finds that the Claimant did not suffer chest pain or gastrointestinal issues following the work-related left shoulder injury, and that the esophageal rupture is not a compensable condition under the present case.

Ultimate Findings

14. As found herein above, the Claimant's testimony that she was instructed by medical staff not to list chest pains in the intake forms and diagrams is not credible. At one point, the Claimant attributed her chest pain to "anxiety" caused by a co-worker, which is internally inconsistent with her attempt to make the "chest pains" part and parcel of her admitted left shoulder injury. Therefore, the ALJ infers and finds that the Claimant did not mention chest pains at various times because she either was not having chest pains, or she was having minor chest pains attributed to "anxiety," and not as a precursor to an esophageal rupture. Further, as found, the opinions of IME Dr. Bernton were highly credible and virtually dispositive of the lack of causal relatedness of the esophageal rupture. The Claimant's testimony, as found to lack credibility, was insufficient to overcome Dr. Bernton's opinion to the contrary.

15. The Claimant has failed to prove, by preponderant evidence that it is reasonably probable that her esophageal rupture is causally related to her admitted left shoulder injury of November 6, 2017.

.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's testimony that she was instructed by medical staff not to list chest pains in the intake forms and diagrams was not credible. At one point, she attributed her chest pain to "anxiety" caused by a co-worker, which is internally inconsistent with her attempt to make the "chest pains" part and parcel of her admitted left shoulder injury. Therefore, as found, the Claimant did not mention chest pains at various times because she either was not having them, or she was having minor chest pains attributed to "anxiety," and not as a precursor to an esophageal rupture. Further, as found, the opinions of IME Dr. Bernton were highly credible and virtually dispositive of the lack of causal relatedness of the esophageal rupture.

b. Compensation can be awarded where there is competent evidence other than expert opinion. *Martin Marietta Corp. v. Faulk*, 158 Colo. 441, 407 P.2d 348 (1965). Such competent evidence includes lay testimony. *See Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Colorado Fuel & Iron Corp. v. Alitto*, 130 Colo. 130, 273 P.2d 725 (1954). *Also see Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997). As found the Claimant's testimony lacked credibility and it was insufficient to overcome Dr. Bernton's opinion to the contrary.

Medical Benefits

c. A claimant must prove a causal relationship between the injury and the medical treatment for which the worker is seeking benefits. *Snyder v. Indus. Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. App. 1997). Treatments for a condition not caused by employment are not compensable. *Owens v. Indus. Claim Appeals Office*, 49 P.3d 1187, 1189 (Colo. App. 2002). An industrial accident is the proximate cause of a claimant's disability if it is the necessary precondition or trigger of the need for medical treatment. *Subsequent Injury Fund v. State Compensation Insurance Authority,* 768 P.2d 751 (Colo. App. 1988). In order to prove that an industrial injury was the proximate cause of the need for medical treatment, an injured worker must prove a causal nexus between the need for treatment and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). It is for the ALJ, as the fact-finder, to determine whether a need for medical treatment is caused by the industrial injury, or some other intervening injury. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985). Respondents are only liable for the "direct and natural consequences" of a work-related injury, including consequential injuries caused by the original compensable injury. *See Travelers Ins. Co. v. Savio*, 806 P.2d 1258 (Colo. 1985). As found, the esophageal rupture is **not** causally related to the left shoulder injury of November 6, 2017.

Burden of Proof

d. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). Also, the burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has failed to sustain her burden with respect to the causal relatedness of the esophageal rupture.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Any and all claims for medical benefits attributable to the Claimant's esophageal rupture are hereby denied and dismissed.

B. The General Admission of Liability, dated January 8, 2019, shall remain in full force and effect unless modification thereof is warranted by law.

DATED this 17th day of May 2019..

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

- Whether the respondents have demonstrated, by a preponderance of the evidence, that the claimant's claim is barred by the statute of limitations.

- If the claimant's claim is not barred, whether the claimant has demonstrated, by a preponderance of the evidence, that he suffered an occupational disease arising out of and in the course and scope of his employment with the employer.

- If the claimant proves a compensable occupational disease, whether the claimant has demonstrated, by a preponderance of the evidence, that the right shoulder surgery recommended by Dr. C. Kelly Bynum is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the occupational disease.

FINDINGS OF FACT

1. The claimant has worked for the employer for 17 years as a trash man. The claimant testified that it is a very physical job. The claimant's job duties include driving a large trash truck and lifting trash bags and bins to chest level to deposit the trash into the trash truck. The claimant also testified that he works in an area where he has to drive the truck up and down long driveways, and then make three point turns.

2. The claimant testified that the physical demands of his job have resulted in pain in both of his shoulders. In 2012, Dr. John Knutson performed surgery on the claimant's left shoulder.[1] In 2016, the claimant suffered a work related injury to his left elbow, that resulted in the need for surgery. The claimant testified that while his left elbow was in a brace, he compensated with his right arm. The claimant believes that this resulted in pain in the claimant's right shoulder. The claimant testified that six years ago his right shoulder pain was "mild"; four years ago it became more severe; and three years ago it was "hard pain".

3. The claimant testified that on September 7, 2018, he performed his normal job duties, and noticed that his right shoulder was painful. Over the weekend the claimant's right shoulder did not improve. By the following Monday, the claimant's pain was such that he was unable to raise his right arm above his chest and he was unable to toilet himself. The claimant also testified that given his level of pain, he did not believe he could pass a DOT physical. The claimant testified that although he had experienced pain in his right shoulder prior to that time, by September 2018, his right shoulder pain limited his ability to perform his job duties.

[1] However, that 2012 surgery was performed outside of the workers' compensation system.

4. On September 13, 2018, the employer completed a first report of injury. That report indicated that the claimant was injured on September 7, 2018 while he was engaged in the activity of "turning wheel in garbage truck". The claimant testified that turning the steering wheel on his trash truck caused him the most pain.

5. The employer provided the claimant with a list of designated medical providers. From that list, the claimant selected Dr. Terry Wade as his authorized treating physician (ATP). The claimant was first seen by Dr. Wade on September 19, 2018. On that date, the claimant reported that he had experienced right shoulder pain "for many years". Dr. Wade opined that the claimant's pain was caused by a rotator cuff tear. Dr. Wade also opined that the claimant's symptoms were secondary to "overuse/repetitive motion". Dr. Wade prescribed Norco and ordered a magnetic resonance image (MRI) of the claimant's right shoulder.

6. On September 28, 2018, an MRI of the claimant's right shoulder showed a probable tear of the superior posterior labrum with associated paralabral cysts. The MRI also showed tendinosis of the supraspinatus tendon and moderate degenerative change of the acromioclavicular (AC) joint.

7. Subsequently, the claimant was seen by Dr. C. Kelly Bynum for an orthopedic consultation. The claimant was first seen by Dr. Bynum on November 12, 2018. At that time, Dr. Bynum diagnosed "right shoulder pain and dysfunction with work injury with SLAP[2] tear with paralabral cyst". Dr. Bynum recommended that the claimant undergo right shoulder arthroscopic debridement, subacromial decompression, distal clavicle excision with release of the longhead of the biceps, and open subpec tenodesis.

8. On February 22, 2019, the claimant attended an independent medical examination (IME) with Dr. Mark Failinger. In connection with the IME, Dr. Failinger reviewed the claimant's medical records, obtained a history from the claimant, and completed a physical examination. Dr. Failinger reviewed the MRI images and noted a "very tiny distal insertional tear of the supraspinatus at the greater tuberosity". Dr. Failinger opined that the claimant does not have a significant rotator cuff tear, and the surgery recommended by Dr. Bynum is intended to address the claimant's labrum. Dr. Failinger also noted that the claimant has not undergone physical therapy or diagnostic injections. Dr. Failinger noted that the Colorado Medical Treatment Guidelines (MTGs) do not address an occupational cause of labral pathology. Finally, Dr. Failinger opined that the claimant's degenerative labrum and paralabral cyst were not caused by a work injury. Based upon the opinions of Dr. Failinger, the respondents denied liability for an injury to the claimant's right shoulder.

9. On March 26, 2019, Dr. Wade authored a letter in which he opined that the claimant's right shoulder pain is "work related due to seventeen years of overuse and repetitive movements". Dr. Wade also stated that he agreed with Dr. Bynum's surgical recommendation.

[2] Superior labral tear from anterior to posterior.

10. The claimant testified that his last day of work for the employer was September 28, 2018, and he has not worked since that date. The claimant also testified that he continues to experience right shoulder pain. The claimant testified that because of the pain in his right shoulder it is difficult to pour a cup of coffee, he is unable to lift a gallon of milk, and cannot pick up his baby.

11. The ALJ credits the claimant's testimony and the medical records and finds that the respondents' have failed to demonstrate that the claimant's claim should be barred by the statute of limitations. Although the claimant was experiencing right shoulder pain for many years, the ALJ finds as credible the claimant's testimony that in September 2018 his right shoulder pain had increased to the point that he was unable to perform his job duties. The claimant reported his right shoulder issues to the employer and a report was filed with the Colorado Department of Workers' Compensation on September 13, 2018. The ALJ finds that this report was made in a timely manner following the increase in the claimant's right shoulder pain.

12. The ALJ credits the medical records and the opinions of Dr. Failinger over the contrary opinions of Drs. Wade and Bynum. The ALJ is persuaded that the claimant has right labrum pathology. The ALJ credits the opinion of Dr. Failinger that the claimant's degenerative labrum and paralabral cyst were not caused by the claimant's job duties. Therefore, the ALJ finds that the claimant has failed to demonstrate that it is more likely than not that he suffered an occupational disease while working for the employer. Likewise, the claimant has failed to demonstrate that is it more likely than not that his need for right shoulder surgery is related to his employment with the employer.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been

contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2018).

3. Section 8-43-103(2), C.R.S., provides, in pertinent part:

> [T]he right to compensation and benefits provided by said articles shall be barred unless, within two years after the injury . . ., a notice claiming compensation is filed with the division. This limitation shall not apply to any claimant to whom compensation has been paid . . . and the furnishing of medical, surgical, or hospital treatment by the employer shall not be considered payment of compensation or benefits within the meaning of this section . . .

The statute of limitations begins to run when claimant, as a reasonable person, should have recognized the nature, seriousness, and probably compensable character of the industrial injury. *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967); *Intermountain Rubber Industries v. Valdez*, 688 P.2d 1133 (Colo. App. 1984).

4. As found, the respondents have failed to demonstrate by a preponderance of the evidence that the claimant's claim should be barred by the statute of limitations. As found, the claimant acted as a reasonable person in recognizing and notifying the employer of his right shoulder symptoms in September 2018. As found, the claimant's testimony and the medical records are credible and persuasive on this issue.

5. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

6. The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation*, 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by Section 8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

7. A claimant is required to prove by a preponderance of the evidence that the alleged occupational disease was directly or proximately caused by the employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251, 252 (Colo. App. 1999). Moreover, Section 8-40-201(14), C.R.S. imposes proof requirements in addition to those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819, 824 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

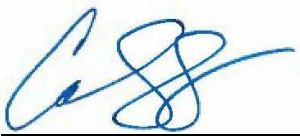
8. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the “logical and recurrent consequence” of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, April 10, 2008). Simply because a claimant’s symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. See *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, October 27, 2008).

9. As found, the claimant has failed to demonstrate by a preponderance of the evidence that he suffered an occupational disease while working for the employer. As found, the medical records and the opinions of Dr. Failinger are credible and persuasive, on this issue.

ORDER

It is therefore ordered that the claimant’s claim for workers’ compensation benefits and related medical treatment is denied and dismissed.

Dated this 20th day of May, 2019.



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-078-769

ISSUES

- Whether Claimant proved by a preponderance of the evidence that he sustained a compensable lower back occupational disease arising out of and in the course and scope of his employment with Employer.

- Whether Claimant proved by a preponderance of the evidence that he is entitled to reasonably necessary medical benefits related to his occupational disease.

FINDINGS OF FACT

Based upon a complete review of the evidence the Judge enters the following Findings of Fact:

1. Claimant has worked for the Employer for approximately seven years, initially as a maintenance technician, and then as a senior technician.

2. Claimant's job duties included changing tires and checking brakes, balances, and alignments. A great majority of these duties required Claimant to remove and then replace each vehicles tires.

3. Claimant worked on different sizes of vehicles, primarily SUVs, trucks, and then larger sedans. Claimant testified that most SUV and truck tires weight more than 50 pounds and larger sedan tires weigh 40-50 pounds. Claimant testified that if he takes the tires off one vehicle, he lifts each of the tires twice, off and then back on the vehicle, so each vehicle requires eight tire lifts. Each lift requires bending, twisting, and squatting.

4. Claimant's written job description details his job duties and is consistent with Claimant's testimony. Claimant testified that the job description is somewhat out of date. Tire weights have all increased since the job description's May 2012 writing.

5. For the five years prior to seeking medical treatment for his low back, Claimant typically worked twelve-hour days, five or six days a week.

6. Claimant works on approximately ten to twenty-five vehicles per day. Employer encourages its employees to do a complete vehicle inspection (CVI) on every vehicle in the shop. Claimant testified that he does a CVI on 60-80% of the vehicles he services, and that a CVI requires him to take all the tires off a vehicle and then put them back on. Claimant testified that he removes and replaces the tires on approximately 80-90% of all the vehicles he worked on.

7. Claimant alleges he suffered an occupational disease while working for Respondent Employer with an onset date in December 2017. Because no specific event

caused Claimant's symptoms, he reported varying but generally consistent dates for the onset of his low back pain. For the same reason, he initially sought medical care using his private insurance.

8. On December 29, 2017, Claimant treated at Parker Adventist Hospital ED and reported a two-week history of lumbar back pain that had gradually worsened. Claimant denied any recent injury. Claimant reported increased pain with bending and lifting, and that the pain radiated to his left leg. On physical exam, the ED physician noted Claimant had lumbar paraspinal tenderness and a positive straight leg test bilaterally. The ED physician diagnosed Claimant with acute midline low back pain with left-sided sciatica. The ED physician recommended Claimant follow-up with his PCP for a possible lumbar MRI.

9. At Hearing, Claimant testified he went to the ED after having a few weeks of increased back pain. He testified he did not remember a specific incident at work. Claimant testified that prior to December 2017 he had some back soreness, but had never experienced symptoms like those that he did in December 2017. Claimant testified that in December 2017, he reported his back issues to his manager Dean G_____. Claimant testified that at that time he believed his back problems related to his work, and he reported this to the Employer.

10. On January 17, 2018, Claimant underwent a lumbar MRI, which revealed a L5-S1 shallow broad central protrusion that slightly indents the ventral thecal sac without overall stenosis and slight left-sided neuroforaminal narrowing and disc space degeneration.

11. On January 23, 2018, Claimant treated with Katarzyna Zofia Kocol, DO, at Centura Orthopedics – Castle Rock. He reported a sudden onset of back pain about 1-2 months prior, on or about December 10, 2017. Claimant reported his back pain was not the result of an injury or a work-related condition. Claimant reported 6/10 back pain that radiates to his left leg more than his right. Claimant denied any history of lower back issues. On physical exam, Dr. Kocol noted decreased lumbar range of motion, increased pain with range of motion testing, tenderness along the lower lumbar paraspinals and lumbar facet region, and positive left straight leg raise. Dr. Kocol diagnosed Claimant with left greater than right L5/S1 lumbar radiculitis. She recommended Claimant undergo a L5/S1 epidural steroid injection and physical therapy. Claimant testified he reported to his physicians the nature of his work duties and that he believed his back problem was related to work.

12. On February 2, 2018, Claimant treated with Dr. Kocol and underwent a L5-S1 epidural steroid injection.

13. Procedurally, Employer completed a First Report of Injury on February 7, 2018, detailing the nature of Claimant's injury. On February 19, 2018, Respondents filed a Notice of Contest.

14. On February 9, 2018, Claimant treated at Concentra with PA-C Gary Scofield and reported his work history with the Employer and that on the morning of December 20, 2017; he woke up with lower back pain. Claimant completed a questionnaire and noted that his back injury occurred at work. Claimant reported he did not remember a specific incident at work so he decided to seek medical treatment through his private medical insurance. Claimant reported he saw his PCP, who recommended a MRI and then referred Claimant to an orthopedic surgeon. Claimant reported he underwent a lumbar injection that helped. Claimant treated with the orthopedic surgeon, who recommended Claimant follow-up with work comp. On physical examination, PA Scofield noted lumbar tenderness, decreased range of motion, and positive straight leg raise test bilaterally. PA Scofield provided Claimant work restrictions and referred him to Michael Rauzzino, M.D., an orthopedic surgeon.

15. On February 20, 2018, Claimant treated with Dr. Kocol and reported approximately 50% pain relief following the injection and that his left leg symptoms were improved. Dr. Kocol noted the same findings on physical examination, including decreased range of motion and increased pain with the range of motion testing and a positive left-sided straight leg raise. Dr. Kocol continued to recommend physical therapy and medications and noted that Claimant may need lumbar surgery.

16. Also on February 20, 2018, Claimant treated with Dr. Rauzzino and reported the nature of his job duties; including lifting heavy tires and working around cars, and that in December 2017, he woke up one morning with back pain. Claimant denied any specific work injury. Claimant reported his medical history, the MRI, and treatment he had received to date. Dr. Rauzzino noted he reviewed the December 2017 ED report. Claimant denied any history of lower back injury or treatment. With respect to causation, Dr. Rauzzino stated:

> I do not see causation that will make this a worker's comp injury in the sense that while he does do physical labor, people who do not do physical labor also get similar findings and the ER reports, it is quite specific there is no [acute] trauma which occurred at work, which would lead him to have this disc herniation and degenerative disc disease.

17. The ALJ does not find Dr. Rauzzino's causation analysis persuasive for two reasons. First, that people who do not perform physical labor can have similar findings, does not mean that such findings in people who perform physical similar labor are not attributable to their physical labor. Second, there need not be an acute trauma because the claim concerns an occupational disease.

18. On February 28, 2018, Claimant treated with PA Scofield and reported that he treated with Dr. Rauzzino, who questioned whether Claimant's condition was work related. PA Scofield referred Claimant to John Aschberger, M.D., a physiatrist, for a possible injection.

19. On March 16, 2018, Claimant treated with Dr. Aschberger. Claimant reported that in December 2017, he had a week where he lifted "significantly heavy weight with truck tires." Claimant reported no specific trauma but aggravation of back pain with increasing symptoms. Claimant acknowledged prior low back pain and achiness but considered it part of the job due to the heavy nature of his work. Claimant reported that he had a good response to the lumbar injection. Dr. Aschberger noted positive findings on physical examination and that he lumbar injection was reasonable based on Claimant's symptoms.

20. With respect to causation, Dr. Aschberger stated:

> Regarding causation, [Claimant] denies any outside trauma or injury and denies any home activities that require significant physical exertion. Given the level of work as he reports it and the number of hours worked, I think likely that this is a work-related event, although [Claimant] is not able to identify any one specific occurrence that precipitated the symptoms.

21. The ALJ finds credible and persuasive Dr. Aschberger's opinion that Claimant's condition and need for treatment are work related. Again, Claimant need not establish a specific occurrence as Claimant is pursuing an occupational injury claim.

22. Procedurally, on December 13, 2018, Claimant filed an Application for Hearing on compensability and medical benefits, along with other issues that are not relevant for this decision. On January 14, 2019, Respondents filed a Response to Claimant's Application for Hearing.

23. On February 13, 2019, Allison Fall, M.D., Respondents' retained expert witness, performed an independent medical examination. Claimant reported his employment history and the nature of his work activities. Claimant reported that in November and December 2017 he was taking the tires off 10 vehicles on average per day and sometimes 15 vehicles per day. Claimant reported the tires weigh between 40-150 pounds and that he lifts the tires on his own. Claimant stated he did not remember a specific incident at work, but that his back started hurting more than normal and was progressively worsening.

24. Dr. Fall reviewed Claimant's medical records and performed a physical examination. She diagnosed Claimant with L5-S1 degenerative disc disease. Dr. Fall opined Claimant's diagnosis did not causally relate to an industrial injury. She opined Claimant's symptoms were inconsistent with an occupational disease. Dr. Fall stated that although Claimant is required to move heavy tires, "I agree with Dr. Rauzzino that these same findings are found in people that do not perform heavy lifting." Dr. Fall opined that it is unlikely Claimant sustained an acute disc herniation at work.

25. Respondents deposed Dr. Fall on March 1, 2019. The doctor testified as a Level II accredited medical expert. Regarding the nature and onset of Claimants' symptoms, Dr. Fall testified consistently with her RIME report. Dr. Fall found no medical

evidence to support Claimant having sustained a medically documented injury on December 22, 2017. Dr. Fall testified that no medically documented evidence supported Claimant having sustained a back injury based on his regular job duties. She testified that she understood Claimant was a master mechanic and assumed that he would not be doing much "hands-on" work.

26. The ALJ find's Dr. Fall's opinions on causation unpersuasive. Dr. Fall assumed that Claimant performed little "hands-on" work when Claimant actually performed significant and repetitive heavy lifting. Dr. Fall was unaware that Claimant's lifting involved flexion. Dr. Fall's analysis of whether Claimant sustained an acute injury on December 22, 2017 is inapposite to Claimant's claim.

27. On cross-examination, Dr. Fall agreed that Claimant does not allege he sustained an occupational injury. Dr. Fall testified Claimant is alleging his occupational exposure to prolonged heavy repetitive lifting caused his back problem. Dr. Fall is familiar with Workers' Compensation Rule of Procedure 17, Exhibit 1, concerning occupational disease back claims. However, she did not review WCRP 17 when reaching her ultimate opinion in Claimant's case. Dr. Fall admitted that WCRP 17 provides that lifting 50-55 pounds or more constitutes a risk factor for cumulative low back pain when combined with flexion and performed 10-15 times per day. Dr. Fall agreed that Claimant reported he lifts tires weighting 40-150 pounds upwards of 40 times per day. Dr. Fall admitted she did not ask – and does not know -- how many tires Claimant changes or the mechanics he uses to do so. Dr. Fall acknowledged that Claimant does not have a history of lower back injuries or treatment.

28. The ALJ finds Dr. Fall's opinions unpersuasive.

29. Claimant has no history of back complaints or treatment.

30. The ALJ finds that Claimant met his burden of proof. It is more probably true than not that Claimant sustained a compensable occupational disease as defined in section 8-40-201(14) C.R.S. Claimant proved by a preponderance of the evidence that he suffered a disease that resulted directly from the employment or the conditions under which the work was preformed, which can be seen as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can fairly be traced to the employment as a proximate cause.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the Claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met their burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002).

The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

A claimant must prove by a preponderance of the evidence that his injury arose out of the course and scope of his employment with employer. *Section 8-41-301(1)(b), C.R.S.; see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). An injury "arises out of and in the course of" employment when the origins of the injury are sufficiently related to the conditions and circumstances under which the employee usually performs his or her job functions to be considered part of the employee's services to the employer. *General Cable Co. v. Industrial Claim Appeals Office,* 878 P.2d 118 (Colo. App. 1994). The question of whether Claimant met his burden of proof to establish a compensable injury is one of fact for determination by the judge. *See Faulkner v. I.C.A.O.*, 12 P. 3d 844 (Colo. App. 2000).

"Occupational disease" as defined by section 8-40-201(14), C.R.S., "means a disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment."

The occupational disease statute imposes additional proof requirements beyond those required for an accidental injury by adding the "peculiar risk" test, which requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). Where there is no evidence that occupational exposure to a hazard is a necessary

precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id*. Where the disease for which a claimant is seeking compensation is produced solely by some extrinsic or independent cause, it is not compensable. *Anderson*, 859 P.2d at 824. The purpose of this rule "is to ensure that the disease results from the claimant's occupational exposure to hazards of the disease and not hazards to which the claimant is equally exposed outside of employment." *Saenz-Rico v. Yellow Freight System, Inc.,* W.C. No. 4-320-928 (January 20, 1998); *also see Stewart v. Dillon Co.,* W.C. No. 4-257-450 (November 20, 1996).

Once the claimant makes such a showing, the burden of establishing the existence of a nonindustrial cause and the extent of its contribution to the occupational disease shifts to the employer. *Cowin & Co. v. Medina*, 860 P.2d 535 (Colo. App. 1992). The hazardous conditions of employment need not be the sole cause of the disease. A preexisting condition does not disqualify a claimant from receiving workers' compensation benefits. Rather, where the industrial injury aggravates, accelerates, or combines with a preexisting disease or infirmity to produce the need for treatment, the treatment is a compensable consequence of the industrial injury. *Joslins Dry Goods Co. v. Indus. Claim Apps. Office*, 21 P.3d 866 (Colo. App. 2001); *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990).

Pursuant to W.C. Rule of Procedure 17-2 (A), 7 Code Colo. Regs. 1101-3, health care practitioners are to use the Medical Treatment Guidelines referenced as Exhibits at W.C. Rule of Procedure 17-7, 7 Code Colo. Regs. 1101-3 (the "Medical Treatment Guidelines") when furnishing medical aid under the Act. The ALJ may also appropriately consider the Medical Treatment Guidelines as an evidentiary tool. *Logiudice v. Siemans Westinghouse*, W.C. 4-665-873 (ICAO January 25, 2011). The weight and credibility to be assigned expert testimony on the issue of causation is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Apps. Office*, 55 P.3d 186 (Colo. App. 2002).

Nevertheless, the ALJ is not required to grant or deny medical benefits based upon the Medical Treatment Guidelines. *Thomas v. Four Corners Health Care*, W.C. 4-484-220 (ICAO April 27, 2009). The Medical Treatment Guidelines are not definitive, but merely guidelines, and the ALJ has the discretion to make findings and orders which follow or deviate from the Medical Treatment Guidelines depending upon the evidence presented in a particular case. *Jones v. T.T.C. Illinois, Inc.*, W.C. 4-503-150 (ICAO May 5, 2006), *aff'd Jones v. Indus. Claim Apps. Office*, N. 06CA1053 (Colo. App. March 1, 2007) (not selected for official publication).

Rule 17, Exhibit 5 (D)(3) of the Medical Treatment Guidelines provides:

> The clinician must determine if it is medically probable (greater than 50% likely or more likely than not) that the need for treatment in a case is due to a work-related exposure or injury. Treatment for a work-related condition is covered when: 1) the work exposure causes a new condition; or 2) the work exposure causes the activation of a previously

> asymptomatic or latent medical condition; or 3) the work exposure combines with, accelerates, or aggravates a pre-existing symptomatic condition. In legal terms, the question that should be answered is: "Is it medically probable that the patient would need the treatment that the clinician is recommending if the work exposure had not taken place?" If the answer is “yes,” then the condition is not work-related. If the answer is “no,” then the condition is most likely work-related.

Additionally, WCRP 17, Exhibit 1 details the medical treatment guidelines regarding lower back pain and injury. WCRP 17, Exhibit 1, page 12 details that a work-related condition may occur when “a work-related exposure that renders a previously asymptomatic condition symptomatic and subsequently requires treatment. WCRP 17, Exhibit 1, page 13 provides:

> Applying the totality of the evidence, it would appear that heavier lifting, 25 kilograms or 50-55 pounds and higher, may be considered a risk factor for cumulative low back pain, when combined with flexion and performed 10-15 times per day over cumulative years of exposure.

As found, Claimant proved by a preponderance of the evidence that he sustained a compensable lower back condition because of his work activities. Claimant’s undisputed testimony establishes that for the five years leading up to his onset of lower back pain in December 2017, he worked approximately 60 hours per week for the Employer and lifted upwards of 20 tires per day (likely more) and that these tires weighed upwards of 50 pounds. Claimant’s job duties establish a causal connection between his lumbar condition and his employment. Claimant’s lumbar condition is causally related to his job duties while working for the Employer.

Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. § 8-42-101, C.R.S. Nevertheless, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. § 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Apps. Office,* 12 P.3d 844, 846 (Colo. App. 2000). Claimant must establish the causal connection with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Indus. Comm’n*, 491 P.2d 106 (Colo. App. 1971). A causal connection may be established by circumstantial evidence, and expert medical testimony is not necessarily required. *Indus. Comm’n v. Jones*, 688 P.2d 1116 (Colo. 1984); *Indus. Comm’n v. Royal Indemnity Co., supra*, 236 P.2d at 295-296. All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970). As found, Claimant proved by a preponderance of the evidence that the medical treatment he has received through his authorized treating physicians is reasonable, necessary, and related to his compensable

occupational injury. Claimant proved by a preponderance of the evidence that he is entitled to reasonably necessary medical benefits related to his compensable, lower back occupational injury. Additionally, Claimant proved by a preponderance of the evidence that all the medical treatment, including February 2, 2018 lumbar injection, he has received related to his lower back is reasonable, necessary, and related to his compensable, occupational disease.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

A. Claimant sustained a compensable lower back injury related to his occupational exposure.

B. All medical treatment Claimant has received for his lumbar spine is reasonable, necessary, and related to his compensable, work-related condition.

C. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. ***For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.***

STATE OF COLORADO OFFICE OF ADMINISTRATIVE COURTS 1525 Sherman Street, 4th Floor, Denver, CO 80203	
In the Matter of the Workers' Compensation Claim of: **D,** Claimant, vs. **H,** Employer, **M,** Insurer Respondents.	▲ **COURT USE ONLY** ▲ **CASE NUMBER:** **WC 5-011-923-003**

FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

Hearing in this matter was held before Administrative Law Judge Margot W. Jones on March 3, 2019. Claimant was present and was represented by----------, Esq. Respondents were represented by _____, Esq. This matter was digitally recorded in Courtroom 3 at 8:30 am.

A Summary Order was issued on this matter on April 29, 2019. Respondents requested a Full Order on May 13, 2019.

In this order, D will be referred to as "Claimant;" H will be referred to as "Employer;" and M will be referred to as "Insurer." Insurer and Employer, collectively, will be referred to as "Respondents."

Also in this order, "ALJ" or "Judge" refers to the Administrative Law Judge, "C.R.S." refers to Colorado Revised Statutes, "OACRP" refers to the Office of Administrative Courts Rules of Procedure, 1 CCR 104-1, "the Act" refers to the Workers' Compensation Act of Colorado, Section 8-40-101, et seq., C.R.S and "WCRP" refers to Workers' Compensation Rules of Procedure, 7 CCR 1101-3.

1. Whether Respondents proved by clear and convincing evidence that the Division Independent Medical Examiner's (DIME) opinion was most probably incorrect; and

2. Whether Claimant proved by a preponderance of the evidence that her need for a total left knee replacement is reasonably necessary and related medical treatment.

FINDINGS OF FACT

1. Claimant sustained an admitted work related injury on February 17, 2016.

2. Claimant slipped and fell on ice in the parking lot of her employer while getting out of her car.

3. Claimant reported immediate pain in her left knee and was taken that day to the emergency room.

4. On October 18, 2016, Claimant received a left knee arthroscopy with partial meniscectomy performed by Dr. Repine.

5. Following her surgery, Claimant remained symptomatic. Claimant credibly testified that following her date of injury her knee never felt as it did prior to the injury as she remained functionally limited.

6. Claimant was placed at maximum medical improvement (MMI) on July 17, 2017, by Dr. Mars who states, "she is being sent in by the insurance carrier." (Claimant's Exhibit 2 Pg 7.)

7. Respondent's filed a Final Admission of Liability dated March 5, 2018. Claimant timely objected to the Final Admission and requested a Division Independent Medical Examination (DIME).

8. Physician Assistant Laura Kaiser's report of September 8, 2017, states, "right knee pain is compensatory from the L knee," and "She has failed surgery and Supartz injections." (Respondent's Exhibit F, Pg 81).

9. Dr. Repine's report of April 6, 2018 states, "left knee pain onset 26 months ago." Dr. Repine further explains, "The pain is sharp. Context there is an injury. Trauma 2 years 1 month 2 weeks 6 days ago on 2/17/2016. The pain is aggravated by walking and standing. Associated symptoms include joint instability, limping, numbness, tingling in the legs and weakness. Pertinent

negatives include decreased mobility, difficulty initiating sleep, joint tenderness, nocturnal awakening, nocturnal pain, spasms and swelling. Additional information, she has undergone L knee scope with lateral release, partial medial meniscectomy and chondroplasty, as well as PT, and Supartz injections. Patient states 7/10 on the pain scale." (Claimant's Exhibit 6, Pg 54).

10. On April 26, 2018 Dr. Repine recommended Claimant to receive a left total knee arthroplasty, also referred to as a total knee replacement.

11. Subsequent to the request for the total knee replacement, Respondents issued a corresponding denial based on an independent medical examination (IME) report from Dr. Douthit. In his IME report Dr. Douthit admitted that the total knee replacement was reasonable and necessary, but questioned the work related causation.

12. On June 12, 2018, Dr. Richard Gordon, M.D. submitted his DIME report. Dr. Gordon opined that "Based on medical record review and this examination, it is this examiner's opinion that [Claimant] has not reached maximum medical improvement. This is based on the extent of her left knee pain with commensurate findings on both MRI and physical examination. I agree with Dr. Repine's assessment that this patient is in need of a left total knee arthroplasty. Based on this assessment, she has not reached maximum medical improvement." (Claimant's Exhibit 6, Pg 79).

13. Claimant attended an IME with Dr. Peter Weingarten on August 22, 2018. In his corresponding report Dr. Weingarten states that Claimant was asymptomatic prior to her work related event and "absent the slip and fall accident, the patient would not require a total knee arthroplasty and would not have required arthroscopic surgery to the knee." (Claimant's Exhibit 4, Pg 28-29).

14. Dr. Weingarten concludes, "the only reasonable treatment at this time would be a total knee arthroplasty. The patient is eager to proceed with the surgery. The need for surgery is causally related to the work incident of 2/17/2016." (Claimant's Exhibit 6, Pg 29).

15. At Respondent's request Claimant attended an IME with Dr. Larson on October 22, 2018. Dr. Larson opined that the Claimant's need for the total knee arthroplasty is reasonable but is unrelated to her industrial injury. Dr. Larson concluded that it "appeared" that Claimant "has recovered from her work related injury." (Respondent's Exhibit G, Pg 7).

16. On March 13, 2019, Dr. Larson testified at a post hearing deposition. Dr. Larson testified consistent with his IME report. In his deposition Dr. Larson testified that from 1982 to the date of her injury Claimant received no treatment to her left knee, was asymptomatic and had no work restrictions.

17. Dr. Douthit testified at hearing consistent with his IME reports. Dr. Douthit also testified that from 1982 to the date of her injury Claimant received no treatment to her left knee, was asymptomatic and had no work restrictions.

18. At hearing Claimant credibly testified that from 1982 to the date of her injury she received no treatment to her left knee, was asymptomatic, was fully functional, and had no work restrictions. Claimant testified that her knee remained symptomatic following her initial surgery and subsequent injections. Her symptoms have remained consistent from her date of injury and she has never returned to her pre-injury function. Claimant stated that none of her current symptoms and functional limitations were present prior to her date of injury.

CONCLUSIONS OF LAW

General Legal Principles

The purpose of the Act is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME

Sections 8-42-107(8)(b)(III) and (c), C.R.S. provide that the finding of a DIME physician selected through the Division of Workers' Compensation shall only be overcome by clear and convincing evidence. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III); *Peregoy v. Indus. Claim Apps. Office*, 87 P.3d 261, 263 (Colo. App. 2004).

Clear and convincing evidence is highly probable and free from serious or substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A fact or proposition has been

proved by clear and convincing evidence if, considering all the evidence, the trier-of-fact finds it to be highly probable and free from serious or substantial doubt. Id. The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO July 19, 2004); see *Shultz v. Anheuser Busch*, *Inc*., W.C. No. 4-380-560 (Nov. 17, 2000).

The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Indus. Claim Apps. Office*, 961 P.2d 590 (Colo. App. 1998). Since the DIME physician is required to identify and evaluate all losses and restrictions that result from the industrial injury as part of the diagnostic assessment process, the DIME physician's opinion regarding causation of those losses and restrictions is subject to the same enhanced burden of proof. *Id*.

Respondents failed to overcome the DIME opinions of Dr. Gordon by a clear and convincing standard. It has been determined that a mere difference of medical opinion does not constitute clear and convincing evidence. The opinions of Dr. Douthit and Dr. Larson only amount to a mere difference of opinion than that of Dr. Gordon. The medical record and the fact that since 1982 Claimant had no symptoms nor received any treatment to her left knee supports the opinions of Dr. Gordon.

The opinions of Dr. Gordon are supported by Dr. Weingarten, who opines that Claimant's recommended total knee arthroplasty is reasonable, necessary, and related to her industrial injury. The opinions of Dr. Weingarten are credible and persuasive.

In conclusion, the opinions of Dr. Larson and Dr. Douthit are found not to be credible or persuasive and do not meet the burden of proof to overcome the DIME's opinions by a clear and convincing standard.

Medical Benefits

If there is a compensable injury, the employer and its insurance carrier must provide all medical benefits, which are reasonably necessary to cure and relieve the work-related injury. Section 8-42-101 C.R.S.; *Owens v. Indus. Claim Appeals Office of State of Colo.,* 49 P.3d 1187, 1188 (Colo. Ct. App. 2002). The right to workers' compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Section 8-42-101, C.R.S.; See *Snyder v. Indus. Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. Ct. App. 1997). Where liability for a particular medical benefit is contested, the claimant must prove that it is reasonably necessary to treat and is causally related to the industrial injury. *Id*.; See *Grover v. Industrial Commission,* 759 P2d 705 (Colo. 1988). The record must distinctly reflect that the medical treatment was necessary and designed to cure or relieve the effects of the work

injury. *Pub. Serv. Co. of Colorado v. Indus. Claim Appeals Office of State of Colo.,* 979 P.2d 584, 585 (Colo. Ct. App. 1999).

The claimant bears the burden of proof to establish the right to specific medical benefits. *HLJ Management Group, Inc. v. Kim*, 804 P.2d 250 (Colo. App. 1990). Factual determinations related to this issue must be supported by substantial evidence in the record. Section 8-43-301(8), C.R.S. Substantial evidence is that quantum of probative evidence which a rational fact finder would accept as adequate to support a conclusion without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert,* 914 P.2d 411, 415 (Colo. App. 1995).

Claimant has proven by a preponderance of the evidence that the need for the left total knee arthroplasty is reasonable, necessary, and related to the compensable claim. Dr. Gordon's DIME opinions are credible and persuasive and were corroborated by those of Dr. Weingarten in that Claimant's need for the surgery is related to the injury of February 17, 2016. The opinions of Dr. Weingarten are found to be credible and persuasive. Claimant's testimony is credible and persuasive that from 1982 to the date of injury Claimant had never received any medical treatment for her left knee and was fully functional. The opinions of Dr. Douthit and Dr. Larson are found not to be credible or persuasive.

ORDER

It is therefore ordered that:

1. Respondents failed to sustain their burden of proof to establish that the DIME physician's opinion is most probably incorrect.

2. Claimant proved by a preponderance of the evidence that the recommended total left knee replacement procedure (TKR) is reasonably necessary and related medical benefits.

1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-857-829-002

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

DANIEL FRECKLETON,

Claimant,

v.

SKYWERXS INDUSTRY, LLC,

Employer,

and

FARMERS INSURANCE EXCHANGE,

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on May 1, 2019, in Denver, Colorado. The hearing was digitally recorded (reference: 5/1/19, Courtroom 1, beginning at 1:30 PM, and ending at 3:00 PM). No testimonial evidence was taken. The matter was submitted on the exhibits admitted into evidence.

The Claimant was not present in person but represented by [Redacted], Esq. Respondents were represented by [Redacted], Esq.

Hereinafter [Redacted], shall be referred to as the “Claimant." [Redacted], shall be referred to as the “Employer.” All other parties shall be referred to by name.

Claimant’s Exhibits 1 through 8 were admitted into evidence, without objection. Respondents’ Exhibits A through T were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ established a post-hearing briefing

schedule. Claimant's opening brief was filed on May 8, 2019. Respondents' answer brief was filed on May 15, 2019. Claimant's reply brief was filed on May 20, 2019, at which time the matter was deemed submitted for decision. The reply brief states the position that all of Respondents' arguments are moot, if the FAL is void *ab initio*.

ISSUES

A critical issue to be determined by this decision is whether the Final Admission of Liability (FAL), dated August 26, 2014, was *void ab initio* as to the admission for maximum medical improvement (MMI), permanent medical impairment, or both. The FAL admitted for causally related and reasonably necessary post-MMI) medical maintenance care; an average weekly wage of $575.61; temporary total disability (TTD) benefits through April 30, 2012; an MMI date of April 30, 2012, and permanent partial disability (PPD) benefits, based upon 23% of the whole person, with a $10,000.00 lump sum payment on October 4, 2012 and a final payout aggregating $37, 388.16, completed on February 11, 2015. The Claimant's contention is that the entire FAL is null and void because it was based on the opinion of Bart Fotheringham, M.D. Claimant's authorized treating physician (ATP) in the State of Utah, who conceded that he was not Level 2 Accredited in the State of Colorado. In rating permanent medical impairment, however, Dr. Fotheringham used the American Medical Association *Guides to the Evaluation of Permanent Medical Impairment,* 3rd Ed., Rev.(hereinafter "AMA Guides"), as required by § 8-42-107 (8) (c), C.R.S., in rating the degree of whole person permanent medical impairment.

Corollary issues are whether the Claimant is estopped from challenging the FAL at this time because he accepted and received all of the admitted permanent medical impairment benefits If the FAL is null and void, should the Claimant be obligated to repay Respondents the $55, 780.44 he received in permanent medical impairment benefits in order to prevent his unjust enrichment, pursuant to the case law dealing with overpayments.

The Claimant filed a Petition to Reopen one day before the 6-year statute of limitations took effect. The ostensible ground in the Petition to reopen is "change of condition." Medical reports supporting renewed urinary problems are attached to the Petition. As it relates to the contention that the FAL is null and void, is it sufficient to state the ground of "change of condition," based on a "substantial compliance-type argument, " when, in fact, the actual ground should be error or mistake in the FAL. If the Petition is to be literally construed, an alternative issue concerning whether it supports a "change of condition," in which case, the FAL and its sequelae remain unchanged and the case could be reopened from the time the condition changed.

The Claimant bears the burden of proof, by preponderant evidence on all issues, with the exception of "estoppel," in which case Respondents bear the burden of proof by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant was injured on June 7, 2011. A General Admission of Liability (GAL), admitting for temporary total disability (TTD) benefits was filed on June 14, 2011 (Respondents' Exhibit A-1). The Claimant received care initially at Craig Hospital, but eventually relocated to Salt Lake City, Utah.

2. On April 30, 2011 he received a release to full duty and was determined to be at maximum medical improvement (MMI). The insurance carrier filed a GAL terminating TTD benefits, pursuant to § 8-42-105(3), C.R.S., on May 1, 2011 (Respondents' Exhibit A 3-5). The Claimant received $17,981.96 in TTD benefits from the date of injury to that date.

Permanent Impairment Rating and Benefits

3. The Claimant underwent an impairment rating pursuant to the AMA Guides, performed by ATP Bart Fotheringham, M.D., in Murray, Utah. Dr. Fotheringham agreed that the Claimant was at MMI on April 30, 2012, and he assigned a 23% whole person impairment rating. Dr. Fotheringham admitted that he was **not** Level II Accredited in Colorado. Respondents filed an FAL, in accordance with Dr. Foteringham's rating, on June 8, 2012 (Respondents' Exhibit B 1-12)..Dr. Fotheringham is not Level 2 Accredited by the Colorado Division of Workers Compensation (DOWC), however, § 8-42-107 (8) (b.5) (I) (A), C.R.S., read *in pari material,* with the rest of Subsection (b.5), reveals that an out-of-state physician may determine MMI and degree of physical impairment and transmit the results to the Colorado insurance carrier, who may then appoint a Colorado Level II to determine the impairment rating. By its silence in the rest of the statutory provision, an insurance carrier may accept the out-of-state ATPs impairment rating and pay PPD benefits pursuant thereto, as is the case herein. By necessary implication, a claimant may either agree with the out-of-state physician's rating, or insist on the appointment of a Colorado Level II Accredited physician to do the rating.

4. The admitted 23% whole person rating totaled $55,780.44 in permanent medical impairment benefits, paid from the date of MMI to February 11, 2015. Attached to the FAL was "Notice to Claimant of Rights and Benefits." Dr. Fotheringham's report was also attached. Also attached is an Objection to the FAL and a Notice and

Proposal, which contains in bold print that if the Claimant had any issues with benefits admitted he needed to file an Objection and apply for a Division Independent medical Examination (DIME) or apply for Hearing within 30 calendar days of the filing of the FAL, July 8, 2012

5. The Claimant began collecting PPD on a bi-weekly basis. He did not file an Objection to the FAL or file an Application for Hearing (Respondents' Exhibit G-2). The Division of Workers Compensation (DOWC) reviewed the file and requested a Final Payment Notice on September 24, 2012 (Respondents' Exhibit E). Respondents filed the Final Payment Notice on October 22, 2012 (Respondents' Exhibit F).

6. On October 2, 2012 the Claimant contacted the DOWC and enquired about obtaining a $10,000.00 Lump Sum (Respondents' Exhibit G-1). The Claimant then contacted Respondents and made the request. Respondents issued this payment on October 4, 2012.

7. Due to this and a lump payment at the onset of PPD, all PPD benefits have been paid out as of August 21, 2014. Respondents filed a second FAL, based upon the completion of payment due to the change in the time period of benefits being owed. Again, Respondents attached the required notices to Claimant. Again, the Claimant did not file an Objection to the FAL and did not apply for hearing on any issues (Respondents' Exhibit B 13-18). The payment ledger was also attached to the FAL.

8. Claimant relocated again to Oregon. He did not treat with any physician in 2014. Again, the Claimant did not file an Application for Hearing on any issues surrounding his post-MMI maintenance care or anything else during this time period (Respondents' Exhibit G 1-2). Claimant eventually relocated to Alaska.

The Petition to Reopen

9. The Claimant filed a Petition to Re-Open on June 6, 2017. The alleged ground in the Petition to Re-Open is marked "Change in Condition". The Claimant did not mark Error or Mistake as a reason for Re-opening (Respondents' Exhibit. H). The attached medical reports were dated March 24, and May 17, 2017. The Petition and Application make no mention of any issues with the FALs. The Claimant's Application for Hearing in connection with the Petition, does not endorse PPD as issue. TPD from March 2013 to "ongoing" and TTD for the same time period were listed as issues. The Claimant later withdrew permanent total disability as an issue by motion. There is no endorsement of an issue concerning the FALs on this Application (Respondents' Exhibit H-7-8).

10. Hearing was set for October 3, 2017. Due to the Claimant not answering discovery and the A pre-hearing conference before the DOWC was held on November 6, 2017. Conference notations indicate that there was difficulty obtaining information

from the Claimant. Again, the Claimant did not provide answers to discovery and the hearing was vacated. The Pre-hearing Order allowed the Claimant to withdraw the Application for Hearing and refile it. There was no mention, nor was there a motion, of additional issues to be endorsed for the next Application (Respondents' Exhibit J).

11. The Claimant filed a new Application for Hearing on March 23, 2018 endorsing the same issues, this time omitting PTD. Again, there is no issue concerning the FAL endorsed and no endorsement of the claim not being closed, such an endorsement possibly being incomprehensible to a self-represent claimant (as the Claimant was at the time) Again due to discovery issues, the hearing was vacated. On August 30, 2018, the Claimant then filed his third Application now endorsing a penalty for alleged failure to involve a Level II provider and closure of claim. Claimant did not endorse the FAL as *void in ab initio* and did not endorse PPD. Claimant also did not file a motion to add the issue nor had there been any Notice that this was an issue until the third Application was filed.

Analysis of the Evidence

12. It is undisputed that at the time of the Petition to Re-open the Claimant did not assert that the claim was still open and that there was an issue with the FALs. It is also undisputed that the Claimant did not endorse PPD on any of his Applications for Hearing. It is undisputed that the Claimant did not Object to either of the FALS and did not apply for hearing within 30 days of their issuance of the FALs. It is undisputed that the Claimant collected over $55,000.00 in PPD and has not returned this sum to the Respondents. While his Petition to Re-Open based on change of condition was timely filed 1 day before the Statute ran, a Petition to Re-open based on Error or Mistake was never filed and the Application for Hearing was not filed until August 30, 2018, The Claimant has raised no issue with the impairment rating itself, and proffers no explanation as to why the DOWC closed the file, after reviewing the FALS. A Petition to Re-Open on Change of Condition is the next procedural step in this case.

13. The Claimant's argument at hearing, with regard to not objecting to the FALs was that he could have requested a DIME, and that he could have received additional indemnity because he was unaware of the law.

14. Claimant does **not** argue that he did not receive the FALs or that the FALs were untimely. He also does **not** argue that the FALs did not have the requisite Notice requirements and objection forms attached (Resp.ondents' Exhibit B). His argument that the FALs did not meet the requirements of § 8-42-107, C.R.S. is factually untimely. The Claimant accepted the PPD award made in the FALs in its entirety, made a lump sum request, which was granted, and the DOWC reviewed the file and requested a Final Payment Notice, thus, the DOWC closed the file and gave notice to the parties that the file was closed.

15. The Claimant argued at hearing that he was not given a right to a DIME to increase his indemnity award. This is not accurate. The insurance carrier sent the requisite Notice and forms to the Claimant in 2012 and 2014 and the Claimant chose to not pursue a DIME or file an Application for Hearing. The only impediment to the Claimant obtaining a DIME was his not requesting a DIME. By requesting the $10,000.00 Lump Sum, which the Claimant received, he demonstrated that he had the ability to contact the DOWC and make inquiries and that he had received the FAL. The ALJ finds that this establishes an acquiescence and acceptance of the FAL.

16. The DOWC received the first FAL on June 8, 2012 and found no errors contained in it. As was the required procedure at the time, when no Objection was filed, the DOWC requested the Final Payment Notice. Respondents fulfilled this request. In that the DOWC enacted the procedures to close the claim, accepted the FAL without issuance of a correction notice, and claimant's Lump Sum request.

17. The filing of the second FAL again afforded the Claimant the right to apply for Hearing on issues at that time. The Claimant again took no action. It is undisputed that Claimant did not timely give notice of the Error/Mistake. It is also undisputed that the last PPD payment was over two years prior to either June 6, 2017 or August 30, 2018. The purpose of a Petition to Re-open is to give Respondents notice that an award should be re-opened. The Claimant did not mark "Error or Mistake" on the June 6, 2017 Petition. The attached medical reports are dated in March and May of 2017. The Application for Hearing attached to the Petition did not endorse PPD or make mention of any issues with the FAL. Specifically, the Claimant did not assert that the FALs were *void ab initio*.

18. The Claimant states in his opening brief that the Petition to Re-Open was filed in a precautionary manner in that the case was still open due to the FALs being *void ab initio*. The Claimant gave no notice of any issues with the FALs until August 30, 2018.

19. The ALJ infers and finds that Respondents are prejudiced by Claimant's untimely raising of this issue (years after the last PPD payment was received by the Claimant) as throughout 2017 and the majority of 2018, Respondents proceeded defending the matter as a Petition to Re-open based on change of condition. This included not only discovery tailored to that issue but also the retaining of Stanley Ginsburg, M.D., to perform a chart review (Respondents' Exhibit K). The Claimant has not proffered a reasonable or persuasive excuse as to the untimely and lack of notice to this issue.

20. The Claimant not only achieved MMI on April 30, 2012, but he has worked for at least four employers since MMI. The case was closed by the FALs as the FALs were accepted and approved by the DOWC and Claimant accepted the award and did not timely Object. The last payout on the PPD award was August 21, 2014.

21. The Petition to Re-open, dated June 6, 2017, on the stated ground of "change of condition," was filed one day short of the expiration of the relevant statute of limitations provision. It was timely and attached to it were medical reports that support a prima facie case of worsening of condition beginning on March 24, 2017 (Respondents' Exhibit H). It creates a disputed factual issue concerning whether the 2017 medical condition was a natural progression of the sequelae of the June 7, 2011 injury, or whether a change or worsening began in March 2017. The Petition postures this issue.

DISCUSSION

The Claimant's principal thrust is that the FALs are null and void. If so, It follows that the $55,780.44 PPD award was a mistake due to clerical error, not fraud. Recovery of overpayments, based on mistake and on a retroactive basis, was prohibited by *HLJ Management Group, Inc. v. Kim,* 804 P.2d 250 (Colo. App. 1990). In 1997, the General Assembly amended the re-opening statute to include overpayments as a ground for re-opening as to overpayments only. § 8-43-303 (1) and (2) (a), C.R.S. Now, employers have a statutory right to review and recalculate payments if an insurance carrier made a mistake in previous payments. *Simpson v. Indus. Claim Appeals Office,* 2009 Colo. App. LEXIS 576 (No. 07CA1581, April 16, 2009) (NSOP). Previously, an admission of liability could only be withdrawn retroactively on the basis of fraud. *Vargo v. Indus. Comm'n,* 626 P.2d 1164 (Colo. App. 1981). To the extent that a case may be re-opened, based on mistake and not fraud, if there were overpayments, the *Vargo* grounds for retroactively modifying a previously admitted award has been altered to include employer mistakes in calculations.

If the Claimant's theory of the case, *i.e.,* that the FALs were *void ab initio*, prevailed, then the Respondents would be entitled to recoup overpayment of $55,780.44 in overpayments made due to the mistake that Dr. Fotheringham was not a Colorado Level II physician, thus, his rating was void. The fallacy with this argument is that the provisions of § 8-42-107 (8) (b.5) (I)(A), C.R.S., allows an out-of-state physician to determine MMI and rate permanent medical impairment provided that the AMA *Guides,* 3rd. Ed., Rev. are used. If a claimant is not satisfied with this proviso, the claimant may request an insurer to pay for the claimant to come to Colorado and be rated by a Colorado Level II Accredited physician. In the present case, both the Respondents and the Claimant accepted Utah ATP Dr. Fotheringham's MMI determination and rating—**End of Story** concerning the FALs. There is a time honored legal principle that the apple cart should not be disturbed unless it is absolutely necessary. in the present case, the statutory scheme on ratings, as referenced herein above, dictate that the FALs should be left well enough alone.

As found, the Petition to Re-open, dated June 6, 2017, on the stated ground of "change of condition," was filed one day short of the expiration of the relevant statute of limitations provision. It was timely and attached to it were medical reports that support a

prima facie case of worsening of condition beginning on March 24, 2017 (Respondents' Exhibit H). creates a disputed factual issue concerning whether the 2017 medical condition was a natural progression of the sequelae of the June 7, 2011 injury, or whether a change or worsening began in March 2017. The Petition postures the issue of "change in condition" for an evidentiary hearing..

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Final Admissions of Liability (FALs)

a. If the Claimant's theory of the case, *i.e.,* that the FALs were *void ab initio*, prevailed, then the Respondents would be entitled to recoup $55,780.44 in overpayments of PPD benefits made due to the mistake that Dr. Fotheringham was not a Colorado Level II physician, thus, his rating was void. The fallacy with this argument is that the provisions of § 8-42-107 (8) (b.5) (I)(A), C.R.S., allow an out-of-state physician to determine MMI and rate permanent medical impairment provided that the AMA *Guides,* 3rd. Ed., Rev. are used. As found, this occurred. If a claimant is not satisfied with this proviso, the claimant may request an insurer to pay for the claimant to come to Colorado and be rated by a Colorado Level II Accredited physician. In the present case, both the Respondents and the Claimant accepted Utah ATP Dr. Fotheringham's MMI determination and rating. This is dispositive concerning the FALs. There is a time honored legal principle that the apple cart should not be disturbed unless it is absolutely necessary. in the present case, the statutory scheme on ratings, as referenced herein above, dictate that the FALs should be left well enough alone. In light of these statutory provisions, it is unnecessary to deal with issues of estoppel, waiver and laches.

Petition to Re-open

b. A Petition to Re-open is required in this case because TTD was properly terminated claimant will still have to prove a change in condition and greater impact on earning capacity to prove entitlement of future indemnity. Claimant not only achieved MMI, but has worked for at least four employers since MMI. The case was closed by the FALS as the FALS were accepted and approved by the DOWC and claimant accepted the award and did not timely Object. Under § 8-43-303(1), C.R.S., after MMI and within six years of the date of injury, an ALJ may re-open a claim based on fraud, an overpayment, **an error, a mistake,** or a change in condition. See *El Paso County Department of Social Services v. Donn,* 865 P.2d 877 (Colo. App. 1993); *Burke v. Indus. Claim Appeals Office,* 905 P. 2d 1 (Colo. App. 1994); *Hanna v. Print Express, Inc.,* 77 P. 3d 863 (Colo. App. 2003); *Donohoe v. ENT Federal Credit Union,* W.C. No.

4-171-210 [Indus. Claim Appeals Office (ICAO) September 15, 1995]. This is so because MMI is the point in time when no further medical care is reasonably expected to improve the condition. § 8-40-101(11.5), C.R.S. (2009); *City of Colorado Springs v. Indus. Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Where a claimant seeks to re-open based on a changed condition, he must demonstrate a change in condition that is "causally connected to the original compensable injury." *Chavez v. Indus. Comm'n,* 714 P.2d 1328 (Colo. App. 1985). As found, the Claimant has made a prima facie case for re-opening. Endorsement of "petition to reopen" on an application for hearing or response to application for hearing sufficiently raises the issue for consideration. *See Cooper v. Indus. Claim Appeals Office,* 109 P.3d 1056 (Colo. App.2005). Collateral estoppel applies to all issues except "**error, mistake, or a change in condition."** *Cooper v. Indus. Claim Appeals Office,* 998 P.2d 5 (Colo. App. 1999). Consequently, as found, it is appropriate to grant the Claimant's Petition to re-open on the ground of "change of condition." It is not appropriate to grant it on the ground of error or mistake insofar as the FALs were allegedly *void ab initio* because they were **not** *void ab initio.*

Burden of Proof

c. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits, beyond those previously admitted. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant sustained his burden with respect to a re-opening based on "change of condition." The Claimant has failed to sustain his burden with respect to error and mistake, specifically, that the FALs were *void ab initio.*

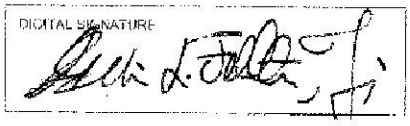
ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Claimant's request to have the previously filed Final Admissions of Liability declared null and void is hereby denied and dismissed. Also, Claimant's request to re-open based on this proposition is hereby denied and dismissed.

B. Claimant's Petition to re-open, based on "change of condition" is hereby granted.

DATED this 23rd day of May 2019..



_____
EDWIN L. FELTER, JR.
Administrative Law Judge

This decision of the administrative law judge does not grant or deny a benefit or a penalty and may not be subject to a Petition to Review. Parties should refer to § 8-43-301(2), C.R.S., and other applicable law regarding Petitions to Review. If a Petition to Review is filed, *see* Rule 26, OACRP, for further information regarding the procedure to be followed.

ISSUES

- What is the proper apportionment of death benefits between the Dependent Claimants?

- Who should be the payee?

FINDINGS OF FACT

1. The Deceased was involved in a fatal accident on March 23, 2018 while working as a roofer for Employer. A gust of wind caught a piece of sheet metal he was working with and caused him to fall from a roof. The accident occurred at approximately 8:33 AM and he was pronounced dead at 2:43 PM that same day. There is no dispute his death was a proximate result of the March 23, 2018 accident.

2. The parties stipulated to an average weekly wage (AWW) of $1,422.23. The parties also stipulated death benefits are payable at the maximum compensation rate of $948.15 in effect on the date of the Deceased's death.

3. Ms. Soto was not married to the Deceased at the time of his death and stipulated she is not entitled to death benefits.

4. The Deceased and Ms. Soto had two children together. J.D. is the Deceased's natural son. His date of birth is May 1, 2009. DNA testing confirmed the probability of paternity at 99.9997%. A.L. is the Deceased's natural daughter. Her date of birth is October 28, 2011. DNA testing confirmed the probability of paternity at 99.99998%. Respondents stipulated that J.D. and A.L. are the Deceased's son and daughter, respectively.

5. J.D. and A.L. are presumed wholly dependent on the Deceased, pursuant to § 8-41-501(1)(b), C.R.S. No evidence was presented to rebut the statutory presumption of dependency, and the ALJ finds J.D. and A.L. were actually dependent on the Deceased for support at the time of his death.

6. The Deceased was not married at the time of his death, and has no children other than J.D. and A.L. The ALJ finds J.D. and A.L. are the only persons eligible to receive workers' compensation death benefits in connection with this claim.

7. J.D. and A.L. are each entitled to death benefits until age 18, or until age 21 if engaged in courses of study as a full-time student in an accredited school.

8. J.D. and A.L. live with Ms. Soto on a full time basis and she is now solely responsible for their support. Ms. Soto is willing and able to apply the benefits in J.D. and

A.L.'s best interests. The ALJ finds Ms. Soto is the best person to act as payee for J.D. and A.L.'s workers' compensation benefits.

9. Ms. Soto requested the death benefits be apportioned "50/50" between J.D. and A.L., which the ALJ finds to be the most reasonable and appropriate apportionment of benefits in this case. The ALJ further finds that, when J.D. or A.L. ceases to be eligible for benefits, the death benefits shall be reallocated 100% to the remaining eligible child, if any.

CONCLUSIONS OF LAW

Death benefits are payable to the dependents of an employee who dies as a proximate result of a work-related accident. Section 8-42-115(1)(b), C.R.S. Dependents and the extent of dependency are determined "as of the date of the injury . . . and the right to death benefits shall become fixed as of said date irrespective of any subsequent change." Section 8-41-503(1), C.R.S. Children of the deceased under the age of 18 are presumed wholly dependent, and children between 18 and 21 years of age are presumed wholly dependent as long as they are engaged in courses of study as full-time students at any accredited school. Section 8-41-501(1)(b) and (c), C.R.S. As found, J.D. and A.L. are the Deceased's sole dependents, and were wholly dependent on the Deceased for support at the time of his injury and death.

Dependents are entitled to two-thirds of the deceased's AWW, subject to the maximum compensation rate in effect on the date of death. Section 8-42-114, C.R.S.; *Richards v. Richards & Richards*, 664 P.2d 254 (Colo. App. 1983). As found, the parties stipulated to an AWW of $1,422.23 and death benefits payable at the rate of $948.15 per week.

Death benefits shall be apportioned among multiple dependents in a manner the ALJ deems "just and equitable." Section 8-42-121, C.R.S. As found, the benefits should be apportioned equally between J.D. and A.L., as long as they are both eligible. When J.D. or A.L. ceases to be eligible for death benefits, the payment shall be reallocated 100% to the remaining eligible child, if any.

The surviving spouse or a friend may apply for death benefits on behalf of the deceased's minor children. Section 8-42-122, C.R.S. The ALJ has discretion to determine the manner and method of payment on behalf of minor children "in such manner as the [ALJ] sees fit." *Id*. As found, the benefits should be paid to Ms. Soto for J.D. and A.L.'s benefit. Ms. Soto is the full-time custodial parent. The ALJ concludes Ms. Soto is willing and able to apply the benefits in the best interests of J.D. and A.L.

ORDER

It is therefore ordered that:

1. Insurer shall pay death benefits of $948.15 per week commencing March 23, 2018 and continuing until terminated according to law.

2. The benefits shall be apportioned equally between J.D. and A.L. as long as both remain eligible. When J.D. or A.L. ceases to be eligible, the payment shall be reallocated 100% to the remaining eligible child, if any.

3. The benefits shall be paid to Ms. Soto as payee, and shall be applied for the benefit of J.D. and A.L.

4. Insurer shall pay statutory interest at the rate of 8% per annum on all amounts not paid when due.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 24, 2019

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that his scheduled 9% right upper extremity impairment should be converted to a whole person rating.

2. Whether Claimant is entitled to an additional disfigurement award pursuant to §8-42-108, C.R.S.

FINDINGS OF FACT

1. Claimant is a 35-year-old Plumber's Apprentice who began working for Employer on May 10, 2016. On June 2, 2016 Claimant sustained admitted industrial injuries. He was installing a drain in the attic of a home when he fell through the ceiling. Claimant attempted to arrest his fall by reaching out with both arms to grasp a 2x4, but was unable to adequately grab the wood and experienced a pulling sensation in both arms. He landed in a standing position on the floor.

2. On June 29, 2016 Claimant presented to the emergency department at the University of Colorado. He reported acute right shoulder pain after a work injury that had occurred 27 days earlier. Claimant underwent right shoulder and elbow x-rays. He was released with no treatment recommendations.

3. On July 1, 2016 Claimant was evaluated by Physician Assistant Kayla Marchesani. Because Claimant reported persistent right shoulder pain, PA Marchesani referred him for physical therapy. Claimant subsequently underwent physical therapy for several weeks outside of the Workers' Compensation system.

4. Claimant reported his June 2, 2016 injuries and received treatment from authorized provider Centura Centers for Occupational Medicine (CCOM). On August 31, 2016 Claimant was evaluated at CCOM by Physician Assistant Joseph Mullen. He reported continued right shoulder pain. PA Mullen recommended additional physical therapy and a right shoulder MRI if Claimant failed to improve.

5. Because Claimant's right shoulder condition did not improve he underwent an MRI on September 30, 2016. The imaging revealed severe supraspinatus tendinosis with a partial thickness articular surface tear of the distal insertion extending into the inferior infraspinatus tendon, mild acromioclavicular osteoarthritis and mild increased fluid in the subacromial, subdeltoid bursa consistent with bursitis. On October 5, 2016 Claimant returned to PA Mullen to review the results of his MRI. He reported persistent right shoulder pain. PA Mullen referred Claimant for an orthopedic surgical consultation with Ronald Royce, D.O. at the Colorado Center of Orthopaedic Excellence.

6. On October 24, 2016.Claimant visited Dr. Royce for an evaluation. Dr. Royce recommended a right shoulder rotator cuff repair. The surgery was approved and on January 12, 2017 Claimant underwent the procedure. Dr. Royce specifically performed an arthroscopic rotator cuff repair and subacromial decompression.

7. On January 27, 2017 Claimant returned to Dr. Royce for an examination. He reported that his shoulder was doing well. Claimant was released to begin physical therapy. By February 24, 2017 Claimant reported to Dr. Royce that his right shoulder continued to improve and his range of motion was increasing. Claimant reported pain ranging from 0/10 to 3/10. Dr. Royce directed Claimant to discontinue using a sling and return in three months.

8. On April 10, 2017 Claimant returned to Dr. Royce for an examination. Claimant reported no pain in his right shoulder. Dr. Royce noted that Claimant's cervical spine exhibited normal range of motion and he had completely regained strength in his right arm. He thus discharged Claimant from his care. All of Claimant's subsequent medical treatment was focused on his complaints of bilateral elbow pain.

9. On May 27, 2017 Claimant underwent an MRI of his right elbow that revealed mild tendinosis of the distal biceps tendon, partial tearing and mild bicipital radial bursitis. Based on the MRI results, PA Mullen referred Claimant for an evaluation with Karl Larsen, M.D.

10. On June 23, 2017 Claimant visited Dr. Larsen for an examination. Claimant reported right elbow pain with lifting. Based on Claimant's pain reports and the right elbow MRI, Dr. Larsen recommended surgery. On September 19, 2017 Dr. Larsen performed a distal tendon debridement and repair on Claimant's right elbow.

11. By January 16, 2018 Claimant reported no right shoulder pain and full range of motion to his medical providers at CCOM. He was able to put his arm behind his back for "lift-off testing" with minimal discomfort. In a pain diagram Claimant only reported aching and burning in his elbows. On January 31, 2018 Claimant reported 0/10 pain in his elbows and right shoulder. He stated that he felt very rare discomfort 10% of the time.

12. On February 21, 2018 Claimant underwent an evaluation at CCOM for the last time. He recounted that he had completed occupational therapy and been lifting 80 pounds, 40 pounds and 30 pounds with pulleys. Claimant noted discomfort but no pain when performing the preceding tasks.

13. From March 6, 2018 through May 29, 2018 Claimant was incarcerated and unable to attend his final medical appointments at CCOM. Respondents thus filed a Final Admission of Liability (FAL) pursuant to Rule 7-1(b) based on Claimant's abandonment of his claim. Claimant's attorney objected to the FAL and sought a Division Independent Medical Examination (DIME).

14. On September 5, 2018 Claimant underwent a DIME with Miguel Castrejon, M.D. Dr. Castrejon noted that the application for the DIME listed the

following specific body parts for evaluation: right shoulder; cervical spine; thoracic spine and left elbow. He remarked that there was no mention of the right elbow "though treatment to the right distal biceps tendon can be interpreted as involving the area of the right elbow." Claimant reported that he was experiencing a dull ache over the anterior aspect of his right shoulder down to his right elbow. He did not report any numbness, tingling or cervical spine issues. However, Claimant noted that he suffered some difficulties with forceful strength activities. He specifically commented that he felt generally improved, but continued to experience intermittent discomfort in both elbows that interfered with activities such as holding his daughter.

15. Dr. Castrejon reviewed Claimant's medical records and conducted a physical examination. He remarked that Claimant's cervical spine exhibited full functional range of motion with no midline tenderness. Dr. Castrejon commented that, although Claimant's elbows were tender, his condition had not worsened. He also noted that Claimant's right shoulder was stable. Dr. Castrejon determined that there were no new or worsening conditions that would require additional medical treatment. He thus concluded that Claimant had reached Maximum Medical Improvement (MMI). Relying on the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised) (AMA Guides*), Dr. Castrejon assigned Claimant a 7% upper extremity impairment rating for right shoulder range of motion deficits. He also assigned Claimant a 2% extremity rating for right elbow range of motion limitations. Combining the ratings yields a 9% upper extremity impairment that converts to a 5% whole person rating. Dr. Castrejon recommended maintenance medical benefits in the form of access to orthopedic follow-up over the ensuing six months and a six-month gym membership to allow Claimant to continue his independent exercise program.

16. On October 2, 2018 Respondents filed a FAL consistent with Dr. Castrejon's 9% right upper extremity impairment rating. Respondents also authorized a $1,000 payment to Claimant for disfigurement. Claimant timely objected to the FAL and filed an Application for Hearing seeking to convert his scheduled impairment to a whole person rating and increase his disfigurement award.

17. Claimant testified at the hearing in this matter. He explained that his scheduled impairment should be converted to a whole person rating because he has lost strength in his right arm. Claimant also suffers tightness and pain when repetitively using his right upper extremity. He noted that he has difficulty working with both arms over his head while carrying heavy objects. Finally, Claimant takes medications for his right upper extremity pain.

18. On cross-examination Claimant explained that he was able to put his right arm out in front of his body and raise it over his head. He remarked that he has full range of motion in his cervical spine. The parties reviewed video surveillance of Claimant from March 31, 2019. The video depicts Claimant pulling an approximately 12 foot ladder out of the back of a SUV, lifting it over his head and placing it onto the roof of another truck. Claimant then climbed up the back of the other truck and tied the ladder onto the roof. .He also rotated his head to the left and right with no evidence of

restricted movement or pain. Throughout the video Claimant moves fluidly and demonstrates no restrictions in the use of his right arm, right shoulder or cervical spine.

19. Claimant underwent a disfigurement evaluation at the hearing in this matter. As a result of his June 2, 2016 admitted industrial injuries, Claimant sustained permanent disfigurement to his right shoulder and right elbow areas. The disfigurement consists of four arthroscopic marks on his right shoulder. His right shoulder is also noticeably lower than his left shoulder. Claimant further exhibited an approximately three-inch long scar on the inside of his right elbow. The disfigurement is serious, permanent and normally exposed to public view. Claimant has already received disfigurement benefits in the amount of $1,000.00 for the preceding body parts pursuant to the October 2, 2018 FAL filed in this matter. Accordingly, Claimant is entitled to receive an additional disfigurement award in the amount of $500.00.

20. Claimant has failed to establish that it is more probably true than not that his scheduled 9% right upper extremity impairment rating should be converted to a whole person rating. Initially, on June 2, 2016 Claimant sustained admitted industrial injuries when he fell through a ceiling while installing a drain in an attic. On January 12, 2017 Claimant underwent an arthroscopic rotator cuff repair and subacromial decompression of his right shoulder. On September 19, 2017 Claimant underwent a distal tendon debridement and repair on his right elbow. By April 10, 2017 Dr. Royce noted that Claimant's cervical spine had normal range of motion and he had completely regained strength in his right arm. Dr. Royce thus discharged Claimant from his care. By January 16, 2018 Claimant reported no right shoulder pain and full range of motion to his medical providers at CCOM. He was able to put his arm behind his back for "lift-off testing" with minimal discomfort. In a pain diagram Claimant only noted aching and burning in his elbows. On January 31, 2018 Claimant reported no pain in his elbows and right shoulder. He felt very rare discomfort 10% of the time.

21. At Claimant's DIME with Dr. Castrejon on September 5, 2018 he reported a dull ache over the anterior aspect of his right shoulder into his right elbow but did not mention any numbness, tingling or cervical spine issues. However, Claimant noted that he experienced some difficulty with forceful strength activities. He specifically commented that he felt generally improved, but continued to suffer intermittent discomfort in both elbows that interfered with activities such as holding his daughter. Upon examination, Claimant's cervical spine exhibited full functional range of motion with no midline tenderness. Claimant's elbows were tender and his right shoulder was stable. Dr. Castrejon determined that there were no new or worsening conditions that required additional medical treatment. Relying on the *AMA Guides*, Dr. Castrejon assigned Claimant a 7% upper extremity impairment rating for right shoulder range of motion deficits. He also assigned Claimant a 2% extremity rating for right elbow range of motion limitations. Combining the ratings yields a 9% upper extremity impairment.

22. The preceding medical records reflect that Claimant's functional disability is limited to overhead lifting and arm movement. Furthermore, Claimant testified that he continues to experience pain in his right shoulder and right elbow. Claimant's right upper extremity symptoms are thus limited to his arm and do not extend into a portion of

his body beyond the schedule of impairments. Notably, the surveillance video reflects Claimant's ability to engage in overhead activities with no evidence of impairment or restricted range of motion. The situs of Claimant's functional impairment is thus in his right upper extremity and does not extend beyond the schedule of disabilities. Accordingly, Claimant's request to convert his 9% right upper extremity scheduled impairment rating to a whole person rating is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Whole Person Conversion

4. Section 8-42-107(1)(a), C.R.S. limits medical impairment benefits to those provided in §8-42-107(2), C.R.S. when a claimant's injury is one enumerated in the schedule of impairments. The schedule includes the loss of the "arm at the shoulder." *See* §8-42-107(2)(a), C.R.S. However, the "shoulder" is not listed in the schedule of impairments. *See Bolin v. Wacholtz*, W.C. No. 4-240-315 (ICAO, June 11, 1998). When an injury results in a permanent medical impairment not set forth on a schedule of impairments, an employee is entitled to medical impairment benefits paid as a whole person. *See* §8-42-107(8)(c), C.R.S.

5. Because §8-42-107(2)(a), C.R.S. does not define a "shoulder" injury, the dispositive issue is whether a claimant has sustained a functional impairment to a

portion of the body listed on the schedule of impairments. *See Strauch v. PSL Swedish Healthcare*, 917 P.2d 366, 368 (Colo. App. 1996). Whether a claimant has suffered the loss of an arm at the shoulder under §8-42-107(2)(a), C.R.S., or a whole person medical impairment compensable under §8-42-107(8)(c), C.R.S., is determined on a case-by-case basis. *See DeLaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000).

6. The Judge must thus determine the situs of a claimant's "functional impairment." *Velasquez v. UPS,* W.C. No. 4-573-459 (ICAO Apr. 13, 2006). The situs of the functional impairment is not necessarily the site of the injury. *See In re Hamrick*, W.C. No. 4-868-996-01 (ICAO, Feb. 1, 2016); *In re Zimdars,* W.C. No. 4-922-066-04 (ICAO, Feb. 4, 2015). Pain and discomfort that limit a claimant's ability to use a portion of the body is considered functional impairment for purposes of determining whether an injury is off the schedule of impairments. *In re Johnson –Wood*, W.C. No. 4-536-198 (ICAO, June 20, 2005); *Vargas v. Excel Corp.,* W.C. 4-551-161 (ICAO, Apr. 21, 2005). However, the mere presence of pain in a portion of the body beyond the schedule does not require a finding that the pain represents a functional impairment. *Lovett v. Big Lots,* WC 4-657-285 (ICAO, Nov. 16, 2007); *O'Connell v. Don's Masonry,* W.C. 4-609-719 (ICAO, Dec. 28, 2006).

7. As found, Claimant has failed to establish by a preponderance of the evidence that his scheduled 9% right upper extremity impairment rating should be converted to a whole person rating. Initially, on June 2, 2016 Claimant sustained admitted industrial injuries when he fell through a ceiling while installing a drain in an attic. On January 12, 2017 Claimant underwent an arthroscopic rotator cuff repair and subacromial decompression of his right shoulder. On September 19, 2017 Claimant underwent a distal tendon debridement and repair on his right elbow. By April 10, 2017 Dr. Royce noted that Claimant's cervical spine had normal range of motion and he had completely regained strength in his right arm. Dr. Royce thus discharged Claimant from his care. By January 16, 2018 Claimant reported no right shoulder pain and full range of motion to his medical providers at CCOM. He was able to put his arm behind his back for "lift-off testing" with minimal discomfort. In a pain diagram Claimant only noted aching and burning in his elbows. On January 31, 2018 Claimant reported no pain in his elbows and right shoulder. He felt very rare discomfort 10% of the time.

8. As found, at Claimant's DIME with Dr. Castrejon on September 5, 2018 he reported a dull ache over the anterior aspect of his right shoulder into his right elbow but did not mention any numbness, tingling or cervical spine issues. However, Claimant noted that he experienced some difficulty with forceful strength activities. He specifically commented that he felt generally improved, but continued to suffer intermittent discomfort in both elbows that interfered with activities such as holding his daughter. Upon examination, Claimant's cervical spine exhibited full functional range of motion with no midline tenderness. Claimant's elbows were tender and his right shoulder was stable. Dr. Castrejon determined that there were no new or worsening conditions that required additional medical treatment. Relying on the *AMA Guides*, Dr. Castrejon assigned Claimant a 7% upper extremity impairment rating for right shoulder range of

motion deficits. He also assigned Claimant a 2% extremity rating for right elbow range of motion limitations. Combining the ratings yields a 9% upper extremity impairment.

9. As found, the preceding medical records reflect that Claimant's functional disability is limited to overhead lifting and arm movement. Furthermore, Claimant testified that he continues to experience pain in his right shoulder and right elbow. Claimant's right upper extremity symptoms are thus limited to his arm and do not extend into a portion of his body beyond the schedule of impairments. Notably, the surveillance video reflects Claimant's ability to engage in overhead activities with no evidence of impairment or restricted range of motion. The situs of Claimant's functional impairment is thus in his right upper extremity and does not extend beyond the schedule of disabilities. Accordingly, Claimant's request to convert his 9% right upper extremity scheduled impairment rating to a whole person rating is denied and dismissed.

Disfigurement

10. Section 8-42-108, C.R.S. provides that a claimant may obtain additional compensation if he is seriously disfigured as the result of an industrial injury. As found, Claimant underwent a disfigurement evaluation at the hearing in this matter. As a result of his June 2, 2016 admitted industrial injuries, Claimant sustained permanent disfigurement to his right shoulder and right elbow areas. The disfigurement consists of four arthroscopic marks on his right shoulder. Notably, his right shoulder is also noticeably lower than his left shoulder. Claimant further exhibited an approximately three-inch long scar on the inside of his right elbow. The disfigurement is serious, permanent and normally exposed to public view. Claimant has already received disfigurement benefits in the amount of $1,000.00 for the preceding body parts pursuant to the October 2, 2018 FAL filed in this matter. Accordingly, Claimant is entitled to receive an additional disfigurement award in the amount of $500.00.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request to convert his 9% right upper extremity scheduled impairment to a whole person rating is denied and dismissed.

2. Claimant shall receive an additional disfigurement award in the amount of $500.00.

3. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review

by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

STATE OF COLORADO **OFFICE OF ADMINISTRATIVE COURTS** 1525 Sherman Street, 4th Floor Denver, CO 80203	
In the Matter of the Workers' Compensation Claim of: **D,** **Claimant,** **vs.** **L** **Employer, and** **A,** **Insurer, Respondents.**	▲ **COURT USE ONLY** ▲ **CASE NUMBER:** **WC 5-084-486-001**
FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER	

Administrative Law Judge Margot W. Jones presided at the hearing in this matter on March 22, 2019, in Greeley, Colorado. Claimant, Delynn Dudenhoeffer, was present at the hearing and represented by Regina M. Walsh Adams, Esq. Lisa Simons, Esq. represented Respondents, City of Loveland and Pinnacol Assurance. The parties' exhibits 1-11 and A,B,D,E,F,G,H,I,J,K,L,M,N.O,S,W,Y, Z were admitted into evidence. All other exhibits submitted on behalf of the Respondents are withdrawn. The Judge held the record open until May 6, 2019, for the parties' position statements.

In this order, D will be referred to as "Claimant," L will be referred to as "Employer" and A will be referred to as "Insurer." Employer and Insurer will be referred to collectively as "Respondents."

Also in this order, "Judge" or "ALJ" refers to the Administrative Law Judge, "C.R.S." refers to Colorado Revised Statutes, "OACRP" refers to the Office of Administrative Courts Rules of Procedure, 1 CCR 104-1, WCRP" refers to Workers' Compensation Rules of Procedure, 7 CCR 1101-3 and "the Act" refers to the Workers' Compensation Act of Colorado, Section 8-40-101, et seq., C.R.S.

ISSUE

The issue for consideration is whether Claimant sustained her burden of proof to establish by a preponderance of the evidence that the chiropractic treatment as ordered by Claimant's Authorized Treating Provider is reasonably necessary and related medical treatment.

FINDINGS OF FACT

1. Claimant worked as a sales tax auditor for the City of Loveland when on July 30, 2018, Claimant was descending stairs when she slipped down the stairs injuring her low back, neck, left wrist, left foot and knee and right foot and ankle.

2. Claimant had previous injuries with Employer where she slipped and fell on ice and injured her left wrist, neck and back on February 1, 2017, had an auto accident on March 27, 2017, injuring her head and neck and slipped on ice on February 5, 2018, injuring her left knee, right hand and low back.

3. Since the accident of July 30, 2018, Claimant's left wrist, left and right lower extremities have gotten better and she is no longer treating for these body parts. Claimant's back and neck were aggravated in the fall and she is still receiving treatment for these body parts.

4. While Claimant's neck and back injuries were aggravated by this accident, with treatment, the symptoms are not quite as severe as they were following the accident of July 30, 2018, due to treatment received to date.

5. Following her accident of July 30, 2018, Claimant went to Banner Occupational Medicine where she was seen by Bryan Copas, PA-C who then referred her to a physiatrist. Currently, Claimant's authorized treating provider is Greg Reichhardt, M.D., a physiatrist who was treating Claimant for her other workers' compensation claims. Claimant was given massage therapy with Mary Yosick, M.T. from October through November, 2018. She also had acupuncture. Neither of these modalities have resolved her back and neck injuries, however, they did help her pain to a certain degree.

6. On October 22, 2018, Dr. Reichhardt recommended chiropractic evaluation and treatment for eight visits for Claimant's neck and low back with no high velocity manipulation. The request for authorization was submitted on November 12, 2018, for the July 30, 2018 claim.

7. On November 16, 2018, Dr. Raschbacher performed an in-house review of some medical records regarding the current claim at Respondent/Insurer's location. He reports having seen records for the claim previously and suggested that Claimant have a fitness for duty evaluation by Employer since she had persistent falls. Dr. Raschbacher did not specifically deny chiropractic treatment at this time but rather recommended that no further care under this claim or any of Claimant's other claims be authorized.

8. Dr. Raschbacher's testimony at hearing indicated that he did not recall what specific medical records were shown to him when he performed an in-house evaluation of Claimant's request for authorization of chiropractic treatment nor did he recall which individual from Insurer was present when he evaluated the claim. He did not recall how many other claims that he evaluated that day and could not recall how long this evaluation took him. Dr. Raschbacher never examined Claimant.

9. Prior to any of the workers' compensation claims with the Employer, Claimant had chiropractic treatment for neck and back issues in 2009 through 2015. The treatment was not constant as Claimant had 9 treatments from August 3, 2009, through October 19, 2009, then 4 treatments from January 28, 2011, through February 16, 2011, and 10 treatments from February 27, 2012, through May 30, 2012. Then on January 13 and 24, 2013, Claimant returned for chiropractic treatment. Finally, she had 5 chiropractic treatments from July 28, 2015, through August 3, 2015.

10. From August 4, 2015, until Claimant's work injuries of 2017, she has not had any chiropractic treatment.

11. Following the accident of February 1, 2017, Claimant was sent to Cavallo Chiropractic for both chiropractic and massage therapy. There were approximately 15 chiropractic treatments during the time period between February 8, 2017, and June 25, 2018. These chiropractic treatments treated Claimant's back and/or neck injuries and/or aggravations through Claimant's three accidents.

12. Claimant testified that chiropractic treatment has helped improve her pain and function in the past. Dr. Raschbacher testified that he thought that the chiropractic treatment did not help improve Claimant's condition.

13. Dr. Raschbacher testified that Claimant had already had an abundance of chiropractic, massage and physical therapy for her injuries with no real improvement. Dr. Raschbacher could not give an exact number or chiropractic treatments that Claimant had since her first injury of February 2, 2017.

14. When asked about Claimant's ongoing need for chiropractic care due to her several re-injuries of her back and neck, Dr. Raschbacher responded that that was possible except that she had never gotten better from the accident back in 2009 and so it was his belief that chiropractic treatment did not help Claimant functionally.

15. There is no evidence that Claimant got better or did not get better from her accident in 2009 and there is only a long gap in treatment for several years for her neck and back injuries from 2015 to 2017.

16. Dr. Reichhardt, in a letter to Laura Harrington at Insurer, opined that the chiropractic treatment for her work related injury is reasonable and necessary and related to the July 30, 2018, injury. He noted that the recommendation is consistent with the Medical Treatment Guidelines. Dr. Reichhardt noted that the goal is to give Claimant

enough symptomatic relief that she can make further progress and advance her independent exercise program and core stabilization program.

CONCLUSIONS OF LAW

General Legal Principles

1. The purpose of the Act is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a workers' compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is evidence that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936).

3. In this case, Claimant is seeking chiropractic treatment for injuries to her back and neck. This is based on the recommendation of her authorized treating provider, Greg Reichhardt, M.D. Claimant has had four separate work accidents since February 1, 2017. She has had chiropractic treatment in the past and it has helped her. Dr. Reichhardt has been Claimant's treating physician since her first injury of 2017. He has examined her and is aware of what treatments are going to work and what treatments will not work for her.

4. Dr. Raschbacher reviewed a portion of Claimant's file but cannot remember exactly what documents he has reviewed. Additionally, he never examined Claimant and has never taken a full history of Claimant's injuries from the past four workers' compensation accidents since February 1, 2017 through the current injury of July 30, 2018.

5. In this matter, the medical opinions of Dr. Reichhardt and Claimant are more persuasive than that of Dr. Raschbacher.

Medical Benefits

6. Claimant bears the burden of establishing entitlement to medical treatment. *See Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997); *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). Once a claimant has established a compensable work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable and necessary medical care to cure and relieve the effects of the work injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990).

7. Claimant has had four work accidents from February 1, 2017 through July 30, 2018. She received treatment as a result of each of the accidents. Unfortunately, each of the accidents represented an aggravation to her low back and/or neck. Thus she has had a series of setbacks.

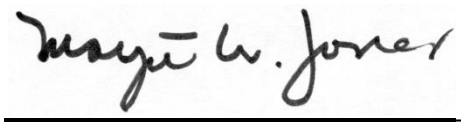
8. Even though Claimant has had chiropractic treatment for the February 1, 2017 injury, she has not had chiropractic treatment for this injury in question. As Dr. Reichhardt has stated, the chiropractic recommendation is consistent with the Medical Treatment Guidelines. Claimant is highly motivated to participate in her medical care and get better.

9. By a preponderance of the evidence, Claimant proved that the recommended chiropractic treatment is reasonable, necessary and related to her occupational injury of July 30, 2018.

ORDER

1. Respondents shall pay for chiropractic treatment as recommended by Dr. Reichhardt.

This 22nd day of May, 2019.



Margot W. Jones

Administrative Law Judge

Office of Administrative Court

1525 Sherman Street, 4th Floor

Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-377-675-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on May 21, 2019, in Denver, Colorado. The hearing was digitally recorded (reference: 5/21/19, Courtroom 2, beginning at 8:30 AM, and ending at 10:00 AM).

Claimant's Exhibit 1, pages 1 to 15 was admitted into evidence, without objection. Respondents' Exhibits A through C were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ took the matter under advisement and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern the Claimant's Petition to Re-open medical benefits for his right and left foot crush injuries of July 4, 1997. Respondents raised the affirmative defense of statute of limitations.

The Claimant has the burden of proof, by a preponderance of the evidence on the alleged change of condition of Claimant's feet and for subsequent medical benefits. Respondents bear the burden on the affirmative defense of statute of limitations.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant sustained work-related forklift crush injuries to both feet on July 4, 1997.

2. Respondents ultimately filed a Final Admission of Liability (FAL), dated September 14, 2010, admitting for reasonably necessary post maximum medical improvement (MMI) [*Grover* medicals] medical maintenance benefits; an average weekly wage of $969.12; an MMI date of July 15, 2010; temporary total disability (TTD) benefits through June 26, 2010; permanent partial disability (PPD) benefits, based on 14% of the left foot (LUE) and 12% of the right foot (RUE); and, bodily disfigurement (Respondents' Exhibit B).

Procedural History

3. The Claimant was initially placed at MMI on May 12, 1998. His claim was reopened in 2006 due to ongoing pain and he underwent fusion surgery on his right big toe. After the surgery, he was placed back at MMI on November 14, 2006.

4. On November 21, 2006, Respondents filed a FAL, admitting for 11% right foot impairment, 2% left foot impairment, disfigurement, and maintenance medical benefits.

5. The case was reopened in 2010 after the condition of Claimant's right foot worsened. The Claimant underwent a hardware removal and fusion revision of the right big toe on February 19, 2010. Respondents filed a General Admission of Liability (GAL), admitting for TTD benefits, beginning February 18, 2010. The Claimant's authorized treating physician (ATP), John Sanidas, M.D., placed the Claimant at MMI as of July 15, 2010, and Respondents filed the FAL referenced in paragraph 2 above.

6. On November 30, 2018, the Claimant filed a Petition to Reopen and an Application for Hearing, seeking benefits for his left foot. This was approximately 21 years after the date of injury.

7. The last indemnity benefit was paid in 2010, at least seven years before the Petition to Reopen was filed.

8. On March 1, 2019, ALJ Kara Cayce granted Respondents' Motion for Partial Summary Judgment concerning indemnity benefits because reopening thereof was barred by the statute of limitations (Respondents' Exhibit B). ALJ Cayce's decision concerning indemnity benefits establishes the law of the case.

Scott G. Resig, M.D., Authorized Surgeon

9. On March 23, 2006, Dr. Resig implicitly was of the opinion that surgical correction was appropriate for both feet.

John Sanidas, M.D., ATP

10. On November 15, 2006, ATP Dr. Sanidas was of the opinion that when Claimant decided to have surgery on his left great toe, the Claimant should be allowed to reopen his case.

Respondents' Independent Medical Examiner (IME), F. Mark Paz, M.D.

11. Dr. Paz performed an IME on January 24, 2019, and issued a report dated February 18, 2019 (Respondents' Exhibit C).

12. Dr. Paz seemingly concedes that "the development of osteoarthritis of the MTP joint of the **left** (emphasis supplied) great toe may have been attributed to **trauma** (emphasis supplied) of the cartilage of the MTP joint of the left great toe." Ultimately, Dr. Paz is of the opinion that any worsening or change of condition in the feet is not attributable to a change or worsening of the original 1997 injuries.

13. Dr. Paz states the ultimate opinion that it is unlikely that the present condition of the Claimant's left toe is causally related to the 1997 injury. In his testimony at the hearing, Dr. Paz stated that it is not probable that the present condition of the Claimant's **left** foot is causally related to the 1997 injury.
‘

14. Dr. Paz defers to Dr. Resig with respect to treatment for the left foot great toe osteosarthritis.

15. Also,, in his report, Dr. Paz opines that if "surgical removal of the hardware in the right great toe is a consideration of Dr. Resig, the treatment would be reasonable, necessary and causally related to the July 4, 1997, incident." Dr. Paz re-affirmed this opinion in his testimony at the hearing.

The Claimant

16. According to the Claimant, Dr. Resig and Dr. Sanidas have caused him to feel that he would be more comfortable with less pain if the hardware were removed from his right foot. Ultimately, the advisability of this would be in the judgment of the Claimant's ATPs.

Ultimate Findings

17. The decision of ALJ Cayce, granting partial summary judgment in favor of the Respondents, which barred indemnity benefits by virtue of the statute of limitations established the law of the case.

18. After more than 10 years since the ATPs dealt with the Claimant's **left** foot, the ALJ finds the opinion of IME Dr. Paz relative thereto credible and persuasive. There are no recent opinions of Dr. Sanidas or Dr. Resig that refute Dr. Paz's opinion in this regard. Concerning the removal of the hardware in the Claimant's right foot, the ALJ finds Dr. Paz's opinion that it is causally related credible and persuasive.

19. The Claimant has failed to prove, by preponderant evidence that there has been a causally related worsening or change of condition of the left foot, however, the Claimant has proven, by a preponderance of the evidence that removal of the hardware in the right foot is causally related to the admitted 1997 injury and it is reasonably necessary to maintain the Claimant at MMI and to prevent deterioration of his condition.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Law of the Case

a. ALJ Cayce granted Respondents' motion for partial summary judgment, determining that reopening of indemnity claims was barred by the relevant statute of limitations. § 8-43-303, C.R.S. ALJ Cayce, therefore, established the "law of the case," and this ALJ is bound by her determination, absent a clear error or changed circumstance, regardless of whether this ALJ disagrees with ALJ Cayce's' determination in this regard. This ALJ, however, does not disagree with her determination. *See Buckley Powder Co. v. State,* 70 P.3d 547 (Colo. App. 2002); *Giampapa v. American Family Mut. Ins. Co.,* 64 P.3d 230 (Colo. 2003); *Arizona v. California,* 460 U.S. 605, 103 S.Ct. 1382, 75 L.Ed.2d 318 (1983).

Credibility

b. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the medical evidence concerning removal of the hardware in the right foot is undisputed. *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As further found, after more than 10 years since the ATPs dealt with the Claimant's **left** foot, the ALJ found the opinion of IME Dr. Paz relative thereto credible and persuasive. There were no recent opinions of Dr. Sanidas or Dr. Resig that refute Dr. Paz's opinion in this regard. Concerning the removal of the hardware in the Claimant's right foot, Dr. Paz's opinion that it is causally related was credible and persuasive.

Reopening

c. Under § 8-43-303(1), C.R.S., after MMI and within six years of the date of injury, an ALJ may re-open a claim based on fraud, an overpayment, **an error, a mistake,** or a change in condition. See *El Paso County Department of Social Services*

v. Donn, 865 P.2d 877 (Colo. App. 1993); *Burke v. Indus. Claim Appeals Office,* 905 P. 2d 1 (Colo. App. 1994); *Hanna v. Print Express, Inc.,* 77 P. 3d 863 (Colo. App. 2003); *Donohoe v. ENT Federal Credit Union,* W.C. No. 4-171-210 [Indus. Claim Appeals Office (ICAO) September 15, 1995]. This is so because MMI is the point in time when no further medical care is reasonably expected to improve the condition. § 8-40-101(11.5), C.R.S. (2009); *City of Colorado Springs v. Indus. Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Where a claimant seeks to re-open based on a worsened condition, she must demonstrate a change in condition that is "causally connected to the original compensable injury." *Chavez v. Indus. Comm'n,* 714 P.2d 1328 (Colo. App. 1985). Endorsement of "petition to reopen" on an application for hearing or response to application for hearing sufficiently raises the issue for consideration. *See Cooper v. Indus. Claim Appeals Office,* 109 P.3d 1056 (Colo. App.2005). There is no restriction as to the number of times a case may be re-opened and when based upon new or different evidence no such limitation may be imposed by the courts, that being a matter for legislative expression. *Graden Coal Co. v. Ytoarralde,* 137 Colo. 527, 328 P.2d 105 (1958)

d. The ALJ notes and finds that the latest FAL admits for post-MMI medical maintenance benefits. Removal of the hardware in the right foot, depending on Dr. resig's determination, could be characterized as a post-MMI medical maintenance benefit. *See* An employee is entitled to continuing medical benefits after MMI if reasonably necessary to relieve the employee from the effects of an industrial injury. *See Grover v. Indus. Comm'n of Colorado*, 759 P.2d 705 (Colo. 1988). The record must contain substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve a claimant from the effects of an injury or to prevent further deterioration of his condition. *Stollmeyer v. Indus. Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995);*Grover v. Indus. Comm'n, supra*. Such evidence may take the form of a prescription or recommendation for a course of medical treatment necessary to relieve a claimant from the effects of the injury or to prevent further deterioration. *Stollmeyer v. Indus. Claim Appeals Office, supra*. **An injured worker is ordinarily entitled to a general award of future medical benefits, subject to an employer's right to contest causal relatedness and reasonable necessity.** *See Hanna v. Print Expediters,* 77 P.3d 863 (Colo. App. 2003). Treatment to **improve** a claimant's condition does **not** fall under the purview of *Grover* benefits. *Shalinbarger v. Colorado Kenworth, Inc.,* W.C. No. 4-364-466 [Indus. Claim Appeals Office (ICAO), March 12, 2001]. As found, Claimant is entitled to admitted maintenance medical care, which is reasonably necessary to address the injury. He has demonstrated that removal of the hardware in the right foot fits post-MMI medical maintenance criteria.

Medical/Causal Relatedness

d. The employee must prove a causal relationship between the injury and the medical treatment for which the worker is seeking benefits. *Snyder v. Indus. Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. Ct. App. 1997). Treatments for a condition

not caused by employment are not compensable. *Owens v. Indus. Claim Appeals Office*, 49 P.3d 1187, 1189 (Colo. Ct. App. 2002). An industrial accident is the proximate cause of a claimant's disability if it is the necessary precondition or trigger of the need for medical treatment. *Subsequent Injury Fund v. State Compensation Insurance Authority,* 768 P.2d 751 (Colo. App. 1988). In order to prove that an industrial injury was the proximate cause of the need for medical treatment, an injured worker must prove a causal nexus between the need for treatment and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). It is for the ALJ, as the fact-finder, to determine whether a need for medical treatment is caused by the industrial injury, or some other intervening injury. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985). Respondents are liable for the "direct and natural consequences" of a work-related injury, including consequential injuries caused by the original compensable injury. *See Travelers Ins. Co. v. Savio*, 806 P.2d 1258 (Colo. 1985). The chain of causation, however, can be broken by the occurrence of an independent intervening injury. *See* 1 A. *Larson, Workers' Compensation Law,* section 13.00 (1997). As found, the Claimant has established the causal nexus of the removal of the right foot hardware to the admitted 1997 injury. He has failed to do so with respect to the left foot, unless an ATP subsequently opines that it is related.

Burden of Proof

e. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to reopening and additional benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). Also, the burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Respondents proved their affirmative defense of statute of limitations with respect to reopening of indemnity claims. Also, Claimant has proven that a reopening is warranted with respect to removal of the hardware in the right foot. The Claimant has failed to prove that the present condition of his left foot is causally related to the 1997 injury.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Claimant's case with respect to removal of the hardware in his right foot is hereby reopened.

B. A reopening of matters with respect to the left foot is hereby denied and dismissed without prejudice.

C. Any and all issues not determined herein are reserved for future decision.

DATED this 28th day of May 2019.

EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm.*

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-065-966-003

ISSUES

I. Whether Claimant established by a preponderance of the evidence that her influenza, which resulted in hospitalization for pneumonia, is compensable.

II. Temporary total disability benefits from December 27, 2019 to January 22, 2019.

STIPULATIONS

The parties reached the following stipulations:

1. Claimant's average weekly wage is $723.58.
2. If the claim is found compensable, Claimant is entitled to $1,791.72 in TTD benefits from December 27, 2017, through January 22, 2018.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a registered nurse, who has worked for Employer for approximately the past 18 years.
2. In December 2017, Claimant worked at BCH Gunbarrel Family Practice. (*Hrg. Tr. pg. 12, lns 2-4*). The clinic treats a variety of medical conditions from wellness visits, diabetes, hypertension, as well as sick patients. (*Hrg. Tr. pg. 12, lns. 10-13*).
3. In 2017, Claimant worked on December 20th, December 21st, and December 22nd. Claimant did not work on December 23rd, December 24th, and December 25th. (*Ex. G, pg. 51*).
4. On December 26, 2017, claimant began to feel ill while at work. Claimant's husband, Dr. David Orgel, prescribed her Tamiflu on Wednesday, December 27, 2017. (*Resp. Ex. B, pg. 6*).
5. On December 31, 2017, Claimant presented to the emergency department. (*Resp. Ex. B. pg. 6*). Claimant tested positive for the flu. (*Resp. Ex. B, pg. 16*). Claimant was diagnosed with pneumonia. (*Resp. Ex. B, pg. 7*). Claimant was hospitalized on December 31, 2017, and discharged on January 2, 2018.
6. Claimant followed up with her primary care physician on January 4, 2018, and reported she was feeling better, but fatigued. (*Resp. Ex. D, pg. 19*). On January

12, 2018, Claimant returned to her primary care physician, reporting that she was no longer ill, but she was fatigued and had a cough. Claimant felt she could not go back to work. (Resp. Ex. D, pg. 23).

7. Claimant testified that as part of her job she escorts patients to the exam room and takes their vital signs and obtains a history. (*Hrg. Tr. pg. 30, lns. 7-19*). Claimant testified that she saw between twelve and fourteen patients a day. (*Hrg. Tr. pg. 17, ln. 1*). Claimant did not sit at her desk much during her shift. (*Hrg. Tr. pg. 29, lns. 21-25; pg. 30, lns. 1-3*).

8. Claimant testified that the urgent care facility is separated from the clinic. (*Hrg. Tr. pg. 29, lns. 5-6*). Claimant testified that the exam rooms are separated by a door from the waiting room. (*Hrg. Tr. pg. 30, lns. 17-20*). Claimant's potential exposure while at work was mostly limited to the patients she cared for and Claimant was not exposed to all patients at the clinic or the urgent care facility attached to the clinic.

9. Claimant testified that the nurse practitioner, a different employee, handled most of the urgent care type of cases and saw sick patients in order to take that workload off the physicians who saw regularly scheduled patients. (*Hrg. Tr. pg. 17, lns. 5-9*). Claimant testified the majority of the flu tests were ordered and performed by the nurse practitioner because she covered the "flu people." (*Hrg. Tr. pg. 18, lns. 10-12*). Claimant was not caring for ill patients as her primary responsibility because the ill patients were seen by the nurse practitioner.

10. Claimant testified that she could not recall interacting with any patients who showed signs or symptoms of the flu. (*Hrg. Tr. pg. 20, lns. 1-4*). Specifically, Claimant testified that she could not recall any contact with a patient that coughed or sneezed on her on either December 21, 2017, or December 22, 2017. (*Hrg. Tr. pg. 40, lns. 24-25; pg. 41, lns. 1-4*). Rather, Claimant could only state that she was merely in the proximity of people who showed influenza-like symptoms. (*Hrg. Tr. pg. 20, lns. 10-13*).

11. Claimant testified that during the three days she was off from work, December 23rd, 24th, and 25th, she did not go anywhere. (*Hrg. Tr. pg. 32, lns 10-11*). However, Claimant testified that she had family in town visiting. (*Hrg. Tr. pg. 32, lns. 21-25*). On December 25, 2017, Claimant had additional family over, including a two-year-old child. (*Hrg. Tr. pg. 33, ln. 14-23; pg. 34, ln. 1*). Claimant also admitted to having friends, a family of four, attend Christmas dinner. (*Hrg. Tr. pg. 34, lns 5-7*).

12. Claimant testified that when she began to feel ill and reported this to Employer, she did not report that she had a work-related injury. (*Hrg. Tr. pg. 36, lns. 8-15*).

13. Dr. Orgel testified that he completed the Workers' Claim for Compensation on behalf of his wife. (*Hrg. Tr. pg. 58, lns. 21-24*). It was not until Claimant was hospitalized and incurred hospital costs that Claimant's husband, a workers' compensation physician, helped Claimant file a claim.

14. Dr. Orgel provided an expert report on behalf of his wife on March 2, 2018. Dr. Orgel opined that transmission of the flu virus can occur through droplets, which

can remain suspended in the air and disseminated by air currents to susceptible hosts. Dr. Orgel also noted that influenza can survive on a variety of surfaces for 48 hours and can be "vectors of transmission." (*Clmt Ex. 4, pg. 43*). Dr. Orgel opined that the incubation period for influenza was one to four days. Dr. Orgel concluded, based on his wife's representations, that there was widespread influenza in her clinic with 14 confirmed cases of flu and many more patients presenting with influenza-like illnesses. Dr. Orgel attributed the cause of the spread of the influenza in his wife's office was the failure of the clinic's preventative measures. (*Clmt Ex. 4, pg. 44*).

15. Dr. Orgel also stated in the "Discussion" section of his March 2, 2018, report that:

> In the case of [Claimant] there was widespread influenza, with 14 confirmed cases [between December 19th and December 27th] and many more patients presenting with influenza-like-illness, with two of her coworkers coming down with influenza at the time of her illness. This included a coworker who on December 24 was diagnosed with influenza, and the physician that she worked with who was also diagnosed with influenza on December 27. (*Clmt Ex. 4, pg. 41 and 43*).

16. However, Respondents submitted a log of the flu tests that were ordered at the Gunbarrel Clinic from November 27th through December 29th. Contrary to Dr. Orgel's contention that there were 14 confirmed cases of the flu, the log only documents 1 positive flu test between December 19th and December 22nd, which is the last day Claimant worked before getting sick with the flu on the 26th. Moreover, the positive flu test was ordered on December 19, 2017, which predates the incubation period for such patient to have possibly transmitted the flu virus to Claimant.

17. Dr. Orgel also stated in his March 2, 2018, report that Claimant:

> [D]escribes exposures in the work environment that include coughing directly on her as well as ill patients and coworkers around her in the days before her illness.

18. Claimant, however, testified that she could not recall any contact with a patient that coughed or sneezed on her on either December 21, 2017, or December 22, 2017. (*Hrg. Tr. pg. 40, lns. 24-25; pg. 41, lns. 1-4*).

19. Dr. Orgel also stated in his report that transmission of the flu virus can be transmitted by droplets, which can remain suspended in the air and disseminated by air currents to susceptible hosts. He goes on to opine that this type of transmission:

> [I]s not always prevented by special air handling units, particularly in an outpatient setting where this sort of ventilation engineering control is typically not present. (*Id at pg. 43*).

20. Therefore, Dr. Orgel appears to be stating that the ventilation system at the clinic also acted as a conduit by which Claimant could have been inoculated with the flu virus while at work. However, there is no indication in his report that he has any personal knowledge as to the air handlers and/or filters in use at the clinic. There is also no indication that he has sufficient expertise in the transmission of influenza virus through ventilation systems. Therefore, such statement appears to be purely speculative.

21. Dr. Orgel also issued a supplemental report on August 21, 2018. In his report, he states that other than her family, Claimant had "minimal outside contacts." (Ex. 4., pg. 46.) This statement is contrary to Claimant's testimony that after she left work on December 22, 2017, she was only exposed to family members.

22. Dr. Orgel also stated in his report that with the incubation period being 1-4 days, Claimant was only exposed to other family members who did not come down with influenza in the 2 weeks before or 10 days after her illness.

23. Claimant also testified that after she left work on December 22, 2017, she did not have contact with anyone, except for family members, and none of them came down with the flu, and therefore, they could not have inoculated her with the virus. Such testimony, however, is not found to be credible or reliable for a number of reasons. First, as credibly and persuasively testified to by Dr. Roth, a person can be a carrier of the flu virus, be shedding the virus, and not be sick. Second, Claimant testified that she had company over Christmas Eve, for desert, and then had additional family members come over on Christmas. This included one of their sons, a two-year-old child, and another family of four. Despite having company over on Christmas Eve and Christmas, Claimant also testified that she did not go anywhere else, [not even the grocery store] after leaving work on December 22, 2017, until she returned to work on December 26, 2017.

24. Dr. Orgel also stated in his report and testimony that Claimant's asthma was an added risk factor for getting sick from the influenza virus. (Hrg. Tr. pg. 49.) However, a review of the medical records, and Claimant's testimony, indicates Claimant's asthma diagnosis was recent and that it did not seem to be that firm of a diagnosis since it was not being actively treated on a regular basis.

25. Dr. Orgel also cited numerous studies in his report, which he contends establishes healthcare workers have a higher incidence of getting the flu. However, based on his overall testimony, which the ALJ does not find persuasive, the ALJ does not credit the studies as being persuasive as applied to the facts of this case. For example, in this case, Claimant's employer required employees and patients to wear personal protection equipment (PPE) such as masks. And, although not all patients abided by the PPE rules, Claimant testified that she did. Therefore, it is not clear how Claimant's abidance to the PPE rules decreased the likelihood of her getting the flu if the health care workers in the studies did not use PPE, etc., such as Claimant.

26. Dr. Orgel testified that Dr. McCarty tested two patients, who Dr. McCarty suspected of having the flu. Based on these tests, Dr. Orgel testified Claimant was exposed to influenza-like illness. (*Hrg. Tr. pg. 54, lns. 9-15*). Dr. Orgel then

testified that Claimant could not have been exposed anywhere other than work. (*Hrg. Tr. pg. 55, lns. 6-9*).

27. Dr. Orgel testified that he performed a records review on his wife's claim and he did not charge for this opinion because they have joint finances. (*Hrg. Tr. pg. 57, ln. 11-14*). Dr. Orgel testified he would receive a financial benefit, if the claim were found compensable. (*Hrg. Tr. pg. 57, lns. 22-25; pg. 58, lns 1*). Thus, Dr. Orgel has a direct financial interest in the outcome of this litigation.

28. Dr. Orgel also stated in his report that another co-worker, as well as Dr. McCarty also came down with the flu. However, the testimony of Mr. Rippy, the Director of Ambulatory Services, did not support Dr. Orgel's contention.

29. Dr. Orgel testified that the flu was an epidemic that year, it is a ubiquitous condition each year it comes out, and that everyone can get the flu. (*Hrg. Tr. pg. 63, lns. 10-19*).

30. The December 2017 flu tests from the Gunbarrel clinic demonstrate Dr. McCarty, the physician with whom Claimant worked, only performed two flu tests on December 22, 2017. Both tests were negative. (*Resp. Ex. F, pg. 50*).

31. The flu tests from December 2017 also demonstrate that there were no positive flu tests during the incubation period during which Claimant could have been exposed. (*Resp. Ex. F, pg. 50*).

32. Dr. Henry Roth, a Level II accredited physician, issued a report and opined that it was impossible to specifically determine where and under what circumstances Claimant contracted influenza. (*Resp. Ex. A, pg. 4*). Dr. Roth noted that the Gunbarrel clinic flu tests showed Claimant's physician, Dr. McCarty, did not have any positive flu tests during December 21, 2017 and December 24, 2017.

33. Dr. Henry Roth testified that an individual contracts the flu through exposure to droplets or aerosolization. Dr. Roth testified that a person who is within six feet of an infected person could become inoculated with the flu virus. (*Hrg. Tr. pg. 79, lns. 7-11*). Dr. Roth testified that just because a person receives an inoculation does not mean that they will get sick. (*Hrg. Tr. pg. 79, lns. 12*). Dr. Roth further testified that if a person has influenza and shedding (which is only for a limited time) and a person is exposed and touches her eye, nose, or mouth, that person could contract the flu. (*Hrg. Tr. pg. 79, lns. 13-18*).

34. Dr. Roth testified that the only day in which Claimant could have contracted the flu while at work would have been December 22, 2017, and there was no documentation (i.e. flu tests) which showed that she engaged with someone who had the flu and could have made her sick. (*Hrg. Tr. pg. 80, lns. 2-7*).

35. Dr. Roth credibly testified that while Claimant and Dr. Orgel testified that Claimant had no other exposure to someone who had the flu, that assumption was not accurate. Dr. Roth persuasively testified that merely because a person was not showing signs of illness does not mean that person did not have the influenza infection and could have been shedding. (*Hrg. Tr. pg. 80, lns. 10-16*). Dr. Roth noted in his report that children shed virus for longer periods of time. (*Resp. Ex. A, pg. 4*). Therefore, a person can have the influenza infection and be

shedding, but not get sick. Therefore, someone does not have to be showing signs of having the flu, and be sick, to transmit the virus.

36. Dr. Roth credibly testified Claimant could not provide any exposure point with regards to a person or time or place. Dr. Roth testified that in this case it was merely the assumption that because Claimant was a healthcare worker and she became ill, it must have been work-related. (*Hrg. Tr. pg. 83, lns. 19-25*).

37. The ALJ finds Dr. Roth's opinions as set forth in his report and testimony to be credible and persuasive.

38. The Judge finds that the incubation period for influenza is one to four days, so Claimant's exposure period for influenza was December 22, 2017 through December 25, 2017. Claimant did not work from December 23, 2017 through December 25, 2017.

39. The Judge finds that the Gunbarrel clinic flu tests do not show any positive flu tests for December 22, 2017, and Claimant has not provided credible and persuasive evidence that she was exposed to an influenza positive individual on December 22, 2017, while at work.

40. The Judge finds the testimony of Dr. Roth to be credible and persuasive. The Judge finds that based on Dr. Roth's persuasive testimony, Claimant could have been exposed to influenza from her family and/or friends that were with her on December 23, 2017 through December 25, 2017, despite the fact that they did not show any symptoms of illness and did not become ill later.

41. The Judge finds that influenza is a ubiquitous condition and it is not possible to identify the cause of Claimant's exposure and development of the flu.

42. The Judge also finds that Claimant could have been exposed to influenza by other members of the public. As found above, the ALJ does not find it credible that Claimant was not around anyone else, other than family members, after she left work on December 22, 2017, and until December 26, 2017. And, even if she was not around anyone else, such factor does not require a finding that that it is more likely than not, that Claimant got the flu due to a work related exposure.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Legal Principles

The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Assessing the weight, credibility and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Moreover, the weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of an expert witness. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

I. Whether Claimant established by a preponderance of the evidence that her influenza, which resulted in hospitalization for pneumonia, was caused by an occupational exposure.

Claimant was required to prove by a preponderance of the evidence that at the time of the injury she was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. The question of whether Claimant met her burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

As found, the Judge concludes that the incubation period for influenza is one to four days, which would put Claimant's potential exposure period between December 22, 2017, and December 25, 2017. Claimant did not work December 23, 2017, through December 25, 2017. The Judge concludes the only potential work exposure Claimant could have had was on December 22, 2017.

The log of the Gunbarrel clinic flu tests showed Dr. McCarty only performed two flu tests on December 22, 2017, and neither were positive for the flu. No other physician had a positive flu test on December 22, 2017. Moreover, Claimant could not identify any specific exposure to an influenza-infected individual. The Judge concludes that the Gunbarrel clinic flu tests are persuasive evidence in establishing that Claimant was not exposed at work on December 22, 2017. Moreover, Claimant argues that being a healthcare worker at this clinic increased her risk of developing the flu when compared to the general public, and that factor is strong evidence that she acquired the flu at work. However, the ALJ is not persuaded by such contention. According to Claimant's testimony, she worked for this clinic for approximately 16 years and this was the first time she got sick with the flu – despite her contention of the increased exposure to people with the flu when compared with the general public. Therefore, the fact that this is the first time she got sick with the flu undercuts her argument.

The ALJ has also considered the testimony of Dr. Orgel that the flu variant during 2017 and 2018 combined with the less effective flu vaccine increased the likelihood of getting sick from the flu. However, again, the ALJ does find this factor to make it more likely than not that Claimant's flu was contracted at work. As found, the testimony of Dr. Orgel was not found to be persuasive for a number of reasons. First, Dr. Orgel has a financial interest in the outcome of the litigation since he is the husband of Claimant and they combine their finances. Second, being the husband of Claimant, he may have either an intentional or an unintentional bias in favor of Claimant to emphasize the facts that support his theory compared to those that do not. Third, Dr. Orgel overstated the number of positive flu test results in the relevant incubation period. Dr. Orgel indicated in his report that there were 14 positive flu tests, which he implied were within the incubation period. However, based on the findings above, there were no positive flu tests within the incubation period. In addition, there were not 14 positive tests within the period identified by Dr. Orgel based upon the records submitted by Employer. Fourth, Dr. Orgel stated that because none of the people that were invited over to their house for Christmas either had the flu or came down with the flu, they could not have transmitted the virus to Claimant. However, based on the credible testimony of Dr. Roth, such people can still be transmitters of the virus. Fifth, Claimant testified that she abided by Employer's PPE requirements and wore a mask when required to do so. Therefore, the ALJ did not find Dr. Orgel's opinions to be credible or persuasive.

Dr. Roth persuasively maintained that just because an individual is not obviously ill or becomes ill, does not mean that an individual does not have the influenza infection and shedding the virus and infecting other people. Therefore, Claimant could have been exposed to influenza by her friends and family during December 23, 2017 and December 25, 2017, despite the fact that none of these individuals were showing signs of illness or became ill after the fact.

In addition, the ALJ does not credit Claimant's testimony that after she left work on December 22, 2017, she did not come into contact with anyone [who could have inoculated her with the flu virus] other than family members that came over to her house on Christmas Eve and Christmas. Again, the likelihood that Claimant, while preparing for Christmas, and to have company at their house, left work on December 22, 2017,

went straight home, and never left the house, and did not go somewhere where she could have been exposed to the flu virus is not found to be credible.

The ALJ is not requiring Claimant to establish the exact patient who inoculated her with the flu virus – or requiring an unattainable standard - to establish a compensable claim. There are a number of cases in Colorado where the development of a communicable disease by a healthcare worker has been found to be compensable even though the Claimant could not identify which patient transmitted the virus. For example, in *Industrial Commission v. Corwin Hospital*, 250 P.2d 135 (Colo. 1952), the Colorado Supreme Court held that where a nurse, who had been working exclusively in the hospital's polio ward and in close contact with polio patients under conditions which caused her to be overtired, contracted polio herself after two months on the job. The Court held that the disease and resulting disability was 'accidentally sustained' and compensable. Moreover, in another case, the Colorado Supreme Court held that where a nurse's job duties caused her to be in close physical contact with patients who were infected with beta streptococcus, her resulting infection with beta streptococcus, and development of generalized rheumatic fever, was compensable. See *City and County of Denver v. Pollard*, 417 P.2d 231 (Colo. 1966).

In this case, however, the ALJ is not persuaded that the evidence presented by Claimant established, by a preponderance, that her flu is compensable. Therefore, the ALJ concludes Claimant has failed to establish by a preponderance of the evidence that her influenza exposure and development of the flu was caused by her employment.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S.

For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 29, 2019.

ISSUES

- Whether the claimant has demonstrated by a preponderance of the evidence that certain recommended medical treatment is reasonable, necessary, and related to the admitted September 21, 2017 work injury. The specific medical treatments at issue are as follows:

1) Treatment of the claimant's cervical spine, including a cervical spine x-ray;

2) Audiology treatment;

3) Additional acupuncture treatment;

4) Listening and Communication Enhancement (LACE) Therapy;

5) Broadband Noise Therapy;

6) Eyeglasses with anti-reflecting lens coating and high index material;

7) Referral to Dr. Mistry;

8) Referral to a new psychological counselor; and

9) The medications mirtazapine and propranolol.

FINDINGS OF FACT

1. The claimant is employed with the employer's preschool, Landmark Christian Preschool. She has worked there since May 2017 as a lead teacher. On September 21, 2017, the claimant suffered an injury while at work. The claimant was outdoors with her students and was attempting to obtain a toy from a large toy box. While she had the toy box open, a gust of wind caused the lid to slam closed, striking the claimant on the top of her head. The claimant testified that the toy box lid, although plastic, had a protruding round piece that was not flush with the inside of the lid. This rounded piece struck the claimant on the head. The claimant testified that this caused a two inch "gash" on the top of her head. The claimant also testified that although she did not bleed, she immediately felt dizzy and sick to her stomach, with tenderness in the area that was struck by the lid.

2. On the date of the injury, the claimant sought medical treatment at Colorado Mesa University & Community Care of the Grand Valley. The claimant was seen at that facility by Dr. Bjorn Inon. The claimant reported that she had blurred vision, headache, nausea, dizziness, and photophobia. Dr. Inon diagnosed a concussion and

recommended mental and physical rest. In addition, Dr. Inon recommended Tylenol for headache.

3. On October 7, 2017, the claimant returned to Colorado Mesa University & Community Care of the Grand Valley and was seen by Kim Hoyt, PA-C. At that time, the claimant reported her symptoms as headache, neck pain, phonophobia, photophobia, anxiety, easily irritated, inability to concentrate, memory loss, and nervousness. Ms. Hoyt referred the claimant to neuropsychologist Dr. Christopher Young for evaluation.

4. On November 13, 2017, the claimant was seen by Dr. Young. At that time, Dr. Young noted that the claimant sustained a closed head injury on September 21, 2017. Dr. Young recorded the claimant's symptoms as: balance and coordination issues, visual problems, headache, sleep disturbance, photosensitivity, and phonosensitivity. Dr. Young recommended vestibular evaluation with a physical therapist and biofeedback therapy.

5. Subsequently, the claimant reported her injury to the employer. At that time, the employer provided the claimant with a list of designated medical providers. The claimant selected St. Mary's Occupational Health as her authorized treating provider (ATP).

6. On November 29, 2017, the claimant was first seen at St. Mary's Occupational Medicine by James Harkreader, NP. At that time, the claimant reported short term memory loss, photophobia, phonophobia, and daily headaches. Mr. Harkreader diagnosed post-concussion syndrome and ordered a magnetic resonance image (MRI) of the claimant's brain. Mr. Harkreader also made a referral to Dr. Young under the claimant's workers' compensation claim.

7. On December 17, 2017, the brain MRI was performed and showed no acute intercranial pathology.

8. On January 4, 2018, the claimant was seen by Kari Mullaney MS, PT for vestibular therapy. At that time, the claimant reported "feeling much better". The claimant also reported that she had a history of noise sensitivity and was "not looking for complete resolution" of her symptoms.

9. On January 14, 2018, Dr. Young noted "moderate worsening" of the claimant's symptoms. However, on January 30, 2018, the claimant returned to Mr. Harkreader and reported that she was improving and that physical therapy was helping. The claimant made similar statements of improved symptoms to Dr. Young on February 9, 2018. At that time, Dr. Young recommended the claimant seen Dennis Phelps, LPC for psychological counseling.

10. On February 12, 2018, the claimant returned to Ms. Mullaney and continued to report improvement, with her primary concern being her sensitivity to noise. Ms. Mullaney recommended the claimant see Dr. Bebee, an audiologist, to address this issue.

11. At an appointment with Mr. Harkreader on February 13, 2018, the claimant reported that Ms. Mullaney had recommended Dr. Bebee and Listening and Communication Enhancement (LACE) therapy. Mr. Harkreader agreed with Dr. Young's recommendation for psychological counseling and Ms. Mullaney's recommendation that the claimant see an audiologist.

12. The claimant testified that LACE therapy was a treatment option that had been researched by the claimant's mother. The claimant also testified that her mother researched the claimant's symptoms on the internet and discovered the diagnosis hyperacusis. From there, the claimant's mother researched treatment for hyperacusis, including LACE therapy. The claimant then presented information regarding hyperacusis and potential treatment to her medical providers.

13. On February 28, 2018, the respondents' physician advisor, Dr. Brain Mathwich, reviewed the request for audiology testing. Dr. Mathwich opined that any audiology treatment should be denied pending neuropsychological evaluation and testing. In support of this opinion, Dr. Mathwich noted that the claimant's medical records indicated continued improvement of her symptoms.

14. On March 2, 2018, the claimant returned to St. Mary's Occupational Health and was seen by Dr. James McLaughlin. At that time, Dr. McLaughlin conducted an audiometry. Dr. McLaughlin noted that the claimant's testing was normal and indicated that the claimant had "exceptional hearing". Dr. McLaughlin referred the claimant back to Dr. Young for the recommended neuropsychological evaluation and testing.

15. The claimant returned to vestibular therapy on March 6, 2018, and reported to Ms. Mullaney that a hearing test had been performed and she had "excellent hearing". Also on that date, the claimant told Ms. Mullaney about a diagnosis called vestibular hyperacusis that was found online by the claimant's spouse.

16. On March 14, 2018, Dr. Mathwich completed a physician advisor report regarding the recommendation that the claimant undergo a neurological evaluation. Dr. Mathwich agreed that the claimant should see a neurologist to determine the cause of the claimant's headaches.

17. The claimant returned to Mr. Harkreader on March 19, 2018. On that date, the claimant presented Mr. Harkreader with paperwork regarding vestibular hyperacusis. Mr. Harkreader indicated that the claimant may need to be seen by an ear, nose, and throat (ENT) specialist.

18. On March 29, 2018, the claimant was seen by neurologist, Dr. Joel Dean. Dr. Dean noted that because he could find no other cause for the claimant's headaches, he opined that the claimant's headaches are caused by her work injury. In addition, Dr. Dean recommended that that the claimant see an audiologist and continue with her vestibular therapy and psychotherapy.

19. On April 3, 2018, the claimant was seen by Mr. Harkreader. At that time, the claimant requested a referral to a different psychologist because "her belief system is a little bit different" from the psychologist. On that date, Mr. Harkreader referred the claimant to acupuncture, to a different psychologist (Dr. Melissa Carris), and to an ENT for an evaluation for hyperacusis. In addition, Mr. Harkreader ordered an x-ray of the claimant's cervical spine.

20. The claimant testified that she wants to see a new psychologist for two reasons. The first is that she and her counselor have different religious beliefs. The claimant testified that the second reason is that the homework given to her by her counselor, Mr. Phelps, made her symptoms worse.

21. On April 3, 2018, an x-ray of the claimant's cervical spine was read as normal with no fracture or alignment abnormality.

22. On April 11, 2018, Dr. Mathwich issued a report related to the recommended cervical spine x-ray and audiology referral. Dr. Mathwich opined that the claimant's phonophobia was not causally related to her headaches. Dr. Mathwich reiterated that neuropsychological testing should be completed before consideration of any further treatment. In addition, Dr. Mathwich opined that the cervical spine x-ray was not necessary. Based upon Dr. Mathwich's opinions, the respondents denied authorization for audiology and for the cervical spine x-ray.

23. On May 30, 2018, the claimant was seen by Dr. Michael Trowbridge, an ENT. On that date, Dr. Trowbridge performed an audiogram and noted that the results were normal. With regard to the claimant's symptoms Dr. Trowbridge opined that it could be a "central phenomena" based on the claimant's head injury as he found "no explanation based on ear findings." The claimant asked Dr. Trowbridge about LACE therapy, which he described in the medical record as "computer or internet programs to desensitize the ears". At that time, Dr. Trowbridge noted that an audiologist in his practice did not find these programs to be "medically based or proven to be effective." Despite these notations, on June 26, 2018, Dr. Trowbridge referred the claimant to LACE therapy for treatment of hyperacusis.

24. On June 4, 2018, the claimant was seen at St. Mary's Occupational Health by Dr. Craig Stagg. In the medical record of that date, Dr. Stagg lists the claimant's diagnoses as post concussive symptomology and hyperacusis.

25. On July 1, 2018, the claimant returned to Dr. Young who noted that the claimant was less symptomatic and experiencing progressive healing. At that time, Dr. Young opined that the claimant's symptoms were consistent with an injury to the frontal/parietal junction. Dr. Young indicated that LACE therapy would be "the best treatment" at that time, but he also discussed the possibility of the claimant undergoing speech therapy. On July 9, 2018, Dr. Stagg requested authorization for LACE therapy at Mile High Hearing.

26. Dr. Mathwich also reviewed the request for LACE therapy. On July 12, 2018, Dr. Mathwich recommended denial of LACE therapy. In support of his opinion, Dr. Mathwich noted that the claimant had a normal audiogram and there was no explanation regarding the diagnosis of hyperacusis. In addition, Dr. Mathwich noted that the Colorado Medical Treatment Guidelines (MTG) do not include LACE therapy as a treatment for hyperacusis.

27. On August 7, 2018, the claimant was seen by Dr. Stagg and reported visual disturbances when an object moves quickly toward her face. At that time, Dr. Stagg referred the claimant to an optometrist, Dr. Diane Reddin. Dr. Stagg listed the reason for the referral as treatment of the claimant's vertigo, dizziness, and visual disturbances.

28. On September 17, 2018, the claimant returned to Dr. Stagg and reported that the acupuncture treatment she received reduced the frequency of her headaches. Based upon this information, Dr. Stagg referred the claimant for four additional acupuncture treatments.

29. At the request of the respondents, on September 25, 2018, Dr. David Orgel reviewed the request for additional acupuncture. In his physician advisor report, Dr. Orgel recommended denial of additional acupuncture treatment. In support of his opinion, Dr. Orgel noted that the number of acupuncture treatments the claimant had received exceeded the MTG. In addition, Dr. Orgel noted that the acupuncture treatment the claimant had received did not improve her symptoms.

30. On October 9, 2018, Dr. Young authored a letter in which he recommended the claimant undergo Broadband Noise Therapy. Dr. Young identified this as the most common treatment for hyperacusis. In that same letter Dr. Young indicated his opinion that the claimant's work injury and related concussion are the cause of her audiological symptoms.

31. On October 19, 2018, the claimant was seen by Dr. Reddin. At that time, Dr. Reddin diagnosed post trauma vision syndrome which, the doctor opined, contributed to the claimant's dizziness, headaches, photosensitivity. Dr. Reddin recommended a number of changes to the claimant's eyeglasses to address these issues. Specifically, Dr. Reddin recommended prescription glasses with a therapeutic prism and gradient tint. On October 23, 2018, a letter from Dr. Reddin's practice clarified that the claimant's glasses would also need to be made from a high index material with an anti-reflecting coating. This same letter explained these additions were necessary because of the amount of prism in the prescription.

32. On November 9, 2018, Dr. Stagg made a note that the hyperacusis specialist, Dr. Phillips, recommended that the claimant see Dr. Mistry, a sports medicine specialist. On that date, Dr. Stagg referred the claimant to Dr. Mistry. The claimant testified that it was her understanding that the practice that would administer the LACE testing required an evaluation by a sports medicine physician prior to commencing LACE treatment.

33. On November 12, 2018, Dr. Mathwich reviewed the requests for 1) the claimant's glasses; 2) treatment for hyperacusis; and 3) the referral to a sports medicine physician. Dr. Mathwich recommended denial of all three requested treatments. In support of his opinion, Dr. Mathwich noted no correlation between the claimant's current symptoms and the minor closed head injury she suffered more than one year prior. Dr. Mathwich suggested that the claimant be placed at maximum medical improvement (MMI). Based upon Dr. Mathwich's report, the respondents denied the requests for new glasses, LACE treatment, and the referral to Dr. Mistry.

34. On November 27, 2018, the claimant attended an independent medical examination (IME) with Dr. John Raschbacher. In connection, with the IME, Dr. Raschbacher reviewed the claimant's medical records, obtained a history from the claimant, and completed a physical exam. In his IME report, Dr. Raschbacher noted that the claimant's symptoms of photophobia and phonophobia were not reported at her initial treatment. As a result, Dr. Raschbacher opined that those symptoms are not related to the concussion she suffered on September 21, 2017. In addition, Dr. Raschbacher indicated that the claimant's continued symptomology and delayed recovery, over a year after the injury, are inconsistent with a minor traumatic brain injury (MTBI). Dr. Raschbacher also opined that the claimant's neck pain is not related to the September 21, 2017 injury. Dr. Raschbacher stated in his report that the claimant reached MMI as of December 21, 2017. Dr. Raschbacher reached this MMI date as determined by the MTG for MTBI or concussion. Dr. Raschbacher did not recommend any further treatment related to the September 21, 2017 incident. Dr. Raschbacher's testimony at hearing was consistent with his written report.

35. On January 24, 2019, Dr. Stagg referred the claimant to Dr. Adam Hunninghake. Dr. Stagg noted in that record that the referral was for "a physical medicine rehabilitation specialist who is well versed in treatment and diagnosis of head injuries".

36. Although the respondent's physician advisor, Dr. Albert Hattem, recommended denial of the referral to Dr. Hunninghake, the claimant was seen by Dr. Hunninghake on April 10, 2019. On that date, Dr. Hunninghake diagnosed "other complicated headache syndrome, paresis of accommodation, unspecified laterality, cognitive change, and primary insomnia". Dr. Hunninghake opined that the claimant may be part of the five to ten percent of individuals who take longer to recover from MTBI than is typical. In addition, Dr. Hunninghake prescribed the medication propranolol for "prophylactic headache treatment" and the medication mirtazapine to treat the claimant's insomnia.

37. On April 16, 2019, Dr. Orgel reviewed the request for mirtazapine and propranolol. Dr. Orgel recommended denial of the medications given the minor nature of the claimant's mechanism of injury. Dr. Orgel agreed with Dr. Raschbacher that the claimant had reached MMI. Based upon Dr. Orgel's report, the respondents denied authorization for mirtazapine and propranolol.

38. The claimant testified that her current symptoms include difficulty sleeping, daily headaches, difficulty driving both during the daytime and at night, nausea with loud noises, nausea when things are close to her face, memory issues, concentration issues, and difficulty with writing and typing. With regard to writing and typing, the claimant explained that she will write the incorrect word. For example, she may type the word "wood" when she means "would". In addition, the claimant has difficulty with music, specifically singing while also playing the piano.

39. The ALJ credits the medical records and finds that the claimant suffered an MTBI as a result of the September 21, 2017 work injury. The ALJ credits the medical records and the opinions of Drs. Raschbacher, Mathwich, and Orgel over the contrary opinions of the claimant's medical providers with regard to a number of the requested medical treatments. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that the requested treatment of the claimant's cervical spine: a cervical spine x-ray; audiology treatment; additional acupuncture treatment; LACE Therapy; Broadband Noise Therapy; eyeglasses with anti-reflecting lens coating and high index material; and the referral to Dr. Mistry; are reasonable and necessary to cure and relieve the claimant from the effects of the work injury.

40. With regard to each individual requested medical treatment, the ALJ finds as follows. Treatment of the claimant's cervical spine is unrelated to the claimant's work injury, including the cervical spine x-ray. The claimant's hearing has been deemed "excellent" and all auditory testing has been found to be normal. Therefore, audiology treatment, LACE Therapy (including the prerequisite referral to Dr. Mistry), and Broadband Noise Therapy are unrelated to the treatment of the claimant's work related injury, and are also not reasonable or necessary. Additional acupuncture treatment is not reasonable or necessary given that the claimant has received acupuncture in excess of the MTG. The request for specific eyeglasses is also unrelated to the claimant's work injury, in that the ALJ is not persuaded that the claimant's vision complaints are related to the work injury.

41. The ALJ credits the medical records, the claimant's testimony, and the recommendations for Dr. Hunninghake and finds that the claimant has demonstrated that it is more likely than not at the referral to a new psychological counselor and the medications mirtazapine and propranolol are reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury.

42. The ALJ finds that the request for a different psychological counselor is due to the claimant's preference for a counselor with religious beliefs similar to her own. While the ALJ finds that to be a matter of personal preference, the ALJ recognizes that the effectiveness of counseling would be negatively impacted if the claimant continues to treat with a counselor with whom she is not compatible. Therefore, the ALJ finds that a referral to a different psychological counselor is reasonable and necessary to cure and relive the claimant from the effects of the work injury.

43. As for the recommended medications mirtazapine and propranolol, these medications are intended to treat symptoms (insomnia and headaches, respectively)

that the ALJ finds are related to the claimant's work injury. Therefore, these medications are reasonable and necessary to cure and relive the claimant from the effects of the work injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. The Colorado Workers' Compensation Medical Treatment Guidelines (MTG) are regarded as accepted professional standards for care under the Workers' Compensation Act. *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). The statement of purpose of the MTG is as follows: "In an effort to comply with its legislative charge to assure appropriate medical care at a reasonable cost, the director of the Division has promulgated these 'Medical Treatment Guidelines.' This rule provides a system of evaluation and treatment guidelines for high cost or high frequency categories of occupational injury or disease to assure appropriate medical care at a reasonable cost." WCRP 17-1(A). In addition, WCRP 17-5(C) provides that the MTG "set forth care that is generally considered reasonable for most injured workers.

However, the Division recognizes that reasonable medical practice may include deviations from these guidelines, as individual cases dictate."

6. While it is appropriate for an ALJ to consider the MTG while weighing evidence, the MTG are not definitive. *See Jones v. T.T.C. Illinois*, Inc., W.C. No. 4-503-150 (May 5, 2006); ***aff'd Jones v. Industrial Claim Appeals Office*** No. 06CA1053 (Colo. App. March 1, 2007) (not selected for publication) (it is appropriate for the ALJ to consider the MTG on questions such as diagnosis, but the MTG are not definitive); *see also Burchard v. Preferred Machining*, W.C. No. 4-652-824 (July 23, 2008) (declining to require application of the MTG for carpal tunnel syndrome in determining issue of PTD); *see also Stamey v. C2 Utility Contractors et al*, W.C. No. 4-503-974 (August 21, 2008) (even if specific indications for a cervical surgery under the MTG were not shown to be present, ICAO was not persuaded that such a determination would be definitive).

7. As found, the claimant has failed to demonstrate by a preponderance of the evidence that the requested medical treatment of the claimant's cervical spine, a cervical spine x-ray; audiology treatment; additional acupuncture treatment; LACE Therapy; Broadband Noise Therapy; eyeglasses with anti-reflecting lens coating and high index material; and the referral to Dr. Mistry; constitute reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury. As found, the medical records and the opinions of Drs. Raschbacher, Mathwich, and Orgel are credible and persuasive with regard to these medical treatments.

8. As found, the claimant has demonstrated by a preponderance of the evidence that the referral to a new psychological counselor and the medications mirtazapine and propranolol constitute reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury. As found, the medical records, the claimant's testimony, and the recommendations for Dr. Hunninghake are credible and persuasive with regard to these medical treatments.

ORDER

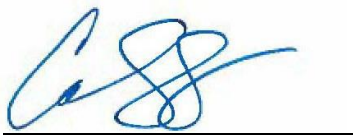
It is therefore ordered:

1. The claimant's requests for treatment of the claimant's cervical spine, a cervical spine x-ray; audiology treatment; additional acupuncture treatment; LACE Therapy; Broadband Noise Therapy; eyeglasses with anti-reflecting lens coating and high index material; and the referral to Dr. Mistry; are denied and dismissed.

2. The respondents shall authorize a different psychological counselor for the claimant, pursuant to the Colorado Medical Fee Schedule.

3. The respondents shall authorize the medications mirtazapine and propranolol, pursuant to the Colorado Medical Fee Schedule.

Dated this 31st day of May, 2019.



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

- Did Claimant prove a C5-6 fusion recommended by Dr. Roger Sung is reasonably necessary to cure and relieve the effects of her admitted injury?

FINDINGS OF FACT

1. Claimant worked for Employer as a landscaper laborer. She suffered admitted injuries on May 25, 2017 when she fell off a three-foot wall and landed on her back. She was taken by ambulance to the Memorial Hospital emergency department complaining of neck and low back pain. CT scans showed no fractures, and she was diagnosed with acute cervical and lumbar strains.

2. Employer referred Claimant to Concentra for authorized medical treatment. At the initial visit on May 26, 2017, she was primarily concerned about low back pain with radiating symptoms in the left leg and foot, and left shoulder pain.[1]

3. Dr. Miguel Castrejon took over as Claimant's primary ATP on June 20, 2017. Dr. Castrejon documented "immediately following the fall the patient recalled feeling pain all over that settled to her neck and lower back. She recalled pain at the posterior left shoulder that has gradually worsened." Claimant complained of constant pain in the left side of her neck extending into the left shoulder. The left shoulder felt weak and she had difficulty lifting her left arm. Physical examination showed tenderness of the left paraspinal muscles and painful facet loading on the left side. Left shoulder range of motion was decreased with positive impingement and empty can signs. Rotator cuff strength was 4/5. Dr. Castrejon's diagnoses included cervical strain with element of facet-mediated pain, and left shoulder rotator cuff strain with possible internal derangement. Dr. Castrejon ordered a left shoulder MRI to check for a rotator cuff tear.

4. The MRI was done on June 24, 2017 and showed only mild rotator cuff tendinosis.

5. Claimant continued to report pain and weakness in the left shoulder, so Dr. Castrejon referred her to Dr. Michael Simpson for an orthopedic evaluation.

6. Claimant saw Dr. Simpson on September 14, 2017. Her neck range of motion was limited by pain. She also complained of dysesthesias and radiating pain down the left arm into the thumb. Dr. Simpson administered a cortisone injection to the left shoulder. Left shoulder impingement test and Hawkins Kennedy test were positive. She was tender to palpation at the AC joint and around the shoulder girdle musculature. The

[1] Claimant received significant treatment directed at her low back in connection with this claim. This order includes minimal findings regarding low back because the sole issue for determination involves surgery for her cervical spine.

injection helped the shoulder pain briefly but the radiating arm pain and numbness got worse after the injection.

7. Dr. Simpson ordered an MR arthrogram of the left shoulder, which was completed on December 13, 2017 and showed no evidence of rotator cuff tear, tendinosis or labral damage.

8. Dr. Castrejon performed an upper extremity EMG on November 13, 2017, which was negative for a cervical radiculopathy or peripheral neuropathy. Dr. Castrejon opined, "I am not convinced that she has a cervical radicular condition and opine that the symptoms are [a] combination of myofascial on the basis of her left shoulder and straining injury to the cervical spine." Nevertheless, he referred Claimant to Dr. Roger Sung for a surgical consultation.

9. Dr. Sung evaluated Claimant on January 11, 2018. She described neck pain, left arm pain, and persistent headaches since the work accident. The headaches were associated with severe neck pain and muscle tightness radiating up to her head. She reported "electric, stabbing, and burning pain that radiates down to the left thumb," and weakness in her left hand. Dr. Sung noted, "Her daily activities have been significantly limited due to this weakness." She could not perform normal ADLs such as braiding her hair. On examination, Dr. Sung appreciated diffuse tenderness throughout the neck, trapezius, and paraspinal muscles. Left arm strength was decreased with 4/5 strength in the deltoid. She had decreased sensation of the left thumb and over the deltoid. Cervical range of motion was limited by pain. Dr. Sung diagnosed neck pain and left arm radiculopathy. He requested a cervical MRI to investigate the radicular arm pain, and physical therapy to address her "quite significant tenderness and spasm in her paraspinal muscles."

10. Claimant saw Dr. Castrejon later that day. She was "very depressed and anxious" about how the pain was impacting her life, so he referred her for counseling and biofeedback. He also recommended trigger point injections to help with the myofascial component of her pain.

11. The cervical MRI was done on January 29, 2018. The radiologist interpreted it as showing straightening of the cervical spine (due to position or muscle spasm), a small central disc protrusion at C5-6, and mild DJD of the C3-4 left facet articulation.

12. Claimant followed up with Dr. Sung on February 21, 2018 to review the MRI. Her physical examination was unchanged from the prior visit. Dr. Sung interpreted the MRI as showing a "disc bulge/herniation" at C5-6, and amended his diagnosis to "C5-6 disc bulge/herniation with intermittent left arm radiculopathy." He recommended a cervical epidural steroid injection (ESI).

13. Dr. Stephen Ford administered the cervical ESI on March 13, 2018. He noted the indications for the injection were "chronic left neck, HA, left arm pain/numbness to the thumb [after] a fall at work 5/2017."

14. Claimant followed up with Dr. Ford on April 3 and reported her neck and arm pain and numbness had decreased after the injection. She also experienced facial flushing and "hot flashes" and was hesitant to try additional injections until the hot flashes were worked up.

15. Dr. Sung re-evaluated Claimant on April 26, 2018. He documented, "For a few hours, she had complete relief of her arm pain and for 2 days her neck felt better and she did not have headaches. It has since returned." No further ESIs were planned because of her allergic reaction to the steroid. Dr. Sung opined, "She had a great response to the injection and she has not done well long-term. At this point I am recommending a C5-6 cervical discectomy and fusion."

16. Insurer denied the surgery and Claimant requested a hearing.

17. Claimant saw Dr. Simpson on May 7, 2018, who opined, "[I] personally think that her neck surgery should be performed first to see where her symptoms settle and then focus on arthroscopic evaluation of her shoulder at that time."

18. On August 30, 2018, Dr. Sung reiterated that Claimant's positive diagnostic response to the cervical ESI was a critical factor in his decision to recommend surgery.

19. On October 4, 2018, Dr. Sung noted Claimant was now having numbness down her left arm, which he opined, "certainly can be coming from C5-6." Surgery was "on hold" pending the hearing.

20. Claimant saw Dr. Brian Reiss for an IME at Respondents' request on October 10, 2018. On examination, she had decreased sensation in the left thumb and index finger. Left cervical rotation caused "shooting" pain to the left thumb. Dr. Reiss opined her pain was injury-related, but disagreed that surgery was warranted. Based on the MRI and EMG reports, he opined her pain is probably myofascial rather than discogenic. Therefore, he thought surgery would not likely decrease her pain or increase her function. He recommended more physical therapy and a psychological evaluation to assess possible somatization.

21. On December 11, 2018, Dr. Reiss issued a supplemental report after reviewing the cervical MRI images. He agreed with the radiologist's interpretation of a "mild central protrusion at C5-6" with no significant central or foraminal stenosis. He opined the disc protrusion "probably represents a pre-existing degenerative condition and is unlikely to be the source of the patient's pain." His ultimate opinions remained the same as set forth in his IME report.

22. While awaiting the hearing, Claimant continued to follow up with Dr. Castrejon regularly. His records from late 2018 into 2019 repeatedly document "worsening neck and upper limb pain." He noted massage therapy was somewhat helpful but only on a temporary basis. Eventually, he discontinued the massage therapy "due to limited temporary benefit in the face of a condition that is still requiring surgical treatment."

23. Dr. Reiss testified in a deposition on March 25, 2019, consistent with his IME report. Dr. Reiss acknowledged the C6 nerve root enervates the thumb and index finger, and C6 radiculopathy can produce neck pain radiating across the biceps, the radial aspect of the form, into the thumb and index finger. However, even though he agreed Claimant's symptoms are "suggestive" of C6 nerve root compression, he was confident there is no compression here based on his review of the MRI. He opined, "the proposed surgery is very useful for radicular pain, but she doesn't have radicular pain. This is not her problem. She has axial neck pain. So the surgery is very unlikely to be helpful to her."

24. The last available report from Dr. Castrejon is dated April 2, 2019. Dr. Castrejon noted continued worsening of "neck pain radiating to the left arm to the thumb with numbness and tingling in this distribution. He indicated Claimant, "continues to point out that rotation of her neck will reproduce a shooting sensation into the left upper limb." He acknowledged the MRI did not show compression, but noted it was "a static study" that cannot capture symptomatic stenosis caused by spinal movement. He referenced medical literature regarding "Kinematic MRIs" that can "demonstrate findings that were not apparent unconventional MRI," such as "changes in positions that provoked symptoms." He believes that is the situation here. He also argued the benefit Claimant received from the cervical ESI points to a problem other than mere myofascial pain, because an ESI is intended to relieve pain or inflammation around the spinal nerve roots or damaged nerves and "would have no therapeutic benefit on a myofascial (muscle) condition."

25. The ALJ finds the opinions and recommendations of Dr. Castrejon and Dr. Sung more persuasive than the contrary opinions offered by Dr. Reiss.

26. Claimant proved by a preponderance of the evidence the C5-6 fusion recommended by Dr. Sung is reasonably needed to cure and relieve the effects of her admitted industrial injury.

CONCLUSIONS OF LAW

The respondents are liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a). Even if the respondents admit liability, they retain the right to dispute the relatedness of any particular treatment, and the mere occurrence of a compensable injury does not compel the ALJ to find that all subsequent treatment was caused by the industrial accident. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove the treatment is reasonably necessary and causally related to the industrial accident. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The claimant must prove entitlement to medical benefits by a preponderance of the evidence. *Page v. Clark*, 592 P.2d 792 (Colo. 1979).

As found, Claimant proved the C5-6 fusion surgery recommended by Dr. Sung is reasonably necessary to cure and relieve the effects of her admitted injury. The ALJ credits the opinions and recommendations of Dr. Castrejon and Dr. Sung over the

opinions of Dr. Reiss. Dr. Reiss agreed the proposed surgery “is very useful for radicular pain,” but stated Claimant “doesn’t have radicular pain.” Yet, the records repeatedly document upper extremity radicular symptoms consistent with C6 nerve root compression or irritation, including numbness and weakness. Admittedly, the MRI findings are not particularly impressive, and at first blush do not suggest a surgical solution. But Dr. Sung appears to have appreciated more significant findings on the MRI than Dr. Reiss, and believes the MRI supports his surgical recommendation. Furthermore, Dr. Castrejon is persuasive that the static MRI probably does not give a complete picture of Claimant's spinal pathology, because her most intense radicular symptoms typically occur when she moves her head. The MRI images were taken in a posture that does not produce her worst symptoms. In any event, the MRI is only part of the picture, and the more compelling evidence relates to Claimant's clinical findings. She has symptoms in a C6 distribution, which are reasonably amenable to surgery at the C5-6 level. Claimant had a “great” (albeit short lived) response to the cervical ESI, which further supports the surgery. She has failed conservative treatment and no realistic remaining options short of surgery. While this is a close call, on balance, the evidence persuades the ALJ the proposed surgery is more likely than not reasonably needed to treat the effects of her industrial injury.

ORDER

It is therefore ordered that:

1. Insurer shall cover the C5-6 fusion surgery recommended by Dr. Sung.

2. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS

STATE OF COLORADO

W.C. No. 5-056-383-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER GRANTING SUMMARY JUDGMENT IN FAVOR OF RESPONDENT TRAVELERS AND DENYING SUMMARY JUDGMENT FOR THE CLAIMANT.

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

v.

Employer,

and

Insurer/Respondents.

A hearing on the merits in the above-referenced matter is scheduled for June 26, 2019, in Denver, Colorado. On January 11, 2019, Administrative Law Judge (ALJ) Edwin L. Felter, Jr. issued Full Findings of Fact, Conclusions of Law and Order on Remand, holding the above-captioned insurance carrier solely liable for the compensability of the Claimant's occupational disease of carpal tunnel syndrome, and ordering Respondent Travelers, accordingly, to pay the Claimant medical and temporary indemnity benefits. Respondent Travelers filed a Petition to Review on the issues of compensability and which insurance carrier was liable, Travelers or New Hampshire Insurance Company.

On or about February 27, 2019, Claimant filed an Amended Application for Hearing, designating by attached letter, penalties versus Respondent Travelers for alleged failure to pay the Claimant benefits when it had allegedly filed a Petition to Review on the exclusive ground that it was not the carrier on the risk on the date of the alleged injury. Respondent Travelers filed a Response to Application for Hearing on March 4, 2019. A clear reading of Travelers Petition to Review reveals that it is also appealing the issue of compensability as it relates to Travelers.

On or about March 26, 2019, Respondent Travelers filed a Motion for Summary Judgment requesting that Claimant's request for penalties, stated in the Application for Hearing and attachment be denied because Respondent Travelers' was, in fact, appealing the issue of compensability and not obliged to pay benefits during the pendency of the appeal. On or about April 5, 2019, Claimant filed a "Response to Respondents' Motion for Summary Judgment and Cross-Motion for Partial Summary Judgment, requesting that Travelers be held liable for penalties. On the same date, Respondent Travelers filed an Objection to Claimant's Cross-Motion for Summary Judgment, accusing Claimant of "knowingly misleading the court," allegations hardly fitting of the high standards of conduct prevailing in the Workers' Compensation Bar. Nonetheless, the ALJ will be the judge of whether the Claimant is "knowingly misleading the court," an allegation of serious magnitude insofar as it alleges a violation of Rule 3.3 of the Colorado Rules of Professional Conduct. Indeed, this issue boils down to whether the Claimant has misguidedly interpreted the provisions of § 8-43-301 (13), C.R.S., regarding the obligation of a carrier found liable, as opposed to another carrier, to pay benefits during the pendency of a review when **compensability** is not an issue, or has "knowingly misled" with the requisite mens rea.

ISSUE FOR SUMMARY JUDGMENT

The sole issue to be determined by this decision concerns whether there is a genuine issue of disputed material fact concerning whether Respondent Travelers was obliged to pay workers' compensation benefits to the Claimant during the pendency of the review a determination that Travelers and not New Hampshire Insurance Company, was the carrier on the risk at the time of the Claimant's last injurious exposure to the occupational disease of carpal tunnel syndrome; and, as a corollary, is there a disputed issue concerning whether Travelers was also appealing compensability regarding its time on the risk.

FINDINGS OF FACT

Based on the undisputed evidence contained in the file, pleadings and exhibits, the ALJ makes the following Findings of Fact:

Undisputed Facts

1. On February 27, 2019, Claimant filed an Amended Application for Hearing on the issue of penalties versus Respondent Travelers for failure to pay the Claimant benefits during the pendency of a petition to review to determine which carrier was on the risk the time of the Claimant's last injurious exposure to the occupational disease of carpal tunnel syndrome. Attached to the Amended Application was the wording of § 8-43-301 (13), C.R.S:

> If the order which is under petition to review does not concern compensability, but concerns the respective liability of two or more employers or insurance carriers, and the injury or illness was found compensable in a hearing held pursuant to section **8-43-215**, the employer or insurance carrier found liable by the director or administrative law judge shall pay benefits in accordance with the order under review until the review process is completed, at which time it shall be reimbursed by the other employer or carrier if reimbursement is necessary to comply with the final order.

2. On March 4, 2019, Respondent Travelers filed a Response to Application for Hearing, indicating that it was appealing the ALJ's determination of compensability as it pertains to Travelers.

3. Respondent Travelers' Brief in Support of Petition to Review states: The other issues regarding **compensability** (emphasis supplied) finding of occupational disease…and finding Travelers was the responsible carrier, need to be considered…."

4. It is not for the present ALJ to determine how very thin Respondent Travelers' argument is --that the ALJ erred in finding a compensable occupational disease of carpal tunnel syndrome generally. Indeed, as found in the Full Findings, Respondent Travelers seems to be asking for a re-weighing of the evidence.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Summary Judgment

a. Pursuant to Office of Administrative Courts Rules of Procedure (OACP) Rule 17, 1 CCR 1101-3, "any party may file a motion for summary judgment seeking resolution of any endorsed issue for hearing." Summary judgment may be sought in a workers' compensation proceeding. *See Fera v. Indus. Claim Appeals Office,* 169 P.3d 231, 232 (Colo. App. 2007). The OAC Rule allows a party to support its Motion with affidavits, transcripts of testimony, medical reports, or employer records. A motion for summary judgment may be supported by pleadings, depositions, answers to interrogatories, and admissions on file. C.R.C.P. 56; *See also Nova v. Indus. Claim Appeals Office*, 754 P.2d 800 (Colo. App. 1988) [C.R.C.P. and C.R.E. apply insofar as they are not inconsistent with the procedural or statutory provisions of the Act]. As found, Respondent Travelers Motion for Summary Judgment is supported by documents in the official file. As further found, the Claimant's Cross Motion for Summary Judgment is supported by the same documents.

b. Summary judgment is appropriate when the pleadings show that there is no genuine issue as to any material fact and that the moving party is entitled to judgment as a matter of law. C.R.C.P. 56(c); *Churchey v. Adolph Coors Co.*, 759 P.2d 1336 (Colo. 1988). This rule allows the parties to pierce the formal allegations of the pleadings and save the time and expense connected with trial when, as a matter of law, based on undisputed facts, one party could not prevail. See *Drake v. Tyner*, 914 P.2d 519 (Colo. Ct. App. 1996). As found, the documentary evidence establishes that the facts in the present case are undisputed.

c. Once the moving party shows specific facts probative of a right to judgment, it becomes necessary for the non-moving party to set forth facts showing that there is a genuine issue for hearing. *See Miller v. Van Newkirk*, 628 P.2d 143 (Colo. App. 1980). As found, Respondent Travelers' Motion raises no genuine issues of disputed, material fact; and, Claimant's Response and Cross Motion for Summary Judgment fail to set forth facts showing that there is a genuine issue of disputed fact.

d. As found, the gravamen of Claimant's request for penalties versus Respondent Travelers involves the wording of §8-43-301 (13), C.R.S.

> If the order which is under petition to review does not concern **compensability** (emphasis supplied), but concerns the respective liability of two or more employers or insurance carriers, and the injury or illness was found compensable in a hearing held pursuant to section **8-43-215**, the employer or insurance carrier found liable by the director or

> administrative law judge shall pay benefits in accordance with the order under review until the review process is completed, at which time it shall be reimbursed by the other employer or carrier if reimbursement is necessary to comply with the final order.

e. The plain wording of §8-43-301 (13) indicates that when the review does **not** involve compensability the first liable insurer shall continue the payment of benefits. When construing a statute, the ALJ must give effect to the General Assembly's purpose and intent as reflected in the plain language of the statute. *People v. Luther*, 58 P.3d 1013 (Colo.2002). The ALJ should not depart from the plain meaning unless it leads to an absurd result. *Colo. Dep't of Soc. Servs. v. Bd. of County Comm'rs*, 697 P.2d 1 (Colo.1985). As found, Respondent Travelers was, among other things, seeking review of the ALJ's determination of compensability regarding Travelers.

f. As found, it is not for the present ALJ to determine how thin Respondent Travelers' request for a re-weighing of the evidence is thin, based on Travelers assessment of the weight to be given certain evidence, as opposed to the ALJ's assessment. Ordinarily, a re-weighing of the evidence is appropriate only when there is newly discovered evidence, which could not have been discovered through the exercise of reasonable diligence and which likely would be outcome determinative. *See Holmes v. Young,* 885 P.2d 305 (Colo. App. 1994). Respondent Travelers makes no such allegation herein.

g. Summary judgment may be sought in a workers' compensation proceeding. OACRP Rule 17 allows an ALJ to enter summary judgment where there are no genuine disputed issues of material fact. *Lanza v. WalMart Stores, Inc*., W.C. 4-707-313 (ICAO, September 24, 2007). Summary judgment is a drastic remedy and is appropriate only if there is no disputed issue of material fact and the movant is entitled to judgment as a matter of law. *Van Alstyne v. Housing Authority of Pueblo*, 985 P. 2d 97 (Colo. App. 1999). Once a moving party establishes that no material fact is in dispute, the burden of proving the existence of a factual dispute shifts to the opposing party. *Lanza, supra.* As found, it is undisputed that there is no genuine issue of disputed material fact.

Burden of Proof

h. The burden of proof is placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P. 2d 535 (Colo. App. 1992). That burden is "preponderance of the evidence." A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274

F.3d 1361 (D.C. Cir. 2001). As found, Respondent Travelers has sustained its burden with respect to its Motion for Summary Judgment. The Claimant has failed to sustain his burden with respect to his Cross-Motion for Summary Judgment.

ORDER

IT IS, THEREFORE, ORDERED THAT:

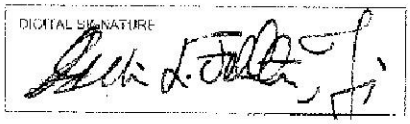
A. Respondent Travelers' Motion for Summary Judgment, requesting a denial of Claimant's request for penalties against Travelers is hereby granted..

B. Claimant's Cross-Motion for Summary Judgment is hereby denied and dismissed.

C. The hearing of June 26, 2019 is hereby vacated.

D. Any and all issues not determined herein are reserved for future decision.

DATED this 4th day of June 2019.



_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-095-747-001

ISSUES

I. Whether Claimant established by a preponderance of the evidence that he suffered a compensable knee injury during the course and scope of his employment on October 16, 2018.

II. Whether Claimant established by a preponderance of the evidence that medical treatment for his knee injury was reasonable, necessary, and causally related to an October 16, 2018 work injury.

III. Whether Claimant established by a preponderance of the evidence that Denver Health is an authorized medical provider.

IV. Claimant's Average weekly wage.

STIPULATION

The parties stipulated that Claimant is not entitled to temporary disability benefits from October 16, 2018, up to and including April 24, 2019.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant, a 56-year-old male, started work September 17, 2018 as a fabricator. Claimant helped build panels and his job duties included lifting parts, putting pieces together, drilling, standing, walking, and kneeling off and on during the workday.
2. Claimant lived in a half-way house and was required to work as part of his probation. Employer hired other half-way house employees.
3. Claimant earned an hourly rate of $16.75 per hour. Work hours varied week to week in large part due to Claimant's multiple absences from work. Wage records reflect that Claimant earned an average weekly wage of $283.08 prior to the alleged injury. (Exhibit J.)
4. On October 16, 2018, only one month after he started work with Employer, Claimant alleged he injured his right knee when he stood after kneeling and drilling screws into place on some panels. Claimant did not report an injury that day and there is no indication Claimant left work early or was unable to finish his shift due to his alleged knee injury. Claimant did, however, report his alleged injury the following day, October 17, 2018. (See Exhibits L, M.)

5. The day before Claimant's alleged injury, October 15, 2018, Claimant's supervisor, Steve Hodgkinson, disciplined Claimant following multiple unexcused absences. (Exhibit K p 40.)

6. After the alleged injury, Claimant's unexcused absences continued. On December 13, 2018, Employer prepared another infraction notice because Claimant failed to document his excuses and/or failed to call or show up at work. (Exhibit K p 41.) Claimant and the employer exchanged text messages on December 17, 2018 and December 18, 2018. Claimant asked if he had a job. Employer replied "Charles, why aren't you at work? You need to be at work from 6:30 AM to 3:00 PM every weekday. No one has told you otherwise." At 2:00 AM the next morning, Claimant responded he was not at work because he had a viral infection. "Sorry I know you're tired of this b*******". Claimant never returned to work or provided proof of his illness. (Exhibit K pp 42, 43.) On December 17, 2018, Employer prepared another infraction notice following Claimant's second no call no show violation. (Exhibit K p 44.)

7. Claimant filed a Workers' Claim for Compensation and acknowledged that he treated with Dr. David Orgel at Midtown Occupational Health. (Exhibit M.)

8. On October 18, 2018, Dr. David Orgel noted Claimant reported that:

> He works construction. He was kneeling placing nails and as he stood up he developed a pop and pain in his right knee.

   The report goes on to note that Claimant did not report the injury until the following day. Dr. Orgel's physical examination reflected bilateral knee pain with less tenderness and pain on the left. There was sub-patellar crepitation, left greater than right. There were also chronic changes of the right knee and some evidence of chronic instability. Dr. Orgel diagnosed right knee pain that could be from his chondromalacia and evidence of chronic instability. Dr. Orgel also concluded some of Claimant's condition may be related to squatting and kneeling which could lead to a meniscal tear. He did not, however, assign any work restrictions due to Claimant's complaints and his physical examination of Claimant. (Exhibit A.)

9. On November 10, 2018, an MRI of the right knee was performed and indicated a "probable medial meniscal tear." (Exhibit C.)

10. On November 16, 2019, Claimant returned to Dr. Orgel. At this visit, Dr. Orgel again noted the mechanism of injury as described by Claimant. The mechanism listed provides:

> He was kneeling and that as he came up from a squat he had immediate pain in his right knee.

He also noted Claimant had persistent discomfort in his right medial knee with the sensation of instability but without walking. He also indicated that Claimant stated his pain was unchanged with time.

Dr. Orgel's diagnosis at that time was: Right knee pain. He also stated that:

> The mechanism of injury would be consistent with a meniscal tear and the MRI suggests a possible meniscal tear but otherwise the knee is felt to be normal.

However, based on his overall assessment of Claimant's right knee, he again returned Claimant to full duty. (Exhibit 1, pg. 14.)

11. Moreover, on the same day, November 16, 2018, Dr. Orgel also completed a M164 form. The form contains a section that asks if the objective findings are consistent with the history and/or work related mechanism of injury. Dr. Orgel checked "yes" and "no" and the section that says "no" also includes the statement "to be determined." Therefore, Dr. Orgel did not conclude Claimant's right knee pain and need for medical treatment was caused by his work activities of standing up after kneeling. (Exhibit 1, pg. 14.)

12. On November 30, 2018, orthopedic specialist, Dr. Joseph Hsin, reported that the MRI was suggestive of a medial meniscal tear. Dr. Hsin did, however, considered Claimant's pain complaints to be out of proportion to the exam and his clinical findings. He noted in his report that they discussed a diagnostic arthroscopy as the next option. Therefore, the recommendation for a diagnostic arthroscopy indicates Dr. Hsin could not determine the cause of Claimant's right knee pain complaints. (Exhibit E.)

13. On December 17, 2018, Claimant sought treatment at Denver Health Emergency room. (See Exhibit F.) Claimant testified he decided to treat at Denver Health because Claimant's primary care physician worked at Denver Health and because Dr. Hsin did not get approval from the adjuster to proceed with the surgery that was for diagnostic purposes. Claimant did not attempt to return for medical care with Dr. Hsin or with Dr. Orgel or at Midtown Occupational Health Services.

14. On December 27, 2018, Dr Marshall at Denver Health noted that Claimant presented with normal right knee strength. X-rays showed no evidence of an acute fracture, no significant knee effusion, no significant joint space narrowing, no focal soft tissue abnormality, and knee alignment was anatomic. The note also indicate that: "Legal counsel suggests he have surgery done on his insurance." (Exhibit G.)

15. On February 15, 2019, physical therapy notes indicate Claimant had a good prognosis for recovery based on his age and high level of activity. The notes also indicate Claimant reported that his pain had decreased since his original injury but had not resolved. The notes further state that a corticosteroid shot Claimant had in December greatly decreased his pain. (Exhibit H.)

16. Dr. Linda Mitchell prepared an independent medical examination report dated April 2, 2019 (Exhibit I) and testified at the hearing. Dr. Mitchell is Board Certified in Occupational Medicine and Level II accredited. Dr. Mitchell diagnosed right knee arthropathy, or arthritis (degenerative joint disease), and a probable medial meniscus tear. Dr. Mitchell concluded that neither condition was related to Claimant's work activities. First, Claimant's arthritis of the right knee was not a work-related condition because the arthritis was a chronic problem in both knees that predated the October 16, 2018 work incident. Also, according to the Medical Treatment Guidelines, Claimant did not meet the criteria for an aggravation of arthritis due to a work incident. Second, the probable meniscus tear was not work-related because the mechanism of injury does not support work relatedness. The Medical Treatment Guidelines support that kneeling down may cause a meniscal tear but that rising from kneeling position, as in this case, will not cause a meniscal tear. Claimant did not bang his knee, twist his knee, or hyper extend his knee. Claimant reported that he rose from a kneeling position and felt a pop and that motion did not provide sufficient force to cause a meniscal tear or work injury. Also, Dr. Mitchell explained that Dr. Hsin noted that the MRI was inconclusive, and a meniscal tear was probable but not confirmed, because radiology protocol requires two levels of the MRI to show a tear and that did not exist in this case. Dr. Mitchell concluded that Claimant's probable meniscal tear was more likely due to the natural progression of his underlying degenerative condition because the degenerative condition was present in Claimant's left and right knees. Dr. Mitchell testified that it is only a matter of time before Claimant experiences similar problems/symptoms in his left knee. Dr. Mitchell concluded that Claimant's symptoms that allegedly occurred at work on October 16, 2018, did not equate to a work-related aggravation or acceleration of Claimant's underlying degenerative condition and work did not cause the need for medical treatment. Dr. Mitchell pointed out that other medical providers' records support her opinion. On October 18, 2018, Dr. Orgel noted Claimant reported bilateral knee pain, sub patellar crepitation left greater than right, evidence of chronic changes, and evidence of chronic instability. Dr. Hsin and Dr. Marshall noted Claimant's pain was out of proportion to their examinations. Dr. Mitchell considered arthroscopy for the meniscus tear unreasonable because she doubted the procedure will help Claimant given his symptom exaggeration and underlying degenerative changes. Dr. Mitchell recommended exercise and injections outside of the workers' compensation system.

17. Claimant testified at the hearing. Claimant stated that his right knee popped when he stood from a kneeling position and that he did not bang his knee, twist his knee, or hyperextend his knee. Claimant admitted that the day before his knee incident, Claimant was made aware of a written warning infraction notice because Claimant missed multiple days of work and that after the knee incident,

attendance problems continued. Claimant admitted he failed to return to work even after Mr. B_____ texted Claimant that he still had a job. Claimant admitted that he treated with Dr. Orgel at Midtown Occupational Health and he treated with an orthopedic specialist whose name he could not recall but may have been Dr. Hsin. Claimant testified that the orthopedic specialist tried to schedule knee surgery, but the insurance company denied authorization, and the specialist cancelled surgery. Claimant assumed that the insurance company denied all medical care when Dr. Hsin cancelled surgery. Claimant admitted, however, that he never attempted to return to Dr. Orgel, Midtown Occupational Health, or the specialist, and he never contacted the insurance company to learn if they denied all treatment. Instead, Claimant chose to resume treatment at Denver Health because his primary doctor worked at Denver Health.

18. Jake B_____, Employer's production engineer, testified at the hearing. Mr. B_____ was familiar with Claimant and with other half-way house employees. Mr. B_____ testified that Claimant had difficulty learning and performing his job. Mr. B_____ was aware of Claimant's attendance issues. Mr. Bechtoldt testified that half-way house employee attendance issues usually occurred because the employee was not allowed to leave the half-way house due to behavioral issues. Mr. B_____ testified that the company drove Claimant to and from his medical appointments to help Claimant attend his appointments because Claimant did not have his own transportation. Mr. B_____ considered Dr. Orgel and Midtown Occupational Health authorized providers. Mr. B_____ did not consider Denver Health an authorized provider. Claimant earned an hourly rate of $16.75 per hour. His hours varied due to attendance issues and the number of days he missed from work each week.

