ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he should be permitted to reopen his December 28, 2015 Workers' Compensation claim based on a change in condition pursuant to §8-43-303(1), C.R.S.

2. Whether Claimant has demonstrated by a preponderance of the evidence that the left shoulder surgery recommended by William Ciccone, II, M.D. is reasonable, necessary, and causally related to his December 28, 2015 industrial injuries.

3. Whether Claimant has proven by a preponderance of the evidence that the cervical facet injections recommended by Tam Nguyen, M.D. are reasonable, necessary and related medical maintenance benefits designed to relieve the effects of his December 28, 2015 industrial injuries or prevent further deterioration of his condition pursuant to *Grover v. Industrial Comm'n.,* 759 P.2d 705 (Colo. 1988).

FINDINGS OF FACT

1. Claimant works for Employer as a Bus Driver. On December 28, 2015 he suffered admitted industrial injuries during the course and scope of his employment with Employer. Specifically, Claimant's bus was struck by a Chevrolet Suburban traveling at approximately 40 miles per hour.

2. On December 29, 2015 Claimant visited Authorized Treating Physician (ATP) Craig Anderson, M.D. for an evaluation. Claimant reported bilateral upper back, trapezius and neck pain. He denied left shoulder pain. Dr. Anderson diagnosed Claimant with cervical and thoracoscapular strains.

3. On February 23, 2016 Claimant returned to Dr. Anderson complaining of left arm discomfort. Specifically, Claimant described his pain as achy, with some tingling extending over the shoulder into the mid-bicep area. Physical examination of the left shoulder revealed "mildly limited by left upper trapezius discomfort rather than glenohumeral pain and no sign of shoulder instability." Dr. Anderson assessed Claimant with an acute cervical strain and left upper extremity pain.

4. On March 11, 2016 Claimant visited. Samuel Y. Chan, M.D. for a physiatry evaluation. Claimant described waxing and waning pain over the left cervical spine area. He also mentioned pain radiating to the left shoulder, with numbness and tingling over the left hand. Physical examination revealed "no tenderness to palpation over the bilateral AC joints, subacromial space, or bicipital tendon groove." Dr. Chan assessed Claimant with a cervical spine injury. He recommended epidural steroid injections.

5. On April 22, 2016 Claimant underwent a left C5-C6 epidural steroid injection. On May 2, 2016 he visited Dr. Chan and reported "that there is no longer any pain that radiates to the left upper extremity."

6. On June 28, 2016 Dr. Anderson released Claimant to full duty employment. Physical examination revealed full active left shoulder range of motion.

7. On July 17, 2016 Dr. Anderson determined that Claimant had reached Maximum Medical Improvement (MMI). He assigned a 12% cervical spine permanent impairment rating and recommended medical maintenance care.

8. On September 28, 2016 Claimant returned to Dr. Chan. Claimant's work activities included three routes requiring him to lift luggage. The additional work activities caused increased pain. Dr. Chan noted Claimant's "current symptoms are more suggestive of C6 radiculitis on the left side." He recommended additional diagnostic testing including an epidural steroid injection.

9. On October 20, 2016 Claimant underwent a left C5-C6 transforaminal cervical epidural steroid injection with John Sacha, M.D. In a follow-up examination with Dr. Anderson Claimant reported no radiating left upper extremity pain or numbness.

10. On December 9, 2016 Claimant returned to Dr. Anderson and reported pain radiating to the left shoulder. Dr. Anderson recommended a surgical evaluation.

11. On December 12, 2016 Claimant underwent a surgical evaluation with Andrew Castro, M.D. Dr. Castro assessed Claimant with a C5-C6 cervical radiculopathy. An MRI revealed increased protrusion at C5-C6 in comparison to the March 2015 MRI. The clinical signs were consistent with C5 left radiculitis and persistent C6 radiculitis.

12. On February 2, 2017 Claimant underwent a left epidural steroid injection at C4-C5 with Peter Reusswig, M.D. Claimant subsequently returned to Dr. Reusswig and reported that his pain had decreased but continued on the outer aspect of his left arm.

13. On April 13, 2017 Claimant returned to Dr. Chan for an examination. Claimant reported increased range of motion and decreased pain. He denied any numbness or tingling in his left upper extremity and rated his pain level as 1-2/10. Over the ensuing months, Claimant treated with Drs. Anderson, Chan and Reusswig. The working diagnosis continued to be a cervical strain with a C5-C6 disc bulge.