19. Jessica L_____, the claims adjuster, testified. Ms. L_____ testified that the Respondents denied surgery, in part, because they recently received the file and needed to gather medical records. Ms. L_____ did not deny treatment with Dr. Orgel or at Midtown Occupational health or with Dr. Hsin, other than surgery. Ms. L_____ did not authorize treatment at Denver Health.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence

is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

Compensability

A claimant must prove by a preponderance of the evidence that his injury arose out of the course and scope of his employment with employer. Section 8-41-301(1)(b), C.R.S.; *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). An injury occurs "in the course of" employment where claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). An accident "arises out of" employment when there is a causal connection between the work conditions and the injury. *In re Question Submitted by the United States Court of Appeals for the Tenth Circuit*, 759 P.2d 17 (Colo. 1988). The determination of whether there is a sufficient "nexus" or causal relationship between the claimant's employment and the injury is one of fact that the ALJ must determine based on a totality of the circumstances. *Moorhead Machinery & Boiler Co. v. DelValle*, 934 P.2d 861 (Colo. App. 1996). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is

awarded. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000); Singleton v. Kenya Corp., 961 P.2d 571, 574 (Colo. App. 1998).

A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. See *Cotts v. Exempla, Inc.*, W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. See *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.,* W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs*, W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

In this case, Claimant failed to demonstrate by a preponderance of the evidence that he suffered a compensable knee injury during the course and scope of his employment on October 16, 2018. The ALJ credits the opinions expressed by Dr. Mitchell that Claimant's degenerative arthritis and probable medial meniscus tear were not causally related to Claimant's activities at work. Dr. Mitchell concluded that Claimant's symptoms which he alleges started at work on October 16, 2018, while standing up did not equate to a work-related aggravation or acceleration of Claimant's underlying degenerative condition and that work did not cause the need for Claimant's medical treatment. Specifically, Claimant's arthritis was not a work-related condition because the arthritis was a chronic problem in both knees that predated the onset of symptoms that Claimant alleged started while at work on October 16, 2018. Also, according to the Medical Treatment Guidelines, Claimant did not meet the criteria for an aggravation of arthritis due to a work incident. Next, Claimant's probable meniscus tear was not work-related. The Medical Treatment Guidelines support that repetitive squatting and kneeling could lead to a meniscus tear but not rising from a kneeling position. In this case, Claimant admitted that he felt a pop when he rose from a kneeling position and that he did not bang his knee, twist his knee, or hyper extend his knee. Dr. Mitchell credibly and persuasively concluded that Claimant's probable meniscal tear was more likely due to the natural progression of his underlying degenerative condition because the degenerative condition was present in Claimant's left knee as well as his right knee. Other medical providers supported Dr. Mitchell's opinion. On October 18, 2018, Dr. Orgel noted Claimant reported bilateral knee pain, sub patellar crepitation left greater than right, evidence of chronic changes, and

evidence of chronic instability. Dr. Orgel also failed to conclude that Claimant's right knee complaints were related to his job activities of standing up on October 16, 2018.

Dr. Hsin and Dr. Mitchell also noted Claimant's pain complaints were out of proportion to their physical examination and findings when they evaluated Claimant. Such evidence is found to be credible and persuasive. Therefore, since Drs. Hsin and Mitchell did not think Claimant was accurately representing the extent of his physical problems, such evidence diminishes the ability of the ALJ to rely on Claimant's contention regarding the time, place, and precipitating event of his right knee problems.

In addition, compensability is questionable when evaluating the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; and the Claimant's motives. Claimant was on probation and living in a half-way house at the time of his employment. A term or condition of his probation was to maintain employment. According to Mr. B_____, Claimant had difficulty learning and performing his job. Also, Claimant only worked for Employer for one month but was absent from work often. According to Mr. Bechtoldt, half-way house employee attendance issues usually occurred because the employee did something wrong and was not allowed to leave the half-way house due to behavioral issues. As a result, Claimant may have been nervous about losing his job when he alleged a work injury two days after the employer disciplined Claimant for excessive unexcused absences.

Therefore, based on the totality of the evidence, the ALJ finds and concludes that Claimant has failed to establish by a preponderance of the evidence that his October 16, 2018 work activities caused his right knee condition and necessitated the need for medical treatment. The ALJ also finds and concludes, based on the totality of the evidence, that Claimant has failed to establish by a preponderance of the evidence that his work activities on October 16, 2018, aggravated, accelerated or combined, with his pre-existing knee condition to produce the need for medical treatment for his right knee. Thus, the ALJ finds and concludes that Claimant has failed to establish by a preponderance of the evidence that he suffered a compensable injury.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed

it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 4, 2019.

ISSUES

- What is the proper apportionment of death benefits between the Dependent Claimants?

- Who should be the payee?

FINDINGS OF FACT

1. The Deceased was involved in a fatal accident on March 23, 2018 while working as a roofer for Employer. A gust of wind caught a piece of sheet metal he was working with and caused him to fall from a roof. The accident occurred at approximately 8:33 AM and he was pronounced dead at 2:43 PM that same day. There is no dispute his death was a proximate result of the March 23, 2018 accident.

2. The parties stipulated to an average weekly wage (AWW) of $1,422.23. The parties also stipulated death benefits are payable at the maximum compensation rate of $948.15 in effect on the date of the Deceased's death.

3. Ms. S[Redacted] was not married to the Deceased at the time of his death and stipulated she is not entitled to death benefits.

4. The Deceased and Ms. S[Redacted] had two children together. J.D. is the Deceased's natural son. His date of birth is May 1, 2009. DNA testing confirmed the probability of paternity at 99.9997%. A.L. is the Deceased's natural daughter. Her date of birth is October 28, 2011. DNA testing confirmed the probability of paternity at 99.99998%. Respondents stipulated that J.D. and A.L. are the Deceased's son and daughter, respectively.

5. J.D. and A.L. are presumed wholly dependent on the Deceased, pursuant to § 8-41-501(1)(b), C.R.S. No evidence was presented to rebut the statutory presumption of dependency, and the ALJ finds J.D. and A.L. were actually dependent on the Deceased for support at the time of his death.

6. The Deceased was not married at the time of his death, and has no children other than J.D. and A.L. The ALJ finds J.D. and A.L. are the only persons eligible to receive workers' compensation death benefits in connection with this claim.

7. J.D. and A.L. are each entitled to death benefits until age 18, or until age 21 if engaged in courses of study as a full-time student in an accredited school.

8. J.D. and A.L. live with Ms. S[Redacted] on a full time basis and she is now solely responsible for their support. Ms. S[Redacted] is willing and able to apply the

benefits in J.D. and A.L.'s best interests. The ALJ finds Ms. S[Redacted] is the best person to act as payee for J.D. and A.L.'s workers' compensation benefits.

9. Ms. S[Redacted] requested the death benefits be apportioned "50/50" between J.D. and A.L., which the ALJ finds to be the most reasonable and appropriate apportionment of benefits in this case. The ALJ further finds that, when J.D. or A.L. ceases to be eligible for benefits, the death benefits shall be reallocated 100% to the remaining eligible child, if any.

CONCLUSIONS OF LAW

Death benefits are payable to the dependents of an employee who dies as a proximate result of a work-related accident. Section 8-42-115(1)(b), C.R.S. Dependents and the extent of dependency are determined "as of the date of the injury . . . and the right to death benefits shall become fixed as of said date irrespective of any subsequent change." Section 8-41-503(1), C.R.S. Children of the deceased under the age of 18 are presumed wholly dependent, and children between 18 and 21 years of age are presumed wholly dependent as long as they are engaged in courses of study as full-time students at any accredited school. Section 8-41-501(1)(b) and (c), C.R.S. As found, J.D. and A.L. are the Deceased's sole dependents, and were wholly dependent on the Deceased for support at the time of his injury and death.

Dependents are entitled to two-thirds of the deceased's AWW, subject to the maximum compensation rate in effect on the date of death. Section 8-42-114, C.R.S.; *Richards v. Richards & Richards*, 664 P.2d 254 (Colo. App. 1983). As found, the parties stipulated to an AWW of $1,422.23 and death benefits payable at the rate of $948.15 per week.

Death benefits shall be apportioned among multiple dependents in a manner the ALJ deems "just and equitable." Section 8-42-121, C.R.S. As found, the benefits should be apportioned equally between J.D. and A.L., as long as they are both eligible. When J.D. or A.L. ceases to be eligible for death benefits, the payment shall be reallocated 100% to the remaining eligible child, if any.

The surviving spouse or a friend may apply for death benefits on behalf of the deceased's minor children. Section 8-42-122, C.R.S. The ALJ has discretion to determine the manner and method of payment on behalf of minor children "in such manner as the [ALJ] sees fit." *Id*. As found, the benefits should be paid to Ms. S[Redacted] for J.D. and A.L.'s benefit. Ms. S[Redacted] is the full-time custodial parent. The ALJ concludes Ms. S[Redacted] is willing and able to apply the benefits in the best interests of J.D. and A.L.

ORDER

It is therefore ordered that:

1. Insurer shall pay death benefits of $948.15 per week commencing March 24, 2018 and continuing until terminated according to law.

2. The benefits shall be apportioned equally between J.D. and A.L. as long as both remain eligible. When J.D. or A.L. ceases to be eligible, the payment shall be reallocated 100% to the remaining eligible child.

3. The benefits shall be paid to Ms. S[Redacted] as payee, and shall be applied for the benefit of J.D. and A.L.

4. Insurer shall pay statutory interest at the rate of 8% per annum on all amounts not paid when due.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 4, 2019

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-857-829-002

CORRECTED FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

No further hearings have been held. On June 3, 2019 Respondents filed a Motion for Corrected Order, correctly averring that the Administrative Law Judge (ALJ) limited the issues concerning the viability of case closure and the Final Admission of Liability (FAL) at the hearing of May 1, 2019.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on May 1, 2019, in Denver, Colorado. The hearing was digitally recorded (reference: 5/1/19, Courtroom 1, beginning at 1:30 PM, and ending at 3:00 PM). No testimonial evidence was taken. The matter was submitted on the exhibits admitted into evidence.

The Claimant was not present in person but represented by [Redacted], Esq. Respondents were represented by [Redacted], Esq.

Hereinafter [Redacted] shall be referred to as the “Claimant." [Redacted] shall be referred to as the “Employer.” All other parties shall be referred to by name.

Claimant's Exhibits 1 through 8 were admitted into evidence, without objection. Respondents' Exhibits A through T were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ established a post-hearing briefing schedule. Claimant's opening brief was filed on May 8, 2019. Respondents' answer brief was filed on May 15, 2019. Claimant's reply brief was filed on May 20, 2019, at which time the matter was deemed submitted for decision. The reply brief states the position that all of Respondents' arguments are moot, if the FAL is void *ab initio*.

ISSUES

A critical issue to be determined by this decision is whether the Final Admission of Liability (FAL), dated August 26, 2014, was *void ab initio* as to the admission for maximum medical improvement (MMI), permanent medical impairment, or both. The FAL admitted for causally related and reasonably necessary post-MMI) medical maintenance care; an average weekly wage of $575.61; temporary total disability (TTD) benefits through April 30, 2012; an MMI date of April 30, 2012, and permanent partial disability (PPD) benefits, based upon 23% of the whole person, with a $10,000.00 lump sum payment on October 4, 2012 and a final payout aggregating $37, 388.16, completed on February 11, 2015. The Claimant's contention is that the entire FAL is null and void because it was based on the opinion of Bart Fotheringham, M.D. Claimant's authorized treating physician (ATP) in the State of Utah, who conceded that he was not Level 2 Accredited in the State of Colorado. In rating permanent medical impairment, however, Dr. Fotheringham used the American Medical Association *Guides to the Evaluation of Permanent Medical Impairment,* 3rd Ed., Rev.(hereinafter "AMA Guides"), as required by § 8-42-107 (8) (c), C.R.S., in rating the degree of whole person permanent medical impairment.

Corollary issues are whether the Claimant is estopped from challenging the FAL at this time because he accepted and received all of the admitted permanent medical impairment benefits If the FAL is null and void, should the Claimant be obligated to repay Respondents the $55, 780.44 he received in permanent medical impairment benefits in order to prevent his unjust enrichment, pursuant to the case law dealing with overpayments.

The Claimant filed a Petition to Reopen one day before the 6-year statute of limitations took effect. The ostensible ground in the Petition to Reopen is "change of condition." Medical reports supporting renewed urinary problems are attached to the Petition. As it relates to the contention that the FAL is null and void, is it sufficient to state the ground of "change of condition," based on a "substantial compliance-type argument, " when, in fact, the actual ground should be error or mistake in the FAL

The Claimant bears the burden of proof, by preponderant evidence on the issues of case closure and whether the FAL is null and void, with the exception of "estoppel," in which case Respondents bear the burden of proof by a preponderance of the evidence.

CORRECTED FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Corrected Findings of Fact:

Preliminary Findings

1. The Claimant was injured on June 7, 2011. A General Admission of Liability (GAL), admitting for temporary total disability (TTD) benefits was filed on June 14, 2011 (Respondents' Exhibit A-1). The Claimant received care initially at Craig Hospital, but eventually relocated to Salt Lake City, Utah.

2. On April 30, 2011, the Claimant received a release to full duty and was determined to be at maximum medical improvement (MMI). The insurance carrier filed a GAL terminating TTD benefits, pursuant to § 8-42-105(3), C.R.S., effective May 1, 2011 (Respondents' Exhibit A 3-5). The Claimant received $17,981.96 in TTD benefits from the date of injury to that date.

Permanent Impairment Rating and Benefits

3. The Claimant underwent an impairment rating pursuant to the AMA Guides, performed by ATP Bart Fotheringham, M.D., in Murray, Utah. Dr. Fotheringham agreed that the Claimant was at MMI on April 30, 2012, and he assigned a 23% whole person impairment rating. Dr. Fotheringham admitted that he was **not** Level II Accredited in Colorado. Respondents filed an FAL, in accordance with Dr. Foteringham's rating, on June 8, 2012 (Respondents' Exhibit B 1-12)..Dr. Fotheringham is not Level 2 Accredited by the Colorado Division of Workers Compensation (DOWC), however, § 8-42-107 (8) (b.5) (I) (A), C.R.S., read *in pari material,* with the rest of Subsection (b.5), reveals that an out-of-state physician may determine MMI and degree of physical impairment and transmit the results to the Colorado insurance carrier, who may then appoint a Colorado Level II accredited examiner to determine the impairment rating. By its silence in the rest of the statutory provision, an insurance carrier may accept the out-of-state ATPs impairment rating and pay PPD benefits pursuant thereto, as is the case herein. By necessary implication, a claimant may either agree with the out-of-state physician's rating, or insist on the appointment of a Colorado Level II Accredited physician to do the rating, in which case the insurance carrier is liable for the costs of the Colorado impairment rating, including a claimant's travel to Colorado.

4. The admitted 23% whole person rating totaled $55,780.44 in permanent medical impairment benefits, paid from the date of MMI to February 11, 2015. Attached to the FAL was "Notice to Claimant of Rights and Benefits." Dr. Fotheringham's report was also attached. Also attached is an Objection to the FAL and a Notice and Proposal, which contains in bold print that if the Claimant had any issues with benefits admitted he needed to file an Objection and apply for a Division Independent medical Examination (DIME) or apply for Hearing within 30 calendar days of the filing of the FAL, July 8, 2012

5. The Claimant began collecting PPD on a bi-weekly basis. He did not file an Objection to the FAL or file an Application for Hearing (Respondents' Exhibit G-2). The Division of Workers Compensation (DOWC) reviewed the file and requested a Final Payment Notice on September 24, 2012 (Respondents' Exhibit E). Respondents filed the Final Payment Notice on October 22, 2012 (Respondents' Exhibit F).

6. On October 2, 2012 the Claimant contacted the DOWC and enquired about obtaining a $10,000.00 Lump Sum (Respondents' Exhibit G-1). The Claimant then contacted Respondents and made the request. Respondents issued the lump sum payment on October 4, 2012.

7. Due to this and a lump payment at the onset of PPD, all PPD benefits had been paid out as of August 21, 2014. Respondents filed a second FAL, based upon the completion of payment due to the change in the time period of benefits being owed. Again, Respondents attached the required notices to Claimant. Again, the Claimant did not file an Objection to the FAL and did not apply for hearing on any issues (Respondents' Exhibit B 13-18). The payment ledger was also attached to the FAL.

8. Claimant relocated again to Oregon. He did not treat with any physician in 2014. Again, the Claimant did not file an Application for Hearing on any issues surrounding his post-MMI maintenance care or anything else during this time period (Respondents' Exhibit G 1-2). Claimant eventually relocated to Alaska.

The Petition to Reopen

9. The Claimant filed a Petition to Re-Open on June 6, 2017. The alleged ground in the Petition to Re-Open is marked "Change in Condition". The Claimant did not mark Error or Mistake as a reason for Re-opening (Respondents' Exhibit. H). The attached medical reports were dated March 24, and May 17, 2017. The Petition and Application make no mention of any issues with the FALs. The Claimant's Application for Hearing in connection with the Petition, does not endorse PPD as issue. TPD from March 2013 to "ongoing" and TTD for the same time period were listed as issues. The Claimant later withdrew permanent total disability as an issue by motion. There was no endorsement of an issue concerning the FALs on this Application (Respondents' Exhibit H-7-8). At the commencement of the may 1, 2019 hearing, the ALJ limited the

reopening issues to whether the latest FAL was null and void, which would result in the case continuing to be open.

10. Hearing was set for October 3, 2017. Due to the Claimant not answering discovery and the A pre-hearing conference before the DOWC was held on November 6, 2017. Conference notations indicate that there was difficulty obtaining information from the Claimant. Again, the Claimant did not provide answers to discovery and the hearing was vacated. The Pre-hearing Order allowed the Claimant to withdraw the Application for Hearing and refile it. There was no mention, nor was there a motion, of additional issues to be endorsed for the next Application (Respondents' Exhibit J).

11. The Claimant filed a new Application for Hearing on March 23, 2018 endorsing the same issues, this time omitting PTD. Again, there was no issue concerning the FAL endorsed and no endorsement of the claim not being closed, such an endorsement possibly being incomprehensible to a self-represent claimant (as the Claimant was at the time) Again due to discovery issues, the hearing was vacated. On August 30, 2018, the Claimant then filed his third Application now endorsing a penalty for alleged failure to involve a Level II provider and closure of claim. Claimant did not endorse the FAL as *void in ab initio* and did not endorse PPD. Claimant also did not file a motion to add the issue nor had there been any Notice that this was an issue until the third Application was filed.

Analysis of the Evidence

12. It is undisputed that at the time of the Petition to Re-open the Claimant did not assert that the claim was still open and that there was an issue with the FALs. It is also undisputed that the Claimant did not endorse PPD on any of his Applications for Hearing. It is undisputed that the Claimant did not Object to either of the FALS and did not apply for hearing within 30 days of their issuance of the FALs. It is undisputed that the Claimant collected over $55,000.00 in PPD and has not returned this sum to the Respondents. While his Petition to Re-Open based on change of condition was timely filed 1 day before the Statute ran, a Petition to Re-open based on Error or Mistake was never filed and the Application for Hearing was not filed until August 30, 2018, The Claimant has raised no issue with the impairment rating itself, and proffers no explanation as to why the DOWC closed the file, after reviewing the FALS. A Petition to Re-Open on Change of Condition is the next procedural step in this case.

13. The Claimant's argument at hearing, with regard to not objecting to the FALs was that he could have requested a DIME, and that he could have received additional indemnity because he was unaware of the law.

14. Claimant does **not** argue that he did not receive the FALs or that the FALs were untimely. He also does **not** argue that the FALs did not have the requisite Notice requirements and objection forms attached (Resp.ondents' Exhibit B). His argument

that the FALs did not meet the requirements of § 8-42-107, C.R.S. is factually untimely. The Claimant accepted the PPD award made in the FALs in its entirety, made a lump sum request, which was granted, and the DOWC reviewed the file and requested a Final Payment Notice, thus, the DOWC closed the file and gave notice to the parties that the file was closed.

15. The Claimant argued at hearing that he was not given a right to a DIME to increase his indemnity award. This is not accurate. The insurance carrier sent the requisite Notice and forms to the Claimant in 2012 and 2014 and the Claimant chose to not pursue a DIME or file an Application for Hearing. The only impediment to the Claimant obtaining a DIME was his not requesting a DIME. By requesting the $10,000.00 Lump Sum, which the Claimant received, he demonstrated that he had the ability to contact the DOWC and make inquiries and that he had received the FAL. The ALJ finds that this establishes an acquiescence and acceptance of the FAL.

16. The DOWC received the first FAL on June 8, 2012 and found no errors contained in it. As was the required procedure at the time, when no Objection was filed, the DOWC requested the Final Payment Notice. Respondents fulfilled this request. In that the DOWC enacted the procedures to close the claim, accepted the FAL without issuance of a correction notice, and Claimant's Lump Sum request.

17. The filing of the second FAL again afforded the Claimant the right to apply for Hearing on issues at that time. The Claimant again took no action. It is undisputed that Claimant did not timely give notice of the Error/Mistake. It is also undisputed that the last PPD payment was over two years prior to either June 6, 2017 or August 30, 2018. The purpose of a Petition to Re-open is to give Respondents notice that an award should be re-opened. The Claimant did not mark "Error or Mistake" on the June 6, 2017 Petition. The attached medical reports are dated in March and May of 2017. The Application for Hearing attached to the Petition did not endorse PPD or make mention of any issues with the FAL. Specifically, the Claimant did not assert that the FALs were *void ab initio*.

18. The Claimant states in his opening brief that the Petition to Re-Open was filed in a precautionary manner in that the case was still open due to the FALs being *void ab initio*. The Claimant gave no notice of any issues with the FALs until August 30, 2018.

19. The ALJ infers and finds that Respondents are prejudiced by Claimant's untimely raising of this issue (years after the last PPD payment was received by the Claimant) as throughout 2017 and the majority of 2018, Respondents proceeded defending the matter as a Petition to Re-open based on change of condition. This included not only discovery tailored to that issue but also the retaining of Stanley Ginsburg, M.D., to perform a chart review (Respondents' Exhibit K). The Claimant has

not proffered a reasonable or persuasive excuse as to the untimely and lack of notice to this issue.

20. The Claimant not only achieved MMI on April 30, 2012, but he has worked for at least four employers since MMI. The case was closed by the FALs as the FALs were accepted and approved by the DOWC and Claimant accepted the award and did not timely Object. The last payout on the PPD award was August 21, 2014.

21. The Petition to Re-open, dated June 6, 2017, on the stated ground of "change of condition," was filed one day short of the expiration of the relevant statute of limitations provision. It was timely and attached to it were medical reports that support a prima facie case of worsening of condition beginning on March 24, 2017 (Respondents' Exhibit H). It creates a disputed factual issue concerning whether the 2017 medical condition was a natural progression of the sequelae of the June 7, 2011 injury, or whether a change or worsening began in March 2017. The Petition to Reopen postures the issue of reopening on the ground of changer of condition for a future hearing..

DISCUSSION

The Claimant's principal thrust is that the FALs are null and void. If so, It follows that the $55,780.44 PPD award was a mistake due to clerical error, not fraud. Recovery of overpayments, based on mistake and on a retroactive basis, was prohibited by *HLJ Management Group, Inc. v. Kim,* 804 P.2d 250 (Colo. App. 1990). In 1997, the General Assembly amended the re-opening statute to include overpayments as a ground for re-opening as to overpayments only. § 8-43-303 (1) and (2) (a), C.R.S. Now, employers have a statutory right to review and recalculate payments if an insurance carrier made a mistake in previous payments. *Simpson v. Indus. Claim Appeals Office,* 2009 Colo. App. LEXIS 576 (No. 07CA1581, April 16, 2009) (NSOP). Previously, an admission of liability could only be withdrawn retroactively on the basis of fraud. *Vargo v. Indus. Comm'n,* 626 P.2d 1164 (Colo. App. 1981). To the extent that a case may be re-opened, based on mistake and not fraud, if there were overpayments, the *Vargo* grounds for retroactively modifying a previously admitted award has been altered to include employer mistakes in calculations.

If the Claimant's theory of the case, *i.e.,* that the FALs were *void ab initio*, prevailed, then the Respondents would be entitled to recoup overpayment of $55,780.44 in overpayments made due to the mistake that Dr. Fotheringham was not a Colorado Level II physician, thus, his rating was void. The fallacy with this argument is that the provisions of § 8-42-107 (8) (b.5) (I)(A), C.R.S., allows an out-of-state physician to determine MMI and rate permanent medical impairment provided that the AMA *Guides,* 3rd. Ed., Rev. are used. If a claimant is not satisfied with this proviso, the claimant may request an insurer to pay for the claimant to come to Colorado and be rated by a Colorado Level II Accredited physician. In the present case, both the Respondents and the Claimant accepted Utah ATP Dr. Fotheringham's MMI

determination and rating—**End of Story** concerning the FALs. There is a time honored legal principle that the apple cart should not be disturbed unless it is absolutely necessary. in the present case, the statutory scheme on ratings, as referenced herein above, dictate that the FALs should be left well enough alone.

As found, the Petition to Re-open, dated June 6, 2017, on the stated ground of "change of condition," was filed one day short of the expiration of the relevant statute of limitations provision. It was timely and attached to it were medical reports that support a prima facie case of worsening of condition beginning on March 24, 2017 (Respondents' Exhibit H). creates a disputed factual issue concerning whether the 2017 medical condition was a natural progression of the sequelae of the June 7, 2011 injury, or whether a change or worsening began in March 2017. The Petition postures the issue of "change in condition" for an evidentiary hearing..

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Final Admissions of Liability (FALs)

a. If the Claimant's theory of the case, *i.e.,* that the FALs were *void ab initio*, prevailed, then the Respondents would be entitled to recoup $55,780.44 in overpayments of PPD benefits made due to the mistake that Dr. Fotheringham was not a Colorado Level II physician, thus, his rating was void. The fallacy with this argument is that the provisions of § 8-42-107 (8) (b.5) (I)(A), C.R.S., allow an out-of-state physician to determine MMI and rate permanent medical impairment provided that the AMA *Guides,* 3rd. Ed., Rev. are used. As found, this occurred. If a claimant is not satisfied with this proviso, the claimant may request an insurer to pay for the claimant to come to Colorado and be rated by a Colorado Level II Accredited physician. In the present case, both the Respondents and the Claimant accepted Utah ATP Dr. Fotheringham's MMI determination and rating. This is dispositive concerning the FALs. There is a time honored legal principle that the apple cart should not be disturbed unless it is absolutely necessary. in the present case, the statutory scheme on ratings, as referenced herein above, dictate that the FALs should be left well enough alone. In light of these statutory provisions, it is unnecessary to deal with issues of estoppel, waiver and laches.

Petition to Re-open

b. Regardless of the stated ground, the Petition to Reopen was timely. A Petition to Re-open is required in this case because TTD was properly terminated. The Claimant not only reached MMI, but he has worked for at least four employers since MMI. The case was closed by the FALS as the FALS were accepted and approved by the DOWC and the Claimant accepted the award and did not timely Object. Under § 8-43-303(1), C.R.S., after MMI and within six years of the date of injury, an ALJ may re-open a claim based on fraud, an overpayment, **an error, a mistake,** or a change in condition. See *El Paso County Department of Social Services v. Donn,* 865 P.2d 877 (Colo. App. 1993); *Burke v. Indus. Claim Appeals Office,* 905 P. 2d 1 (Colo. App. 1994); *Hanna v. Print Express, Inc.,* 77 P. 3d 863 (Colo. App. 2003); *Donohoe v. ENT Federal Credit Union,* W.C. No. 4-171-210 [Indus. Claim Appeals Office (ICAO) September 15, 1995]. This is so because MMI is the point in time when no further medical care is reasonably expected to improve the condition. § 8-40-101(11.5), C.R.S. (2009); *City of Colorado Springs v. Indus. Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Where a claimant seeks to re-open based on a changed condition, he must demonstrate a change in condition that is "causally connected to the original compensable injury." *Chavez v. Indus. Comm'n,* 714 P.2d 1328 (Colo. App. 1985). As found, the Claimant has made a prima facie case for re-opening. Endorsement of "petition to reopen" on an application for hearing or response to application for hearing sufficiently raises the issue for consideration. *See Cooper v. Indus. Claim Appeals Office,* 109 P.3d 1056 (Colo. App.2005). Collateral estoppel applies to all issues except "**error, mistake, or a change in condition."** *Cooper v. Indus. Claim Appeals Office,* 998 P.2d 5 (Colo. App. 1999). Consequently, as found, it is appropriate to grant the Claimant's Petition to re-open on the ground of "change of condition." It is not appropriate to grant it on the ground of error or mistake insofar as the FALs were allegedly *void ab initio* because they were **not** *void ab initio.*

Burden of Proof

c. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits, beyond those previously admitted. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has

failed to sustain his burden with respect to error and mistake, specifically, that the FALs were *void ab initio.* Consequently, the issue of re-opening based on change of condition remains to be heard at a future time.

CORRECTED ORDER

IT IS, THEREFORE, ORDERED THAT:

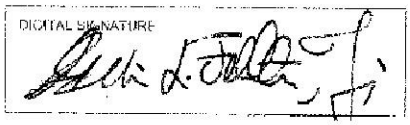
A. Respondents' Motion for Corrected Order is hereby granted.

B. Claimant's request to have the previously filed Final Admissions of Liability declared null and void is hereby denied and dismissed. Also, Claimant's request to re-open based on this proposition is hereby denied and dismissed.

C. Claimant's Petition to re-open, based on "change of condition" is hereby deferred, pending a future evidentiary hearing.

D. Any and all issues not determined herein, including re-openuing, are reserved for future decision..

DATED this 5th day of June 2019..



EDWIN L. FELTER, JR.
Administrative Law Judge

This decision of the administrative law judge does not grant or deny a benefit or a penalty and may not be subject to a Petition to Review. Parties should refer to § 8-43-301(2), C.R.S., and other applicable law regarding Petitions to Review. If a Petition to Review is filed, *see* Rule 26, OACRP, for further information regarding the procedure to be followed.

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that her cervical spine condition and a three level cervical fusion is causally related to her November 6, 2014 work injury.

FINDINGS OF FACT

1. Claimant was employed by Employer as a team leader and content manipulator. Employer is a restoration company that restores fire and flood damaged businesses and homes. Claimant's duties included working with a crew to pack and clean damaged businesses and homes. Her duties often required lifting and moving heavy furniture items.

2. On November 6, 2014, while so employed, Claimant sustained an admitted work related injury. On that date, Claimant was lifting a large desk in a commercial office building with three other coworkers. As she lifted the corner of the desk up, Claimant felt immediate pain.

3. Claimant testified that the immediate pain she felt was in her shoulder and the right side of her neck.

4. Claimant reported the injury to her supervisor and was referred for treatment.

5. On November 11, 2014, Stephen Danahey, M.D. evaluated Claimant. Claimant reported that she had been lifting a large heavy desk with other employees when she felt a pulling sensation in the right shoulder. Claimant reported that she had continued to work, but had increasing pain in her right shoulder with radiation to the right lateral neck and the right arm. Dr. Danahey assessed right shoulder strain and recommended physical therapy and ibuprofen. Dr. Danahey noted that the examination was concerning for a rotator cuff tear and that if there was no improvement in a week or so, an MRI would be needed for the shoulder. *See* Exhibits 3, A.

6. On November 14, 2014, Claimant underwent physical therapy with PT William Widdison. Claimant reported that her chief complaint was right cervical shoulder pain. PT Widdison noted that Claimant was there for therapy for a right shoulder strain. PT Widdison evaluated the right shoulder strain, issued Claimant a cold pack and point relief for use at home and work, and instructed Claimant in therapeutic exercises. PT Widdison instructed on exercises that included cervical rotation and side bending stretches and instructed Claimant in sitting posture and its importance to Claimant's neck and shoulder pain. *See* Exhibit B.

7. On November 19, 2014, PT Widdison noted that Claimant had the same complaints of right shoulder pain and loss of motion. *See* Exhibit B.

8. On November 20, 2014, Dr. Danahey evaluated Claimant. Claimant reported right shoulder pain and that it hurt to move the shoulder. On exam, Dr. Danahey found the right shoulder abduction and flexion to be very limited. He continued to asses right shoulder strain. *See* Exhibit A.

9. Claimant also underwent physical therapy on November 20, 2014. Claimant reported that her shoulder was feeling the same overall with symptoms aggravated with active abduction and with raising the arm in general. Claimant reported pain at the anterior shoulder joint and the right upper trapezius region. *See* Exhibit B.

10. On December 5, 2014, Elizabeth Palmer, PA evaluated Claimant. Claimant reported that she was still having pain in her right shoulder. PA Palmer noted that the pain was located over the right AC joint as well as in the right trapezius and that it radiated up the right neck. Claimant reported mild improvement of symptoms with physical therapy. PA Palmer assessed strain of right shoulder, right shoulder joint pain, and ordered an MRI of Claimant's right shoulder. *See* Exhibit A.

11. Claimant underwent an MRI of her right shoulder on December 16, 2014. It showed oblique tearing of the supraspinatus tendon at its confluence with the infraspinatus. *See* Exhibits 4, D.

12. On December 19, 2014, Miriam Halazon, NP evaluated Claimant. Claimant's right shoulder was found to have limited range of motion in all planes and was painful in all planes. The right shoulder had a positive Hawkins test, positive empty can test, and positive lift off test. On examination of the cervical spine, NP Halazon found normal lordosis, no tenderness, and full range of motion with normal sensation. NP Halazon assessed shoulder joint pain, strain of right shoulder, and tear of right supraspinatus tendon. She referred Claimant to an orthopedic consultation. *See* Exhibit A.

13. On December 19, 2014, Claimant was involved in a non-work related motor vehicle accident. Claimant was on Santa Fe Boulevard stopped at a red light when a sports utility vehicle hit another sports utility vehicle that was pushed into Claimant's car. The speed limit on Santa Fe Boulevard was 45 miles per hour and Claimant had minor damage to her vehicle. Claimant did not seek immediate medical care following the motor vehicle accident.

14. On December 30, 2014, Claimant was evaluated at Southwest Emergency Room by Gregory Burcham, M.D. Claimant reported she was rear ended on December 19 while wearing her seatbelt and that no airbags deployed. Claimant reported worsening neck pain, thoracic back pain, right wrist pain, and left hip pain since her motor vehicle collision. On examination, Claimant's neck was found to have full range of motion, no

midline tenderness, and mild left lateral tenderness. Dr. Burcham doubted fracture or dislocation and opined there was no evidence of spine injury. He opined that Claimant may be developing radicular pain and that Claimant may need an MRI if her symptoms progressed. Dr. Burcham referred Claimant to orthopedics and provided a primary impression of cervical strain. Claimant was discharged to home. *See* Exhibits 5, F.

15. On January 20, 2015, orthopedic surgeon Craig Davis, M.D. evaluated Claimant. Claimant reported that on November 6 she was helping with a desk at work when she felt a pop and pain in her right shoulder and reported that she had significant pain since with any sort of reaching or lifting. Dr. Davis reviewed Claimant's right shoulder MRI. On exam, Dr. Davis found a strongly positive impingement test and provided the impression of right rotator cuff tear. He opined that Claimant was a good surgical candidate. Claimant indicated that she wanted to think about the surgery. Claimant did not report a neck injury to Dr. Davis and did not report the motor vehicle accident she had been involved in less than one month prior. *See* Exhibits 6, G.

16. On February 18, 2015, Claimant provided a recorded statement to an insurance carrier involving her motor vehicle accident. Claimant described the motor vehicle accident and her motor vehicle accident related injuries in detail. Claimant indicated that her injuries from the motor vehicle accident included a neck injury and reported ongoing symptoms including neck popping and pain across her neck and shoulders. Claimant reported pain levels at 6.5 to 7.5/10. Claimant denied having any prior neck injuries, reported that she was still hurting, and reported that she wanted medical care for her motor vehicle accident injuries. *See* Exhibit I.

17. On April 7, 2015, Dr. Davis evaluated Claimant. He again went over surgical treatment and told Claimant that the longer she waited, the larger her rotator cuff tear was likely to be and the worse the result of the repair. Claimant again stated she wanted to think about things and wanted to make arrangements with work. Claimant did not mention neck issues or her motor vehicle accident at this visit. *See* Exhibit G.

18. On April 15, 2015, Claimant's personal care provider Gregory Glick, PA evaluated Claimant. Claimant reported chronic neck pain, left hip pain, and right hand pain after a December motor vehicle accident. Claimant reported that when she turned her head, it sometimes got stuck and she needed to jar her neck to get it unstuck. Claimant reported that the pain was in her right shoulder and right side of her neck primarily and that she now had a grinding/popping noise in her neck when she moved it. On exam, Claimant's neck motion was noted to be limited. Cervical spine x-rays were performed and compared to June 2009 x-rays. They showed that Claimant's grade 1 retrolisthesis of C5 on C6 from 2009 was unchanged, that there was a new minor grade 1 anterolisthesis of C4 on C5, that there was stable moderate to severe degenerative disc disease at C5-6, and that there was mild cervical facet hypertrophy. *See* Exhibits 5, J, K.

19. On October 7, 2015, Claimant underwent right shoulder arthroscopy with labral debridement, arthroscopic double row repair of the rotator cuff, and subacromial decompression. *See* Exhibits 7, G.

20. On October 21, 2015, Timothy Abbott, PA for Dr. Davis, evaluated Claimant. Claimant reported that she had been compliant with her sling and denied any new injury. X-rays showed good hardware placement and soft underside of the acromion. PA Abbott opined that Claimant appeared to be healing well and understood the risk of re-tear and would continue to avoid any active use of the shoulder. *See* Exhibit G.

21. On November 18, 2015, Dr. Davis evaluated Claimant. Claimant reported she had been using the sling and doing physical therapy. Claimant reported quite a bit of trapezial and neck pain as well as headaches. Dr. Davis opined that Claimant was doing well following rotator cuff repair and recommended discontinuing the sling and continuing physical therapy to progress to active motion and eventually to strengthening. *See* Exhibit G.

22. On December 16, 2015, Dr. Davis evaluated Claimant. Dr. Davis noted that Claimant was now 10 weeks from the right rotator cuff repair and was compliant with her 2 pound restriction and able to work without difficulty with no new strain or injury to the shoulder. Claimant reported that she still had pain in her neck and trapezius but that it seemed to be improving gradually with massage and since she had discontinued her sling. On examination, Dr. Davis found slight tenderness to palpation along the trapezius into the neck. He found good neck range of motion with only mild pain at extremes. Dr. Davis provided the impression of post right shoulder scope with rotator cuff repair and postoperative neck and trapezial pain. He allowed Claimant to increase her lifting to 5 pounds as tolerated and recommended continued physical therapy as well as continued massage therapy for the neck and trapezius. *See* Exhibit G.

23. On January 13, 2016, Dr. Davis evaluated Claimant. Claimant reported she was making progress in physical therapy but continued to have a lot of soreness around the right side of her neck and trapezial area. Dr. Davis noted that claimant had apparently not had any massage despite his last request. He opined that Claimant was making gradual progress. On exam, Claimant reported significant tenderness on the right side of her neck and trapezial area as well as pain with range of motion of her neck that radiated to the right side. Dr. Davis noted that Claimant continued to have a lot of myofascial pain on the right side of the neck and trapezial area. *See* Exhibits 6, G.

24. On March 9, 2016, Dr. Davis evaluated Claimant. Claimant reported she began massage therapy, which helped but continued to have significant activity related pain around the right trapezial area as well as the lateral acromial area. On exam, Claimant had some tenderness in the trapezial area and parascapular area as well as over the lateral acromion. Dr. Davis opined that Claimant was having more pain than he would normally expect at this point and ordered an MRI to evaluate the shoulder repair. *See* Exhibit G.

25. On April 27, 2016, after an updated right shoulder MRI, Dr. Davis noted that Claimant had a partial re-tear of the rotator cuff. He opined that recurrent tears happen approximately 20% of the time after a tear of her size and that it was sometimes

unavoidable since they had to do physical therapy starting right after surgery to avoid postoperative stiffness. He recommended a second opinion with Dr. Faulkner and opined it might be necessary to use a graft in repeat surgery. *See* Exhibit G.

26. On July 18, 2016, Nathan Faulkner, M.D. evaluated Claimant. Claimant reported doing well for approximately two months post surgery but then developing worsening pain in her right shoulder. Dr. Faulkner opined that Claimant would be a good candidate for a revision rotator cuff repair with possible allograft augmentation and Claimant indicated she wanted to think about her options. *See* Exhibit G.

27. On January 12, 2017, Claimant underwent another right shoulder surgery, this one performed by Dr. Faulkner. The procedures performed included: right shoulder arthroscopy with debridement of the superior and posterosuperior labrum as well as synovitis in the glenohumeral; arthroscopic rotator cuff repair with allograft augmentation, and subscapularis repair. *See* Exhibits 12, G.

28. On January 23, 2017, Dr. Faulkner evaluated Claimant. Claimant reported her pain was mildly improved since surgery. Claimant reported pain in her upper arm and neck and that she had been wearing her sling as instructed. Dr. Faulkner recommended continuing the sling when ambulating and at night. *See* Exhibit G.

29. On February 20, 2017, Dr. Faulkner evaluated Claimant. Claimant reported that her pain continued to slowly improve and that the pain was localized to her neck, upper arm, and lateral shoulder. Claimant reported wearing her sling as instructed. Dr. Faulkner recommended discontinuing the sling and performing physical therapy. *See* Exhibit G.

30. On April 3, 2017, Dr. Faulkner evaluated Claimant. Claimant reported she continued to have generalized shoulder pain that radiated into her biceps and anterior chest. Dr. Faulkner noted that an MRI showed the graft and cuff to be intact. He recommended continued physical therapy. *See* Exhibit G.

31. On June 5, 2017, Dr. Faulkner evaluated Claimant. Claimant reported that her pain and range of motion had been improving but had gotten worse since her last physical therapy appointment. Claimant reported that she still could not ride her motorcycle. *See* Exhibit G.

32. On September 11, 2017, Dr. Faulkner evaluated Claimant. Claimant reported muscle tightness and intermittent catching in her shoulder with pain at a 6/10. Dr. Faulkner noted another MRI showed again that the rotator cuff and graft were intact. Dr. Faulkner ordered an intra articular steroid injection. *See* Exhibit G.

33. On November 14, 2017, Christopher Isaacs, D.O. provided a second surgical opinion. Claimant reported that she had suffered a shoulder injury while lifting a desk at work. Claimant did not report a neck injury during her work accident and also did

not report her motor vehicle accident. Dr. Isaacs recommended a right shoulder injection followed by an arthroscopic lysis of adhesions. *See* Exhibit O.

34. On December 15, 2017, Alexander Zimmer, M.D. evaluated Claimant. Claimant reported that she injured her right shoulder on November 6, 2014 when lifting a heavy desk. Claimant reported having two rotator cuff surgeries on her right shoulder and that she continued to have pain from the right shoulder area extending across the upper trapezius to the right posterior neck. Claimant also reported a loss of feeling over the tips of her second through fifth digits on the right hand. Claimant denied any next or upper extremity problems prior to her work injury. Dr. Zimmer performed a nerve conduction-emg study that was entirely normal. His impression noted no objective evidence of neuropathy on examination or nerve conduction testing including cervical radiculopathy. Dr. Zimmer opined that Claimant's symptoms may be related to musculoskeletal factors producing pain in the shoulder girdle then causing more distal sensory symptoms. *See* Exhibit P.

35. On December 18, 2018, Dr. Faulkner provided a shoulder injection and recommended more shoulder surgery to include a manipulation under anesthesia with diagnostic arthroscopy, lysis of adhesions, subacromial bursectomy, and possible biceps tenodesis. *See* Exhibit G.

36. On January 25, 2018, John Burris, M.D. evaluated Claimant. Claimant reported developing right shoulder pain after lifting tables at work. Claimant did not report neck pain during the lifting event and did not report her motor vehicle accident. Dr. Burris planned to obtain Dr. Faulkner's noted and then decide how to proceed. Around this time, Claimant requested a change of physician to someone closer to home which was granted and she began treatment with Brian Beatty, D.O.

37. On January 29, 2018, Dr. Faulkner evaluated Claimant. Claimant reported that the intra articular steroid injection only provided 2 hours of pain relief. Claimant also reported that a recent EMG was normal. Claimant continued to reported muscle tightness and intermittent painful catching in the shoulder. Claimant also reported continued numbness in her fingertips since the surgery. Dr. Faulkner recommended another MRI to evaluate. *See* Exhibit G.

38. On February 21, 2018, Dr. Faulkner called Clamant to review the recent right shoulder MRI. Dr. Faulkner opined that it showed some adhesive capsulitis and residual subacromial bursitis and he recommended proceeding with examination/manipulation under anesthesia with diagnostic arthroscopy, lysis of adhesions, subacromial bursectomy, and possible biceps tenodesis. Claimant wanted to think about her options and get back to him. *See* Exhibit G.

39. On April 5, 2018, Dr. Beatty evaluated Claimant. Claimant reported that she was injured while at work and lifting a desk and that she felt a pull in her right shoulder. Claimant again did not report a neck injury or the motor vehicle accident. Claimant was referred for chiropractic care. On April 25, 2018, Dr. Beatty evaluated Claimant again

and referred Claimant for an MRI of her cervical spine to rule out the neck as a contributing factor. *See* Exhibit Q.

40. On April 30, 2018, Claimant underwent a cervical MRI. The results showed zygopophyseal joint arthritis worse on the right side at C4-5; spondylolisthesis at C4-5, moderate right foraminal stenosis at C4-5, small protrusions at C3-4; protrusions and osteophytes at C5-6, C6-7, and C7-T1; moderate canal and severe bilateral foraminal stenosis at C5-6; and mild canal stenosis and mild right foraminal narrowing at C6-7. Dr. Beatty referred Claimant to Hugh McPherson, M.D. after reviewing the cervical spine MRI results. *See* Exhibit Q.

41. On June 13, 2018, Dr. McPherson evaluated Claimant. Claimant reported immediate pain in her neck when lifting the desk at work. Claimant failed to report her motor vehicle accident. Dr. McPherson diagnosed probable C5 radiculopathy, C4-5 instability with anterolisthesis, C5-6 retrolisthesis, and C4 through C7 degeneration. He opined that a C4-C7 anterior posterior fusion should be considered and Claimant wanted to think about it. *See* Exhibit T.

42. On July 11, 2018, Dr. McPherson evaluated Claimant. Dr. McPherson recommended obtaining a cervical injection to isolate where claimant's symptoms were coming from. On August 7, 2018, Barry Ogin, M.D. administered a right C6 transforaminal epidural steroid injection. Dr. Ogin's post procedure impressions were advanced cervical spondylosis, cervical degenerative disc disease, and right upper extremity radiculopathy. On August 27, 2018, Dr. McPherson noted that the injection helped delineate Claimant's pathology, as the injection provided 70% relief. Dr. McPherson concluded the cervical spine was now the primary pain generator, and recommended to moving forth with a C4-C7 fusion.

43. David Orgel, M.D. reviewed Dr. McPherson's recommendation for a three level cervical fusion and issued a report on September 11, 2018. Dr. Orgel opined that the relatedness of the need for fusion was suspect and recommended denying surgery until an independent medical examination was completed by Dr. Hattem. *See* Exhibit V.

44. On September 18, 2018, Albert Hattem, M.D. performed an independent medical examination. Claimant reported that she lifted a u shaped desk estimated to weigh 200 pounds with two men and one woman and that while she was pulling on the right side of the desk and lifting slightly, she felt immediate pain in her right shoulder. Claimant did not describe immediate neck pain or neck popping. Dr. Hattem asked Claimant about subsequent injuries and Claimant denied any neck injuries. Dr. Hattem reviewed medical records and performed a physical examination. *See* Exhibit W.

45. Dr. Hattem opined that Claimant's cervical condition and need for a three level fusion was not causally related to her work injury. He opined that the history of mechanism of injury was unlikely to result in cervical spine injury and that the records supported that Claimant had only intermittent cervical myofascial pain following the work injury radiating up from her acute rotator cuff tear not unexpected given such a large

rotator cuff tear. Dr. Hattem also opined that Claimant's December 19, 2014 negative cervical examination suggested the myofascial pain had resolved by that date and that the cervical MRI showed only age related chronic degenerative changes and no evidence of an acute cervical spine injury. Dr. Hattem opined that considering the significant degenerative findings identified on the cervical MRI, Claimant was likely to be experiencing the same cervical spine symptoms regardless of her work injury. *See* Exhibit W.

46. On November 26, 2018, Dr. Faulkner evaluated Claimant. Claimant reported that since she was seen in January, she had gone to Dr. McPherson and was found to have some central and foraminal stenosis that was likely contributing to her right shoulder and lateral neck pain and that Dr. McPherson was recommending a C4-7 fusion. Claimant reported continued muscle tightness and intermittent catching in the shoulder as well as numbness in her fingertips since surgery. Dr. Faulkner noted that Claimant had persistent pain, stiffness, and significantly limited function of her shoulder despite articular steroid injection, anti-inflammatory pain medication, and extensive physical therapy. Dr. Faulkner noted that Claimant's foraminal and central stenosis was likely contributing to Claimant's ongoing pain. Dr. Faulkner opined that given that Claimant's pain started at her job and had never resolved despite two shoulder surgeries, it was as likely as not that the work injury exacerbated Claimant's underlying cervical degenerative disc disease. He therefore recommended the cervical spine treatment be covered by workers' compensation. Dr. Faulkner was not aware of Claimant's motor vehicle accident. *See* Exhibits 11, G.

47. On December 6, 2018, Dr. McPherson reviewed Dr. Hattem's IME report. Dr. McPherson relied on Dr. Hattem's report for the medical records. Dr. McPherson disagreed with Dr. Hattem and believed the mechanism of injury of lifting a desk was substantial enough to cause a neck injury. Dr. McPherson opined that Claimant's cervical complaints were consistent since the point of initial complaint and he opined that Claimant had no prior active need for treatment in her cervical spine prior to her work injury. Dr. McPherson opined that Claimant had degenerative changes in her cervical spine that were likely pre-existing but asymptomatic, thus making the wakened area of her spine more susceptible to injury. Dr. McPherson had a history from Claimant of immediate pain in her neck when lifting the desk. Dr. McPherson was not aware of Claimant's motor vehicle accident. *See* Exhibit 17.

48. On April 10, 2019, Dr. Faulkner issued an updated report. Dr. Faulkner opined that there was a causal relationship between Claimant's work injury and her complaints of neck pain because Claimant indicated some pain in her neck that radiated into her arm at her initial visit. Dr. Faulkner opined that the neck pain started at work from the injury lifting a desk causing strain on the neck and shoulder. Dr. Faulkner noted that reviewing additional medical records did not change his opinion that the work injury is more likely than not to have exacerbated Claimant's neck condition and cervical degenerative disk disease. Dr. Faulkner opined that degenerative disc disease of the cervical spine can often manifest as shoulder pain due to referred pain from pinched nerves in the neck and that there was a high probability that is what was the case for

Claimant since she had two prior shoulder surgeries resulting in healing of the rotator cuff injury but yet continued right shoulder and radiating arm pain. Dr. Faulkner recommended continued definitive management of the neck before considering any additional shoulder treatment. *See* Exhibit 18.

49. Dr. Hattem testified at hearing. He continued to opine that Claimant's cervical MRI findings were chronic degenerative changes and that nothing on the cervical MRI could be identified as acute. Dr. Hattem also noted that after his independent medical examination, he was given additional records including a 2009 cervical x-ray report and records related to the motor vehicle accident, and the recorded statement made to an insurance company regarding the motor vehicle accident. He also noted that he received physical therapy records. Dr. Hattem testified and opined that the intermittent myofascial neck pain reported after the work injury and before the motor vehicle accident was not pain related to a cervical spine injury.

50. Dr. Hattem opined that after reviewing the additional records, he believed Claimant's testimony that she did not injure her neck in the motor vehicle accident and that her neck was exactly the same before and after the motor vehicle accident to be inconsistent. Dr. Hattem again opined that Claimant would have the same cervical condition and need for care regardless of the work injury. He opined that the work related mechanism of injury was not one expected to cause a cervical spine injury but opined that a whiplash type injury from the motor vehicle accident is a more injurious mechanism of injury. He opined that if any event aggravated or accelerated Claimant's pre existing condition it was the motor vehicle accident.

51. Dr. Hattem's opinions are found credible and persuasive. Dr. Hattem's causation opinion is consistent with the overall weight of the evidence.

52. Claimant testified at hearing. Overall, she is not found credible or persuasive. Her testimony that her neck pain was the exact same before and after her motor vehicle accident is inconsistent with her reports to the insurance provider regarding the motor vehicle accident and is inconsistent with medical records. Her explanation for failing to report her motor vehicle accident to her workers' compensation providers is not persuasive. Her testimony that after significant findings in 2009 x-rays of her cervical spine she was not told or did not know she had a degenerative condition in her neck is not persuasive. Claimant's testimony that she did not recall telling the motor vehicle accident insurance provider that she had injured her neck in the motor vehicle accident is also not persuasive.

53. Many providers relied on Claimant's subjective reports indicating immediate pain in her neck at the time she lifted the desk. They also relied on subjective reports made by Claimant indicating that she had no prior neck problems, when 2009 x-rays show clear evidence of degenerative disk disease. Further, Claimant also reported subjectively and inaccurately that she had no subsequent neck injuries after her work injury when she in fact was treated for and reported a neck injury with the motor vehicle accident. Any

opinions based on Claimant's inaccurate subjective reports cannot be relied upon to any degree of certainty.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo.App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo.App. 2000).

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d

1192 (Colo. App. 2002).). Again, the claimant bears the burden of proof of showing that medical benefits are causally related to his work-related injury or condition, by a preponderance of the evidence. *Ashburn v. La Plata School District 9R,* W.C. No. 3-062-779 (ICAO May 4, 2007); C.R.S. §8-43-201, *HLJ Management Group, Inc. v. Kim,* 804 P. 2d 250(Colo. App. 1990).; *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915, 918 (Colo. App. 1993).

Claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his/her need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949); *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970); § *8-41-301(1)(c), C.R.S.* Ongoing benefits may be denied if the current and ongoing need for medical treatment or disability is not proximately caused by an injury arising out of and in the course of employment. *Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). In other words, the mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment was caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those which flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball*, *supra*.

It is well settled that any natural development of an intervening, nonindustrial injury, which is separate from and uninfluenced by an earlier industrial injury, is not compensated as part of the original industrial injury. *Post Printing & Publishing Co. v. Erickson,* 94 Colo. 382, 30 P.2d 327 (1934) Stated another way, the causation chain and the right to medical benefits may be severed by an efficient intervening event or aggravation. As stated in *Baer v. Sherwin Williams*, W.C. No. 4-217-692 (ICAO March 7, 1996), an efficient intervening injury which causes claimant's subsequent disability and need for further treatment supports the denial of benefits. *See* also *Metz v. Cornerstone Care Center,* W.C. No. 4-151-534 (ICAO March 7, 1994) (claimant's right knee condition which pre-existed an admitted work injury was worsened in an injury on the weekend after the work injury); In *Baer v. Sherwin Williams,* supra, after the occurrence of an admitted low back injury, claimant suffered a subsequent, intervening, back injury while installing a sprinkler system at home which necessitated surgical repair of a herniated disc that was denied as not causally related to the admitted injury. In *Kowal v. JVK Enterprises, Inc.*, W.C. No. 4-271-333 (ICAO September 20, 1996), claimant injured his neck while wrestling his manager at work, but did not lose any time from work until he experienced severe neck pain while reaching across a restaurant table while away from work, the herniated disc found unrelated to this claim's injury as it was caused by this subsequent unrelated event. Whether a particular condition is the result of an independent intervening cause is a question of fact for resolution by the ALJ. *Owens v. ICAO*, 49 P.3d 1187 (Colo. App. 2002).

Claimant has failed to establish, by a preponderance of the evidence that the three level surgical fusion recommended by Dr. McPherson is causally related to her November 6, 2014 work injury. Although Claimant sustained an acute right rotator cuff tear on that date and had myofascial pain radiating from her shoulder into her right upper trapezius and neck area, Claimant has failed to establish that the incident caused a cervical spine injury or the need for a three level surgical spine fusion.

As noted above, Claimant had significant pre-existing degenerative disease in her cervical spine prior to the work injury. This included retrolisthesis at C5-6, degenerative disk disease at C4-5, minor grade 1 anterolisthesis of C4 on C5, moderate to severe degenerative disc disease at C5-6, and mild cervical facet hypertrophy. None of these conditions are related to Claimant's work injury. The significant degenerative disease process was present in her cervical spine as far back as 2009 and is naturally expected to progress. Claimant has failed to establish that the work injury accelerated the natural degenerative process. As found above, there were no acute findings on the cervical spine MRI. Claimant is not credible that she experienced an acute pop in her neck on the date of injury.

Additionally, as found above, Claimant was involved in a motor vehicle accident on December 19, 2014. Claimant failed to report this motor vehicle accident to multiple providers who were treating her workers' compensation right shoulder injury. Claimant did report to an insurance provider that she had acutely hurt her neck in this motor vehicle accident. Claimant's symptoms after the motor vehicle accident changed from pain radiating from her shoulder into her neck to symptoms not previously present including locking, clicking, grinding, and range of motion deficits. Providers gave opinions on causation without the a history and based on Claimant's subjective reports. The opinions that were made without all the information cannot be relied upon to any degree of certainty.

Claimant has failed to establish, more likely than not, that the November 6, 2014 work injury caused her need for a three level cervical fusion. Rather, the credible evidence and testimony establishes it to be more likely needed due to the natural progression of her pre-existing degenerative disease or due to her intervening motor vehicle accident. Claimant has failed to meet her burden.

ORDER

It is therefore ordered that:

1. The request for further medical treatment of claimant's neck is denied and dismissed including, but not limited to, the C4-7 cervical fusion recommended by Dr. McPherson. Further treatment of claimant's neck is not reasonable, necessary, or related to her November 6, 2014 injury.

2. Any issued not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or

service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 5, 2019

/s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

I. Is Claimant entitled to Temporary Total Disability ("TTD") benefits?

II. Are Respondents entitled to withdraw their Final Admission of Liability ("FAL"), dated 12/21/2018?

III. If Respondents all allowed to withdraw their FAL, which party's DIME application will take precedence?

STIPULATIONS

The parties agreed that the issue of Permanent Total Disability will be held in abeyance. The ALJ accepted this stipulation.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant was a delivery driver at Lowe's Home Center. On February 19, 2018, he was moving a refrigerator when he suffered an injury to his thoracic and lumbar spine. A General Admission of Liability was filed on 4/18/2018. (Ex. 3).

2. Claimant treated with Dr. Autumn Dean as his authorized treating physician (ATP). Claimant's first appointment with Dr. Dean was on February 22, 2018. Dr. Dean's report was sent to the Lowe's Human Resources manager, Jill Roudebush. A First Report of Injury was promptly filed. (Ex. 28, pp. 293-295).

3. After the Claimant's initial medical appointment, Ms. Roudebush and the Claimant reviewed his restrictions on 2/24/18 when he returned to work. They both signed the "Transitional Work Employee Acknowledgement" (Ex. 26, p. 98) form for Sedgwick confirming his work restrictions which were: No lifting/carrying/pushing/pulling more than 5 lbs., no crawling/squatting/kneeling/climbing. At hearing, Ms. Roudebush testified that she was aware of Claimant's work restrictions, and that Claimant was therefore offered a modified job at Lowe's. She described the light job duty as working in the delivery office where he was notifying customers of the deliveries and taking incoming calls. He was basically providing customer service. She described the job as a seated position. She testified that his job was working in an office, not on the floor.

4. The Claimant returned to work performing the modified job and his regular 40 hour per week shift. He had his second appointment with Dr. Dean on March 1, 2018. Dr. Dean wrote:

> Today, he says he is doing a little better, but still having a lot of muscle pain and spasms. He says that he has a lot of pain with walking on the concrete at work, has been walking most of his shifts and not allowed to sit much. No new symptoms." (Ex. 27, p. 264).

The physician's restrictions on the WC 164 form for that appointment included a 5 pound lifting restriction (with the new addition of)

> No bending. Sedentary duties, stand as needed for comfort, Sit in chair with back (no stools). No driving if taking sedation medications". (Ex. 27, p. 272)

At hearing, Ms. Roudebush testified that she did not meet with the Claimant to discuss these new restrictions. She did indicate that the Claimant was able to stand and sit as needed for his light duty job as an appliance locator. The claims adjuster Megan Tharp testified that she received these new restrictions from the ATP on March 2.

5. Jill Roudebush testified about conversations she had with the Claimant about potentially going to another position. He eventually told her on March 6, that he wanted to resign his position as a delivery driver and that he did not want to return as a driver. There was a discussion about other positions made available but he was not interested in those positions, despite their encouragement to apply for other positions within the company.

6. Claimant's next medical follow up was March 22, 2018. Claimant was still working the same modified duty job. Dr. Dean's comments from that appointment include, "He denies any new symptoms today, still has pain with certain motions and after standing on concrete floor for 5-6 hours." He was referred to chiropractic treatment. (Ex. 27, pp. 245, 242.)

7. Also on March 22, Claimant exchanged text messages with his Lowe's supervisor Larry Wright. He wrote,

> I will not be in today due to my back issues. And after what you said about no place for me I am going to HR to consider resigning. No need to text back I will see you and management face to face on Friday. Sorry about all this. I have a doctors appointment today." (Ex. J)

8. Claimant testified that he was spending about half of his 8 hour shift on his feet, while checking the items in the warehouse. He testified that walking the warehouse aisles on the cement floor "destroys me". He also said he had pain from looking upwards for the items on the shelves when he was locating them.

9. Later in the text message exchange, Larry Wright wrote:

> "We would find a spot for you, all I was saying is that it probably wouldn't be deliveries after the delivery coordinator spot was filled-but we're still a ways out on that. (Ex. J)

At hearing Mr. Wright testified that the delivery coordinator spot was not actually available. Mr. Wright testified that the warehouse was approximately 60 X 100 feet, containing "several aisles".

10. Jason Taylor, the Operations Manager for Lowe's, testified at hearing. He was the Claimant's manager. He testified that the modified job the Claimant was performing involved him taking phone calls, and then walking the warehouse floor and locating the appliances that needed to be delivered. The items were stored up high on shelves in the warehouse. Claimant would be required to locate the items in the warehouse and then mark down on the delivery notes where the item was in the warehouse.

11. Mr. Taylor testified that the other jobs that were available for the Claimant were floor sales, which was working in the store helping customers, or a cashier job. Both of these jobs would involve standing. Mr. Taylor also described several conversations he has with Claimant during this time period:

> A: ….it was probably several times a week where we would have conversations and stuff like that. And there were a lot of times when, you know, Ben [Claimant] would make a comment that would say, you know, I've never done this before, I've always been a worker. I feel bad, you know, doing this. And we – we had offered him to move to the sales floor, we had offered him to do cashier work, and that never really come to fruition.
>
> Q. Okay. So did you ever tell him at any time that there was not light-duty available?
>
> A. No

12. The Claimant attended a meeting with Jill Roudebush of Human Resources on March 24 and signed the Employee Notice of Resignation form. The form stated that Claimant certified that his resignation was voluntary. (Ex. J, p. 37). Jill Roudebush testified that at the time, the Claimant resigned, there was still light duty work available under the doctor's restrictions.

13. The Claimant continued in treatment for his work injury, and at some point retained counsel. Through his counsel, he filed a Worker's Claim for Compensation to the Division. (Ex. 2). On April 3, 2018 Claimant's counsel sent a letter to Insurer's adjuster, alleging that the Claimant had been informed by Lowe's management that there was no more modified duty for him to perform within his restrictions, and that the Claimant had been encouraged to resign so that he did not have to be fired. The letter stated that the Claimant retracted his resignation. (Ex. 28, p. 299)

14. At hearing, Claims adjuster Megan Tharp testified that after receiving this letter, she discussed the Claimant's job with Jill Roudebush at Lowe's. Then on April 18, 2018 Ms. Tharp filed a General Admission of Liability ("GAL"), denying temporary disability benefits. This was filed 46 days after Lowe's created their injury report, which had not been turned in to the Division.

15. The Claimant did not return to work, but continued his medical treatment for the injury under his GAL. The ATP, Dr. Dean, placed the Claimant at MMI on September 20, 2018. Dr. Dean determined that the Claimant had an 11% Whole Person rating from Table 53II B for specific disorders of the spine. Insurer's adjuster, Megan Tharp, received official notice of this impairment rating by fax from Dr. Dean's office on October 2, 2018, and mailed a copy of the fax to Claimant's counsel's office on October 9, 2018. (Ex. 28, p. 300)

16. On October 24, the parties attended a settlement conference with a PALJ conducted through the Pre Hearing Unit on the case, but did not arrive at a settlement.

17. On November 16, 2018 Claimant's counsel mailed Dr. Dean a letter inquiring if she would review her impairment rating, as Claimant had his own Functional Capacity Evaluation ("FCE") performed, which had shown significant loss of range of motion. Dr. Dean had not included range of motion in her impairment rating. The letter was copied to Respondents' counsel. (Ex. B). Ms. Tharp testified that she received a copy of that letter, and then became aware that Dr. Dean did not include a range of motion in her initial impairment rating.

18. After receiving the initial impairment rating provided by the ATP, Respondents did not file a Final Admission of Liability. Neither did they file a Notice and Proposal for a DIME within 30 days as required by WCRP Rule 5-5 (E). Counsel for the Claimant sent a letter by fax to the Respondent counsel on December 11, 2018, referring to a December 4 telephone call, and inquiring why there was still not a FAL "Claimant was placed at MMI on September 20"**…[**and].. **"**Megan [Tharp] STILL has not filed a Final Admission"…(Ex. 19, p. 103).

19. Megan Tharp testified there was a delay in filing the Final Admission of Liability due to her confusion over whether she had actually received a Form 164 and there was a Settlement Conference which had been scheduled. Ms. Tharp testified that she received the letter from Ms. Roepke indicating that the rating report was missing range of motion and also information that the Claimant's attorney was contacting her attorney requesting why a Final Admission of Liability had not been filed.

20. Despite having received the impairment rating reports and worksheets on October 2, Respondents failed to take any action until December 21, 2018, at which time the adjuster Megan Tharp filed a FAL, admitting to Dr. Dean's 11% WP rating, and a payment of $16,409.36 to Claimant. Ms. Tharp attached a WC 164 report from the September 20 appointment; however, she did not attach the rating sheets or the written impairment report from Dr. Dean. (Ex.5). The FAL, therefore, was filed 80 days after the Claimant's MMI report had been faxed to the adjuster by Dr. Dean's office. At hearing, Ms. Tharp confirmed that she did not file the FAL within the proper deadlines.

21. When questioned as to why she did not check with Dr. Dean to see if the missing range of motion was an error, Ms. Tharp testified that she did not check herself, "…because I figured if she felt that there was a range of motion, she would respond to your [Attorney

Roepke's] letter." Ms. Tharp did not take any steps to check with the doctor about the rating, she said, because she thought the 11% rating was correct.

22. On December 21, the Claimant's counsel filed a Notice of Deposition of ATP Dr. Dean, to be held on January 7, 2019. (Ex. 6) Later, Dr. Dean's office cancelled the deposition, which was later rescheduled.

23. On December 26, 2018, at the request of ATP Dr. Dean, Excel Physical Therapy performed a lumbar range of motion measurement. (Ex. 26) This evaluation found a lumbar range of motion deficit of 26%.

24. Based on the new range of motion testing which indicated there would be a higher impairment rating, Ms. Tharp testified:

> I knew we were going want to rescind the General…Final Admission and request a DIME.

25. With the completed range of motion measurements from Excel Physical Therapy, the parties conducted a second settlement conference with a PALJ from the Pre Hearing unit. They did not arrive at a settlement.

26. On January 10, 2019, the Claimant filed a timely Objection to the FAL and submitted a DIME Application. (Ex. 5) The newly-adopted (as of January 2019) DIME form has a heading which reads, "Medical Reason for DIME 2. A) The Physician will consider the issues of Maximum Medical Improvement, Permanent Impairment, and Apportionment." Claimant seeks the DIME examination to address the issues of Maximum Medical Improvement, and the Claimant's Permanent Impairment rating.

27. On January 22, 2019 the Respondents filed an Application for Hearing, requesting the sole issue of withdrawal of the Final Admission of Liability of December 21, 2018, stating it was "incomplete" with regard to Dr. Dean's MMI report. (Ex. 6). Claimant timely filed a Response to this Application on February 21, 2019, endorsing Medical Benefits, and Temporary Benefits (along with PTD, which is not ripe at this time, but was pled to preserve the issue). (Ex. 7).

28. On January 30, 2019, Claimant's counsel filed another Motion for an Order to take the evidentiary deposition of Dr. Dean, which was again granted. (Ex. 9)

29. On February 22, 2019, the DIME panel under Claimant's DIME request was issued and the parties proceeded through the selection process. During that process, Respondents objected, but filed a provisional strike. Dr. Jack Rook was selected as the DIME physician. (Ex. 7)

30. Dr. Dean's evidentiary deposition was taken on March 4, 2019. Dr. Dean testified that she gave the Claimant an 11% whole person rating based upon a Table 53 rating for his lumbar spine injury, which involved 5 different lumbar levels. (Ex.17). Through the course of his treatment she did not refer Claimant for a consult with a spinal specialist

such as an orthopedic surgeon; however, she did refer him to a physiatrist for pain management.

31. Dr. Dean provided permanent work restrictions of no lifting, carrying, pushing, or pulling greater than 20 pounds, and no repeated bending. Dr. Dean acknowledged then that she had later changed her final rating after the range of motion was taken, and she combined the 26% rating for the loss of range of motion with the 11% specific disorders rating for a final combined rating of 34% whole person.

32. Dr. Dean explained that, "I was previously misinformed as far as including that range of motion due to some of the chronic nature. I then realized that with a Table 53 or 54 diagnosis, you have to have a range of motion done in order to submit that, so I ordered him to have that done, and he was found to have a 26 percent impairment due to the range of motion testing." (Dean depo, p. 10).

33. According to testimony, Respondents received the full written narrative of Dr. Dean's revised impairment rating on March 19, 2019—although the ALJ notes that her impairment rating was discussed in detail at the March 4, 2019 deposition.

34. Respondents have objected to setting the DIME under Claimant's request, and requested a Pre Hearing on their Motion to hold the DIME in abeyance until such time as their hearing (on withdrawing the FAL) could be held. PALJ Gallivan issued a Pre Hearing Order on March 5, 2019, granting the Motion to hold the DIME in abeyance, pending the hearing. (Ex. 9), pursuant to the "1-DIME per case" policy of the Division.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the

case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Was Claimant Responsible for his own Termination?

D. The termination statutes, § 8-42-103(g) and § 8-42-105(4)(a) C.R.S., provide: In cases where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury. The employer must prove by a preponderance of the evidence that a Claimant was terminated for cause or was responsible for the separation from employment. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008). To establish that a Claimant was responsible for termination, the Respondents must show the Claimant performed a volitional act or otherwise exercised "some degree of control over the circumstances which led to the termination." *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 5 P.3d 1061, 1062 (Colo. App. 2002); *Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1995); *Velo v. Employment Solutions Personnel*, 988 P.2d 1139 (Colo. App. 1988). Whether the Claimant acted volitionally or exercised control over the circumstances of the termination is a question of fact, which must be evaluated based on the totality of circumstances. *Knepfler v. Kenton Manor*, W.C. No. 4-557-781 (March 17, 2004).

E. A Claimant who voluntarily resigns her job is "responsible for termination" unless the resignation was prompted by the injury. *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2008); W.C. No. 4-492-753 (ICAO, May 11, 2004). The term "responsible," as used in the termination statutes, may not be construed in a fashion which undermines the "overall scheme of the Act." *Colorado Springs Disposal v. Industrial Claim Appeals Office*, supra, In *Colorado Springs Disposal* the court held the "word 'responsible' does not refer to an employee's injury or injury-producing activity." The court reasoned that treating a Claimant as "responsible" for the loss of employment caused by physical limitations resulting from the compensable injury itself would significantly alter fundamental principles of the Act. Hence, a Claimant does not act "volitionally" or exercise control over the circumstances leading to the termination if the

effects of the injury ultimately lead to her termination. E.g., *Kauffman v. Noffsinger*, W. C. No. 4-608- 836 (ICAO, April 18, 2005); *Blair v. Art C. Klein Construction, Inc.*, W.C. No. 4-556-576 (ICAO, November 3, 2003); *Bonney v. Pueblo Youth Service Bureau*, W.C. No. 4-485- 720 (ICAO, April 24, 2002).

F. Respondents have shown, by a preponderance of the evidence, that Claimant was responsible for the termination of his employment within the meaning of the termination statutes. Claimant voluntarily resigned his employment, which establishes a prima facie case that he was responsible for termination. See *Coleman v. Wellbridge/Starmark Holdings*, W.C. No. 4- 969-560-02 (ICAO, January 13, 2017). As such, it is incumbent upon Claimant to show that his resignation was triggered by the effects of his industrial injury, rather than personal issues. Claimant continued working after the injury, even according to his own testimony. There is no evidence of more than three days of lost time which would entitle the Claimant to start TTD benefits. Light duty was offered consistent with the doctor's restrictions by the Employer per the testimony of Jill Roudebush and Jason Taylor. The ALJ finds these witnesses to be credible. While Claimant testified that he had difficulty performing his modified job, he never testified that he was asked to do anything outside the work restrictions of his ATP. Per Jill Roudebush, he was permitted to sit and stand as needed with the light duty job.

G. As the Claimant told Jason Taylor, he had never done that type of light duty work before and he felt bad doing that type of work. He was not interested in any of the potential jobs that might have been available to him and decided to resign. He initially told Jill Roudebush that he wanted to resign on March 6, and then confirmed that by signing the Resignation form on March 24. To the extent that Claimant testified that modified duty was never discussed, the ALJ finds this unpersuasive. Claimant was understandably frustrated with his injuries, and unfamiliar with the Workers Compensation process. While the ALJ is empathetic with Claimant's situation at the time, the fact remains that he voluntarily left his employment, and it was not as a direct result of his work injuries. He had options to stay, consistent with his work restrictions, but decided to leave anyway. Once he did, despite the best efforts of his attorney, Lowes was not obligated to re-hire him. They moved on.

H. Further, while Claimant may have sincerely, subjectively, felt he could not work effectively at the modified duty which was offered, it was not his unilateral decision to make. See *Willhoit v. Maggie's Farm*, WC No. 5-054-125-01 (ICAO, July 23, 2018).

I. Claimant's Exhibit 4 was admitted without objection by Respondents. The ALJ accepts it as a genuine copy of a Notice of Decision by the Colorado Department of Labor, mailed 5/4/2019. In this decision, Claimant was awarded Unemployment benefits, finding that Claimant separated from employment [from Lowes] because he was 'physically unable to perform the work'. However, (and as noted by Respondents) this is a totally different forum, with different procedures, differing burdens of proof, and quite possibly, differing motivations of the parties involved. The Decision, (all 46 words of it-with no exhibits in support) notes that it is "*Based on information received*." As such, despite its admission, the ALJ can place very little weight on this document.

Instead, this decision must be based upon the evidence received at this Workers Compensation hearing.

J. Claimant performed a volitional act exercising control over the circumstances of his termination. Therefore, the Claimant is responsible for his termination and not entitled to Temporary Total Disability benefits.

May Respondents Withdraw their 12/21/2018 FAL?

What did Respondents Know, and When did they Know it?

K. Respondents' adjuster, Megan Tharp, received Dr. Dean's impairment rating (sans range-of-motion figures) and WC-164 on October 2, 2018. Despite her years of experience as an adjuster, she testified that she did not realize that the ROM measurements were missing until it was called to her attention by Claimant's counsel. That occurred on November 16, 2018. The ALJ finds that November 16, 2018 is the very latest date at which Respondents had *actual knowledge* that there was a serious issue with the initial impairment rating. Further, Respondents were on *constructive notice* on October 2, 2018 of this same issue. Once in receipt of the WC-164 and impairment ratings (complete or not), Respondents were obligated, within 30 days to 1) File a FAL, 2) Request a DIME, or, 3) File an Application for Hearing. None occurred, in part because the adjuster apparently believed this case might settle later on in October.

L. The adjuster further testified that she could not recall a similar scenario where a Table 53 rating was given, but without ROM figures being part of the calculation. Despite these issues, the adjuster testified at hearing that she thought the 11% whole person impairment rating was *correct* after all, so she went ahead and filed the FAL on 12/21/18. The ALJ notes that even this date (12/21/18) was more than 30 days past the date (11/16/18) that Ms. Tharp was placed on *actual notice* that ROM figures were not part of the ATP's ratings.

M. Claimant then underwent a FCE, the results of which were prepared on 12/26/18, and which showed a lumbar ROM loss of 26%. According to testimony, these results were received by the adjuster on 1/7/19. Two days later, the adjuster went on an unexpected medical leave, not returning until 3/12/19. Her files were then assigned to a backup and a supervising adjuster. In any event, instead of amending the FAL within 30 days, as permitted by WCRP 5-9(A), the file languished. While it is duly noted that these ROM figures were not prepared by the ATP, it provides further evidence that something was amiss, and known to all parties.

N. Claimant (despite all good-faith efforts to have the ATP include ROM in the impairment rating) then timely filed an objection to the FAL, and requested a DIME on 1/10/19. Respondents responded by filing their own Application for Hearing on 1/22/19, wishing, on that date, to withdraw the 12/21/18 FAL, *based on **reliance** on an **incomplete** MMI report from Dr. Dean.* As noted by Claimant, were this so, what

changed between the FAL and 1/22/19- except Claimant's own diligence and the DIME request?

O. The fact that Dr. Dean admitted her rating was wrong her 3/4/19 deposition testimony has no bearing on the timing of the Respondents' late filing of the Final Admission of Liability. Respondents now allege they were not aware that a Table 53 rating should be accompanied by ROM figures. Dr. Dean indicates she was "misinformed" on including ROM figures with a Table 53 rating. Even after reading the deposition, the ALJ does not understand how Dr. Dean was "misinformed", or when, or by whom.

P. Deciding whether or not to object to an impairment rating is the job of the adjuster. The adjuster gets the first opportunity to object if the rating is wrong. Ms. Tharp testified that, if she has questions, she can consult with her supervisor. In this case, the adjuster had the additional benefit of legal counsel. If Ms. Tharp believed the rating was "incomplete", she could have discussed this with her supervisors or legal counsel prior to filing the FAL. Respondents then could have taken steps to clarify the rating, or file the paperwork to object. Respondents have not presented sufficient evidence to support their position that they should get a second chance to evaluate the ATP's rating that did not exist between the time that they received the rating and filed the Final Admission of Liability. Claimant diligently called this to everyone's attention the entire time.

Whose DIME is it Anyway?

Q. Respondents rely upon *Fausnacht v Inflated Dough, Inc. d/b/a Domino's Pizza et al.,* (ICAP July 20, 1999) in support of their position that they can withdraw their 12/21/18 FAL in this fashion. The ALJ does not concur. As noted in *Fausnacht,* and the Rule then in effect, "The insurance carrier may modify an existing admission regarding medical impairment, whenever the medical impairment rating is changed pursuant to a *binding IME, a division IME, or an order"* (emphasis added). Here, the impairment rating was not changed pursuant to a *binding IME*, a *division IME*, or an *order*. It was changed because the ATP said, without further foundation, that she had been "misinformed."

R. More importantly, while *Fausnacht* notes that Claimant filed a timely objection to the incomplete impairment rating, <u>there is nothing in that case to suggest that Ms. Fausnacht had moved for a DIME.</u> Claimant herein timely moved for a DIME on 1/20/19. Claimant herein has now incurred a DIME fee in the process. Claimant has acted diligently, and in a timely fashion throughout the entire process-in sharp contrast to Respondents. Despite having been placed at MMI on 9/20/18, Claimant's reward to date has been late responses by Respondents, a cancelled deposition by his ATP which resumed weeks later, and now a request that Respondents select the location and composition of the DIME panel, once they got an ATP impairment rating they didn't like.

S Respondents complain of their dilemma posed by the pressure to file an FAL back in December when they were aware that there were issues with the ROM. They further argue that if the FAL is withdrawn, the new triggering date for Claimant to ask for a DIME would now be 30 days from Dr. Dean's 3/4/19 deposition. Conveniently, Respondents have now filed their own DIME request on more favorable terms, after disagreeing with Dr. Dean's revised figures.

T. But what of *Claimant's* dilemma, once the FAL was eventually filed? Which was, it appears, to either:

> 1) Not contest the FAL within 30 days, anticipating that, someday, Dr. Dean's would admit her mistake, and adopt the 26% ROM figures from the FCE. And then hope that through the good graces of Respondents, despite their late FAL in December, they would file a new 34% WP FAL in March, and not bind Claimant to the 11% rating for his failure to timely object, *or*
>
> 2) Timely contest it, and move for a DIME within 30 days, pay the fee, and select a physician, only to have it all nullified by Respondents withdrawing their FAL in March. Respondents then request their own DIME on more favorable terms. This, despite all parties being on actual notice that ROM was an issue since November, 2018 at the latest.

U. Surely this is not contemplated by the statute. One of the reasons the adjuster must comply with the guidelines for filing the Final Admission of Liability, is to assure there will be timely payment of benefits to the Claimant. Benefits for permanent impairment are due when the FAL is filed. Claimant, who was not receiving any TTD, was forced to wait for 92 days between his MMI date and the date the FAL was finally filed to receive any compensation at all for his work injury. Respondents asserted that they filed the FAL under pressure from the Claimant's counsel. Yes, they were, and rightfully so. At all times, Claimant, through counsel, acted with due diligence to process the case in a timely and accurate fashion. Claimant was under medical restrictions, had unwisely left his job, and therefore was not receiving any TTD payments. For Respondents to now be rewarded for this comedy of errors would be unconscionable.

V. Respondents have not shown, by a preponderance of the evidence, that they should now be allowed to withdraw the FAL which was filed on December 21, 2018. A DIME in this case was all but inevitable. Claimant didn't like (and with good reason), the 11% originally provided by Dr. Dean. He timely filed an objection, and requested a DIME. Respondents then didn't like the revised 34% WP rating by Dr. Dean. So they moved for their own DIME. (The record is unclear if Claimant would have been satisfied with Dr. Dean's revised rating or not). Either way, a DIME was going to occur. Respondents will now get a DIME, just as they say they want. And there has been absolutely no evidence to suggest that more than one DIME physician is needed here. Judicial economy, and Division guidelines dictate there will be but one. Dr. Rook was selected according to protocol, under Claimant's timely application.

Respondents' objections are duly noted, but Dr. Rook will remain the DIME physician for Claimant's injuries.

ORDER

It is therefore Ordered that:

1. Claimant's claim for Temporary Total Disability benefits is denied and dismissed.

2. Respondents may not withdraw their Final Admission of Liability dated 12/21/2018.

3. Dr. Rook will remain the DIME physician.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 5, 2019

Colorado Springs, Colorado 80906

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she sustained a compensable work related injury to her right shoulder on October 25, 2018.

2. If compensable, whether Claimant has established by a preponderance of the evidence that right shoulder surgery recommended by William Ciccone, M.D. is reasonable, necessary, and causally related to her October 25, 2018 injury.

STIPULATIONS

1. Claimant's average weekly wage at the time of injury is $374.59.

2. If the claim is found compensable, Claimant is not entitled to temporary total disability (TTD) or temporary partial disability (TPD).

3. If the claim is found compensable, the treatment received to date from Respondents' designated medical providers is authorized treatment.

4. One reusable nylon bag weighs one pound.

FINDINGS OF FACT

1. Claimant is a 50 year old woman who is employed by Employer as a small sorting package handler. Claimant has been so employed since May 20, 2018.

2. Claimant's duties include taking bags off a conveyer belt, reviewing destination labels, and moving the bags to a secondary conveyer belt.

3. On September 24, 2018, Claimant sustained an admitted work related injury to her left elbow while working for Employer. Claimant was placed on restrictions that basically required no use of her left upper extremity. She initially was assigned to two weeks of office work and filing following her left elbow injury. She was then reassigned to a light duty position that involved moving nylon bags that contained empty nylon bags. Claimant had no restrictions regarding her right upper extremity.

4. The light duty position was located in the D-bag area. In this light duty position, Claimant was required to move the bags that contained empty bags from a table/platform to a bin/cart. Claimant is approximately 5 feet 5 inches tall and the work

station as well as the bins were both approximately waist high to her and were between 3 and 3.5 feet tall.

5. Claimant testified that she was not trained for the light duty position in the D-bag area and that she was not instructed on how to do the job of transferring bags from the table/platform into the bins/carts. She testified that the nylon bags would come with other nylon bags folded inside and that she would lift the nylon bags up over the bins and empty out any of the other bags that were inside. The nylon bags, as viewed in court, are approximately 3 feet by 3 feet and the parties stipulated that they each weigh approximately 1 pound.

6. Claimant was doing this job with her right arm, given her restrictions on the left side as a result of her left elbow injury. Employer supervisor Ms. O_____ testified that Claimant was not required as a part of this job to empty the nylon bags that contained other nylon bags, but Claimant testified she was doing so regularly. The maximum number of bags that can fit inside a bag is approximately 20.

7. Claimant testified that on October 25, 2018 while lifting a nylon bag that contained other empty nylon bags to empty out the other empty bags into the cart, she felt acute and immediate sharp pain in her right shoulder and reported an injury to Employer.

8. On November 1, 2018, Julie Parsons M.D. evaluated Claimant. Dr. Parsons was also treating Claimant's left elbow injury. Claimant reported that on October 25, 2018 she was emptying bundles of bags into bins and felt a sharp pain in her right shoulder. On review of symptoms, Dr. Parsons noted pulling bags and hurt right shoulder. On examination, Dr. Parsons found tenderness and limited range of motion insertion SS and proximal biceps insertion. Dr. Parsons assessed shoulder strain noting strain of unspecified muscle, fascia, and tendon at shoulder and upper arm level right arm and rhomboid muscle strain. Dr. Parsons recommended physical therapy referral to treat the right shoulder with a total of 8 visits recommended. On instructions, Dr. Parsons noted add physical therapy for right shoulder, 10-pound lift pull push carry, and no overhead work right arm. Dr. Parsons filled out a WC164 form indicating the objective findings were consistent with history and/or work related mechanism of injury/illness and listed a work related medical diagnosis of right shoulder strain. *See* Exhibit 5.

9. On November 6, 2018, Brittney Blanchard, PA evaluated Claimant. Claimant reported muscle aches in the right shoulder. Claimant reported sharp pain with stabbing radiating into the neck and shoulder blades at a pain level of 8/10. Claimant reported her right shoulder pain was worse and she felt she needed a break from repetitive lifting. On examination, PA Blanchard found diffuse tenderness of the AC joint, bicipital groove, and rhomboids. PA Blanchard found full range of motion with pain at all ranges. PA Blanchard continued the assessment of right shoulder strain and added the restrictions of taking a 15-minute break every hour from repetitive activity. *See* Exhibit 5.

10. On November 13, 2018, Claimant underwent physical therapy at MVP Physical Therapy. Claimant reported that while on light duty for her elbow injury, she went to work with bags and while using only the right arm her shoulder started to hurt. Claimant reported that she tried to alter her mechanics but was unable to without causing pain. Claimant reported that it happened on October 25 and that she worked bags for the next 4 days, had increasing pain, and then went to the doctor. Claimant reported some recent pops with discomfort. Claimant reported difficulty with lifting the arm above the head and reaching forward. Claimant provided a medical history of osteoarthritis (body, feet, knees, right hand, neck) and of carpal tunnel. The therapist noted that Claimant had an ace wrap on her right shoulder and was holding her arm very guarded. The therapist noted that the testing was very limited due to Claimant's elevated pain levels with any movement or palpation of the shoulder. The therapist noted that Claimant had reduced discomfort following treatment and may be able to have further evaluation at the next visit. *See* Exhibits 6, C.

11. On November 19, 2018, Dr. Parsons evaluated Claimant. Dr. Parsons referred Claimant for an orthopedic surgery evaluation with Dr. Ciccone for the right shoulder strain. *See* Exhibit 5.

12. On December 11, 2018, William Ciccone, M.D. evaluated Claimant. Claimant reported that she injured her shoulder on October 25, 2018 when moving bag bundles that could be of varying weights. Claimant reported that while moving the bundles, she had increased pain in her right shoulder and felt like she was overusing her right arm due to a previous left arm injury. Claimant reported pain over the anteromedial aspect of the right shoulder and pain with reaching and lifting. Claimant reported 8 physical therapy visits were of some help. Claimant reported no prior shoulder injuries. On examination, Dr. Ciccone found positive Hawkins and Neer impingement signs and mild pain at the AC joint and SC joint as well as along the clavicle. Dr. Ciccone noted fluctuating problem of right shoulder pain. Claimant was noted to be 5'5" with a weight of 215 pounds and a body mass index of 35.78. Claimant's blood pressure was noted to be 152/83 and was notified of the elevated blood pressure level and referred to her primary care provider for the elevated blood pressure. Dr. Ciccone assessed acute pain of right shoulder and he ordered an MRI of the right shoulder. He also assessed body mass index of 35.0 to 35.9, adult. Dr. Ciccone noted Claimant's report of increased pain while moving heavy bag bundles with persistent pain and symptoms over the past 6 weeks. He noted that he would re-evaluate her after the MRI scan. *See* Exhibits 8, D.

13. On December 20, 2018, Hanna Bodkin, PA, evaluated Claimant at Concentra. Claimant reported that while working light duty on October 25, 2018, she was moving heavy empty canvas bags into wheeled baskets and began having right shoulder pain. Claimant felt the symptoms started due to over compensation with the right arm due to restrictions on the left. Claimant reported that she had 8/10 pain in her right shoulder and had a pop in the shoulder around November 12 when walking into work and taking off her coat. Claimant reported that her shoulder began freezing on November 14 and that she went and got a brace on her own. Claimant reported that she had pain in the right neck, back, chest, and under the armpit as well as tenderness in the anterior and

posterior shoulder into the shoulder blade. Claimant reported that her claim was denied on November 16. On examination, Claimant had tenderness in the rhomboids, the scapula, and the anterior shoulder but had near full range of motion in all planes. *See* Exhibit 10.

14. On December 24, 2018, Carrie Burns, M.D. evaluated Claimant. Dr. Burns noted that the right shoulder claim had been denied and was set for hearing. Dr. Burns noted that if the shoulder is not compensable, they should stop seeing Claimant for the shoulder and no longer address it in restrictions but would wait for the legal matters to settle. *See* Exhibit 10.

15. On December 27, 2018, Claimant was noted to have had some improvement with range of motion and strength over her 8 physical therapy visits. Claimant was noted to continue to be limited with the shoulders due to pain and weakness. The therapist noted some neurological signs and that the clinical presentation was evolving with changing characteristics. *See* Exhibits 6, C.

16. On December 31, 2018, Claimant underwent a right shoulder MRI. The impression was diffuse rotator cuff tendinosis, overall moderate, with multifocal partial tearing. A high grade partial tearing of the superior subscapularis tendon was found along the long head biceps location. Narrower delamination type tears were also found at the anterior supraspinatus and infraspinatus tendons. No muscle atrophy was found. Mild acromioclavicular osteoarthritis was found. Mild subacromial subdeltoid bursitis was noted as well as a remote sprain of the inferior glenohumeral ligament. *See* Exhibits 9, D.

17. On January 4, 2018, Dr. Ciccone evaluated Claimant. Claimant reported persistent pain in the right shoulder. Dr. Ciccone reviewed the right shoulder MRI and noted that it showed long head biceps tendon subluxation at the bicipital groove with partial-thickness injury of the subscapularis and remainder of the rotator cuff with subacromial impingement. Dr. Ciccone assessed right shoulder pain with biceps subluxation and partial-thickness rotator cuff tearing. Claimant reported that her claim had been denied and that she was scheduled for an independent medical examination. Dr. Ciccone recommended she continue working with a home exercise program. Dr. Ciccone noted that if Claimant had persistent pain or symptoms, the possibilities for shoulder arthroscopy with biceps tenodesis and rotator cuff repair existed but noted they would see how Claimant did. He encouraged Claimant to exercise. *See* Exhibits 8, D.

18. Dr. Ciccone requested authorization from Insurer for a right shoulder arthroscopy, subacromial decompression, rotator cuff repair, and possible biceps tenodesis. The notes indicated the procedure date was February 14, 2019 with a diagnosis of traumatic complete tear of right rotator cuff, subacromial impingement of right shoulder, and biceps tendinitis on right. *See* Exhibit 8.

19. On January 28, 2019 Claimant underwent an independent medical evaluation (IME) performed by F. Mark Paz, M.D. Claimant reported working with empty

bags that are bundled and when filled with 10 bags, the bundle weighs approximately 20 to 30 pounds. Claimant reported that she empties the bundled bags and puts the empty bags in a bin. Claimant reported they measure approximately 3 feet by 3 feet. Claimant reported that she was only using her right arm to complete work due to a left elbow injury and that during her first week of light duty in the empty bag area, she exclusively used her right arm. Claimant reported that after about a week of working in that area dumping and processing the bundled bags, she was emptying a set of bundled bags into a bin when she felt an extreme sharp pain in the right shoulder, neck, and across the front of the right shoulder down the posterior right side of her back. Claimant associate the onset of symptoms with the lifting of a single bundle bag. Claimant reported that she did not remember any popping in the shoulder, just a lot of pain. Claimant reported the weight of the bag bundles was 34 to 45 pounds. *See* Exhibits 12, B.

20. Dr. Paz reviewed medical records and performed a physical examination. Dr. Paz opined that pain behaviors were evident during physical examination with most appearing exaggerated. Dr. Paz assessed: right shoulder pain; right upper extremity parasthesias; right lower extremity parasthesias; left lateral epicondylitis; left upper extremity paresthesias; right upper extremity parasthesias; bilateral knee osteoarthritis; right ankle/foot osteoarthritis; obesity; and left radial tunnel syndrome. Dr. Paz opined that it was not medically probable that the right shoulder rotator cuff tendinosis/tendon tears of the subscapularis, infraspinatus, and supraspinatus were causally related to the October 25, 2018 incident. He opined that based on the history of the mechanism of injury and transferring bundled bags from a waist level platform into a waist level bin, the activity did not involve lifting overhead or above chest height. Considering the mechanism of injury, he opined it was not medically probable that the rotator cuff tears were causally related. He also opined that it was not medically probable that the right shoulder rotator cuff tendinosis was aggravated or accelerated as part of the October 25, 2018 incident. *See* Exhibits 12, B.

21. Dr. Paz opined that the rotator cuff captures the lifting load across the shoulder through the range of motion of 60 to 120 degrees. Dr. Paz opined that the direct history provided by Claimant did not include lifting above chest level with filled bundle bags. Dr. Paz also opined that there were inconsistencies regarding the history Claimant provided at his examination of acute pain and discomfort versus the initial physical therapy assessment documenting symptoms that were progressive over the following four shifts Claimant worked. He also opined that prior records did not document the right upper extremity, right lower extremity, back, and neck pain. *See* Exhibits 12, B.

22. On January 29, 2019, Insurer issued a letter through counsel that denied Dr. Ciccone's request indicating they were not authorizing it, as compensability of the claim had not been established. *See* Exhibit 8.

23. Claimant testified that the empty nylon bags could come down empty or with other empty bags inside. She testified that if they were super full, they could contain up to 40 empty bags inside. Claimant reported that while she was emptying a bag that had many bags inside she felt extreme pain. Claimant testified that she had to shake the bags

to empty the other bags out of it. Claimant was not aware of a rule that only 9 bags are supposed to be folded inside 1 bag. Claimant acknowledges that she could have put the bags that had empty bags inside them directly into the cart without shaking them to empty them, but that she would take them out and unbundle them to make it easier down the line for processing.

24. Claimant also testified that she is a caretaker for her disabled husband and helped him in all personal care and with mobility. She testified that after her elbow injury, she could no longer help him stand/transfer and her son took over that part of the care.

25. Ms. O_____ testified at hearing. Ms. O_____ has extensive experience working in the D-Bag area and is a part time supervisor for Employer. Ms. O_____ did not supervise Claimant and was not present at the time of the alleged injury. Ms. O_____ testified that sometimes the job involves getting empty bags off a belt and putting them into a cart and that sometimes they are bundled with other bags inside and sometimes they are not bundled. Ms. O_____ testified that they are shipped from other hubs and are supposed to have 9 empty bags inside 1 bag and that each bag weighs 1 pound. Ms. O_____ estimated that at most you could fit 20 empty bags inside 1 bag.

26. Dr. Paz also testified at hearing. He testified that Claimant's demonstration to him at the IME of how she emptied the bags involved lifting with both hands to chest height over the bin, whereas in court she demonstrated fully extending her arm over her head to empty the bags. Dr. Paz opined that the right shoulder MRI demonstrated that the tendon's in Claimant's right rotator cuff were affected and showed degenerative changes and there was no way to assess if any of the tears were acute. Dr. Paz reiterated that the load is on the rotator cuff primarily when between 60 and 120 degrees. He testified that at the IME, Claimant did not demonstrate movements above 60 degrees and opined there was no stress on the rotator cuff. Dr. Paz also testified that a load of 10 to 20 pounds was not a load expected to tear the rotator cuff or aggravate a rotator cuff. Dr. Paz testified that it was confusing to appreciate how many bags were actually inside a bag and what the weight was. Dr. Paz again opined that the exposure was insufficient to cause rotator cuff pathology or to aggravate/accelerate pre-existing pathology and he opined that the requested right shoulder surgery was not causally related. Dr. Paz testified the surgery was reasonable and necessary but not work related and was due to a degenerative condition.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence,

to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo.App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo.App. 2000).

Compensability

Where a Claimant's entitlement to benefits is disputed, the Claimant has the burden to prove a causal relationship between a work-related injury and the condition for which benefits or compensation are sought. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Whether the Claimant sustained her burden of proof and whether a compensable injury has been sustained is generally a factual question for resolution by the ALJ. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997); *Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo. App. Div. 5 2009). To recover benefits under the Worker's Compensation Act, the Claimant's injury must both occur "in the course of" employment and "arise out of" employment. *See* § 8-41-301, C.R.S.

A pre-existing condition "does not disqualify a Claimant from receiving workers' compensation benefits." *Duncan v. ICAO*, 107 P.3d 999 (Colo. App. 2004). Further, if a pre-existing condition is stable but is aggravated by an occupational injury the resulting occupational injury is still compensable because the incident caused the dormant condition to become disabling. *Siefried v. Industrial Commission*, 736 P.2d 1262 (Colo. App. 1986). Thus, if an industrial injury aggravates, accelerates, or combines with a pre-existing condition so as to produce disability and need for treatment, the claim is

compensable. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Indus. Comm'n v. Newton Lumber & Mfg. Co.,* 314 P.2d 297 (Colo. 1957). Additionally, if the industrial injury aggravates, accelerates, or combines with a pre-existing disease or infirmity to produce the need for treatment, the treatment is a compensable consequence of the industrial injury. *Duncan v. ICAO, supra.*

Claimant has met her burden to show by a preponderance of the evidence that she sustained a compensable right shoulder injury on October 25, 2018. Claimant has shown, more likely than not, that her right shoulder was injured while she was emptying bags into a bin on that date. As found above, Claimant is a 50 year old obese and de-conditioned woman with degenerative changes in her right shoulder and known arthritis throughout her body. The ALJ finds it credible and persuasive that she, in that condition, had immediate pain, disability, and the need for treatment for her right shoulder acutely on October 25, 2018 due to her work emptying bags that weighed between 1 and 20 pounds.

Claimant has established by preponderant evidence that emptying bags at work caused an acute injury or an acute aggravation/acceleration of the degenerative condition in her right shoulder. Claimant had no limitations with her right shoulder prior to October 25, 2018 nor was it mentioned in any treatment prior to that date. As found above, Dr. Paz noted that the rotator cuff is engaged between 60 and 120 degrees. Claimant is credible and persuasive that she had to lift the bags over the bin to empty them out, which necessarily put her arm into the 60-120 range engaging the rotator cuff, given the height of the bin and Claimant's height. Although Claimant displayed some pain behaviors, expanding symptoms, and exaggerated the weight of the empty bags, Claimant's description of how the work is performed is credible and consistent with an activation of the rotator cuff.

Respondents' argument that Claimant's right shoulder pain is unrelated to her job duties and is simply the natural progression of Claimant's pre-existing degenerative shoulder condition is not found persuasive. Rather, it is more likely that emptying the bags at work caused an acute injury or acute aggravation and the need for medical treatment. Claimant is credible that she was not experiencing or suffering from any right shoulder limitations leading up to October 25, 2018. Examinations of Claimant noted tenderness in the shoulder area and pain with range of motion. Further, Claimant's treating provider at Advanced Urgent Care has opined that the objective findings are consistent with the work related mechanism of injury. Claimant has shown that emptying bags caused an immediate onset of right shoulder pain that did not exist prior to October 25, 2018, objective findings including tears shown by MRI in the right shoulder support Claimant's subjective pain complaints, that emptying bags was the direct cause of her need for treatment.

The opinion of Dr. Paz is based heavily on the lack of activation of the rotator cuff given Claimant's demonstration to him at IME of how she emptied the bags. Her explanation of how she lifted the bags to do that job that was testified to and explained at hearing is found persuasive and puts her right shoulder into the range of 60 to 120

degrees. Further, although Dr. Paz testified that a 20-pound load or less would not be expected to injure a rotator cuff, Claimant is credible that she had acute pain and injury on that date. Claimant's right shoulder and her overall body habitus is not that of a healthy individual. On October 25, 2018, Claimant was 50 years old, obese, deconditioned, and had pre-existing degenerative changes including osteoarthritis throughout her body and pre-existing degeneration in her right shoulder. Putting someone with that body habitus into a position where she would have to activate her rotator cuff to repetitively lift bags even if they only weighed between 1 and 20 pounds is found more likely than not to be the cause of an acute injury or acute aggravation/acceleration of her degenerative shoulder condition on October 25, 2018.

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

Claimant has met her burden to show that the right shoulder arthroscopy subacromial decompression, rotator cuff repair and possible bicep tendinosis is reasonable, necessary, and causally related to her October 25, 2018 work injury. The surgery is specifically intended to address the symptoms and right shoulder pain that Claimant developed while emptying a bag containing empty bags at work. Claimant did not have pain in her right shoulder prior to October 25, 2018 and although Claimant may have had preexisting degenerative changes, as shown by MRI, the work of emptying the bag containing empty bags caused or accelerated Claimant's need for treatment, as she was otherwise was asymptomatic prior to that event. The surgery recommended is causally related to the emptying of bags. As found above, Dr. Ciccone requested the surgery in January of 2018. He noted at that time that they would see how Claimant did but recommended surgery if Claimant's pain and symptoms were persistent. The pain and symptoms have been persistent since, and although they have slightly improved, they have not gone away. Claimant has thus met her burden to establish that the surgery is reasonable, necessary, and causally related to her injury.

ORDER

It is, therefore, ordered that:

1. Claimant has established by a preponderance of the evidence she suffered a compensable injury to her right shoulder on October 25, 2018.

2. Medical care rendered at Advanced Urgent Care, Cornerstone Orthopaedics and Concentra Medical Centers and their referrals are reasonable, necessary, related and authorized treatments.

3. The right shoulder arthroscopy, subacromial decompression, rotator cuff repair and possible bicep tendinosis recommended by Dr. Ciccone is reasonable and necessary to cure and relieve the effects of Claimant's industrial injury and Claimant is entitled to this medical benefit.

4. Claimant's average weekly wage is $374,59.

5. Claimant is not currently entitled to temporary partial disability ("TPD") or temporary total disability ("TTD") benefits.

6. Any issues not determined in this decision are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80203

STATE OF COLORADO **OFFICE OF ADMINISTRATIVE COURTS** 1525 Sherman Street, 4th Floor Denver, CO 80203	
In the Matter of the Workers' Compensation Claim of: **,** Claimant, vs. **,** Self-Insured-Employer, Respondent.	▲ **COURT USE ONLY** ▲ **CASE NUMBER:** **WC 5-020-103-002**

FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

Hearing in this matter was held on February 12, 2019, before Margot W. Jones, Administrative Law Judge. Claimant was present and was represented by _____, Esq. _____, Esq. represented Respondent. This matter was digitally recorded in Courtroom 4 convening at 1:30 pm. in Denver, CO The parties' exhibits 1-9 and A-G were admitted into evidence.

In this order, _____ referred to as "Claimant" and Respondent-Employer _____ is referred to as "Employer" or "Respondent."

Also in this order, "ALJ" or "Judge" refers to the Administrative Law Judge, "C.R.S." refers to Colorado Revised Statutes, "OACRP" refers to the Office of Administrative Courts Rules of Procedure, 1 CCR 104-1, WCRP" refers to Workers' Compensation Rules of Procedure, 7 CCR 1101-3 and "the Act" refers to the Workers' Compensation Act of Colorado, Section 8-40-101, et seq., C.R.S.

ISSUE

Whether Respondent overcame the opinion of the Division independent medical examiner (DIME) by clear and convincing evidence with regard to his opinion on maximum medical improvement (MMI).

FINDINGS OF FACT

1. Claimant is 58 years of age. He has worked for Employer for the past nineteen years delivering and picking up materials.

2. On April 14, 2014, Claimant had been assigned to deliver a double-door refrigerator to a contractor. He was unloading it while standing on the bed of the truck and using a dolly. Another worker was on the ground below the refrigerator for the purpose of helping lower the refrigerator to the ground. Without warning, the worker on the ground stepped away from the refrigerator, leaving the Claimant to hold the entire load. As a result, Claimant was pulled out of the back of the truck on to the top of the refrigerator and then to the ground. The refrigerator pulled Claimant's arm and shoulder downward.

3. At that time, Claimant felt a pop in his shoulder. He was able to complete the delivery and returned back to Employer. When he arrived, he reported his injury to two managers. Claimant did not see a doctor at that time and he thought he would get better without medical treatment.

4. Claimant continued to work; however, he experienced pain when he lifted anything with his right arm or lifted anything overhead. In order to still do his job, Claimant transported lumber and other items off the truck and into carts by only using the forklift.

5. Claimant's shoulder continued to hurt and became worse so he again told Employer who then sent him to Concentra, Employer's-designated provider.

6. Claimant's first appointment was with Dr. Katheryn Bird on August 6, 2014. Dr. Bird noticed significant popping in Claimant's shoulder with abduction. Dr. Bird diagnosed Claimant as having shoulder impingement and shoulder pain. She stated that Claimant could do regular duty and prescribed physical therapy. Dr. Bird stated that the objective findings were consistent with the history and the work-related mechanism of injury.

7. On August 11, 2014, Claimant returned to see Dr. Bird. Dr. Bird found no significant change in Claimant's condition. Claimant reported his pain as a 4/10. She also noted Claimant was working regular duty.

8. After five session of physical therapy, Dr. Bird first put Claimant at MMI on September 15, 2014. Dr. Bird noted that Claimant's right shoulder was slightly better. Claimant reported his pain as a 2/10, but found relief by taking Naproxen and from his home exercise program. Dr. Bird did not assign any permanent impairment nor did Dr. Bird assign any work restrictions.

9. Between September 15, 2014, and May 5, 2016, Claimant was able to work full duty even though some movements caused pain. On May 5, 2016, Claimant returned to see Dr. Bird. Dr. Bird noted that, since his original date of MMI, Claimant continued to deal with aching in his right shoulder including pain with external rotation and popping. Dr. Bird also noted Claimant having difficulty playing golf. He reported his pain as 2/10. Dr. Bird requested an MRI of Claimant's right shoulder.

10. Claimant's received an MRI of his right shoulder on May 13, 2016. The MRI found 1) a more than 50% loss Claimant's supraspinatus tendon; 2) interstitial particle tear along the infraspinatus myotendinous; 3) fibrous delamination of the upper subscapularis; 4) subluxation/dislocation or longitudinal spitting rotator interval and biceps tendon; 5) and moderate clavicular joint arthritic findings.

11. Claimant returned to Dr. Bird on May 17, 2016. Claimant reported continued popping in his arm stating that "it feels like something is moving out of place." In reviewing the MRI results, Dr. Bird noted a "partial tear of supraspinatus and infraspinatus, subluxation/dislocation of bicep tendon, AC arthritis." At this time, Dr. Bird restricted Claimant from lifting, pushing, or pulling over 25 lbs.

12. Claimant was referred to Dr. Mark Failinger who practices orthopedic medicine. Dr. Failinger noted that Claimant's right shoulder had poor strength, poor range of motion, and would pop out of place. After reviewing the MRI, Dr. Failinger diagnosed Claimant with 1) a right shoulder dislocating biceps tendon; 2) right shoulder partial-thickness supraspinatus tear; 3) a right shoulder partial subscapularis tear. In discussing his findings, Dr. Failinger stated that Claimant had a "classic story" for a dislocated biceps tendon. Dr. Failinger noted the problematic consequences of Claimant's continued popping explaining that Claimant "is doing well with the biceps in the grove, but he tore the transverse ligament and when it pops out of the groove, it disables him. He cannot really use him arm until it pops back in. (Ex. 3, Bates 111-112).

13. Dr. Failinger also noted a "high-grade partial tear that needed to be fixed." In discussing treatment options, Dr. Failinger explained that there was a "75% to 85%" that surgery would help with the pain. In support of recommendation for surgery, Dr. Failinger stated "[h]e has not done well for two years. There are no other options that therapy should not help this and injection should not help this. So, there are really two options. He should live with this [or] pushing on with the surgery." (Ex. 3, Bates 112).

14. On July 28, 2016, Claimant reported that his right shoulder was throbbing and stated that his pain was now 5/10. Dr. Bird noted that Dr. Failinger had recommended surgery and to stop physical therapy because it was hurting the shoulder. At this time, Dr. Bird restricted Claimant from lifting over 10 lbs., pushing or pulling over 15 lbs., and from overhead lifting. Dr. Bird did not restrict Claimant from operating a forklift.

15. Claimant saw Dr. Bird on August 18, 2016. Dr. Bird noted that Claimant's right shoulder was getting worse. Claimant reported his pain at 3-5/10. Dr. Bird diagnosed

Claimant with rotator cuff tear arthropathy and tendinopathy of the right bicep tendon. At this time Claimant was taking Advil to deal with his shoulder pain.

16. On September 15, 2016, Claimant again reported increasing pain in his right shoulder. Dr. Bird diagnosed Claimant with a rotator cuff tear arthropathy and tendinopathy of the right bicep tendon. At this time, Claimant reported that Advil and Meloxicam was no longer as helpful in treating his shoulder pain.

17. On October 13, 2016, Dr. Bird noted that Claimant's pain "is not getting better and seems to be getting worse." Claimant reported sharp shooting pains that would increase at night. At this time, Claimant reported his pain as a 5/10.

18. On November 10, 2016, Claimant reported having lots of pain to the point of "keeping his wife up at night because he is moving around so much." Dr. Bird diagnosed Claimant with a right shoulder strain, rotator cuff arthropathy, shoulder impingement, shoulder pain, and tendinopathy of the right bicep tendon.

19. On November 21, 2016, Claimant then saw Dr. Michael Hewitt, who also specializes in orthopedic medicine. Dr. Hewitt diagnosed Claimant with a right shoulder rotator cuff tear finding that the described mechanism of injury was consistent with his findings. "The current clinical complaints and MRI findings would be attributable to the work injury described two and a half years prior." Dr. Hewitt agreed with Dr. Failinger that Claimant was an appropriate candidate for surgery."

20. Hearing was held on January 25, 2017, on the relatedness of the shoulder surgery. The ALJ found that Claimant's need for right shoulder surgery did not relate to his April 14, 2014, industrial injury.

21. On August 25, 2017, Dr. Hewitt reiterated his prior diagnosis stating that "[p]atient has undergone extensive conservative management without improvement. His mechanism, namely forcible traction to the extremity, is consistent with his injuries. He reiterates his desire to proceed with surgery. I do feel this is most appropriate." (Ex. 5, Bates 127).

22. On March 20, 2017, Dr. Bird put Claimant again at MMI. Dr. Bird assigned a 15% upper extremity rating. Dr. Bird also restricted Claimant from lifting over 10 lbs., pushing or pulling over 15 lbs. and from lifting overhead with his right arm.

23. Dr. Alison Fall performed an Independent Medical Evaluation (IME) for Respondents on November 3, 2016. In examining Claimant's right shoulder, Dr. Fall noted tenderness of the bicipital groove, pain with internal rotation, range abduction, and flexion. In examining the left shoulder, Dr. Fall noted that Claimant had no complaints of pain with range of motion, nor did she note any signs of impingement, instability, or tenderness. Dr. Fall concluded that, due to a lack of documentation of ongoing shoulder complaints, it was not possible to determine the exact status of the shoulder. Dr. Fall recommended a subacromial injection for Claimant's right shoulder and further opined

that the right shoulder surgery recommended by Dr. Failinger "cannot be determined to be related back to the initial injury." (Ex. A, Bates 6).

24. Another MRI of Claimant's right shoulder was done on September 12, 2018. The MRI revealed Claimant's rotator cuff had a greater than 50% partial articular side tear of the supraspinatus tendon "reaching 11.5 x 17 mm." (Ex. B, Bates 15).

25. An MRI of Claimant's left shoulder was performed on November 17, 2018. The MRI showed an estimated 50% partial thickness tear of the supraspinatus tendon retracted 1.3 cm. In interpreting the left shoulder MRI, Dr. Brendar Essary stated that the "findings are similar although to a lesser degree compared to the right shoulder." (Ex. B, Bates 17-18).

26. After reviewing the MRI of the left shoulder, Dr. Fall agreed with Dr. Essary that the "findings are similar, although to a lesser degree, compared to the right shoulder." (Ex. A, Bates 12).

27. Dr. J. Stephen Gray performed a Division Sponsored Independent Medical Examination (DIME) on May 22, 2018. Claimant reported to Dr. Gray that his right shoulder pain did not resolve after his original date of injury. However, Claimant was able to avoid certain activities that caused discomfort and "'toughed through'' the pain. (Ex. 6, Bates 142). During his physical examination of Claimant, Dr. Gray noted Claimant experiencing popping in his right shoulder. In further examining Claimant's right shoulder, Dr. Gray noted that "impingent signs were present and biceps provocation maneuvers were also positive." (Ex. 6, Bates 146). In examining Claimant's left shoulder, Dr. Gray noted 90-degree external rotation and no impairment.

28. Dr. Gray diagnosed Claimant with a work-related partial total cuff year of Claimant's right shoulder and a work-related biceps tendon dislocation, which was cumulatively aggravated with unrestricted work activities. In support of his diagnosis, Dr. Gray pointed to the Claimant had documented crepitus of his right shoulder prior to his first MMI date of September 15, 2014. Dr. Gray also noted that no imaging or orthopedic evaluation was done prior to Claimant's first MMI date. Additionally, Dr. Gray relied on the opinions Claimant's treating providers including Dr. Failinger and Dr. Hewitt.

29. Dr. Gray assigned Claimant a 9% impairment rating of Claimant's right upper extremity. Dr. Gray further found that Claimant was not MMI until he had the recommended right shoulder surgery, which he found to be work-related.

30. Dr. Fall testified that Dr. Gray's DIME opinion is incorrect because of the MRI of the left shoulder, which indicated a biceps tendon dislocation on his left arm. From this, Dr. Fall stated that it is clear Claimant did not have a traumatic biceps tendon dislocation in 2014.

31. On cross-examination, Dr. Fall acknowledged that no other treating providers found it necessary to order an MRI of the left shoulder before diagnosing Claimant's right

shoulder because these providers were only providing treatment and not looking to causation. Dr. Fall also acknowledged that, when examining Claimant's right and left shoulder, she noted a difference in Claimant's symptomology and pathology. Dr. Fall further acknowledged that the findings in the right shoulder MRI are more severe than the findings in the MRI of the left shoulder.

32. Claimant is on a ten-pound lifting restriction. He feels pain when he jerks his right arm too quick. His right arm also continues to keep him up at night.

33. Claimant has not missed a day of work due to his injury.

34. Prior to April 14, 2014, Claimant had never experienced popping in his right arm. He has yet to experience popping or any symptoms in his left arm.

35. Outside of work, Claimant fishes, camps and golfs. Claimant says that these activities are his livelihood, and while he had to adjust the ways in which he performs these activities, he did not want to give them up completely on account of his injury. Prior to April 14, 2014, Claimant did not experience pain when performing these activities.

36. Claimant's job with Employer requires him to do heavy lifting. He had no issues performing his job duties prior to April 14, 2014. Claimant had never had work restrictions prior to April 14, 2014. Claimant did not have pain or discomfort in his right shoulder prior to April 14, 2014.

37. During his deposition, Dr. Gray was endorsed as Level II accredited and a specialist in occupational medicine. In support of his DIME opinion, Dr. Gray found that Claimant's pain threshold and stoic nature in handling his symptoms allowed him to work full duty after his date of injury and to participate in hobbies outside of work.

38. Dr. Gray acknowledged that Claimant's right and left shoulder both revealed signs of degenerative changes, but that the April 2014 event aggravated Claimant's right shoulder.

39. Dr. Gray's opinion was not swayed by the fact that Claimant did not receive treatment until four months after his original date of injury. Nor was Dr. Gray's opinion swayed by the 18-month gap between Claimant's first date of MMI and when his case was reopened.

CONCLUSIONS OF LAW

General Principles

The purpose of the Act is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v.*

Clark, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensee v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968). The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME

Overcoming the DIME on MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. Under the statute MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office***,** 128 P.3d 270 (Colo. App. 2005); *Monforte Transportation v. Industrial Claim Appeals Office*, 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007). A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office*, 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office*, 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.*, W.C. No. 4-320-606 (I.C.A.O. March 2, 2000). The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging

the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gusset,* 914 P.2d 411 (Colo. App. 1995). Where the evidence is subject to conflicting inferences a mere difference of opinion between qualified medical experts does not necessarily rise to the level of clear and convincing evidence. Rather it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Industries*, WC 4-712- 812 (ICAO November 21, 2008). The ultimate question of whether the party challenging the DIME physician's finding of MMI has overcome it by clear and convincing evidence is one of fact for the ALJ. *Metro Moving and Storage Co. v. Gusset, supra.*

Respondent relies on Dr. Fall's IME report and hearing testimony that the gaps in Claimant's treatment supports the argument that it is highly probable that the DIME opinion is incorrect. Drs. Bird, Hewitt, Failinger and Gray reviewed the same medical records as Dr. Fall. These doctors were aware of the four-month delay from the original date of injury and the eighteen months delay after Claimant's first MMI date. Despite these gaps in treatment, these doctors did not alter their opinion that the need for right shoulder surgery was work-related. Each doctor found Claimant's participation in sports as a non-factor in their determination that Claimant's need for shoulder surgery is work- related.

Dr. Fall erroneously opined that the doctors only provided treatment and did not address causation. However, to the contrary, Dr. Bird noted in his first appointment Claimant's work-related mechanism of injury. Then, Dr. Bird treated Claimant for three years and did not change her opinion that Claimant's right shoulder symptoms related to his work-injury.

Dr. Failinger's opinion on the work relatedness of Claimant's injury was not swayed by Claimant's ability to continue working despite having pain nor was his opinion swayed by the gaps in treatment between Claimant's date of injury, first date of MMI, and date of reopening his case.

Dr. Hewitt opined that Claimant's right shoulder injury was work related and he is an appropriate candidate for surgery.

In his DIME report, Dr. Gray thoroughly examined Claimant's symptoms and medical records, acknowledging the gaps in treatment, and did not alter his opinion that Claimant's need for right shoulder surgery is work-related.

Drs. Bird, Failinger, Hewitt, and Gray also noted that Claimant's described mechanism of injury ultimately caused the tear to his bicep and rotator cuff, which led to the need for surgery.

Furthermore, Respondent's use of the left shoulder MRI to try and overcome the DIME is unpersuasive and speculative. No treatment provider found it necessary to compare an MRI of Claimant's left shoulder with an MRI of Claimant's right shoulder in order to determine causation. Thus, there is little support from any treating providers as to the probative value of the left shoulder MRI as it relates to Claimant's need for right shouldersurgery.

The ALJ is unable to rely on the left shoulder MRI alone to make a finding to overcome the DIME. In using the left shoulder MRI, Respondents have failed to extract any clear and substantiated evidence other than to show that Claimant's shoulders both shows signs of degeneration. Even with the similarities in the two MRIs, Dr. Fall failed to consider the documented symptoms and physical limitations in Claimant's right arm compared to his left. For instance, popping and a lack of range of motion in the right shoulder were present while there were no signs of popping or range of motion issues in the left shoulder. Dr. Fall did not make a solid or clear distinction between the two MRIs by which it can be concluded that the DIME physician's opinion on MMI has been overcome by clear and convincing evidence.

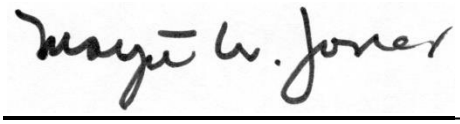
Dr. Gray credibly testified that Claimant appears to have a high tolerance for pain such that he was able to do his job despite his right shoulder symptoms. Claimant credibly testified that he is able get around his physical limitations as a skilled forklift operator with nineteen years of experience. While opinions to the contrary may exist, these opinions are not held by Claimant's treating providers and are not persuasive as it relates to overcoming the DIME. Respondent's use of Dr. Fall's expertise amounts only to a difference of opinion and conflicting inferences, which ultimately fails to overcome the DIME.

ORDER

1. Respondents failed to overcome Dr. Gray's DIME opinion that Claimant is not at MMI by clear and convincing evidence.

2. All matters not determined herein are reserved for future determination.

This 6th day of June, 2019.



Margot W. Jones

Administrative Law Judge

Office of Administrative Court

1525 Sherman Street, 4th Floor

Denver, CO 80203

ISSUES

I. Whether Claimant proved by a preponderance of the evidence he suffered a compensable injury while working for Respondents on March 13, 2018 or March 14, 2018.

II. If Claimant proved he suffered a compensable injury, whether Claimant proved by a preponderance of the evidence he is entitled to temporary total disability (TTD).

III. If Claimant proved he suffered a compensable injury, whether Claimant proved by a preponderance of the evidence he is entitled to a change of physician.

IV. If Claimant proved he suffered a compensable injury, determination of Claimant's average weekly wage (AWW).

FINDINGS OF FACT

1. Claimant is a 44-year-old man who worked for Employer from January 9, 2018 to September 9, 2018 performing fracking duties.

2. Claimant alleges he sustained a work injury on March 13, 2018 or March 14, 2018 after being physically assaulted by a co-worker. Claimant estimates the co-worker is 19 years old, approximately 5'11'' and weighs a little over 210 lbs. Claimant is approximately 5'4'' tall and weighs around 170 lbs. Claimant worked with this co-worker as his main partner for approximately four to five weeks prior to the alleged incident. He testified that, prior to the alleged incident, he and the co-worker were involved in verbal arguments but never got physical.

3. Claimant testified that, on the day of the alleged incident, the co-worker flipped Claimant's helmet off of his head as he was walking by. Claimant testified he put his helmet back on, asked the co-worker why he did that, and then proceeded to begin performing a work task. Claimant testified the co-worker then approached Claimant and struck him with a right hook to the left side of his forehead, causing Claimant to fall backwards into a tanker. Claimant testified his respirator mask moved slightly, scratching the left side of his nose. Claimant stated that immediately after the alleged punch he was startled, saw "little stars," and had a "little headache," but did not experience any significant symptoms. He testified he did not respond in any physical manner and merely resumed performing his work activities, finishing the remainder of his shift working with the co-worker. No other individuals observed the alleged incident.

4. Claimant did not immediately report the alleged incident to Employer or immediately seek medical treatment. Claimant testified he delayed reporting the incident

because he did not want to create any problems. Claimant continued working his scheduled shifts with the co-worker and was able to perform his job duties over the next few days. Claimant testified he felt nauseous and fatigued in the two to three days following the alleged incident, experiencing a few headaches and ringing in his ears. He stated that the "complete onset" of symptoms occurred on March 18, 2018, as he was being driven back to the yard after being removed from the pad by his supervisor, Daniel Gordon. Claimant testified Mr. Gordon retrieved him during his shift and informed him it was because he was being "picked on." Claimant testified that as he was being driven back to the yard by Mr. Gordon he felt very nauseous, weak and dizzy. Claimant did not inform Mr. Gordon of these alleged symptoms. Claimant testified he then attempted to drive himself home, but "lost track of space and time" and decided to drive himself to the emergency room.

5. Claimant presented to the emergency department at North Colorado Medical Center at approximately 6:45 p.m. on March 18, 2018 with complaints of right-sided neck pain for five days. He reported that, on March 14, 2018, a co-worker hit him in the face while he was wearing a respirator, causing his head to snap back. Shelley Anne O'Neil, PA noted,

> Pt. claims that the person has been interacting with him in a negative manner and almost likely a bully. During the altercation patient had his hat tipped then hit in the face, upper left side which caused his respirator to shift and his head was snapped back and to the right. No falling to the ground. No lesions or cuts or bruising. Since the patient has developed some pain of the muscles of the neck making it hard to turn head and painful to sleep do (*sic*) to the stiffness.

Claimant denied any recent vision problems, headache, dizziness, altered level of consciousness, numbness, tingling or weakness, as well as any hematomas, lacerations, abrasions, bruises or lesions. On exam, PA O'Neil noted some tightness along the cervical spine, but full and active cervical range of motion without pain. No lacerations or abrasions were noted. X-rays were negative for acute abnormality in the cervical spine. PA O'Neil gave the following impression: alleged assault, muscle pain, neck pain on right side. She prescribed Claimant Flexeril, took Claimant off of work for one day, and recommended Claimant follow up with a workers' compensation clinic.

6. As Claimant reported to the hospital staff he suffered an assault, the Weld County Sheriff's department was contacted and an officer came to speak with Claimant at the hospital. Officer Rougier conducted an investigation. Claimant testified his understanding was that the co-worker denied the alleged incident occurred, and Officer Rougier determined the alleged incident was unfounded.

7. Officer Rougier took photographs of Claimant at the hospital on March 18, 2018 (Claimant's Exhibit 10). Claimant purports that the photographs show a scratch on the left side of his nose that resulted from the alleged punch. The photographs show a very small, minimally perceptible mark on the left side of Claimant's nose.

8. Mr. Gordon testified at hearing on behalf of Respondents. Mr. Gordon testified that a few days after the alleged incident Claimant told him he was hit by the particular co-worker and was experiencing neck pain. Mr. Gordon stated Claimant would not provide further details of the incident despite his questioning. Mr. Gordon testified that he did not observe any physical altercation between the Claimant and the co-worker. He stated that, on previous occasions, he had personally observed Claimant instigate arguments with co-workers and get upset and storm off. Mr. Gordon testified that he did not tell Claimant he was being removed from the pac because he was being picked on. Mr. Gordon testified that he was interviewed by Officer Rougier.

9. On March 23, 2018, Claimant presented to Carolyn Douglas, PA-C at Employer's authorized provider, Advanced Urgent Care. Claimant testified he was instructed to go to Advanced Urgent Care by Employer and was not provided a list of providers. Claimant complained of 3/10 neck pain and right head pain since March 13, 2018, along with mild headaches, fatigue, poor concentration, and nausea with exertion. He denied vision changes, hearing loss, or skin lesions. On physical exam, PA-C Douglas noted Claimant's head was normocephalic and atraumatic, limited cervical range of motion and tenderness, and no neurological deficits or lesions. She assessed Claimant with a concussion with no loss of consciousness and neck pain. The medical note indicates Claimant was to be taken off of work until March 27, 2018 due to medication given to him at his emergency department visit, although the WC-164 form completed by PA-C Douglas notes Claimant was released to full duty with no restrictions.

10. Claimant returned to Advanced Urgent Care for follow-up on March 26, 2018. Claimant reported no vision changes, nose problems, loss of hearing, muscle aches, headaches, dizziness or skin lesions. On physical exam, Claimant's head was again normocephalic and atraumatic and his neck was supple with full range of motion and no cervical spine tenderness. Claimant was assessed with post-concussion syndrome and cleared to return back to work without restrictions. No further treatment was prescribed.

11. Claimant returned to working his regular duties. He subsequently received disciplinary write-ups on April 18, 2018 for an attendance issue and April 19, 2018 for sleeping in the safety shower.

12. Claimant sought no healthcare treatment between March 27, 2018 and April 29, 2018. On April 30, 2018, Claimant sought treatment on his own accord with his primary care physician at SCHC Loveland Community Health Center reporting headaches, dizziness, difficulty concentrating, and fatigue. Claimant reported that he had been diagnosed with concussion syndrome. Physical examination was normal. Jennifer Smith, PA-C assessed Claimant with a concussion without loss of consciousness, approved Claimant to return to work with restrictions of no DOT driving and no safety-sensitive work, and instructed him to return if his condition failed to improve or worsened. Employer was unable to accommodate the restrictions.

13. On June 8, 2018, Claimant was evaluated by Jason Valderrama, PA-C at SCHC Loveland Community Health Center. Claimant complained of headaches and ringing in his ears that had been improving. Claimant also complained of some light

sensitivity on occasion and posterior scalp pain, as well as some dizziness and fatigue. Claimant was given a hearing test, which he failed. A brain MRI was ordered, which Claimant underwent on June 16, 2018. The MRI was normal, with no evidence of an intracranial mass, hemorrhage or acute ischemia.

14. At a return visit to SCHC Loveland Community Health Center on July 19, 2018, Claimant reported he would like to transition back to work. He complained of some residual ringing in his left ear and fogginess. Claimant passed a hearing test on both sides. He was released to return to work.

15. Claimant returned to Advanced Urgent Care on August 6, 2018 for a return-to-work evaluation. Claimant reported no issues or symptoms and was released to return to work without restrictions. Claimant also underwent a Department of Transportation evaluation on August 8, 2018 and was cleared to return to work.

16. Claimant returned to performing his regular duties and subsequently resigned on September 10, 2018. Claimant completed a separation checklist stating his reason for termination of his employment was dissatisfaction with type of work. He further reported to Employer that the crew was not working as a team, crew members were "snippy" to him when giving instructions, and safety concerns for the speed at which tasks were performed.

17. Claimant testified that he resigned from this employment because he no longer trusted Employer and did not want to again end up in a similar situation with the particular co-worker. Claimant testified that since his resignation from Employer, he has worked a few different jobs and is currently employed as a machine operator. Claimant stated his last doctor's appointment was in October 2018. He testified he continues to experience ringing in his left ear and dizziness with extreme heat or over-exertion.

18. Dustin Pennell testified at hearing on behalf of Respondents. Mr. Pennell worked for Employer as a Servicer Specialist and is familiar with both Claimant and the co-worker, who were on his crew. Mr. Pennell testified he did not personally see the co-worker hit Claimant. He testified that both Claimant and the co-worker would express their frustrations with each other over the work radio, and that he had previously spoken to both Claimant and the co-worker about their radio communication and instructed them to stop. Mr. Pennell testified that he was also interviewed by Officer Rougier, whom he told of his belief that Claimant was not being truthful about the alleged incident.

19. Tony Euser, D.O. testified on behalf of Respondents by pre-hearing deposition. Dr. Euser reviewed Claimant's records and testified there was no objective evidence of trauma to Claimant's head. He testified merely because a physical examination shows "some deficit" that does not mean it was caused by what the patient alleges. Dr. Euser explained that the March 23, 2018 chart note did not support, objectively, that Claimant was injured as claimed, and that the March 26, 2018 chart note does not support any objective medical evidence that Claimant was continuing to have any sequalae from the alleged incident. Dr. Euser agreed with the claimant's release to regular duty.

20. Per the wage records, Claimant earned the following wages during the following time period:

Pay period	**Amount**
1/9/2018 – 1/21/2018	$1,784.00
1/22/2018 – 2/4/2018	$3,952.00
2/5/2018 – 2/18/2018	$2,736.00
2/19/2018 – 3/4/2018	$2,640.00

21. Claimant's testimony is not found credible or persuasive.

22. The ALJ credits the testimony of Dr. Euser, Mr. Gordon, and Mr. Pennell.

23. Claimant failed to prove by a preponderance of the evidence he sustained a compensable injury.

24. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or

improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

The claimant was required to prove by a preponderance of the evidence that at the time of the injury she was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

As found, Claimant failed to meet his burden to prove he sustained a compensable injury. The ALJ is persuaded Claimant and this particular co-worker had a contentious professional relationship. However, the ALJ is not persuaded Claimant was punched by the co-worker, causing any disability or need for treatment. Claimant alleges he was struck by a much larger man and the blow was severe enough to, at the time, cause him to stumble backwards into a tanker and see stars and and, later, experience headaches, nausea, fatigue and ringing in his ears. Claimant's allegations regarding the incident and the severity of the incident are inconsistent with Claimant's actions and complaints in the medical records. Claimant failed to immediately report the alleged incident or seek medical treatment, continuing to perform his job duties and work with the particular co-worker. The ALJ is not persuaded by Claimant's explanation that he delayed reporting the incident to avoid causing problems, as Mr. Gordon credibly testified he had personally observed Claimant on prior occasions instigating arguments with co-workers and storming off of the job.

Claimant's testimony that he experienced a complete onset of symptoms, including weakness, nausea, dizziness and losing "track of space and time" is inconsistent with the complaints noted in emergency room records, which note Claimant solely reported neck pain. The March 18, 2018 medical record documents Claimant specifically denied any recent vision problems, headache, dizziness, altered level of consciousness, weakness, as well as any hematomas, lacerations, abrasions, bruises

or lesions. The miniscule mark on the left side of Claimant's nose seen in the photographs taken by Officer Rugier do not support Claimant's contention that he was struck in the face by a much larger man, causing an abrasion and concussive symptoms. Claimant's credibility is further called into question as, after reporting on March 26, 2018 no hearing issues, headaches, or dizziness, he did not seek further medical treatment until he received two disciplinary write-ups from Employer. Dr. Euser credibly testified the objective evidence does not support Claimant's contentions. The record contains insufficient credible and persuasive objective evidence Claimant sustained an acute injury. Based on the totality of the evidence, Claimant failed to prove he sustained a compensable injury arising out of and in the course of his employment for Employer on March 13 or March 14, 2018.

As Claimant failed to prove he sustained a compensable injury, the remaining issues of TTD, AWW and authorized physician are moot.

ORDER

It is therefore ordered that:

1. Claimant failed to prove he sustained a compensable injury arising out of and in the course of his employment for Employer on March 13 or March 14, 2018. Claimant's claim for benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant prove repeat lumbar rhizotomies, an inversion table, and facet injections are reasonably necessary and causally related post-MMI medical treatment?

FINDINGS OF FACT

1. Claimant has worked for Employer for approximately 32 years, the last 18 years as a sprinkler backflow technician. The job is physically demanding and regularly requires lifting fifty pounds or more.

2. Claimant suffered an admitted low back injury on May 28, 2015 while lifting a 100-pound backflow machine onto a truck.

3. A lumbar MRI on June 18, 2015 showed a large left disc extrusion at L4-5 causing severe central canal stenosis, severe impingement of exiting L4 nerve roots, and severe left neural foraminal narrowing. There was also a disc bulge and central disc protrusion at L5-S1, causing mild central canal stenosis and severe bilateral neural foraminal narrowing. The radiologist considered the findings degenerative rather than acute.

4. Employer referred Claimant to Emergicare for authorized treatment, but eventually, he transferred to Southern Colorado Clinic, where he treated with Dr. Terrence Lakin and PA-C Terry Schwartz. At the initial visit with Dr. Lakin on August 25, 2015, Claimant reported 8/10 back pain with weakness and dragging his left leg. He was still working his regular job, but struggling with it. He reported a remote history of low back problems and treatment in 1996 but stated he "has been well since then." Claimant had difficulty tolerating NSAIDs due to stomach discomfort. Dr. Lakin imposed work restrictions and referred Claimant to Dr. Michael Sparr for consideration of injections.

5. Claimant saw Dr. Sparr on September 23, 2015. He described constant 7/10 low back pain around the belt line with occasional radiation into his left buttock. He also reported "heaviness" in his left leg, and "[it] sometimes feels as if he's dragging his left leg." He walked with an antalgic gait favoring his left leg, and had difficulty walking on his heels because of left leg weakness. Physical examination showed "profound" myofascial tightness of the lumbar paraspinals and gluteal musculature. Facet loading was positive at L4-5 and L5-S1. Lasegue maneuver was markedly positive, and straight leg raising was positive bilaterally at approximately 30°. Lower extremity strength was normal except ankle dorsiflexion and extensor hallucis longus were graded 5-/5. Dr. Sparr opined,

> Severe lumbosacral pain is likely related to the L4-L5 disc extrusion noted on MRI or facetogenic pain and profound myofascitis, also some element of sacroiliitis. Radiculopathy was present initially, but now has lessened substantially. He seems to have some left-sided weakness in an L5 myotome distribution which may be the result of the above-noted disc herniation.

6. Dr. Sparr prescribed a prednisone burst and encouraged Claimant to try Celebrex, which should be easier on his stomach than ibuprofen.

7. Claimant returned to Dr. Sparr on October 28, 2015 and reported the prednisone was "extremely beneficial in substantially decreasing his pain." Claimant had also responded well to chiropractic treatment with Dr. Young. The physical examination findings were improved; Lasegue test and straight leg raising were now negative. The primary significant finding was "exquisite tenderness" to palpation of the bilateral L4-5 and L5-S1 facets, worse on the right. Dr. Sparr opined his pain appeared to be primarily related to facet dysfunction and arthralgias, and recommended facet injections.

8. Claimant had right L4-5 and L5-S1 facet injections on November 16, 2015 with Dr. Stephen Scheper.

9. On December 9, Dr. Sparr documented the injections immediately decreased Claimant's pain from 7/10 to 0/10 and gradually returned to 5/10 by the time of the appointment. Dr. Sparr considered this "an excellent diagnostic response." He decided to start trigger point injections combined with additional chiropractic treatment.

10. On December 30, 2015, Dr. Sparr noted the combination of trigger point injections and chiropractic were "quite beneficial."

11. Dr. Sparr administered another set of trigger point injections on January 27, 2016. Unfortunately, that round of injections was not as helpful as the first set. Eventually, Dr. Sparr recommended medial branch blocks ("MBBs") "with an eye toward radiofrequency rhizotomy."

12. Dr. Scheper performed MBBs at L3, L4, and L5 on March 21, 2016.

13. At Claimant's follow up appointment on March 30, 2016, Dr. Sparr documented,

> Prior to the injection his pain was graded as 6-7/10. Immediately following the injection his pain diminished to 1/10. It was 0/10 for the next 3-4 hours, gradually increase[ing] thereafter. It is intermittently 7/10 at this point. This is an excellent diagnostic response to the medial branch blocks.

14. Based on Claimant's response to the MBBs, Dr. Sparr recommended rhizotomy at L4-5 and L5-S1.

15. Dr. Scheper performed the rhizotomies on June 13, 2016.

16. Dr. Sparr's June 29, 2016 note states,

> He's extremely pleased [with the rhizotomies], reporting almost no pain in his back. His pain has averaged 1/10 in the past week. Immediately following the procedure the pain was much improved. He has been able to lift, stand and walk without significant problem.

The physical examination was much improved too, showing only "minimal tenderness" to direct palpation over the lumbar paraspinals and facet joints, and negative facet loading. Because of Claimant's "excellent response" to the rhizotomy, Dr. Sparr opined he "does not need further treatment in the way of injections," but recommended a possible repeat rhizotomy as "maintenance treatment" if the pain returned after six months.

17. On July 7, 2016, Dr. Lakin noted claimant "appears to be doing well," with "just tightness" in his back but minimal pain. He released Claimant to a trial of regular work on July 7, 2016.

18. Claimant tolerated the return to work reasonably well, except for some mild pain while bending forward. On July 19, 2016, PA Schwartz noted, "it appears the radiofrequency helped reduce radicular pain and severity of the specific back pain. It also increased functional capacities to near previous baseline."

19. Dr. Lakin put Claimant at MMI on August 25, 2016. His report states, "He has completed extensive conservative care, benefited from radiofrequency ablation and plateaued in his recovery." He recommended maintenance treatment of periodic follow-up with Dr. Sparr and a repeat rhizotomy "as needed in the next 2 years." Dr. Lakin released Claimant to regular duty.

20. Respondent filed a Final Admission of Liability admitting for reasonably necessary injury-related medical treatment after MMI.

21. Claimant worked without difficulty after MMI for approximately nine months. On May 17, 2017, he returned to Dr. Lakin's office and reported "increasing discomfort" and a "recurrence of low back pain." Dr. Lakin opined Claimant might need a repeat rhizotomy. He imposed no work restrictions, and Claimant continued working despite the worsening pain.

22. Claimant saw Dr. Sparr on April 30, 2018. Dr. Sparr recalled when he released Claimant in 2016, he reported "substantial benefit with almost no pain in his back." Dr. Sparr noted,

> He returns reporting rather severe increased pain in the central lumbar and lower extremity regions. The symptoms have been worse over the past week. Prior to that he was not experiencing severe back pain. He did not change his routine in any way. He denies any specific trauma or significant change in activities. He scheduled today's visit and is reporting 8/10 intensity near constantly in the central lumbar region of the belt line with radiation into both buttocks.

23. The physical examination was very similar to Claimant's presentation at the first appointment with Dr. Sparr in 2015. Claimant had an antalgic gait favoring the left leg, "exquisite tenderness" to palpation over the right side L4-5 and L5-S1 facets, and "markedly positive" facet loading on the right. Dr. Sparr opined Claimant had "responded exceptionally well" to the prior rhizotomy and chiropractic treatment but "has recently experienced a rather severe flareup. I'm concerned that the disc extrusion has worsened. He also seems to have recurrent right-sided L4-L5 and L5-S1 facet arthralgias." Dr. Sparr ordered a lumbar MRI and prescribed a prednisone burst. He stated, "Rhizotomy was extremely beneficial in the past. A repeat rhizotomy of the L4-L5 and L5-S1 facets will be requested. This will not be scheduled until he has had some time to determine medication effect. . . . If his pain subsides then a rhizotomy will not be necessary."

24. Dr. Sparr's May 16, 2018 note documents, "The patient had good response to [the] prednisone burst and paper but continues to have rather severe Central back pain. Lumbar facet injections and been considered as he has an excellent response to previous rhizotomy." A final decision was deferred pending the MRI.

25. Claimant had the MRI on May 17, 2018. The radiologist did not have the prior images available for comparison, but the results appear very similar to the June 2015 MRI.

26. The last note from Dr. Sparr is dated June 8, 2018, which states,

> In the past he had excellent response to radiofrequency ablation . . . . He would like to avoid further injections as he hates needles. I do think an epidural steroid injection would be extremely beneficial. This will be considered in the future should he have worsening pain. He responded exceptionally well to steroid burst and taper. If he has worsening pain, an additional burst would be appropriate. Surgical intervention would certainly be an option given the severity of findings. He would like to avoid this at all costs. . . . Chiropractic treatment has been extremely beneficial in the past. Dr. Young is aware of his situation and will use disc precautions. I will order 6-8 such treatment hoping to further alleviate his pain.

27. In his July 24, 2018 report, Dr. Young noted,

> I have reviewed his prior response to interventional management; unfortunately, [Claimant] has a fear of needles and does not wish to pursue this at this time. I have consulted with Dr. Sparr regarding additional management options to include an inversion table for home use, this has been requested, however, there has been no indication of authorization or denial at this time.

28. Claimant saw Dr. Frank Polanco for an IME at Respondent's request on September 11, 2018. Dr. Polanco documented a largely benign physical examination, with only "generalized lumbar paraspinal tenderness" and limited range of motion. He appreciated no muscle spasm or trigger points, no facet tenderness on deep palpation,

and no leg weakness. He described Claimant's gait as "normal." Dr. Polanco said Claimant told him the rhizotomy "did not offer any significant benefit" and only reduced his pain from 9/10 to 7/10 "for a little while." Dr. Polanco opined, "In reviewing the effects of his prior rhizotomy procedure there is no indication of a substantial decrease in pain or significant improvement in functional status." He opined additional chiropractic treatment and epidural injections were "outside the medical treatment guidelines," and therefore not reasonably necessary.

29. Dr. Polanco issued a supplemental report on November 15, 2018 to address the medical necessity of a repeat rhizotomy. He reiterated the findings and opinions from his previous IME report and added,

> As [Claimant] has noted, the prior rhizotomy procedure did not provide any significant pain relief or functional improvement. The guidelines support rhizotomy procedures with objective documentation of sustained and substantial relief for six to eighteen months. Thus, the request is not supported as it does not meet guideline criteria.

30. At hearing, Claimant disputed Dr. Polanco's assessment that the prior rhizotomies were unhelpful. He believes the pain relief and functional improvement described in Dr. Sparr and Dr. Lakin's records accurately depicts the benefit he perceived from the previous rhizotomy. He credibly testified the rhizotomies decreased his pain substantially and allowed him to return to his physically demanding job. Claimant testified he now wishes to pursue repeat rhizotomies, despite his fear of needles, because it is getting increasingly difficult to work and engage in other activities.

31. Dr. Polanco testified at hearing. He stated Claimant's accident aggravated his pre-existing multilevel degenerative disc disease but he improved with treatment and resumed full duties with no permanent restrictions. Dr. Polanco opined Claimant's current symptoms are due to the natural progression of his underlying pre-existing condition and not the work injury.

32. Claimant's testimony at hearing was generally credible.

33. Dr. Sparr's reports and opinions regarding the utility of rhizotomies are credible and more persuasive than the contrary opinions offered by Dr. Polanco.

34. Claimant proved repeat rhizotomies are reasonably necessary to relieve the effects of his injury and prevent further deterioration of his injury-related condition.

35. Claimant failed to prove an inversion table or facet injections are reasonably necessary.

CONCLUSIONS OF LAW

The respondents are liable for medical treatment after MMI reasonably necessary to relieve the effects of the injury or prevent deterioration of the claimant's condition. Section 8-42-101; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Even if

the respondents admit liability for post-MMI treatment, they retain the right to dispute the reasonable necessity or relatedness of any particular treatment. *Hanna v. Print Expediters Inc*., 77 P.3d 863 (Colo. App. 2003). The mere occurrence of a compensable injury does not compel the ALJ to approve all requested treatment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove the treatment is reasonably necessary and causally related to the industrial accident. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The claimant must prove entitlement to medical benefits by a preponderance of the evidence. *Page v. Clark*, 592 P.2d 792 (Colo. 1979).

As found, the repeat rhizotomies recommended by Dr. Sparr are reasonably necessary to relieve the effects of Claimant's injury and prevent further deterioration of his injury-related condition. The persuasive evidence shows Claimant had an excellent response to the first rhizotomy, with a lengthy period of sustained pain relief that allowed him to resume his regular work. Dr. Polanco's opinion that "there is no indication of a substantial decrease in pain or significant improvement in functional status" is convincingly refuted by the medical records and Claimant's credible testimony. In fact, Claimant's pain almost completely resolved and he returned to a manual labor job without restrictions. Nor is the ALJ persuaded by Dr. Polanco's opinion that Claimant's recurrent symptoms merely reflect the natural progression of his pre-existing condition. Claimant's current facet pain is a continuation of the aggravation set in motion by the May 2015 work accident.

Claimant failed to prove additional facet injections or an inversion table are reasonably necessary. Facet injections are primarily diagnostic, and we already know Claimant has facetogenic pain based on his response to previous injections and rhizotomies. The Chronic Pain MTGs suggest repeat MBBs "if the patient's pain pattern presents differently than the initial evaluation." But that consideration does not apply here, because Claimant's current condition closely mirrors his presentation before the previous facet blocks and rhizotomies. Claimant conceded in his brief that if the repeat rhizotomy is approved, the facet injections are moot.

The inversion table was recommended as an alternative to rhizotomies because Claimant fears needles. Claimant has now indicated a willingness and desire to pursue additional rhizotomies. Given his positive response to the previous rhizotomies, the inversion table will be superfluous if he has a similarly good result this time. Of course, Dr. Sparr may make any other treatment recommendations he deems appropriate (if any) after assessing the efficacy of the repeat rhizotomies. But the ALJ is not persuaded the inversion table is reasonably needed at this time.

ORDER

It is therefore ordered that:

1. Insurer shall cover the repeat rhizotomies recommended by Dr. Sparr.

2. All issues not decided herein, or otherwise closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 7, 2019

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

The issues set for determination included:

- Did Claimant meet her burden of proof to reopen the claim for a worsening of condition?

- Were Claimant's current symptoms related to or caused by her work injury?

PROCEDURAL HISTORY

The ALJ issued a Summary Order on May 8, 2019, which was served on May 9, 2019. Respondents requested Specific Findings of Fact and Conclusions of Law on May 17, 2019. This Order follows.

FINDINGS OF FACT

1. Claimant's medical history was significant in that she was previously was evaluated on May 30, 2000 at Alpine Urology with a complaint of urinary frequency, hesitancy, urgency and incontinence. The impression was: urge incontinence, 2+ plus cystocele and 1+ rectocele; low back pain. There was no evidence in the record Claimant required prescription medication to treat urinary incontinence before August 23, 2010.

2. Claimant injured her low back in a motor vehicle accident in approximately 1983. The medical records specified Claimant had residual problems for this injury. There was no evidence in the record Claimant required surgery for her low back, nor was there evidence of a permanent medical impairment for the low back or permanent work restrictions related to the motor vehicle accident.

3. On June 30, 2010, Claimant was evaluated by Sarah Bell, M.D. at Kaiser Permanente when she walked into the garage, fell and hit a table. Her back was painful, with no radiation of pain. There was no evidence in the record Claimant required treatment for her back at this time after this incident.

4. Claimant suffered an admitted industrial injury on August 23, 2010 when she fell down stairs while working for Employer.

5. After her fall, Claimant was transported by ambulance to Exempla Good Samaritan Center, where Julie Seaman, M.D. evaluated her. Her medical history included osteoporosis, esophagitis, anxiety, and depression. Dr. Seaman's impression was: left pubis and inferior pubic rami fracture, mechanical fall, osteoporosis, hypoxia secondary to narcotics. Claimant was admitted for pain control and Dr. Seaman

concluded Claimant would need PT/OT. Claimant initially received treatment for her work injuries though Kaiser Permanente.

6. On November 15, 2010, Claimant was evaluated by Sander Orent, M.D. Dr. Orent noted Claimant was tender over the pubic ramus. Dr. Orent's impression was pelvic fracture, with ongoing urinary incontinence. Dr. Orent also took Claimant off work, prescribed Celebrex and said they would attempt to take her off Percocet. Dr. Orent referred Claimant to William Ciccone II, M.D. (orthopedic surgeon) and for pain management.

7. David Schneider, M.D./Dr. Ciccone evaluated Claimant on November 17, 2010, at which time she was noted to be doing reasonably well. The diagnosis was: bilateral pubic ramus fracture. Dr. Ciccone restricted her ambulation and driving, with a follow-up in four weeks.

8. Claimant returned to Dr. Orent at regular intervals in November 2010 through December 2010. On November 22, 2010, Dr. Orent's impression was: pelvic fracture, with ongoing urinary incontinence; ongoing pain, requiring narcotics. Claimant received physical therapy ("PT") and her medications were monitored.

9. Dr. Ciccone evaluated Claimant on four occasions from December 2010 through January 10, 2011, including appointments on December 6, 16, 30, 2010. In the follow-up evaluation on January 10, 2011, Dr. Orent noted Claimant was getting progressively better. She was still experiencing incontinence and had seen an urologist (C. Cragin Anderson, M.D.), who wanted to perform an urodynamic study to rule out neurologic incontinence. Dr. Orent opined this condition was directly related to the work-related multiple pelvic fractures and this opinion was persuasive to the ALJ.

10. Claimant returned to Dr. Orent on February 3, 10, and 17, 2011, as well as March 3, 10, 17, 28, 20111 and April, 11, 2011. At that examination, Dr. Orent's assessment was: left pubic ramus fracture, with persistent pain. Claimant's fractures were healing, but not completely healed.

11. Urodynamic testing was completed on March 22, 2011 by Dr. Anderson. In a follow-up evaluation of Claimant on April 14, 2011, Dr. Anderson stated Claimant had an exacerbation of voiding dysfunction as a result of the work injury on August 23, 2010. Dr. Anderson observed that prior to the accident, she had some symptoms common for a woman of her age, with minor stress urinary incontinence. Subsequent to the accident, she had severe urinary urge incontinence, requiring the use of a protective pad, using 3-4 pads daily. Dr. Anderson noted Claimant had been undergoing PT and started anti-cholinergic therapy with some mild improvement.[1] The ALJ credited Dr. Anderson's opinion that the work injury caused Claimant's severe urinary incontinence.

12. Claimant returned to Dr. Ciccone on April 13, 2011. She reported left hip pain, with minimal pain. A review of the CT scan showed no acute abnormality, but

[1] Exhibit 6, pp. 260-262.

incomplete healing of the bilateral sacroiliac fractures, as well as the ramus fractures. Dr. Ciccone recommended Claimant to continue to be weight-bearing, as tolerated and continue with a home exercise program. Dr. Ciccone said no orthopedic follow-up was necessary.

13. On May 4, 2011, Claimant underwent a psychological evaluation performed by Ronald Carbaugh, Psy.D. Dr. Carbaugh's diagnostic impressions were: pain disorder associated with psychological factors and general medical condition; history of post-traumatic stress disorder; adjustment disorder, with depressed mood; other diagnoses deferred. Dr. Carbaugh said Claimant had a history of significant physical and sexual abuse, which can be a factor in the development of chronic pain disorders. Claimant appropriately entered psychotherapy for the prior abuse issues and functioned well. However, Dr. Carbaugh noted past abuse could lead to heightened pain sensitivity. Dr. Carbaugh opined Claimant would likely benefit from a course of pain and adjustment counseling.

14. Claimant completed eight (8) pain and adjustment counseling sessions, provided by Jane Cameron MS in Dr. Carbaugh's office. In the psychological discharge summary on August 9, 2011, Dr. Carbaugh's diagnostic impressions were the same as on May 4, 2011. Claimant's mood had stabilized. Claimant was encouraged to apply strategies taught during treatment to enhance her pain coping skills. No further sessions were scheduled or recommended at that time.

15. On August 25, 2011, Dr. Orent evaluated Claimant, at which time he noted she suffered a setback of the urinary incontinence condition. Dr. Orent increased her Vesicare prescription. Claimant was taking Vicodin twice a day and tolerating it well. Dr. Orent noted Claimant had a total of four fractures and secondary urinary incontinence. Claimant's recovery was slow, but Dr. Orent opined she reached MMI as of July 28, 2011.

16. Dr. Orent assigned a 21% whole person impairment-for the pelvis fracture, with displacement residuals; a bilateral pubic rami fracture; a sacral fracture; and a coccyx fracture. Claimant's impairment for the fractures totaled 15%. Claimant also had a medical impairment for urinary bladder function, and impairment in the form of urgency with frank incontinence, for an additional 7%. Dr. Orent recommended continuing medical treatment for Claimant.

17. For maintenance treatment, Dr. Orent stated if the urinary incontinence worsened, Claimant may need to revisit the neurologist. Dr. Orent also noted Dr. Ciccone opined it was possible Claimant will need surgery on her hip because of the injury, which should be considered a part of potential maintenance care. Dr. Orent stated maintenance care also included prescriptions for Vicodin and Vesicare.

18. On September 15, 2011, a Final Admission of Liability ("FAL") was filed on behalf of Respondents based upon Dr. Orent's August 25, 2011 report, which was the date of MMI. The FAL admitted for a 21% whole person impairment, which included a

medical impairment rating for the pelvis, hip and urinary incontinence. The FAL admitted for medical treatment that was reasonable, necessary and directly related to the industrial "injury of August 23, 2010 only". Treatment was limited to the "pelvic fracture to include the hip, as recommended by Dr. Sander Orent and Dr. Ciccone".

19. Dr. Anderson performed a transvaginal tape procedure and cystoscopy for the stress urinary incontinence issue on May 30, 2012. The ALJ inferred Claimant's urinary incontinence symptoms following the work injury necessitated this surgery. Claimant returned to Dr. Orent on June 14, 2012, at which time she reported the bladder suspension surgery was very successful. Although she had what was described as a chronic ache in the pelvic area, this was the first time she had not had to use incontinence pads in two years.

20. On September 27, 2012, Dr. Orent referred Claimant to Lief Sorenson, M.D. for continued low back and right SI joint tenderness. Dr. Sorenson evulated Claimant and his diagnoses were: chronic pain; lumbar spondylosis; muscle pain; sacroiliac joint inflammation. Dr. Sorenson administered SI joint injections on October 10, 2012 and November 3, 2012; both of which provided pain relief to Claimant. This was confirmed when Claimant returned to Dr. Orent for evaluation on October 11, 2012 and November 26, 2012, respectively.

21. Claimant returned to Dr. Orent on December 13, 2012, at which time a minor flare-up was noted. Claimant was doing well in the follow-up-a visit on December 27, 2012. Dr. Orent reevaluated Claimant for maintenance visits in 2013, including on April 4, June 6, October 3, November 7, 2013 and January 9, 2014. At the January 9, 2014 exam, Dr. Orent said the SI joint injection had no efficacy and referred Claimant to see Dr. Sorenson as soon as possible. Dr. Sorenson administered an SI joint injection on January 15, 2014. Dr. Orent evaluated Claimant on January 16, February 6, March 13, 2014. He noted Claimant was having nonoccupational issues at the March 13, 2014 appointment. When Claimant was evaluated on April 17, 2014 and July 10, 2014, Dr. Orent stated Claimant was doing quite well. When Claimant returned on November 6, 2014, Dr. Orent documented a worsening in her condition.

22. Dr. Orent referred Claimant to B. Andrew Castro, M.D., who evaluated her on November 21, 2014. Claimant was experiencing pain with increased activities, including bending and getting up. On examination, she had a reasonably good ROM on flexion, extension, lateral bending and rotation. Dr. Castro discussed treatment options with Claimant, specifically a SI joint fusion. He was concerned because of the poor bone density of the SI joints, specifically the sacral ala. Dr. Castro opined that surgery may not improve Claimant's symptoms and can actually make it worse. The ALJ noted Dr. Orent incorporated Dr. Castro's conclusions when deciding on treatment options for Claimant.

23. Dr. Orent ordered an MRI of Claimant's lumbar spine, which was performed on November 26, 2014. Todd Greenberg, M.D. read the films and noted

minimal displacement at L5-S1, with no stenosis. Mild disc height loss was noted at L4-5 and Dr. Greenberg concluded this was an unremarkable lumbar spine study.

24. On December 11, 2014, Claimant was re-evaluated by Dr. Orent. Claimant walked with an antalgic gait, was having pain, numbness in the legs/feet and was using a cane. Dr. Orent opined that her symptoms were directly related to her original SI joint injury. Dr. Orent took Claimant off work, because she was taking narcotics and was in a great deal of pain.

25. Claimant received an SI joint injection on December 31, 2014. On January 7, 2015, Dr. Orent evaluated Claimant, after she had completed an injection. The injection was characterized as very helpful in reducing her pain. Claimant reported she was still having issues with incontinence, which Dr. Orent discussed at length with her. He did not believe this was related to any *cauda equina* type syndrome. Dr. Orent ordered a short course of therapy to increase the efficacy of the injection and scheduled for a follow-up after that. Dr. Orent noted Claimant's left SI joint had worsened in a follow-up evaluation on January 22, 2015. He recommended either doing a reopening or continuing the maintenance care in a different direction, specifically with a focus on the facets just above the SI joint.

26. J. Trevor McNutt, M.D. (neurologist) evaluated Claimant on March 19, 2015. Dr. McNutt opined that Claimant's numbness from the pelvic fractures and urinary incontinence would likely not improve.

27. Dr. Sorenson performed a radiofrequency ablation (L5, S1, S2 and S3) on March 25, 2015. Dr. Sorenson administered a trigger point injection on April 28, 2015, a left trochanteric bursa injection on August 3, 2015 and caudal epidural steroid injection on August 31, 2015. Claimant reported this last injection provided the best functional relief when she returned to Dr. Sorensen on September 14, 2015. This treatment was for continued pain in the low back and hip area. The treatment notes admitted into evidence reflected Claimant reported improvement after she received injections in this timeframe. The ALJ inferred that this maintenance treatment and resultant pain relief was necessary to maintain MMI.

28. On May 22, 2015, Claimant underwent an MRI of the pelvis and the films were read by Steven Pomeranz, M.D. Dr. Pomeranz' conclusion was: no major internal derangement or skeletal abnormality noted; mild anterosuperolateral osteoarthritic change consistent for age, with labral degeneration; symphysis pubis arthrosis, with suspected fracture bony remodeling.

29. On November 3, 2015, Claimant returned to Dr. Anderson. She had stress and urge-related incontinence. Her previous treatment was initially effective, but the symptoms returned. Dr. Anderson noted improvement with PT and recommended continuing with that until improvement was no longer achieved. He also recommended

a neurological evaluation. The ALJ noted there was no evidence of a worsening of the urinary incontinence symptoms in the record after this time.

30. Throughout the treatment Claimant received in 2015, Dr. Orent opined she remained at MMI. Dr. Orent evaluated Claimant at regular intervals, including after the injections she received. At the September 24, 2015 evaluation, Dr. Orent noted Claimant felt much after the caudal epidural she underwent.

31. Claimant returned to Dr. Orent on February 11, 2016, she was having a substantial flair of back pain after PT was re-started. On examination, Dr. Orent found a positive straight leg raising test, with radiation way down into the foot of the left leg. The right leg caused pain in the back. Tenderness was found around the paraspinous musculature, but there was no muscle weakness. Dr. Orent noted Claimant's incontinence continued and there was nothing that could be done with it, as there was nerve damage. Dr. Orent recommended a repeat epidural, without reinstituting PT.

32. Dr. Sorenson administered a caudal epidural steroid injection on January 6, 2016, which provided functional relief. On March 3, 2016, Claimant returned to Dr. Orent. Claimant had undergone an injection the day before and was doing extremely well. Dr. Orent's impression was back pain, status post injection; post-injection headaches; urologic incontinence due to his back injury, which was worked up thoroughly. Dr. Orent noted the straight leg raising test was negative and there was no motor weakness. No unusual pain behaviors were present. Claimant's headaches were present in the occipital area. Dr. Orent recommended therapeutic dry needling and massage, as well as PT. Dr. Orent stated this was maintenance care and Claimant had already been rated. The ALJ inferred Dr. Orent was of the opinion Claimant sustained no additional medical impairment and the treatment was necessary to maintain MMI.

33. Dr. Orent examined Claimant on March 31, 2016. No paraspinous spasm was found, nor was there tenderness throughout the SI joint area. Range of motion ("ROM") for flexion was excellent, with extension somewhat limited. Dr. Orent's impression was: SI joint issue, chronic occupationally related. Dr. Orent stated Claimant needed to come back for a repeat injection if she had a flare. Dr. Orent opined this was maintenance treatment Claimant would need for the rest of her life.[2] The ALJ credited this opinion on relatedness and the need for maintenance treatment.

34. Respondents filed a FAL on April 15, 2016, based upon Dr. Orent's March 31, 2016 report. Claimant was at MMI as of March 31, 2016 and no additional medical impairment was assigned. The FAL did not state a position as to maintenance medical benefits.

35. David Orgel, M.D. evaluated Claimant on May 25, 2016. Dr. Orgel noted he reviewed Claimant's history, but it was not clear that he reviewed the entirety of the chart. Claimant's symptoms included: psychological symptoms, ongoing incontinence

[2] Exhibit 3, p.195.

and joint pain. Tenderness was discerned in the sacrum and into the right greater than left sacral iliac region, but no synovial swelling was noted. Dr. Orgel commented that Claimant received seven years of treatment and should have exhausted maintenance treatment years ago. The ALJ noted this reference to seven years of treatment was inaccurate. Dr. Orgel's assessment was chronic pain. He thought it was best for Claimant to return to Dr. Sorenson for maintenance treatment, including the Percocet prescription, as well as for any recurrent injections. Dr. Orgel did not rule out further treatment to be provided by Dr. Sorenson.

36. Claimant was evaluated by Dr. Orent on July 27, 2016 and he noted she fell two weeks ago. Claimant was complaining of pain in the coccyx, as well as her left hip, which radiated all the way down to her calf. Tenderness was noted in this region, as well as the greater trochanteric bursa, with inferior radiation. Dr. Orent's impression was coccygeal contusion or fracture; greater trochanteric bursitis with neuropathic pain component and SI joint dysfunction. He stated all of these conditions were occupationally-related and were very responsive to cortisone in the past. Dr. Orent opined that this was maintenance care and if the carrier balked, Claimant would be taken off MMI and her active treatment resumed.

37. On August 26, 2016, an Amended FAL was filed to reflect the correct amount of TTD benefits, which were paid through March 30, 2016. The Amended FAL did not state a position on maintenance medical benefits.

38. Dr. Sorenson administered caudal epidural steroid injections on June 15, 2016 and August 24, 2016. In a follow-up evaluation which took place on November 18, 2016, Dr. Sorenson documented Claimant's back pain was worsening. Associated symptoms included headaches, leg pain, pelvic pain, tingling and weakness. Dr. Sorenson administered a caudal epidural steroid injections on December 29, 2016. Claimant reported relief and increased ability to function when Dr. Sorenson evaluated her on January 12, 2017. Claimant received another total epidural steroid injection on March 27, 2017. The records of Dr. Sorenson during 2015-16 documented continued pain in Claimant's low back, SI joint trochanteric bursa.

39. On March 29, 2017, Claimant underwent an independent medical examination, which was performed by Douglas Scott, M.D.[3] At that time, Claimant reported pain over her left pubic ramus, right iliac crest, tailbone and left hip. She also reported urinary incontinence. On examination, Claimant's lumbar range of motion was reduced to an estimated forward flexion of 60°, with extension back limited secondary to feeling lightheaded. Bilateral lateral flexion was 15° and equal. She had negative straight leg raise in a sitting position.

40. Dr. Scott's diagnoses were: status post trip and fall with resulting fractures of the pubis and left pubic rami. These fractures had healed. Claimant had chronic pain with chronic pain complaints in the right sacroiliac joint, left hip, and left pubic

[3] This evaluation was performed at the request of the disability insurer and not directly in connection with the instant workers' compensation claim.

ramis. Claimant had a history of stress urinary incontinence with exacerbation after the August 28, 2010 work injury. Claimant had chronic low back pain, pain syndrome and opiate pain medication use. Dr. Scott issued physical restrictions and opined Claimant could function eight hours per day/40 hours per week. The ALJ noted this evaluation did not address Claimant's need for continuing medical treatment or the efficacy of said treatment.

41. On April 24, 2017, Claimant underwent an IME with Carlos Cebrian, M.D. at the request of Respondents. Claimant complained of pain, loss of stamina, incontinence, and depression. She also told Dr. Cebrian she was not as active as in the past distances and was not able to drive long distances. Dr. Cebrian reviewed Claimant's treatment records and noted that Claimant complained of incontinence since 2000. The ALJ noted Dr. Cebrian prepared a lengthy and detailed review of Claimant's course of treatment. However, no detail was provided in his report regarding the findings he made on examination, including ROM measurements. Dr. Cebrian stated Claimant's claim-related diagnoses were: multiple pelvic fractures that were treated non-operatively; urinary incontinence secondary to the public fractures; SI joint dysfunction secondary to the pelvic fractures.

42. Dr. Cebrian agreed Claimant reached MMI as of December 27, 2012. Dr. Cebrian concluded Claimant's pelvic fractures and urinary incontinence were managed, with improvement noted. He opined Claimant had an expansion of her original complaints. Claimant had a history of chronic low back pain, and a history of intermittent vertigo, all predating her 2010 injury. Dr. Cebrian stated Claimant's lumbar radiculopathy was not related to the 2010 injury, given that her radicular symptoms did not manifest until nearly five years after the date of injury. Dr. Cebrian further opined that Claimant's subjective complaints of pain were not supported by any objective evidence. He noted EMG testing was negative and CT and MRIs of the lumbar spine and pelvis showed no abnormality.

43. Dr. Cebrian stated Claimant suffered from a chronic pain disorder unrelated to her 2010 injury. Dr. Cebrian stated no further medical maintenance care was indicated, as there was no objective injury of mechanical lesions which supported her subjective complaints. He said no further opioid medications should be prescribed pursuant to the Colorado Medical Treatment guidelines. He also said no further anti-inflammatory should be prescribed and Claimant should not receive additional injections. The ALJ was not persuaded by Dr. Cebrian's opinion concerning the urinary incontinence condition, as that opinion did not address whether the work injury worsened Claimant's urinary incontinence. The ALJ found Dr. Cebrian's opinion regarding the cause of the hip and SI joint symptoms to be less persuasive than Claimant's ATPs, especially given the lack of specific findings related to his examination.

44. Claimant returned to Dr. Sorensen on June 6, 2017, at which time he noted the relief from the last caudal injection was not as great as the prior injection. Dr. Sorenson said a left greater trochanteric bursa injection might be considered, as well as

lumbar MRI. The recommendation for this type of injection appears to remain a viable treatment option.

45. On December 19, 2017, Claimant was examined by Patrick Russell, M.D. (Kaiser Permanente), at which time she was complaining of weakness in the left leg, pain in the low back, bilateral groin and leg pain. Dr. Russell noted a slow gait and a Trendelenburg gait with weakness on the left lower extremity. Claimant's right hemipelvis was dropped and she had tenderness along the PSIS, left greater than right. There was also tenderness along the left greater trochanteric bursa, as well as the IT band. Dr. Russell found Claimant had weakness throughout the left lower extremity on motor examination, diminished sensation and weakness on hip flexion in the left lateral leg.[4] The ALJ inferred the IT band tenderness, as well as weakness supported the conclusion that Claimant's condition had worsened.

46. Dr. Russell recommended PT, which Claimant declined because therapy previously made her symptoms worse. She opined Claimant could also consider a trial of acupuncture. Claimant wished to resume caudal injections and Dr. Russell said a SI joint injection would also be considered. Dr. Russell recommended a lumbar MRI, which took place on January 8, 2018. The ALJ credited Dr. Russell's opinion regarding Claimant's need for treatment and diagnostic testing.

47. On May 18, 2018, John Burris M.D. evaluated Claimant, at the request of Respondents. At that time, she was complaining of low back and left thigh pain, right leg shooting pain, and bladder incontinence. On examination, Dr. Burris said Claimant's lumbar spine/pelvis were normal to visual inspection, with no swelling, or deformities. Equal leg lengths were present, with normal pelvic alignment. Diffuse tenderness over the right gluteal region was found, without localization. ROM was full for extension and lateral bending bilaterally, with restrictions on forward flexion. Dr. Burris' assessment was: pelvic fractures consisting of left superior pubic ramus fracture, right ramus fracture, and sacral insufficiency fracture.

48. Dr. Burris stated Claimant suffered pelvic fractures, as noted above. Follow-up diagnostic testing revealed these fractures healed completely without complication. He said Claimant had no objective findings of worsening at her examination or in the records of diagnostic testing. Dr. Burris opined Claimant's work-related conditions had not objectively worsened since reaching MMI. He also concluded Claimant had no current physical restrictions.

49. Dr. Burris testified as an expert in Physical Medicine and Rehabilitation at hearing. He is Level II accredited, pursuant to the WCRP. Dr. Burris reviewed his findings made on the examination of Claimant and reiterated his opinion that Claimant's condition had not objectively worsened since the last time she was placed at MMI. Dr. Burris stated Claimant suffered from chronic pain and because of the nature of that condition, her symptoms would wax and wane. He testified that diagnostic testing did not show abnormalities and much of the treatment was based upon Claimant's

[4] Exhibit 19, pp. 824-825.

subjective complaints, which was the basis for his opinion her condition had not worsened. The ALJ found Dr. Burris to be a credible witness, as Dr. Burris did not posit that all of Claimant's previous maintenance treatment was unreasonable.

50. Dr. Burris opined that Claimant did not continue to need treatment. Dr. Burris did not address the specific recommendations made by Dr. Russell at Kaiser, although he noted that in general, the effect of the injections was short-term. Also, he stated the MRI showed what would be expected in terms of degenerative changes. In addition, Dr. Burris did not specifically address the current status of Claimant's urinary incontinence and the ALJ found Dr. Anderson's opinions to be persuasive with respect to this condition.

51. Dr. Orent treated Claimant for almost six (6) years. The ALJ credited Dr. Orent's opinions with regard to Claimant's continuing treatment needs. He evaluated Claimant on multiple occasions, made the referrals to specialists and oversaw her treatment, including key recommendations as to her maintenance treatment needs.

52. Claimant testified she has been paying for everything for her urinary incontinence since 2017.[5] Most recently, she has treated with physicians at Kaiser. Claimant testified the pain in her hip has been getting worse. Walking is painful and pain in her hip wakes her up at night. She also said her gait was worse. Claimant said she received caudal injections and these injections helped her pain. Claimant was a credible witness, particularly when describing that her symptoms were worse.

53. Claimant proved the condition of her hip and SI joint has worsened.

54. Claimant failed to prove that her urinary incontinence condition worsened.

55. Testimony and evidence inconsistent with the above findings is either not credible and/or not persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

[5] There is a dearth of evidence in the record, which would explain why Respondents have not provided those medical benefits as *Grover* medical benefits. This is especially true given the conclusions of Drs. Orent and Anderson that this condition was worsened by the industrial accident. However, the issue of medical benefits was not before the Court at this hearing.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). In this case, the ALJ evaluated Claimant's credibility as a witness, as well as the credibility of various medical opinions.

Reopening

§ 8-43-303(1), C.R.S. authorizes an ALJ to reopen any award within six years after the date of injury on a number of grounds, including error, mistake, or a change in condition. *Heinicke v. Industrial Claim Appeals Office*, 197 P.3d 220 (Colo. App. 2008); *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). A change in condition refers either "to a change in the condition of the original compensable injury or to a change in Claimant's physical or mental condition which can be causally connected to the original compensable injury". *Chavez v. Industrial Comm'n*, 714 P.2d 1328, 1330 (Colo. App. 1985).

The reopening authority granted ALJs by § 8-43-303, C.R.S. "is permissive, and whether to reopen a prior award when the statutory criteria have been met is left to the sound discretion of the ALJ". *Cordova v. Industrial Claim Appeals Office*, *supra,* 55 P.3d at 189. The party seeking reopening bears "the burden of proof as to any issue sought to be reopened". § 8-43-303(4), C.R.S. In the case at bench, Claimant asserted her urinary incontinence condition, as well as symptoms related to the hip and SI joint had worsened since she was placed at MMI. Claimant referenced her most treatment records from Kaiser Permanente in support of this argument. Respondents averred Claimant failed to prove her condition worsened. Respondents attributed the increase in symptoms to Claimant's chronic pain condition and relied upon the IME reports of Dr. Cebrian and Dr. Burris, as well as the expert testimony of Dr. Burris to support their contention.

The ALJ credited Dr. Anderson's and Dr. Orent's opinions with regard to the cause of this condition and Claimant's need for maintenance treatment for her urinary incontinence. (Finding of Fact 9, 11, 17, and 51). Although Claimant had symptoms prior to the injury, the symptoms were exacerbated by Claimant's fall. *Id.* After the injury, she required surgery, as well as prescription medications to treat her urinary incontinence. Based upon the medical evidence before the Court, the ALJ was unable to conclude that Claimant's urinary incontinence had worsened since the last time Dr. Anderson evaluated her. (Finding of Fact 54). Since Claimant was placed at MMI,

there was no medical documentation in the record, which showed this condition worsened. As found, Claimant continued to experience symptoms of urinary incontinence. This was consistently documented when she was evaluated. (Finding of Fact 29, 31, 35, 39, 41, 47). However, on balance, the ALJ determined this condition has remained relatively stable since 2015-16. (Finding of Fact 29).

The ALJ concluded the condition of Claimant's hip and SI joint had worsened. This was a close question, as Dr. Burris was a credible witness, particularly when describing the phenomenon of chronic pain and the waxing/waiting of symptoms. (Finding of Fact 49). However, that was not dispositive. As determined in Findings of Fact 45-46, the most recent medical evidence demonstrated an increase in symptoms, particularly with respect to the trochanteric bursa. The ALJ credited Dr. Russell's opinions regarding the need for treatment, along with Claimant's testimony that her symptoms had worsened over time. *Id.* Additional support for the conclusion that her condition worsened came from Claimant herself, who testified as to specific symptoms, which were worse. (Finding of Fact 52). As the Colorado Supreme Court held in *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984), Claimant's lay testimony can provide evidentiary support for a Petition to Reopen. More recently, the Industrial Claims Appeals Office affirmed this principle in *Loy v. City Market*, W.C. 4-972-625-03 (ICAO October 12, 2018), citing *Savio House v. Dennis, 665 P.2d 141,* (Colo. App. 1983). The *Savio House* Court stated at 665 P.2d 142:

> "Whether the claimant has established causation is a question of fact, the determination of which is within the determination of the fact finder. If the findings are supported by substantial evidence, they are binding upon appellate review. Contrary to the assertions of petitioners, substantial evidence of causation is not restricted to credible medical testimony. Claimant's testimony was sufficient to establish with reasonable probability that her condition had worsened, and that the worsening was attributable to the accident. (Internal citations omitted.)"

On this issue, the ALJ considered Respondents' contentions that objective medical tests did not show a basis for a worsening of condition or the need for treatment. Respondents also argued Claimant received extensive treatment and had not shown a great deal of improvement. After considering the totality of the evidence, the ALJ was convinced by both the Claimant's testimony, as well as medical evidence in the record that the low back, hip and SI joint condition had worsened. The ALJ further determined that the worsening of this condition was directly attributable to Claimant's work injury, as her symptoms and need for treatment resulted from the pelvic fractures she suffered in August 2010. There was direct evidence in the form of medical opinions that established this. The ALJ was persuaded by Dr. Orent's consistent opinions that Claimant would continue to require treatment for her hip/ SI joint and this was directly related to her work injury. In fact, Dr. Orent consistently opined Claimant would continue to need maintenance treatment throughout her lifetime and her need for treatment was caused by the work injury. (Findings of Fact 32, 33 and 36).

Accordingly, the ALJ determined Claimant met her burden of proof on the Petition to Reopen. Although Claimant has received extensive treatment for her low back, hip and SI joint, her ATPs (including Dr. Orent) recommended continuing treatment. The physicians at Kaiser who evaluated her most recently also recommended treatment and diagnostic testing. These medical opinions were persuasive to the ALJ.

ORDER

It is therefore ordered:

1. Claimant failed to meet her burden of proof to show her urinary incontinence condition worsened. The Petition to Reopen is denied and dismissed as to that condition.

2. Claimant met her burden of proof to show the condition of her hip and SI joint worsened.

3. All matters not determined herein are reserved for future determination.

Denver, CO 80203

ISSUES

- Whether Claimant proved by a preponderance of the evidence that he suffered a compensable work-related injury to his right knee on August 6, 2017?
- Whether Claimant proved by a preponderance of the evidence entitlement to a general award of medical benefits, and specifically the surgery on his right knee performed on May 29, 2018?
- Whether Claimant proved by a preponderance of the evidence entitlement to temporary total disability benefits from May 29, 2018 to July 8, 2018?

STIPULATIONS

Respondent withdrew the issue of a late reporting penalty against Claimant.

FINDINGS OF FACT

1. Claimant works for Employer as a correctional trade supervisor Level I at a women's correctional facility in Denver. Claimant manages the kitchen and supervises female offenders in the kitchen. Claimant is a full time sergeant and has worked for Employer for 6 years.

2. Claimant testified that he was working his regular job in the kitchen on August 6, 2017. Claimant was attempting to remove shelves from an oven and place them on an adjacent table. The space was tight and as he was bending to place the trays on to the bottom shelf of the steel table, his right knee popped. Claimant felt immediate pain and burning in his right kneecap. Claimant testified, "right away, I was limping."

3. Prior to August 6, 2017, Claimant had no prior problems or medical treatment to his right knee.

4. Claimant immediately reported his knee injury to his supervisor, Lieutenant P_____. Claimant reported that he was pulling shelves out of the oven when his knee popped. Claimant testified that Lt. P_____ wrote an incident report but did not send him to a doctor. The report provided:

> On 8-6-2017 a Kitchen staff member, [Claimant], was working in the [facility] when he informed me, LL P_____ #19960, that his knee cap "popped" out of place while walking and performing regular job duties. The staff member informed me that this has happened in the past and that this was a pre-existing condition. The staff member continued to

work and complete his shift as he will seek medical attention. Shift commander notified and report submitted.

5. Lt. P_____ testified at hearing that on August 6, 2017, he noticed Claimant limping coming out from the kitchen. Lt. P_____ testified that he asked Claimant what happened and that Claimant reported that he injured himself in the facility's kitchen.

6. Claimant finished his shift on August 6, 2017, but his knee pain worsened. When he woke the next day, he experienced difficulty walk. Claimant saw his family physician at Family Medicine Clinic and called Lt. P_____ to inform them that he would not be in because he was seeking treatment for his knee injury.

7. Lt. P_____ testified that he was experienced with processing work injury reports. He testified that Claimant reported that his knee injury was preexisting, so P_____ chose not to initiate a workers' compensation claim.

8. On August 7, 2017, Claimant sought treatment at Family Medicine Clinic. The notes indicate that Claimant presented with knee pain, which followed a specific injury to his right knee that occurred when "I was picking something up at work yesterday and I pulled something in my right knee." The report notes that the onset of symptoms was immediate after the injury. The provider noted a positive McMurry test, recommended an MRI, and noted "highly suspicious for medial Meniscus/MCL injury."

9. On August 27, 2017, Claimant underwent an MRI of his right knee, which showed a "displaced bucket handle tear medial meniscus."

10. Claimant's family physician referred Claimant to orthopedic surgeon Dr. John Reister. Dr. Reister noted acute right knee pain and diagnosed a bucket handle tear of the right knee meniscus, consistent with the MRI findings. The doctor opined that "without question" Claimant needed surgery.

11. On December 27, 2017, the warden's assistant asked Lt. P_____ to recreate the August 2017 incident report. P_____ testified that he was not involved in Employer's investigation.

12. On December 27, 2017, Lt. P_____ filed the following injury report:

> On 8-6-2017 Sgt. L_____was working in [Employer's] kitchen on the PM shift. While performing his regular job duties as he was working near the ovens when he incurred his injury. I noticed Sgt. L_____was limping and he informed me that same instant that he had turned his body while working near the ovens and "popped" his knee out of place. I had asked him if he needed to go seek medical attention and he stated no that he would be fine and did not want to go to the doctor as this has happened to him in the past and was a re-occurring injury. I completed an incident

> report (#1040362) and contacted the Shift Commander [ ] who advised me that I did not need to complete any other paperwork since this was a pre-existing condition and all I needed to do was just complete the incident report since Sgt. L_____was not going to seek medical attention. The following day August 7, 2017, Sgt. L_____had called into work stating he was not going to make it in and he was going to see the doctor about his knee injury. This was the last time that I had dealt with this incident until now on December 27, 2017.

13. On May 29, 2018, Claimant underwent a partial medial meniscectomy performed by Dr. Reister. The doctor placed Claimant on restrictions of "limited ability to bear weight. Limited mobility" post-surgery.

14. Claimant returned to work full duty and full time on July 8, 2018.

15. While Claimant testified that he took "sick leave" during his recovery, Exhibits 13 and 14 establish that Claimant took unpaid time off under the FMLA.

16. Claimant's IME, Dr. Caroline M. Gellrick, opined that Claimant sustained an on-the-job injury to his right knee with no evidence of a prior chronic condition in medical records. The doctor opined that Claimant had been working full duty prior to his injury on August 6, 2017 and that the medical records do not support that Claimant had any pre-existing, symptomatic knee condition.

17. Claimant credibly testified that he delayed the surgery hoping that his symptoms would resolve, and in order to build up enough sick leave to cover his recovery. Claimant's testimony is consistent with what he reported to Dr. Gellrick, that he delayed in getting the surgery due to scheduling issues and so that he could build up enough sick leave to cover it.

18. The ALJ finds Dr. Gelrick's causation opinion to be credible and persuasive.

- It is consistent with the fact that Claimant was working full duty with Employer without reporting symptoms, seeking treatment, or needing restrictions for a six-year period.

- It is consistent with Claimant's credible testimony.

- It is not inconsistent with Dr. Henke's acknowledgment that a knee becomes functional when the bucket handle flips back into place, and that Claimant's symptoms would wax and wane.

19. Respondent retained Dr. Gwendolyn Henke, M.D., an expert in both orthopedics of the knee and occupational medicine, to review Claimant's medical records and opine on causation. Dr. Henke reviewed medical records, including the

MRI scan. However, she did not examine or speak with Claimant. Dr. Henke opined that the MRI imaging revealed no findings suggestive of acute trauma and noted that the MRI confirmed no range of motion deficit. Dr. Henke explained that a forceful twisting of a flexed knee under load causes a bucket handle meniscus tear, accompanied by immediate swelling and an inability to bear weight. She found that Claimant's decision not to seek immediate medical care to be inconsistent with an acute bucket handle meniscus tear.

20. Prior to hearing, the parties took Dr. Henke's evidentiary deposition. She opined that Claimant's knee condition was chronic for the following four reasons:

- Claimant's MRI revealed a popliteal cyst which occurs after an extended period of waxing and waning swelling, and that it must have been present before August 6, 2017.

- The mechanism of injury from August 6, 2017 as described by the Claimant is not consistent with the type of force required to cause an acute bucket handle meniscus tear.

- She would not expect such a simple mechanism to cause this type of injury unless there was a carried load involved of approximately fifty pounds or more.

- An acute bucket handle meniscus tear is a debilitating injury.

21. However, Dr. Henke acknowledged that a day or two after an acute bucket handle meniscus tear, the swelling can go down and the knee can be functional if the displaced "bucket handle" flips back into place.

22. Dr. Henke also acknowledged that after an acute bucket handle meniscus tear, there are intermittent episodes of popping, locking and pain that wax and wane as the "bucket handle" periodically flips back and forth.

23. The ALJ finds that Claimant met his burden of proving by a preponderance of the evidence that he suffered a compensable work-related injury to his right knee on August 6, 2017.

24. The ALJ finds that Claimant met his burden of proving by a preponderance of the evidence that he is entitled to a general award of medical benefits and specifically the surgery on his right knee performed on May 29, 2018.

25. The ALJ finds that Claimant met his burden of proving by a preponderance of the evidence that he is entitled to temporary total disability benefits from May 29, 2018 to July 8, 2018.

CONCLUSIONS OF LAW

This ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved. The ALJ is not bound to address every piece of evidence or every inference that might lead to conflicting conclusions, and has rejected evidence contrary to his findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Furthermore, the relative weight and credibility to be assigned expert opinions is the ALJ's province as fact-finder. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d186 (Colo. App. 2002). To the extent expert opinions are subject to conflicting interpretations, the ALJ resolves the conflict by crediting part or none of the opinions. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

To receive compensation or medical benefits, a claimant must prove that he or she suffered an injury arising out of and in the course of his employment. Section 8-41-301(1), C.R.S.; *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000).

A claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S.

A claimant must prove a causal nexus between his claimed disability and the work-related incident. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a new disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990).

The ALJ concludes that Claimant proved that he injured his right knee on August 6, 2017 while in the course and scope of his employment. The ALJ credits Claimant's testimony regarding how the incident occurred, the immediate onset of symptoms, and the absence of problems or medical treatment to his knee prior to that date. Claimant's testimony is also consistent with the medical records.

Respondent's expert Dr. Henke did not evaluate Claimant. Her opinion that Claimant simply experienced a temporary exacerbation of his pre-existing condition is not persuasive. Prior to Claimant's injury on August 6, 2017, Claimant's knee was asymptomatic. Even if Claimant had a pre-existing bucket handle tear that was non-displaced, it was also asymptomatic and required no medical care. Claimant's actions on August 6, 2017, either caused the tear or caused the preexisting tear to become

displaced requiring medical treatment and surgery. In either event, the claim is compensable.

Dr. Henke's opinion is outweighed by the opinion of Dr. Gellrick who opined that Claimant's knee injury and need for surgery is directly related to his work related injury sustained on August 6, 2017. Dr. Gellrick opined that claimant was working full duty on August 6, 2017 when he injured his right knee. Dr. Gellrick noted, as does the ALJ, that no persuasive evidence supports a chronic preexisting right knee condition as speculated by Dr. Henke.

The respondent is liable for medical treatment which is reasonably necessary to cure and relieve the effects of the industrial injury. See § 8-42-101 (1)(a), C.R.S.; Snyder v. Industrial Claim Appeals Office, 942 P .2d 1337 (Colo. App. 1997); Country Squire Kennels v. Tarshis, 899 P.2d 362 (Colo. App. 1995). The claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. WalMart Stores, Inc. v. Industrial Claim Appeals Office, 989 P.2d 251 (Colo. App. 1999); Snyder v. Industrial Claim Appeals Office, 942 P.2d 1337 (Colo. App. 1997), cert. denied September 15, 1997. Where a Claimant's entitlement to benefits is disputed, the Claimant has the burden to prove a causal relationship between a work related injury and the condition for which benefits or compensation are sought. Snyder v. Industrial Claim Appeals Office, 942 P .2d 1337 (Colo. App. 1997). Whether the claimant sustained his burden of proof is generally a factual question for resolution by the ALJ. City of Durango v. Dunagan, 939 P .2d 496 (Colo. App. 1997).

Claimant has established that he sustained a work related injury to his right knee on August 6, 2017. Respondents filed an incident report but failed to send claimant to a physician or provide claimant a provider list. Claimant has established that all treatment to date, including the surgery recommended and performed by Dr. Reister is both reasonable and necessary to cure and relieve the effects of his injury. Any aftercare, if prescribed by Dr. Reister, including physical therapy or rehabilitation from this injury is also reasonable and necessary.

To prove entitlement to temporary total disability ("TTD") benefits, the Claimant must prove: that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. PDM Molding, Inc. v. Stanberg, 898 P.2d 542 (Colo. 1995); City of Colorado Springs v. Industrial Claim Appeals Office, 954 P.2d 637 (Colo. App. 1997). C.R.S. § 8- 42-103(1)(a), requires a claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. PDM Molding, Inc. v. Stanberg, supra. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. Culver v. Ace Electric, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. Ortiz v. Charles J. Murphy & Co., 964 P.2d 595 (Colo. App. 1998).

TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; City of Colorado Springs v. Industrial Claim Appeals Office, supra.

In this case, the Claimant established that he suffered a compensable work injury on August 6, 2017. Claimant worked full time and did not suffer a wage loss until claimant underwent surgery on his right knee on 5/29/2018. Claimant established that he suffered a wage loss subsequent to that time up through July 8, 2018 when claimant returned to work full time. As such he is entitled to temporary total disability benefits from 5/29/2018 through July 8, 2018.

ORDER

It is therefore ordered that:

1. Claimant suffered a compensable injury on August 6, 2017 to his right knee.

2. Claimant is entitled to a general award of medical benefits and specifically the surgery on his right knee performed on May 29, 2018.

3. Claimant is entitled to TTD benefits from May 29, 2018 through July 8, 2018.

4. All matters not determined are reserved for future determination.

Dated this 11th day of June, 2019.

Administrative Law Judge
Office of Administrative Courts
1525 Sherman St., 4th Floor
Denver, CO 80203

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant prove that an orthopedic evaluation of his right knee with Dr. Michael Simpson is causally related to his admitted April 14, 2018 industrial accident?

FINDINGS OF FACT

1. Claimant has worked for Employer as a paramedic for over 20 years. He suffered admitted injuries on April 14, 2019 when he slipped and fell on an icy concrete stairway at a fire station. He fell awkwardly and landed on his back. At hearing, Claimant described it as "a really bizarre position," with his right leg somewhat behind him.

2. Claimant immediately felt pain in multiple areas of his body, including his head, back, neck, right elbow, right hip, right knee, and right foot.

3. Claimant hobbled into the firehouse and called his supervisor, Robert G[Redacted]. Claimant told Mr. G[Redacted] he hurt his head, neck, back, right leg, right knee, and right elbow. Respondents offered no testimony or other evidence from Mr. G[Redacted] to dispute that Claimant mentioned his right knee during the call.

4. Mr. G[Redacted] asked if Claimant needed immediate medical attention, but Claimant stated he just wanted go home and lie down.

5. Claimant hoped the pain would subside, but it intensified over the next day. Claimant contacted Mr. G[Redacted] and was referred to Concentra. Mr. G[Redacted] told Claimant he needed to send an incident report to the workers' compensation supervisor, Bobby W[Redacted], and get approval before he could go to Concentra.

6. Claimant tried unsuccessfully to email Mr. W[Redacted] a few times over the next several days. After learning he was using an incorrect email address, he sent the following report to Mr. W[Redacted]:

> While on duty at Wescott Fire Department working my 24hr shift approximately 7:10am slipped and fell on steps due to icy conditions. I fell onto concrete steps landing on my right elbow, back and ankle awkwardly. I felt immediate pain to right ankle, knee, elbow, and lower back. I went into station and immediately took some ibuprofen and began icing my back and elbow and finished my shift. I went home and kept treating elbow, back, and ankle with ice due to swelling and severe pain to elbow. Later that day I began having increased pain, swelling, and numbness to right hand and was having problems grabbing or holding objects in hand.

7. Claimant saw Dr. Randall Jones at his first appointment at Concentra on April 19, 2018. The WC164 form describes the accident/injury as "Patient states, I slipped

on icy steps and fell on concrete. Injured right elbow, right knee, right ankle/foot, and low [back.]"

8. Dr. Jones' accompanying narrative report does not mention the right knee. The history documented by Dr. Jones was,

> He was going down icy/snowy steps and slipped falling backwards. He landed on his [b]ack with pain right elbow. He does not if he extended arms or not. He did not hit his head. He had immediate pain/swelling right elbow. He had some increase in his chronic back pain. No increase in his neck pain chronic. . . . He states 2-3 days of several episodes slight urinary incontinence. Also now has occ[asional] vague sciatica to knee with paresthesias to feet more left than right.

9. The musculoskeletal examination portion of the exam is documented as, "Normal gait. No tenderness or swelling of extremities." Dr. Jones diagnosed right elbow sprain and contusion, and lumbosacral strain and contusion.

10. At hearing, Claimant disputed the history documented in Dr. Jones' April 19 report. Claimant testified he mentioned of the right knee during the appointment as evidenced by the injury description on the WC164 form.

11. Claimant subsequently received treatment directed to his right elbow, low back, and lower extremity radiculopathy. None of the treatment records reference any right knee issues for several months after the accident.

12. Claimant submitted a Worker's Claim for Compensation form on June 26, 2018. He listed the injured body parts as "neck, mid-lower back, right hip, right elbow, head contusion." There was no mention of his right knee.

13. Claimant underwent a C4-C7 fusion with Dr. Paul Stanton on July 30, 2018.

14. The first mention of right knee issues after the initial WC164 form is found in the August 16, 2018 Concentra report, which states "also c/o R knee pain."

15. Claimant subsequently obtained a change of physician to Dr. Pia Schalin. At the initial appointment on September 17, 2018, Dr. Schalin documented,

> DOI 4/14/18 – INJURY TO RIGHT ELBOW, NECK & LOWER BACK with right elbow (50% tear of 1 ligament), pain both hips, right knee pain, right big toe . . . .

16. Claimant told Dr. Schalin his low back was the worst problem, and the neck was the second worst.

17. The next reference to Claimant's right knee is in a September 24, 2018 report from physical therapy for his neck. Claimant told the therapist "he was working as a paramedic on 3/14/18 [sic] and he fell on ice injuring his neck, back, R elbow and R

knee. . . . He thinks he may have torn something in the R knee. This has not been addressed yet. He was told he had to pick the top two injuries to address." The therapist further noted, "R KNEE: feels like something is torn and it gives way sometimes."

18. On October 1, 2018, Dr. Schalin documented, "He also c/o pain in RIGHT KNEE, which he states he has had all along since the injury, but which has never been evaluated."

19. Claimant again discussed the right knee with Dr. Schalin on October 15, 2018. She noted, "[It] continues hurting and he says there is something seriously wrong with it, because when he kneels or squats, he is unable to put any pressure on it trying to get up. This has not been evaluated so far." Dr. Schalin's exam focused primarily on Claimant's significant low back pain and lower extremity radiculopathy, including sensory and motor deficits. Claimant was having difficulty walking due to the severe radicular symptoms and reported several falls due to leg weakness.

20. On October 29, 2018, Claimant reported his right knee "is still horrible." Dr. Schalin noted the right knee "continues hurting and he says there is something seriously wrong with it . . . . There is no change in this so far." Examination of the knee showed tenderness to palpation and pain with flexion and extension. McMurray's test was difficult to perform "due to the severity of the lower back pain and the bilateral sciatica."

21. At his November 19, 2018 appointment with Dr. Schalin, Claimant stated the knee pain was making it "hard to get up from the floor." Dr. Schalin noted, "The [right knee] problem continues and is not getting better." She diagnosed, "RIGHT KNEE PAIN with FUNCTIONAL LIMITATIONS since the 4/14/18 fall." She referred Claimant for an MRI of the right knee.

22. Dr. Stanton performed a multilevel lumbar fusion on December 12, 2018.

23. On January 29, 2019, Dr. Schalin noted Claimant had fallen in a hotel bathtub. She indicated the right leg showed no sign of acute injury from the fall. At hearing, Claimant confirmed that none of his falls injured or aggravated the right knee.

24. Claimant had a right knee MRI on February 5, 2019. The indication for the MRI was described as "persistent pain since fall at work on April 14, 2018." The MRI showed a large medial meniscus tear.

25. After reviewing the MRI, Dr. Schalin referred Claimant to Dr. Michael Simpson, an orthopedic surgeon. Respondents denied the referral as unrelated to the industrial accident.

26. Dr. Robert W[Redacted] performed a Rule 16 record review for Respondents on April 24, 2019. Dr. W[Redacted] opined Claimant's right knee issues are not work-related and stated:

> When [Claimant] was injured, he reported a number of injuries primarily related to his low back and right elbow. The first mention of any knee pain

was on 8/16/2018 at which time he told Dr. Johnson that his right knee hurts. Prior to this visit there was no discussion from any of his providers regarding problems specifically related to his right knee. He did report radicular symptoms to Dr. Stanton, Dr. Jones and Dr. Johnson, which improved following an epidural steroid injection. However, there was no mention specifically related to his right knee. The first mention of a specific right knee injury was made to one of the physical therapist on 9/24/2018, 5 months after the work injury.

27. There is no persuasive evidence Claimant had any issues with his right knee before the work accident on April 14, 2018. Nor is there any persuasive evidence of any post-accident trauma or incident that could have caused a meniscal tear.

28. Claimant proved by a preponderance of the evidence he injured his right knee in the April 14, 2018 industrial accident.

CONCLUSIONS OF LAW

The respondents are liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101. Even if the respondents admit liability an accident, they retain the right to dispute the reasonable necessity or relatedness of any particular treatment, and the mere occurrence of a compensable injury does not compel the ALJ to approve all requested treatment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove the treatment is reasonably necessary and causally related to the industrial accident. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The claimant must prove entitlement to medical benefits by a preponderance of the evidence. *Page v. Clark*, 592 P.2d 792 (Colo. 1979).

As found, Claimant proved he injured his right knee in the April 14, 2018 accident. Claimant had no known problems with his knee before the work accident. The work accident provides a plausible mechanism for a torn meniscus, and there is no persuasive evidence of any other accidents or potentially injurious events. Claimant told Mr. G[Redacted] he injured his right knee during their telephone conversation the morning of the accident, and listed the right knee among the injured body parts in the email he sent to Mr. W[Redacted]. The ALJ credits Claimant's testimony he mentioned the right knee at the first appointment with Concentra because it was contemporaneously documented on the WC164 form. Dr. Jones' failure to address or document the knee at that appointment is puzzling, but the content of Dr. Jones' report was not within Claimant's control.

Admittedly, Claimant did not press the issue for several months after the accident. But the knee problems were probably overshadowed by his severe neck and back issues, which ultimately resulted in two multi-level spinal fusions less than six months apart. The knee symptoms were also probably masked or confounded somewhat by the radiculopathy and progressive neurological deficits affecting his legs. Claimant has

consistently attributed the right knee symptoms to the accident. Dr. W[Redacted]'s opinions are unpersuasive because he was unaware of the initial statement to Mr. G[Redacted], the email to Mr. W[Redacted], and the WC164 that accompanied the first visit to Concentra. If Dr. W[Redacted] were correct that the first mention of the right knee injury was not until August or September 2018, the ALJ's conclusion might have been different. But after reviewing all the available evidence, the scale tips in favor of finding the right knee a compensable consequence of the April 14, 2018 accident.

ORDER

It is therefore ordered that:

1. Insurer shall cover the orthopedic evaluation of Claimant's right knee with Dr. Simpson as recommended by Dr. Schalin.

2. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 11, 2019

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that his admitted Average Weekly Wage (AWW) of $456.08 should be increased based on his concurrent employment with ACE Car Rental.

2. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive Temporary Partial Disability (TPD) benefits for the period May 5, 2017 through December 20, 2017.

3. Whether Claimant has established by a preponderance of the evidence that his emergency treatment at the UC Health Emergency Room on July 22, 2017 constituted an emergency that was reasonable, necessary and causally related to his April 5, 2017 admitted industrial injuries.

FINDINGS OF FACT

1. Claimant worked for Employer as a Car Wash Driver at its Denver International Airport (DIA) location. His job duties involved driving and cleaning rental cars.

2. On April 5, 2017 Claimant suffered admitted industrial injuries to his neck and chest area while working for Employer. Claimant was involved in a motor vehicle accident while performing his job duties.

3. While working for Employer, Claimant was also employed by ACE Car Rental at DIA. His job duties involved driving and cleaning rental cars. Claimant remarked that he began working for ACE Car Rental in February 2017. He worked for 6.5 hours each day for 32.5 hours each week and earned $11.00 per hour for an Average Weekly Wage (AWW) of $357.50. Claimant explained that he would work from 8:00 a.m. until 2:30 p.m. for ACE Car Rental and then work for Employer until 11:00 p.m.

4. Claimant received treatment for his April 5, 2017 industrial injuries through Concentra Medical Centers. At his first visit to Concentra on May 4, 2017 Claimant was diagnosed with muscle spasms of the neck and thoracic back muscle. Physicians released Claimant to regular duty and referred him for physical therapy.

5. In a Physician's Report of Workers' Compensation Injury dated June 22, 2017 Daniel M. Peterson, M.D. noted that his objective findings were consistent with a work-related mechanism of injury from a May 4, 2017 visit. Dr. Peterson determined that Claimant had not reached Maximum Medical Improvement (MMI). He remarked that Claimant could return to regular duty on May 4, 2017, but he noted a follow-up appointment scheduled for May 5, 2017.

6. On May 5, 2017 Claimant returned to Concentra for an evaluation. He reported that he had tried to return to work but suffered worsening muscle pain in his chest, the left side of neck and his left shoulder area. Physicians diagnosed Claimant with a cervical strain, a chest wall muscle strain and a left trapezius muscle strain. Claimant received work restrictions that he "may not drive company vehicle due to functional limitations."

7. On July 22, 2017 Claimant visited the UC Health Emergency Room for neck pain. Based on Claimant's history, physical examination and diagnostic testing, physicians determined that Claimant's condition was caused by muscle pain following a motor vehicle accident.

8. On December 21, 2017 Claimant visited Authorized Treating Physician (ATP) Kristin D. Mason, M.D. for an examination. After reviewing Claimant's medical records and conducting a physical examination, Dr. Mason diagnosed Claimant with a "cervical sprain/strain with definite involvement of the trapezius muscle and levator scapula, [with] possible underlying facet arthropathy." She recommended chiropractic treatment and medications. Dr. Mason also released Claimant to return to work without restrictions.

9. After additional follow-up treatment, Claimant returned to Dr. Mason for an evaluation on April 26, 2018. Dr. Mason diagnosed Claimant with a cervical strain and "probable facet mediated pain." She determined that he had reached MMI and assigned a 9% whole person impairment rating for Claimant's cervical spine injuries.

10. On June 22, 2018 Respondents' filed a Final Admission of Liability (FAL) consistent with Dr. Mason's April 26, 2018 date of MMI and 9% whole person impairment rating. The FAL also acknowledged an AWW of $456.08 based on Claimant's employment with Employer.

11. Claimant testified at the hearing in this matter. He explained that his May 5, 2017 restriction preventing him from driving company vehicles rendered him unable to perform his job duties for both Employer and ACE Car Rental. However, Employer accommodated his restrictions by permitting him to scan vehicles and earn regular wages. In contrast, ACE Car Rental was unable to accommodate Claimant's work restrictions and terminated him in May 2017 because of his inability to perform his job duties. Claimant also noted that he visited the UC Health Emergency Room on July 22, 2017 because of increasing chest and neck pain related to his April 5, 2017 industrial injuries.

12. Claimant's wage records from ACE Car Rental for the period April 16, 2017 through April 30, 2017 reflect that he earned $11.00 per hour over 71.70 hours for a total gross pay of $788.70 or $344.35 per week. Moreover, subtracting Claimant's earnings of $788.70 from his year to date earnings of $4383.50 on his April 16-30, 2017 pay stub yields total earnings of $3594.80 as of April 15, 2017. Utilizing a start date of February 1, 2017 for Claimant's employment with ACE Car Rental, he worked for 74 days until April

15, 2017 and earned $3594.80. Dividing $3594.80 by 74 days times seven yields an AWW of $340.05 for the period February 1, 2017 through April 15, 2017.

13. Claimant has demonstrated that it is more probably true than not that his admitted AWW of $456.08 should be increased based on his concurrent employment with ACE Car Rental. Claimant worked for ACE Car Rental for 6.5 hours each day for 32.5 hours each week and earned $11.00 per hour for an AWW of $357.50. Moreover, Claimant's wage records from ACE Car Rental for the period April 16, 2017 through April 30, 2017 reflect that he earned $11.00 per hour over 71.70 hours for a total gross pay of $788.70 or $344.35 per week. Moreover, subtracting Claimant's earnings of $788.70 from his year to date earnings of $4383.50 on his April 16-30, 2017 pay stub yields total earnings of $3594.80 as of April 15, 2017. Utilizing a start date of February 1, 2017 for Claimant's employment with ACE Car Rental, he worked for 74 days until April 15, 2017 and earned $3594.80. Dividing $3594.80 by 74 days times seven yields an AWW of $340.05 for the period February 1, 2017 through April 15, 2017. Although there are some slight variations in Claimant's AWW from ACE Car Rental based on his testimony and the wage records, $350.00 constitutes a fair approximation of his wage loss and diminished earning capacity from his concurrent employment. Adding $350.00 to Claimant's admitted AWW of $456.08 while working for Employer yields a total AWW of $806.08. An AWW of $806.08 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

14. Claimant has proven that it is more probably true than not that he is entitled to receive Temporary Partial Disability (TPD) benefits for the period May 5, 2017 through December 20, 2017. Initially, on April 5, 2017 Claimant suffered admitted industrial injuries to his neck and chest area while working for Employer. At his first visit to Concentra on May 4, 2017 Claimant was diagnosed with muscle spasms of the neck and thoracic back muscle. Physicians released Claimant to regular duty and referred him for physical therapy. In a Physician's Report of Workers' Compensation Injury dated June 22, 2017 Dr. Peterson noted that his objective findings were consistent with a work-related mechanism of injury from a May 4, 2017 visit and Claimant had not reached MMI. He remarked that Claimant could return to regular duty on May 4, 2017, but he noted a follow-up appointment scheduled for May 5, 2017. Although the report is dated June 22, 2017, it pertains to Claimant's May 4, 2017 Concentra visit. The report thus does not demonstrate that Claimant was released to full duty without restrictions on June 22, 2017.

15. On May 5, 2017 Claimant returned to Concentra for an evaluation. He reported that he had tried to return to work but suffered worsening muscle pain in his chest, the left side of neck and his left shoulder area. Physicians diagnosed Claimant with a cervical strain, a chest wall muscle strain and a left trapezius muscle strain. Claimant received work restrictions that he "may not drive company vehicle due to functional limitations." Claimant explained that his May 5, 2017 restriction preventing him from driving company vehicles rendered him unable to perform his job duties for both Employer and ACE Car Rental. However, Employer accommodated his restrictions by permitting him to scan vehicles and earn regular wages. In contrast, ACE Car Rental was unable to accommodate Claimant's work restrictions and terminated him in May 2017

because of his inability to perform his job duties. Claimant's work restrictions continued until Dr. Mason released him to full duty employment on December 20, 2017.

16. Based on an AWW of $806.08 Claimant sustained wage loss commencing May 5, 2017. For the 27 day period from May 5, 2017 through May 31, 2017 Claimant should have earned $3,109.17 in wages ($806.08 / 7 x 27 days = $3,109.17) based on the AWW for both jobs. He earned $1,759.16 from Employer ($456.08 / 7 x 27 days). However, from ACE Car Rental Claimant earned $405.75 for the period May 5, 2017 through May 31, 2017. The combined wages earned from both Employer and ACE Car Rental is thus $2,164.91. Subtracting $2,164.91 from $3,109.17 demonstrates that Claimant suffered a wage loss of $944.26 for the period May 5, 2017 through May 31, 2017.

17. For the 202 day period from June 1, 2017 to December 20, 2017 Claimant should have earned $23,261.17 at an AWW of $806.08 ($806.08 / 7 x 202 days = $23,261.17). However, Claimant actually earned $13,161.16 ($456.08 / 7 x 202 days = $13,161.16). Subtracting $13,161.16 from $23,261.17 yields a total wage loss of $10,100.01 for the 202 day period from June 1, 2017 to December 20, 2017. Adding the wage loss of $944.26 for the period May 5, 2017 through May 31, 2017 yields a total wage loss of $11,044.27 for the period May 5, 2017 through December 20, 2017.

18. Claimant has established that it is more probably true than not that his treatment at the UC Health Emergency Room on July 22, 2017 constituted an emergency that was reasonable, necessary and causally related to his April 5, 2017 admitted industrial injuries. Initially, on July 22, 2017 Claimant visited the UC Health Emergency Room for neck pain. Based on Claimant's history, physical examination and diagnostic testing, physicians determined that Claimant's condition was caused by muscle pain following a motor vehicle accident. Furthermore, Claimant credibly explained that he visited the UC Health Emergency Room because of increasing chest and neck pain related to his April 5, 2017 industrial injuries. A review of the specific facts and circumstances of Claimant's visit to the UC Health Emergency Room reveals that he made a reasonable decision to obtain emergency treatment related to his April 5, 2017 industrial injuries without the delay of notifying Employer to obtain a referral or approval. Accordingly, Respondents are financially responsible for Claimant's visit to the UC Health Emergency Room on July 22, 2017.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the

rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Average Weekly Wage

4. Section 8-42-102(2), C.R.S. requires the Judge to determine a claimant's AWW based on his earnings at the time of injury. The Judge must calculate the money rate at which services are paid to the claimant under the contract of hire in force at the time of injury. *Pizza Hut v. ICAO,* 18 P.3d 867, 869 (Colo. App. 2001). However, §8-42-102(3), C.R.S. authorizes a Judge to exercise discretionary authority to calculate an AWW in another manner if the prescribed methods will not fairly calculate the AWW based on the particular circumstances. *Campbell v. IBM Corp.,* 867 P.2d 77, 82 (Colo. App. 1993). The overall objective in calculating an AWW is to arrive at a fair approximation of a claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO, May 7, 1997). Therefore, §8-42-102(3), C.R.S. grants an ALJ substantial discretion to modify the AWW if the statutorily prescribed method will not fairly compute a claimant's wages based on the particular circumstances of the case. *In Re Broomfield,* W.C. No. 4-651-471 (ICAO, Mar. 5, 2007).

5. When a worker is concurrently employed the ALJ may, in order to achieve fairness, include all wages in the computation of the AWW. *Broadmoor Hotel and Continental Ins. Co. v. Industrial Claim Appeals Office*, 939 P.2d 460 (Colo. App. 1996); *Guerrero Barrio v. GCA Services Group, Inc.*, W.C. No. 4-813-965 (ICAO, July 28, 2010); *see Miranda v. ISS Prudential Services, Inc. and/or Denver Public Schools,* W.C. Nos. 3-833-976, 3-908-234 and 4-105-113 (ICAO, Feb. 28, 1994) (where the claimant holds concurrent employment at the time of the injury, the ALJ has discretion to calculate the AWW to include the total income from the multiple employers). However, there is no mandate that wages from concurrent employment must be included in the AWW. *Coleman v. National Produce Service,* W.C. No. 4-601-676 (ICAO, July 12, 2005).

6. As found, Claimant has demonstrated that it is more probably true than not that his admitted AWW of $456.08 should be increased based on his concurrent employment with ACE Car Rental. Claimant worked for ACE Car Rental for 6.5 hours

each day for 32.5 hours each week and earned $11.00 per hour for an AWW of $357.50. Moreover, Claimant's wage records from ACE Car Rental for the period April 16, 2017 through April 30, 2017 reflect that he earned $11.00 per hour over 71.70 hours for a total gross pay of $788.70 or $344.35 per week. Moreover, subtracting Claimant's earnings of $788.70 from his year to date earnings of $4383.50 on his April 16-30, 2017 pay stub yields total earnings of $3594.80 as of April 15, 2017. Utilizing a start date of February 1, 2017 for Claimant's employment with ACE Car Rental, he worked for 74 days until April 15, 2017 and earned $3594.80. Dividing $3594.80 by 74 days times seven yields an AWW of $340.05 for the period February 1, 2017 through April 15, 2017. Although there are some slight variations in Claimant's AWW from ACE Car Rental based on his testimony and the wage records, $350.00 constitutes a fair approximation of his wage loss and diminished earning capacity from his concurrent employment. Adding $350.00 to Claimant's admitted AWW of $456.08 while working for Employer yields a total AWW of $806.08. An AWW of $806.08 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

Temporary Partial Disability Benefits

7. Section 8-42-103(1), C.R.S. requires a claimant seeking temporary disability benefits to establish a causal connection between the industrial injury and subsequent wage loss. *Champion Auto Body v. Industrial Claim Appeals Office*, 950 P.2d 671 (Colo. App. 1997). The term "disability," connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by the claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). A claimant suffers from an impairment of earning capacity when he has a complete inability to work or there are restrictions that impair his ability to effectively and properly perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997).

8. As found, Claimant has proven by a preponderance of the evidence that he is entitled to receive TPD benefits for the period May 5, 2017 through December 20, 2017. Initially, on April 5, 2017 Claimant suffered admitted industrial injuries to his neck and chest area while working for Employer. At his first visit to Concentra on May 4, 2017 Claimant was diagnosed with muscle spasms of the neck and thoracic back muscle. Physicians released Claimant to regular duty and referred him for physical therapy. In a Physician's Report of Workers' Compensation Injury dated June 22, 2017 Dr. Peterson noted that his objective findings were consistent with a work-related mechanism of injury from a May 4, 2017 visit and Claimant had not reached MMI. He remarked that Claimant could return to regular duty on May 4, 2017, but he noted a follow-up appointment scheduled for May 5, 2017. Although the report is dated June 22, 2017, it pertains to Claimant's May 4, 2017 Concentra visit. The report thus does not demonstrate that Claimant was released to full duty without restrictions on June 22, 2017.

9. As found, on May 5, 2017 Claimant returned to Concentra for an evaluation. He reported that he had tried to return to work but suffered worsening muscle pain in his chest, the left side of neck and his left shoulder area. Physicians diagnosed Claimant with a cervical strain, a chest wall muscle strain and a left trapezius muscle strain. Claimant received work restrictions that he "may not drive company vehicle due to functional limitations." Claimant explained that his May 5, 2017 restriction preventing him from driving company vehicles rendered him unable to perform his job duties for both Employer and ACE Car Rental. However, Employer accommodated his restrictions by permitting him to scan vehicles and earn regular wages. In contrast, ACE Car Rental was unable to accommodate Claimant's work restrictions and terminated him in May 2017 because of his inability to perform his job duties. Claimant's work restrictions continued until Dr. Mason released him to full duty employment on December 20, 2017.

10. As found, based on an AWW of $806.08 Claimant sustained wage loss commencing May 5, 2017. For the 27 day period from May 5, 2017 through May 31, 2017 Claimant should have earned $3,109.17 in wages ($806.08 / 7 x 27 days = $3,109.17) based on the AWW for both jobs. He earned $1,759.16 from Employer ($456.08 / 7 x 27 days). However, from ACE Car Rental Claimant earned $405.75 for the period May 5, 2017 through May 31, 2017. The combined wages earned from both Employer and ACE Car Rental is thus $2,164.91. Subtracting $2,164.91 from $3,109.17 demonstrates that Claimant suffered a wage loss of $944.26 for the period May 5, 2017 through May 31, 2017.

11. As found, for the 202 day period from June 1, 2017 to December 20, 2017 Claimant should have earned $23,261.17 at an AWW of $806.08 ($806.08 / 7 x 202 days = $23,261.17). However, Claimant actually earned $13,161.16 ($456.08 / 7 x 202 days = $13,161.16). Subtracting $13,161.16 from $23,261.17 yields a total wage loss of $10,100.01 for the 202 day period from June 1, 2017 to December 20, 2017. Adding the wage loss of $944.26 for the period May 5, 2017 through May 31, 2017 yields a total wage loss of $11,044.27 for the period May 5, 2017 through December 20, 2017.

Emergency Medical Care

12. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The claimant bears the burden of demonstrating a causal connection between his industrial injuries and the need for additional medical treatment. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

13. Section 8-43-404(5)(a), C.R.S. grants employers the initial authority to select the ATP. However, in a medical emergency a claimant need not seek authorization from his employer or insurer before seeking medical treatment from an unauthorized medical provider. *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777, 781 (Colo. App. 1990). A medical emergency affords an injured worker the right to obtain immediate treatment without the delay of notifying the employer to obtain a referral or approval. *In Re Gant*, W.C. No. 4-586-030 (ICAO, Sept. 17, 2004). Because there is no precise legal test for determining the existence of a medical emergency, the issue is dependent on the particular facts and circumstances of the claim. *In re Timko,* W.C. No. 3-969-031 (ICAO, June 29, 2005).

14. As found, Claimant has established by a preponderance of the evidence that his treatment at the UC Health Emergency Room on July 22, 2017 constituted an emergency that was reasonable, necessary and causally related to his April 5, 2017 admitted industrial injuries. Initially, on July 22, 2017 Claimant visited the UC Health Emergency Room for neck pain. Based on Claimant's history, physical examination and diagnostic testing, physicians determined that Claimant's condition was caused by muscle pain following a motor vehicle accident. Furthermore, Claimant credibly explained that he visited the UC Health Emergency Room because of increasing chest and neck pain related to his April 5, 2017 industrial injuries. A review of the specific facts and circumstances of Claimant's visit to the UC Health Emergency Room reveals that he made a reasonable decision to obtain emergency treatment related to his April 5, 2017 industrial injuries without the delay of notifying Employer to obtain a referral or approval. Accordingly, Respondents are financially responsible for Claimant's visit to the UC Health Emergency Room on July 22, 2017.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant earned an AWW of $806.08.

2. Claimant shall receive TPD benefits based on a total wage loss of $11,044.27 for the period May 5, 2017 through December 20, 2017.

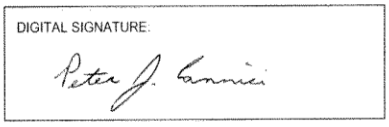
3. Respondents are financially responsible for Claimant's visit to the UC Health Emergency Room on July 22, 2017.

4. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it

within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: June 11, 2019.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-017-566-001 & 5-042-920-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

SELF-INSURED,

Self-Insured Respondent.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on May 29, 2019, in Denver, Colorado. The hearing was digitally recorded (reference: 5/29/19, Courtroom 1, beginning at 1:30 PM, and ending at 3:00 PM).

Claimant's Exhibits 1 through 6 were admitted into evidence, without objection. Respondent's Exhibits A through D, G and H, and K through R were admitted into evidence, without objection. Respondent's Exhibits E, F, I and J were admitted into evidence over Claimant's objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of portions of a proposed decision to both counsel. Claimant's counsel was to prepare a proposed decision on the issue of permanent partial disability (PPD); and, Respondent's counsel was to prepare a proposed decision on the issues of reopening and temporary total disability (TTD) benefits. Claimant filed her proposed decision, electronically, on June 4, 2019. Respondent filed its proposed decision on the same date. There were no timely objections to either proposal. After a consideration of the proposed decisions, the ALJ has modified them and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern Respondent's Petition to Reopen on the ground of error or mistake and Claimant's Petition to Reopen on the ground of change of condition. Specifically, Respondent alleges error in the previous Full Findings, dated June 27, 2018 insofar as the award of temporary total disability (TTD) benefits was inconsistent with the Stipulation of the parties and the Findings as to TTD went beyond the undisputed date of maximum medical improvement (MMI); and, ambiguity in the Final Admission of Liability (FAL), which admitted to 12% whole person permanent partial disability (PPD), based on the subsequent deposition opinion of Scott J. Primack, D.O., who in his report of February 21, 2018, indicated that his first rating of 20% included loss of range of motion (ROM). After seeing surveillance film of the Clamant, Dr. Primack modified his PPD rating by subtracting the ROM component, thus, modifying his PPD opinion to 12% whole person upon which Respondent filed the FAL Claimant contends that the Respondent is required to admit to the impairment rating of 20% first determined by Dr. Primack, in the medical report of February 21, 2018 upon which Respondent is obliged to admit.

The Respondent bears the burden of proof, by a preponderance of the evidence on the issue of reopening based on error or mistake. The Claimant bears the burden on the issue of increased PPD.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. On June 1, 2016, the Claimant suffered an admitted, work related injury to her low back when she bent over a produce ben to lift out a watermelon. She felt immediate pain in her low back. She was treated conservatively for less than two months. She was placed at MMI on September 15, 2016, with no permanent impairment and no permanent work restrictions.

2. Respondent filed a FAL on February 17, 2017, admitting for zero PPD.

3. The Claimant suffered a worsening of her condition at the beginning of February 2017. She was doing her regular job duties that included lifting heavy boxes. She suffered an increase in low back pain and an increase in right radicular pain. Her pain was so severe that she sought medical treatment on February 8, 2017 from her primary care physician, Dr. Baker.

4. On March 28, 2017, the Claimant was examined by a workers'

compensation physician, Robert Broghammer, M.D.

5. Dr. Broghammer referred the Claimant to Scott Primack, D.O., who examined the Claimant on April 26, 2017 and found she was a reasonable candidate for surgical intervention.

6. May 13, 2017, the Claimant's pain became so extreme that she reported to the emergency room (ER). She underwent a surgical repair on May 13, 2017, performed by Michael Rauzzino, M.D. Despite the surgical intervention, the Claimant continued to have back pain and it was determined she had a recurrent disc herniation. The Claimant had a second surgery on June 7, 2017, again performed by Dr. Rauzzino.

7. The Clamant requested a hearing on a Petition to Reopen W.C. No. 5-017-566-01 or in the alternative a determination that the Claimant suffered a new work related injury on February 6, 2017. The matter proceeded to hearing on April 24, 2018 and June 4, 2018 before the undersigned ALJ. The ALJ ordered W.C. No. 5-017-566-001 re-opened by decision of Jne 27, 2018.

8. Respondent appealed the Findings of Fact, Conclusions of Law and Order entered June 27, 2018. The ALJ's Order was affirmed by The Industrial Claim Appeals Office (ICAO) on December 20, 2018.

Respondent's Petition to Reopen

9. At the commencement of the hearing on April 24, 2018, the parties entered three stipulations on the record: (1) Claimant's average weekly wage (AWW) was $616.70 from June 1, 2016 through May 31, 2017; (2) Claimant's AWW is $871.24 beginning June 1, 2017; and (3) If it is determined that the claim should be reopened, then Claimant is owed temporary disability benefits from March 28, 2017, and continuing.

10. At the conclusion of the hearing on June 4, 2018, this Administrative Law Judge entered an oral ruling from the bench, finding that:

> "[t]he claimant has proven by a preponderance of the evidence that her condition has worsened in the original 5-017-566. And she's failed to prove by a preponderance of the evidence that she sustained a new injury on February 6, 2017. . . And based on the stipulations to reopen the claimant's -- average weekly wage, well, I'll pinpoint that the worsening is at February 6, 2017, that's a transition point. So the claimant's average weekly wage was 616.70 from February 6, 2017 until May 31st, 2017, and then it went up to 871.24. The claimant I have, and correct me if I'm wrong here because it's been a while, claimant was temporarily and totally disabled from March 28, 2017 and continuing. And

there's a variable temporary total rate because of increased average weekly wage."

[Exhibit B, pp. 20-21].

11. The ALJ requested that Claimant's counsel prepare proposed Full Findings of Fact, Conclusions of Law and Order, which Claimant's counsel submitted on June 11, 2018 [Exhibit B, p. 73]. Claimant's Proposed Findings of Fact, Conclusions of Law and Order included a section entitled "Stipulations," in which Claimant's counsel re-iterated three stipulations entered in the record at the hearing on April 24, 2018

12. The ALJ issued Full Findings of Fact, Conclusions of Law and Order on June 28, 2018, which reiterated the parties' three stipulations as the first three Findings of Fact:

> ¶ 1 The Claimant's AWW was $616.70 from June 1, 2016 through May 31, 2017;
>
> ¶ 2 The Claimant's AWW is $871.24 beginning June 1, 2017; and
>
> ¶ 3 If it is determined that the claim should be reopened, the Claimant is owed TTD benefits from March 28, 2017 and continuing.

[Exhibit D, p. 38].

13. In ¶ 21 of the "Findings of Fact", the Administrative Law Judge found that "[t]he Claimant has proven, by a preponderance of the evidence that she experienced a worsening (change) of her condition, related to the admitted injury of June 1, 2016, after the finality of the FAL therein. Therefore, she has proven that a reopening of W.C. No. 5-017-566-01 is warranted." [Exhibit D, p. 41]. Although the Administrative Law Judge did not provide a specific date for reopening, he stated it was "after the finality of the FAL", which became final on March 20, 2018. Finding of Fact ¶ 23 then stated that "based on the stipulations of the parties … Claimant was and is temporarily and totally disabled from March 28, 2017 and continuing..." [Exhibit D, p. 41].

14. Paragraph f of the "Conclusions of Law" section of the Full Findings of Fact, Conclusions of Law and Order starts by stating that "the Claimant was and is temporarily and totally disabled from March 28, 2017 and continuing." [Exhibit F, p. 44]. However, the paragraph then goes on to state "[t]he period from June 1, 2016, through May 31, 2017, both dates inclusive, equals 365 days. The period from June 1, 2017, through the hearing date, June 4, 2018, both dates inclusive, equals 368 days. Based on the AWW through May 31, 2017, retroactive, past due TTD benefits in the aggregate amount of $21,436.45. Based on the AWW from June 1, 2017, through the hearing date, June 4, 2018, retroactive, past due TTD benefits in the aggregate amount of

$30,536.64, are due." [*Id*.]. Thus, the Administrative Law Judge entered contradictory conclusions, as he first stated that Temporary Total Disability benefits begin on March 28, 2017, but then calculated Temporary Total Disability benefits beginning June 1, 2016.

15. Paragraph D of the "Order" section of the Full Findings of Fact, Conclusions of Law and Order states "For the period from June 1, 2016, through May 31, 2017, both dates inclusive, equals 365 days, Respondent shall pay the Claimant retroactive, past due temporary total disability benefits in the aggregate subtotal amount of $21,436.45. For the period from June 1, 2017, through the hearing date, June 4, 2018, both dates inclusive, equals 368 days, Respondent shall pay the Claimant retroactive, past due temporary total disability benefits in the aggregate subtotal amount of $30,536.64. Respondent shall pay the Claimant a grand total of retroactive, past due temporary total disability benefits of $51,973.09, which is payable retroactively and forthwith." [Exhibit D, p. 45].

16. Paragraph F of the "Conclusions of Law" and paragraph D of the "Order" sections of the Full Findings of Fact, Conclusions of Law and Order was an error and mistake, as the parties clearly stipulated that temporary total disability benefits would begin on March 28, 2017, if the claim was reopened pursuant to Claimant's request.

Temporary Total Disability Benefits

17. The Full Findings of Fact, Conclusions of Law and Order dated June 28, 2018, which awarded TTD benefits retroactive to June 1, 2017, is reopened. Consistent with the parties' stipulations, which the ALJ found as fact in the Full Findings of Fact, Conclusions of Law and Order dated June 28, 2018, the Claimant is entitled to TTD benefits beginning on March 28, 2017, through May 31, 2017, both dates inclusive, a total of 65 days. For that period of time, Claimant's Average Weekly Wage (AWW) was $616.70, resulting in a TTD benefit rate of $411.13 per week. Thus, the Claimant is entitled to $3,817.67 in TTD benefits from March 28, 2017, through May 31, 2017, both dates inclusive.

18. The parties stipulated that the Claimant's AWW increased to $871.21 effective June 1, 2017, resulting in a TTD benefits rate of 580.81 per week. Claimant's authorized treating physician (ATP), Scott J. Primack, D.O., placed the Claimant at maximum medical improvement (MMI) on February 21, 2018. The period from June 1, 2017, through February 21, 2018, both dates inclusive, is 266 days. Thus, Claimant is entitled to TTTD benefits in the amount of $22,070.65 for the period from June 1, 2017, through February 21, 2018, both dates inclusive.

19. Therefore, from the date the claim was reopened on Claimant's petition to reopen, she is entitled to TTD benefits in the grand total amount of $25,888.32.

Permanent Partial Disability

20. Respondent filed a FAL, dated January 11, 2019. The FAL admitted to a 12% whole person impairment rating. Under the Remarks and basis for permanent

disability award it states, “Pursuant to Dr. Primack’s deposition taken 4/16/2018, and his report dated February 21, 2018, Claimant sustained a 12% whole person impairment rating for specific disorder.” The ALJ finds that the FAL was based on Dr. Primack’s changed opinion of 12% whole person, expressed in his evidentiary deposition, which excluded a rating for ROM, when his report rated PPD at 20% whole person and included a rating for ROM. Claimant contends that the first 20% PPD rating is the appropriate rating because it was based on Dr. Primack’s examination of the Claimant. Dr. Primack changed his rating by subtracting the ROM component after watching surveillance videos. The question is: which rating is more reliable and credible.

Ultimate Findings

21. The official and first opinion of Dr. Primack on PPD, expressed in his report, of 20% whole person is more credible and persuasive than his spontaneous declaration at the evidentiary deposition, deducting the range-of-motion portion (ROM) and reducing his PPD rating to 12% because it is more thoroughly and objectively explained. His subsequent reduction to 12% is based upon Dr. Primack’s subjective viewing of surveillance film and is entitled to little, if any, weight.

22. Between internally conflicting opinions of Dr. Primack, the ALJ makes a rational choice, based on substantial evidence, to accept Dr. Primack’s official report opinion of 20% whole person rating, and to reject his second rating of 12% whole person.

23. The ALJ finds that the Claimant has proven, by a preponderance of the evidence that Dr. Primack’s first rating of 20% whole person is more reliable and credible because it was based on an objective examination of the Claimant for purposes of a permanent medical impairment rating. The second rating of 12%, expressed in Dr. Primack’s evidentiary deposition was subjectively based on his eyeball viewing surveillance film, which had no persuasive indicia of objective criteria upon which the changed opinion was based.

24. The ALJ’s award of TTD benefits retroactive to June 1, 2017, was an error or mistake because the parties had stipulated that if the claim was reopened pursuant to Claimant’s request TTD benefits would begin on March 28, 2017. Therefore, Respondent sustained its burden of proving an error or mistake, in the Findings of Fact, Conclusions of Law and Order dated June 28, 2018, and the case should be reopened to correct that error and mistake.

25. The Respondent’s Petition to Reopen on the ground of error or mistake should be granted, but not for the outcome desired by the Respondent. The error was the admission of 12% whole person when, in fact, it should have been 20%.

26. Respondent alleges an error that could not have been addressed by following Division Independent Medical Examination (DIME) procedures in a timely fashion. Consequently, the only avenue open was a Petition to Reopen, based on error or mistake. The ALJ finds that reopening is appropriate and the outcome sought by the

Claimant is appropriate.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, Dr. Primack's first rating of 20% whole person was more reliable and credible because it was based on an objective examination of the Claimant for purposes of a permanent medical impairment rating. The second rating of 12%, expressed in Dr. Primack's evidentiary deposition was subjectively based on his eyeball viewing surveillance film, which had no persuasive indicia of objective criteria upon which the changed opinion was based. As found, The official and first opinion of Dr. Primack on PPD, expressed in his report, of 20% whole person is more credible and persuasive than his spontaneous declaration at the evidentiary deposition, deducting the range-of-motion portion (ROM) and reducing his PPD rating to 12% because it is more thoroughly and objectively explained. His subsequent reduction to 12% is based upon Dr. Primack's subjective viewing of surveillance film and is entitled to little, if any, weight.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between internally conflicting opinions of Dr. Primack, the ALJ made a rational choice, based on substantial evidence, to accept Dr. Primack's first opinion of 20% whole person PPD, and to reject his second opinion of 12% whole person PPD.

Petition to Reopen

c. Under § 8-43-303(1), C.R.S., after MMI and within six years of the date of injury, an ALJ may re-open a claim based on fraud, an overpayment, **an error, a mistake,** or a change in condition. See *El Paso County Department of Social Services v. Donn,* 865 P.2d 877 (Colo. App. 1993); *Burke v. Indus. Claim Appeals Office,* 905 P. 2d 1 (Colo. App. 1994); *Hanna v. Print Express, Inc.,* 77 P. 3d 863 (Colo. App. 2003); *Donohoe v. ENT Federal Credit Union,* W.C. No. 4-171-210 [Indus. Claim Appeals Office (ICAO) September 15, 1995]. This is so because MMI is the point in time when no further medical care is reasonably expected to improve the condition. § 8-40-101(11.5), C.R.S. (2009); *City of Colorado Springs v. Indus. Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). As found, Respondent alleged an error that could not have been addressed by following Division Independent Medical Examination (DIME) procedures in a timely fashion. Consequently, the only avenue open was a Petition to Reopen, based on error or mistake. As found, reopening is appropriate and the PPD outcome sought by the Claimant is appropriate.

Burden of Proof

d The burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A

"preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (CIAO), March 20, 2002]. *Also see Ortiz v. Principe,* 274 Ph.D. 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 Pd.D. 1116 (Colo. 1984). As found, Respondent has satisfied its burden with respect to reopening; and TTD. Claimant has satisfied her burden with respect to degree of PPD, *i.e.,* 20% whole person.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. W.C. No. 5-017-566-001 is hereby reopened, based on error or mistake.

B. The Claimant sustained permanent medical impairment of 20% whole person, and Respondent shall accordingly pay the Claimant additional permanent medical impairment benefits, based on 20% whole person.

C. Respondent shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts of indemnity benefits due and not paid when due.

DATED this 13th day of June 2019.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she sustained a compensable work related injury on May 30, 2016.

2. Whether Claimant has established by a preponderance of the evidence that the November 18, 2016 MRI was reasonable, necessary, and causally related to her May 30, 2016 work injury.

FINDINGS OF FACT

1. Claimant was employed by Employer as a housekeeper and was so employed for approximately 7 years.

2. On May 30, 2016, while so employed, Claimant was in the housekeeping closet when a towel and toilet paper roll fell off her cleaning cart. Claimant bent over to pick up the items. When Claimant stood up, a fellow employee ran into Claimant with her cleaning cart.

3. The fellow employee, Ms. O_____, acknowledged running her cleaning cart into Claimant. Ms. O_____ indicated that she was pushing her cart out of the closet, going slow and just getting moving, when she bumped her cart into Claimant. Ms. O_____ apologized and noted that it sounded like Claimant was hurt but that Claimant stretched and continued pushing her cart away. *See* Exhibits 8, K.

4. Claimant testified that the cleaning carts are about 4-5 feet tall and weigh approximately 350 pounds when fully loaded. Claimant testified that when she was hit, her chest was pushed into her cart, and Ms. O_____'s cart hit her in the back. Claimant is approximately 5'7" tall.

5. Claimant testified that she tried to continue working that day and tried to work through the pain, but couldn't finish work and went to the emergency room.

6. On May 30, 2016 at the Yampa Valley Medical Center Claimant reported that she had increased low back pain and that she hurt from her head to her low back after being hit from behind by a large housekeeping cart that morning at 9:00 a.m. Claimant reported pain at a 10/10. Claimant reported a history of chronic low back pain. Claimant underwent x-rays of the cervical spine, thoracic spine, and lumbar spine. The cervical spine x-rays showed mild cervical degenerative disc disease most severe at C5-6 and no sign of traumatic injury. Claimant was given pain medications and flexeril. Codes indicate possible diagnoses of strain of muscle, fascia, and tendon at the neck, back wall of thorax, and lower back. *See* Exhibits 10, 11, P, T.

7. On May 31, 2016, Frederick Scherr, M.D. evaluated Claimant. Claimant reported low back pain and cervical pain. Claimant reported that she was hit in her lower back with a housekeeping cart and that she did not feel immediate pain but had increasing low back pain and neck pain as the day went on. Dr. Scherr noted a complicated history with Claimant having chronic issues with low back pain and having treated with pain management and physical therapy since 2011. Claimant reported that her pain was similar somewhat to her pain in the past. Claimant reported low back pain across the lower lumbar spine and some cervical pain and pain across the trapezius bilaterally. On physical examination, Dr. Scherr found no tenderness over the cervical spine spinous processes but some bilateral paraspinal muscle tenderness and trapezius muscle tenderness bilaterally with some guarding. He found some difficulty in extension on cervical spine range of motion. Dr. Scherr found some rhomboid tenderness and maybe mid thoracic spine paraspinal muscle tenderness. In the lumbar spine, Claimant had some bilateral paraspinal muscle tenderness with the left greater than the right and some left iliac crest tenderness that gave Claimant some radiating pain to the left lateral thigh. Dr. Scherr found difficulty in range of motion of the lumbar spine during rotation and flexion. Dr. Scherr assessed low back pain with left radiculopathy and cervical sprain. He noted that Claimant already had a physical therapy appointment the next day for her prior back injury and he told her to keep that appointment. He also gave her a renewed physical therapy for the new problems. He provided her with valium. Dr. Scherr provided reduced work restrictions and limited her lifting, carrying, and repetitive lifting to 5 pounds and provided a restriction of standing and sitting as needed. *See* Exhibits 11, P.

8. On June 1, 2016, Claimant returned to the medical center as a walk in and asked to be taken off work. Linda Boylan-Starks, NP, evaluated Claimant. NP Boylan-Starks noted that she spoke to the physical therapist who stated that Claimant's symptoms were similar to the symptoms Claimant had prior to the event with the housekeeping cart but that the symptoms just may be a little bit more severe. NP Boylan-Starks noted that the pain through the neck and shoulder region was new. Claimant reported pain primarily in the low back radiating to her buttocks as well as tightness in her neck and shoulder region. Claimant reported her pain was at an 8/10. NP Boylan-Starks opined that Claimant's behaviors did not necessarily support that pain rating. Claimant was noted to move easily fully from a sitting to standing position and noted that during distraction Claimant was able to move her neck more freely than on examination. NP Boylan-Starks provided the impression of thoracolumbar strain. She opined that the work restrictions given the day prior were appropriate for the nature of the injury and opined that the mechanism of injury was relatively minor. NP Boylan-Starks noted that Claimant became more stiff and didn't feel pain initially which was consistent with musculoskeletal tightness. *See* Exhibits 11, P.

9. On June 6, 2016, Dr. Scherr evaluated Claimant. Dr. Scherr noted that Claimant's x-rays at the emergency department showed essentially no acute findings but some degenerative changes and no signs of traumatic injuries. Dr. Scherr provided a diagnostic impression of mild cervical strain and thoracolumbar strain in the face of degenerative disk disease. Dr. Scherr estimated maximum medical improvement at four

to six weeks and recommended continued physical therapy and deep tissue massage. *See* Exhibits 11, P.

10. On June 21, 2016, Dr. Scherr evaluated Claimant. Claimant reported mild low back pain and more significant trapezius musculature pain and right sided SCM pain. Claimant reported that the pain in her neck radiated into her jaw and became more severe over the past week. Dr. Scherr noted that Claimant had been in physical therapy but was failing to progress and had been in some sort of physical therapy since approximately 2011 with her chronic back pain. Dr. Scherr noted that they would reassess Claimant in two weeks and perhaps move her to full duty work if they had success with new treatment modalities including acupuncture and massage. *See* Exhibits 11, P.

11. On June 21, 2016, Claimant was also evaluated by Brian Harrington, M.D. Claimant reported that after last seeing Dr. Harrington in April of 2016, she had gone home to Jamaica and had relaxed without working and reported that her back pain got a lot better. Claimant reported that she returned to Colorado May 25 and was hit from behind while working housekeeping on May 30 and now had burning low back pain especially in the left low back area and upper buttocks. Claimant reported that she was better that day than a couple of months ago and that the month off from work seemed to especially help. Dr. Harrington noted that he still believed Claimant had muscular low back pain exacerbated by a depressed mood. He noted that she had visit earlier that day with a WC164 form indicating diagnosis of sprain lumbar region. He discussed that it did not make sense for Claimant to see two providers for work comp issues especially if they were for the same problem. Dr. Harrington opined that clearly mental health issued played into Claimant's injury and pain experience. *See* Exhibit O.

12. On July 5, 2016, Dr. Scherr evaluated Claimant. Claimant reported that she was doing much better and that she felt like her back pain was at baseline. Claimant felt that she was moving better and could return to full duty work. Claimant wanted to complete the course of physical therapy. On examination, Dr. Scherr found no pain with palpation of the cervical, thoracic, or lumbar spine and found full range of motion of the neck without pain. Claimant also reported no pain on lumbar range of motion. Dr. Scherr opined that Claimant was doing the best that he had seen since this encounter and appeared very comfortable. Dr. Scherr discussed with Claimant that her pain appeared to be at baseline with the chronic lumbar spine pain that she suffered from and noted that Claimant agreed. Dr. Scherr recommended maintenance therapy of six physical therapy visits to complete the PT course. Dr. Scherr opined that Claimant was at MMI. *See* Exhibit 11.

13. On August 16, 2016, Dr. Harrington evaluated Claimant. Claimant reported her lower back had been generally okay but her neck was bothering her a lot now and that she attributed the neck pain to an accident that occurred around the beginning of July where she was hit from behind. Dr. Harrington noted that he was confused about what issues he should be addressing but noted that he saw Claimant early in the year for a low back pain claim that got better when Claimant was not working and back home in Jamaica. He opined that it sounded like she may have been at MMI but that he did not

see him for follow-up until she had a new injury. Dr. Harrington opined that Claimant's stated degree of pain and disability for both the back and neck was in excess of objective findings. He discussed Claimant may need to not do physical work. He opined that Claimant's job description for Employer continued physical work beyond what Claimant could tolerate and noted Claimant's struggle with chronic back pain issues. He noted that her symptoms mostly resolve when she is home in Jamaica and not working but that lifting, carrying, pushing, and repetitive back bending all seemed to aggravate her condition. *See* Exhibit 11.

14. Dr. Harrington noted on September 6, 2016 that he had been seeing Claimant for low back pain since January of 2016 and that her pain had improved when Claimant was home in Jamaica and not working. Dr. Harrington noted that Claimant returned to the area and began working in late May and that before working was at MMI effective May 25, 2016. He noted that because she had greater than 6 months of pain and rigidity he would have recommended an impairment rating but that unfortunately Claimant never followed up before starting a new job. Dr. Harrington noted that apparently, on May 30, Claimant suffered a new injury with a new ongoing case which would cloud interpretation of her condition and proper allocation of signs/symptoms to the correct work comp case and opined it made doing an impairment rating difficult since he could not easily determine to what degree her current signs/symptoms were due to the old back complaint work comp case or to the new injury. *See* Exhibits 11, O.

15. On September 22, 2016, Dr. Scherr evaluated Claimant. Claimant reported that her back pain was worse and that she was having trouble with urination, felt like her feet were weak, and had a myriad of numerous complaints. Claimant reported that her neck had pain and that her left arm was numb. Claimant was vague about when this started and said she always had the pain. Dr. Scherr opined that it was very difficult to understand what was really going on with Claimant. He opined that Claimant had severe pain behaviors with some exaggerated movements. Dr. Scherr opined that none of the current symptoms were related to the May 30, 2016 incident based on the mechanism of injury and her current complaints and symptoms plus documentation from July 5, 2016 noting that she was back to baseline. Dr. Scherr opined that, if anything, the new symptoms were related to her chronic history of low back issues and not the minor May 30, 2016 incident. He encouraged her to continue to see Dr. Harrington for her ongoing chronic symptoms and opined that she remained at MMI with no restrictions for the May 40, 2016 incident. *See* Exhibits 11, P.

16. On September 23, 2016, Claimant returned to Dr. Harrington's office and was evaluated by Michelle Jimerson, M.D. Claimant reported that she had worsening of her back pain beginning on September 18, 2016 with no injury. Claimant reported she was doing laundry and light duty work. Dr. Jimerson opined that Claimant had an acute exacerbation of her long-standing issues with no injury but exacerbated by work in laundry. Dr. Jimerson also opined that the injury over the summer contributed as well. Dr. Jimerson recommended speaking with Dr. Harrington to decide on next steps. *See* Exhibit O.

17. On October 7, 2016, Dr. Harrington evaluated Claimant. Claimant reported continued low back pain that was the same back pain she had since 2011. Dr. Harrington noted that in contrast to his prior commentary, he would accept Claimant's back pain as related to her 2011 work comp claim. He still believed it was time to move Claimant to MMI but felt he needed to lay to rest her current complaints and concerns about cord compression or radiculopathy. Dr. Harrington ordered a new lumbar spine MRI. *See* Exhibit O.

18. On November 18, 2016, Claimant underwent an MRI of her lumbar spine. The impression was moderate narrowing of the left L3 neural foramen due to broad based left posterolateral disc protrusion compressing the exiting L3 nerve root and at L4-5 a broad based right posterolateral disc protrusion causing moderate narrowing of the right L4 foramen with the exiting nerve root not appearing compressed. The right lateral recess at L4-5 was found to be mildly narrowed with disc material abutting though not visibly compressing or displacing the descending right L5 nerve root and left neural foramen mildly narrowed without signs of nerve root compromise. An annular tear at L5-S1 was noted without significant disc bulge or protrusion and with moderate right foraminal narrowing. *See* Exhibits 10, T.

19. On November 28, 2016, Dr. Harrington evaluated Claimant. He reviewed an October 7, 2014 MRI of the lumbar spine, a February 17, 2015 note from Dr. Corenman, and a November 18, 2016 lumbar MRI. He noted that the October 2014 MRI showed degenerative disc disease and facet joint arthropathy in the mid to lower lumbar spine, showed a broad based left lateral disc protrusion at L3-4 contacting the exiting left L3 nerve root, and showed a circumferential broad based annular disc bulging at L4-5 contacting the exiting right L4 nerve root and both descending L5 nerve roots. He noted it showed several foraminal stenosis including at left L3-4, right L4-5, and right L5-S1 as well as central spinal canal stenosis at L4-5. Dr. Harrington noted that Dr. Corenman recommended less physical work in February of 2015. Dr. Harrington noted that the November 2016 MRI again showed a left disc protrusion at L3 impinging on a nerve root. Dr. Harrington opined that the L3 disc protrusion was new since February 20, 2013 where an MRI did not show the protrusion and thus the L3 finding was relatively new and not related to Claimant's August 2011 workers' compensation claim. Dr. Harrington opined that the non-work related disc protrusion affected Claimant's assessment for an impairment rating and opined that Claimant should get her disc protrusion evaluated and treated as necessary first and then afterwards do an impairment rating for her August 2011 workers' compensation claim. *See* Exhibits 11, O.

20. On December 6, 2016, Dr. Harrington performed an impairment rating examination for the August 2011 work injury. He reviewed medical records that noted Claimant's low back pain usually at a 7/10 to 10/10 with numbness running down her left foot in January of 2016. He also noted that Claimant reported her regular housework made her back pain worse and continued to have burning pain in her feet and was tearful in March of 2016. Medical records he reviewed noted no change in symptoms on April 1, 2016. Dr. Harrington noted in his medical records review that after April 1, 2016, the ski season ended and Claimant returned to her native Jamaica. The next entry was May

30, 2016. Dr. Harrington noted that Claimant reported that she had returned to Jamaica in the spring after the ski season ended and returned on May 25, 2016. Claimant reported that while back home in Jamaica and not working, her back pain had improved and was really not bothering her much but flared up again with the new injury on May 30, 2016. *See* Exhibits 11, O.

21. Dr. Harrington noted that in March of 2016, Claimant would take a pain pill in the morning and then could go to work but would have low back pain on both sides of her low back on busy days. Claimant also reported that she had frequent numbness in her left leg down to her foot and sometimes had pain in the back of her left calf. When working she would avoid stretching overhead, avoid bending, and was okay if she pushed a cart slowly. Dr. Harrington provided the impression of work related low back strain and exacerbation of underlying degenerative disc and joint disease of the lumbar spine in 2011 with persistent pain and rigidity. He opined that Claimant was at MMI, effective May 26, 2016. *See* Exhibits 11, O.

22. Dr. Harrington opined that Claimant had an unusually long course of treatment for an injury from August of 2011. He noted that no surgical intervention is indicated and that injections and nerve blocks did not provide lasting benefit. Dr. Harrington opined that a February 2013 lumbar MRI showed preexisting degenerative disc disease and degenerative arthritis but no nerve root compromise. He opined that Claimant's symptoms had varied overtime, had been inconsistent, had been in excess of objective findings on examination, and had not always followed clear anatomic pathways. He also opined that Claimant's stated symptoms had been compounded by depression and anxiety. Dr. Harrington noted that the most recent MRI showed left L3 nerve root compromise that could be causing some left lower extremity symptoms but that it was a new finding that likely represented the natural progression of Claimant's underlying and chronic degenerative arthritis. Dr. Harrington opined that Claimant could have been declared at MMI perhaps several years ago but he listed MMI as May 25, 2016 based on Claimant's stated improvement when she was home in Jamaica and not working and before she started working again. Dr. Harrington provided permanent work restrictions, recommended maintenance care, and opined that Claimant had a 7% whole person impairment rating from the August 2011 injury. *See* Exhibits 11, O.

23. On January 24, 2017, Henry Fabian, M.D. issued a report. Dr. Fabian noted that an MRI done on November 18, 2016 showed L3-4 foraminal stenosis. He compared it to the February 2013 MRI and noted that the only new things showing progression were degenerative changes at L3-4 that were now with foraminal stenosis at L3 and an L3 impingement. Dr. Fabian opined that unfortunately, an L3 impingement did not totally match Claimant's symptoms. Dr. Fabian opined that in terms of causality, the injury pattern would be challenging to totally attribute to what happened. He opined that it sounded like Claimant would have had an acute hyperextension injury to the lumbar spine and that if she had underlying foraminal stenosis and lateral recess stenosis, it could have certainly been aggravated by acute extension. He recommended based on the only thing that had changed since the index February 2013 MRI was the L3-4 foraminal stenosis,

that Claimant have a transforaminal left L3-4 block to see if it helped with her symptoms. *See* Exhibits 12, Q.

24. Apparently, Dr. Fabian was not provided the October 7, 2014 MRI. Dr. Fabian does not note it in his report at any place nor does he comment on the findings in that report of disc protrusion contacting the exiting left L3 nerve root that existed in October of 2014.

25. On September 16, 2017, S.D. Lindenbaum, M.D. performed an independent medical evaluation. Dr. Lindenbaum took a history from Claimant, reviewed medical records, and performed a physical examination. On the cervical spine exam, he found Claimant to have multiple positive Waddell's signs. Dr. Lindenbaum also noted that when he took a history from Claimant her motion was extremely full and free in the cervical spine, but was markedly limited when he examined her. On lumbar exam, he also found some Waddell signs. Dr. Lindenbaum opined that Claimant had residual problems from her 2011 injury with a total of 20% whole person impairment for the 2011 injury. Dr. Lindenbaum opined that Claimant did not have a new acute injury on May 30, 2016 when she bumped her back. He opined that although Claimant had an underlying disc injury from 2011 she did not have any new injury in either the cervical or lumbar spines from May of 2016. He opined that Claimant needed no further treatment for the most recent injury but needed maintenance treatment and limitations or lighter work related to her 2011 injury. *See* Exhibit N.

26. On February 20, 2018, Claimant underwent an MRI of her cervical spine. The impression was Grade 1 C5-6 and C6-7 disc protrusions with mild spinal stenosis at both levels and mild cord abutment at C6-7. Bilateral mild C6 and moderate C7 foraminal narrowing was also noted. A mild nonspecific lymphadenopathy of the left neck, possibly necrotic level 1B lymph node was also noted and an ENT evaluation for oral pharyngeal pathology was recommended. *See* Exhibits 16, T.

27. Claimant also underwent a thoracic MRI on February 20, 2018 that was read as normal. *See* Exhibits 16, T.

28. On November 15, 2018, Carlos Cebrian, M.D. performed an independent medical evaluation. Claimant reported cervical spine pain, lumbar spine pain, pain in the left buttock, pain in the left forearm, thoracic spine pain, pain in the left hand, leg weakness, leg and hand numbness, and pain at the back of the head. Claimant reported that on May 30, 2016 in the morning while getting her housekeeping cart from a closet, she was bumped into by another employee with her cart and hit the mid part of her back, which caused her chest to hit her own cart. Claimant reported that she felt pain in her mid-back and had shoulder pain into her low back, that she sat down for a period of time, and that when she got up she felt pain in her neck. Dr. Cebrian reviewed medical records and performed a physical examination. Apparently, Dr. Cebrian was not provided the October 7, 2014 MRI and did not note it in his records review. *See* Exhibits 13, M.

29. Dr. Cebrian opined that Claimant's work diagnosis related to the May 30, 2016 work incident was a lumbar spine contusion/strain. He opined that no further medical care was medically reasonable, necessary, or related to the claim. He opined that Claimant was appropriately placed at MMI on July 5, 2016 by Dr. Scherr. Dr. Cebrian opined that the mechanism of injury was very mild and not of sufficient force to cause and injury to the cervical spine or shoulders and that at most there would have been some localized tissue damage in the lumbar spine area where the cart contacted Claimant. He opined that this would have improved with or without medical treatment. Dr. Cebrian opined that from the beginning, Claimant's subjective pain complaints had been out of proportion to the objective evidence and mechanism of injury. Dr. Cebrian opined that Claimant had an extensive pre-existing medical history of pain complaints in her lumbar spine and that her acute contusion/strain of her chronic underlying condition was a medical event of limited duration that did not change her underlying chronic problem. *See* Exhibits 13, M.

30. Dr. Cebrian opined that the event of May 30, 2016 provided no specific opportunity to change Claimant's anatomy and opined there was no diagnostically demonstrated change in her anatomy. Dr. Cebrian opined that the physical examination at his IME indicated non-physiologic/non-organic conditions. He ultimately opined that the ongoing complaints were causally related to pre-existing lumbar spine complaints and chronic pain disorder and that there were no restrictions and no permanent impairment related to the May 30, 2016 claim. *See* Exhibits 13, M.

31. On November 12, 2018, Clint Devin, M.D. evaluated Claimant for her neck and left upper extremity pain and paresthesias. Dr. Devin noted Claimant's reports of neck and left upper extremity pain and paresthesias that began months ago and had gotten worse over time. Dr. Devin opined that it appeared to be in the C5-C6 distribution. Dr. Devin reviewed the February 2018 MRI and noted degenerative changes with no appreciable stenosis. He opined that Claimant had degenerative changes, which explained her neck pain. *See* Exhibit Q.

32. As noted in the medical records, at the time of the May 30, 2016 incident with the cleaning cart, Claimant had recently been undergoing physical therapy and taking pain medications for her August 2011 injury. Just prior to the May 30, 2016 injury, Claimant had approximately 1.5 months off work and returned to Jamaica. Claimant reported feeling better after no work for that vacation time and she returned on May 25, 2016 to Colorado.

33. As noted in the medical records, there were several diagnostic tests performed prior to the May 30, 2016 incident. Claimant also was undergoing treatment in early 2016 for an August 2011 injury.

34. On February 20, 2013, Claimant underwent a lumbar spine MRI that showed multilevel degenerative disc disease and hypertrophic facet arthropathy. Claimant had mild degenerative foraminal stenosis at L3-4 through L5-S1 levels. The findings were most pronounced on the left at L3-4 and on the right at L4-5 where small

far lateral disc bulges were suggested. No evidence of central stenosis was found. *See* Exhibits 9, T.

35. On October 7, 2014, Claimant underwent an MRI of her lumbar spine that showed degenerative disc disease and facet joint arthropathy in the mid to lower lumbar spine. The findings included a broad based left lateral disc protrusion at L3-4 that contacted the exiting left L3 nerve root. The findings also included a circumferential broad based annular disc bulge at L4-5 that contacted the exiting right L4 nerve root and contacted both descending L5 nerve roots. Claimant had several foraminal stenosis including moderate left L3-4, moderate right L4-5, and moderate right L5-S1. Claimant had mild central spinal canal stenosis at L4-5. *See* Exhibits 9, T.

36. On March 1, 2016, Katie Liefer, RN evaluated Claimant in follow up for low back pain. Claimant reported that she got off and on stabbing pain in her low mid back that sometimes involved the left side of her low back. Claimant reported that her back pain was worse in the mornings and evening and reported her pain that day at 8/10. Dr. Harrington also evaluated Claimant and noted chronic low back pain, facet arhropathy, and chronic depression. *See* Exhibit O.

37. On April 1, 2016, Dr. Harrington evaluated Claimant. Claimant reported sharp daily pains in her low back with lifting and bending with a pain level of 8/10 with pain sometimes spreading across both buttocks and especially her left posterior buttocks. Claimant reported that she wakes up at night sometimes and ices her back. *See* Exhibit O.

38. On April 15, 2019, Dr. Cebrian testified by deposition. Dr. Cebrian opined that based on the May 30, 2016 mechanism of injury it was not biologically plausible that Claimant would have had the widespread pain complaints that she had over a period of 2.5 years. Dr. Cebrian pointed out that Dr. Lindenbaum's opinion was similar to his and that Dr. Harrington noted subjective complaints out of proportion to objective findings. Dr. Cebrian testified that Claimant had extensive treatment from 2011 through 2016 for her chronic pain. He testified that her pre-existing complaints in the low back were basically the same. He testified that although Claimant didn't have cervical spine complaints before the May 30, 2016 incident, it would not be the type of incident that would lead to any kind of cervical spine complaints or injury. Dr. Cebrian opined there was insufficient force with the mechanism of injury to cause any kind of injury to the cervical spine and he noted there were no objective findings supporting an acute injury. Dr. Cebrian also opined that the mechanism of injury was not enough to exacerbate or aggravate Claimant's pre-existing condition in the lumbar spine and wouldn't have changed her underlying disc pathology or chronic pain. Dr. Cebrian opined that the majority of the symptoms that Claimant was having when treating under the May 30, 2016 claim weren't related to the May 30 incident but were related to her pre-existing condition and chronic pain disorder. Dr. Cebrian opined that it wasn't really reasonable or necessary to provide any kind of treatment to Claimant for the May 30, 2016 claim and that if the providers had all the pre-existing records, they probably wouldn't have provided treatment.

39. Dr. Cebrian opined that the L3 disc protrusion shown on the 2016 MRI was not related to the May 30, 2016 incident and that the protrusion was related to the underlying natural history of degenerative disc disease. Dr. Cebrian opined that the mechanism of injury was minor, the symptoms and findings were non-physiologic and did not correlate with an L3 disc protrusion with nerve contact, and thus it was medically probable the L3 disc protrusion had nothing to do with the 2016 claim. Dr. Cebrian opined that Claimant had a minor contusion and treatment was not necessary for the May 30, 2016 incident.

40. Claimant overall is not credible or persuasive. Multiple inconsistencies and exaggerated pain behaviors and/or non-physiologic findings exist throughout the records

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo.App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo.App. 2000).

Compensability

The claimant was required to prove by a preponderance of the evidence that at the time of the injury he was performing service arising out of and in the course of the employment, and that the alleged injury was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether the claimant met the burden of proof to establish a compensable injury is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

The Act creates a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence." Section 8-40-201(1), C.R.S. In contrast, an "injury" contemplates the physical or emotional trauma caused by an "accident." An "accident" is the cause and an "injury" is the result. No benefits flow to the victim of an industrial accident unless the accident causes a compensable "injury." A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.,* W.C. No. 4-650-711 (ICAO February 15, 2007).

Claimant has failed to meet her burden to establish that she sustained a compensable work related injury on May 30, 2016. Although she was bumped by a co-worker's cleaning cart on that day, the accident did not create disability or the need for medical treatment. Rather, Claimant had ongoing disability and need for medical treatment dating back to 2011 for chronic pain in her lumbar spine. Claimant had severe degeneration in both her cervical spine and lumbar spine that pre dated the incident on May 30, 2016. Although Claimant had been out of the country on vacation and resting for approximately 1.5 months before this incident, records show that prior to her vacation, and in April of 2016 Claimant had significant ongoing pain and issues. Claimant tolerated the pain and went to the emergency room when it got bad over the years as shown by the medical records. Here, after being back in state for 5 days, Claimant naturally was again feeling the persistent and chronic back pain that she has reported to have suffered from on and off since 2011. Claimant's prior back issues had not resolved as argued by Claimant.

Further, the opinions of Dr. Scherr, Dr. Lindenbaum, Dr. Devin, and Dr. Cebrian are all found credible and persuasive. It is not surprising that Claimant's back began to hurt again after returning to work following a 1.5 month vacation. It had hurt at a rating of

8/10 just prior to her vacation. As noted by Dr. Harrington, in March of 2016 Claimant was able to get through a day of work by taking a pain pill in the morning, pushing her cart slowly, and avoiding certain movements. Claimant argues that the 2016 MRI shows a "new" L3 disc protrusion. However, the credible reports show that her symptoms do not entirely correlate with an L3 distribution and the protrusion is "new" compared to the 2013 MRI but not new compared to the 2014 MRI. The 2014 MRI shows the L3 protrusion with compression existed long before May 30, 2016. Dr. Cebrian, Dr. Devin, and the reports are also credible that the cervical spine complaints are degenerative and not the result of an acute injury when bumped in the back by a cleaning cart.

Although Claimant may have continued pain and changes in her lumbar spine requiring treatment and degenerative changes in her cervical spine requiring treatment, she has failed to establish that these are causally related to the May 30, 2016 incident. Claimant did not sustain an acute injury on that date. Claimant did not aggravate or accelerate her ongoing condition in either the lumbar spine or cervical spine on that date. Rather, as noted above by multiple providers, the mechanism of injury was minor and did not likely cause any acute injury. Claimant has failed to meet her burden to show by preponderant evidence that she sustained a compensable work related injury on May 30, 2016. Her claim is denied and dismissed.

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).). Again, the claimant bears the burden of proof of showing that medical benefits are causally related to his work-related injury or condition, by a preponderance of the evidence. *Ashburn v. La Plata School District 9R,* W.C. No. 3-062-779 (ICAO May 4, 2007); C.R.S. §8-43-201, *HLJ Management Group, Inc. v. Kim,* 804 P. 2d 250(Colo. App. 1990).; *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915, 918 (Colo. App. 1993).

Claimant has failed to establish that the November 18, 2016 MRI was reasonable, necessary, and causally related to her May 30, 2016 incident at work. On that date, Claimant did not sustain an acute injury nor did she aggravate or accelerate her underlying conditions to require treatment. Claimant has failed to show that the November 18, 2016 MRI was reasonable or necessary to cure and relieve her from the May 30, 2016 incident. Rather, it was much more likely needed to cure and relieve the effects of her underlying degenerative condition and/or her 2011 injury.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that she sustained a compensable work related injury on May 30, 2016.

2. Claimant has failed to establish by a preponderance of the evidence that the November 18, 2016 MRI was reasonable, necessary, and causally related to a May 30, 2016 work injury.

3. Any issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 13, 2019

/s/ Michelle E. Jones

_____

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

STATE OF COLORADO OFFICE OF ADMINISTRATIVE COURTS 1525 Sherman Street, 4th Floor, Denver, CO 80203	
In the Matter of the Workers' Compensation Claim of: **S** Claimant, vs. **H** Employer, AND **P,** Insurer, Respondents	▲ **COURT USE ONLY** ▲ **CASE NUMBER:** **WC 5-070-200-002**

FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

Hearing in this matter was held on March 26, 2019, before Margot W. Jones, Administrative Law Judge. The post hearing deposition of Paul A_____ dated April 19, 2019, was made part of the record. The parties' exhibits A through P and 1 through 18 were admitted into evidence. The record remained open to May 21, 2019, for submission of the parties' post hearing position statements. The ALJ entered a Summary Order on May 29, 2019 which was served on May 30, 2019. Claimant requested a full order on June 3, 2019.

Claimant was present and represented by _____, Esq. Respondents were represented by _____, Esq. This matter was digitally recorded in Courtroom 3 convening at 8:30 a.m. in Denver, Colorado.

In this order, S will be referred to as "Claimant," H, will be referred to as "Employer" and P will be referred to as "Insurer." The Insurer and Employer, collectively, will be referred to as "Respondents."

Also in this order, "ALJ" or "Judge" refers to the Administrative Law Judge, "C.R.S." refers to Colorado Revised Statutes (2018), "OACRP" refers to the Office of Administrative Courts Rules of Procedure, 1 CCR 104-1, "the Act" refers to the Workers' Compensation Act of Colorado, Section 8-40-101, et seq., C.R.S. and "WCRP" refers to Workers' Compensation Rules of Procedure, 7 CCR 1101-3.

Issues

1. Whether Claimant proved by a preponderance of the evidence that he sustained a compensable injury in the course and scope of his employment with Employer;

2. Whether Claimant proved by a preponderance of the evidence that he is entitled to an award of medical benefits that are reasonable, necessary and related to a workplace injury;

3. Whether Claimant proved by a preponderance of the evidence that he is entitled to an award of indemnity benefits;

4. What is Claimant's average weekly wage; and

5. Whether Respondents proved by a preponderance of the evidence that Claimant was responsible for the termination of his employment with Employer.

FINDINGS OF FACT

1. Claimant worked as a marijuana harvester and trimmer for Employer. He made $15.00 per hour, and worked 40 – 48 hours per week. Employer is a supplemental staffing agency for licensed marijuana facilities in Colorado. Claimant alleges that he sustained a head injury in the course and scope of his employment on February 19, 2018.

2. Claimant has a history of irritable bowel syndrome (IBS) that predates his alleged industrial injury. Claimant treated at Mercy Medical Group in Sacramento in 2014. He endorsed symptoms including insomnia, abdominal cramping, and pain. On August 12, 2014, Dr. Kamyar Farhangfar strongly recommended that Claimant stop using marijuana, as it could be contributing to his IBS symptoms.

3. After moving to Colorado, Claimant began treating with Clinica Family Health on October 27, 2016. On that date, he complained of an earache. Claimant stated that he had dizziness, ear pressure and popping, and hot flashes. Under the "Review of Symptoms" section, symptoms including vision changes, dizziness, headache, memory impairment, depression and hopelessness were endorsed. He was diagnosed with otalgia of the right ear, which may have been related to bruxism.

4. Claimant returned to Clinica Family Health on November 1, 2016, again noting that he had diminished hearing, vertigo, memory loss, headache and confusion. He stated that his balance was "a little off" sometimes. He complained of IBS-related symptoms on February 22, 2017.

5. Claimant presented at Clinica Family Health on October 11, 2017 with a cough. He complained that he felt disoriented, dizzy and that his brain was “misfiring.” He stated that he had been coughing so hard that he had strained his neck.

6. Claimant began treating for the alleged work injury in this matter with Dr. Felix Meza at Concentra on February 21, 2018. Claimant complained of headache, dizziness and memory loss. There were no endorsed neck symptoms. Dr. Meza diagnosed Claimant with a concussion with loss of consciousness of unspecified duration. Dr. Meza placed Claimant on restricted duty. On February 27, 2018, Claimant was diagnosed with a neck strain. On March 13, 2018, Claimant reported personality change but denied having seizures.

7. Claimant began physical therapy at Concentra on February 28, 2018. The therapist noted that Claimant was struck on the cranium “causing a whiplash like motion and onset of headache and tightness.” His pain was at a six to seven out of ten. By March 7, 2018, Claimant’s pain level was at a two out of ten.

8. Claimant returned to Clinica Family Health on April 3, 2018. Erin Atkinson, NP, recommended MRIs of the brain and cervical spine due to continued complaints. MRIs of the brain and cervical spine were taken on April 24, 2018 and were normal.

9. On May 7, 2018, Claimant complained to Ms. Atkinson that IBS was triggering his migraines.

10. Claimant began treating at Mental Health Partners on May 11, 2018. Claimant noted past trauma relating to witnessing domestic abuse. Endorsed symptoms included nightmares, psychological reactivity, somatic complaints, hypervigilance, rage, diminished interest, issues with attention and concentration, as well as mild paranoia. He noted that he has had these symptoms since childhood. Peter Lear diagnosed him with acute stress disorder, generalized anxiety disorder, ADHD and tobacco use.

11. At a visit at Clinica Family Health on May 21, 2018, Claimant stated that he was trying to find work in the marijuana industry but felt discriminated against due to mental illness. On June 7, 2018, Claimant began complaining of seizures. Ms. Atkinson noted that Claimant’s symptoms were not consistent with epileptic seizures. At this appointment, Claimant was diagnosed with PTSD, complaining of symptoms including anxious/fearful thoughts, depressed mood, difficulty concentrating, excessive worry and racing thoughts. Claimant noted that functioning was extremely difficult. On June 27, 2018, Ms. Atkinson remarked that Claimant’s PTSD was associated with headache. Claimant told Ms. Atkinson that he was having migraines due to overheating at work.

12. Claimant was transported by ambulance to Boulder Community Health on September 17, 2018 for alleged seizures. Claimant alleged that his IBS was

acting up in a Safeway Grocery Store, so he took some marijuana before going outside to wait for a bus. He felt lightheaded. He further alleged that Gabapentin had given him a stroke or aneurysm previously. Dr. Dale Wang's assessment was that Claimant's condition was multifactorial, "including pain from his IBS as well as marijuana medication." Claimant was hospitalized with similar complaints on October 29, 2018 after being exposed to clapping. No provider diagnosed him with a seizure.

13. On November 13, 2018, Claimant was evaluated by Dr. Matthew Kidd at Associated Neurologists. Claimant alleged that he suffered from seizure like spells which included total body paralysis, total body pain, passing out, dizziness and lightheadedness. Claimant oscillated between crying and hysterical laughter. Claimant thought he may have been experiencing one of his spells during the appointment, which Dr. Kidd did not assess as a seizure. He diagnosed Claimant with recurrent spells and bipolar disorder. He could not determine the nature of Claimant's spells. An EEG performed at UC Health on January 11, 2019 revealed no abnormalities or patterns suggestive of seizures.

14. Claimant acknowledged that he brought marijuana edibles to the place where he was employed in the marijuana industry, hereinafter referred to as _____ or Employer, but alleged that he had permission to do so. He testified that other employees of Employer used marijuana at work. Claimant testified that he received a "bo staff" from an individual named Donnie. Claimant's bo staff was brought to hearing. It is approximately a 7 foot long, carved wooden stick with ornately carved tip. Claimant testified that he used the staff to practice his "fire spinning techniques" on break or before work, and as a walking aid due to damaged cartilage in his knee.

15. Claimant testified that he worked three or four jobs after being terminated from his employment with Employer. Claimant attributed his inability to hold a job to his alleged work injury, stating that his disabilities affected his memory and mood. He alleged that following his workplace incident, he had to relearn how to live. Claimant testified that he had seizures at his jobs after being terminated by Employer. He worked for Gr_____ from April 29, 2018 to May 3, 2018, before being terminated. He claimed that he worked for T_____ from June 19, 2018 to July 28, 2018 before being terminated. Wage record from this Employer reflect that he worked there from at least June 9, 2018 through August of 2018. He then worked at C_____ in November of 2018.

16. Claimant testified concerning his employers prior to working for Employer. His testimony concerning his employers reflects that he had short tenures with numerous employers, typically ending with his termination.

17. Claimant testified that he suffers from IBS, ADHD and PTSD. Claimant testified concerning the kinds of symptoms that he experiences as a result of IBS. He stated that he gets cranky and irritable, and that his head "gets funky." Claimant

stated that following his alleged work injury, he experienced a seizure as a result of his IBS. He testified that a medication, Gabapentin, gave him a seizure as well. For this reason, Claimant testified that he treats his symptoms with marijuana on a daily basis. He testified that he uses the marijuana to treat his IBS, ADHD and PTSD.

18. Claimant testified that on the morning of February 19, 2018, he had an incident with the bo staff that he was using. Claimant testified that he showed up early at S_____ for the purpose of showing two other individuals his techniques with respect to the spinning of the staff. He testified that he struck himself in the head with the staff. He testified that the incident with the staff occurred approximately four hours prior to the alleged work injury.

19. Claimant testified that he worked the rest of his shift on February 19, 2018 and arrived at work to perform his duties on February 20, 2018.

20. Two of Claimant's co-worker testified credibly at hearing, Ms. Heather R_____ and Mr. Joshua B_____. Both of these co-workers testified that they were working close by when they heard a commotion in the area where Claimant claimed he was struck by falling polls. They testified credibly that Claimant did not complain of being struck or that he was hurt. Claimant did not appear to his co-workers to have been injured.

21. Mr. Paul A_____ credibly testified via post-hearing deposition that he is the owner and operator of Employer. He testified that he was not informed of any workplace injury by Claimant or anybody else on the date of the alleged work injury. Subsequently, Mr A_____ investigated Claimant's claim of injury and the allegation that Claimant brought outside product to a client's grow operation, which is prohibited, and could present a threat to the license status of his business and his clients' businesses. Mr. A_____ testified that he discussed the possibility of Claimant bringing marijuana product to work with other employees and later the same day Claimant approached Mr. A_____ alleging that he had been hit on the head by a metal pole. This was the first time that Mr. A_____ learned of any allegation of a workplace injury. Mr. A_____ provided Claimant with a designated provider list.

22. Video of the February 19, 2018 incident was entered into evidence. The video does not corroborate Claimant's claim of work related injury.

CONCLUSIONS OF LAW

General Legal Principles

1. The purpose of the Act is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the

necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a workers' compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is evidence that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline,* 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

Compensability

3. Pursuant to Section 8-41-301(1) (c), C.R.S., a disability is compensable if it is shown that it was "proximately caused by an injury ... arising out of and in the course of the employee's employment." See also, Section 8-41-301(1) (b), C.R.S. "It is not sufficient for the claimant simply to show that an incident or accident occurred. It is the claimant's initial burden to prove a compensable injury." *Asfaw v. King Soopers*, W.C. No. 5-006-280 (ICAO, February 10, 2017). An "accident" is defined under the Act as an "unforeseen event occurring without the will or design of the person whose mere act causes it; an unexpected, unusual or undesigned occurrence." Section 8-40-201(1), C.R.S. In contrast, an "injury" refers to the physical trauma caused by the accident. *City of Boulder v. Payne*, 426 P.2d 194, 196 (Colo. 1967). Consequently, a compensable injury is one which requires medical treatment or causes disability. Id.; *Romero v. Industrial Commission*, 632 P.2d 1052 (Colo. App. 1981); *Aragon v. CHIMR, et al.,* W.C. No. 4-543-782 (ICAO, Sept. 24, 2004). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." *Asfaw, supra*; Section 8-41-301, C.R.S.

4. In this case, Claimant failed to establish by a preponderance of the evidence that he suffers from a concussive condition caused by a February 19, 2018 work injury. The alleged work related incident in question occurred on video. While the view of Claimant's head is partially obscured, the falling poles are visible. A metal pole fell down to the ground. A wooden pole fell into Claimant's left hand. Its course does not appear to have been diverted or altered by any object, including any part of Claimant's body. The video evidence does not support the position that Claimant sustained a compensable injury. The video footage does not show Claimant flinch or engage in any other movement that would be consistent with a body blow causing injury or trauma.

Claimant's testimony concerning where he was struck with the pole was inconsistent. Furthermore, the immediate aftermath of the incident was witnessed. Two of Claimant's co-workers in the vicinity of the incident credibly testified that Claimant denied being struck in the head, and that he did not exhibit behavior consistent with being struck in the head or suffering any injury.

5. As Claimant failed to prove that he sustained a compensable injury, his request for medical and indemnity benefits is denied and dismissed. Respondents' issue of termination for cause is not addressed as Claimant did not prove a compensable injury.

.

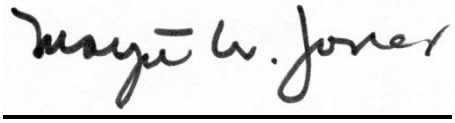
ORDER

It is therefore ordered that:

1. Claimant's claim for compensation is denied and dismissed.

2. Claimant's requests for medical and indemnity benefits are denied.

DATED: June 13, 2019



MARGOT W. JONES
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that she is entitled to post-MMI medical maintenance care, as a result of a work injury which occurred on January 9, 2017?

STIPULATIONS

I. Respondents have agreed to pay Claimant $5,000 in TTD/TPD benefits. No further indemnity benefits are owed.

II. The date of MMI shall be July 6, 2018 (as per the DIME report).

III. On January 27, 2017, Respondents filed a Notice of Contest in this matter. Shortly thereafter, the ATPs in this case refused to provide further treatment, stating that the claim had been denied. Claimant then sought medical treatment on her own, with treatment paid for by Medicaid. Consistent therewith, Medicaid now has a lien in this matter. The parties have stipulated that Respondents shall reimburse Medicaid for all treatment from the date of injury to the date of MMI for any treatment which was reasonable, necessary, and claim related. Respondents are currently working with Medicaid on this reimbursement issue, but have not completed the process as of the date of this Order.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant is employed as a merchandise stocker with Employer's location on Dillon Drive in Pueblo, Colorado. Claimant's job duties include stocking boxes on shelves, loading merchandise, walking, bending, and climbing ladders as part of the overnight shift. Claimant continues to work her job as a stocker in a full duty capacity following MMI.

2. Claimant sustained a compensable injury to her low back on January 9, 2017. Claimant was helping to stock boxes in the back room. She was bent over at the waist, when a box fell on her low back from above her. At her 12/14/2017 hearing on compensability, Claimant testified that the box weighed approximately ten pounds and fell from a height of approximately 7-8 feet from the ground. Claimant then testified that she felt the immediate onset of pain in her low back, but was able to finish her shift.

3. Claimant has a pre-existing history of low back pain dating to 2012. (Ex. A) On October 15, 2012, Claimant noted to her primary care physicians in a patient

questionnaire that she had been experiencing back pain for approximately two years, and had also been involved in a car accident in 2005. *Id.* Following conservative treatment with her chiropractor, Claimant discontinued further care, noting that the treatment modalities were "not helping her." *Id. at 5* Claimant also noted to her primary care physician that her left leg would 'give out' on her due to her ongoing low back pain. (Ex. B, p. 6)

4. On April 24, 2014, Claimant again presented to her primary care physicians, noting worsening back pain for the past couple of weeks. (Ex. B, p. 16) Claimant again noted low back pain directly over the lumbar spine, with *ongoing radiculopathy* in the left leg. *Id.* Claimant detailed a history in which her *left leg would go numb* and had falls resulting from the radiculopathy. *Id.* Claimant was referred for an MRI of the lumbar spine.

5. Claimant underwent an MRI of the lumbar spine on April 30, 2014. The MRI Impression notes the following:

> 1. L5-S1 left lateral disc protrusion which at least abuts and may partially compress the left L5 nerve, with additional mild left foraminal narrowing.
>
> 2. No significant lumbar spinal stenosis or additional neural foraminal narrowing. (Ex. C, p. 23).

6. Claimant returned for a follow-up visit with her PCP on May 6, 2014, and to discuss her MRI results. (Ex. B, p. 19). Claimant's PCP noted ongoing back pain that was "intermittent for many years" and recommended a trial of physical therapy, injections, and possible surgery based on the MRI results. *Id. at 19-21* Claimant was given a referral for physical therapy, and advised to contact her insurance company to establish an in-network provider. *Id. at 21.*

7. Throughout 2015 and 2016, Claimant sustained multiple work-related injuries to various body parts, and sought treatment with the authorized treating physicians for those claims. (Ex. E, pp. 53-58, Ex. J). Claimant's complaints were noted by several physicians to be out of proportion to the objective findings. *Id.* Claimant was noted to have myofascial pain complaints throughout parts of her body. *Id.*

8. According to the records review portion of an IME performed by Dr. Eric Ridings, MD, Claimant presented to Joel Cohen, PhD., for a psychological evaluation on January 13, 2016. (Ex. E, p. 56, Ex. J, p. 152). Dr. Cohen noted that Claimant has a

> "tendency, as in often the case with many of my clients, to assume that it is the escalating pain that is producing the emotional distress I see today, but as pointed out to her, it is equally likely that her frustration and distress with aspects of the work system and her interactions with management

may well be an active contributor to the myofascial elements of her pain complaints." (Id.)

9. On January 11, 2017, Claimant presented to Southern Colorado Clinic for an initial evaluation regarding the January 9, 2017 work injury. (Ex. D, p. 24) Claimant was evaluated by physicians' assistant Terry Schwartz. Claimant described her mechanism of injury regarding a box that fell from a height of 8 feet, but she was unable to indicate how much the box weighed. Claimant described ongoing low back pain that was stabbing in nature. PA Schwartz performed a physical examination, and was unable to identify a contusion, although Claimant reported subjective pain complaints and tenderness. *Id. at 29.*

10. Claimant attended a follow-up visit to PA Schwartz on January 18, 2017. Claimant indicated that she was having ongoing back pain after last night "while folding clothes" and that her back "really got hurting," and needing to sit down frequently. (Ex. D at 36). PA Schwartz noted that he was having difficulty connecting the alleged mechanism of injury to Claimant's ongoing pain complaints. *Id. at 36,37.*

11. On January 25, 2017, Claimant returned to PA Swartz regarding her low back pain. (Ex. D, p. 51). PA Schwartz noted that Claimant had a dramatic response to palpation of the lumbar spine, and reported complaints of "severe pain" throughout the L3-L5 region. *Id*.

12. On March 20, 2017, Claimant underwent an Independent Medical Examination ("IME") with Eric Ridings, M.D. at the request of Respondents. (Ex. E) Dr. Ridings performed a physical examination, and reviewed claimant's medical records. Dr. Ridings obtained information regarding the height from which the box allegedly fell. He also tried to ascertain the weight of the box as described by Claimant and Employer. Dr. Ridings concluded that the alleged mechanism of injury resulted in a contusion to Claimant's lumbar spine, assuming Claimant's statements regarding the incident were accurate. If the box fell from a shorter distance, or weighted significantly less, the mechanism of injury would not produce the need for medical treatment. Dr. Ridings noted that there was no objective evidence of a contusion or abrasions to Claimant's low back following this incident. Dr. Ridings noted a history of Claimant's psychological overlay, with no objective findings, and her history of her prior claims with other providers.

13. Following the IME with Dr. Ridings, Claimant underwent another MRI on 4/14/2017 for her lumbar spine. (Ex. F, p. 66) The MRI revealed the following Impression:

> An eccentric left disc osteophyte complex at L5-S1 moderately narrows the left neural foramen and likely abuts and displaces the exiting left L5 nerve. There is an additional small central disc protrusion with annular tearing at this level resulting in no significant spinal canal stenosis. *Id.*

14. Claimant continued to treat for her low back pain with her Primary Care Physician throughout the remainder of 2017. (Ex. G) On August 2, 2017 Claimant presented to her physical therapist ("PT"), Barry Brown, and noted that she had "gone to the doctor on Monday 7/31 and stated she kept pushing on my back and it has been hurting ever since." *Id. at 72.* On August 9, 2017, Claimant noted to PT Brown that she was feeling "ok" and that her back pain had subsided after walking for a period of time. *Id. at 78*.

15. Claimant underwent a second IME with Miguel Castrejon, M.D. at her own request. (Ex. 9, p. 265). Dr. Castrejon noted a prior medical history in which Claimant noted a bulging disc and prior back pain that she believed was related to lifting boxes at work. *Id. at 265.* Claimant reported ongoing back pain just above her left buttock and extending down in to her left leg and into her left foot and toe. *Id. at 267.* Dr. Castrejon noted that "these subjective complaints were not present prior to the event of January 9, 2017 and deserve additional testing and treatment." *Id. at 270.*

16. In reviewing this report, the ALJ notes that in his IME report, Dr. Castrejon only received medical reports from the date of injury forward. He did not review any of Claimant's medical records regarding her back issues dating to 2012, her MRI from 2104, or her psychological history. He even notes that "The patient's past medical history is negative for any other prior injuries to the above-mentioned areas [such 'areas' being left lumbar region down to left toe] (Ex. 9, p. 267). Despite this lack of records, Dr. Castrejon concluded that the alleged mechanism of injury resulted in a straining type injury to Claimant's low back, and that Claimant was not at MMI. He opined that further treatment is needed, including injections, to help alleviate Claimant's low back pain. *Id.*

17. A Hearing took place in this matter on the issue of compensability on December 14, 2017. (Ex. 2, pp. 31-41). ALJ Spencer issued his Order on February 22, 2018, finding the claim compensable, since a compensable claim had been met. ALJ Spencer concluded that:

> As found, Claimant proved she suffered a compensable injury on January 9, 2017. The persuasive evidence demonstrates a box of product fell from a shelf directly onto Claimant's back while she was stooped over. The shelf was 7'4" high, and the box that fell was most likely stacked on top of at least one other box. Even if the forces involved were relatively minor, they were sufficient to evoke symptoms in Claimant's low back. When the pain persisted, Claimant reasonably requested medical treatment and Employer obliged. Her clinical presentation at the initial visit was consistent with an acute episode of low back pain. Although PA-C Schwartz saw no obvious contusion, he noted she was "quite tender" where the box struck her and concluded the incident likely "set off' back spasms. PA-C Schwartz diagnosed "acute" low back pain and reasonably prescribed conservative measures including diagnostic imaging, medication and physical therapy. (Ex. 2, p. 39).

> Although Claimant had a history of low back problems with episodes of similar symptoms in 2012 and 2014, there is no persuasive evidence that she was pursuing or needed any treatment for those issues immediately before the incident in January 2017. The last documented treatment for the preexisting condition was in June 2014, nearly two and one-half years before the work accident. The ALJ finds it unlikely that Claimant was having significant symptoms during that interval, particularly since she has not otherwise been reticent to pursue treatment when she feels it warranted. Furthermore, Claimant would not likely have been able to maintain her relatively physically demanding job had her back been symptomatic. The most likely scenario is Claimant suffered a reoccurrence of back pain as a direct and proximate result of the incident on January 9, 2017. *Id.*

18. ALJ Spencer noted that his issues were limited to compensability, and that he did not have jurisdiction to rule on the issue of MMI.

> Respondents have raised legitimate questions regarding the full extent of Claimant's injury and whether her ongoing need for treatment is related to the compensable injury. This order does not address those issues….*Id at 40.*

19. Following that hearing, Respondents sent correspondence to Dr. Terrence Lakin, DO, inquiring about MMI. (Ex. H) Dr. Lakin opined that Claimant had reached MMI on January 25, 2017. *Id. at 95.* Dr. Lakin further noted in a separate narrative that Claimant may have obtained minor soft tissue injuries as a lumbar strain with this claim. *Id. at 101*. However, Dr. Lakin opined that this injury would have resolved back to baseline within weeks with conservative care.

20. In response to Dr. Lakin's opinions, Respondents filed a Final Admission of Liability ("FAL") on March 21, 2018. (Ex. 2, p. 42). Claimant timely objected to the FAL and requested a Division IME.

21 In May 2018, Claimant presented to her primary care physicians for her ongoing low back pain. (Ex. 6) Claimant noted ongoing severe low back pain that was not improving. (Id. at pg. 125) Claimant noted that her pain was a 5 out of 10 at best and 7 out of 10 at worst. *Id.*

22. On May 29, 2018, Claimant noted to PT Barry Brown that she had been receiving trigger point injections for her low back pain. (Ex. 6, p. 163) However, she still had moderate pain levels and a burning sensation in her left low back that would radiate down her left foot despite the injections.

23. On July 6, 2018, Anjmun Sharma, M.D. performed a Division IME. Dr. Sharma agreed that Claimant was at MMI, but opined that MMI had been reached on

July 6, 2018. He assigned this date on the basis that this was when the Division IME took place. (Ex. I, p. 125) Dr. Sharma opined that Claimant had a mild lumbar strain with contusion, and that she could benefit from trigger point injections. *Id. at 124-126.* Dr. Sharma assigned a Table 53 impairment rating of 7%, and range of motion deficit of 7%, consistent with the *AMA Guides Third Edition* revised.

24. Regarding maintenance care, Dr. Sharma felt that Claimant should have a series of three trigger point injections spaced, every two months until six months' time had elapsed. He did not indicate that any other maintenance care was needed. The ALJ notes however, that Dr. Sharma was not in possession of Claimant's medical records from the Institute for Total Rehabilitation from May of 2018, which indicate that Claimant had already received several trigger point injections, occurring just prior to this Division IME appointment with Dr. Sharma.

25. In response to the Division IME findings, Respondents filed a Final Admission of Liability. (Ex.2, p. 43) They admitted to an MMI date of 1/25/17 (proposed by Dr. Lakin), as opposed to the DIME's MMI date of 7/6/18. Claimant objected and endorsed the issue of maintenance care benefits and temporary disability benefits.

26. On March 4, 2019, Carlos Cebrian, M.D. performed an IME at the request of Respondents. (Ex. J). Dr. Cebrian performed a physical examination, and noted that Claimant was tender to extremely light touch, and recoiled away from her when he tried to lightly palpate her. *Id at 179.* Dr. Cebrian reviewed the medical records, and noted that Claimant's diagnosis was a lumbar strain/contusion. He opined that Claimant had a temporary aggravation of her underlying degenerative condition which had resolved. *Id at 182.*

27. Dr. Cebrian opined that Claimant did not need any additional medical care, as it related to her claim. *Id at 182.* He noted that Claimant had several different modalities of conservative care that were not beneficial to her. He noted that Claimant had physical therapy, trigger point injections, epidural steroid injections, and medications, all without significant benefit. Dr. Cebrian opined that Claimant's current complaints were due to the natural progression of her underlying degenerative disc disease and prior disc bulge pathology. *Id. at 184.*

28. Claimant testified at hearing. Claimant described being in the backroom stocking boxes in a shelving unit which had three levels. She recounted how she was bent over at the waist, organizing boxes, when she felt a box fall on her low back from above her. She testified that she jolted forward, and felt immediate pain in her low back.

29. Claimant testified as to her physical condition as is existed prior to the injury in this case. Claimant testified at as of January 9, 2017, she had not sought medical care for her low back in approximately two and a half years, that she was not having any significant symptoms. She was working unrestricted fully duty, in a physically demanding job. Claimant testified that at no time since January 9, 2017 has

her low back condition returned to this baseline. Claimant testified that she has pain every day, that she has constantly been in medical treatment, and that she is severely limited in her ability to perform her job and her activities of daily living.

30. Dr. Cebrian testified at hearing in this matter. Dr. Cebrian detailed the mechanism of injury and noted the lack of objective findings initially from PA-C Schwarz. He also noted that Claimant has a pre-existing history of low back pain, with positive findings of a bulging disc dating from 2014. Claimant had treated for ongoing low back pain as early as 2012. Dr. Cebrian testified that Claimant described intermittent low back pain in the years prior.

31. Dr. Cebrian reviewed the MRI from April of 2017, and noted that the MRI findings from April 2014 and April 2017 were unchanged. Dr. Cebrian noted that the two MRIs showed evidence of a chronic degenerative condition, without evidence of acute trauma. He opined that the findings on the MRI were not aggravated, accelerated, or exacerbated by the mechanism of injury described by the claimant. Dr. Cebrian agreed with Dr. Lakin that Claimant had a mild strain and contusion to her lumbar spine as a result of the injury, but that ongoing maintenance care was not related to the claim. Dr. Cebrian explained that Claimant's need for ongoing care was due to the natural progression of her underling condition, and not the original injury.

32. Dr. Cebrian agreed with Dr. Lakin and Dr. Sharma that the nature of the injury, as well as its consequences, had resolved. He differed with Dr. Sharma regarding maintenance care and Claimant's need for trigger point injections, noting that Claimant had the injections in May of 2018 without benefit. Dr. Cebrian noted that Dr. Sharma was not in possession of those trigger point records during his examination.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40- 101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of Claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

B. Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence.

C. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *Robinson v. Youth Track*, 4-649-298 (ICAO May 15, 2007).

D. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Grover Medical Benefits

E. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The need for medical treatment may extend beyond the point of maximum medical improvement where Claimant requires periodic maintenance care to prevent further deterioration of his physical condition. The need for maintenance care is based on whether any additional treatment is reasonable and necessary to maintain the Claimant's condition at MMI. The treatment must be casually related to the original injury. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that Claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1999); *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an order for future treatment if supported by substantial evidence of the need for such treatment. *Grover v. Industrial Commission*, *supra.*

F. Claimant has a pre-existing history of ongoing low back pain that comes and goes. Claimant first noted ongoing back pain to her PCP in 2012. At that time, Claimant noted that she had been involved in a car accident in 2005, and had ongoing low back pain for two years before she first presented for treatment. Claimant's back pain was sufficiently severe that she was having ongoing symptoms and pain down her left leg and into her left foot. These same subjective complaints were described to the physicians following her January 9, 2017 injury.

G. Claimant specifically described the same type of pain and radiculopathy to her physicians as a result of possible nerve impingement confirmed by separate MRI findings in 2014 and 2017. Dr. Cebrian opined that the findings are unchanged, and are the result of ongoing chronic degenerative back pain. The ALJ finds persuasive Dr. Cebrian's testimony and opinions regarding the MRIs, and the objective findings three years apart.

H. The ALJ also finds persuasive the opinions from Dr. Lakin. Claimant's physicians diagnosed her with a lumbar strain and contusion. Dr. Sharma, the Division IME physician, agreed with these conclusions further noting a "mild" injury. PA Schwartz noted early in this claim that he had difficulty connecting the mechanism of injury to the subjective complaints of Claimant. He also noted the lack of objective findings.

I. Further, while Claimant presents as sincere, there is an abundance of evidence in the record to suggest that there is a psychological component to this case, highly suggestive of symptom magnification. The ALJ also notes that Dr. Castrejon's IME opinions are less persuasive than Dr. Cebrian's in this instance. Dr. Castrejon not only did not review any of Claimant's medical records pre-dating her injury (perhaps most significantly, her 2014 MRI); this fact appeared not to concern him.

J. The ALJ further notes that Claimant has already obtained the trigger point injections noted by Dr. Sharma as the only medical maintenance care needed. Claimant testified that the injections took place prior to the Division IME. Medical records from Claimant's PCPs confirm that the injections took place in May of 2018. The ALJ finds no evidence that Dr. Sharma was in possession of the Claimant's medical records from May, 2018, or he was aware that Claimant had already obtained the trigger point injections.

K. The ALJ finds it more probable that Claimant's ongoing need for medical treatment is related to the natural progression of her degenerative and pre-existing condition, and not due to the temporary aggravation which occurred as a result of her minor, albeit compensable, work injury. Her request for post-MMI medical treatment, therefore, is denied.

ORDER

It is therefore Ordered that:

1. Claimant's claim for post-MMI medical maintenance benefits ("Grover Medical Benefits") is denied and dismissed.

2. Respondents will pay Claimant $5000 as settlement in full for her TTD/TPD indemnity benefits.

3. As noted in the Stipulation, Respondents shall reimburse Medicaid for all treatment from the date of injury, to the date of MMI, for any treatment which was reasonable, necessary, and claim related.

4. Claimant's date of MMI is July 6, 2018.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. NO. 5-005-672-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

,

Employer,

and

SELF-INSURED
Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on May 29, 2019, in Denver, Colorado. The hearing was digitally recorded (reference: 5/29/19, Courtroom 1, beginning at 8:30 AM, and ending at 10:32 AM).

Claimant's Exhibit 1-8, were admitted into evidence, without objection. Respondents' Exhibits A- CCC were admitted into evidence, without objection.

At the conclusion. of the hearing, the ALJ established a post-hearing briefing schedule. The Claimant's opening brief was filed, electronically, on May 31, 2019. The Respondent's answer brief was filed on June 4, 2019. Claimant waived the prerogative of filing a reply brief. Consequently, the matter was submitted for decision on June 4, 2019.

ISSUES

The issues to be determined by this decision concern: (1) whether Respondent established that the Claimant waived the right to seek medical benefits for treatment to

the L5-S1 disc through an approved Stipulation; and,. whether the right L5-S1 RF Neurotomy recommended by authorized treating provider (ATP) Rick D. Zimmerman, D.O., to address the Claimant's increasing low back pain is causally related to an aggravation/acceleration of the Claimants admitted low back injury of December 14, 2015, and is it reasonably necessary to cure and relieve the proximate effects of the compensable injury.

The Respondent bears the burden of the proof, by a preponderance of the evidence on the alleged waiver by the Claimant of the right to seek medical benefits for treatment to L5-S1 disc because of an approved Stipulation. The Claimant has the burden of proof, by a preponderance of the evidence on the alleged causal relationship between the Claimant's increasing low back pain and the admitted aggravation/acceleration of the admitted low back injury of December 14, 2015.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Procedural History Findings

1. Respondent filed a Final Admission of Liability (FAL), dated April 13, 2017 ultimately admitting for a date of maximum medical improvement (MMI) of March 13, 2017; permanent medical impairment (PPD) of 18% whole person for the Claimant's low back injury of December 14, 2015; and post-MMI medical maintenance benefits.

2. Attached to the FAL, the parties entered into a Stipulation ("Parties Joint Stipulation"), dated June 10, 2016. The Stipulation stated, in relevant part, "The parties agree that the compensable injury involved in this claim is limited to the herniated disc at L4-L5" (Claimant's Exhibit 1, BS 4). The Claimant agreed at hearing that he read and understood the Stipulation. As determined herein below, the Stipulation failed to waive the Claimant's right to further treatment in the area of L4-L5.

3. On December 4, 2018, Respondent, by letter, informed authorized treating physician (ATP) Rick Zimmerman, D.O. that the requested L4-S1 RF neurotomy was denied, as the Claimant was not entitled to the proposed treatment pursuant to statute or settlement (Parties Joint Stipulation). The matter was heard on May 29, 2019.

Preliminary Findings

4. On December 14, 2015, the Claimant, the Principal of an elementary school, injured his lower back (which was an aggravation of a pre-existing back injury) while removing a disruptive student to a safe room with another teacher.

5. The Claimant's medical records show a persistent pre-existing history of lower back problems with lower extremity radiculopathy. Medical records support that he experienced pain on both the left and right sides.

6. On January 22, 2016, the Claimant received an MRI (magnetic resonance imaging) of his lumbar spine to evaluate "left sided sciatica." The MRI showed a left sided disc protrusion at L4-L5.

7. On January 27, 2016, the Claimant **was diagnosed with left sided radiculopathy stemming from the L4-L5 disc herniation. Bryan Reiss, M.D. recommended a L4-L5 microdiscectomy.**

Independent Medical Exam (IME) by Carlos Cebrian, M.D.

8. On April 14, 2016, Dr. Cebrian, at the request of the Respondent, performed an IME. Dr. Cebrian was of the opinion that the disc herniation was a new finding that was not causally related to the December 14, 2015 industrial event.

9. Dr. Cebrian also found that a microdiscectomy at L4-L5 should occur because a causal connection existed between the need for the surgery and the industrial event.

10. On June 7, 2016, the Claimant received the L4-L5 microdiscectomy by Bryan Reiss, M.D. The Claimant experienced relief of left sided symptoms, post-surgery.

11. On March 13, 2017, the Claimant was placed at MMI by ATP Tomm VanderHorst, M.D. Dr. VanderHorst documented that although the Claimant had prior L5-S1 discectomy and subsequent interbody fusion, he had "no previously documented range of motion and, as such, there was no designated apportionment" (Claimant's Exhibit 10, bate stamp (BS) 52).

12. On June 28, 2017, ATP VanderHorst performed the Claimant's post MMI maintenance evaluation. ATP Dr. VanderHorst placed the Claimant back on Gabapentin to treat the Claimant's left calf pain.

The Motor Vehicle Accident (MVA)

13. On the advice of his automobile insurance company. the Claimant saw his private physician at Kaiser, for back pain concerns following a motor vehicle accident (MVA)-- on November 20, 2017.

14. The Claimant's medical records from the November 20, 2017 visit show no acute injury to the low back and the accident required no new care to the low back.

15. On March 27, 2018, the Claimant returned to his private physician at Kaiser, complaining of right sided low back pain. He was referred for PT (physical therapy) and a neurosurgery evaluation.

16. On May 21, 2018, the Claimant reported to his private physician at Kaiser, that his back pain had worsen and was now present in his right hip.

17. On June 11, 2018, the Claimant saw ATP Dr. VanderHorst, reporting 5 to 6 months increasing pain and stiffness, specifically in the morning. The Claimant also stated that for the last 2.5 months, symptoms had become right sided.

18. At June 11 visit, ATP Dr. VanderHorst was of the opinion: "I believe his current symptoms continue to be primarily at the L4-L5 level, the level of his work related injury and thus compatible with his injury of 12/15/15." ATP VanderHorst referred the Claimant for possible epidural injections. Claimant's Exhibit 10, BS 60).

19. The ALJ draws a plausible inference that ATP Dr. VanderHorst was considering an aggravation/acceleration of the Claimant's low back condition, as work-related, based on his causality statement herein above illustrated.

20. On June 25, 2018, the Claimant saw ATP Dr. Zimmerman for a discussion on the proposed injections. ATP Dr. Zimmerman noted, "… As part of medical maintenance for the next five years, he (Claimant) is allowed reevaluation, chiropractic, and epidural steroid injections or other procedures as needed." Claimant's Exhibit 7, BS 128-129).

21. ATP Dr. Zimmerman also noted, "Diagnostic medial branch blocks are recommended at the bilateral L4-L5 levels. This will then be staged at the right sacroiliac joint for diagnostic purposes of the facet joints and potentially diagnostic and therapeutic relief or SI joint related symptoms." Claimant's Exhibit 7, BS 128-129).

22. On July 3, 2018, the Claimant underwent bilateral L4-L5 medial branch blocks provided by ATP Dr. Zimmerman. The Claimant reported a positive result, having total pain relief for 20 hours.

23. On August 1, 2018 ATP Dr. VanderHorst noted at the Claimant's follow-up that, after the first 16-20 hours, he felt total pain relief. The pain then returned and is now a 7/10. ATP Dr. VanderHorst then diagnosed the Claimant as having right sacroiliac dysfunction and suggested the rhizotomy procedure.

24. On August 6, 2018, the Claimant underwent repeat/confirmatory bilateral

L4-L5 medial branch blocks at the facet joints by ATP Dr. Zimmerman. The Claimant reported significant pain relief for 36 hours. ATP Dr. Zimmerman recommended the Claimant for radiofrequency (RF) neurotomy at the same location.

25. On September 5, 2018, the Claimant underwent a bilateral L4-L5 RF neurotomy performed by ATP Dr. Zimmerman. The Claimant reported relief in 3 of 4 spots.

26. On September 10, 2018 ,ATP Dr. VanderHorst reported pain relief in 3 of 4 locations after the L4-L5 (RF) neurotomy.

27. On October 15, 2018, ATP Dr. Zimmerman made note of the same pain issues as stated by ATP Dr. VanderHorst and the Claimant. ATP Dr. Zimmerman indicated that a L5-S1 medial branch block for final diagnostic purposes should be scheduled.

28. On October 24, 2018 and November 14, 2018, the Claimant underwent medial branch blocks at L5-S1 by ATP Dr. Zimmerman. The Claimant had diagnostic responses. ATP Dr. Zimmerman recommended a right sided L5-S1 RF neurotomy.

29. On April 30, 2019, ATP Dr. VanderHorst stated the following opinion: "I believe it is reasonable to have him [Claimant] reassessed by Dr. Reiss to further clarify his symptomatic level. His symptoms are most compatible with an S1 radiculopathy though his MRI shows only postsurgical changes at L5-S1 and some persistent disc changes at L4-L5" (Claimant's Submission Exhibit 5, BS 71).

Respondents' Independent Medical Examiner (IME) Carlos Cebrian, M.D.

30. On April 14, 2016, Dr. Cebrian, at the request of the Respondent, performed an IME.

31. In a report dated May 8, 2019, Dr. Cebrian issued a report based on a records review rather than a physical examination of the Claimant.

32. Dr. Cebrian ultimately stated the opinion that the L5-S1 neurotomy was not causally related to the December 14, 2015 industrial event, disagreeing with other doctors and the Claimant. Dr. Cebrian stated that it was more likely causally related to pre-existing facet surgery and that no further treatment should be provided to the L5-S1 level under this claim. he ALJ finds that Dr. Cebrian's opinion in this regard is speculative, inadequately founded and contrary to the weight of the evidence.

33. Dr. Cebrian also testified about the Claimant's November, 2017 motor vehicle accident (MVA) speculating that MVA's can cause or aggravate facet pathology. He stated he believed that the MVA is an intervening cause of the need for an L5-S1 procedure. The ALJ finds this "opinion'" speculative and contrary to the actual facts

concerning the MVA. The ALJ finds that this speculation significantly undermines Dr. Cebrian's opinions.

34. Dr. Cebrian conceded, however, on cross-examination that different physicians could have different opinions, that there were nerves in the spine that branched out including anterior, posterior, inferior, and superior. Under the circumstances, the ALJ infers and finds that the other physicians in this case have opinions different than Dr. Cebrian and their opinions are more credible and persuasive.

The Claimant

35. Before the admitted industrial injury, the Claimant only had episodes of back pain, nothing constant. The Claimant also credibly testified that since the industrial injury he has had constant back pain. The pain averaged 2 out of 3 on a scale of 1 to 10.

36. The Claimant additionally and credibly testified about the MVA in November 2017, where the he stated that he rear-ended another vehicle and was ticketed. He saw his private physician at Kaiser, and was informed, consistent with the medical reports, that he had not suffered an acute low back injury in the MVA and that no further care was required for the accident.

37. The Claimant testified in detail about the procedures performed by ATP Dr. Zimmerman, including both injections and RF neurotomy which gave the Claimant relief in 3 of 4 areas in his back.

38. On cross examination, the Claimant agreed that that he did not have right leg pain and right sided low back pain again until around March, 2018 and that he was not having any left sided pain during the spring of 2018.

39. The Claimant believes the ALJ can draw a plausible inference and find that the profession and aggravation/acceleration of his low back condition provides sufficient circumstantial evidence to prove that the proposed L5-S1 RF neurotomy is causally connected to the admitted December 14, 2015 industrial injury.

Ultimate Findings

40. The ALJ finds the Claimant's testimony to be credible and supported by the weight of persuasive medical evidence. For the reasons herein above stated, the ALJ finds the opinions of ATPs VanderHorst and Zimmerman, as well as the other treating and consulting medical providers credible and persuasive as supported by the

totality of the medical evidence in the record. Additionally, the ALJ finds Respondent's IME Dr. Cebrian's opinion lacking in credibility and persuasiveness.

41. Between conflicting medical opinions, the ALJ made a rational choice, based on substantial evidence, including circumstantial evidence created by the Claimant's lay testimony, to accept the opinions of the treating doctors and the plausible inferences derived from the Claimant's testimony and to reject Dr. Cebrian's ultimate IME opinion on the causal relatedness of the L5-S1 injection to the admitted industrial injury.

42. The Claimant's "signing of the Parties Joint Stipulation" did not factually waive his right to seek medical benefits for treatment to the L5-S1 level. Respondent's strained interpretation of the Stipulation would defeat the underlying purposes of the Workers' Compensation Act, would be against public policy, and it would be reminiscent of the agreement between Shylock and Antonio in the Merchant of Venice.

43. The Claimant's RF neurotomy recommended by ATP Zimmerman at L5-S1 is reasonably necessary due to an aggravation/acceleration of the Claimant's low back injury which is causally related to the Claimant's admitted industrial injury of December 12, 2015.

44. The Claimant has proven his designated issues by a preponderance of the evidence.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply

to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995).). Moreover, the ALJ, as the fact finder, is allowed to use reason and common sense in drawing inferences from other facts that have been proved. *Venetucci v. City of Colorado Springs*, 99 Colo. 389, 63 P.2d 462 (1936); *Independence Coffee & Spice Co. v. Kalkman*, 61 Colo. 98, 156 P. 135 (1916). *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). As found, the Claimant's testimony was credible and supported by the weight of the persuasive medical evidence. Additionally, the opinions of ATPs VanderHorst and Zimmerman regarding the Claimant's L5-S1 treatment needs being causally related to the December 14, 2015 industrial injury were highly credible and supported by the totality of medical evidence in the record. On the other hand, the opinion of Respondent's IME Dr. Cebrian lacked underlying persuasive explanations and overall credibility.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** that would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting

medical opinions, the ALJ made a rational choice, based on substantial evidence, including circumstantial evidence from the Claimant's lay testimony, to accept the opinions of ATPs VanderHorst and Zimmerman, and to reject the opinions of Respondent's IME Dr. Cebrian and any other contrary opinions.

Effects of the Claimant's Lay Testimony

c. Compensation can be awarded where there is competent evidence other than expert opinion. *Martin Marietta Corp. v. Faulk*, 158 Colo. 441, 407 P.2d 348 (1965). Such competent evidence includes lay testimony. *See Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Colorado Fuel & Iron Corp. v. Alitto*, 130 Colo. 130, 273 P.2d 725 (1954). *Also see Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997). As found, the Claimant's lay testimony alone created credible circumstantial evidence, backed by the opinions of ATPs VanderHorst and Zimmerman that the recommended RF procedure at L5-S1 is attributable to an aggravation/acceleration of a preexisting low back condition, which is causally connected to the admitted December 14, 2015 admitted industrial injury.

Medical/Causal Relatedness/Reasonable Necessity of Medical Treatment

d. The employee must prove a causal relationship between the injury and the medical treatment for which the worker is seeking benefits. *Snyder v. Indus. Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. Ct. App. 1997). An employer must also provide an injured employee with reasonably necessary medical treatments to "cure and relieve the employee from the effect of the injury." § 842-101(1) (a), C.R.S. Treatments for a condition not caused by employment are not compensable. *Owens v. Indus. Claim Appeals Office*, 49 P.3d 1187, 1189 (Colo. Ct. App. 2002). An industrial accident is the proximate cause of a claimant's disability if it is the necessary precondition or trigger of the need for medical treatment. *Subsequent Injury Fund v. State Compensation Insurance Authority,* 768 P.2d 751 (Colo. App. 1988). In order to prove that an industrial injury was the proximate cause of the need for medical treatment, an injured worker must prove a causal nexus between the need for treatment and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). It is for the ALJ, as the fact-finder, to determine whether a need for medical treatment is caused by the industrial injury, or some other intervening injury. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985). Respondents are liable for the "direct and natural consequences" of a work-related injury, including consequential injuries caused by the original compensable injury. *See Travelers Ins. Co. v. Savio*, 806 P.2d 1258 (Colo. 1985). The chain of causation, however, can be broken by the occurrence of an independent intervening injury. *See* 1 A. *Larson, Workers' Compensation Law,* section 13.00 (1997). As found, the Claimant has established the causal nexus (the L5-S1 RF procedure) to the admitted December 14, 2015 industrial injury. Further, ATP Zimmerman's

recommended RF neurotomy at L5-S1 is reasonably necessary to cure and relieve the effects of the December 14, 2015 admitted industrial injury.

Intervening Cause

e. An intervening event which severs the causal connection between the injury and a subsequent injury and causes subsequent disability is an "efficient, intervening cause," which cuts off entitlement to benefits. *Schlage Locik v. Lahr,* 870 P.2d 615 (Colo. App. 1993). Where an employee had returned to work after a compensable injury and sustained a subsequent injury to the same body part and there was no proof that the previous injury contributed to the disability after the subsequent injury, the subsequent injury constituted "an efficient intervening injury." *Post Printing & Publishing Co. v. Erickson,* 94 Colo. 382, 30 P.2d 327 (1934). As found, Respondent has not established that the Claimant's November 2017 MVA was an effective, efficient intervening cause. Only the discredited opinion of Respondent's IME would tend to support this proposition, however, as found, the opinion was based on speculation.

Pre-Existing Condition

f. A compensable injury is one that arises out of and in the course of employment. Section 8-41-301(1) (b), C.R.S. The "arising out of" test is one of causation. If an industrial injury aggravates or accelerates a preexisting condition, the resulting disability and need for treatment is a compensable consequence of the industrial injury. Thus, a claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). An injured worker has a compensable new injury **if the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought.** § 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). An injury resulting from the concurrence of a preexisting condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, *supra*. *Duncan v. Indus. Claims App. Office*, 107 P.3d 999 (Colo. App. 2004). Even where the direct cause of an accident is the employee's preexisting disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989). *Also see* § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). As found, the Claimant's back surgery due to the admitted December 14, 2015 injury aggravated and accelerated his low back pain to the point where ATP Zimmerman recommended a RF neurology at L5-S1.

Maintenance Medical Care/Treatment of Related Conditions to Treat the Effects of the Admitted Injury

g. An employee is entitled to continuing medical benefits after MMI if reasonably necessary to relieve the employee from the effects of an industrial injury. *See Grover v. Indus. Comm'n of Colorado*, 759 P.2d 705 (Colo. 1988). The record must contain substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve a claimant from the effects of an injury or to prevent further deterioration of his condition. *Stollmeyer v. Indus. Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995); *Grover*, 759 P.2d 705. Such evidence may take the form of a prescription or recommendation for a course of medical treatment necessary to relieve a claimant from the effects of the injury or to prevent further deterioration. *Stollmeyer*, 916 P.2d 609. Services that are "medical in nature" include home health services in the nature of "attendant care," if reasonable needed to cure or relieve the effects of the industrial injury. *Atencio v. Quality Care, Inc.*, 791 P.2d 7 (Colo. Ct. App. 1990). As found, the recommended RF neurotomy procedure at L5-S1 is reasonably necessary and causally related to the December 14, 2015 admitted industrial injury. Further, the recommended procedure targets a preexisting low back condition, the procedure is reasonably necessary to address the Claimant's back pain which was proximately caused by the admitted December 14, 2015 industrial injury.

Waiver of Right to Seek Treatment beyond Stipulated Injury

h. Waiver constitutes an intentional relinquishment of a known right. Waiver may be explicit, or it may be implied where a party engages "in conduct which manifests an intent to relinquish the right or privilege or acts inconsistently with its assertion." *Johnson v. Industrial Commission*, 761 P.2d 1140, 1147 (Colo. 1988). A waiver must be made with full knowledge of the relevant facts, and the conduct should be free from ambiguity and clearly manifest the intention not to assert the right. *Id*.; *Department of Health v. Donahue*, 690 P.2d 243 (Colo. 1984). The question as to whether a party waived a right is one of fact for determination by the ALJ. *See Johnson v. Industrial Commission, supra.* As found, the Claimant's signing of the Parties Joint Stipulation does not constitute a waiver of his right to seek medical treatment beyond the stipulated injury (in this case the stipulation was for an L4-L5 aggravation/acceleration). Further, the Claimant has shown by the preponderance of the evidence that the RF neurotomy is reasonably necessary to "cure and relieve" him from the effect of the admitted industrial injury.

Burden of Proof

i. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to reopening and additional benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985);

Faulkner v. Indus. Claim Appeals Office, 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). Also, the burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant had proven, by the preponderance of the evidence that the right L5-S1 RF neurotomy recommended by ATP Zimmerman is causally related to the Claimant's aggravation/acceleration of the admitted industrial injury and is reasonably necessary to cure and relieve the effects of that injury. Respondents failed to prove, by the preponderance of the evidence that Claimant, by signing the Parties Joint Stipulation, limited the injury and treatment area to the L4-L5 level of the low back.

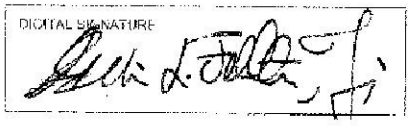
ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondent shall pay the costs of the treatment recommended by ATP Rick Zimmerman, ,D.O., subject to the Division of Workers Compensation Medical Fee Schedule.

B. Any and all issues not determined herein are reserved for future decision.

DATED this 14th day of June 2019.



EDWIN L. FELTER, JR.
Administrative Law Judge

ISSUES

I. Whether Claimant proved by a preponderance of the evidence she suffered a compensable occupational disease with a date of onset of November 16, 2016.

II. If Claimant proved she suffered a compensable occupational disease, whether Claimant has proven by a preponderance of the evidence that she is entitled to temporary partial disability (TPD) and temporary total disability (TTD) from November 16, 2016 and ongoing.

III. If Claimant proved she suffered a compensable occupational disease, determination of Claimant's average weekly wage (AWW).

IV. If Claimant proved she suffered a compensable occupational disease and entitlement to temporary indemnity benefits, whether Claimant was responsible for termination of employment.

Claimant endorsed the issue of disfigurement on her Application for Hearing. As Claimant appeared for the hearing by telephone, the issue of disfigurement was withdrawn, without prejudice.

FINDINGS OF FACT

1. Claimant is a 52-year-old woman with a prior history of cervical pain and radiculopathy. Claimant sustained a cervical injury in 2004 and underwent an anterior cervical discectomy and fusion (ACDF).

2. Claimant alleges she suffered cumulative trauma injuries to her neck and right upper extremity as a result of the work she performed for Employer. Claimant alleges a date of onset of November 16, 2016. Claimant worked for Employer, a grocery store chain, in different capacities at various locations for approximately nine years. At the time of the alleged date of onset, Claimant had been working at one particular store for approximately 1.5 years as an all-purpose clerk, performing customer service, desk operator and cashier duties. Claimant began working at this particular store in approximately June 2015, and initially performed stocking duties. In approximately December 2015 Claimant began performing more cashiering duties.

3. In January 29, 2016, Claimant presented to Kathy Vidlock, M.D. at Colorado Orthopaedics with complaints of right elbow pain that began one or two months prior. Claimant reported the pain was to the point she could not sleep. She also complained of numbness and stiffness on the right side. An ultrasound of the right lateral elbow showed fluid and swelling consistent with tendinosis. Dr. Vidlock assessed Claimant with lateral epicondylitis of the right elbow. She was prescribed Tramadol and referred

for physical therapy and taken off work. Claimant participated in physical therapy and subsequently underwent a percutaneous tenotomy on March 4, 2016. A work disability form completed by Dr. Vidlock on March 5, 2016 indicated Claimant's right elbow lateral epicondylitis was not due to her employment. Claimant was taken off of work from March 4, 2016 to March 21, 2016. At a follow-up appointment with Dr. Vidlock on April 6, 2016, Claimant reported improvement in her right elbow symptoms but increased pain in her right wrist. Claimant then underwent some physical therapy for the right wrist.

4. Claimant testified that, on November 16, 2016, she began experiencing pain in her right arm towards the end of her shift after ringing up several customers. Claimant testified she went home after her shift and took some ibuprofen. Claimant was not scheduled to work the following two days.

5. On November 18, 2016, Claimant sought chiropractic treatment at Denver Integrated Spine Center. Claimant complained to Michael Schnider, D.C. of continuous 8/10 pain in the back of her neck, which she described as a sharp, burning, and aching. Dr. Schnider assessed Claimant with cervical, thoracic and lumbar joint dysfunction with associated myospasms. Claimant underwent manipulation, manual therapy and mechanical traction. Dr. Schnider issued a letter removing Claimant from work from November 21, 2016 to November 25, 2016.

6. Claimant returned for chiropractic treatment on November 21, 2016 with complaints of continuous burning, aching and sharp pain in the back of her right shoulder.

7. Claimant testified that, after her appointment with Dr. Schnider on November 18, 2016, she made multiple attempts to speak to a manager by phone that same day to notify Employer of her upcoming absences. She testified she sent Dr. Schnider's note to Employer by fax and confirmed the receipt of the fax with a co-worker, Colin Gleason. Claimant testified she personally went to the store on November 21, 2016, saw her supervisor, Carol Mulligan, at a cash register, and asked to speak with her. Claimant testified she then went to talk to another co-worker and to Jim, an administrative assistant, whom she asked for medical leave paperwork. Claimant testified she retrieved the medical leave paperwork from Jim's office and then waited to speak to Ms. Mulligan. Claimant testified she left the store before speaking to Ms. Mulligan because she did not feel well and her daughter was waiting for her.

8. Ms. Mulligan testified at hearing that she did not recall seeing Claimant on November 21, 2016. She testified Claimant ceased appearing for scheduled work shifts after November 16, 2016 and did not notify Employer of her absences. Employer policy requires employees to immediately call and notify a member of management of any absences. On November, 22, 2016, Ms. Mulligan sent Claimant a letter stating Claimant had been absent without leave for four days. In the letter, Ms. Mulligan instructed Claimant to contact her no later than three days from the date of the letter to discuss Claimant's status, noting failure to do so would result in termination of employment. The letter was returned to sender. Claimant was terminated on November 25, 2016 for being

absent without leave since November 19, 2016 and for failing to contact Employer regarding her absences per Employer policy. Ms. Mulligan sent Claimant a letter dated November 25, 2016 notifying Claimant of her termination. This letter was also returned to sender. Ms. Mulligan testified Claimant had not reported any work injury to Employer prior to being terminated.

9. On November 28, 2016, Dr. Schnider diagnosed Claimant with post-surgical cervical radiculopathy with numbness and tingling and motor weakness and sensory deficits. He removed Claimant from work through December 2, 2016 and referred her to a neurologist. Dr. Schnider's medical notes do not include an opinion on the work-relatedness of Claimant's condition.

10. Claimant presented to Adam Seidl, M.D. at UC Health on December 1, 2016 with complaints of right shoulder pain since January 2016, now radiating into her arm and fingers. She reported neck spasms as well as pain and a burning sensation in both hands. X-rays of Claimant's right elbow and shoulder were negative for fracture or malalignment. Dr. Seidl diagnosed Claimant with cervical radiculopathy and lateral epicondylitis and performed an injection of Claimant's right elbow. He referred Claimant for occupational therapy and a neck evaluation given Claimant's previous spinal fusion and continued radicular symptoms. There is no reference in Dr. Seidl's medical note regarding the work-relatedness of Claimant's condition.

11. On January 12, 2017, Claimant presented to Stephen Pehler, M.D. at Colorado Orthopedic Consultants with neck pain. Dr. Pehler noted Claimant had a prior ACDF and initially did well but developed increasing right arm pain and bilateral shoulder pain. Dr. Pehler noted Claimant described right upper extremity symptoms and a C6-type distribution with some C7. Dr. Pehler assessed Claimant with bilateral upper extremity cervical radiculopathy and possible adjacent segment disease. He prescribed Claimant a Medrol Dosepak and ordered a cervical MRI.

12. Claimant underwent the cervical MRI on January 19, 2017, which revealed degenerative disc and joint changes with mild dural sac indentation without cord deformity and moderate right foraminal narrowing at C6-7, and a healed fusion at C5-6.

13. Claimant returned to Dr. Pehler on January 23, 2017. He noted that Claimant's cervical MRI showed left-sided adjacent segment disease at C4-5 and right-sided adjacent segment disease at C6-7. Dr. Pehler prescribed Claimant Gabapentin and ordered an EMG.

14. Claimant filed a claim for workers compensation in approximately mid-to-late January 2017. She testified she filed a claim after Dr. Pehler informed her of her condition.

15. Respondent filed a Notice of Contest on February 1, 2017.

16. Claimant underwent an EMG on February 3, 2017, performed by Simon Oh, M.D. The EMG revealed mild chronic bilateral radiculopathies, with no electrodiagnostic

evidence of any focal neuropathy, brachial plexopathy, or other cervical radiculopathy in the upper extremities.

17. Dr. Pehler reviewed Claimant's EMG findings at a follow-up appointment on February 6, 2017, noting bilateral C7 radiculopathies. His final assessment was adjacent segment disease of cervical spine with cervical radiculopathy. Dr. Pehler opined Claimant's progressive symptoms failed conservative treatment and recommended Claimant undergo adjacent segment disease decompression at C4-5 and C6-7. Dr. Pehler did not opine as to the work-relatedness of Claimant's condition in his medical notes.

18. On February 21, 2017, Claimant presented to Kathryn Bird, D.O. at Employer's authorized provider Concentra. Claimant reported she began having burning pain in her left shoulder and right forearm after cashiering on November 16, 2016. Claimant complained of 8/10 neck, wrist and elbow pain, as well as numbness and tingling in her fingers. Dr. Bird assessed Claimant with tendonitis of the left and right elbows and chronic left and right wrist pain. She noted it was possible Claimant's elbow and wrist conditions were work-related, and requested a work-site analysis. She believed Claimant also had cervical radiculopathy, which was not work-related. Dr. Bird advised Claimant to treat with ice, ibuprofen and a bandit brace, and released Claimant to full duty.

19. Claimant returned to Dr. Bird on March 7, 2017 with complaints of left shoulder and bilateral arm pain. Dr. Bird noted Claimant's workers' compensation claim was denied and released Claimant from her care.

20. A job demands analysis was performed on March 29, 2017. Claimant was not present for the evaluation. It was determined Claimant's position fell into the light-medium category in terms of physical demands of the job. Per the analysis, Claimant's position consisted of 70% customer service duties, 20-25% desk operator duties, and 5-10% cashier duties. No primary or secondary risks factors, as outlined in the Colorado Medical Treatment Guidelines, were identified.

21. Claimant disagrees her position consisted of 70% customer service duties and only 5-10% cashier duties. Claimant testified she only performed customer service duties for approximately two months, staring in August 2016, while she was training as a front end supervisor, and that most of her time was spent cashiering. Claimant did not further testify regarding the details of her position.

22. On April 11, 2017, Sean M. Griggs, M.D. performed an independent medical examination (IME) at the request of Respondent. Claimant reported having a prior history of right arm pain in January 2016, for which she underwent treatment and improved until November 2016. Claimant alleged to Dr. Griggs that the repetitive activity she performed as a cashier caused her symptoms to reoccur. Dr. Griggs performed a physical exam and reviewed Claimant's medical records, including the cervical spine MRI and EMG. He diagnosed Claimant with possible lateral epicondylitis and cervical radiculopathy. Dr. Griggs noted Claimant was no longer working yet continued to have

pain, which he remarked would typically resolve with rest if the condition was actually caused by repetitive work. Dr. Griggs recommended Claimant undergo an MRI to confirm lateral epicondylitis. He stated there was a possibility Claimant could have developed such condition from repetitive work, but that he could not make a determination absent a job description or further job details.

23. Claimant attended a follow-up appointment with Dr. Pehler on April 24, 2017. He noted Claimant continued to suffer from left-sided cervical radiculopathy related to her adjacent segment disease from her prior ACDF. He recommended Claimant undergo an anterior cervical discectomy and fusion at C4-5 and C6-7.

24. Dr. Griggs issued an addendum IME report on May 9, 2017 after reviewing the job demands analysis. Dr. Griggs opined that Claimant's lateral epicondylitis was not work-related, as cashiering duties were only 5-10% of Claimant's position, and she did not meet the criteria for any primary or secondary risk factors.

25. Dr. Griggs issued a second addendum on July 29, 2017 after reviewing additional records. He again noted Claimant's lateral epicondylitis was not work-related, as there were no primary or secondary risk factors. He reviewed Dr. Vidlock's notes and opined that Claimant underwent appropriate treatment for lateral epicondylitis prior to the claim, and her residual elbow issues were not work-related. He referenced Dr. Pehler's opinion that Claimant's ongoing bilateral upper extremity pain, neck pain and radiating pain and associated numbness were related to cervical spine disease and radiculopathy. Dr. Griggs opined that any relationship between Claimant's cervical spine issues and her work would be need to be addressed by a specialist.

26. Claimant testified she was determined disabled by the Social Security Administration in December 2018, and has since received $1,018 per month in social security disability benefits.

27. On May 9, 2019, B. Andrew Castro, M.D. performed an IME at the request of Respondent. Dr. Castro did not physically examine Claimant. He reviewed Claimant's medical records, including the cervical MRI and EMG. He noted that the EMG highlighted chronic radiculopathy at C7 likely consistent with chronic degenerative changes in Claimant's neck. Dr. Castro noted Claimant had extensive complaints of elbow and right upper extremity pain several months prior to the claimed injury, which was diagnosed as epicondylitis, and underwent treatment. His impression was: upper extremity pain vaguely in the right and left upper extremities. He opined that Claimant's symptoms were not consistent with an overuse injury, noting Claimant's job description did not involve substantial heavy lifting or repetitive awkward motions of the upper extremities. Dr. Castro agreed with Dr. Griggs that Claimant's worsening pain after being taken off of work for a period of time was inconsistent with a chronic overuse injury. He opined that Claimant's neck, shoulder and arm symptoms, as well as the need for any surgical intervention for adjacent segment degeneration, were not work-related.

28. Claimant testified that, despite her prior cervical fusion, she had been feeling fine and prior to November 16, 2016, was not having the problems she is currently experiencing.

29. The ALJ finds the opinions of Drs. Griggs, Castro, Vidlock, Schnider, Seidl, Pehler and Bird, and the testimony of Ms. Mulligan credible and persuasive.

30. Claimant failed to prove by a preponderance of the evidence she sustained a compensable occupational disease as a result of this employment.

31. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

The claimant was required to prove by a preponderance of the evidence that at the time of the injury she was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation,* 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by § 8-40-201(14), C.R.S., as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

This section imposes additional proof requirements beyond those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). However, the existence of a preexisting condition does not defeat a claim for an occupational disease. *Id.* A claimant is entitled to recovery if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

The claimant bears the burden to prove by a preponderance of the evidence that the hazards of the employment caused, intensified or aggravated the disease for which compensation is sought. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000); *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251 (Colo. App. 1999). The question of whether the claimant has proven causation is one of fact for the ALJ. *Faulkner v. Industrial Claim Appeals Office, supra*. In this regard the

mere occurrence of symptoms in the workplace does not require the conclusion that the conditions of the employment were the cause of the symptoms, or that such symptoms represent an aggravation of a preexisting condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (I.C.A.O. August 18, 2005). Once a claimant makes such a showing, the burden shifts to respondents to establish both the existence of a non-industrial cause and the extent of its contribution to the occupational disease. *Cowin & Co. v. Medina*, 860 P.2d 535 (Colo. App. 1992).

As found, Claimant failed to meet her burden to prove she suffered a compensable occupational disease. It is undisputed Claimant suffers from cervical radiculopathy and lateral epicondylitis of the right elbow. Nonetheless, there is insufficient credible and persuasive evidence establishing Claimant's conditions were proximately caused by this employment. Claimant suffered from prior cervical issues, including undergoing a cervical fusion in 2004. Claimant's cervical MRI and EMG revealed chronic degenerative findings. The record is devoid of any medical opinion asserting that Claimant's cervical radiculopathy and associated symptoms were caused, aggravated, or intensified by the hazards of Claimant's employment. Dr. Bird, Castro and Griggs credibly and persuasively opined Claimant's cervical radiculopathy is not work-related. While Dr. Pehler recommends treatment for Claimant's cervical condition, his recommendation is based on a diagnosis of cervical radiculopathy related to adjacent segment disease from a prior ACDF. As such, there is insufficient record support indicating Claimant's cervical condition is related to this employment.

Similarly, there is insufficient record support that Claimant's lateral epicondylitis is work-related. Claimant was diagnosed with lateral epicondylitis in January 2016, which Dr. Vidlock noted was not work-related, and underwent appropriate treatment for the condition. Although Dr. Bird stated it was possible Claimant's lateral epicondylitis could be work-related, she requested a worksite evaluation in order to make such determination. Claimant was released from Dr. Bird's care prior to Dr. Bird making such determination; however, Dr. Griggs and Dr. Castro reviewed the job demands analysis and both credibly and persuasively opined Claimant's lateral epicondylitis and right upper extremity symptoms were not caused by Claimant's employment. The job demands analysis does not identify any primary or secondary risks factors for the development of lateral epicondylitis. While Claimant disagrees with the characterization of her duties in the job demands analysis, she failed to offer sufficient evidence to the contrary.

Based on the totality of the credible and persuasive evidence, Claimant failed to prove it is more probable than not she sustained a compensable occupational disease. As Claimant failed to prove he sustained a compensable occupational disease or industrial injury, the remaining issues of TTD, TPD, AWW and responsibility for termination are moot.

ORDER

It is therefore ordered that:

1. Claimant failed to prove she suffered a compensable occupational disease. Claimant's claim for benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Administrative Law Judge
Office of Administrative Courts

ISSUES

- Does Colorado have jurisdiction over injuries Claimant suffered in Tennessee on July 15, 2017?

- If Colorado has jurisdiction, did Claimant prove a compensable injury?

FINDINGS OF FACT

1. Claimant works for Employer as a flight attendant. Her claim arises out of an incident on July 15, 2017 at the airport in Nashville, Tennessee. The flight she was working was grounded at the gate waiting for a lightning storm to clear. Lightning struck the jet bridge that was connected to the aircraft. At the time of the lightning strike, Claimant standing in the aisle at the front of the plane approximately 3 to 4 feet from the main cabin door. The passengers were deplaned and the flight attendants were checked on-site by EMTs. Claimant was subsequently transported by ambulance to a local hospital.

2. At the time of the accident, Claimant was living in Florida and was based out of Orlando. Employer opened a workers' compensation claim under Florida law and provided medical benefits.

3. Employer's corporate headquarters is in Denver.

4. Claimant was hired as a flight attendant by Employer on October 20, 2014. At that time, she was living in Colorado. Claimant was hired in Denver and did her initial training in Denver.

5. After finishing her training, Claimant moved to Chicago and was based out of O'Hare. The exact date she moved to Chicago is unclear, but the evidence shows it was in late 2014. In 2015, she was reassigned to the Orlando hub and moved to Florida.

6. Claimant moved back to Colorado in July 2018 and now resides in Pueblo West. Her current base is Las Vegas. Claimant has never been stationed or based in Colorado since she started working for Employer.

7. Claimant filed a Colorado claim on September 10, 2018. Respondents denied the claim on the theory Colorado lacks jurisdiction.

8. No persuasive evidence was presented that Claimant was ever in Colorado for any work-related purpose after she moved to Chicago in 2014 until she moved back to Colorado in July 2018.

9. There is no persuasive evidence Employer ever filed an election with the Division to extend the default six-month extraterritorial jurisdictional time limit.

10. Colorado lacks jurisdiction over Claimant's injuries because the accident occurred more than six months after Claimant left Colorado.

CONCLUSIONS OF LAW

Compensation for injuries occurring outside Colorado is governed by the so-called "extraterritorial provision" codified at § 8-41-204. This section provides:

> If an employee who has been hired or is regularly employed in this state receives personal injuries in an accident or an occupational disease arising out of and in the course of such employment outside of this state, the employee, or such employee's dependents in case of death, shall be entitled to compensation according to the law of this state. *This provision shall apply only to those injuries received by the employee within six months after leaving the state*, unless, prior to the expiration of such six-month period, the employer has filed with the division notice that the employer has elected to extend such coverage for a greater period of time. (Emphasis added).

Colorado's power to cover out-of-state injuries is based on its interest in the welfare and protection of its citizens and their dependents. *Hathaway Lighting, Inc. v. Industrial Claim Appeals Office*, 143 P.3d 1187 (Colo. App. 2006). The extraterritorial provision is "meant to protect the employee who may be sent out of state . . . for temporary or occasional work." *State Compensation Insurance Fund v. Howington*, 298 P.2d 963, 968 (Colo. 1956). Section 8-41-204 provides the "exclusive grounds" under which Colorado may take jurisdiction of an injury that occurs outside the state. *Rodenbaugh v. DEA Construction*, W.C. No. 4-523-336 (December 20, 2002). Accordingly, the claimant must either be hired in Colorado and suffer an injury within six months of leaving the state, or be regularly employed in Colorado and injured within six months of leaving the state. *Id*. The six-month period runs from the most recent employment-related visit to Colorado. *Employer's Liability Assurance Corporation v. Industrial Commission*, 363 P.2d 646 (Colo. 1961).

As found, Colorado lacks jurisdiction over any injuries Claimant sustained at the Nashville airport in July 2017. It is undisputed Claimant moved away from Colorado at the end of 2014. There is no persuasive evidence she returned to Colorado for any work-related purpose before July 2018. Thus, the six-month period began to run in late 2014 and expired by July 1, 2015 at the very latest. It necessarily follows that the July 15, 2017 accident occurred after Colorado lost jurisdiction over any injuries she received in another state. The fact that Employer's corporate headquarters is in Denver is immaterial because the extraterritorial provision focuses solely on the injured worker's presence or absence from the state, not the employer's location.

[ORDER CONTINUES NEXT PAGE]

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 14, 2019

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-090-215-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW, AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

And

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on June 4, 2019 in Denver, Colorado. The hearing was digitally recorded (reference: 06/4/2019, Courtroom 5, beginning at 8:30 AM and ending at 11:30 AM)

Claimant's Exhibits 1 and 2 were admitted into evidence without objection. Respondents' Exhibits A through L were admitted into evidence without objection.

At the Conclusion of the Hearing, the ALJ took the matter under advisement and hereby issues the following decision.

ISSUE

The sole issue to be determined by this decision concerns compensability of the Claimant's injury of August 8, 2018. The issue is whether the Claimant suffered an injury legally sufficient enough to be compensable on that date-- at Employer's place of business.

The Claimant bears the burden of proof on all issues by a preponderance of the evidence.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ makes to following Findings of Fact:

Preliminary Findings

1. The Claimant and Respondents agree that an incident occurred in the Employer's warehouse on or about August 8, 2018.

2. The incident in question arose between the Claimant and one of her co-workers in the Employer's warehouse at Zone H5.

3. The incident was never officially reported to any of Employer's personnel but was self-reported to both Allison M. Fall , M.D., an authorized treating physician (ATP) on September 4, 2018 and Atoosa Etminani Amoli , M.D. (a subsequent ATP) on November 5, 2018 (Respondents' Exhibits A, bates stamp (BS) 0004- 0006, and Exhibit B, BS 0007-0009)..

4. Dr. Fall listed the reason for the Claimant's visit as being follow-up maintenance care, but noted that Claimant stated she was at work and somebody punched her left arm as it was her birthday, leading to a bruise and concern from Claimant as to how this would affect her shoulder (Respondents' Exhibit A, BS 0001 to 0002).

5. The Claimant had shoulder surgery for a rotator cuff injury in 2013 (Respondents' Exhibits C-BS 0026).

The Incident

6. The Employer's employee who struck the Claimant disputes that it was due to it being her birthday, and instead contends that it was because she was 'slapped' in the face with a shipping label by the Claimant, after asking the Claimant to assist in filing of an order, and that this was not malicious but instead part of warehouse horseplay.

7. A disputed fact concerns the cause of.Leann L_____ striking the Claimant. It is not of great significance, but rather what is important to the issue of compensability is that such action took place at the Employer's place of business. Whether L_____ struck the Claimant with a closed fist or an open hand to the Claimant's left arm; whether it was a reaction to actions of the Claimant; whether it was general warehouse horseplay, or in relation to Claimant's birthday, are of minimal import on a credibility determination regarding Claimant's testimony.

8. The ALJ finds that the striking incident by L_____ was generally accepted horseplay and not outside the course and scope of employment.

Medical

9. The Claimant then saw Dr. Amoli at Concentra on November 5, 2018 for a Division of Worker's Compensation Exam for the injury resulting from the August 8, 2018 incident (Respondents' Exhibit B, BS 0007).

10. At this time of the exam,, Dr. Amoli and Ron Rasis, PA-C (certified physician's assistant) suggested a treatment plan relating to her S40.022A work related medical diagnosis. For the contusion of her left upper arm and or shoulder area as well as the traumatic hematoma of her left upper arm, Dr. Amoli and Mr. Rasis recommended that the Claimant attend physical therapy (PT) to improve her ROM.

11. The PT sessions were included in the treatment plan from Dr. Amoli and PT was suggested for three session a week for two weeks (Respondents' Exhibit A, BS 0007.

12. This PT was ordered for the Claimant's traumatic hematoma of her left upper arm (Respondents' Exhibits A, BS 0007).

13. The Claimant attended PT at Concentra Medical Centers on November 7, 2018; November 9, 2018; and November 16, 2018 (Respondents' Exhibit C, BS 0026-0035).

14. On December 28, 2018, the Claimant was placed at maximum medical improvement (MMI) by Dr. Amoli of Concentra Medical Center (Respondents' Exhibit B, BS 0022).

Horseplay

15. The deviation between the Claimant and the other employees of the Employer was for a brief period on August 8, 2018. The ALJ finds that the deviation did not last longer than approximately one minute. The severity of the deviation was part of a generally tolerated level of horseplay in the workplace of Employer. The deviation was comingled with the performance of the Claimant's and the other employee's daily job task, specifically the request and filling of a 'will-call order' in Claimant's zone. Based on the testimony of both Respondent's witnesses and Claimant, the practice of horseplay, at least in terms of the warehouse at Employer's place of business, has become accepted as part of the employment. Several of Respondent's witnesses made reference to horseplay in their direct examinations and mentioned that employees in the warehouse "joked all the time." Because there was no evidence of any policy or provision maintained or enforced by the Employer in regard to disciplining such horseplayers, the ALJ finds that the practice of horseplay is an accepted part of the employment within the warehouse.