14. On November 14, 2017 Claimant presented to the emergency room complaining of an exacerbation of his cervical injury. Claimant reported the pain began after driving a bus over railroad tracks. He subsequently experienced numbness and heaviness in his left extremity. The emergency room physician assessed Claimant with "mild left foraminal stenosis at C5-C6 due to left eccentric disc protrusion."

15. On November 14, 2017 Dr. Anderson responded to correspondence from Respondent regarding his retraction of MMI. Dr. Anderson noted that Claimant's symptoms were approaching the severity after the initial injury. He thus reasoned that Claimant could not safely operate a bus. Dr. Anderson concluded that there was good reason to believe that the "cervical disc herniation and cervical radiculitis/radiculopathy could be the result of a substantial aggravation of the cervical condition due to the physical stresses associated with bus operation."

16. On May 30, 2018 Claimant returned to Dr. Anderson. He assessed Claimant with cervical C5-C6 discopathy/C6 left sided radiculopathy. Physical examination of the left shoulder revealed normal range of motion and strength. Dr. Anderson returned Claimant to MMI and released him to full duty employment. He recommended medical maintenance treatment in the form of massage, medications, acupuncture and electrical stimulation.

17. On June 12, 2018 Respondent filed a Final Admission of Liability (FAL) consistent with Dr. Anderson's MMI determination. The FAL also acknowledged that Claimant was entitled to receive medical maintenance benefits. Claimant did not object to the FAL.

18. On August 6, 2018 Claimant visited ATP Lloyd Thurston, D.O. for an evaluation. Dr. Thurston noted that Claimant continued to work full duty with some persistent symptoms. Claimant reported benefits from acupuncture, massage and working out.

19. On February 8, 2019 Claimant visited Dr. Thurston for an evaluation. He reported increased left-sided neck, left shoulder and other pain symptoms over the last three to four weeks. Claimant associated his increased symptoms with a new bus route that required more turning to his left. Dr. Thurston recommend cervical and left shoulder MRI's. He attributed Claimant's persistent left shoulder issues to his neck pain and sought a left shoulder MRI to rule out shoulder pathology. Dr. Thurston noted Claimant has suffered chronic left shoulder pain that has not been properly evaluated since his December 28, 2015 injuries. He recommended reopening Claimant's claim.

20. On February 19, 2019 Claimant underwent a left shoulder MRI. The MRI revealed a slight irregularity of the posterior labrum with an accompanying cyst and AC joint arthritis. The MRI did not reflect a rotator cuff tear.

21. On March 1, 2019 Claimant visited Dr. Thurston for an examination. Dr. Thurston noted Claimant's persistent left-sided neck pain that radiated across the left shoulder down his left arm. He referred Claimant to orthopedic surgeon William Ciccone, II, M.D. for a left shoulder examination and treatment.

22. On March 6, 2019 Claimant visited Dr. Ciccone for a left shoulder evaluation. The physical examination revealed no obvious muscle atrophy, normal alignment, near active range of motion and some rotator cuff weakness. Dr. Ciccone observed pain with palpation of the AC joint. He commented that the physical

examination was “really pretty normal for the shoulder although he does have some persistent pain and symptoms from the neck with radiation down the arm.” Because most of Claimant’s pain at the shoulder was around AC joint, he recommended an AC joint injection.

23. On April 30, 2019 Claimant returned to Dr. Ciccone for an examination. Dr. Ciccone noted that Claimant has suffered persistent pain and symptoms associated with impingement and AC joint pain. On May 2, 2019 Dr. Ciccone requested authorization to perform a left shoulder arthroscopy and decompression, distal clavicle resection and possible bicep tendinitis to relieve Claimant’s symptoms.

24. On May 12, 2019 Mark S. Failinger, M.D. performed a records review of the prior authorization request for left shoulder surgery. Dr. Failinger determined that Claimant did not suffer a left shoulder injury while driving a bus on December 28, 2015. He detailed that Claimant exhibited cervical and upper thoracic strain symptoms, but follow-up visits with Drs. Anderson and Chan did not reveal any shoulder abnormalities. Dr. Failinger explained “[a]lthough there was very brief mention of the left shoulder.regional discomfort in late January 2016, there were no consistent findings whatsoever in the shoulder, and essentially all tests of the shoulder were negative.” He remarked that, as of March 11, 2016, Claimant reported complete resolution of his left upper extremity complaints after the epidural injection. Dr. Failinger concluded that Claimant sustained a cervical strain and radiculopathy that were confirmed by injections. He commented that there were no significant shoulder findings throughout the next three years until Dr. Thurston felt that the shoulder should become part of the claim. However, “there was no evidence that the shoulder had any signs or symptoms of any significance or consistency throughout his early and even late post-MVA timeframe.” He specified that Claimant may have some AC joint symptoms, but they are not connected to the motor vehicle accident of December 28, 2015. Dr. Failinger reiterated that Claimant had a “complete resolution of symptoms years ago by the cervical epidural steroid injections.”

25. On June 7, 2019 Claimant filed a Petition to Reopen based on a change of condition. Specifically, Claimant sought left shoulder treatment under his Workers’ Compensation claim and approval for the proposed surgery. In response to Claimant’s Application for Hearing, Respondent obtained an independent medical evaluation performed by Carlos Cebrian, M.D.

26. On July 23, 2019 Claimant underwent an independent medical examination with Dr. Failinger. Dr. Failinger reviewed updated medical reports and performed a physical examination. He concluded that Claimant did not sustain any injury to his left shoulder in the December 28, 2015 bus accident. Dr. Failinger noted that the most important factor in determining the relationship between an event and the subsequent development of symptoms is the temporal proximity of the symptoms to the accident. He explained that the motor vehicle accident caused a contusion without any significant pathology. Furthermore, the follow-up care did not reveal any significant symptoms in the left shoulder area. Moreover, by June 23, 2016 Dr. Chan noted full resolution of left upper extremity discomfort following a series of epidural steroid

injections. Dr. Failinger summarized that Claimant did not develop any left shoulder pathology as a result of the December 28, 2015 bus accident. Therefore, the recommended left shoulder surgery is not reasonable, necessary or causally related to Claimant's industrial injuries.

27. In a report dated September 3, 2019, Dr. Cebrian agreed with Dr. Failinger that Claimant did not sustain any injury to his left shoulder in the December 28, 2015 motor vehicle accident. After conducting a physical examination and reviewing the medical records, Dr. Cebrian summarized: "(1) early medical records were consistent with cervical spine complaints with some radiation to the shoulder, left greater than right; (2) Claimant did not have findings of shoulder pathology on multiple examinations by different physicians; (3) Claimant reported resolution of his left shoulder complaints after some cervical spine injections." He also noted that on August 6, 2018 Dr. Thurston documented normal left shoulder findings. Accordingly, Dr. Cebrian concluded that Claimant's "left shoulder complaints are not causally related to the 12/28/2015 claim due to the temporal delay of over three years."

28. On September 20, 2019 Claimant treated with Susan Miget, NP, who works with Tam Nguyen, M.D. Clamant reported 50% pain relief following the C5-C6 transforaminal epidural steroid injection. He noted increased pain with his job duties, including looking up into the bus mirror and turning/twisting his head left to right to watch for traffic. NP Miget recommended a trial of cervical facet injections with consideration of medial branch blocks and radiofrequency. Dr. Nguyen recommended bilateral C4-C7 facet injections for diagnostic and therapeutic purposes.

29. Dr. Nguyen subsequently submitted a request for bilateral cervical facet injections. Respondent asked Dr. Cebrian to review the medical necessity of the facet injections. In a report dated September 30, 2019 Dr. Cebrian determined that Claimant remained at MMI. Dr. Cebrian's claim-related diagnosis included cervical spine strain with aggravation of C5-C6 disc pathology. He concluded that the request for facet injections should be denied. Dr. Cebrian reasoned that Claimant's injury is nearly four years old and he has been treated consistently for radiculopathy with 15 epidural steroid injections. Second, although there was occasional documentation regarding the facets as part of the differential diagnosis, there were never any consistent findings suggestive of facet-mediated pain. Furthermore, after Claimant had a positive response to epidural steroid injections, there was no additional documentation regarding the facets. Third, if Claimant is currently experiencing facet mediated pain, Dr. Cebrian determined that it is not related to the December 28, 2015 accident because of the "temporal delay" in his complaints.