16. Respondent's contend that the assault that caused the alleged injury was personal, and therefore did not create a compensable injury. Because the assault between the two employees had an inherent connection with the employment, mainly the filling of an order and discussion of such activity between the employees, the incident satisfies the "arising out of employment" requirement of compensability.

Ultimate Findings

17. The ALJ finds the Claimant's testimony concerning her injury, resulting from the incident on August 8, 2018 was credible and dispositive.

18. The ALJ finds that the incident of August 8, 2018 was part of a pattern of tolerated horseplay and the incident was, therefore, within the course and cope of employment.

19. Regardless of the tolerated horseplay, the Claimant sustained a contusion to the left upper arm and this injury was sufficient to require medical treatment.

20. Based on the totality of the evidence, the ALJ finds that the Claimant sustained a compensable injury, consisting of a contusion to the left upper arm on August 8, 2018.

21. The Claimant has sustained her burden of proof by a preponderance of the evidence on the issue of compensability.

CONCLUSIONS OF LAW

Based on the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered to "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull*, 802 P.2d 1182, 1183 (Colo. App 1990); *Penasquito Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. *Arena v. Indus. Claim Appeals Office,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned to evidence is a

matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office*, 297 P.3d 964, 2012 COA 85. The fact finder should consider, among other things, the consistency or inconsistency of a witness; testimony and/ or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/ or actions; the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil, 3:16 (2005); *One Hour Cleaners v. Indus. Claim Appeals Office*, 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's testimony concerning the injury of August 8, 2018 was credible, despite being disputed by the testimony of Respondents' witness Leann L_____.

Compensability

b. An "injury" referred to in § 8-41-301, C.R.S., contemplates a disabling injury to a claimant's person, not merely a coincidental and non-disabling insult to the body. *See Henderson v. RSI, Inc.,* 824 P.2d 91 (Colo. App. 1991). *Also see Gaudett v. Stationers Distributing Company*, W.C No. 4-135-027 [Indus. Claim Appeals Office (ICAO), April 5, 1993}. A priori, the consequences of a work-related incident must require medical treatment **or** be disabling in order to be sufficient. The claimant must prove by a preponderance of the evidence that her injury was proximately caused by an injury arising out of and in the course of her employment with employer. § 8-41-301(1)(b) & (c), C.R.S.; *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). As found, the Claimant's injury required medical attention and was, therefore, sufficient to be compensable.

c. An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of her employment and during an activity that had some connection with her work-related functions. *See Triad Painting Co. v. Blair,* 812 P.2d 638 (Colo. 1991); *Hubbard v. City Market,* W.C No. 4-934-689-01 (ICAO, November 21, 2014). It was not disputed that the injury alleged by the Claimant occurred "in the course of" employment in the present circumstance. The Claimant was in the warehouse of the Employer on August 8, 2018, at a time when she was intended to be there. One work-related activity that brought about the injury was the request of another employee directed at the Claimant to assist in the filling of a "will-call order'" within the Claimant's zone of the Employer's warehouse. Therefore, the activity that brought about the injury was connected to the Claimant's work-related functions.

d. The "arising out of" element is narrower and requires an injured worker to show a causal connection between the employment and the injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those function to be considered part of the employment contract. *See Triad Painting Co. v. Blair, supra.; City of Brighton v Rodriguez,* 318 P.3d 496, 502 (Colo. 2014). It is not essential to compensability that an employee's activity at the time of the injury result from a job duty if the activity is sufficiently incidental to the work to be properly

considered as arising out of and in the course of employment. *Panera Bread, LLC v. Indus. Claim Appeals Office,* 141 P.3d 970 (Colo. App. 2006); *Rodriguez v. Pueblo County,* W.C No. 4-911-673-01 (ICAO. August 2, 2016). As found, the Claimant's injury arose out of her job duties.

e. If a claimant's activity at the time of the injury constituted such a substantial deviation from the circumstances and conditions of the claimant's employment that the activity is for the claimant's sole benefit, the injury does not arise out of or occur in the course of employment. *Kater v. Indus. Commission,* 728 P.2d 746 (Colo. App. 1986); *Laroc v. Labor Ready, Inc.*, W.C No. 4-783-889 (ICAO ,February 1, 2010). The activity that led up to the Claimant's injury was a deviation in the sense that it was horseplay, as claimed by Respondents' witness, L_____. Where the alleged deviation from employment involves "horseplay," the courts apply a four-part test to determine whether the resulting injury is compensable. In *Lori's Family Dining v. Indus. Claim Appeals Office,* 907 P.2d 715, 718 (Colo. App 1995), the Court of Appeals held that the relevant factors are:

> (1) The extent and seriousness of the deviation; (2) the completeness of the deviation, i.e., whether it was commingled with the performance of a duty or involved an abandonment of duty; (3) the extent to which the practice of horseplay had become an accepted part of the employment; and (4) the extent to which the nature of the employment may be expected to include some horseplay. *Orist v. G4s Secure Solutions (USA), Inc.*, W.C No. 4-886-126-01 (ICAO. August. 17, 2012).

No single factor is determinative, and the claimant need not prove the existence of every factor in order to establish compensability. Ultimately, resolution of the issue is one of fact for determination by the ALJ. *Panera Bread, LLC v. Indus. Claim Appeals Office, supra.* As found, the deviation between the Claimant and the other employee of Employer was for a brief period on August 8, 2018. From the facts before the ALJ, it appears that said deviation did not last longer than approximately one minute. The severity of the deviation remains open to interpretation but appears to have been part of a generally tolerated level of horseplay in the workplace of Employer. As for factor (2) above, the deviation was comingled with the performance of Claimant's and the other employee's daily job task, specifically the request and filling of a 'will-call order' in Claimant's zone. Based on the testimony of both Respondent's witnesses and Claimant, factor (3) above has been satisfied. The practice of horseplay, at least in terms of the warehouse at Employer's place of business, has become accepted as part of the employment. Several of Respondent's witnesses made reference to horseplay in their direct examinations and mentioned that employees in the warehouse "joked all the time." Because the ALJ is unaware of any policy or provision maintained or enforced by Employer in regard to disciplining such horseplay, the ALJ finds that the practice of horseplay has become accepted as part of the employment within the warehouse.

f. Respondent's also contend that the assault that caused the alleged injury was personal, and therefore did not create a compensable injury. Several Colorado cases have dealt with this issue and developed a test for determining if an assault arises out of employment for the purposes of compensability. "Under the test, willful assaults by co-employees are divided into three categories: (1) those assaults that have an inherent connection with the employment; (2) those assaults that are inherently private; and (3) those assaults that are neutral. *Horodyskyj v. Karanian,* 32 P.3d 470, 475 (Colo. 2001) *see Popovich,* 811 P.2d at 383 (explaining the test as established in *Tolbert,* 759 P.2d at 23–24). "Both the first and third categories of assaults arise out of the employment for the purposes of the Workers' Compensation Act and therefore prevent an employee from suing his or her employer in tort for injuries based on such assaults." *Id.* Because the assault between the two employees had an inherent connection with employment, mainly the filling of an order and discussion of such activity between the employees, the incident falls within the first category and satisfies the arising out of employment requirement of compensability.

Burden of Proof.

g. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained her burden on compensability.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Claimant sustained a compensable injury on August 8, 2018.

B. Any and all issues not determined herein ae reserved for future decision.

DATED this 17th day of June 2019.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

This decision of the administrative law judge does not grant or deny a benefit or a penalty and may not be subject to a Petition to Review. Parties should refer to § 8-43-301(2), C.R.S., and other applicable law regarding Petitions to Review. If a petition to Review is filed, *see* Rule 26, OACRP, for further information regarding the procedure to be followed.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-047-379-003

ISSUES

I. Whether Claimant has overcome the Division Independent Medical Examination ("DIME") physician's opinion that he reached MMI on April 27, 2017.

II. Whether Claimant has established that additional medical treatment is reasonable and necessary to reach MMI.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a 51-year-old man. He was employed as an auto painter with the Employer, Auto Collision Specialists, from October 2014 to approximately August 2017. The Claimant has worked as an auto painter for the last 30 years.
2. Claimant testified that prior to April 27, 2017, he worked overtime hours nearly every week and that, outside of his work activities, he was not participating in any sports or hobbies in which he repetitively used his body. Claimant also testified that prior to April 27, 2017, he did not have lower back pain, right radicular symptoms, or right groin pain.
3. Claimant testified that, at the time of the injury, he was painting a "monster truck." He described the height of the truck by stating that the lift was so high on the truck, he had to let air out of the tires in order to be able to lean over the truck and reach the top of the truck while using a ladder and platform. Claimant also testified that this portion of the paint job took approximately one week.
4. Claimant also testified that due to the height of the truck, he had to constantly move up and down a ladder with his equipment and work on a narrow platform that was only about 9-10 inches wide. Claimant also said that due to the height of the truck, he would have to stand on the tips of his toes, while standing on the ladder and/or the narrow platform, and try to keep his balance while leaning/bending forward and twisting to paint the truck with a paint gun that was attached to an air hose. Claimant also had to perform these physical tasks while balancing and using the paint gun and sander over his head. Claimant further stated that at times he would have to contort his body and lean/bend over the truck with his equipment to reach the center of the roof, but keep himself from brushing up against that portion of the truck that had already been painted. Claimant reported that while completing this work on April 27, 2017, which required him to paint in an awkward position that was atypical, he began to experience severe low back pain as well as right sided leg, buttock, and foot pain.

5. Claimant reported the injury to Employer the same day, April 27, 2017. Claimant further testified that Employer did not want to file a workers' compensation claim and first directed him to a chiropractor. Claimant went to the chiropractor twice, but the treatment did not improve his back pain or his radicular symptoms.

6. Thereafter, Claimant sought medical care with his primary care physician, Dr. Greg Tjossem, on May 9, 2019, at Kaiser Permanente.

7. Dr. Tjossem diagnosed Claimant with lumbar radiculopathy and advised Claimant that he should not work on ladders or lift/push/pull more than 20 lbs. until he was evaluated by a worker's compensation physician. (*Exhibit A*)

8. Claimant was subsequently evaluated by Colleen August, PA-C, at UC Health – Poudre Valley Hospital ER on May 10, 2017. PA-C August noted that Claimant's objective findings were consistent with his history and/or the work related mechanism of injury/illness. She further described his injury as, "pain coming from carrying paint gun up and down stairs" and recommended that the Claimant remain off work for 1-2 days as well as further evaluation. (*Exhibit 7, p. 37 and 46*)

9. On May 11, 2017, Claimant was referred to Dr. Robert Nystrom at Concentra Medical Center. Dr. Nystrom noted Claimant was experiencing issues from his lower back into his right lower extremity to the bottom of his foot and that, most recently, developed pain into his groin area. He recommended an immediate lumbar MRI and work restrictions to include no trunk rotation and no lifting more than 10 pounds. With regards to injury history, Dr. Nystrom documented the following:

> This injury is the result of **twisting** (Pt was painting a large truck with a lift and was climbing up on the truck and up and down a step ladder for 3-4 hours which included the prep prior to painting and toward the end of the job felt significant pain in his low back. Pt states he has been painting for 30 years and has been working for this company for the last 3 and has never had a back injury…(*Emphasis added)*

(*Hearing Exhibit 8, pp. 89 and 95-98*)

10. Claimant underwent a lumbar MRI the following day, May 12, 2017. The MRI revealed multilevel disc and facet changes with the greatest and most significant canal narrowing at the L4-5 level where it was moderate. (*Exhibit 9, p. 100*)

11. On May 16, 2017, Claimant returned to Concentra. Amber Payne, PA-C, noted that Claimant's lumbar and lumbar radicular symptoms were somewhat improved but continued to recommend work restrictions and physical therapy. (*Exhibit 8, pp. 84-87*)

12. Due to his work injury, Claimant was restricted from performing his regular job duties. Due to his work restrictions, Respondents admitted for temporary total disability benefits as of May 13, 2017.

13. Claimant returned to Concentra on May 23, 2017. Amber Payne, PA-C, continued to note improvement with physical therapy and that Claimant's radicular symptoms

were improving, but yet increased Claimant's work restrictions. (*Exhibit 8, pp. 80-83*)

14. On May 25, 2019, Respondents filed a General Admission of Liability admitting to medical and temporary total disability benefits. (*Exhibit 2*)

15. On June 6, 2017, Claimant was again evaluated by Dr. Nystrom. He noted that Claimant had recently finished physical therapy and that his low back symptoms had improved. Dr. Nystrom recommended massage therapy and that Claimant return to full duty at work. (*Exhibit 8, pp. 77-79*)

16. Claimant continued to treat with Dr. Nystrom at Concentra, when evaluated on July 10, 2017, Dr. Nystrom noted Claimant continued to improve, but required additional massage and chiropractic care, and was approaching MMI. (*Exhibit 8, pp. 73-75*)

17. On July 31, 2017, Dr. Nystrom placed Claimant at MMI. No impairment was assigned and Claimant was directed to continue with chiropractic care and massage therapy.

18. On August 14, 2017, Respondents filed a Final Admission of Liability admitting to Dr. Nystrom's findings of MMI. (*Exhibit 3*)

19. Claimant timely filed an Objection to Respondents' August 14, 2017, Final Admission of Liability and requested a Division IME. Dr. Wallace Larson was selected to serve as the DIME physician and the DIME was scheduled for January 9, 2018.

20. Claimant commenced chiropractic care with Dr. Scott Parker on August 9, 2017, Dr. Parker noted ongoing right sacroiliac dysfunction with thoracic region tightness. He recommended 3-5 chiropractic treatments. Claimant returned for chiropractic care with Dr. Parker on August 11, 16 and 18, 2017. During that time, Claimant advised Dr. Parker that he was experiencing bouts of sharp pain in the right piriformis muscle region and that he felt he may need to see Dr. Nystrom again. Dr. Parker indicated that he would speak to Dr. Nystrom if the issues failed to improve. (*Exhibit 11, pp. 116-126*)

21. Claimant underwent additional chiropractic treatments with Dr. Parker on August 22, 24 and 29, 2017 as well as September 7 and 13, 2017. Dr. Parker continued to note issues with ongoing right radicular pinching and cramping and spoke to Dr. Nystrom about the Claimant returning for an evaluation and medical care. Claimant returned to Dr. Nystrom on September 13, 2017. (*Exhibit 11, pp. 110-115*)

22. On September 13, 2017, Claimant returned to Dr. Nystrom for additional evaluation and treatment. Dr. Nystrom concluded Claimant's case needed to be re-opened and referred Claimant to Dr. Shimon Blau for an evaluation for injections. (*Exhibit 8, pp. 55-60*)

23. Claimant was evaluated by Dr. Blau on September 18, 2017. Dr. Blau noted Claimant had a work-related injury, occurring on April 27, 2017, resulting from painting a car while working on a step stool over a 3-4 day period. He noted that Claimant continued to have ongoing complaints of a deep pinching pain in his right buttock that was constant in nature, increased with repetitive motion, and walking.

He noted that Claimant also, at times, had pain radiating down his right leg to the bottom of his foot. Dr. Blau recommended an ultrasound-guided right piriformis muscle steroid/lidocaine injection. (*Exhibit 10, pp. 107-109*)

24. On September 25, 2017, Claimant underwent a right piriformis muscle ultrasound-guided steroid/lidocaine injection with Dr. Blau. (*Exhibit 10, pp. 106-108*)

25. On October 10, 2017, Claimant returned to Dr. Blau and told him the injection, which he had on September 25, 2017, did not help reduce his symptoms. He also indicated that he continued to have the feeling of a knot in his right buttock as well as tingling going down his right posterior lower extremity and numbness in this bottom of his right foot. Dr. Blau diagnosed lumbar radiculopathy and recommended a right L4-5 interlaminar epidural steroid injection. (*Exhibit 10, pp. 104-105*)

26. On November 20, 2017, Claimant underwent an Independent Medical Examination with Dr. Jeffrey Wunder. Dr. Wunder noted the following in his report:

    - Mr. Munoz presented at a 49-year-old, right-hand-dominant male. His chief complaint was "pressure in my right buttock." He was employed as an auto painter for Specialty Auto Body. He was hired there in October of 2014 and terminated in August 2017. At this point in time he reported that he is doing some subcontracting work now, working only 9-10 hours per week.
    - Mr. Munoz reported no previous history of low back pain.
    - The current work-related injury occurred on 04/27/17. He reported that he had been working for four weeks on a monster truck that was elevated. In order to get to this vehicle, he had to climb up a stepladder to a platform where he prepped and painted the vehicle. This included sanding. He carried multiple objects up his stepladder including hose, paint gun, and sander and then worked on painting the truck. He reported that going up and down the ladder occurred for about one week. He then began to experience gradual onset of right buttock more than low back pain. He reported that he felt a shocking feeling down his right lower extremity to the plantar surface of his foot extending into his first three toes.
    - Lumbar range of motion was reduced with pain in the low back with flexion which reproduced his right buttock pain…Sensation to pin was decreased in the right L5 distribution, ie., dorsum of the foot. Manual muscle testing was normal, except for right great toe extension which was grade 4/5.
    - IMPRESSION: 1. Right L5 radiculopathy 2. Lumbar degenerative disc disease with lateral recess stenosis at L4-5.
    - DISCUSSION: It is my opinion that Mr. Munoz has a right L5 radiculopathy which would be related to his work-related activities on date of injury 04/27/17. He was initially diagnosed with lumbar

radiculopathy by his physician at Kaiser Permanente and even at his initial visits at Concentra. His initial treatment was conservative, but he continued to have fluctuating pain symptoms. It is unclear why Dr. Nystrom placed him at maximum medical improvement on 08/02/17…Mr. Munoz stated that he continued to have symptoms and finally returned for reevaluation on 09/13/17. He was not doing well at that point. Dr. Nystrom at that time recommended reopening the case…he was given a whole new line of therapy including guided injections for the diagnosis of lumbar radiculopathy.

- I do not believe that he has reached maximum medical improvement. I believe he has always had symptoms of lumbar radiculopathy which were not addressed.
- He was never symptom free when he was placed at MMI without impairment or restrictions, and Dr. Nystrom's request to begin treatment and reopen the claim have not been honored. Mr. Munoz at this point in time continues to work 9-10 hours per week doing the best he can but still has symptoms of radiculopathy and as noted today findings of right L5 radiculopathy.
- I believe that Mr. Munoz needs to undergo a right L5 transforaminal epidural steroid injection (TFESI).
- I think he should be restarted in physical therapy. If he continues to have recurrent symptoms, then I would recommend surgical evaluation.

(*Exhibit 5, pp. 25-28*)

27. On December 11, 2017, Claimant returned to Dr. Blau for a right L4-5 interlaminar epidural steroid injection. However, due to issues with high blood pressure, Claimant was referred to the ER and the injection was not performed. Claimant returned to Dr. Blau on or about December 29, 2017, for the injection and reported a dramatic decrease in symptoms for several days thereafter. (*Exhibit 10 pp. 102-103*)

28. On January 9, 2018, Claimant underwent a Division IME that was performed by Dr. Wallace Larson. Dr. Larson concluded Claimant suffers from degenerative disc disease and foraminal narrowing and that such conditions were not caused by Claimant's work. He then summarily concluded Claimant's symptoms and need for medical treatment, which includes a surgical evaluation, are due to the natural progression of Claimant's degenerative disc disease and not from his work activities.

29. A review of Dr. Larson's report reveals Dr. Larson obtained very little information regarding the exact physical requirements of Claimant's job duties and the alleged cause of Claimant's work injury. As set forth in his DIME report, Dr. Larson merely described Claimant's job duties as follows:

> He reports that his occupation involves painting cars. He reports that he spent one week straight painting a large crew cab type of monster truck. He did that for 1 week straight and following that began to notice right lower back pain. He had been working on an adjustable platform and needed to climb up and down from a platform.

(*Exhibit 12, pg. 130*)

30. There is no indication in his report that Dr. Larson actively tried to obtain more details from Claimant regarding the physical requirements of his job. For example, there is no indication Dr. Larson tried to determine whether painting the large "monster truck" was more physically demanding than Claimant's regular job duties, required additional bending, twisting and being in awkward positions, and whether those activities resulted in more stress being placed on his low back. In his report, Dr. Larson merely listed some of the medical records he reviewed, a brief summary of what the records provided, and then summarily concluded Claimant did not sustain a work injury on April 27, 2017. His conclusion is as follows:

> The patient has right-sided sciatica which has not responded to conservative treatment. The patient does have multilevel degenerative disc disease and foraminal narrowing. It would be appropriate to consult a spine surgeon. The patient does not have a work-related disorder of his lumbar spine. He has a degenerative condition in his lumbar spine. He does not have specific history of trauma at work. By history it appears that he noticed his symptoms after work but there was no work-related injury and his work does not appear to have caused this as a result of repetitive use disorder. His spine surgical consultation would therefore be for a nonwork related condition.

(*Exhibit 12, p. 133*)

31. Dr. Larson also concluded Claimant was at MMI on April 27, 2017, the date of injury.

32. Therefore, Dr. Larson concluded Claimant suffered from degenerative disc disease and foraminal narrowing and that his symptoms and need for further treatment, which included a surgical evaluation, were due to the natural progression of Claimant's degenerative disc disease.

33. Respondents filed a second Final Admission of Liability on April 26, 2018 admitting to the findings of the DIME physician, Dr. Larson. (*Exhibit 4*)

34. On March 29, 2018, Dr. Rebekah Martin performed a Rule 16 review of a request for Dr. Blau to perform a L5 selective nerve root block. It is not clear which medical records Dr. Martin was provided and reviewed before rendering her opinion. In her report, she discusses only the May 11, 2017, report from Concentra, the MRI, and Dr. Larson's DIME report, which references additional medical records. She then concluded that:

> The requested right L5 transforaminal epidural steroid injection is not medically indicated or appropriate for a specific work-related incident. The patient did not have any specific occupational injury or incident that clearly caused the changes noted on the lumbar spine MRI. In addition, the changes on the lumbar spine MRI should be considered degenerative in nature, without findings suggestive of any acute trauma or change that would result in nerve root compression and symptoms of radiculopathy/radiculitis. (*Exhibit D*)

35. The ALJ does not find Dr. Martin's opinion and conclusion as set forth in her March 29, 2018, report, to be credible or persuasive. For example, Dr. Martin reframes the issue in a manner that precludes her, or anyone else, from finding the injection to be appropriate under the facts of this case. Dr. Martin reframes the issue to be:

    - Whether the injection is appropriate due to a specific work-related incident that clearly caused the changes noted on the lumbar MRI.

    In essence, Dr. Martin sets an unattainable standard for Claimant to meet. The real issue is whether Claimant's underlying degenerative disc disease was aggravated by his work activities and resulted in a L5 nerve root irritation for which the injection has been prescribed. Dr. Martin, however, has reframed the issue in a manner that requires Claimant to establish:

    i. That his injury is the result of a specific and isolated incident - which it was not; and

    ii. That the incident clearly caused the changes on the MRI – which he cannot - because the MRI findings are degenerative, and by definition are not due to an acute and specific incident.

36. Dr. Martin also stated Claimant's symptoms are suggestive of a S1 nerve root irritation instead of L5. However, Dr. Martin did not physically examine Claimant and does not appear to have all of his medical records from this claim. Therefore, her opinions and conclusions do not appear to be well founded when compared to Dr. Blau who determined an injection at the L5 level was appropriate in this case after physically examining Claimant.

37. On April 10, 2018, another physician from Concentra, possibly Dr. Blau, ordered an MRI of Claimant's right hip to assist in diagnosing the cause of Claimant's right groin pain. On April 16, 2018, Dr. Martin issued a second Rule 16 Report. Dr. Martin concluded the MRI was not reasonable or medically necessary because the medical records provided to her do not show Claimant reported symptoms consistent with intra-articular hip pathology on the right side directly after the incident. Again, the ALJ does not find Dr. Martin's conclusions to be credible or persuasive for the following reasons. First, there is no indication in her second report that she reviewed all of the relevant medical records. Second, there is no discussion in her report why Claimant's groin pain, which is noted in the record from the first physician he saw at Concentra, would not support performing an MRI for diagnostic purposes. Third, it does not appear Dr. Martin is aware of the physical requirements of

Claimant's job when he was painting the "monster truck." Consequently, it does not appear she had sufficient information to render a credible and persuasive opinion.

38. Dr. Wunder, an expert in Physical Medicine and Rehabilitation and a physician with Level II Accreditation, testified consistent with his November 20, 2017 IME report. Dr. Wunder stated that he had often performed causation analysis of injuries and that it was his opinion that Claimant's job duties of painting the "monster truck, which included the repetitive activity of carrying and managing items while going up and down a ladder, caused irritation around the L5 nerve root on the Claimant's right side and therefore, like his authorized treating providers, believed Claimant sustained a work related injury on April 27, 2017. He testified that the specific finding of right L5 nerve root irritation was born from the Claimant's significant pain relief following the transforaminal steroid injection and the fact that he had pain and symptoms in the first three toes of his right foot.

39. Dr. Wunder also testified consistent with Claimant's medical providers that Claimant was not at MMI. Dr. Wunder stated that since the Claimant had a positive response to the injection, that a repeat injection would be reasonable and that if it only provides temporary relief that a surgical consultation and repeat MRI scan would be warranted.

40. Concerning his opinions of Dr. Larson's causation analysis, Dr. Wunder testified that Dr. Larson's description was very brief and flawed in its assessments that the Claimant's pain started after work. As noted by Dr. Wunder, and Claimant, his pain started while at work. He also testified that Dr. Larson indicated Claimant alleged his back pain was caused from walking up and down a ladder. However, and as testified to by Claimant and Dr. Wunder, Claimant's job duties were much more physically demanding than just casually climbing up and down a ladder or standing on a platform. Dr. Wunder also testified that Claimant's job tasks could and did result in a compensable, occupationally related, lower back injury, for which Claimant still needs treatment before Claimant can be placed at MMI.

41. Dr. Wunder further explained that a causation analysis requires an accurate diagnosis and then a determination as to whether or not the work-related activities would be consistent with the diagnosis. In this case, Dr. Wunder opined that the low back treatment guidelines have some conflicting information with regard to an occupational/repetitive motion back injury. However, Dr. Wunder clearly and convincingly concluded that the fact that Claimant had no lower back or radicular symptoms before working on the large truck and then developed pain and radicular symptoms while working on the large truck, which required twisting and bending, such factors lead to a finding of work relatedness, in the form of an aggravation of an asymptomatic preexisting condition. Dr. Wunder clarified that while he disagreed with Dr. Larson's causation analysis, many of their diagnostic findings were similar and that he agreed with Dr. Larson that Claimant should be referred for a surgical evaluation.

42. Dr. Larson testified consistent with his Division IME report. He did not think Claimant suffered a compensable work injury because no singular traumatic event occurred that could explain Claimant's back pain.

43. Dr. Larson also indicated that he did not believe Claimant's line of work was repetitive for lifting and twisting significant amounts of weight in sufficient amounts to have caused an occupational disease in the form of the degenerative disc disease and foraminal narrowing shown on the MRI. In essence, Dr. Larson concluded that based on the MRI findings, Claimant suffers from degenerative disc disease with foraminal narrowing and that his back pain and radicular symptoms were inevitable and unrelated to his work activities. However, such analysis is in direct conflict with the Medical Treatment Guidelines referenced by Dr. Wunder. The *Guidelines* specifically state that degenerative findings on an MRI cannot be used to justify an argument that back pain in a specific individual was inevitable and not due to work related exposures.[1]

44. Moreover, Dr. Larson failed to analyze all of the job duties Claimant performed while painting the "monster truck" and which he alleges caused his injury. Dr. Larson focused only on Claimant's job activities of climbing up and down a ladder to, and from, a platform, in perfect form, without any equipment. Dr. Larson also failed to analyze the physical requirements involved in painting the truck once Claimant had climbed up the ladder and was on the platform. Again, Dr. Larson's methodology is inconsistent with the *Guidelines*. The *Guidelines* require the physician to obtain a detailed history and job description in order to assess causation. This includes inquiring about the common positioning of the Claimant's body during the workday – such as bending and twisting – as well as the frequency and physical requirements of lifting, pushing, and pulling. [2]

45. Therefore, without a clear understanding of the physical requirements of Claimant's job duties, i.e., relevant facts, Dr. Larson analyzed causation. Moreover, when additional relevant facts regarding Claimant's job duties were brought to his attention during the hearing, he declined to consider the additional information and held on to his prior conclusions.

46. The *Guidelines* also set forth what constitutes a compensable injury. The *Guidelines* indicate that work-related conditions may occur from "a work-related exposure that renders a previously asymptomatic condition symptomatic and subsequently requires treatment." [3] Dr. Larson, however, failed to analyze in his DIME report whether Claimant's work activities, even as he understood them and as set forth in the DIME, aggravated Claimant's preexisting asymptomatic degenerative disc disease and foraminal narrowing and caused the need for medical treatment.

47. The ALJ finds Dr. Wunder's opinions and testimony to be highly credible and very persuasive.

---

[1] *See* Medical Treatment Guidelines, Rule 17, Exhibit 1, Low Back Pain, D(1)(d).(Clinicians should be well versed on the non-predictive value of degenerative imaging findings as noted in section E.1. Imaging Studies. Numerous studies have validated the finding of degenerative changes in older asymptomatic individuals. The presence of these findings cannot be used to justify an argument that back pain in a specific individual was inevitable and not due to work related exposures.)

[2] *See* Medical Treatment Guidelines, Rule 17, Exhibit 1, Low Back Pain, D(1)(a)(i).

[3] *Id*. at pg. 12.

48. Claimant was not exposed to the same physical demands required by his job when he was not working.

49. Based on the above findings, the ALJ finds, by clear and convincing evidence that Dr. Larson erred in his analysis and conclusion that Claimant did not suffer a compensable injury and was therefore at MMI as of the date of the alleged injury.

50. During rebuttal, Claimant again testified that painting the roof of the monster truck, which was approximately 8 feet high, required him to twist, turn, stretch, and lean over the truck. As aptly stated by Claimant, "you're not a robot" performing the job.

51. The ALJ agrees that the description of what Claimant was doing at work when he developed his symptoms, as noted by various providers, is not a model of precision and consistency. The medical records contain various fragmented statements regarding Claimant's job duties, what he was doing when his symptoms developed, and where he was when his symptoms developed. However, Claimant's testimony filled in the gaps, corrected any errors, and provided context to the fragmented statements contained in the medical records. Therefore, the ALJ finds Claimant's testimony to be highly credible, very persuasive, and consistent with the record.

52. The causation analyses of Drs. Wunder, Nystrom, Blau, Tjossem and PA-C August and Payne support the findings of a compensable work related injury occurring on April 27, 2017, and that Claimant is not at MMI, and is need of additional treatment to cure and improve his symptoms that were caused by his work injury.

53. The ALJ finds that the L5 injection and right hip MRI recommended by Dr. Blau is reasonable and necessary to determine the extent of Claimant's injuries as well as the type and extent of future treatment. The ALJ further finds that such treatment is reasonable and necessary to cure Claimant from the effects of his work injury.

54. The ALJ finds Claimant has established by clear and convincing evidence that he is not at MMI for his compensable work injury.

55. The ALJ further finds that Claimant has established by clear and convincing evidence that he is entitled to reasonably necessary and causally related medical treatment to cure him from the effects of the April 27, 2017, industrial injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). The facts in a workers' compensation case must be interpreted neutrally;

neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. **Whether Claimant has overcome the Division Independent Medical Examination ("DIME") physician's opinion that he reached MMI on April 27, 2017.**

a. Whether Claimant suffered a compensable injury.

The threshold question of whether Claimant sustained a compensable injury in the first instance is one of fact that the ALJ must determine, if contested, under the preponderance of the evidence standard. *See Leprino Foods Co. v. Industrial Claim Appeals Office of State*, 134 P.3d 475, 483 (Colo. App. 2005) (citing *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). Consequently, the DIME physician's opinion on this issue is not entitled to special or presumptive weight. *See Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000).

A claimant is required to prove by a preponderance of the evidence that at the time of the injury he was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S.

A preexisting disease or susceptibility to injury does not disqualify a claim if the injury aggravates, accelerates, or combines with the preexisting disease or infirmity to

produce the need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The ICAO has noted that pain is "a typical symptom from the aggravation of a pre-existing condition" and a claimant is entitled to medical treatment for pain as long as the pain was proximately caused by the injury and is not attributable to an underlying preexisting condition. *Rodriguez v. Hertz Corp.,* WC 3-998-279 (ICAO February 16, 2001).

However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any preexisting condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a preexisting condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether Claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

In this case, Respondents filed a General Admission of Liability on May 25, 2017, and admitted liability for Claimant's industrial injury. Then, upon receipt of the Division Examiner's opinion, they filed a second Final Admission of Liability on April 26, 2018. Consequently, this is an admitted claim.

Moreover, Respondents did not move to withdraw their admission. Therefore, whether Claimant suffered a compensable injury is not before the ALJ because Respondents have admitted that he did. However, to the extent that such issue is inextricably intertwined with the issue of MMI based on the facts of this case, the ALJ finds and concludes, based on the foregoing findings above and subsequent conclusions set forth below that Claimant has established by clear and convincing evidence, that he suffered a compensable injury and is not at MMI. [4]

[4] The threshold question of whether Claimant sustained a compensable injury in the first instance is one of fact that the ALJ must determine, if contested, under the preponderance of the evidence standard. *See Leprino Foods Co. v. Industrial Claim Appeals Office of State*, 134 P.3d 475, 483 (Colo. App. 2005) (citing *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). Consequently, the DIME physician's opinion on this issue is not entitled to special or presumptive weight. *See Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000). However, due to the facts of this case, the ALJ has found Claimant met the higher burden of proof as to the compensability of his industrial injury/occupational disease, even though the clear and convincing burden is not applicable to such issue.

b. Whether Claimant has overcome the Division Independent Medical Examination ("DIME") physician's opinion that he reached MMI on April 27, 2017.

Maximum medical improvement exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

"Clear and convincing" evidence has been defined as evidence which demonstrates that it is highly probable the DIME physician's opinion is incorrect. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Under the statute, MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office*, 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office*, 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of Claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007). A finding that Claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office*, 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office*, 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (I.C.A.O. March 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining Claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Patterson v. Comfort Dental East Aurora*, WC 4-874-745-01 (ICAO February 14, 2014); *Hatch v. John H. Garland Co*., W.C. No. 4-638-712 (ICAO August 11, 2000).

Claimant established by clear and convincing evidence that he suffered a compensable injury on April 27, 2017. The credible and persuasive testimony of Claimant and Dr. Wunder, combined with the medical record, established Claimant suffered a compensable injury on April 27, 2017, due to painting a "monster truck" at work. Prior to April 27, 2017, Claimant worked overtime hours nearly every week and that, outside of his work activities, he was not participating in any sports or hobbies in which he repetitively used his body in a manner that was consistent with his work duties. In addition, prior to April 27, 2017, he did not have lower back pain, right radicular symptoms and right groin pain.

At the time of the injury, Claimant was painting a "monster truck." The truck was so tall, Claimant had to let air out of the tires in order to be able to lean over the truck and reach the top of the truck while using a ladder and a narrow platform. This portion of the paint job took Claimant approximately one week. The physical requirements of painting the monster truck required Claimant to repetitively climb up and down a ladder with his equipment and work on a narrow platform that was only 9-10 inches wide. He

also had to stand on the tips of his toes, while standing on the ladder and/or the narrow platform, try to keep his balance, lean/bend forward, and twist to paint the truck. Claimant had to do this with a paint gun that was attached to an air hose. Moreover, Claimant also performed these physical tasks while using the paint gun and sander over his head so he could reach the very top of the truck and while not leaning against those portions of the truck that had already been painted. This placed additional demands on Claimant's lower back in comparison to his regular painting duties.

While completing this work on April 27, 2017, Claimant began to experience severe low back pain as well as right sided leg, buttock, and foot pain. In addition, when Claimant ultimately saw a physician at Concentra, it was noted that he was also having right groin pain. Due to his pain complaints, Claimant underwent an MRI of his lumbar spine. The MRI showed Claimant had degenerative disc disease and foraminal narrowing involving his lumbar spine.

Dr. Wunder credibly testified that Claimant's job duties of painting the "monster truck" resulted in a compensable injury in the form of an aggravation of Claimant's preexisting and asymptomatic degenerative disc disease. Dr. Wunder further testified that such aggravation necessitated the need for medical treatment and that Claimant is in need of additional medical treatment before he can be placed at MMI.

Claimant established that Dr. Larson erred in his assessment of this matter. As found, Dr. Larson failed to obtain and analyze the physical requirements of Claimant's job duties, in general, and while Claimant was painting the "monster truck." As found, Dr. Larson failed to consider the bending, twisting, leaning, and atypical body postures necessary for Claimant to climb up and down the ladder, get on the platform, and paint the "monster truck." The ALJ finds and concludes that such failure is a clear error in his assessment of this matter and establishes that it is highly probable that his opinion regarding whether Claimant suffered a compensable injury and is at MMI is incorrect.

Dr. Larson also failed to consider whether Claimant's job duties resulted in an aggravation of his preexisting degenerative disc disease and foraminal narrowing. Dr. Larson concluded Claimant's work activities did not cause the degenerative findings demonstrated on the MRI. He also concluded Claimant's pain complaints and radicular symptoms were due to the degenerative findings noted on Claimant's MRI. He did not, however, consider and evaluate whether Claimant's job duties aggravated Claimant's underlying condition and necessitated the need for medical treatment and caused Claimant's disability.

Dr. Larson did recommend Claimant see a spinal surgeon to assess whether Claimant is a surgical candidate based on his symptoms and the findings on his MRI. Such recommendation supports a finding that Claimant is not at MMI.

Moreover, Dr. Blau, an authorized treating physician, has recommended another spinal injection at the L5 level. Dr. Wunder concurred with this recommendation. Dr. Blau also recommended an MRI of Claimant's right hip to assess whether Claimant also suffered an injury to his hip joint at the same time and is causing Claimant's right groin pain. Since the treatment recommended by Dr. Blau is to cure Claimant from the effects of his injury and to determine the extent of his work injury, such treatment is inconsistent with a finding of MMI.

Moreover, the ALJ also finds that the L5 injection prescribed by Dr. Blau and the right hip MRI are reasonable, necessary and related to Claimant's work injury. The injection is to help reduce Claimant's radicular symptoms and/or define the pain generator. The right hip MRI is to determine the extent of Claimant's work injury and whether painting the truck also caused or aggravated an intra-articular hip condition and is causing his groin pain.

The quality of an expert's opinion is only as good as the data upon which it relies. In this case, Dr. Larson had insufficient data regarding the physical requirements of Claimant's job while painting the large truck. "Like a house built on sand, the expert's opinion is no better than the facts on which it is based." *See Kennemur v. State of California*, 184 Cal. Rptr. 393, 402 (Cal. Ct. App. 1982).

Therefore, the ALJ finds and concludes Claimant has overcome the opinion of the Division Examiner by clear and convincing evidence. Claimant is not at MMI.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant is not at MMI.
2. Respondents shall provide reasonable and necessary medical treatment to cure Claimant from the effects of his industrial injury.
3. Respondents shall pay, subject to the Colorado Medical Fee Schedule, for Claimant to have the L5 injection and right hip MRI that were prescribed by Dr. Blau, an authorized treating physician.
4. Although Dr. Wunder and Dr. Larson both recommend a surgical evaluation, the ALJ cannot order Respondents to pay for the evaluation at this time because an authorized treating physician has yet to recommend or prescribe a surgical evaluation.
5. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding

procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 17, 2019

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

The issues raised for consideration are:

- Whether Claimant proved by a preponderance of the evidence that she sustained a compensable injury in the course and scope of employment on March 13, 2017.

- Whether Claimant proved by a preponderance of the evidence that she is entitled to an order awarding authorized, reasonably necessary and related medical benefits.

- Whether Claimant established by a preponderance of the evidence that she was disabled from her usual employment commencing May 7, 2018 through October 25, 2018 and is therefore entitled to an order awarding indemnity benefits.

FINDINGS OF FACT

Based on the testimony and evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. Claimant alleges injuries to her right shoulder as a result of throwing a trash bag into a dumpster on March 13, 2017. Based on these Findings of Fact, Claimant failed to establish that she sustained a compensable work-related injury on March 13, 2017.

2. At the time of the alleged incident, Claimant worked as a cook for Employer and her duties included cleaning and closing down the kitchen at the end of her night shift.

3. Claimant testified at hearing that she immediately reported the incident to a co-worker, and she verbally informed her supervisor a few days later. At hearing, Ms. H_____ corroborated Claimant's report that she had complained about her right shoulder after taking out the trash in March 2017. Ms. H_____ could not recall the specific date of the complaint and could not recall if Claimant complained about her shoulder after that day.

4. Claimant testified that her shoulder was "sore and it hurt" in the days following the incident, but "it wasn't severe." Claimant testified that she never asked for medical treatment throughout her employment at Employer, which ended in March 2018.

5. Claimant testified that she completed the Workers' Claim for Compensation fifteen months after the alleged date of injury. On her Workers' Claim for Compensation,

Claimant listed her "last day worked" as May 1, 2018. However, Claimant clarified at hearing that May 1, 2018 was the last date she worked for her subsequent employer, The Universal.

6. During the summer after Claimant's alleged injury, she participated in several activities inconsistent with an acute injury.

- Three months after the alleged work-related injury on March 13, 2017, Claimant played in a golf tournament in June 2017, winning the "longest putt" award.
- Claimant testified that she performed industrial sewing for her spouse's archery business two days a week throughout the summer following the alleged work injury.
- Claimant testified that she rode her motorcycle to work at least once following the March 13, 2017 incident. She later testified that, between March 13, 2017 and her surgery in May 2018, she rode her motorcycle "not once." Despite reportedly experiencing pain after riding her motorcycle to work following the March 13, 2017 incident, Claimant did not seek medical treatment for her right shoulder.

7. Claimant testified that she was still working for Employer in February 2018, and her right shoulder pain was worse at that time than it was initially following the March 13, 2017 incident.

8. On February 14, 2018, Claimant sought medical treatment for a concussion, neck pain, and upper back pain. Claimant testified that she was using a hot tub to "try and rehab [her] shoulder" when the hot tub cover fell on her head. While she testified that she disclosed her right shoulder condition to the medical provider, there is no mention of her right shoulder complaints in the medical record, and her extremity examination was reportedly normal.

9. Claimant testified that she sought treatment for her neck at the February 14, 2018, appointment and never sought any additional treatment for her neck after that date, which is inconsistent with records from Dr. Seidl in May 2018, when he referred her to a specialist for cervical radiculopathy.

10. Claimant and Employer amicably parted ways in March 2018, and Claimant was given a letter of recommendation, which she used to secure a position at The Universal in March 2018.

11. Claimant testified that her job duties were more physically demanding at The Universal than they had been for Employer. Claimant testified that there was "a huge difference" in her job duties for Employer compared to The Universal. She testified that The Universal was "busy and booming and fast-paced" and had "a much higher volume of clientele…"

12. Claimant testified that her right shoulder pain "became worse the longer I worked [at The Universal]." She further testified, "I think that's what made my pain worse in my shoulder."

13. Claimant reportedly complained to the chef at The Universal about her right shoulder pain and eventually called-in sick due to pain. She sought treatment on May 3, 2018. Claimant did not return to work at The Universal after calling-in sick on May 3, 2018.

14. Claimant testified that she did not miss any shifts at either Employer or The Universal due to right shoulder pain from March 13, 2017 until May 3, 2018. She further testified that she did not seek any medical treatment for her right shoulder from March 13, 2017 through May 2, 2018.

15. Claimant presented to Metro Urgent Care on May 3, 2018, reporting right shoulder pain with no known injury or trauma. The medical record contains the following history:

> States her right shoulder started bothering her about nine months ago. Denies known injury or other etiology for shoulder pain. States her pain got more acute over the last week or so, and she's having trouble sleeping due to the pain. States she can't think of anything different she did around the time her shoulder became more acutely uncomfortable.

16. At hearing, Claimant testified that she told the staff at Metro Urgent Care that her right shoulder complaints were "likely a workmen's [sic] compensation claim" but did not provide the name of any employer and could not recall if she had provided the exact date of injury, as the May 3, 2018 appointment was "a long time ago."

17. Claimant was referred by Metro Urgent Care to UC Health ER the evening of May 3, 2018. UC Health medical records indicate: "No injury mechanism." Claimant reported that she was unable to fold clothes that day due to pain. There is no mention of a work, lifting, or throwing incident that caused her right shoulder symptoms.

18. The first mention in any medical record of a trash throwing incident is from Claimant's May 10, 2018, appointment with Adam Seidl, M.D. Claimant reported that, nine months prior, "she felt something pull in her shoulder when she was throwing a bag into the dumpster." She complained of right shoulder and neck pain. At hearing, Claimant denied telling Dr. Seidl that the throwing incident occurred nine months prior.

19. Dr. Seidl recommended an MRI and referred her to a spine clinic for evaluation of cervical radiculopathy symptoms and neck pain. Dr. Seidl ultimately performed surgery

to repair a right rotator cuff tear on May 16, 2018. Claimant recovered from surgery and Dr. Seidl released her to full duty on October 25, 2018.

20. Several weeks following the May 16, 2018 surgery, Claimant filed a Workers' Claim for Compensation initiating this claim. Claimant first filed a claim with Pinnacol Assurance, who denied the claim based on insurance coverage, as their policy went into effect on March 14, 2017. Claimant then pursued benefits from Auto Owners Insurance Company. At hearing, the ALJ took judicial notice of the fact that Auto Owners Insurance Company's policy expired as of March 14, 2017, and Pinnacol Assurance was on the risk for any injuries occurring from March 14, 2017 through August 2017 (9 months pre-surgery).

21. L. Barton Goldman, M.D. testified at hearing as an expert in physical medicine and rehabilitation and medical causation. Dr. Goldman opined that, if the March 13, 2017 incident had caused the MRI findings apparent in May 2018, Claimant would have required surgery much sooner, such symptoms would have been documented in the medical records leading up to May 2018, and she would not have been able to participate in a golf tournament, ride her motorcycle, or do industrial sewing, which Claimant testified to performing in the summer of 2017. He further opined that, had the March 13, 2017 incident not occurred as alleged, Claimant would have nonetheless likely required the surgery performed by Dr. Seidl on May 16, 2018.

22. Dr. Goldman performed an independent medical examination of Claimant on February 21, 2019. Claimant recounted to Dr. Goldman that she immediately felt right lateral shoulder pain after throwing a trash bag into the dumpster on March 13, 2017. Claimant recounted to Dr. Goldman that she had difficulty mopping, scrubbing, and taking out the garbage and requested a shift change in the summer of 2017. Claimant told Dr. Goldman that her employment at The Universal resulted in a substantial workload increase from 30 plates to 200 to 300 plates per shift. She reported that her right shoulder pain was 6/10 while working for Employer and 4/10 when off work. Claimant told Dr. Goldman that, after she started work at The Universal, her pain levels rose to 6-7/10 when off work and 9/10 more frequently while at work.

23. Claimant reportedly told Dr. Goldman that she filed her Workers Claim for Compensation with Pinnacol before her surgery occurred and, after the claim was denied, she refiled the claim with Auto Owners two and half weeks after the surgery. Claimant's recollection is inaccurate, as she filed her Workers' Claim for Compensation on June 4, 2018 (having undergone surgery on May 16, 2018).

24. Dr. Goldman noted that, if Claimant's MRI findings in May 2018 had been even "mildly caused" by a March 13, 2017 incident:

> …it would have been…a really dramatic injury, and the patient would have had what we call a drop sign…because it wasn't just the supraspinatus muscle that was torn and retracted, she had the subscapularis muscle

> was torn, which is—that's a much more significant and harder muscle to hurt—it's underneath the shoulder blade—and she [has] got an involvement of all of her muscles and tendons. If that had happened back in March 2017…she would not have been able to do very much.

25. Claimant acknowledged to Dr. Goldman that she played two or three rounds of golf in the summer of 2017 and that she won a "longest putt" award at a golf tournament that summer. Claimant further told Dr. Goldman that she would help her wife by performing industrial sewing two times per week during the summer of 2017 which involved repetitive rotation of her right shoulder. She recalled taking two motorcycle trips in the summer of 2017.

26. Dr. Goldman noted that, "…even if the patient's participation in [industrial sewing, motorcycle riding, and golfing] was limited during 2017, she nevertheless was able to do so, which would make the alleged injury of March 2017 a very minor event..." Rather, Dr. Goldman opined, if the March 13, 2017 incident resulted in "a significant injury, one would have anticipated substantial deterioration in a fairly steady fashion within a couple of weeks of said injury with a persistent and declining presentation that would have necessitated surgical intervention much earlier in this case."

27. Dr. Goldman testified that it is common for injured workers to reflect back on musculoskeletal injuries and perceive that one event led to a progressive worsening of a condition, but most injuries are not "a straight line" but rather symptoms wax and wane, which in this case "makes more sense in terms of why this went on for so long." Claimant's perception, through her testimony, that the March 13, 2017 incident ultimately caused the need for surgery in May 2018 is medically improbable, considering all other available evidence.

28. Concerning the lack of medical documentation of the March 13, 2017 incident, even as Claimant started receiving treatment for her right shoulder in May 2018, Dr. Goldman stated:

> I'm well aware that documentation can vary in quality, but we have such consistency of lack of documentation of this incident up until around the time of the surgery, and there's opportunities for this to be raised within the records where it's not…it's not any one document—or even…Ms. Renslow's recollection, or lack thereof, it's the overall pattern and my understanding of the underlying pathophysiology that supported my conclusion…

Dr. Goldman opined that, even if the March 13, 2017 incident "had not occurred, she clearly was exposed to other…stressors to the shoulder and other reasons, both traumatic and non-traumatic that would have likely led to the surgery that occurred in May…"

29. In terms of the other stressors that likely led to her need for shoulder surgery, Dr. Goldman testified that, while Claimant's employment period at The Universal was relatively short (1-2 months), "her exposure volume, which is what we look at when we're looking at degenerative issues,…went up…like hundreds of percentage points." If Claimant's need for surgery was related to a work-related exposure, Dr. Goldman opined that the "volume exposure at Universal" would be the most likely culprit, although he clarified that he would consider The Universal exposure to be "contributory."

30. Claimant submitted into evidence medical reports from Dr. Seidl and responses to questions posed by Claimant's attorney to support that her need for surgery was caused by the March 13, 2017 incident. Claimant asks the ALJ to rely on an unsigned response by her surgeon, Dr. Seidl, to a letter from her attorney to support that her MRI findings in May 2018 and need for surgery was caused by the March 13, 2017 incident. At face value, Dr. Seidl's responses do not support that the March 13, 2017 incident caused her need for surgery.

31. Dr. Seidl noted that, "based upon the history given, it is highly likely that this injury was caused by the described event 9 months prior to her presentation in my clinic." Based on this response, the March 13, 2017 incident could not have caused her injury, because 9 months prior to her May 2018 presentation was August 2017—when Pinnacol Assurance provided coverage for Employer. It is possible Dr. Seidl was mistaken as to the date, but assuming the date listed was a typo, Dr. Seidl further supported his conclusion based on Claimant's report of "significant pain and loss of function after the [March 13, 2017] event."

32. Based on Claimant's testimony at hearing, she did not have significant pain, nor loss of function after the event. Claimant testified that she did not miss any work from the date of the injury through when she stopped working for Employer approximately a year later. In fact, she was able to perform work that was more physically demanding for 1-2 months over a year after the alleged March 2017 incident. Claimant further failed to obtain any medical treatment for her right shoulder until May 2018. In fact, Claimant went to an urgent care in February 2018 for neck and head pain, and failed to report any right shoulder symptoms, including weakness, which was specifically noted by Dr. Seidl in May 2018.

33. In response to this contradictory evidence, Claimant asserts that the ALJ should disregard the lack of documentation in the medical records as clerical errors by multiple providers on multiple dates, and attribute the fact that Claimant did not miss any work throughout this time—in fact, throughout the entire time she worked for Employer and over a month of more physically-demanding work for a subsequent employer—as evidence of Claimant's character and willingness to work through pain, and not as objective evidence of an absence of "significant pain and loss of function" noted by Dr. Seidl as a basis for his opinion.

34. Dr. Seidl further relied on Claimant's MRI findings to support that Claimant sustained an "acute injury." He noted that the finding of a "full thickness rotator cuff tear without severe atrophy of the muscles makes it unlikely that this tear is chronic." Dr. Goldman testified that he reviewed the MRI images and report and disagreed with Dr. Seidl's interpretations. Dr. Goldman testified that he would expect to see "atrophy in the rotator cuff…within weeks [of an injury], depending on the age of the patient, but generally within one to three months [the atrophy is] substantial." The fact that Dr. Seidl notes no significant atrophy on the MRI supports that the rotator cuff tear did not occur more than a year prior.

35. The MRI report itself further supports that the surgery-inducing event did not occur more than 1-3 months prior to the MRI, based on Dr. Goldman's testimony. The MRI report showed "low-grade atrophy…of the supraspinatus tendon." The low-grade nature of the atrophy suggests that the tear occurred recently—perhaps weeks prior, as opposed to months prior—and almost certainly not over a year prior. This, combined with Claimant's testimony that her pain substantially worsened while working at The Universal, suggests that an injury occurred—either at work or not—while she was employed by The Universal.

36. Dr. Goldman's conclusions are supported by Claimant's testimony at hearing that, immediately after the March 13, 2017 incident, she did not think her injuries were "severe." Her testimony that she never missed any time from work for Employer or sought medical treatment for her right shoulder before May 3, 2018 further support that the March 13, 2017 incident resulted in, at most, a mild strain that resolved with time but nevertheless resides in the context of waxing and waning progressively worsening right shoulder symptoms that eventually necessitated surgery, which would have been medically necessary even in the absence of the March 13, 2017 incident.

CONCLUSIONS OF LAW

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceedings is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App.

2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

The ALJ finds the testimony of Claimant to be credible insofar as she testified consistent with her recollection of the progression of her condition. However, the ALJ credits Dr. Goldman's opinions concerning the medical probability of the accuracy of Claimant's recollections and finds Dr. Goldman's testimony concerning medical causation more persuasive than Claimant's. The ALJ finds Dr. Seidl's opinions unpersuasive.

A claim is compensable if it is shown that the injury was proximately caused by an event arising out of and in the course of the employee's employment. C.R.S. § 8-41-301(1)(c). A pre-existing condition does not disqualify a claimant from receiving workers' compensation benefits. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004). A claimant may be compensated if his or her employment "aggravates, accelerates, or combines with" a worker's pre-existing infirmity or disease "to produce the disability for which workers' compensation is sought." *H&H Warehouse v. Vicory,* 805 P.2d 1167, 1169 (Colo. App. 1990).

There is a distinction between the terms "accident" and "injury." The term "accident" refers to "an unexpected, unusual or undesigned occurrence." C.R.S. § 8-42-201(1). In contrast, an "injury" refers to the physical trauma caused by the accident. Under the Workers' Compensation Act, disability and medical benefits do not flow simply because an accident occurred while the claimant was in the course and scope of employment. Compensable injuries involve an accident that requires medical treatment or causes disability. *Vicory,* supra. Pursuant to *Wherry v. City and County of Denver,* W.C. No. 4-475-818 (ICAO March 7, 2002), if an incident is not a significant event resulting in an injury, the claimant is not entitled to benefits. A compensable injury does not exist simply because something occurred, even if such "something" could have

caused pain and the need for treatment but did not. See *e.g.*, *Montgomery v. HSS*, W.C. No. 4-989-682 (ICAO, August 17, 2016)(no dispute that the claimant was hit on the head with a gate, but ALJ rightfully finds that no "injury" resulted from such event; the fact that respondents' medical expert testified that the event "may" have caused injury is insufficient, and claimant must sustain burden to establish that injury did, in fact, occur).

The ALJ finds that, while an accident may have occurred on March 13, 2017, such did not necessitate medical treatment, which is supported by the medical records and Claimant's testimony. Even if Claimant reported that an accident occurred on March 13, 2017, she consistently testified that she did not seek medical treatment because her shoulder pain was not "severe." That testimony confirms that it is unlikely that Claimant sustained a rotator cuff tear requiring surgery in March 13, 2017, especially when coupled with her testimony that she was able to participate in multiple avocational activities in the year following that incident, including motorcycling, golfing, and industrial sewing.

The ALJ finds that Claimant did not sustain a compensable injury requiring medical treatment or causing disability on March 13, 2017. At most, Claimant experienced a work-related accident that resulted in a muscle strain, which is supported by Claimant's testimony that she was "sore" after the incident, and repeatedly testified that she did not think her injury was "severe." The mild nature of Claimant's strain is supported by the fact that she was able to participate in a golf tournament in June 2017 and play well enough that she won "longest putt." As Dr. Goldman credibly and persuasively testified, if Claimant had sustained a rotator cuff tear as demonstrated in her May 2018 MRI in March 2017, it is highly unlikely that she would have been physically able to play golf, perform industrial sewing, or ride a motorcycle without debilitating pain that would have caused disability, which would be reflected in missed time or medical treatment documentation in the weeks following the incident.

The ALJ finds the fact that Claimant did not raise any complaints or symptoms concerning her right shoulder at her February 2018 urgent care visit inconsistent with sustaining an injury that required medical treatment on March 2017. Claimant's failure to report any symptoms or complaints concerning her right shoulder suggests that any injury necessitating surgery must have occurred in the 3 months prior to her May 3, 2018 presentation.

The ALJ finds Dr. Goldman's testimony credible and persuasive, insofar as he concluded that, even if Claimant's activities in summer 2017 were limited, she was still able to perform them (golfing, motorcycle, industrial sewing) and, if she had MRI findings as found in May 2018, it is highly unlikely that she would have been able to physically perform those tasks, much less work at a new job in a more physically demanding position on a full time basis for over a month.

The ALJ further finds Dr. Goldman's testimony concerning the May 2018 MRI findings persuasive to support that Claimant's injuries were likely sustained in the months leading up to her presentation to Dr. Seidl, and it is highly unlikely that her work

for Employer, which ceased more than a year prior, was the proximate cause of her need for surgery and disability.

The ALJ finds that Claimant did not sustain a work-related injury on March 13, 2017.

ORDER

It is therefore ordered that:

Claimant's claim for benefits is denied and dismissed.

DATED: June 17, 2019

/s/ Kimberly Turnbow
Kimberly J. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman St., 4th Floor
Denver, CO 80203

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether claimant has proven by a preponderance of the evidence that he sustained a compensable injury arising out of and in the course of his employment with employer?

- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that the medical treatment he received was reasonable and necessary to cure and relieve claimant from the effects of the work injury?

- The issues of temporary total disability and temporary partial disability and average weekly wage were preserved for later determination.

FINDINGS OF FACT

1. Claimant was employed with employer as a ranch hand. Claimant testified his job duties included fence building and ditch cleaning. Additionally, claimant would spray the plants when he was out in the field.

2. Claimant testified he worked for employer approximately ninety (90) days. Claimant testified he was not told by employer what personal protection devices he should wear when he was in the field spraying. Claimant testified he son worked for employer and was provided with personal protective devices including gloves, a respirator, and long sleeve shirt and pants. However, claimant was not provided with this same equipment.

3. Claimant testified that that on May 23, 2018, he was mixing chemicals to spray on the plants. According to the evidence, claimant was mixing Eco-Hydro Fish Fertilizer nor the EcoNereo Kelp Plant Food.. Claimant testified he would put the material in tanks and add water to top off the drums. Claimant testified that on May 23, 2018, he spilled the material on himself and was drenched from the waist down. Claimant testified he reported the spill to his supervisor. Claimant testified he continued to work in the field with the wet clothes for one hour.

4. Following the spill, claimant was called to the office and was advised by employer that he was being let go by employer. Claimant was not terminated due to the spill, but was not retained after completing his probationary period of employment. Claimant testified he then called his wife to give him a ride from work and went immediately to the public library to use the computer to look for additional employment. Claimant testified he was in his wet clothes for approximately four hours before getting home and changing.

5. Claimant testified that he got home at approximately 7:00 p.m. and took a shower and noticed a rash developing on his feet. Claimant testified that the rash started progressing and spread up his body to his hands and thumb. Claimant testified the rash was red and irritating and described by claimant as being like chicken pox.

6. Claimant testified that the rash continued to get worse, including the formation of blood blisters on his feet. Claimant testified the blisters remained present for 4-6 months. Claimant presented photographs at hearing depicting the nature of the rash. Claimant further demonstrated at the hearing that remnants of the rash remained even at the date of the hearing.

7. Claimant testified his rash got bad enough that he contacted poison control on March 28, 2018, five days after the spill.

8. Claimant sought medical treatment with Grand Valley Hospital and Medical Center on May 30, 2018 and was examined by Nurse Practitioner ("NP") Steinbach. Claimant reported to NP Steinbach that he experienced a rash and swelling that started after having chemicals fish emulsion, humic acid and kelp and irrigation water spill on him six day ago. Claimant reported the rash first presented on his feet and had progressed up both legs and started to spread to his back, abdomen and arms a few days ago. NP Steinbach ordered blood work and other lab testing to determine the cause of claimant's condition. NP Steinbach noted that Dr. Wright was consulted and provided a diagnosis of wide spread vasculitis caused by exposure to chemicals at work. Claimant was prescribed a 14 day taper of prednisone and instructed to follow up with Dr. Wright in four weeks.

9. Claimant was examined at the Battlement Mesa Medical Center on June 8, 2018. Claimant reported he still had the rash and swelling to his bilateral feet and lower extremities, with the rash to his arms resolved. Claimant reported he still had some blisters on his feet that were popping and peeling. The lab results were reviewed and it was noted that claimant had elevated liver enzymes. Claimant was diagnosed with vasculitis, hypertension and hyperlipidemia.

10. Claimant testified at hearing that he was prescribed a steroid (prednisone) with kept the rash from spreading, but blood blisters started forming after he began taking the steroid. Claimant testified he began feeling better around August, but would still get pain in his feet.

11. Claimant was evaluated by Dr. Wright on August 1, 2018. Dr. Wright noted that claimant's wife had brought pictures of the original blistering reaction three months ago and the diagnosis of vasculitis. Dr. Wright examined claimant and reviewed the results of his lab testing. Dr. Wright diagnosed a lichen planus, which was described as an idiopathic autoimmune hypersensitivity reaction for which the cause is found in less than 3% of cases. Dr. Wright noted that the microbiome of the gut is

sometimes to blame, and recommended a three month trial of a probiotic to help with the condition. Claimant testified he began to take the probiotic on August 2, 2018.

12. Respondents obtained a record review independent medical examination ("IME") with Dr. Jacobs on March 31, 2019. Dr. Jacobs reviewed claimant's medical records, including his pre-existing medical records, and the Occupational Health and Safety Association ("OSHA") hazard forms for the Eco-Hydro Fish Fertilizer and the EcoNereo Kelp Plant Food. Dr. Jacobs noted that the OSHA literature suggests that both of the materials are not a health hazard nor a physical hazard.

13. Dr. Jacobs noted that claimant was diagnosed with lichen planus, which is considered an autoimmune disease. Dr. Jacobs opined that it was not unusual to trigger lichen planus with certain medications, including hydrochlorothiazide, Lisinopril, ibuprofen and proton pump inhibitors. Dr. Jacobs noted that claimant was exposed to these medications prior to his date of injury. Dr. Jacobs opined that claimant's exposure to the fertilizer at work was not related in a causal fashion to the rash he developed and its natural history as described in the medical records.

14. The ALJ credits the reports and opinions of Dr. Wright and Dr. Jacobs and finds that claimant was likely experiencing lichen planus that was idiopathic in its manifestation. The ALJ has found insufficient credible evidence to associate that lichen planus with his exposure to the Eco-Hydro Fish Fertilizer nor the EcoNereo Kelp Plant Food.

15. The ALJ concludes that claimant has failed to demonstrated that it is more probable than not that his lichen planus developed as a result of his exposure to chemicals at work. The ALJ notes that Dr. Wright's report indicates that the development of the lichen planus was of an idiopathic nature and finds this opinion to be credible and persuasive with regard to the issue of compensability.

16. Due to the fact that claimant has failed to establish that it is more probable than not that his lichen planus was related to his employment with employer, claimant's claim for benefits must be denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the

employer. Section 8-43-201, C.R.S., 2006. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with "a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

4. There is no requirement that a claimant present medical evidence to prove the cause of an injury. *See Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997); *Apache Corp. v. Industrial Commission*, 717 P.2d 1000 (Colo. App. 1986). Similarly, the claimant is not required to prove the cause of his injuries by "medical certainty." *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968). To the contrary, the claimant's testimony, if credited, may be sufficient to establish the requisite nexus between an industrial injury and the disability for which benefits are sought. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983). However, to the extent expert medical testimony is presented, it is the ALJ's sole prerogative to assess its weight and sufficiency. *Rockwell International v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990).

5. The determination of whether there is a sufficient "nexus" or causal relationship between the claimant's employment and the injury is one of fact which the ALJ must determine based on the totality of the circumstances. *Moorhead Machinery and Boiler Co. v. Del Valle*, 934 P.2d 861 (Colo. App. 1996). As found, claimant has failed to prove by a preponderance that he suffered compensable injury arising out of and in the course of his employment with employer on May 23, 2018 when he was allegedly exposed to chemicals at work.

6.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable injury arising out of and in the course of his employment with employer. Claimant's claim for benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether claimant has proven by a preponderance of the evidence that he sustained a compensable injury arising out of and in the course of his employment with employer?

- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that the medical treatment he received was reasonable and necessary to cure and relieve claimant from the effects of the work injury?

- The issues of temporary total disability and temporary partial disability and average weekly wage were preserved for later determination.

FINDINGS OF FACT

1. Claimant was employed with employer as a ranch hand. Claimant testified his job duties included fence building and ditch cleaning. Additionally, claimant would spray the plants when he was out in the field.

2. Claimant testified he worked for employer approximately ninety (90) days. Claimant testified he was not told by employer what personal protection devices he should wear when he was in the field spraying. Claimant testified he son worked for employer and was provided with personal protective devices including gloves, a respirator, and long sleeve shirt and pants. However, claimant was not provided with this same equipment.

3. Claimant testified that that on May 23, 2018, he was mixing chemicals to spray on the plants. According to the evidence, claimant was mixing Eco-Hydro Fish Fertilizer nor the EcoNereo Kelp Plant Food.. Claimant testified he would put the material in tanks and add water to top off the drums. Claimant testified that on May 23, 2018, he spilled the material on himself and was drenched from the waist down. Claimant testified he reported the spill to his supervisor. Claimant testified he continued to work in the field with the wet clothes for one hour.

4. Following the spill, claimant was called to the office and was advised by employer that he was being let go by employer. Claimant was not terminated due to the spill, but was not retained after completing his probationary period of employment. Claimant testified he then called his wife to give him a ride from work and went immediately to the public library to use the computer to look for additional employment. Claimant testified he was in his wet clothes for approximately four hours before getting home and changing.

5. Claimant testified that he got home at approximately 7:00 p.m. and took a shower and noticed a rash developing on his feet. Claimant testified that the rash started progressing and spread up his body to his hands and thumb. Claimant testified the rash was red and irritating and described by claimant as being like chicken pox.

6. Claimant testified that the rash continued to get worse, including the formation of blood blisters on his feet. Claimant testified the blisters remained present for 4-6 months. Claimant presented photographs at hearing depicting the nature of the rash. Claimant further demonstrated at the hearing that remnants of the rash remained even at the date of the hearing.

7. Claimant testified his rash got bad enough that he contacted poison control on March 28, 2018, five days after the spill.

8. Claimant sought medical treatment with Grand Valley Hospital and Medical Center on May 30, 2018 and was examined by Nurse Practitioner ("NP") Steinbach. Claimant reported to NP Steinbach that he experienced a rash and swelling that started after having chemicals fish emulsion, humic acid and kelp and irrigation water spill on him six day ago. Claimant reported the rash first presented on his feet and had progressed up both legs and started to spread to his back, abdomen and arms a few days ago. NP Steinbach ordered blood work and other lab testing to determine the cause of claimant's condition. NP Steinbach noted that Dr. Wright was consulted and provided a diagnosis of wide spread vasculitis caused by exposure to chemicals at work. Claimant was prescribed a 14 day taper of prednisone and instructed to follow up with Dr. Wright in four weeks.

9. Claimant was examined at the Battlement Mesa Medical Center on June 8, 2018. Claimant reported he still had the rash and swelling to his bilateral feet and lower extremities, with the rash to his arms resolved. Claimant reported he still had some blisters on his feet that were popping and peeling. The lab results were reviewed and it was noted that claimant had elevated liver enzymes. Claimant was diagnosed with vasculitis, hypertension and hyperlipidemia.

10. Claimant testified at hearing that he was prescribed a steroid (prednisone) with kept the rash from spreading, but blood blisters started forming after he began taking the steroid. Claimant testified he began feeling better around August, but would still get pain in his feet.

11. Claimant was evaluated by Dr. Wright on August 1, 2018. Dr. Wright noted that claimant's wife had brought pictures of the original blistering reaction three months ago and the diagnosis of vasculitis. Dr. Wright examined claimant and reviewed the results of his lab testing. Dr. Wright diagnosed a lichen planus, which was described as an idiopathic autoimmune hypersensitivity reaction for which the cause is found in less than 3% of cases. Dr. Wright noted that the microbiome of the gut is sometimes to blame, and recommended a three month trial of a probiotic to help with the condition. Claimant testified he began to take the probiotic on August 2, 2018.

12. Respondents obtained a record review independent medical examination ("IME") with Dr. Jacobs on March 31, 2019. Dr. Jacobs reviewed claimant's medical records, including his pre-existing medical records, and the Occupational Health and Safety Association ("OSHA") hazard forms for the Eco-Hydro Fish Fertilizer and the EcoNereo Kelp Plant Food. Dr. Jacobs noted that the OSHA literature suggests that both of the materials are not a health hazard nor a physical hazard.

13. Dr. Jacobs noted that claimant was diagnosed with lichen planus, which is considered an autoimmune disease. Dr. Jacobs opined that it was not unusual to trigger lichen planus with certain medications, including hydrochlorothiazide, Lisinopril, ibuprofen and proton pump inhibitors. Dr. Jacobs noted that claimant was exposed to these medications prior to his date of injury. Dr. Jacobs opined that claimant's exposure to the fertilizer at work was not related in a causal fashion to the rash he developed and its natural history as described in the medical records.

14. The ALJ credits the reports and opinions of Dr. Wright and Dr. Jacobs and finds that claimant was likely experiencing lichen planus that was idiopathic in its manifestation. The ALJ has found insufficient credible evidence to associate that lichen planus with his exposure to the Eco-Hydro Fish Fertilizer nor the EcoNereo Kelp Plant Food.

15. The ALJ concludes that claimant has failed to demonstrated that it is more probable than not that his lichen planus developed as a result of his exposure to chemicals at work. The ALJ notes that Dr. Wright's report indicates that the development of the lichen planus was of an idiopathic nature and finds this opinion to be credible and persuasive with regard to the issue of compensability.

16. Due to the fact that claimant has failed to establish that it is more probable than not that his lichen planus was related to his employment with employer, claimant's claim for benefits must be denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2006. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with "a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

4. There is no requirement that a claimant present medical evidence to prove the cause of an injury. *See Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997); *Apache Corp. v. Industrial Commission*, 717 P.2d 1000 (Colo. App. 1986). Similarly, the claimant is not required to prove the cause of his injuries by "medical certainty." *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968). To the contrary, the claimant's testimony, if credited, may be sufficient to establish the requisite nexus between an industrial injury and the disability for which benefits are sought. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983). However, to the extent expert medical testimony is presented, it is the ALJ's sole prerogative to assess its weight and sufficiency. *Rockwell International v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990).

5. The determination of whether there is a sufficient "nexus" or causal relationship between the claimant's employment and the injury is one of fact which the ALJ must determine based on the totality of the circumstances. *Moorhead Machinery and Boiler Co. v. Del Valle*, 934 P.2d 861 (Colo. App. 1996). As found, claimant has failed to prove by a preponderance that he suffered compensable injury arising out of and in the course of his employment with employer on May 23, 2018 when he was allegedly exposed to chemicals at work.

6.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable injury arising out of and in the course of his employment with employer. Claimant's claim for benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-017-566-001 & 5-042-920-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

,

Claimant,

v.

,

Employer,

and

,

Self-Insured Respondent.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on May 29, 2019, in Denver, Colorado. The hearing was digitally recorded (reference: 5/29/19, Courtroom 1, beginning at 1:30 PM, and ending at 3:00 PM).

The Claimant was not present. She was represented by [Redacted], Esq. The Self-Insured Respondent was represented by [Redacted], Esq.

Hereinafter [Redacted] shall be referred to as the “Claimant." [Redacted] shall be referred to as the “Employer.” All other parties shall be referred to by name.

Claimant’s Exhibits 1 through 6 were admitted into evidence, without objection. Respondent’s Exhibits A through D, G and H, and K through R were admitted into evidence, without objection. Respondent’s Exhibits E, F, I and J were admitted into evidence over Claimant’s objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of portions of a proposed decision to both counsel. Claimant’s counsel was

to prepare a proposed decision on the issue of permanent partial disability (PPD); and, Respondent's counsel was to prepare a proposed decision on the issues of reopening and temporary total disability (TTD) benefits. Claimant filed her proposed decision, electronically, on June 4, 2019. Respondent filed its proposed decision on the same date. There were no timely objections to either proposal. After a consideration of the proposed decisions, the ALJ has modified them and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern Respondent's Petition to Reopen on the ground of error or mistake and Claimant's Petition to Reopen on the ground of change of condition. Specifically, Respondent alleges error in the previous Full Findings, dated June 27, 2018 insofar as the award of temporary total disability (TTD) benefits was inconsistent with the Stipulation of the parties and the Findings as to TTD went beyond the undisputed date of maximum medical improvement (MMI); and, ambiguity in the Final Admission of Liability (FAL), which admitted to 12% whole person permanent partial disability (PPD), based on the subsequent deposition opinion of Scott J. Primack, D.O., who in his report of February 21, 2018, indicated that his first rating of 20% included loss of range of motion (ROM). After seeing surveillance film of the Clamant, Dr. Primack modified his PPD rating by subtracting the ROM component, thus, modifying his PPD opinion to 12% whole person upon which Respondent filed the FAL Claimant contends that the Respondent is required to admit to the impairment rating of 20% first determined by Dr. Primack, in the medical report of February 21, 2018 upon which Respondent is obliged to admit.

The Respondent bears the burden of proof, by a preponderance of the evidence on the issue of reopening based on error or mistake. The Claimant bears the burden on the issue of increased PPD.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. On June 1, 2016, the Claimant suffered an admitted, work related injury to her low back when she bent over a produce ben to lift out a watermelon. She felt immediate pain in her low back. She was treated conservatively for less than two months. She was placed at MMI on September 15, 2016, with no permanent impairment and no permanent work restrictions.

2. Respondent filed a FAL on February 17, 2017, admitting for zero PPD.

3. The Claimant suffered a worsening of her condition at the beginning of February 2017. She was doing her regular job duties that included lifting heavy boxes. She suffered an increase in low back pain and an increase in right radicular pain. Her pain was so severe that she sought medical treatment on February 8, 2017 from her primary care physician, Dr. Baker.

4. On March 28, 2017, the Claimant was examined by a workers' compensation physician, Robert Broghammer, M.D.

5. Dr. Broghammer referred the Claimant to Scott Primack, D.O., who examined the Claimant on April 26, 2017 and found she was a reasonable candidate for surgical intervention.

6. May 13, 2017, the Claimant's pain became so extreme that she reported to the emergency room (ER). She underwent a surgical repair on May 13, 2017, performed by Michael Rauzzino, M.D. Despite the surgical intervention, the Claimant continued to have back pain and it was determined she had a recurrent disc herniation. The Claimant had a second surgery on June 7, 2017, again performed by Dr. Rauzzino.

7. The Clamant requested a hearing on a Petition to Reopen W.C. No. 5-017-566-01 or in the alternative a determination that the Claimant suffered a new work related injury on February 6, 2017. The matter proceeded to hearing on April 24, 2018 and June 4, 2018 before the undersigned ALJ. The ALJ ordered W.C. No. 5-017-566-001 re-opened by decision of Jne 27, 2018.

8. Respondent appealed the Findings of Fact, Conclusions of Law and Order entered June 27, 2018. The ALJ's Order was affirmed by The Industrial Claim Appeals Office (ICAO) on December 20, 2018.

Respondent's Petition to Reopen

9. At the commencement of the hearing on April 24, 2018, the parties entered three stipulations on the record: (1) Claimant's average weekly wage (AWW) was $616.70 from June 1, 2016 through May 31, 2017; (2) Claimant's AWW is $871.24 beginning June 1, 2017; and (3) If it is determined that the claim should be reopened, then Claimant is owed temporary disability benefits from March 28, 2017, and continuing.

10. At the conclusion of the hearing on June 4, 2018, this Administrative Law Judge entered an oral ruling from the bench, finding that:

> "[t]he claimant has proven by a preponderance of the evidence that her condition has worsened in the original 5-017-566. And she's failed to prove by a preponderance of the evidence that she sustained a new injury on February 6, 2017. . . And based on the stipulations to reopen the

> claimant’s -- average weekly wage, well, I'll pinpoint that the worsening is at February 6, 2017, that's a transition point. So the claimant's average weekly wage was 616.70 from February 6, 2017 until May 31st, 2017, and then it went up to 871.24. The claimant I have, and correct me if I'm wrong here because it's been a while, claimant was temporarily and totally disabled from March 28, 2017 and continuing. And there's a variable temporary total rate because of increased average weekly wage.”

[Exhibit B, pp. 20-21].

11. The ALJ requested that Claimant’s counsel prepare proposed Full Findings of Fact, Conclusions of Law and Order, which Claimant’s counsel submitted on June 11, 2018 [Exhibit B, p. 73]. Claimant’s Proposed Findings of Fact, Conclusions of Law and Order included a section entitled “Stipulations,” in which Claimant’s counsel re-iterated three stipulations entered in the record at the hearing on April 24, 2018

12. The ALJ issued Full Findings of Fact, Conclusions of Law and Order on June 28, 2018, which reiterated the parties’ three stipulations as the first three Findings of Fact:

> ¶ 1 The Claimant's AWW was $616.70 from June 1, 2016 through May 31, 2017;
>
> ¶ 2 The Claimant's AWW is $871.24 beginning June 1, 2017; and
>
> ¶ 3 If it is determined that the claim should be reopened, the Claimant is owed TTD benefits from March 28, 2017 and continuing.

[Exhibit D, p. 38].

13. In ¶ 21 of the “Findings of Fact”, the Administrative Law Judge found that “[t]he Claimant has proven, by a preponderance of the evidence that she experienced a worsening (change) of her condition, related to the admitted injury of June 1, 2016, after the finality of the FAL therein. Therefore, she has proven that a reopening of W.C. No. 5-017-566-01 is warranted.” [Exhibit D, p. 41]. Although the Administrative Law Judge did not provide a specific date for reopening, he stated it was “after the finality of the FAL”, which became final on March 20, 2018. Finding of Fact ¶ 23 then stated that “based on the stipulations of the parties … Claimant was and is temporarily and totally disabled from March 28, 2017 and continuing...” [Exhibit D, p. 41].

14. Paragraph f of the “Conclusions of Law” section of the Full Findings of Fact, Conclusions of Law and Order starts by stating that “the Claimant was and is

temporarily and totally disabled from March 28, 2017 and continuing." [Exhibit F, p. 44]. However, the paragraph then goes on to state "[t]he period from June 1, 2016, through May 31, 2017, both dates inclusive, equals 365 days. The period from June 1, 2017, through the hearing date, June 4, 2018, both dates inclusive, equals 368 days. Based on the AWW through May 31, 2017, retroactive, past due TTD benefits in the aggregate amount of $21,436.45. Based on the AWW from June 1, 2017, through the hearing date, June 4, 2018, retroactive, past due TTD benefits in the aggregate amount of $30,536.64, are due." [*Id*.]. Thus, the Administrative Law Judge entered contradictory conclusions, as he first stated that Temporary Total Disability benefits begin on March 28, 2017, but then calculated Temporary Total Disability benefits beginning June 1, 2016.

15. Paragraph D of the "Order" section of the Full Findings of Fact, Conclusions of Law and Order states "For the period from June 1, 2016, through May 31, 2017, both dates inclusive, equals 365 days, Respondent shall pay the Claimant retroactive, past due temporary total disability benefits in the aggregate subtotal amount of $21,436.45. For the period from June 1, 2017, through the hearing date, June 4, 2018, both dates inclusive, equals 368 days, Respondent shall pay the Claimant retroactive, past due temporary total disability benefits in the aggregate subtotal amount of $30,536.64. Respondent shall pay the Claimant a grand total of retroactive, past due temporary total disability benefits of $51,973.09, which is payable retroactively and forthwith." [Exhibit D, p. 45].

16. Paragraph F of the "Conclusions of Law" and paragraph D of the "Order" sections of the Full Findings of Fact, Conclusions of Law and Order was an error and mistake, as the parties clearly stipulated that temporary total disability benefits would begin on March 28, 2017, if the claim was reopened pursuant to Claimant's request.

Temporary Total Disability Benefits

17. The Full Findings of Fact, Conclusions of Law and Order dated June 28, 2018, which awarded TTD benefits retroactive to June 1, 2017, is reopened. Consistent with the parties' stipulations, which the ALJ found as fact in the Full Findings of Fact, Conclusions of Law and Order dated June 28, 2018, the Claimant is entitled to TTD benefits beginning on March 28, 2017, through May 31, 2017, both dates inclusive, a total of 65 days. For that period of time, Claimant's Average Weekly Wage (AWW) was $616.70, resulting in a TTD benefit rate of $411.13 per week. Thus, the Claimant is entitled to $3,817.67 in TTD benefits from March 28, 2017, through May 31, 2017, both dates inclusive.

18. The parties stipulated that the Claimant's AWW increased to $871.21 effective June 1, 2017, resulting in a TTD benefits rate of 580.81 per week. Claimant's authorized treating physician (ATP), Scott J. Primack, D.O., placed the Claimant at maximum medical improvement (MMI) on February 21, 2018. The period from June 1, 2017, through February 21, 2018, both dates inclusive, is 266 days. Thus, Claimant is

entitled to TTTD benefits in the amount of $22,070.65 for the period from June 1, 2017, through February 21, 2018, both dates inclusive.

19. Therefore, from the date the claim was reopened on Claimant's petition to reopen, she is entitled to TTD benefits in the grand total amount of $25,888.32.

Permanent Partial Disability

20. Respondent filed a FAL, dated January 11, 2019. The FAL admitted to a 12% whole person impairment rating. Under the Remarks and basis for permanent disability award it states, "Pursuant to Dr. Primack's deposition taken 4/16/2018, and his report dated February 21, 2018, Claimant sustained a 12% whole person impairment rating for specific disorder." The ALJ finds that the FAL was based on Dr. Primack's changed opinion of 12% whole person, expressed in his evidentiary deposition, which excluded a rating for ROM, when his report rated PPD at 20% whole person and included a rating for ROM. Claimant contends that the first 20% PPD rating is the appropriate rating because it was based on Dr. Primack's examination of the Claimant. Dr. Primack changed his rating by subtracting the ROM component after watching surveillance videos. The question is: which rating is more reliable and credible.

Ultimate Findings

21. The official and first opinion of Dr. Primack on PPD, expressed in his report, of 20% whole person is more credible and persuasive than his spontaneous declaration at the evidentiary deposition, deducting the range-of-motion portion (ROM) and reducing his PPD rating to 12% because it is more thoroughly and objectively explained. His subsequent reduction to 12% is based upon Dr. Primack's subjective viewing of surveillance film and is entitled to little, if any, weight.

22. Between internally conflicting opinions of Dr. Primack, the ALJ makes a rational choice, based on substantial evidence, to accept Dr. Primack's official report opinion of 20% whole person rating, and to reject his second rating of 12% whole person.

23. The ALJ finds that the Claimant has proven, by a preponderance of the evidence that Dr. Primack's first rating of 20% whole person is more reliable and credible because it was based on an objective examination of the Claimant for purposes of a permanent medical impairment rating. The second rating of 12%, expressed in Dr. Primack's evidentiary deposition was subjectively based on his eyeball viewing surveillance film, which had no persuasive indicia of objective criteria upon which the changed opinion was based.

24. The ALJ's award of TTD benefits retroactive to June 1, 2017, was an error or mistake because the parties had stipulated that if the claim was reopened pursuant to Claimant's request TTD benefits would begin on March 28, 2017. Therefore, Respondent sustained its burden of proving an error or mistake, in the Findings of Fact, Conclusions of Law and Order dated June 28, 2018, and the case should be reopened

to correct that error and mistake.

25. The Respondent's Petition to Reopen on the ground of error or mistake should be granted, but not for the outcome desired by the Respondent. The error was the admission of 12% whole person when, in fact, it should have been 20%.

26. Respondent alleges an error that could not have been addressed by following Division Independent Medical Examination (DIME) procedures in a timely fashion. Consequently, the only avenue open was a Petition to Reopen, based on error or mistake. The ALJ finds that reopening is appropriate and the outcome sought by the Claimant is appropriate.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, Dr.

Primack's first rating of 20% whole person was more reliable and credible because it was based on an objective examination of the Claimant for purposes of a permanent medical impairment rating. The second rating of 12%, expressed in Dr. Primack's evidentiary deposition was subjectively based on his eyeball viewing surveillance film, which had no persuasive indicia of objective criteria upon which the changed opinion was based. As found, The official and first opinion of Dr. Primack on PPD, expressed in his report, of 20% whole person is more credible and persuasive than his spontaneous declaration at the evidentiary deposition, deducting the range-of-motion portion (ROM) and reducing his PPD rating to 12% because it is more thoroughly and objectively explained. His subsequent reduction to 12% is based upon Dr. Primack's subjective viewing of surveillance film and is entitled to little, if any, weight.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between internally conflicting opinions of Dr. Primack, the ALJ made a rational choice, based on substantial evidence, to accept Dr. Primack's first opinion of 20% whole person PPD, and to reject his second opinion of 12% whole person PPD.

Petition to Reopen

c. Under § 8-43-303(1), C.R.S., after MMI and within six years of the date of injury, an ALJ may re-open a claim based on fraud, an overpayment, **an error, a mistake,** or a change in condition. See *El Paso County Department of Social Services v. Donn,* 865 P.2d 877 (Colo. App. 1993); *Burke v. Indus. Claim Appeals Office,* 905 P. 2d 1 (Colo. App. 1994); *Hanna v. Print Express, Inc.,* 77 P. 3d 863 (Colo. App. 2003); *Donohoe v. ENT Federal Credit Union,* W.C. No. 4-171-210 [Indus. Claim Appeals Office (ICAO) September 15, 1995]. This is so because MMI is the point in time when no further medical care is reasonably expected to improve the condition. § 8-40-101(11.5), C.R.S. (2009); *City of Colorado Springs v. Indus. Claim Appeals Office,* 954

P.2d 637 (Colo. App. 1997). As found, Respondent alleged an error that could not have been addressed by following Division Independent Medical Examination (DIME) procedures in a timely fashion. Consequently, the only avenue open was a Petition to Reopen, based on error or mistake. As found, reopening is appropriate and the PPD outcome sought by the Claimant is appropriate.

Burden of Proof

d The burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (CIAO), March 20, 2002]. *Also see Ortiz v. Principe,* 274 Ph.D. 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 Pd.D. 1116 (Colo. 1984). As found, Respondent has satisfied its burden with respect to reopening; and TTD. Claimant has satisfied her burden with respect to degree of PPD, *i.e.,* 20% whole person.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. W.C. No. 5-017-566-001 is hereby reopened, based on error or mistake.

B. The Claimant sustained permanent medical impairment of 20% whole person, and Respondent shall accordingly pay the Claimant additional permanent medical impairment benefits, based on 20% whole person.

C. Respondent shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts of indemnity benefits due and not paid when due.

DATED this 13th day of June 2019.

EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm.*

STATE OF COLORADO **OFFICE OF ADMINISTRATIVE COURTS** **1525 Sherman Street, 4th Floor, Denver, CO 80203**	
In the Matter of the Workers' Compensation Claim of: **M** Claimant, vs. **D,** Employer, AND **C,** Insurer, Respondents	▲ **COURT USE ONLY** ▲ **CASE NUMBER:** **WC 5-081-669-002**

FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

Hearing in this matter was held on May 16, 2019, before Administrative Law Judge Margot Jones. Claimant was present and was represented by _____, Esq. Respondents were represented by _____, Esq. The hearing was digitally recorded beginning at 1:30 p.m. IN Courtroom 3. The parties' exhibits 1-8 and A-M were made part of the record.

In this order, the Judge refers to M as Claimant, to Respondent Employer D as Employer, and to Respondent-Insurer C as Insurer. The Judge may refer to Employer and Insurer collectively as Respondents.

Also in this order, the Judge may use the following acronyms: C.R.S. refers to Colorado Revised Statutes (2018); the Workers' Compensation Act refers to the Workers' Compensation Act of Colorado, §§8-40-101, et seq., supra; OAC refers to the Office of Administrative Courts; OACRP refers to the Office of Administrative Courts Rules of Procedure, 1 CCR 104-1; and WCRP refers to Workers' Compensation Rules of Procedure, 7 Code Colo. Reg. 1101-3.

ISSUES

Whether claimant sustained a compensable injury on June 21, 2018, arising out of and in the course and scope of his employment?

FINDINGS OF FACT

1. Claimant is employed as a locomotive engineer for Employer.

2. Claimant alleges that he sustained an injury to his left shoulder while pulling a train horn lever on June 21, 2018.

3. Claimant stipulated at hearing that he is not alleging a cumulative trauma injury, but rather an isolated injury which occurred on June 21, 2018.

4. Claimant was required to pull a train horn lever four times at each highway grade crossing. The sequence is two long pulls, one short pull, and one long pull.

5. Pursuant to a Job Demands Analysis and Risk Factor Analysis completed by Genex on April 27, 2018, the force required to pull a train horn is three to five pounds.

6. Pursuant to the Pull Force Study of Denver Transit Train Horns completed by Genex on October 31, 2018, the force required to pull a train horn varies from 14 pounds to 20 pounds depending on the train.

7. At approximately 3:30 a.m. on June 21, 2018, Claimant was operating a train which was traveling from Union Station to Denver International Airport. As Claimant crossed Chambers Road and operating the train horn consistent with his responsibilities as a train engineer, he allegedly experienced a pop in his left shoulder followed by immediate pain.

8. Claimant stopped the train and called dispatch. He testified that he told the dispatcher that he was able to operate the train until he reached the airport, but that he would not be able to operate the train on its return trip to Union Station.

9. Upon arrival at Denver International Airport, a transportation supervisor drove Claimant back to Union Station to obtain his belonging and then to St. Anthony Hospital. Claimant was given pain medications and discharged with instructions to follow-up on an outpatient basis.

10. After he was discharged from the hospital, Claimant sought treatment with Dr. Kern and later Dr. Williams. He was referred for an MRI of the left shoulder.

11. Claimant underwent an MRI of the left shoulder on July 2, 2018. It revealed a minimal area of near full-thickness articular sided tearing of the posterior fibers of the

supraspinatus just proximal to the footprint measuring 2 mm in AP dimensions and a diminutive anterior/inferior labrum which may have been related to old partial labral tearing. With regards to the biceps and labrum, mild long head biceps tendinopathy is noted. The distal tendon was well seated in the bicipital groove. The superior labrum was intact.

12. Respondents' expert, Timothy O'Brien, M.D. credibly testified at hearing that the MRI findings were not acute and were the opposite of what would be expected with an acute injury. He noted age related desiccation. He further noted that the biceps tendon appeared normal and there were no objective findings either degenerative or acute. Dr. O'Brien testified that the MRI is the most accurate diagnostic available.

13. Claimant treated with Rajesh Bazaz, M.D. on August 24, 2018. Dr. Bazaz noted that Claimant had failed to improve with conservative treatment. He recommended a left shoulder arthroscopy with subacromial decompression and a rotator cuff debridement. He noted depending on the percentage thickness, a rotator cuff repair may be indicated which would be an intraoperative decision.

14. Claimant underwent surgery performed by Dr. Bazaz on December 27, 2018. During the surgery, Dr. Bazaz found no evidence of partial-thickness or full thickness tearing of the rotator cuff. He noted irregularities of the biceps insertion on the superior labrum and performed a biceps tenodesis along with a subacromial decompression.

15. Dr. O'Brien evaluated Claimant for an independent medical examination (IME) on November 8, 2018.

16. Dr. O'Brien opined that Claimant "did not sustain an isolated injury to his shoulder on June 21, 2018 while employed as a train driver."

17. Dr. O'Brien explained that the MRI findings related to personal health issues, were age appropriate, and were biomechanically insignificant. Dr. O'Brien opined that, "A vast majority of people in Mr. Spector's age group have similar MRI scan findings and yet have no shoulder pain."

18. Dr. O'Brien noted, "[w]hile partial thickness rotator cuff tears can intermittently be painful and while partial thickness labral tears can also intermittently be painful, the likelihood that those MRI scan changes could have resulted in 10/10 pain that required immobilization and resulted in such significant disability that [Claimant] had to be helped from the train to his car, is nearly impossible. In my opinion, [Claimant's] behavior following an innocuous activity such as pulling on a brake lever with one's arm positioned at the level of the abdomen/chest have no physiologic or anatomic explanation. Certainly, the MRI scan demonstrates no bleeding, accumulation of inflammatory fluid, and no significant pathoanatomy that might explain this level of pain and dysfunction as that complained of by [Claimant] on June 21, 2018." (Ex. J, p.152)

19. Dr. O'Brien testified that interoperatively, Dr. Bazaz observed an injured biceps tendon with a normal rotator cuff.

20. Dr. O'Brien testified that the biceps tendon was normal when the MRI was obtained on July 2, 2018. He indicated that the biceps tendon injury reported by Dr. Bazaz was not observed on the MRI. Dr. O'Brien noted that the MRI showed that the internal portion of the bicep was normal. He testified that any incident on June 21, 2018 did not cause the injury reported by Dr. Bazaz. If a biceps tendon injury was present, it would have been observed on the MRI. Dr. O'Brien testified that the MRI appearance was the opposite of what would be observed if Claimant suffered an acute injury.

21. Claimant offered no explanation for the absence of a biceps tendon injury on the MRI. As Dr. O'Brien testified, if the biceps tendon was injured on June 21, 2018, it would have appeared on the July 2, 2018 MRI.

22. Dr. O'Brien testified that the mechanism of injury for a biceps tendon injury, a rotator cuff injury, or labral injury are similar and what injures one will frequently injure another. While he examined Claimant under the assumption of an alleged rotator cuff injury, he testified that the analysis would be the same for a biceps tendon injury.

23. Dr. O'Brien testified that the position Claimant was in at the time of the alleged injury was a safe position for the rotator cuff. The mechanism of injury did not engage the rotator cuff or biceps tendon to any extent, but rather engaged the deltoid. The movement in question was a deltoid muscle force and not a rotator cuff muscle force.

24. When Dr. O'Brien examined claimant, the October 31, 2018 Pull Force Study was not available. However, Dr. O'Brien testified the difference in pull force noted on the April 27, 2018 Job Demands Analysis and Risk Factor Analysis and the pull force noted on the October 31, 2018 Pull Force Study does not make any difference in his analysis.

25. Dr. O'Brien testified that the popping Claimant heard did not correlate with a new onset of injury when there were no objective findings.

26. Dr. O'Brien testified that feeling pain does not correlate with an objective finding of injury. There was simply no evidence of tissue breakage or yielding.

27. Dr. O'Brien testified Dr. Williams and Dr. Bazaz did not perform a Level II causation analysis.

28. Dr. O'Brien opined, "[w]hen there is no correlation between the level of pain of which a person is complaining and the level of disability it is causing relative to the objective findings that are observed at the time of the onset of those complaints, in my opinion have to be considered nonorganically based." (Ex. J, p. 153)

29. Dr. O'Brien continued, ""[w]hen I look back at [Claimant's] records and consider the fact that he was merely pulling on a lever (with negligible amounts of

energy or force required to do so) with his left arm positioned at nipple height – an essentially innocuous and non-injurious activity – and then try to reconcile his complaints of 10/10 pain that prevented him from walking independently to his car, I am unable to do so." (Ex. J, p. 153) 30. Dr. O'Brien opined, "I believe [Claimant's] complaints of pain are nonorganically based and they are being generated by secondary gain issues." (Ex. J, p.153)

CONCLUSIONS OF LAW

1. The purpose of the Act is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

3. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO,* 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ*. Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S.

4. With regard to compensability, Section 8-43-201 states, "A claimant in a workers' compensation claim shall have the burden of proving entitlement to benefits by a preponderance of the evidence." The claimant always carries the initial burden of

proof in a workers' compensation case." *DiCamillo v. Gosney & Sons, Inc*., W.C. No. 4-328-945 (I.C.A.O. May 21, 1998).

5. Black's Law Dictionary (9th Ed. 2009) defines "burden of proof" as follows: "A party's duty to prove a disputed assertion. The burden of proof includes both the burden of persuasion and the burden of production."

6. The preponderance standard is met when "the existence of a contested fact is more probable than its nonexistence*." Industrial Com. of Colorado v. Jones,* 688 P.2d 1116 (Colo. 1984); *People v. Taylor*, 618 P.2d 1127 (Colo. 1980).

7. The question of whether Claimant met his burden of proof to establish a compensable injury is one of fact for determination by the judge. *See Faulkner v. I.C.A.O*., 12 P. 3d 844 (Colo. App. 2000).

8. If a party has the burden of proof by a preponderance of the evidence, and the evidence presented weighs evenly on both sides, the finder of fact must resolve the question against the party having the burden of proof. *Town of Castle Rock v. I.C.A.O*., 2013 COA 109 (Colo. App. 2013); *Schocke v. State*, 719 P.2d 361 (Colo. App. 1986).

9. A claimant must prove by a preponderance of the evidence that his injury arose out of the course and scope of his employment with employer. Section 8-41-301(1)(b), C.R.S.; *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). An injury "arises out of and in the course of" employment when the origins of the injury are sufficiently related to the conditions and circumstances under which the employee usually performs his or her job functions to be considered part of the employee's services to the employer. *General Cable Co. v. Industrial Claim Appeals Office,* 878 P.2d 118 (Colo. App. 1994).

10. Merely feeling pain at work in and of itself is not "compensable." *See Miranda v. Best Western Rio Grande Inn,* W.C. No. 4-663-169 (I.C.A.O. April 11, 2007). "An incident which merely elicits pain symptoms caused by a preexisting condition does not compel a finding that the claimant has sustained a compensable injury." *See also F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App 1995).

11. Claimant failed to meet his burden of proving that it is more probably true than not that he suffered an injury to his left shoulder either to the rotator cuff or the biceps tendon in the course and scope of his employment on June 21, 2018. The persuasive and credible evidence shows that Claimant's symptoms are degenerative age related conditions.

12. Claimant did not sustain any injury to his left shoulder in the course and scope of his employment on June 21, 2018.

13. The ALJ finds the testimony of Dr. O'Brien as to the issue of causation of the left shoulder symptoms to be credible and persuasive.

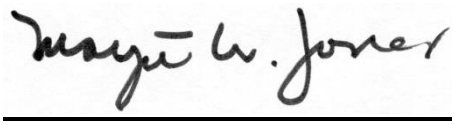
14. The ALJ rejects the opinions of Dr. Williams and Dr. Bazaz. Neither physician performed a Level II Causation Analysis. Neither physician offered an explanation for the lack of correlation of findings between the MRI and the operative report.

ORDER

Claimant's claim for workers' compensation benefits arising out of the alleged June 21, 2018 injury is hereby denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 19, 2019



MARGOT W. JONES
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-086-536-001

ISSUES

- Whether claimant has proven by a preponderance of the evidence that the reverse total shoulder replacement surgery recommended by Dr. Knackendoffel is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury?

FINDINGS OF FACT

1. Claimant sustained an admitted injury on August 27, 2018 when he tripped over rebar while walking on a job site and fell onto his right shoulder. Claimant testified he was carrying a piece of equipment (a splicer) in one hand and a tool bag in his other hand when he fell. Claimant testified he landed on his right shoulder and his right hand went numb including his right thumb and forefinger.

2. Claimant testified he reported his injury to employer immediately and sought medical treatment at Paonia Hospital on the day of the injury. Claimant was initially seen at West Elk Walk-In clinic before being instructed to go to the emergency room ("ER"). Claimant was evaluated at the Delta County Memorial Hospital ER on August 27, 2018. Claimant reported a history of falling onto his right shoulder and noted significant limitation in his range of motion. Claimant reported a distant history of a glenoid labrum tear that was surgically treated. Claimant was referred for x-rays. The x-rays revealed severe arthritic changes in the right shoulder predominantly within the glenohumeral articulation. No acute fracture was noted. Claimant was instructed to follow up with a workers' compensation physician or an orthopedic surgeon.

3. Claimant was evaluated by Dr. Wade on August 28, 2018. Dr. Wade noted claimant was continuing to complain of sever right shoulder pain since his fall the previous day. Claimant reported to Dr. Wade a history of right shoulder pain approximately 19 years ago which required rotator cuff surgery. Dr. Wade evaluated claimant and referred him for a magnetic resonance image ("MRI") of the right shoulder.

4. The MRI was performed on September 4, 2018. The MRI demonstrated marked arthrosis of the glenohumeral joint for a patient of claimant's age. The MRI also showed a large mulilocculated cystic lesion residing with the muscle belly of the supraspinatus. The MRI also revealed advanced acromioclavicular ("AC") joint degeneratve changes, tendinosis subscaularis witout tear and tendinosis biceps tendon.

5. Claimant returned to Dr. Wade on September 11, 2018 after the MRI. Dr. Wade reviewed the results of the MRI and recommended claimant continue with the shoulder immobilizer and referred claimant to Rocky Mountain Orthopedics for evaluation.

6. Respondents obtained a physician advisor report from Dr. Erickson on September 14, 2018. Dr. Erickson reviewed the medical records and opined that claimant did not report a significant blow to the right shoulder in the fall and opined claimant likely suffered a minor contusion or a sprain or strain of the right shoulder in the fall. Dr. Erickson noted that claimant's MRI showed advanced arthritis of the AC joint, some mild rotator cuff tendinopathy, and impingement findings along with some cysts in the muscle belly of the supraspinatus, but the major issue was the marked arthrosis of the glenohumeral joint. Dr. Erickson opined that if claimant continued to have difficulties with his shoulder, it was not because of the fall, but instead due to the advanced glenohumeral arthrosis with was a pre-existing condition. Dr. Erickson also opined that there was no evidence of aggravation or worsening and the fall did not accelerate the disease process.

7. Claimant was examined by Dr. Knackendoffel on September 19, 2018. Claimant reported to Dr. Knackendoffel a consistent accident history of falling while at work leading to his current symptoms of pain, numbness, tingling, locking, swelling, weakness, and decreased range of motion. Claimant also reported numbness and tingli9g in the median distribution of the right hand. Dr. Knackedoffel reviewed claimant's MRI exam and performed a physical evaluation and diagnosed claimant with severe glenohumeral arthritis of the right shoulder, which was noted to be chronic. Dr. Knackendoffel further opined that the claimant's osteoarthritis was acutely aggravated by the fall. Dr. Knackendoffel diagnosed claimant with severe tendinopathy of the distal supraspinatus and severe cystic degeneration of the muscle belly of the supraspinatus.

8. Dr. Knackendoffel noted claimant's prior surgical history involving the shoulder and acknowledged the chronic arthritis of the shoulder. Dr. Knackendoffel opined, however, that claimant's condition was severely aggravated by the recent fall. Dr. Knackendoffel recommended a computed tomography ("CT") scan of the right shoulder with extraction of the humeral head. Dr. Knackendoffel opined that the optimal surgical procedure would be a reverse total shoulder arthroplasty, but noted that claimant would be young for this type of procedure. Dr. Knackendoffel noted that a conventional total shoulder arthroplasty would probably not facilitate adequate active flexion of the right shoulder and noted that given claimant's significant injury to his right shoulder superimposed upon the chronic glenohumeral degeneration, claimant would be unlikely to return to active physical labor. Dr. Knackendoffel also recommended physical therapy.

9. The CT scan was performed on September 26, 2018. The CT scan demonstrated severe right glenohumeral osteroarthritis with mild right acromioclavicular arthritis.

10. Claimant returned to Dr. Knackendoffel on September 27, 2018. Dr. Knackendoffel reviewed the results of the CT scan and noted that the CT scan demonstrated severe osteoarthritis of the glenohumeral joint with prominence cysts within the superior glenoid. Dr. Knackendoffel again recommended the reverse total shoulder arthroplasty.

11. Respondents obtained a second physician advisor opinion from Dr. Erickson on October 12, 2018. Dr. Erickson noted the recommendations by Dr. Knackendoffel and opined that it was inappropriate to make a recommendation for a reverse arthroplasty based on a CT scan and physical examination. Dr. Erickson recommended an MRI arthrogram to adequately assess the status of the rotator cuff. Dr. Erickson further opined that the fall did not cause claimant's significant degenerative arthritis, nor did it aggravate of worsen claimant's pre-existing condition.

12. Claimant continued to treat with Dr. Wade pending the surgical recommendation. Claimant also continued to participate in physical therapy.

13. Claimant returned to Dr. Knackendoffel on November 15, 2018. Dr. Knackendoffel noted that claimant's surgery was denied and recommended a cortisone and steroid injection in the shoulder. The injection was performed by Dr. Knackendoffel on that day. Claimant followed up with Dr. Wade on November 19, 2018 and reported that the injection did not help at all. Dr. Wade recommended claimant continue physical therapy.

14. Claimant returned to Dr. Wade on December 11, 2018. Dr. Wade noted claimant continued with his physical therapy which was helping. Claimant again returned to Dr. Wade on January 14, 2019. Dr. Wade noted that claimant's range of motion of his shoulder was getting worse.

15. Respondents referred claimant for an independent medical examination ("IME") of claimant on January 19, 2019 with Dr. Failinger. Dr. Failinger reviewed claimant's medical records, obtained a medical history and performed a physical examination in connection with his IME.

16. Claimant reported a consistent accident history to Dr. Failinger of falling when he tripped over rebar and hitting his right side on the rocks on the ground as he held on to the splicer. Dr. Failinger noted limited range of motion on examination with no obvious rupture of the long head of the biceps. Dr. Failinger noted that claimant's right shoulder condition appeared to be an exacerbation of the severe pre-existing glenohumeral degenerative joint disease following his previous shoulder surgery in 1999. Dr. Failinger noted that claimant reported at the IME that he fell with a direct blow to the shoulder and the intake clinic note on August 27, 2018 reports that claimant fell with injury to the shoulder and no description of the actual impact area. Dr. Failinger opined that the cause of the shoulder condition would be severe degenerative joint disease which appeared to have been exacerbated by the fall on August 27, 2018. Dr. Failinger recommended reviewing the films that had been taken to determine if there was an actual change in the patient's pathology.

17. Claimant returned to Dr. Knackendoffel on February 13, 2019. Dr. Knackendoffel noted claimant was unable to perform work with his right arm above chest level. Dr. Knackendoffel again recommended the reverse total shoulder replacement surgery with the understanding that claimant would be unable to return ot heavy labor employment following the surgery.

18. Claimant again returned to Dr. Knackendoffel on March 7, 2019. Dr. Knackendoffel noted claimant continued to have pain in his right shoulder which had become more bothersome. Dr. Knackendoffel opined that the claimant's rotator cuff was not functional and probably had significant fatty degeneration. Dr. Knackendoffel opined that a standard shoulder replacement would not be likely to be stable secondary to rotator cuff weakness. Dr. Knackendoffel recommended an MRI arthrogram of the right shoulder.

19. Dr. Failinger issued an addendum to his report on March 15, 2019 after reviewing the imaging studies, including the x-rays from 2012 and 2015 along with the x-ray from August 27, 2018 and MRI from September 4, 2018. Dr. Failinger opined after reviewing the x-rays that there was no new pathology created by the fall and that the rotator cuff appeared to be intact. Dr. Failinger opined that the fall could cause a contusion only and any ongoing pain after a 6-8 week period would be due to the pre-existing arthritis which is incredibly severe.

20. Claimant testified at hearing regarding the condition of his shoulder prior to his work injury. Claimant testified he had a prior injury to his right shoulder associated with coal mining. Claimant testified he had surgery on his shoulder and the problems with his shoulder resolved. Claimant testified that after he recovered from the shoulder surgery he was able to perform his work duties for employer without restriction up until his August 27, 2018 work injury. The ALJ finds claimant's testimony regarding the physical condition of his right shoulder to be credible.

21. Dr. Knackendoffel testified at hearing in this matter. Dr. Knackendoffel testified that based on his physical examination of claimant, claimant had stiffness of the right shoulder with extreme weakness of the rotator cuff musculature. Dr. Knackendoffel testified that the MRI exams showed an extremely arthritic joint with the findings appearing to be longstanding problems. Dr. Knackendoffel testified that there were no findings on either MRI exam that represented acute findings related to the fall at work.

22. Dr. Knackendoffel opined at hearing that the fall claimant sustained on August 27, 2018 exacerbated claimants underlying shoulder condition and permanently aggravated the shoulder condition. Dr. Knackendoffel testified that this opinion was based on claimant's statements to him during the examination process. Dr. Knackendoffel testified that if claimant did not experience the fall at work on August 27, 2018, claimant would have likely eventually still needed a reverse total shoulder replacement surgery, but not yet.

23. Dr. Failinger testified at hearing in this matter. Dr. Failinger testified that the multiloculated cysts in the supraspinatus that were present on the MRI film are chronic in nature and would not develop in the weeks between the injury and the MRI film. Dr. Failinger testified that the nature of the changes in claimant's shoulder demonstrated in the x-rays and MRI were chronic in nature and represented severe pre-existing arthritis. Dr. Failinger testified that the chronic nature of claimant's shoulder

condition would have warranted surgery if claimant's symptoms correlated with the pathology.

24. Dr. Failinger testified that the recommended reverse shoulder arthroplasty was developed for situations in which the patient does not have a functioning rotator cuff and abnormal motion mechanics from the lack of a functioning rotator cuff. Dr. Failinger testified he agreed with Dr. Erickson that in claimant's case, he did not appear to have a significant rotator cuff tear. Dr. Failinger testified that the x-rays and MRI films demonstrated the severity of the arthritis and there were no signs of anything acute involving the shoulder, or that the shoulder was affected at all by the fall. Dr. Failinger opined that the fall did not accelerate, change, or alter claimant's disease process at all. Dr. Failinger testified that it would be highly improbable that claimant would have had no problems with his shoulder.

25. Dr. Failinger testified on cross-examination that there was no medical evidence indicating that claimant was symptomatic in the months or years before his fall. Dr. Failinger also testified that, according to claimant's reports, he was capable of working fully duty prior to his fall. Dr. Failinger Dr. Failinger further agreed that according to medical records, after the fall, claimant's symptoms involving his shoulder changed.

26. The ALJ credits the testimony of Dr. Knackendoffel along with claimant's testimony at hearing, and finds that claimant has demonstrated that it is more probable than not that the recommended reverse total shoulder arthroplasty is reasonable medical treatment necessary to cure and relieve claimant from the effects of the work injury. The ALJ credits claimant's testimony that his onset of symptoms involving pain and restricted range of motion developed following the fall on August 27, 2018. The ALJ further credits the testimony of Dr. Knackendoffel that the surgery in this case was accelerated by the fall that resulted in the development of symptoms.

27. The ALJ notes that the degenerative nature of claimant's shoulder condition, but the testimony and medical records entered into evidence in this case demonstrate that it is more probable than not that the fall resulted in the development of symptoms that accelerated the need for the recommended total reverse arthroplasty in this case.

28. The ALJ further credits the testimony and opinions expressed by Dr. Knackendoffel in his report and finds that claimant has demonstrated that it is more probable than not that the appropriate surgery in this case is the reverse total shoulder arthroplasty. The ALJ credits the opinions expressed by Dr. Knackendoffel regarding the condition of claimant's rotator cuff tendon and finds Dr. Knackendoffel's testimony on the necessity of the reverse total shoulder arthroplasty surgery to be credible and persuasive.

29. The ALJ further finds that claimant's testimony regarding the nature of his symptoms prior to his work injury is corroborated by the medical records that do not document claimant having ongoing problems for his right shoulder following the surgery

performed in 1999. Therefore, the ALJ finds claimant's testimony on this issue to be credible.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2006. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990).

4. As found, claimant has established by a preponderance of the evidence that the recommended revers total shoulder replacement surgery is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury. As found, the opinions expressed by Dr. Knackendoffel along with claimant's testimony at hearing are found to be credible and persuasive regarding this issue.

5. As found, the opinions presented by Dr. Knackendoffel regarding the necessity of the reverse shoulder arthroplasty are found to be credible and persuasive. As found, claimant has proven by a preponderance of the evidence that the

recommended reverse total should arthroplasty is reasonable and necessary medical treatment related to claimant's August 27, 2018 work injury.

ORDER

It is therefore ordered that:

1. Respondents shall pay for the reasonable medical treatment necessary to cure and relieve claimant from the effects of the August 27, 2018 work injury including the surgery recommended by Dr. Knackendoffel.

2. All issues not determined herein are reserved for further determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 20, 2019

Keith E. Mottram

Grand Junction, Colorado 81501

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that vascular surgery for her right leg is causally related to her April 13, 2018 work injury.

FINDINGS OF FACT

1. Claimant is a 39-year-old female employed by Employer as a ramp agent. Claimant's duties include loading cargo, bags, mail, and other items on and off airplanes.

2. On April 13, 2018, Claimant was so employed and was working with bags when she felt a pop in her right leg. Claimant was immediately unable to put pressure on her right leg. Claimant testified that her leg was so swollen that she was packed with ice at a visit that day.

3. On April 13, 2018, Claimant was evaluated at Concentra by physical therapist Abigail Burger. Claimant reported that she was pulling a bag off a cart, stepped back, and felt immediate pain in the right gastroc. Claimant reported that the pain was sharp and that she was unable to bear weight. PT Burger noted no functional restrictions prior and that Claimant's reason for therapy was gastroc strain. PT Burger noted that Claimant had been placed off work and was unable to participate in any essential job functions. Claimant was noted to be using two crutches and to be non-weight bearing. *See* Exhibit G.

4. Employer filled out a first report of injury form on April 13, 2018. The form indicated that Claimant was reaching the top shelf in a baggage cart to unload a bag and was on her tippy toes and that as she grabbed a bag to bring it towards her she felt her right knee pop. *See* Exhibit A.

5. On April 24, 2018, Nickolas Curcija, PA evaluated Claimant at Concentra. Claimant was noted to be 5'4" and to weigh 250 pounds. PA Curcija's notes indicated that Claimant was there for recheck of right knee and follow up on right calf strain. Claimant reported that her symptoms had not changed and that she was still having trouble bearing weight. Claimant reported intermittent swelling that was worse in the morning and improved during the day. Claimant reported that her toes felt tingly when the leg was swollen. Claimant reported increased pain in her knee with bending. On examination, PA Curcija found tenderness diffusely over the anteromedial aspect of the right knee and diffusely over the posterior knee. He found circumference at the mid-calf to be equal on both legs and no visible swelling or edema was found in the right lower leg. PA Curcija noted posterior tenderness in the right lower leg. He also found tenderness in the Achilles musculotendinous junction and limited range of motion in all planes with pain in the right ankle. He assessed muscle strain of the right lower leg. PA

Curcija recommended an MRI of the right knee and an MRI of the right lower extremity. He also recommended lidocaine patches. *See* Exhibit 5.

6. On May 2, 2018, Jenelle Tittelfitz, PA evaluated Claimant at Concentra. Claimant reported some improvement but that she was still having a hard time putting weight on her right knee. She was noted to be there for a follow up of her right knee and calf strain. Claimant reported that the day prior, she was standing and ambulating with her crutches and when she got home her right calf was swollen, warm, and very tender to light touch. Claimant applied ice, elevated her leg, and felt like the swelling had improved but was still very tender in the right calf. Claimant reported that the lidocaine patches did not significantly improve the pain in her calf or her knee. On examination, PA Tittelfitz noted the right calf circumference was slightly greater than the left calf, by .5 cm. She also noted swelling and posterior tenderness on the right lower leg and calf. PA Tittelfitz assessed muscle strain of the right lower leg and planned to do a venus flow ultrasound of the right lower extremity. It was noted that the ultrasound was to rule out deep vein thrombosis given the worsening of swelling, warmth, and muscle cramping of the right calf. *See* Exhibits 5, H.

7. On May 7, 2018, Claimant underwent an MRI of her right lower leg. The impression was no muscle strain, tendon tear, or focal hematoma. The impression also found some nonspecific periosteal edema about the medial tibia shaft, unlikely to reflect stress related change, with no intramedullary edema or acute bone lesion identified. The radiologist found mild increased signal within the superficial posterior compartment musculature and opined the increased signal was unlikely to reflect a strain, however he opined that an overuse type of injury/delayed onset muscle soreness was conceivable. *See* Exhibit I.

8. On May 9, 2018, PA Tittelfitz evaluated Claimant. She noted that the recent ultrasound was negative for deep vein thrombosis. Claimant reported that she went to a pool and felt improved range of motion after moving her right leg a little in the pool. PA Tittelfitz noted that an MRI of the lower leg was performed and was negative for tendon or muscle tear. She noted that the right knee MRI, however, showed a full thickness radial tear through the posterior horn of the medial meniscus with a gap of absent meniscus spanning about 4 mm. Claimant was assessed with medial meniscus tear and surgery was recommended. *See* Exhibit 5.

9. On June 4, 2018, Claimant underwent right knee surgery with Cary Motz, M.D. Dr. Motz performed a right knee arthroscopy with partial medial meniscectomy and chondroplasty of the medial femoral condyle. *See* Exhibits 6, J.

10. On June 14, 2018, Angelina Waller, PA evaluated Claimant. Claimant reported that she developed bilateral lower extremity swelling and increased right calf pain after surgery. Claimant's knee pain was noted to be improved from pre surgery. PA Waller noted that an ultrasound the week prior was negative for deep vein thrombosis and that Claimant had a gastroc injury at the time of the initial knee injury. PA Waller expected Claimant's pain to continue to improve over the next several weeks. *See* Exhibit 6.

11. On June 14, 2018, Amanda Cava, M.D. evaluated Claimant. Claimant reported that 4 days after her surgery she had severe bilateral swelling in her lower extremities, a fever, and marks on her legs. Claimant reported having a venous Doppler to rule out deep vein thrombosis that was negative and blood work to rule out infection that was also negative. Claimant reported that she gets cramping in her right calf with walking so was using a single crutch. The review of systems noted joint pain, muscle pain, joint swelling, joint stiffness, limping, and night pain. Dr. Cava assessed tear of medial meniscus status post arthroscopic surgery and muscle strain of right lower leg. Dr. Cava recommended physical therapy and pool therapy. Dr. Cava noted that Claimant would start the post op physical therapy and could resume pool therapy for a few visits, which may benefit Claimant due to the gastroc injury. Dr. Cava noted moderate level of pain and swelling in the knee. *See* Exhibit 5.

12. On July 12, 2018, Dr. Motz evaluated Claimant. Dr. Motz noted that Claimant's pain was improved and that Claimant would continue home exercise and physical therapy. He discussed that she may have chronic knee pain given chondromalacia in the knee. Dr. Motz noted that Claimant had a prior gastroc injury and had some persistent pain. *See* Exhibit 6.

13. On July 13, 2018, PA Tittelfitz evaluated Claimant. Claimant reported that she did not start pool therapy as the therapist felt she needed to strengthen her knee first. Claimant reported that she had improvement in her knee strength and was now using a cane to ambulate and was off the crutches. Claimant reported continued muscle tension/trigger points in the gastrocnemius and reported that physical therapy was treating the gastroc with deep massage and kinesiology taping. On examination of the right lower leg, PA Tittelfitz found medial, posterior, and proximal tenderness. She assessed muscle strain of the right lower leg and tear of the medial meniscus status post arthroscopic surgery. *See* Exhibit 5.

14. On August 15, 2018, PA Tittelfitz evaluated Claimant. Claimant reported her knee was feeling better and that her calf was still spasming but was healing. Claimant reported falling the week prior on her stairs due to weakness in her knee and that she did not hit her knees. Claimant reported that she still had not started pool therapy, as the physical therapist didn't feel she was strong enough yet. Claimant reported that the physical therapist recommended calf compression stockings. Claimant had kinesiology tape on her calf. PA Tittelfitz provided a prescription for calf sleeves. *See* Exhibit 5.

15. On September 6, 2018, Dr. Motz evaluated Claimant. Claimant reported continued pain in her calf with swelling. Dr. Motz noted that a deep vein thrombosis ultrasound was negative and that an MRI of the calf done in May showed some mild periosteal reaction but no muscle strain. Dr. Motz opined that it would be reasonable to repeat the calf MRI to look for any muscle edema or continued periosteal reaction. Dr. Motz opined that Claimant should wear the TED hose they provided after surgery to see if that helped with swelling and discomfort. Dr. Motz opined that it was possibly a vascular issue. *See* Exhibits 6, J.

16. On September 10, 2018, Claimant underwent a second MRI of her right lower leg. The increased signal within the superficial posterior compartment muscles from her prior MRI in May was found to be less conspicuous but still present. The radiologist found no acute abnormality, and found the subtle high T2 signals from the anteromedial tibial shaft periosteal region and the subtle high T2 signal within the superficial posterior compartment muscles to be less conspicuous than what showed in the May study. *See* Exhibit I.

17. On September 20, 2018, Dr. Motz evaluated Claimant. Dr. Motz noted that the repeat MRI of the lower leg showed near resolution of the periostitis and showed no muscle herniation or tear. Claimant reported her pain had improved with the compression stocking. Claimant reported that her knee was back to normal but reported continued calf pain. Dr. Motz opined that they could not explain the calf pain and that the MRI showed no pathology, a repeat deep vein thrombosis was negative, and that he was hoping with compression stockings it would eventually resolve. Dr. Motz opined that he had no further treatment options but noted a vascular consultation could be considered. *See* Exhibits 6, J.

18. On September 24, 2018, Dr. Cava evaluated Claimant. Claimant reported that her right knee pain was improving but that her calf pain, calf swelling, and calf muscle cramping was persistent. Claimant reported that using compression stockings helped. Dr. Cava noted that Claimant was released from orthopedic care with Dr. Motz. On exam, Dr. Cava found trace swelling in Claimant's right calf along with posterior tenderness. Dr. Cava opined that Claimant's knee was doing well but that they were still working on the lower leg/calf muscle. *See* Exhibit 5.

19. On October 17, 2018, PA Tittelfitz evaluated Claimant. Claimant reported being sore from physical therapy and dry needling and that she had pain in her right leg from her right calf down to her ankle. Claimant was limping. PA Tittelfitz found no swelling in the right lower leg but found lateral and posterior tenderness. PA Tittelfitz noted slow progress and recommended continued dry needling and physical therapy. *See* Exhibit 5.

20. On November 7, 2018, PA Tittelfitz evaluated Claimant. Claimant reported having more better days than bad days and that her calf pain comes and goes. Claimant reported that a physical therapist had pin pointed an area of her posterior lower leg where there was supposed scar tissue built up from a missed calf tear. PA Tittelfitz opined that treatment would remain the same and recommended continued physical therapy and pool therapy. *See* Exhibit 5.

21. On December 5, 2018, PA Tittelfitz evaluated Claimant. Claimant reported having some swelling, stiffness, and limping after trying to walk around for maybe half an hour. Claimant also reported an echhymotic area on the posterior right calf the week prior that felt like the leg was wet and that he noted a weeping of the skin. PA Tittelfitz reviewed physical therapy notes that noted Claimant was making good progress. On examination, PA Tittelfitz found swelling in the right lower leg with shiny and taut skin. She also found lateral and posterior tenderness and tenderness to palpation along the gastrocnemius. She assessed swelling of lower leg, muscle strain of right lower leg, and status post

arthroscopic surgery of the right knee. PA Tittelfitz also referred Claimant to a vascular surgeon for the right lower leg swelling. Under discussion, PA Tittelfitz noted that Claimant had chronic unilateral leg swelling with a previous negative ultrasound, antiembolism stockings without resolution, and a prior MRI of the right lower extremity showing red marrow in distal femur and fibula with suggestion for CBC. *See* Exhibit 5.

22. On December 20, 2018, Dr. Cava evaluated Claimant. Claimant reported her right leg was sore and she continued to have some swelling. Claimant reported that her right knee felt great but that her right calf was very painful with cramping and swelling. Dr. Cava noted mild swelling in the right lower leg and diffuse tenderness to palpation. Dr. Cava assessed muscle strain of the right lower leg and periostitis of the lower leg. Dr. Cava noted that Claimant was stable but still having significant pain and swelling in the right calf/lower leg. *See* Exhibit 5.

23. On December 26, 2018, Omar Mubarek, M.D. evaluated Claimant. Claimant reported that she had been symptomatic with right lower extremity swelling after trauma in the workplace. Claimant reported that her right leg is often 2-3 inches larger in circumference than her left when she stands for prolonged periods of time. Claimant reported that this only occurred after her work accident. Dr. Mubarek performed an ultrasound that showed deep venous insufficiency involving the common femoral vein and superficial venous insufficiency of the great saphenous vein. Dr. Mubarek believed that multiple factors were contributing to the right lower extremity swelling and he assessed chronic venous insufficiency, swelling of right lower extremity, and lymphedema. Dr. Mubarek recommended addressing all the issues that might be worsening the situation. He advised Claimant to wear compression therapy, to elevate her leg, to use jobst pumps, to diet and exercise, and he recommended a right greater saphenous vein ablation. Dr. Mubarek noted that Claimant was morbidly obese and that weight loss would help with the leg swelling. *See* Exhibits 8, L.

24. On January 18, 2019, PA Tittelfitz evaluated Claimant. Claimant reported feeling the same. PA Tittelfitz noted that a vascular consult and ultrasound showed an incompetent greater saphenous vein and that surgery for ablation was recommended. Claimant was instructed to wear calf compression stockings and to lose 20 pounds before surgery. Claimant reported that Respondent had denied the surgery and that she felt frustrated since she did not have leg cramping or swelling before her injury and had been consistently reporting her ongoing calf tenderness, swelling, and pain. PA Tittelfitz noted that MRI of the lower leg and Doppler ultrasounds done pre and post operatively for Claimant did not show incompetence of the vein and that ultrasounds in both May and September of 2018 did not document any venous insufficiency although he greater saphenous was not mentioned in either study. PA Tittelfitz also noted that the MRI would not have been specific for greater saphenous vein insufficiency, as MR venography was not performed. PA Tittelfitz noted that a deep vein thrombosis can contribute to venous incompetence if veno occlusive. PA Tittelfitz assessed swelling of lower leg, muscle strain of right lower leg, and injury of saphenous vein of the right lower extremity, sequela. PA Tittelfitz opined that unfortunately the referral for vascular ablation was being denied and that Claimant may need an IME to better determine causality. *See* Exhibits 5, H.

25. On February 8, 2019, Dr. Cava evaluated Claimant. Claimant reported she felt worse in the right leg since her last visit with 5-6/10 pain. Claimant reported swelling. Dr. Cava noted that Claimant was discharged from physical therapy and from the orthopedic specialist. Dr. Cava assessed only the right knee tear and noted that she would call vascular specialist Dr. Mubarek to discuss causality. Dr. Cava noted that if Dr. Mubarek felt relatable, then she could appeal the denied procedure, but if not then she would close the case with an impairment rating of the knee. *See* Exhibit 5.

26. On March 22, 2019, Dr. Cava evaluated Claimant. Claimant reported that nothing had changed and that her swelling had not gone down. Dr. Cava noted the right knee injury and surgery with complicated recovery due to a painful right lower extremity with swelling. Dr. Cava noted the insurance denial of liability for the lower extremity vein treatment for venous insufficiency. Dr. Cava noted there was a hearing scheduled for June 4. On exam, Dr. Cava found trace lower leg edema. Dr. Cava opined that Claimant was at maximum medical improvement for the tear of the medial meniscus and would have permanent restrictions. Dr. Cava noted that she left a detailed message for Dr. Mubarek that morning regarding his opinion on causality of the lower leg/calf. Dr. Cava noted that for now, Claimant would be at MMI unless the hearing recommended reopening her case/treatment for venous insufficiency. Dr. Cava opined that Claimant had a 12% lower extremity impairment. *See* Exhibits 5, H.

27. On March 25, 2019, Dr. Mubarek's medical assistant called Dr. Cava and noted that Dr. Mubarek was out of town for the next week and a half but that she would discuss his opinion of causality on the swelling with him upon his return. *See* Exhibits 5, H.

28. On April 11, 2019, Tashof Bernton, M.D. performed an independent medical evaluation. Claimant reported that on April 13, 2018 she was working on the ramp when she went to pull a bag from a bag cart and as she reached upward felt her leg pop. Claimant reported feeling it in the knee down her right side and that she couldn't put any pressure on the right leg, people helped her to the car, and she went for evaluation. Dr. Bernton noted a medical report from April 13 indicating Claimant had pain radiating into the calf more localized on the top of the calf and an assessment of muscle strain of lower right leg. Mild tenderness and mild swelling and ecchymosis at the anterior inferior aspect of the knee and at the anterior proximal lower leg were noted on April 13 as well. Dr. Bernton reviewed additional medical records. He noted that Dr. Mubarek never opined whether or not the venous insufficiency was work related. Dr. Bernton also performed a physical exam, noting Claimant to have a body mass index of 47 with a weight of 282 pounds and a height of 5 feet 5 inches. *See* Exhibits 10, M.

29. Dr. Bernton opined that the diagnosis was clear and that Claimant had a right medial meniscal tear with some osteoarthritis of the right knee and that Claimant had venous insufficiency with symptoms of swelling bilaterally, although significantly greater on the right than the left. Dr. Bernton noted that the venous insufficiency on the right involved both the deep venous system and the superficial venous system. He noted that the history reported of onset of venous insufficiency was with the medial meniscal tear. Dr. Bernton noted that the history as given by Claimant indicates a temporal sequence that was present in that the onset of right calf symptoms occurred at the same

time as the occupational injury. However, he opined that temporal sequence alone did not establish causation. *See* Exhibits 10, M.

30. Dr. Bernton opined that although the MRI of Claimant's lower right leg showed some evidence of mild strain, no clear abnormalities were present. Dr. Bernton opined that Claimant clearly did not have secondary venous disease due to trauma as multiple ultrasounds demonstrated the absence of a clot/deep vein thrombosis and there was clearly no arteriovenous fistula. He opined that secondary venous disease is caused by either a thrombotic event with a deep vein thrombosis or through an arteriovenous fistula that occurs after trauma. He noted that the ultrasounds showed neither. Therefore, he opined and testified that Claimant had primary venous disease, which he opined was more common than secondary venous disease. He testified that primary venous disease is related to obesity and has risk factors including age, family history, female gender, history of deep vein thrombosis, and obesity. Dr. Bernton opined that Claimant's weight and severe obesity represented a significant risk factor. *See* Exhibits 10, M.

31. Dr. Bernton opined that there was no known mechanism for the trauma, as described by Claimant, to have resulted in venous insufficiency. He opined that the occupational injury had no basis to have resulted in the causation or exacerbation of venous insufficiency. Dr. Bernton opined that the ablation recommendation was medically appropriate but was not work related. *See* Exhibits 10, M.

32. On April 29, 2019, Respondents filed a final admission of liability admitting to a 12% permanent partial disability rating for Claimant's right leg. Respondent admitted to maintenance medical care pursuant to Dr. Cava's March 30, 2019 report. *See* Exhibits 3, D.

33. Dr. Bernton testified at hearing. He testified that there are two types of venous insufficiency and that Claimant has primary venous insufficiency. He opined that the other type, secondary venous insufficiency, could be related to trauma like a penetrating wound or a blood clot/thrombosis. However, he noted that post operatively, Claimant had an ultrasound and venogram that showed no clots and no fistula and that she had primary venous insufficiency and not secondary insufficiency. He opined that primary insufficiency happens when a vein becomes weak and opined that it can happen as a gradual process due to increased pressure (weight primarily). He testified that over time it reaches a tipping point where the veins can no longer close smoothly as they should. He opined and noted that Claimant's deep vein was incompetent. Dr. Bernton noted that the MRI of the right leg had no significant findings and would have shown a traumatic muscle injury if one had occurred. Dr. Bernton noted Claimant's body mass index of 47 and opined that at 40, a person is considered morbidly obese and he noted that the risk factor of weight affects both sides. Dr. Bernton opined that the venous insufficiency couldn't have been and wasn't caused by the work injury or the work related right knee surgery. He testified that despite the temporal relationship, there was no causal relationship.

31. Claimant also testified at hearing. Claimant testified that she has had pain in her right calf since the injury and that she never had problems in her right or left leg prior to the injury. Claimant testified that she has calf spasms that never existed before the injury. Claimant noted that even with physical therapy, her calf symptoms had not gone away since the injury. Claimant's testimony is credible, persuasive, and consistent with the medical records.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo.App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo.App. 2000).

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). The claimant is required to prove by a preponderance of the evidence that the conditions for which she seeks medical treatment was proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has established, by a preponderance of the evidence, that the right leg ablation vascular surgery is reasonable, necessary, and causally related to her April 13, 2018 work injury. As noted above, there is an acute temporal relationship between the injury and the onset of symptoms in Claimant's right calf. As found above, Claimant reported immediate pain in her right calf. On April 13, 2018 the date of injury, Claimant reported pain radiating into the calf more localized on the top of the calf and an assessment of muscle strain of lower right leg was given. On that same date, the physical therapist who evaluated Claimant assessed gastroc strain. On April 24, Claimant was assessed as having a right calf strain and muscle strain of the right lower leg. On May 2, Claimant was found to have swelling and posterior tenderness in her right lower leg and calf. The MRI of her right lower leg performed on May 7 showed mild increased signal in the superficial posterior compartment musculature, the exact area that Claimant had acute symptoms and tenderness beginning on April 13. Although the radiologist noted the findings were unlikely to reflect a strain, the clinical findings and diagnosis at that exact time included gastroc strain, muscle strain of right lower leg, and right calf strain. After the MRI, Dr. Cava assessed gastroc injury and muscle strain of the right lower leg, continuing to believe there was an injury and strain to the right calf area. On September 10, another right leg MRI showed, again, increased signal in the superficial posterior compartment musculature. This MRI showed the increased signal to be less than what showed up in May, but still showed it present in the area where Claimant had clinical symptoms of strain.

Dr. Bernton acknowledges the temporal relationship of the Claimant's symptoms in the right calf/right lower leg with the work injury on April 13, 2018. However, he opines that physiologically the event/incident couldn't have caused the need for the recommended surgery. Dr. Bernton points out the lack of trauma to the area and he noted that Claimant was shown by tests to not have deep vein thrombosis or an acute traumatic muscle injury. Dr. Bernton opined that the MRI of the right lower extremity showed some evidence of mild strain but had no clear abnormalities or significant findings. Dr. Bernton opined that if there had been a traumatic muscle injury on April 13, 2018, it would have shown on MRI.

The ALJ finds Claimant's testimony credible and persuasive that she had new, acute, painful, and limiting symptoms in her right calf/right lower leg on April 13, 2018 at the time she sustained a work related injury. The ALJ rejects the argument that there was no traumatic muscle injury on that date to the right lower leg. Rather, the increased

signal on MRI in the superficial posterior compartment musculature correlates with the clinical diagnosis, symptoms, and tenderness Claimant had in her right lower leg beginning April 13, 2018. It is more likely than not that Claimant sustained an acute traumatic injury to her right lower leg on April 13, 2018 that led her ongoing symptoms of deep venous insufficiency requiring a right greater saphenous vein ablation. Claimant is credible and persuasive that she did not have symptoms of deep venous insufficiency prior to April 13, 2018. Claimant has shown, more likely than not, that the recommended right greater saphenous vein ablation is casually related to her April 13, 2018 work injury.

ORDER

It is therefore ordered that:

1. Claimant has established by a preponderance of the evidence that right greater saphenous vein ablation vascular surgery is causally related to her April 13, 2018 injury.

2. Any issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 20, 2019 /s/ Michelle E. Jones

STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-086-536-001

ISSUES

- Whether claimant has proven by a preponderance of the evidence that the reverse total shoulder replacement surgery recommended by Dr. Knackendoffel is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury?

FINDINGS OF FACT

1. Claimant sustained an admitted injury on August 27, 2018 when he tripped over rebar while walking on a job site and fell onto his right shoulder. Claimant testified he was carrying a piece of equipment (a splicer) in one hand and a tool bag in his other hand when he fell. Claimant testified he landed on his right shoulder and his right hand went numb including his right thumb and forefinger.

2. Claimant testified he reported his injury to employer immediately and sought medical treatment at Paonia Hospital on the day of the injury. Claimant was initially seen at West Elk Walk-In clinic before being instructed to go to the emergency room ("ER"). Claimant was evaluated at the Delta County Memorial Hospital ER on August 27, 2018. Claimant reported a history of falling onto his right shoulder and noted significant limitation in his range of motion. Claimant reported a distant history of a glenoid labrum tear that was surgically treated. Claimant was referred for x-rays. The x-rays revealed severe arthritic changes in the right shoulder predominantly within the glenohumeral articulation. No acute fracture was noted. Claimant was instructed to follow up with a workers' compensation physician or an orthopedic surgeon.

3. Claimant was evaluated by Dr. Wade on August 28, 2018. Dr. Wade noted claimant was continuing to complain of sever right shoulder pain since his fall the previous day. Claimant reported to Dr. Wade a history of right shoulder pain approximately 19 years ago which required rotator cuff surgery. Dr. Wade evaluated claimant and referred him for a magnetic resonance image ("MRI") of the right shoulder.

4. The MRI was performed on September 4, 2018. The MRI demonstrated marked arthrosis of the glenohumeral joint for a patient of claimant's age. The MRI also showed a large mulilocculated cystic lesion residing with the muscle belly of the supraspinatus. The MRI also revealed advanced acromioclavicular ("AC") joint degeneratve changes, tendinosis subscaularis witout tear and tendinosis biceps tendon.

5. Claimant returned to Dr. Wade on September 11, 2018 after the MRI. Dr. Wade reviewed the results of the MRI and recommended claimant continue with the shoulder immobilizer and referred claimant to Rocky Mountain Orthopedics for evaluation.

6. Respondents obtained a physician advisor report from Dr. Erickson on September 14, 2018. Dr. Erickson reviewed the medical records and opined that claimant did not report a significant blow to the right shoulder in the fall and opined claimant likely suffered a minor contusion or a sprain or strain of the right shoulder in the fall. Dr. Erickson noted that claimant's MRI showed advanced arthritis of the AC joint, some mild rotator cuff tendinopathy, and impingement findings along with some cysts in the muscle belly of the supraspinatus, but the major issue was the marked arthrosis of the glenohumeral joint. Dr. Erickson opined that if claimant continued to have difficulties with his shoulder, it was not because of the fall, but instead due to the advanced glenohumeral arthrosis with was a pre-existing condition. Dr. Erickson also opined that there was no evidence of aggravation or worsening and the fall did not accelerate the disease process.

7. Claimant was examined by Dr. Knackendoffel on September 19, 2018. Claimant reported to Dr. Knackendoffel a consistent accident history of falling while at work leading to his current symptoms of pain, numbness, tingling, locking, swelling, weakness, and decreased range of motion. Claimant also reported numbness and tingli9g in the median distribution of the right hand. Dr. Knackedoffel reviewed claimant's MRI exam and performed a physical evaluation and diagnosed claimant with severe glenohumeral arthritis of the right shoulder, which was noted to be chronic. Dr. Knackendoffel further opined that the claimant's osteoarthritis was acutely aggravated by the fall. Dr. Knackendoffel diagnosed claimant with severe tendinopathy of the distal supraspinatus and severe cystic degeneration of the muscle belly of the supraspinatus.

8. Dr. Knackendoffel noted claimant's prior surgical history involving the shoulder and acknowledged the chronic arthritis of the shoulder. Dr. Knackendoffel opined, however, that claimant's condition was severely aggravated by the recent fall. Dr. Knackendoffel recommended a computed tomography ("CT") scan of the right shoulder with extraction of the humeral head. Dr. Knackendoffel opined that the optimal surgical procedure would be a reverse total shoulder arthroplasty, but noted that claimant would be young for this type of procedure. Dr. Knackendoffel noted that a conventional total shoulder arthroplasty would probably not facilitate adequate active flexion of the right shoulder and noted that given claimant's significant injury to his right shoulder superimposed upon the chronic glenohumeral degeneration, claimant would be unlikely to return to active physical labor. Dr. Knackendoffel also recommended physical therapy.

9. The CT scan was performed on September 26, 2018. The CT scan demonstrated severe right glenohumeral osteroarthritis with mild right acromioclavicular arthritis.

10. Claimant returned to Dr. Knackendoffel on September 27, 2018. Dr. Knackendoffel reviewed the results of the CT scan and noted that the CT scan demonstrated severe osteoarthritis of the glenohumeral joint with prominence cysts within the superior glenoid. Dr. Knackendoffel again recommended the reverse total shoulder arthroplasty.

11. Respondents obtained a second physician advisor opinion from Dr. Erickson on October 12, 2018. Dr. Erickson noted the recommendations by Dr. Knackendoffel and opined that it was inappropriate to make a recommendation for a reverse arthroplasty based on a CT scan and physical examination. Dr. Erickson recommended an MRI arthrogram to adequately assess the status of the rotator cuff. Dr. Erickson further opined that the fall did not cause claimant's significant degenerative arthritis, nor did it aggravate of worsen claimant's pre-existing condition.

12. Claimant continued to treat with Dr. Wade pending the surgical recommendation. Claimant also continued to participate in physical therapy.

13. Claimant returned to Dr. Knackendoffel on November 15, 2018. Dr. Knackendoffel noted that claimant's surgery was denied and recommended a cortisone and steroid injection in the shoulder. The injection was performed by Dr. Knackendoffel on that day. Claimant followed up with Dr. Wade on November 19, 2018 and reported that the injection did not help at all. Dr. Wade recommended claimant continue physical therapy.

14. Claimant returned to Dr. Wade on December 11, 2018. Dr. Wade noted claimant continued with his physical therapy which was helping. Claimant again returned to Dr. Wade on January 14, 2019. Dr. Wade noted that claimant's range of motion of his shoulder was getting worse.

15. Respondents referred claimant for an independent medical examination ("IME") of claimant on January 19, 2019 with Dr. Failinger. Dr. Failinger reviewed claimant's medical records, obtained a medical history and performed a physical examination in connection with his IME.

16. Claimant reported a consistent accident history to Dr. Failinger of falling when he tripped over rebar and hitting his right side on the rocks on the ground as he held on to the splicer. Dr. Failinger noted limited range of motion on examination with no obvious rupture of the long head of the biceps. Dr. Failinger noted that claimant's right shoulder condition appeared to be an exacerbation of the severe pre-existing glenohumeral degenerative joint disease following his previous shoulder surgery in 1999. Dr. Failinger noted that claimant reported at the IME that he fell with a direct blow to the shoulder and the intake clinic note on August 27, 2018 reports that claimant fell with injury to the shoulder and no description of the actual impact area. Dr. Failinger opined that the cause of the shoulder condition would be severe degenerative joint disease which appeared to have been exacerbated by the fall on August 27, 2018. Dr. Failinger recommended reviewing the films that had been taken to determine if there was an actual change in the patient's pathology.

17. Claimant returned to Dr. Knackendoffel on February 13, 2019. Dr. Knackendoffel noted claimant was unable to perform work with his right arm above chest level. Dr. Knackendoffel again recommended the reverse total shoulder replacement surgery with the understanding that claimant would be unable to return ot heavy labor employment following the surgery.

18. Claimant again returned to Dr. Knackendoffel on March 7, 2019. Dr. Knackendoffel noted claimant continued to have pain in his right shoulder which had become more bothersome. Dr. Knackendoffel opined that the claimant's rotator cuff was not functional and probably had significant fatty degeneration. Dr. Knackendoffel opined that a standard shoulder replacement would not be likely to be stable secondary to rotator cuff weakness. Dr. Knackendoffel recommended an MRI arthrogram of the right shoulder.

19. Dr. Failinger issued an addendum to his report on March 15, 2019 after reviewing the imaging studies, including the x-rays from 2012 and 2015 along with the x-ray from August 27, 2018 and MRI from September 4, 2018. Dr. Failinger opined after reviewing the x-rays that there was no new pathology created by the fall and that the rotator cuff appeared to be intact. Dr. Failinger opined that the fall could cause a contusion only and any ongoing pain after a 6-8 week period would be due to the pre-existing arthritis which is incredibly severe.

20. Claimant testified at hearing regarding the condition of his shoulder prior to his work injury. Claimant testified he had a prior injury to his right shoulder associated with coal mining. Claimant testified he had surgery on his shoulder and the problems with his shoulder resolved. Claimant testified that after he recovered from the shoulder surgery he was able to perform his work duties for employer without restriction up until his August 27, 2018 work injury. The ALJ finds claimant's testimony regarding the physical condition of his right shoulder to be credible.

21. Dr. Knackendoffel testified at hearing in this matter. Dr. Knackendoffel testified that based on his physical examination of claimant, claimant had stiffness of the right shoulder with extreme weakness of the rotator cuff musculature. Dr. Knackendoffel testified that the MRI exams showed an extremely arthritic joint with the findings appearing to be longstanding problems. Dr. Knackendoffel testified that there were no findings on either MRI exam that represented acute findings related to the fall at work.

22. Dr. Knackendoffel opined at hearing that the fall claimant sustained on August 27, 2018 exacerbated claimants underlying shoulder condition and permanently aggravated the shoulder condition. Dr. Knackendoffel testified that this opinion was based on claimant's statements to him during the examination process. Dr. Knackendoffel testified that if claimant did not experience the fall at work on August 27, 2018, claimant would have likely eventually still needed a reverse total shoulder replacement surgery, but not yet.

23. Dr. Failinger testified at hearing in this matter. Dr. Failinger testified that the multiloculated cysts in the supraspinatus that were present on the MRI film are chronic in nature and would not develop in the weeks between the injury and the MRI film. Dr. Failinger testified that the nature of the changes in claimant's shoulder demonstrated in the x-rays and MRI were chronic in nature and represented severe pre-existing arthritis. Dr. Failinger testified that the chronic nature of claimant's shoulder

condition would have warranted surgery if claimant's symptoms correlated with the pathology.

24. Dr. Failinger testified that the recommended reverse shoulder arthroplasty was developed for situations in which the patient does not have a functioning rotator cuff and abnormal motion mechanics from the lack of a functioning rotator cuff. Dr. Failinger testified he agreed with Dr. Erickson that in claimant's case, he did not appear to have a significant rotator cuff tear. Dr. Failinger testified that the x-rays and MRI films demonstrated the severity of the arthritis and there were no signs of anything acute involving the shoulder, or that the shoulder was affected at all by the fall. Dr. Failinger opined that the fall did not accelerate, change, or alter claimant's disease process at all. Dr. Failinger testified that it would be highly improbable that claimant would have had no problems with his shoulder.

25. Dr. Failinger testified on cross-examination that there was no medical evidence indicating that claimant was symptomatic in the months or years before his fall. Dr. Failinger also testified that, according to claimant's reports, he was capable of working fully duty prior to his fall. Dr. Failinger Dr. Failinger further agreed that according to medical records, after the fall, claimant's symptoms involving his shoulder changed.

26. The ALJ credits the testimony of Dr. Knackendoffel along with claimant's testimony at hearing, and finds that claimant has demonstrated that it is more probable than not that the recommended reverse total shoulder arthroplasty is reasonable medical treatment necessary to cure and relieve claimant from the effects of the work injury. The ALJ credits claimant's testimony that his onset of symptoms involving pain and restricted range of motion developed following the fall on August 27, 2018. The ALJ further credits the testimony of Dr. Knackendoffel that the surgery in this case was accelerated by the fall that resulted in the development of symptoms.

27. The ALJ notes that the degenerative nature of claimant's shoulder condition, but the testimony and medical records entered into evidence in this case demonstrate that it is more probable than not that the fall resulted in the development of symptoms that accelerated the need for the recommended total reverse arthroplasty in this case.

28. The ALJ further credits the testimony and opinions expressed by Dr. Knackendoffel in his report and finds that claimant has demonstrated that it is more probable than not that the appropriate surgery in this case is the reverse total shoulder arthroplasty. The ALJ credits the opinions expressed by Dr. Knackendoffel regarding the condition of claimant's rotator cuff tendon and finds Dr. Knackendoffel's testimony on the necessity of the reverse total shoulder arthroplasty surgery to be credible and persuasive.

29. The ALJ further finds that claimant's testimony regarding the nature of his symptoms prior to his work injury is corroborated by the medical records that do not document claimant having ongoing problems for his right shoulder following the surgery

performed in 1999. Therefore, the ALJ finds claimant's testimony on this issue to be credible.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2006. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990).

4. As found, claimant has established by a preponderance of the evidence that the recommended revers total shoulder replacement surgery is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury. As found, the opinions expressed by Dr. Knackendoffel along with claimant's testimony at hearing are found to be credible and persuasive regarding this issue.

5. As found, the opinions presented by Dr. Knackendoffel regarding the necessity of the reverse shoulder arthroplasty are found to be credible and persuasive. As found, claimant has proven by a preponderance of the evidence that the

recommended reverse total should arthroplasty is reasonable and necessary medical treatment related to claimant's August 27, 2018 work injury.

ORDER

It is therefore ordered that:

1. Respondents shall pay for the reasonable medical treatment necessary to cure and relieve claimant from the effects of the August 27, 2018 work injury including the surgery recommended by Dr. Knackendoffel.

2. All issues not determined herein are reserved for further determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUE ON REMAND

I. Have Respondents overcome, by clear and convincing evidence, the DIME opinion of Dr. Higginbotham on Claimant's Whole Person Impairment Rating? Specifically, did the evidence establish a specific diagnosis, objective pathology, and six months of medically documented pain and rigidity?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact (unchanged from the original Order, but with the addition of 21A) :

1. Claimant suffered admitted work related injuries when he rolled the cement mixer he was operating for employer on September 11, 2017. (Ex. A). At the time of the accident Claimant was treated for a laceration over his eye and complaints of wrist pain. (Ex. 4, p. 21).

2. Claimant's accident was described in Dr. Higginbotham's DIME report as follows, "the force of the rollover caused him to be thrown against the passenger door and window. He denies loss of consciousness. He hit his head against the cabin, causing an abrasion on the top of his head and a laceration above his left eye." (Ex. H, p. 55).

3. Claimant's initial visit to CCOM occurred on the date of the incident and he was seen by Steven Byrne, PA-C. (Ex. 4, p. 21). Little detail was provided in the First Report of Injury besides the diagnoses of "laceration left eyelid" and "laceration left hand".

4. On September 13, 2017, two days later, Claimant reported to the emergency room complaining of neck pain, although his range of motion in the neck was described as "normal". Imaging was taken which showed no acute abnormalities and conservative care was recommended. Intake reports from the ER note that at the time of the rollover, Claimant was unrestrained. (Ex. D, pp. 15-17).

5. Upon his return to CCOM on September 18, 2017, Claimant was reporting that he was "feeling much better but still having considerable amount discomfort through the left cervical paraspinal and posterior shoulder girdle." (Ex. 4, p. 22).

6. Claimant's initial visit with his ATP, Dr. Neubauer was September 25, 2017 (Ex. 4, pp. 26-29). At this visit, it was noted that he reported lower back and left leg pain. Claimant's neck paraspinals were tender to palpation, with pain in all planes upon range of motion. The paraspinals were tender in his lower and upper back. Physical therapy continued to be recommended.

7. Medical records indicate that Claimant improved from his diagnosed strain injuries. By October 23, 2017, Claimant was reporting 2-3 of 10 pain, reported by him as "mild", and consisting of mostly aching/stiffness/tightness. (Ex. F, p. 31).

8. In the interim, Respondents filed a General Admission of Liability ("GAL") on October 18, 2017 admitting for medical benefits, but denying Temporary Total Disability ("TTD") benefits as "*claimant was responsible for his own termination."* It is unclear from the record if Claimant was terminated for failure to wear his seat belt, or simply from rolling a full cement truck.

9. Claimant also underwent a short course of physical therapy between September 20 and October 16, 2017. (Ex. E, Ex. 6). Claimant reported having cervical pain, pain in both shoulders, and lower back pain. *Id.* As of his physical therapy visit on October 6, 2017, Claimant was still reporting a high level of pain with end range cervical motion and difficulty sleeping due to the neck pain. Claimant also reported that he continued to have low back pain and stiffness. *Id.* at 79.

10. Claimant returned to Dr. Neubauer on October 9, 2017, still complaining of ongoing neck and back pain. (Ex. 4, p. 30). It was noted that Claimant was having pain with activity and movement of his back and his neck, and the back was specifically described in this note as being *tight. (emphasis added).* Physical exam documented pain in the neck with all planes of motion. Examination of the back documented tenderness to palpation in the low back and buttocks and decreased/painful forward flexion, extension, rotation, and lateral flexion; the mid-back symptoms were no longer noted.

11. Dr. Neubauer recommended continued therapy, heat to the back and the neck, and also referred Claimant to Dr. Chad Abercrombie for chiropractic care. *Id.* at 32. Prior to his first appointment with Dr. Abercrombie, Claimant had another visit at CCOM with Dr. Neubauer on October 23, 2017 that documented ongoing complaints of back and neck pain that was described as "*aching/stiffness/tightness"* and that he was having *pain/stiffness* with activity and movement of the back and the neck. *Id.* at 35. (emphasis added).

12. Chiropractic care began on October 26, 2017, with Dr. Chad Abercrombie. At the initial visit, he reported overall improvement, but still had "some lower back, neck and left shoulder pain." (Ex. G, p. 50, Ex. 7, pp. 86-88). "Moderately" reduced range of motion was noted in his lumbar and cervical regions. A medical history noting a 2014 lower back lifting injury which "stabilized" and a 1993 motor vehicle accident with residual left shoulder injuries is noted on the initial chiropractic intake. *Id.*

13. On November 29, 2017, Dr. Neubauer documented that Claimant was still reporting 3 out of 10 neck and low back pain and that "He continues to have *stiffness* with motion of the neck and low back…." (Ex. F, p. 40). When Dr. Neubauer placed Claimant at MMI on January 4, 2018, it was again noted that Claimant was reporting low back pain and tightness. *Id.* at 54. His closing comments indicated that Claimant still had neck and low back tightness, but he released Claimant at MMI with no impairment and instruction to finish his

chiropractic care. *Id.* at 56. Dr. Abercrombie's final note from January 24, 2018 indicates that Claimant was greatly improved, but that he continued to have *minimal objective residual* problems as noted in his report. (Ex. 7, p. 89) (emphasis added).

14. By December 14, 2017, Claimant was reporting pain of 1 out of 10, reported as "mild" and intermittent, and noted increased pain in his lower back when lifting over 100 pounds. At the same time, Claimant reported he was not talking pain medications and was sleeping ok. (Ex. E, p. 45). Though Claimant by this time had been terminated by Employer, he was released to work without restrictions on December 14, 2017. (Ex. E. p. 47.)

15. On January 4, 2018, after completing a course of physical therapy, and continued conservative care, Claimant was released at MMI by Dr. Jay Neubauer at CCOM. Dr. Neubauer's report indicates that Claimant was reporting slight tightness in his neck and back which Claimant described as "infrequent," and therefore released Claimant at MMI with no impairment rating, but with a recommendation to continue chiropractic care under maintenance treatment. (Ex. C. pp. 12-14).

16. After his release at MMI, Claimant's chiropractor, Dr. Abercrombie released Claimant on January 24, 2018. (Ex. G. p. 53). At this time Dr. Abercrombie noted:

> Overall, he has responded very well to treatment noting very minimal symptoms at this time. He had some lower back stiffness this past week of unknown cause however denies pain, and the stiffness resolved. Otherwise, he denies neck or mid back symptoms. He is performing at this time all activities of daily living without difficulty.
>
> Examination on today's visit reveals normal spinal/paraspinal symmetry. Range of motion is full and all cervical, thoracic and lumbar planes and *without symptoms*. . . .

Id, (emphasis added).

17. In accordance with Dr. Neubauer's release at MMI, Respondents submitted a **Final** Admission of Liability, admitting for 0% impairment on January 25, 2018. The Final Admission indicates that Claimant received $11,565.48 in TTD from September 12, 2017, through December 13, 2017, the date he was released to work without restrictions. (Ex. C). This FAL made no mention of any alleged violation of a safety rule. For reasons unclear from the record, this FAL appears to be a reversal of Respondents' prior position in the GAL, wherein all TTD had been denied due to his termination for cause.

18. The Final Admission of Liability admitted to a general award of maintenance care and the attached MMI report from Claimant's ATP indicated the claim related diagnoses were: 1.) laceration of the left eyelid; 2.) laceration of the left wrist; 3.)

strain of muscle, fascia, and tendon at the neck; 4.) strain of muscle and tendon at the back wall of the thorax; 5.) strain of muscle, fascia, and tendon of the lower back, and; 6) sprain of interphalangeal joint of right middle finger. (Ex. 3, p. 14).

19. Claimant promptly objected and sought a DIME. The DIME exam occurred with Dr. Thomas Higginbotham on April 24, 2018. (Ex. H). At the time of the DIME, Claimant reported that he had been employed with Safeco, which contracted with Comcast placing underground digital cable. This full-time work required him to use a shovel and pick frequently. (Ex. H, p. 55). Dr. Higginbotham cites Claimant's subjective symptom checklist, which includes, "Clicking and popping and pain of the jaw; asthma with shortness of breath; muscle cramps; joint swelling, pain, and *stiffness*; depression and nervousness." (Ex. H, p. 59). Claimant also reported, "nausea, blurred vision, tingling of the hands and feet; swelling of the feet; trouble falling asleep and staying asleep; and mood swings;" in addition to *stiffness* in his lower back and a sharp pull in the left side of his *neck and back* when he increases his physical activity." *Id.* at p. 60.

20. Claimant's lack of a use of seatbelt was discussed with Dr. Higginbotham:

> He was the driver of a large cement truck, not wearing seatbelt and shoulder harness. He relates that the seatbelt mechanism was not functional. He had the intent of reporting the malfunction the morning he had his incident. However, he got busy with getting his vehicle prepped and then was assigned a delivery route. He was pressed to get his work down [done] and forgot about recording the seatbelt mechanism malfunction.

21. Dr. Higginbotham provided impairment ratings of 7% for the cervical spine resulting from 3% range of motion deficit, combined with 4% from Table 53IIB. He also assigned 10% for the lumbar spine, noting 5% from Table 53IIB and 5% range of motion deficit. These two ratings combined for a 16% impairment rating of the whole person. (Ex. H, pp. 62-63). This impairment rating was made in agreement the ATP, Dr. Neubauer, that Claimant had reached MMI on January 4, 2018. (Ex. H. p. 62).

21A. Under "ASSESSMENTS", Dr. Higginbotham issued two pertinent specific diagnoses:

Cervical strain without discogenic disease or radiculopathy

Lumbar strain without discogenic disease or radiculopathy

22. Dr. Higginbotham's narrative of his physical exam makes several references to *tenderness* in the lumbar and cervical regions. At no point in his physical examination does Dr. Higginbotham refer to any symptom which would constitute *rigidity.* No observed stiffness, trigger points, spasm are noted anywhere in the report. On Page 8 of his report (Ex. 9, p. 97) he states "There is <u>no</u> *muscle tone asymmetry or spasm*." It is unclear to the ALJ where the lack of spasm is noted to be *absent.*

23. Dr. Higginbotham further noted: “A TENS unit would be appropriate to *decrease discomfort and decrease spasm and assist with range of motion* as needed. (Ex. 8, p. 99) (emphasis added). At no point in his DIME exam does he indicate what *spasm* he is now referring to, its location, or duration.

24. In response to Dr. Higginbotham’s report, on June 13, 2018, Respondents filed an Application for Hearing endorsing the issues of ”Overcoming Division IME; and Failure to Utilize Safety Device/Violation of a Safety Rule; Causation; and Set-offs.” (Ex. 1, p. 1).

25. In advance of the hearing, Respondents obtained a Medical Record Review from Dr. Kathy Fine McCranie. (Ex. 9). Respondents also obtained and disclosed a video demonstrating the functionality of the vehicle’s seat-belt. (Ex. K).

26. Claimant also obtained an IME with Dr. Jack Rook. In his report dated September 3, 2018, Dr. Rook states that upon rolling his cement truck, Claimant fell 6 feet from the driver’s seat to the passenger door, rotating as he fell and striking the back side of the passenger side door. Though Claimant denied loss of consciousness throughout the treatment records and his DIME with Dr. Higginbotham, Claimant reported to Dr. Rook that he probably did have a loss of consciousness. (Ex. 10, p. 111).

27. Dr. Rook’s report also contains an opinion that Claimant’s post-MMI job at Safeco was “more physically demanding than his cement truck driving job.” (Ex. 10, p. 116). However, he further noted that although Claimant was able to lift 130 pounds at MMI, he was able to deadlift over 450 pounds prior to the accident, indicating a severe drop in functionality from his baseline. *Id*

28. On physical examination of the neck, Dr. Rook found moderate to severe tenderness associated with *increased muscle tone* on palpation of the left sternocleidomastoid muscle. *Id.* at 117. Evaluation of the lower back documented *increased muscle tone* with moderate tenderness of the left-sided lower paralumbar musculature overlying the L4, L5, and S1 facet joints. Back pain was increased when elicited with spinal extension and bending to the left. The same maneuver was negative on the right.

29. Dr. Rook also addressed the final chiropractic report from Dr. Abercrombie from January 24, 2018. He explained how Dr. Abercrombie’s report documented increased muscle tone in the same muscles that Dr. Rook had identified eight months later. Dr. Abercrombie also found problems with the left-sided facet joints based on provocative testing at that visit. Dr. Rook identified those same findings on his examination. (Ex. 10, p. 118). “These constitute *objective findings* and therefore Dr. Higginbotham was correct in providing the patient with a table 53 rating.” Dr. Rook disagreed with Dr. McCranie regarding her opinion on a lack of objective findings, and her opinion was just that: a mere difference of opinion with the DIME physician.

30. Dr. McCranie testified at hearing. Dr. McCranie explained that Dr. Higginbotham’s DIME report did not comply with the AMA Guides and Level II

training, which require "objective" findings in order to provide an impairment rating. "Specifically, 'Impairment Ratings are given when a specific diagnosis and objective pathology is identified.'" (Ex. 9, p. 109, citing the Rating Tips found at Desk Aid 11, https://www.colorado.gov/pacific/cdle/workers-compensation-document-library-desk-aids-0).

31. In explaining her position, Dr. McCranie noted that the Claimant's records were devoid of any objective findings of pathology, and only reflected Claimant's *subjective* complaints of pain and occasional stiffness.

32. In noting a lack of objective support for Claimant's impairment rating, Dr. McCranie found that Claimant's sole diagnoses, which were echoed by Dr. Higginbotham, were muscular strains. She opined that, by their nature, muscle strains were temporary. (Ex. 9 p. 110).

33. After her medical records in this matter, Dr. McCranie testified at hearing that the records demonstrated what should be expected from diagnosed muscular strains, with a progression of conservative care to a release at MMI, but without any residual range of motion deficits. The lack of residual range of motion deficits are echoed in the January 4, 2018, MMI report of Dr. Neubauer, finding full range of motion in the back and noting *"The condition has resolved,"* (Ex. C, pp. 12-14) (emphasis added). Further the post-MMI release report of Dr. Abercrombie indicated transient low back stiffness "of unknown cause," with a complete resolution of symptoms and full range of motion in the lumbar, thoracic and cervical spines. (Ex. G, p. 53). Dr. McCranie opined that findings of mild tenderness and tightness on palpation are not objective findings that would support a rating under the AMA Guides or Level II training.

34. Dr. McCranie concluded her testimony by noting that available medical records, including Dr. Higginbotham's report, were devoid of objective evidence to support an impairment rating in accordance with the AMA guides and Level II training. Dr. McCranie clarified that Claimant's subjective complaints of stiffness and pain, coupled with the diagnoses of muscular strain injuries were insufficient to support a Table 53 rating.

35. Dr. McCranie also found that if Claimant was not entitled to a Table 53 rating, a range of motion rating would be inapplicable. [The ALJ notes that this statement is correctly supported by Desk Aid 11's tips on Spinal Rating, "Spinal range of motion impairment must be completed and applied to the impairment rating only when a corresponding Table 53 diagnosis has been established. (References: Spine section of the *AMA Guides, 3rd Edition (rev.)*; Level II Accreditation Curriculum, Spine and Pelvis Impairment)."]

36. Jason Gordon also testified at hearing. Mr. Gordon is the Human Resources and Payroll manager for Transit Mix Concrete. Mr. Gordon testified that the safety policies found at Exhibits I and J, contain numerous requirements concerning the consistent use of seat-belts. These requirements and safety procedures are consistently reinforced in regular driver training. Mr. Gordon noted that seatbelt use is specifically required in p. 109, and p. 111 of Exhibit J.

37. Mr. Gordon noted that if a seatbelt was not working at the time of pre-trip inspection, a vehicle would be deemed unsafe to operate and a driver would not be expected to utilize the vehicle.

38. Mr. Gordon further noted that Claimant never reported a seatbelt malfunction. Mr. Gordon indicated that drivers become very familiar with their vehicles through regular use. Though a pre-trip inspection has many small points, a driver should be able to complete the pre-trip inspection to ensure their vehicle was safe.

39. Respondents also presented the testimony of Curt Young. Mr. Young is a maintenance technician with Transit Mix. Mr. Young explained that Respondents' Exhibit K (video) demonstrates his opinion that the seatbelt was functional at the time of his inspection-months after the accident. This video was taken in June of 2018. Considerable effort was initially required to move this belt from its retracted position. Mr. Young indicated that no repairs had been conducted on the vehicle since Claimant's workplace accident.

40. Mr. Young testified that he was directed to assess the functionality of the seatbelt at the time he made the video, and that no one had touched the truck prior to that time.

41. Mr. Young noted that the air-supported driver's seat had lost all of its air, resulting in a fully lowered position. Mr. Young noted that because the pneumatic seat had dropped completely, the seatbelt was fully tensioned. Also, Mr. Young testified that the seatbelt was completely retracted and in the locked position when he inspected it. This, he opined, indicated that it was in a retracted, non-used, position when the accident occurred.

42. Mr. Young clarified that upon lifting the seat to relieve tension on the seatbelt, he was able to free the seatbelt from the locked position, and thus demonstrated that the seatbelt was functional. Mr. Young concluded that the seatbelt was fully functional at the time of the incident.

43. Claimant testified on his own behalf. Claimant testified that he had incurred multiple small cuts and bruises. He described his whole body as being sore after the accident. Claimant testified that he continues to experience neck and lower back symptoms that he attributes to the motor vehicle accident. Regarding the neck, Claimant continues to experience tightness and a pulling sensation in his neck when he attempts to turn to the right, indicating both ongoing tightness and pain.

44. Claimant reported ongoing tightness in his lower back throughout the day, and reported discomfort with prolonged sitting. Claimant testified that he continued to have pain in his neck and back to this day. He has not sustained any new injuries to his neck or back since his work accident. Claimant testified that he never had problems with his neck or back prior to this incident. Moreover, although Claimant was limited to lifting up to 130 pounds, that remains functionally limiting to him. as he used to work out daily and was able to deadlift 455 pounds and squat 450 pounds.

45. At hearing, Claimant testified that he found the seatbelt "difficult to put on." Claimant admitted that he was not wearing a seatbelt at the time of the incident. Claimant stated that he noticed the seatbelt was more difficult to pull, requiring more force than usual, on Friday afternoon before the Monday accident. He assumed it would be easier to have it repaired the following Monday.

46. Before Claimant exited the yard that morning, he was already running late by about ten to fifteen minutes due to complications at the plant and having to wash excess concrete mix off his truck. Claimant then called dispatch to let them know he was running late. He testified that he wrestled with the seatbelt to put it on before leaving the facility. He then drove to his destination and stopped about five to eight miles from the destination to stop and check the consistency of the "slump"[1] to make sure it was exactly what the customer had ordered, which is required by the Employer. Claimant had to exit the vehicle to do this. If the slump is not correct, the purchaser is likely to reject it, which could result in a write up for the employee. Claimant checked the slump and it was still the proper consistency. He then, in the interest of time, proceeded towards his destination, without taking the time to struggle with the seat belt further. It was Claimant's intention to report the malfunctioning seatbelt after he returned to the yard from this visit.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ, on Remand, draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case are not interpreted liberally in favor of either party. Section 8-43-201, C.R.S. (2016).

B. A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. Pursuant to Section 8-43-215, C.R.S., the decision of the ALJ contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has discretion to make credibility determinations, draw plausible inferences from the record, and resolve conflicts in the evidence. *Davison v. Indus. Claim Apps. Office*, 84 P.3d 1023, 1025 (Colo. 2004). This decision does not address every item contained in the record, and incredible or implausible testimony or unpersuasive inferences that have not been specifically addressed have been implicitly rejected. *Magnetic Eng'ng, Inc. v. Indus. Claim Apps. Office*, 5 P.3d 385, 389 (Colo. App. 2000).

C. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation,

consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. Colorado Jury Instructions, Civil, 3:16 (2018). The ALJ, as fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull*, 802 P.2d 1182, 1183 (Colo. App. 1990). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968); see also *Dow Chemical Co. v. Industrial Claim Appeals Office*, 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion). To summarize, the ALJ finds the witnesses, including Claimant, to have testified sincerely and credibly at the hearing.

Overcoming a DIME Opinion, Generally

D. A DIME physician's findings of causation, MMI and whole person impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning impairment is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

E. Stated differently, to overcome a DIME physician's opinion regarding impairment, the party challenging the DIME must demonstrate that the physicians' determinations in these regards are highly probably incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.* Proof of a deviation from the rating protocols provides some evidence from which the ALJ may infer that the DIME physician's rating has been overcome*. Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117 (Colo. App. 2003).

F. In resolving the question of whether the DIME physician's opinions have been overcome, the ALJ may consider a variety of factors including whether the DIME physician properly applied the AMA Guides. *See Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo. App. 2000); *Aldabbas v. Ultramar Diamond Shamrock*, W.C. No. 4-574-397 (ICAO August 18, 2004). The ALJ should also consider all of the DIME physician's written and oral testimony. *Lambert and Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998).

Dr. Higginbotham's Application of Table 53IIB

G. Desk Aid 11, paragraph 1 states, "Impairment ratings are given when a specific diagnosis and objective pathology is identified. *(Reference: C.R.S. §8-42-107(8)(c)*. Further, when addressing Spinal Ratings, Desk Aid 11 states:

> In order to be assigned a spinal rating, the patient must have objective pathology and impairment that qualifies for a numerical impairment rating of greater than zero under Table 53. Spinal range of motion impairment must be completed and applied to the impairment rating only when a corresponding Table 53 diagnosis has been established.

Thus, under Table 53(II)(B) of the AMA Guides and Desk Aid #11, the DIME examiner may assign an impairment value for impairment or a specific disorder of the lumbar or cervical regions of the spine, so long as the medical evidence establishes the presence of a specific diagnosis, objective pathology, and six months of *medically documented* pain and rigidity. In this instance, the ALJ now concludes that Dr. Higginbotham's *Assessments,* both for Claimant's cervical and lumbar spine, were sufficient to constitute a specific diagnosis, coupled with objective pathology, to warrant a Table 53(II)(B) impairment rating. In light of the ICAO's Remand, the ALJ is not persuaded by Dr. McCranie's analysis that the six months of rigidity must be documented objectively by a medical provider.

Six Months of Medically Documented Pain and Rigidity

H. The medical records reviewed by the DIME examiner contain sufficient references to pain-*and rigidity*- of both Claimant's neck and back - from the date of the accident, up through Claimant's final visit with his chiropractor on January 24, 2018-a period of just over 4 months. The DIME exam itself occurred just over 7 months after the accident. While Dr. Higginbotham did not document any *objective* findings of rigidity in his DIME exam, he did note Claimant's self-reported complaints of "*stiffness* of his *lower back* and a *sharp pull* in the left side of his *neck and back* when he increases his physical activity." Under the guidance provided by the ICAO on remand, the ALJ now concludes that this provides *sufficient, medically documented evidence of at least 6 months of pain and rigidity* to qualify for a Table 53(II)(B) diagnosis.

I. While Dr. Rook purports to have noted some objective evidence of rigidity at his IME months later, this was not known to Dr. Higginbotham at his DIME exam, since Dr. Rook's report didn't yet exist. There is no evidence that Dr. Higginbotham supplemented his findings based upon what Dr. Rook may have observed. Therefore, while Dr. Rook's observations of rigidity after the time are duly noted, they are not part of Dr. Higginbotham's calculus. Independent of what Dr. Rook observed, however, there was sufficient, *medically documented* evidence available to Dr. Higginbotham to support a finding of at least 6 months of pain and *rigidity* to warrant an impairment rating under Table 53(II)(B).

J. There is no allegation (nor does the ALJ find) that Dr. Higginbotham's methodology in performing his range-of-motion measurements was deficient. Nor in the soundness of his medical conclusions, his physical exam, or his review of the medical records. The ALJ, therefore, concludes that the DIME physician's opinion has not been overcome with clear and convincing evidence.

ORDER

It is therefore Ordered that:

1. The DIME report of Dr. Higginbotham has not been overcome. Claimant's Impairment Rating of the Whole Person is 16% of the whole person.

2. All other Orders issued in connection with this case remain in full force and effect.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-003-379-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on June 11, 2019, in Denver, Colorado. The hearing was digitally recorded (reference: 6/11/19, Courtroom 2, beginning at 8:30 AM, and ending at 12:00 PM).

Claimant's Exhibits 1 through 14 were admitted into evidence, without objection. Respondents' Exhibits C through E, G through L, and DD through QQ were admitted into evidence, without objection. Respondents removed Exhibits BB and CC and did not seek their admission. Claimant objected to Respondents' Exhibits A, B and M through AA as not relevant to any hearing issue. The ALJ admitted those Exhibits over the Claimant's standing objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant, which was filed filed, electronically, on June 18, 2019. On June 19, 2019, Respondents filed comments, electronically, concerning paragraph 13 of the findings and paragraph D of the order portion of the proposed decision. After a consideration of the proposed decision and the Respondents' comments thereon, the ALJ has modified the proposal and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern the Claimant's average weekly wage (AWW); and, the causal relatedness of the Claimant's recent TMJ (tempomandibular joint) surgeries and temporary disability benefits arising from those surgeries, if causally related.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant sustained an admitted work-related injury on December 17, 2015.

2. The latest General Admission of Liability (GAL), dated June 21, 2019, admits for causally related medical benefits; an AWW of $1,143.79, and variable temporary partial disability (TPD) and total (TTD) benefits; the latest period of TPD being from March 18, 2019 through "Undet." I remains in full forcer and effect.

The Injury of December 17, 2015

3. On the day of the injury, the Claimant slipped and fell on patch of ice. Both feet slipped out from under her. She landed squarely on her buttocks. She extended her right upper extremity (RUE) to break the fall. She had wrist discomfort initially and developed right elbow pain throughout the day. She developed a headache as well as spine pain. (Claimant's Exhibit 8, p. 42).

4. The ALJ finds that the Claimant's fall was a substantial slip and fall, which resulted in numerous injuries as more fully described in the Division Independent Medical Examination (DIME) report of Jonathan Bloch., D.O (Claimant's Exhibit 8, pp. 55-56, 58-67).

Dr. Bloch –TMJ

5. As pertinent to the issues for hearing, Dr. Bloch determined that the Claimant was not at maximum medical improvement (MMI) based on a specific need for treatment of her bilateral TMJ joints. Dr. Bloch found and concluded "with regard to her jaw, that **it is medically probable that none of her current jaw issues would be deteriorated if it wasn't for her injury and it would only be appropriate that the proposed bilateral TMJ arthroplasty fall under workers' compensation at this time…**(emphasis supplied). I agree with her doctors at Kaiser, that the TMJ surgery needs to be done bilaterally." (*Id.* at 59). The ALJ finds that this causality opinion is

inextricably tied into Dr. Bloch's determination that Claimant is not at MMI, an integral part of the DIME process.

6. Dr. Bloch continued: "The TMJs are supported under workers' compensation and I would start there…I would also anticipate the TMJs are also exacerbating some of her other concussive effects as well as neck pain by way of sympathetic mediation, which could explain the partial or temporary responses to prior therapies or treatments. Bilateral TMJ arthroplasty is the current proposed definitive treatment, which will better kickstart new stages of recovery." (*Id.* at 64*).*

7. Dr. Bloch was aware of the Claimant's past history of problems with her TMJ joints, including a prior prosthetic reconstruction on the left TMJ. (*Id.* at 55). Dr. Bloch was of the opinion that the work-related slip and fall exacerbated and accelerated her bilateral TMJ deterioration resulting in the need for bilateral surgeries. (*Id.* at 55, 59, 64).

8. Dr. Bloch issued his DIME report on September 9, 2017. He specifically determined that the Claimant was not at MMI because of the need for bilateral TMJ surgeries. (*Id.* at 36, 55, 59, 64).

9. The DIME Unit of the Division of Workers' Compensation (DOWC) issued a NOTICE--Report "Not at MMI" on September 15, 2017. The DIME with Dr. Bloch remains open (Claimant's Exhibit 9, p. 69).

10. Respondents took no steps in response to the Notice from the DIME Unit until filing a GAL on November 13, 2017 (Claimant's Exhibit 10, pp. 71 and 73). Specifically, Respondents did not file an Application for Hearing within 2 Instead, Respondents later affirmatively admitted that the Claimant was not at MMI based on the DIME report from Dr. Bloch (*Id.* at 73) ("Per the attached DIME report the IW (Claimant) is not at MMI, amend[ing] the admission to place back on a GAL.").

Aaron T. Liddell, M.S., D.M.D.

11. Dr. Liddell is the treating and attending surgeon for the Claimant's bilateral TMJ surgeries. Dr. Liddell submitted a request for prior authorization of those surgical procedures to Pinnacol on July 31, 2018 (Claimant's Exhibit 11, pp. 114-118). The request specifically tied the Claimant's TMJ pain to her fall at work in 2015. (*Id.* at 116). The ALJ finds and infers that Dr. Liddell would not have submitted that request to Pinnacol for authorization (and ultimately payment) unless he believed that the surgeries in question were reasonably necessary, and causally related to the work injury.

12. Pinnacol responded to the request for prior authorization on August 1, 2018. Pinnacol wrote to Dr. Liddell and approved his requested authorization for "prosthetic TMJ joint with interdental wiring, arthroplasty TMJ joint with prosthetic joint replacement, bilateral, with associated procedures." (Claimant's Ex. 12, pg. 119). The

ALJ finds and infers that Pinnacol would not have approved that request unless it was reasonable, necessary, and related to the work injury. While Pinnacol **may** have retained the right to challenge that particular prior authorization request from Dr. Liddell when it was submitted, it chose not to and instead approved and authorized the bilateral surgeries.

The Claimant

13. The Claimant testified credibly at hearing. Here testimony supports the fact that the work-related slip and fall exacerbated and worsened her bilateral TMJ and the ALJ so finds. The Claimant confirmed that none of her current treating medical providers have placed her at MMI following the bilateral TMJ surgeries on February 7, 2019. Her main gatekeeper for treatment is David Reinhard, M.D. Dr. Reinhard has specifically rendered the opinion that the Claimant is not at MMI. The Claimant continues to need PT, massage therapy and pain management until she fully recovers from the TMJ surgeries. She is anticipated to reach MMI in the next 2 to 3 months, at which time she can return to Dr. Bloch for completion of the DIME with a final impairment rating (Claimant's Exhibit 14, pp. 124-25). Pinnacol remains subject to the February 8, 2019 GAL as it relates to temporary disability benefits. The Respondents did not seek to withdraw that admission as part of the present hearing.

Respondents' Independent Medical Examiner (IME), Curtis Hayes, D.D.S.

14. Respondents presented the testimony of Dr. Hayes, at hearing. Dr. Hayes only performed a medical records review. He has never examined or treated the Claimant, nor taken a history from her.

15. Dr. Hayes confirmed that the ["I agree with Dr. Bloch…that the surgery needed to be completed bilaterally."]. Dr. Hayes disagreed that the surgery was causally related to the work injury. (*See id.*). As discussed in more detail below, there is a significant question of whether the Respondents are able to challenge the causal relatedness of the TMJ surgeries to the work injury in light of Dr. Bloch's unchallenged DIME opinion on "not at MMI." Without reference to that legal issue, the ALJ finds as a matter of fact that the bilateral TMJ surgeries were reasonable, necessary, **and causally related** to the work injury. The ALJ credits the more credible and persuasive opinions of Dr. Bloch on this issue. Further, the ALJ finds and infers that the bilateral surgeries were reasonably necessary **and causally related,** based on the insurance carrier's decision to authorize the surgeries and to admit for temporary disability benefits following the surgeries.

16. Dr. Hayes' opinion was based substantially on his view that the Claimant's prior symptoms were similar to the symptoms she was experiencing prior to the work injury. Dr. Hayes' own report, however, undermines this opinion. His report shows that the Claimant did not have any TMJ treatments in 2014. Prior to the injury in 2015, the Claimant only had two appointments that year. Following the injury late in 2015, the Claimant had multiple visits for TMJ problems with much more extensive problems and

treatments listed throughout 2016. The same is also true for 2017. The ALJ infers and finds that Dr. Hayes is not Level II certified by the DOWC, and he did not appreciate the concept of aggravation/acceleration in the workers' compensation context. Indeed, he indicated that this was the firs time he testified in a workers' compensation case. The records support the finding that the Claimant (Respondents' Exhibit A, pp. 006-008). The ALJ finds the medical opinions of Dr. Bloch and Der. Liddell, M.D., D.D.S., significantly more persuasive and credible than the opinions of Dr. Hayes.and the ALJ rejects Dr. Hayes' non work-related opinions as not credible or persuasive.

Average Weekly Wage

17. The Claimant's W-2 for 2015 presents the most comprehensive picture of her AWW at the time of the injury (Claimant's Exhibit 1, p. 1). Her gross earnings for that year were $67,757.39. Dividing that gross amount by 52 weeks results in an AWW of $1,303.03. The ALJ finds that this AWW is the most accurate reflection of her earnings at the time of the injury. The Claimant's attorney made a judicial admission at the hearing accepting the AWW as of the date of injury, and withdrawing any request for an increased AWW for missed time after the surgeries in 2019.

Temporary Disability

18. The Claimant was disabled from her regular work following the surgeries on February 7, 2019. She remains at least partially disabled at this time. Under the GAL of February 8, 2019, the Claimant has established that the Respondents owe her additional TPD benefits for the past periods of TPD admitted in that GAL based on her increased AWW. Further, the Claimant has established that the Respondents are liable for the differential between the admitted temporary disability benefits from February 7, 2019 and continuing based on the re-determined AWW.

Ultimate Findings

19. For the reasons specified herein above, the ALJ finds the medical opinions of Dr. Bloch and Der. Liddell, M.D., D.D.S., significantly more persuasive and credible than the opinions of Dr. Hayes. and the ALJ rejects Dr. Hayes' non work-related opinions as not credible or persuasive. Further, the ALJ finds the Claimant's testimony credible insofar as it supports the causal relatedness of the agfgravation/acceleration of her TMJ Joints.

20. Between conflicting opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the opinions of DIME Dr. Bloch and authorized treating surgeon (ATP) Dr. Liddell, and to reject the opinion of IME Dr. Hayes.

21. Although DIME Dr. Bloch's opinion on the causal relatedness of the aggravation/acceleration of the Claimant's TMJ problems is inextricably bound into his determination that the Claimant is not at MMI, the ALJ hereby applies the "preponderance" standard of proof because the Claimant has established that it is more

likely than not, based on the totality of the evidence, that the aggravation/acceleration of the Claimant TMP problems and consequent need for surgery is causally linked to the admitted injury of December 17, 2015.

22. Although Respondents make a compelling argument that it would be inappropriate to increase the Claimant's AWW, based on increased earnings as of February 7, 2019, the evidence thereof was murky and Claimant made a judicial admission to relinquish her request for an increased AWW as of February 7, 2019. Instead, Claimant requested an increased AWW based on an erroneous computation of AWW as of the date of injury. Consequently ,based on a correct computation of AWW as of December 17, 2015. Claimant's AWW should be $1,303.03, which should drive an increase in temporary disability benefits from the start.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour*

Cleaners v. Indus. Claim Appeals Office, 914 P.2d 501 (Colo. App. 1995). As found, the medical opinions of Dr. Bloch and Der. Liddell, M.D., D.D.S. As further found, the ALJ rejected Dr. Hayes' non work-related opinions as not credible or persuasive. Additionally, the ALJ found the Claimant's testimony credible insofar as it supported the causal relatedness of the aggravation/acceleration of her TMJ Joints.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting opinions, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of DIME Dr. Bloch and authorized treating surgeon (ATP) Dr. Liddell, and to reject the opinion of IME Dr. Hayes. Also, as found, the Claimant's testimony was credible.

Dr. Bloch's DIME Opinion of "not at MMI" Is Binding on the Parties and the ALJ

c. Under § 8-42-107(8), C.R.S., a DIME physician's opinions concerning MMI and permanent medical impairment are binding unless overcome by clear and convincing evidence. Both determinations require the DIME physician to assess, as a matter of diagnosis, whether the various components of the claimant's medical condition are causally related to the industrial injury. *E.g. Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). Consequently, when a party challenges the DIME physician's determination of MMI, the Court has recognized that a DIME physician's determination on causation is also entitled to presumptive weight. *Id.; Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998). The DIME doctor's opinion on the cause of a claimant's disability is an inherent part of the diagnostic assessment, which comprises the DIME process involved in determining MMI. *Bekkouche v. Riviera Electric*, W.C. No. 4-514-998 (December 30, 2008).

d. The Colorado Supreme Court held in *Williams v. Kunau*, 147 P.3d 33 (Colo. 2006) that "once a claimant has successfully challenged a finding of MMI

through the DIME process, the DIME process remains open and, when the treating physician makes a second finding of MMI, the employer or insurer may not file an FAL to close the case prior to returning the claimant to the independent medical examiner for a follow-up examination and determination of MMI." Id. at 36. Further, where a DIME physician and an authorized treating physician (ATP) agree that a workers' compensation claimant is not at MMI, an ALJ cannot determine MMI as a matter of fact, and treatment should continue until either the DIME or the ATP places the claimant at MMI. Colo. Rev. Stat. § 8-42-107(8)(b)(II); *Burren v. Indus. Claim Appeals Office*, 2019 COA 37, ¶ 17, *reh'g denied* (Apr. 4, 2019). Here it is undisputed and found that neither the DIME doctor nor any of the Claimant's treating physicians have placed her at MMI following the bilateral TMJ surgeries on February 7, 2019.

e. In addition, the Respondents' failure to contest the DIME physician's findings precludes them from challenging Dr. Bloch's findings concerning the cause of the Claimant's TMJ complaints and the need for surgery. *Leprino Foods Co. v. Industrial Claim Appeals Office*, 134 P.3d 475 (Colo. App. 2005); *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med*, 961 P.2d at 590.

f. In essence this case involves a constructive challenge to Dr. Bloch's opinion of "not at MMI." Dr. Bloch's unchallenged and binding opinion concerning not at MMI was inextricably intertwined with his opinion that the Claimant needed bilateral TMJ surgeries as a result of the work injury. That was the reason Dr. Bloch concluded that the Claimant was not at MMI for the work injury; she needed the bilateral TMJ surgeries as result of the work injury to reach MMI. The MMI determination inherently required the DIME physician to assess, as a matter of diagnosis, whether the various components of the Claimant's medical condition were causally related to the industrial injury. Respondents' failure to dispute the DIME's not at MMI finding within 20 days as required by § 8-42-107.2(4)(c) rendered the components of the DIME opinion binding not only as to the not at MMI finding, but also the DIME's determination of causation of the aggravation/acceleration of the MT condition. *See Leprino Foods*, 134 P.3d at 482-83.

g. As a consequence, the DIME's findfing pertinent to causation as an inherent part of his "not at MMI" finding is no longer subject to dispute, even to the extent of clear and convincing evidence. The DIME physician's determination is therefore binding on the parties and the ALJ because the Respondents did not timely act to contest it. Accordingly, jurisdiction to hear such a contest has now been lost. *Leprino Foods*, 134 P.3d at 482.

Medical Treatment

h. In order to prove that an industrial injury was the proximate cause of the need for medical treatment, an injured worker must prove a causal nexus between the need for treatment and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). It is for the ALJ, as the fact-finder, to determine whether a need for medical treatment is caused by the industrial injury, or some other intervening injury.

F.R. Orr Construction v. Rinta, 717 P.2d 965 (Colo. App. 1985). Respondents are liable for the "direct and natural consequences" of a work-related injury, including consequential injuries caused by the original compensable injury. *See Travelers Ins. Co. v. Savio*, 806 P.2d 1258 (Colo. 1985). As found, the Claimant has established that it is more likely than not, based on the totality of the evidence, that the aggravation/acceleration of the Claimant TMJ problems and consequent need for surgery is causally linked to the admitted injury of December 17, 2015. Although DIME Dr. Bloch's opinion on the causal relatedness of the aggravation/acceleration of the Claimant's TMJ problems is inextricably bound into his determination that the Claimant is not at MMI, the ALJ hereby applies the "preponderance" standard of proof because of the potential import of a recent Court of Appeals opinion in *Yeutter v. Indus. Claim Appeals Office,* **2019 COA 53** (April 11, 2019) [holding that the standard of proof in a DIME's determination of causation can be subject to the "preponderance standard").

Average Weekly Wage

i. An AWW calculation is designed to compensate for **total** temporary wage loss. *Pizza Hut v. Indus. Claim Appeals Office,* 18 P. 3d 867 (Colo. App. 2001). *See* § 8-42-102, C.R.S. As found, although Respondents make a compelling argument that it would be inappropriate to increase the Claimant's AWW, based on increased earnings as of February 7, 2019, the evidence thereof was murky and Claimant made a judicial admission to relinquish her request for an increased AWW as of February 7, 2019. Instead, Claimant requested an increased AWW based on an erroneous computation of AWW as of the date of injury. Consequently ,based on a correct computation of AWW as of December 17, 2015. Claimant's AWW was $1,303.03, which should drive an increase in temporary disability benefits from the start.

Judicial Admission

j. A judicial admission is defined as a "formal, deliberate declaration that a party or his or her counsel makes in a judicial proceeding for the purpose of dispensing with proof of formal matters or facts about which there is no real dispute." *Kempter v. Hurd,* 713 P.2d 1274 (Colo. App. 1986); *Gen. Steel Domestic Sales, LLC v. Hogan & Hartson, LLP,* 230 P.3d 1275, 1283 (Colo. App. 2010). Judicial admissions must be unequivocal but become binding once they are made. *Salazar v. American Sterilizer Co.,* 5 P.3d 357 (Colo. App. 2000). *Also see Valdez v. Texas Roadhouse,* W.C. No. 4-366-133 [Industrial Claim Appeals Office (ICAO), January 25, 2001]. Stipulations are a form of judicial admission and are binding on the party who makes them. *Maloney v, Brassfield,* 251 P.3d 1097, 1108 (Colo. App. 2010). As found herein above, Claimant's counsel made a judicial admission tjhat Claimant was only seeking an increased AWW, based on an erroneous computation as of the date of injury.

Burden of Proof

f. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S.

See City of Boulder v. Streeb, 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained her burden of proof on the designated issues.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents shall pay the costs of the bilateral TMJ surgeries and the additional medical treatment related to those TMJ surgeries as prescribed by the authorized treating physicians, subject to the Division of Workers' Compensation Medical Fee Schedule.

B. The Claimant's average weekly wage is re-established at $1, 303.03 from the beginning of the claim forward.

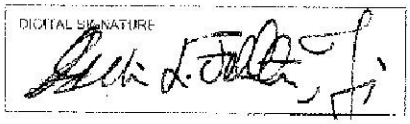
C. Respondents shall pay the Claimant the differential between the previously admitted temporary partial sand temporary total disability benefits for the admitted periods, subject to the new average weekly wage.

D. Subject to the differential in average weekly wage, the latest General Admission of Liability remains in full force and effect.

E. Respondents shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts of indemnity benefits due and not paid when due.

F. Any and all issues not determined herein are reserved for future decision.

DATED this 24th day of June 2019.



EDWIN L. FELTER, JR.
Administrative Law Judge

ISSUES

1. Whether Respondent has overcome, by clear and convincing evidence, the opinion of division independent medical examination (DIME) physician Frederick Scherr, M.D. that Claimant is not at maximum medical improvement (MMI).

2. If Respondents overcome DIME physician Dr. Scherr's opinion, and establish that Claimant is at MMI, whether Claimant has established by a preponderance of the evidence an entitlement to a general award of medical maintenance benefits.

STIPULATIONS

1. If Respondent overcomes DIME physician Dr. Scherr's opinion, and establish that Claimant is at MMI, Claimant is not entitled to any permanent partial disability (PPD) benefits for his October 8, 2015 right shoulder injury due to a prior injury, impairment rating, and complete apportionment.

2. Claimant is seeking a general award of maintenance benefits and is not specifically seeking right total shoulder replacement as no treating physician has specifically requested that procedure.

FINDINGS OF FACT

1. Claimant is a 69-year-old male employed by Employer as a ramp agent. Claimant's duties include loading cargo, bags, mail, and other items on and off airplanes. Claimant has been so employed for approximately 24 years.

2. On October 8, 2015, Claimant reported that he was directing an airplane with lighted wands and that when he raised his arms up to cross them overhead, he felt a pop and immediate pain in his right shoulder, causing his right arm to drop.

3. Claimant also reported that a few days prior to the October 8, 2015 incident, he was loading heavy military bags onto an airplane. Claimant reported that after loading approximately 150 of these heavy bags onto the plane, his shoulder was sore for the next few days.

4. Respondent admitted liability for the incident, and therefore, Claimant treated his right shoulder under workers' compensation as a work related injury.

5. On October 30, 2015, Clamant underwent an MRI of his right shoulder that was compared to a prior MRI of the right shoulder from October of 2010. The impression

provided was full thickness re-tear of the rotator cuff involving the posterior supraspinatus and the majority of the infraspinatus measuring 3.4 cm with retraction of the torn fibers approximately 5.4 cm to the level of the glenoid, and interval progression of intrasubstance split tearing of the subscapularis tendon and partial thickness tearing of the undersurface fibers. The findings also included interval biceps tenodesis, stable fraying and fissuring of the labrum with interval development of a posterosuperior labral tear, mild glenohumeral arthropathy with superior sublation of the humeral head likely due to loss of the depressor mechanism, and distension of the joint capsule by intraarticular contrast with synovial debris and hypertrophy layering along the axillary recess. *See* Exhibit C.

6. On November 30, 2015, Sean Griggs, M.D. evaluated Claimant. Claimant reported that he was bringing a plane into the gait utilizing signaling flashlights and that when he raised his arm above his head he felt a pop and then developed pain and weakness. Claimant reported a prior rotator cuff tear that was repaired in 2010, that was large, and that after surgery he did well. Claimant reported pain and weakness. On examination, Dr. Griggs noted weakness of the rotator cuff on the right and an internal rotation lag on the right. He also found limited strength in the right shoulder. Dr. Griggs diagnosed right shoulder rotator cuff tear. Dr. Griggs noted that based on the history and relatively normal function before the event on October 8, 2015, he recommended surgical exploration with rotator cuff repair. Dr. Griggs told Claimant there was a possibility that there was a portion of the previous repair that did not heal and that Claimant had gone on to tear further into that area. Dr. Griggs noted that, by MRI, there was a tear of the subscapularis that appeared to be worse than prior examinations. Dr. Griggs opined that the need for surgery related to the October 8, 2015 injury. *See* Exhibit F.

7. On December 23, 2015, Claimant underwent right shoulder surgery performed by Dr. Griggs. Dr. Griggs performed a right arthroscopic partial rotator cuff repair and a right shoulder subacromial bursectomy. Dr. Griggs noted in surgery that the rotator cuff tear was massive and that the posterior cuff including the infraspinatus and teres minor were unable to be repaired. Dr. Griggs noted that he was able to repair the supraspinatus tendon and opined that appeared to be the only portion of the tear that was fresh and appeared more recent. Dr. Griggs noted some mild glenohumeral joint arthritis and evidence of a previous biceps tenotomy. *See* Exhibit F.

8. On January 11, 2016, Dr. Griggs evaluated Claimant. Dr. Griggs noted that Claimant was 19 days post surgery where he had an acute on chronic massive rotator cuff tear. Dr. Griggs indicated that the infraspinatus and a portion of the teres minor were found chronically detached and were not able to be repaired but that he was able to fully flex the supraspinatus anterior edge and partially repair the rotator cuff. Claimant remained on restrictions of no use of the right upper extremity at this visit. *See* Exhibit F.

9. On February 23, 2016, Dr. Griggs evaluated Claimant. Dr. Griggs noted that Claimant was doing well 8 weeks post surgery where they were able to repair a portion of the supraspinatus. Dr. Griggs opined that the partial repair appeared to be intact and that Claimant could begin with strengthening at therapy but should continue

with sling immobilization while out and about. Dr. Griggs recommended compliance so that Claimant did not re-injure himself. *See* Exhibit F.

10. On March 22, 2016, Dr. Griggs evaluated Claimant. Dr. Griggs found some limitation in motion of the right shoulder compared to the left and opined that Claimant's right rotator cuff was functioning but was weak. By April 19, 2016, Dr. Griggs found continued weakness of the rotator cuff on the right, but Claimant reported he was feeling better. Dr. Griggs noted that at the time of surgery, Claimant could only have a partial repair and because of that Dr. Griggs recommended Claimant consider permanent restrictions. *See* Exhibit F.

11. Claimant continued therapy and treatment for both his right shoulder and for an unrelated knee injury. Ultimately, in December of 2017, he was sent for an impairment rating.

12. On December 21, 2017, John Aschberger, M.D. performed an impairment assessment. Claimant reported suffering a shoulder injury when signaling a plane as it was coming in and feeling a pop in the arm. Claimant reported that he was identified as having a rotator cuff tear and that he underwent surgery and overall had a good recovery. Dr. Aschberger noted some persistent difficulty and that the surgeon was unable to reconnect the infraspinatus. Claimant reported that he was working but not lifting bags and was tolerating work well. Dr. Aschberger performed a physical examination with range of motion measurements. Dr. Aschberger assessed status post right rotator cuff tear and surgical repair, right knee meniscectomy, and right knee total arthroplasty. Dr. Aschberger opined that the strength and motion of the right shoulder were overall good but noted some weakness in external rotation. Dr. Aschberger found Claimant to have a 5% upper extremity impairment due to Claimant's range of motion limitations in the right upper extremity. *See* Exhibit G.

13. On October 15, 2018, Frederick Scherr, M.D. performed a DIME. Claimant reported right shoulder ache and lack of strength. Claimant reported that on October 8, 2015, he was working as a baggage handler and was loading 150 military bags weighting between 50-75 pounds and that he was in the cargo bay on his knees as the bags came up a conveyer belt. Claimant reported that he took each bag and stacked them to chest height and that he loaded all 150 bags. Claimant reported some soreness in his right shoulder at the end of the day but noted no specific incident or trauma to the right shoulder. Claimant reported that he went home, iced his right shoulder, and took some ibuprofen. Claimant reported that the next day at work he was assisting to park a jet and when raising his arms with the light sticks, was unable to raise his right arm up to form an "X" to indicate to the plane it should stop. Claimant reported he had to use his left arm to pick up his right arm to form an "X." Claimant reported that he sought treatment, had an MRI, and underwent surgery on December 23, 2015 to repair his rotator cuff. Claimant reported that the surgeon was able to repair the supraspinatus but not the remaining rotator cuff injuries. Claimant reported that he had progressed slowly, felt like his impairment rating was low, and wondered if there was anything else that could be done for his right shoulder because his function and strength were limited. *See* Exhibits 3, A.

14. Dr. Scherr reviewed medical records and performed a physical examination. Dr. Scherr provided an assessment of severe right shoulder rotator cuff pathology, post rotator cuff repair, possible adhesive capsulitis of right shoulder, degenerative right shoulder, and right shoulder pain. Dr. Scherr opined that Claimant had a work related injury on October 8, 2015 not due to specific trauma or a specific incident but because Claimant had done overhead work for 23 years that qualified as likely to contribute to shoulder disorders. Dr. Scherr noted that both the surgeon and the authorized treating provider told Claimant nothing else could be done. Claimant reported that he had deteriorated since his impairment rating with Dr. Aschberger. Dr. Scherr opined that Claimant was not at MMI and needed further work up including MRI or MRI arthrogram depending upon the second opinion from an orthopedic shoulder specialist. Dr. Scherr noted the possibility that Claimant may need a shoulder replacement surgery in order to correct his right shoulder and Dr. Scherr noted that there would be a question whether a shoulder replacement is more likely due to degenerative issues and the process of aging or due to one incident on October 8, 2015. Dr. Scherr opined that Claimant was not at MMI, should see an orthopedic shoulder specialist to determine next steps including possible repeat MRI/MRA and/or additional surgery. Dr. Scherr opined that if no surgery was offered, Claimant would be at MMI. *See* Exhibits 3, A.

15. On January 15, 2019, Dr. Aschberger evaluated Claimant. He noted that he had seen Claimant once prior on December 21, 2017 for an impairment rating. Dr. Aschberger noted that Claimant had a pretty good recovery overall from a shoulder injury and had an impairment of 5% of the upper extremity from the last evaluation. Claimant reported worsening since December 2017 with increasing pain and decreasing range of motion. Dr. Aschberger reviewed previous evaluations of Claimant previously Claimant's pain level and range of motion findings would not be indicative of an aggressive procedure, but noted that Claimant reported significant deterioration in terms of range of motion. On exam, Dr. Aschberger noted markedly restricted shoulder range of motion. Dr. Aschberger assessed status post right rotator cuff repair with original good improvement, subsequent decreasing range of motion, and mild increased pain as well as possible adhesive capsulitis. Dr. Aschberger opined that the deterioration appeared to be related to the original injury. Dr. Aschberger referred Claimant back to orthopedic surgeon Dr. Griggs for evaluation and noted it was likely Claimant warranted repeat MRI but that he would leave that to Dr. Griggs' determination. *See* Exhibits 10, G.

16. On February 14, 2019, Sean Griggs, M.D. evaluated Claimant. Dr. Griggs noted he last treated Claimant in 2016 when Claimant had a massive acute on chronic rotator cuff tear and underwent surgical management. Dr. Griggs noted that he was able to repair the supraspinatus at that time and by May of 2016, Claimant had near normal range of motion but limited strength. Claimant reported that he had trouble with raising his arm above his head that gradually happened again after surgery and return to activities. Dr. Griggs diagnosed right shoulder massive rotator cuff tear with recurrent tearing following repair of a massive acute on chronic tear where only a portion of the cuff was repairable. Dr. Griggs opined that Claimant likely had a recurrent tear not due to trauma but due to the status of Claimant's rotator cuff. Dr. Griggs recommended an MRI

to evaluate the size of the cuff tear and amount of atrophy present. Dr. Griggs opined that if Claimant had ongoing pain and weakness and desired surgical management, he would likely require a reverse prosthesis. *See* Exhibits 12, F.

17. On February 28, 2019, Timothy O'Brien, M.D. performed an independent medical evaluation. Claimant reported his recent injury as repetitive overuse and that his right shoulder felt weak and sore after loading 135 military bags. Claimant reported that a few days later, he was bringing in a plane and as he was crossing his hands with the lighted wands, his right arm dropped because of pain and weakness. Claimant indicated that he reported the injury and was treated including surgery that failed. Claimant reported continued pain and weakness. Dr. O'Brien reviewed medical records and performed a physical examination. *See* Exhibits 13, B.

18. Dr. O'Brien opined that Claimant's onset of right shoulder pain on October 8, 2015 was a manifestation of Claimant's personal health and was in no way causally related to a specific or isolated work event. Dr. O'Brien opined that lifting one's arm overhead with a lightweight illumination device is not an injury mechanism but a daily activity. He opined that the lighted wands were not heavy and that lifting them is not traumatic and could not have generated enough energy to result in any new tissue breakage or yielding of the right shoulder. Dr. O'Brien opined that Claimant felt pain because Claimant had a pre-existing and long-standing rotator cuff tear of the right shoulder with a non-work related massive tear in 2011 with surgery and likelihood that the 2011 repair failed. Dr. O'Brien opined that due to the ongoing attrition and degeneration, and desiccation that occurred at the repair site after 2011, it was predictable that the rotator cuff tear repair in 2011 was going to fail and he opined it was medically probable that the repair failed quite rapidly. Dr. O'Brien opined that as there was no new injury on October 8, 2015, Claimant did not require ongoing care. Dr. O'Brien opined that the MRI supported his opinion, as it showed no new tear of the rotator cuff and showed retraction and substantial atrophy, which are findings that take years to become evident. Dr. O'Brien opined that there was no bleeding, evidence of acute injury, or evidence of new tissue breakage or yielding indicative of a "new" tear. Dr. O'Brien opined that all the findings on MRI were chronic, longstanding, and consistent with the failure of the 2011 tear to heal. *See* Exhibits 13, B.

19. Dr. O'Brien attached a medical study to his report indicating that large rotator cuff repairs can fail to heal greater than 50% of the time. Dr. O'Brien opined that it was not unusual that Claimant could be able to continue functioning nearly normally even though his 2011 massive rotator cuff tear repair failed to heal. Dr. O'Brien disagreed with Dr. Griggs' decision to perform surgery to repair Claimant's irreparable rotator cuff and noted that the failure of the 2011 surgery proved that the surgery recommended by Dr. Griggs had no hope of healing. Dr. O'Brien indicated that subjecting Claimant to another surgery that was going to predictably fail was poor clinical decision making. Dr. O'Brien opined that the current recommended surgery of reverse shoulder arthroplasty was not causally related to the occupational exposure of October 8, 2015 and that Claimant had a need for that surgical intervention long prior to the October 8, 2015 work activity. Dr. O'Brien noted that after the 2011 surgery predictably failed, Claimant had

substantial retraction of the rotator cuff and had progressive apparent chondromalacia and was a candidate long before October 8, 2015. *See* Exhibits 13, B.

20. On March 8, 2019, Claimant underwent a right shoulder MRI. The impression provided was postoperative shoulder with full thickness tears of the supraspinatus and infraspinatus tendons, moderate grade partial thickness tear of the subscapularis tendon, chronic appearing tear of the posterior labrum, and mild to moderate osteoarthritis and chondromalacia of the glenohumeral joint. The radiologist noted full thickness tears of the supraspinatus and infraspinatus tendons with medial tendon retraction estimated at 5.4 cm and a tear estimated at 3.9 cm and accompanied with severe corresponding muscle atrophy. *See* Exhibits 11, C.

21. Dr. O'Brien testified by deposition. Dr. O'Brien noted that Claimant had a massive rotator cuff tear in 2010 that involved both the supra and infraspinatus and noted that the MRI read showed chronic labral tearing or degeneration, involvement of the subscapularis, and osteoarthritis of the glenohumeral joint. Dr. O'Brien compared the MRI read from 2010 to the MRI read from 2015 and testified that when comparing the two, there were massive tears on both with the 2015 one showing 5.4 cm of retraction compared to 2-3.5 cm of retraction in 2010. Dr. O'Brien testified that the rotator cuff was still massive on the 2015 MRI and even though there was attempted treatment prior, the rotator cuff didn't heal and continued to retract and continued to atrophy. Dr. O'Brien testified that the findings referred to rotator cuff arthropathy and showed a very predictable course of ongoing degeneration. Dr. O'Brien testified that well over 50% of massive rotator cuff repairs fail. Dr. O'Brien testified that the mechanism of injury of lifting a flashlight type device could not cause a rotator cuff tear, and that raising one's arm overhead is not an injury mechanism and is a daily activity.

22. Dr. O'Brien testified that Claimant experienced pain because he had a pre-existing rotator cuff tear and a failed pre-existing rotator cuff repair. Dr. O'Brien testified that after the failed repair, Claimant was left with a massive rotator cuff tear and underlying arthritis. He opined those are incurable, relentlessly progressive conditions and it would be expected that Claimant would have intermittent pain even with daily activities that are not injurious. Dr. O'Brien testified that Claimant had a manifestation of a personal patho anatomy. Dr. O'Brien pointed out that in the 2010 surgical repair, the tear was so chronic and the tendon was so retracted, the surgeon couldn't completely put the whole tendon back into its footprint and could only get part of it reattached.

23. Claimant had previous treatment involving his right shoulder.

24. On September 9, 2010, Stuart Greer, M.D. evaluated Claimant. Claimant reported a football injury with a direct blow right shoulder to ground 9 days prior. Claimant reported old right ac surgery and Dr. Greer found that consistent with findings on x-ray. Dr. Greer diagnosed rotator cuff syndrome. By September 23, 2010, Claimant reported continued and somewhat worsened right shoulder pain and that he was unable to work. Claimant was later assessed with possible rotator cuff tear due to the marked weakness in external rotation and an MRI was ordered. *See* Exhibit D.

25. Claimant's previous medical records show that in October of 2010, a right shoulder MRI showed a very large full thickness rotator cuff tear involving the mid to posterior supraspinatus, entire infraspinatus with some thinned degenerated anterior supraspinatus remaining intact, retraction of the supraspinatus tendon by 2.8 cm and retraction of the infraspinatus tendon by 3.3 cm, and a 3.4 cm anteroposterior dimension of the tear. Claimant had mild atrophy of the infraspinatus and to a lesser extent, the supraspinatus muscle bellies. Claimant also had a high grade partial tear of the long head biceps tendon lateral rotator interval segment and labral degeneration. See Exhibit D.

26. On November 2, 2010, Michael Gallagher, M.D. evaluated Claimant. Claimant reported that on August 17, 2010 he tripped going up the stairs at work while carrying a stroller and reached out with his right arm to grab onto the railing. Claimant reported that he had pain and weakness in his shoulder. Claimant also reported the day prior to that, he had a slight strain of his shoulder while lifting a motorized wheelchair. Claimant noted afterwards that he had a difficult time raising his arm up over his head while trying to assist in the arrival of a plane. Dr. Gallagher noted that the MRI images and report showed massive rotator cuff tearing, biceps fraying, and some longitudinal tearing of the subscapularis. Dr. Gallagher discussed extensively with Claimant the nature of rotator cuff repair and that his massive rotator cuff tear may be irreparable. *See* Exhibit D.

27. Claimant underwent right shoulder arthroscopy with biceps tenotomy and repair of massive rotator cuff repair with Dr. Gallagher on December 20, 2010. After surgery, Claimant underwent physical therapy. *See* Exhibits D, E.

28. On September 13, 2011, Dr. Gallagher evaluated Claimant and noted that he was 9 months out from surgery and was requesting to return to work. Claimant reported no pain in the shoulder but reported mild loss of strength. Claimant felt, overall, that he was very close to being ready to go back to work. Dr. Gallagher found continued limitations in external rotation to 50 degrees but opined that Claimant appeared to be doing very well with controlled pain and significant return of strength. Dr. Gallagher noted the mild residual strength deficit from the massive rotator cuff tear that remained, but opined that Claimant could return to work in October. Dr. Gallagher wanted Claimant to continue working on strengthening and gave Claimant recommendations for proper lifting techniques. *See* Exhibit D.

29. Claimant testified at hearing that after his surgery and 2011 treatment, he had no problems in his right shoulder and no job modifications. Claimant testified that one week prior to October 8, 2015 he had a heavy week at work with a lot of lifting. Claimant testified that now he doesn't lift anything chest height or higher and has pain lifting his arm over his head and has a lack of strength. Claimant testified that he does not think his shoulder is back to its normal condition and that he requested a DIME because he didn't think his shoulder was okay, it was still hurting, and he had a lack of strength.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo.App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo.App. 2000).

DIME opinion on MMI

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.;

Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, 5 P.3d 385 (Colo. App. 2000).

Under the statute MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007). A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (I.C.A.O. March 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Abeyta v. WW Construction Management,* W.C. No. 4-356-512 (ICAO May 20, 2004); *Hatch v. John H. Garland Co.,* W.C. No. 4-638-712 (ICAO August 11, 2000). Thus, a DIME physician's findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI. Therefore, the DIME physician's opinions on these issues are binding unless overcome by clear and convincing evidence. *See Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). The question of whether the party challenging the DIME physician's finding regarding MMI has overcome the finding by clear and convincing evidence is one of fact for the ALJ.

Respondents have established by clear and convincing evidence that DIME physician Dr. Scherr's determination that Claimant was not at MMI was incorrect. It is highly probable and free from serious or substantial doubt that Claimant is at MMI for his work related injury and requires no additional medical treatment or diagnostic procedures to improve or define his injury related medical condition.

As found above, Claimant had massive rotator cuff tearing in 2010 prior to this work related injury. Despite undergoing treatment and therapy, including surgery, in 2010 and 2011, Claimant was left with limitations in his right upper extremity that included weakness. Dr. O'Brien is credible and persuasive that Claimant's rotator cuff was

irreparable back in 2010 and that between 2010 and 2015, the rotator cuff continued to retract. It is credible, persuasive, and highly probable and free from doubt that Claimant had a failed rotator cuff repair in 2010. Claimant's symptoms and findings are consistent with the progression of a torn rotator cuff. Claimant, as found above, had a loss of strength and limitations in external rotation in 2011 when he returned to work full duty. Claimant is not persuasive that he had no problems after his 2011 treatment in his right shoulder. The degree of tearing, retraction, atrophy, and arthritis in his right shoulder demonstrate that his problems have been ongoing for a significant amount of time. As found above, Claimant has similar limitations in strength and range of motion now as he had in 2011 when he stopped treatment following his 2010 injury. Dr. Griggs based his opinion, in part, on Claimant's report that he had mostly normal function before October 8, 2015. However, this report is not credible or persuasive given the limitations Claimant had in 2011 and the imaging in 2015 showing significant retraction, atrophy, and arthritis in the right shoulder.

Although Dr. Griggs attempted to repair the right shoulder on December 23, 2015, it was a futile attempt given the status of Claimant's right rotator cuff that had been irreparable since his massive rotator cuff tear in 2010. Dr. Griggs, as found above, acknowledged that in the 2015 surgery he couldn't repair a lot of the structures and was only able to repair one portion, the supraspinatus tendon. Claimant, at this time, has loss of strength and loss of range of motion similar to what he had in 2011. Respondent has demonstrated that Claimant is back to baseline and that no further treatment is reasonably expected to improve Claimant's work related condition. Claimant's condition Claimant has no new impairment.

Dr. Scherr appears to lack reports showing that Claimant had loss of range of motion and loss of strength in 2011 when he discontinued treatment for his prior right shoulder injury. Dr. O'Brien, overall, is found credible and persuasive. His opinions are consistent with the weight of the medical reports and evidence. There is no further treatment reasonably expected to improve Claimant's work related injury condition and Respondent has established by clear and convincing evidence that Claimant is at MMI for his October 8, 2015 injury.

Medical Maintenance Benefits

The respondents are liable to provide such medical treatment as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury. Section 8-42-101(1)(a), C.R.S. Colorado courts have ruled that the need for medical treatment may extend beyond the point of MMI where the claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or prevent further deterioration of her condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995).

Claimant has failed to establish by a preponderance of the evidence an entitlement to medical treatment beyond MMI. He has failed to show that future medical treatment is

reasonably necessary to relieve the effects of his work related injury or to prevent further deterioration of his work related injury. As found above, his right shoulder condition now includes pain, weakness, and lack of range of motion. This is similar to the condition of his right shoulder in 2011 before this new incident/injury. Although Claimant may wish to pursue additional surgery, this would not be necessary to relieve of the effects of the October 8, 2015 injury but would be necessary to relieve the ongoing effects of the massive and irreparable rotator cuff injury he sustained in 2010. Claimant has failed to establish the need for any future treatment to relieve the effects or to prevent the deterioration of his condition.

ORDER

It is therefore ordered that:

1. Respondent has established by clear and convincing evidence that DIME physician Dr. Scherr erred. Claimant is at MMI for his October 8, 2015 injury.

2. Claimant has failed to establish by a preponderance of the evidence a need for future medical treatment to relieve the effects of or to prevent the deterioration of his October 8, 2015 injury.

3. Any issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 26, 2019 /s/ Michelle E. Jones

1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that the loss of his teeth #24 and #25 (and prospective loss of #23 and #26) is due to a compensable work injury that occurred in August of 2016?

II. If found compensable, what are the reasonable, necessary, and related medical expenses to cure Claimant of his work injury?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant is a long-term employee of Lowe's, performing various tasks, to include returning items which customers have returned back into store inventory. He remains employed as of this time.

2. Claimant was hurt at work sometime in August of 2016 [Claimant's written material state it was August 18, while a calendar Claimant supplied suggests it occurred August 16] while restocking boards back into inventory. He was tossing a two-by-four board into a bin, apparently near shoulder height, when the board struck a support beam and bounced back unexpectedly. Claimant was then struck on the lower part of his mouth by the end of the board. Claimant reported no bleeding or bruising following the injury. There were no witnesses, and Claimant did not tell his coworkers or supervisor at the time of injury. He continued working.

3. Claimant testified at hearing. He did not seek treatment for his this injury at the time, nor for over two years following the incident. He testified that he had no symptoms for five months following the incident. His symptoms started in January 2017, and included pain and loose teeth. However, he did not seek treatment at his dentist, since he had gone from full-time to part-time work at Lowes, and had let his dental insurance lapse. Claimant testified that he lost two bottom teeth (noted to be teeth #24 and #25, the two lower front teeth in the center) on August 9, 2018 while eating some meat.

4. Claimant first reported to Respondents after he lost his teeth on August 9, 2018. [This is noted to be barely within two years of the initial incident].

5. After the claim was denied, Claimant sought treatment from his personal dentist, Dr. Matthew Lovato, DDS, on November 15, 2018. Prior to this visit, Claimant had not been to this dentist since October of 2014. At this 2014 visit, Claimant was noted to have some bone loss in the anterior portion of his lower jaw, specifically #s, 23, 24, 25, 26. (#23 being to the immediate left of #24, and #26 being to the immediate right of #25).

6. In a letter dated 11/16/2018, Dr. Lavato noted that not only were #24 and #25 missing, but #23 and #26 were suffering from severe bone loss, and would soon likely need to be extracted. He concluded this letter thusly:

> There are times when trauma to a tooth *can* lead to the pulp of the tooth going bad, leading to infection and the teeth loosening. I would say that, considering Mr. Ralph's previous condition, his accident *may have contributed* to him losing teeth #24 and 25, and the future loss of teeth #23 and 26. (Ex. B) (emphasis added).

7. A deposition of Dr. Lovato was taken on January 15, 2019. Claimant had originally seen Dr. Lovato as a patient in 2012, suffering from bone loss which resulted in extraction of tooth #15. The cause of Claimant's tooth loss was discussed at length, with trauma resulting in tooth death and periodontal disease offered as possible causes. Dr. Lovato said that as of 2018, there was gum and bone loss in the areas surrounding the two lost teeth. Dr. Lovato ultimately concluded that he could not say within reasonable degree of medical certainty what caused Claimant's tooth loss.

> Q. …Within a reasonable degree of medical certainty, you are unable today to say definitively that the tooth loss at 24 and 25 are due to trauma? There are other mechanisms that it could be due to, like periodontal disease?
>
> A. Correct. I couldn't say that it was due to a periodontal issue either. You know, one way or the other, I can't say that it was this or that. Those are probably the two things, though.

8. He noted that the most common reason for teeth simply 'falling out' was probably periodontal disease:

> Q. Based on your practice, would you say it's [periodontal disease] the *most common reason* why you just get spontaneous tooth loss in adults?
>
> A. Yes. Probably. (emphasis added).

9. Dr. Lovato also noted that one would expect pain to accompany tooth trauma leading to tooth death:

> Q. So in a case of pulp death due to trauma, what would you expect a patient to experience prior to the tooth just falling out? I mean, there are warning signs, right?
>
> A. *Yes. I would think so.* Everybody is a little different.
>
> Q. What would you expect in a typical case of trauma leading to pulp death?
>
> A. At some point, you would *expect* it to get an abscess, like I said.
>
> Q. And would an abscess be something that's painful?

A. *Most of the time*…..You would think it would hurt, but not always. (emphasis added)

10. An Independent Medical Examination (IME) was performed on January 17, 2019 by James E. Berwick, D.D.S. (Ex. A). The ALJ notes that the history of the injury as described by Claimant, and the symptoms Claimant noted, are reasonably consistent with Claimant's testimony at trial, and the chronology he outlined in his written materials tendered at hearing.

11. In reviewing the dental records, Dr. Berwick notes that Claimant's previous dental history showed a history of bone loss, suggestive of periodontal disease, with other teeth requiring extraction (#15 in 2012, and #2 in 2014). He also noted that Dr. Lovato had documented bone loss of Claimant's teeth #s 22 through 27 as far back as 2013.

12. In his report, Dr. Berwick opined that Claimant's #24 and 25 suffered a fate similar to #15 and #2:

> The patient's history and complaints as well as his present condition are consistent with loss of teeth #s 24 and 25 form periodontitis or chronic bone loss from periodontal disease. *There are not indications that the teeth sustained significant trauma,* and their loss is not [to] be related to it. (Ex. A). (emphasis added).

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182,

1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion). The ALJ in this case finds Claimant to be sincere and credible in his belief that he lost his teeth due to a work injury. Claimant has been reasonably consistent (if belated) in describing this work incident, and the chronology of symptoms he experienced. The ALJ finds that the incident at work (being struck in the lower mouth by the 2 by 4) indeed occurred, and sometime in August of 2016, within the statute of limitations.

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

D. A compensable injury is one that arises out of and occurs within the course and scope of employment. § 8-41-301(1)(b), C.R.S. An injury occurs in the course of employment when it was sustained within the appropriate time, place, and circumstances of an employee's job function. *Wild West Radio v. Indus. Claim Apps. Office*, 905 P.2d 6 (Colo. App. 1995). An injury arises out of employment when there is a sufficient causal connection between the employment and the injury. *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014). Where the Claimant's entitlement to benefits is disputed, the claimant has the burden to prove, by a preponderance of the evidence, a causal relationship between the work injury and the condition for which benefits are sought. *Snyder v. Indus. Claim Apps. Office*, 942 P.2d 1337 (Colo. App. 1997).

E. Claimant has a history of periodontitis and tooth loss relating to the disease. His periodontal disease was the reason for his initial visit to Dr. Lovato in 2012. At that time, Claimant's records show "severe bone loss," which led to looseness of the tooth adjacent to the bone loss. Two of Claimants' teeth have already had to be extracted due to the bone loss. Claimant had bone loss in additional areas, including surrounding the anterior bottom teeth, which are currently at issue.

F. Dr. Lovato opined that in order to stabilize periodontal disease, like Claimant had in 2012 through 2014 on the teeth in question, hygiene, including regular cleanings, would be necessary to prevent furtherance of the disease. Claimant apparently did not visit a dentist for regular cleanings from 2014 until after the loss of his teeth in 2018. While the precise timelines are unclear from the record, at some point Claimant had dropped his dental coverage when he went part-time. This occurred at a very inopportune time, given his preexisting periodontal woes.

G. The most Dr. Lavato would state on Claimant's behalf was that the loss of the front two teeth *could* have resulted from trauma. However, when asked if he could determine within a reasonable degree of medical certainty that Claimant's tooth loss had come from trauma, Dr. Lovato stated that he could not make that determination. He eventually opined that the most common reason for teeth simply "falling out" was periodontal disease – not from trauma. In the event of trauma sufficient to cause this type of result (pulp death of the tooth), one would most likely experience an abscess, and accompanying pain. Claimant has described neither at any point. Nor did Claimant supply #24 and #25 for any sort of forensic examination by his dentist, in order to shed some light on what just occurred. While no bad faith is implied herein, it remains Claimant's burden to show what happened to his teeth.

H. Dr. Berwick examined Claimant for an IME and noted issues of gum recession at various locations throughout Claimant's mouth. He concluded, based on his examination and Claimant's history and complaints, that the loss of the teeth in question was the result of periodontitis or chronic bone loss from periodontal disease, and not from trauma. The ALJ finds Dr. Berwick's analysis persuasive. In the end, even Dr. Lovato is not opining that the work accident was the cause of Claimant's loss; it was merely *possible.*

I. Claimant has not shown by a preponderance of evidence that this work accident was the cause of his tooth loss. However sincere, he is merely speculating that his dental problems, which did not start until five months after the injury, were the result of this work accident. The ALJ finds and concludes that it is more likely than not that Claimant's loss of teeth #24 and #25 (and the prospective loss of #23 and #26) are due to the degenerative nature of periodontal disease, and not from this work accident. Nor did this work accident cause his underlying degenerative condition to become symptomatic.

Medical Benefits/Authorized Treating Provider

J. Because this claim is not compensable, no medical or dental benefits are to be awarded.

ORDER

It is therefore Ordered that:

1. Claimant's claim for Workers Compensation benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 26, 2019

/s/ William G. Edie

William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that work injuries sustained on February 24, 2015 (W.C. No. 4-989-017), January 11, 2016 (W.C. No. 5-004-904), and June 23, 2016 (W.C. No. 5-026-332), caused a pre-existing, asymptomatic Chiari Malformation Type 1 (CMF1) to become symptomatic, necessitating ongoing medical treatment.

PROCEDURAL MATTERS

I. At hearing, Respondents' counsel indicated that the issue before the ALJ solely involved W.C. Nos. 5-026-332 and 5-004-904, which had not been consolidated. Claimant's counsel indicated W.C. No. 4-989-017 was also to be considered. The ALJ noted Application for Hearing identifies W.C. Nos. 4-989-017 (February 24, 2015 date of injury), W.C. No. 5-004-904 (January 11, 2016 date of injury), and W.C. No. 5-026-332 (June 23, 2016 date of injury).Respondents' counsel subsequently agreed W.C. No. should not be excluded in consideration of this matter. Claimant argued that two additional work incidents, one in December 2016 and September 2017, should be also be considered by the ALJ. Respondents argued the December 2016 and September 2017 incidents could not be considered by the ALJ in terms of any contributory effect, as no admissions of liability had been filed for the alleged injuries, and compensability for those alleged injuries had not been endorsed as an issue for hearing. The ALJ agrees. Accordingly, with respect whether Claimant's work injuries caused an asymptomatic condition to become symptomatic, the ALJ limits her consideration to the injuries that are the subject of W.C. Nos. 4-989-017, 5-004-904 and 5-026-332.

II. During the evidentiary deposition of Dr. Lorah, counsel for Claimant posed questions to Dr. Lorah pertaining to an August 31, 2018 evaluation. At that time, undersigned counsel objected to the line of questioning, inasmuch as the August 31, 2018, office visit occurred subsequent to the August 9, 2018, hearing, and details of this evaluation should not be added into the record. Respondents' objection is sustained by the ALJ.

III. At the end of Dr. Lorah's deposition, counsel for Claimant requested that Dr. Lorah provide a complete copy of the clinical notes for the treatment that Claimant has received at the clinic. Respondents' counsel timely objected to the submission of parts of the clinical notes, given the fact that some of the clinical notes may have been generated after the August 9, 2018 hearing. Upon reviewing the records, Respondents' counsel objected to the submission of the clinical notes dated August 3, 2018, August 17, 2018, August 31, 2018, September 18, 2018, and October 24, 2018. Respondents' objection is sustained by the ALJ.

FINDINGS OF FACT

1. Claimant is a 56 year old male who works for Employer as a construction project administrator.

2. On February 24, 2015, Claimant sustained a compensable industrial injury (W.C. No. 4-989-017) after slipping and falling on ice. Claimant presented to authorized treating physician (ATP) Bruce D. Lippman, M.D. at Glenwood Medical Associates on March 2, 2015 and reported landing on his buttocks and right upper extremity. Claimant complained of neck stiffness, right wrist discomfort and a constant headache. No head injury was reported. Dr. Lippman assessed Claimant with a cervical strain and contused right upper extremity. Claimant subsequently reported occasional headaches at a March 16, 2015 evaluation, again with no mention of a head injury. Dr. Lippman opined that Claimant's headaches were the result of the cervical spine strain, which had resolved. As of Claimant's next visit on April 6, 2015, Dr. Lippman noted Claimant's only remaining symptom was soreness in the right wrist. Claimant subsequently continued to treat with Dr. Lippman at least once per month for right wrist symptoms. He ultimately underwent right wrist surgery on August 12, 2015. The medical records during that time period are devoid of any reference to a head injury or associated complaints.

3. On January 11, 2016, Claimant suffered an admitted industrial injury (W.C. No. 5-004-904) when he again slipped and fell on ice while at work. Claimant went to the emergency room and underwent a CT scan of the head, which was normal. He presented to Dr. Lippman on January 18, 2016, reporting that he fell on ice and hit the back of his head with no loss of consciousness. Claimant complained of dizziness, some nausea, headache, and neck tightness. Dr. Lippman noted, "This is the first time he has had a head injury or concussion." Dr. Lippman assessed Claimant with a concussion without loss of consciousness, cervical strain and low back strain. He removed Claimant from work due to the concussion.

4. Claimant was released to limited duty on January 25, 2016, but returned to Dr. Lippman on January 26, 2016 with complaints of increased headaches, dizziness, trouble concentrating and memory issues. Dr. Lippman restricted Claimant to sedentary work. On February 1, 2016, Dr. Lippman referred Claimant for a neurological consultation with Jeffrey Siegel, M.D.

5. Claimant presented to Dr. Siegel on March 21, 2016. Dr. Siegel diagnosed Claimant with post-concussion syndrome as a result of the January 11, 2016 incident, noting a typical expected recovery time of three to six months. He recommended Claimant undergo physical therapy and an occipital nerve block. Claimant continued to treat with Dr. Siegel, who ultimately discharged Claimant from his care on May 3, 2016. Dr. Siegel noted Claimant's symptoms were slowly and steadily improving despite continued headaches.

6. Claimant continued to see Dr. Lippman, reporting improved vertigo, occasional memory problems, headaches, photophobia, and issues with cognition and memory. Claimant continued to participate in physical therapy and work modified duty. By June

16, 2016, Dr. Lippman noted that, despite some remaining issues with short-term memory, Claimant's concussive symptoms had improved, and his headaches were

7. Claimant was rear-ended in a low-speed motor vehicle accident (MVA) while working on June 23, 2016 (W.C. No. 5-026-332). Claimant presented to Valley View Hospital with complaints of neck pain. He reported no loss of consciousness. The attending physician noted that a CT scan of the head was not indicated, as Claimant did have any seizure activity, vomiting, change in vision, gait instability or loss of consciousness. Claimant was diagnosed with a concussion and neck pain, prescribed Flexeril, and advised to follow up with his primary care physician.

8. Claimant presented to David M. Lorah, M.D. at Glenwood Medical Associates on June 28, 2016 with complaints of worsening cervical pain, low back pain and headaches after the MVA. Claimant reported he did not recall hitting his head, and there was no deployment of airbags or loss of consciousness during the incident. Dr. Lorah diagnosed Claimant with a concussion and cervical strain, referred him for physical therapy, and released Claimant with restrictions.

9. On June 30, 2016, Dr. Lippman placed Claimant at maximum medical improvement (MMI) for his January 11, 2016 work injury with no permanent impairment or need for maintenance care. He noted Claimant finished physical therapy for the January 11, 2016 injury months prior and had been working his regular job with no active problems. Dr. Lippman noted Claimant had since been involved in a MVA and appeared to have sustained another concussion and cervical strain.

10. On July 5, 2016, Dr. Lippman evaluated Claimant in connection with the June 23, 2016 MVA. Claimant complained of headaches and neck pain. Dr. Lippman diagnosed Claimant with a concussion, cervical strain, and lumbar strain, opining that the MVA aggravated Claimant's January 11, 2016 injury. He referred Claimant for physical therapy.

11. On July 26, 2016, Respondents filed a Final Admission of Liability (FAL) for Claimant's January 11, 2016 injury (W.C. No. 5-004-904) consistent with Dr. Lippman's June 30, 2016 report. Respondents admitted for reasonable, necessary and related post-MMI medical treatment. No objection to the FAL was filed.

12. Dr. Siegel reevaluated Claimant on August 16, 2016 per the referral of Dr. Lippman. Dr. Siegel noted Claimant was involved in a MVA and diagnosed Claimant with a whiplash type injury.

13. At a follow-up evaluation with Dr. Siegel on September 27, 2016, Claimant reported ongoing vertigo. Dr. Siegel noted Claimant and his wife reported that Claimant's vertigo actually "[e]xtend[ed] back to a February 2015 injury; apparently he slipped, broke his wrist, and also struck his head at that time. The vertigo was intermittent, lasting a few weeks at a time. It will then remit for a few weeks, then recur."

14. On October 4, 2016, Claimant underwent a brain MRI and saw Dr. Siegel. Dr. Siegel reviewed the MRI results and noted there was no explanatory intracranial

pathology. He assessed Claimant with dizziness after three concussive injuries over the past couple of years, two culminating from slips and falls and one whiplash type injury. Dr. Siegel noted no specific acute or subacute neuropathology was identified, other than residual concussion symptoms. He opined nothing else could be done for Claimant at that time and had no further recommendations for diagnostic workup or treatment.

15. Claimant continued to treat with Dr. Lippman and continued to report headaches, some cognitive and memory issues, and improved vertigo. At a December 16, 2016 appointment, Claimant reported to Dr. Lippman he had an episode of vertigo at work, fell down on his hands and knees, and did not feel well the rest of the day. There is no reference to Claimant hitting his head during this incident. Dr. Lippman referred Claimant back to Dr. Siegel.

16. Claimant saw Dr. Siegel on December 20, 2016, reporting that six days prior he bent down, had a spell of vertigo, and fell forward into a cabinet wall. Claimant denied having passed out. Dr. Siegel noted it was unclear whether Claimant sustained another concussion. He opined there was not much else that could be done for Claimant's vertigo at the time.

17. Dr. Lippman continued to treat Claimant, who continued to complain of headaches, photophobia, vertigo, and issues with sleep, cognition and memory. On April 14, 2017, Claimant asked Dr. Lippman for a referral to Blue Sky Neurology.

18. Upon the referral of Dr. Lippman, Claimant presented to Marc Wasserman, M.D. at Blue Sky Neurology on May 17, 2017. Claimant reported suffering a series of concussions in February 2015, January 2016, June 2016 and December 2016, alleging he hit his head during each incident. Dr. Wasserman opined Claimant suffered four most likely grade II concussions. Dr. Wasserman felt Claimant's neurological examination was somewhat embellished and opined there may be psychological overlay, but noted he could not entirely rule out a central injury. Dr. Wasserman ordered an MRI, EEG, EMG/NCGT and neuropsychological evaluation.

19. Claimant underwent a brain MRI on June 2, 2017 that revealed a Chiari I malformation without obstructive ventriculomegaly.

20. Claimant underwent EMG testing on June 15, 2017, which was normal except for mild median neuropathy at the left wrist.

21. On June 29, 2017, Respondents filed a General Admission of Liability (GAL) in W.C. No. 5-026-332 for the June 23, 2016 injury, admitting for medical benefits and temporary total disability.

22. Claimant underwent a neuropsychological evaluation with Katherine Giles, Psy.D. on July 14, 2017. Claimant reported to Dr. Giles hitting his head on the ground during each of the February 2015, January 2016, and December 2016 incidents, and experiencing whiplash as a result of the June 2016 MVA. He alleged his cognitive problems began following the February 2015 incident, but progressively worsened over time with each subsequent concussive injury. Dr. Giles opined that most of Claimant's

scores were invalid and not interpretable, which she noted could be the result of suboptimal engagement or headache, dizziness, fatigue and/or mood disorder. She stated that Claimant's scores fell below scores obtained by patients with significant brain injury and degenerative neurological conditions. Dr. Giles went on to state that these findings were inconsistent with Claimant's observed ability to provide a coherent history. She noted that Claimant's "clinical profile further indicated that he may have a preoccupation with physical functioning and health matters in general and may tend to develop physical and cognitive symptoms in response to emotional distress (i.e., conversion, somatization)." Dr. Giles gave the following diagnostic impression: concussion without loss of consciousness, post-concussive syndrome, Chiari malformation type 1, and depression. She noted that, while cognitive dysfunction is atypical in Chiari type 1 malformations, the structural abnormality could be producing or exacerbating Claimant's symptoms. Dr. Giles recommended Claimant return to Dr. Wasserman for follow-up.

23. On July 31, 2017, Nicholas K. Olsen, D.O. performed an independent medical examination (IME) at the request of Respondents. Dr. Olsen physically examined Claimant and reviewed Claimant's medical records dating back to May 2000. Dr. Olsen noted Claimant first reported to him that he could not recall whether he struck his head or lost consciousness during the February 2015 work injury, but later claimed he sustained his first concussion during the February 2015 work injury, reported the resulting symptoms, but was denied by workers' compensation. Claimant reported a third incident occurred in December 2016 where he leaned over to work on a pedestal, the pedestal "went boom" and he fell over into the snow. No specific head injury was noted. Dr. Olsen opined Claimant inaccurately portrayed his injuries noting that, based on the medical records, Claimant did not sustain an initial head injury until January 11, 2016, with no loss of consciousness. He opined Claimant suffered a mild concussion without loss of consciousness on January 11, 2016, that significantly improved prior to the MVA. He further noted Claimant did not suffer any loss of consciousness as a result of the June 23, 2016 MVA. Dr. Olsen noted that Claimant's potential for conversion or somatization, as noted by Dr. Giles, was a much more likely explanation for his current complaints than any defined diagnosis stemming from the January 11, 2016 injury. Dr. Olsen opined that there was no objective clinical evidence Claimant required further treatment related to the January 11, 2016 injury or the June 23, 2016 MVA.

24. Claimant returned to Dr. Wasserman on August 15, 2017. Dr. Wasserman noted Claimant has a Chiari malformation, but stated he did not think the Chiari malformation explained all of Claimant's current symptoms. Neurological workup was normal. Dr. Wasserman noted severe depressive symptoms as well as possible somatization and remarked that psychological factors played "a great deal" in Claimant's current symptomatology. He noted Claimant became significantly worse after his father passed away earlier in the year. Dr. Wasserman stated that, while there may be some post-concussive symptoms, at the current juncture it would be difficult to relate all of Claimant's symptoms to the December 2016 incident.

25. Claimant saw David W. Miller, M.D. on September 7, 2017 for evaluation of the Chiari malformation. Claimant reported to Dr. Miller an alleged new incident that occurred the day prior. He reported to Dr. Miller that he squatted down while at work,

felt funny and fell backwards, awakening on the ground with no recollection of what transpired. Claimant reported to Dr. Miller he suffered five concussions over the last few years. Dr. Miller reviewed Claimant's June 2, 2017 brain MRI, which he opined revealed evidence of a Chiari I malformation. Dr. Miller's medical report does not document that he reviewed any other prior medical records from any other source as part of his evaluation. He compared Claimant's June 2017 and October 2016 brain MRIs and did not note "much difference." Dr. Miller opined some of Claimant's symptoms are related to the Chiari malformation, while others, such as Claimant's reported word-searching problems, issues with balance, and headaches, are more likely related to post-concussive syndrome. Dr. Miller concluded that the only good way to treat Claimant's symptoms would be a surgical decompression of his foramen magnum.

26. Claimant also saw Dr. Lippman on September 7, 2017. He reported to Dr. Lippman that, the day prior, he squatted down to look at an electrical box and the next thing he knew was flat on his back and awakened confused and dazed. Dr. Lippman questioned whether Claimant sustained a head injury, noting it was not clear what made Claimant fall over. He removed Claimant from work.

27. Claimant presented to John James Oro, M.D. at the Colorado Chiari Institute on October 3, 2017. Claimant reported to Dr. Oro that he damaged his right wrist during a slip and fall and noticed dizziness after undergoing right wrist surgery in 2015, in January 2016 hit the back of his head and sustained a concussion from a fall, and sustained another concussion as a result of a MVA in June 2016. Claimant complained of headaches, intermittent dizziness, occasional vertigo, difficulty expressing words, and difficulty with cognition and memory. Dr. Oro noted Claimant's October 4, 2016 MRI and June 2, 2017 revealed a Chiari I malformation. His impression was, in relevant part: history of multiple concussions and Chiari I malformation. Dr. Oro recommended Claimant undergo cervical and lumbar MRIs and cervical flexion-extension films.

28. At a follow-up evaluation with Dr. Oro on October 5, 2017, Claimant reported having suffered from five work-related concussions. Dr. Oro asked Claimant and Claimant's wife to prepare a document describing each concussion. Claimant reported that on February 20, 2015 he fell on ice and hit the back of head. He further reported that he was never treated for his concussion, despite reporting the alleged concussion to his physical therapist and workers' compensation doctor at the time. Claimant reported that he was told he had concussions resulting from the January 11, 2016 slip and fall and the June 23, 2016 MVA. Regarding the December 14, 2016 incident, Claimant reported that he was opening up a cabinet door and fell down and landed on his hand. Claimant did not include any reference to striking his head during this incident. Claimant further reported that, on September 6, 2017, he fell down after squatting and got up after approximately 10-15 minutes. He reported that he went to the emergency room and was told he had a concussion. Dr. Oro opined that it is likely Claimant's neurologic syndrome is a combination of the Chiari malformation and his five concussions. He recommended Claimant not consider any surgical intervention at the time, noting Claimant's chances of improvement after a Chiari decompression were less than usual (60-75%) due to his multiple concussions.

29. Dr. Olsen performed another IME on June 20, 2018 addressing a request for speech therapy. He noted that the symptoms Claimant continued to report were very similar to the symptoms reported to Dr. Wasserman in May 2017. Dr. Olsen opined that Claimant was appropriately worked up for all work-related injuries as of August 2017, and that his continued symptoms were consistent with a tendency towards conversion and somatization. He concluded that speech therapy was not medically reasonable, necessary or related to Claimant's January 11, 2016 or June 23, 2016 work injuries.

30. Claimant testified at hearing that he hit his head during the February 24, 2015 slip and experienced dizziness after the February 24, 2015 with no cognitive difficulties. He further testified he struck his head during the January 11, 2016 slip and fall, and was also rear-ended in June 2016. Claimant stated he also fell over in December 2016 and "must've" struck his head, but he does not recall how it happened. Claimant testified that he has experienced issues with directions and memory since the fourth incident.

31. Dr. Oro testified at hearing on behalf of Claimant as an expert in neurosurgery and Chiari malformations. Dr. Oro explained that a Chiari 1 malformation is a structural abnormality in which cerebellar tonsils hang down into the spinal canal. This can result in pressurizing in the brain and dysfunction in the nerve tissues in the brain stem and upper spinal cord. Dr. Oro testified that, by the time he examined Claimant, Claimant had sustained "up to five" concussions" and presented with headaches, ringing in the ears, dizziness, vertigo, and cognitive and balance issues, which are classic symptoms of a Chiari malformation. He stated that Claimant's brain MRI clearly demonstrates a Chiari malformation, which is congenital and pre-existing, but can be triggered or worsen over time. Dr. Oro opined that Claimant concussions seemed to have aggravated the development of Claimant's Chiari malformation symptoms. On cross-examination, Dr. Oro testified that a Chiari malformation can become symptomatic without the presence of trauma, which is the most likely situation. He referred to a study conducted by Dr. Milhorat, which concluded that 24% of individuals with symptomatic CMF1 had a history of trauma contributing to those symptoms, while 76% of those with symptomatic CMF1 had an insidious onset of symptoms with no specific trauma.

32. Dr. Lorah testified by post-hearing deposition on behalf Claimant on October 24, 2018. Dr. Lorah testified as an expert in family medicine. Dr. Lorah became Claimant's current ATP after Dr. Lippman retired in late August 2018, evaluating Claimant on August 31, 2018. Dr. Lorah testified that, based on his review of Claimant's prior medical records and what has been reported to him, his impression is Claimant is a significantly different person as far as his ability to function at work, maintain organizational skills, his resilience to deal with stressors, and issues with memory and processing speed. Dr. Lorah deferred to Dr. Oro when asked whether concussions or head trauma can trigger an asymptomatic Chiari malformation to become symptomatic. Dr. Lorah agreed with Dr. Wasserman that psychological factors play a great deal into Claimant's current symptomatology.

33. Dr. Olsen testified by post-hearing deposition on behalf of Respondents on November 12, 2018. Dr. Olsen testified as an expert in physical medicine and rehabilitation. Dr. Olsen agreed that a Chiari malformation can become symptomatic as a result of trauma. He testified he reviewed the Dr. Milhorat study referred to by Dr. Oro,

and noted that, of the 24% of participants who became symptomatic due to trauma, in many cases it was severe trauma, leading to quadriparesis, death, and central cord syndrome. Dr. Olsen testified that the need for any type of CMF1 surgery would not be causally related to any of Claimant's reports of head trauma. Dr. Olsen indicated that for two of the five incidents Claimant reported causing head traumas, the medical records simply do not support that these incidents resulted in head trauma. He testified that Claimant sustained mild head trauma on January 11, 2016 which fully resolved with no permanent impairment or permanent restrictions, and the June 23, 2016 motor vehicle accident did not show any clear indication of a head injury or concussion. Dr. Olsen further testified that, to the extent Claimant had head traumas, these are not the kind of head traumas identified in the Milhorat study that would result in an asymptomatic CMF1 becoming symptomatic). Dr. Olsen also stated that the CMF1 becoming symptomatic was not related to trauma, but more likely would be explained by the natural progression of a CMF1. Dr. Olsen testified that he believed the most likely scenario in this case is that the concussive symptoms that Claimant is reporting are simply not reliable, either because he has intentionally exaggerated symptoms, or through somatization. Dr. Olsen stated that the second most likely explanation to explain Claimant's symptoms is the natural progression of Claimant's CMF1, without the presence of any kind of trauma. Finally, he opined that the least likely explanation ("very low on the list, if even on the list") would be that the current symptoms is the result of a symptomatic CMF1 occurred from the incidents at work, which boils down to the mild head trauma that he experienced on June 23, 2016.

34. The ALJ finds the opinions of Drs. Olsen and Wasserman, as supported by the medical records, more credible and persuasive than the opinions of Drs. Oro and Miller and the testimony of Claimant.

35. The ALJ finds Claimant did not sustain any head trauma as a result of the February 24, 2015 injury. Claimant sustained mild head trauma as a result of the January 11, 2016 injury and significantly improved after undergoing conservative treatment, being placed at MMI by Dr. Lippman in late June 2016 with no permanent impairment or restrictions. Claimant sustained a mild concussion as a result of the June 23, 2016 MVA. None of these aforementioned incidents, alone or combined, likely caused Claimant's asymptomatic Chiari malformation to become symptomatic.

36. Claimant failed to prove by a preponderance of the evidence that the February 24, 2015, January 11, 2016 or June 23, 2016 work injuries caused, aggravated, accelerated or combined with his pre-existing Chiari 1 malformation to produce the need for medical treatment.

37. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Treatment

A claimant is required to prove by a preponderance of the evidence that at the time of the injury he was performing service arising out of and in the course of the employment, and that the alleged injury was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether the claimant met the burden of proof to establish a compensable injury is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d

786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

A respondent is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *See generally Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002).

As found, Claimant failed to meet his burden to prove the February 24, 2015, January 11, 2016 or June 23, 2016 work injuries resulted in his pre-existing asymptomatic Chiari malformation becoming symptomatic. Of importance is Claimant's noted tendency towards conversion and somatization, as noted by Drs. Giles and Wasserman. Dr. Giles specifically noted Claimant's scores on his neuropsychological testing were invalid, fell below scores obtained by patients with significant brain injuries and neurological conditions, and were inconsistent with his observed ability to provide a coherent history. Dr. Wasserman opined that psychological factors played "a great deal" in Claimant's symptomatology, noting Claimant's reported condition significantly worsened after the death of his father. The accuracy of Claimant's reporting of events and symptoms is called into question considering such factors, and is significant in light of other evidence that does not support Claimant's contentions.

At his initial evaluation with Dr. Lippman, Claimant did not report hitting his head. The medical record documents complaints of headaches, which Dr. Lippman subsequently attributed to a cervical strain that had resolved. By April 6, 2015, the only symptoms noted were right wrist symptoms. Despite continuing to see Dr. Lippman on a regular basis for the February 24, 2015 injury for several months thereafter, the records contain no reference to a reported head injury or associated symptoms. To the contrary, Dr. Lippman referred to Claimant's January 11, 2016 incident as Claimant's first head injury or concussion. There is no mention in the record of Claimant allegedly hitting his head during the February 24, 2015 incident until Claimant's September 2016 evaluation with Dr. Siegel, at which time he reported experiencing intermittent vertigo dating back to February 2015. The record is devoid of sufficient credible and persuasive evidence establishing Claimant sustained any head trauma as a result of the February 24, 2015 work injury.

While Claimant did sustain a concussion as a result of the January 11, 2016 slip and fall, the credible and persuasive evidence establishes that the concussion was mild with no loss of consciousness. Claimant underwent a conservative course of care, significantly improved, and was placed at MMI on June 30, 2016 with no permanent impairment or restrictions or recommendations for maintenance treatment. Shortly before being placed at MMI for the January 11, 2016 injury, Claimant sustained a mild whiplash-type injury as a result of a low speed MVA. Claimant did not lose consciousness nor require a CT scan of the head. Dr. Olsen credibly and persuasively opined that, Claimant received an appropriate workup for the aforementioned injuries

and, to the extent Claimant sustained head trauma due to such injuries, the head trauma did not cause Claimant's Chiari malformation to become symptomatic.

Dr. Olsen conducted a thorough review of Claimant's medical records and was privy to the inconsistencies regarding Claimant's reports of the incidents and symptoms. While Dr. Miller and Dr. Oro opined that Claimant suffers from both a combination of Chiari symptoms and post-concussive symptoms, and Claimant's work injuries caused the Chiari malformation to become symptomatic, both physicians based their opinions on Claimant's subjective reports of sustaining five work-related concussions. While it is undisputed a Chiari malformation may become symptomatic due to trauma, both Dr. Oro and Dr. Olsen testified that this is the least likely scenario. Moreover, Dr. Olsen credibly testified that those situations generally involve severe trauma. Drs. Oro and Olsen both acknowledged that it is more likely that an asymptomatic Chiari malformation becomes symptomatic without undergoing any kind of trauma. Dr. Olsen credibly opined it is more likely Claimant's symptoms are attributable to the natural progression of the Chiari malformation. Based on the totality of the credible and persuasive evidence, Claimant failed to prove that the February 24, 2015, January 11, 2016 and June 23, 2016 work injuries caused his asymptomatic Chiari malformation to become symptomatic and require treatment.

ORDER

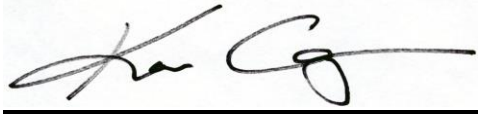
It is therefore ordered that:

1. Claimant's request for ongoing treatment related to the Chiari I malformation is not related to the February 24, 2015, January 11, 2016 or June 23, 2016 work injuries and is thus denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 28, 2019



Kara R. Cayce

ISSUES

1. Whether Claimant has established by a preponderance of the evidence an entitlement to mileage reimbursement.

2. If so, determination of the total amount of mileage reimbursement due to Claimant and whether Respondents have overpaid mileage due.

FINDINGS OF FACT

1. Claimant is a 47-year-old male who worked for Employer as a carpenter.

2. On January 7, 2014, Claimant sustained an admitted work related injury after slipping and falling on ice while pulling a tarp at Employer's work site.

3. Claimant underwent treatment with providers in the Denver metropolitan area following his injury. At the time of his injury, Claimant was living in Aurora.

4. Claimant testified that for a while, he was living on the streets and at a truck stop after he lost his home. Claimant testified that he began picking up his work related prescribed medications at a UPS facility in Commerce City. He testified that he would get prescriptions from his doctors, order the medications from a company, and that UPS would call him when they arrived and he would pick up the medications.

5. Claimant testified that he has undergone five surgeries since his injury but that he is still in pain and requires daily pain medications. Claimant also testified that he has depression and requires medications for that as well.

6. On June 7, 2016, Walter Torres, Ph.D. evaluated Claimant. Dr. Torres noted that Claimant was homeless and living in his truck after being ejected from the home he shared with his then-wife and that Claimant was in a situation involving psychosocial duress. *See* Exhibit 13.

7. On July 25, 2016, Claimant was evaluated at the University of Colorado Hospital. Claimant reported that his pain was unbearable, that he wanted to cut his legs off, that he had pain in his left shoulder and knee, headaches, anxiety, and suicidal ideation. Claimant reported that he ran out of hydrocodone and morphine five days prior. The records indicate Claimant was struggling with homelessness. *See* Exhibit 14.

8. In August and September of 2016, it was noted that Claimant continued to have difficulties with pain management. Claimant was noted to have gone 5 days without pain medications and with significant withdrawal symptoms, but was better after getting

back on his regimen. Claimant was noted to look considerably more comfortable with Embeda, which included morphine, and was noted to look functionally much better while on medications. Claimant was noted to continue to have an unstable housing situation, continuing to be homeless as of September 22, 2016 and it was also noted that Claimant's depression was complicating his chronic pain. *See* Exhibit 15.

9. At some point near the end of 2016 or in 2017, Claimant moved to Pueblo, Colorado to live at his girlfriend's brother's home. Claimant testified that he wanted to see how things would work out in Pueblo before formally changing his address or notifying Respondents of an address change. Claimant submitted a request for mileage reimbursement indicating that as of December 20, 2016 he was still living in Aurora. He submitted a formal change of address to the Pueblo address on February 9, 2017. Claimant could not testify specifically to the date that he actually moved to Pueblo, but indicated he didn't want to change his address formally until he knew the living situation with his girlfriend in Pueblo would work out.

10. While living in Pueblo, Claimant continued to see his medical providers in Aurora and in Denver.

11. On February 9, 2017, Claimant notified Respondents of his address change and that he had moved to Pueblo. Insurer had a hard time finding medical providers in Pueblo for Claimant's ongoing treatment due to the complexity of Claimant's case. Thus, Claimant continued to treat with providers in Aurora and Denver. Claimant ultimately moved back to Aurora in August of 2017 and again notified Respondents of his address change. *See* Exhibit 12.

12. While Claimant was living in Pueblo, the owner of the home where Claimant was staying did not want prescription medications or any drugs delivered to the home address and did not want the drugs inside the home.

13. Claimant testified that he attempted to go to UPS in Pueblo to see if he could set up delivery of the medications there, as he had done in Commerce City. He testified that he went to a few different locations but that all the medications had been moved to a central office and that he had trouble getting the medications. Claimant agreed that he could have picked up his medications in Pueblo, but that after going to several locations and trying to figure it out and going 3 days without medications in severe pain, he decided just to continue picking up his medications in Commerce City because he had no problems there. Claimant did not attempt to get the medications delivered to a store in Pueblo (i.e. Walgreens, Target, King Soopers, Walmart, etc.). Claimant did not attempt to set up a PO Box for delivery in Pueblo. Claimant tried once to get medications from the Pueblo UPS, felt it was too difficult to figure out, and decided to just keep driving to Denver to pick up his medications.

14. Ultimately, Claimant decided it would be easier just to continue to pick up his medications in Commerce City, since the UPS employees knew him and Claimant had been picking up the medications there for a while without problems. Claimant also testified that it helped him to get out of the house and drive to Denver.

15. On July 18, 2017, Claimant submitted a request for mileage reimbursement to Respondents. Claimant indicated all mileage submitted was for the case and requested reimbursement as soon as possible. Claimant attached five mileage application forms to the request. *See* Exhibit 11.

16. The dates/mileage on that request included:

09/26/2016	**228 miles**	Dr. Torres	*duplicate
11/07/2016	**228 miles**	Dr. Torres	*not living in Pueblo
11/15/2016	**238 miles**	Dr. Aschberger	*not living in Pueblo
12/05/2016	**238 miles**	Dr. Aschberger	*not living in Pueblo
12/07/2016	**228 miles**	Dr. Torres	*not living in Pueblo
12/21/2016	**228 miles**	Dr. Torres	*no address change
12/28/2016	**250 miles**	pick up meds	*not reasonable
01/02/2017	**238 miles**	Dr. Aschberger	*no address change
01/03/2017	**238 miles**	Dr. Aschberger	*no address change
01/06/2017	**238 miles**	Dr. Aschberger	*no address change
01/16/2017	**238 miles**	Dr. Aschberger	*no address change
01/17/2017	**228 miles**	Dr. Torres	*no address change
01/18/2017	**250 miles**	pick up meds	*not reasonable
01/25/2017	**238 miles**	Dr. Aschberger	*no address change
02/28/2017	238 miles	Dr. Aschberger	
03/06/2017	238 miles	Dr. Aschberger	
03/07/2017	228 miles	Dr. Torres	
03/10/2017	228 miles	Dr. Torres	
03/11/2017	238 miles	Dr. Aschberger	
03/13/2017	228 miles	Dr. Torres	
04/04/2017	238 miles	massage therapy	
04/10/2017	228 miles	Dr. Torres	
04/18/2017	238 miles	Dr. Aschberger/Guy MT	
04/24/2017	**250 miles**	pick up meds	*not reasonable
04/25/2017	238 miles	massage therapy	
04/27/2017	**250 miles**	pick up meds	*not reasonable
05/11/2017	238 miles	Dr. Aschberger	
05/12/2017	**250 miles**	pick up meds	*not reasonable
05/17/2017	238 miles	toni Shaw RTM	
05/18/2017	228 miles	Dr. Torres	
05/19/2017	**250 miles**	pick up meds	*not reasonable
06/01/2017	238 miles	Dr. Aschberger	
06/05/2017	**250 miles**	pick up meds	*not reasonable
06/05/2017	**236 miles**	collect meds – Walgreens	*not reasonable
06/09/2017	**250 miles**	pick up meds	*not reasonable
06/14/2017	228 miles	Dr. Torres	
06/18/2017	228 miles	Dr. Torres	
06/19/2017	238 miles	Dr. Aschberger	
06/20/2017	**250 miles**	pick up meds	*not reasonable

06/21/2017	**250 miles**	pick up meds	*not reasonable
06/26/2017	276 miles	Dalton chiropractic and pick up meds	
07/03/2017	228 miles	Dalton chiropractic	
07/05/2017	238 miles	cervical MRI apt.	
07/10/2017	228 miles	Dalton chiropractic	
07/11/2017	238 miles	physical therapy	
07/12/2017	**250 miles**	pick up meds	*not reasonable

See Exhibits 11, B.

17. The total miles requested were 10,976. Of the 10,976 miles requested, 2,986 were requested for mileage incurred in picking up medications at either a UPS facility or a Walgreens in the Denver area. Of the 10,976 miles requested (not including medication pickups) 2,806 were for dates prior to February 9, 2017 when Claimant notified Respondents of his address change.

18. On July 27, 2017, Respondents issued a letter to Claimant's attorney. Respondents indicated that mileage that occurred before Claimant's change of address to Pueblo that they were notified of on February 9, 2017 was not reasonable. Respondents also indicated that they did not believe driving to and from Denver to pick up medications was reasonable. Respondents calculated the mileage prior to the address change at 3,782 miles and the mileage for medication pickups at 2,499 miles. From Claimant's request for 10,976 miles, Respondents subtracted 3,782 miles (prior to address change) and subtracted 2,499 miles (for medication pickups). Respondents were left with 4,695 miles. The letter indicated that they would be paying mileage for 4,695 miles and that they did not believe the other mileage requests were reasonable. They also noted that they were in the process of getting a provider and new authorized treating provider in Pueblo for Claimant. *See* Exhibits 17, C.

19. On July 27, 2017, Claimant's attorney emailed Respondents' attorney indicating that Claimant had a complicated history and needed a physiatrist or occupational medicine physician to be his primary provider. The email also indicated that the move to Pueblo was a temporary move and that Claimant planned to return to Denver although had not determined when he would move back. *See* Exhibit 17.

20. On August 7, 2017, Respondents' counsel emailed Claimant's counsel. The email indicated that with Claimant's plan to move back to the Denver area, getting a new ATP in Pueblo may be a worthless endeavor but noted it would still be a problem if Claimant continued to request mileage from Pueblo to Denver. Respondents' counsel suggested allowing the treating providers to remain the same but noted a compromise of not agreeing to continue to pay mileage. The letter also indicated that the mileage payment would not include payments for Claimant to drive all the way to Denver to pick up medications. *See* Exhibit 17.

21. On August 8, 2017, Respondent issued payment to Claimant for mileage between 11/07/16 and 07/12/17. The total amount paid was $2,488.35, for 4,695 miles at .53/mile consistent with Respondents position outlined above. *See* Exhibit 10.

22. On September 27, 2017, Claimant submitted a letter to Respondent. The letter indicated that Claimant disagreed with the mileage calculation and the payment amount of $2,488.35. Claimant requested reimbursement for an additional $3,328.93 for mileage. *See* Exhibit 11.

23. The additional $3,328.93 includes the amount of mileage for the denied miles of 3,782 (prior to address change) and for the denied miles of 2,499 (for medication pickups).

24. On an earlier mileage request from January 30, 2017 that Claimant submitted, he requested mileage to/from an Aurora address for visits through December 20, 2016. In that request, one entry is for 09/26/2016 for 26 miles to/from Dr. Torres. As seen above, in the mileage request at issue for this hearing, Claimant also later requested reimbursement for the same date, 09/26/2016, for 228 miles to/from Dr. Torres from a Pueblo address. *See* Exhibits A, B.

25. The mileage request at issue for this hearing includes not only the duplicate 9/26/16 entry, but also requests reimbursement for four additional entries in November and December of 2016 to/from a Pueblo address, when Claimant's January 30, 2017 mileage request indicated that his address through December 20, 2016 was in Aurora. *See* Exhibit A.

26. From the list above, the ALJ finds that 5,792 of the miles requested in Claimant's July 18, 2017 mileage request are not supported. This amount includes all items listed in **bold** in the above list. The 5,792 number includes the duplicate entry on 9/26/16 and includes all entries prior to December 20, 2016 as Claimant previously indicated he was still living in Aurora and failed to establish that he lived in Pueblo during that time. It also includes all entries for mileage between Pueblo and either UPS or Walgreens in the Denver area as it is not found reasonable to travel that distance for medications. Finally, it includes additional dates between December 20, 2016 and February 9, 2017 when Claimant failed to notify Respondents of his move to Pueblo and failed to provide them an opportunity to get Claimant in treatment with a provider closer in Pueblo, and because Claimant has not established that he actually moved to Pueblo prior to February 9.

27. Claimant's testimony, and the medical records, support that he needs medications. However, Claimant's testimony did not establish any true attempt or inability to get medications sent to him in Pueblo. Claimant did not live in a rural area where it would be conceivable that mail delivery of medications would be difficult. Further, as shown by the mileage requests, Claimant was traveling to Denver regularly for doctors' appointments. Claimant could have coordinated medication pickups while already in Denver for doctors' visits. His requests for 250 miles roundtrip for the sole purpose of medication pickups is unreasonable.

28. Taking Claimant's request of 10,976 miles and subtracting out 5,792 miles leaves 5,184 reimbursable miles from the July 18, 2017 request. The subtraction

includes the requests that are duplicative, the requests made from Pueblo when Claimant failed to establish he was living in Pueblo, the requests for medication pickups, and the requests for dates when he failed to provide an address change/establish he actually was living in Pueblo.

29. At the reimbursement rate of .53/mile, this amounts to a total mileage reimbursement due Claimant of $2,747.52. As found above, for this mileage reimbursement request, Respondents have already issued payment for $2,488.35. Respondent thus owes Claimant an additional $259.17 for mileage.

30. Respondents argue that there are medical records missing for certain dates Claimant requested reimbursement. The dates prior to February 9, 2017 pointed out by Respondents have been denied mileage reimbursement for other reasons. Claimant has submitted into evidence verification of visits on some of the other dates contested, specifically 3/7/2017, 6/18/17, and 6/26/27. Of the three remaining disputed dates, 3/10/17, 3/11/17, and 6/1/17, Claimant submitted reports showing he was actually evaluated (but did not request mileage) within a week of those dates. Although they are incorrect dates, Claimant traveled the mileage within a week and thus it is owed. The ALJ declines to reduce/deduct mileage based on a date error. *See* Exhibit 18.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo.App. 2002). The weight and credibility to be assigned expert testimony is a matter within the

discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo.App. 2000).

Mileage

Workers' Compensation Rules of Procedure at 7 CCR 1101-3, Rule 18-6 (E) provides that: The payer shall pay an injured worker for reasonable and necessary expenses for travel to and from medical appointments and reasonable mileage to obtain prescribed medications. The rate for mileage shall be 53 cents per mile. The injured worker shall submit a request to the payer showing the date(s) of travel and mileage, and explain any other reasonable and necessary travel expenses incurred or anticipated. Reasonable is defined by Merriam-Webster's dictionary as "not extreme or excessive", "fair and sensible".

Claimant made insufficient attempts to have his medications delivered to Pueblo. It is entirely unreasonable to drive 250 miles roundtrip to pick up medications when a person lives in a large, non-rural area. Claimant, with slightly more effort, could easily have picked up his medications in Pueblo despite his girlfriend's brother not wanting them delivered to the home. Claimant has failed to establish that the extreme mileage he requested for medication pickups is reasonable in order to obtain prescription medications. Claimant could have obtained prescription medications without incurring such extreme mileage. Although Claimant is credible that he cannot go without medications and that it helped him to get out of the house, Claimant had significantly reduced mileage options to obtain his medications and/or get out of the house. His request for all mileage pertaining to medication pickups is denied and is found unreasonable.

Additionally, Claimant is found to be evasive and lacking in credibility surrounding the date he actually moved to Pueblo. As found above, in an earlier mileage submission, Claimant claimed mileage for an appointment with a start/end point in Aurora on December 20, 2016. The ALJ finds and concludes that Claimant did not live in Pueblo prior to December 20, 2016. The ALJ also finds, more likely than not, that Claimant did not live in Pueblo for approximately 7 weeks between December 20, 2016 and the change of address provided on February 9, 2017. Although possible that he had actually moved to Pueblo during those 7 weeks, Claimant lacks credibility and it is not found probable that he was living there or that his necessary travel for medical appointments during that time required travel between Pueblo and Denver. Claimant has not established, by preponderant evidence, that his necessary travel expenses included travel between Pueblo and Denver until after February 9, 2017. Although Claimant may have traveled

to Pueblo to visit his girlfriend and/or to see if living in Pueblo would work out or be an option for him, he has failed to establish his move until February 9, 2017 and lacks credibility that he moved earlier than that date. Even assuming he moved prior to February 9, 2017, Claimant failed to provide Respondents with an opportunity to start looking for a qualified provider in Pueblo to take over Claimant's care at any time before February 9, 2017. The dates in the list above, in bold, are denied. Claimant has established that he is due reimbursement for the remaining dates.

ORDER

It is therefore ordered that:

1. Claimant has established by a preponderance of the evidence an entitlement to mileage reimbursement from his July 18, 2017 request in the amount of $2,747.52 for 5,184 total reimbursable miles.

2. Respondent previously paid Claimant $2,488.35 toward the reimbursable mileage from the July 18, 2017 request. Respondents shall pay Claimant the difference and additional mileage in the amount of $259.17.

3. Insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. Any issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 28, 2019

/s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts

STATE OF COLORADO OFFICE OF ADMINISTRATIVE COURTS 1525 Sherman Street, 4th Floor, Denver, CO 80203	
In the Matter of the Workers' Compensation Claim of: **A,** Claimant, vs. **12,** Employer, And **RM**, Insurer, Respondents.	▲ **COURT USE ONLY** ▲ **CASE NUMBER:** **WC 5-045-612-001**

FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

Hearing in the above-captioned matter was held before Administrative Law Judge Margot W. Jones on May 2, 2019, at 1:30 p.m. in Courtroom 5 in Denver, Colorado. Claimant was present in person and represented by _____, Esq. Respondents were represented by _____, Esq. Exhibits 1-6, 8 and A-T were admitted into evidence.

In this order, A shall be referred to as "Claimant," 12 shall be referred to as "Employer" and RM shall be referred to as "Insurer." Employer and Insurer, collectively, will be referred to as "Respondents."

In this order, the Judge may use the following acronyms: C.R.S. refers to Colorado Revised Statutes (2018); the Act refers to the Workers' Compensation Act of Colorado, §§8-40-101, et seq., supra; OAC refers to the Office of Administrative Courts; OACRP refers to the Office of Administrative Courts Rules of Procedure, 1 CCR 104-1; and WCRP refers to Workers' Compensation Rules of Procedure, 7 Code Colo. Reg. 1101-3.

ISSUES

1. Whether Claimant established by a preponderance of the evidence that he sustained an injury or aggravation that arose out of and in the course and scope of employment with the Employer on February 8, 2017; and

2. If Claimant establishes that he sustained an injury that arose out of the course and scope of employment on February 8, 2017, whether Claimant established by a preponderance of the evidence that he is entitled to an order awarding reasonably necessary and related medical benefits, specifically, whether Claimant is entitled to an order finding that medical treatment and corresponding mileage to attend medical appointments was reasonably necessary and related.

FINDINGS OF FACT

1. Claimant alleges that on February 8, 2017, he was employed by Employer as a bus driver. Claimant had been so employed by Employer for four or five years. Claimant alleges he reached behind his seat with his left arm to put an item in the trash when his right hip popped, jarring his left shoulder, and causing him to develop pain. Claimant testified that he had performed this identical reaching maneuver a hundred times before without any problems, but on this occasion, because his hip popped he jarred his shoulder. Claimant is 76 year old (date of birth, August 12, 1943).

2. Claimant adamantly denied at hearing that he had any prior injuries or pain complaints in his left shoulder prior to the alleged February 8, 2017, work injury. Claimant's testimony is rebutted by his pre-date of loss medical records which confirm that Claimant has a significant pre-existing medical history, including issues with his right hip, bilateral shoulders, and neck. Claimant also has received impairment awards related to prior workers' compensation claims.

3. Prior to the alleged February 8, 2017, injury, Claimant presented to William Cooney, M.D. on January 10, 2011, for a preoperative appointment for biceps surgery and documented Claimant's significant medical history, including osteoarthritis and right rotator cuff syndrome.

4. On November 27, 2013, Claimant presented to Anjmun Sharma, M.D. for a DIME and evaluation of his right shoulder. Dr. Sharma noted Claimant's MRI of his right thigh revealed chronic moderate tendinosis of the proximal hamstring tendon symmetric to the left side and mild degenerative changes to the hips. Dr. Sharma assigned Claimant an 11% whole person rating and permanent restrictions, including no lifting, pushing, pulling over 70 pounds, no carrying over 65 pounds, and no overhead lifting over 20 pounds.

5. On April 1, 2014, Claimant treated with Paul Springer, P.A., and reported neck and upper trapezius pain on the right and left after a refrigerator fell on top of him at work. During the evaluation, Claimant reported a prior neck injury. Claimant also reported that he was a golfer and enjoyed outdoor activities. Claimant was eventually referred to physical therapy.

6. While in physical therapy, Claimant complained of pain complaints with his bilateral shoulders and neck on April 22, 2014, May 8, 2014, and December 26, 2014.

7. On October 23, 2014, Claimant presented to Bryan Wernick, M.D., and was diagnosed with chronic pain syndrome. Claimant complained of pain radiating into his back, neck, and bilateral shoulders. Dr. Wernick recommended consideration for additional physical therapy.

8. On February 17, 2015, Claimant treated with Richard Shouse, P.A., and reported pain in his neck from C5-T2 going along the trapezius from the side of the neck to both shoulders. Mr. Shouse noted Claimant's primary problem seemed to be the shoulders into the subscapular region.

9. On March 12, 2015, Claimant presented to Ranee Shenoi, M.D., for a DIME, who noted Claimant had a history of a prior neck fracture in 1997. During the evaluation, Claimant reported soreness in his neck and bilateral shoulders.

10. Less than three months from the alleged February 8, 2017, event, Claimant saw Mark Levstik, D.O., on November 22, 2016, with pain in his neck, bilateral shoulders, bilateral hips, and bilateral knees. Claimant reported his joint pain was worse with sitting and activity. Dr. Levstik documented Claimant's significant medical history, including osteoarthritis. Dr. Levstik prescribed Claimant Tramadol for his arthritis.

11. Following the alleged February 8, 2017, event, Claimant delayed seeking treatment for over a month. Claimant agreed at hearing that he was able to continue his normal job duties and regular activities of daily living following the February 8, 2017, incident. On March 24, 2017, Claimant first sought treatment with Monica Schubert, P.A., who noted Claimant was a 73-year-old bus driver who was reaching to throw away trash when he felt pain in his left shoulder. Ms. Schubert referred him for an MRI.

12. The MRI of Claimant's left shoulder, completed April 4, 2017, revealed a small full thickness tear of the supraspinatus tendon, impingement resulting in moderate partial thickness tear of the subscapularis tendon and intraocular portion of the biceps tendon with moderate bursitis, 4 mm calcified body, and moderate osteoarthrosis of the acromioclavicular joint.

13. Following the MRI, Claimant returned to Ms. Schubert on April 5, 2017, who referred Claimant to Dr. Hsin, an orthopedist, per the Claimant's request because Dr. Hsin had performed a prior surgery on Claimant's right shoulder. Claimant was kept at full duty.

14. On April 18, 2017, Claimant presented to Joseph Hsin, M.D., who noted Claimant sustained an injury when he was driving a school bus when he was reaching and his hip popped or clicked, which caused him to jar his shoulder. Claimant reported pain radiating into his neck. Dr. Hsin reviewed the MRI and assessed Claimant with a small full-thickness rotator cuff tear, impingement and biceps pathology. They discussed surgery, which Claimant did not want to do.

15. On June 30, 2017, Ms. Schubert discharged Claimant for non-compliance as he failed to show up for his appointments since April 26, 2017. Claimant agreed at hearing that he stopped treating for the left shoulder because he did not want to pursue surgery and his shoulder complaints had resolved.

16. After he was discharged from care, Claimant returned to Dr. Levstik on August 1, 2017, for chronic pain in his right knee.

17. On January 2, 2018, Claimant presented to John Burris, M.D., for an independent medical examination (IME) at the request of Respondents. Dr. Burris testified at hearing, within a reasonable degree of medical probability, that Claimant's left shoulder tear and MRI findings were not caused or aggravated by the alleged February 8, 2017, event.

18. In forming his opinion, Claimant reported that on February 8, 2017, he reached behind his seat with his left arm while driving a school bus, felt a click in his right hip, which caused him to jerk forward and develop pain in his left shoulder. Dr. Burris testified that the forces and positioning of the shoulder involved in the reported mechanism of injury were not sufficient to cause or contribute to the small rotator cuff tear on the left shoulder MRI. Dr. Burris explained that Claimant's MRI findings were pre-existing and degenerative in nature and consistent with Claimant's age. Dr. Burris testified that Claimant may have experienced pain when he reached behind the seat, but that experiencing pain does not mean Claimant sustained an injury that necessitated medical treatment. Dr. Burris testified that Claimant's pre-existing osteoarthritis in his hips likely caused Claimant's hip to pop, which then caused Claimant to jar his left shoulder.

19. Dr. Burris testified that Claimant has a pre-existing impingement syndrome of the left shoulder, which is an anatomical condition that predated the alleged February 8, 2017, event. Dr. Burris testified that Claimant's current impingement syndrome was a natural aging process that would have occurred regardless of the alleged February 8, 2017, event. Dr. Burris

testified that Claimant's pre-existing impingement syndrome was the more likely cause of Claimant's left shoulder tear. Dr. Burris explained that the bilateral nature of Claimant's shoulder complaints supported the conclusion that Claimant's left shoulder complaints were pre-existing and degenerative in nature.

20. During the IME, Claimant reported "feeling good" and did not report any pain. Claimant demonstrated full range of motion in the shoulder. Claimant enjoyed skiing and was doing regular exercise, including walking, stationary biking, rowing machine and lifting weights. Claimant reported that his left shoulder was sore but that it did not interfere with his normal activities.

21. Dr. Burris testified that even if Claimant sustained a minor work-related strain on February 8, 2017, the treatment he received following the minor event was not reasonable, necessary or related to this event. Dr. Burris explained that he disagreed with the course of physical therapy and medical treatment prescribed to Claimant by Concentra as this treatment was not reasonable, necessary and/or related to the February 8, 2017, incident.

22. It is found that the alleged mechanism of reaching was not the probable cause of Claimant's left shoulder rotator cuff tear, nor the cause of an aggravation of Claimant's pre-existing degenerative condition to the shoulder. It is found that Claimant did not sustain a disabling injury on February 8, 2017. Claimant did not immediately seek medical treatment, Claimant returned to his normal duties and has made virtually no changes or accommodations to his activities of daily living. Claimant's testimony that his left shoulder was asymptomatic prior to February 8, 2017, is not credible and is rebutted by Claimant's medical records. The ALJ finds Claimant's left shoulder issues pre-date the alleged February 8, 2017, event as documented in the medical records and that Claimant's impingement syndrome is the likely cause of his rotator cuff issues.

23. The ALJ further finds that the precipitating cause of Claimant's left shoulder pain on February 8, 2017, was the popping of his right hip. If Claimant's hip had not popped, then his left shoulder would not have been jarred. Thus, Claimant's alleged injuries were caused by the pre-existing hip condition and no special hazard of employment existed to increase the risk or extent of his left shoulder injury.

CONCLUSIONS OF LAW

General Legal Principles

1. The purpose of the Act is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. A claimant shoulders the burden of proving

entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. Claimant was required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. Claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.*, 961 P.2d 571 (Colo. App. 1998).

5. A pre-existing disease or susceptibility to an injury does not disqualify a claim if the employment aggravates, accelerates, or combines with a pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Indus. Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent

the result of a natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Constr. v. Renta*, 717 P.2d 965 (Colo. App. 1995).

6. In this case, Claimant may have experienced pain while reaching behind his seat while driving a school bus on February 8, 2017. However, Claimant has failed to establish by a preponderance of the evidence that this experience of pain caused a compensable injury. The incident was not proven to have caused a disability or the need for medical treatment.

7. Dr. Burris testified, within reasonable medical probability, that Claimant's alleged left shoulder tear was not caused or aggravated by the alleged February 8, 2017, event. Dr. Burris testified credibly that the force of reaching may have caused Claimant pain, but not a disabling injury. Dr. Burris testified credibly that the more likely cause of Claimant's left shoulder issues is the pre-existing impingement syndrome that would have occurred regardless of the alleged February 8, 2017, event.

8. The medical records reflect that Claimant did not seek treatment for over month following the alleged work event and continued his normal work duties. Claimant was an admitted golfer and skier, which could have caused the small tear on the left shoulder MRI. These findings support the conclusion that the February 8, 2017, event was not the cause of Claimant's left shoulder tear.

9. Based on the foregoing, the ALJ finds that Claimant failed to establish by a preponderance of the evidence that he sustained a disabling injury that arose out of and in the course of employment and therefore Claimant is not entitled to benefits.

The special hazard rule

10. Special rules apply in the event an injury is precipitated by some pre-existing condition brought by the claimant to the workplace. *Shelton v. Eckstine Elec. Co.*, W.C. No. 4-724-391 (ICAO May 30, 2008). If the claimant's injury is precipitated by a pre-existing nonindustrial condition, the injury is not compensable unless a special hazard of the employment contributes to the accident or the extent of the injuries sustained. *Nat'l Health Labs. v. Indus. Claim Appeals Office*, 844 P.2d 1259 (Colo. App. 1992). This principle is known as the "special hazard" rule. *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989). However, a condition is not considered to be a special hazard of the employment if it is ubiquitous in the sense that it is found generally outside of the employment. *Gates Rubber Co. v. Indus. Commission*, 705 P.2d 6 (Colo. App. 1985). The rationale for this rule is that unless a special hazard of employment increases the risk or extent of injury, an injury due to the claimant's pre-existing condition does not bear sufficient causal relationship to the employment to "arise out of" the employment. *Id; Gaskins v. Golden Auto. Group, L.L.C.*, W.C. No. 4-374-591 (ICAO Aug. 6, 1999) (injury when pre-existing condition caused the claimant to stumble on concrete stairs not compensable because stairs were a ubiquitous condition).

11. Alternatively, as found above, Claimant's pre-existing nonindustrial hip condition was the precipitating cause of his left shoulder injury, and Claimant cannot establish that a special hazard of employment existed to increase the risk or extent of his left shoulder injury. As found above, Claimant was simply reaching behind his seat when his hip popped, jarring his left shoulder. Claimant agreed that he performed this same reaching maneuver a hundred times before, but on this specific occasion his hip popped, which caused a jarring mechanism to the shoulder. The medical records document Claimant had extensive osteoarthritis, which caused Claimant's hip to pop, jarring his left shoulder and causing his rotator cuff tear. Thus, Claimant's pre-existing hip condition was the precipitating event of his left shoulder injury and no special hazard of employment combined with his pre-existing hip condition to cause or increase Claimant's left shoulder injury.

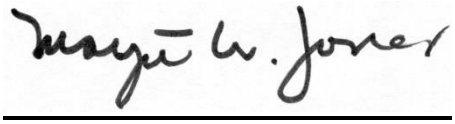
12. Based on the foregoing, the ALJ finds that Claimant failed to establish by a preponderance of the evidence that he sustained a compensable injury as Claimant's pre-existing nonindustrial hip condition was the precipitating event and there was no special hazard of employment.

ORDER

1. Claimant has failed to establish by a preponderance of the evidence that he sustained an injury that arose out of the course and scope of employment on February 8, 2017. The claim is denied and dismissed.

2. Any issues not determined in this decision are reserved for future determination.

DATED: July 1, 2019.



MARGOT W. JONES
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUE

Whether Claimant has established by a preponderance of the evidence that his excessive alcohol consumption that required ambulance transportation and treatment at the Boulder Community Hospital Emergency Room on October 5, 2018 was a direct and natural consequence of his June 22, 2016 admitted industrial injuries.

FINDINGS OF FACT

1. Claimant worked for Employer as a Flagger. On June 22, 2016 he suffered admitted industrial injuries when he was struck by a pickup truck while performing his job duties. Claimant specifically sustained a closed head injury that included almost daily migraines, short-term memory loss, anxiety and depression. He also suffered bilateral shoulder injuries, neck pain, a chest wall injury and thoracic back pain.

2. Claimant has received extensive psychological treatment for his anxiety and depression from numerous providers including Mark Babcock, MSW, LCSW, Gary S. Gutterman, M.D., David D. Robinson, Ph.D. and Paul M. Richards, Ph.D. since the outset of his claim in June 2016. Claimant testified that he has suffered depression as a result of being left alone after the June 22, 2016 accident and his inability to participate in activities at the same level he did before the accident.

3. Dr. Richards first examined Claimant on August 16, 2016. Claimant was experiencing pounding headaches behind his eyes at a pain level of 9/10 as well as depression and anxiety with some intrusive thoughts about getting hit by the vehicle. He also mentioned sleep problems from pain and emotional distress. Dr. Richards was concerned that Claimant might be self-medicating with alcohol and advised him to see Mr. Babcock for mental health treatment.

4. On September 9, 2016 Claimant visited Mr. Babcock for an evaluation. Although Claimant reported some depression as a result of an earlier Workers' Compensation injury from November 2014, he noted that his depression increased after June 22, 2016. Claimant endorsed severe anxiety and depression, social isolation and using a combination of a couple of Vicodin and ½ - ¾ of a fifth of Jack Daniels per night. Mr. Babcock was concerned about the combination and wrote "we need to help him experience significant relief from the high measure of distress he is experiencing." Through a combination of mental health treatment, pain medications and family involvement Claimant was able to avoid or limit alcohol consumption.

5. On June 19, 2017 Claimant visited Dr. Gutterman to establish psychiatric care. Claimant remarked that he had been depressed because he could not be as active as he was before the June 22, 2016 accident. Claimant also reported irritability and episodic anxiety. Dr. Gutterman commented that Claimant's affect varied particularly

when discussing how his life has changed since the accident. He started Claimant on Escitalopram, 10 mg. At his next appointments in August 2017 Claimant reported that his mood had improved on the Escitalopram and he was experiencing less anxiety. Dr. Gutterman determined that Claimant's "Adjustment Disorder with Mixed Emotional Features," due to "anxiety and mood lability resulting from chronic pain due to employment injury," was improving. He thus increased the Escitalopram to 20 mg per day.

6. In October 2017 Claimant began mental health treatment with Dr. Robinson. Dr. Robinson determined that Claimant suffered anxiety and mood disorders due to a known physiological condition that included a major depressive-like episode. He also noted that Claimant reported he had previously been tearful, but Dr. Gutterman's treatment had helped stabilize his emotional lability.

.7 On October 5, 2018 Claimant was transported to the Boulder Community Hospital Emergency Room at about 7:45 p.m. for alcohol-related symptoms. Claimant explained that he consumed the alcohol because he had undergone an independent medical examination with Taschof Bernton, M.D. that caused pain and his prescription for Lexapro had not been filled.

8. After Claimant visited Dr. Bernton for an independent medical examination on October 5, 2018 he attended his scheduled appointment with Dr. Robinson. Claimant reported that he had undergone an independent medical examination in the morning with Dr. Bernton. He remarked that Dr. Bernton had hurt his head while moving it from side-to-side. Dr. Robinson wrote that Claimant "was generally distressed during this appointment, and specifically that Dr. Bernton had caused pain during his examination. His expressions of problems and concerns is disjointed and difficult to follow, as to what has already occurred or what will take place in the future." Dr. Robinson remarked that Claimant "did not seem able to grasp the provisions of the Maintenance Management section of the chronic pain guidelines [that] provide for essential care after he reaches MMI. He catastrophizes, which is a feature of his chronic pain experience."

9. Claimant received his medications through the mail from the Injured Workers' Pharmacy (IWP) located in Methuen, Massachusetts. IWP sends Claimant his medications by overnight mail through FedEx and the medications consistently arrive on the day of or day before Claimant requires his refill. IWP sent Claimant his Lexapro every 30 days through FedEx by overnight mail from June 22, 2017 through January 10, 2019 with the exception of September 28, 2018. On September 28, 2018 IWP did not ship Claimant's Lexapro through overnight mail but instead by standard transit. Claimant thus did not receive his Lexapro until Saturday, October 6, 2018 at 2:02 p.m. rather than on September 29, 2018.

10. At some point following Claimant's appointment with Dr. Robinson on October 5, 2018 he went home and began drinking alcohol. Claimant stated that he only remembered his first drink. Claimant's 24 year-old son Jameson Clark tried to get his father to stop drinking or slow down. Mr. Jameson Clark noted that Claimant was agitated and upset. Prior to passing out, Claimant repeatedly told his son to call 9-1-1. An

ambulance arrived to transport Claimant to Boulder Community Hospital. The ambulance report specified that Claimant had consumed rum, his mood shifted to anger and he spoke of suicidal ideations. Further, the ambulance report noted Claimant had not consumed alcohol regularly for the previous two years. After reaching the Emergency Room presenting with acute alcohol intoxication, Claimant commented that he "had a very long day today." He noted that, after a psychological evaluation for depression, he went home, felt very stressed and started drinking. Claimant subsequently received treatment for alcohol intoxication in the Boulder Community Hospital Emergency Room and was released home with his children.

11. When Claimant returned to Dr. Robinson on October 12, 2018 he explained that he visited the Emergency Room on October 5, 2018 because he had fallen and struck the back of his head. Claimant did not tell Dr. Robinson that he drank alcohol because he was out of Lexapro.

12. On October 15, 2018 Claimant visited Dr. McCranie for an examination. He described an episode from the previous week where he grabbed his son forcefully and then blacked out. He told her he visited Boulder Community Hospital but did not know the results of his evaluation. Claimant did not mention increased anxiety following his independent medical examination, running out of Lexapro or passing out because of alcohol consumption.

13. On November 7, 2018 Claimant visited Dr. Gutterman for an evaluation. Claimant told Dr. Gutterman that he had discontinued all of his medications because he did not believe that any of them were helpful. He expressed that he did not want to return for follow-up visits with any of his providers. Claimant remarked that he had become "extremely frustrated" with his Workers' Compensation case because he had only received a 7% impairment rating for one of his shoulders and would have to go back to work despite persistent symptoms. He did not tell Dr. Gutterman he had difficulties filling his last Lexapro prescription, suffered increased anxiety as a result of his independent medical examination with Dr. Goldman or was taken to the hospital for excessive alcohol consumption.

14. In her report from November 12, 2018 Dr. McCranie commented that Claimant wanted to discuss the events from October. He told her he received a new antidepressant from Dr. Gutterman on October 2, 2018 and was able to have it filled. Claimant also told Dr. McCranie that he underwent an independent medical examination on October 5, 2018 and experienced increased soreness. He did not mention increased anxiety or drinking. Finally, Claimant did not relate his excessive alcohol consumption and trip to the Emergency Room on October 5, 2018 to his June 22, 2016 work injury.

15. Claimant's level of anxiety on October 5, 2018 was not unusual. Numerous providers have diagnosed Claimant with anxiety and depression as a result of his work-related injuries. His medical records are replete with examples of depression, anxiety, anger and traumatic history. Although Dr. Robinson noted that Claimant was anxious at the October 5, 2018 appointment, his symptoms were comparable to those he exhibited on February 25, 2017, March 17, 2017, June 2, 2017, August 22, 2017, November 17,

2017, December 1, 2017, April 19, 2018, April 27, 2018, May 4, 2018, June 15, 2018, July 27, 2018, August 10, 2018, October 26, 2018, November 9, 2018, December 21, 2018, March 15, 2019 and March 22, 2019. To manage Claimant's anxiety, mental health providers have furnished counseling and medications. They have also instructed him about several techniques to deal with his pain and anxiety including: biofeedback; guided imagery; problem solving; cognitive behavioral strategies; energy allocation; sleep hygiene; coping tools; relaxation skills; marksmanship breathing exercises and grief techniques.

16. Although Dr. Robinson reported that Claimant had experienced symptoms of depression and anxiety at almost every one of his weekly or bi-weekly therapy appointments from the time he started treating him on October 5, 2017, Claimant's behavior started to improve at the end of August, 2018. Claimant was weaning off his final pain medication. At Claimant's August 31, 2018 and September 24, 2018 appointments Dr. Robinson reported that Claimant's mood "was the least anxious and depressed since I began to see him." Claimant also exhibited mild optimism, expressed anticipating pleasure and suffered only mild anxiety.

17. Claimant has failed to establish that it is more probably true than not that his excessive alcohol consumption that required ambulance transportation and treatment at the Boulder Community Hospital Emergency Room on October 5, 2018 was a direct and natural consequence of his June 22, 2016 admitted industrial injuries. Claimant specifically contends that he consumed excessive alcohol on October 5, 2018 because he had undergone an independent medical examination with Dr. Bernton that caused pain and his prescription for Lexapro had not been filled. However, because Claimant's excessive drinking constituted an intentionally self-inflicted intervening cause and was not the direct and natural consequence of his June 22, 2016 industrial injuries, his request for Respondent to pay for the ambulance bill and Emergency Room services is denied and dismissed.

18. Although Claimant testified that he consumed excessive alcohol on October 5, 2018 because he suffered pain as a result of his independent medical examination with Dr. Bernton and had not received his prescription for Lexapro, his medical and treatment records subsequent to October 5, 2018 do not support his contention. When Claimant returned to Dr. Robinson on October 12, 2017 he explained that he visited the Emergency Room on October 5, 2018 because he had fallen and struck the back of his head. Claimant did not tell Dr. Robinson he drank alcohol because he was out of Lexapro. In an October 15, 2018 visit with Dr. McCranie Claimant described an episode from the previous week where he grabbed his son forcefully and then blacked out. He told her he visited Boulder Community Hospital but did not know the results of his evaluation. Claimant did not mention increased anxiety following his independent medical examination, running out of Lexapro or passing out because of alcohol consumption. On November 7, 2018 Claimant did not tell Dr. Gutterman he had difficulties filling his last Lexapro prescription, suffered increased anxiety as a result of his independent medical examination with Dr. Goldman or was taken to the hospital for excessive alcohol consumption. Finally, Claimant had received significant counseling and medications during the course of his claim to reduce his levels of anxiety and depression. His

treatment improved his condition prior to October 5, 2018. Claimant's decision to begin drinking when he returned home after his independent medical examination with Dr. Bernton and psychological treatment with Dr. Robinson was an intentionally self-inflicted intervening cause that severed the connection to his June 22, 2016 industrial injuries.

19. Attributing Claimant's excessive drinking and Emergency Room visit on October 5, 2018 to his June 22, 2016 industrial injuries is speculative. Specifically, there is an attenuated causal connection that is insufficient to establish a direct and natural relationship between Claimant's injuries and Emergency Room visit on October 5, 2018. Claimant's injuries that occurred more than two years earlier did not render him unable to resist the impulse to drink excessively. Accordingly, Claimant's request for Respondent's to pay for the October 5, 2018 ambulance bill and Emergency Room services is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107

P.3d 999, 1001 (Colo. App. 2004). The claimant bears the burden of demonstrating a causal connection between his industrial injuries and the need for additional medical treatment. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

5. In a medical emergency a claimant need not seek authorization from his employer or insurer before obtaining medical treatment from an unauthorized medical provider. *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777, 781 (Colo. App. 1990). A medical emergency affords an injured worker the right to obtain immediate treatment without the delay of notifying the employer to obtain a referral or approval. *In Re Gant*, W.C. No. 4-586-030 (ICAO, Sept. 17, 2004). Because there is no precise legal test for determining the existence of a medical emergency, the issue is dependent on the particular facts and circumstances of the claim. *In re Timko,* W.C. No. 3-969-031 (ICAO, June 29, 2005).

6. Section 8-41-301(1)(c), C.R.S., provides, as one of the conditions of recovery, that the injury must be "proximately caused by an injury or occupational disease arising out of and in the course of employment and is not intentionally self-inflicted." Generally, self-inflicted death or suicide is "an independent, nonindustrial, intervening cause which severs the chain of causation for compensability." *Dependable Cleaners v. Vasquez,* 883 P.2d 583, 584-85 (Colo. App. 1994). However, Colorado applies the "chain of causation" exception to the non-compensability of self-inflicted injuries. *Id.* at 585. The exception is applicable when the industrial injury causes a severe or deranged mental condition and the mental condition is a proximate cause of the worker's suicide or injuries. *Id.*; *Jacko Painting Contractors v. Industrial Commission,* 702 P.2d 755 (Colo. App. 1985).

7. In *In Re Nunnaly,* W.C. No. 4-168-841 (ICAO, Mar. 30, 1998), the ICAO determined that the Act "provides for the compensability of direct and natural consequences of an industrial injury, even where those consequences may involve self-destructive acts such as the misuse of drugs or alcohol." *Id.* at *4. The ICAO noted that the Act "is primarily concerned with compensating the victim." *Id.* Additionally, it reasoned that "if an industrial injury causes or aggravates a preexisting tendency to abuse alcohol, injury or death resulting from the abuse of alcohol is compensable under the 'quasi-course of employment' doctrine" as long as the use of alcohol is the "direct and natural consequence" of the original injury. *Id.* at *2. The ICAO determined that Claimant's alcohol consumption resulting in death "was a symptom of the claimant's injury-related depression, not an intervening event." *Id.* at *3.

8. The severe or deranged mental condition must be of such magnitude that it impairs the worker's "ability to resist suicidal impulses, or causes the injured worker to commit self-destructive acts without knowingly intending to end his or her life." *Dependable Cleaners*, 583 P.2d at 585; *see Gordley v. Advanced Energy Inc.* W. C. No. 4-549-974 (ICAO, Apr. 8, 2005) (noting that decedent's "severe mental condition" rendered him unable to resist the impulse to take his own life"). Otherwise, the suicide or

injuries resulting from the suicide attempt are considered to be the result of an intervening cause. *Dependable Cleaners*, 583 P.2d at 585.

9. As found, Claimant has failed to establish by a preponderance of the evidence that his excessive alcohol consumption that required ambulance transportation and treatment at the Boulder Community Hospital Emergency Room on October 5, 2018 was a direct and natural consequence of his June 22, 2016 admitted industrial injuries. Claimant specifically contends that he consumed excessive alcohol on October 5, 2018 because he had undergone an independent medical examination with Dr. Bernton that caused pain and his prescription for Lexapro had not been filled. However, because Claimant's excessive drinking constituted an intentionally self-inflicted intervening cause and was not the direct and natural consequence of his June 22, 2016 industrial injuries, his request for Respondent to pay for the ambulance bill and Emergency Room services is denied and dismissed.

10. As found, although Claimant testified that he consumed excessive alcohol on October 5, 2018 because he suffered pain as a result of his independent medical examination with Dr. Bernton and had not received his prescription for Lexapro, his medical and treatment records subsequent to October 5, 2018 do not support his contention. When Claimant returned to Dr. Robinson on October 12, 2017 he explained that he visited the Emergency Room on October 5, 2018 because he had fallen and struck the back of his head. Claimant did not tell Dr. Robinson he drank alcohol because he was out of Lexapro. In an October 15, 2018 visit with Dr. McCranie Claimant described an episode from the previous week where he grabbed his son forcefully and then blacked out. He told her he visited Boulder Community Hospital but did not know the results of his evaluation. Claimant did not mention increased anxiety following his independent medical examination, running out of Lexapro or passing out because of alcohol consumption. On November 7, 2018 Claimant did not tell Dr. Gutterman he had difficulties filling his last Lexapro prescription, suffered increased anxiety as a result of his independent medical examination with Dr. Goldman or was taken to the hospital for excessive alcohol consumption. Finally, Claimant had received significant counseling and medications during the course of his claim to reduce his levels of anxiety and depression. His treatment improved his condition prior to October 5, 2018. Claimant's decision to begin drinking when he returned home after his independent medical examination with Dr. Bernton and psychological treatment with Dr. Robinson was an intentionally self-inflicted intervening cause that severed the connection to his June 22, 2016 industrial injuries.

11. As found, attributing Claimant's excessive drinking and Emergency Room visit on October 5, 2018 to his June 22, 2016 industrial injuries is speculative. Specifically, there is an attenuated causal connection that is insufficient to establish a direct and natural relationship between Claimant's injuries and Emergency Room visit on October 5, 2018. Claimant's injuries that occurred more than two years earlier did not render him unable to resist the impulse to drink excessively. Accordingly, Claimant's request for Respondent's to pay for the October 5, 2018 ambulance bill and Emergency Room services is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for Respondent to pay for the October 5, 2018 ambulance bill and Emergency Room services is denied and dismissed.

2. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

- Is this claim closed by a Final Admission of Liability dated October, 30, 2018?

FINDINGS OF FACT

1. Claimant suffered an admitted injury to his right foot on September 8, 2018.

2. His ATP placed him at MMI with no impairment on September 24, 2018.

3. Respondents filed a Final Admission of Liability (FAL) on October 30, 2018 based on the ATP's MMI report. The FAL admitted for $399.92 in medical benefits and five days of TTD.

4. On the date of the FAL, Claimant was represented by Lawrence D. Saunders, Esq. The FAL was sent to Mr. Saunders at "Michael Seckar, 2904 Hart Rd Ste C, Pueblo, CO 81008." That is the correct mailing address for Mr. Saunders.

5. The FAL was also addressed to Claimant at "PO Box 15052 Colorado Springs CO 80935." On the date of the FAL, that was not a valid mailing address for Claimant. He had used that address for several years, but obtained a new post office box when he moved to Pueblo before the accident. Claimant's Worker's Claim for Compensation form lists his mailing address as "2880 Siloam Rd./P.O. Box 1149, Pueblo, CO 81008."

6. The DOWC received a copy of the FAL electronically on October 30, 2018.

7. Mr. Saunders first received a copy of the FAL in the mail on December 20, 2018.

8. After receiving the FAL, Mr. Saunders contacted Claimant to see if he had received the FAL. Claimant indicated he had not received it.

9. Mr. Saunders objected to the FAL and filed a DIME Notice and Proposal on January 18, 2019.

10. The DOWC subsequently issued a DIME Panel and the parties exercised their respective strikes. Dr. Wallace Larson was selected and confirmed as the DIME physician.

11. Claimant was found indigent in an order dated March 6, 2019.

12. On March 27, 2019, PALJ Sandberg issued an order holding the DIME process in abeyance pending determination by the OAC as to whether Claimant's claim is closed.

13. Mr. Saunders' testimony regarding his office's procedures regarding incoming mail and FALs is credible and persuasive. The ALJ credits Mr. Saunders' testimony he did not receive the FAL until December 20, 2018.

14. This claim is not closed. Claimant's January 18, 2019 objection and DIME Notice and Proposal were timely because they were filed within 30 days after Mr. Saunders first received a copy the FAL.

CONCLUSIONS OF LAW

An FAL provides a statutory mechanism for the respondents to close a claim. Once an FAL is filed, the claimant must perfect an objection within thirty days or the claim will "automatically close." The purpose of an FAL is to notify the claimant of the exact basis on which benefits have been admitted or denied so the claimant "can make an informed decision whether to accept or contest the final admission." *Paint Connection Plus v. Industrial Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010). To that end, due process requires a claimant receive "actual notice" of an FAL before it can close a claim. *Bowlen v. Munford*, 921 P.2d 59 (Colo. App. 1996). The requirement of "actual notice" has repeatedly been interpreted to require receipt of the FAL itself, rather than mere knowledge of its potential existence. *E.g*., *Duran v. Russell Stover Candies*, W.C. No. 4-524-717 (April 13, 2004); *Meskimen v. Fee Transportation*, W.C. No. 3-966-629 (March 31, 2003); *Gonzales v. Pillow Kingdom*, W.C. No. 4-296-143 (July 12, 1999). If a claimant is represented, the claimant and the attorney must receive actual notice of an FAL before it can close a claim. *Hall v. Home Furniture Co*., 724 P.2d 94 (Colo. App. 1986). Lack of receipt by *either* the claimant *or* his attorney tolls the objection deadline until thirty days after it is received by each of them. *E.g*., *Gonzales v. Pillow Kingdom, supra; Henriquez v. K.R. Swerdfeger Construction*, W.C. No. 4-439-726 (May 5, 2003).

As found, Mr. Saunders first received the FAL on December 20, 2018. Thirty days from his receipt of the FAL was Saturday, January 19, 2019, so the objection deadline was extended to Monday, January 21, 2019. *See* § 2-4-108(2), C.R.S. The January 18, 2019 objection and DIME Notice and Proposal were timely and prevented the claim from closing.

ORDER

It is therefore ordered that:

1. Claimant timely objected to the FAL and initiated the DIME process. This claim is not closed.

2. PALJ Sandberg's March 27, 2019 order holding the DIME in abeyance is hereby vacated. Claimant may now proceed with the DIME. Claimant shall have ten (10)

business days from service of this order to schedule the DIME and notify Respondents and the Division of the appointment.

3. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 8, 2019

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-095-145-001

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable right shoulder injury on November 13, 2018 during the course and scope of his employment with Employer.

2. Whether Claimant has demonstrated by a preponderance of the evidence that he is entitled to receive authorized medical treatment that is reasonable and necessary to cure or relieve the effects of his industrial injury.

3. A determination of Claimant's Average Weekly Wage (AWW).

4. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period November 19, 2018 until terminated by statute.

PROCEDURAL MATTERS

OAC Rule 23 addresses the procedure for entering an order against a party who did not appear for a scheduled hearing. The Rule specifies that, when a party fails to appear for a hearing and the OAC has sent notice of the hearing to the party, the judge must consider whether "the addresses to which the notice of hearing was sent are the most recent addresses provided by the non-appearing party to either the OAC or the Division of Workers' Compensation" before "entering any orders against the non-appearing party as a result of that hearing."

Initially, the Notice of Contest filed by Insurer on January 2, 2019 noted the address of Employer as 5314 S. Yale Ave., Ste 900, Tulsa, OK 74135. In a FAX dated May 15, 2019 Insurer's Senior Claims Representative Erin Corcoran denied Claimant's medical treatment. She provided the following e-mail address: erin.corcoran@thehartford.com. Ms. Corcoran acknowledged "there is a hearing in the beginning of June." The Application for Hearing in this matter was mailed to Employer at 5314 S. Yale Ave, Ste 900, Tulsa, OK 74135 and e-mailed to Ms. Corcoran at erin.corcoran@thehartford.com. The Notice of Hearing was also mailed to Employer at 5314 S. Yale Ave, Ste 900, Tulsa, OK 74135 and e-mailed to Ms. Corcoran at erin.corcoran@thehartford.com. The Notice of Hearing specified that the hearing would be conducted at 9:00 a.m. on June 7, 2019 at the 19th Judicial District-Weld County Center in Greeley, CO.

There is no evidence in the OAC file that the Notice of Hearing was returned for insufficient postage or was otherwise undeliverable. Accordingly, Respondents had adequate notice of the June 7, 2019 hearing in this matter.

FINDINGS OF FACT

1. Claimant worked for Employer as a Laborer. His job duties involved installing pipes in oil fields to capture gas in drilling locations.

2. Claimant explained that on November 13, 2018 he injured his right shoulder while performing his job duties. While installing a handrail with his supervisor who was operating a forklift, Claimant threw a rope to get it out of the way. He immediately suffered a "pop" and pain in his right shoulder.

3. Claimant visited urgent care after the accident. He was referred to Julie Parsons, M.D. at Advanced Urgent Care in Brighton, Colorado for occupational medicine treatment. On November 19, 2018 Dr. Parsons assigned Claimant work restrictions of no lifting, pushing/pulling or carrying in excess of five pounds as well as no driving with his right arm. Claimant subsequently underwent conservative care for his right shoulder condition.

4. On February 12, 2019 Claimant obtained treatment with Joshua T. Snyder, M.D. at Orthopaedic & Spine Center of the Rockies. Claimant reported that he suffered an injury at work when he threw a rope onto a platform and felt a "pop" in his right shoulder. Dr. Snyder noted that Claimant had been suffering right shoulder pain since his industrial injury on November 13, 2018. Claimant's pain had not decreased with physical therapy or limitations on activities. He also had been taking anti-inflammatory medications with minimal relief. After conducting a physical examination and reviewing diagnostic studies, Dr. Snyder diagnosed Claimant with "right shoulder pain with evidence of labral detachment." He affirmed the work restrictions assigned by Advanced Urgent Care. Dr. Snyder explained that, because Claimant had failed conservative treatment, he recommended a "right shoulder arthroscopy with labral repair and possible subacromial decompression." Orthopaedic & Spine Center of the Rockies sent a surgical authorization request for the preceding procedure. However, on May 5, 2019 Insurer denied any further medical treatment.

5. Claimant thus sought treatment on May 15, 2019 with Alicia Feldman, M.D. at the Colorado Clinic. Claimant reported that, while installing a handrail with his supervisor who was operating a forklift, he threw a rope out of the way. He felt a "pop" and pain in his right shoulder. After considering the history of Claimant's work injury and diagnostic imaging, Dr. Feldman determined that he had suffered a right shoulder labral tear. She assigned work restrictions that included limited use of the right upper extremity.

6. For the period June 23, 2018 until November 10, 2018 Claimant earned total wages of $19,575.50. The period covered 141 days or 20.14 weeks. Dividing

$19,575.50 by 20.14 weeks yields an Average Weekly Wage (AWW) of $971.97. An AWW of $971.97 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

7. Claimant explained that he has been unable to perform his job duties since November 19, 2018 because of his industrial injury. He has not reached Maximum Medical Improvement (MMI).

8. Claimant has established that it is more probably true than not that he sustained a compensable right shoulder injury on November 13, 2018 during the course and scope of his employment with Employer. He credibly testified that on November 13, 2018 he injured his right shoulder while performing his job duties. While installing a handrail with his supervisor who was operating a forklift, Claimant threw a rope to get it out of the way. He immediately suffered a "pop" and pain in his right shoulder. The medical records reflect that Claimant has consistently maintained he injured his right shoulder while throwing a rope at work on November 13, 2018. Based on Claimant's credible testimony and the medical records, Claimant suffered a disability that was proximately caused by an injury arising out of and within the course and scope of his employment with Employer.

9. Claimant has demonstrated that it is more probably true than not that he is entitled to receive authorized medical treatment that is reasonable and necessary to cure or relieve the effects of his industrial injury. Claimant initially received medical treatment for his right shoulder from Dr. Parsons at Advanced Urgent Care. On February 12, 2019 Claimant sought right shoulder care with Dr. Snyder at Orthopaedic & Spine Center of the Rockies. Dr. Snyder explained that, because Claimant had failed conservative treatment, he recommended a "right shoulder arthroscopy with labral repair and possible subacromial decompression." Orthopaedic & Spine Center of the Rockies sent a surgical authorization request for the preceding procedure to Insurer. However, on May 5, 2019 Insurer denied any further medical treatment. Claimant thus obtained care on May 15, 2019 with Dr. Feldman at the Colorado Clinic. After considering the history of Claimant's work injury and diagnostic imaging, Dr. Feldman determined that he had suffered a right shoulder labral tear. All of the preceding medical treatment was reasonable, necessary and related to Claimant's November 13, 2018 industrial injury. Moreover, the proposed right shoulder surgery is designed to cure and relieve the effects of Claimant's compensable right shoulder injury. Employer is thus financially responsible for the payment of Claimant's medical expenses including the proposed right shoulder arthroscopy with labral repair and possible subacromial decompression.

10. Claimant has proven that it is more probably true than not that he is entitled to receive Temporary Total Disability (TTD) benefits for the period November 19, 2018 until terminated by statute. On November 19, 2018 Dr. Parsons assigned work restrictions of no lifting, pushing/pulling or carrying in excess of five pounds as well as no driving with his right arm. Dr. Snyder subsequently affirmed the work restrictions assigned

by Advanced Urgent Care and Dr. Feldman assigned work restrictions that included limited use of the right upper extremity. Claimant also credibly explained that he has been unable to perform his job duties since November 19, 2018 because of his industrial injury. He has not reached MMI. Claimant is entitled to receive TTD benefits because his November 13, 2018 industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §840-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo.

App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAO, Aug. 18, 2005).

6. As found, Claimant has established by a preponderance of the evidence that he sustained a compensable right shoulder injury on November 13, 2018 during the course and scope of his employment with Employer. He credibly testified that on November 13, 2018 he injured his right shoulder while performing his job duties. While installing a handrail with his supervisor who was operating a forklift, Claimant threw a rope to get it out of the way. He immediately suffered a "pop" and pain in his right shoulder. The medical records reflect that Claimant has consistently maintained he injured his right shoulder while throwing a rope at work on November 13, 2018. Based on Claimant's credible testimony and the medical records, Claimant suffered a disability that was proximately caused by an injury arising out of and within the course and scope of his employment with Employer.

Medical Benefits

7. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

8. As found, Claimant has demonstrated by a preponderance of the evidence that he is entitled to receive authorized medical treatment that is reasonable and necessary to cure or relieve the effects of his industrial injury. Claimant initially received medical treatment for his right shoulder from Dr. Parsons at Advanced Urgent Care. On February 12, 2019 Claimant sought right shoulder care with Dr. Snyder at Orthopaedic & Spine Center of the Rockies. Dr. Snyder explained that, because Claimant had failed conservative treatment, he recommended a "right shoulder arthroscopy with labral repair

and possible subacromial decompression." Orthopaedic & Spine Center of the Rockies sent a surgical authorization request for the preceding procedure to Insurer. However, on May 5, 2019 Insurer denied any further medical treatment. Claimant thus obtained care on May 15, 2019 with Dr. Feldman at the Colorado Clinic. After considering the history of Claimant's work injury and diagnostic imaging, Dr. Feldman determined that he had suffered a right shoulder labral tear. All of the preceding medical treatment was reasonable, necessary and related to Claimant's November 13, 2018 industrial injury. Moreover, the proposed right shoulder surgery is designed to cure and relieve the effects of Claimant's compensable right shoulder injury. Employer is thus financially responsible for the payment of Claimant's medical expenses including the proposed right shoulder arthroscopy with labral repair and possible subacromial decompression.

Average Weekly Wage

9. Section 8-42-102(2), C.R.S. requires the ALJ to base the claimant's AWW on his or her earnings at the time of injury. The Judge must calculate the money rate at which services are paid to the claimant under the contract of hire in force at the time of injury. *Pizza Hut v. ICAO,* 18 P.3d 867, 869 (Colo. App. 2001). However, §8-42-102(3), C.R.S. authorizes a judge to exercise discretionary authority to calculate an AWW in another manner if the prescribed methods will not fairly calculate the AWW based on the particular circumstances. *Campbell v. IBM Corp.,* 867 P.2d 77, 82 (Colo. App. 1993). Specifically, §8-42-102(3), C.R.S. grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993); *see In re Broomfield,* W.C. No. 4-651-471 (ICAO, Mar. 5, 2007). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell,* 867 P.2d at 82. Where the claimant's earnings increase periodically after the date of injury the ALJ may elect to apply §8-42-102(3), C.R.S. and determine whether fairness requires the AWW to be calculated based upon the claimant's earnings during a given period of disability instead of the earnings on the date of the injury. *Id.*

10. As found, for the period June 23, 2018 until November 10, 2018 Claimant earned total wages of $19,575.50. The period covered 141 days or 20.14 weeks. Dividing $19,575.50 by 20.14 weeks yields an AWW of $971.97. An AWW of $971.97 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

Temporary Total Disability Benefits

11. Section 8-42-103(1), C.R.S. requires a claimant seeking temporary disability benefits to establish a causal connection between the industrial injury and subsequent wage loss. *Champion Auto Body v. Industrial Claim Appeals Office*, 950 P.2d 671 (Colo. App. 1997). To demonstrate entitlement to TTD benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability," connotes two

elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999).

12. As found, Claimant has proven by a preponderance of the evidence that he is entitled to receive TTD benefits for the period November 19, 2018 until terminated by statute. On November 19, 2018 Dr. Parsons assigned work restrictions of no lifting, pushing/pulling or carrying in excess of five pounds as well as no driving with his right arm. Dr. Snyder subsequently affirmed the work restrictions assigned by Advanced Urgent Care and Dr. Feldman assigned work restrictions that included limited use of the right upper extremity. Claimant also credibly explained that he has been unable to perform his job duties since November 19, 2018 because of his industrial injury. He has not reached MMI. Claimant is entitled to receive TTD benefits because his November 13, 2018 industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a compensable right shoulder injury on November 13, 2018 during the course and scope of his employment with Employer.

2. Employer is financially responsible for the payment of Claimant’s medical expenses for his right shoulder including the proposed right shoulder arthroscopy with labral repair and possible subacromial decompression.

3. Claimant earned an AWW of $971.97.

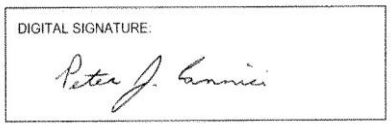
4. Claimant shall receive TTD benefits for the period November 19, 2018 until terminated by statute.

5. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge’s order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge’s order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09070). For further*

information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 8, 2019.



_____

Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. In addition to Claimant's stipulated Average Weekly Wage ("AWW") from Respondent, what amounts should be added to his AWW from other income sources and benefits?

II. What is Claimant's Income from other sources [Freight Agent and Uber driver] which should be deducted from his AWW to calculate his Temporary Partial Disability ("TPD") payments?

STIPULATIONS

The parties stipulated that Claimant's Average Weekly Wage from ABF Freight Systems is $1,266.53. The ALJ accepted this stipulation.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant injured his right shoulder on February 16, 2018 while working as an over the road truck driver for ABF Freight Systems, Inc. ("ABF"). At the hearing on compensability, Claimant testified that while driving his normal route to Salt Lake City, he stopped in Evanston, Wyoming to get some coffee and fuel and clean his windshield of ice and snow. He was standing on the driver's side running board of the truck and holding onto the mirror with his right hand while cleaning off his windshield with his left hand. The tractor door unexpectedly popped open, knocking him off balance, and causing him lose his footing and swing by his right arm to regain his balance, then close the door.

2. This resulted in an injury to Claimant's right shoulder, for which he underwent surgery by Dr. David Weinstein. The parties now agree that the Claimant has physical restrictions, which have precluded him from returning to work as a truck driver since the date of his injury. The Claimant has not returned to work in any capacity for Respondent employer since the injury.

3. At the time of this industrial injury, the Claimant was concurrently employed as an independent freight expediter. The Claimant did business as Continuous Motion Enterprises, LLC ("Continuous Motion"). The Claimant testified that there were two distinct parts of Continuous Motion, to wit: 1) the trucking company side of the company which hauled freight from one place to another with the Claimant's own trucks, and 2) the freight expediter side of the business, which brokered payments for loads of freight, via computer, between merchandise sellers and shippers. The

Claimant testified that Landstar, Inc. was his main shipping client as a freight expediter.

4. Claimant filed Chapter 7 bankruptcy on March 30, 2018 (Ex. 13). According to the profit and loss statement, which was filed with the bankruptcy documents, the Claimant profited $2,580.00 as a freight agent in January 2018, but then showed a loss of $1,330.00 for February, 2018. No figures were listed for March. (Ex. 13, p. 383). [This equates to an AWW of $96.15, assuming the month of March is factored at $0].[Assuming the month of March is ignored-perhaps due to incomplete information-the AWW based upon January and February only comes to $144.23].

5. At hearing, Claimant testified that he does not know why the figure listed earlier in the bankruptcy document on the Attachment to SOFA, Question 4 reflects $1,800.00 'Year to Date' as a freight agent (Ex. 13, p. 348) is different. [Such a figure equates to an AWW of $141.58, as calculated by the parties]. When asked which figure was correct, he testified that he did not know. He testified that he has no reason to dispute anything reflected in the bankruptcy document, and that he told the bankruptcy court about the pending worker's compensation claim.

6. Since his Workers Compensation claim was still under a Notice of Contest at the time the bankruptcy was filed, the value of the WC claim was listed as $1.00. (Ex. 13, p. 356) (The ALJ finds this figure to be reasonable, since compensability had not yet been determined). Claimant's bankruptcy was discharged on July 26, 2018. (Ex. B). Right after the discharge, Claimant changed the name of his freight expediting agency to his own name, no longer reflecting Continuous Motion Enterprises, LLC. The freight expediting agency has continued to exist under the Claimant's name since that time.

7. Since his work injury, Claimant has continued to work as a freight expediter, still under his own name. He also worked as an UBER driver after the date of his industrial injury. The Landstar records show that the Claimant worked as a freight agent at the time of his industrial injury. (Ex. 5). Claimant's 2018 tax return (Ex. 18, pp. 490, 492) indicate that the Claimant reported a net profit of $17,885.00 from his freight brokerage business in 2018. The Claimant reported a 2018 tax loss of ($9,449.00) from his rideshare (UBER) business.

8. At the time of his industrial injury, Claimant was a member of the Western Teamsters Union ("Union"). At the time of the industrial injury, fringe benefits were available from the Teamsters, which included health insurance benefits, pension benefits and a VEBA benefit, all of which were paid for by his employer. Payment of these benefits directly to the Union were the responsibility of ABF.

9. When compensability was originally denied by the Respondents, Claimant had attempted to obtain the shoulder surgery recommended by Dr. Weinstein through his employer-provided health insurance. He was then informed by his physicians that his health insurance benefits were no longer in effect as of May 1, 2018.

10. Claimant received a COBRA letter from the Western Teamsters Welfare

Trust on May 16, 2018. This letter notified him that his health insurance had been discontinued, effective May 1, 2018. If Clamant wished to elect COBRA coverage, he would be required to pay $1,821.10 per month ($420.25 per week) (Ex.11, p. 312) but for a period of no more than 18 months.

11. Employer also contributed a total of $7,318.08 ($423.35 per week) to the Western Conference of Teamster's Pension Trust for the months of August 2017 through December 2017. (Ex.15). The Respondent Employer also paid $69.20 per month ($15.97 per week) to the union for VEBA benefits. (Ex.14, p. 397).

12. On April 25, 2019, Employer then repaid, retroactively, past due health insurance premiums totaling $13,440.21 to the Teamsters Union, to restart the Claimant's health insurance benefits. In the interim, Claimant had no access to health insurance benefits through the Union or his employer between 5/1/18 and 5/1/19. Claimant testified that he had no knowledge of any coverage waiver which he could have elected, nor did he receive any documentation regarding this waiver at the time his health insurance was discontinued. He testified that he received no documentation from either ABF or from the Teamsters Union regarding this waiver in 2018.

13. Claimant testified that the only documentation he received after May 1, 2018 regarding his health insurance was the COBRA letter dated May 16, 2018, which he received by U.S. Mail. (Ex.11, pp. 311-319). He testified that it was not until after May 1, 2019, when he received health insurance cards in the mail, that he learned his health insurance benefits had been reinstated.

14. On May 8, 2019, Claimant also received a letter from the Union informing him that his health insurance benefits had been reactivated. Claimant also received a letter dated May 13, 2019 from the Union informing him that he "may" be entitled to a waiver of premium to continue his health care coverage. Other than these three letters, Claimant testified that he received no communication, from either the Union or Employer, regarding his health insurance benefits between May 2018 and May 2019.

15. The Claimant testified that he did not have any health insurance for a period of two and a half months after his health insurance had been discontinued on May 1, 2018. Since approximately August 2018, he has been covered under an 'expensive' policy through his wife's employer. He testified that this policy was strictly for emergencies as it was cost-prohibitive to use. He estimated that the monthly premium was between $625 and $645, and was paid by his wife through her employer, but this monthly cost covered *both* of them. However, Claimant provided no cost breakdown between his wife as an employee, and Claimant as a spouse. Nor is there evidence in the record which would compare the quality of coverage between Claimant's wife's plan and that offered through Employer.

16. In April 2019, Respondent employer repaid the amount of $17,118.40 to the Union representing past due payments owed to the Union pension fund.

17. Article 53, Section 3 of the Union contract (between the Union and ABF)

specifically states that:

> If an employee is injured on-the-job, the Employer shall continue to pay the required [health insurance] contributions until such employee returns to work, however, such contribution shall not be paid for a period of more than twelve (12) months beginning with the first month after contribution for active employment ceases". (Ex.14, pp. 402-403).

18. Article 54, Section 2 of this contract states that:

> If an employee is injured on-the-job, the Employer shall continue to pay the required [pension] contributions until such employee returns to work; however, such contribution shall not be paid for a period of more than twelve (12) months beginning with the first month after contribution for active employment ceases. (Ex. 14, pp. 404-405).

19. Cindy Barr, the adjuster for the employer, acknowledged that she knew the claim was found to be compensable in late 2018, but did not pay any TPD benefits until May 9, 2019. ALJ Lamphere's order regarding compensability was signed on November 16, 2018. The General Admission of Liability filed on May 9, 2019 admitted to an average weekly wage of $1,408.11 [$1,266.53 from Employer, + $ 141.58 from Landstar]. This FAL also admitted to TPD benefits from 2/17/18 through 3/2/19.

20. Claimant's health insurance premiums and pension benefits were paid back in full to the Claimant's account, a total of $30,558.25. Ms. Barr testified Claimant could have elected the union waiver provision to obtain 6 months of coverage, that she felt Claimant was well aware of his union contract provisions, and that it was common procedure for similarly situated employees to obtain medical care that would then be reimbursed.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-101, *et seq*., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S*. The claimant shoulders the burden of proving by a preponderance of the evidence that he is a covered employee who suffered an "injury" arising out of and in the course of employment. *Section 8-41-301(1), C.R.S.; Faulker v. Industrial Claim Appeals Office, 12 P.3d 844 (Colo.App. 2000); City of Boulder v. Streeb, 706 P.2d 786 (Colo. 1985); Pacesetter Corp. v. Collett, 33 P.3d 1230 (Colo.App. 2001).* A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark, 197 Colo. 306, 592 P.2d 792 (1979)*. The facts in a

workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. *Section 8-43-201, C.R.S*. A workers' compensation claim is decided on its merits. *Section 8-43-201, supra.*

B. In accordance with § 8-43-215, C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, *84 P.3d 1023 (Colo. 2004).* This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, 5 P.3d 385 (Colo. App. 2000).*

C. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. In this case, the ALJ credits Cindy Barr with being credible in her testimony about the timing and amount of payments made by Employer. The ALJ does not find that Claimant actually knew of his union medical benefits. Had he known, he likely would have utilized them when he was injured, and not waited. The ALJ is not persuaded of the accuracy of Claimant's tax returns for 2018; however, as noted below, viable alternatives do not exist in the record.

Average Weekly Wage, Generally

D. Colorado Revised Statute §8-42-102(2) provides that a Claimant's average weekly wage should be calculated upon the monthly, weekly, daily, hourly or other remuneration which the injured employee was receiving at the time of the industrial injury. C.R.S. §8-42-102(3) gives the Administrative Law Judge wide discretion to compute the average weekly wage in whichever manner or method he or she chooses which will fairly determine an employee's average weekly wage. The overall purpose of the statutory scheme is to calculate a fair approximation of the claimant's wage loss and diminished earning capacity. Campbell v. IBM Corp., 867 P.2d 77 (Colo. App. 1993).

Average Weekly Wage from ABF

E. The parties stipulated that Claimant's AWW from ABF is **$1,266.53.**

Additional Average Weekly Wage as a Freight Expediter

F. Based upon the available figures, supplied by Claimant's own bankruptcy and tax records, the ALJ finds that Claimant's AWW – and as proposed by Respondents, and admitted to in the GAL – is **$141.58.** If one uses only the months of

January and February of 2018 (Ex. 13) [which the ALJ finds to be the more reasonable practice, since the month of March was not yet completed when the bankruptcy petition was filed], the AWW comes to $144.22; mere dollars' difference. While Claimant's figures invite some speculation, $141.58 is the most reliable figure available from the evidence. Claimant's AWW from 2/16/2018 through 4/30/2018 is therefore **$1408.11.**

Additional Average Weekly Wage for Pension Payments

G. Claimant concedes that the pension benefits- now paid retroactively in full by Employer to the Union – are not part of the AWW calculation herein.

Additional Average Weekly Wage for Medical Insurance- 5/1/2018 through 4/30/2018

H. As best can be ascertained from the record, Claimant was without medical insurance from Approximately May 1, 2018, until some date in August, 2018, when he was placed in his wife's insurance. In lieu of specific evidence, the ALJ adopts August 1, 2018 as such a date. Ergo, Claimant was without any health insurance for a period of three months. The ALJ adopts the COBRA figure for that 3-month period [**$420.25**]. While Cindy Barr sincerely believes that Claimant was familiar with the Union contract, the ALJ does not draw that inference based on her opinion alone. For a period of time, as found below, Claimant was adrift, without health insurance, and without knowledge of the alternatives which existed through the Union.

I. Since that time, Claimant has availed himself of his wife's policy, but at a cost of $645 to $665 per month. In lieu of a more specific figure, the ALJ adopts $655 per month, and imputes one-half of this figure to Claimant's portion [$655 ÷ 2 = $311 per month x 12 ÷ 52 = $71.77]. For the remainder of this time period, the ALJ finds that Claimant's medical costs are **$71.77** weekly for the 9-month period ending May 1, 2019 [when Claimant's insurance was reinstated]. The ALJ will not speculate further about what might happen moving forward with Claimant's now-reinstated medical insurance. The ALJ blends the COBRA figure and the spouse's figures thusly: [$420.25 x 13(weeks) = $5,463.25] plus [$71.77 x 39(weeks) = $2,799] = $8,262.00 ÷ 52 = **$158.88** for Claimant's additional Average Weekly Wage attributed to medical insurance. Claimant's cumulative AWW from all three sources, therefore, is found to be **$1567.00 -** for this one-year period.

Concurrent Employment during TTD

J. The final issue around which the parties disagree is how much TPD the Claimant is actually owed from the date of his injury through April 6, 2019, the date of the last Landstar commission statement. (Ex. 7). The Colorado Supreme Court in Elliott v. El Paso County and ICAO, 860 P.2d 1363 (1993) held that when determining a self-employed Claimant's post-injury AWW, reasonable depreciation should be deducted from his or her gross earnings when calculating temporary partial disability benefits. The ALJ in Elliott, *supra*, calculated the Claimant's post injury earnings by taking his

gross profit and subtracting the depreciation which was claimed on the Claimant's yearly tax return. The Court noted that decisions regarding the amount of a Claimant's average weekly wage and post injury wages fall solely within the determination of the ALJ.

Tax Year 2018 as Freight Agent and Uber Driver

K. Here, Claimant's 2018 tax return (Ex. 18) reflects gross revenue, before depreciation, of $53,234.00 from his freight expediting business (Landstar) and $21,870.00 from his Uber ridesharing business. (Ex. 18, pp. 490, 492). Claimant reports his 2018 profit (after depreciation) from his freight expediting business to be $17,885.00. He claimed a net loss of $9,449.00 from his Uber ridesharing business in 2018.

L At hearing, Claimant carefully distinguished his income (or loss) from the freight business, and that from what he made as a freight agent. "They're separate but distinct, ma'am. One [trucking] is an asset-based business, *one [freight agent] is not."* (hearing transcript, p. 40). Claimant further noted that as a freight agent, he had *one* freight client out of California that he dealt with…"and I continue that way to today." (hearing transcript, p. 25).

M. Upon examining the exhibits, the ALJ notes that Claimant began preparing his own tax return for tax year 2018. Until that time, he has used a professional tax preparer. Despite simply routing trucks from his home, presumably using a PC and a landline, Claimant depreciated 1000 square foot of his personal residence for a home office at part of his ('non-asset based') freight agent business. He also depreciated a $48,000 2015 Dodge Ram at 83.33% business usage for a business expense- again for a 'non-asset based' business, ostensibly run out of his home. The ALJ is skeptical that Claimant drove this Dodge Ram 15,000 miles per year to further a home-based business consisting of one California-based client.

N. Claimant claimed a Hyundai Sonata for his Uber business at 95% business, 5% personal. His self-prepared taxes purport to show a net loss for his Uber business – which generated $21,870 in gross revenue while he was actively driving. While Double Declining accelerated depreciation is permitted per IRS rules, the ALJ is skeptical that Claimant would persist in actually losing money week after week, were he really doing so poorly at it. According to Claimant, he even returned to Uber driving for a while, after recovering from his injury.

O. Respondents assert in their position statement [but only in their position statement] that Claimant's Uber activity during TTD payments was only discovered during surveillance. If so, even greater skepticism by the ALJ would be warranted for failing to report income while collecting TTD.

P. The issue facing the ALJ however, is what other 'reasonable' depreciation and expenses *can* the ALJ impose, other than what Claimant actually put on his tax

return? There is no competing evidence, nor guidance in the record from Respondents. In the end, despite the (not unreasonable) skepticism of Respondents, no clear, defensible alternative depreciation schedule exists in the record before this ALJ-for 2018. However reluctantly, the ALJ adopts the depreciation as outlined in Claimant's tax returns. Claimant's Uber income is effectively zero for the relevant time period.

Q. Claimant's income from his freight agent business, d/b/a Richard McArdle, is $17,885-but this is for tax year 2018 only. Those 2018 returns have been prepared, providing some sort of anchor to measure income. Further, Claimant operated his freight agent business (d/b/a Richard McArdle) for only a portion of tax year 2018, to wit: after his bankruptcy, beginning at the end of March of 2018. His 2018 income of 17,885 was thus earned over 39 weeks-not 52. Dividing $17,885 by 39 = **$458.59.** This is the weekly figure to offset from TTD payments, attributable to his (Landstar-funded) freight agent business, d/b/a Richard McArdle, for the period from 4/1/18 through 12/31/18.

Tax Year 2019 as Freight Agent

R. For tax 2019, no tax returns have been prepared. Thus, there is no anchor for 2019. There is no guidance for the ALJ to use, beyond what has been supplied. No testimony was elicited from Claimant how he intends to continue as a freight agent. It remains unknown how much additional income Claimant might derive from his freight agent business(es). It remains unknown if he will continue to depreciate his Ram truck using the same method, or how many miles he might drive servicing his client(s). It is unclear how he will claim his home office deduction. Certainly Claimant will not enjoy as generous depreciation schedule as he did in his first year of operation. What is clear (and all that is clear) from the record is that Claimant earned commissions from Landstar totaling $21,753.75 for 14 weeks in tax year 2019. In contrast to tax year 2018, the ALJ will not infer how Claimant will offset his earnings from Landstar for 2019. Therefore, Claimant's weekly income for the 14 weeks of 2019 is $21,753.75 ÷ 14 = **$1553.84**, to be offset against TTD payments made for the same period.

Tax Year 2019 as Uber Driver

S. Similarly, Claimant has received the benefit of generous depreciation and expenses from his Uber business for tax year 2018. He was allowed to claim a 'loss' for tax purposes (and for TTD purposes herein) and the ALJ has so found-for 2018. It appears Claimant not only depreciated his Hyundai on a double declining basis for 2018, but he also took 54.5 cents per mile driven – which factors in depreciation already. Thus, Claimant appears to have double-dipped his Hyundai depreciation for 2018 to magnify his losses. This, despite the fact that Claimant would not continue to operate as an Uber driver if it did not truly benefit him personally. Nonetheless, tax returns for 2018 at least exist, and the ALJ will not assume the role of tax auditor.

T. However, nothing in the record before the ALJ will allow similar speculation for tax year 2019. In this case, a prima facie case has been made - by

Respondents - that Claimant grossed $2843.28 for 9 weeks of Uber work in 2019. From the records supplied, Uber 'expenses and taxes' (presumably franchise fees and corporate taxes) are approximately 1/3 of gross income, leaving a net of $1895.43. That equals **$210.60** per week for the period ending 1/5/19 to 3/2/19. This will also offset Claimant's TTD payments made for the same period in 2019, and the ALJ so finds.

ORDER

It is therefore Ordered that:

1. Claimant's AWW from all sources is $1,567.00

2. Claimant's 2018 weekly income as a freight operator is $458.59, effective 4/1/2018 until the end of 2018.

3. Claimant's 2018 weekly income as an Uber driver is $0.

4. Claimant's 2019 weekly income as a freight agent is $1553.84, for each week he works in that capacity.

5. Claimant's 2019 weekly income as an Uber driver is $210.60 for each week he works in that capacity.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. ISSUES

- Who are the Deceased's eligible dependents?
- What death benefits are payable to the Deceased's dependents?
- What is the proper apportionment of death benefits between the dependents?
- Who should be the payee?

FINDINGS OF FACT

1. The Deceased was a Sheriff Road Sergeant for Employer. He died on December 12, 2018 in a motor vehicle accident while responding to a call.

2. Ms. M[Redacted] was not married to the Deceased at the time of his death. She was not dependent on the Deceased and stipulated she is not entitled to death benefits.

3. The Deceased and Ms. M[Redacted] had two children together. S.M. is the Deceased's natural daughter, born on November 29, 2006. She will reach age 18 on November 29, 2024 and age 21 on November 29, 2027. M.M. is the Deceased's natural daughter, born on May 3, 2013. She will reach age 18 on May 3, 2031 and age 21 on May 3, 2024.

4. The parties stipulated S.M. and M.M. were actually and wholly dependent on the Deceased for support at the time of his death.

5. Jared K[Redacted] is Ms. M[Redacted]'s natural son. Jared is not the natural child of the Deceased, and the Deceased did not legally adopt Jared. Jared was not dependent on the Deceased and is not entitled to death benefits.

6. The Deceased was not married at the time of his death, and has no children other than S.M. and M.M. The ALJ finds S.M. and M.M. are the only persons eligible to receive workers' compensation death benefits in connection with this claim.

7. S.M. and M.M. are each entitled to death benefits until age 18, or until age 21 if engaged in courses of study as a full-time student in an accredited school.

8. The parties have requested the death benefits be apportioned equally between S.M. and M.M., and the ALJ finds a 50-50 split is the most appropriate apportionment of benefits for the period both dependents are eligible for benefits. The ALJ further finds that, when S.M. or M.M. ceases to be eligible for benefits, their

respective share should be reallocated and paid to the remaining eligible child until terminated according to law.

9. The parties stipulated to an average weekly wage (AWW) of $1,006.36 and a corresponding compensation rate of $670.90 per week before offsets.

10. S.M. and M.M. were each awarded Social Security survivor benefits of $1,468.00 per month, effective December 2018. The parties stipulated to a weekly Social Security offset of $169.38 for each child.

11. Employer's policy XIV(C) provides "all drivers and passengers in any county-owned vehicle shall wear a seatbelt at all times while such vehicle is in motion." The Sheriff's Department advised seatbelts must be worn during regular patrol and normal duties. The Deceased knew of the policy because he acknowledged receipt of the Las Animas County policy manual.

12. The Deceased was not wearing a seatbelt at the time of the accident, contrary to Employer's established policy. The Deceased died, in part, because he was thrown from the vehicle, which could have been prevented had he worn his seatbelt.

13. The parties stipulated Respondent will reduce the death benefits by 50% based on the Deceased's willful violation of the seat belt safety rule.

14. The parties stipulated the safety rule reduction will be applied after the Social Security offset.

15. After offsets and reductions, S.M. and M.M. are each entitled to a net death benefit of $83.04 per week ($670.90 ÷ 2 = $335.45 - $169.38 = $166.07 x 50% = $83.04).

16. S.M. and M.M. live with Ms. M[Redacted] full time and she is now solely responsible for their support. Ms. M[Redacted] is willing and able to apply the benefits in S.M. and M.M.'s best interests. Ms. M[Redacted] has agreed to place S.M. and M.M.'s workers' compensation proceeds into separate accounts to be used solely for each child's respective benefit. The ALJ finds Ms. M[Redacted] is the best person to act as payee for S.M. and M.M.'s workers' compensation benefits.

CONCLUSIONS OF LAW

Death benefits are payable to the dependents of an employee who dies as a proximate result of a work-related accident. Section 8-42-115(1)(b), C.R.S. Dependents and the extent of dependency are determined "as of the date of the injury . . . and the right to death benefits shall become fixed as of said date irrespective of any subsequent change." Section 8-41-503(1), C.R.S. Children of the deceased under the age of 18 are presumed wholly dependent, and children between 18 and 21 years of age are presumed wholly dependent if they are engaged in courses of study as full-time students at any accredited school. Section 8-41-501(1)(b) and (c), C.R.S. As found, S.M. and M.M. are the Deceased's sole dependents, and were wholly dependent on the Deceased for support at the time of his injury and death.

Dependents are entitled to two-thirds of the deceased's AWW, subject to the maximum compensation rate in effect on the date of death. Section 8-42-114, C.R.S.; *Richards v. Richards & Richards*, 664 P.2d 254 (Colo. App. 1983). As found, the parties stipulated to an AWW of $1,006.36 and a weekly compensation rate of $670.90 before offsets.

Under § 8-42-114, C.R.S., workers' compensation death benefits shall be reduced by fifty percent of any Social Security survivor's benefits payable to deceased workers' dependents. As found, Respondent is entitled to a Social Security offset of $169.38 per week for each child.

Section 8-42-112(1)(b), C.R.S. provides for a fifty percent reduction of indemnity benefits "where injury results from the employee's willful failure to obey any reasonable rule adopted by the employer for the safety of the employee." The term "willful" means "with deliberate intent." The respondents need not present evidence about the claimant's state of mind or prove he had the rule "in mind" when he did the prohibited act. Rather, a "willful" violation may be inferred from evidence the claimant knew the safety rule and did the prohibited act. *Id*. The parties stipulated death benefits in this case should be reduced 50% based on a safety rule violation.

Death benefits shall be apportioned among multiple dependents in a manner the ALJ deems "just and equitable." Section 8-42-121, C.R.S. As found, the benefits should be apportioned equally between S.M. and M.M., as long as they are both eligible.

S.M. and M.M. are each entitled to a net payment of $83.04 per week. When S.M. or M.M. ceases to be eligible for death benefits, the payment shall be reallocated 100% to the remaining eligible child until terminated by law.

The surviving spouse or a friend may apply for death benefits on behalf of the deceased's minor children. Section 8-42-122, C.R.S. The ALJ has discretion to determine the manner and method of payment on behalf of minor children "in such manner as the [ALJ] sees fit." *Id*. As found, the benefits should be paid to Ms. M[Redacted] as payee for S.M. and M.M.'s benefit. Ms. M[Redacted] is the full-time custodial parent. The ALJ concludes Ms. M[Redacted] is willing and able to apply the benefits in the best interests of S.M. and M.M.

ORDER

It is therefore ordered that:

1. Respondent shall pay death benefits to S.M. and M.M. commencing December 13, 2018 and continuing until terminated according to law.

2. The benefits shall be apportioned equally. Respondent shall pay $83.04 per week for S.M. and $83.04 per week for M.M. When S.M. or M.M. ceases to be eligible, the benefits shall be reallocated 100% to the remaining eligible child.