30. Dr, Cebrian testified at the hearing in this matter. He maintained that Claimant's condition has remained stable since he reached MMI on May 30, 2018. Dr. Cebrian remarked that the medical records do not reveal that Claimant suffered a left shoulder injury on December 28, 2015. He specifically reiterated that Claimant's left shoulder MRI was unremarkable. The rotator cuff was "pristine" with no evidence of a tear or acute injury. Dr. Cebrian also explained that Dr. Chan repeatedly palpated Claimant's AC joint and there was no evidence of tenderness. He thus concluded that,

because Claimant did not suffer a left shoulder injury on December 28, 2015, his condition has no worsened. Accordingly, Claimant reached MMI on May 30, 2018 and his claim should not be reopened.

31. Dr. Cebrian also testified that the requested facet injections are not reasonable, necessary or causally related to Claimant's December 28, 2015 industrial injuries. Initially, Dr. Cebrian recounted Claimant's extensive treatment for his December 28, 2015 cervical spine injury. Claimant specifically received epidural steroid injections, massage therapy, chiropractic treatment, trigger point injections and physical therapy to address a likely C6 radiculopathy. Notably, because Claimant had a diagnostic response, the epidural steroid injections confirmed his pain generator. Claimant noted complete resolution of symptoms periodically over the years following epidural steroid injections. Based on the four-year delay and extensive treatment, Claimant's facet symptoms are not related to his industrial injury. Moreover, because diagnostic testing has not revealed proven facetogenic pain, the Chronic Pain recommendations in the Colorado Division of Workers' Compensation *Medical Treatment Guidelines* (*Guidelines*) *Guidelines* do not recommend facet injections. Dr. Cebrian thus summarized that Claimant suffers from a chronic cervical condition reflected by the waxing and waning of symptoms since his December 28, 2015 industrial injuries.

32. On November 11, 2019 the parties conducted the post-hearing evidentiary deposition of Dr. Failinger. Dr. Failinger maintained that Claimant did not suffer a left shoulder injury on December 28, 2015. He noted that a February 2019 left shoulder MRI revealed a small cyst, AC joint arthritis and "an extremely remote possibility of any torn rotator cuff." Furthermore, based on a review of the extensive medical records "there didn't seem to be any signs whatsoever that the shoulder itself was affected from this accident." Dr. Failinger remarked that the medical records did not reflect that Claimant suffered left shoulder pain and the injections to his neck relieved his pain. Because Claimant did not suffer a left shoulder injury as a result of the December 28, 2015 bus accident, Dr. Failinger reasoned that Claimant's condition has not worsened and he remains at MMI

33. Claimant has failed to establish that it is more probably true than not that he should be permitted to reopen his December 28, 2015 Workers' Compensation claim based on a change in condition pursuant to §8-43-303(1), C.R.S. The medical records and persuasive opinions of Drs. Failinger and Cebrian reflect that Claimant's left shoulder symptoms are not related to his industrial injuries. The medical records reveal that Claimant suffered a cervical spine injury in the December 28, 2015 bus accident and did not report consistent left shoulder pathology. On May 30, 2018 ATP Dr. Anderson. assessed Claimant with cervical C5-C6 discopathy/C6 left sided radiculopathy. Physical examination of the left shoulder revealed normal range of motion and strength. Dr. Anderson determined that Claimant had reached MMI and released him to full duty employment.

34. Dr. Failinger maintained that Claimant did not suffer a left shoulder injury on December 28, 2015. He noted that a February 2019 left shoulder MRI revealed "an

extremely remote possibility" of a rotator cuff tear. Dr. Failinger explained that the bus accident caused a contusion without any significant pathology. Furthermore, the follow-up care did not reveal any significant symptoms in the left shoulder area. Moreover, by June 23, 2016 Dr. Chan noted full resolution of left upper extremity discomfort following a series of epidural steroid injections. Dr. Failinger summarized that Claimant did not develop any left shoulder pathology as a result of the December 28, 2015 bus accident. He concluded that Claimant sustained a cervical strain and radiculopathy that was confirmed by injections. Dr. Cebrian agreed with Dr. Failinger that Claimant did not sustain any injury to his left shoulder in the December 28, 2015 bus accident. He maintained that Claimant's condition has remained stable since he reached MMI on May 30, 2018. Dr. Cebrian remarked that the medical records do not reveal that Claimant suffered a left shoulder injury on December 28, 2015. He specifically reiterated that Claimant's left shoulder MRI was unremarkable. The rotator cuff was "pristine" with no evidence of a tear or acute injury. Dr. Cebrian concluded that Claimant's left shoulder symptoms were not causally related to the December 28, 2015 claim because of the temporal delay of over three years. He thus reasoned that, because Claimant did not suffer a left shoulder injury on December 28, 2015, his condition has not worsened.