3. The benefits shall be paid to Ms. M[Redacted] as payee, and shall be applied for the benefit of S.M. and M.M.

4. Respondent shall pay statutory interest at the rate of 8% per annum on all amounts not paid when due.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 8, 2019

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-073-549-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

[Redacted],

Claimant,

v.

[Redacted],

Employer,

and

[Redacted],

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on March 31, 2019 and concluded on June 24, 2019, in Denver, Colorado. The hearing was digitally recorded (reference: 3/21/19, Courtroom 1, beginning at 8:30 AM, and ending at 11:45 AM; 6/24/19, Courtroom 1, beginning at 1:30 PM, and ending at 11:00 AM).

The Claimant was present in person and represented by [Redacted], Esq. Respondents were represented by [Redacted], Esq.

Hereinafter [Redacted] shall be referred to as the "Claimant." [Redacted] shall be referred to as the "Employer." All other parties shall be referred to by name.

Claimant's Exhibits 2 through 10 were admitted into evidence, without objection. The ALJ overruled objections to parts of Claimant's Exhibits 1 and 11 and admitted these exhibits in their entirety. Respondents' Exhibits A through M were admitted into evidence, without objection.

Written transcripts of the evidentiary depositions of William Ciccone II, M.D., taken on January 16, 2019 (hereinafter "Ciccone Depo." followed by page and line references; Thomas Noonan, M.D., taken on March 12, 2019 (hereinafter "Noonan

Depo,." followed by page and line references) and, Michael [Redacted], taken on March 6, 2019 (hereinafter "[Redacted] Depo.). Also, the rebuttal evidentiary depositions of Dr. Ciccone, taken on April 17, 2019 (hereinafter referred to a "Ciccone Rebuttal Depo."); and, Dr. Noonan, taken on May 21, 2019 (hereinafter referred to as "Noonan Rebuttal Depo.") were admitted in lieu of the live testimony of these witnesses.

At the conclusion of the last session of the hearing, on June 24, 2019, the ALJ established a post-hearing briefing schedule: Claimant's opening brief was filed on June 28, 2019. Respondents' answer brief was filed on July 3, 2018. Claimant's reply brief was filed on July 8, 2019, at which time the matter was submitted for decision.

ISSUES

The issues to be determined by this decision concern compensability of a right shoulder event of March 31, 2018; if compensable, medical benefits, average weekly wage (AWW) and temporary total disability (TTD) benefits from March 31, 2018, through April 13, 2018, both dates inclusive, a total of 14 days.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. At the commencement of the hearing, the parties stipulated and the ALJ finds that the Claimant's AWW is $1,310, which yields at TTD benefit rate of $873.32 per week, or $124.76 per day.

2. On April 19, 2018, the Insurer issued a Notice of Contest stating that the Claimant's March 31, 2018, injury was not work-related.

3. The Claimant has worked as a helicopter pilot for twenty-eight years. Prior to flying helicopters for a living, he was a police officer for the Los Angeles Police Department. The Employer hired the Claimant on March 16, 2018, as a helicopter pilot. After his date of hire, the Employer required the Claimant to undergo two-weeks of training, which consisted of multiple simulated helicopter flights. On the last day of training, the Claimant would then perform a test flight in an actual helicopter known as a "check ride" (Hearing Tr., pp. 16-17: lns. 4-6; Hearing. Tr. , pp. 30-44: lns. 17-8).

4. To operate a helicopter, the Claimant explained that he had to use his right arm to control the "cyclic." He explained that the "cyclic" essentially acts as a steering wheel for the helicopter because it controls the blade. The left arm is used to operate the "collective," which will turn all the blades allowing the helicopter to either descend or rise (Hearing Tr., pp. 18-21: lns. 9-16). According to the Claimant he did not experience any pain or physical limitations in his right arm when performing the

simulator flights (Hearing Tr. p. 44: lns. 1-10). Employer records n evidence establish that the Claimant successfully completed his simulated flights on March 27, March 28, March 29, and March 30. Nowhere in these records is there any note about the Claimant appearing injured. In the record from March 30, the instructor, Ryan Daniels, recommended the Claimant for his "check ride" (Claimant's Exhibit 5, bates 10-13). The ALJ finds the Claimant's testimony in this regard credible and corroborated by extrinsic evidence in the record.

The Incident of March 31, 2018

5. On the Claimant's last day of training, March 31, 2018, he was scheduled to do the "check ride" with the training instructor, Michael [Redacted]. Prior to the "check ride," the Claimant had to do a "preflight check." This required him to review different components on the helicopter to make sure they were free from cracks, leaks, or anything that could lead to potential harm. When doing the "preflight check," the Claimant had to climb up onto the helicopter to check the rotor system. This required him to use his arms to climb up onto the helicopter and to hang onto the rotor blades. According to the Clamant, he was able to complete the "preflight The ALJ finds the Claimant' check" without any pain or physical limitations (Hearing. Tr., pp. 46-49: lns.24-21). The ALJ finds the Claimant's testimony credible and persuasive in this regard.

6. Around 10:00 PM, Supervisor Johnson asked the Claimant and another trainee, Chris [Redacted], to help move a helicopter dolly. According to the Claimant and [Redacted] helicopter dollies are usually transported with a tractor since they are very heavy.(Hearing Tr., p. 25: lns. 1-24; and p. 54: lns.4-6). Helicopter dollies weigh over 2,200 lbs. This was the first time the Claimant and [Redacted] had ever moved a helicopter dolly by hand (Hearing Tr., p. 54: lns. 4-6). Both the Claimant and [Redacted] complied with Johnson's request and attempted to move the dolly. In trying to move the dolly, the Claimant felt a tear in his right arm. He told [Redacted] and Mike [Redacted] (an instructor) that he had injured him right arm. [Redacted] then asked the Claimant if he needed an ambulance.

Medical Referrals

7. The Claimant told [Redacted] that he needed an ambulance; however, [Redacted] proceeded to call his boss and an ambulance never arrived. Eventually, the Claimant decided to drive himself to the hospital (Hearing Tr., pp. 52-57: lns.9-23). The Claimant arrived at Skyridge Medical Center just after midnight on April 1, 2018, where he was diagnosed with a ruptured bicep tendon (Claimant's Exhibit 9, bates 81). There is no persuasive evidence that the Employer made a specific medical referral on March 31, 2019, when the Claimant reported a work-related injury. Consequently, the Claimant chose Sky Ridge.

8. Sky Ridge referred the Claimant to Herbert Thomas, M.D., an orthopedist, for follow up at that time (Claimant's Exhibit 10, p.116). Instead, the Claimant went to see Thomas Noonan, M.D., an orthopedic surgeon who the Claimant had seen in the

past. The initial referral to Dr. Noonan came from Charles Henry Miranda, M.D., the Claimant's personal physician (Respondents' Exhibit C , pp. 021-022; Deposition of Dr. Noonan, March 12, 2019 p.15, ll. 1-9; Deposition of Dr. Ciccone, April 17, p. 11, ll. 5-10). Dr. Noonan was **not** within the authorized chain of referrals.

9. Six days after the Employer was aware of an alleged work-related injury, the Claimant was provided a Choice of Provider Acknowledgement on April 5, 2018 and the Claimant chose a Concentra clinic at 9330 S. University in Highlands Ranch (Respondents' Exhibit M).

10. The Claimant attended physical therapy and was released to full duty on April 9, 2018. (Ex. B , pp. 016-020; Ex. C , pp.021-022) Although he did see a provider at the chosen location, after being placed at MMI, he did not return.

11. In his reply brief, Claimant addresses Respondents' argument that the ALJ should order that they are not liable for the surgery performed by Dr. Noonan because he was not an authorized treating provider (ATP). Claimant further argues that authorization may occur if, "as part of the normal progression of authorized treatment for a compensable injury suffered by a claimant, **an authorized treating physician** (emphasis supplied) refers a claimant to one or more other physicians." *Bestway Concrete v. Indus.l Claim Appeals Office*, 984 P.2d 680, 684 (Colo. App. 1999). The question of whether a physician is an ATP is one of fact for the ALJ. *Suetrack v. Industrial Claim Appeals Office*, 902 P.2d 854 (Colo. App. 1995). As found herein abover, **no** ATP referred the Claimant to Dr. Noonan.

12. At hearing, the Claimant testified that he spoke with the Insurer about Dr. Noonan providing treatment for his injury (Hearing. Tr. , p.77: lns.1-20). There is no persuasive evidence that the insurer authorized Dr. Noonan in this conversation. In the record from April 9, 2019, Dr. McKinney and Dr. Corson, who were both ATPs, noted that the Claimant was "cleared by the orthopedist" who was Dr. Noonan. Dr. McKinney and Dr. Corson then cite to Dr. Noonan's determination that the Claimant was at MMI without restrictions to support their own determination on MMI and work restrictions (Respondents' Exhibit B). Their actions do not amount to authorization because they did not refer the Claimant to Dr. Noonan. Nonetheless, even assuming that Dr. Noonan is not an ATP, the Claimant argues that the ALJ may order that the Respondents are still liable for the surgery performed by Dr. Noonan. The ALJ does not find this argument persuasive however, it seems inequitable for the Respondents to silently accept the benefits of Dr. Noonan's surgery and not be liable for payment to him. Unfortunately, there is no specific delegation of equitable powers to construct authorization of medical providers in the Workers' Compensation Act—similar to the AWW portion of the Act. The law is clear that an ATP must make the referral to preserve the chain of authorized referrals. This did not happen here.

Medical

13. On April 2, 2018, the Claimant saw Kelly Lindauer, M.D. of Health Images at Castle Rock for an MRI (magnetic resonance imaging) of the right upper extremity (RUE). After reviewing the imaging results, Dr. Lindauer diagnosed the Claimant with a full thickness tear of the right biceps tendon and a tear of the superior labrum (Claimant's Exhibit 10, bates 119). The Claimant saw Dr. Noonan on April 5, 2018. In his report, Dr. Noonan stated that the Claimant "got complete resolution of his AC joint pain after the injection 3 weeks ago." Dr. Noonan then stated that the Claimant has a new injury after pushing a helicopter dolly. Dr. Noonan diagnosed the Claimant with a full-thickness tear of [the] long head bicep tendon at the glenohumeral joint." Despite the tear, Dr. Noonan indicated that the Clamant was able to return to work without restrictions (Claimant's Exhibit 8, bates 42-43). Casey McKinney, PA-C (Certified Physician's Assistant) saw the Claimant on April 9, 2018. She put the Claimant at maximum medical improvement (MMI). In doing so, she cited to Dr. Noonan's determination that the Claimant is able to return to work with no restrictions (Respondents' Exhibit B, bates 17-18). The ALJ takes administrative notice of the fact that "ability to return to work with no restrictions does not necessarily equate with MMI.. Consequently, the ALJ does not find PA-C Casey's opinion of MMI adequately founded or credible.

14. The Claimant was again seen by Dr. Noonan on June 6 and on August 21, 2018. Dr. Noonan noted a positive impingement exam. A repeat MRI (magnetic resonance imaging) scan showed an intact rotator cuff with capsular thickening and advanced AC arthritis. On August 29, 2018, Dr. Noonan performed a right shoulder arthroscopy with subacromial decompression, distal clavicle resection and debridement of biceps stump with a capsular release (Respondents' Exhibit H , pp.035-039).

The Claimant's Lay Witnesses, Including the Claimant

15. At hearing, the Claimant testified that his treating providers told him that it would take a few months for him to heal. Nonetheless, because he was a new hire, the he became concerned that taking too much time off from work could jeopardize his job. For this reason, he asked his treating providers to allow him to return to work. In order for this to occur, the Claimant had to complete a range of motion (ROM) test. At this time, Claimant's ROM had not become an issue and he successfully completed the test. On April 14, 2018, the Claimant successfully completed his check ride with Mike [Redacted]. Afterwards, the Claimant continued to work. He explained that, during this time, the Employer only required him to fly seven hours a month. Additionally, the Claimant was able to use autopilot when flying the helicopter. He explained that the autopilot controls the helicopter for everything other than the land and the take off. This feature allowed the Claimant to do his job despite the pain and limitations in his injured arm (Hearing Tr. pp. 59-64: 18-12).

16. Around the middle of May, the Claimant began to develop new symptoms within his shoulder. He also began to lose his ROM. Not knowing what the issue was, the Claimant went to see Dr. Noonan on June 8, 2018 (Hearing Tr. , pp. 64-67). In his report, Dr. Noonan noted that the Claimant reported continued pain in his right shoulder.

Dr. Noonan treated the Claimant with a steroid injection and recommended surgery if the symptoms persisted (Claimant's Exhibit 8, bates 47-48). The Claimant saw Dr. Noonan again on August 21, 2018. Dr. Noonan noted that the Claimant complained of worsening pain and instability in his right shoulder. After performing an MRI, Dr. Noonan noted capsular thickening in the right shoulder (Claimant's Exhibit 8, bates 50). Dr. Noonan performed surgery on the Claimant's right shoulder on August 29, 2018. In the operative report, Dr. Noonan diagnosed the Claimant with right shoulder degenerative anterior labral tearing; **adhesive capsulitis** with inferior capsular thickening; articular-sided partial-thickness **rotator cuff tear;** impingement; and acromioclavicular joint arthritis (Claimant's Exhibit 8, bates 53).

17. According to the Claimant, he dealt with shoulder problems in his AC joint prior to tearing his bicep in March of 2018. He explained that the issue with his AC joint only gave him pain, for which he would receive an injection about every six months. He further testified that he did not experience ROM issues in his right arm or shoulder until after his March 31, 2018, industrial injury (Hearing Tr., p. 66).

18. Chris [Redacted], the other individual involved in moving the dolly, testified at the June 24, 2019, hearing. Mr. [Redacted] is a long-time helicopter pilot who works for the Employer in Missouri. He also trained alongside the Claimant in March of 2018. He testified that [Redacted] asked the Claimant and himself to help move the dolly because the wind had changed direction. While moving the dolly, however, [Redacted] stated that the Claimant yelled that he hurt his arm. [Redacted] testified that he had seen Claimant throughout the two-week training and did not notice any display of pain or physical limitation. He also witnessed the Claimant perform the "preflight check" on March 31. He confirmed that the "preflight check" required the pilot to climb onto the helicopter. [Redacted] stated that the Claimant did not display any signs of pain or physical limitations when doing the pre-flight check. [Redacted] also testified that during his long career as a helicopter pilot, he has never moved a dolly by hand. On rebuttal, [Redacted] refuted [Redacted]'s testimony that he did not ask the Claimant and himself to move the dolly. He also refuted [Redacted]'s testimony that the Claimant followed [Redacted], touched the dolly, and yelled "my arm, my arm." [Redacted], although testifying by telephone, presented as straight-forward and able to answer questions without hesitation, sometimes in a quick sequence, which causes the ALJ to infer that [Redacted] did not have time to think about or contrive his answers—a sign of credibility.

Respondents' Lay Witnesses

19. Mike [Redacted] testified that on March 31, 2018, prior to the dolly incident, he allegedly went to shake the Claimant's hand and noticed the Claimant had to use his left hand to hold up his right arm to shake [Redacted]'s hand. [Redacted] admitted that, even though he was scheduled to fly with the Claimant, he made no attempt to determine if the Claimant was physically capable of operating the helicopter. [Redacted] then testified that he did not ask the Claimant to move the dolly, but instead went to move the dolly by himself. According to [Redacted], the Claimant then allegedly

followed him, touched the dolly, and yelled “my arm, my arm.” [Redacted] confirmed that the Claimant had a large knot in his arm after lifting the dolly ([Redacted] Depo. Tr., pp. 5-8: 19-11). [Redacted] admitted that, up until the dolly incident, there was no mention from anyone that the Claimant appeared injured. After the incident, [Redacted] completed an AIDMOR report, which is the protocol used by the Employer when documenting a work-related injury. Nowhere in the AIDMOR report, submitted on April 2, 2018, did [Redacted] make any indication that the Claimant was injured prior to moving the dolly. [Redacted] confirmed, that since the Claimant’s injury, the Employer put in place a new rule that all dollies be moved by a tractor and not by hand ([Redacted] Depo. Tr., pp. 26-30: 21-24). At hearing, the Claimant disputed [Redacted]’s testimony that he had to use his left hand to support his right arm when shaking his hand on March 31, 2019. The Claimant stated that this incident described by [Redacted] did not occur (Hearing Tr. pp. 67: 7-25). The ALJ finds that [Redacted]’s testimony is replete with inconsistencies and, as a whole does not make a lot of sense. On the other hand, the Claimant’s testimony was straight-forward, consistent throughout, credible and persuasive.

20. At the second session of the hearing, another training instructor, Jared [Redacted], testified that he had an identical incident in which the Claimant had to use his left hand to support his right arm to shake his hand. [Redacted] testified that it was obvious the Claimant was in pain when he went to shake his hand. Nonetheless, he admitted that he took no action in following up with the Claimant, or anyone else, even though the Claimant was scheduled to fly later with [Redacted]. [Redacted] originally testified that the incident occurred on March 31, 2018. On cross-exanimation, he was impeached with an Insurer record created shortly after the incident –created on April 4, 2018. The record stated that “Another co-worker (Jared [Redacted]) also said he [the Claimant] was off, when Jared went to shake his hand, Rob took his left hand to lift his right hand to shake Jared’s hand, and this was that day, before the reported incident on March 30, 2018” (Claimant’s Exhibit 11, admitted at the June 24, 2019 session of the hearing). After reviewing the record, [Redacted] stated that he did not remember the date of when he went to shake the Claimant’s hand, but that it was on the same day as the dolly incident. The Employer’s Safety Policy states that “Risk Management; Accident and Incident Reporting; and Safety Communications and Awareness” are core elements for all employees. [Redacted] agreed that these elements are essential to his job as a helicopter pilot instructor (Claimant’s Exhibit 4, bates 9). As with Mike [Redacted], the Claimant disputed Winter’s testimony that he had to use his left hand to hold up his right arm when shaking his hand stating that the incident did not occur (Hearing Tr. p. 67: 7-25). [Redacted]’ testimony concerning his alleged memory of the “hand-shaking” incident was impeached Indeed, the ALJ finds the Claimant’s testimony in this regard more persuasive and credible than the testimony of [Redacted] and [Redacted]. In fact, the ALJ draws a a plausible inference that moving the dolly by hand was not safe, with or without a formal safety policy against it, and it was convenient, an a plausible motive, for [Redacted] and [Redacted] to have an inaccurate memory of the timing of the Claimant’s injury in order to avoid accountability for ordering and participating in an unsafe practice, to wit, moving a 2,200 lbs.+ dolly by hand. On the other hand, a motive

for the Claimant to “fake” a work-related injury is simply not plausible in the context of the totality of the evidence.

Credibility

21. [Redacted] and [Redacted] had been training captains for several years at the airfield where the Claimant’s injury occurred. The ALJ draws a plausible inference that [Redacted] and [Redacted] were aware of and should have known that industry practice required the movement of the helicopter dolly by a tug or tractor. Regardless of whether the airfield had a specific written rule in place on March 31, 2018, [Redacted] and [Redacted] should have known that it was unsafe to do so by hand. The ALJ infers that after the dolly-moving incident, [Redacted] and [Redacted] had motives to disassociate the dolly-moving incident from the Claimant’s injuries.

22. The testimonies of both [Redacted] and [Redacted] are suspect in that neither individual took any action after allegedly witnessing the Claimant use his left arm to support his right arm to shake their hands. [Redacted] testified that it was “obvious” the Claimant was injured, yet [Redacted] failed to follow-up with the Claimant or inform anybody about the injury. Considering the fact that the Employer puts a high priority on safety, observing an injured pilot should give rise to an immediate safety concern. The failure of [Redacted] and [Redacted] to make any inquiry, after noticing the “Claimant was obviously hurt, “ creates a behavioral disconnect with their testimonies and goes against the overall credibility of their story. Furthermore, neither witness, who were in the position of supervisory employees included the “hand shaking incident” in the AIDMOR report (the AIDMOR report is the primary means by which the Employer makes a record of work-related injuries). Neither [Redacted] nor [Redacted] included any information about their respective encounters with the Claimant in the report. Additionally, both witnesses offered inconsistent testimony regarding the dates and facts surrounding the incident. The ALJ concludes as a matter of fact that the testimonies of these two gentlemen are unreliable and lacking in credibility.

23. The testimonies of [Redacted] and [Redacted] is almost identical to a fault. Indeed, other than being outweighed by the weight of credible evidence, the ALJ infers that both testimonies appeared to be synchronized and contrived in part. Nonetheless, [Redacted]’s and [Redacted]’ testimonies, purporting to support the theory that the Claimant was already injured when he dealt with the helicopter dolly, was not credible in light of the totality of the evidence.

William Ciccone II, M.D., Respondents’ Independent medical Examiner (IME)

24. Dr. Ciccone evaluated the Claimant once on December 26, 2018, at the Respondents’ request (Ciccone Depo., p. 4, lns. 4-15). Dr. Ciccone agreed with Dr. Noonan on the need for surgery (Ciccone Rebuttal Depo., p 4; lns. 9-25), however, it was Dr. Ciccone’s opinion that all of the Claimant’s conditions were pre-existing (Ciccone Rebuttal Depo., pp. 4, 5). The ALJ notes that Dr. Ciccone’s causality opinion lines up with the discredited testimony of Mike [Redacted] and Jared [Redacted],

however, the ALJ cannot draw any inferences from this coincidence. Ultimately, Dr. Ciccone's causality opinion is at odds with ATP Dr. Noonan's opinion. Although Dr. Noonan was not within the chain of authorized referrals, his opinions are nevertheless higjhly persuasive and credible. Dr. Noonan was the orthopedic surgeon who successfully operated on the Claimant's right shoulder. In the final analysis, the ALJ finds that Dr. Ciccone's "lack of causality" opinion is outweighed by the totality of the credible evidence. Therefore, the ALJ finds Dr. Ciccone's "lack of causality" opinion lacking in credibility.

Thomas Noonan, M.D., Orthopedic Surgeon

25. Dr. Noonan, who is an orthopedic surgeon, treated the Claimant for acromioclavicular arthritis prior to his industrial injury. Nevertheless, Dr. Noonan persuasively explained that the Claimant developed frozen shoulder after his bicep tear, which Dr. Noonan determined to be unrelated to the preexisting acromioclavicular arthritis. Dr. Noonan explained that frozen shoulder is an inflammatory reaction inside the shoulder joint that develops either after a traumatic injury or idiopathically. In determining whether the Claimant's frozen shoulder was post-traumatic or idiopathic, Dr. Noonan testified that with post-traumatic frozen shoulder "people have an injury, it sets off an inflammatory cascade in the shoulder. They develop subsequent stiffness and pain." With idiopathic frozen shoulder, Dr. Noonan stated that individuals have "absolutely no trauma history" only to wake up with pain in the shoulder. Dr. Noonan is of the opinion that the Claimant's frozen shoulder was the main pain generator in the Claimant's right shoulder and that had it not been for the work-related torn bicep tendon, the Claimant would not have developed the frozen shoulder nor would he have required surgery. (Noonan Depo, Tr., 10-13: 7-12); (Noonan Rebuttal Depo. Tr., pp. 5-7).

26. Regarding the delay in symptoms, Dr. Noonan stated that the inflammation from the bicep tendon tear progressed over time, creating capsular thickening and ultimately developed into frozen shoulder. Dr. Noonan recognized the Claimant's preexisting issues, but stated that it was the bicep tendon tear that "pushed the Claimant over the edge" and triggered the need for surgery. (Noonan Rebuttal Depo. Tr., pp. 7-9). Contrary to Dr. Cinccone's assertion that a bicep tendon tear never requires surgical intervention, Dr. Noonan is of the opinion that it can require surgical intervention. In the past year, Dr. Noonan has repaired three bicep tendon tears, and in the last ten years, he has repaired thirty bicep tendon tears (Noonan Depo. Tr., p. 14).

Ultimate Findings

27. For the reasons herein above specified, the lay testimony of the Claimant is credible and persuasive. The lay testimony of Mike [Redacted] and Jared [Redacted] is **not** credible.

28. For the reasons herein above specified, the expert opinions of ATP Dr. Noonan are credible and persuasive. The expert opinion of IME Dr. Ciccone on lack of causality is **not** credible.

29. Dr. Noonan was not within the chain of authorized referrals because Skyridge referred the Claimant to Dr. Thomas not to Dr. Noonan.

30. Between conflicting medical opinions, the ALJ makes a rational choice, based on substantial evidence, the accept the causality opinion of Dr. Noonan and to reject the causality opinion of Dr. Ciccone. The ALJ makes the same rational choice to accept the lay testimony of the Claimant and Chris [Redacted] and to reject the testimony of Mike [Redacted] and Jared [Redacted].

31. The Claimant has proven, by a preponderance of the evidence that he was able to work, without restrictions despite pre-existing back problems and treatment by Dr. Noonan. The incident of helping to move the helicopter dolly by hand was within the course and scope of the Claimant's employment and it caused the torn right biceps tendon to the point of the Claimant requiring medical treatment and RUE surgery plus the Claimant being temporarily and totally disabled for 14 days.

32. The Claimant has proven by preponderant evidence that all of his medical care and treatment for the torn right biceps tendon, leading up to treatment and surgery by Dr. Noonan, was authorized and within the chain of authorized referrals; and, it was reasonably necessary to cure and relieve the effects of the March 31, 2018 injury.

33. As found herein above, the parties stipulated and the ALJ found that the Claimant's AWW is $1,310, which yields at TTD benefit rate of $873.32 per week, or $124.76 per day.

34. The Claimant has proven, by a preponderance of the evidence that he was temporarily and totally disabled from March 31, 2018, through April 13, 2018, both dates inclusive, a total of 14 days.

35. The Claimant failed to designate a ripe issue concerning temporary disability from April 14, 2018, through the date of the last session of the hearing, June 24, 2019, thus, the Claimant failed to prove entitlement to temporary disability benefits during this period of time.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences

from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the lay testimony of the Claimant was credible and persuasive. The lay testimony of Mike [Redacted] and Jared [Redacted] was neither credible nor persuasive. As further found, the expert opinions of ATP Dr. Noonan were credible and persuasive. The expert opinion of IME Dr. Ciccone on "lack of causality" was **not** credible.

.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting

medical opinions, the ALJ made a rational choice, based on substantial evidence, to accept the opinion of Dr. Noonan and to reject the opinion of Dr. Ciccone, on the issue of causality. The ALJ makes the same rational choice to accept the lay testimony of the Claimant and Chris [Redacted] and to reject the testimony of Mike [Redacted] and Jared [Redacted].

Compensability

c. An "injury" referred to in § 8-41-301, C.R.S., contemplates a **disabling** injury to a claimant's person, not merely a coincidental and non-disabling insult to the body. *See Henderson v. RSI, Inc.,* 824 P.2d 91 (Colo. App. 1991). *Also see Gaudett v. Stationers Distributing Comp*any, W.C. No. 4-135-027 [Indus. Claim Appeals Office (ICAO), April 5, 1993]. A priori, the consequences of a work-related incident must require medical treatment or be disabling in order to be sufficient to constitute a compensable event. If an incident is not a significant event resulting in an injury, claimant is not entitled to benefits. *Wherry v. City and County of Denver*, W.C. No. 4-475-818 (ICAO, March 7, 2002). The dolly-moving incident of March 31, 2018 meets the definition of "sufficient" to be compensable.

d. In order for an injury to be compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Office,* 919 P.2d 207, 210, 210 (Colo. 1996). An injury "arises out of' employment if it would not have occurred **but for** the fact that the conditions and obligations of employment placed the employee in a position that he or she was injured." *See City of Brighton v. Rodriguez,* 318 P.3d 496, **2014 CO 7** presumption that an injury arises out of employment when an unexplained injury occurs during the course of employment. Thereupon, it is incumbent to show that non-work related factors caused the injury. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1) (c), C.R.S. *See Faulkner v. Indus. Claim Appeals Office,* 24 P.3d 844 (Colo. App. 2000)*; Eller v. Indus. Claim Appeals Office*, 224 P.3d 397, 399 (Colo. App. 2009); *Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277, 1279 (Colo. App. 2008). The question of causation is generally one of fact for determination by an ALJ. *Faulkner* at 846; *Eller* at 399-400. As found, the incident of helping to move the helicopter dolly by hand on March 31, 2018 was within the course and scope of the Claimant's employment and it caused the torn right biceps tendon to the point that the Claimant required medical treatment and RUE surgery, plus he was temporarily and totally disabled for 14 days.

Medical Referrals

e. The employer's initial right to select the treating physician is triggered once the employer has some knowledge of the facts concerning the injury or occupational disease with the employment and indicating "**to a reasonably conscientious manager**" that a **potential** workers' compensation claim may be involved. *Bunch v. Indus. Claim Appeals Office*, 148 P.3d 381 (Colo. App. 2006). As

found, the Employer made no medical referral on March 31, 2018, when the Claimant reported a work-related injury and the Claimant selected Skyridge.

f. All referrals must remain within the chain of authorized referrals in the normal progression of authorized treatment. *See Mason Jar Restaurant v. Indus. Claim Appeals Office,* 862 P. 2d 1026 (Colo. App. 1993); *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P. 2d 501 (Colo. App. 1995); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). As found, Skyridge referred the Claimant to Dr. Thomas. Instead, the Claimant saw Dr. Noonan, who was **not** within the chain of authorized referrals.

Medical

g. The employee must prove a causal relationship between the injury and the medical treatment for which the worker is seeking benefits. *Snyder v. Indus. Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. Ct. App. 1997). Treatments for a condition not caused by employment are not compensable. *Owens v. Indus. Claim Appeals Office*, 49 P.3d 1187, 1189 (Colo. Ct. App. 2002). An industrial accident is the proximate cause of a claimant's disability if it is the necessary precondition or trigger of the need for medical treatment. *Subsequent Injury Fund v. State Compensation Insurance Authority,* 768 P.2d 751 (Colo. App. 1988). In order to prove that an industrial injury was the proximate cause of the need for medical treatment, an injured worker must prove a causal nexus between the need for treatment and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). It is for the ALJ, as the fact-finder, to determine whether a need for medical treatment is caused by the industrial injury, or some other intervening injury. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985). Respondents are liable for the "direct and natural consequences" of a work-related injury, including consequential injuries caused by the original compensable injury. *See Travelers Ins. Co. v. Savio*, 806 P.2d 1258 (Colo. 1985). The chain of causation, however, can be broken by the occurrence of an independent intervening injury. *See* 1 A. *Larson, Workers' Compensation Law,* section 13.00 (1997). As found, all of the Claimant's medical care and treatment for the torn right biceps tendon, leading up to treatment and surgery by Dr. Noonan, was causally related to the March 31, 2018 compensable event.

h. Medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's medical care and treatment was and is reasonably necessary to cure and relieve the effects of the March 31, 2018 injury.

Average Weekly Wage (AWW)

i. An AWW calculation is designed to compensate for **total** temporary wage loss. *Pizza Hut v. Indus. Claim Appeals Office,* 18 P. 3d 867 (Colo. App. 2001). *See* §

8-42-102, C.R.S. As found, Claimant lost wages from the Employer and as stipulated and found, his AWW is $1,310, which is less than the State AWW for FY 17/18. The AWW yields at TTD benefit rate of $873.32 per week, or $124.76 per day.

Temporary Total Disability

j. The Claimant was temporarily and totally disabled from March 31, 2018, through April 13, 2018, both dates inclusive, a total of 14 days. Aggregate TTD benefits for this period of time equal $1,746.64.

k. The Claimant failed to prove entitlement to TTD benefits, on the ripe issue, from April 14, 2018 through June 24, 2018, the last session of the hearing.

Burden of Proof

l. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant sustained his burden on compensability, medical benefits, AWW, and TTD benefits from March 31, 2018, through April 13, 2018. The Claimant failed to sustain his burden on entitlement to temporary disability benefits from April 14, 2018, through June 24, 2018, the date of the last session of the hearing.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents shall pay the costs of all authorized medical care and treatment for the Claimant's torn right biceps tendon, with the exception of the surgical repair thereof by Thomas Noonan, M.D., who was **not** within the chain of authorized referrals, subject to the Division of Workers' Compensation Medical Fee Schedule.

B. Respondents shall pay the Claimant temporary total disability benefits at the rate of $873.32 per week, or $124.76 per day, from March 31, 2018, through April

13, 2018, in the aggregate amount of $1,746.64, which is payable retroactively and forthwith.

C. Any and all claims for temporary disability benefits from April 14, 2018, through June 24, 2019, are hereby denied and dismissed.

D. Respondents shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts of indemnity benefits due and not paid when due.

E. Any and all issues not determined herein are reserved for future decision.

DATED this 9th day of July 2019..

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

The sole issue is whether Respondent overcame the DIME's 18% whole person impairment rating by clear and convincing evidence. Respondent asserts Claimant suffered no work-related impairment, and the ATP's 0% rating is correct. Respondent withdrew the endorsed issue of apportionment, and Claimant withdrew the issue of medical benefits after MMI.

FINDINGS OF FACT

1. Claimant works for Employer as a tool rental clerk. Employer rents a variety of tools such as chainsaws, trimmers, lawnmowers, rototillers, and wood chippers. The job requires frequent heavy lifting, most commonly helping customers load and unload rented tools and equipment from their vehicles.

2. Claimant was 78 years old at the time of his industrial accident. Despite his advanced age, Claimant performed all duties of his job without difficulty or limitation.

3. Claimant suffered admitted injuries on April 12, 2018 when he tripped over a cart and fell face first onto a concrete floor. He struck the right side of his head and face on the concrete. He does not remember if he was knocked unconscious, but the next thing he remembers is sitting in the office with a coworker cleaning the cut on his left.

4. Claimant was taken by ambulance to the Penrose Hospital emergency department. He complained primarily of facial pain and neck soreness. A postinjury photograph shows Claimant lying on a gurney or hospital bed wearing a cervical collar with extensive bruising, lacerations, and dried blood around the right side of his face and right eye. A cervical CT scan showed "multiple level spondylitic changes . . . moderate to advanced multilevel intervertebral disc height narrowing and degenerative changes," but no acute findings. His facial lacerations were sutured and Claimant was discharged.

5. On April 17, 2018, Claimant saw his PCP, Dr. David Bird, to follow up for his injuries. Dr. Bird subsequently served as the primary ATP during the claim. Claimant's primary complaints were "confusion and slow thinking," facial swelling, right-sided headaches, and neck pain. Dr. Bird took Claimant off work for 2 weeks.

6. Claimant next saw Dr. Bird on April 25, 2018. He was "quite uncomfortable" because of pain in his neck and shoulders. Cervical rotation was limited due to pain, but flexion and extension were "good." He was tender about the paracervical muscle and bilateral trapezius muscles. Dr. Bird diagnosed a "cervical strain" and a neck contusion with muscle tightness and pain "secondary to fall at work." He referred Claimant to physical therapy and released him to light duty.

7. At his follow up appointment on May 14, Claimant told Dr. Bird his neck was feeling better with physical therapy, but he was still having difficulty lifting heavy objects at work. Dr. Bird noted he was "sitting with his neck a little bit crooked." Cervical range of motion was limited, and he was tender to palpation of the paracervical muscles and trapezius. Dr. Bird opined Claimant had a cervical strain with spasm.

8. On June 7, 2018, Claimant reported "intermittent neck discomfort," that worsened with "lifting heavy items repeatedly." Claimant's neck pain had improved but then worsened, so he went back to therapy. Claimant stated therapy was helpful and "he feels that he is improving each time that he goes." Claimant requested permission to lift heavier items at work, and Dr. Bird liberalized his restrictions to 50 pounds occasionally and 20 pounds repetitively.

9. At his June 25, 2018 therapy appointment, Claimant told the therapist "he is able to lift heavier objects at work, but if he has to lift by himself his right-sided neck becomes sore and painful."

10. On June 29, 2018, the therapist noted Claimant had no neck pain or headaches. But he was also noted to be tender to palpation of the right cervical muscles and upper trapezius, with painful range of motion.

11. Claimant returned to Dr. Bird on July 9, 2018. His neck was "no longer as sore as it was." He was tolerating occasional lifting of 50 pounds at work, with help. He thought therapy was still helping and had three more scheduled therapy visits. His range of motion was significantly improved from previous visits.

12. On July 10, the physical therapist noted, "his neck pain and headaches are gone." Confusingly, the therapist also noted tenderness to palpation of the right upper trapezius, right temporalis muscle, and right posterior cervical spine.

13. Claimant was discharged from physical therapy on July 19, 2018. The therapist noted "the patient reports he has no neck pain or HA and has no problems with lifting within his precautions at work." Yet again, this report contains contradictory information, because his right-sided cervical musculature was tender to palpation and he exhibited limited cervical extension.

14. Despite multiple internal inconsistencies, the physical therapy records show steady progress and significant benefit over time. What is less clear is whether Claimant's neck pain and headaches completely resolved, or simply improved substantially.

15. Dr. Bird placed Claimant at MMI on September 11, 2018, with no permanent impairment. Dr. Bird performed no physical examination and indicated all of Claimant's injury-related issues had "resolved." He noted Claimant "has been working and still having some limitations in his lifting. He feels ready to return to work without limitations." Dr. Bird released Claimant to regular duties and opined no further follow-up was necessary.

16. After being put at MMI, Claimant returned to his regular job with no restrictions. Within a few days of working full duty, he started having increased neck pain and headaches. He also felt like his neck would get "hung up" when he turned his head.

17. Claimant had a history of neck problems before the April 2018 work accident. He was involved in a motor vehicle accident on June 15, 2016 and suffered a "whiplash" type injury to his neck. Claimant saw Dr. Bird's partner the day of the accident and reported neck pain and a headache. He was prescribed a muscle relaxer and advised to take Tylenol. A CT scan showed cervical spondylosis and mild central stenosis at C6-7, but no acute structural injury. There is no further mention of headaches in Dr. Bird's records after June 15, 2016.

18. Claimant attended 11 physical therapy sessions for his neck pain from July 27 through October 3, 2016. The therapy records mention no problems with headaches. The October 3 discharge report indicated he was having "minimal soreness" with activity, and "minimal spasming and tightness" of the cervical paraspinal muscles. Cervical range of motion was described as "WNL."

19. Claimant saw Dr. Bird on October 6, 2016 for unrelated medical issues. The report contains no indication of any ongoing neck issues.

20. Consistent with the aforementioned records, Claimant credibly testified his neck pain resolved after therapy and he needed no further treatment.

21. Claimant saw Dr. Bird on June 15, 2017 for a routine primary care appointment. One issue they discussed was pain in the back of his neck. Claimant stated, "he will be looking a certain way and will be a quick onset of pain that also quickly resolves. This didn't start after his motor vehicle accident when he was rear ended." Claimant said the pain was "tolerable" and he was willing to "monitor" it. No treatment was recommended for the neck pain.

22. Claimant saw a chiropractor, Dr. Jason Gilles, on August 4, 2017 for "4 out of 10" neck pain. He stated, "the onset was gradual and began approximately 4 weeks ago. He reported no history of trauma." The pain was aggravated by moving his head. Claimant exhibited decreased ROM with flexion, right lateral flexion, right rotation, and left rotation. Dr. Gilles diagnosed a cervical "strain, segmental somatic dysfunction, myalgia, and muscle spasm. Dr. Gilles adjusted Claimant's neck and recommended Claimant return for treatment "twice per week."

23. Claimant saw Dr. Gillies again on August 9, 2017. He still had neck pain, but it had improved to 2/10. Dr. Gillies performed additional manipulations, and recommended Claimant return for treatment "once per week."

24. Claimant did not follow up with Dr. Gilles because his neck pain resolved and he did not see a need for further adjustments.

25. Claimant returned to Dr. Gillies on January 8, 2018 for recurrent "4 out of 10" neck pain that started "approximately 2 weeks ago." Dr. Gillies adjusted Claimant's neck and thoracic spine and recommended he return "twice per week."

26. Claimant sought no additional chiropractic treatment because his neck pain resolved, and he required no further adjustments.

27. There is no further mention of neck pain in the medical records until the work accident on April 12, 2018. Nor was any lay testimony presented to contradict Claimant's testimony his neck was pain-free in the three months before the accident.

28. Claimant saw Dr. Jack Rook for a Division IME on December 24, 2018. Claimant reported ongoing neck pain and headaches that he attributed to the work accident. Claimant disagreed his symptoms had completely resolved as of September 11, 2018. His primary complaint at the time of the DIME was headaches emanating from the right side of his neck. He said the headaches had been better while he was in physical therapy, and were now worse at work. Dr. Rook noted Claimant's cervical range of motion was decreased in all planes. He had increased muscle tone with severe tenderness of the right-sided paracervical and suboccipital muscles, and moderate tenderness of the left-sided paracervical muscles and bilateral upper trapezii. Dr. Rook diagnosed chronic neck pain, chronic right-sided headaches, tension headaches, and occipital neuralgia. He opined Claimant sustained permanent impairment "primarily as it relates to his cervical condition." He opined Claimant's headaches are likely triggered by his cervical condition. Dr. Rook calculated an 18% whole person impairment, comprised of 4% under Table 53 and 15% for range of motion.

29. Dr. Rook reviewed Claimant's preinjury medical records and explicitly noted the prior episodes of neck pain starting with the MVA in June 2016. Dr. Rook noted, "this patient had two episodes within the year prior to the injury in question that resulted in functional disability. However, he did not miss any work because of his condition. He had three chiropractic visits and one physician visit as a result of his condition." Dr. Rook apportioned out 2% of the range of motion impairment, resulting in a final whole person rating of 16%. Dr. Rook also opined, "An argument can be made that apportionment is not indicated in this case based on the formula provided in the Division IME paperwork. . . . [The] previous cervical condition was not work-related. The patient was working full time with no restrictions indicating that the previous condition was not independently disabling." Nevertheless, Dr. Rook ultimately decided to apportion the rating.

30. Dr. Rook issued an addendum report on February 7, 2019 in response to communication from the DIME unit. He noted,

> I recently received an incomplete notice from the Division of workers' compensation IME unit requesting that I amend the DIME report I performed . . . . Specifically, I was asked to address the following: "Apportionment: it appears that apportionment was applied to a non-work-related injury. As noted in your report, the previous cervical condition was not work-related. The patient was working full time with no restrictions indicating that previous

condition was not independently disabling. Apportionment can only be applied when there was a previous work-related injury to the same body part or if the injury was deemed independently disabling. Please review the report and clarify."

31. Dr. Rook opined apportionment was not warranted and amended the final rating to 18% whole person.

32. Claimant went back to Dr. Bird to discuss the increased neck pain and headaches because of working without restrictions. On January 31, 2019, Dr. Bird completed a request for accommodations in which he noted Claimant "still" had stiffness in his neck and decreased range of motion. He opined Claimant's cervical strain "may remain indefinitely." He requested Claimant have help lifting heavy objects and limit his lifting to no more than 50 pounds. Employer has accommodated the restriction and allowed Claimant to keep working.

33. Claimant saw Dr. Allison Fall for an IME at Respondent's request on February 28, 2018. Dr. Fall opined Dr. Rook clearly erred in assigning an impairment rating, because none of Claimant's ongoing neck pain or headaches was related to the April 2018 accident. Dr. Fall emphasized medical records showing Claimant's symptoms had "resolved" by September 11, 2018. Dr. Fall opined Claimant did not qualify for a Table 53 Specific Disorder rating because there was no objective evidence of any work-related spinal pathology. She opined any recurrent neck pain and associated range of motion deficits were due to the natural progression of Claimant's underlying degenerative disease, without contribution from the work accident. She further opined the cervical range of motion deficits measured by Dr. Rook are related to Claimant's advanced age and not the industrial injury.

34. Claimant's testimony regarding the onset, nature, progression, and duration of his neck pain and headaches was generally credible.

35. Respondent failed to overcome the DIME rating by clear and convincing evidence. Dr. Fall's opinions amount to "mere differences of medical opinion" regarding causation of Claimant's ongoing neck pain and headaches. Respondent did not prove Dr. Rook's 18% impairment rating is "highly probably incorrect."'

CONCLUSIONS OF LAW

A DIME's determination regarding whole person impairment is binding unless overcome by "clear and convincing evidence." Section 8-42-107(8)(C). The DIME's determination regarding the cause of the claimant's impairment is an "inherent" part of the diagnostic assessment that comprises the DIME process of determining MMI and rating permanent impairment. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1988). Therefore, the DIME's determination that a particular impairment is or is not related to the industrial injury is binding unless overcome by clear and convincing evidence. *Id*. Clear and convincing evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App.

2002). The party challenging a DIME's conclusions must demonstrate it is "highly probable" that the impairment rating is incorrect. *Qual-Med*, 961 P.2d 590 (Colo. App. 1998); *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A "mere difference of medical opinion" does not constitute clear and convincing evidence. *E.g., Gutierrez v. Startek USA, Inc*., W.C. No. 4-842-550-01 (March 18, 2016).

As found, Respondent failed to overcome Dr. Rook's 18% whole person rating by clear and convincing evidence. Dr. Rook's opinion that Claimant's ongoing neck pain and associated headaches are causally related to the admitted accident is a reasonable interpretation of the available evidence. While there is no question Claimant had pre-existing degenerative changes in his cervical spine, he did not need significant or regular treatment before the accident. In the sixteen months before the accident, his only treatment consisted of three visits to a chiropractor, which corroborates his testimony the neck pain was episodic and well managed. Before the accident, Claimant worked a relatively physical job without difficulty; since the accident, he has not been able to tolerate heavy lifting without exacerbating his neck pain. His pain improved with therapy and work restrictions, but when he tried to return to regular duties, it immediately flared. He now has a permanent restriction of no lifting more than 50 pounds, whereas he did not need restrictions before the accident. Fortunately for him, Employer agreed to accommodate Claimant's restrictions, or he may have been forced to stop working. There is no persuasive evidence Claimant suffered from chronic cervicogenic headaches before the accident, which now is his primary problem. The persuasive evidence supports Dr. Rook's determination Claimant has permanent impairment related to his industrial injury. He has had objective findings of soft tissue injury including muscle spasm and increased muscle tone during his treatment and at the DIME. By the time he saw Dr. Rook, Claimant had crossed the threshold requirement for "six months of medically documented pain and rigidity, with or without muscle spasm" required to qualify for Table 53 cervical rating. The mere fact that reasonable physicians can disagree regarding the evidence in this case does not rise to the level of clear and convincing evidence necessary to overcome a DIME.

ORDER

It is therefore ordered that:

1. Respondent's request to overcome the DIME regarding permanent impairment is denied and dismissed.

2. Respondent shall pay Claimant PPD benefits based on Dr. Rook's 18% whole person rating.

3. Respondent shall pay Claimant statutory interest of 8% per annum on all benefits not paid when due.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or

service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 10, 2019

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that she suffered a compensable injury to her lower back on or about November 29, 2019?

II, Has Claimant shown, by a preponderance of the evidence, that she is entitled to all reasonable and necessary medical treatment, which is related to her work injury?

STIPULATIONS

I. Claimant's Average Weekly Wage is $580.00.

II. If compensable, Claimant's Authorized Treating Physician is Dr. Marcus Button of Button Family Practice in Canon City.

III. If compensable, Claimant would be entitled to Temporary Total Disability payments until terminated by operation of law.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

The Work Incident

1. Claimant began working for the Employer on November 26, 2018, three days prior to her work incident. (Ex. 4, p. 11). She underwent a pre-employment physical earlier the same month, before being hired by the Employer. At hearing, Claimant testified that the nurse practitioner performing the physical examined her back and noted zero abnormalities. She reported no back pain or leg weakness at that time, nor was she limited by her back or legs in any way.

2. The physical was performed by Alicia Kielas, FNP-C on November 7, 2018. (Ex. 5, p. 16). The pre-employment physical indicates that Claimant was fit to perform her duties as a youth development specialist with the Employer. *Id.* Nurse Practitioner Kielas reviewed the job description and felt Claimant was able to perform the essential functions of the job. She specifically documented that Claimant had no back abnormalities. *Id.* at 19.

3. Claimant testified at hearing. The incident occurred on Thursday, November 29, 2018. On Monday and Tuesday of that week, her training consisted primarily of meeting people, slideshows, bookwork, etc. Claimant testified that they began the physical portion of their training on Wednesday, November 28, 2018. The physical training followed the Employer's "Safe Crisis Management Manual." (Ex. 13). Employees were asked to practice and demonstrate abilities to perform safe "takedown" and "restraint" maneuvers should they be required to intervene in a physical manner with one or more of their clients.

4. Claimant woke up the next morning, November 29, 2018, feeling "Fine" and experiencing no back or leg symptoms. She continued the physical training beginning the morning of the 29th. Claimant testified that they followed the training manual. She believes they completed the training up until 'floor assists'. She estimated that the training began that morning around 9:00 a.m. Claimant testified that she recalled a female trainer asking her if she was okay, as apparently Claimant had an expression of discomfort on her face.

5. Claimant and the rest of the trainees broke for lunch around noon, after the morning training session was completed. She was given an hour for lunch, off-site. She testified that she did nothing during her lunch hour which could have caused her back injury. Claimant's legs were noticeably "wobbly" to her during the lunch hour; however, the afternoon portion of the class was primarily a seated slideshow presentation that lasted approximately two hours.

6. The instructor broke the class for a break after the slideshow had been completed. It was at this time that Claimant attempted to stand up and simply could not do so. She explained that she could not bear any weight on her feet, and it took the assistance of two co-workers to get her to her feet. As Claimant attempted to walk and regain feeling in her legs, they completely gave out. She fell to the ground, and struck her head against the wall behind her. An ambulance was called.

The Medical Records

7. AMR ambulance records indicate: She [Claimant] denied any strenuous activity or any trauma to her legs or back. [We] got an initial set of vital signs. We helped patient to stand, but she couldn't bare [sic] any weight on her legs. (Ex. H, p. 101).

8. Claimant was originally transported to St. Thomas More Hospital in Canon City, Colorado. (Ex. 8). The 'History of Present Illness' upon arrival at the emergency room states as follows:

> This is a 29 y.o. female who comes in with bilateral leg weakness that occurred less than an hour prior to arrival. She was at work performing some takedown techniques and on her knees for 5-10 minutes for a few separate occasions. She was then sitting for greater than two hours at her desk. When she started to stand up she was very weak in both legs. She was able to stand but when she bent her knees she fell and fell back and struck her head." *Id.* at 55

Claimant testified that she could not recall when she first noticed the pain in her back versus the symptoms in her legs.

9. A MRI of Claimant's lumbar spine was performed at St. Thomas More Hospital on November 29, 2018. Per the radiologist report's "Findings" the MRI revealed:

> L3-4 level demonstrates a **clinically significant central disc herniation which appears acute. This is severe.** Neural foramina not significantly involved. Facet and ligamenturm flavum hypertrophy.
>
> L1-2 level demonstrates a clinically significant *right-sided* likely chronic focal disc herniation which moderately encroaches upon thecal sac and right neural foramen. Mild ligamentum flavum and facet hypertrophy. (Ex. G, p. 97, Ex. 11. P 110) (emphasis added).

10. A CT scan of Claimant's head was also obtained which revealed no acute intracranial processes. (Ex. G, p. 98).

11. Attending physicians anticipated, based on these findings - specifically the *L3-L4* - that Claimant would likely need urgent back surgery. (Ex. 8, p. 59). Claimant was then sent as a direct admit to Penrose Hospital in Colorado Springs for further evaluation and treatment.

12. Claimant was transferred to Penrose St. Francis Hospital in Colorado Springs, Colorado and evaluated by Dr. David Smoley, M.D. on the night of November 29, 2018. (Ex. E, pp. 33-38). Claimant reported to Dr. Smoley she had been at her training earlier this date "working on these maneuvers without any kind of problems." She denied any specific low back pain to Dr. Smoley, but complained primarily of leg weakness and leg heaviness in the quadriceps region bilaterally. He said that it was possible Claimant was experiencing some *meralgia paresthetica* given Claimant's obesity. Dr. Smoley began Claimant on some steroids, muscle relaxants, pain control, and some sliding scale insulin.

13. Claimant was evaluated by a neurosurgeon; however, as time progressed, the leg weakness and numbness slowly dissipated. At the time of discharge the next day, it was noted that her legs were working significantly better. (Ex. 7, p. 25). It was recommended that Claimant follow up for more non-invasive treatment before discussing possible surgery. *Id. at 48.*

14. According to neurosurgeon Dr. Christopher Tomac, Claimant presented with an episode of "lower extremity weakness yesterday [Nov. 29], status post physical activity at work." (Ex. 9, p. 94). Claimant denied any history of spinal injuries. Dr. Tomac did not recommended surgery at this time. However, Dr. Tomac recommended that Claimant undergo pain management, physical therapy, and "when necessary," a surgical follow up. *Id. at 95.*

15. Claimant established care with Button Family Medicine on Monday, December 3, 2018 as the ATP for this claim. Her first visit to Button Family Medicine after this incident was on December 3, 2018. (Ex. 10). Claimant complained of back pain at this time, but denied any history of back injuries. She was seen by Tonia Bershinsky, FNP-C. Work restrictions were imposed on Claimant, including no lifting more than 10 pounds, no pushing or pulling, no sitting for more than 30 minutes, and no twisting or bending at the waist. *Id. at 103.* Claimant was written a prescription for physical therapy based on a diagnosis of "Lumbar pain." *Id.* at 104. It was also requested by NP Bershinsky that Claimant obtain another lumbar MRI and undergo physical therapy and pain management for her 'back injury' and her 'lumbar disc herniation.' *Id.* at 108.

16. Claimant's last medical appointment to date is her December 10, 2018 appointment with Button Family Practice. She reported she was still suffering from lumbar back pain with radiculopathy. Claimant was recommended to participate in physical therapy and was referred for a follow-up neurosurgery consultation. (Ex. C, p. 21). Claimant was again released to modified duty and was provided the restrictions of no lifting, carrying, pushing, or pulling more than 10 lbs., walking and standing as tolerated, sitting only 30 minutes at a time, and no twisting or bending at the waist. *Id.* Although her ATP wanted a new MRI and for Claimant to undergo treatment, the claim was denied.

17. Claimant testified that she continues to experience symptoms to this day, which she relates to the November 29, 2018 incident. She continues to experience daily back pain, with a pins and needles sensation going down her legs to her feet. Claimant returned to her Employer the next Monday, December 3, and was informed that she would not be able to return to work until she has clearance to work full duty.

Dr. Rook's IME Report

18. Claimant underwent an IME with Dr. Jack Rook at the request of Claimant's counsel on April 1, 2019. (Ex. 12). Dr. Rook's history documents that

Claimant was at work on November 29, 2018 and was involved in very-hands-on, physical training. He based his opinion both on Claimant's history, and the Safe Crisis Management manual that Dr. Rook personally reviewed. Dr. Rook opined that there appeared to be heavy lifting requirements while bending and twisting.

19. Claimant told Dr. Rook that an instructor had asked her if she was okay because she appeared to be in discomfort. Claimant told the instructor that her legs were bothering her, but she felt she could finish out the day. Dr. Rook noted that Claimant was never able to get the repeat MRI or any physical therapy because her claim was denied, she had no treatment since December 10, 2018.

20. At the time of his exam, Claimant was still reporting constant low back and bilateral hip pain, along with the numbness, tingling, and weakness in both legs. *Id.* at *117.* Dr. Rook's physical examination documented moderate to severe tenderness at the L2, L3, and L4 spinous processes, consistent with the MRI findings. *Id. at 118*. There was a palpable spasm with severe tenderness in bilateral paraspinal musculature at these levels. The sacroiliac joints were not tender. Claimant reported an increase of low back pain with spinal flexion and extension. *Id.*

21. Dr. Rook diagnosed Claimant as suffering from low back pain, an acute disc herniation at L3-4, discogenic pain, a probable component of facet mediated pain, and muscle spasm in the low back bilaterally. (Ex. 12, p. 118). Dr. Rook ultimately concluded that the aforementioned diagnoses were more likely than not a direct result of Claimant's work activities on November 29, 2018.

22. Dr. Rook gave a list of reasons as to why he felt the Claim was compensable:

- The patient had no prior history of a low back injury[1];
- She had never treated with a medical provider for her back or her lower extremity injury;
- When she arrived at work on November 29, 2018, she was having no issues with her back or lower extremities;
- She developed weakness and pain in both legs while performing physically demanding activities as described above, while engaging in the "safe crisis management" course at her workplace;
- The activities performed included lifting a co-worker while twisting, bending, and pulling. Such an activity places significant stress on an individual's low back structures, especially bending and twisting while lifting;
- She was not involved in any other traumatic events around the time of this incident to account for the development of this condition;

[1] Although the pre-injury physical documented that Claimant had a prior "back injury," the ALJ credits the testimony of Claimant that she never had an injury per se, rather general soreness that never required medical attention as there are no medical records to suggest otherwise.

- She reported the incident immediately, and was taken by ambulance from work to the St. Thomas More emergency room for workup which demonstrated a large acute herniated disc at the L3-4 level. This condition necessitated hospital admission; and
- She filed paperwork in a timely fashion and saw a company directed work comp doctor within days of the incident. (Ex. 12, p. 119).

Dr. Burris' IME Report

23. Claimant underwent an IME with Dr. John Burris at the request of Respondents on April 16, 2019. (Ex. A, pp. 4-10). Claimant's chief complaint at the time of this evaluation was her low back pain. Claimant provided a similar history, i.e., that she did not recall a specific traumatic event, but that near the end of her morning session her legs began to "feel funny." After returning for a few more hours of watching presentations while seated, Claimant attempted to bear weight when she fell and struck her head before being transported by ambulance to the Emergency Room. As of April 16, 2018, Claimant was reporting ongoing lower back pain at a level of 5 out of 10, along with the ongoing episodic pins and needles running through her legs down to her feet. At his examination, Dr. Burris noted an essentially normal lower back examination.

24. Dr. Burris ultimately opined that Claimant did not sustain an injury to her lower back at work on November 29, 2018. (Ex. A, pp. 9-10). He reasoned that the clinical presentation was "somewhat odd," but most importantly, that she did not identify any specific event or trauma at work on the date in question. Dr. Burris opined that Claimant could have been experiencing *meralgia paresthetica. Id.* at 10.

25. Dr. Burris opined that the MRI findings from the date of the injury showing an acute disc herniation were likely independent in nature and unrelated to the work incident for 3 reasons: 1) nature of the reported workplace activities on 11/29/2018 (which would not be sufficient to cause a disc injury, 2) nature of and progression of her symptoms (nonspecific leg weakness resolving within hours, not consistent with an acute disc injury), and 3) documented non-focal examinations which do not correlate to the findings. (Ex. A, p. 10).

26. Dr. Burris issued a supplemental report dated May 23, 2019 after receiving a copy of Dr. Rook's IME report. (Ex. A, pp. 1-3). Dr. Burris reiterated his opinion that the activities Claimant was performing were not enough to cause her disc herniation, and Dr. Rook's opinions did not change his. *Id at 2.*

Dr. Burris' Deposition Testimony

27. Dr. Burris also testified via deposition on May 20, 2019 as a Level II accredited expert in occupational medicine. Early on, the following exchange took place:

> Q. ……And so on those – how were those techniques described to you by Ms. Jacobs in your examination?
> A. She didn't go into a lot of detail. She just said physical takedown and restraints, and just described it as being a physical activity."
>
> Q. Right. So based on that description, which is what you are basing your analysis on, would you say the activities or in the maneuvers that she performed during this training would be enough to establish causation under the circumstances?
> A. **Potentially.** It depends on what the ultimate outcome is, what the diagnosis is." (emphasis added).
>
> Q. So as the facts exist now, based on your examination, how she described them to you, would you say that causation is established based on her description of these takedown techniques?
> A. Well, it's **really hard to say.** As I pointed out in my report, her presentation is not straightforward; it's pretty odd…..(emphasis added)

28. Dr. Burris opined although the November 29, 2018 MRI indicated Claimant has subacute findings at the L4-5 level and severe, acute findings at the L3-4 level, the presentation of her symptoms do not align with the diagnosis of a disc herniation. Dr. Burris testified that her lack of initial pain, delayed onset of numbness, and resolution of symptoms within hours is not consistent with the typical presentation of symptoms associated with a disc herniation. Furthermore, Dr. Burris testified that even though the findings of the MRI revealed what the radiologist described as an "acute" herniation, "acute" could mean a period of days or weeks and is not always associated with an immediate event within a period of hours.

29. Dr. Burris noted that while Claimant did participate in reported rigorous physical restraint training for a number of hours before her episode of bilateral leg numbness, she did not report any specific events, traumas, or pain associated with these activities and reported no problems over her lunch break. Rather, he concluded her legs began to feel numb after she had been sitting for approximately 2-3 hours that afternoon and noted this numbness could represent *meralgia paresthetica* (a non-occupational condition), which is more consistent with the onset of symptoms after prolonged sitting (and associated with her body habitus, independent of her activities). Additionally, Dr. Burris emphasized that

Claimant demonstrated a resolution of symptoms within hours, which is not consistent with a significant injury. Dr. Burris noted that his interview with Claimant, the physical examination, and records review did not reveal any specific event or trauma on the date in question which he could point to as the cause for Claimant's disc herniation.

30. Dr. Burris agreed that there is no medical record to indicate she ever treated for any numbness, tingling, or any sort of back pain or injury prior to the November 29, 2018 work event. Moreover, Dr. Burris was completely unaware of the pre-employment physical Claimant took 22 days before the incident. Dr. Burris disagreed that lifting while bent or twisting is a common way to herniate a disc in the lumbar spine; however, he did concede that it does put more stress on the spinal elements, which does in fact include the discs.

Dr. Rook's Hearing Testimony

31. Dr. Jack Rook testified via telephone at hearing. He was qualified as a Level II accredited expert in the fields of physical medicine and rehabilitation, pain management, and electrodiagnostic medicine. Dr. Rook confirmed he was unaware of any record demonstrating that Claimant had been evaluated or treated for prior back pain. He indicated that he was not in possession of records from AMR. Dr. Rook noted that he had reviewed the Safe Crisis Management manual, and that there is evidence of twisting, grabbing, pulling, and lowering people to the floor. Therefore, he opined, there appeared to be heavy lifting requirements while bending and twisting. It was his opinion that this type of activity "places a tremendous amount of stress and force on the lower lumbar spine."

32. Dr. Rook testified that the lumbar spine MRI—taken the date of the injury—showed an acute central disc herniation at L3-4 and a moderately severe right sided likely subacute disc herniation at L1-2. Dr. Rook opined that the cause of these particular findings was due to her job. The initial emergency records do not reflect complaints of back pain at the time. Assuming Claimant was not having actual pain in her back at that moment does not mean she did not herniate a disc. As Dr. Rook expressed, if the disc was only pressing on the motor nerves at the time, there would likely be no back pain and only leg symptoms. Dr. Rook also explained that there are a lot of people who get herniated discs that have no actual back pain; simply leg symptoms.

33. Dr. Rook testified that Claimant's leg symptoms as expressed were consistent with the MRI findings. Dr. Rook's rationale is that because she had severe central canal stenosis, that would account for weakness in both legs, as opposed to foraminal stenosis where the disc herniates to one side or the other.

34. Dr. Rook also addressed Claimant's presentation of severe leg symptoms that mostly resolved while she was at the emergency room, only to return within days. It is unusual, though there is a medical explanation. Dr. Rook

explained that after Claimant arrived at the ER, she was given an infusion of intravenous steroids to reduce inflammation. The inflammation can reduce quite quickly, relieving the pressure on the nerve(s) and allowing feeling back into her legs.

35. At the time of Dr. Rook's IME, Claimant continued to report constant low back and bilateral hip pain with intermittent numbness, tingling, and weakness of her legs. Dr. Rook opined that the continuing nerve symptoms are likely due to ongoing irritation of the originally affected nerve roots. It was Dr. Rook's opinion that the disc material likely had not resorbed by the time of his examination. He further stated, "It's probably still there, and with certain movements, it – it likely impinges on the nerve roots in the central canal.

36. Dr. Rook also provided his rationale for why Claimant was not suffering from *meralgia paresthetica*. This condition only affects numbness on the outside of the thighs and does not involve the legs or the feet, nor does it cause weakness, because those are just sensory nerves, and not motor nerves.

37. Dr. Rook was asked at hearing whether he agreed with Dr. Burris' statement that the mechanism of injury in this case simply did not produce enough force to cause Claimant's herniated discs. Dr. Rook inquired if these acute MRI findings are not related to the strenuous work activity, what would they be related to? He maintained that the activities Claimant was performing were classic activities associated with development of spinal issues, whether musculoskeletal or disc related. Dr. Rook opined this stress on the spine "is frequently associated with disc herniations."

38. Dr. Rook also disagreed with Dr. Burris's second rationale for lack of causation being Claimant's progression of her symptoms, regarding the leg weakness resolving within hours. Dr. Rook reiterated that this is explained by the very fast acting IV anti-inflammatories that she received at the ER.

39. Regarding Dr. Burris's third rationale that there was no causation because of documented, non-focal examinations which do not correlate to the findings, Dr. Rook disagreed, and opined that Claimant's symptomatology is certainly consistent with the imaging and her entire clinical picture.

Ken Orth's Hearing Testimony

40. Ken Orth testified at hearing. He was the training supervisor for Employer, and was working on November 29, 2018. Mr. Orth testified that the goal of the safety training is to be able to intervene and deescalate the situation; however, if those tactics fail, the employee must be able to physically restrain a hostile youth. Mr. Orth testified that prior to doing any of the physical training, the participants are required to stretch and warm up, and that he asks if anybody is having any issues that would impact their ability to perform the safety training.

41. Mr. Orth testified that Claimant did not state that she was having any problem that morning. Mr. Orth indicated that Claimant did not mention any problems until the afternoon session when she attempted to stand up and could not because of leg weakness. Mr. Orth stated that he overheard Claimant tell EMS that she moved out of the medical field because she had a back injury from lifting patients. [The ALJ notes that there is no mention of a prior back injury by Claimant in the AMR records.] (Ex. 6).

42. Mr. Orth testified that Claimant did not appear to be in any distress during the physical training on November 28, 2019. When asked if the next morning [November 29] anybody was having any issues that may prevent them from performing the activities, nobody indicated they did, including Claimant. As far as Mr. Orth is aware, Claimant showed up to work exhibiting no outward symptoms of pain or weakness. However, she left in an ambulance due to near total loss of function of her lower extremities.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim*

Appeals Office, 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

C. In this instance, the ALJ finds Claimant to be sufficiently credible in recounting the work incident, and in describing her ongoing symptoms to her medical providers to the best of her abilities. While there are some inconsistencies in her version of events (most notably when she felt and reported back pain), the ALJ will not hold Claimant to a standard of exactitude to still be believable. This was no doubt a frightening and traumatic event, with medical histories being asked in differing contexts, in different formats, by different providers, to an unsophisticated patient. Without more, the ALJ cannot concluded she is purposefully lying.

D. Similarly, the ALJ finds Mr. Orth to be a credible and sincere individual. For reasons that will remain unclear, apparently Claimant made a statement to AMR (and overheard by Mr. Orth) to the effect of having a prior back injury. No further context is provided for such a statement, i.e., did she mean 'pain' vs a documented 'injury'? When? Was she ever treated? While Mr. Orth apparently heard a statement to this effect, it is notable that AMR personnel – assuming they heard it too - did not feel it warranted documentation in their reports. Without more, the ALJ will not conclude that Claimant actually had a preexisting back *injury* such that compensability can no longer be found.

E. There are two physicians who have offered their professional opinions, both in reports, as well as in sworn testimony. Those opinions differ, as is often the case. The ALJ finds both physicians to be equally sincere, professional, and credible in rendering their respective opinions. The ALJ's analysis, as outlined below, rests on *persuasiveness*, rather than truthfulness towards the tribunal.

F. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability, Generally

G. A claimant is required to prove that an injury arose out of and in the course of the claimant's employment by a preponderance of evidence. *Faulkner v. Indus. Claim Appeals Office*, 12 P.3d 844 (Colo. Ct. App. 2000). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Indus. Comm'n v. Jones*, 688 P.2d 1116, 1119 (Colo. 1984).

H. Arising out of employment requires claimant to prove "a causal connection between the employment and injuries such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract." *Madden v. Mountain W. Fabricators*, 977 P.2d 861, 863 (Colo. 1999). Course of employment refers to the time, place and circumstances of the claimant's injury. *Wild West Radio, Inc. v. Indus. Claim Appeals Office*, 905 P.2d 6 (Colo. Ct. App. 1995).

I. Moreover, correlation is not causation. The mere fact that an employee may feel pain or symptoms while at work, or during or after a work activity, does not mean that there is a causal connection satisfying the claimant's burden. *Scully v. Hooters of Colorado*, W.C. No. 4-745-712 (October 27, 2008) (Panel finds claimant contention that because her back spasms occurred in the act of bussing tables and the spasms were immediately preceded by the claimant's twisting her back in the performance of an essential job function that the back spasm must have been caused by her twisting her back to be logical fallacy mistaking temporal proximity for a causal relationship.)

Did Claimant have Preexisting Back 'Injury'?

J. The only mention in the medical records of a prior back injury is that Claimant checked that she had a prior "Back Injury" during her pre-employment physical to inform the doctor that she had generalized soreness and aches with her back in the past. However, she checked that she was never, nor was she currently, in any degree of chronic pain at that time. Claimant had no great explanation at hearing for why she checked that particular box – to her credit, ultimately. She was likely in a hurry to just get on with it, didn't have someone sitting next to her in the waiting room to ask for clarification, and just checked a box by mistake. This does not lead the ALJ to conclude she suffered an undisclosed, serious back *injury.*

K. Claimant underwent a pre-employment physical 22 days before November 29, 2018. Claimant's back was examined during the physical with no abnormalities to her back noted whatsoever. The job description was reviewed by the provider as well, and there was no indication as of November 7, 2018 that she was experiencing any symptoms in her low back. There are no medical records suggesting otherwise.

L. According to the testimony of Mr. Orth, Claimant completed the physical testing on Wednesday, November 28 without incident and she appeared to be in no discomfort when she returned to work the morning of November 29, 2018. Mr. Orth asked if anyone had any injuries or symptoms or otherwise felt they could not perform the job. Claimant did not say that she could not perform her job duties that day. In summary, Claimant showed up to work with no signs or symptoms of leg weakness/pain or back pain and left work that day in an ambulance, totally unable to walk.

Persuasiveness of the Medical Opinions

M. The doctors differ in opinion on various aspects of the claim. By his own admission, Dr. Burris was not fully familiar with the takedown maneuvers Claimant was doing, yet still opined that her activities were not enough to cause a herniated disc. Dr. Rook reviewed the training manual, went over the maneuvers, and concluded they were sufficient to cause a herniated disc. Both doctors agreed that lifting while bent and twisting puts more stress on the discs, but disagreed on whether these maneuvers could have caused a disc injury.

N. Dr. Burris argued that nature and progression of symptoms are not consistent with an acute disc injury. Dr. Rook explained that upon arrival at the emergency room, Claimant was given a heavy dose of IV anti-inflammatories that would be likely to reduce the inflammation to the point of reducing pressure on the nerves that were initially severely compressed. Dr. Burris finally indicated that the examinations of Claimant do not correlate with the findings. Dr. Rook pointed out that the MRI clearly correlates with Claimant's condition explaining both the back pain and the bilateral lower extremity symptoms that would be caused by the severe central canal stenosis. Dr. Burris's has not indicated, however, what other possible cause there could be for Claimant's injury aside from her work activities. To his credit, Dr. Burris equivocated during his deposition on the issue of causation. He cannot be sure.

O. Further, in this case, Dr. Rook better correlates Claimant's symptoms to the L3-L4 region than does Dr. Burris. As he explained, *meralgia paresthetica* affects numbness on the outside of the thighs, but does not involve the legs or feet, nor does it cause weakness (which Claimant displayed in great abundance), since motor nerves are not affected by this condition. In the end, the ALJ finds the medical opinions of Dr. Rook to be more persuasive, and does attribute the onset of Claimant's symptoms to mere coincidence. The ALJ concludes that Claimant has established, by a preponderance of the evidence, that she sustained a compensable injury to her lower back/lumbar spine on November 29, 2018 while in the course and scope of her employment and arising out of her work activities.

Medical Benefits

P. Respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. § 8-42-101 (1)(a), C.R.S. (2009); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P. 2d 362 (Colo. App. 1995). Where a claimant's entitlement to benefits is disputed, the claimant has the burden to prove a causal relationship between a work-related injury and the condition for which benefits or compensation are sought. *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997). Whether the claimant sustained his burden of proof is generally a factual question for resolution by the ALJ. *City of Durango v. Dunagan*, 939 P .2d 496 (Colo. App. 1997).

Q. The ALJ has found that Claimant sustained a compensable injury to her lower back. All treatment Claimant has had to date is found to be reasonable, necessary, and related. Claimant is entitled to ongoing reasonable, necessary, and related treatment for her lower back, including the disc herniations noted on the lumbar spine MRI and for any surrounding soft-tissue or musculature injuries.

Temporary Total Disability Benefits

R. To receive temporary disability benefits, Claimant must prove the injury caused a disability. C.R.S. § 8-42-103(1); *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995). As stated in *PDM Molding*, the term "disability" refers to the claimant's physical inability to perform regular employment. *See also McKinley v. Bronco Billy's,* 903 P.2d 1239 (Colo. App. 1995). Once the claimant has established a "disability" and a resulting wage loss, the entitlement to temporary disability benefits continues until terminated in accordance with C.R.S. § 8-42-105(3)(a)-(d). Claimant is not required to prove that the industrial injury is the "sole" cause of his wage loss to recover temporary disability benefits. *Jorge Saenz Rico v. Yellow Transportation, Inc*. W.C. No. 4-547-185 (ICAO December 1, 2003), citing *Horton v. Industrial Claim Appeals Office*, 942 P.2d 1209 (Colo. App. 1996).

S. Claimant sustained a compensable injury on November 29, 2018 and has been unable to return to work since that date. Claimant was unable to work in the days following the event, as evidenced by her symptoms, as well as the significant work restrictions put in place by Claimant's ATP. Claimant also testified that the Employer will not allow her to return to work until she has been cleared to work full duty. According to Claimant's unrebutted testimony, and the medical records, Claimant continues to remain under work restrictions. Further, the parties have stipulated that if compensability is shown, Claimant is entitled to TTD payments. She is, therefore, entitled to TTD benefits beginning November 30, 2018 and ongoing, subject to any offsets, until terminated by operation of law.

ORDER

It is therefore Ordered that:

1. Claimant's claim is compensable.

2. Respondents will pay for all reasonable, necessary, and related medical treatment for Claimant's lower back work injury.

3. Respondents will pay Temporary Total Disability payments from the date of injury until terminated by operation of law.

4. The Insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

STATE OF COLORADO

W.C. No. 5-100-039-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on June 27, 2019, in Denver, Colorado. The hearing was digitally recorded (reference: 6/27/19, Courtroom 1, beginning at 8:30 AM, and ending at 12:30 PM). There were two Spanish/English interpreters, who performed in relay fashion: Miguel Iraola and Jorge Espinosa.

Claimant's Exhibits 1 –7, with the exception of Exhibit 6 were admitted into evidence at the commencement of the hearing, without objection. Photographs in Exhibit 6 were authenticated and admitted into evidence during the hearing. Respondents' Exhibits A-H were admitted into evidence, without objection.

A transcript of the evidentiary deposition of Allison M. Fall, M.D., taken on June 18, 2019, was filed in lieu of her live testimony (herein after referred to a "Fall Depo., followed by a page number).

.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant, which was filed, electronically, on July 5, 2019. On July 8, 2019, counsel for the Respondents submitted suggested changes in the proposed decision. After a consideration of the proposed decision and Respondents' suggested revisions thereto, the ALJ has modified the proposal and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern: compensability; medical benefits; average weekly wage (AWW); and, whether the Claimant is entitled to temporary total disability (TTD) benefits from January 17, 2019, through March 5, 2019.

The Claimant bears the burden of proof, by a preponderance of the evidence, on all issues.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. At the commencement of the hearing, the parties stipulated and the ALJ finds that "the Claimant was sent to get a physical at Concentra Clinic by the employer on January 16, 2019 and the Claimant was compensated by the Employer for the time that he missed on his trip to the clinic." This was a routine physical examination required by the Employer.

The Incident

2. While at the Concentra Clinic, a nurse drew blood from the Claimant's dominant right arm, and another nurse ordered the nurse to do another blood draw because not enough blood had been drawn in the first instance.

3. According to David Yamamoto, M.D., the Claimant's expert witness, the fact that the blood was drawn from the Claimant's dominant right arm was unusual.

4. The Claimant went home from Concentra and within one hour began to experience swelling and numbness in his right hand, and burning in his arm.

5. Because he was unable to sleep that night, the Claimant contacted his Employer the next morning and reported his condition. He and his supervisor agreed that he should not work that day and that the Claimant should address his symptoms.

6. The Claimant went to a Walgreen's store and described his symptoms to a pharmacist who advised him to return to Concentra where the blood draw had been performed.

Medical

7. The Claimant went to Concentra and was treated for his symptoms.

8. At Concentra, the Claimant underwent medical treatment, was prescribed medication, was given work restrictions and was released to full duty work on January 21, 2019.

9. Having been released to full duty work as of January 21, 2019, the Claimant still had pain in his right arm and he immediately sought medical treatment at UC Health Sciences Center (UCHSC) (Claimant's Exhibit 1, bates 040 - 070).

10. Concentra referred the Claimant out for medical evaluation to the Vascular Institute of the Rockies for further evaluation. After receiving evaluation and treatment, he was referred to Carter Jones at Pain Medicine on January 30, 2018, for evaluation and treatment for right upper extremity (RUE) pain, swelling, and weakness and possible CRPS (complex regional pain syndrome) [Exhibit 1, bates 033, 038, and 039].

11. According to the Claimant, he could not comply with the recommendations made by the Vascular Institute of the Rockies because he could not afford the $500.00 co-pay requested by Carter Jones at Pain Medicine, who was in the authorized chain of referrals, however, the Claimant's case was fully contested.

12. On January 29, 2019, The Claimant was advised by Amanda Cava at Concentra, that if he experienced acute/severe worsening symptoms, he was advised to go to ER, and to "submit statement of injury/incident with monetary compensation requests to Concentra ops." (*Id.* at 031).

Allison M. Fall, M.D., Respondents' Independent Medical Examiner (IME)

13. Dr. Fall performed an IME of the Claimant, at Respondents' request, on April 17, 2019. In addition to examining the Claimant, Dr. Fall reviewed the questionnaire of Vascular Surgery specialist, Barbara Melendez, M.D., and the IME Report of David Yamamoto, M.D (Claimant's IME). Dr. Fall disagreed with both doctors. She diagnosed right arm thrombophlebitis as a non-work related condition.

14. Dr. Fall also reviewed the records of the blood draw and was of the opinion that there was nothing abnormal about it. In her examination of the Claimant, she found no signs of complex regional pain syndrome (CRPS). This is in direct conflict with the observations of the vascular surgeons (a more precise specialty for dealing with CRPS) and with the opinion of Dr. Yamamoto. In this case, the ALJ makes a rational choice, based on substantial evidence, to reject Dr. Fall's opinion and to accept the probable opinions of Dr. Melendez and Dr. Yamamoto.

15. Ultimately, Dr. Fall is of the opinion that the blood draw did not cause the problems with the Claimant's right arm. By necessary implication, her opinion negates work-relatedness. For the reasons articulated throughout these Findings, the ALJ rejects Dr. Fall's opinions. The probable findings of Dr. Melendez and Dr. Yamamoto are more credible.

Compensability

16. The totality of the credible evidence supports the proposition that the Claimant sustained a compensable injury, probable CRPS, by virtue of the blood draw on January 16, 2019.

17. The critical underpinning of Dr. Yamamoto's opinion on work-relatedness is the proximity in time from the blood draw to the onset of symptoms shortly thereafter. Dr. Yamamoto was credible when he stated the reasoned opinion that there can't be any other explanation for the Claimant's condition but the blood draw.

18 Dr. Yamamoto was of the opinion, within a reasonable degree of medical probability, that the Claimant sustained work-related injuries consistent with CRPS, which Dr. Yamamoto diagnosed.

19. The ALJ observed the Claimant's injured right arm as compared to his left arm. Dr. Yamamoto pointed out that the right hand was swollen, there was white hair growing on the right arm and not on the left arm and there was a difference in skin color. The ALJ confirmed all of these observations.

20. In addition, Dr. Yamamoto indicated that he had previously identified signs consistent with CRPS including striations of the nails of Claimant's right hand which were not present on his left hand for which Dr. Yamamoto used a magnifying glass.

21. Another sign that Dr. Yamamoto previously identified was that the Claimant could not make a clenched fist, had loss of range of motion on the fingers of his right hand and not on his left hand and weakness in his right hand. (RUE).

22. According to Dr. Yamamoto's testimony, the Claimant's symptoms meet the Budapest criteria for CRPS..

23. Dr. Yamamoto concluded that the Claimant **is not at maximum medical improvement (MMI).** According to Dr. Yamamoto, the Claimant is in need of further testing, like the QSART, stress thermography, x-rays, triple bone scan and may also be a candidate for a sympathetic block (Exhibit 5, bates 088). This treatment recommendation is necessary to come up with a certain diagnosis in compliance with the Division of Workers' Compensation Medical Treatment Guidelines.

24. Barbara Melendez, M.D., of the Vascular Institute (Claimant's Exhibit 2, bates 078 - 079) answered a questionnaire as follows:

a. at #3, Dr. Melendez answers in the affirmative to the question, "Absent any other impact to his arm, on January 16, 2019, can the two blood draws taken

form the Claimant have been the mechanism of injuries diagnosed by your clinic? (*Id.* at 078)

b. at #7, she answers in the affirmative to the question, "Concerning possible CRPS, should [Claimant] be evaluated and treated for CRPS and would said evaluation and treatment be reasonably related to his original injury and diagnosis? (*Id.* at 079), Dr. Melendez answered "yes."

25. According to the Claimant, he could not make a clenched fist, he has a loss of range of motion (ROM) on the fingers of his right hand and he has difficulty handling the weight of a gallon of milk with his right hand.

Medical

26. In weighing the medical evidence, Dr. Yamamoto's testimony and his report, the Claimant's testimony, and the photographs, the ALJ finds that the totality of the evidence supports the fact that the Claimant sustained a compensable injury, probable CRPS, by virtue of the blood draw on January 16, 2019.

27. Claimant's care, beginning on January 17, 2019 is causally related to the compensable injury caused by the blood draw of January 16, 2019, and was and is reasonably necessary to cure and relieve the effects thereof.

28. The ALJ finds that the Claimant's medical treatment was authorized and within the authorized chain of referrals in the natural progression of treatment for the compensable injury.

Temporary Disability

29. The ALJ finds that the Claimant has been consistently restricted from full duty by the Employer. On the date of injury, the Claimant was handling heavy equipment. He could not have returned to using heavy equipment after his compensable injury. He was off work because of the injury from January 17, 2019 through March 4, 2019. He returned to restricted employment on March 5, 2019, after being accommodated by the Employer. The Claimant was, therefore, temporarily and totally disabled from January 17, 2019 to March 4, 2019, both dates inclusive, for a total of 47 days.

Average Weekly Wage (AWW)

30. The Claimant was paid $26.76 an hour. He average more than 40-hours per week. The hourly rate at time and a half is $40.14 an hour. The Claimant's overtime pay equals $401.40. The Claimant's AWW on the date of injury was $1,471.80.

31. TTD benefits, from January 17, 2019 to March 4, 2019, both dates inclusive, a total of 47 days, equal an aggregate amount of $6,587.99.

Ultimate Findings

32. The opinions of Dr. Yamamoto and Vascular Surgeon, Dr. Melendez, were more credible and persuasive than the opinions of Dr. Fall for the reasons specified herein above.

33. Between conflicting opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the opinions of Dr. Melendez and Dr. Yamamoto, and to reject the opinions of Dr. Fall.

34. The Claimant has proven, by a preponderance of the evidence that he sustained a compensable injury on January 16, 2019, resulting from the blood draw and this injury arose out of the course and scope of the Claimant's employment for the Employer herein.

35. The Claimant has proven, by preponderant evidence, that all of the Claimant's medical care and treatment for the injury resulting from the blood draw was and is causally related thereto, reasonably necessary to cure and relieve the effects thereof, and within the chain of authorized referrals in the normal progression of treatment therefore.

36. The Claimant has proven, by preponderant evidence, that further testing for CRPS, as recommended by Dr. Yamamoto and the vascular surgeons, is required.

37. The Claimant is not at MMI.

38. The Claimant has established by a preponderance of evidence that his AWW is $1,471.80, which yields a TTD benefit rate of $981.19 per week, or $140.17 per day.

39. The Claimant has proven, by a preponderance of the evidence that he was temporarily and totally disabled from January 17, 2019, through March 4, 2019, both dates inclusive, a total of 47 days. Aggregate TTD benefits for his period equal $6,587.99.

40. The Claimant has failed to prove that he was temporarily disabled from March 5, 2019, through June 27, 2019, the hearing date.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the opinions of Dr. Yamamoto and Vascular Surgeon, Dr. Melendez, were more credible and persuasive than the opinions of Dr. Fall for the reasons specified herein above in the Findings..

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions

in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting opinions, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of Dr. Melendez and Dr. Yamamoto, and to reject the opinions of Dr. Fall.

Compensability

c. In order for an injury to be compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Office,* 919 P.2d 207, 210, 210 (Colo. 1996). An injury "arises out of' employment if it would not have occurred **but for** the fact that the conditions and obligations of employment placed the employee in a position that he or she was injured." *See City of Brighton v. Rodriguez,* 318 P.3d 496, **2014 CO 7** [presumption that an injury arises out of employment when an unexplained injury occurs during the course of employment]. Thereupon, it is incumbent to show that non-work related factors caused the injury. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1) (c), C.R.S. *See Faulkner v. Indus. Claim Appeals Office,* 24 P.3d 844 (Colo. App. 2000)*; Eller v. Indus. Claim Appeals Office*, 224 P.3d 397, 399 (Colo. App. 2009); *Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277, 1279 (Colo. App. 2008). The question of causation is generally one of fact for determination by an ALJ. *Faulkner* at 846; *Eller* at 399-400. As found, the Claimant sustained a compensable injury on January 16, 2019, resulting from the blood draw and this injury arose out of the course and scope of the Claimant's employment for the Employer herein.

Medical Referrals

d. To be authorized, all referrals must remain within the chain of authorized referrals in the normal progression of authorized treatment. *See Mason Jar Restaurant v. Indus. Claim Appeals Office,* 862 P. 2d 1026 (Colo. App. 1993); *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P. 2d 501 (Colo. App. 1995); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). When an ATP refers an injured worker to his personal physician, under the mistaken belief that the claim was not compensable, the referral was nonetheless within the chain of authorized referrals and, thus, subsequent treatment was authorized. *See Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277 (Colo. App. 2008). As found, the Claimant's medical care was within the chain of authorized referrals in the normal progression of treatment therefore.

Medical

e. To be a compensable benefit, medical care and treatment must be causally related to an industrial injury or occupational disease. *Dependable Cleaners v. Vasquez,* 883 P. 2d 583 (Colo. App. 1994). As found, Claimant's medical treatment is causally related to the bolood draw of January 16, 2019. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's medical care and treatment was and is reasonably necessary to cure and relieve the effects of his injury.

Average Weekly Wage

f.

f. Section 8-42-102(2), C.R.S., requires the ALJ to calculate a claimant's AWW based on the earnings at the time of injury as measured by the claimant's monthly, weekly, daily, hourly or other earnings. This section establishes the so-called "default" method for calculating the AWW An AWW calculation is designed to compensate for **total** temporary wage loss. *Pizza Hut v. Indus. Claim Appeals Office,* 18 P. 3d 867 (Colo. App. 2001). *See* § 8-42-102, C.R.S. As found, the Claimant lost 100% of his wages from the Employer when he was off work.

Temporary Disability

g. To establish entitlement to temporary disability benefits, a claimant must prove that the industrial injury has caused a "disability," and that he has suffered a wage loss that, "to some degree," is the result of the industrial disability. § 8-42-103(1), C.R.S; *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Disability from employment is established when the injured employee is unable to perform the usual job effectively or properly. *Jefferson Co. Schools v. Headrick*, 734 P.2d 659 (Colo. App.1986). This is true because the employee's restrictions presumably impair his

opportunity to obtain employment at pre-injury wage levels. *Kiernan v. Roadway Package System*, W.C. No. 4-443-973 [Indus. Claim Appeals Office (ICAO), December 18, 2000]. There is no statutory requirement that a claimant must present medical opinion evidence from of an attending physician to establish his physical disability. See *Lymburn v. Symbois Logic*, 952 P.2d 831 (Colo. App. 1997). Rather, the Claimant's testimony alone is sufficient to establish a temporary "disability." *Id*. As found, the Claimant was temporarily and totally disabled from January 17, 2019, through March 4, 2019, both dates inclusive, a total of 47 days. Aggregate TTD benefits for this period equal $6,587.99.

h. Once the prerequisites for TTD are met (*e.g.,* no release to return to full duty, MMI has not been reached, a temporary wage loss is occurring in modified employment or modified employment is no longer made available, and there is no actual return to work), TTD benefits are designed to compensate for a 100% temporary wage loss. *See Eastman Kodak Co. v. Indus. Comm'n,* 725 P. 2d 107 (Colo. App. 1986); *City of Aurora v. Dortch,* 799 P. 2d 461 (Colo. App. 1990). As found, the Claimant sustained a 100% temporary wage loss from January 17, 2019, through March 4, 2019.

Maximum Medical Improvement (MMI)

I. MMI is defined as the point in time when any medically determinable physical or medical impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition. § 8-40-201(11.5), C.R.S. *Donald B. Murphy Contractors, Inc. V. Indus. Claim Appeals Office*, 916 P.2d 611 (Colo. App. 1995). Diagnostic procedures that constitute a compensable medical benefit must be provided prior to MMI if such procedures have a reasonable prospect of diagnosing or defining a claimant's condition so as to suggest a course of further treatment *See In the Matter of the Claim of William Soto, Claimant,* W.C. No. 4-813-582 (ICAO, October 27, 2011). As found, Dr. Yamamoto is recommending further tests, *e.g.,* a QSART Test, among other tests to positively confirm or rule out the diagnosis of CRPS. For this reason, among others, the Claimant has not yet reached MMI.

Burden of Proof

j. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 (ICAO, March 20, 2002). *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v.*

Jones, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained his burden with respect to compensability, medical benefits, AWW, and TTD benefits from January 17, 2019, through March 4, 2019. He has failed to sustain his burden with respect to temporary disability benefits from March 5, 2019, through June 27, 2019, the hearing date.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents shall pay all the medical costs related to treatment of the consequences of the work-related blood draw, including the tests recommended by David Yamamoto, M.D., to positively confirm or rule out CRPS, subject to the Division of Workers' Compensation Medical Fee Schedule.

B. Respondents shall pay the Claimant temporary total disability benefits of $981.19 per week, or $140.17 per day, from January 17, 2019, through March 4, 2019, both dates inclusive, a total of 47 days, in the aggregate amount of $6,587.99, which is payable retroactively and forthwith.

C. Any and all claims for temporary disability benefits from March 5, 2019, through June 27, 2019, are hereby denied and dismissed.

D. Respondents shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts of indemnity benefits not paid when due.

E. Any and all issues not determined herein are reserved for future decision.

DATED this 12th day of July 2019.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

ISSUE

Whether Claimant has established by a preponderance of the evidence that he should be permitted to reopen his August 11, 2014 Workers' Compensation claim based on a change in condition pursuant to §8-43-303(1), C.R.S. and Respondents should thus be financially responsible for his January 4, 2019 left shoulder surgery.

FINDINGS OF FACT

1. Claimant has worked for Employer as a Firefighter since May 2002. On August 11, 2014 Claimant suffered an admitted left shoulder injury during the course and scope of his employment. Claimant was ascending a ladder while carrying an approximately 45-pound air pack over his left shoulder. As he went to lay the air pack off to the side, he felt a sharp pain in his left shoulder. Claimant was 39 years old at the time of the incident.

2. Claimant initially underwent conservative treatment for his left shoulder through Authorized Treating Physician (ATP) Martin Boublik, M.D. at the Steadman Hawkins Denver Clinic. The treatment included ice, rest, anti-inflammatories and physical therapy.

3. On October 23, 2014 Claimant underwent an MRI of his left shoulder. The MRI revealed the following: (1) moderate supraspinatus and infraspinatus tendinosis; (2) circumferential degeneration and discrete tearing of the labrum; (3) mild chondromalacia of the posterior glenoid fossa with underlying cystic change; and (4) moderate to severe acromioclavicular joint arthrosis.

4. On October 29, 2014 Dr. Boublik administered an intraarticular corticosteroid injection into Claimant's left shoulder. The injection provided significant improvement for several months.

5. On February 2, 2015 Dr. Boublik placed Claimant at Maximum Medical Improvement (MMI) with no permanent impairment. However, by April 6, 2015 Claimant reported returning left shoulder pain with increased activities. Although Dr. Boublik administered a repeat corticosteroid injection in Claimant's left shoulder, he continued to experience discomfort.

6. On November 12, 2015 Dr. Boublik performed surgery on Claimant's left shoulder. His postoperative diagnoses included left shoulder impingement, a labral tear and degenerative joint disease.

7. On November 25, 2015 Claimant was released to return to light duty deskwork. By December 27, 2015 Claimant returned to full duty employment.

8. Claimant returned to Dr. Boublik's office for follow up on April 6, 2016. Dr. Boublik noted:

> The MRI dated October 23, 2014 revealed significant degenerative tearing of the labrum, moderate tendinopathy of the rotator cuff, only mild chondromalacia of the posterior glenoid fossa and moderate-to-severe AC joint arthropathy. Subsequently, upon his surgery on November 12, 2015 there was significant glenohumeral joint arthropathy noted with grade 4 changes in the glenoid and humeral head.

Regarding Claimant's status and prognosis, Dr. Boublik remarked:

> Overall the patient is doing well in regards to his left shoulder with known underlying DJD as well as status post above stated surgery with subacromial decompression and debridement of the labrum. Again he does get intermittent soreness which does not limit him with work.

Dr. Boublik noted that Claimant might need a total shoulder arthroplasty at some point in the future.

9. On January 30, 2017 Claimant underwent a repeat MRI of his left shoulder. The interpreting radiologist compared the results with the MRI from October 2014. The radiologist's findings were as follows: (1) severe glenohumeral arthrosis with marked interval progression since comparison study; (2) rotator cuff tendinosis, shallow articular sided fraying of infraspinatus, no measurable tear or muscle atrophy; and (3) torn superior labrum which was present previously with tendinosis of the long biceps tendon without tearing or instability.

10. By October 11, 2017 Dr. Boublik determined that Claimant had reached MMI. He noted that Claimant felt he had plateaued over the past two years and, although he was able to work, he continued to have pain with activities. Dr. Boublik assigned a 4% left upper extremity permanent impairment rating that converted to a 2% whole person rating. He also explained that Claimant was at risk for progression of his left shoulder symptoms and might require a left total shoulder replacement in the future.

11. On March 16, 2018 Claimant underwent a Division Independent Medical Evaluation (DIME) with Stephen D. Lindenbaum, M.D. After Dr. Lindenbaum considered Claimant's injury and course of treatment, he agreed that Claimant had reached MMI on October 11, 2017. However, Dr. Lindenbaum assigned a 22% permanent impairment rating of the left upper extremity. The rating consisted of 11% for loss of range of motion and 12% for crepitus. Dr. Lindenbaum did not assign work restrictions or recommend medical maintenance care.

12. On April 17, 2018 Respondents filed an Amended Final Admission of Liability (FAL). The FAL was consistent with Dr. Lindenbaum's MMI and impairment determinations.

13. On September 26, 2018 Claimant underwent another left shoulder MRI. The MRI report noted the presence of severe left glenohumeral joint osteoarthritis with large joint effusion and mild synovitis with severe stress response in the glenoid and posterior humeral head. There was also full-thickness cartilage loss with moderate thinning and decreased bone stock of the posterior half of the glenoid. The MRI revealed extensive subchondral cystic change and intraosseous ganglion cyst formation with extraosseous component of ganglion cyst extending through the posterior superior quadrant of the glenoid margin. The report further noted severe circumferential macerated degenerative tearing of the glenoid labrum of the left shoulder. The radiologist also noted severe arthritic changes of the left glenohumeral joint with severe reactive arthritis. Finally, there was a large joint effusion and mild synovitis.

14. On October 3, 2018 Claimant returned to Dr. Boublik for a follow-up examination. He reported progressively worsening left shoulder pain. Dr. Boublik reviewed the September 26, 2018 MRI results and noted the findings were consistent with the following: (1) end-stage osteoarthritic degeneration of the glenohumeral joint; (2) moderate osteoporosis of the acromial clavicular joint; and (3) no evidence of significant rotator cuff tear. Dr. Boublik diagnosed significant degenerative disease of the left shoulder located primarily in the glenohumeral articulation. He recommended a consultation with Braden Mayer, M.D. for consideration of a left shoulder joint replacement.

15. On October 22, 2018 Claimant visited Dr. Mayer for an evaluation. Claimant reported worsening left shoulder pain for several years as the result of a 2014 Workers' Compensation injury. Claimant described pain with overhead activities including significant catching and crepitus within the shoulder. Dr. Mayer reviewed the October 3, 2018 x-rays and diagnosed severe left shoulder degenerative joint disease. He noted that Claimant had exhausted all conservative treatment and had worsening pain that affected his quality of life. He commented that they discussed the need for left shoulder surgery that included humeral head resurfacing with an inlay glenoid procedure.

16. On October 26, 2018 Dr. Mayer submitted a request for prior authorization for a surgery that was tentatively scheduled for November 9, 2018. However, on November 2, 2018 Respondents denied the request because the procedure was not causally related to the claim. Respondents noted that an independent medical examination was scheduled with J. Tashof Bernton, M.D. to address the surgical request.

17. On December 11, 2018 Dr. Bernton conducted an independent medical examination of Claimant to determine the cause of his left shoulder symptoms and need for additional surgery. Dr. Bernton had also conducted a prior independent medical examination of Claimant on August 9, 2018. However, based on the posture of the claim at the time, Dr. Bernton's August 9, 2018 examination was primarily focused on permanent impairment and shoulder conversion.

18. At the December 11, 2018 examination Claimant reported that he had experienced increased pain and decreased mobility in his left shoulder since the August 2018 independent medical examination. Dr. Bernton reviewed the updated medical records from Drs. Boublik and Mayer as well as the September 26, 2018 MRI report. Following an examination, Dr. Bernton noted that Claimant demonstrated the rapid onset of severe arthritic changes in his shoulder. He determined that, while it was likely the changes were simply due to a progression of Claimant's pre-existing underlying osteoarthritis, it was also possible that they were due to the presence of a monoarticular inflammatory arthritis or an indolent infection. Dr. Bernton recommended a diagnostic evaluation on a non-work-related basis to determine whether inflammatory arthritis or an indolent infection was present.

19. Dr. Bernton explained that, whether the deterioration of Claimant's shoulder was due to the progression of his underlying osteoarthritis or the presence of inflammatory arthritis, his current condition was not work-related. However, if a Propionibacterium acne infection was present the progression of arthritis would most likely represent an infectious complication following the November 12, 2015 surgery. Otherwise, the rapid onset of degeneration and the need for additional surgery would not be causally related to his Worker's Compensation claim. Dr. Bernton determined that there was no basis to conclude that either the original mechanism of injury or the surgery would result in the type of rapid progression of degenerative osteoarthritis that Claimant suffered. Thus, unless testing revealed the presence of an indolent postoperative joint infection, Claimant remained at MMI with regard to his August 11, 2014 left shoulder injury.

20. After receiving Dr. Bernton's December 11, 2018 independent medical examination report, Respondents maintained their denial of Dr. Mayer's surgical request. On January 8, 2019 Respondents wrote letters to Dr. Boublik and Claimant's counsel offering to provide Claimant with the diagnostic workup recommended by Dr. Bernton. However, shortly thereafter, Respondents learned that Claimant had already undergone the requested surgery. In fact, medical records from Steadman Hawkins Clinic reflect that Dr. Mayer performed a left humeral head resurfacing with inlay glenoid procedure on Claimant's left shoulder on January 4, 2019. Respondents thus wrote another letter to Dr. Boublik requesting that he disregard the previous January 8, 2019 letter.

21. Claimant testified at the hearing in this matter that he was able to return to full duty work following his November 2015 arthroscopic surgery. However, he commented that his shoulder pain gradually worsened over time. Claimant described his symptoms as "the standard – arthritic pain that increased and – and continued to get worse over that three-year period."

22. Dr. Bernton testified at the hearing in this matter regarding the basis for his opinion that Claimant suffered from degenerative arthritis that existed prior to his August 11, 2014 work injury. He noted that Claimant was injured when he attempted to lift an approximately 45-pound air pack that he was carrying with his left hand over his head. He felt pain in his left shoulder as he pulled back in an external rotation and

abduction position. After reviewing Claimant's October 23, 2014 left shoulder MRI, Dr. Bernton explained some of the findings. Regarding the finding of chondromalacia in the glenoid fossa, Dr. Bernton noted that the glenoid fossa is the socket part of the ball-and-socket shoulder joint. The MRI revealed changes in the cartilage in the back of the fossa. Dr. Bernton explained that the MRI reflected cystic changes or small areas of cysts in the bone underlying the cartilage. Furthermore, the MRI showed moderate to severe arthritis of the acromioclavicular joint. Dr. Bernton explained that, while all of the changes existed a little more than two months after the work injury, the process of arthritic changes in the joint requires years to develop. In addition, Dr. Bernton noted that the changes could not have been caused by Claimant's described mechanism of injury. Consequently, the MRI demonstrated that changes representing the presence of arthritis had occurred prior to the work injury.

23. After reviewing the November 12, 2015 operative report, Dr. Bernton commented that Claimant already had severe and advanced degenerative arthritis of the shoulder. Specifically, Claimant suffered from grade IV or the most advanced form of loss, both on the humerus or the ball part of the ball-and-socket joint, and on the glenoid or the socket part of the joint. In other words, Claimant had arthritis on both sides of the joint that was grade IV out of IV in severity. Dr. Bernton explained that the process takes years to develop. Moreover, the changes would not have resulted from the mechanism of injury in the August 11, 2014 incident.

24. In contrast to the pre-existing degenerative arthritis in Claimant's left shoulder, Dr. Bernton testified that the August 11, 2014 work incident likely caused a labral tear. Dr. Bernton explained that the labrum is a small lip of cartilage that surrounds the edge of the glenoid fossa or the socket side of the joint. The labrum allows people to have more mobility in the shoulder without losing the stability or structural integrity of the joint. Dr. Bernton remarked that, because labral tears can occur on a degenerative basis, it is not possible to know whether the labrum in Claimant's left shoulder was intact or already torn and then worsened as a result of the work incident. Dr. Bernton summarized that the August 11, 2014 industrial injury consisted of either a torn labrum or the worsening of a labral tear. He described that Claimant suffered an acute injury that was superimposed on a pre-existing and underlying degenerative condition.

25. Dr. Bernton explained that the September 26, 2018 MRI revealed an effusion or excessive fluid in the joint, synovitis, or inflammation of the lining tissue of the joint, full thickness cartilage loss on both sides of the joint and advancement of the cystic changes underneath the bone. He reasoned that the MRI revealed significant advancement of the degenerative process and a rapid deterioration since the October 23, 2014 MRI and November 2015 surgery. Dr. Bernton specified that the September 26, 2018 MRI findings were reflective of end stage arthritis.

26. Dr. Bernton further testified that, if Claimant's current condition simply represents the rapid onset of his underlying degenerative arthritis, his worsened condition is also not causally related to his August 11, 2014 work injury. He explained that, while the progression of a degenerative arthritis can be changed by a structural

event, the injury would have to essentially alter the joint surface. He specifically mentioned a fracture of the humeral head that did not heal properly and caused abnormalities of the joint surface on either the humeral head or glenoid side. However, Claimant suffered a labral tear on August 11, 2014 that did not change the integrity of the joint or any of the joint surfaces. While the labral tear caused Claimant pain, it did not affect the progression of the underlying osteoarthritis.

27. Claimant has failed to establish that it is more probably true than not that he should be permitted to reopen his August 11, 2014 Workers' Compensation claim based on a change in condition pursuant to §8-43-303(1), C.R.S. and Respondents should thus be financially responsible for his January 4, 2019 left shoulder surgery. Claimant has specifically failed to sustain his burden of proving that the worsening of his left shoulder condition is causally related to the August 11, 2014 work injury. Initially, Claimant's left shoulder injury consisted of a labral tear superimposed on his underlying degenerative condition. The objective medical evidence reflects that Claimant suffered pre-existing degenerative arthritis. A recent MRI from September 26, 2018 shows significant advancement of arthritis throughout Claimant's left shoulder joint as compared to the October 23, 2014 MRI and the intraoperative findings from the November 12, 2015 arthroscopic surgery. The degree of deterioration during the period of time is unusual and, as Dr. Bernton remarked, could be due to either a progression of the underlying osteoarthritis, an inflammatory arthritis or an infectious arthritis. Dr. Bernton persuasively reasoned that, in any event, the worsened condition is not causally related to the August 11, 2014 work injury. Because the labral tear did not alter the joint surface or the integrity of the joint, it would not have caused, accelerated or otherwise changed the course of the underlying arthritis. Furthermore, if Claimant's rapid deterioration was caused by inflammatory arthritis, the arthritis also would not be causally related to a systemic or metabolic disease. Claimant's degenerative, progressive condition would thus have no causal relationship to the August 11, 2014 work injury.

28. Claimant has also not shown that the worsening of his left shoulder condition is causally related to the treatment that he received after his work injury that included the November 12, 2015 arthroscopic surgery. As Dr. Bernton persuasively explained, the procedures performed during the November 2015 surgery are frequently utilized to treat patients with osteoarthritic shoulders and do not involve any changes to the joint that would lead to the acceleration of the underlying arthritis or otherwise alter the course of the arthritis that already existed in Claimant's left shoulder. The significant changes on the September 26, 2018 MRI had occurred throughout the joint and did not reflect the localized degeneration that can be attributed to a specific traumatic injury, event or procedure. If the deterioration in Claimant's shoulder was due to inflammatory arthritis, it would still not be related to his claim because inflammatory arthritis is a systemic condition that is unrelated to and unaffected by any structural injury or specific treatment. Finally, although Dr. Bernton remarked that a Propionibacterium acne infection could be work-related as a complication from the November 12, 2015 surgery, there is no evidence that the deterioration in Claimant's left shoulder is due to an indolent infection.

29. On January 4, 2019 Dr. Mayer performed a left humeral head resurfacing with inlay glenoid procedure on Claimant's left shoulder. The surgery was designed to address Claimant's underlying severe left shoulder degenerative joint disease. Although the surgical procedure may have been reasonable, the need for surgery was independent of Claimant's work-related left shoulder injury. The bulk of the medical records, in conjunction with the persuasive opinion of Dr. Bernton, demonstrate that Claimant's worsening arthritic condition was unrelated to his August 11, 2014 work-related left labral tear. Because Claimant's worsened, degenerative condition is not causally connected to his industrial injury, he remains at MMI. Accordingly, Claimant's request to reopen his August 11, 2014 Workers' Compensation claim based on a change in condition is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Section 8-43-303(1), C.R.S. provides that a worker's compensation award may be reopened based on a change in condition. In seeking to reopen a claim the claimant shoulders the burden of proving his condition has changed and that he is entitled to benefits by a preponderance of the evidence. *Osborne v. Industrial Commission*, 725 P.2d 63, 65 (Colo. App. 1986). A change in condition refers either to a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition that is causally connected to the original injury. *Jarosinski v. Industrial Claim Appeals Office,* 62 P.3d 1082, 1084 (Colo. App. 2002). A

"change in condition" pertains to changes that occur after a claim is closed. *In re Caraveo,* W.C. No. 4-358-465 (ICAO, Oct. 25, 2006). The determination of whether a claimant has sustained his burden of proof to reopen a claim is one of fact for the ALJ. *In re Nguyen,* W.C. No. 4-543-945 (ICAO, July 19, 2004).

5. As found, Claimant has failed to establish by a preponderance of the evidence that he should be permitted to reopen his August 11, 2014 Workers' Compensation claim based on a change in condition pursuant to §8-43-303(1), C.R.S. and Respondents should thus be financially responsible for his January 4, 2019 left shoulder surgery. Claimant has specifically failed to sustain his burden of proving that the worsening of his left shoulder condition is causally related to the August 11, 2014 work injury. Initially, Claimant's left shoulder injury consisted of a labral tear superimposed on his underlying degenerative condition. The objective medical evidence reflects that Claimant suffered pre-existing degenerative arthritis. A recent MRI from September 26, 2018 shows significant advancement of arthritis throughout Claimant's left shoulder joint as compared to the October 23, 2014 MRI and the intraoperative findings from the November 12, 2015 arthroscopic surgery. The degree of deterioration during the period of time is unusual and, as Dr. Bernton remarked, could be due to either a progression of the underlying osteoarthritis, an inflammatory arthritis or an infectious arthritis. Dr. Bernton persuasively reasoned that, in any event, the worsened condition is not causally related to the August 11, 2014 work injury. Because the labral tear did not alter the joint surface or the integrity of the joint, it would not have caused, accelerated or otherwise changed the course of the underlying arthritis. Furthermore, if Claimant's rapid deterioration was caused by inflammatory arthritis, the arthritis also would not be causally related to a systemic or metabolic disease. Claimant's degenerative, progressive condition would thus have no causal relationship to the August 11, 2014 work injury.

6. As found, Claimant has also not shown that the worsening of his left shoulder condition is causally related to the treatment that he received after his work injury that included the November 12, 2015 arthroscopic surgery. As Dr. Bernton persuasively explained, the procedures performed during the November 2015 surgery are frequently utilized to treat patients with osteoarthritic shoulders and do not involve any changes to the joint that would lead to the acceleration of the underlying arthritis or otherwise alter the course of the arthritis that already existed in Claimant's left shoulder. The significant changes on the September 26, 2018 MRI had occurred throughout the joint and did not reflect the localized degeneration that can be attributed to a specific traumatic injury, event or procedure. If the deterioration in Claimant's shoulder was due to inflammatory arthritis, it would still not be related to his claim because inflammatory arthritis is a systemic condition that is unrelated to and unaffected by any structural injury or specific treatment. Finally, although Dr. Bernton remarked that a Propionibacterium acne infection could be work-related as a complication from the November 12, 2015 surgery, there is no evidence that the deterioration in Claimant's left shoulder is due to an indolent infection.

7. As found, on January 4, 2019 Dr. Mayer performed a left humeral head resurfacing with inlay glenoid procedure on Claimant's left shoulder. The surgery was

designed to address Claimant's underlying severe left shoulder degenerative joint disease. Although the surgical procedure may have been reasonable, the need for surgery was independent of Claimant's work-related left shoulder injury. The bulk of the medical records, in conjunction with the persuasive opinion of Dr. Bernton, demonstrate that Claimant's worsening arthritic condition was unrelated to his August 11, 2014 work-related left labral tear. Because Claimant's worsened, degenerative condition is not causally connected to his industrial injury, he remains at MMI. Accordingly, Claimant's request to reopen his August 11, 2014 Workers' Compensation claim based on a change in condition is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's request to reopen his August 11, 2014 Workers' Compensation claim based on a change in condition and for Respondents to pay for his January 4, 2019 left shoulder surgery is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: July 12, 2019.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-036-773-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

[Redacted],

Claimant,

v.

[Redacted],

Employer,

and

[Redacted]
Self-Insured Respondent.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on April 2, 2019 and June 14, 2019, in Denver, Colorado. The hearing was digitally recorded (reference: 4/2/19, Courtroom 1, beginning at 8:30 AM, and ending at 12:00 PM; 6/14, 2019, Courtroom 1, beginning at 1:30 PM, and ending at 4:156 PM).

The Claimant was present in person and represented by [Redacted], Esq. The Respondents were represented by [Redacted], Esq. and [Redacted], Esq.

Hereinafter [Redacted] shall be referred to as the “Claimant." [Redacted] shall be referred to as the “Employer.” All other parties shall be referred to by name.

Respondent’s Exhibits A through R were admitted into evidence without objection. Exhibits through were admitted into evidence, without objection. Claimant’s Exhibits 3 through 10 were admitted into evidence without objection. Respondent’s objection to Claimant’s Exhibits 1 and 2 was overruled and these Exhibits were admitted into evidence.

At the conclusion of the hearing, the ALJ established a schedule for post hearing briefs. Because the case involves the Respondent’s Challenge to the Division

Independent Medical Examination (DIME) of Khoi Pham, M.D., Respondent's opening brief was filed, electronically, on June 25, 2019. Claimant's answer brief was filed, electronically, on July 2, 2019. Respondent's reply brief was filed, electronically, on July 8, 2019, at which time the matter was deemed submitted for decision. .

ISSUE

The sole issue to be determined by this decision concerns the Respondent's request to overcome the DIME of Dr. Pham on the degree of permanent medical impairment.

The Respondent bears the burden of proof by clear and convincing evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant is a 22 year-old man who was struck in the back by a heavy cart while working for the Employer on September 11, 2016. The Respondent denied the claim. At the hearing on the issue of compensability, ALJ Peter Cannici found that the Claimant had been struck with enough force to cause an injury and ALJ Cannici entered an Order on September 5, 2017 in favor of the Claimant (*Claimant"s Exhibit 1*). The ALJ's Order was affirmed by the Industrial Claim Appeals Office (ICAO) on January 8, 2018 (*Claimant's Exhibit 2*).

Authorized Treating Physician (ATP) Allison fall, M.D.

2. Allison Fall, M.D. became the Claimant's ATP. During her initial evaluation, she diagnosed the Claimant with a lumbosacral strain and lower extremity radiculitis. She referred the Claimant for injection treatment with Dr. Sacha (Respondent's Exhibit D, p. 70).

3. Dr. Fall continued to provide treatment, and a *Samms* conference was held with her on October 30, 2017. In a report generated after the conference, she indicated that she agreed that an additional ESI injection was not appropriate under the Colorado Medical Treatment Guidelines, but reversed her opinion after speaking with the Claimant, and she made more treatment recommendations, including physical therapy. (Respondent's Exhibit D, p. 64).

4. Dr. Fall continued to treat the Claimant and during a return appointment on January 5, 2018, she noted that the Claimant could forward flex with his fingertips to his lower shin, and there were no radicular signs. She referred the Claimant for massage therapy and continued his work restrictions (*Id.,* p. 59). Dr. Fall also noted that the Claimant was working new employment, had returned to school, and was no longer reporting any nerve pain in his legs (*Id.,* p. 58).

5. In Dr. Fall's evaluation of February 2, 2018, she noted that Claimant was able to forward flex with his fingertips to his lower shin, and that there were no radicular signs. She issued a six-month health membership and noted she did not anticipate impairment (*Id.,* p. 55).

6. Dr. Fall examined the Claimant again on March 19, 2018. She noted that he had nearly full flexion, with his fingertips being inches from touching his toes, but that he was stiff with extension. She noted that she had one final recommendation prior to placement at maximum medical improvement (MMI), which was a medial branch block to determine if a pain generator could be identified. She also ordered additional massage therapy (*Id*., p. 52). She recommended that the Claimant should follow up in one month, or in April 2018.

7. The Claimant did not return for treatment for almost three months, until he saw Dr. Fall on June 4, 2018, noting he had been busy and was vacationing in Florida in the interim since his last visit on March 19, 2018. Dr. Fall recorded that the Claimant reported more pain with extension than flexion and he estimated he was 25% improved. Claimant had undergone the medial branch block. Dr. Fall's physical exam recorded that the Claimant could perform a full squat, forward flexion was unrestricted with no increased pain, and there were no radicular signs, including during straight raise testing, with no neurological deficits. Dr. Fall documented that there was **no pain generator identified**, and that she could not find any structural abnormalities. As such, Dr. Fall was of the opinion there was no indication of permanent impairment. She noted there was no Table 53 diagnosis, and range of motion (ROM) was not indicated. Dr. Fall referenced a gym membership for strengthening and refills of Lyrica 75 mg. for six months (*Id.,* p. 50).

8. Dr. Fall reiterated that there were no physiologic findings to support an impairment rating in her response to the Division of Workers' Compensation" (DOWC's) inquiry of June 18, 2018 (*Id.,* p. 48).

9. Dr. Fall placed the Claimant at MMI as of June 4, 2018, with no permanent impairment. Division Independent Medical Examination (DIME), Khoi Pham, M.D., agreed with Dr. Fall's MMI date.

10. The Claimant requesting a DIME and Dr. Pham was selected to perform the examination, and his evaluation occurred on October 30, 2018 (Respondent's Exhibit A).

Division Independent Medical Examination (DIME) of Khoi Pham, M.D.

11. Dr. Pham did not identify any objective, anatomical pain generator. Instead, his only diagnosis was "Chronic low back pain" (Respondent's Exhibit A, p. 5). Further, Dr. Pham noted that the Claimant's physical evaluation was "benign" with normal strength throughout, normal muscle bulk and tone, normal sensory examination in all lumbar dermatomes. Dr. Pham also concluded the imaging study of the Claimant's low back showed only mild degenerative changes. *Id*.

12. Based solely on his diagnosis of chronic low back pain, Dr. Pham assigned the Claimant a 5% whole person impairment under Table 53 of the American Medical Association Guides to the Evaluation of Permanent Impairment, 3rd Ed., Rev. (hereinafter "AMA Guides") (Respondent's Exhibit A). Additionally, Dr. Pham added 7% whole person impairment based on range of motion (ROM) loss for a combined whole person impairment of 12%.(Respondent's Exhibit A).

13. The ALJ finds that Dr. Pham's sole diagnosis, upon which he based his permanent impairment rating, was "chronic pain." He failed to identify any anatomic or physiologic correlation based on objective findings, or pain generator to the Claimant's pain complaints. Even the additional rating for loss of ROM is premised on the diagnosis of chronic pain. Dr. Pham is a Level II accredited, Board Certified Neurologist, but there is no indication that he is well versed in the Colorado Revised Statutes. .§ 8-42-107 (8) (c) provides:

> For purposes of determining levels of medical impairment, the physician shall **not** (emphasis supplied) render a medical impairment rating based on chronic pain **without** (emphasis supplied) anatomic or physiologic correlation. Anatomic correlation must be based on objective findings…..

14. Based on the four corners of Dr. Pham's DIME Report (Claimant's Exhibit 5), the ALJ cannot even reasonably infer that Dr. Pham's diagnosis of chronic pain was based on an objective anatomical or physiological correlation. Dr. Pham's rating was based on the Claimant's complaints of pain—pure and simple. It is, indeed, unfortunate that the Claimant was deprived of a meaningful DIME because Dr. Pham either did not understand the law or did understand it and was only able to diagnose chronic pain without any correlations.

15. In light of the clear wording of § 8-42-107 (8) (c), it is unfortunate that both sides expended considerable time and effort, participating in two sessions of a lengthy hearing (approximately six hours total) and engaging the opinions and sometimes testimony of numerous non-DIME physicians and another expert to either overcome or support Dr. Pham's DIME rating (Dr. Sacha, Dr. Hughes, Dr. Primack, and Jeffrey Palmer Broker, Ph.D, an expert in biomechanics who, according to his self-declaration on the witness stand had more expertise on the human body than medical doctors). A

review of Dr. Pham's DIME Report and § 8-42-107 (8) (c) , C.R.S., is dispositive of the issue of whether the DIME's permanent medical impairment rating is clearly erroneous.

16. The ALJ has carefully perused all of the medical reports and testimony in evidence and the ALJ finds that these opinions are extrinsic and cannot, permissibly, be injected into the four corners of Dr. Pham's report (Dr. Pham did not testify) to determine whether Dr. Pham's rating is clearly erroneous—in light of the clear wording of § 8-42-107 (8) (c).

17. John Sacha, M.D., testified that even if there were no diagnosis a doctor can give an impairment rating based on pain using table 53 of the AMA Guides, provided the patient has had six months of back symptoms and provided the doctor considers the patient to be truthful (*April 2, 2019 Hearing., Tr. p.134*). Despite Dr. Sacha's strong convictions, his opinion cannot overcome, or make an exception to, the clear wording of § 8-42-107 (8) (c). It is up to the General Assembly to change the wording of the statute.

Ultimate Findings

18. The Claimant reached MMI on June 4, 2018.

18. Respondent has filed **no** admissions of liability. The DIME process was initiated based on ALJ Cannici's determination of compensability and ICAO's affirmance of his decision.

20. It is highly probable, unmistakable and free from serious and substantial doubt that Dr. Pham's DIME rating is erroneous because it was not in accord with the clear mandate of § 8-42-107 (8) (c), C.R.S., thus, Dr. Pham's permanent medical impairment rating has been overcome by clear and convincing evidence. It is, therefore, invalid and the permanent medical impairment rating must revert to the opinion of the ATP, Dr. Fall.

21. Under the circumstances, an analysis of the multitude of non-DIME opinions in evidence would be superfluous in light of the fact that there was no visible evidence within the four corners of Dr. Pham's Report that his chronic pain diagnosis was supported by the requirements of § 8-42-107 (8) (c). Extrinsic medical opinions cannot be injected into Dr. Pham's Report to add what Dr. Pham **did not** include therein.

22. Any determinations of credibility, substantial evidence, or factors other than the mandate of § 8-42-107 (8) (c) would be superfluous.

23. Under the circumstances, the only permanent medical impairment rating is that of ATP Dr. Fall, which is zero. There is an interesting question concerning what happens next, however, the ALJ abstains from addressing this question.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Overcoming the DIME of Dr. Pham

a. The party seeking to overcome a DIME physician's opinions bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office***,** 5 P.3d 385 (Colo. App. 2000). *Also see Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475 (Colo. App. 2005). The DIME physician's determination of MMI is binding unless overcome by "clear and convincing evidence." *Metro Moving & Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995); *See also Peregoy v. Indus. Claim Appeals Office,* 87 P.3d 261 (2004); and § 8-42-107(b)-(c), C.R.S. *Also see Whiteside v. Smith,* 67 P.3d 1240 (Colo. 2003). "Clear and convincing evidence" is evidence, which is stronger than preponderance, is unmistakable, makes a fact or facts highly probable or the converse, and is free from serious or substantial doubt. *Metro Moving & Storage Co. v. Gussert, supra; Leming v. Indus. Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). In other words, a DIME physician's finding may not be overcome unless the evidence establishes that it is "highly probable" that the DIME physician's opinion is incorrect. *Postelwait v. Midwest Barricade,* 905 P. 2d 21 (Colo. App. 1995). To overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt". *Adams v. Sealy, Inc.,* W.C. No. 4-476-254 [Indus. Claim Appeals Office (ICAO), Oct. 4, 2001]. Suffice it to say, Dr. Pham's rating opinion was clearly erroneous and not in accord with the mandate of § 8-42-107 (80 (c), C.R.S. Therefore, it was overcome by clear and convincing evidence.

b. In light of the invalidity of the DIME rating of permanent medical impairment, a reversion to the pre-DIME status quo, the rating of ATP Dr. Fall, is warranted. It is an interesting question whether either party can commence the DIME process *de novo*, or whether the permanent medical impairment issue ends here.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Claimant reached maximum medical improvement on June 4, 2018.

B. The permanent medical impairment rating of Division Independent Medical Examiner Khoi Pham, M.D., having been overcome, the only remaining rating is that of

authorized treating physician Allison Fall, M.D., which is zero permanent medical impairment.

C. Any and all issues not determined herein are reserved for future decision.

DATED this 16th day of July 2019.

EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

The issues presented for hearing were compensability; reasonable, necessary and authorized medical providers; and Respondent's contention that the accident or injury claimed was fully compensated in W.C. No. 5-009-471.

PROCEDURAL HISTORY

On August 8, 2018, the ALJ entered her order. On March 15, 2019, ICAO ordered the ALJ's order be set aside and remanded the matter for further proceedings and a new order.

This order clarifies that Claimant's November 9, 2016 injury is compensable; that Claimant's care provided by Dr. McIntyre and those in the chain of his referrals was reasonable, necessary and provided by Claimant's ATPs; and that the November 9, 2016 claim was fully compensated under W.C. No. 5-009-471.

FINDINGS OF FACT

1. On March 3, 2016, Claimant sustained a compensable injury when she struck her head on a counter in the course and scope of employment. Respondent admitted liability and Claimant's case proceeded as W.C. No. 5-009-471. Claimant treated with Dr. Brian McIntyre and several other providers in the chain of his referrals.

2. On November 9, 2016, while still treating for her March 3, 2016 injury, Claimant struck the left side of her head and neck on an x-ray machine at work. She experienced increased symptomology because of the November 9, 2016 event.

3. Claimant reported the November 9, 2016 event and her increased symptoms to Dr. McIntyre. Dr. McIntyre's note from that visit states that Claimant struck the back, left side, of her head on an x-ray machine at work. Dr. McIntyre referred to the event variably as a "re-injury" and an "injury" that caused some regression and worsening in her symptomology.

4. On November 21, 2016, claims representative Kaylee R_____(p/k/a Kaylee S_____) contemporaneously documented a conversation with Claimant. The note indicates that Ms. R_____ and Claimant discussed the November 9, 2017 event and whether Respondent would open a new claim or cover Claimant under claim W.C. No. 5-009-471. Ms. R_____'s note states: *"I advised [Claimant] since it was the same body part, and DMP [designated medical provider, Dr. McIntyre] opined that it was an aggravation, it would continue to be handled under her current claim."* Ms. R_____ testified that the note set forth the essence of the conversation and her impression that she had answered Claimant's questions and informed Claimant that Respondent was going to handle the November 9 event under the original workers' compensation claim,

W.C. No. 5-009-471. Ms. R_____ testified that she did not have any direct conversations with Dr. McIntyre but based her decision upon a review of Dr. McIntyre's reports.

5. At hearing, Claimant contested Ms. R_____'s version of the conversation and insisted that the November 9 event was a new claim. Claimant testified that she also took contemporaneous notes of the discussion. However, Claimant did not introduce into evidence any such notes, nor did she disclose such notes in her responses to discovery. On this topic, the ALJ finds the testimony and documentation provided by Ms. R_____ to be more credible and persuasive than that of Claimant.

6. Dr. McIntyre treated Claimant for both the March 3, 2016 injury and the November 9, 2016 event as part of W.C. No. 5-009-471. Dr. McIntyre's medical reports for the next several months indicate that he was treating Claimant for post-concussive syndrome and strain of the muscle, fascia and tendon at the neck level. His reports also document Claimant's progress and her gradual ability to return to work. Claimant testified at hearing that Dr. McIntyre treated her for both the March injury and November event.

7. Dr. McIntyre testified by June 6, 2018 deposition, that he treated Claimant for over a year. Claimant had a combination of head injury symptoms, including dizziness, difficulty with concentration, fatigue, headache pains, and neck pains. Dr. McIntyre indicated that he was aware of the original March 3, 2016 event, and the subsequent November 9, 2016 event. He testified that the November 9, 2016 head contusion occurred to the same general posterior aspect of Claimant's skull and that both events shared the following four elements:

- The strain of muscle, fascia and tendon at neck level,
- post concussive syndrome;
- concussion without loss of consciousness, and
- Claimant's head striking against other stationary object.

8. Dr. McIntyre testified that the diagnosis for both incidents was the same. He also testified that he did not treat the November 9, 2016 event as a completely new injury. Dr. McIntyre testified that they were **"**continuing the same vein of treatment from her previous injury," and that he hoped Claimant would not need much more treatment for the November 9, 2016 event because **"**it was just a slight increase in symptomology."

9. Claimant's treatment after November 9, 2016 included:

- Dr. McIntyre referred the Claimant to a neurological specialist, Dr. Patricia Soffer.
- Claimant underwent a CT scan to rule out any new abnormalities.
- Dr. Soffer read the scan and determined it to be normal.

- Dr. McIntyre treated the Claimant's subjective complaints until April 4, 2017.

10. Dr. Patricia Soffer's narrative report on January 27, 2017, indicated that Claimant had improved by that time. She had no further headaches, her cognitive difficulties had resolved, as had her neck pain. Dr. Soffer also found that Claimant's neck was supple with full range of motion. Dr. Soffer discharged Claimant from care on January 27, 2017.

11. Claimant returned to Dr. McIntyre's care until she eventually reached maximum medical improvement on April 4, 2017. Dr. McIntyre released Claimant to full regular activity and duty and prescribed maintenance treatment to consist of two visits with a neurologist, Dr. Patricia Soffer, within the following six (6) months and four (4) chiropractic visits within the following three (3) months of her MMI status. Dr. McIntyre testified that he felt that Claimant was at MMI from *both* the March 3, 2016 injury and November 9, 2016 event.

12. Respondents filed a Final Admission of Liability in W.C. No. 5-009-471 noting that Claimant had reached MMI and had no permanent impairment. Respondent also admitted for post-MMI maintenance care with Dr. Soffer and chiropractic care.

13. Claimant did not respond to Respondents' FAL.

14. On January 19, 2018, nine months after receiving the Final Admission of Liability, Claimant filed a new Workers' Claim for Compensation for the November 9, 2016 event. On February 20, 2018 Respondent filed a Notice of Contest, taking the position that the November 9, 2016 event was subsumed within W.C. No. 5-009-471 and that the case was closed.

15. At hearing, Claimant testified that her symptoms worsened because of the November 9, 2016 event and that she did not believe she had received adequate care and treatment.

16. Claimant testified that she did not pursue any follow-up treatment with the neurological specialist, Dr. Soffer, following Dr. McIntyre's recommendation of maintenance medical care. She offered no persuasive evidence that she followed up with any authorized chiropractic care after Dr. McIntyre made those recommendations.

17. Rather, Claimant treated with her private physicians at Kaiser Permanente. She continued to complain of neck pain and headaches in those records.

18. While Dr. McIntyre did not treat the November 9, 2016 event as a completely new injury, he did acknowledge the November 9, 2016 event caused "a slight increase in symptomology" and required medical treatment.

19. Based on the totality of the evidence, the ALJ finds that Claimant suffered a compensable injury on November 9, 2016.

20. Based on the totality of the evidence, the ALJ finds that Respondents provided Claimant all reasonable and necessary medical care for her November 9, 2016 injury as part of her March 3, 2016 claim handled as W.C. No. 5-009-471.

21. Based on the totality of the evidence, the ALJ finds that Claimant did not establish that she is entitled to any additional benefits with respect to her November 9, 2016 injury.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), §8-40-101, C.R.S. 2017, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier of fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. §8-43-201, C.R.S.

In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

Compensability

For a claim to be compensable under the Act, a claimant has the burden of proving that she suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. C.R.S., §8-41-301(1) (c). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for determination by the ALJ. *Id*. at 846.

A compensable injury is an injury that "arises out of" and "in the course of" employment. *See* C.R.S. §8-41-301(1) (b). In deciding whether a Claimant has met his burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to testimony, and draw plausible inferences from the evidence." *See Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002).

The ALJ must examine the totality of the circumstances to determine whether there is a sufficient nexus between the employment and the injury such that the accident may be said to have occurred in the scope of the Claimant's employment. *City and County of Denver School District No. 1 v. Industrial Commission*, 581 P.2d 1162 (1978). In establishing causation, a Claimant "must show that the industrial injury bears a 'direct causal relationship between the precipitating event and the resulting disability.'" *See Garcia v. CF&I Steel*, W.C. No. 4-454-548 (ICAO May 14, 2004).

The ALJ concludes that the November 9, 2016, event constituted a compensable work injury. Claimant was in the course and scope of her work duties when she struck the left side of her head and neck on an x-ray machine at Employer's facility. Further, Claimant experienced increased symptomology from that injury which required medical care. § 8-41-301(1)(c).

Reasonable and necessary Medical Care

Respondents are liable for authorized medical treatment that is reasonably necessary to cure and relieve the effects of the industrial injury. § 8-42-101(1)(a), C.R.S; *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994).

Whether medical treatment is reasonable and necessary is for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002); *Wal-Mart Stores, Inc. v. Industrial Claims Office*, 989 P.2d 251 (Colo. App. 1999). The claimant bears the burden of proof to establish the right to specific medical benefits. *Wal-Mart Stores, Inc. v. Industrial Claims Office, supra*.

The Judge credits Dr. McIntyre's testimony that the diagnosis for both injuries was the same, and that he treated Claimant for both injuries. Dr. Soffer also treated Claimant for both injuries and found that by January 27, 2017, Claimant had no further headaches, her cognitive difficulties had resolved, as had her neck pain and range of motion

limitations. Claimant returned to Dr. McIntyre who placed her at maximum medical improvement for both injuries on April 4, 2017. While Dr. McIntyre prescribed certain maintenance treatment, Claimant chose not to pursue such care.

Respondents filed a Final Admission of Liability in W.C. No. 5-009-471 noting that Claimant had reached MMI and had no permanent impairment. The Judge reasonably infers from context that the FAL encompassed Claimant's November 9, 2016 injury for which she had received treatment and been placed at MMI.

Claimant did not oppose the FAL, request a DIME, or file an application for hearing. Rather, Claimant waited nine months, and only then did she file a new Workers' Claim for Compensation for the November 9, 2016 event.

Based on the totality of the evidence, the Judge finds and concludes that Respondents provided Claimant with reasonable and necessary medical care sufficient for her to reach MMI without any permanent impairment or restrictions.

Thus, although Respondents should have opened a new claim for the November 9, 2016 injury, Insurer provided all reasonable and necessary medical care for that injury under the previously established claim, W.C. No. 5-009-471.

ORDER

IT IS, THEREFORE, ORDERED THAT:

1. Claimant suffered a compensable work injury on November 9, 2016.

2. while she was treating for a March 3, 2016 injury which was the subject of W.C. No. 5-009-471.

3. Claimant received all reasonable and necessary medical treatment and appropriate disability and/or impairment benefits for the November 9, 2016 event as part of W.C. No. 5-009-471. Those benefits are set forth in Respondent's Final Admission of Liability dated April 5, 2017.

4. Claimant's claims for benefits not covered in W.C. No. 5-009-471 are denied and dismissed with prejudice.

5. Any medical care provided by Kaiser Permanente is not authorized medical care for which the Respondent is responsible.

DONE this 17th day of July 2019.

OFFICE OF ADMINISTRATIVE COURTS

/s/ Kimberly Turnbow
Kimberly B. Turnbow,
Administrative Law Judge

STATE OF COLORADO OFFICE OF ADMINISTRATIVE COURTS 1525 Sherman Street, 4th Floor, Denver, CO 80203	
In the Matter of the Workers' Compensation Claim of: **R,** Claimant, vs. **C,** Employer, And A, Insurer, Respondents.	▲ **COURT USE ONLY** ▲ **CASE NUMBER:** **WC 5-063-591-002**

FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

Hearing in the above-captioned matter was held before Administrative Law Judge Margot W. Jones on May 8, 2019, at 1:30 p.m. in Courtroom 3 in Denver, Colorado. Claimant was present in person and represented by_____, Esq. Respondents were represented by _____, Esq. Exhibits 1-10 and A-G were admitted into evidence. A post hearing deposition of Dr. Bryan Andrew Castro was held on June 12, 2019, and received by the Judge on July 15, 2019.

In this order, R shall be referred to as "Claimant." C shall be referred to as "Employer" and A shall be referred to as "Insurer." Employer and Insurer, collectively, will be referred to as "Respondents."

In this order, the Judge may use the following acronyms: C.R.S. refers to Colorado Revised Statutes (2018); the Act refers to the Workers' Compensation Act of Colorado, §§8-40-101, et seq., supra; OAC refers to the Office of Administrative Courts; OACRP refers to the Office of Administrative Courts Rules of Procedure, 1 CCR 104-1; and WCRP refers to Workers' Compensation Rules of Procedure, 7 Code Colo. Reg. 1101-3.

ISSUE

1. Whether Claimant has demonstrated by a preponderance of the evidence that the L5-S1 disc replacement surgery recommended by Brent Y. Kimball, M.D., is reasonable, necessary, and causally related to Claimant's industrial injury?

FINDINGS OF FACT

1. Claimant is a 34-year-old female who was employed by Employer as a Licensed Practical Nurse (LPN) for approximately 2 ½ to 3 years prior to her admitted industrial injury of September 13, 2017. As an LPN, Claimant credibly testified she assists with patient transfers, dispenses medications, and assists physicians with Employer's patients.

2. Claimant credibly testified prior to September 13, 2017, she had no limitations, pain complaints or symptoms in her lower extremity and was in good health and able to perform all aspects of her job.

3. On September 13, 2017, Claimant suffered an admitted industrial injury when in the course and scope of her employment as an LPN she was lifting a patient who had fallen toward her and who had sunk into his mattress when she felt the sudden onset of low back pain, right greater than left.

4. Following Claimant's admitted industrial injury, she commenced treating with the Employer's authorized treating provider (ATP), Robert Broghammer, M.D.

5. On January 15, 2018, after trying physical therapy which did not relieve Claimant's radiating pain into her lower extremity, Claimant underwent microdiscectomy surgery at the L5-S1 level, performed by ATP Christopher Gallus, D.O.

6. On February 28, 2018, following surgery, Claimant had increased low back pain which required an emergency room visit.

7. On May 3, 2018, ATP Gallus released Claimant from his care, however, Claimant continued to complain to ATP Broghammer of pain in the "lumbar area" and Claimant's back was still "very sore."

8. After her release by ATP Gallus, Claimant was referred out by ATP Broghammer to Samuel Y. Chan, M.D., at Mile High Sports and Rehabilitation Medicine to address Claimant's low back pain. ATP Chan performed epidural steroid injections and SI injections.

9. On July 25, 2018, because Claimant's low back was still symptomatic, even after the injections performed by ATP Chan, Claimant was referred by ATP Broghammer to Brian Andrew Castro, M.D., at Cornerstone Orthopedics and Sports Medicine. Dr. Castro opined that because the pain generator has not been fully established, Claimant was not a good surgical candidate, that a second microdiscectomy or decompression would not assist and that a fusion was not indicated in light of her young age.

10. Claimant credibly testified she did not enjoy her interaction with ATP Castro. She believed that he was not responsive to her concerns and she did not like his statement to her that she just had to "live with the pain." She raised her concerns to ATP Broghammer who made a referral out for a second surgical evaluation.

11. On September 7, 2018, Claimant was referred out by ATP Broghammer for a second opinion from Stephen F. Pehler, M.D., at Colorado Orthopedic Consultants. After evaluating Claimant, ATP Pehler wrote to Dr. Broghammer, noting a review of Claimant's medical history, and opined as follows:

> At this point in time, this patient has a complicated postop of course after a microdiscectomy. She has relatively mild neural compressive pathology with fairly debilitating low back pain. We reviewed options as well as further diagnosis. The only diagnostic modality that she has not obtained is a discogram. If the patient does have a positive response to a discogram, she could potentially be a candidate for a lumbar disc arthroplasty. I do not feel this patient would do well with a fusion or any further decompression.

See Claimant's Submission Tab 5, BS 16-17

12. After receiving ATP Pehler's surgical suggestion for a disc replacement, Respondents requested that ATP Castro conduct a records review of Claimant's case. On December 8, 2018, ATP Castro provided Respondents a written report containing his opinion regarding Claimant need for disc replacement surgery.

13. Claimant credibly testified that after meeting with ATP Pehler, her mother treated with a Brent Y. Kimball, M.D., at Carepoint Neurosurgery. Claimant requested that ATP Broghammer refer her out to Dr. Kimball, for a third surgical evaluation, in light of the fact that ATP Castro was of the opinion that no further medical care was warranted and ATP Pehler was of the opinion that if Claimant does have a positive response to a discogram, she could potentially be a candidate for a lumbar disc arthroplasty.

14. On November 19, 2018, Claimant presented to ATP Kimball, whose medical records reflect that the doctor examined and discussed with Claimant the benefits/risks/indications of fusion vs total disc replacement (TDR). Given Claimant's young age, the doctor wanted to avoid fusion. He recommended Claimant get a discogram and based on the results further discuss a L5/S1 TDR.

15. On December 8, 2018, ATP Castro completed the record review previously requested by the Respondents. In that record review, it was ATP Castro's opinion that Claimant suffered a work-related injury on September 13, 2017, that she had undergone an L5-S1 microdiscectomy on January 15, 2018, which provided short-term relief for approximately 4 to 5 weeks, but that her pain had continued. It was Dr. Castro's opinion that "I do not agree with the concept that we have tried everything else so surgery must be the next answer" (*See* Claimant's Submission Tab 10, BS 78) and his studies do not show the superiority of a disc replacement versus a fusion in treatment of low back pain, that surgical intervention would not be

likely to produce benefit or functional gains and that surgery was not causally related to the accident in question. (*See* Claimant's Submission Tab 10, BS 79).

16. On December 12, 2018 Claimant was evaluated by ATP Chan whose report reflects that Dr. Chan performed a physical exam and thoroughly reviewed the conflicting opinions of Dr. Castro and Dr. Pehler regarding disk replacement. Dr. Chan notes that Claimant continued to be seen for psychological evaluation by a Dr. Hawkins. Dr. Chan further discussed Claimant's case with Dr. Broghammer and noted that Claimant would like to have her disk replacement surgery. Dr. Chan questioned the value of electro-diagnostic testing. Dr. Chan's assessment and recommendations were that facet injections could be considered to completely rule out the possibility of a posterior element pain, prior to disk replacement surgery. Dr. Chan opined that one may certainly consider pursuing L4-5 and L5-S1 facet injections, for diagnostic reasons, to be done under fluoroscopic guidance.

17. On December 28, 2018, ATP Kimball eventually decided against the need for Claimant to undergo a discogram and submitted a request for Claimant to undergo an L5-S1 disc replacement. ATP Castro agreed with not doing a discogram at his deposition on June 12, 2019.

18. On January 9, 2019, the L5-S1 disc replacement surgery which was scheduled to occur with ATP Kimball was cancelled by Respondents who notified ATP Kimball that, attaching the IME report from Dr. Castro dated December 8, 2018, Respondents denied the December 28, 2018, surgery request.

19. On January 16, 2019, Claimant had her fifth of twelve visits with Rebecca D. Hawkins, PhD, ABPP, BCP who noted in her report Claimant has undergone an extensive Psychological Pain Evaluation in which Dr. Hawkins assessed Claimant's surgical candidacy from a psychosocial standpoint, and determined that Claimant is actually a good surgical candidate.

20. On February 19, 2019, after surgery had been denied, ATP Chan noted in his report Claimant presents for reevaluation of chronic low back pain. Dr. Chan notes second and third opinions with Dr. Castro and Dr. Pehler, then Dr. Kimball's disk replacement recommendation. A CT scan was repeated, which showed single-level diskogenic disease in L5-S1 level and a broad-based central disk protrusion in the L5-S1 level. On December 17, 2018, Claimant most recently underwent bilateral L4-5 and L5-S1 facet injections, which had no effect. Claimant was supposed to have her disk replacement on January 8, 2019, however, this was not approved by the insurance company.

21. On April 3, 2019 Claimant returned to ATP Chan who noted that she has a hearing scheduled for May 8, 2019, and that Claimant has exhausted all treatment and thus, it was recommended that the patient undergo disk replacement. Dr. Chan notes that Dr. Kimball had opined that perhaps 1-level diskogram may suffice in diagnosing discogenic complaints. Dr. Chan concluded that Claimant's clinical findings and symptoms do correlate with a discogenic-nature complaint.

22. On April 5, 2019, ATP Pehler responded to ATP Castro's December 8, 2018, record review that opined that surgery was not necessary. Dr. Pehler opined that

given the nature of Claimant's complaints and her imaging findings, the doctor recommended an isolated provocative discography at the L5-S1 level to confirm this as the source of her pain. In the event that this is a positive study, Dr. Pehler recommends a lumbar disc replacement at L5-S1.

23. On April 18, 2019 ATP Kimball responded to ATP Castro's December 8, 2018, opinion that surgery was not necessary stating that Claimant appears to be a healthy adult without gross secondary gain issues related to her clinical presentation. Dr. Kimball opined that the lack of changes in Claimant's MRI is not significant because Claimant has progressive discogenic or clinically symptomatic back pain associated with post microdiscectomy and a repeat MRI does not identify discogenic back pain. Dr. Kimball opined that the fact that Dr. Castro cannot identify a pain generator does not negate that her symptoms are primarily caused by discogenic post discectomy related low back pain.

24. Dr. Kimball further opined that Claimant's anxiety and mood changes related to her low back pain and persistent symptoms is not unusual since her symptoms are disruptive to her life. The doctor opined that Claimant's psychological overlay is not a confounding element as it is more likely a typical and common comorbid condition related to the disruption that she has experienced and her persistent pain.

25. Dr. Kimball opined that the indication for surgery is that the patient is having clinically symptomatic discogenic back pain. Dr. Kimball notes that the recommendation for surgery comes only after failed conservative treatment, including SI joint injections, epidural injections, acupuncture, trigger point injections, physical therapy, and chiropractic manipulations, as well as a prolonged amount of time after her discectomy. Dr. Kimball opined that Claimant's condition may be challenging to diagnose and it is even more difficult to treat interventionally discogenic back pain. However, the doctor believes that the fact that attempted treatments are negative is further evidence that Claimant's pain is related to her disc and because Claimant's symptoms only started after her discectomy. Dr. Kimball opined that Claimant's disc is more than likely the isolated generator of her pain.

26. ATP Kimball addressed Dr. Castro's discussion of a possible fusion surgery stating that he, Dr. Kimball, is not recommending fusion surgery at this time. Dr. Kimball further indicated that there have not been superiority trials done with lumbar disc replacement so Dr. Castro's comment regarding disc replacement is incorrect.

CONCLUSIONS OF LAW

General Legal Principles

1. The purpose of the Act is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case must be interpreted neutrally, neither in favor of either the rights of the claimant or nor in favor of the rights of the respondents, and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

2. Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *Robinson v. Youth Track*, 4-649-298 (ICAO May 15, 2007).

3. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Treatment

4. A respondent is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the

ALJ. *See generally Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002).

5. A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004).

6. The Workers' Compensation Rules of Procedure, 7 Code Colo. Reg. 1101-3, Rule 17 establishes *Medical Treatment Guidelines*. These *Medical Treatment Guidelines* are created by the Division of Workers' Compensation using evidence-based medicine, and they address occupational injuries that occur most frequently or incur high costs of treatment. The goal is to establish guidelines for quality care at a reasonable price. The medical treatment guidelines set forth reasonable medical care for high cost or high frequency categories of occupational injury or disease. However, the Division recognizes reasonable medical care may include deviations from the guidelines in individual cases. *Medical Treatment Guidelines*, Rule 17, 19-4(A), Procedure for Questioning Care

7. When determining the issue of whether proposed medical treatment is reasonable and necessary the ALJ may consider the provisions and treatment protocols of the Guidelines because they represent the accepted standards of practice in workers' compensation cases and were adopted pursuant to an express grant of statutory authority. However, evidence of compliance or non-compliance with the treatment criteria of the Medical Treatment Guidelines is not dispositive of the question of whether medical treatment is reasonable and necessary. Rather the ALJ may give evidence regarding compliance with the Medical Treatment Guidelines such weight as he/she determines it is entitled to considering the totality of the evidence. *See Adame v. SSC Berthoud Operating Co., LLC,* WC 4-784-709 (ICAO January 25, 2012); *Thomas v. Four Corners Health Care*, WC 4-484-220 (ICAO April 27, 2009); *Stamey v. C2 Utility Contractors, Inc.*, WC 4-503-974 (ICAO August 21, 2008); Section 8-43-201(3), C.R.S.

8. The ALJ concludes that Claimant proved by a preponderance of the evidence the requested L5-S1 disc replacement surgery is reasonable, necessary and related to the admitted September 13, 2017, injury. While Claimant had a previous microdiscectomy at L5-S1, that surgery only provided temporary relief. Claimant was credible in her testimony that she did not have any symptoms, limitations, or restriction in her lower extremity leading up to the admitted industrial injury. Claimant has been evaluated by no less than three surgeons, two of whom have opined that disc replacement surgery is reasonable, necessary and related. Additionally, ATP Broghammer has noted that both ATPs Kimball and Pehler feel that the surgery proposed is reasonable. Claimant's psychologist has approved her for surgery. Claimant's pain specialist, ATP Chan, has indicated disc replacement surgery would be appropriate for Claimant's symptoms.

9. It is the ALJ's opinion that Claimant's admitted industrial injury of September 13, 2017, and the subsequent microdiscectomy at L5-S1 have not resolved Claimant's pain complaints and that the recommendation for L5-S1 disc replacement surgery is appropriate.

10. The ALJ has considered medical treatment guidelines as they apply to Claimant's case and, based upon the totality of the evidence, concludes it is more likely than not that Claimant's need for the L5-S1 disc replacement surgery is related to her work injury and is reasonable and necessary to cure and relieve Claimant of its effects.

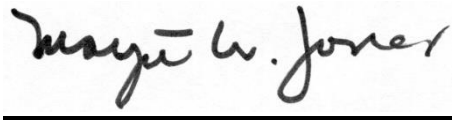
ORDER

1. ATP Kimball's request for L5-S1 disc replacement surgery is reasonable, necessary and related to Claimant's work injury.

2. Respondents shall pay for such surgery pursuant to the fee schedule.

3. Any issues not determined in this decision are reserved for future determination.

DATED: July 17, 2019.



MARGOT W. JONES
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

If you are dissatisfied with the Judge's Order, you may file a Petition to Review the Order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the Order, as indicated on the certificate of mailing or service; otherwise, the Judge's Order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the Order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43- 301(2), C.R.S. (as amended, SB 09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a Petition to Review at ttp://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-092-738

ISSUE

- Whether Claimant proved by a preponderance that she suffered a compensable injury on November 8, 2018.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. This matter arises out of a denied injury that occurred on November 8, 2018 while Employer employed Claimant as a waitress. Claimant suffered a non-displaced fracture of the right fifth metatarsal bone.

2. Claimant testified that she was carrying a tray of sugar caddies, walking very quickly to a meeting right before the restaurant opened, when she felt a pop and pain in her right foot, causing her to fall to the ground hitting her left knee. She was wearing non-slip, hard-soled shoes appropriate for restaurant work. Claimant testified that prior to feeling this pain/pop she did not recall slipping, tripping, or stumbling.

3. If Respondents investigated the claim, Claimant was unaware of such and Respondents asked no questions about her injury.

4. Claimant testified credibly that she had not previously experienced any symptoms in her right foot and had never received any treatment for her foot. Respondents provided no persuasive evidence to the contrary.

5. Immediately after her fall, Claimant did not want to be taken to a doctor, but after resting for 30 minutes she could not walk due to the pain. Claimant was taken to urgent care and was advised after x-rays that she had fractured her right fifth metatarsal. Claimant was placed in a walking boot, prescribed Ibuprofen, and sent home. Claimant was unable to work because of her injury from the day of her injury through November 17, 2018.

6. Claimant next treated with Dr. Ocel who casted her foot and prescribed pain medication. Dr. Ocel restricted Claimant to standing and walking to five minutes, and as a result, Claimant was unable to perform her regular job duties.

7. Claimant returned to work on November 18, 2019 as a hostess earning $13.00 per hour. Employer paid Claimant $8.18 per hour as a waitress, and Claimant credibly testified that she generally earned an average of $100 per shift in tips. However, historically her tips were higher in November and December because people were generous during the holiday season. The week immediately prior to her injury,

Claimants tips averaged $130 per shift. Claimant earned less working as a hostess than as a waitress. Claimant testified that she returned to work full duty as a waitress on December 13, 2019 and earned approximately $130 per shift in tips.

8. The ALJ finds that that Claimant's temporary partial disability benefits disability should be calculated using the following formula:

[(8.18 x hours worked) + $130] – ($13 x hours worked) = Temporary partial disability rate

9. The ALJ finds that that Claimant's temporary total disability benefits disability should be calculated using the following formula:

[(8.18 x hours worked) + $130] = Temporary total disability rate

10. On approximately November 20, 2018, Insurer notified Claimant that they had denied her claim.

11. Claimant returned to Dr. Ocel on November 30, 2018. He removed her cast and placed her back into a walking boot for thirty days. Claimant testified that she paid $75.00 to Dr. Ocel for removing her cast. She also paid $100 for two later visits to Dr. Ocel, and for additional x-rays. Claimant did not have the means to pay for recommended physical therapy.

12. At hearing, Dr. Lawrence Lesnak testified for Respondents as an expert in the fields of Rehabilitation and Occupational Medicine.

13. Dr. Lesnak performed a Respondents sponsored IME on Claimant on Marc1, 2019. He interviewed and examined Claimant and reviewed Claimant's medical records which Respondents provided. Based on Claimant's statement that she did not slip or trip, he opined that Claimant was "merely walking down a hallway" at the time of her injury, and that it was not work related. The ALJ is not persuaded. As the Doctor formed his conclusion based on Claimant's statement, she finds that the doctor's opinion was not based on any medical expertise. Rather, he appears to have construed one part of a neutral statement in a posture favorable to Respondents as they were paying for that opinion.

14. Claimant disagreed with Dr. Lesnak's description that she was merely walking. Claimant's testimony clarified that she was walking very quickly to a meeting while carrying a tray just prior to the restaurant opening for lunch. Claimant has worked as a waitress for more than eighteen years and distinguished her "work walk" from non-work walking. The ALJ finds Claimant's testimony credible and persuasive; more so than that of Dr. Lesnak.

15. The ALJ finds and concludes Claimant has met her burden of proving it more likely that she was in the course and scope of her employment at the time of the injury, and that the injury arose out of that employment.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the ALJ draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), sections 8-40-101, C.R.S. 207, et seq., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the Claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-201 C.R.S. A preponderance of the evidence is that which leads the trier-of-fat, after considering all of the evidence to find that a fact is more probably true than not, *Page v. Clark,*197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of the Respondents. Section 8-43-201, C.R.S.

The primary issue was whether Claimant met her burden of proof with respect to the issue of compensability and showed that the injury arose out of and in the course of her employment with Employer.

An injury is compensable if it "arises out of" and "in the course of" employment. Section 8-31-301 CRS; *Price v. Industrial Claims Appeals Office*, 919 P.2d 207 (Colo. 1996). The parties do not dispute that Claimant was in the course and scope of her employment at the time of the injury. However, Respondents argue Claimant did not establish by a preponderance of the evidence the "arising out of" requirement ,which requires that the injury have its origin in an employee's work-related functions and be sufficiently related thereto so as to be considered part of the employee's service to the employer. *Gutierrez v. Walmart Stores, Inc*, W.C. No. 4-432-838 (November 30, 2000). "The mere fact that a Claimant develops an injury during the course of her employment does not relieve her of the duty to establish that the injury arose out of the employment." *Savage v. First Fleet, Inc.*, W.C No. 4-929-714-01 (August 5, 2014). "Colorado law does not create a presumption that injuries which occur in the course of employment necessarily arise out of employment." *Finn v. Industrial Commission*, 165 Colo. 106, 437 P. 2d 542 (1968).

The Supreme Court addressed this issue in *City of Brighton v. Rodriguez,* 318 P.3d 496 (Colo. 2014). In *City of Brighton*, the court identified three categories of injuries. These are (1) employment risks directly tied to the work itself, (2) personal risks, which are inherently personal, and (3) neutral risks, which are neither employment related nor personal.

While Claimant could not explain why her fifth metatarsal broke, the ALJ credits her testimony that she was not merely walking. Rather, she was walking quickly and purposefully to a pre-opening meeting minutes before the restaurant opened while carrying restaurant equipment. She credibly described this as her work walk, as opposed to merely walking along. The ALJ finds and concludes that the facts of this claim fall within the first category of risks the court identified in *City of Brighton.*

Therefore, the ALJ concludes that Claimant has met her burden of proving it more likely than not that she was in the course and scope of her employment at the time of the injury, and that the injury arose out of that employment.

ORDER

It is therefore ordered that:

1. Claimant has met her burden of proof on the issue of compensability of the claim at issue.

2. As the claim is compensable, Respondents are liable for Claimant's medical and disability benefits.

3. Claimant's medical benefits include, but are not limited to, the $175 she paid directly for medical care.

4. All matters not determined herein are reserved for future determination

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http//www.colorado.gov/dpa/oac/forms-WC.htm.

DATED July 18, 2019

/s/ Kimberly Turnbow
Kimberly Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street; 4th Floor
Denver, CO 80203

ISSUES

I. Has Claimant made a proper showing that she is entitled to a change of her Authorized Treating Physician?

II. Have Respondents shown, by a preponderance of the evidence, that they should be entitled to withdraw their admission for *Grover* medical maintenance benefits?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant was injured at work on July 27, 2017, while pulling on the head of a bed. It suddenly came free and fell, while Claimant attempted to hold onto it. Claimant began to develop pain in the left shoulder. She received extensive conservative care included physical therapy, dry needling, acupuncture, and medications. At Claimant's request, a left shoulder MRI was performed on October 12, 2017, which revealed, under *Impression,* 'traces' and 'mild' abnormalities, "likely due to muscular injury or strain." (Ex. 5, p. 43).

2. A cervical MRI was performed on October 16, 2018, which showed "minimal degenerative changes of the cervical spine". Nothing in this cervical MRI suggested an injury of any sort. (Ex. 5, p. 45).

3. Claimant testified at hearing. The bases in Claimant's testimony for a change of physician were

    - Dr. Thomas Centi's lack of sincerity (in that he did not believe she sustained an injury),

    - The length of medical visits, and his placing her at maximum medical improvement without performing any injections or otherwise resolving her pain.

    Claimant indicated that she would like a physician who would provide care so that she could recover, as she still had pain and discomfort in the form of a ball in her back that would not loosen up.

Medical Treatment

4. On August 4, 2017, Claimant presented to Steven Quackenbush PA with discomfort in the left shoulder blade into neck, tingling, and numbing sensation. Her pain was self-reported at 2/10. Physical examination showed full flexion, extension, and lateral

movement of the cervical neck without focal deficits. "Reproducible pain with palpation of the left paracervical and trapezius muscles". Full range of motion of the upper and lower extremities without pain, swelling, popping, or evidence of joint trauma. (Ex. D).

5. On August 7, 2017, Claimant first presented to Thomas Centi, M.D. She reported feeling 'a little better.' Difficulty with elevation and turning neck. Located in the neck, left shoulder. Pain level was 2/10. Range of motion of the neck was normal. No pain to palpation or motion. Left sided muscle tautness and tenderness. Left shoulder range of motion was normal with no pain to palpation or motion. Dr. Centi recommended continued ice and heat, ibuprofen, and Flexeril. A physical therapy referral was made. (Ex. E).

6. From August 11, 2017 to September 13, 2017 Claimant received 10 sessions of outpatient physical therapy. (Ex. G).

7. On August 21, 2017, Claimant self-reported slight improvement, but she now rated her pain 7/10 for 20% of the time. (Ex. I, p. 62). This is the only date that Claimant marks her pain at any level above "4".

8. On September 29, 2017, Claimant returned to Dr. Centi. She felt that her condition had improved 'significantly'; pain was 2/10. She had completed therapy with great results. Nevertheless, the patient herself "now request[ed] an MRI of the shoulder to know for certain nothing [was] wrong." Dr. Centi agreed, and ordered an MRI (taken 10/12/17, as noted above) of her left shoulder, which was indicative of a muscle strain. (Ex. M, N).

9. On October 19, 2017, Claimant reported significant improvement to Dr. Centi, although her pain remained 2/10. Tolerating regular activity without problems located in the neck, left shoulder. Normal range of motion with no pain to palpation at the neck and left shoulder. Strength was normal. Reflexes were normal. Left shoulder MRI was 'essentially negative'. Dr. Centi recommended that she continue and home exercise program. He placed Claimant at MMI with no impairment or permanent work restrictions. He did diagnose a sprain of ligaments in the cervical spine, 'consistent with a work injury.' (Ex. O).

10. Claimant saw her Primary Care Physician, Steven Olson, M.D., on November 16, 2017, for a yearly physical exam- no complaints were noted. In the review of systems section under "musculoskeletal" it was stated "denies back pain, joint pain, muscle aches" and under neurological "denies numbness, weakness, headaches". On physical examination, the musculoskeletal portion stated "gait normal, no gross deformities". There was no mention of any neck or left shoulder complaints in this visit, which occurred one month after Claimant was found to be at MMI. (Ex. P).

11. Claimant timely requested a DIME. The DIME Examination took place on February 20, 2018, by Dr. John Burris, MD. Claimant reported 3/10 "discomfort" over the back of her left shoulder. Claimant described her pain as aching and tightness with intermittent shooting and burning. The pain averaged between 1 and 3/10. Claimant indicated she

was never pain-free. She denied neck pain, radiation of pain, numbness or weakness of the extremities. (Ex. A).

12. Physical examination of the cervical spine revealed normal to visual inspection – supple and non-tender. Full range of motion in all planes. Negative Spurling's sign bilaterally. Motor strength 5/5 throughout the upper extremities, DTRs symmetrical, normal sensation. (Ex. A).

13. Physical examination of the left upper extremity revealed 'neurovascularly intact throughout'. Normal color, temperature, and muscle tone. Non-tender over the clavicle and AC joint. Non-tender over the lateral edge of the acromion. Mild tenderness in the posterior shoulder girdle along the medial scapular border. Palpation in this area reproduced her pain. No muscle spasm or trigger points present. No scapular winging present. Normal scapulothoracic tracking with motion. Shoulder range of motion: 180° flexion, 55° extension, 170° abduction, 50° adduction, 90° external rotation, and 80° Internal rotation. Negative impingement sign, negative speeds test, and negative drop arm sign. Full strength with resisted abduction. Normal radial, median, and ulnar nerve function distally. (Ex. A).

14. The DIME assessed Claimant with a mild myofascial strain to the left posterior shoulder girdle at work on July 27, 2017. Diagnostic testing was negative and she has completed conservative treatment. Dr. Burris agreed with Dr. Centi's MMI date of October 19, 2017. Claimant displays full range of motion, with no objective findings, and no evidence of residual deficits. No maintenance was indicated, but he did recommend a home exercise program. (Ex. A).

15. On August 15, 2018, Dr. Centi stated that the patient reported that she continued to have the same symptoms as previously during her course of treatment including "tightness and some pain, moving better but hurts with rotating neck, no other arm or leg involvement, here for re-evaluation, still with left-sided neck and upper back pain and tightness, hurts with turning and lifting, no numbness or tingling, had been released from care but is here for more treatment located in the neck, left shoulder, she considers it to be minimal. She describes it as tender, aching". (Ex. Q).

16. A Cervical MRI of 10-16-18 showed "minimal degenerative changes of the cervical spine as described". There were minimal disc bulges at C4-5 and C5-6 [well within the normal range for an asymptomatic adult per Dr. Ridings] as the only findings. There was no spinal canal or neuroforaminal narrowing. (Ex. 5, Ex. W).

17. Between August 28, 2018 and November 15, 2018, Claimant attended over 20 physical therapy appointments. The most recent entry, from November 15, 2018, under "subjective", states that "Pt is not getting relief that lasts." (Ex. S, p. 193).

Claimant's Hearing Testimony

18. At the hearing, Claimant did not recall both Dr. Centi and Dr. Burris recommending that she continue a home exercise program following maximum medical improvement. However, the physical therapy notes indicate that Claimant had not followed this advice. A medical note from August 28, 2018 for Claimant's cervical evaluation indicates that "[t]he patient does not regularly exercise and demonstrates low tone, strength and endurance." (Ex. 4, p. 36). Further, that same note states "the diagnosis is a *relapse of a prior episode in 2016." Id at 36.* (emphasis added).

19. Claimant testified that she did not believe her condition was stable, She wanted a change of physician to improve her condition. She indicated that this request was based upon a disagreement with both Dr. Centi and Dr. Burris about whether or not her condition was stable. Claimant felt she required additional treatment to improve that condition.

20. Claimant indicated that she wanted an 'injection', believing that such a procedure may help make her condition go away forever. However, Claimant earlier admitted that she did not attempt to challenge the DIME opinion of Dr. Burris that she was at MMI.

Dr. Centi's Deposition Testimony

21. The ATP, Dr. Thomas Centi, testified via deposition on Ju7ne 26, 2018. He felt like the MRI of Claimant's shoulder was "basically normal". She had returned to regular duty at work with no complaints. He reiterated that he felt her MMI date of Oct. 19, 2017. He was unaware of any problems communicating with Claimant, and at no time did he feel he was refusing treatment that was needed. He concurred with Dr. Burris' essential findings.

22. Dr. Centi initially felt that Claimant's complaints were purely subjective in nature, but later acknowledged that she had exhibited some tautness in her shoulder, which would then qualify as objective evidence of an injury. He reiterated that range of motion was normal. He acknowledged that Claimant's self-reported pain level varied between visits, but never dropped to zero.

23. Dr. Centi was asked about entries for Claimant's neck, which appeared twice, with differing symptoms, on the same examination date. He had no explanation, save the possibility that data from one visit would be auto-carried over to the next visit. He acknowledged it was a mistake on his part.

Dr. Ridings' Report and Testimony

24. Dr. Eric Ridings, MD, was telephonically deposed on behalf from Respondents on May 13, 2019. Dr. Ridings testified that the only types of injections that could be relevant to this type of case would be either trigger point injections or cervical or thoracic injections. However, based on the Colorado Medical Treatment Guidelines, he opined that

Claimant did not meet any of the criteria for administering such injections. This is, in part, because the mechanism of injury was not consistent for facet injury.

25. Trigger point injections would only be necessary where Claimant was having difficulty participating in physical therapy. Since Claimant participated in numerous physical therapy sessions, there would be no basis for this trigger point treatment. However, Prior to MMI, Claimant also reported great results from physical therapy. *(*Ex. M, p. 86).

26. Dr. Ridings opined, that based on the PCP record and DIME record alone, there was no basis for continued care in this case. Dr. Ridings acknowledged the errors in Dr. Centi's reports and that he would not want to have Dr. Centi as his physician. However, based on the lack of any report of pain or complaints to Claimant's PCP, coupled with a normal examination with the DIME physician, there was no need for additional care. Dr. Ridings explained that rather than treating too little, Dr. Centi in fact over-indulged Claimant's requests for treatment.

27. Dr. Ridings explained that based on the medical records, it appeared that the endpoint of the treatment being prescribed by Dr. Centi was at whatever point the patient told him that she did not require any additional treatment. However, within a reasonable degree of medical probability based on the medical records (specifically the PCP report and the DIME report), none of the maintenance care prescribed Dr. Centi was reasonable and necessary. (Ex. C).

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

B. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

C. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). In this instance, while the ALJ finds Claimant to be sincere in wanting more medical treatment, her sincerely held opinions cannot overcome the weight of the medical evidence.

Change of Physician

D. A claimant may seek a change of physician upon a "proper showing." C.R.S. § 8-43-404(5)(a)(VI); *Carlson v. ICAO*, 950 P.2d 663 (Colo. App. 1997). Because the statute does not contain a specific definition of a proper showing, the ALJ has broad discretionary authority to determine whether the circumstances justify a change of physician. *Loza v. Ken's Welding*, W.C. 4-712-246 (Jan. 7, 2009). Whether a proper showing has been made is a factual determination for the ALJ. C.R.S. § 8-43-308; *see Story v. ICAO*, 910 P.2d 80 (Colo. App. 1995).

E. The claimant may procure a change of physician where she has reasonably developed a mistrust of the treating physician. *See Carson v. Wal-Mart*, W.C. No. 3-964-07 (Apr. 12, 1993). The ALJ may consider whether the employee and physician were unable to communicate such that the physician's treatment failed to prove effective in relieving the employee from the effects of his/her injury. *See Merrill v. Mulberry Inn, Inc.*, W.C. No. 3-949-781 (Nov. 1995). But an ALJ is not compelled to grant a change of physician based upon the claimant's personal dissatisfaction with that physician. *See Story v. ICAO*, 910 P.2d 80, 82 (Colo. App. 1995); *Zolman v. Horizon Home Care, LLC*, W.C. No. 4-636-044 (Nov. 3, 2010).

F. Where an employee has been receiving adequate medical treatment, courts need not allow a change in physician. *Loza v. Ken's Welding*, W.C. No. 4-712-246 (Jan. 7, 2009); *Greenwalt-Beltmain v. Dep't. of Reg. Agencies*, W.C. No. 3-896-932 (ICAO December 5, 1995). And the fact that an ATP stops providing treatment based upon the medical determination that further treatment is not needed is not a sufficient basis alone to warrant a change of physician. Rather, the claimant must seek applicable statutory remedies such as submitting a request for change of

physician or seeking a DIME. *See Bilyeu v. Babcock & Wilcox Inc.*, W.C. No. 4-349-701 (July 24, 2001), *aff'd., Bilyeu v. ICAO*, (Colo. App. No. 01CA1505, April 11, 2002) (not selected for publication).

G. Claimant in this instance has failed to make a sufficient showing. The medical evidence shows that she suffered no work injury to her neck. To the extent that she later complained of problems with her neck, after MMI, the evidence suggests any pain was due to an old injury. Nothing in the cervical MRI suggested an injury; merely mild degenerative conditions in her discs. Despite Dr. Centi's plain errors in documenting Claimant's neck symptoms, Claimant did not injure her neck at work. The ALJ finds Dr. Ridings' reasoning persuasive here; Claimant suffered a mild strain to her shoulder - nothing more - which had largely resolved by the time she reached MMI. If anything, Dr. Centi went too far in ordering diagnostics and treatment. The ALJ also finds Dr. Burris DIME to have been accurately performed, both in his diagnosis and his recommendations.

H. Here, Claimant did seek a DIME. She testified that was dissatisfied with the DIME's determination that her condition was stable. She further testified that the basis for her request for a change of physician was because of her dissatisfaction with this determination, and that she wanted another physician who would provide her with additional treatment to *improve* her condition. However, a claimant is not free simply to request a change of physician to circumvent the determination by both the ATP and the DIME that she has reached MMI with no additional treatment likely to improve her condition. By Claimant's own admission, she is not seeking additional maintenance medical benefits via a change of physician; rather, she is seeking a change of physician to obtain additional treatment to reach MMI and hopefully cure her condition. *See Chism v. Wal-Mart*, W.C. No. 4-809-103-03 (Jan 9, 2017 & July 10, 2017) (discussing the distinction between pre-MMI and post-MMI maintenance medical care).

I. Accordingly, Claimant should not be allowed to circumvent the DIME process via a change of physician where both the ATP and the DIME agree that no additional treatment is likely to improve her condition. Claimant has not made a proper showing that she should be entitled to a change of physician.

Withdrawal of Admission for Post-MMI Medical Maintenance

J. Claimants are entitled to seek maintenance medical benefits post-MMI, *Grover v. Indus. Comm'n*, 759 P.2d 705, 710 (Colo. 1988), but employers retain the right to challenge the "need for continued medical benefits," *Snyder v. ICAO*, 942 P.2d 1337, 1339 (Colo. App. 1997). Employers bear the burden of proof to modify future maintenance medical benefits. § 8-43-201(1), C.R.S. 2018.

K. In *Grover*, the supreme court recognized two different methods to challenge maintenance medical benefits. Employers have the right to "contest any future claims for medical treatment on the basis that such treatment is unrelated to the industrial injury or occupational disease." *Grover*, 759 P.2d at 712. The

respondents are only responsible for medical treatment that are reasonably necessary to cure or relieve the effects of the industrial injury. This also applies to a request for medical treatment after the date of MMI. *Grover*, 759 P.2d 705 (Colo. 1988); *Holly Nursing Care Center v. ICAO*, 992 P.2d 701 (Colo. App. 1999). The question of whether the requested treatment is reasonable and necessary is one of fact for the ALJ.

L Here, Dr. Ridings persuasively outlined several reasons why Claimant did not require continued treatment to maintain MMI:

- The treatment Claimant was seeking should not be characterized as maintenance medical care;
- The mechanism of injury did not support maintenance care; and
- The objective findings by the PCP and the DIME did not support maintenance care.

M. Additionally, the medical records showed that Claimant had not taken the basic step of continuing her home exercise program. Because of her deconditioning, any of her symptoms now were unrelated to the work injury. Dr. Ridings explained that even if Claimant were to have objective findings of some muscle tightness six months after the DIME or more recently, within a reasonable degree of medical probability these symptoms could not be attributed to her work injury. Accordingly, there is no objective basis for continued maintenance medical care related to the work injury. Respondents have met their burden here, by a preponderance of the evidence. Their request to withdraw their admission for *Grover* medical maintenance benefits is granted.

ORDER

It is therefore Ordered that:

1. Claimant's request for a change of Authorized Treating Physician is denied and dismissed.

2. Respondents' request to withdraw their admission for *Grover* medical maintenance benefits is granted.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the

certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-036-773-001

CORRECTED FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Self-Insured Respondent.

No further hearings have been held in the above-captioned matter. On July 17, 2019, Respondent's attorney indicates that Respondent was served with the Full Findings of fact, Conclusions of Law and Order. On July 19, 2019, Respondent's attorney filed a letter, electronically, commenting on clerical errors in the Full Findings. The comments of Respondent's attorney are well taken. The ALJ was away from the office on July 19, 2019, and returned on July 22, 2019, at which time he corrected the decision accordingly.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on April 2, 2019 and June 14, 2019, in Denver, Colorado. The hearing was digitally recorded (reference: 4/2/19, Courtroom 1, beginning at 8:30 AM, and ending at 12:00 PM; 6/14, 2019, Courtroom 1, beginning at 1:30 PM, and ending at 4:156 PM).

Respondent's Exhibits A through R were admitted into evidence without objection. Exhibits through were admitted into evidence, without objection. Claimant's Exhibits 3 through 10 were admitted into evidence without objection. Respondent's objection to Claimant's Exhibits 1 and 2 was overruled and these Exhibits were admitted into evidence.

At the conclusion of the hearing, the ALJ established a schedule for post hearing briefs. Because the case involves the Respondent's Challenge to the Division Independent Medical Examination (DIME) of Khoi Pham, M.D., Respondent's opening brief was filed, electronically, on June 25, 2019. Claimant's answer brief was filed,

electronically, on July 2, 2019. Respondent's reply brief was filed, electronically, on July 8, 2019, at which time the matter was deemed submitted for decision. .

ISSUE

The sole issue to be determined by this decision concerns the Respondent's request to overcome the DIME of Dr. Pham on the degree of permanent medical impairment.

The Respondent bears the burden of proof by clear and convincing evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant is a 22 year-old man who was struck in the back by a heavy cart while working for the Employer on September 11, 2016. The Respondent denied the claim. At the hearing on the issue of compensability, ALJ Peter Cannici found that the Claimant had been struck with enough force to cause an injury and ALJ Cannici entered an Order on September 5, 2017 in favor of the Claimant (*Claimant"s Exhibit 1*). The ALJ's Order was affirmed by the Industrial Claim Appeals Office (ICAO) on January 8, 2018 (*Claimant's Exhibit 2*).

2. After ICAO affirmed the decision of ALJ Cannici on January 8, 2018, Respondent filed a General Admission of Liability (GAL) on January 28, 2018. The GAL was not included in either party's proffered exhibits, either at the first session of the hearing bon April 2, 2019, or sat the last session of the hearing on June 14, 2019. Neither party brought the GAL to the ALJ's attention at either session of the hearing. Also, in Respondent's letter, Respondent admitted that it was erroneously noted that Claimant requested the Division Independent Medical Examination (DIME) when, in fact, Respondent requested it and subsequently challenged it.

Authorized Treating Physician (ATP) Allison fall, M.D.

3 Allison Fall, M.D. became the Claimant's ATP. During her initial evaluation, she diagnosed the Claimant with a lumbosacral strain and lower extremity radiculitis. She referred the Claimant for injection treatment with Dr. Sacha (Respondent's Exhibit D, p. 70).

4. Dr. Fall continued to provide treatment, and a *Samms* conference was held with her on October 30, 2017. In a report generated after the conference, she indicated that she agreed that an additional ESI injection was not appropriate under the

Colorado Medical Treatment Guidelines, but reversed her opinion after speaking with the Claimant, and she made more treatment recommendations, including physical therapy. (Respondent's Exhibit D, p. 64).

5. Dr. Fall continued to treat the Claimant and during a return appointment on January 5, 2018, she noted that the Claimant could forward flex with his fingertips to his lower shin, and there were no radicular signs. She referred the Claimant for massage therapy and continued his work restrictions (*Id.,* p. 59). Dr. Fall also noted that the Claimant was working new employment, had returned to school, and was no longer reporting any nerve pain in his legs (*Id.,* p. 58).

6. In Dr. Fall's evaluation of February 2, 2018, she noted that Claimant was able to forward flex with his fingertips to his lower shin, and that there were no radicular signs. She issued a six-month health membership and noted she did not anticipate impairment (*Id.,* p. 55).

7. Dr. Fall examined the Claimant again on March 19, 2018. She noted that he had nearly full flexion, with his fingertips being inches from touching his toes, but that he was stiff with extension. She noted that she had one final recommendation prior to placement at maximum medical improvement (MMI), which was a medial branch block to determine if a pain generator could be identified. She also ordered additional massage therapy (*Id*., p. 52). She recommended that the Claimant should follow up in one month, or in April 2018.

8. The Claimant did not return for treatment for almost three months, until he saw Dr. Fall on June 4, 2018, noting he had been busy and was vacationing in Florida in the interim since his last visit on March 19, 2018. Dr. Fall recorded that the Claimant reported more pain with extension than flexion and he estimated he was 25% improved. Claimant had undergone the medial branch block. Dr. Fall's physical exam recorded that the Claimant could perform a full squat, forward flexion was unrestricted with no increased pain, and there were no radicular signs, including during straight raise testing, with no neurological deficits. Dr. Fall documented that there was **no pain generator identified**, and that she could not find any structural abnormalities. As such, Dr. Fall was of the opinion there was no indication of permanent impairment. She noted there was no Table 53 diagnosis, and range of motion (ROM) was not indicated. Dr. Fall referenced a gym membership for strengthening and refills of Lyrica 75 mg. for six months (*Id.,* p. 50).

9. Dr. Fall reiterated that there were no physiologic findings to support an impairment rating in her response to the Division of Workers' Compensation" (DOWC's) inquiry of June 18, 2018 (*Id.,* p. 48).

10. Dr. Fall placed the Claimant at MMI as of June 4, 2018, with no permanent impairment. Division Independent Medical Examination (DIME), Khoi Pham, M.D., agreed with Dr. Fall's MMI date.

11. The **Respondent** requesting a DIME and Dr. Pham was selected to perform the examination, and his evaluation occurred on October 30, 2018 (Respondent's Exhibit A).

Division Independent Medical Examination (DIME) of Khoi Pham, M.D.

12. Dr. Pham did not identify any objective, anatomical pain generator. Instead, his only diagnosis was "Chronic low back pain" (Respondent's Exhibit A, p. 5). Further, Dr. Pham noted that the Claimant's physical evaluation was "benign" with normal strength throughout, normal muscle bulk and tone, normal sensory examination in all lumbar dermatomes. Dr. Pham also concluded the imaging study of the Claimant's low back showed only mild degenerative changes. *Id*.

13. Based solely on his diagnosis of chronic low back pain, Dr. Pham assigned the Claimant a 5% whole person impairment under Table 53 of the American Medical Association Guides to the Evaluation of Permanent Impairment, 3rd Ed., Rev. (hereinafter "AMA Guides") (Respondent's Exhibit A). Additionally, Dr. Pham added 7% whole person impairment based on range of motion (ROM) loss for a combined whole person impairment of 12%.(Respondent's Exhibit A).

14. The ALJ finds that Dr. Pham's sole diagnosis, upon which he based his permanent impairment rating, was "chronic pain." He failed to identify any anatomic or physiologic correlation based on objective findings, or pain generator to the Claimant's pain complaints. Even the additional rating for loss of ROM is premised on the diagnosis of chronic pain. Dr. Pham is a Level II accredited, Board Certified Neurologist, but there is no indication that he is well versed in the Colorado Revised Statutes. .§ 8-42-107 (8) (c) provides:

> For purposes of determining levels of medical impairment, the physician shall **not** (emphasis supplied) render a medical impairment rating based on chronic pain **without** (emphasis supplied) anatomic or physiologic correlation. Anatomic correlation must be based on objective findings…..

15. Based on the four corners of Dr. Pham's DIME Report (Claimant's Exhibit 5), the ALJ cannot even reasonably infer that Dr. Pham's diagnosis of chronic pain was based on an objective anatomical or physiological correlation. Dr. Pham's rating was based on the Claimant's complaints of pain—pure and simple. It is, indeed, unfortunate that the Claimant was deprived of a meaningful DIME because Dr. Pham either did not understand the law or did understand it and was only able to diagnose chronic pain without any correlations.

16. In light of the clear wording of § 8-42-107 (8) (c), it is unfortunate that both sides expended considerable time and effort, participating in two sessions of a lengthy hearing (approximately six hours total) and engaging the opinions and sometimes testimony of numerous non-DIME physicians and another expert to either overcome or

support Dr. Pham's DIME rating (Dr. Sacha, Dr. Hughes, Dr. Primack, and Jeffrey Palmer Broker, Ph.D, an expert in biomechanics who, according to his self-declaration on the witness stand had more expertise on the human body than medical doctors). A review of Dr. Pham's DIME Report and § 8-42-107 (8) (c) , C.R.S., is dispositive of the issue of whether the DIME's permanent medical impairment rating is clearly erroneous.

17. The ALJ has carefully perused all of the medical reports and testimony in evidence and the ALJ finds that these opinions are extrinsic and cannot, permissibly, be injected into the four corners of Dr. Pham's report (Dr. Pham did not testify) to determine whether Dr. Pham's rating is clearly erroneous—in light of the clear wording of § 8-42-107 (8) (c).

18. John Sacha, M.D., testified that even if there were no diagnosis a doctor can give an impairment rating based on pain using table 53 of the AMA Guides, provided the patient has had six months of back symptoms and provided the doctor considers the patient to be truthful (*April 2, 2019 Hearing., Tr. p.134*). Despite Dr. Sacha's strong convictions, his opinion cannot overcome, or make an exception to, the clear wording of § 8-42-107 (8) (c). It is up to the General Assembly to change the wording of the statute.

Ultimate Findings

19. The Claimant reached MMI on June 4, 2018.

20. Respondent has filed **no** admissions of liability. The DIME process was initiated based on ALJ Cannici's determination of compensability and ICAO's affirmance of his decision.

21. It is highly probable, unmistakable and free from serious and substantial doubt that Dr. Pham's DIME rating is erroneous because it was not in accord with the clear mandate of § 8-42-107 (8) (c), C.R.S., thus, Dr. Pham's permanent medical impairment rating has been overcome by clear and convincing evidence. It is, therefore, invalid and the permanent medical impairment rating must revert to the opinion of the ATP, Dr. Fall.

22. Under the circumstances, an analysis of the multitude of non-DIME opinions in evidence would be superfluous in light of the fact that there was no visible evidence within the four corners of Dr. Pham's Report that his chronic pain diagnosis was supported by the requirements of § 8-42-107 (8) (c). Extrinsic medical opinions cannot be injected into Dr. Pham's Report to add what Dr. Pham **did not** include therein.

23. Any determinations of credibility, substantial evidence, or factors other than the mandate of § 8-42-107 (8) (c) would be superfluous.

24. Under the circumstances, the only permanent medical impairment rating is that of ATP Dr. Fall, which is zero. There is an interesting question concerning what happens next, however, the ALJ abstains from addressing this question.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Overcoming the DIME of Dr. Pham

a. The party seeking to overcome a DIME physician's opinions bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office***,** 5 P.3d 385 (Colo. App. 2000). *Also see Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475 (Colo. App. 2005). The DIME physician's determination of MMI is binding unless overcome by "clear and convincing evidence." *Metro Moving & Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995); *See also Peregoy v. Indus. Claim Appeals Office,* 87 P.3d 261 (2004); and § 8-42-107(b)-(c), C.R.S. *Also see Whiteside v. Smith,* 67 P.3d 1240 (Colo. 2003). "Clear and convincing evidence" is evidence, which is stronger than preponderance, is unmistakable, makes a fact or facts highly probable or the converse, and is free from serious or substantial doubt. *Metro Moving & Storage Co. v. Gussert, supra; Leming v. Indus. Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). In other words, a DIME physician's finding may not be overcome unless the evidence establishes that it is "highly probable" that the DIME physician's opinion is incorrect. *Postelwait v. Midwest Barricade,* 905 P. 2d 21 (Colo. App. 1995). To overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt". *Adams v. Sealy, Inc.,* W.C. No. 4-476-254 [Indus. Claim Appeals Office (ICAO), Oct. 4, 2001]. Suffice it to say, Dr. Pham's rating opinion was clearly erroneous and not in accord with the mandate of § 8-42-107 (80 (c), C.R.S. Therefore, it was overcome by clear and convincing evidence.

b. In light of the invalidity of the DIME rating of permanent medical impairment, a reversion to the pre-DIME status quo, the rating of ATP Dr. Fall, is warranted. It is an interesting question whether either party can commence the DIME process *de novo*, or whether the permanent medical impairment issue ends here.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Claimant reached maximum medical improvement on June 4, 2018.

B. The permanent medical impairment rating of Division Independent Medical Examiner Khoi Pham, M.D., having been overcome, the only remaining rating is that of authorized treating physician Allison Fall, M.D., which is zero permanent medical impairment.

C. Any and all issues not determined herein are reserved for future decision.

DATED this 22nd day of July 2019.

ISSUES

- Is Claimant entitled to a general award of medical benefits after MMI?
- If so, did Claimant make a proper showing for a change of physician to Southern Colorado Clinic?
- Disfigurement.

FINDINGS OF FACT

1. Claimant worked for Employer since 2004 as a firefighter and paramedic. He suffered an admitted low back injury on August 11, 2016 while carrying a patient down a flight of stairs. He felt a painful pop in his low back and immediate burning pain in his right leg.

2. Claimant had no significant back problems before the work accident. He experienced "soreness" in his low back occasionally because of the physically demanding nature of his work, but required no treatment and had no work limitations. Claimant credibly testified his low back "felt fine" before the accident.

3. Employer referred Claimant to its occupational medicine clinic for authorized treatment, and his care has primarily been managed by PA-C Paula Homberger. He was initially diagnosed with a lumbar "sprain" and radiculopathy. He was put on work restrictions and referred to physical therapy.

4. A September 9, 2016 lumbar MRI showed multilevel disc and facet degenerative changes, most prominent at L4-5 and L5-S1.

5. Claimant started treating with Dr. Dwight Leggett on October 6, 2016. He received multiple injections from Dr. Leggett and Dr. Scheper in 2016 and 2017. Some injections provided temporary relief, but some made him worse. He underwent multilevel medial branch blocks (MBBs) in April 2017 that were not helpful.

6. On August 18, 2017, Ms. Homberger opined Claimant was "likely approaching" MMI.

7. Claimant returned to Ms. Homberger on September 15, 2017, with worsening symptoms. He stated, "there was no specific event or injury that led to the increase in pain." Ms. Homberger ordered a repeat lumbar MRI and an EMG.

8. The MRI showed foraminal L5 nerve root compression, "worse when compared to the exam dated September 9, 2016." The remaining findings were largely unchanged.

9. Dr. Michael Sparr performed an EMG on October 3, 2017, which showed "acute to subacute, mild to moderate right L5 radiculopathy."

10. Claimant had a surgical consultation with Dr. Michael Rauzzino on November 6, 2017. Dr. Rauzzino documented neurological deficits, including the right foot drop. Claimant did not want more injections and preferred "more definitive" treatment." Dr. Rauzzino recommended an L5-S1 microdiscectomy and foraminotomies.

11. Claimant underwent surgery on December 13, 2017. Dr. Rauzzino discovered a large disc herniation at L5-S1 with a large disc fragment, which necessitated a discectomy in additional to the planned foraminotomies.

12. The surgery was initially very helpful in relieving Claimant's radicular leg symptoms. It also helped his back pain to a lesser extent.

13. Claimant developed new pain down the back of his thighs approximately one month after surgery. A lumbar MRI on February 22, 2018 showed no significant new findings. The radiologist appreciated increased signal intensity in the right L5 nerve root "consistent with radiculitis."

14. On April 10, 2018, Claimant followed up with Dr. Rauzzino and his PA-C, Stephen Ladd, to review the MRI. The report from that visit states,

> Regarding the MRI, there are no new findings that warrant any additional surgery, at least any small decompression. He certainly has multilevel degenerative disk disease, which has led to some foraminal stenosis because of the disc space collapse and enlarged facet joints. At some point in his life, he may be looking at a larger operation such as a multilevel fusion. Hopefully, at this time, the leg pain is just a flare-up of some acute inflammation and swelling after the surgery [illegible] scarring and radiculitis. We hope that this will settle down in time . . . . We would like to follow up with him in a few months to see how the nerve is settling down. He also may be a good candidate for another injection at that level to see if that would help with his symptoms.

15. Claimant's last appointment with Mr. Ladd was July 3, 2018. He had some residual numbness and tingling in his leg, but minimal pain. His biggest complaint was low back pain. Mr. Ladd opined, "I do think that he is nearing MMI and likely has need for maintenance therapy." Claimant was released from a surgical standpoint, to follow up "as-needed."

16. Claimant saw Dr. Nicholas Kurz at Employer's occupational health clinic on September 4, 2018. Dr. Kurz determined Claimant was at MMI with a 19% whole person impairment. Dr. Kurz opined Claimant "does not require any medical maintenance and is not taking any ongoing medications related to this claim." He also stated, "patient agrees to follow-up with his PCP privately for his chronic, pre-existing, degenerative condition, unrelated to this DOI." This appointment appears to be the only time Claimant saw Dr. Kurz.

17. Claimant had a DIME with Dr. John Tyler on January 16, 2019. Claimant described ongoing low back pain and periodic burning pain in his right leg. Physical activity generally aggravated his symptoms. Dr. Tyler diagnosed mild residual right L5 sensory radiculopathy. He agreed Claimant was at MMI and assigned a 24% whole person impairment. Dr. Tyler recommended Claimant see a pain management specialist for mediations to control his symptoms. He also recommended intermittent massage therapy for flare-ups. He opined ongoing treatment was related to the work accident because "this patient did not have any pre-existing lumbar spinal pain until the date of injury."

18. Claimant saw Dr. Lynn Parry for an IME at his counsel's request on May 6, 2019. Dr. Parry noted Claimant had been "medically retired" from his career as a firefighter because he could not safely perform the essential functions of the job. Claimant reported ongoing back pain with pain and numbness in his right leg. He was using OTC NSAIDs for pain relief. Dr. Parry recommended post-MMI treatment including medications, intermittent physical therapy and massage therapy for flare-ups, and a gym membership.

19. Dr. Brian Reiss performed an IME at Respondent's request on May 27, 2019. Dr. Reiss opined, "The need for medical maintenance benefits is related to the underlying work injury, it is not unreasonable and should be considered necessary."

20. After receiving Dr. Reiss' report, Respondent's counsel asked Dr. Kurz to reconsider Claimant's need for post-MMI care. Dr. Kurz opined Claimant required no further care in connection with the work-related injury. Specifically, Dr. Kurz opined, "This patient has multilevel pre-existing degenerative changes that are unrelated to this claim. This should be followed by his PCP primarily, as they are chronic and pre-existing."

21. Claimant testified at hearing regarding his ongoing symptoms related to the work accident. His testimony was consistent with the reports from multiple examining physicians, including Dr. Tyler, Dr. Parry, and Dr. Reiss. Claimant has been attending massage therapy once per month at his own expense to manage his pain. He regularly uses a hot tub and performs stretching exercises, which temporarily decrease his back pain. Ms. Homberger previously prescribed valium for flares, which Claimant found helpful.

22. Claimant testified he does not want to see Dr. Kurz for further treatment. Claimant believes Dr. Kurz' reports are inaccurate and potentially dishonest. Claimant has no confidence in Dr. Kurz. Claimant wants to change to Southern Colorado Clinic in Pueblo. He has done internet research on Southern Colorado Clinic and believes it is a quality facility. It is also much closer to his home in Canon City.

23. Claimant's testimony was credible and persuasive.

24. The opinions of Dr. Tyler, Dr. Parry, Dr. Reiss, and Mr. Ladd regarding Claimant's probable need for post-MMI treatment are credible and persuasive.

25. Dr. Kurz' opinions regarding post-MMI are not credible or persuasive.

26. Claimant proved he is entitled to a general award of medical benefits after MMI.

27. Claimant made a proper showing for a change of physician to Southern Colorado Clinic.

28. Claimant has a 3-inch long by 1/8 to ¼ inch wide, indented, discolored surgical scar on the lumbar spine. The ALJ finds Claimant should be awarded $1,200 for disfigurement.

CONCLUSIONS OF LAW

A. General award of post-MMI treatment

The respondents are liable for medical treatment after MMI reasonably necessary to relieve the effects of the injury or prevent deterioration of the claimant's condition. Section 8-42-101; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). If the claimant establishes the probability of a need for future treatment, he is entitled to a general award of medical benefits after MMI, subject to the respondents' right to dispute compensability or reasonable necessity of any particular treatment. *Hanna v. Print Expediters, Inc.*, 77 P.3d 863 (Colo. App. 2003). A claimant need not be receiving treatment at the time of MMI or prove that a particular course of treatment has been prescribed to obtain a general award of *Grover* medical benefits. *Miller v. Saint Thomas Moore Hospital*, W.C. No. 4-218-075 (September 1, 2000). Proof of a current or future need for "any" form of treatment will suffice for an award of post-MMI benefits. *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995). The DIME's opinion regarding medical treatment after MMI is not entitled to any special weight but is simply another medical opinion for the ALJ to consider when evaluating the preponderance of the evidence. *See Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Story v. Industrial Claim Appeals Office*, 910 P.2d 80 (Colo. App. 1995).

The existence of a pre-existing condition does not preclude a claim for medical benefits if an industrial injury aggravated, accelerated, or combined with the pre-existing condition to produce the need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). The ultimate question is whether the need for treatment was the proximate result of an industrial aggravation or is merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

As found, Claimant proved entitlement to a general award of medical benefits after MMI. Claimant remains symptomatic despite back surgery. The pre-existing degenerative changes in his spine were asymptomatic and non-disabling before the work accident. The persuasive evidence shows the work accident substantially aggravated Claimant's pre-existing condition and proximately caused the need for ongoing treatment. The opinions of Dr. Tyler, Dr. Parry, Mr. Ladd, and Dr. Reiss regarding the need for post-MMI care are credible and persuasive. Dr. Kurz' opinions are neither credible nor persuasive.

B. Change of physician

A claimant can request a change of physician "upon the proper showing to the division." Section 8-43-404(5)(a)(VI)(A); *Gianetto Oil Co. v. Industrial Claim Appeals Office*, 931 P.2d 570 (Colo. App. 1996). Section 8-43-404(5)(a)(VI)(A) does not define a "proper showing," and the ALJ has broad discretion to decide if the circumstances justify a change of physician. *Jones v. T.T.C. Illinois, Inc*., W.C. No. 4-503-150 (May 5, 2006). The ALJ should exercise this discretion with an eye toward ensuring the claimant receives reasonably necessary treatment while protecting the respondents' legitimate interest in being apprised of treatment for which they may ultimately be held liable. *Yeck v. Industrial Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999); *Landeros v. CF & I Steel*, W.C. No. 4-395-315 (October 26, 2000). The ALJ may consider a variety of factors including whether the claimant has received adequate treatment, whether the claimant trusts the ATP, the level of communication between the claimant and the ATP, the ATP's expertise and skill at managing a condition, and the ATP's willingness to provide additional treatment. *E.g*., *Carson v. Wal-Mart*, W.C. No. 3-964-07 (April 12, 1993); *Merrill v. Mulberry Inn, Inc*., W.C. No. 3-949-781 (November 1995); *Greenwalt-Beltmain v. Department of Regulatory Agencies*, W.C. No. 3-896-932 (December 5, 1995); *Zimmerman v. United Parcel Service*, W.C. No. 4-018-264 (August 23, 1995). An ALJ is not obliged to approve a change of physician because of a claimant's personal reasons, including mere dissatisfaction with the ATP. *McCormick v. Exempla Healthcare*, W.C. No. 4-594-683 (November 27, 2007). On the other hand, the ALJ is not precluded from considering the claimant's subjective perception of his relationship with the physician. *Gutierrez v. Denver Public Schools*, W.C. No. 4-688-075 (December 18, 2008).

As found, Claimant made a proper showing for a change of physician to Southern Colorado Clinic. Dr. Kurz is unwilling to treat Claimant, and an award of post-MMI treatment is meaningless without an authorized provider to oversee it. Claimant justifiably lacks confidence in Dr. Kurz given multiple inaccuracies in his report. Southern Colorado Clinic is an established occupational medicine provider that serves as the designated provider for many employers in the Pueblo. Southern Colorado Clinic is closer to Claimant's home, which is more convenient and will reduce Claimant's reimbursable mileage expense.

C. Disfigurement

Section 8-42-108(1) provides that a claimant is entitled to additional compensation if he is "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view." As found, Claimant has a 3-inch long by 1/8 to ¼ inch wide, indented, discolored surgical scar on the lumbar spine. The ALJ concludes that Claimant should be awarded $1,200 for this disfigurement.

[ORDER CONTINUES NEXT PAGE]

ORDER

It is therefore ordered that:

1. Respondent shall cover reasonably necessary medical treatment after MMI from authorized providers to relieve the effects of Claimant's injury or prevent deterioration of his condition.

2. Claimant's request for a change of physician to Southern Colorado Clinic is granted. Respondent shall cover reasonably necessary post-MMI treatment provided by and under the direction of Southern Colorado Clinic.

3. Respondent shall pay Claimant $1,200 for disfigurement.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUE

Whether Respondents have produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of James Regan, M.D. that Claimant has not reached Maximum Medical Improvement (MMI) as a result of her January 25, 2017 admitted right hip injury.

FINDINGS OF FACT

1. Claimant worked for Employer as a Certified Surgical Processor Technician. On January 25, 2017 she suffered an admitted right hip injury during the course and scope of her employment. Claimant specifically fell to the ground while pushing a cart of supplies.

2. As a result of the January 25, 2017 accident Claimant suffered a displaced right femoral neck fracture. On January 26, 2017 Phillip Stahel, M.D. performed a closed reduction with percutaneous pin fixation to repair Claimant's right hip.

3. By March 10, 2017 Dr. Stahel noted that Claimant had been doing very well and experiencing minimal residual pain. X-rays demonstrated no further change in alignment compared to images taken on February 9, 2017. On April 28, 2017 Dr. Stahel documented minimal pain and x-rays revealed progressive fracture healing "in excellent near anatomic position."

4. On July 7, 2017 Claimant told Dr. Stahel that she had been doing very well and resumed full weight bearing on the right leg. Dr. Stahel commented that she was still limping and had pain over the lateral IT band but no groin pain. He noted some tenderness on palpation over the screw heads in the lateral hip. He diagnosed healed right femoral neck fracture six months after screw fixation with hardware-related pain. Dr. Stahel remarked that Claimant "agreed with my recommendation to proceed with an early removal of the screws and washer to mitigate her hardware-associated symptoms related to the backed-up screws and associated IT band syndrome." He scheduled Claimant for screw removal on July 24, 2017.

5. On July 24, 2017 Claimant told Authorized Treating Physician (ATP) Alisa Koval, M.D. that she was experiencing discomfort, but not pain, in her right hip. Claimant advised Dr. Stahel that the pins would be removed on August 3, 2017.

6. The pin removal procedure did not occur on July 24, 2017 or August 3, 2017 because Claimant decided not to pursue the surgery. By August 8, 2017 Claimant noted that she had reached a plateau in her condition.

7. On September 27, 2017 Claimant returned to Dr. Koval. She remarked that Dr. Stahel had again attributed her ongoing pain to the hip joint pins rubbing against

the IT band. Dr. Stahel recommended removal of the pins. Dr. Koval noted that, because "Dr. Stahel has changed institutions to North Suburban, we will re-establish her referral to him there for continuity of care."

8. On October 3, 2017 Claimant presented to a physical therapy session with 1/10 pain and remarked that she felt her pins, "but that is normal." .Claimant underwent her final physical therapy session at SelectPT on October 26, 2017 and again reported 1/10 pain.

9. On March 18, 2018 Claimant underwent an independent medical examination with Lawrence Lesnak, D.O. After reviewing Claimant's medical records and performing a physical examination Dr. Lesnak concluded that Claimant had reached a point of functional stability by October 26, 2017 and attained Maximum Medical Improvement (MMI). Claimant required no further formal physical therapy pertaining to the initial injury and was not taking any medications. Screw removal would constitute post-MMI medical maintenance treatment and not affect Claimant's MMI status. Dr. Lesnak assigned a 5% right lower extremity impairment rating based on range of motion deficits.

10. On April 23, 2018 Claimant returned to Dr. Koval for an examination. Dr. Koval remarked that the main impediment to "the normalization of her gait is the presence of the pins in her R hip from her ORIF. The pain she describes dull & achy with occasional sharpness, in the region where the pins make contact with her IT band. Ultimately, the solution for this is to have the pins removed." Dr. Koval commented that removal of the pins was a "priority," and if Dr. Stahel was unavailable, "we need to find an alternative solution."

11. On June 6, 2018 Claimant visited Lucas Schnell, MD at the Center for Spine and Orthopedics. Dr. Schnell remarked that x-rays demonstrated complete healing of the fracture. Claimant's surgical hardware was painful, but she was taking a trip to California over the next month and would "not proceed with the surgery for a minimum of six weeks."

12. Claimant did not subsequently schedule a follow-up with Dr. Schell after she returned from California. She testified that she did not want Dr. Schnell to perform the pin removal surgery.

13. On July 31, 2018 Respondents sent Claimant a demand appointment notice for pin removal scheduled for August 20, 2018. Claimant did not attend the pin removal procedure at Dr. Schell's office. Although there was initially a dispute about the reason for the cancellation, the parties agreed that Claimant advised Dr. Schnell's office that she would not return to that facility for removal of the surgical pins because she was waiting for Dr. Stahel to receive his credentials at North Suburban Medical Center so he could perform the procedure.

14. On August 2, 2018 Dr. Koval determined that Claimant had reached MMI. Dr. Koval noted that hardware removal was scheduled to occur in August 2017 but

Claimant "had some doubts about proceeding" and the procedure did not occur. She remarked that Claimant had consulted with Dr. Schnell at North Suburban but decided to pursue the procedure at Swedish. Dr. Koval stated that, because Claimant "has chosen to pursue R hip hardware removal at a different institution than originally planned, and the timeline of that procedure is unknown at this time, I believe it is reasonable to place her at MMI and have the hardware removed under maintenance care." She noted that Claimant had plateaued in her recovery. Dr. Koval assigned Claimant a 35% scheduled rating that converted to a 14% whole person impairment. The rating consisted of 20% for a right hip replacement arthroplasty pursuant to Table 45 of the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised) (AMA Guides*) and a 19% right lower extremity rating for range of motion limitations. Dr. Koval also released Claimant to full duty employment.

15. On October 21, 2018 Claimant underwent a Division Independent Medical Examination (DIME) with James Regan, MD. Dr. Regan noted that Claimant had "considerable pain and MMI would imply that further treatment is not likely to impact her ultimate recovery. I feel that more could be offered. The consensus is that the pins should be removed. This alone should alleviate her pain greatly." Dr. Regan thus determined that Claimant would not reach MMI until she underwent the recommended pin removal. However. Dr. Regan did not mention whether he was aware that Claimant delayed undergoing the procedure that had first been recommended in June 2017 and was scheduled for July/August 2017. Based on range of motion limitations Dr. Regan assigned a 16% right lower extremity rating that converted to a 6% whole person impairment pursuant to the *AMA Guides*. He did not assign an impairment rating for a right hip replacement arthroplasty because Claimant did not undergo the procedure.

16. On February 22, 2019 Claimant underwent the recommended pin removal surgery with John Woodward, M.D. Claimant explained that Dr. Stahel referred her to Dr. Woodward for the procedure.

17. On March 29, 2019 L. Barton Goldman, M.D. performed a detailed records review of Claimant's claim. He determined that Claimant had plateaued by September 2017 and no additional improvement was likely until Claimant underwent the pin removal procedure. He explained that no documentation explained why the procedure had been postponed for several months after it had first been recommended on July 7, 2017. Dr. Goldman commented that in Level II accreditation courses physicians are taught that recommended procedures should be implemented as soon as possible or at the latest within three months of the recommendation. He also noted that:

> We further teach that if the patient fails to follow through/comply with that recommendation after 2 or 3 well-meaning attempts by the patient's provider and/or parties to this claim to facilitate such treatment, then the patient likely is approaching maximum medical improvement unless there are other interventions and treatments being contemplated and documented consistent with Rule 17 that would accelerate symptomatic and functional recovery.

18. Dr. Goldman explained that access and availability of services with respect to that "relatively minor orthopedic procedure" was not a concern. Instead, the failure to undergo pin removal was caused by Claimant's lack of compliance. Dr. Goldman reasoned that Claimant had reached MMI by October 26, 2017 after she had concluded physical therapy and decided that she was going to postpone pin removal until at least December 2018. In addressing Dr. Regan's DIME opinion, Dr. Goldman explained:

> [I would] strongly disagree with the DIME physician with respect to stating that MMI status had not yet been obtained in this case in which initial pin removal was recommended July 7, 2017 and then recommended again September 1, 2017, 13 to 16 months prior to the date of the DIME, and 17 to 20 months ago with no further treatment being provided during the interim period that would have been expected to substantially improve [Claimant's] symptomatic and functional status beyond which she was in fact exhibiting by the end of October 2017.

19. Dr. Goldman summarized that, "within greater than 99% medical probability," Dr. Regan's opinion in delaying MMI was incorrect. Based on the Level II Accreditation Course and consistent with Rule 17, the appropriate action "should have been a recommendation of MMI date most likely occurring in the fourth quarter of 2017 with potential pin removal considered most likely a post-MMI maintenance intervention."

20. Dr. Lesnak testified at the hearing in this matter. He maintained that Claimant reached MMI by October 26, 2017 and suffered a 5% right lower extremity impairment rating for range of motion deficits. Dr. Lesnak explained that MMI exists when a person has reached functional stability. He detailed that Claimant's right femoral fracture had completely healed, she had limited pain complaints, she was functioning well and her condition had stabilized by October 26, 2017. Dr. Lesnak explained that Claimant's ongoing aching was likely related to pins in her hip. The pin removal process was a minor procedure that would not affect MMI but would constitute medical maintenance treatment. He remarked that the pin removal procedure would not improve Claimant's function. Dr. Lesnak noted that the Level II curriculum provides that, if an individual declines a recommended course of treatment and no other treatment modalities are warranted, the person should be placed at MMI. He thus concluded that Dr. Regan erroneously determined that Claimant had not reached MMI.

21. Claimant testified at the hearing in this matter. She acknowledged that she cancelled the pin removal surgery in July or August 2017 because she thought her condition would improve. Claimant noted that she did not schedule another appointment with Dr. Stahel because he had moved to North Suburban. She was hesitant to see another doctor and did not know other surgeons. Claimant did not schedule an orthopedic follow-up between the time she cancelled the first surgery in summer 2017 and when she saw Dr. Schnell in June 2018. She also did not schedule a return appointment with Dr. Schnell after June 6, 2018 because she did not want him to perform the pin removal procedure. Claimant remarked that she did not receive notice

of the demand appointment for August 20, 2018 and denied that she cancelled the appointment.

22. Respondents have produced clear and convincing evidence to overcome the DIME opinion of Dr. Regan that Claimant has not reached MMI as a result of her admitted January 25, 2017 right hip injury. On January 25, 2017 Claimant suffered a displaced right femoral neck fracture. On January 26, 2017 Dr. Stahel performed a closed reduction with percutaneous pin fixation to repair Claimant's right hip. Although Claimant healed successfully, she continued to suffer hardware-related pain as a result of her surgery. Dr. Stahel thus recommended "removal of the screws and washer to mitigate her hardware-associated symptoms related to the backed-up screws and associated IT band syndrome." He scheduled Claimant for screw removal on July 24, 2017. On July 24, 2017 Claimant told ATP Dr. Koval that she was experiencing discomfort, but not pain, in her right hip. Claimant advised Dr. Stahel that the pins would be removed on August 3, 2017. However, the pin removal procedure did not occur on July 24, 2017 or August 3, 2017 because Claimant chose not to pursue the surgery. By April 23, 2018 Dr. Koval remarked that Claimant suffered pain and a gait abnormality because of the pins in her hip. She noted that removal of the pins had to be a "priority," and if Dr. Stahel was unavailable, "we need to find an alternative solution."

23. On August 2, 2018 Dr. Koval determined that Claimant had reached MMI. Dr. Koval noted that hardware removal had been scheduled for August 2017 but Claimant "had some doubts about proceeding" and the procedure did not occur. She assigned Claimant a 35% scheduled rating that converted to a 14% whole person impairment. The rating consisted of 20% for a right hip replacement arthroplasty pursuant to Table 45 of the *AMA Guides* and a 19% right lower extremity rating for range of motion limitations.

24. On October 21, 2018 Claimant underwent a DIME with Dr. Regan. Dr. Regan noted that Claimant had "considerable pain and MMI would imply that further treatment is not likely to impact her ultimate recovery. I feel that more could be offered. The consensus is that the pins should be removed. This alone should alleviate her pain greatly." Dr. Regan thus determined that Claimant would not reach MMI until she underwent the recommended pin removal. Based on range of motion limitations Dr. Regan assigned a 16% right lower extremity rating that converted to a 6% whole person impairment pursuant to the *AMA Guides*. He did not assign an impairment rating for a right hip replacement arthroplasty because Claimant did not undergo the procedure.

25. Dr. Goldman noted that pin removal was initially recommended on July 7, 2017. However, Claimant failed to undergo the procedure because she did not comply with physicians' recommendations. Dr. Goldman explained that in Level II accreditation courses physicians are taught that recommended procedures should be implemented as soon as possible or at the latest within three months of the recommendation. He reasoned that Claimant reached MMI by October 26, 2017 after she concluded physical therapy and decided that she was going to postpone pin removal until at least December 2018. Dr. Goldman strongly disagreed with Dr. Regan that Claimant has not

reached MMI and summarized that "within greater than 99% medical probability," Dr. Regan's opinion in delaying MMI was incorrect. Dr. Goldman concluded that, based on the Level II Accreditation Course, and consistent with Rule 17, Claimant should have been placed at MMI by October 26, 2017 with potential pin removal as a post-MMI maintenance intervention.

26. Similarly, Dr. Lesnak maintained that Claimant reached MMI by October 26, 2017 and suffered a 5% right lower extremity impairment rating for range of motion deficits. Dr. Lesnak explained that Claimant's right femoral fracture had completely healed, she had limited pain complaints, she was functioning well and her condition had stabilized by October 26, 2017. He commented that Claimant's ongoing aching was likely related to pins in her hip and the pin removal process was a minor procedure that would not affect MMI but would constitute medical maintenance treatment. Dr. Lesnak noted the Level II curriculum provides that, if an individual declines a recommended course of treatment and no other treatment modalities are warranted, the person should be placed at MMI. He thus concluded that Dr. Regan erroneously determined that Claimant had not reached MMI.

27. Based on the medical records and persuasive reasoning of Drs. Goldman and Lesnak, Respondents have established by clear and convincing evidence that Dr. Regan erroneously determined that Claimant had not reached MMI. Claimant failed to comply with physicians' recommendations to undergo the pin removal procedure for a lengthy period and the procedure constituted medical maintenance treatment because it would not improve her functional status. Dr. Regan did not mention whether he was aware that Claimant delayed undergoing the procedure that had first been recommended in June 2017 and was scheduled for July/August 2017. He also failed to apply the Level II curriculum or properly consider the *AMA Guides* in concluding that Claimant had not reached MMI. Claimant's refusal to undergo the pin replacement procedure for a lengthy period was unreasonable. Because Claimant's unwillingness to undergo the recommended procedure caused a significant delay in treatment, she reached MMI as a matter of law. Accordingly, Respondents have produced unmistakable evidence free from serious or substantial doubt that Dr. Regan's determination that Claimant has not reached MMI is incorrect.

28. Because Respondents have overcome Dr. Regan's determination that Claimant has not reached MMI, the correct MMI date must be determined. ATP Dr. Koval persuasively concluded that Claimant reached MMI on August 2, 2018. Dr. Koval persuasively reasoned that, because Claimant had chosen to pursue right hip hardware removal at a different institution than originally planned and the timeline of that procedure was unknown, a determination of MMI was reasonable. Moreover, she noted that the pin removal would constitute maintenance care. Dr. Koval also commented that Claimant had plateaued in her recovery. In contrast, Drs. Goldman and Lesnak reasoned that Claimant reached MMI on October 26, 2017 because her fracture had completely healed, she had limited pain complaints, she was functioning well, her condition had stabilized and she had declined pin removal for a lengthy time after physicians' initial recommendations. However, Dr. Koval had provided extensive medical treatment to Claimant, was familiar with her condition, knew all the details about

the delayed pin removal procedure and determined that she had plateaued by August 2, 2018. Accordingly, Claimant reached MMI on August 2, 2018 because she had stabilized and no additional treatment would likely improve her condition.

29. Dr. Koval assigned Claimant a 35% scheduled rating that converted to a 14% whole person impairment. The rating consisted of 20% for a right hip replacement arthroplasty and a 19% right lower extremity rating for range of motion limitations. However, Dr. Koval erroneously assigned an impairment rating for a right hip replacement arthroplasty. Notably, Dr. Regan did not assign an impairment rating for a right hip replacement arthroplasty because Claimant did not undergo the procedure. Similarly, Dr. Lesnak assigned a 5% right lower extremity impairment rating for range of motion deficits but did not mention a rating for a right hip arthroplasty. Because Claimant did not undergo a right hip replacement arthroplasty, the appropriate rating should be based on range of motion limitations. Dr. Lesnak assigned a 5% rating for right lower extremity range of motion deficits. However, Dr. Koval assigned a 19% and Dr. Regan assigned a 16% right lower extremity impairment for range of motion deficits. Based on the disparity between Dr. Lesnak's determination and the other impairment ratings, it is appropriate to adopt the 19% rating assigned by Dr. Koval at the time Claimant reached MMI. Accordingly, Claimant suffered a 19% right lower extremity impairment rating because of her January 25, 2017 industrial injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAO, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

5. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAO, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAO, Apr. 16, 2008).

6. A DIME physician's opinions concerning MMI and impairment carry presumptive weight pursuant to §8-42-107(8)(b)(III), C.R.S.; *see Yeutter v. Industrial Claim Appeals Office*, No. 18CA0498 (Apr. 11, 2019) 2019 COA 53. The statute provides that "[t]he finding regarding [MMI] and permanent medical impairment of an independent medical examiner in a dispute arising under subparagraph (II) of this paragraph (b) may be overcome only by clear and convincing evidence." *Id.* Subparagraph (II) is limited to parties' disputes over "a determination by an authorized treating physician on the question of whether the injured worker has or has not reached [MMI]." §8-42-107(8)(b)(II). "Nowhere in the statute is a DIME's opinion as to the cause of a claimant's injury similarly imbued with presumptive weight." *See Yeutter*, 2019 COA 53 ¶ 18. Accordingly, a DIME physicians opinion carries presumptive weight only with respect to MMI and impairment. *Id.* at ¶ 21.

7. "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAO, Nov. 17, 2000).

8. If a party has carried the initial burden of overcoming the DIME physician's impairment rating by clear and convincing evidence, the ALJ's determination of the correct rating is then a matter of fact based upon the lesser burden of a preponderance of the evidence. *See Deleon v. Whole Foods Market, Inc*., W.C. No. 4-600-47 (ICAO, Nov. 16, 2006). The ALJ is not required to dissect the overall impairment rating into its numerous component parts and determine whether each part has been overcome by

clear and convincing evidence. *Id.* When the ALJ determines that the DIME physician's rating has been overcome, the ALJ may independently determine the correct rating. *Lungu v. North Residence Inn*, W.C. No. 4-561-848 (ICAO, Mar. 19, 2004); *McNulty v. Eastman Kodak Co*., W.C. No. 4-432-104 (ICAO, Sept. 16, 2002).

9. MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007); *Powell v. Aurora Public Schools* W.C. No. 4-974-718-03 (ICAO, Mar. 15, 2017). Moreover, the Colorado Division of Workers' Compensation *Medical Treatment Guidelines* (*Guidelines*) specifically provide that "MMI should be declared when a patient's condition has plateaued to the point where the authorized treating physician no longer believes further medical intervention is likely to result in improved function." W.C.R.P. Rule 17, Exhibit 6, p.4.

10. The Level II Accreditation Course provides that when procedures or interventions are recommended to improve a claimant's status but the patient fails to follow-through or comply with the recommendations, then the patient is at MMI unless there are additional medical interventions available. The Level II accreditation program specifically provides that

> [a]t times patient may choose not to participate in a treatment that has been recommended by their physician … It is [ ] appropriate to declare the patient at MMI if further treatment would improve the patient's condition, but the patient chooses not to undergo any of the treatment that might be expected to improve their condition.

Page 28, Accreditation Curriculum.

11. If additional medical treatment presents a reasonable prospect for improvement, the claimant may not be at MMI only if she is willing to undergo the treatment. *See MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001, 1005 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1080 (Colo. App. 1990). A claimant who refuses the only treatment available that has a prospect for improving the injury-related condition is at MMI as a matter of law. *MGM Supply Co.* 62 P.3d at 1005; *Neidens v. Firewall Forward Aircraft Engines, Inc.,* W. C. No. 4-553-056 (ICAO, Aug. 10, 2005). The reasonableness of a claimant's refusal to submit to additional treatment is a question of fact for the ALJ. *MGM Supply Co.*, 62 P.3d at 1005-06.

12. As found, Respondents have produced clear and convincing evidence to overcome the DIME opinion of Dr. Regan that Claimant has not reached MMI as a result of her admitted January 25, 2017 right hip injury. On January 25, 2017 Claimant suffered a displaced right femoral neck fracture. On January 26, 2017 Dr. Stahel performed a closed reduction with percutaneous pin fixation to repair Claimant's right hip. Although Claimant healed successfully, she continued to suffer hardware-related pain as a result of her surgery. Dr. Stahel thus recommended "removal of the screws and washer to mitigate her hardware-associated symptoms related to the backed-up screws and associated IT band syndrome." He scheduled Claimant for screw removal on July 24, 2017. On July 24, 2017 Claimant told ATP Dr. Koval that she was experiencing discomfort, but not pain, in her right hip. Claimant advised Dr. Stahel that the pins would be removed on August 3, 2017. However, the pin removal procedure did not occur on July 24, 2017 or August 3, 2017 because Claimant chose not to pursue the surgery. By April 23, 2018 Dr. Koval remarked that Claimant suffered pain and a gait abnormality because of the pins in her hip. She noted that removal of the pins had to be a "priority," and if Dr. Stahel was unavailable, "we need to find an alternative solution."

13. As found, on August 2, 2018 Dr. Koval determined that Claimant had reached MMI. Dr. Koval noted that hardware removal had been scheduled for August 2017 but Claimant "had some doubts about proceeding" and the procedure did not occur. She assigned Claimant a 35% scheduled rating that converted to a 14% whole person impairment. The rating consisted of 20% for a right hip replacement arthroplasty pursuant to Table 45 of the *AMA Guides* and a 19% right lower extremity rating for range of motion limitations.

14. As found, on October 21, 2018 Claimant underwent a DIME with Dr. Regan. Dr. Regan noted that Claimant had "considerable pain and MMI would imply that further treatment is not likely to impact her ultimate recovery. I feel that more could be offered. The consensus is that the pins should be removed. This alone should alleviate her pain greatly." Dr. Regan thus determined that Claimant would not reach MMI until she underwent the recommended pin removal. Based on range of motion limitations Dr. Regan assigned a 16% right lower extremity rating that converted to a 6% whole person impairment pursuant to the *AMA Guides*. He did not assign an impairment rating for a right hip replacement arthroplasty because Claimant did not undergo the procedure.

15. As found, Dr. Goldman noted that pin removal was initially recommended on July 7, 2017. However, Claimant failed to undergo the procedure because she did not comply with physicians' recommendations. Dr. Goldman explained that in Level II accreditation courses physicians are taught that recommended procedures should be implemented as soon as possible or at the latest within three months of the recommendation. He reasoned that Claimant reached MMI by October 26, 2017 after she concluded physical therapy and decided that she was going to postpone pin removal until at least December 2018. Dr. Goldman strongly disagreed with Dr. Regan that Claimant has not reached MMI and summarized that "within greater than 99% medical probability," Dr. Regan's opinion in delaying MMI was incorrect. Dr. Goldman

concluded that, based on the Level II Accreditation Course, and consistent with Rule 17, Claimant should have been placed at MMI by October 26, 2017 with potential pin removal as a post-MMI maintenance intervention.

16. As found, similarly, Dr. Lesnak maintained that Claimant reached MMI by October 26, 2017 and suffered a 5% right lower extremity impairment rating for range of motion deficits. Dr. Lesnak explained that Claimant's right femoral fracture had completely healed, she had limited pain complaints, she was functioning well and her condition had stabilized by October 26, 2017. He commented that Claimant's ongoing aching was likely related to pins in her hip and the pin removal process was a minor procedure that would not affect MMI but would constitute medical maintenance treatment. Dr. Lesnak noted the Level II curriculum provides that, if an individual declines a recommended course of treatment and no other treatment modalities are warranted, the person should be placed at MMI. He thus concluded that Dr. Regan erroneously determined that Claimant had not reached MMI.

17. As found, based on the medical records and persuasive reasoning of Drs. Goldman and Lesnak, Respondents have established by clear and convincing evidence that Dr. Regan erroneously determined that Claimant had not reached MMI. Claimant failed to comply with physicians' recommendations to undergo the pin removal procedure for a lengthy period of time and the procedure constituted medical maintenance treatment because it would not improve her functional status. Dr. Regan did not mention whether he was aware that Claimant delayed undergoing the procedure that had first been recommended in June 2017 and was scheduled for July/August 2017. He also failed to apply the Level II curriculum or properly consider the *AMA Guides* in concluding that Claimant had not reached MMI. Claimant's refusal to undergo the pin replacement procedure for a lengthy period was unreasonable. Because Claimant's unwillingness to undergo the recommended procedure caused a significant delay in treatment, she reached MMI as a matter of law. Accordingly, Respondents have produced unmistakable evidence free from serious or substantial doubt that Dr. Regan's determination that Claimant has not reached MMI is incorrect.

18. As found, because Respondents have overcome Dr. Regan's determination that Claimant has not reached MMI, the correct MMI date must be determined. ATP Dr. Koval persuasively concluded that Claimant reached MMI on August 2, 2018. Dr. Koval persuasively reasoned that, because Claimant had chosen to pursue right hip hardware removal at a different institution than originally planned and the timeline of that procedure was unknown, a determination of MMI was reasonable. Moreover, she noted that the pin removal would constitute maintenance care. Dr. Koval also commented that Claimant had plateaued in her recovery. In contrast, Drs. Goldman and Lesnak reasoned that Claimant reached MMI on October 26, 2017 because her fracture had completely healed, she had limited pain complaints, she was functioning well, her condition had stabilized and she had declined pin removal for a lengthy time after physicians' initial recommendations. However, Dr. Koval had provided extensive medical treatment to Claimant, was familiar with her condition, knew all the details about the delayed pin removal procedure and determined that she had plateaued by August 2, 2018. Accordingly, Claimant reached MMI on August 2, 2018

because she had stabilized and no additional treatment would likely improve her condition.

19. As found, Dr. Koval assigned Claimant a 35% scheduled rating that converted to a 14% whole person impairment. The rating consisted of 20% for a right hip replacement arthroplasty and a 19% right lower extremity rating for range of motion limitations. However, Dr. Koval erroneously assigned an impairment rating for a right hip replacement arthroplasty. Notably, Dr. Regan did not assign an impairment rating for a right hip replacement arthroplasty because Claimant did not undergo the procedure. Similarly, Dr. Lesnak assigned a 5% right lower extremity impairment rating for range of motion deficits but did not mention a rating for a right hip arthroplasty. Because Claimant did not undergo a right hip replacement arthroplasty, the appropriate rating should be based on range of motion limitations. Dr. Lesnak assigned a 5% rating for right lower extremity range of motion deficits. However, Dr. Koval assigned a 19% and Dr. Regan assigned a 16% right lower extremity impairment for range of motion deficits. Based on the disparity between Dr. Lesnak's determination and the other impairment ratings, it is appropriate to adopt the 19% rating assigned by Dr. Koval at the time Claimant reached MMI. Accordingly, Claimant suffered a 19% right lower extremity impairment rating because of her January 25, 2017 industrial injury.

ORDER

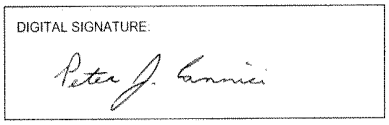
Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

.1 Respondents have overcome Dr. Regan's DIME opinion. Claimant reached MMI for her January 25, 2017 industrial injury on August 2, 2018 and suffered a 19% right lower extremity impairment rating.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: July 23, 2019.



_____

Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she sustained a compensable work related injury on July 18, 2018.

2. Whether Claimant has established by a preponderance of the evidence an entitlement to a general award of reasonable, necessary, and causally related medical benefits and specific benefits including payment of UC Health emergency room bills for a July 23, 2018 visit.

3. Whether Claimant has established by a preponderance of the evidence an entitlement to temporary total disability (TTD) benefits.

4. Whether Claimant has established by a preponderance of the evidence that she is entitled to a change of physician based on lack of designated provider list.

FINDINGS OF FACT

1. Claimant is a 33-year-old woman who was employed by Employer as a laborer working in landscape construction.

2. Claimant's job duties included planting flowers and trees, spreading mulch, installing sprinklers, installing edging and rocks, and installing new trees.

3. Claimant was hired by Employer on June 18, 2018 and began work on June 22, 2018. Prior to this job, Claimant had worked for two years for a different landscaping company.

4. On July 18, 2018, Claimant was working with two co-workers to unload and plant three 7-foot pine trees. They each dug holes for the tree ball and roots. They then worked together to unload each tree from a trailer and put each tree into the holes that had been dug.

5. While moving the third tree, Claimant testified that her two co-workers, Ivan and Michael pushed the tree while she pulled the tree. Claimant testified that on this last tree, the root ball was loose and that they were trying to move the tree without damaging it. Claimant testified that they tipped the trailer slightly to help remove the tree. She testified that Ivan and Michael were pushing while she pulled and that she felt pain while pulling the tree. Claimant testified that the tree was tipped into her, and had she not been there, the tree would have fallen so it was on her or pushed against her while she was the only person pulling it. Claimant testified that she felt pain in her low back, left arm, and abdomen. Claimant testified that she told the guys to hold on for a minute since she

thought she had hurt herself. Claimant testified that Michael indicated they would let the supervisor know soon, but to just finish planting the tree.

6. Claimant testified that she told both her co-workers right away that she had hurt herself. Claimant testified that after they got the third tree down off the trailer and planted, they returned to Employer's office where she reported the injury to her left shoulder and left low back.

7. At Employer's office, Claimant reported the incident to Duncan H_____. One of the co-workers on Claimant's crew translated on behalf of Claimant, as Claimant only speaks Spanish. An incident report was completed and Claimant elected to complete her shift rather than go home. Claimant did not seek medical treatment that day and did lighter duty work for the rest of the afternoon.

8. On that day, July 18, 2018, Claimant filled out and signed a form titled workers' compensation offer of medical treatment. The form is in both English and Spanish. Claimant filled out the Spanish section of the form indicating she hurt her low back and signed the form. Claimant denied medical treatment that day. Respondents provided a designated providers list in their exhibit packet. The designated providers list is not signed, not dated, and Claimant testified she did not receive that form. *See* Exhibits 4, 7, F.

9. The next day, July 19, 2018, Claimant returned to Employer's office and complained of a worsening of her symptoms. Claimant was evaluated by Employer's on-call nurse, Duke Chase. The incident response report indicates Claimant reported that she was loading a truck when she felt pain in her low back and that she was complaining of lower back pain. Mr. Chase assessed lower back pain, noted that he assessed Claimant, provided ice, massage with biofreeze, and demonstrated stretches. He recommended icing the area with 20 minutes of ice followed by an hour off. He recommended applying biofreeze and taking over the counter medications as needed for pain. Claimant worked that day again doing lighter tasks. *See* Exhibit 1.

10. Claimant had July 20, 21, and 22 off work. On July 23, 2018, Claimant went to Employer and asked to be evaluated again. Claimant was taken to Concentra by a supervisor and was evaluated at Concentra by Emily Crockett, M.D. Claimant reported that she was planting a tree with coworkers on July 18 when she hurt her low back and left shoulder. Claimant reported no prior low back or shoulder injuries. Claimant reported pain in the left lateral shoulder and bilateral low back pain. On examination, Claimant had bilateral muscle spasms with palpation of the lumbosacral spine. Claimant had a negative straight leg raise test but had reported reduced range of motion. Dr. Crockett assessed strain of lumbar region and left shoulder strain and referred Claimant for physical therapy. Dr. Crockett also noted that Claimant had significant left lower quadrant pain on examination and assessed abdominal pain in female. Dr. Crockett recommended Claimant go to the emergency room to evaluate the lower quadrant abdominal pain. *See* Exhibits 12, C.

11. Claimant's supervisor then drove her to the emergency room. On July 23, 2018, Claimant was evaluated at UC Health in the emergency room. Claimant reported abdominal pain that radiated to her back and was worse with twisting after pulling a heavy tree out of the back of a truck. Claimant reported that the tree did not fall on her and that she did not fall. Claimant reported that her pain was a 9/10. Claimant's urine test was noted to be normal, having only small blood urine values and occasional bacteria urine values. Claimant's disposition was left sided abdominal pain, and acute left sided low back pain without sciatica. Claimant was discharged and was released to work with activities as tolerated. *See* Exhibits 13, B.

12. On July 24, 2018, an employee injury report was created. The report indicated that Claimant was assisting with moving a tree for installation and was helping with the trunk and not the root ball when she complained about side and back muscle pains on the left. An employer's first report of injury form was completed the same day and indicated the same mechanism of injury. *See* Exhibits 2, 5.

13. On July 25, 2018, Dr. Crockett evaluated Claimant. Dr. Crockett noted that Claimant's workup for abdominal pain was negative at the emergency room. Claimant reported she was still hurting a lot and that she needed pain medication. Claimant did not perform a musculoskeletal exam and told Dr. Crockett that it was too painful and Claimant refused to move her arm and her back. Dr. Crockett noted that Dr. McCullough at University Hospital had sent Claimant back to full duty work. Dr. Crockett assessed lumbar strain and left shoulder strain and noted that Claimant was at functional goal and ready for discharge. Claimant was released from care. *See* Exhibits 12, C.

14. On July 27, 2018, Employer noted that they were terminating Claimant for job abandonment after Claimant did not show up for work on Thursday or Friday. *See* Exhibit D.

15. On August 2, 2018, a Personnel Action Form was signed indicating that Claimant was terminated from employment with Employer based on job abandonment, "no call no show." *See* Exhibit D.

16. On August 7, 2018, Respondents filed a notice of contest indicating that the injury was not work related. *See* Exhibit 6.

17. On September 10, 2018, Claimant submitted a Request for Change of Physician form. Respondents denied the request on September 19, 2018. *See* Exhibits 8, 9.

18. On February 19, 2019, Claimant was evaluated by John Raschbacher, M.D. Claimant reported that while planting a tree at work, there was a tree that was difficult to move off the trailer and into the hole that had been dug. Claimant reported that her two male co-workers pushed the tree and that the tree fell on her and hit her at the left shoulder and the left side of the chest and abdomen and that she felt it at the left shoulder and left upper arm and also felt something in her low back. Claimant reported that she

told her foreman, that he called the manager, and that she was taken to the shop and given pain pills. Claimant reported that the completed planting that tree before going back to the shop. Claimant reported that she did not return to work and was fired. Dr. Raschbacher reviewed medical records and performed a physical examination. *See* Exhibit A.

19. Dr. Raschbacher opined that Claimant made a very poor effort at left upper extremity testing and opined that despite much tenderness to palpation reported, there were no objective findings. Dr. Raschbacher noted, remarkably, that Claimant jumped or startled when testing the upper extremity DTRs for some reason. Dr. Raschbacher found that Claimant also startled with lower extremity testing. He noted Claimant possibly had a sacral fat pad and/or increased lumbar lordosis. He again noted very poor effort with left lower extremity manual muscle testing and noted awkward transfers and deliberate /slow/awkward gait. Dr. Raschbacher found a negative seated straight leg raise and he completed several range of motion measurements. Dr. Raschbacher opined that it was remarkable that Claimant appeared to have refused to move her left arm when evaluated at Concentra and he opined that would not be anticipated medically. Physiologically, he opined that it would not make sense. He noted her very poor effort with his examination on testing and her significant pain behaviors. Dr. Raschbacher questioned Claimant's presentation and opined that it was not clear that an injury actually occurred. He recommended correlating Claimant's reports with her co-workers' observations. *See* Exhibit A.

20. At hearing, Claimant's co-worker Ivan C_____ testified. Mr. C_____ testified that he was working as a laborer alongside Claimant and that on July 18, 2018 they were assigned to install some trees and pick up sod. Mr. C_____ testified that the trees they were installing were approximately 6 feet tall. He testified that another co-worker was moving the tree at the root area and that he and Claimant were guiding the tree into the hole and directing it to be straight/steady. He testified that there was no fall but that the tree was put into the hole, then the wire was cut, then dirt was put in. He testified that Claimant had her right hand at the bottom of the tree and her left hand at the top guiding the tree on one side, while he was guiding it on the other side. He testified that when they were done and decided to go back to the shop, Claimant said that her arm hurt at the elbow/shoulder area but he testified that Claimant did not stop them or complain of an injury while they were actually moving the tree. He testified that after they were done planting the trees, Claimant reported to them that she hurt, and that they had an ice pack in the truck they gave her. He testified that they went back to the shop and that Claimant reported the injury.

21. At hearing, Claimant's supervisor Zach W_____ testified. He noted that on July 18, 2018 he was notified by phone call of Claimant having left shoulder issues when moving a tree. He testified that the next day at the office Claimant reported a back issue. He testified that he drove Claimant to Concentra twice and to the emergency room once for evaluations.

22. Dr. Raschbacher also testified at hearing. He opined that Claimant's examination was quite unusual. He testified that although something may have happened on July 18, 2018, there was no good medical examination and no good explanation for Claimant's big pain behaviors. Dr. Raschbacher testified that contusions/sprains/strains can occur but noted no documentation of outward signs of trauma at Concentra. Dr. Raschbacher opined that something happened on July 18 but that the significant pain now 10 months later has no explanation. He testified that Claimant was all over the place with her range of motion measurements, comparing his to Concentra's. He also testified that Claimant had a normal seated straight leg raise, but pain with the laying down straight leg raise, which was inconsistent. He opined that Claimant's range of motion medically did not make sense. He also testified that the mechanism of injury was not significant and that although Claimant may have had a strain/sprain, it was extremely unlikely that there was currently a medical condition to treat.

23. On June 3, 2019, Duncan H_____ testified by deposition. Mr. H_____ is an account manager and branch safety leader for Employer. Mr. H_____ noted that on July 18, 2018 Claimant and her co-workers reported to him that Claimant had tweaked her shoulder pulling a tree out of a trailer. Mr. H_____ asked Claimant that day if she wanted to go back to work and she indicated yes. Mr. H_____ testified that Claimant came back the next day and asked to have medical attention for her symptoms and that she pointed at her back the next day. Mr. H_____ testified that he called the on call nurse who assessed Claimant and testified that Claimant was released back to work and that she worked that day. Mr. H_____ noted that Claimant came into work the next Monday and asked to go to the emergency room and was taken by Mr. W_____. Mr. H_____ testified that it was probably correct that the designated medical provider list was never provided to Claimant because the document lacks her signature. Mr. H_____ also testified that if a worker was not going to report to work they are supposed to text or call their supervisor and that Claimant's normal work days were Monday through Thursday.

24. Claimant testified that after her July 23, 2018 emergency room visit, she asked her son to tell Employer she was going to rest. She testified that she had a doctor visit on July 25, 2018 and that she returned to work that day and tried to work but couldn't. Claimant testified that on July 26, 2018 she also tried to work again, but was only able to do two hours of work. Claimant testified that she contacted Mr. W_____ and left him a voice message and text message, but never heard back. Claimant testified that she cannot perform the job duties she performed previously due to her pain. Claimant testified that she has pain in her lower back and that her left leg goes numb. Claimant testified that her left shoulder does not bother her as much as her low back and leg and that it only bothers her when she scrubs the tub or mops. Claimant testified that she wants medical treatment.

25. Wage records indicate Claimant did not work or receive pay after the week ending July 22, 2018. *See* Exhibit D.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo.App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo.App. 2000).

Compensability

The claimant was required to prove by a preponderance of the evidence that at the time of the alleged injury, she was performing service arising out of and in the course of the employment, and that the alleged injury or occupational disease was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. The Act creates a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence." Section 8-40-201(1), C.R.S. In contrast, an "injury" contemplates the physical or emotional trauma caused by an

"accident." An "accident" is the cause and an "injury" is the result. No benefits flow to the victim of an industrial accident unless the accident causes a compensable "injury." A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.,* W.C. No. 4-650-711 (ICAO February 15, 2007).

Claimant, overall, is not credible or persuasive. Claimant testified that both Michael and Ivan were pushing the tree when she was injured. She testified that she was pulling it and that it was tilted on/into her and if she had not been there it would have fallen. Claimant testified that she told Michael and Ivan that she was hurt while they were moving the tree. Ivan's testimony, as found above, differed greatly from Claimant's testimony. Ivan testified that Michael was the person pushing the tree. Ivan testified that he and Claimant were both guiding the tree. He also testified that Claimant did not report that she was hurt or had pain until after the tree was planted and that she did not stop them or say she was hurt mid tree planting.

Claimant also has extreme and unusual pain behaviors and presentation at medical provider visits. Claimant had very little objective evidence of an acute injury. She had reported tenderness and some muscle spasms with palpation, but negative objective tests with maneuvers performed by medical providers. Her reported pain level of 9/10 at the emergency room, her request for pain medications, and her failure to even attempt to move body parts due to her reported extreme pain are inconsistent with the overall weight of the evidence and logically do not make sense.

Finally, Claimant's reports that she had her son call in to work for her, that she called and texted a supervisor, and that she attempted to work after her release from medical care on July 25, 2018 and on July 26, 2018 are inconsistent with the weight of the overall evidence. Wage records and testimony do not support that she made these attempts or calls. Overall, Claimant's testimony fails to carry weight due to the many inconsistencies.

Dr. Raschbacher, overall, is credible and persuasive that Claimant lacks objective findings, has extremely inconsistent range of motion measurements, and has given very unexplainable poor efforts in movement of her body parts. Dr. Raschbacher is credible and persuasive that refusal to move body parts for examination due to reported pain would not be anticipated medically and physiologically would not make sense. Dr. Raschbacher pointed out that Claimant had a normal seated straight leg raise, but pain with the laying down straight leg raise, which was inconsistent. His opinion that although there may have been an incident, there was no significant mechanism of injury is persuasive. His opinion that although Claimant may have possibly had a strain/sprain on July 18, 2018, there is currently no medical condition to treat is also persuasive.

Overall, Claimant has failed to meet her burden to establish that she sustained a compensable work related injury on July 18, 2018. There are too many inconsistencies both in the reported mechanism of injury and in Claimant's medical presentation to find her credible and persuasive. Claimant has failed to establish that she sustained an acute injury causing disability and the need for medical treatment. Rather, the weight of the

evidence establishes that Claimant was guiding a tree, afterwards reported pain, but at medical appointments had reports that physiologically do not make sense. Claimant has failed to show, more likely than not, that she has any disability or need for medical treatment based on a July 18, 2018 incident.

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). Claimant requested treatment as provided by UC Health emergency room. As she has failed to establish a compensable injury, her request for medical benefits is denied and dismissed.

Temporary Total Disability

Claimant has requested temporary total disability benefits from July 24, 2018 and ongoing. Again, as she has failed to establish a compensable injury, her request for TTD is denied and dismissed.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that she sustained a compensable work related injury on July 18, 2018. Her claim is denied and dismissed.

2. Claimant has failed to establish by a preponderance of the evidence an entitlement to a general award of reasonable, necessary, and causally related medical benefits and specific benefits including the medical bills from UC Health emergency room.

3. Claimant has failed to establish by a preponderance of the evidence an entitlement to temporary total disability (TTD) benefits.

4. Any issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty

(20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 24, 2019

/s/ Michelle E. Jones

Michelle E. Jones

Denver, CO 80203

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that his claim for an injured left shoulder should be reopened?

II. Has Claimant shown, by a preponderance of the evidence, that the left shoulder surgery proposed by Dr. Weinstein (superior capsular reconstruction, but then if necessary, a reverse shoulder arthroplasty) is reasonable, necessary, and related to his work injury of 3/31/16?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant sustained an admitted work injury to his left shoulder while working as a forklift operator on March 31, 2016. At the time of the injury, Claimant's primary duties involved driving a forklift and receiving product into the warehouse. This job required very heavy lifting, sometimes requiring the Claimant to lift as much as one hundred pounds. Claimant lifted a wooden door from a vertical position leaning against the forks onto a horizontal stack that was about waist high when he felt and heard a pop in his left shoulder and numbness down his left arm. (Ex. C, p. 18) Claimant reported the incident to his supervisor, who then sent him to Concentra for treatment*. Id.*

2. Claimant was seen by Dr. Randall Jones at Concentra on 3/31/16 and was referred for an immediate MRI. The MRI of the left shoulder dated 4/1/16 revealed a complete full-thickness tear of the distal supraspinatus and infraspinatus tendons, with a 4.5 cm medial tendon retraction. It also showed a medial subluxation of the long head of the biceps tendon. (Ex. F, p. 135). The MRI showed minimal atrophy and minimal fatty infiltration of the supraspinatus and infraspinatus muscles.

3. Based on the results of the MRI, Dr. Jones referred Claimant to Dr. Wiley Jinkins, an orthopedic surgeon. Dr. Jinkins recommended surgical intervention to repair the rotator cuff. In his 4/5/16 medical record, Dr. Jinkins opined that, due to the severity of the Claimant's tear, he did not feel conservative management, such as physical therapy, would afford the Claimant any relief of symptoms. (Ex. 6, p. 160). On 4/21/16, Dr. Jinkins performed an open subacromial decompression and rotator cuff repair on Claimant's left shoulder. Claimant then began physical therapy. Claimant returned to work, at modified duty, approximately two weeks after surgery.

4. Approximately three months post-surgery on 7/26/16, Dr. Jinkins noted that the Claimant's pain level had decreased significantly and was at a 0 out of 10. Dr. Jinkins also noted that the Claimant's left arm was still very weak. Over time, the Claimant's

pain level remained minimal, although his left arm remained "significantly weaker than his right and his forward flexion and lateral abduction was significantly limited". (Ex. 6, p. 170). On 8/23/16, Dr. Jinkins again noted the Claimant had no pain in his left shoulder; however, it was still significantly weak, and range of motion was still limited in his forward flexion and lateral abduction.

5. Dr. Jinkins warned the Claimant that persons who have surgery to repair a severely torn rotator cuff were "definitely at risk for re-tearing if they became overzealous with lifting". He recommended that the Claimant continue physical therapy, and continue restrictions on the use of his left upper extremity. (Ex. 6, p. 168). On 9/20/16, Dr. Jinkins again saw Claimant and noted that he had no pain, yet still demonstrated significant weakness in his left shoulder. He decreased the Claimant's lifting restriction to 20 pounds, although he noted that the Claimant should not lift over waist high. He recommended another 4 weeks of physical therapy.

6. On 10/18/16, Dr. Jinkins again noted significant weakness of the left shoulder and again noted that the Claimant was "very much at risk for re-tearing" his rotator cuff. (Ex. 6, p. 175). The Claimant was placed at MMI by Dr. Jones on 11/16/16, and was given a 21% upper extremity rating. Dr. Jinkins placed the Claimant on a permanent 30-pound lifting restriction up to waist level with a 20-pound lifting restriction lifting to chest height. (Ex. C, p. 22)

7. Claimant returned to Dr. Jinkins for maintenance care on 12/13/16. Dr. Jinkins noted increased discomfort in the Claimant's left shoulder with weather changes and again reiterated that the Claimant was definitely at risk for re-tearing if he did not abide by his lifting restrictions.

8. Claimant requested a Division Independent Medical Examination (DIME) which was performed by J. Stephen Gray, M.D. on April 19, 2017. Dr. Gray reduced Claimant's impairment rating to 17 percent upper extremity. He recommended maintenance medical treatment in the form of physical therapy for documented flare ups and up to three steroid injections per year. (Ex. B)

9. Respondents filed a Final Admission of Liability dated June 5, 2017. (Ex. A) Claimant objected and the parties entered into a stipulation resolving the issues of conversion and disfigurement. The parties stipulated that the claim was closed pursuant to the June 5, 2017 Final Admission of Liability.

10. On 6/18/17, Claimant testified that as he was toweling off after a shower (not lifting anything), he felt another "pop" in his left shoulder and had immediate onset of significant shoulder pain and numbness in his left arm. Claimant returned to see Dr. Jinkins on July 11, 2017. He indicated to Dr. Jinkins that he was drying off after a shower when he experienced an acute onset of left shoulder pain. Dr. Jinkins noted a possible re-tear of the previously repaired left rotator cuff. Claimant was referred for an MRI. As claimant was working in a new position that did not require any heavy lifting, no additional work restrictions were necessary. (Ex. D, pp. 104-105)

11. Claimant underwent an MRI of the left shoulder on July 14, 2017. It revealed a re-tear of the previously repaired rotator cuff, as well as interval development of a superior labrum tear. (Ex. G, pp. 138-139)

12. Dr. Jinkins opined that attempting to repair the rotator cuff would be unreasonable given the likelihood of re-tearing. He referred Claimant for an orthopedic consultation with David Weinstein, M.D. (Ex. D, pp. 124-125)

13. On 9/18/17, Dr. Weinstein examined the Claimant and noted that the complete re-tear of the Claimant's rotator cuff was "in large due to the significant nature of his initial injury". He offered the Claimant the choice of continuing with observation and home exercises or proceeding with a superior capsular reconstruction or reverse total shoulder arthroplasty (if there were too many arthritic changes after he opened the Claimant up to observe the shoulder joint firsthand).

14. Dr. Weinstein noted that if the Claimant chose the non-surgical option, it was possible that his shoulder condition would worsen over time and require surgical intervention. Claimant chose the non-surgical route at this juncture.

15. The Claimant returned to Dr. Jinkins on 9/27/27, 10/31/17, 11/19/17, 1/9/18, 2/26/18, 4/24/18 and 7/31/18. By December of 2018, cortisone injections were failing to control the Claimant's increasing shoulder pain so he returned to Dr. Weinstein.

16. On 12/24/18, Dr. Weinstein noted that the Claimant had deep pain in his left shoulder and marked weakness. He noted that "the patient was very unhappy with his current status which is progressively worsening". Dr. Weinstein again offered the Claimant surgical treatment as outlined above.

17. This time, Claimant wished to proceed with the surgery; however, Respondents denied authorization, based upon the IME opinion of Dr. Timothy O'Brien, performed at the request of the Respondents. Dr. O'Brien also testified by deposition on June 10, 2019. His current practice consists of 20% patient care and 80% IME's, of which 98% of such IME's are at the request of the Respondents. Although Dr. O'Brien is an orthopedic surgeon, his area of specialty is the foot and ankle. He is not a shoulder and elbow specialist, nor has he surgically treated a shoulder since approximately 2003.

18. Dr. O'Brien testified that Dr. Jinkins' recommendation for surgery (rather than conservative care) so early in the case fell below the standard of orthopedic care. However, he characterized Dr. Jinkins' surgery as arthroscopic, when it was really an open procedure. Dr. O'Brien opined that the capsular reconstruction recommended by Dr. Weinstein is not reasonable, as it is an "experimental" surgery, since it is a relatively new procedure.

19. Dr. O'Brien testified that the Claimant had weakness in his left shoulder prior to the 3/31/16 industrial injury, although he could point to no medical records, which support that contention. He also admitted that there were no medical records reflecting preexisting pain or treatment of the Claimant's left shoulder. Nor were there any

records indicating the Claimant had physical restrictions to his left shoulder prior to this industrial injury.

20. Dr. O'Brien did opine that the weakness in the Claimant's left shoulder would have been more profound after the re-tear than prior to the industrial injury. He also stated that he did not know what the Claimant's job duties were prior to or at the time of his industrial injury. Dr. O'Brien agrees that if the capsular reconstruction is 'taken out of the picture', then Claimant's only viable treatment option would be a reverse total shoulder arthroplasty (consistent with both Dr. Jinkins' and Dr. Weinstein's opinions). Dr. O'Brien agreed that while Claimant is a candidate for a reverse total shoulder, it should not be considered work related.

21. Dr. Wiley Jinkins testified by deposition on June 13, 2019. Dr. Jinkins testified that after reviewing the Claimant's MRI of 4/1/16 and observing the Claimant's "pseudoparalysis" of his left arm, his decision to perform a "mini-open" rotator cuff repair was indicated, as he did not feel that conservative rehabilitation would afford the Claimant any significant relief of symptoms. He explained that the minimal atrophy and minimal fatty infiltration seen on the MRI of 4/1/16 indicated that the Claimant's shoulder was functioning at a fairly high level prior to the industrial injury.

22. Dr. Jinkins opined that if the tear itself was longstanding, and the Claimant was not functioning well, one would expect to see more atrophy and fatty infiltration than the amount seen on the 4/1/16 MRI. Regarding Dr. O'Brien's allegation in his IME that Dr. Jinkins failed to speak to the Claimant about non-invasive therapies prior to performing the rotator cuff repair surgery which falls below an orthopedic standard of care, Dr. Jinkins testified that this is incorrect. He did speak to Mr. Laabs about the possibility of conservative care, but did voice his opinion that the Claimant's rotator cuff tear and shoulder pain were not likely to improve without surgery.

23. Dr. Jinkins testified that he was concerned that if surgery were not performed relatively quickly, the additional time that would elapse would lead to deconditioning and additional atrophy of the Claimant's musculature therefore making it more difficult for the Claimant to regain function after surgery. Because the Claimant's goal was to be able to continue working at his job which required some lifting, Dr. Jinkins testified that a rotator cuff repair was the only treatment option that, if successful, would allow him to do so. Dr. Jinkins testified that once he surgically opened the Claimant's shoulder, he determined that there was enough viable tissue to repair the rotator cuff, so he proceeded with the rotator cuff repair. If there had not been enough viable tissue, he would not have continued with the surgery.

24. Dr. Jinkins disagreed with Dr. O'Brien's characterization of the injury as a "relatively minor strain/sprain that resulted in a minimal amount of inflammation" which was back to pre-injury status before 4/21/16. Dr. Jinkins testified that if the Claimant's injury were just a minor strain/sprain, it would have taken several days for the inflammation to fully develop. A strain/sprain would not necessarily cause the immediate sharp pain that Claimant described. This immediate onset of sharp pain would be more consistent with a tearing of the rotator cuff. Dr. Jinkins opined that there were very few treatment

options available for the Claimant considering the extent of the tear. He was hopeful that by repairing the rotator cuff, it would buy the Claimant time before he might need to undergo a shoulder replacement. Dr. Jinkins also testified that even if the Claimant's rotator cuff tear is found to be preexisting, his heavy lifting duties at BMC likely substantially aggravated his preexisting shoulder condition.

25. Dr. Weinstein testified by deposition on 5/10/19. Dr. Weinstein is an orthopedic specialist with 98% of his practice related to shoulder and elbow pathology. He performs approximately 300 shoulder arthroplasties per year, of which at least 50% of them are reverse total shoulder replacements.

26. Dr. Weinstein testified that some of the pathology seen on the Claimant's initial MRI scan of 4/1/16 was probably preexisting; however, Claimant was compensating extremely well, and was not having any symptoms in his left shoulder before the 3/31/16 injury. Dr. Weinstein opined that some of the rotator cuff pathology seen on the MRI of 4/1/16 was new, and that the "pop" reported by the Claimant on 3/31/16 represented further tearing of the already compromised rotator cuff. Dr. Weinstein stated that it is very possible an individual with preexisting rotator cuff pathology can present with no weakness. He testified that he frequently sees patients with preexisting pathology which neither bothers them, nor affects them. However, then an event will occur that injures the area just enough that they cannot compensate anymore.

27. Dr. Weinstein opined that, contrary to Dr. O'Brien's opinion, Dr. Jinkins appropriately treated the Claimant with rotator cuff repair surgery on 4/21/16. He explained that a severe rotator cuff tear in a 50-year-old individual does not have a lot of good treatment options besides a surgery. He agreed with Dr. Jinkins' assessment that non-invasive therapy would be contraindicated, since non-operative therapy had "no chance" of healing the tear. He further opined that the minimal atrophy and minimal fatty infiltration seen on the 4/1/16 MRI indicated that there was a possibility that the tear was repairable, or partially repairable.

28. Dr. Weinstein explained that, in an attempt to prevent the tear from becoming irreparable, Dr. Jinkin's surgery was "absolutely indicated". He opined that an individual who has preexisting, compromised rotator cuff tissue (even if surgically repaired) is more likely to suffer a re-tear of the rotator cuff at a later date. He also disagreed with Dr. O'Brien that the Claimant had returned to his preinjury level of functioning prior to the date of Dr. Jinkin's surgery. He explained that since the Claimant had no pain, and had absolutely no treatment to his left shoulder prior to this injury, there is no indication that the Claimant was "back to baseline" by April 21, 2016. He disagrees with Dr. O'Brien's opinion that Dr. Jinkin's surgery was nearly 100% certain to fail because of the Claimant's preexisting gout, prediabetes and hyperlipidemia.

29. Dr. Weinstein also disputes Dr. O'Brien's allegation that Dr. Jinkins' recommendation for surgery so early in the Claimant's care fell below the standard of care outlined by the American Academy of Orthopedic Surgeons. Dr. Weinstein knows of nowhere in the standard of orthopedic care in Colorado Springs or in the American Academy of

Orthopedic Surgeons that states **all** non-operative modalities must first be exhausted prior to proceeding with surgery. Dr. Weinstein characterized Dr. O'Brien's statements as "absolutely ridiculous" and inappropriate. Dr. Weinstein also opined that the toweling off incident on June 18, 2017 should not be characterized as a "new injury". He attributes the Claimant's need for the capsular reconstruction or reverse total shoulder arthroplasty to the work related injury of 3/31/16. He explained that once a tendon is torn, it will never be as strong as it would have been (even after repair) had it not been torn in the first place.

30. Dr. Weinstein also explained that a superior capsular reconstruction is a relatively new procedure but it should not be deemed "experimental". He has personally performed many of these procedures. He explained that prospective randomized studies have not been performed because it would be unethical to do surgery on some individuals where the procedure is actually performed and not do it on others who expect to have the procedure, but actually do not.

31. Dr. Weinstein recommends this procedure to the Claimant because of the Claimant's relatively young age, and the uncertainty as to the "longevity" of a shoulder replacement. Since shoulder replacements have only been in existence since 2004, there is no way to know what happens to the implants in fifteen or twenty years. The Claimant could need a revision surgery in the future, if the arthroplasty loosens due to age. Dr. Weinstein's goal in doing a capsular reconstruction is to extend the time before the Claimant would ultimately need a total shoulder replacement-thereby lowering the probability that an additional revision surgery might be needed. Ultimately, if there are no other options available, Dr. Weinstein opined that it is appropriate to proceed with a reverse total shoulder even in an individual as young as Claimant.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). A Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents, and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

B. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of

evidence or every inference that might lead to conflicting conclusions, and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

C. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions, the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is to be decided on its merits. C.R.S. § 8-43-201.

Credibility Findings

D. In this instance, the ALJ finds Claimant to be credible, both as a hearing witness, and as a medical historian throughout his treatment in a sincere effort to get better. In this case, three medical experts have offered their sincerely held opinions, both on the issue of causation, as well as the reasonableness, necessity, and relatedness of the proposed surgery. The ALJ finds the opinions of Dr. Jinkins and Dr. Weinstein to be more persuasive, as outlined below, in part because of their active expertise in shoulder surgery, and in part because their reasoning is simply more sound than that of Dr. O'Brien.

Reopening, Generally

E. Pursuant to Section 8-43-303(1), C.R.S., a claim may be reopened based on a change of condition which occurs after MMI. *See El Paso County Department of Social Services v. Donn*, 865 P.2d 877 (Colo. App. 1993). The burden to prove that a claim should be reopened rests with the Claimant to demonstrate that reopening is warranted by a preponderance of evidence. Pursuant to Section 8-43-303(1), C.R.S., a "change of condition" refers to a "change in the condition of the original compensable injury or a change in claimant's physical or mental condition which can be causally connected to the original compensable injury." *Chavez v. Industrial Commission*, 714 P.2d 1328 (Colo. App. 1985). The issue of whether medical treatment is necessitated by a compensable aggravation or a worsening of the Claimant's preexisting condition is one of fact for resolution by the ALJ based upon the evidentiary record. *See Standard Metals Corp. v. Ball*, *172 Colo. 510, 474 P.2d 622 (1970); F.R. Orr Construction v. Rinta*, *717 P.2d 965 (Colo. App. 1985)*.

Medical Benefits, Generally

F. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. C.R.S. § 8-42-101. However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000). The question of whether a particular medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office, supra*; *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P.2d 251 (Colo. App. 1999). The claimant bears the burden of proof to establish the right to specific medical benefits. *HLJ Management Group, Inc. v. Kim,* 804 P.2d 250 (Colo. App. 1990).

G. The right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000).

H. The question of whether a particular medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office, supra*; *Wal-Mart Stores, Inc. v. Industrial Claims Office*, 989 P.2d 251 (Colo. App. 1999). The claimant bears the burden of proof to establish the right to specific medical benefits. *HLJ Management Group, Inc. v. Kim*, 804 P.2d 250 (Colo. App. 1990). Factual determinations related to this issue must be supported by substantial evidence in the record. Section 8-43-301(8), C.R.S. Substantial evidence is that quantum of probative evidence which a rational fact finder would accept as adequate to support a conclusion without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411, 415 (Colo. App. 1995).

Intervening Events

I. If an intervening event triggers disability or need for medical treatment, then the causal connection between the original injury and the claimant's condition is severed. *See, Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970); *Vargus v. United Parcel Service*, W.C. No. 4-325-149 (ICAO August 29, 2002); *Vandenberg v. Ames Construction,* W.C. No. 4-388-883 (ICAO December 5, 2007). An independent intervening injury does not necessarily have to be so severe that it would cause injury in an individual without a pre-existing weakness. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990).

J. The Claimant has a compensable injury if the employment-related activities aggravate, accelerate or combine with the preexisting condition to cause a need for medical treatment or produce the disability for which benefits are sought.

Section 8-41-301(1)(c), C.R.S. 2015; Snyder v. Industrial Claims Appeals Office, *942 P.2d 1337 (Colo. App. 1997)*. An industrial aggravation is the "proximate cause" of a Claimant's disability if it is the "necessary precondition or trigger" of the need for medical treatment. *Subsequent Injury Fund v. State Compensation Insurance Authority, 768 P.2d 751 (Colo. App. 1988)*. The evidence in this case reveals that the trigger of the Claimant's original left shoulder pain is the 3/31/16 industrial incident. Both Dr. Weinstein and Dr. Jinkins testified that they would never recommend surgery for an individual who had no pain in his shoulder even if it was discovered that preexisting degeneration existed in the joint. Both physicians explain that they treat the individual, not necessarily results of testing. The ALJ finds this reasoning persuasive.

K. The ALJ finds that the showering incident which resulted in the re-tear of the Claimant's rotator cuff should not be deemed a "new" injury or intervening event that breaks the chain of causation. If an industrial injury has left the body in a weakened condition and that weakened condition is the natural and proximate cause of additional injury, the Claimant's additional injuries are causally related to the original industrial injury. *Standard Metals Corp. v. Ball 172 Colo. 510, 474 P.2d 622 (1970)*. Even Dr. O'Brien admitted that the Claimant's left shoulder/arm was ultimately weaker after the repair by Dr. Jinkins, therefore rendering it more likely to be injured by re-tearing it.

Relatedness of Claimant's Current Symptoms to the Work Injury

L. Here, the evidence establishes that Claimant's pain started after lifting heavy doors on 3/31/16. The Concentra record of that same date notes the Claimant's complaints about his left shoulder. The physical examination by Dr. Jones necessitated referral for an immediate MRI. Every medical record thereafter documents ongoing left shoulder pain. There are no medical records documenting preexisting pain, treatment or limitation of the Claimant's left shoulder before this date.

M. Pain is a typical symptom from the aggravation of a pre-existing condition. The Claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment related activities and not the underlying pre-existing condition. See *Merriman v. Industrial Commission, 120 Colo. 400, 210 P.2d 448 (1949)*. "But for" the lifting incident of 3/31/16, the Claimant would not have begun to experience pain in his left shoulder on 3/31/16. Even Dr. O'Brien, the Respondent's expert, agreed that there was no evidence that the Claimant ever suffered from or was treated for preexisting left shoulder pain. He even admitted that a reverse total shoulder arthroplasty was reasonable and necessary and at this point in the Claimant's treatment.

N. Dr. Jinkins and Dr. Weinstein also both explained the basis for their opinion regarding causation–namely that the Claimant was asymptomatic prior to the lifting incident on 3/31/16. This original lifting incident was the catalyst for the Claimant's need for a capsular reconstruction or reverse total shoulder arthroplasty, and the ALJ finds that Claimant's conditions has worsened as a result, but not due to any intervening cause.

O. Where an industrial injury merely causes the discovery of the underlying disease to happen sooner, but does not accelerate the need for surgery for the underlying disease, treatment for the preexisting condition is not compensable. *Robinson v. Youth track, 4-649-298 (ICAO May 15, 2007)*. No evidence was offered by the Respondents that would lead one to conclude that the Claimant needed surgery on his left shoulder prior to 3/31/16. It was only after the lifting incident of 3/31/16 that the Claimant's left shoulder became symptomatic and the need for a superior capsular reconstruction or reverse total shoulder arthroplasty was recommended. As Dr. Jinkins and Dr. Weinstein explained, neither would ever recommend surgery for an individual who was not having pain, whether or not they had degeneration in their joint. The ALJ finds that Claimant's current need for the reconstruction or reverse total shoulder arthroplasty surgery has been accelerated by the lifting incident of 3/31/16.

Reasonableness and Necessity of the Proposed Surgery

P. Both Dr. Jinkins and Dr. Weinstein explained that a rotator cuff tear of such magnitude was only going to be successfully treated by surgery. Both addressed the issue of any surgical risks based upon the Claimant's preexisting prediabetes, gout, and obesity. Even Dr. O'Brien agreed that there was no evidence that the Claimant ever suffered from or has been treated for preexisting left shoulder pain. He admitted that a reverse total shoulder arthroplasty was reasonable and necessary at this point in Claimant's treatment - he disagrees on causation, and the reasonableness of first attempting the superior capsular reconstruction. As a surgeon who consistently performs complex shoulder surgeries, Dr. Weinstein's opinion on the advisability of this surgery is more persuasive to this ALJ than that of Dr. O'Brien.

Conclusion

Q. Claimant has met his burden of proof. Claimant's current condition was caused by his original 3/31/16 work injury, which has worsened with time, and without any significant intervening events. Such worsening of the original condition wrought by his work injury justifies a reopening of this case, with a need for additional medical treatment. In this instance, Claimant is to be afforded the opportunity to first try the superior capsular reconstruction. In the event that procedure proves nonviable- in the sole judgment of Claimant and Dr. Weinstein-then Claimant may then undergo the reverse shoulder arthroplasty.

ORDER

It is therefore Ordered that:

1. Claimant's case is reopened, due to worsening of Claimant's condition.

2. Respondents shall pay for the superior capsular reconstruction as proposed by Dr. Weinstein.

3. In the sole discretion of Dr. Weinstein and Claimant, should a reverse shoulder arthroplasty become necessary, Respondents shall pay for that procedure as well.

4. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 24, 2019

/s/ William G. Edie

William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-086-729-001

ISSUES

I. Whether Claimant established by a preponderance of the evidence that she developed a compensable occupational disease in the form of right sided carpal tunnel syndrome and right sided cubital tunnel syndrome, i.e., ulnar neuropathy, with an onset date of September 5, 2018.

II. Whether Claimant is entitled to reasonable, necessary, and related medical treatment.

III. Whether the medical treatment rendered by Concentra and Dr. McDermott, including the EMG performed on February 6, 2019, is authorized, reasonable, necessary, and related.

IV. Whether Claimant is entitled to temporary total disability benefits after she was terminated from employment.

V. Claimant's average weekly wage.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant has been a computer control machinist ("CCM") with Alfred Manufacturing for the past twelve years. She was terminated by layoff on February 6, 2019.
2. Claimant credibly testified that she felt an onset of severe right hand symptomatology on or about September 5, 2018, when she awoke in the middle of the night she had both numbness and tingling in her right hand. She also observed that her right hand was a bluish color. *Hearing Transcript ("HT") p, 18, lines 21 – 24*.
3. On September 6, 2018, she sought medical attention from Platte Valley Medical Center for wrist pain. *Exhibit 3*.
4. Thereafter, she was referred for an orthopedist evaluation by the emergency room doctors at Platte Valley Medical Center. However, after she reported her injury to her employer she was sent to Concentra and not seen by an orthopedist.
5. She began treatment at Concentra on or about September 11, 2018. The Concentra report of that date states that she was suffering right hand paresthesia and tenosynovitis in the right wrist. *Exhibit 4, BS 101*. She also complained of

severe pain in her fingers, blue coloration and extreme coldness in all of her right digits. *Id.*, *BS 102*.

6. Thereafter, Claimant underwent extensive physical therapy at Concentra which included therapeutic exercises stretching, strengthening, tendon gliding, and patient education. *Id*., *BS 99*.

7. On October 4, 2018, the Claimant was evaluated by Dr. David Bierbrauer who opined that Claimant was suffering right radial tunnel syndrome. He recommended an injection. This was provided. *Id*., BS 82. Dr. Bierbrauer noted that when the Claimant removed her brace from her right hand, she stated her fingers turned blue, even though they were symmetrical with her left upper extremity and he did not notice any discoloration at that time. *Id.*

8. On October 9, 2018, Claimant was evaluated by NP Halat. At this appointment, NP Halat provided Claimant work restrictions that limited her lifting to up to 5 pounds. *Ex. 4, BS 76*.

9. On October 30, 2018, Claimant returned to NP Halat at Concentra. At this visit, the note indicates the following:

> Ms. Forte returns to the Clinic today for recheck of her right wrist and arm pain. She has still not received anything on the ergonomic evaluation. She is feeling better and OT has been doing some paraffin on her hand and wrist which has really helped. She would like to go up on her restrictions at this time. *Ex. 4, BS 50.*

Therefore, NP Halat increased Claimant's lifting restrictions to 25 pounds. *Ex. 4, BS 50*. But, NP Halat kept Claimant on modified duty. *Ex. 4, BS 48*.

10. On November 1, 2018, Claimant attended physical therapy. The notes from that visit indicate that although her restrictions had been decreased, her wrist had become weak. The notes also indicate the restrictions continued to limit one or more of the Claimant's essential job functions. *Ex. 4, BS 45*.

11. On November 13, 2018, Claimant returned to Concentra and was seen by Dr. Strain. The note from this appointment also states that Claimant is feeling better and that she would like to go up on her restrictions. However, the note in this report, even though it was apparently written by Dr. Strain, is the exact note contained in the October 30, 2018, note which was written by NP Halat. The note from this November 13, 2018, report also provides:

> Ms. Forte returns to the Clinic today for recheck of her right wrist and arm pain. She has still not received anything on the ergonomic evaluation. She is feeling better and OT has been doing some paraffin on her hand and wrist which has really helped. She would like to go up on her restrictions at this time. *Ex. 4, BS 37.*

12. On November 26, 2018, Claimant returned to Concentra for additional physical therapy with OT Ahlenstorf. At this appointment, OT Ahlenstorf noted Claimant's "Impairment Goals," as was done in prior reports. In this report, the occupational therapist noted Claimant had made minimal progress towards her DASH goal.

She also indicated Claimant had made moderate progress towards her gripping goals. However, a review of Claimant's prior physical therapy records indicate that her initial grip strength was 7 pounds and her goal was 40 pounds. Nevertheless, as of this date, Claimant's grip strength was still 7 pounds and her grip strength goal was still 40 pounds. Moreover, the report states in another section that Claimant has only reached 12.5% of her overall goals at this time. Thus, the stated conclusion by OT Ahlenstorf that Claimant had made moderate progress towards increasing her grip strength is not supported by the records. *See Ex. 4, BS 25, and other Concentra Records*. In fact, Claimant's grip strength, which was required to perform her job duties, had not improved at all.

13. On November 27, 2018, Claimant returned to NP Halat. Despite the physical therapist noting that Claimant had only met 12.5% of her goals and documentation that her grip strength had not improved at all, NP Halat noted that Claimant's symptoms have nearly completely resolved. She also indicated she reviewed the Job Demands Analysis performed by Mr. Fallik and determined that based on Mr. Fallik's conclusions, Claimant's job did not contribute to her CTS. She further stated Claimant should be advancing her restrictions in future physical therapy visits and prescribed 3 more weeks of physical therapy. She concluded that after Claimant completes another 3 weeks of physical therapy, Claimant should be able to be returned to full duty. However, despite such statement, she returned Claimant to full duty that day. *Ex. 4, BS 19-20.* In the end, the ALJ infers and finds that NP Halat released Claimant to full duty because she did not think Claimant's job duties contributed to her carpal tunnel syndrome and elbow neuropathy based upon Mr. Falik's conclusions. Therefore, the ALJ finds that Claimant's upper extremity problems still prevented her from performing her regular job duties even though she was released to full duty by PA Halat.

14. On November 28, 2018, OT Halat discussed Mr. Fallik's report with Dr. Strain and it was determined that Claimant's case should be closed since they determined, based on Mr. Fallik's report, her right upper extremity problems were not work related. Such report also indicates Claimant should be returned to full work activity and that she would be able to work her entire shift. *Ex. 4, BS 20*. However, the ALJ finds that this full duty release was not based on Claimant's ability to work, but was instead based on the case being closed and their erroneous conclusion that Claimant's condition was not caused by her work activities and therefore there were no restrictions associated with a work related condition.

15. As previously referenced, and at Respondents request, a Job Demands Analysis was performed by Howard Fallik of Genex. He issued a report on October 21, 2018. *Exhibit 11*. In his report, Mr. Fallik opined Claimant's job duties did not involve either primary or secondary risk factors that could have contributed to her right upper extremity problems.

16. Claimant testified that she observed the Job Demands Analysis performed by Mr. Fallik. A fellow-employee named "Julian" (who had been on the job a couple of weeks) was asked to perform the various tasks. These are depicted in the

pictures attached to the Job Demands Analysis. Claimant's testimony was that Julian did not fully perform the tasks that she performed throughout her ten-hour shift. Rather, he demonstrated what tasks might be required. *HT p. 24, line 24 to p. 25, line 9*.

17. Although he did not talk to Claimant about her job, (*HT p. 30, line 23 to p. 31, line 1*), Mr. Fallik opined that the job demands of Claimant's work are in the light duty category. Claimant disagreed because her job required up to 50 lbs. lifting. She also testified that pushing on her handle or vice (or wrench) during the process was frequent, not infrequent, contradicting the statement by Mr. Fallik. *See generally HT p. 25, line 6 to p. 30, line 22*.

18. Next, despite Mr. Fallik's statement, Claimant's use of a wrench or power tool was frequent, not infrequent. She also had to lift frequently from the floor to waist and with frequent bending, squatting and twisting, with simple grasping frequently. All of these conflict with Mr. Fallik's report. *Id.*

19. The Claimant testified that the job she was called upon to do when she was injured had 15,000 parts to be completed over one week, or 3,750 parts a day) 375 parts an hour. Over this period, Claimant had constant exposure to vibration through drills and a power hose. Additionally, she was asked to write down her tasks. This she did and used this experience to enable her to detail her regular job activities that involved the repetitive and forceful use of her hands. *Id.*

20. Relying exclusively on the conclusions in Mr. Fallik's Job Demands Analysis, Concentra's Nurse Practitioner Deanna Halat opined that the Claimant did not meet the requirements of "Rule 17 for CTS or Radial Tunnel Syndrome based on the findings of Force and Repetition/Duration and Awkward Posture and Repetition/Duration." *Exhibit 4, BS 19 and 20*.

21. The record does not show that NP Halat performed an independent jobsite evaluation or visited the job site. The record also does not show that NP Halat reviewed the actual raw data of Mr. Fallik's report. Instead, NP Halat merely relied upon the stated conclusions in Mr. Fallik's report.

22. Although Claimant was given work restrictions by Concentra providers during her treatment with Concentra, she continued to work full time, i.e., 40 hours per-week, until she was laid off and terminated on February 6, 2019.

23. Shortly before her termination, Claimant Respondents denied Claimant further medical care at Concentra. On January 11, 2019, Claimant wrote a letter to Nurse Halat confirming that she had been denied medical care at Concentra. *Exhibit 5*. Thereafter, Claimant sought medical attention from her primary care physician, Dr. McDermott.

24. Dr. McDermott evaluated Claimant on January 25, 2019. His report noted the following:

> **Review of Systems and Symptoms:**
>
> Constitutional: negative

> Musculoskeletal: right forearm pain, weakness and numbness for about 7 months. This was thought to be WC related from repetitive motion. Patient and specialist consult and the specialist thought she may have radial tunnel syndrome. Patient says both the specialist and the primary treating doctor wanted EMG but WC carrier refused.

Exhibit 10, BS 139.

25. After Claimant was denied medical care by Concentra, she underwent an EMG on referral by Dr. McDermott, despite Respondents' Notice of Contest. *Exhibit 1, BS 1*.

26. Claimant's EMG, on February 6, 2019, established that the ulnar nerve conduction velocities were slow across the elbow, likely establishing an entrapment distally in the cubital tunnel. There also was a moderate entrapment of the right medial nerve of the wrist, consistent with carpal tunnel syndrome. (*See EMG*.) Dr. Kakkar recommended Claimant undergo a hand surgery consultation. *Exhibit 6, BS 113*.

27. As found above, on February 6, 2019, Claimant was laid off from work. *HT pg. 50, line 7-9*.

28. Following the EMG, Claimant continued treatment with Dr. McDermott. On March 25, 2019, Dr. McDermott issued Claimant a Spica splint to be worn at all times to help protect the carpal tunnel from further inflammation. *Exhibit 10, BS 143*. Additionally, he issued a report on May 8, 2019, in which he opined that at that time he thought Claimant's carpal tunnel syndrome was probably a result of her repetitive work. *Id*., *BS 145*.

29. The ALJ finds that Claimants' regular job duties were injurious. The ALJ also finds that Claimant was unable to perform her regular job duties as of September 5, 2018. As found above, Claimant had only met 12.5% of her goals in physical therapy and made no progress in improving her grip strength that was necessary to perform her job. Moreover, the work restrictions provided by Concentra through the majority of her claim support a finding that Claimant was unable to perform her regular job duties. Furthermore, the release to full duty was not medically based on Claimant's underlying condition, but administratively based on her claim being closed and NP Halat and Dr. Strain's erroneous conclusion that Claimant's condition was not work related. Moreover, the reduction in work restrictions, which were provided shortly before her case was closed, was done at Claimant's request in order to see if she could handle working closer to her pre-injury capacity. Such request does not negate the finding of this ALJ that Claimant has remained restricted from performing her regular job duties since September 5, 2018.

30. The ALJ further finds that wearing the Spica splint would inhibit Claimant's ability to perform her regular job duties and would restrict her from performing her regular job. Again, the ALJ finds that Claimant's was returned to full duty, based on the incorrect assumption that her work was not injurious and was not the

cause of her carpal tunnel syndrome and cubital tunnel syndrome, i.e., ulnar neuropathy. Had a proper causation assessment been made by NP Halat and Dr. Strain, the ALJ finds that the original restrictions issued by Concentra would have remained and Claimant would have been restricted from performing her regular job duties by the Concentra providers. Moreover, once laid off from work, the ALJ finds that Claimant has been unable to obtain similar employment as a machinist based on the finding that working as a machinist caused her underlying condition, she remained symptomatic, she had pain and limited grip strength, and may need surgery.

31. At the request of the Respondents, Claimant was evaluated by Dr. Marc Steinmetz on April 23, 2019. Dr. Steinmetz confirmed Claimant suffers from symptomatology consistent with carpal tunnel syndrome, including positive Tinel's and Phalen's signs. He also documented Claimant's right elbow tenderness on both the medical and lateral aspects, along with right shoulder tenderness. *Exhibit 7, BS 117*.

32. Dr. Steinmetz's opinion relied heavily on Mr. Fallik's stated conclusions as set forth in the Job Demands Analysis, while ignoring Claimant's statement concerning the nature of her job's physical demands, as well as the raw data contained in Mr. Fallik's report. Dr. Steinmetz concluded Claimant's purported history was inconsistent with the Job Demands Assessment and did not support a finding that her job caused her underlying upper extremity conditions. *Exhibit 7, BS 118*. His conclusion, however, is neither well founded nor well explained.

33. Dr. Steinmetz relied on Mr. Fallik's stated conclusions in his Job Demands Analysis to establish Claimant failed to meet the requirements of the risk factors found in Rule 17 of the *Guidelines*. *Exhibit 9, BS 138*. This Rule provides that for the disease of carpal tunnel syndrome there is good evidence that a combination of repetition and force for six hours, as well as a combination of repetition and forceful tool use with awkward posture for six hours, or a combination of 2 lb. pinch or 10 lb. hand force three times or more per minute for three hours constitute risk factors for the development of carpal tunnel syndrome. *Id.*

34. The Respondents introduced the testimony of supervisor Juan Jimenez who asserted that he had reviewed the report of Mr. Fallik and that the report was accurate.

35. The Claimant testified that although Mr. Jimenez was physically present, he did not observe the job demand evaluation performed by Mr. Fallik. Rather, he was engaged in other tasks while this was being performed. Mr. Jimenez disagreed with the statements by Claimant concerning the weights that she would be required to lift throughout the day. Claimant's rebuttal contested the accuracy of the testimony of Mr. Jimenez. *HT p. 98, line 16 to p. 99, line 3*. She also contested his claim that she was an inefficient worker. *HT p. 99, line 4 – 12*.

36. Finally, she credibly testified that Mr. Jimenez was not focused on Mr. Fallik's evaluation. *HT p, 99, lines 25 to p. 100, line 6*.

37. There appears to be no dispute that Claimant's job required the repetitive and forceful use of her upper extremities. The dispute, however, is over the extent of the repetitive and forceful use of her upper extremities that was required for her to perform her job and whether such activities caused her to develop her upper extremity conditions. To assist in this assessment, Mr. Fallik purported to measure the repetitive and forceful use of Claimant's upper extremities required to perform her job and whether they met any of the primary or secondary risk factors for the development of cumulative trauma disorders as contained in the *Guidelines*.

38. A cursory review of Mr. Fallik's conclusions indicates Claimant's job duties did not meet any of the primary or secondary risk factors for the development of a cumulative trauma disorder. Moreover, Dr. Steinmetz relied upon Mr. Fallik's conclusions without looking at and discussing the underlying raw data. For example, a review of the raw data contained in Mr. Fallik's report reveals that he only conducted two time studies. However, the results of each time study was not adequately considered and addressed by Dr. Steinmetz.

    - The first time study assessed whether Claimant's job duties met the Primary Risk Factor of 6 hours of use of 2 pounds pinch force or 10 pounds hand force 3 times or more per minute. For this risk factor, Mr. Fallik measured someone else demonstrating Claimant's job duties that required the use of 10 pounds of hand force 3 times or more per minute. Over a one-hour period, Mr. Fallik determined Claimant's job duties met that portion of the risk factor for 35 out of 60 minutes. Therefore, based on a 9 hour and 40 minute workday, Claimant used 10 pounds of hand force 3 times or more per minute for approximately 5 ½ hours per day. This is just under the 6 hours required under the *Guidelines* to be a primary risk factor. Moreover, if Claimant's testimony is credited, which it is, in that she worked faster than what Mr. Fallik observed another co-worker demonstrate, it is reasonable to conclude and find Claimant met the 6-hour primary risk factor contained in the *Guidelines*.[1] Even if Mr. Fallik's assessment were accurate, these tasks would be a secondary risk factor under the *Guidelines* since the time performing such tasks exceeded three hours.

    - The second time study assessed whether Claimant's job duties met the secondary risk factor of 3 hours of use of hand held tools weighing 2 pounds or greater. For this risk factor, Mr. Fallik determined Claimant's job required the use of hand tools weighing 2 pounds or more for greater

[1] Although there was testimony that the machine performed each task at a set time and therefore Claimant could not be faster than any other worker, Claimant credibly testified that she worked faster. Claimant's testimony is credited because even though each task the machine completed might have been performed at the same speed, a worker could still place the material into the machine and take it out of the machine faster, and perform other assembly and manual work faster, before initiating the machine to perform each additional predetermined task.

It should also be noted that Mr. Fallik did not document whether he measured how often a worker was required to use 2 pounds of pinch force, which is also a risk factor.

than 3 ½ hours per day. Therefore, based on his raw data, Claimant's job duties also met this secondary risk factor contained in the *Guidelines*.

39. Despite the raw data contained in Mr. Fallik's report, Dr. Steinmetz' report and testimony failed to describe how these findings were used to assess causation in this matter and how these findings, if true, affected his causation assessment in this case.

40. Furthermore, the *Guidelines* indicate that there is good evidence that combination of 2 pound pinch or 10 pounds of hand force 3 times or more per minute for 3 hours is a risk factor for the development of carpal tunnel syndrome. *Guidelines*, *pg. 29*. Despite this information being readily available to Dr. Steinmetz, he failed to describe and articulate how this information impacted his causation assessment.

41. In addition, the *Guidelines* provide that work activities involving wrist bending and/or full elbow flexion/extension, repetition for 4 hours, and vibration, or repetitive pronation of the forearm, or sustained pressure at the cubital tunnel are additional factors to consider in the development of cubital tunnel syndrome. However, it does not appear Mr. Fallik documented whether these risk factors were or were not present. Again, despite this gap, Dr. Steinmetz failed to elicit the lack or presence of this exposure from Claimant in order to assess causation regarding the cause of Claimant's cubital tunnel syndrome.

42. In addition, despite Dr. Steinmetz concluding Claimant's right upper extremity conditions were caused by non-occupational factors, he also failed to assess whether Claimant's job duties aggravated such conditions and necessitated the need for medical treatment. The *Guidelines* specifically state and emphasize the following:

> *Remember that preexisting conditions may be aggravated by, or contribute to, exposures lower than those listed on the table*. (Emphasis added.)

Exhibit 5, Medical Treatment Guidelines, Section D(3), pg. 18.

43. Dr. Steinmetz also failed to critically analyze and assess whether Claimant's work activities, at levels that might be lower than the various risk factors contained in the *Guidelines*, combined with her predisposing factors, such as smoking, and being female, and caused her upper extremity conditions.

44. Also absent from Dr. Steinmetz' analysis is how the force and physical demands placed on Claimant's right upper extremity each and every day while at work and performing her job could not have aggravated a preexisting neuropathy.

45. In addition, *Exhibit 5* of the *Guidelines* indicates that the epidemiological literature used to determine the primary and secondary risk factors for the development of certain cumulative trauma disorders "rely most heavily upon healthy worker populations and may not reflect the worker population with other concurrent disease or comorbidities." [*Exhibit 5, Medical Treatment Guidelines, Section D(3), pg. 18*.] Dr. Steinmetz failed to address this section of the *Guidelines* and whether it was relevant in this case.

46. Overall, the ALJ does not credit or find persuasive Dr. Steinmetz' opinions as set forth in either his report or hearing testimony regarding causation. The ALJ does, however, credit and find persuasive that portion which diagnoses Claimant with carpal tunnel syndrome and a right ulnar neuropathy, i.e., cubital tunnel syndrome. The ALJ also does not credit or find persuasive the opinions of Dr. Strain or NP Halat regarding their causation assessments and release of Claimant to full duty.

47. Overall, the ALJ finds the testimony of the Claimant concerning the nature of her job activities as a CNC machinist to be credible. The ALJ rejects the opinions of both Mr. Fallik and Mr. Jimenez to the extent such opinions and testimony supports a contention that Claimant's job duties did not meet any primary or secondary risk factors under the *Guidelines* or that Claimant's job did not require the repetitive and forceful use of her upper extremities.

48. The ALJ does credit those portions of Mr. Fallik's report that demonstrates Claimant's job duties involved the repetitive and forceful use of her upper extremities and hands and supports a finding that her job duties met some of the primary and/or secondary risk factors for the development of cumulative trauma disorders set forth in the *Guidelines*.

49. The ALJ also finds that the primary and secondary risk factors involved with Claimant's job duties are also set forth as risk factors for the development of carpal tunnel syndrome.

50. Claimant is a credible witness and her testimony is both persuasive and consistent with a significant portion of the medical records contained in record.

51. The ALJ finds and concludes that Claimant developed an occupational disease involving her right upper extremity in the form of carpal tunnel syndrome and cubital tunnel syndrome, i.e., an ulnar neuropathy.

52. Claimant has also established that she can no longer perform her regular job duties due to her occupational disease. Claimant further established that once she was laid off and terminated from her job on February 6, 2019; her wage loss became attributable to her occupational disease.

53. Claimant has also established that Respondent, and the designated and authorized providers at Concentra, refused to provide Claimant medical treatment based on the assumption that her condition was not work related. Therefore, Claimant selected, and sought treatment from, Dr. McDermott to treat her occupational disease. Therefore, Dr. McDermott, and his referrals, are authorized providers.

54. Claimant has also established that the medical treatment she has obtained up through the date of the hearing to diagnose and treat her right upper extremity problem, is reasonable, necessary, and related to her occupational disease. This includes the EMG that was performed by Dr. Kakkar at Lowry Neurological Associates, pursuant to a referral from Dr. McDermott.

55. Claimant worked 40 hours per week and was paid $18.00 per hour. Neither party disputes the hours she worked each week and the rate at which she was paid. Therefore, her average weekly wage is $720.00.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence dispositive of the issues involved. The ALJ has not addressed every piece of evidence leading to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005).

Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence

of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995).

I. Whether Claimant established by a preponderance of the evidence that she developed a compensable occupational disease in the form of right sided carpal tunnel syndrome and right sided ulnar neuropathy with an onset date of September 5, 2018.

The ALJ makes the rational choice to accept Claimant's testimony, the opinion of Dr. McDermott, portions of Dr. Steinmetz and Mr. Fallik's, and the plausible inferences drawn therefrom. The ALJ, however, rejects those portions of Dr. Steinmetz, Halat, and Strain's opinions regarding causation. The ALJ also rejects those portions of Mr. Fallik's report that understates the force, repetition, and weight that is necessary for Claimant to perform her job. Despite medical opinion to the contrary, a claim may be supported by lay testimony alone. See *Lymburn v Symbois Logic*, 952 P.2d 831 (Colo. App. 1997).

Section 8-40-201(14), C.R.S. defines "occupational disease" as follows:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

This section imposes additional proof requirements beyond that required for an accidental injury. An occupational disease is an injury that results directly from the employment or conditions under which work was performed and can be seen to have followed as a natural incident of the work, as is the case here. Section 8-40-201(14). C.R.S.; *Climax Molybdenum Co. v. Walter,* 812 P.2d 1168 (Colo. 1991); *Campbell v. IBM Corporation,* 867 P.3d 77 (Colo. App. 1993). In contrast, an accidental injury is traceable to a particular time, place, and cause. *Colorado Fuel & Iron Corp. Industrial Commission,* 154 Colo. 240,392 P.2d 174 (1964); *Delta Drywall v. Industrial Claims Appeals Office,* 868 P.2d 1155 (Colo. App. 1993).

Under the statutory definition, the hazardous conditions of employment need not be the sole cause of the occupational disease. A Claimant is entitled to recovery demonstrating that the hazards of employment cause, intensify, or aggravate, to some reasonable degree, the disability. *Anderson v. Brinkhoff,* 859 P.2d 819 (Colo. 1993). Once the Claimant makes this showing, the burden of establishing the existence of a non-industrial cause and the extent of its contribution to the occupational disease shifts to the employer. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App 1992).

Dr. McDermott opined that Claimant's occupational diseases of September 5, 2018, might have been caused by the physical demands of her job. The ALJ finds that Claimant's job activities caused her right sided carpal tunnel syndrome and cubital

tunnel syndrome, i.e., ulnar neuropathy. This culminated in a disabling occupational disease injury causing the Claimant to suffer industrial disability from September 5, 2018, ongoing.

Dr. Steinmetz also acknowledged the Claimant experienced symptoms that are consistent with carpal tunnel syndrome and an ulnar neuropathy at the elbow. However, he opined that her conditions were not caused by her work. In formulating his opinion, he used the Medical Treatment *Guidelines* ("*Guidelines*") to opine that the Claimant was exposed to none of the primary or secondary risk factors listed therein. His opinion relied solely on the conclusions stated in the Job Demands Analysis performed by Mr. Fallik and he rejected Claimant's testimony as to the demands of her job as well as the raw data contained in Mr. Fallik's report.

The *Guidelines* are contained in Rule of Procedure 17, 7 CCR 1101-3. In *Hall v. Industrial Claim Appeals Office*, 47 P.3d 459 (Colo. App. 2003), the Colorado Court of Appeals noted that the *Guidelines* are to be used by health care practitioners when furnishing medical care under the Workers' Compensation Act ("Act"). See § 8-42-101(3)(b), C.R.S. Further, the *Guidelines* are regarded as accepted professional standards for care under the Act. *Rook v. industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). At the same time, § 8-43-201(3), C.R.S. provides that ALJs are not required to utilize the *Guidelines* as the sole basis in determining whether medical treatment is reasonable, necessary, and related to an industrial injury. Additionally, the General *Guidelines* Principles provide that:

> Mechanisms of injury for the development of cumulative trauma related conditions have been controversial. However, repetitive awkward posture, force, vibration, cold exposure, and combinations thereof are generally accepted as occupational risk factors for the development of cumulative trauma related conditions.

Rule 17, Exhibit 5, p. 6.

The Courts have also recognized *Guidelines* limitations:

> We have long held that an expert's compliance with the *Guidelines* does not dictate whether the expert's opinions are admissible, or whether they may constitute substantial evidence supporting a fact finder's determinations. Rather, compliance with the *Guidelines* may affect the weight given the ALJ to any particular medical opinion. See *Cahill v. Patty Jewett Golf Course*, W.C. No. 4-729-518 (Feb. 23, 2009); see also *Thomas v. Four Corners Health Care,* W.C. No. 4-484-220 (April 27, 2009)(noting ALJ not required to award or deny medical benefits based on the *Guidelines*); *Burchard v. Preferred Machining*, W.C. No. 4-652-824 (July 23, 2008)(declining to require application of *Guidelines* for carpal tunnel syndrome in determining issue of PTD); *Siminoe v. Worldwide Flight Services, Inc.*, W.C. No. 4-535-290 (Nov. 21, 2006)(appropriate for ALJ to consider *Guidelines*; however, deviation from medical treatment guidelines does not compel fact finder to disregard the opinion of that medical expert on issue of causal connection between work-related injury and particular medical condition).

Ames v. Adams 12 Five Star Schools, WC No. 4-933-851-01 (ICAO 06/22/2018).

The risk factor definitions in the *Guidelines* indicate that the combination of force, repetition, and vibration are known risk factors for the development of carpal tunnel syndrome. *Ex. 9, BS 138*. The *Guidelines* also indicate that there is good evidence that carpal tunnel syndrome can be caused by the combination of:

> Repetition and force for 6 hours, or
>
> Repetition and forceful tool use with awkward posture for 6 hours, or
>
> Force, repetition, and awkward posture, or
>
> Two pound pinch or 10 pound hand force 3 time or more per minute for 3 hours.

See *Rule 17, Exhibits 5, BS 137-138.*

Based on Claimant's testimony and portions of Mr. Fallik's report, these risk factors were involved in Claimant's job. As found, Claimant's job duties required the use of 10 pounds of hand force 3 times or more per minute for 6 hours and represent a primary risk factor under the *Guidelines*. Claimant's job duties also required her to use hand tools weighing 2 pounds or more for over 3½ hours per day and these represented a secondary risk factor under the *Guidelines.* Therefore, pursuant to the *Guidelines*, Claimant's carpal tunnel syndrome was more likely than not caused by her job duties.

The *Guidelines* also indicate that there is some evidence that the combination of forceful tool use, repetition and probably posture for 6 hours and holding a tool in position with repetition can cause cubital tunnel syndrome. The *Guidelines* also indicate that that work activities involving wrist bending and/or full elbow flexion/extension, repetition for 4 hours, and vibration, or repetitive pronation of the forearm, or sustained pressure at the cubital tunnel are additional factors to consider in the development of cubital tunnel syndrome. See *Ex 9, BS 138*. Although it does not appear Mr. Fallik accurately documented whether these risk factors were or were not present, the ALJ finds and concludes that Claimant's job duties involved repetition, force, flexion and extension of her elbow, and that such job duties caused her to develop cubital tunnel syndrome, i.e., an ulnar neuropathy.

Claimant also has symptoms associated with carpel tunnel syndrome, which include a positive Phalen's sign and positive Tinel's sign, along with paresthesia in the thumb, index and middle finger. Next, Claimant's nerve conduction velocity study documents the presence of carpal tunnel, recognizing that symptoms fluctuate over time in both directions. *Id*., *BS 83, 84*. This positive nerve conduction study demonstrated slowing of the medial distal sensory and nerve changes in the median thenar muscles. *Id.*, *BS 86*. The *Guidelines* also provide that there is strong evidence that patients who do not have chronic carpal tunnel syndrome, will have functional improvement six months after surgery. There has been limited functional improvement.

The EMG established that Claimant was referred by Dr. McDermott for numbness, tingling and pain in the right hand, which had occurred over four months. *Exhibit 6, BS 110*. The EMG demonstrated prolonged latencies in the median ulnar

nerve, nerve entrapment at the wrist consistent with carpal tunnel syndrome, and ulnar nerve entrapment at the elbow. The EMG provider suggested hand surgery.

There is no reasonable dispute that Claimant suffers from carpal tunnel syndrome and an ulnar neuropathy. The dispute is over causation. Respondents' rely on the Job Demands Analysis performed by Fallik. The Claimant's testimony is that the Claimant's actual duration of job performance was never evaluated by him. Rather, a fellow employee demonstrated some of the jobs that she did without showing how long the Claimant performed them and what the demands were over time.

Claimant credibly testified that her physical job demands were much higher than those reported by Mr. Fallik. Further, he did not have her perform any of the tasks that she regularly performed. The Claimant's credible testimony concerning those tasks that she was required to perform was consistent with the notes she took when she was asked by the Employer to note what the activities she performed on the 15,000 piece job.

The ALJ finds Claimant's testimony more credible as to her job duties than Mr. Fallik's conclusions. Further, the ALJ finds that Dr. Steinmetz's opinion is based heavily on Mr. Fallik's Job Demands Analysis, which the ALJ finds less credible than Claimant's testimony.

Dr. McDermott concluded that Claimant's carpal tunnel syndrome was probably related to her job duties and that her neuropathy and dysfunction may be causally related to the nature of her work activities as well. The ALJ rejects Dr. Steinmetz's opinion on causation and adopts that of Dr. McDermott, to the extent it supports causation, based on substantial evidence in the record. Further, and although not required, Dr. Steinmetz does not establish a credible and persuasive alternate cause of Claimant's carpal tunnel syndrome or ulnar neuropathy.

The ALJ finds the testimony of the Claimant credible. *Lymburn v. Symies Logic*, 952 P.2d 831 (Colo. App. 1997).

Therefore, the ALJ finds and concludes Claimant has established by a preponderance of the evidence that she developed a compensable occupational disease in the form of right sided carpal tunnel syndrome and right sided cubital tunnel syndrome, i.e., ulnar neuropathy, due to the forceful and repetitive nature of her job duties.

II. Whether Claimant is entitled to reasonable, necessary, and related medical treatment.

III. Whether the medical treatment rendered by Concentra and Dr. McDermott, including her EMG performed on February 6, 2019, is authorized, reasonable, necessary, and related.

The Respondents are liable for medical treatment that is reasonably necessary to cure and relieve the effects of the industrial injury. Section 8-42-101 (1)(a), C.R.S. 2007; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997);

Country Squire Kennels v. Tarshis, 899 P.2d 362 (Colo. App. 1995). Where the Claimant's entitlement to benefits is disputed, the Claimant has the burden to prove a causal relationship between a work-related injury and the condition for which benefits or compensation are sought. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Whether the Claimant sustained his burden of proof is generally a factual question for resolution by this ALJ. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997).

Where a treating physician refuses to render care to a Claimant the right of selection passes to the Claimant. See *Rogers v. Industrial Claims Appeals Office*, 746 P.2d 565 (Colo. App. 1987). Further, even if a treating physician refers a Claimant for treatment to the Claimant's primary care doctor based on the mistaken belief that a medical problem is not work related the primary care doctor becomes authorized despite the authorized doctor's mistake. *Cabela v. ICAO*, 198 P.3d 1277 (Colo. App. 2008).

The medical treatment provided by Concentra, Dr. Kakkar, and Dr. McDermott, was reasonable and necessary to diagnose and treat Claimant for her work related occupational disease. The evidence here also established that the Respondents denied Claimant further medical care by refusing her further treatment based on the mistaken belief that her condition was not work related. This refusal is supported by the evidence in the record. This triggered Claimant's right to select her physician, which she did, by choosing Dr. McDermott, her primary care physician to treat her. By virtue of this refusal, Dr. McDermott and his referrals are authorized. See *Roybal v. University of Colorado Health Sciences Center*, 768 P.2d 1249 (Colo. App. 1988).

Therefore, Claimant has established by a preponderance of the evidence that she is entitled to reasonable and necessary medical treatment to treat her occupational disease. Claimant also established by a preponderance of the evidence that the treatment provided by Concentra and Dr. McDermott, as well as their referrals, was reasonable, necessary, and related. This includes the EMG that was performed by Dr. Kakkar at Lowry Neurology Associates, P.C.

IV. Whether Claimant is entitled to temporary total disability benefits after she was terminated from employment.

To prove entitlement to TTD benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that she left work as a result of the disability, and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a

complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

The existence of disability presents a question of fact for the ALJ. There is no requirement that the claimant produce evidence of medical restrictions imposed by an ATP, or by any other physician. Rather, lay evidence alone may be sufficient to establish disability. *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997).

As found, Claimant's carpal tunnel syndrome and cubital tunnel syndrome has resulted in pain and decreased grip strength involving her right upper extremity. Such pain and limited grip strength precluded Claimant from performing her regular job duties as a machine operator. This was also evidenced by Claimant's testimony and the work restrictions issued by the medical providers at Concentra. Although Claimant was released to full duty by NP Halat and Dr. Strain, such release was based upon the erroneous determination that her condition was not work related and that there were therefore no restrictions based on a work related condition. Moreover, once she was laid off on February 6, 2019, her occupational disease and her symptoms such as pain and weakened grip strength hindered her ability to obtain and maintain subsequent employment as a machine operator. In addition, her regular job duties were injurious and caused her underlying condition and therefore continuing to perform her regular job duties could have worsened her condition. Moreover, in March of 2019, when she was prescribed a Spica splint, and advised to wear it at all times, except for hygiene, to protect the carpal tunnel from further inflammation, evidence of her occupational disease, the possibility of further injury, and inability to work as a machine operator was also visible to prospective employers.

Therefore, Claimant has established by a preponderance of the evidence that she is entitled to temporary total disability benefits as of the date she was laid off from work, which was February 6, 2019.

V. Claimant's average weekly wage.

Claimant worked 40 hours per week and was paid $18.00 per hour. Neither party disputes the hours she worked each week and the rate at which she was paid. Therefore, her average weekly wage is $720.00.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant established that she developed a compensable occupational disease in the form of right sided carpal tunnel syndrome and cubital tunnel syndrome, i.e., ulnar neuropathy.

2. Claimant is entitled to reasonable and necessary medical treatment to cure and relieve her from the effects of her occupational disease. This includes the treatment provided by Concentra and their referrals.

3. The right to select a treating physician passed to Claimant and Claimant selected Dr. McDermott. Therefore, Dr. McDermott is an authorized treating physician, as are his referrals, such as Dr. Kakkar.

4. Respondents shall pay for the medical treatment, which has been provided by Concentra, Dr. McDermott, and Dr. Kakkar, and their referrals, subject to the Colorado Medical Fee Schedule.

5. Claimant's average weekly wage is $720.00.

6. All issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 30, 2019

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant overcame Dr. Burris' DIME opinion on causation and impairment by clear and convincing evidence.

FINDINGS OF FACT

1. Claimant is a 53-year-old male who has worked for Employer as a milk hauler since 2006.

Prior History

2. Claimant sustained a back injury in the 1990s and underwent back surgery in approximately 1994. Subsequent to the surgery Claimant treated with physical therapy and took medications.

3. On June 29, 2010, Claimant was evaluated by Kimberly Weisser, PA at Brush Family Medicine. He presented with worsening back pain with an onset of "years ago." The location of pain was in Claimant's mid and low back radiating to both legs. He reported his pain was piercing and aggravated by daily activities and sitting. PA Weisser continued Claimant on medications and recommended physical therapy or acupuncture. Claimant declined the physical therapy and acupuncture.

4. On October 21, 2011, Claimant returned to PA Weisser with complaints of low back pain with an onset of one year. Claimant reported that the back pain occurred intermittently and rated the pain 6/10, with pain radiating down the back and into the bilateral thighs. It was noted Claimant had increased pain in the buttock when he sat for long periods of time while in his truck. Claimant continued on medication.

5. Between October 2011 and June 2012, Claimant had multiple visits with PA Weisser for unrelated issues. The medical records for those visits do not address Claimant's chronic back pain.

6. On June 18, 2012, PA Weisser again evaluated Claimant. Claimant complained of low back pain with a gradual onset and duration of three months. The pain was described as radiating down to both feet and was aggravated by sitting. PA Weisser assessed Claimant with low back pain and sciatica. She prescribed additional medication and ordered a lumbar MRI.

7. Claimant underwent x-rays and an MRI of his lumbar spine on July 5, 2012. He was noted to have degenerative disc disease at L5-S1, central disc extrusion at L4-L5

splaying the descending nerve roots, disc space height loss at L5-S1 associated with dorsal protrusion of disc material and a prior laminotomy at L5.

8. PA Weisser reevaluated Claimant on September 14, 2012. Claimant continued to complain of mild to moderate persistent and worsening back pain radiating to the lower extremities. PA Weisser referred Claimant to a neurologist and noted Claimant would follow-up with workers' compensation to see if his issues were a continuation of his previous workers' compensation claim. Claimant returned to PA Weisser on October 3, 2013 and November 5, 2013 with persistent low back pain. Claimant continued on medications.

9. On October 17, 2014, Claimant was again seen by PA Weisser, who noted Claimant was still having pain if he sat for too long and that the pain was radiating to his thighs. PA Weisser refilled Claimant's medications for a year, noting he had been using them without increase and was able to function without problems.

10. On May 14, 2015, PA Weisser reevaluated Claimant. Claimant reported persistent back pain that was aggravated by walking, climbing stairs, and driving his truck. Claimant continued on medications.

11. On June 3, 2015, Claimant took and passed a Department of Transportation driver's permit physical examination. Claimant sought treatment for unrelated issues on October 16, 2015 and December 5, 2015. The medical notes for these visits do not address Claimant's chronic back pain.

12. On May 13, 2016, Claimant returned to PA Weisser. Claimant reported that he felt good with the exception of back pain at night, which medications helped. PA Weisser refilled Claimant's medications.

Current Industrial Injury

13. On August 4, 2016, Claimant sustained an admitted industrial injury when he tripped over a door frame and landed on the left side of his body. Claimant immediately reported the incident to Employer but was able to finish his shift.

14. On August 8, 2016, Claimant presented to authorized treating physician (ATP) Anne Louise Gallion, M.D. at Banner Health. Claimant reported falling on his left side and experiencing pain in his left wrist, left shoulder, low back, and left knee, in order of severity. Dr. Gallion noted Claimant had chronic low back pain with a surgery in 1994 and had pain in his buttocks and chronic left foot numbness. Dr. Gallion diagnosed Claimant with a contusion of the left wrist, left hip, left knee, thoracic strain and acute exacerbation of chronic low back pain. His left shoulder was suspicious for a rotator cuff injury. She ordered an x-ray of Claimant's low back.

15. Claimant underwent flexion-extension x-rays of his lumbar spine on August 19, 2016 which revealed lumbar spondylosis with degenerative disc disease.

16. On August 25, 2016, Claimant saw Danielle Suzanne McDonald, M.D. at Banner Health with complaints of left shoulder, left wrist and back pain and sciatica down his left side. Claimant reported having chronic pain, but that his current symptoms were "worse and different" and felt "similar to how it felt the first time."

17. Claimant underwent a lumbar spine MRI on September 7, 2016 which showed degenerative changes superimposed on congenitally narrowed spinal canal. Spinal stenosis was greatest and increased at L4-L5 with moderate unchanged neural foraminal narrowing at L4-L5 and L5-S1.

18. On October 10, 2016, Dr. Gallion reevaluated Claimant and reviewed the September 2016 lumbar spine MRI. Dr. Gallion opined Claimant suffered an acute exacerbation of chronic low back pain from the August 4, 2016 fall and a slight exacerbation from a back strain due to an incident at work on October 9, 2016. She referred Claimant to a neurosurgeon for his back complaints.

19. On October 12, 2016, Claimant underwent left shoulder surgery, which was successful. Claimant reported that his left shoulder pain resolved, as did his left knee and left wrist pain.

20. On November 10, 2016, Dr. Gallion saw Claimant. She noted that a week before his surgery, Claimant had an incident where his legs went numb, worse on his left, and felt weak to the point where Claimant could not lift his leg to push the clutch in on his truck. Dr. Gallion put Claimant on work restrictions.

21. On December 8, 2016, Claimant was again evaluated by Dr. Gallion. She noted that at this point, Claimant's low back was more bothersome than his surgically-repaired shoulder, as he had intermittent pain going into both legs, and his legs would get heavy and weak, and go numb. Claimant reported that his back pain was 8/10 at worst, and currently 6/10.

22. On January 2, 2017, Claimant saw Regina Bower, M.D. for a neurosurgical consultation. Claimant reported pain and numbness radiating down either leg into his calves. It was noted the symptoms were not consistent and varied from day to day. Dr. Bower physically examined Claimant and reviewed Claimant's September 2016 MRI. She opined that Claimant's back pain is likely due to facet syndrome and was also myofascial in nature. She doubted Claimant's leg symptoms are due to the stenosis seen at L4-5 as Claimant's pain did not follow a clear pattern of neurogenic claudication. She ordered x-rays and referred Claimant for physical therapy.

23. Claimant saw Dr. Gallion on February 8, 2017 and March 24, 2017 and continued to complain of back pain and leg numbness.

24. On April 4, 2017, underwent bilateral L4-5 and L5-S1 transforaminal epidural steroid injections.

25. On May 18, 2017, Claimant was evaluated by Dr. Gallion. At this visit, Claimant expressed that he would like a second opinion on his back to make sure surgery was not indicated. Dr. Gallion estimated that Claimant would be at maximum medical improvement (MMI) in about a month unless surgery was indicated.

26. On June 7, 2017, Claimant presented to Robert J. Benz, M.D. for a surgical consultation. Dr. Benz reviewed Claimant's lumbar MRI and obtained x-rays. Dr. Benz diagnosed Claimant with lumbar disc degeneration with a degenerative scoliosis and severe foraminal narrowing resulting in ongoing back and left leg pain. Dr. Benz recommended Claimant undergo a L4-5 and L5-S1 fusion and requested approval for the surgery, which was denied by Respondents.

27. On August 27, 2017, Dr. D'Angelo performed an independent medical examination (IME) at the request of Respondents. Dr. D'Angelo interviewed and physically examined Claimant and conducted a thorough medical records review of records dating back to October 2000. Dr. D'Angelo noted that her review of the medical records revealed Claimant has a long history of identical complaints of lower back pain with bilateral radiculopathy for which he regularly pursued medical care, including as recently as three months prior to the work-related injury. She further noted that Claimant's September 2016 MRI showed advancement of his pre-existing osteoarthritis with no acute traumatic findings. Dr. D'Angelo opined that Claimant's current lumbar spine symptoms were not causally related to his work injury and any need for surgical intervention was not causally related to the work fall. She noted that, if Claimant did suffer an acute exacerbation of chronic low back pain, the exacerbation was temporary and of limited duration and would not be expected to persist for 10 months. She remarked that Claimant's persistent symptoms despite treatment was indicative of the failure of treating a chronic degenerative disease as if it were an acute traumatic injury. Dr. D'Angelo concluded that Claimant reached MMI for his work injury and required no further active or maintenance treatment through the workers' compensation system. She opined Claimant was not entitled to permanent impairment of the lumbar spine since his complaints were not causally related to his work injury.

28. Claimant continued to treat with Dr. Gallion. On August 29, 2017, Claimant had continued low back and left leg pain, and reported a new symptom of penile pain with erection. Dr. Gallion did not further address the reported penile pain in the medical report. Dr. Gallion noted Dr. Benz wished to proceed with a L4-5 and L5-S1 fusion, which she remarked was a good option for Claimant since he had no improvement over the last year.

29. Subsequent records do not contain mention of reported penile or groin pain, diagnosis or treatment.

30. On October 19, 2017, Dr. Gallion answered some questions posed to her by Respondents. In response to a question regarding whether Dr. Gallion agreed with Dr. D'Angelo's opinions and assessments, Dr. Gallion responded that she did not agree with Dr. D'Angelo and stated:

> Low back pain significantly worsened after fall on 8/4/16 without expected improvement with treatment (physical therapy, pain medications, epidural steroids). He had new numbness in right leg which has continued since the fall. While I agree that degenerative disc disease progresses gradually over time, I disagree that his symptoms would have progressed this suddenly, especially since the fall caused the acute change/worsening of symptoms.

Dr. Gallion noted that a significant increase in pain/numbness/weakness since his fall had affected Claimant's ability to function in the capacity in which he was able to function prior to the work injury, despite treatment. She opined Claimant required further medical treatment in the form of medication, physical therapy and a second opinion regarding the consideration of surgery.

31. On November 3, 2017, a hearing took place before ALJ Michelle Jones on the issue of authorization of Dr. Benz's request for surgery. ALJ Jones concluded Claimant failed to establish the back surgery requested by Dr. Benz was reasonable, necessary and related to the August 4, 2016 work injury.

32. Dr. Gallion placed Claimant at MMI on March 27, 2018. At the time, Claimant continued to report 5-6/10 back pain with intermittent left leg symptoms. Dr. Gallion's final assessment was acute exacerbation of chronic low back pain and low back pain with left-sided sciatica. She referred Claimant to James Rafferty, D.O. for an impairment rating.

33. Dr. Rafferty evaluated Claimant on July 19, 2018. Dr. Rafferty interviewed and physically examined and reviewed the following records: a letter from Respondents' counsel to Dr. Gallion including questionnaire and Dr. D'Angelo's IME report, a March 27, 2018 report of Dr. Gallion, and letters from Respondents' counsel to Dr. Rafferty dated May 4, 2018 and June 5, 2018. Dr. Rafferty noted Claimant admitted to a long-standing history of low back pain dating back to the late 1990s and had undergone back surgery and took medications. Claimant reported that his pre-existing symptoms were made significantly worse as a result of the August 2016 work injury. Dr. Rafferty diagnosed Claimant with, in relevant part, chronic low back pain with work-related symptomatic aggravation of pre-existing lumbar spondylosis, multi-level degenerative changes. He assigned a 12% upper extremity rating for the shoulder (whole person 7%) and 18% whole person impairment for the lumbar spine for abnormal range of motion and injury under Table 53(II)(C) of the AMA Guides. Dr. Rafferty released Claimant to full duty work with no restrictions and opined Claimant did not require maintenance care. Claimant was to remain on his current medications as managed by his primary care provider.

34. John Burris, M.D. performed a Division IME on January 8, 2019. Dr. Burris interviewed and physically examined Claimant and reviewed medical records dating back to October 2000. Dr. Burris noted Claimant underwent lumbar surgery in the 1990s and received an impairment rating but no permanent restrictions. Claimant reported having persistent low back pain since that time, mainly at night. On examination of the lumbar spine, Dr. Burris noted the following: no localized tenderness, muscle spasm, or trigger points; functional range of motion with mild loss on forward flexion; full extension and lateral bending bilaterally; and negative seated straight leg raising to 90 degrees bilaterally. Dr. Burris gave the following assessment: left shoulder rotator cuff tear. He noted that the medical records documented a "long history of chronic low back pain following lumbar surgery in 1994 and requiring regular treatment." He further stated,

> The initial examination and x-rays, and follow-up MRI on 9/7/2016, revealed no evidence of acute abnormality associated with the workplace event. Review of the records indicate no significant objective changes before or after the 8/4/2016 workplace event. Thus, there is no evidence that [Claimant] suffered a permanent aggravation of his pre-existing condition. [Claimant's] current low back complaints are, more likely than not, due to the natural progression of his pre-existing condition. Thus, there is no table 53 disorder associated with the 8/4/2016 workplace even and his subjective low back complaints are not a ratable condition.

Dr. Burris determined Claimant reached MMI on March 27, 2018 and assigned a 5% upper extremity impairment rating for Claimant's shoulder. He specifically stated no apportionment is applicable. He concluded Claimant did not require permanent work restrictions or maintenance care. Dr. Burris completed the Division IME Examiner's Summary Sheet. In Section 5 of the summary sheet regarding apportionment, he wrote "N/A."

35. Claimant testified at hearing that, in the two months preceding the work injury, he experienced low back pain at night and took medication, but did not have pain during the day or any issues performing his job duties. Claimant testified that between 2010 and 2015 he had some lower back symptoms and symptoms radiating down his leg, but remained able to function. He stated that, prior to the August 2016 work injury, he last participated in physical therapy in 1996 and never before had a back injection. When asked if he developed any new symptoms after the August 2016 work fall that he did not previously have, Claimant testified, "So I started having pain on my groin and a lot of pain in my legs and – and my back. You know, it was just the same old – numbness, heat pain, swelling, yeah." (Hrg. Tr. p.15:3-5). He stated he did not have groin issues prior to the work injury. Claimant testified that prior to the injury his pain was a 1-3/10 and at hearing his pain was a 5-6/10 while on medication. Claimant testified he believed Dr. Rafferty was more thorough in his examination, performing multiple measurements and explaining things to Claimant over the course of approximately an hour and a half. Claimant testified Dr. Burris' examination took approximately 20-30 minutes. He stated Dr. Burris took one set of quick measurements and did not explain things to him.

36. The ALJ finds the DIME opinion of Dr. Burris, as supported by Dr. D'Angelo's opinion and the medical records, more credible and persuasive than the opinions of Drs. Gallion and Rafferty and the testimony of Claimant.

37. Claimant failed to overcome Dr. Burris' DIME opinion on causation and impairment by clear and convincing evidence.

38. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as

unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME Opinion

A DIME physician must apply the AMA Guides when determining the claimant's medical impairment rating. Section 8-42-101(3.7), C.R.S.; Section 8-42-107(8)(c), C.R.S. The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing that it is highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000). Section 8-42-107(8)(c), C.R.S. provides, "For purposes of determining levels of medical impairment, the physician shall not render a medical impairment rating based on chronic pain without anatomic or physiologic correlation. Anatomic correlation must be based on objective findings."

Ultimately, the questions of whether the DIME physician properly applied the AMA Guides, and whether the rating was overcome by clear and convincing evidence, present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office, supra*. Not every deviation from the rating protocols of the AMA Guides requires the ALJ to conclude that the DIME physician's rating has been overcome as a matter of law. Rather, deviation from the AMA Guides constitutes evidence that the ALJ may consider in determining whether the DIME physician's rating has been overcome. *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117 (Colo. App. 2003); *Logan v. Durango Mountain Resort,* W.C. No. 4-679-289 (ICAO April 3, 2009). Moreover, a mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

Claimant failed to produce evidence showing it is highly probable Dr. Burris' DIME opinion is incorrect. Claimant argues Dr. Burris is known respondent IME and is thus clearly biased. Claimant contends Dr. Burris' analysis is deficient and completely

ignores several facts, such as Claimant's new symptom of penile pain and worsening symptoms. Claimant also takes issue with Dr. Burris' finding that Claimant required "regular treatment" prior to the injury, arguing Claimant only took medications to "mask" the pain, but was under no treatment to improve his back condition leading up to the work injury. Claimant further argues Dr. Burris did not conduct a thorough examination, pointing to different exam findings by Dr. Rafferty. Finally, Claimant contends Dr. Burris failed to follow correct procedures because he did not answer "yes" or "no" to the apportionment flowchart included in Section 5 of the DIME Examiner's Summary Sheet.

The ALJ is not persuaded by Claimant's arguments considering the totality of the evidence. The medical records support Dr. Burris' conclusion that Claimant has a longstanding history of chronic low back pain requiring regular treatment. Medical records dating back to 2010 reflect Claimant experienced low back pain radiating to both legs for which he saw his primary care physician on at least an annual basis, if not more often, and consistently took medication for his back symptoms leading up to the work injury. Dr. Burris' opinion is corroborated by Dr. D'Angelo, who agreed Claimant's current back symptoms are not causally related to the August 4, 2016 work injury.

To the extent Claimant's pre-existing symptoms increased after the work injury, Dr. Burris and Dr. D'Angelo credibly opined that, more likely than not, Claimant's current symptoms are the natural progression of his pre-existing degenerative condition. While Claimant testified he developed a new symptom of penile/groin pain after the sustaining the work injury, there is minimal reference to such reported condition in the medical records, and no indication Claimant reported this as a primary concern to Drs. Rafferty, D'Angelo or Burris for their analysis. As determined by both Dr. Burris and Dr. D'Angelo, there is no objective evidence of acute trauma resulting from the August 4, 2016 work injury. The lumbar MRI and x-rays reveal degenerative changes, which support the opinions of Drs. Burris and D'Angelo that Claimant's current low back complaints are due to the natural progression of his pre-exiting condition.

Based on his DIME report, Dr. Burris performed a comprehensive review of Claimant's medical records and performed the necessary measurements on physical examination. Nothing in the record indicates the DOWC considered Dr. Burris' DIME report incomplete. With respect to Claimant's contention that Dr. Burris erred because he did not answer the apportionment questions in Section 5 of the DIME summary sheet, the ALJ disagrees. Dr. Burris specifically stated in his report that apportionment was not applicable. Moreover, Dr. Burris clearly wrote "N/A" on the summary sheet. The ALJ is not aware of, nor does Claimant cite, any particular provision further requiring Dr. Burris to fill out the apportionment flowchart in a situation where he has already stated and clearly indicated apportionment is not applicable.

There is insufficient credible and persuasive evidence Dr. Burris failed to follow the AMA Guides or otherwise erred in his opinions regarding causation and impairment. While Drs. Gallion and Rafferty reached different conclusions regarding the relatedness of Claimant's low back condition and permanent impairment, the ALJ concludes those opinions amount to mere differences of medical opinion, and do not rise to the level of clear and convincing evidence.

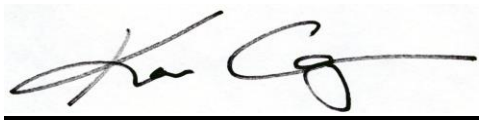
ORDER

1. Claimant failed to overcome Dr. Burris' DIME opinion on causation and permanent impairment by clear and convincing evidence.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 31, 2019



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

STATE OF COLORADO OFFICE OF ADMINISTRATIVE COURTS 1525 Sherman Street, 4th Floor, Denver, CO 80203	
In the Matter of the Workers' Compensation Claim of: **P,** Claimant, vs. **D,** Employer, And , Insurer, Respondents.	▲ **COURT USE ONLY** ▲ **CASE NUMBER:** **WC 4-956-021-002**

FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

Hearing in the above-captioned matter was held before Administrative Law Judge Margot W. Jones on May 24, 2019, at 8:30 a.m. in Courtroom 4 in Denver, Colorado. Claimant was present and represented himself. Respondents were represented by Jeff Staudenmayer, Esq. Exhibits 1, 2 and A-M were admitted into evidence.

In this order, P shall be referred to as "Claimant," D shall be referred to as "Employer" and Pinnacol Assurance shall be referred to as "Insurer." Employer and Insurer, collectively, shall be referred to as "Respondents."

In this order, the Judge may use the following acronyms: C.R.S. refers to Colorado Revised Statutes (2018); the Act refers to the Workers' Compensation Act of Colorado, §§8-40-101, et seq., supra; OAC refers to the Office of Administrative Courts; OACRP refers to the Office of Administrative Courts Rules of Procedure, 1 CCR 104-1; and WCRP refers to Workers' Compensation Rules of Procedure, 7 Code Colo. Reg. 1101-3.

ISSUES

- Whether Claimant established by a preponderance of the evidence that he suffered a worsening of condition of his July 7, 2014, work injury to allow a reopening of WC No. 4-956-021.

- Whether Claimant established by a preponderance of the evidence that he is entitled to an award of medical benefits.

FINDINGS OF FACT

1. Claimant is a 59 year old man who worked for Employer in July 2014. On July 7, 2014, Claimant sustained a low back injury from pushing a 100-200 lb. pallet up a ramp.

2. Claimant treated at Concentra. As of July 28, 2014, Claimant was complaining of 9/10 pain in his low back radiating to his buttocks, thighs, and bilateral calves. He was attending physical therapy without benefit.

3. Dr. Allison Fall first examined Claimant on August 22, 2014, when Claimant complained of 8/10 pain from his back to the back of his knees. Dr. Fall reviewed a lumbar MRI, which showed significant central stenosis with congenital stenosis and degenerative changes as well as disc bulges bilaterally at L4-5 and L5-S1.

4. Claimant began chiropractic and acupuncture care with Don Aspegren, D.C. on August 27, 2014.

5. On September 17, 2014, Claimant was evaluated by Bryan Andrew Castro, M.D., orthopedic surgeon. Dr. Castro noted physical therapy had been terminated as not helpful. Claimant's pain was 9/10 with symptoms into his buttock and posterior thighs. Dr. Castro recommended a lumbar epidural injection.

6. Claimant was evaluated by John Sacha, M.D. on October 10, 2014, and October 15, 2014, but on each occasion he was not a candidate for injections due to high blood pressure. Dr. Sacha administered a L5-S1 interlaminar epidural injection on November 7, 2014. On November 21, 2014, Claimant reported to Dr. Sacha receiving no relief from the injection.

7. On December 5, 2014, Dr. Fall prescribed additional physical therapy.

8. Dr. Castro recommended Claimant attempt additional injections in the form of bilateral L4-5 and L5-S1 transforaminal epidural steroid injections.

9. Dr. Sacha cancelled Claimant's planned injection due to high blood pressure. Dr. Sacha administered the bilateral L5 and S1 injections on March 6, 2015.

On March 20, 2015, Claimant reported to Dr. Fall his pain was 10/10, and he received no response from the injections. Dr. Fall prescribed Hydrocodone.

10. Dr. Castro recommended surgical lumbar decompression at L3-4, L4-5, and L5-S1 on April 15, 2015.

11. An April 21, 2015, lumbar MRI showed central and bilateral foraminal stenosis at L3-S1, with broad based disc protrusions at L4-5 and L5-S1.

12. Dr. Fall noted on May 4, 2015, that Claimant was complaining of 10/10 pain, he was in no apparent distress, and he did not appear to be in 10/10 pain.

13. Claimant informed Dr. Fall on June 5, 2015, that he did not want to pursue surgery. Dr. Fall placed Claimant at maximum medical improvement (MMI) and assigned a 19% whole person impairment rating for his lumbar spine.

14. Dr. Joseph Morreale performed the Division independent medical examination (DIME) on March 11, 2016. Dr. Morreale noted that he believed Claimant was a good surgical candidate. He stated Claimant would be at MMI if he refused surgery. He assigned a provisional 22% whole person impairment rating for Claimant's lumbar spine.

15. Dr. Fall evaluated Claimant on July 1, 2016. Claimant was ready to consider surgery, and she referred him back to Dr. Castro.

16. The initial surgical scheduling was delayed due to Claimant's high blood pressure. Dr. Castro performed the surgery on December 22, 2016.

17. On February 6, 2017, Claimant reported to Dr. Fall his back pain was better, his leg pain was diminished, but he noted having left-sided hip pain. Dr. Fall prescribed a muscle relaxer, Cyclobenzaprine, and referred Claimant for physical therapy. On April 3, 2017, Dr. Fall noted Claimant continued to complain of left hip pain and his physical therapist talked to him about piriformis syndrome. Dr. Fall further noted that Claimant stated he did not need additional therapy.

18. Records of Claimant's physical therapy sessions at Concentra document under Therapeutic Exercises administered, that attention was provide to "hip flexion, abduction, extension in standing 1x10 each bilat . . ."

19. Dr. Fall placed Claimant at MMI on April 25, 2017. She noted Claimant was still complaining of low back and left thigh pain. He was taking a muscle relaxant, Cyclobenzaprine, and rare Norco. Dr. Fall assigned a 22% whole person impairment rating for Claimant's lumbar spine. She recommended maintenance care of Cyclobenzaprine for one year and annual follow-ups with Dr. Castro.

20. Claimant was evaluated by Dr. Amanda Cava at Concentra on April 28, 2017. Claimant reported "severe pain present with distal radiation down the left leg." He was using a cane for ambulation and his pain level was 7/10. Dr. Cava reiterated the maintenance medical treatment recommendations of Dr. Fall.

21. Claimant began physical therapy at Rose Medical Center outside of the workers' compensation system, the first record of which is June 26, 2017. Claimant reported 8/10 pain in his left low back and left hip. He complained of 8-9/10 pain on June 28, 2017. On July 7, 2017, Claimant reported 5-7/10 pain, and he had been bed ridden due to his pain after walking 40 minutes

22. Dr. Morreale performed a follow-up DIME July 10, 2017. Claimant reported only having "mild complaints" post-surgery. He had full range of motion in his hips. Dr. Morreale confirmed Claimant was at MMI and assigned a 29% impairment rating. He assigned a MMI date of June 22, 2016.

23. Respondents filed a Final Admission of Liability (FAL) on September 5, 2017, admitting for a 29% impairment rating and maintenance medical benefits.

24. Albert Hattem, M.D. performed an Independent Medical Examination (IME) on behalf of Respondents on February 20, 2018. Dr. Hattem noted Claimant frequently smiled, and he was comfortable and relaxed. He reported low back, left hip, and bilateral thigh pain at 8-9/10. Dr. Hattem noted Claimant had non-physiologic signs on physical exam. He also documented reviewing surveillance video from January 11 & 18, 2018, as well as February 20, 2018. He noted the surveillance showed him walking rapidly without assistance or use of a cane. Dr. Hattem separately noted Claimant presented at the IME with a slow and stiff gait and used a cane to ambulate, contrary to the surveillance. Dr. Hattem noted Claimant's non-physiologic signs and subjective pain ratings were wholly inconsistent with his demeanor.

25. Claimant was admitted to the Medical Center of Aurora on August 1, 2018. He complained of right lower quadrant abdominal pain and right rib pain. He was diagnosed with an "extremely large occlusive pulmonary embolism" in the right main pulmonary artery, along with smaller segmental pulmonary emboli, diffuse severe COPD, and cardiomegaly. Dr. Clare Prohaska was one of the attending physicians. She noted at various points in the treatment records that Claimant had "recent spinal surgery." She later documented that Claimant "did have spinal surgery – 2 months ago and reports increased driving, which was likely provoking incident." The ALJ notes Dr. Prohaska's understanding of the timing of Claimant's surgery was incorrect, as the surgery occurred in December 2016, or approximately 20 months prior to his pulmonary embolisms. A separate note in the same treatment records authored by Christian Dinescu, M.D. more accurately noted that Claimant "has had no recent surgeries . . ." Claimant was discharged on August 4, 2018.

26. On August 23, 2018, the parties entered into a stipulation noting the correct date of MMI was April 25, 2017, not June 22, 2016, as that date preceded the

date of Claimant's surgery. As a result of the stipulation, Respondents paid Claimant $7,489.59. Claimant, in part, waived with prejudice his right to attempt to overcome the opinions of Dr. Morreale in any other manner. Claimant was represented by counsel at the time, and Claimant indicated his agreement to the stipulation by notarized signature.

27. Claimant filed the Application for Hearing which is the subject of this hearing on November 14, 2018. He endorsed the issues of medical benefits, "impairment rate," petition to reopen claim, and permanent total disability. By Order dated November 4, 2018, PALJ DeMarino held the issues of permanent total disability and impairment rate in abeyance.

28. Dr. Hattem performed a follow-up IME of Claimant on February 14, 2019. He again noted Claimant's effect was pleasant and he frequently smiled. Claimant admitted he received no treatment under the workers' compensation claim in the prior year, but he was receiving medication management through his primary care provider and he had attended one month of physical therapy, which actually increased his pain complaints. Claimant reported his condition remained unchanged since Dr. Hattem last evaluated him, and he provided a pain level of 7-10/10 for his low back and left hip. Claimant again had non-physiologic signs on exam. Dr. Hattem noted that Claimant's overall condition remained the same by evaluation of Claimant's medical history and physical examination. Dr. Hattem even noted that Claimant's pain rating at that appointment was less than the appointment the prior year. Claimant also described exactly the same functional capacities between both appointments with respect to his walking tolerances. Dr. Hattem did not believe Claimant sustained a left hip injury which required treatment in the workers' compensation claim, noting that only his lumbar spine was injured in the work accident. With regard to Claimant's August 2018 pulmonary embolisms, Dr. Hattem opined that they would not be causally related to the work-injury or resultant surgery due to the interval of time from the surgery to when the embolisms manifested. He cited medical literature supporting that a provoked pulmonary embolism would have occurred within days or weeks of spinal surgery. Dr. Hattem stated that Claimant was still at MMI as of April 25, 2017, for his work-injury. He stated Claimant did not require further maintenance medical treatment for his work-injury.

29. Claimant testified at hearing. He testified he wants to reopen his claim and obtain medical treatment in the form of pain medications for his left hip and treatment for his blood clots. He testified he was unsure what medications he would need, but he wanted to see a pain specialist because his hip pain was chronic.

30. Claimant testified Dr. Fall told him his hip pain was not responding to treatment, so treatment should be stopped. He also testified that Dr. Castro's assistant informed him that his hip pain would go away, but it had not. He testified he did not receive physical therapy for his hip. Claimant testified he spoke with his prior counsel about overcoming the DIME, but his attorney told him it was too hard.

31. Regarding his blood clots, Claimant testified he sought treatment for his blood clots at the same hospital he had surgery. He presumed the physicians treating him for his blood clots would therefore have known when his surgery occurred due to the procedure occurring at the same facility, and they would not have made a mistake in determining when his spine surgery occurred.

32. Claimant testified he was in 9/10 pain at the time of the hearing. Mr. Anderson testified his pain has been the same without change since the injury, at 9/10, including from the date of injury, through surgery, at the time of MMI, and currently. He testified he had severe left hip pain at the time he was placed at MMI, and he was taking pain killers and using a cane at that time. He confirmed that around that time his pain was so severe he would be bedridden at times, and the physical therapy records from Rose Medical Center in mid-2017 correctly documented his pain complaints.

33. Claimant could not identify any medical records which he believed documented physician recommendations for additional pain management.

34. Claimant testified that none of the medications or other treatment he had received at any time in his claim, including physical therapy, surgery, muscle relaxers, pain medicine, and the nerve pain medicine Gabapentin, had provided him any benefit.

35. Dr. Hattem testified at hearing as an expert in the field of occupational medicine. He testified Claimant had documented hip complaints pre-MMI, which were similar to complaints Claimant made to him at the two IMEs he performed. Dr. Hattem testified Claimant's hip pain was likely radiating pain from his low back, confirmed by various references to sciatica pain or piriformis syndrome related to his low back condition. However, Dr. Hattem did not believe Claimant had a separate injury in his hip.

36. Dr. Hattem testified that Claimant did not report a worsening of condition. Claimant had specifically told him on multiple occasions at the February 2019 IME that his condition had remained the same. Dr. Hattem further testified that there were no objective signs of a worsened condition. Claimant's physical exam and presentation over the two IMEs he performed was substantially similar, it was similar to how Claimant presented at hearing, and in all circumstances his pain complaints did not match objective evidence and were not in line with his general presentation. Dr. Hattem further noted Claimant actually reported an improved pain score and had slightly improved lumbar range of motion in February 2019, as compared to February 2018.

37. Regarding Claimant's August 2018 pulmonary embolism/blood clots, Dr. Hattem testified that blood clots do not form 20 months after surgery, as was the timeframe from Claimant's surgery to the formation of his blood clots. Rather they will form within days, weeks, or maybe up to a month after surgery. He testified the note from Dr. Prohaska in the Medical Center of Aurora that Claimant had recent spine surgery two months prior was not accurate. He testified that Claimant's blood clots are not medically likely related to the work-injury or treatment from the work-injury.

38. The ALJ finds and concludes that Claimant failed to meet his burden of proof to establish by a preponderance of the evidence he sustained a worsening of condition related to his July 7, 2014, admitted work-injury. Therefore, Claimant is not entitled to a reopening of this workers' compensation claim.

39. The ALJ finds the collective testimony of Dr. Hattem and Claimant himself establish Claimant has not sustained a worsened condition. Although Claimant initially testified he believed his condition had worsened, he later admitted that he felt his pain had been the same from the date of injury through the present, including at the time of MMI. Dr. Hattem credibly testified there was no objective evidence that Claimant had sustained a worsened condition, and Claimant's own reports in the records and at hearing confirm as much. Conversely, Claimant has not presented any medical opinion in his favor that his condition has worsened since the date of MMI.

40. The ALJ further finds and concludes that Claimant has not established by a preponderance of the evidence that he is entitled to an award of medical benefits. Respondents admitted to maintenance medical benefits in the September 5, 2017, FAL, and therefore, a general award for maintenance medical benefits is not required and would be duplicative of that for which Respondents have already admitted liability. Moreover, Claimant failed to present sufficient evidence to establish by a preponderance of the evidence that he is entitled to an award of specific medical benefits. Claimant requested two forms of medical treatment, pain medicine for his left hip and unspecified treatment for his blood clots. As found, Claimant's blood clots are not causally related to his workers' compensation claim. Also, Claimant presented no evidence that any medical provider is continuing to recommend he be prescribed pain medicines related to his work-injury. To the contrary, Claimant testified every medication he has taken or is currently taking provided him no relief from pain he alleged to be related to the workers' compensation claim.

CONCLUSIONS OF LAW

General Legal Principles

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936; CJI, Civil 3:16 (2007).

3. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

Petition to Reopen

4. Section 8-43-303(1), C.R.S., provides that an award may be reopened on the ground of change in condition. The claimant shoulders the burden of proving his condition has changed and his entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S.; *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005). A change in condition refers either to change in the condition of the original compensable injury or to a change in the claimant's physical or mental condition that can be causally related to the original injury. *Heinicke v. Industrial Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). A change in condition, for purposes of the reopening statute, refers to a worsening of the claimant's work-related condition after MMI. *El Paso County Dept. of Social Services v. Donn*, 865 P.2d 877 (Colo. App. 1993).

5. As found, Claimant has failed to establish by a preponderance of the evidence that he sustained a worsened condition related to the work-injury. Although Claimant initially testified he believed his condition had worsened, he contradicted that testimony in subsequent testimony. Thereafter, he testified that he has been in constant and consistent pain throughout his claim, without improvement or worsening. With respect to his left hip, he testified he had the severity of the left hip pain of which he currently complains at the time he was placed at MMI. Moreover, Claimant failed to present any other evidence that his condition has worsened. The documents he submitted as his evidence do not reflect any worsening of a left-hip condition or opinion from a medical provider in that regard. WCRP 7-2(A) states that a party requesting reopening of a claim must have supporting documentation accompanying the request. Claimant has not provided any such supporting documentation.

6. The ALJ notes that Claimant's contention that he did not receive therapy directed to his hip appears incorrect on the face of the Concentra physical therapy records. Dr. Fall also noted on April 3, 2017, that Claimant himself was reporting he did not need additional physical therapy. He then began physical therapy outside the workers' compensation system on his own a couple months later.

7. The ALJ notes Dr. Morreale placed Claimant at MMI while documenting Claimant had full hip range of motion and had only ongoing "mild" complaints from surgery, without reference to any hip pain. This is contrary to Claimant's pain complaints with his treating providers and the Rose Medical Center physical therapists, in general and pertaining to his alleged hip pain, leading up to the DIME. To the extent Claimant is arguing his left hip pain was not adequately addressed at the time of his follow-up DIME, this is not an issue which would justify reopening of his claim. Rather, Claimant had the opportunity to overcome the opinion of Dr. Morreale that he was at MMI. And, Claimant agreed by notarized signature to waive his challenge to the DIME in exchange for the payment of additional money not included in the FAL.

8. Claimant testified his left hip pain was present at the time he was placed at MMI, and his pain levels have been consistent since that time. His medical records verify that he was complaining of left hip pain up to the time he was placed at MMI. Dr. Hattem credibly testified that the hip complaints documented in the pre-MMI medical records are similar to the complaints Claimant made to him at the IMEs. Dr. Hattem also credibly testified that Claimant exhibited no sign of a worsened condition over the two IMEs he conducted in February 2018 and February 2019. The ALJ notes Dr. Hattem's testimony that Claimant's subjective complaints do not match his objective findings, and therefore, Claimant's initial statement alone that he believed he was worsening is insufficient to constitute a preponderance of the evidence in favor of reopening his claim.

9. The ALJ credits the testimony of Dr. Hattem and finds that Claimant did not meet his burden to prove entitlement to a reopening of his claim due to change of condition by a preponderance of the evidence.

Medical Benefits

10. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. The question of whether the need for treatment is causally-related to an industrial injury is one of fact. *Wal-Mart Stores, Inc. v. Industrial Claims Office*, 989 P.2d 251 (Colo. App. 1999).

11. Where the respondents file an FAL admitting for maintenance medical treatment pursuant to *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988), this does not preclude them from later contesting their liability for a particular treatment. Rather, when the respondents contest liability for a particular medical benefit, the claimant must prove that such contested treatment is reasonably necessary to treat the industrial injury. *See Grover v. Industrial Commission*, 759 P.2d at 712; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). In determining whether the claimant has proven entitlement to a specific medical benefit, the ALJ is charged with making pertinent factual determinations under a preponderance of the evidence standard. *See* § 8-43-201, C.R.S.

12. Claimant endorsed the issue of medical benefits for hearing without specification as to whether he was only requesting pre-MMI medical benefits, or if his petition to reopen were denied, maintenance medical benefits in the alternative as well. Nevertheless, Claimant failed to meet his burden in either regard.

13. As noted, Claimant failed to prove by a preponderance of the evidence that his condition has worsened and his claim should be reopened. Therefore, Claimant remains at MMI and he is not entitled to any pre-MMI medical benefits.

14. Moreover, Claimant has failed to prove by a preponderance of the evidence entitlement to an award of maintenance medical benefits. Respondents admitted for maintenance, or *Grover*, medical benefits when they filed the September 5, 2017 FAL. Therefore, the ALJ will not address whether Claimant is entitled to a general award of maintenance medical benefits, which would be duplicative to that already required of Respondents by the FAL. The sole remaining issue is whether Claimant has proven entitlement to a specific maintenance medical benefit, which he has not.

15. Claimant made specific requests to the ALJ for the authorization of pain management medications and for general authorization of treatment for his blood clots. He failed to prove entitlement to an award of either as forms of maintenance medical treatment. As to the latter, Claimant has not proven his blood clots are causally related to his work-injury. The ALJ credits Dr. Hattem's testimony that blood clots forming as a result of surgery would manifest within a matter of days, weeks, or approximately a month from surgery, but not 20 months after a surgery. And, Dr. Prohaska at the Medical Center of Aurora regarding the timing of the surgery relative to his pulmonary embolisms was not correct. Dr. Prohaska was on the face of her record under a false impression as to when Claimant's surgery occurred when she was attempting to identify a provoking incident for the embolisms. Claimant has failed to prove entitlement to an award of medical benefits related to his August 2018 pulmonary embolisms.

16. Finally, Claimant failed to prove entitlement to pain medications as maintenance treatment. Claimant's authorized treating providers have not had the opportunity to evaluate Claimant for as much. Respondents have also not had the opportunity to review and deny any such request. Claimant presented no evidence that any medical provider is of the opinion he requires ongoing pain medicines related to the work-injury. Claimant testified that the pain medicines he is taking provide him absolutely no relief. He also testified he has received no relief from any treatment provided to date. It is therefore not clear why an award for pain medications would be reasonable and necessary, even if Claimant were to have presented a medical opinion in his favor.