35. In contrast, Dr. Thurston attributed Claimant's persistent left shoulder issues to his neck pain and sought a left shoulder MRI to rule out shoulder pathology. He noted Claimant has suffered chronic left shoulder pain that has not been properly evaluated since his December 28, 2015 injuries. Dr. Thurston recommended reopening of Claimant's claim. However, based on the extensive medical records and persuasive opinions of Drs. Failinger and Cebrian, Claimant did not suffer a left shoulder injury as a result of the December 28, 2015 bus accident. Instead, Claimant sustained a cervical strain and radiculopathy that was repeatedly confirmed by epidural steroid injections. Because Claimant did not suffer a left shoulder injury on December 28, 2015, his condition has not worsened. Accordingly, Claimant's request to reopen his December 28, 2015 Workers' Compensation claim based on a change in condition is denied and dismissed.

36. Claimant has failed to demonstrate that it is more probably true than not that the left shoulder surgery recommended by Dr. Ciccone is reasonable, necessary and causally related to his December 28, 2015 industrial injury. Dr. Ciccone explained that Claimant has suffered persistent pain and symptoms associated with impingement and AC joint pain. On May 2, 2019 Dr. Ciccone requested authorization to perform a left shoulder arthroscopy and decompression, distal clavicle resection and possible bicep tendinitis to relieve Claimant's symptoms. However, as explained, the medical records and persuasive opinions of Drs. Failingwer and Cebrian demonstrate that Claimant likely did not suffer a left shoulder injury as a result of the December 28, 2015 bus accident. Accordingly, the requested left shoulder surgery is not reasonable, necessary or causally related to Claimant's industrial injuries.

37. Claimant has failed to prove that it is more probably true than not that the cervical facet injections recommended by Dr. Nguyen are reasonable, necessary and related medical maintenance benefits designed to relieve the effects of his December

28, 2015 industrial injuries or prevent further deterioration of his condition. On September 20, 2019 Claimant visited Dr. Nguyen's office and reported 50% pain relief following a C5-C6 transforaminal epidural steroid injection. However, he noted increased pain with his job duties, including looking up into the bus mirror and turning/twisting his head left to right to watch for traffic. Dr. Nguyen subsequently sought authorization for bilateral C4-C7 facet injections for diagnostic and therapeutic purposes.

38. In contrast, Dr. Cebrian persuasively explained that the request for facet injections should be denied. He reasoned that Claimant's injury is nearly four years old and he has been treated consistently for a radiculopathy with 15 epidural steroid injections. Notably, because Claimant had a diagnostic response, the epidural steroid injections confirmed his pain generator. Claimant noted complete resolution of symptoms periodically over the years following epidural steroid injections. Dr. Cebrian commented that, although there was occasional documentation regarding the facets as part of the differential diagnosis, there were never any consistent findings suggestive of facet-mediated pain. Furthermore, after Claimant had a positive response to epidural steroid injections, there was no additional documentation regarding the facets. Based on the four-year delay and extensive treatment, Claimant's facet symptoms are not related to his industrial injury. Moreover, because diagnostic testing has not revealed proven facetogenic pain, the *Guidelines* do not recommend facet injections. The persuasive opinion of Dr. Cebrian, in conjunction with the extensive medical records and diagnostic testing, demonstrate that Claimant suffered a cervical strain and radiculopathy. Because Claimant's facet symptoms are not related to his December 28, 2015 bus accident, his request for bilateral C4-C7 facet injections is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Reopening

4. Section 8-43-303(1), C.R.S. provides that a Worker's Compensation award may be reopened based on a change in condition. In seeking to reopen a claim the claimant shoulders the burden of proving his condition has changed and that he is entitled to benefits by a preponderance of the evidence. *Osborne v. Industrial Commission*, 725 P.2d 63, 65 (Colo. App. 1986). A change in condition refers either to a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition that is causally connected to the original injury. *Jarosinski v. Industrial Claim Appeals Office,* 62 P.3d 1082, 1084 (Colo. App. 2002). A "change in condition" pertains to changes that occur after a claim is closed. *In re Caraveo,* W.C. No. 4-358-465 (ICAO, Oct. 25, 2006). The determination of whether a claimant has sustained his burden of proof to reopen a claim is one of fact for the ALJ. *In re Nguyen,* W.C. No. 4-543-945 (ICAO, July 19, 2004).

5. As found, Claimant has failed to establish by a preponderance of the evidence that he should be permitted to reopen his December 28, 2015 Workers' Compensation claim based on a change in condition pursuant to §8-43-303(1), C.R.S. The medical records and persuasive opinions of Drs. Failinger and Cebrian reflect that Claimant's left shoulder symptoms are not related to his industrial injuries. The medical records reveal that Claimant suffered a cervical spine injury in the December 28, 2015 bus accident and did not report consistent left shoulder pathology. On May 30, 2018 ATP Dr. Anderson. assessed Claimant with cervical C5-C6 discopathy/C6 left sided radiculopathy. Physical examination of the left shoulder revealed normal range of motion and strength. Dr. Anderson determined that Claimant had reached MMI and released him to full duty employment.

6. As found, Dr. Failinger maintained that Claimant did not suffer a left shoulder injury on December 28, 2015. He noted that a February 2019 left shoulder MRI revealed "an extremely remote possibility" of a rotator cuff tear. Dr. Failinger explained that the bus accident caused a contusion without any significant pathology. Furthermore, the follow-up care did not reveal any significant symptoms in the left shoulder area. Moreover, by June 23, 2016 Dr. Chan noted full resolution of left upper extremity discomfort following a series of epidural steroid injections. Dr. Failinger summarized that Claimant did not develop any left shoulder pathology as a result of the December 28, 2015 bus accident. He concluded that Claimant sustained a cervical strain and radiculopathy that was confirmed by injections. Dr. Cebrian agreed with Dr. Failinger that Claimant did not sustain any injury to his left shoulder in the December 28, 2015 bus accident. He maintained that Claimant's condition has remained stable since he reached MMI on May 30, 2018. Dr. Cebrian remarked that the medical records do

not reveal that Claimant suffered a left shoulder injury on December 28, 2015. He specifically reiterated that Claimant's left shoulder MRI was unremarkable. The rotator cuff was "pristine" with no evidence of a tear or acute injury. Dr. Cebrian concluded that Claimant's left shoulder symptoms were not causally related to the December 28, 2015 claim because of the temporal delay of over three years. He thus reasoned that, because Claimant did not suffer a left shoulder injury on December 28, 2015, his condition has not worsened.

7. As found, in contrast, Dr. Thurston attributed Claimant's persistent left shoulder issues to his neck pain and sought a left shoulder MRI to rule out shoulder pathology. He noted Claimant has suffered chronic left shoulder pain that has not been properly evaluated since his December 28, 2015 injuries. Dr. Thurston recommended reopening of Claimant's claim. However, based on the extensive medical records and persuasive opinions of Drs. Failinger and Cebrian, Claimant did not suffer a left shoulder injury as a result of the December 28, 2015 bus accident. Instead, Claimant sustained a cervical strain and radiculopathy that was repeatedly confirmed by epidural steroid injections. Because Claimant did not suffer a left shoulder injury on December 28, 2015, his condition has not worsened. Accordingly, Claimant's request to reopen his December 28, 2015 Workers' Compensation claim based on a change in condition is denied and dismissed.

Shoulder Surgery

8. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

9. As found, Claimant has failed to demonstrate by a preponderance of the evidence that the left shoulder surgery recommended by Dr. Ciccone is reasonable, necessary and causally related to his December 28, 2015 industrial injury. Dr. Ciccone explained that Claimant has suffered persistent pain and symptoms associated with impingement and AC joint pain. On May 2, 2019 Dr. Ciccone requested authorization to perform a left shoulder arthroscopy and decompression, distal clavicle resection and possible bicep tendinitis to relieve Claimant's symptoms. However, as explained, the medical records and persuasive opinions of Drs. Failingwer and Cebrian demonstrate that Claimant likely did not suffer a left shoulder injury as a result of the December 28, 2015 bus accident. Accordingly, the requested left shoulder surgery is not reasonable, necessary or causally related to Claimant's industrial injuries.

Facet Injections

10. To prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App. 1995). Once a claimant establishes the probable need for future medical treatment he "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna v. Print Expediters, Inc.*, 77 P.3d 863, 866 (Colo. App. 2003); *see Karathanasis v. Chilis Grill & Bar,* W.C. No. 4-461-989 (ICAP, Aug. 8, 2003). Whether a claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the Judge. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 919 P.2d 701, 704 (Colo. App. 1999).