17. Respondents have admitted for maintenance medical benefits in general. Claimant is entitled to seek authorization for specific medical treatment. However, there is no record of any outstanding requests for medical treatment which Respondents have denied. Claimant's vague requests for pain medicines and generalized treatment for his blood clots are insufficient on their face to prove the requests reasonable, necessary,

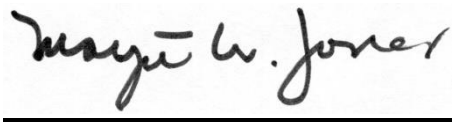
and causally related, compared to the remainder of the evidence. Moreover, the ALJ credits the opinion of Dr. Hattem stated in his February 14, 2019 IME report that Claimant requires no treatment at this time for his admitted work-injury, as it relates to the treatment Claimant specifically requested at hearing.

ORDER

1. Claimant's request to reopen his claim is denied and dismissed.

2. Claimant's claim for medical benefits is denied and dismissed.

DATED: July 31, 2019.



MARGOT W. JONES
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

If you are dissatisfied with the Judge's Order, you may file a Petition to Review the Order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the Order, as indicated on the certificate of mailing or service; otherwise, the Judge's Order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the Order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43- 301(2), C.R.S. (as amended, SB 09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a Petition to Review at ttp://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that he suffered a compensable work injury on September 13, 2018?

II. Has Claimant shown, by a preponderance of the evidence, that he suffered a compensable work injury on September 27, 2018?

III. Has Claimant shown, by a preponderance of the evidence, that he is entitled to reasonable, necessary, and related medical treatment for a compensable work injury occurring on September 13, 2018, September 27, 2018, or both?

IV. Has Claimant shown, by a preponderance of the evidence, that he is entitled of Temporary Total Disability ("TTD") benefits as a result of a compensable work injury?

STIPULATIONS

I. Claimant's Average Weekly Wage is $544.30.

II. If the ALJ finds that Claimant suffered a wage loss, TTD benefits would total $592.17 from September 13, 2019, until terminated by operation of law.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant began working for Employer in December of 2017 as a laborer. Claimant's job duties included shoveling sawdust, stacking wood, and operating a forklift.

September 13, 2018 Incident

2. Claimant testified at hearing that on September 13, 2018, he was standing on top of a four-bladed band saw, using a blower to remove sawdust, which had accumulated on top of the saw. Claimant explained that this machinery with the bandsaws is probably about 10 to 12 feet long and includes four separate saws on the same table.

3. Claimant testified that he stepped on a piece of angle iron, causing him to slip and fall, striking his left hip and shoulder. Claimant testified that he landed on a piece of angle iron between the blade and conveyor belt, and he experienced the onset of a small amount of neck pain, hip pain, and some pain in his left shoulder. Claimant testified he had an onset of back pain later in the day. Claimant testified that he immediately reported this injury to his supervisor, 'Richard', who in turn told him to "stop

being a dumbass."

4. Eagle William Spohn testified at hearing by telephone. Mr. Spohn testified that he believed he began working for the Employer in August of 2018, the month prior to Claimant's first work injury. He worked with Claimant every day prior to the work injury. Mr. Spohn observed Claimant fall on the bandsaw, although he could not recall the date of the incident. Mr. Spohn testified that he observed Claimant trip on the bandsaw, and he later observed Claimant limping and complaining about back and shoulder pain. Per Mr. Spohn, Claimant intended to try to just "walk it off."

5. Mr. Spohn had never witnessed Claimant exhibit any sort of symptoms that led him to believe Claimant was working through pain. Mr. Spohn did not witness Claimant have any issues performing the full duties of his job prior to the work injury. He indicated it was essentially standard practice to clean the bandsaws the way Claimant did, stating "you got to get up there…" in order to clean it, further stating "we had to get up on the machine." Mr. Spohn did not have any knowledge regarding the second incident [from September 27, 2018].

September 27, 2018 Incident

6. On September 27, 2018, Claimant testified he was at work cutting wood on the same table of bandsaws, but was using a different one of the four saws that day. Claimant had just cut down "six-inch 43s" into two halves. Claimant testified he was lifting and turning 90 degrees with the two 6"x43" halves of a piece of wood off the single-bladed bandsaw when he felt a 'pop' in his back. Along with the pop, Claimant testified that he had an immediate onset of pain in his back. Claimant testified that that he lifted from waist height and that the two 6x43s weighed approximately 175 pounds when lifted together.

7. Claimant testified that his injury occurred on Thursday and he reported the injury on the following Monday, October 1, 2018. [Administrative notice was taken that September 27, 2018 is a Thursday and October 1, 2018 is a Monday}. In his written report of injury, Claimant stated that he felt a pop in his *back and shoulder* while stacking the wood; however, he did not report a pop in his left shoulder to his doctors. (Ex. J; Ex F) Claimant testified that he did not have a pop in his *shoulder* on September 27, 2018.

8. Micah Langston testified at hearing. She is the corporate manager for Employer, which is owned by her parents. She handles taxes, payroll, bill payment, staff, customers, and vendors. Ms. Langston performed the Employer investigation, and completed the reporting documents on October 2, 2018. Ms. Langston testified that she attempted to view surveillance footage from the September 13, 2018 injury location, but the system had already overwritten the video footage. Ms. Langston testified that she reviewed the surveillance footage on the one-bladed bandsaw [of which there is only one], and determined that the one-bladed bandsaw was not in operation on September 27, 2018. She could not fully recall if Claimant might have appeared anywhere in the surveillance video at all, as there were people passing in the background. However, Claimant did not appear at any point to be working where one would expect this

bandsaw operator to be positioned.

9. Ms. Langston testified that she was only able to question one of the two listed witnesses, namely, Mr. Spohn. Per Ms. Langston, Mr. Spohn told her that Claimant had climbed up on the bandsaw and fallen on it, landing on the table - not the floor. Ms. Langston did not ask any detailed questions of Mr. Spohn, such as whether Claimant fell onto his hip or shoulder.

10. Bradley Dunmire is a mechanical engineer who owns several businesses in the wood industry, one of which is the Employer. He has worked in the lumber industry for 30 years. Mr. Dunmire is familiar with all of Employer's machinery and he has operated all such equipment. When he found out at a safety meeting that Claimant had been hurt two weeks prior, he insisted that Claimant go get an X-ray that same day – and not even wait until the following day. This step was implemented on October 2, 2018.

11. Mr. Dunmire also testified that the single bladed saw that Claimant says he was operating produces wood pieces that would weigh, at most, approximately 60 pounds per piece, and that one normally would handle one piece at a time by stacking it up to waist level.

Claimant Initially Seeks Treatment through his PCP

12. After his alleged injury on September 27, 2019 Claimant sought treatment outside the Workers Compensation system from Dr. Norman McLeod at Valley-Wide Health Systems. (Ex. F, p. 149) Dr. McLeod recorded that Claimant had an onset of pain in upper back, lower back, gluteal area and neck 19 years ago with radiation to the left lower extremity. (Id at 150). The history was reported as bending over and lifting a heavy object; no mention of a fall is noted within the report. On examination, Dr. McLeod does not list that any bruising was observed on Claimant's left hip. (Id).

13. Despite Claimant entering the Workers Compensation system a few days later, Claimant kept a follow-up appointment with Dr. McLeod for back and neck pain on November 13, 2018. At that appointment, Dr. McLeod noted in the physical exam, under *Musculoskeletal*, that Claimant had 'Normal Inspection and Normal Range of Motion' for each shoulder and each hip, and a 'Normal' exam for his neck. Claimant was positive for 'back pain'. (Ex. F, pp. 158-159).

14. At hearing, Claimant testified that he disagreed with Dr. McLeod's record of 19 years of back pain. Claimant further testified that he did not ever have back pain prior to September 13, 2018. Claimant testified that his answers to interrogatories specify that he has never had any prior back injuries.

Claimant's Prior Back Issues

15. Claimant has a documented history of an injury that was first reported on 8/8/2009, but which had occurred about two months prior. (Ex. G, p. 165) Claimant's initial report of injury indicated that he had popping in his left shoulder. (Id at 166). By August 29, 2009, Claimant reported 8/10 pain in his neck related to this incident. (Id at 169) Claimant submitted several handwritten requests for sick call in 2009, stating he needed treatment for his neck and back. (Ex. D). On November 28, 2009, Claimant reported pain in his neck and back, and began requesting an MRI. (Ex. G at 177) Claimant was prescribed pain medications for his back. (Id at 182)

16. On June 6, 2011, Claimant's back pain complaints extended into his thoracic spine. *Id at 196.* On July 28, 2011, Claimant complained that his medication, was not working for his shoulder and lower back pain. *Id at 198.* Claimant received trigger point injections for back pain on September 23, 2011. *Id at 200* Claimant continued to complain about his back pain through November 30, 2011, just before he ceased taking his back pain medication due to the side effects. *Id at 205-207.*

17. Claimant testified that he could not recall being injured while working out in June of 2009. Claimant then testified that he did not recall being injured but in 2007, he began having back pain. Claimant testified that he did not report his history of back pain to his treating physicians, or to either IME physician involved in this claim.

Claimant Seeks Treatment through an ATP

18. After being instructed to do so by Mr. Dunmire, Claimant began treating with Dr. Bradley at Emergicare on October 2, 2018. (Ex. B, pp. 22-29). Claimant testified that he did not have shoulder pain on October 2, 2018; however, his pain diagram from October 2, 2018 indicates left shoulder pain. (Ex. B, p. 28) Claimant also indicated on the pain diagram that he was having neck pain on October 2, 2018; however, Claimant testified at hearing that he was not experiencing neck pain at that time. *Id.*

19. Claimant did eventually report both injuries to Dr. Bradley. Dr. Bradley noted normal range of motion in the lumbosacral spine, though spasm and tenderness of the lumbar musculature was noted, as well as tenderness to the left shoulder and left trapezius. *Id at 24.* In Claimant's written history, he indicated that he felt a pop in his *back and shoulder* from stacking wood. *Id at 027.* Dr. Bradley diagnosed Claimant with generic "low back pain," an ischiocapsular ligament sprain of the left hip, and a migraine without aura. *Id at 41.* Dr. Bradley provided an injection into Claimant's dorsogluteal muscle. Claimant was put on restrictions of no lifting, carrying, pushing, or pulling more than 20 pounds.

20. Claimant continued treating with Dr. Bradley, and reported that he was still experiencing left shoulder pain on October 16, 2018. He also indicated back pain, radiating down his left arm. *Id at 35.* On that date, an x-ray of his left shoulder showed degenerative changes, but no acute injuries were noted. (Ex. E p. 144). Dr. Bradley performed an injection to Claimant's left deltoid on this date and ordered him a TENS unit. *Id.* at 52, 53. Dr. Bradley's report reflects that he had diagnosed a strain of muscles or tendons in the left shoulder. *Id.* at 54.

21. On October 23, 2018, Dr. Bradley recorded that Claimant was reporting injury and pain in his arm, shoulder, and back. Claimant's musculoskeletal exam of the lumbar and thoracic spine was normal, though Claimant did exhibit some tenderness and spasm in his spine. He also referred Claimant for chiropractic care with Dr. Wiedner.

22. On November 1, 2019, an MRI of Claimant's lumbar and thoracic spine showed minimal issues of the thoracic spine and minimal disc bulging from T12-S1. (Ex. E pp. 144-145) No acute abnormalities were identified, and no spinal stenosis or nerve impingement was noted. An x-ray of the lumbar spine on October 2, 2018 showed that the facet joints of the lumbar spine appeared normal. *Id at 141*.

23. Claimant's first appointment with Dr. Weidner took place on November 16, 2018. (Ex. 12, pp. 115-17). The intake note reflects that Claimant was referred for work injuries to his lower back, mid-back, left hip, and buttocks from the September 13 and September 27, 2018 incidents. *Id. at 115*. Claimant reported ongoing severe mid to lower back pain extending into the SI joint/buttock region. Dr. Weidner suggested a trial of 6 to 8 visits to see if the chiropractic care would help. *Id.* at 116. Dr. Weidner indicated that Claimant would need further "medical/ortho-neuro eval" if Claimant's condition did not improve with chiropractic care. *Id.*

24. On December 17, 2018, Dr. Bradley began noting that Claimant's 'subjective pain was greater than observed pain'. (Ex. B at 84) On December 31, 2019, Dr. Bradley placed Claimant at MMI. *Id at 092.* Dr. Bradley observed that Claimant's subjective pain was greater than observed pain, but Claimant had continued tenderness in the thoracolumbar region. Dr. Bradley noted that mild degenerative changes were noted at T11-L1 as well as minimal disc bulges at T12-S1 with no acute changes.

25. Claimant had completed eight chiropractic treatments without reporting relief, and Dr. Bradley determined that no further treatment would be beneficial. Claimant continued to complain of 8/10 pain in his back, but showed minimal signs of pain. Dr. Bradley records that Claimant denied previous injuries to his neck, shoulder and back. On January 13, 2019, Dr. Bradley released Claimant from care with permanent restrictions of 20 pounds push/pull/lift/carry, and a whole person impairment rating of 18%, which Dr. Bradley attributed to Claimant's "*fall injury* on {October 2}, 2018 (sic). (Ex. B, p. 107). For reasons unclear, the WC164 form dated 12/31/18 by Dr. Bradley stated that Claimant had *no permanent impairment* (Ex. 8, p. 88), but listed the lifting limit at 15 pounds.

IME with Dr. Castrejon

26. Dr. Miguel Castrejon performed an IME on 3/19/19 at Claimant's request. He testified at hearing by telephone. Claimant reported to Dr. Castrejon that on September 13, 2018, he was on top of the table of the bandsaws cleaning, and as he was going to the next section, he slipped and fell, landing on his left hip and left shoulder. (Ex. 15, p. 147). Claimant reported that he was no longer having left shoulder or left hip pain at this time, that he did not recall neck pain after the first incident, and that he did continue to experience lower back pain. *Id.* Claimant reported that on

September 27, 2018, he had lifted a bundle of wood weighing approximately 175 to 180 pounds, rotated, and experienced a sharp pain in his lower back that extended to his midback and lower neck.

27. Dr. Castrejon opined that Claimant sustained strained lumbar musculature, with some SI joint involvement from the September 13, 2018 incident. His opinion was based on the early physical therapy records that document the lumbar injury as well as some involvement of the left SI joint, and that Claimant was walking with a left-sided limp, that he had a decrease in hip motion, and that there was tenderness of the left piriformis.

28. Dr. Castrejon testified that the second incident "definitely" caused a worsening Claimant's lumbar condition, with facet mediated pain and mid-back involvement. Dr. Castrejon opined that Claimant requires additional treatment, primarily for the September 27, 2018, injury. He also testified that his medical opinion is based on the information he received, and the quality of such opinions is determined by the quality of such underlying information. Dr. Castrejon believed that Claimant was a reliable historian. Claimant did not, however, report prior back injuries during his IME.

29. Dr. Castrejon dismissed the recorded 19-year history of back pain as untrue. However, Dr. Castrejon testified that he did not have access to any of Claimant's medical records regarding his prior back injury and treatment. He testified that if he learned that Claimant was lifting between one-eighth to one-third the [175-180 lb] weight that Claimant reported to him, it would not change his opinion. Dr. Castrejon testified that if he learned that the equipment Claimant alleged he was using on the date of injury was actually not functioning, he would not change his opinion. Dr. Castrejon testified that if he learned Claimant was untruthful regarding his medical history, it would affect his reliance on Claimant's reporting.

30. Dr. Castrejon went on to testify that he understood Claimant was bending and lifting the wood from ground level. He identified the facet hypertrophy at L4-5 as the only relevant finding with regard to his opinion. However, he agreed that the facet hypertrophy is a chronic, not acute objective finding.

IME with Dr. Raschbacher

31. Dr. John Raschbacher performed an IME at Respondents' request. He testified at hearing in his capacity as a level II accredited expert in the field of occupational medicine; however, Dr. Raschbacher admitted he is no longer board certified in any field, including occupational medicine. He testified that Claimant reported to him that his low back pain began the day following his fall, and that he had a bruise on his left hip from the fall. Dr. Raschbacher stated that no medical records he reviewed recorded any sign of bruising to Claimant's left hip. He testified that a 19-year history of back pain would be significant in evaluating this claim because Claimant's pain history is an integral part of evaluating the nature of the injury.

32. Dr. Raschbacher testified that Claimant's MRI was unremarkable, showing no acute findings, and Claimant's medical history was inaccurate and incomplete.

Specifically regarding the September 27, 2018 injury, Dr. Raschbacher testified that if the single-bladed bandsaw was not operating, then Claimant's description of the work he was performing would leave an evaluator without a reliable mechanism of injury.

33. Dr. Raschbacher testified that most rotation occurs within the thoracic rather than the lumbar spine, so an injury due to rotation is expected to occur more frequently in the thoracic than the lumbar spine. He did concede that Claimant's reported mechanism of injury from September 27, 2018 - rotation of the spine while lifting and holding a very heavy item - can cause injury to the facets. He also testified that according to the impairment rating tips from the Division, one must have correlation between subjective complaints and objective findings; however, Claimant's subjective statements and symptoms are out of proportion with the objective findings.

34. Dr. Raschbacher further conceded that there are no medical records documenting any prior back injury or pain for at least seven years prior to the work related incident. He did testify that Claimant's treatment history from 2009 – 2011 was relevant for two reasons: Claimant had a significant history of back pain for which he gave a mechanism of injury that is inconsistent with correlating medical records, and Claimant has denied any prior history of back pain. Dr. Raschbacher concluded that there is no clear evidence that any injury occurred either on September 13 or 27, 2018.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to

resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002).

Compensability, Generally

D. Claimant must prove by a preponderance of the evidence that she is a covered employee who suffered an injury arising out of and in the course of employment. C.R.S. § 8-41-301(1); S*ee*, *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett, 33 P.3d 1230* (Colo. App. 2001). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 592 P.2d 792 (Colo. 1979).

E. An injury occurs "in the course of" employment where Claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arising out of" requirement is narrower and requires claimant to show a causal connection between the employment and injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. *Id.*

A Work Injury occurred on September 13, 2018

F. The evidence presented suggests that it is more likely than not that Claimant sustained a work injury on September 13, 2018. There is reliable eyewitness to the incident, Mr. Spohn, who saw Claimant fall on the bandsaw table on September 13, 2018, walk with a limp afterwards, and complaining of back and shoulder pain. The ALJ credits the testimony of Claimant and Mr. Spohn regarding this work injury, as there has been insufficient evidence to refute that this incident occurred, aside from the fact that it was not reported until after the second injury. It is noted that Dr. Bradley attributed Claimant's permanent impairment to his mid and lower back to the *fall injury*, and not the alleged lifting incident.

A Work Injury did not occur on September 27, 2018

G. However, the evidence does not similarly support a finding that that Claimant sustained a permanent aggravation of his lumbar and thoracic spine as a result of the September 27, 2018 incident. The ALJ finds insufficient evidence to conclude this event even occurred as described by Claimant. Since it had allegedly

occurred the very same day as Claimant reported to his PCP, one would expect Claimant to describe his alleged mechanism of injury [a dramatic pop while lifting 175 lb of wood] with greater specificity to his PCP. Further, since Claimant reported this alleged injury to his PCP the same day (September 27, 2018), there can be little confusion about dates – which might otherwise explain how this might still have occurred, despite this one-bladed bandsaw not being in use on the date in question.

H. The ALJ also credits the testimony of Mr. Dunmire, who is intimately familiar with the equipment in use, the weight of the processed wood products, and the physical maneuvers required to remove the product from the one-bladed bandsaw and stack it. The ALJ is also unpersuaded by Dr. Castrejon's insistence that his medical opinion would not change, even if he found out the wood pieces Claimant allegedly moved weighed only a fraction of the 175 lb. alleged by Claimant. Additionally, while Claimant has not treated recently for his back, his failure to mention his prior back issues [at one point requesting a MRI while in the custody of DOC] to the IMEs and providers is concerning, to say the least. Claimant has not shown, by a preponderance of the evidence, that he sustained a work injury on 9/27/18.

Medical Benefits

I. Respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. § 8-42-101 (1)(a), C.R.S. (2009); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P. 2d 362 (Colo. App. 1995). Where a claimant's entitlement to benefits is disputed, the claimant has the burden to prove a causal relationship between a work-related injury and the condition for which benefits or compensation are sought. *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo.App. 1997). Whether the claimant sustained his burden of proof is generally a factual question for resolution by the ALJ. *City of Durango v. Dunagan*, 939 P .2d 496 (Colo.App. 1997).

J. The ALJ has found that Claimant sustained compensable injuries for his fall occurring on September 13, 2018 [only]. All treatment Claimant has received to date through an authorized treating provider is found to be reasonable, necessary, and related to this incident, as treated by Dr. Bradley. Regarding ongoing medical benefits, the ALJ recognizes that Claimant has been placed at MMI already, and will not order specific ongoing treatment. Therefore, Respondents should file a Final Admission of Liability consistent with the report of Dr. Bradley or file a request for a Division Independent Medical Examination.

Temporary Partial Disability Benefits

K. To receive temporary disability benefits, the claimant must prove the injury caused a disability. C.R.S. § 8-42-103(1); *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995). As stated in *PDM Molding*, the term "disability" refers to the claimant's physical inability to perform regular employment. *See also McKinley v. Bronco Billy's,* 903 P.2d 1239 (Colo. App. 1995). Once the claimant has established a "disability" and a resulting wage loss, the entitlement to temporary disability benefits continues until terminated in accordance with C.R.S. § 8-42-105(3)(a)-(d). Claimant is not required to prove that the industrial injury is the "sole" cause of his wage loss to recover temporary

disability benefits. *Jorge Saenz Rico v. Yellow Transportation, Inc*. W.C. No. 4-547-185 (ICAO December 1, 2003), citing *Horton v. Industrial Claim Appeals Office*, 942 P.2d 1209 (Colo. App. 1996). As found, Claimant has suffered a work injury occurring on September 13, 2018. The parties agreed that Claimant's wage loss up through his date of MMI is a total of $592.17.

ORDER

It is therefore Ordered that:

1. Claimant suffered a compensable work injury on September 13, 2018. All reasonable, necessary and related medical treatment rendered to date (through his ATP) in connection with that injury will be paid by Respondents.

2. Claimant did not suffer a compensable work injury on September 27, 2018. Claimant's claim for workers compensation benefits in connection with that alleged injury is denied and dismissed.

3. Respondents will pay TTD benefits to Claimant of $592.17.

4. The insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Determination of the amount of temporary partial disability (TPD) benefits to which Claimant is entitled for the period May 5, 2017 through April 10, 2018, as awarded by ALJ Cannici in his November 2, 2018 Order.

II. Whether Claimant proved by a preponderance of the evidence penalties should be imposed against Respondents pursuant to Section 8-43-304, C.R.S. for failing to pay the full amount of TPD benefits to which Claimant was entitled per ALJ Cannici's Order.

FINDINGS OF FACT

1. Claimant sustained an admitted industrial injury to his left hip on May 1, 2017 and underwent medical treatment. He continued to work for Employer on modified duty with temporary restrictions until April 20, 2018.

2. Respondents filed a General Admission of Liability (GAL) on May 31, 2018 admitting to an average weekly wage (AWW) of $895.00 and temporary total disability (TTD) benefits from April 20, 2018 ongoing.

3. On September 11, 2018 ALJ Peter J. Cannici held a hearing on the issues of AWW, TPD benefits from May 5, 2017 through April 10, 2018, and penalties for Respondents' failure to accurately calculate AWW or the amount of disability benefits and for unreasonable delay or denial of prior authorization of surgery.

4. ALJ Cannici entered Findings of Fact, Conclusions of Law, and Order (Order) on November 2, 2018 denying and dismissing Claimant's claims for penalties. ALJ Cannici determined Claimant's AWW was $1,314.12 and awarded Claimant TPD for the period of May 5, 2017 through April 10, 2018. Finding of Fact 22 in ALJ Cannici's Order states, in part:

> The record reveals that Claimant was limited to working 40 hours per work (*sic*) while on modified duty employment. In contrast, Claimant testified that he consistently worked in excess of 40 hours each week for Employer prior to his injury. The wage records also reveal that Claimant regularly worked in excess of 40 hours per week prior to his industrial injury but was generally limited to working 40 hours per week after May 1, 2017…Accordingly, Claimant is entitled to receive TPD benefits to the extent that his AWW of $1,314.12 exceeded his weekly earnings during the period May 5, 2017 through April 10, 2018.

5. ALJ Cannici ordered "Claimant shall receive TPD benefits to the extent that his AWW of $1,314.12 exceeded his weekly earnings during the period May 5, 2017 through April 10, 2018." The Order did not include the specific dollar amount of TPD benefits to be paid.

6. On November 19, 2018, Respondents issued a check to Claimant in the amount of $8,252.38 for partial temporary income benefits for the benefit period May 5, 2017 to April 10, 2018.

7. On December 5, 2018, Claimant's counsel emailed Respondents' counsel alleging Claimant was owed additional TTD benefits. The email indicated Claimant was owed "full value" from May 1, 2017 through November 16, 2018 and alleged an unpaid balance of $5,980.70 in TTD benefits.

8. Respondents' counsel responded via email on December 17, 2018, maintaining Claimant had been paid per ALJ Cannici's Order and requesting an explanation of Claimant's belief Respondents were required to pay "full value." Claimant's counsel responded via email the same day, stating Respondents were required to pay TTD benefits according to the newly determined AWW per ALJ Cannici's Order.

9. On December 18, 2018, Claimant's counsel sent an email to Respondents' counsel conceding that the TTD payments Claimant received were, in fact, accurate. Claimant's counsel alleged, however, that there was a slight variation in TPD benefits calculations, and requested Respondents provide the basis for their TPD calculations.

10. On January 10, 2019, Respondents' counsel replied via email stating he had followed up with the adjuster regarding the TPD issue.

11. On January 17, 2019, Respondents' counsel sent an email to Claimant's counsel attaching an indemnity log. The email attachment was not offered as evidence. Respondents' counsel did not provide an explanation regarding Respondents' TPD calculations. Respondents' counsel sent another email later in the day asking if Claimant was interested in settlement. No further evidence was entered into the record regarding additional discussions of settlement or Respondents' rationale for their calculations.

12. On January 31, 2019, Claimant's counsel emailed Respondents' counsel again alleging Claimant was entitled to additional TPD benefits for the period from May 5, 2017 to April 10, 2018. Claimant's counsel contended a literal reading of ALJ Cannici's Order would mean Claimant was entitled to the difference between his gross AWW and gross wages, which Claimant calculated to be $16,027.75. Claimant's counsel noted that, if the $16,027.75 was paid at the 2/3 TPD rate, Claimant was still owed $2,432.79 ($10,685.17 minus $8,252.38, the TPD already paid). Claimant's counsel again requested that Respondents provide their rationale for their TPD calculations or the issue would need to be resolved at a hearing or a settlement conference.

13. Claimant filed an Application for Hearing on February 20, 2019[1] endorsing "Temporary Partial Benefits from 5/05/2017 to 4/10/2018" as well as a penalty for knowingly refusing to obey a lawful Order in violation of C.R.S. 8-43-304(1).

14. Claimant testified at hearing that, based on ALJ Cannici's Order, he believes he is owed the full value of the difference between his gross AWW and his actual earnings during the period from May 5, 2017 through April 10, 2018. He testified that, upon receiving his TPD check, he immediately notified his attorney of a discrepancy. Claimant further testified the underpayment of TPD caused him and his family financial hardship, as his daughter dropped out of college because he was no longer able to provide her with financial assistance and he was no longer able to go on family vacations.

15. Jennifer Escobar Tiemann testified at hearing on behalf of Respondents. Ms. Tiemann oversaw Claimant's claim at the time of the benefits calculation; however, she was not the adjuster on the claim at the time of the TPD payment. Rick Davis, who no longer works for Insurer, was the adjuster on Claimant's claim and made the TPD calculations. Ms. Tiemann testified she was unable to determine the basis for the calculation made and did not attempt to perform her own calculations in preparation for the hearing. Ms. Tiemann testified she could not recall when she was first alerted to the TPD payment issue, nor could she recall if she was alerted prior to her notation on April 16, 2019, which is the first mention of the TPD shortage within the Respondents' claims notes. Ms. Tiemann testified the amount of $48,936.53 was a fairly accurate reflection of the Claimant's wages actually earned May 5, 2017 through April 10, 2018.

16. Per Claimant's calculations, his AWW from May 5, 2017 through April 10, 2018 was $64,016.41 and his gross earnings were $48,936.53. Claimant contends he is owed $6,827.50 in TPD benefits, after subtracting the amount of TPD that has been paid from the difference between his AWW and gross earnings ($15,079.88 minus $8,252.38). In the alternative, Claimant argues he is owed $1,800.87, which represents the total after subtracting the TPD payment already received from 2/3 of the difference of the AWW and earnings ($10,053.25 minus $8,252.38).

17. Respondents concede Claimant is owed TPD benefits for the time period awarded by ALJ Cannici. Per Respondents' calculations, the difference between Claimant's AWW and gross wages from May 5, 2017 through April 10, 2018 is $15,406.76 ($64,917.53 minus $49,881.30). Respondents contend Claimant is owed $2,018.79 in additional TPD benefits after subtracting 2/3 of the difference ($10,271.17) from what Claimant has already been paid, $8,252.38.

Ultimate Findings

18. The ALJ takes administrative notice of the calendar for the years 2017 and 2018. Claimant's pay records reflect Claimant worked Monday through Friday. May 5,

[1] The ALJ takes administrative notice of the OAC file, which includes the February 20, 2019 Application for Hearing.

2017 was a Friday and April 10, 2018 was a Tuesday. For the period May 5, 2017 through April 10, 2018, Claimant's total gross wages were $48,936.53.[2] Claimant's total AWW during this same time period was $64,016.42. Claimant's total wage loss during this time period was $15,079.89 ($64,016.42 minus $48,936.53).

19. ALJ Cannici's Order does not award Claimant the full value of the difference between Claimant's AWW and weekly earnings during the time period at issue. ALJ Cannici determined that, to the extent Claimant suffered lost wages during the period May 5, 2017 through April 10, 2018, he is entitled to TPD benefits. ALJ Cannici did not order the TPD benefits to be calculated via a method not specified in Section 8-42-106(1), C.R.S.

20. Accordingly, pursuant to ALJ Cannici's Order, Claimant was entitled to be paid TPD at a rate of 66 2/3^{rds} of the difference between Claimant's AWW and weekly earnings, $10,053.26 ($15,079.89 x 2/3). As Claimant has already been paid $8,252.38, Claimant is owed an additional $1,800.88 in TPD benefits ($10,053.26 – $8,252.38).

21. Respondents failed to comply with ALJ Cannici's Order by failing to pay the full amount of TPD benefits owed to Claimant for the time period awarded by ALJ Cannici. Respondents' actions were objectively unreasonable, as Claimant repeatedly attempted to rectify the discrepancy, Respondents acknowledge Claimant has been underpaid, and Claimant continues to be owed benefits to which he is entitled.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and

[2] Claimant earned $293.26 on May 5, 2017, which was included in the May 12, 2017 check. Claimant earned a total of $413.23 for April 9, 2018 and April 10, 2018. The remaining earnings for the other weeks during the time period at issue total $48,230.04.

draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Temporary Partial Disability

Section 8-42-106(1), C.R.S. provides,

> In the case of temporary partial disability, the employee shall receive sixty-six and two-thirds percent of the difference between the employee's average weekly wage at the time of the injury and the employee's average weekly wage during the continuance of the temporary partial disability, not to exceed a maximum of ninety-one percent of the state average weekly wage per week. Temporary partial disability shall be paid at least once every two weeks.

Claimant contends the method of TPD calculation set forth in Section 8-42-106(1), C.R.S. is a default calculation and the ALJ may substitute the calculation when making an order, citing to Section 8-40-201(15), C.R.S. Claimant argues the phrasing of ALJ Cannici's Order provides an alternative method for calculating Claimant's TPD benefits. He reasons that, per ALJ Cannici's Order, he is entitled to the full value of the difference between his AWW and his actual earnings for the period of May 5, 2017 through April 10, 2018 ($15,079.89), as opposed to 2/3 of the difference ($10,053.26). Thus, Claimant maintains he has been underpaid $6,827.50 in TPD benefits ($15,079.89 - $8,252.38).

The ALJ disagrees with Claimant's argument that ALJ Cannici's wording requires an alternative TPD calculation. Section 8-42-102(3), C.R.S. allows an ALJ discretion in calculating a claimant's AWW. However, the ALJ is unaware of, nor does Claimant cite, any authority allowing an ALJ discretion in calculating TPD benefits in a method other than that specifically outlined in Section 8-42-106(1), C.R.S. The statutory provision cited by Claimant in his position statement, Section 8-40-201(15), C.R.S., does not

support his contention that an ALJ may order TPD benefits to be calculated at a different rate, as the section merely defines "Order" as "any decision, finding and award, direction, rule, regulation, or other determination arrived at by the director or an administrative law judge."

Moreover, the wording of ALJ Cannici's Order can be reasonably interpreted as a statement of Claimant's entitlement to benefits, not an alternative method of calculating the amount of TPD benefits to be paid. The purpose of temporary disability benefits is to compensate the claimant for wage loss, including lost earning capacity, during the healing period. *Colorado AFL-CIO v. Donlon*, 914 P.2d 396, 403-404 (Colo. App. 1995); *Yates v. LaFarge Corporation*, W.C. No. 4-527-450 (July 3, 2003). When ALJ Cannici ordered that Claimant shall receive TPD benefits to the extent his AWW exceeded his weekly earnings during the time period at issue, he was merely stating that, to the extent Claimant suffered lost wages during such time period, Claimant is entitled to TPD benefits. This interpretation is supported by Finding of Fact 22 of ALJ Cannici's Order, in which ALJ Cannici specifically found Claimant worked fewer hours post-injury as compared to pre-injury.

As found, the difference between Claimant's total AWW and Claimant's actual gross earnings from May 5, 2017 through April 10, 2018 is $15,079.89. Using the method of calculation set forth in Section 8-42-106(1), C.R.S. and pursuant to ALJ Cannici's Order, Claimant is entitled to TPD at a rate of 2/3 of the difference, $10,053.26. As Claimant has already been pain $8,252.38 in TPD, he is owed a balance of $1,800.88.

Penalties

Section 8-43-304(1), C.R.S. provides for the imposition of penalties of up to $1,000 per day where the insurer "violates any provision of article 40 to 47 of [title 8], or does any act prohibited thereby, or fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or the panel, for which no penalty has been specifically provided, or fails, neglects or refuses to obey any lawful order made by the director or panel…" An ALJ must first determine whether the insurer's conduct constitutes a violation of the Act, a rule, or an order. The ALJ must then determine whether any action or inaction constituting the violation was objectively unreasonable. The reasonableness of the insurer's action depends on whether it was based on a rational argument based in law or fact. *Jiminez v. Industrial Claim Appeals Office,* 107 P.3d 965 (Colo. App. 2003); *Gustafson v. Ampex Corp.,* W.C. No. 4-187-261 (I.C.A.O. August 2, 2006), *but see, Pioneers Hospital v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005) (standard is less rigorous standard of "unreasonableness"). However, there is no requirement that the insurer know that its actions were unreasonable. *Pueblo School District No. 70 v. Toth,* 924 P.2d 1094 (Colo. App. 1996).

Respondents argue there was no violation of the Act and no failure to obey ALJ's Cannici's Order. Respondents note ALJ Cannici's Order did not detail a specific dollar amount of TPD benefits to be paid, thus necessitating a calculation by Respondents.

Respondents contend a simple difference of calculations does not amount to a violation of the Act or any failure or refusal to obey an order.

Respondents concede the TPD payment issued to Claimant was incorrect and Claimant is owed additional TPD benefits. At the time of hearing and issuance of this order, there is no indication Claimant has been paid additional TPD benefits to which he is owed. Accordingly, although Respondents issued a timely TPD payment, they have failed to comply with ALJ Cannici's Order by failing to pay the full amount of benefits owed to Claimant for the time period awarded by ALJ Cannici.

Claimant concedes, and the ALJ agrees, that a mere miscalculation in these specific circumstances does not, by itself, warrant imposition of penalties. However, Insurer's inaction and failure to remedy the admitted discrepancy is objectively unreasonable. Claimant's counsel first notified Respondents' counsel of a potential discrepancy in the TPD payment on December 18, 2018, in an email requesting the rationale for Respondents' TPD calculations. Respondents' counsel replied on January 10, 2019, indicating he had followed up with the adjuster regarding the TPD issue. Respondents subsequently provided Claimant an indemnity payout log and, on January 17, 2019, inquired as to Claimant's desire to discuss settlement. The record is devoid of Respondents making any attempts to provide the basis for their initial TPD calculations, despite a January 17, 2019 email from Claimant's counsel specifically outlining Claimant's calculations, a January 31, 2019 email again requesting Respondents' rationale, and a February 20, 2019 Application for Hearing specifically detailing the calculations and endorsing penalties. While Respondents were by no means required to summarily accept Claimant's calculations, a reasonable insurer under the circumstances would make prompt efforts to ensure there were no miscalculations on their behalf. There is no evidence establishing Respondents did so.

Here, the Court deems a potential error in calculation less problematic than Respondents' failure to subsequently check their calculations when repeatedly apprised of a potential discrepancy and then promptly remedy what they readily acknowledge is an underpayment. As argued by Respondents, no particular dollar amount of TPD benefits was specified in ALJ Cannici's Order, requiring Respondents to perform their own calculations based on wage and other relevant information in their possession. Miscalculations and disputes regarding calculations can be expected to occur in workers' compensation matters and can be addressed at hearing if needed. However, this is not a situation where each party maintains their respective calculations were correct, or the sole dispute was whether Claimant is actually entitled to "full value" per his interpretation of ALJ Cannici's Order.

Respondents were notified of a potential discrepancy in TPD payments and were repeatedly asked to address the discrepancy. As of the date Claimant filed the Application for Hearing, Respondents had been given multiple opportunities over the course of several months to remedy the underpayment. The record is devoid of a reasonable explanation, or any explanation at all, for Respondents' failure to do so. Further, no explanation was provided as to the basis for Respondents' initial calculations, why there is now a difference in those calculations, and why there has

been a delay in rectifying the underpayment when it was ultimately acknowledged by Respondents.

Accordingly, the ALJ concludes Respondents are subject to a penalty for the time period of February 1, 2019through the date of hearing, June 4, 2019. By February 1, 2019, Claimant's counsel had repeatedly contacted Respondents regarding the discrepancy, requested rationale for Respondents' TPD payment, and notified Respondents Claimant would be filing an Application for Hearing if the matter was not resolved. Respondents had sufficient time by February 1, 2019 to check their calculations, confirm that there was an underpayment, and attempt to remedy the situation. February 1, 2019 through June 4, 2019 is a period of 124 days. As each day is a separate offense under the statute, Respondents shall pay a penalty of $5.00 per day, totaling $620.00 in penalties.

ORDER

1. Respondents shall pay Claimant $1,800.88 in TPD benefits owed for the time period May 5, 2017 through April 10, 2018.

2. Respondent shall pay Claimant $620.00 in penalties.

3. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 2, 2019

Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-068-409-002

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW, AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

[Redacted],

Claimant,

v.

[Redacted],

Employer,

And

[Redacted],

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on July 9, 2019 in Denver, Colorado. The hearing was digitally recorded (reference: 07/09/2019, Courtroom 3, beginning at 8:30 AM and ending at 12:30 PM). The official Spanish/English interpreter was Rigoberto Mendez.

The Claimant was present in person and represented by [Redacted], Esq. Respondents were represented by [Redacted], Esq.

Hereinafter [Redacted] shall be referred to as the "Claimant." [Redacted] shall be referred to as the "Employer." Pinnacol Assurance shall be referred to as the "Insurer". Employer and Insurer will collectively be called "Respondents". All other parties shall be referred to by name.

Claimant's Exhibits 1 through 8 were admitted into evidence, without objection, with exception of Claimant's Exhibit 8 which was withdrawn. Respondents' Exhibits A through O were admitted into evidence, with exception of Respondents' Exhibits M and O which were withdrawn.

At the conclusion of the hearing, the ALJ established a post-hearing briefing schedule: the Claimant's opening brief was timely filed, electronically, on July 16, 2019. The Respondents' answer brief was timely filed, electronically, on July 23, 2019. The Claimant's reply brief was timely filed, electronically, on July 26, 2019, at which time the matter was deemed submitted for decision.

ISSUES

The paramount issue to be determined by this decision concerns whether the Claimant sustained a compensable injury on October 5, 2017. The decision in this matter, to a great extent turns on credibility. If the case is not compensable, the other designated issues are moot.

The Claimant bears the burden of proof on all issues by a preponderance of the evidence.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ makes to following Findings of Fact:

1. The Claimant is 44 years old and has worked as a laborer his whole life. He was hired by the Employer in January of 2017. He worked full time. The Claimant's work with the Employer required frequent lifting and carrying of heavy materials.

2. The Claimant lacks any sort of ascertainable medical history because he did not frequent a doctor's office nor did he seek care for any prior injuries.

3. On October 5, 2017, the Claimant was working on a job site for the Employer. He lifted some scaffolding when he allegedly felt a pain in his back. He reported his back pain to his supervisor, Mel [Redacted] (hereinafter "Sauce") shortly after the alleged incident. The Claimant finished the work day.

4. The Claimant took the next two weeks off from work. During his time off, he received an address for "Building H" at Denver Health from Respondents. The Claimant tried to obtain care at "Building H" but it was allegedly closed. The Claimant then tried to get help with the address from personnel at Denver Health. He was told to receive care at the emergency room (ER), but admittedly never tried to obtain care from Denver Health until February 2018, almost four months later.

5. The Claimant returned to work sometime around October 17, 2017. He continued his regular job duties allegedly with the help of the Employer's brother until December 31, 2017. [Redacted] testified that his brother was incarcerated in Colorado Springs, Colorado, or in Mexico during the period that the Claimant alleged that the Employer's brother helped him with the work. The ALJ finds [Redacted]'s testimony in

this regard credible. The Claimant did not persuasively contradict [Redacted]'s testimony.

6. During December, the Employer allegedly received complaints about the Claimant's work quality and the Claimant was allegedly seen with a pipe and drugs at a work site. The Claimant denied having ever used drugs. The Employer told the Claimant he no longer had work for the Claimant after December 31, 2017.

7. On January 13, 2018, the Claimant went to the Division of Worker's Compensation and filled out a Worker's Claim for Compensation. The Claimant required assistance because he only speaks and reads Spanish.

8. On February 23, 2018, the Claimant spoke with Chanyn [Redacted] from Pinnacol. The Claimant admitted to [Redacted] that he had received a list of medical providers from the Employer but failed to obtain medical care because "Building H" was closed. [Redacted] informed the Claimant that she would be denying his claim because there was no evidence of injury, the Claimant failed to obtain medical care, the Claimant failed to contact Insurer, and the Claimant continued his regular job duties after the injury.

Medical

9. On February 24, 2018, the Claimant sought care at Denver Health for back pain. Amarprett Kaur, M.D., diagnosed the Claimant with lumbar back pain and prescribed pain medication.

10. On March 22, 2018, the Claimant sought care at Swedish Medical Center. There, he was diagnosed with radiculopathy in the L4-L5 region.

11. On April 18, 2018, the Claimant underwent an X-ray. The sX-ray showed a superior anterior corner of the L4 vertebral body with anterior displacement of the fragment. This fracture was described as chronic with no known date.

12. On May 1, 2018, the Claimant went to Alejandrina Viadales, M.D., at Jeffco Family Health Services Clinic. The Claimant reported his back pain and that he believed he hurt his back lifting scaffolding at work. Dr. Viadales diagnosed the (PT).

John Raschbacher, M.D. Respondents' Independent Medical Examiner (IME)

13. On June 15, 2018, the Claimant was evaluated by Dr. Racshbacher for an IME requested by the Respondents. Dr. Racshbacher was of the opinion in his report that the mechanism of injury (lifting the corner of scaffolding) was not medically likely to cause a vertebral body fracture at L4 or otherwise. He also was of the opinion that even in the unlikely event a fracture did occur, the Claimant would not have been able to tolerate any degree of physical work thereafter..

14. On August 4, 2018, the Claimant underwent an MRI (magnetic resonance imaging) of his back. Joseph Morgan, M.D., found mild spondylosis and facet arthrosis in the L3-L4, L4-L5 and L5-S1 region. The MRI failed to pick up a fracture.

15. Robert Messenbaugh, M.D., issued an IME records review on June 9, 2019. Dr. Messenbaugh reiterated the opinions of Dr. Racshbacher.

Testimony of the Claimant

16. The Claimant testified at hearing through an interpreter. He stated that on October 5, 2017 he was lifting scaffolding at a job site for the Employer when he felt a puncture in his back. He also stated he told [Redacted] right away, but was sent away to work at another site.

17. The Claimant also testified that he did not return to work for two weeks because of the back pain he (Building H at Denver Health) was closed. He did not attempt to receive medical attention for his condition until February 2018, almost four months after the alleged injury.

18. The Claimant also testified that he returned to work in mid-October. He stated that he would work with [Redacted]'s brother Bernardo who did all the heavy lifting for the two of them. The Claimant continued to work for Respondents until he was let go in December for lack of work.

19. When asked on cross examination if the real reason the Claimant was terminated from his job was due to the use of drugs and poor work performance, the Claimant denied both accusations.

20. In rebuttal to the Employer's assertion that Bernardo [Redacted]'s brother had been arrested and deported to Mexico during the time that Bernardo was allegedly helping the Claimant, the Claimant testified that he thought Bernardo had been arrested and deported some time but did not know the exact date. He could not recall if Bernardo worked with him in November and December. This contradicted Claimant's earlier version of being helped by Bernardo. The ALJ infers and finds that the Claimant's waffling on this matter when confronted with Bernardo's jailing and/or depoprtation, significantly undermines the Claimant's credibility.

21. The Claimant testified that he was unsure of how to proceed with medical treatment because he was hurt at work and that on February 23, 2018 when [Redacted] contacted the Claimant to deny his claim, it was the first time he had spoken with someone from Insurer.

22. Lastly, the Claimant testified that he still experiences significant back pain, but the level of pain varies. The Claimant wishes to seek treatment at Jeffco Family Services Clinic and he wants to continue PT.

Testimony of Mel [Redacted]

23. [Redacted] testified that the Claimant reported his back pain to him on October 5, 2017, but that Claimant continued to work even after [Redacted] told him to go home for the day.

24. [Redacted] also testified that he went to the Claimant's house to bring him the worker's compensation paperwork including the list of providers. The Claimant rejected [Redacted]'s advice to seek medical attention. The Claimant was then absent for one to one and one-half weeks from work, but he told [Redacted] that he was absent because he was ill not because he allegedly injured his back at work.. The ALJ finds [Redacted]'s testimony credible and persuasive.

25. When the Claimant returned to work in mid-October, he said nothing about his back to [Redacted]. He also continued to work his regular 40-hour week, during some of which [Redacted] saw the Claimant lift up to 100 lbs. on his own. [Redacted] also stated that Bernardo was absent during the time in which the Claimant alleged Bernardo assisted him. [Redacted] stated that Bernardo was arrested in Colorado Spring, Colorado, on October 17, 2017 and remained incarcerated until sometime in January 2018 when he was deported to Mexico. The ALJ finds [Redacted]'s testimony in this regard highly persuasive, credible and unrebutted by the Claimant.

26. [Redacted] stated that he had received complaints from a customer stating that the Claimant was showing up late to the job. [Redacted] also testified about witnessing the Claimant place a clear substance into a pipe and smoking it. [Redacted] stated that these were the reasons the Claimant's employment was terminated on December 31, 2017, but admitted that he only told the Claimant that there was not any more work for him.

Testimony of Chanyn [Redacted]

27. [Redacted] testified at hearing that she spoke on the phone with the Claimant on February 23, 2018. She stated that the Claimant told her that he had received the authorized provider list, but never sought medical care because it was too late in the day. The ALJ finds [Redacted]'s testimony credible. The Claimant did not contradict [Redacted] in this regard.

28. [Redacted] also stated that she told the Claimant that she would be denying his claim because there was a lack of evidence to support the existence of an injury, the Claimant had failed to seek medical treatment, that the Claimant failed to contact the Insurer before February 2018..

29. Lastly, [Redacted] stated that another claims representative was handling the claim prior to February 2018. [Redacted] stated that based on a review of the file, the prior representative had documented a conversation with the Employer. The

conversation stated that the Employer had filed a First Report of Injury and had given the list of providers to the Claimant.

Testimony of Drs. Racshbacher and Messenbaugh

30. Dr. Racshbacher and Dr. Messenbaugh testified at hearing that they believed the Claimant did not suffer an injury to his low back on October 5, 2017. Both also were of the opinion that it was medically probable that even if an injury did occur on October 5, 2017, the Claimant's injury did not require medical treatment, work restrictions, time from work. The ALJ finds their opinions credible and persuasive.

31. Additionally, Dr. Messenbaugh stated that the Claimant had not aggravated or accelerated a pre-existing condition. Dr. Messenbaugh stated that if any injury had even occurred, it was likely a strain and the Claimant would not still be feeling pain.

Ultimate Findings

32. The ALJ finds the Claimant's testimony lacks credibility and is not supported by the weight of the persuasive medical evidence, as found herein above.

33. The ALJ finds the opinions of Mel [Redacted], Chanyn [Redacted] and Drs. Racshbacher and Messenbaugh credible and persuasive and supported by the totality of the medical evidence in the record.

34. Based on the totality of the evidence, the ALJ finds that the Claimant did not sustained an injury to his low back on October 5, 2017, sufficient to be compensable.

35. The Claimant failed to sustain her burden of proof by a preponderance of the evidence on the issue of compensability.

CONCLUSIONS OF LAW

Based on the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines

the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.**

The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). Moreover, the ALJ, as the fact finder, is allowed to use reason and common sense in drawing inferences from other facts that have been proved. *Venetucci v. City of Colorado Springs,* 99 Colo. 389, 63 P.2d 462 (1936); *Independence Coffee & Spice Co. v. Kalkman* 61 Colo. 98, 156 P. 135 (1916).*Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). As found, the Claimant's testimony was not credible nor supported by the weight of the medical evidence. The testimony of Drs. Racshbacher and Messenbaugh as well as Respondents' lay witnesses, Mel [Redacted] and Chanyn [Redacted] was credible and supported by the weight of the medical evidence in the record.

Compensability

b. An "injury" referred to in § 8-41-301, C.R.S., contemplates a **disabling** injury to a claimant's person, not merely a coincidental and non-disabling insult to the body. *See Henderson v. RSI, Inc.,* 824 P.2d 91 (Colo. App. 1991). *Also see Gaudett v. Stationers Distributing Comp*any, W.C. No. 4-135-027 [Indus. Claim Appeals Office (ICAO), April 5, 1993]. A priori, the consequences of a work-related incident must require medical treatment or be disabling in order to be sufficient to constitute a compensable event. If an incident is not a significant event resulting in an injury, claimant is not entitled to benefits. *Wherry v. City and County of Denver*, W.C. No. 4-475-818 (ICAO, March 7, 2002). As found, based of the opinions of Drs. Raschbacher and Messenbaugh, the Claimant's injuries, if any, were not sufficient for the Claimant to seek medical attention, which would have been necessary almost immediately after the incident of October 5, 2017, inferentially, according to the opinions of Drs. Raschbacher and Messenbaugh.

c. In order for an injury to be compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Office,* 919 P.2d 207, 210, 210 (Colo. 1996). An injury "arises out of' employment if it would not have occurred **but for** the fact that the conditions and obligations of employment placed the employee in a position that he or she was injured." *See City of Brighton v. Rodriguez,* 318 P.3d 496, **2014 CO 7** presumption that an injury arises out of employment when an unexplained injury occurs during the course of employment. Thereupon, it is incumbent to show that non-work related factors caused the injury. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1) (c), C.R.S. *See Faulkner v. Indus. Claim Appeals Office,* 24 P.3d 844 (Colo. App. 2000)*; Eller v. Indus. Claim Appeals Office*, 224 P.3d 397, 399 (Colo. App. 2009); *Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277, 1279 (Colo. App. 2008). The question of causation is generally one of fact for determination by an ALJ. *Faulkner* at 846; *Eller* at 399-400. As found, the Claimant failed to prove by a preponderance of the evidence that a compensable injury was in the course and scope of and arose out of his employment with Respondent on October 5, 2017.

d. An injured worker has a compensable new injury **if the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought.** § 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997)*.* An injury resulting from the concurrence of a preexisting condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, *supra*. *Duncan v. Indus. Claims App. Office*, 107 P.3d 999 (Colo. App. 2004). Even where the direct cause of an accident is the employee's preexisting disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989). *Also see* § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). As found, the incident of October 5, 2017, did not aggravate or accelerate any of the Claimant's preexisting back conditions.

Burden of Proof

e. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to

benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant failed to sustain his burden that a compensable injury occurred on October 5, 2017.

ORDER

IT IS, THEREFORE, ORDERED THAT:

Any and all claims for Workers' Compensation benefits are hereby denied and dismissed.

DATED this 5th day of August 2019.

EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

- Did Respondent prove a basis to withdraw its admission of liability?
- Did Claimant prove his claim should be reopened for additional medical benefits for treatment of cervical myelopathy?[1]

FINDINGS OF FACT

1. Claimant works for Employer as an IT specialist. On October 17, 2018, he suffered admitted injuries while moving a printer. The printer was very large so Claimant enlisted a coworker, Michael P[Redacted], to help him. Claimant and Mr. P[Redacted] were surprised by the weight of the printer, which they estimated weighed at least 100 pounds. The printer was inside a metal rack on a shelf approximately 24 inches off the ground. They planned to put the printer on a wheeled cart Claimant had pulled up next to the shelf. As they were "manhandling" the printer out of the rack, the cart was bumped and rolled away. They tried to move toward the cart, but Mr. P[Redacted] stumbled over on some equipment on the floor and ultimately lost his grip. The printer crashed to the floor, striking Mr. P[Redacted] on the leg while it was falling. In the process, Claimant bumped into a storage cabinet and his head moved backward and forward.

2. Claimant reported the incident to his supervisor and completed an accident report. He listed the injured body parts as "shoulder – left and neck." Immediately after the accident, Claimant did not feel he had suffered any injuries but wanted to see how he felt in the morning. The next day he felt "pretty stiff and sore" around his neck and left shoulder, so Employer referred him to CCOM for evaluation.

3. Claimant saw Dr. Thomas Centi at his first CCOM appointment on October 19, 2018. Claimant completed a pain diagram showing pain about his posterior left shoulder and the left side of his neck. He had no numbness or tingling in his extremities. Dr. Centi's report indicates Claimant "fell to the floor" and the printer fell "onto his left shoulder and neck." At hearing, Claimant agreed that history is not accurate—he did not fall and the printer did not fall on him. Claimant's left arm strength was normal on examination. He was tender to palpation of the superior shoulder region, upper trapezius and left side of his neck. Shoulder and cervical range of motion were mildly reduced. An x-ray of the left shoulder showed degenerative changes and mild osteoarthritis but

[1] At hearing, Claimant argued the claim was not closed by a November 27, 2018 Final Admission of Liability (FAL). In the alternative, Claimant requested the case be reopened for additional medical benefits. In his brief, Claimant conceded he did not timely object to the FAL and his claim "automatically closed," and now simply requests the claim be reopened. Claimant's concession that the claim is closed accurately reflects the controlling law on this issue. *See Martinez v. Energy Saving Crew LLC*, W.C. No. 5-055-251-002 (May 31, 2019); *Suomie v. Spectrum Retirement Communities*, W.C. No. 5-050-347-01 (June 14, 2019).

nothing acute. Dr. Centi diagnosed a left shoulder contusion and a cervical "sprain." He prescribed NSAIDs and muscle relaxers and put Claimant on work restrictions.

4. Claimant followed up with Dr. Centi on October 22, 2018. He reported ongoing pain in his left shoulder and left neck, but his pain levels were lower than the previous visit. He had no numbness or tingling in his extremities. The physical examination findings were unchanged, with no suggestion of neurological abnormalities. Dr. Centi referred Claimant to Action Potential for physical therapy.

5. Claimant had his initial physical therapy visit the next day, on October 23. He reported neck and left shoulder pain, but "no neurological sx." On the intake forms, Claimant stated he had no tingling in his arm, shoulder, or hand. On examination, he was tender to palpation of the left shoulder, biceps, and neck. Shoulder range of motion and left cervical rotation were reduced 50%. Manual muscle testing was graded 3/5 but there was no myotomal weakness.

6. Claimant ultimately had nine PT sessions at Action Potential. His reported symptoms were generally confined to his left shoulder and neck, with no mention of any neurologic symptoms suggestive of myelopathy. The only reference to anything other than left shoulder or left neck symptoms is a non-specific statement on November 5, 2018 that "[he] did something over the weekend and is really sore today pain radiated to the right side." The "objective" section of each PT report was cloned from the initial visit, so it is unclear whether the therapist performed a new physical examination at any subsequent visits. But the ALJ infers the therapist appreciated no worrisome neurologic signs or symptoms at any time or he would have documented same in his records.

7. Claimant followed up with Dr. Centi a few more times in October and November 2016. On November 12, 2018, Dr. Centi noted Claimant was making "good progress with therapy." He was still having left shoulder and neck pain, but "no numbness or tingling." On the accompanying pain diagram from the November 12 appointment, Claimant made marks near his left upper arm, but the report is not legible enough for the ALJ to discern whether he indicated "aching" or "pins & needles." Regardless, there was no indication of any right-sided symptoms that date, and nothing on the pain diagram to suggest he was experiencing symptoms consistent with cervical myelopathy.

8. Claimant was 71 years old at the time of the work accident. He had received treatment for age-related neck pain before the October 2018 accident.

9. On May 14, 2018 (approximately five months before the accident), Claimant received chiropractic treatment for neck and upper back pain. Claimant had been doing "a lot of yard work recently, but did not have any one specific event that caused a problem." Physical examination showed "moderate" muscle spasm in the left side of the neck, left trapezius and in the thoracic area. Cervical extension and left rotation were mildly reduced due to pain.

10. Claimant was still having left trapezius pain when he saw his PCP, Dr. James Kinsman, on June 27, 2018. He said the pain had been "present for a few months"

and persisted despite four chiropractic visits "with only very transient benefit." Dr. Kinsman opined, "Muscle spasm is just as likely as radiculopathy if not more so without any arm symptoms." He recommended PT, which Claimant declined.

11. Claimant saw his chiropractor again on November 19, 2018. He complained of pain in the left neck and left posterior shoulder "over the last 2 weeks." Claimant denied any injury, accident, or fall. He received chiropractic adjustments to his neck, thoracic spine and left shoulder. There was no indication of any neurological symptoms such as numbness, tingling, weakness, or coordination difficulties.

12. Dr. Kinsman's records suggest Claimant had symptoms consistent with cervical stenosis, radiculopathy, or myelopathy before the work accident. A March 27, 2018 record lists unresolved diagnoses of "cervical myelopathy," "cervical radiculopathy," and "cervical spinal stenosis." Those diagnoses were carried forward to subsequent notes dated April 6, April 12, April 26, May 14, and June 27, 2018. In his deposition, Dr. Kinsman seemed puzzled by those notations but offered no persuasive explanation for how they came to be found in records predating the accident.

13. Claimant's final appointment with Dr. Centi was on November 26, 2018. He presented in a notably different condition than previous visits. Dr. Centi noted, "[he] has now developed an unsteady gait, coordination issues." For the first time, Claimant's pain diagram included symptoms in the low back, right leg, and bilateral hands and fingers. Claimant had "completed all therapy" for his shoulder and neck strains. He still had aching and stiffness in his neck, but "considers it to be minimal." Dr. Centi opined Claimant was at MMI without impairment for his soft tissue strains, and advised him to follow-up with his personal physicians for the new "unrelated medical condition."

14. Claimant went to the Penrose Hospital emergency department the afternoon of November 26 because he thought might be having a stroke. He reported symptoms including weakness in his right arm and leg, balance problems, dragging his right foot, and difficulty writing. Multiple examining and treating providers at the hospital documented that the neurological symptoms started approximately one week before Claimant arrived at the ER and became progressively worse, which the ALJ finds as fact. At least two providers noted Claimant fell at home within a week before presenting to the ER. Multiple providers also erroneously stated the work accident occurred approximately 2 weeks before the ER visit.

15. Physical examination at the ER showed "significant weakness" of the right arm and right leg, and some right-sided drift. Claimant was admitted to the hospital for further workup.

16. A neurological nurse practitioner evaluated Claimant on November 27 and confirmed weakness in the right arm and leg. She diagnosed "possible incomplete cervical myelopathy" and recommended brain and neck MRIs.

17. An MRI of Claimant's brain on November 27, 2018 showed mild chronic small vessel disease but no evidence of acute cerebral infarct. A cervical MRI on

November 28, 2018 showed severe C4-5 and moderate-to-severe C5-6 canal stenosis with subtle cord edema, and moderate foraminal stenosis at C3-4.

18. Claimant had a surgical consult with Dr. Christopher Tomac on November 29, 2018. Dr. Tomac documented, "States attempted to lift 100-pound printer with colleague, his colleague slipped and printer fell onto his LEFT shoulder. He states initially increased spasm pain LEFT shoulder/trapezius area. This was followed by right-sided numbness and pain with some mild weakness (both the RIGHT upper extremity and RIGHT lower extremity)." Dr. Tomac was under the mistaken impression it had only been "2-3 weeks since accident." Dr. Tomac opined, "within reasonable medical certainty, [the] patient's cervical spondylosis, as well as any required treatment up to and including surgery, is resultant from the accident." Claimant told Dr. Tomac his symptoms were improving, which was borne out by the physical examination findings. Dr. Tomac opined, "Based on my interpretation of the imaging and [the] patient's significantly improving exam, I cannot, with a clear conscience recommend a surgical intervention at the present time."

19. Claimant was transferred to the rehab unit and remained there from November 30 to December 11, 2018. The principal diagnosis was cervical myelopathy. His rehab was managed by Dr. House, a PM&R specialist. At intake, Claimant told Dr. House,

> He was helping move a printer to a table. His partner carrying the other side tripped and fell with the printer coming toward him, knocking him into the file cabinet. This led to rapid flexion of the head and immediate symptoms described below. He has weakness of the right arm and leg and left hand if it is less than his baseline. He also has tingling in her bilateral upper extremities that appears to be worse on the left. His foot is dragging when he walks.

20. On December 19, 2018, Dr. Kinsman observed Claimant was using a walker and "obviously has weakness and poor coordination of his upper extremities." Dr. Kinsman summarized his understanding of the HPI as: "[H]e was hospitalized . . . after a fall that occurred at work when he was trying to lift something heavy with a coworker and he injured his neck. Obviously, he had pre-existing changes that had never been symptomatic and now he effectively has a cervical myelopathy." Dr. Kinsman diagnosed "cervical myelopathy due to a combination of pre-existing but as yet previously asymptomatic cervical stenosis and foraminal stenosis but with trauma superimposed. Little improvement since early November injury."

21. Claimant had a surgical consultation with Dr. Sergiu Botolin on December 26, 2018. Claimant told Dr. Botolin "he was fine until [a] work-related accident that happened at the beginning of November. He reports that he and another coworker were lifting a laser printer and the other person [ ] tripped and fell which made [Claimant] fall too. He reports that after the fall he has noticed severe deterioration of his balance. He has to walk with a walker or otherwise he falls down." Dr. Botolin diagnosed cervical spondylosis with myelopathy and an incomplete spinal cord injury at C5-7 without bone

injury." Dr. Botolin opined, "I explained to the patient that he does present with a clinical picture of cervical myelopathy. Based on the patient's story, his changes developed suddenly after his fall at work, which implies that he had an incomplete spinal cord injury at that time. He does appear to have spinal cord edema on the MRI from November 28." Dr. Botolin recommended a C3-6 anterior cervical discectomy and fusion. Claimant wanted to think about his options before deciding whether to have surgery.

22. Claimant has had type 2 diabetes for many years. On January 25, 2019, Dr. Botolin postponed surgery after receiving blood work showing elevated hemoglobin A1c and a prolonged prothrombin time ratio. Dr. Botolin's PA-C advised Claimant to follow up his PCP "for optimization of his co-morbidities" so he could proceed with surgery.

23. Claimant saw Dr. Kinsman on January 28, 2019, who opined his A1c level "should not preclude surgery . . . [and] we would be hard-pressed to get this down much further." After discussing the matter with an endocrinologist and with Dr. Botolin's medical assistant, he determined Dr. Botolin is "more strict" about this than are other surgeons. Claimant requested a second opinion and Dr. Kinsman referred him to Dr. Ronald Hammers, a neurosurgeon.

24. Dr. Hammers evaluated Claimant on February 4, 2019. Dr. Hammers noted, "[Claimant] reports a fall in October of 2018 while moving a piece of equipment at work. Prior to this injury he denies any symptoms resembling radiculopathy or myelopathy. Subsequent to this injury, he developed a variety of symptoms," including pain and numbness in his arms and hands, worse on the right, dragging his right leg, and decreased coordination. On examination, he demonstrated a spastic gait, bilateral upper extremity weakness, and decreased sensation in the right hand. Dr. Hammers diagnosed cervical spondylosis with myelopathy and central cord syndrome. He recommended Claimant undergo a C4-6 anterior decompression and fusion "soon" because of the severity of his symptoms and lack of improvement. Dr. Hammers did not consider Claimant's A1c level or PT ratio to outweigh the relatively urgent need for surgery.

25. Dr. Hammers performed the surgery on February 14, 2019. The surgery was successful, with Claimant reporting "night and day" improvement in his gait and significant improvement in using his arms.

26. Claimant saw Dr. Eric Ridings for an IME at Respondent's request on March 25, 2019. Dr. Ridings spent considerable time reviewing the incident and injury mechanism with Claimant. The history Claimant provided Dr. Ridings differed significantly from that documented in other records. Notably, Claimant denied falling and denied that the printer fell on him. Based on the incident as Claimant described to him, Dr. Ridings opined Claimant suffered a left shoulder strain, with referred soft tissue pain into the neck. He saw no mechanism that would cause any specific injury to the cervical spine. Dr. Ridings believed Claimant's soft tissue strain improved with therapy and he was appropriately put at MMI without impairment on November 26, 2018. After reviewing all the records, Dr. Ridings opined, "while the patient may have had some mild and perhaps transient symptoms beginning the weekend of November 3 or 4, he likely did not begin having symptoms that he considered significant and worrisome until approximately

November 26." He opined the neurological symptoms that necessitated surgery were related to "cervical stenosis with cervical myelopathy, which was not, well within a reasonable degree of medical probability, caused, aggravated, or accelerated by his work injury or its treatment." Dr. Ridings explained,

> The typical pattern of the onset of cervical myelopathy from cervical stenosis is that at some point there is enough pressure on the spinal cord that inflammation is caused. The inflammation causes swelling which, of course, then dramatically increases the pressure at that level, leading to the onset of nerve injury. There does not have to be any identifiable incident or "cause"; the stenosis can simply become tighter with the deposition of calcium molecule-by-molecule over a period of years due to osteoarthritis, until at some point a critical stenosis is reached leading to the cascade of events described above.

27. Dr. Kinsman provided an opinion regarding causation in a report dated April 24, 2019, stating,

> Unbelievably, the situation was denied as a Workmen's Compensation claim. I reviewed my chart and the patient has 9 visits with me from August 2014 through June 2018 with no mention of any symptoms that could have been at all related to C-spine problems until the June note when he mention some trapezius area pain and I thought that might have been muscular more likely than cervical radiculopathy. Then after his accident he had latent and progressive cervical myelopathy with the threat of paralysis. It is clear to me that he had minimal or no symptoms related to degenerative cervical changes and suddenly had critical symptoms as a result of being injured on the job.

28. Dr. Hammers testified via deposition on May 24, 2019. He had not spent much time investigating causation because he was primarily focused on providing treatment. Dr. Hammers opined,

> The spondylosis . . . [is] an arthritic condition, [and] would not have been caused by one acute traumatic event. This is years and years of buildup of arthritic or degenerative change that causes tightness of stenosis around the spinal cord. Now it is certainly conceivable that a one-time acute injury can take that underlying spondylosis and cause it to become acutely symptomatic and acute myelopathy, which is a form of trauma we generally referred to as central cord syndrome.

29. When asked whether he would relate the onset of symptoms to the work accident at the level of reasonable probability, Dr. Hammers replied,

> In the history of feeling normal and there being an absence of cervical spine related symptoms prior to the injury and then having the onset of the symptoms that I saw, if those symptoms indeed onset subsequent or just

after the injury, then I think it is plausible to relate that event as a causative mechanism.

30. Dr. Hammers opined central cord syndrome or exacerbation of myelopathy does not require direct trauma to the spine, and "many times it is an indirect trauma like whiplash and acceleration-deceleration injuries that can directly contribute." Dr. Hammers further opined that the subtle cord edema shown on the MRI, in combination with Claimant's symptoms, "can strongly suggest that that has been a more acute or subacute rather than chronic finding."

31. Dr. Kinsman testified in a deposition on June 13, 2019. He emphasized the dramatic change in Claimant's condition between his appointments in June 2018 and December 2018 as a significant factor in his causation assessment. He also relied on the temporal coincidence of the symptoms developing after the work accident. Dr. Kinsman explained, "I had a patient I saw who had minimal symptoms that might have been related to cervical spinal stenosis in June of 2018, but then saw me again in December . . . who had cervical myelopathy, and reported an injury and accident on the job in October. And I have to go on my patients, you know, veracity, his honesty that he suffered one injury and that the symptoms, if he had one injury, his symptoms followed that." When asked about the cause of the drastic change in Claimant's condition between June 2018 and December 2018, he stated, "I think the accident at work was the most likely cause." Dr. Kinsman admitted he had not previously seen records from Dr. Centi or Action Potential.

32. Dr. Centi testified via deposition on June 17, 2019. Dr. Centi confirmed he neither observed nor knew of any neurologic symptoms suggestive of myelopathy before Claimant's November 26, 2018 appointment. Dr. Centi opined the new symptoms Claimant exhibited on November 26 were new and unrelated to the October 2018 the work injury. He opined Claimant's cervical and left shoulder strains improved and resolved with therapy. He maintained his opinion Claimant suffered no impairment and required no further treatment for any work-related medical condition.

33. Dr. Ridings testified at hearing consistent with his IME report. He acknowledged that "sudden extension of the neck is the most common sort of trauma that causes cervical stenosis to get worse or symptomatic," but opined "the expectation from a sudden traumatic exacerbation . . . would be rapid onset of swelling in the cervical cord and a rapid progression of symptoms, really for the first 24 hours, and certainly not . . . beginning more than 48 hours later." Dr. Ridings opined that the mechanism of injury Claimant relayed to him could not cause a worsening of his pre-existing stenosis or cause new onset of cervical myelopathic symptoms."

34. Respondent filed a Final Admission of Liability on November 27, 2018 based on Dr. Centi's November 26 MMI report. On December 26, 2018, Claimant emailed the adjuster and indicated "Dr. Centi should never have turned me loose . . . [e]veryone knows that this was mishandled and should still be a Comp situation as this definityly [sic] is a work-related accident and should be treated as such." Claimant filed a formal Objection to Final Admission of Liability on January 8, 2019, but did not apply for a hearing or request a DIME in conjunction with the objection.

35. Claimant's claim automatically closed on December 27, 2018.

36. Respondent failed to prove a basis to withdraw its admission of liability. The persuasive evidence shows Claimant suffered soft tissue shoulder and cervical strains that reasonably required evaluation and conservative care.

37. Dr. Ridings' opinions regarding the cause of Claimant's progressive cervical myelopathy leading to surgery are credible and more persuasive than medical opinions in the record to the contrary.

38. Claimant failed to prove his work accident caused, aggravated, accelerated or combined with his pre-existing severe cervical stenosis to cause the need for treatment of cervical myelopathy. The treatment Claimant received after being released by Dr. Centi was not related to the industrial injury. Claimant failed to prove a basis to reopen his claim.

CONCLUSIONS OF LAW

A. Withdrawal of admission of liability

When an employer files an admission of liability, the employer has "admitted that the claimant has sustained the burden of proving entitlement to benefits." *City of Brighton v. Rodriguez*, 318 P.3d 496, 507 (Colo. 2014). If the employer subsequently seeks to withdraw its admission of liability, it must prove by a preponderance of the evidence that the claimant's injuries were not compensable in the first instance. *See* § 8-43-201(1) ("a party seeking to modify an issue determined by a general or final admission … shall bear the burden of proof for any such modification.").

Even a "minor strain" can be a sufficient basis for a compensable claim if it was caused by a claimant's work activities and caused him to seek medical treatment. *Garcia v. Express Personnel*, W.C. No. 4-587-458 (August 24, 2004); *Conry v. City of Aurora*, W.C. No. 4-195-130 (April 17, 1996).

As found, Respondent has failed to prove by a preponderance of the evidence that Claimant suffered no compensable injury. The persuasive evidence shows Claimant suffered shoulder and cervical strains that reasonably required conservative care. Dr. Centi's initial physical exam found tenderness of the left shoulder and "left-sided muscle taughtness and tenderness" of the neck, consistent with soft tissue strains. The medications and therapy prescribed by Dr. Centi were reasonably necessary to cure and relieve the effects of Claimant's compensable strains.

B. Reopening

Section 8-43-303 authorizes an ALJ to reopen any award on the grounds of error, mistake, or a change in condition. The allowance for reopening reflects a "strong legislative policy" that the goal of achieving a fair and just result overrides the interests of litigants in obtaining final resolution of their dispute. *Padilla v. Industrial Commission*, 696 P.2d 273, 278 (Colo. 1985). Thus, a "final" award means only that the matter has been concluded subject to reopening if warranted under the applicable statutory criteria. *Renz*

v. Larimer County School District Poudre R-1, 924 P.2d 1177 (Colo. App. 1996). The authority to reopen a claim is permissive, and whether to reopen a claim if the statutory criteria have been met is left to the ALJ's discretion. *Id*. The party requesting reopening bears the burden of proof. Section 8-43-304(4).

A "change in condition" refers to a change in the condition of the original compensable injury or a change in the claimant's physical or mental condition that can be causally related to the original injury. *Heinicke v. Industrial Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008); *Chavez v. Industrial Commission,* 714 P.2d 1328 (Colo. App. 1985). If a claimant's condition is shown to have changed, the ALJ should consider whether the change represents the natural progression of the industrial injury, or results from some other cause. *Goble v. Sam's Wholesale Club*, W.C. No. 4-297-675 (May 3, 2001).

As found, Claimant failed to prove his worsened condition after MMI was causally related to the work accident. The change of Claimant's condition reflects the natural progression of his severe pre-existing spinal stenosis, without contribution from the accident at work. Dr. Hammers' and Dr. Kinsman's causation opinions are predicated largely on the assumption Claimant suffered significant trauma to his neck and/or the myelopathy manifested shortly after the accident. Neither assumption is correct. Similarly, Dr. Tomac mistakenly believed the printer fell "onto" Claimant's shoulder and that the accident happened only 2-3 weeks before his hospitalization. The ALJ accepts Dr. Hammers' opinion that trauma such as whiplash *can* cause or aggravate cervical myelopathy, but also credits Dr. Ridings' opinion that, had that been the case here, the symptoms would have manifested sooner. Claimant testified he developed symptoms suggestive of myelopathy – unsteady gait, coordination issue, and tingling in his hands – while still in therapy. But the contemporaneous medical records do not corroborate his testimony in this regard. The therapy notes document no neurological symptoms or findings, and Claimant noted no such issues on the pain diagrams he completed at CCOM (until November 28). Although Claimant's head may have moved backward and forward during the accident, the ALJ is not persuaded he experienced a significant "whiplash" sufficient to proximately cause, aggravate or accelerate cervical myelopathy. As Dr. Ridings persuasively explained, the onset of significant symptoms in late November 2018 is most consistent with the natural and expected progression of myelopathy in the context cervical stenosis, with a slow and steady accretion of pressure on the spinal cord eventually leading to acute inflammation and myelopathy. The fact that the cord pressure reached a tipping point within six weeks after Claimant's accident is more likely coincidental than indicative of a cause and effect relationship.

ORDER

It is therefore ordered that:

1. Respondent's request to withdraw its admission of liability is denied and dismissed.

2. Claimant’s request to reopen his claim for medical benefits related to cervical myelopathy is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 5, 2019

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable work related injury on November 18, 2017.

2. Whether Claimant has established by a preponderance of the evidence that the right shoulder surgery recommended by Dr. Parker and denied by Respondents is reasonable, necessary, and causally related to a November 18, 2017 work injury.

3. Whether Respondent has established by a preponderance of the evidence that Claimant suffered an intervening injury on or about July 2, 2018 that severed the causal connection between Claimant's neck symptoms and a November 18, 2017 injury.

FINDINGS OF FACT

1. Claimant is a 51-year-old male who is employed by Employer as a firefighter/engineer. Claimant has been so employed since approximately October of 1997.

2. On November 18, 2017 while so employed, Claimant and other firefighters were dispatched to a residential house fire during the evening hours. At the scene, Claimant was wearing his full bunker gear that weighed approximately 75 pounds. Claimant was using a tool, weighing approximately 35 pounds, which was essentially a combination sledgehammer and ax.

3. With the tool, Claimant had to reach overhead to break through drywall to see the attic space and contain hot spots. Claimant also assisted in carrying two victims from the home. Claimant held one arm and one leg of the victims, while a fellow firefighter held the other arm and leg of the victims.

4. Claimant felt pain and fatigue in both shoulders, his neck, and his back while tearing down the drywall. Claimant testified that he thought his symptoms would get better but that they got worse the next morning.

5. After working a shift with continued pain, Claimant reported the alleged injury and was referred for treatment.

6. On November 21, 2017, Joan Mankowski, M.D. evaluated Claimant. Claimant reported right shoulder pain and weakness, left shoulder pain, tightness in both shoulders, and tightness in his upper and lower back. Claimant reported that his right shoulder did not feel right. Claimant reported he first noted symptoms on November 18 after pulling down a ceiling in search of an active fire. Claimant reported that he worked

a full shift on November 19, but then the pain worsened, prompting him to seek medical evaluation. Claimant reported his right shoulder pain was aggravated with lifting, reaching forward, abduction, and adduction and was rated 9/10 at its worst. Claimant reported his left shoulder pain was aggravated with lifting and rated 6/10 at its worst. Claimant reported his neck pain was achy and tight aggravated with neck extension, rated 6/10 at its worst. Claimant reported ongoing and pre-existing neck problems for which he was treating with his personal physician and had an injection early November. Claimant reported his low back pain was constant, crampy, and dull in character. Dr. Mankowski assessed strain of muscle, fascia, and tendon at neck level, low back pain, and strain of muscle, fascia, and tendon at the bilateral shoulders/upper arms. She ordered an MRI of the right shoulder. *See* Exhibits 3, D.

7. On November 29, 2017, Claimant underwent an MRI of his right shoulder interpreted by Patrick O'Malley, M.D. Dr. O'Malley provided the impression of moderately severe supraspinatus and infraspinatus tendinosis, moderate subscapularis tendinosis, and no deep partial thickness or full thickness rotator cuff tear. He also opined that Claimant had subacromial impingement/rotator cuff impingement syndrome with severe degenerative change in the acromioclavicular joint with inferior osteophyte formation. Dr. O'Malley found exuberant edema associated with the acromioclavicular joint and opined that it may be degenerative in nature or could be related to mild grade 1-2 acromioclavicular joint separation in the appropriate clinical setting. Dr. O'Malley found no evidence of a labral teat. *See* Exhibits 3, D.

8. On November 20, 2017, Dr. Mankowski evaluated Claimant. Claimant reported a generalized worsening of pain in both shoulder, neck and back. Claimant reported his back pain was at a 7-8/10 at its worst with occasional seizing up. Claimant reported new intermittent pain from the midline of the low back to the left foot. Dr. Mankowski assessed worsening low back pain, no evidence of right shoulder tear on MRI that was positive for rotator cuff tendinosis. Dr. Mankowski noted that if there was no clinical improvement she would consider referral to a pain medicine and rehabilitation specialist and noted Claimant may be a candidate for shoulder injections. *See* Exhibit 3.

9. On December 19, 2017, Dr. Mankowski evaluated Claimant. Claimant reported his right shoulder pain was unchanged, his left shoulder pain was worse, his back pain was slightly improved, and his neck pain was stable. Claimant reported his right shoulder pain was 6/10 at rest and 9/10 with abduction and flexion. Claimant reported his left shoulder pain was 4-5/10 at rest and 8-9/10 with flexion and adduction. Claimant reported his low back pain was 6/10. Dr. Mankowski assessed strain muscle/fascia/tendon at shoulder/upper arm and opined that it was a complex case involving multiple body parts in the setting of pre-existing cervical spine pathology. Given no improvement in persistent symptoms, she referred Claimant to Dr. Chan, a pain medicine and rehabilitation specialist for further evaluation and treatment. *See* Exhibit 3.

10. On January 15, 2018, Samuel Chan, M.D. evaluated Claimant. Claimant reported that he was pulling ceiling tile during a fire rescue and did not have any type of pain but after the adrenaline rush had gone down that night, he had significant pain over

the cervical spine area that radiated to the bilateral shoulders. Claimant reported the areas were very tight and he had constant spasms. Claimant reported continued diffuse pain with the majority of the pain achiness from the mid lumbar spine to the low back area. Claimant reported his pain was between 7-8/10. Claimant reported no prior past medical history other than relating to the knees and wrists. On exam, Dr. Chan found limited range of motion in the cervical spine with tenderness to palpation and active trigger points. In the lumbar spine, Dr. Chan found tenderness to palpation over the lumbosacral paraspinal muscles and tenderness with extension and rotation bilaterally at about L4-5 and L5-S1. The bilateral shoulder exams were unremarkable. Dr. Chan diagnosed cervical spine discogenic disease, facetogenic pain, and myofascial complaints. He also diagnosed bilateral acromioclavicular joint degenerative changes in the shoulders. Dr. Chan diagnosed bilateral L4-5 and L5-S1 facetogenic lumbosacral pain and recommended ruling out lumbar discogenic disease. Dr. Chan opined that the findings were most consistent with musculoskeletal pain, but given the length of symptoms, he recommended an MRI of the cervical and lumbar spines. *See* Exhibit 2.

11. On January 16, 2018, Alisa Koval, M.D. evaluated Claimant. Claimant reported that his symptoms were largely unchanged. Dr. Koval noted that Claimant had consulted with Dr. Chan a few days prior and was planning to undergo MRIs of the cervical spine and lumbar spine. Claimant reported that his shoulders and low back were pain free before this incident at work. Claimant reported he had pre-existing neck pathology that was aggravated by this injury event. Claimant reported extensive heavy use of the back and shoulders on November 18, 2017 when he used a tool to break down a ceiling and assisted evacuating two people from a building. Dr. Koval assessed strain of muscle, fascia, and tendon at neck level, low back pain, and strain of muscle/fascia/tendon at bilateral shoulders/upper arms. Dr. Koval noted the pending MRIs per Dr. Chan. *See* Exhibit 3.

12. On January 25, 2018, Claimant underwent an MRI of his cervical spine interpreted by Eduardo Seda, M.D. Dr. Seda provided the impression of degenerative disc changes with mild dural sac indentation and mild bilateral foraminal narrowing at C5-6. Dr. Seda found small central disc bulges with mild dural sac indentation at C5-6 and C6-7. *See* Exhibits 3, D.

13. On January 25, 2018, Claimant also underwent an MRI of his lumbar spine interpreted by Dr. Seda. Dr. Seda provided the impression of degenerative disc and joint changes with slight dural sac indentation, no root sleeve deformity. He found small central disc bulges at L4-5 and L5-S1. *See* Exhibits 3, D.

14. On February 5, 2018, Dr. Chan evaluated Claimant. Dr. Chan noted that the MRIs of the cervical and lumbar spine showed some mild facetogenic issues with diffuse degenerative changes including disc desiccation. Claimant reported his pain at a 7/10 with more pain on the right bicipital tendon region. Dr. Chan diagnosed cervical spine facetogenic pain and myofascial complaints with an essentially normal MRI. He diagnosed some AC joint arthritis in the bilateral shoulders. Dr. Chan also diagnosed bilateral L4-5 and L5-S1 facetogenic pain with a normal MRI and essentially normal

neurologic examination of the lumbar spine. Dr. Chan opined that the MRIs showed some age appropriate degenerative changes and is essentially within normal limits. Dr. Chan opined that the examinations demonstrated findings consistent with facetogenic pain over the cervical and lumbar spine areas and noted that facet injections could be considered. *See* Exhibit 2.

15. On February 6, 2018, Dr. Koval evaluated Claimant. Dr. Koval noted that Claimant was pending injections for his cervical spine. Dr. Koval recommended evaluation by an orthopedist regarding his right shoulder as Claimant continued to report burning pain in the acromioclavicular region. She recommended continued physical therapy, chiropractor, and massage therapy. *See* Exhibit 3.

16. On February 13, 2018, Claimant was evaluated by Andrew Parker, M.D. for his bilateral shoulders. Claimant reported pain at a 7/10 with sharp, dull, throbbing symptoms. Claimant reported that his symptoms were made worse with moving, athletics, gripping, lifting, and reaching overhead. Claimant reported that the problem started after an injury at work when he was pulling ceiling and carrying victims out. Claimant reported the symptoms had been present since November 17, 2018. On examination, Dr. Parker found bilateral tenderness over the acromioclavicular joints. Dr. Parker noted that the MRI demonstrated significant increased signal on the acromioclavicular joint. Dr. Parker diagnosed primary osteoarthritis of the right and left shoulders and bilateral osteoarthritis of the acromioclavicular joint. Dr. Parker performed injections bilaterally of the acromioclavicular joints. Dr. Parker noted that Claimant's pain was immediately improved bilaterally following injection and noted he wanted to see how Claimant did with a follow up one month out. *See* Exhibit 1.

17. On March 1, 2018, Dr. Koval evaluated Claimant. Claimant reported he had recent shoulder injections and that he was scheduled for injections of his neck and lower back. Claimant reported chiropractic care had significantly improved his neck range of motion and pain. Claimant reported his neck pain at a 5, back pain at a 5, and shoulder pain at a 7. The assessment included improving bilateral shoulder, neck, and lumbar strains. *See* Exhibit 3.

18. On March 11, 2018, Haley Burke, M.D. performed bilateral C6-7 and C7-T1 cervical intra articular facet injections. Claimant reported a pre-procedure pain score of 7/10 and a post procedure pain score of 3/10. *See* Exhibit D.

19. On March 15, 2018, Dr. Mankowski evaluated Claimant. Claimant reported his shoulders and lower back were improving. Claimant reported that he had undergone a neck injection with minimal appreciable response. *See* Exhibit 3.

20. On March 15, 2018, Dr. Chan evaluated Claimant. Dr. Chan noted that the MRIs of the cervical and lumbar spine showed degenerative type findings without any acute findings. Claimant reported that his March 8 facet injections gave him about 3-4 hours of pain relief. Dr. Chan wished to observe the response longer. *See* Exhibit 2.

21. On March 19, 2018, Dr. Parker evaluated Claimant. Claimant reported that the injections in the bilateral acromioclavicular joints had helped tremendously but that he still had pain laterally on the right shoulder. Dr. Parker continued to assess bilateral osteoarthritis of the shoulders and provided a new impression of rotator cuff tendinitis/impingement on the right shoulder. Dr. Parker performed a subacromial space injection on the right. *See* Exhibit 1.

22. On April 10, 2018, Dr. Koval evaluated Claimant. Dr. Koval noted that Claimant had been making good progress with the combination of cervical and shoulder injections, physical therapy, chiropractic care, and massage therapy. She opined that he was likely a patient who would continue improving with conservative measures. She found Claimant to be functioning with less pain, improved range of motion, and significant reduction in muscle spasms in neck/trapezius. *See* Exhibit 3.

23. On April 11, 2018, Dr. Chan evaluated Claimant. Claimant reported improvement from the March 8 injections and the March 15 injection. Claimant reported his pain at a 4/10. Claimant reported definite overall pain improvement and increased function. Dr. Chan noted that if Claimant continued to be symptomatic, they could consider medial branch blocks, but if Claimant continued to do well, he may be approaching maximum medical improvement. *See* Exhibit 2.

24. On April 16, 2018, Dr. Parker evaluated Claimant. Claimant reported that with most daily activities and at rest, his shoulders were doing well. He noted that with strenuous activity such as overhead he shoulder pain on the right side. Dr. Parker discussed the option of surgical intervention and reviewed that surgery would involve right shoulder arthroscopy, subacromial decompression, distal clavicle excision, and rotator cuff debridement with possible repair. Claimant reported that he would observe his right shoulder for the next 4 weeks to see how he was doing. Dr. Parker noted that if the shoulder continued to be symptomatic with strenuous activity, they would likely proceed with right shoulder arthroscopy. *See* Exhibit 1.

25. On May 24, 2018, Samuel Chan, M.D. evaluated Claimant. Claimant reported that the bilateral facet injections were very beneficial. Claimant also reported his h-wave and Celebrex had provided significant benefits. Claimant reported that he had two injections in his shoulders that offered benefit as well and that he has continued to work full time and full duty but that he was now working in the fire prevention department and did not have to respond to calls. Dr. Chan performed a physical examination. Dr. Chan opined that Claimant's cervical spine MRI was essentially normal, that his lumbosacral MRI was normal, and that his right shoulder MRI showed AC joint arthrosis. Dr. Chan noted that Claimant had done rather well and had rather minimum pain complaints. Dr. Chan noted that even though Claimant had some sort of pain, it was no longer functionally limiting. Dr. Chan noted the MRI findings were essentially within normal limits and opined that Claimant would most likely be at maximum medical improvement. Dr. Chan noted that with no significant pathology identified on imaging studies, he did not anticipate any permanent impairment. Dr. Chan noted that for

maintenance, Claimant may have chiropractic care, repeat facet injections in the cervical spine, and repeat shoulder injections. *See* Exhibits 2, D.

26. On June 15, 2018, Dr. Koval evaluated Claimant. She noted that overall Claimant's neck and back pain were fairly well controlled and flared up occasionally, but did not last. Dr. Koval noted that Claimant's shoulders had waxed and waned for quite some time and had never returned to 100%. Dr. Koval noted that Dr. Parker was recommending arthroscopy on the right shoulder and an MRI on the left shoulder and that the right shoulder surgery was tentatively scheduled for July 25, 2018 pending insurance approval. *See* Exhibit 3.

27. On June 22, 2018, Claimant underwent an MRI of his left shoulder interpreted by Trystain Johnson, M.D. Dr. Johnson provided the impression of diffuse rotator cuff tendinosis and articular surface fraying with low grade partial articular side tear of the distal 10 mm of the upper subscapularis with no full thickness rotator cuff tear or muscle belly atrophy. She also provided the impression of severe acromioclavicular joint arthrosis with capsular thickening and edema as well as subchondral bony remodeling and probably erosive change and opined it most likely was chronic repetitive trauma with developing arthrosis. She found mild long head biceps tendinosis without tear or subluxation and diffuse labral fraying without tear. *See* Exhibits 3, D.

28. On June 26, 2018, Respondent filed a notice of contest contesting/denying Claimant's workers' compensation claim. See Exhibit A.

29. On July 2, 2018, Dr. Parker evaluated Claimant. Dr. Parker noted that Claimant tentatively had surgery for the right shoulder scheduled for later in the month but that the claim had not been accepted. On examination, Dr. Parker found tenderness over the acromioclavicular joint in the right shoulder and left shoulder. Dr. Parker opined that the left shoulder MRI demonstrated acromioclavicular osteoarthritis and rotator cuff tendinosis versus small partial tear. Dr. Parker diagnosed primary osteoarthritis, right shoulder and secondary osteoarthritis, left shoulder. Dr. Parker opined that Claimant would ultimately probably need surgical intervention bilaterally in the shoulders. Dr. Parker opined that Claimant's history certainly supported a significant work aggravation to the bilateral acromioclavicular arthritis with some rotator cuff findings bilaterally. See Exhibit 1.

30. On July 16, 2018, Dr. Koval evaluated Claimant. Claimant reported persistent pain in both shoulders, right greater than left. Dr. Koval noted that surgery was not approved for the right shoulder and that they would continue with conservative care. Claimant reported his low back pain at a 4/10, his neck pain at a 6-7/10 and his right shoulder pain at a 6-7/10. *See* Exhibit 3.

31. On August 23, 2018, Dr. Koval evaluated Claimant. She noted that his symptoms were unchanged. She noted that the case had been under a notice of contest since June 26, with no updates. Claimant denied having ever been treated in the past for

his shoulder issues. Dr. Koval continued to recommend conservative treatment. *See* Exhibit 3.

32. On November 29, 2018, Claimant underwent an independent medical evaluation performed by Lawrence Lesnak, D.O. Claimant reported that on November 18, 2017 he was removing ceiling drywall in a building that had caught fire and that he did not recall any specific inciting event. Claimant reported that sometime afterward had increased fatigue and pain in his bilateral anterior shoulder regions and that when the fire call was complete, he went back to the firehouse and went to sleep. Claimant reported that several days later, he notified his supervisor because he had increased symptoms and went for evaluation. Claimant reported no long-term improvement of his symptoms. Claimant reported constant bilateral anterior shoulder aching sensations, constant posterior neck aching and diffuse low back pain. Claimant reported a history of chronic neck pain for which he had been undergoing treatment for at least the past 10-15 years. Claimant reported a cervical MRI six months prior to November 2017 and a cervical facet joint trial in approximately 2016. Claimant also reported that he had bilateral shoulder pain prior to November 2017 but that he had undergone no specific treatment for the shoulder symptoms before November 2017. Claimant also reported that he had no specific low back issues before November 2017. *See* Exhibit B.

33. Claimant reported that his symptoms were essentially unchanged from what they were before November 2017 but that his function was somewhat different. Claimant reported he could still do everything but it just caused more pain. Claimant reported his worst pain at a 7/10 and his best at a 3/10. Dr. Lesnak reviewed medical records. Dr. Lesnak noted that Claimant had undergone a C5-6 bilateral facet joint injection on November 1, 2017 just 17 days prior to the reported injury. Dr. Lesnak also noted that Claimant's November 29, 2017 right shoulder MRI is completely unchanged from Claimant's October 18, 2017 right shoulder MRI done just one month prior to the reported injury. Dr. Lesnak also noted that the findings on Claimant's January 25, 2018 cervical spine MRI appeared to be identical to the findings on Claimant's cervical spine MRI on October 18, 2017 just one month prior to the reported injury. *See* Exhibit B.

34. Dr. Lesnak opined that Claimant had no work related diagnoses relating to the reported injury on November 18, 2017. Dr. Lesnak opined that it was quite clear that Claimant had chronic and progressive neck, upper back, shoulder, and upper extremity symptoms for many years prior to November 18, 2017. Dr. Lesnak noted a cervical spine MRI and right shoulder MRI were performed just one month before the reported injury due to Claimant's chronic progressive symptomatology. Dr. Lesnak also noted that Claimant was referred for an orthopedic surgery evaluation for the right shoulder symptoms and was referred for cervical facet joint injections for his neck pains just prior to the reported injury. Dr. Lesnak pointed out that Claimant's pain levels just prior to November 18, 2017 were noted as being between 6-9/10 and essentially the same as what were reported after the November 18, 2017 reported injury. Dr. Lesnak also opined that the MRIs were identical before and after November 18, 2017. Dr. Lesnak opined that there was no evidence of any structural injury and that although Claimant reported subjectively that his symptoms were worse, the records show the symptoms were

essentially the same before and after November 18, 2017, other than some complaints of low back pain. Dr. Lesnak also opined that the exam findings were essentially identical before and after November 18, 2017. Dr. Lesnak opined there was no acute exacerbation of a pre-existing condition. Dr. Lesnak opined that Claimant should continue seeking medical care outside the workers' compensation claim since there appeared to be no occupational injuries. Dr. Lesnak opined that Claimant merely had ongoing chronic symptoms that have been chronically progressive but essentially unchanged just prior to and after November 18, 2017. *See* Exhibit B.

35. Prior to November 18, 2017, Claimant had undergone several cervical spine MRIs including ones on November 30, 2006, April 8, 2015, and October 18, 2017. In 2006, the MRI order comments noted that Claimant had bilateral radicular pain/numbness and to rule out herniated disk. The 2006 findings included multilevel discogenic degenerative change most pronounced at C5-6. In 2015, the MRI order comments noted tingling in hands and chronic neck pain with request to rule out disk herniation or nerve root compression. The 2015 findings included multilevel disk and/or bony bulging with resultant borderline to mild central spinal canal stenosis at C5-6 and narrowing of the left C5-6 neural foramen as well as minor foraminal narrowing bilaterally at C6-7. *See* Exhibit C.

36. On October 4, 2017, Ranee Shenoi, M.D. evaluated Claimant. Claimant reported pain and discomfort in his neck and shoulders and that the pain began 20+ years ago with no trauma other than a motor vehicle accident or football from years ago. Claimant reported tightness in his shoulders for the past three months and that it hurt to lift them. Claimant reported concern with his quality of life due to constant irritation with his pain/function at a 6-7/10 usually but spiking to an 8-9/10. Overall, Claimant reported his pain was worsening. Claimant reported that he had undergone chiropractic care, acupuncture, physical therapy, and massage that were not helpful and that he was taking oxycodone and flexeril medications. Claimant reported bilateral hand numbness/tingling in his median 2 digits that correlated with muscle tightness in his shoulders. On examination, Claimant had mildly decreased bilateral flexion in cervical range of motion and tenderness along the shoulder girdle, biceps tendons, acromioclavicular joints and subacromial spaces bilaterally. Dr. Shenoi assessed bilateral shoulder pain, right greater than left and cervical disc disease with possible radiculopathy or facet mediated pain. Dr. Shenoi recommended a right shoulder MRI and a cervical MRI. Dr. Shenoi referred Claimant to physical therapy and opined that a surgical opinion was not indicated at the time but would be considered if Claimant's symptoms were not responsive to non-surgical care. *See* Exhibits C, E.

37. The October 18, 2017 cervical MRI, which was performed approximately one month before this reported work injury, shows in the history that it was for Claimant's complaints of bilateral shoulder pain and tingling in his median 2 digits, cervical radiculopathy. The findings included mild progression in degenerative changes with moderate bilateral foraminal narrowing and mild canal stenosis at C3-4, grossly similar moderate to severe bilateral foraminal narrowing at C5-6, moderate to severe right and

moderate left foraminal narrowing at C6-7, and straightening and mild reversal of the normal lumbar lordosis. *See* Exhibit C.

38. One month prior to November 18, 2017, Claimant also underwent an MRI of his right shoulder. On October 18, 2017, the findings from the MRI included very low-grade partial articular surface tear involving the posterior fibers of the supraspinatus at the footprint. They also included supraspinatus, infraspinatus, subscapularis, and intra-articular biceps tendinosis, subacromial/subdeltoid bursal fluid consistent with mild bursitis. Acromioclavicular degenerative arthrosis was found and mild fraying of the superior labrum without discrete labral tear was also found. *See* Exhibit C.

39. Dr. Lesnak testified at hearing consistent with his independent medical examination report.

40. Claimant testified at hearing inconsistent with the medical records in evidence.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

Where the claimant's entitlement to benefits is disputed, the claimant has the burden to prove, by a preponderance of the evidence, a causal relationship between a work injury and the condition for which benefits are sought. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The existence of a preexisting condition will not prevent an injury from "arising out of" the employment. *Peter Kiewit Sons' Co. v. Indus. Comm'n of Colo.*, 124 Colo. 217, 220, 236 P.2d 296, 298 (1951); *Subsequent Injury Fund v. Thompson*, 793 P.2d 576, 579 (Colo. 1990). Generally, an injury will be found compensable if the employment aggravated, activated, caused, or accelerated a medical disability or need for medical treatment. *Id*.

An incident, which merely elicits pain symptoms caused by a pre-existing condition, does not compel a finding that the claimant sustained a compensable aggravation. *F. R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Barba v. RE 1J School District*, W.C. No. 3-038-941 (June 28, 1991); *Hoffman v. Climax Molybdenum Company*, W.C. No. 3-850-024 (December 14, 1989). Rather, a claimant must establish to a reasonable degree of probability that the need for additional medical treatment is proximately caused by the aggravation, and is not simply a direct and natural consequence of the pre-existing condition. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo.1949); *Rockwell International v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990) *cf. Valdez v. United Parcel Service*, 728 P.2d 340 (Colo. App. 1986). A respondent is liable only for the disability flowing proximately and naturally from an industrial injury. *Travelers Insurance Co. v. Savio*, 706 P.2d 1258 (Colo. 1985); *Standard Metals Corp. v. Ball*, 474 P.2d 622 (Colo. 1970).

Claimant, overall, is not found credible or persuasive. During the course of his treatment for this alleged work injury, Claimant falsely reported to Dr. Koval that he had never been treated in the past for shoulder issues. However, records show that he had been referred to physical therapy and prescribed muscle relaxers for his bilateral shoulder pain prior to the alleged work injury and had undergone a right shoulder MRI just one month prior to the alleged work injury. Claimant also testified on direct examination that prior to the injury, his pain in the bilateral shoulders, neck, and low back was at a 3-4/10 and increased to an 8/10 after the alleged injury. However, medical records show a pre-injury pain level of 6-7/10 spiking to 8-9/10.

Claimant also testified that he was more or less asymptomatic prior to this alleged injury and had low pain and was able to perform his activities of daily living without pain. Again, medical records show just six weeks prior to the alleged work injury Claimant reported pain and discomfort in his neck and shoulders that had worsened in the past

three months such that it hurt to lift his shoulders and to a degree that he was concerned about his quality of life due to the constant irritation. Additionally, medical records contradict Claimant's report that he had no left shoulder symptoms prior to the alleged injury and the medical records show that he had bilateral shoulder pain, right worse than left.

Dr. Lesnak is found credible and persuasive. As found above the objective medical testing and imaging found no indication of an acute injury on November 18, 2017. The imaging of the right shoulder and cervical spine were nearly identical to the imaging performed just prior to the alleged work related injury. Although there is no pre-existing imaging for the left shoulder or lumbar spine, the objective evidence is consistent with Dr. Lesnak's opinion that there was no acute injury to any areas. Dr. Parker's opinion on aggravation and acceleration is not, overall, persuasive. Dr. Parker bases his opinion on Claimant's subjective reports and the first visit with Dr. Parker shows that Claimant reported his problems and symptoms began in his bilateral shoulders after the November 18, 2017 work incident. We know this to be inaccurate. It is unclear whether Dr. Parker had access to Claimant's significant and severe pre-existing shoulder issues, but Claimant did not subjectively report his history accurately to Dr. Parker. Dr. Lesnak had full access to prior records and his opinion is more persuasive and consistent with the overall weight of the evidence.

Claimant had severe and ongoing pre-existing problems that were causing him problems and pain prior to this alleged work injury and continue to cause him problems and pain. It is not surprising that he had pain with activity during work hours as he was having pain with activity at all times prior to November 18, 2017. Claimant has failed to establish, by a preponderance of the evidence, that he either sustained a new injury or aggravated/accelerated his pre-existing and significant ongoing conditions. Therefore, his claim is denied and dismissed.

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

Claimant has failed to establish that any medical treatment is reasonable and necessary to cure and relieve the effects of a work related injury. Rather, Claimant remains in need of medical treatment as he was in need prior to November 18, 2017. His request for right shoulder surgery is denied and dismissed.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable work related injury on November 18, 2017. His claim is denied and dismissed.

2. As Claimant has failed to establish a compensable work related injury, his request for right shoulder surgery as recommended by Dr. Parker is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, *see* section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 6, 2019

Denver, CO 80203

STATE OF COLORADO OFFICE OF ADMINISTRATIVE COURTS 1525 Sherman Street, 4th Floor, Denver, CO 80203	
In the Matter of the Workers' Compensation Claim of: , Claimant, vs. Employer, , Insurer Respondents.	▲ COURT USE ONLY ▲ **CASE NUMBER:** **WC 4-952-617-001**

FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

Hearing in this matter was held on December 12, 2018, and March 29, 2019, before Administrative Law Judge (ALJ) Margot W. Jones in Denver, Colorado. The hearing was held in Courtroom 3 on December 12, 2018, and in Courtroom 4 on March 29, 2019. Claimant was present at the hearing and represented by Jess Perez, Esq. Respondents appeared through Bradley J. Hansen, Esq. The parties' exhibits 1-19 and A-Y were admitted into evidence.

In this order, EB shall be referred to as "Claimant," X shall be referred to as "Employer" and N shall be referred to as "Insurer." Employer and Insurer, collectively, will be referred to as "Respondents."

In this order, the Judge may use the following acronyms: C.R.S. refers to Colorado Revised Statutes (2018); the Act refers to the Workers' Compensation Act of Colorado, §§8-40-101, et seq., supra; OAC refers to the Office of Administrative Courts; OACRP refers to the Office of Administrative Courts Rules of Procedure, 1 CCR 104-1; and WCRP refers to Workers' Compensation Rules of Procedure, 7 Code Colo. Reg. 1101-3.

ISSUES

1. Whether Claimant proved by clear and convincing evidence that the opinion of the Division independent medical examiner (DIME), Dr. Scott Hompland, D.O. with regard to maximum medical improvement (MMI) is most probably incorrect;

2. Whether Claimant established by a preponderance of the evidence that he is entitled to an award of indemnity benefits; and

3. Who is Claimant's authorized treating physician (ATP).

FINDINGS OF FACT

1. Claimant is a 40-year-old male who worked for Employer on an oil rig. Claimant sustained a work-related back injury on April 9, 2014. Claimant states he was pushing back pipe and he felt his back "pop." Claimant treated at Banner Health Occupational with Dr. Laura Caton.

2. Prior to working for Employer, Claimant worked on another oil rig for another company as a yard hand. Claimant had a back injury while working for this employer that included two "shattered" discs.

3. Claimant has had chronic back pain that dates back to 2001. Claimant was seen at University of Colorado Hospital on March 24, 2011, complaining of low back pain for 10 years that was debilitating. On April 14, 2011, Claimant had a fusion surgery at University of Colorado Hospital from L4-SI.

4. Claimant had SI joint injections in 2012 after the fusion surgery due to complaints of continued back pain. An x-ray was performed on November 14, 2013, for back pain. Claimant was taking morphine and other narcotics at the time. An MRI of the lumbar spine was ordered due to six months of low back pain above the incision line from his fusion surgery.

5. On January 17, 2012, Claimant reported to his primary care physician at Monfort Family Clinic that he was tired and needed pain meds for back pain.

6. On October 25, 2012, Claimant reported he was taking Percocet 1 every 3-4 hours for back pain, starting SI joint therapy and considering surgery again, however it would be a 2-year process as only 1 SI joint can be operated on at one-time.

7. On August 14, 2014, Claimant was seen by Dr. Laura Caton at Banner Health for his work injury with Employer. Dr. Caton noted it was "challenging" to identify a pain generator.

8. Claimant had hardware injections but reported his pain was 10/10. An MRI completed on July 2, 2014, revealed postoperative changes from the fusion surgery and mild progression at L3-L4.

9. Dr. Brian Beatty performed an independent medical examination (IME) on October 9, 2014, and opined all appropriate interventions had been performed on Clamant and there is no further medical care that would bring him to MMI. All of Claimant's current symptoms and complaints are related to the lumbar spinal fusion surgery from 2011.

10. Claimant continued treatment with Dr. Caton to include injections, medications, and physical therapy. Claimant was placed at MMI on June 24, 2015, and assigned a 31% impairment rating. Respondents challenged the opinion of the ATP and requested a DIME.

11. The DIME was done by Dr. Scott Hompland on December 7, 2015. The DIME agreed with the authorized treating physician (ATP) that Claimant was at MMI on June 24, 2015, and assigned a 22% whole person impairment rating. A final admission of liability was filed on December 22, 2015, admitting for the findings of the DIME.

12. Claimant objected to the FAL and filed an application for hearing to overcome the DIME findings of MMI and permanent partial disability benefits (PPD). The issue of temporary total disability benefits was not endorsed by Claimant on the application for hearing (APH) filed on January 20, 2016, and subsequent AFH filed on October 20, 2016.

13. Claimant's medical care was transferred to Dr. Alicia Feldman due to Dr. Caton transferring to another clinic.

14. Claimant continued to treat with Dr. Alicia Feldman for maintenance care after the filing of the FAL. On July 25, 2016, Dr. Feldman agreed that SI joint fusion was not reasonable or related to the April 9, 2014, work injury. SI joint injections were also considered not reasonably necessary or work related.

15. On March 6, 2017, Dr. Feldman responded to Respondents' counsel's interrogatories and opined Claimant's symptoms were due to his previous work injury and SI joint pathology was present prior to 2014. Dr. Feldman also stated Claimant was discharged from the clinic for violation of his pain contract.

16. Claimant began treating outside the workers' compensation system since he had been discharged from care from Dr. Feldman.

17. Claimant began treating with Dr. Kathy McCranie for pain management upon agreement of the parties. Claimant testified at hearing that Dr. McCranie was an

ATP. Claimant was seen by Dr. McCranie on three separate occasions but discontinued going due to her recommendation to wean Claimant off pain medications. Claimant indicated at the July 25, 2018, office visit that he did not feel he needed to see Dr. McCranie any further. The ALJ finds Dr. McCranie is Claimant's ATP.

18. On May 2, 2017, Claimant had a right SI joint injection at Denver Health Medical Center.

19. On August 23, 2017, Claimant underwent an IME with Dr. Stephen Gray who opined Claimant was not at MMI and required additional medical treatment. Dr. Gray testified Claimant had extreme pain behaviors disproportionate to objective findings. Dr. Gray recommended SI joint injections, fusion, and hardware removal.

20. On February 1, 2018, Claimant underwent a left SI joint fusion with Dr. Fernando Techy. On March 23, 2018, Claimant underwent a right SI joint fusion. Claimant reported no benefit from the surgery. Claimant had a SI joint injection which Claimant states only increased his pain.

21. On August 10, 2018, Claimant had hardware removal at L4-L5 and L5-SI.

22. Dr. Jeffrey Raschbacher performed an IME at the request of Respondents on October 30, 2018. Dr. Raschbacher opined in his report that further application of medical resources would not produce significant improvement in subjective complaints for Claimant's reported functional status. Dr. Raschbacher did not recommend any further treatment or intervention under the claim. Dr. Raschbacher also testified at the hearing held in this matter. His opinion remained the same and noted that all the treatment recommendations that were suggested for Claimant's SI joints have been done and yet, he still has no improvement in his symptoms.

23. Claimant testified at the hearings held in this matter. Claimant testified he was still in pain and that the procedures were not helpful.

24. The ALJ credits the medical records and the opinions of Drs. Hompland, Caton, Feldman, Raschbacher, McCranie, and Beatty over the conflicting opinion of Dr. Gray that Claimant is not at MMI for his 2014 work injury.

25. Claimant has failed to overcome the DIME physician's opinion of MMI by clear and convincing evidence.

26. Claimant's expert, Dr. Gray, does not provide any treatment he is recommending that has not been provided to Claimant without any beneficial effect. The ALJ does not find Dr. Gray's testimony and opinion persuasive or credible.

27. Claimant was properly placed at MMI by the DIME on June 15, 2015, and is not entitled to additional indemnity benefits of TTD.

28. The ALJ finds the medical treatment and medications Claimant received after being placed at MMI to include left and right SI joint injections, left and right SI joint fusion, pain medications, rhizotomy, spinal cord stimulator and surgical hardware removal were not necessary nor reasonable treatment for Claimant under the claim as they provided no beneficial effect to Claimant.

29. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

General Legal Principles

1. The purpose of the Act is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979).

2. A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive*. Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. Industrial Commission of Colorado v. Jones, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

4. Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

DIME procedure

5. In this case, Claimant contends that the DIME's opinion on MMI is most probably incorrect. MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

6. Under the statute, MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007). A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (I.C.A.O. March 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Abeyta v. WW Construction Management,* W.C. No. 4-356-512 (ICAO May 20, 2004); *Hatch v. John H. Garland Co.,* W.C. No. 4-638-712 (ICAO August 11, 2000). Thus, a DIME physician's findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI. Therefore, the DIME physician's opinions on these issues are binding unless overcome by clear and convincing evidence. *See Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

7. The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the

DIME physician's finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

8. As found, Claimant failed to prove by clear and convincing evidence that the opinion of Dr. Scott Hompland is most probably incorrect with regard to the issue whether Claimant is at MMI. No credible or persuasive evidence was presented that Dr. Hompland's opinion on MMI was incorrect. Claimant relies on Dr. Gray's opinion rendered after conducting an IME that Claimant requires additional curative treatment. However, Dr. Gray does not point to any treatment he is recommending that has not already been provided to Claimant without any beneficial effect.

9. Dr. Hughes' opinion does not establish by clear and convincing evidence that Dr. Hompland's DIME opinion was most probably incorrect.

10. Dr. Raschbacher testified that in workers' compensation claims, while unfortunate, a claimant may have chronic pain from a work injury and nothing further will cure the symptoms. As the definition of MMI states, the point when nothing further will improve the effects of the industrial injury. All of the procedures Claimant had done after being placed at MMI were ineffective and so he was properly placed at MMI on June 24, 2015. Also, the ATP and DIME opined that a lot of Claimant's pain stemmed from his prior back injury to this claim and that the treatment for his SI joints predated the 2014 work injury. Chronic back issues are to be expected given the original 2011 back fusion and numerous other treatment but this does not mean Claimant is not at MMI.

11. The ALJ also finds the opinion and testimony of Claimant's expert, Dr. Gray, to not be persuasive or credible. Dr. Gray testified at the hearing that he examined Claimant for purposes of an IME at the request of Claimant's counsel. At hearing, Dr. Gray testified that Claimant had "extreme" pain behaviors out of proportion to objective findings. Dr. Gray admitted every procedure he had recommended in his IME report had been completed and did not appear to relieve Claimant of his symptoms. Claimant has failed to meet his burden of clear and convincing evidence to overcome the DIME opinion.

Temporary Total Disability Benefits

12. Temporary total disability benefits (TTD) benefits continue until the occurrence of one of the four terminating events specified in section 8-42-105(3), C.R.S. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Under section 8-42-105(3)(a), C.R.S., temporary disability benefits terminate when the employee reaches MMI. Since it is found and concluded that the DIME's opinion on MMI was not overcome by clear and convincing evidence, it is also found that Claimant is not entitled to an order awarding indemnity benefits.

Authorized provider of medical treatment

13. Section 8-43-404(5)(a), C.R.S. gives the respondents the right in the first instance to select the authorized treating physician (ATP). Authorization refers to a physician's legal status to treat the industrial injury at the respondents' expense. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006); *Popke v. Industrial Claim Appeals Office,* 944 P2d. 677 (Colo. App. 1997). Once an ATP has been designated the claimant may not ordinarily change physicians or employ additional physicians without obtaining permission from the insurer or an ALJ. If the claimant does so, the respondents are not liable for the unauthorized treatment. *Yeck v. Industrial Claim Appeals Office,* 996 P.2d 228 (Colo. App. 1999). If upon notice of the injury the employer fails forthwith to designate an ATP, the right of selection passes to the claimant. *Rogers v. Industrial Claim Appeals Office,* 746 P.2d 565 (Colo. App. 1987). The employer's obligation to appoint an ATP arises when it has some knowledge of the accompanying facts connecting an injury to the employment such that a reasonably conscientious manager would recognize the case might result in a claim for compensation. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006).

14. As found, Claimant treated with Dr. Kathy McCranie and conceded she is his ATP. Therefore, the ALJ finds Dr. Kathy McCranie is claimant's ATP. Claimant was discharged from care with the original ATP, Dr. Feldman, for violation of his pain contract. Dr. Feldman was providing pain management maintenance care to the Claimant. After Claimant was discharged from care, he began seeking treatment outside of workers' compensation. At no time during the course of this claim did respondents give up their right to select an ATP. Claimant presented no evidence to dispute the right of selection had passed to him.

15. Upon agreement of the parties, claimant began treating with Dr. McCranie for pain management on May 8, 2018. Claimant was seen by Dr. McCranie on three separate occasions. If there was a dispute as to the ATP, Claimant in effect "chose" Dr. McCranie by continuing to treat with her, and, claimant testified at the March 29, 2019 hearing that she was the ATP. For these reasons, it is found Dr. McCranie is Claimant's ATP.

16. Dr. Raschbacher testified that in workers' compensation claims, while unfortunate, a claimant may have chronic pain from a work injury and nothing further will cure the symptoms. As the definition of MMI states, the point when nothing further will improve the effects of the industrial injury. All of the procedures Claimant had done after being placed at MMI were ineffective and so he was properly placed at MMI on June 24, 2015. Also, the ATP and DIME opined that a lot of Claimant's pain stemmed from his prior back injury to this claim and that the treatment for his SI joints predated the 2014 work injury. Chronic back issues are to be expected given the original 2011 back fusion and numerous other treatment but this does not mean Claimant is not at MMI.

17. The ALJ also finds the opinion and testimony of Claimant's expert, Dr. Gray, to not be persuasive or credible. Dr. Gray testified at the hearing that he examined Claimant for purposes of an IME at the request of Claimant's counsel. At hearing, Dr. Gray testified that Claimant had "extreme" pain behaviors out of proportion to objective findings. Dr. Gray admitted every procedure he had recommended in his IME report had been completed and did not appear to relieve Claimant of his symptoms. Claimant has failed to meet his burden of clear and convincing evidence to overcome the DIME opinion.

ORDER

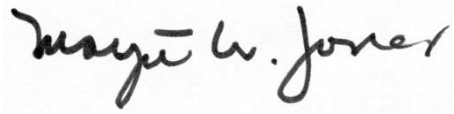
1. Claimant has failed to overcome the DIME opinion of Dr. Scott Hompland by clear and convincing evidence.

2. Dr. Kathy McCranie is claimant's ATP.

3. Claimant is not entitled to an order awarding indemnity benefits since he is at MMI.

4. All matters not determined herein are reserved for future determination.

DATED: August 2, 2019



MARGOT W. JONES
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, Denver, Colorado, 80202. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. (as amended, SB 09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant proved by a preponderance of the evidence that he suffered a functional impairment contained off the schedule of injuries set forth at Section 8-42-107(2), C.R.S. and is entitled to permanent partial disability benefits based upon a whole person conversion of the upper extremity rating.

2. Whether the Claimant is entitled to compensation for disfigurement pursuant to C.R.S. § 8-42-108 and, if so, the amount of compensation.

3. Whether Claimant has established by a preponderance of the evidence an entitlement to medical maintenance benefits as recommended by the DIME physician Dr. Hall.

FINDINGS OF FACT

1. Claimant is a male who was employed by Employer as a mechanical assembler at the time of a November 28, 2016 work injury. Claimant remains employed by Employer but now is a test stand operator. Claimant has been employed by Employer for approximately 12 years.

2. On November 28, 2016, Claimant sustained an admitted work related injury to his left forearm. On that date, when it was cold outside, Claimant went to close an overhead door. By some means, his left arm was caught in a chain and the chain cut through his left forearm as the chain was moving. Claimant pulled with his other arm trying to avoid the cable/chain cutting completely through his left forearm. While his forearm was caught in the chain, the chain was pulling Claimant off the ground. Claimant yelled for a coworker to help, a coworker arrived with cutters and cut the chain, and Claimant fell to the ground. Claimant was bleeding significantly and initially attempted to run to his car in an attempt to drive to the hospital, but he was stopped by Employer's response team who assisted him and called an ambulance.

3. Records from Thompson Valley EMS on November 28, 2016 show that Claimant was picked up at work and transported by ambulance to Mckee Medical Center Emergency Department. *See* Exhibit 5.

4. Claimant arrived at the Emergency Department of McKee Medical Center and was evaluated. Claimant reported that a cable from the garage at work cut into his arm. A left forearm laceration at the volar aspect of the left forearm was noted. Claimant reported numbness in his left hand involving the thumb and index finger. Claimant reported no pain or injury to his neck, upper back, or chest. The examination found a deep and extensive laceration across the volar aspect of the left forearm and the proximal

third transected muscle tissue. It was noted that Claimant was unable to flex his wrist and that he had sensory deficit in his left thumb and index finger. *See* Exhibit 6.

5. Steven Sides, M.D. was brought in to evaluate and perform surgery on Claimant's left forearm. Dr. Sides noted at the Emergency Department evaluation on November 28, 2016 that Claimant's laceration was quite deep, that there was some sensation loss, but that the motor function seemed intact. On examination, Dr. Sides found full range of motion of the left shoulder and non-tenderness about the shoulder and elbow. He found a 12 cm laceration on the middle third of the forearm that was transverse in nature, perpendicular to the long axis of the forearm that was complex. Dr. Sides noted there was exposed muscle and blood clot in the wound. Dr. Sides assessed left forearm laceration with penetrating trauma, likely intramuscular injury only although he opined there may be some mild neurological injury as well. Dr. Sides planned surgery including debridement and irrigation of the left forearm would with repair of structures as needed and Claimant was taken into surgery that afternoon. *See* Exhibits 6, A.

6. In surgery, Dr. Sides debrided some skin, some underlying subcutaneous fat, a small amount of muscle, some fascia, and some deeper tissue. Dr. Sides noted that the radial artery was lacerated and completely clotted in the wound and he tied off the ends with silk ties. Dr. Sides opined that there was no tendinous tissue that could be repaired. He felt the median nerve as intact and could not visual well the superficial radial nerve. He again noted that the radial artery was completely lacerated. He closed the wound and noted capillary refill in all digits of the hand after the procedure. *See* Exhibit 6.

7. As a result of his surgery and injury, Claimant has a scar measuring approximately 6 inches on his left forearm. The scar is deep, wide, and discolored from Claimant's skin tone despite adequate time for healing. At hearing, although pictures of the injury were offered, the ALJ viewed the actual scar in its current condition. In addition to the deep, wide, 6-inch scar, Claimant has an indentation of musculature on his left forearm that is visibly different in appearance from his non-injured right forearm.

8. On November 30, 2016, Employer completed a member incident report after getting a statement from Claimant over the phone. The report indicates that Claimant was working near the receiving door and that it was cold outside so he went to close the door. Claimant reported that when he pushed the button to close the dock door, the cable for the door was hanging loose, the motor started winding the cable up, and his left forearm was caught between the cable and the door. Claimant reported that the cable started cutting into his arm and he started to be lifted off the ground because his arm was wedged between the cable and door. Claimant reported that he yelled for someone to bring wire/cable cutters and that a co-worker cut the cable and he fell to the ground. Claimant reported he was fearful his left arm would have been amputated. *See* Exhibit 3.

9. On December 6, 2016, Steven Mull, M.D. evaluated Claimant. Claimant reported that his left forearm was stuck in cables at work. Claimant reported that he went to McKee Medical Center by ambulance and had surgery that day. Claimant reported his

pain was at a 7/10. Claimant reported his left middle, index, and thumb were numb and tingling. Claimant reported difficulty sleeping due to his pain. Dr. Mull opined that neurologic damage was still uncertain. Dr. Mull assessed laceration with deep tissue vascular and neurologic injury, post-surgical repair and he recommended follow up reevaluation in one month. *See* Exhibit 7.

10. On July 27, 2017, Gregory Reichhardt, M.D. evaluated Claimant. Claimant reported that he had some pain over the radial forearm and numbness in the palmar and dorsal aspects of digits one through three on the left hand. Claimant denied any symptoms proximal to the mid-forearm. Claimant reported his pain was at a 5-6/10 and that using his hand to do physical work aggravated his pain. Claimant reported that his pain interfered with playing sports, working on cars, playing drums, doing handyman work, and grabbing things. On examination, Claimant had decreased sensation to light touch over the palmar and dorsal aspect of the left hand, digits one through three. Claimant had no tenderness to palpation about the cervical spine, no tenderness about the shoulder, and had good shoulder range of motion. Claimant had no cervical paraspinal muscle spasm, no tenderness to palpation about the elbow, and normal elbow range of motion. On an assessment, Claimant reported not at all to a question of whether the muscles in his neck ached. Claimant also had negative test signs over the median and ulnar nerves at the elbow. Electrodiagnostic testing showed left median neuropathy at the wrist with old/chronic axonal involvement but without acute axonal involvement, left radial sensory neuropathy at the wrist. *See* Exhibits 8, B.

11. On January 8, 2018, Dr. Sides evaluated Claimant. Claimant reported that he did not think his arm was getting stronger and that he continued to have numbness in his fingers. Dr. Sides recommended compounding cream to help with the nerve pain. *See* Exhibit 9.

12. On February 8, 2018, Kevin O'Toole, D.O. evaluated Claimant. Dr. O'Toole noted that Claimant had recently completed a functional capacity evaluation where he reported occasional shooting pains from his incision distally into the palm, constant numbness of the radial forearm, entire dorsal hand, and medial one half of the volar aspect of the hand. Dr. O'Toole noted that Claimant had been functioning satisfactorily at work but had not resumed playing bongo drums. Claimant reported that he had been using a xenia compound cream for neuropathic pain and that it reduced his daily pain. Claimant reported that his current symptoms included pain in the left arm and that his condition had stayed the same since his last visit. Dr. O'Toole assessed laceration of radial artery at left forearm level, forearm laceration, and radial neuropathy. Dr. O'Toole recommended independent exercises, continued use of Xenia compound cream, and maintenance medication as needed with occupational medicine evaluation every 6-12 months. Dr. O'Toole opined that Claimant was at maximum medical improvement with a rating of 21% upper extremity impairment. *See* Exhibits 10, C.

13. On March 12, 2018, Respondents filed a final admission of liability. Respondents admitted to permanent partial disability benefits as a scheduled impairment rating of 21% of the arm at shoulder. Respondent also admitted to post maximum medical

improvement medical benefits that were related, reasonable, and necessary as recommended by an authorized treating physician. Respondents reserved the right to challenge the reasonably necessity and causal relatedness of any treatment recommended by a provider or sought by Claimant. *See* Exhibit 1.

14. On November 7, 2018, Claimant underwent a Division Independent Medical Examination (DIME) performed by Timothy Hall, M.D. Dr. Hall noted that he reviewed the mechanism of injury with Claimant and that it was consistent with the records. Dr. Hall also noted that he reviewed the medical records and that there were no discrepancies. Dr. Hall performed a physical examination. Dr. Hall opined that Claimant was at maximum medical improvement (MMI). Dr. Hall recommended as maintenance care a trial of neuroleptic medication such as gabapentin or Lyrica and recommended the medications over a two-year period with physician visits every three months. Dr. Hall opined that Claimant had a 27% upper extremity impairment rating which converted to a 16% whole person impairment for the radial nerve injury below the triceps, the range of motion loss involving the wrist, and the claudication due to injury to the radial artery. Dr. Hall recommended permanent restrictions of no repetitive gripping or pinching with the left hand and no lifting greater than 10 pounds with the left arm, waist to shoulder. *See* Exhibits 4, D.

15. On February 8, 2019, Respondents filed a new final admission of liability, following the DIME. Respondents admitted to permanent partial disability benefits as a scheduled impairment rating of 27% of the arm at shoulder. Respondents also admitted to maintenance care after maximum medical improvement pursuant to Dr. O'Toole's February 8, 2018 report. *See* Exhibit 2.

16. Throughout the course of his treatment, Claimant regularly filled out pain diagrams. Claimant did not circle any areas above his left elbow in pain diagrams dated January 10, 2017, January 31, 2017, February 23, 2017, March 9, 2017, May 16, 2017, July 6, 2017, September 7, 2017, December 19, 2017, January 8, 2018, and February 8, 2018. *See* Exhibits F, G, H, I, J, K, L, M, N, O.

17. Claimant testified at hearing that he has constant pain at all times, with his lowest pain level being a 5/10. Claimant testified that he has intermittent daily shooting pain from his incision site down into his hand. Claimant testified that he lost an artery in his forearm and has nerve damages to his fingers. Claimant also testified that his pain from the injury will sometimes shoot up his arm and down his chest and that he has muscle tightness in his neck and left side. Claimant reported that he cannot perform sports, wear a baseball glove, or drum. Claimant was an avid drummer and performed with bands throughout the last 30 years. Claimant testified that he has trouble sleeping due to the pain and that his pain wakes him up 2-3x per night. Claimant testified that in the winter, he has to wear a sleeve on his arm because of his nerve issues.

18. Claimant testified that he has not been on opioids since his surgery, but that he would like to try Lyrica/gabapentin for his pain. Claimant testified that he never had shooting pain in his shoulder or neck prior to this injury. Claimant testified that the pains

in his shoulder he gets with heavy work and with sleeping and that his overall pain limits his activity.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Disability Compensation Based on Scheduled Injury vs. Whole Person Impairment

The claimant bears the burden of establishing functional impairment beyond the arm at the shoulder and the consequent right to permanent partial disability benefits under§ 8-42-107(8)(c), C.R.S., by a preponderance of the evidence. *Maestas v. American Furniture Warehouse,* W.C. No. 4- 662-3 69 (June 5, 2007); *Johnson-Wood v. City of Colorado Springs,* W. C. No. 4-536-198 (ICAO June 20, 2005).

The question of whether a claimant sustained a "loss of an arm at the shoulder" within the meaning of § 8-42-107(2)(a), C.R.S. or a whole person medical impairment compensable under § 8-42-107(8)(c), C.R.S. is one of fact for determination by the ALJ. In resolving this question, the ALJ must determine the situs of the claimant's "functional impairment," and the site of the functional impairment is not necessarily the site of the injury itself. *Langton v. Rocky Mountain Health Care Corp.,* 937 P.2d 883 (Colo. App. 1996); *Strauch v. PSL Swedish Healthcare System,* 917 P.2d 366 (Colo. App. 1996); *Warthen v. Industrial Claim Appeals Office,* 100 P.3d 581 (Colo. App. 2004).

There is no requirement that functional impairment take any particular form in order to be compensable under § 8-42-107(8)(c), C.R.S. Evidence of pain and discomfort which interferes with the claimant's ability to use a portion of the body may be considered impairment for this purpose. Aligaze *v. Colorado Cab Co. / Veolio Transportation*; W.C. No. 4-705-940 (ICAO April 29, 2009); *Chacon v. Nichols Aluminum Golden, Inc.,* W.C. No. 4-521-005 (ICAO November 29, 2004); *Guillotte v. Pinnacle Glass Company*, W.C. No. 4-443-878 (ICAO November 20, 2001), aff'd., *Pinnacle Glass Co. v. Industrial Claim Appeals Office*, (Colo. App. No. 01CA2386, August 22, 2002) (not selected for publication). The courts have held that damage to structures of the "shoulders" may or may not reflect a "functional impairment" enumerated on the schedule of disabilities. *See Walker v. Jim Fouco Motor Company,* supra*; Strauch v. PSL Swedish Healthcare System,* supra, *Langton v. Rocky Mountain Health Care Corp.,* supra*; Price v. United Airlines,* W.C. No. 4-441-206 (ICAO January 28, 2002); *Johnson-Wood v. City of Colorado Springs,* supra.

In this case, Claimant has failed to establish by a preponderance of the evidence that his functional impairment extends beyond the arm at the shoulder. Rather, all the credible evidence and testimony limits the functional impairment to areas below Claimant's elbow. As found above, on examinations Claimant has had no spasms, tenderness, or problems noted by physicians above the left elbow. Claimant filled out multiple pain diagrams reporting no problems above the left elbow. On the date of injury, at the emergency department, Claimant reported no pain or injury to his neck, upper back, or chest. Claimant had full range of motion in his left shoulder and non-tenderness about his left shoulder and elbow on examination by Dr. Sides at the emergency department. In July of 2017, when evaluated by Dr. Reichhardt, Claimant reported no symptoms proximal to the mid-forearm and he had no tenderness to palpation about the cervical spine, no tenderness about the shoulder, and had good shoulder range of motion. At the July 2017 evaluation, Claimant had no cervical paraspinal muscle spasm, no tenderness to palpation about the elbow, and normal elbow range of motion and Claimant reported not at all to a question of whether the muscles in his neck ached.

The weight of the credible evidence establishes that Claimant does not have permanent partial disability or functional impairment beyond the arm at the shoulder. Although Claimant testified to sleep issues and argues that his impaired sleep impairs his whole body function and is beyond the arm at the shoulder, the ALJ finds this not persuasive. Claimant's functional limitations are below his left elbow and do not qualify for a whole person impairment rating.

Medical Maintenance Benefits

The need for medical treatment may extend beyond the point of MMI where claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Hanna v. Print Expediters Inc.*, 77 P.3d 863, 865 (Colo. App. 2003); *Hobirk v. Colorado Springs School District #11,* W.C. No. 4-835-556-01 (ICAO, Nov. 15, 2012). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that the claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999); *Hastings v. Excel Electric*, W. C. No. 4-471-818 (ICAO, May 16, 2002). The claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915 (Colo. App. 1993); *Mitchem v. Donut Haus*, W.C. No. 4-785-078-03 (ICAO, Dec. 28, 2015). An award of *Grover* medical benefits should be general in nature. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003); *Anderson v. SOS Staffing Services,* W. C. No. 4-543-730, (ICAO, July 14, 2006).

In cases where the respondents file a final admission of liability admitting for ongoing medical benefits after MMI they retain the right to challenge the compensability, reasonableness, and necessity of specific treatments. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003); *Oldani v. Hartford Financial Services,* W.C. No. 4-614-319-07, (ICAO, Mar. 9, 2015). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School District No.11*, W.C. No. 3-979-487, (ICAO, Jan. 11, 2012); *Ford v. Regional Transportation District,* W.C. No. 4-309-217 (ICAO, Feb. 12, 2009. The question of whether the claimant has proven that specific treatment is reasonable and necessary to maintain her condition after MMI or relieve ongoing symptoms is one of fact for the ALJ. *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

Claimant has consistently reported significant pain as a result of his injury and medical records establish neuropathic pain exists in this case. Claimant testified that he would like to try the additional medications of Lyrica/Gabapentin that have been recommended by DIME physician Dr. Hall. As found above, Dr. Hall recommended as maintenance care a trial of neuroleptic medication such as gabapentin or Lyrica over a two-year period with physician visits every three months. Claimant has established that this specific medical maintenance benefit is reasonable and necessary to relieve the effects of his work related injury or to prevent further deterioration of his condition. As found above, Dr. O'Toole also recommended maintenance medication as needed. Although Dr. O'Toole did not specify or recommended gabapentin or Lyrica, the recommendation for maintenance medication as needed is consistent with Dr. Hall's recommendations. Claimant has met his burden and Respondents shall authorize maintenance benefits for two years trial of neuroleptic medication. Claimant also indicated that he wears a sleeve due to his nerve issues and that at some point in the future, he will need another sleeve. This specific benefit is denied at this time. Claimant

has failed to establish that a new sleeve is reasonable and necessary to relieve the effects of his injury or prevent further deterioration of his condition. This order does not preclude Claimant from seeking a sleeve in the future.

Disfigurement Award

Pursuant to C.R.S. § 8-42-108, if the Claimant is "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view, in addition to all other compensation benefits…the director may allow compensation not to exceed four thousand dollars to the employee who suffers such disfigurement." The area normally exposed to public view has been interpreted to include all areas of the body that would be apparent in swimming attire. *Twilight Jones Lounge v. Showers,* 732 P.2d 1230 (Colo. App. 1986). The ability to conceal a disfigurement, by means of clothing or a prosthetic or artificial device does not defeat an entitlement to benefits for the disfigurement. *Arkin v. Industrial Commission,* (145 Colo. 463, 358 P.2d 879 (1961).

As a result of his work related injury and surgery, Claimant has a significant scar on his left forearm, measuring approximately 6 inches in length. The scar is deep, wide, and significantly discolored from Claimant's normal skin tone despite adequate time for healing. In addition to the scar, Claimant has an area on his forearm where there is a raised bump type appearance of his muscle, near where muscle was removed in surgery. Claimant, therefore has sustained permanent disfigurement to an area of his body normally exposed to public view and is entitled to additional compensation. Although Claimant requested a disfigurement award under the higher cap and argues that he has extensive body scars, the ALJ finds this not persuasive and finds that compensation under § 8-42-108(1), C.R.S. adequately compensates Claimant for the degree of his disfigurement. The ALJ finds that Insurer shall pay Claimant $2,900 for the disfigurement described above.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that he suffered a functional impairment contained off the schedule of injuries set forth at Section 8-42-107(2), C.R.S. Claimant is not entitled to permanent partial disability benefits based upon a whole person conversion of the upper extremity rating.

2. Claimant is entitled to compensation for disfigurement pursuant to C.R.S. § 8-42-108(1) in the amount of $2,900.

3. Claimant has established by a preponderance of the evidence an entitlement to neuroleptic medications as medical maintenance benefits. Claimant retains the right to request and Respondents retain the right to deny any future specific maintenance medical benefits.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, *see* section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 8, 2019

/s/ Michelle E. Jones

_____

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

STATE OF COLORADO OFFICE OF ADMINISTRATIVE COURTS 1525 Sherman Street, 4th Floor, Denver, CO 80203	
In the Matter of the Workers' Compensation Claim of: **M,** Claimant, vs. **R,** Employer, And **N**, Insurer, Respondents.	▲ **COURT USE ONLY** ▲ **CASE NUMBER:** **WC 5-044-197-002**

FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

Hearing in the above-captioned matter was held before Administrative Law Judge Margot W. Jones on April 25, 2019, at 3:22 p.m. in Courtroom 4 in Denver, Colorado. Claimant was present in person and represented by _____, Esq. Respondents were represented by _____, Esq. Claimant's exhibits A-B and Respondents' exhibits A-E were admitted into evidence.

In this order, M shall be referred to as "Claimant," R shall be referred to as "Employer" and N Insurance Company shall be referred to as "Insurer." Employer and Insurer, collectively, will be referred to as "Respondents."

In this order, the Judge may use the following acronyms: C.R.S. refers to Colorado Revised Statutes (2018); the Act refers to the Workers' Compensation Act of Colorado, §§8-40-101, et seq., supra; OAC refers to the Office of Administrative Courts; OACRP refers to the Office of Administrative Courts Rules of Procedure, 1 CCR 104-1; and WCRP refers to Workers' Compensation Rules of Procedure, 7 Code Colo. Reg. 1101-3.

ISSUE

Whether Claimant has proven by a preponderance of the evidence that the Synvisc injection recommended by William Sterett, M.D., is causally related to the industrial injury of March 29, 2017.

STIPULATION

Claimant's Average Weekly Wage is $1,636.45.

FINDINGS OF FACT

1. On March 29, 2017, Claimant sustained an admitted industrial injury to his right knee, right shoulder and left hand when he slipped while walking down a hallway while working for Employer. Respondents admitted liability for the injuries and provided Claimant with medical treatment.

2. Claimant first sought treatment from Aspen Medical Clinic on April 3, 2017, where he was seen by Kim Scheuer, M.D. Dr. Scheuer documented that Claimant's right knee pain was in the area located "behind" [posterior] and "outside" [lateral] his right knee, with "no instability." Dr. Scheuer assessed Claimant with acute pain of the right shoulder, right knee and left wrist, ordered x-rays of the left wrist and recommended physical therapy.

3. Claimant returned to Aspen Medical Clinic on April 12, 2017, where he was seen by Dewayne Niebur, M.D. Consistent with Dr. Scheuer's office note, Dr. Niebur documented that Claimant's right knee pain was "[p]osterior and medial/lateral" with "[n]o instability." Exhibit 1, p. 130. William I. Sterett, M.D. has performed multiple surgeries to Claimant's left knee, culminating in a total knee arthroplasty in March 2013. Therefore, Claimant requested a referral to Dr. Sterett and Dr. Niebur complied.

4. Claimant underwent right knee x-rays on April 19, 2017, which showed postoperative[1] and degenerative changes without acute fracture or effusion.

5. Dr. Sterett examined Claimant's right knee on April 24, 2017, documenting Claimant's complaints of right knee medial and lateral joint pain. Dr. Sterett recommended a right knee MRI.

6. Claimant underwent the right knee MRI on May 5, 2017, which Dr. Sterett reviewed on the same date and opined that the exam showed lateral meniscus posterior root tear, 2 loose bodies and patellofemoral and lateral compartment chondromalacia. His diagnosis was meniscus tear and loose bodies. Dr. Sterett specifically did *not* diagnose Claimant with osteoarthritis.

[1] Claimant underwent a right knee anterior cruciate ligament bone-patellar-bone reconstruction in August 1999. [Exhibit A2, pp. 51-52].

7. On May 30, 2017, Dr. Sterett performed right knee arthroscopic partial medial and lateral meniscectomies, bicompartmental chondroplasty, lysis of adhesions and removal of scar tissue and removed two loose bodies.

8. On July 12, 2017, Dr. Sterett documented that Claimant complained of medial sided catching, causing pain along the joint line of the right knee. Therefore, Dr. Sterett performed a steroid injection into the area of the catching.

9. The Aspen Valley Hospital Rehabilitation Services discharge summary indicates that as of July 17, 2017, Claimant denied pain in his right knee. On August 23, 2017, Dr. Sterett released Claimant from care with no restrictions, indicating that Claimant is making excellent progress and future treatment is not anticipated. Claimant was to seek treatment, as needed.

10. Claimant returned to Aspen Medical on August 24, 2017, where Dr. Niebur documented that Claimant stated his right knee symptoms were usually without pain, but he may ache if active. Claimant reported an injection resolved the medial knee pain. On the Pain Diagram for this visit, Claimant did not mark any pain in his right knee. On all of the Pain Diagrams prior to August 24, 2017, Claimant marked pain in his right knee.

11. On September 21, 2017, Dr. Niebur documented that Claimant reported his right knee was doing well with no pain or swelling. On the Pain Diagram for this visit, Claimant again did not mark any pain with his right knee. Dr. Niebur removed the right knee from the problem list in his medical records, providing assessments for only Claimant's right shoulder and left wrist.

12. Claimant testified that he essentially noticed no improvement from his right knee surgery. Claimant's testimony is not credible, as the physical therapy discharge note, Dr. Niebur's records and Dr. Sterett's records all document that Claimant's right knee was pain free and he was very active in August and September 2017. Claimant's reports to Dr. Sterett regarding his knee are deemed credible. The evidence established that Claimant made excellent progress postoperatively and was reporting no pain in his right knee. Thus, Claimant's testimony regarding his pain complaints and his response to surgery is not credible.

13. Claimant returned to Dr. Niebur on October 24, 2017, complaining of burning pain to the anterior and medial right knee and a sense of instability with swelling which occurred on transition from biking to hiking. Claimant's complaints in October 2017 are different from his complaints after his fall at work. After the fall at work, Drs. Scheuer, Niebur and Sterett all document that Claimant's pain complaints were in the posterior knee with no instability. In October 2017, after experiencing almost three and one-half months of no right knee pain, Claimant began to complain of pain in his anterior knee with instability.

14. On November 15, 2017, Dr. Sterett performed another steroid injection, and stated that if Claimant was not better, the doctor would order a repeat MRI of the right knee without contrast to evaluate for a possible medial meniscal tear.

15. The repeat MRI of the right knee was taken on January 4, 2018. On January 19, 2018, Dr. Sterett opined that the MRI revealed a progression of Claimant's lateral and patellofemoral osteoarthritis. Dr. Sterett opined that the cause of Claimant's right knee pain was secondary to chondromalacia and inflammation of the knee. Dr. Sterett recommended an injection of Synvisc One.

16. On March 16, 2018, Dr. Sterett opined that Claimant's meniscus tear resolved, but the chondral delamination was continuing to delaminate. Dr. Sterett's assessment was chondral delamination with multiple loose bodies patellofemoral joint of the right knee. Dr. Sterett recommended the Synvisc injection and related it to the original injury. However, Dr. Sterett recommended the Synvisc injection to treat Claimant's chondral delamination of the patella.

17. Based on Dr. Sterett's March 16, 2018, note, he reached the conclusion that the chondral delamination of the patella is related to the work related injury because he observed chondral delamination during the arthroscopic surgery on May 30, 2017. Claimant has the burden to prove that the chondral delamination of the patella observed and debrided by Sterett during surgery was caused, aggravated or accelerated by the incident on March 29, 2017. Claimant did not sustain his burden of proof on this issue.

18. Dr. Sterett's assessment on May 5, 2017, and May 25, 2017, was tear of the lateral meniscus and loose body of the right knee. In his letter dated February 7, 2019, when commenting specifically on causation, Dr. Sterett made no mention of Claimant sustaining an injury to his patella or chondral delamination. Dr. Sterett opined that Claimant sustained meniscal tears in the event on March 29, 2017. Yet, during surgery, Dr. Sterett chose to debride the patella. Dr. Sterett debrided Claimant's pre-existing, non-industrial chondral delamination of the patella since the doctor already was inside Claimant's knee on March 29, 2017. However, Claimant still has the burden of proving that the chondral delamination Dr. Sterett addressed during surgery on May 30, 2017, was caused or aggravated by the industrial injury. Claimant has provided no credible evidence to that effect.

19. Douglas Scott, M.D., credibly testified that the chondral delamination present in Claimant's knee before the surgery was pre-existing, caused by Claimant's long-standing osteoarthritis. This opinion is supported by Dr. Sterett's operative report, which found grade III changes of the patella that were debrided and Dr. Sterett's postoperative plan indicating that Claimant's knee was at significant risk for continued degenerative changes. Therefore, Claimant has failed to prove that the portion of the surgery in which Dr. Sterett debrided Claimant's patella to address the pre-existing non-industrial chondral delamination was necessitated by the incident on March 29, 2017.

20. Dr. Scott testified that if Claimant had no history of an injury on March 29, 2017, and no surgery on May 30, 2017, Claimant's pre-existing osteoarthritis would have become symptomatic at some point in the future because an injury or surgery is not a prerequisite to Claimant's pre-existing non-industrial osteoarthritis and chondral delamination of the patella becoming symptomatic. Claimant's medical records show that he was pain free and released from care for his meniscal tears, and more than three months later began to complain of a different pain to his anterior knee with instability, rather than the prior posterior knee pain without instability prior to his surgery. This different area of pain supports Dr. Scott's testimony that Claimant's pain is not coming from the meniscal tears or any area that was symptomatic prior to surgery.

21. Dr. Sterett issued a letter dated February 7, 2019, again addressing causation. Dr. Sterett stated that Claimant had continued deterioration of the knee. However, Dr. Sterett did not identify where that continued degeneration of the knee is occurring, or why that area of the knee is continuing to deteriorate. Since Respondents are not liable for the continued degeneration of the knee if that continued degeneration was not caused, aggravated or accelerated by the injury.

CONCLUSIONS OF LAW

General Legal Principles

1. The purpose of the Act is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See Bodensleck v. ICAO, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. Arenas v. ICAO, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. Cordova v. ICAO, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to

expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Medical Benefits

4. The claimant bears the burden of establishing entitlement to medical treatment. *See Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Proof of causation is a threshold requirement which an injured employee must establish by a preponderance of the evidence before any workers' compensation is awarded. Section 8-41-301(1)(c), C.R.S.; *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000). Where the claimant's entitlement to benefits is disputed, the claimant has the burden to prove a causal relationship between a work-related injury and the condition for which benefits or compensation are sought. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo.App.1997).

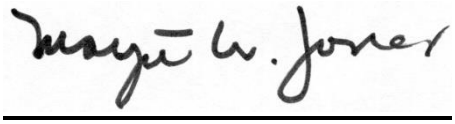
5. The Administrative Law Judge finds and concludes, considering the totality of the evidence that Claimant has failed to prove by a preponderance of the evidence that the Synvisc injection recommended by Dr. Sterett is causally related to Claimant's fall on March 29, 2017. Dr. Sterett opined that the portions of Claimant's knee surgery causally related to the fall were the meniscal tears and the loose bodies. Dr. Sterett also performed surgery on Claimant's degenerative chondral delamination of the patella, but Claimant has failed to prove that this portion of the surgery was causally related to the injury. Dr. Sterett now has recommended a Synvisc injection to address a continued degeneration of the chondral delamination of the patella, but has not addressed whether the issue of whether the non-industrial portion of the surgery on May 30, 2017, caused the continued chondral delamination.

ORDER

1. Claimant's request for the Synvisc injection recommended by Dr. Sterett is denied and dismissed.

2. Any issues not determined in this decision are reserved for future determination.

DATED: August 8, 2019.



MARGOT W. JONES
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

If you are dissatisfied with the Judge's Order, you may file a Petition to Review the Order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the Order, as indicated on the certificate of mailing or service; otherwise, the Judge's Order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the Order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43- 301(2), C.R.S. (as amended, SB 09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a Petition to Review at ttp://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Is Claimant entitled to a change of physician to Elizabeth Yurth, M.D.?
- Did Claimant meet her burden of proof to show she was entitled to TTD or TPD benefits after February 5, 2019?

FINDINGS OF FACT

1. Claimant was employed as a merchandise execution supervisor for Employer.

2. On April 26, 2018, Claimant suffered an admitted industrial injury while working for Employer.[1] In particular, Claimant injured her low back while moving a table in a loading area.

3. Claimant was evaluated at an urgent care facility on April 26, 2018 and then by her primary care physician, Mira Lee, M.D. the next day. Dr. Lee documented moderate-to-severe tenderness in the right lower lumbar spine, with moderate to severely decreased range of motion ("ROM") of the back, as well as a very slow gait. Dr. Lee's assessment was: back pain and muscle spasm. She prescribed oxycodone-acetaminophen and a Medrol dose pack.

4. Claimant was referred to Darla Draper, M.D. at Concentra, the ATP for Employer, who evaluated her on April 30, 2018. Dr. Draper diagnosed strain of muscle, fascia and tendons in lower back. She ordered occupational therapy and physical therapy ("PT") and Claimant had a restriction of no activity. Dr. Draper continued this restriction in the follow-up-appointment on May 7, 2018.

5. Dr. Draper modified Claimant's work restrictions on May 14, 2018. Claimant was allowed to return to work on May 14, 2018 with the following restrictions: may lift up to 5 lbs. frequently-up to six hours/day; may push/pull up to 5 lbs. frequently-up to six hours/day; change positions periodically to relieve discomfort. Dr. Draper kept the same work restrictions in place after the May 16, 2018 office visit.

6. On May 31, 2018, Claimant was evaluated by Eric Shoemaker, D.O. and was complaining of radicular symptoms in the low back. Dr. Shoemaker reviewed the May 8, 2018 MRI films, which showed a moderate sized disc herniation with extrusion at L4-5, which appeared to abut and displace the traversing L5 nerve roots bilaterally without compression. There was a shallow broad-based protrusion at L5-S1, traversing

[1] A Notice of Contest was filed on May 17, 2018 in which Respondents disputed liability, however, a GAL was filed on June 18, 2018.

right S1 nerve root without compression. There was a prominent high-intensity zone at L3-4, consistent with annular tearing, but no protrusion and no nerve impingement. The remaining levels were unremarkable.

7. Dr. Shoemaker's diagnoses included: dorsalgia, unspecified; unspecified thoracic, thoracolumbar and lumbosacral intervertebral disorder; low back pain. Dr. Shoemaker opined that Claimant did not have a significant spondylosis or degenerative disc changes and felt this represented a discrete and probably acute to subacute injury, which was consistent with her mechanism of injury. He felt it was probable that this represented a work-related injury. Dr. Shoemaker prescribed metalaxone, tramadol, atenolol and continued Claimant's work restrictions.

8. Claimant was evaluated by Debra Smith, M.D. on June 5, 2018, at which time the following work restrictions were given: may lift up to 5 lbs. constantly-up to 8 hours/day; may push/pull up to 5 lbs. constantly-up to 8 hours/day; change positions periodically to relieve discomfort. Claimant returned to Dr. Smith on June 14, 2018 and these work restrictions were continued.

9. On June 18, 2018, a General Admission of Liability ("GAL") was filed on behalf of Respondents. Respondents admitted for medical benefits and TTD, beginning on April 27, 2018. TTD benefits were paid at the rate of $401.48 per week, based upon an AWW of $602.22.

10. On June 28, 2018, Claimant returned to Dr. Smith who reduced her work restrictions. The work restrictions included: may lift up to 30 lbs. constantly-up to 8 hours or greater/day; may push/pull up to 200 lbs. constantly-up to 8 hours or greater/day; may bend occasionally-up to 3 hours; may stand and walk constantly up to 8 hours or greater/day; change positions periodically to relieve discomfort; no climbing ladders.[2]

11. Claimant received conservative treatment, including PT, during this period of time and Dr. Smith oversaw her treatment. Claimant underwent a bilateral L5 transforaminal epidural steroid injection on July 6, 2018. In her follow-up evaluation with Dr. Smith on July 12, 2018, Claimant reported increased pain since the injection. The diagnoses included: bulging of lumbar intervertebral disc, lumbar strain; multilevel degenerative disc disease. Dr. Smith maintained the same work restrictions.

12. Claimant returned to Dr. Shoemaker on July 19, 2018 and reported she felt worse compared to before the injection. In light of that, Dr. Shoemaker did not recommend a repeat epidural steroid injection to which Claimant agreed. Claimant was to remain active with PT and begin transitioning to an independent strengthening home exercise program.

[2] Exhibit 4, p. 46.

13. In the evaluations which occurred on August 9 and 16, 2018, Dr. Smith maintained Claimant's work restrictions, as well as adding that Claimant could occasionally bend and constantly stand. Dr. Smith approved a light duty work offer for Claimant on August 15, 2018. She noted Claimant required regular 10 minute breaks every two hours.[3] Claimant received PT, which included therapeutic exercise through September 11, 2018. When Claimant returned to Dr. Draper on September 25, 2018, she was referred to massage therapist, as well as to a physiatrist.

14. An amended GAL was filed on September 13, 2018. TTD benefits were paid from April 27, 2018 through September 8, 2018, with TPD benefits paid on September 9 and 10, 2018. TTD then resumed on September 11, 2018.

15. Claimant was evaluated by Kathy McCranie, M.D. on October 1, 2018, to whom she was referred by Dr. Smith. Claimant was complaining of low back pain described as a constant ache, with occasional spasms and sharp pain. The pain radiated down the back of her left leg and heel. Dr. McCranie's examination of Claimant was positive for joint pain, muscle cramps and joint stiffness. Dr. McCranie's diagnoses were: status post lumbar strain, with mild facial involvement; lumbar degenerative disc disease; probable left sacroiliac strain. Dr. McCranie recommended transitioning from the current physical therapy to a work conditioning program, in order to increase lifting. She prescribed Cymbalta for Claimant, as well as massage therapy. She also discussed chiropractic care with Claimant to address sacroiliac involvement.

16. On November 15, 2018, Claimant was evaluated by Linda Thomas, M.D. She complained of midline mid back pain and noted the symptoms occurred intermittently. Dr. Thomas noted left sciatic notch tenderness. The assessment was: lumbar strain and multilevel degenerative disc disease. Claimant's restrictions were lifting up to 30 lbs.-occasionally; push/pull up to 50 lbs.-occasionally; must be able to change positions from sit to stand as needed. Dr. Draper evaluated Claimant on November 28, 2018 and continued Claimant's work restrictions. Claimant had missed a few weeks of work conditioning and was to return to that treatment. Claimant returned to Dr. Draper on January 2, 2019, at which time tenderness was present in the left paraspinal and mild decreased ROM was noted. Claimant was to start trigger point injections with Dr. McCranie to be followed by massage therapy, PT-work conditioning.

17. A letter, dated January 9, 2019, was sent to Scott Richardson, M.D. with a job description prepared by Employer. This letter outlined modified duty that was available to the Claimant and was signed by Kelly Redoutey for Insurer. The physical requirements included standing up to 8 hours/day, not including 30-minute lunch and two 15 minute breaks; walking around the store for up to 8 hours/day; lifting returned items from customers up to 30 lbs.; push/pull fixtures and/or carts/vehicles with merchandise. On January 17, 2019, Dr. Richardson approved the modified job duty. The ALJ determined that by formalizing the modified job offer and securing ATP approval, Respondents intended that Claimant comply with the terms of the offer.

[3] Exhibit P.

18. Claimant returned to Dr. McCranie on January 14, 2019. She reported improvement with the injection and was taking ibuprofen and gabapentin. Tenderness on palpation was noted in the bilateral quadratus lumbar ROM and bilateral SI paraspinals. Dr. McCranie's impression was: low back pain, status post strain, with mild facial involvement; lumbar degenerative disc disease. Dr. McCranie administered trigger point injections, which was the second in a series. Claimant was to receive massage therapy and Dr. McCranie opined a third set of injections would benefit her.

19. On January 22, 2019, a certified letter was sent to Claimant, which offered a modified duty position to Claimant within her restrictions for 40 hours per week, with a starting date of February 5, 2019, at 9:00 a.m. Claimant's schedule was subject to change based upon business needs. The letter listed Shana R_____ as the person to whom Claimant was to report and set her rate of pay at $18.90 per hour. The letter was signed by Ms. Y_____ , HR Business Partner for Employer. The ALJ concluded Respondents had all relevant information concerning the offer of modified duty made to Claimant, as well as her restrictions.

20. Claimant testified she was scheduled for the last sessions of work conditioning the week of February 5, 2019. She attended the work conditioning sessions two times per week. Claimant spoke to someone at Employer (possibly Shana) and asked to put off the return to work, so she could finish the work conditioning.

21. Shana R_____ testified as a representative of Employer. Her position was general manager and she has worked at the Westminster store location since January 2019. When Claimant was first scheduled to return for modified duty, Ms. R_____ had not met her.

22. Ms. R_____ testified the first conversation she had with Claimant was on January 27, 2019. Claimant called to introduce herself and discuss her return to work. Ms. R_____ testified that they discussed what hours Claimant was available. Ms. R_____ agreed Claimant did not initiate the discussion about what hours she was available. Ms. R_____ said she asked if Claimant had flexibility in her schedule and Claimant responded she needed to pick up her grandson. Ms. R_____ testified supervisors were required to have open availability. The supervisor role remained open from February 5 through March 7, 2019. Ms. R_____ said she did not communicate that this position was open.

23. During her conversation with Claimant, there was no discussion about a change of benefits. She was not involved in the administration of workers' compensation benefits. Ms. R_____ testified she was going to find out the next steps from her HR partner, Beth Y_____ . The ALJ found Employer had the information required to make the modified duty job offer available, including the open available positions, as well as Claimant's restrictions.

24. Ms. R_____ testified she was aware of the job offer letter sent by Ms. Y_____ . She stated a supervisor was required to be available 40 hours per week. Employer has been able to accommodate the job restrictions since March 8, 2019.

25. Claimant testified that during her telephone conference with Ms. R_____ , a change to her workers' compensation benefits was not discussed. Claimant confirmed she discussed picking up her grandson with Ms. R_____ , but said if she had she known her benefits were impacted, she would have had another family member pick up her grandson. Claimant was not aware that the supervisor position remained available to her.

26. Claimant did not return to work on February 5, 2019. This terminated Claimant's right to receive TTD benefits, at least until the starting date of the second modified duty offer.

27. A second modified duty offer, dated February 7, 2019, was sent to Claimant. The modified duty position was identified as merchandise execution associate with a new starting date of February 12, 2019. This second offer identified varying hours over seven days per week. This letter listed a starting day of February 19, 2019 at 9:00 a.m. Once again, Claimant was to report to Ms. R_____ . Claimant's pay rate was listed as $11.25 per hour. The letter was signed by Ms. Y_____ , HR Business Partner for Employer. The ALJ found this offer of modified duty superseded its predecessor.

28. A third modified duty offer, dated February 7, 2019 was sent to Claimant. This letter was identical in all respects to the second modified duty offer, with the exception that the start date was listed February 19, 2019. The ALJ found this offer of modified duty superseded its predecessor. Claimant signed the acceptance portion of the temporary modified-duty assignment on or about February 11, 2019. Communications between counsel for the parties were admitted as part of Claimant's Exhibit 1. These confirmed an agreement that Claimant's start date for the modified duty position was February 19, 2019. The ALJ concluded Claimant relied upon the modified terms of the modified her.

29. Respondents changed the terms of the modified job duty offer by virtue of the letter sent on February 7, 2019. Accordingly, Claimant was entitled to receive TTD benefits from February 12-19, 2019.

30. A revised GAL was filed on February 8, 2019. This reflected payment of TTD benefits from September 11, 2018 through February 4, 2019. TTD was terminated based upon the job offer made to Claimant within her restrictions "earning her normal wage".

31. Claimant returned to work on or about February 19, 2019 and has been working the modified duty job.

32. Claimant was evaluated by Dr. Yurth on February 21, 2019. She reported pain in her low back, more severe on the left, which occasionally radiated down into the left knee. The steroid injection aggravated her back pain. On examination, tenderness was noted and Claimant lacked 20° of flexion. The straight leg raise test at 90° caused left-sided low back pain and flexion caused left gluteal pain. Dr. Yurth's assessment was: severe bilateral facet joint synovitis at L4-5 and L5-S1.

33. Dr. Yurth reviewed the May 18 lumbar spine MRI and noted a very large facet joint effusion was present at L4-5 and less so at L5-S1.[4] Dr. Yurth recommended Claimant obtain an updated lumbar spine MRI to evaluate for the persistence of the effusion, as well as L4-5 and L5-S1 facet joint aspiration and steroid injections. Dr. Yurth was not an ATP, as Claimant went to her on her own. Claimant testified she was not confident that Dr. McCranie would be able to resolve her issues and wanted to treat with Dr. Yurth.

34. On February 26, 2019, Claimant underwent an MRI of the lumbar spine. The films were read by Christopher Nasser, M.D. At L4-L5, a slight broad-based annular bulge was present, along with a small central protrusion and posterior annular tear, which was smaller from the comparison examination. Mild to moderate facet arthropathy was seen, with mild fluid distention of the facet joints bilaterally. No significant neural foraminal encroachment was present. At L5-S1, a broad based annular bulge was present, but no significant facet arthropathy was noted. No significant neural foraminal encroachment was present. Dr. Nasser's impression was multilevel degenerative disc and degenerative joint disease present at those levels. There was slight improvement of the central spinal canal narrowing at L4-L5, with a diminished size of the central protrusion was observed. Mild to moderate facet arthropathy was present at L4-L5, with mild fluid distention of facet joints.

35. The ALJ found this MRI was reasonable and necessary, as well as related to Claimant's industrial injury. Dr. McCranie confirmed this in her hearing testimony, noting it was valuable in determining her treatment plan.[5]

36. Claimant was next evaluated by Dr. McCranie on March 8, 2019 and reported the trigger point injections were not helpful for her. Claimant advised Dr. McCranie she went to see Dr. Yurth, outside of workers' compensation system and Dr. Yurth said effusions were present at L4-5 and L5-S1. Claimant said a repeat MRI was recommended, as well as consideration of aspiration at the facets and injections at the facet joints. Claimant subsequently underwent the MRI, but the MRI report was not available.

37. Dr. McCranie reviewed the previous MRI and there was no mention of joint effusion on the MRI report. On examination, Claimant's deep tendon reflexes were +2 and the straight leg raise, Patrick's maneuver, and piriformis tests were negative,

[4] It was not clear from this report whether Dr. Yurth reviewed the actual films or the MRI report.

[5] Hearing Transcript ("Hrg. Tr."), p.74: 15-18.

though Claimant reported pain on external rotation at the L4 paraspinals, left more than right. Dr. McCranie stated that based upon the examination that there did not a significant facetogenic component to Claimant's pain, but that could be evaluated after viewing the second MRI. An epidural steroid was to be evaluated after that review. The ALJ inferred that Dr. McCranie was open to additional treatment options upon review of the MRI films. Dr. McCranie also noted Claimant could treat with Dr. Yurth outside the workers' compensation system.

38. Dr. McCranie testified as an expert in Physical Medicine and Rehabilitation and Pain Medicine. She is Level II accredited pursuant to the WCRP. Dr. McCranie began treating Claimant on October 1, 2018 and Claimant's diagnoses included: a lumbar strain, myofascial involvement, lumbar degenerative disc disease, as well as a sacroiliac strain.

39. Dr. McCranie noted when she first evaluated Claimant one of the main concerns was her inability to return to work and consequently, the focus of her treatment was improving her strength and conditioning. This is the reason for the referral for a work conditioning program. Dr. McCranie testified she tried medications, referred Claimant to massage therapy, discussed chiropractic care, but Claimant decided to hold off on the latter. Claimant followed through with a work conditioning program, but had a bad reaction to an epidural steroid injection, which was why Dr. McCranie recommended a course of trigger point injections that were administered in January 2019. Claimant did not return to Dr. McCranie until March 2019.

40. Dr. McCranie reviewed the MRI report, which had been ordered by Dr. Yurth and stated there was a small amount of fluid in the L4-5 facets. Dr. McCranie testified she contacted the radiologist to clarify discrepancy between what Dr. Yurth related to Claimant and what was in the MRI report. Dr. McCranie ordered a facet injection and aspiration at L4-5, which was the same as recommended by Dr. Yurth. Dr. McCranie made this recommendation on May 17, 2019, which was three business days before the hearing. She did not order treatment at the L5-S1 level because there was no facet involvement and no fluid at that level. Dr. McCranie wanted to see whether the injections worked for Claimant and wanted to rule out whether or not there was a facetogenic component to her pain. Dr. McCranie testified she wanted to examine Claimant again to consider the etiology of her back pain, as well as treatment options such as facet rhizotomy and potentially a referral for a surgical consult. The ALJ concluded Dr. McCranie was fully considering available treatment options at this time.

41. Claimant failed to prove she was entitled to a change of physician.

42. Claimant's restrictions were modified on March 8, 2019, limiting her work to four hours per day. Respondents agreed Claimant sustained a wage loss, based upon 20 hours per week.

43. Claimant testified she has worked between 8 and 12 hours per week since March 8, 2019. Claimant's supervisor determines her work hours and Ms. R_____ testified this depends on workload.

44. No ATP has placed Claimant at MMI, nor has an ATP released her to return to full duty.

45. Claimant's pay records were introduced into evidence.[6] These showed Claimant earned the following amounts from February-May 2019:

February 17, 2019 through March 2, 2019: $385.38 (gross pay).
March 3, 2019 through March 16, 2019: $407.20 (gross pay).
March 17, 2019 through March 30, 2019: $325.81 (gross pay).
March 31, 2019 through April 13, 2019: $260.56 (gross pay).
April 14, 2019 through April 27, 2019: $443.94 (gross pay).
April 28, 2019 through May 11, 2019: $666.67 (gross pay).

46. Claimant sustained a wage loss attributable to her industrial injury.

47. From February 20, 2019 through March 7, 2019, Claimant gross wages were $385.38. Claimant is entitled to TPD in the amount of $709.73. [$724.99 (AWW) x 2 = $1,449.98 less $385.38 gross = $1,064.60 x 2/3 = $709.73]. Claimant noted that the pay periods did not directly correspond and the ALJ was persuaded by the calculation put forward by Claimant.

48. From March 8, 2019 through May 11, 2019, Claimant gross wages totaled $2,104.18 over that 10 week period. Claimant is entitled to TPD in the amount of $3,430.65. [$724.99 x 10 weeks = $7,249.90 less $2,104.18 gross = $5,145.72 x 2/3 = $3,430.65. Subsequent to the hearing, Respondents paid Claimant TPD benefits in the amount of $149.48 per week.[7] [$3,430.65 less $1,494.80 = $1,935.85 TPD owed from March 8, 2019 through May 11, 2019]. Respondents are entitled to a credit for TPD benefits paid from March 8, 2019 and continuing.

49. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be

[6] Exhibits 8 & L.

[7] Claimant's Position Statement, p. 6.

interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. (2016). The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). In the case at bench, the credibility of Claimant, as well as the opinions of the medical experts was dispositive.

Change of Physician

Claimant made a request for change of physician pursuant to § 8-43-404(5)(VI)(A), C.R.S. (2018), which Respondents denied in a timely fashion. Both parties agreed that compliance with this section was not an issue. The question presented at hearing was whether Claimant made the requisite showing to prove she was entitled to a change of physician.

Claimant may seek a change of physician upon a "proper showing". Section 8-43-404(5), C.R.S. (2018); *Carlson v. Industrial Claim Appeals Office* 950 P.2d 663 (Colo. App. 1997). § 8-43-404(5) does not contain a specific definition of what constitutes a "proper showing" for change of physician. Consequently, it has been previously held the ALJ possesses broad discretionary authority to grant a change of physician depending on the particular circumstances of the claim. *Yeck v. Industrial Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999); *Szocinski v. Powderhorn Coal Co.*, W.C. No. 3-109-400 (December 14, 1998); *Merrill v. Mulberry Inn, Inc.*, W.C. No. 3-949-781 (November 16, 1995). An abuse of discretion does not exist unless the ALJ's Order is beyond the bounds of reason, as where it is unsupported by the evidence or is contrary to law. *Rosenberg v. Board of Education of School District No. 1*, 710 P.2d 1095 (Colo. 1995).

When making this determination, the ALJ considered the scope and type of treatment Claimant received and concluded no change of physician was warranted. The ALJ's reasoning was twofold; first, the ALJ was persuaded Claimant received a comprehensive course of treatment, which was punctuated by regular office visits with ATPs, as well as diagnostic testing. As determined in Findings of Fact 4-13, Claimant's treatment was overseen by Dr. Draper, then Dr. Shoemaker and Dr. Smith. These physicians evaluated Claimant at regular intervals and modified her treatment (including medications) depending on her response. The record reflected referrals by these ATPs

for PT, injections and the like. As found, Claimant underwent an MRI on or about May 8, 2018 in the acute phase of her injury. (Finding of Fact 6).

Claimant was referred to Dr. McCranie, a physiatrist, who focused on Claimant's return to work. (Finding of Fact 6). The ALJ was also persuaded that Dr. McCranie's evaluations and treatment of Claimant were thorough and considered the full range of therapeutic options. (Findings of Fact 37, 40).

Second, the ALJ determined Claimant's course of treatment comported with the DOWC MTG for treatment of lumbar spine injuries. The DOWC MTG treatment recommendations focus included physical therapy and exercise program, as well as regular physician evaluations every 3 to 4 weeks. (WCRP Rule 17, Exhibit 1, pp. 2-7). Diagnostic testing, specifically an MRI was ordered based upon Claimant's symptoms. (WCRP Rule 17, Exhibit 1, p. 17). Claimant underwent injections as part of her treatment course. (WCRP Rule 17, Exhibit 1, pp. 44-47, 51). Based upon these findings, the ALJ concluded Claimant's treating physicians provided her the full range of treatment options.