11. It is appropriate for an ALJ to consider the *Guidelines* in determining whether a certain medical treatment is reasonable and necessary for a claimant's condition. *Deets v. Multimedia Audio Visual*, W.C. No. 4-327-591 (ICAO, Mar. 18, 2005); see *Eldi v. Montgomery Ward*, W.C. No. 3-757-021 (ICAO, Oct. 30, 1998) (noting that the *Guidelines* are a reasonable source for identifying the diagnostic criteria). The *Guidelines* are regarded as accepted professional standards for care under the Workers' Compensation Act. *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). Nevertheless, the *Guidelines* expressly acknowledge that deviation is permissible.

12. As found, Claimant has failed to prove by a preponderance of the evidence that the cervical facet injections recommended by Dr. Nguyen are reasonable, necessary and related medical maintenance benefits designed to relieve the effects of his December 28, 2015 industrial injuries or prevent further deterioration of his condition. On September 20, 2019 Claimant visited Dr. Nguyen's office and reported 50% pain relief following a C5-C6 transforaminal epidural steroid injection. However, he noted increased pain with his job duties, including looking up into the bus mirror and turning/twisting his head left to right to watch for traffic. Dr. Nguyen subsequently sought authorization for bilateral C4-C7 facet injections for diagnostic and therapeutic purposes.

13. As found, in contrast, Dr. Cebrian persuasively explained that the request for facet injections should be denied. He reasoned that Claimant's injury is nearly four years old and he has been treated consistently for a radiculopathy with 15 epidural steroid injections. Notably, because Claimant had a diagnostic response, the epidural steroid injections confirmed his pain generator. Claimant noted complete resolution of symptoms periodically over the years following epidural steroid injections. Dr. Cebrian commented that, although there was occasional documentation regarding the facets as part of the differential diagnosis, there were never any consistent findings suggestive of facet-mediated pain. Furthermore, after Claimant had a positive response to epidural steroid injections, there was no additional documentation regarding the facets. Based on the four-year delay and extensive treatment, Claimant's facet symptoms are not related to his industrial injury. Moreover, because diagnostic testing has not revealed

proven facetogenic pain, the *Guidelines* do not recommend facet injections. The persuasive opinion of Dr. Cebrian, in conjunction with the extensive medical records and diagnostic testing, demonstrate that Claimant suffered a cervical strain and radiculopathy. Because Claimant's facet symptoms are not related to his December 28, 2015 bus accident, his request for bilateral C4-C7 facet injections is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request to reopen his December 28, 2015 Workers' Compensation claim based on a change in condition is denied and dismissed.

2. The requested left shoulder surgery is not reasonable, necessary or causally related to Claimant's industrial injuries.

3. Because Claimant's facet symptoms are not related to his December 28, 2015 bus accident, his request for bilateral C4-C7 facet injections is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-074-897-001

ISSUES

I. Whether Claimant established that he suffered a compensable injury on February 19, 2018.

II. Whether Claimant established that he is entitled to reasonable, necessary, and related medical treatment.

III. Whether Claimant established he is entitled to temporary total disability benefits.

IV. Claimant's average weekly wage.[1]

V. Whether David Yamamoto, M.D., is an authorized treating provider.

VI. Penalties:

a) Penalties against Respondents.

b) Penalties against Claimant.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant was born on April 18, 1975, and was 48 years of age at the time of the hearing.
2. Pro Logistics – Employbridge - (i.e., Employer) is an employee staffing company.
3. On July 20, 2016, Claimant was hired by Pro Logistics – Employbridge Holding Company – to work as a mail sorter, at a UPS (United Parcel Service) facility.
4. Claimant performed his job duties at a UPS facility. Claimant's job duties included going into a delivery truck with a pallet jack and removing pallets of boxes. Once the boxes were removed from the truck and were inside the UPS facility, Claimant would sort the mail.
5. Claimant's supervisor, who also worked for Pro Logistics – Employbridge - was Aaron Grimes. Mr. Grimes, however, did not work at the UPS facility with Claimant.

[1] The issue of Claimant's average weekly wage based on his concurrent employment is reserved for future determination - if the Claim is found compensable.

6. Mark Mathies also works for Pro Logistics – Employbridge – and worked at the UPS facility. Mr. Mathies was responsible for supervising the Pro Logistics' – Employbridge – employees, which included Claimant, who were working at the UPS facility. Mr. Mathies, however, worked under the supervision of Mr. Grimes.

7. On February 19, 2018, Claimant was working and unloading a UPS truck with a pallet jack. Claimant testified that while moving a pallet, a box weighing at least 100 pounds fell off the top of a load because it was not shrink wrapped and landed on him. Claimant testified that after the 100-pound box landed on him, two coworkers, Gabe and Lance, had to come over and physically lift the 100-pound box off of him.

8. Claimant testified that he did not feel pain until about 15 minutes later when he started sorting mail at his station. Claimant testified he felt pain in his neck, right side of his neck, right shoulder, right side of his back, and the lower right side of his back. Claimant testified that approximately 40 minutes after the incident, he went to his supervisor, Mr. Mathies, and told him that he was not feeling well and was going to leave work. Claimant did not, however, tell Mr. Mathies he was leaving because he had just been injured.

9. Claimant further testified that after the incident, he left work between 5 and 6 a.m. and walked to a light rail station in order to go straight to the Emergency Room at Denver Health. However, the medical report from Denver Health indicates Claimant arrived at 10:50 a.m. It does not seem reasonable for it to have taken Claimant approximately 5 hours to get to the emergency room. Therefore, Claimant's testimony that he left work and went straight to Denver Health is inconsistent with the medical records from Denver Health. Consequently, Claimant's testimony regarding this issue is not found to be credible.

10. According to the medical records, Claimant arrived at the Denver Health Emergency Room at 10:50 a.m. Claimant was seen by Physicians Assistant William Drew at 11:35 a.m. The history documented by PA Drew indicates a package weighing 50-100 pounds fell on Claimant's right shoulder. PA Drew also documented that Claimant denied any neck pain or back pain. Claimant's testimony at hearing that the box weighed at least 100 pounds and that he developed pain in his neck and low back after the incident is inconsistent with the medical records from Denver Health. Therefore, Claimant's testimony regarding the weight of the box and the symptoms he felt after the box fell and hit him is not found to be credible.

11. PA Drew physically examined Claimant's right shoulder. The only findings he noted was some tenderness on the posterior of Claimant's right shoulder girdle.[2] PA Drew specifically noted Claimant's right shoulder had normal range of motion and there was no swelling or deformity. X-rays were taken, and they were normal. At discharge, Claimant was diagnosed with a contusion. He was prescribed ibuprofen (Advil/Motrin) and was told to take it as needed for mild

[2] These findings are similar to those noted when Claimant presented to Denver Health on July 13, 2016, approximately 2 weeks after Claimant was involved in an automobile accident.

pain, which was specifically noted to be only a 1-2. Claimant was also instructed to call his employer in order to see to which workers' compensation facility he should follow up with and to file a claim. As found above, despite Claimant's testimony to the contrary, there was no indication in the medical records from that date that Claimant was also complaining of neck and low back pain on February 19, 2018.

12. On February 19, 2018, a To Whom It May Concern letter was prepared by PA Drew which states, "Doron Foster was seen and treated in our emergency department on 2/19/2018. He may return to work on 02/21/18." There was no indication in the letter why Claimant could not work for one day and there was no indication Claimant might have been injured at work.

13. Claimant testified he called his supervisor Mr. Mathies and then sent him a text with a picture of the note taking him off work for one day. Claimant testified Mr. Mathies said he would call Mr. Grimes and discuss the matter with him.

14. Mr. Mathies also testified at hearing. Mr. Mathies testified Claimant did tell him on February 19, 2018, that he was not feeling well and wanted to go home. Mr. Mathies also testified that Claimant did not tell him that he was injured due to a box falling on him at work or due to any other incident at work.

15. Mr. Mathies testified that Claimant did send him a text with the letter from Denver Health excusing Claimant from work. He also testified that once he found out Claimant was alleging he was hurt by a box falling on him at work, he investigated the matter by talking to various co-workers. After investigating the matter, it was his understanding that a box did fall off a pallet, but yet it grazed Claimants' shoulder. This was confirmed by another co-worker, or manager, Kyle, who told Mr. Mathies he heard a box hit the floor the morning of the incident. Mr. Mathies' testimony is found to be credible and persuasive. Moreover, his testimony discredits Claimant's testimony that the box fell on Claimant and two co-workers, Lance and Gabe, had to lift the 100-pound box off of Claimant. If the box fell directly on Claimant, as he described during his testimony, and two co-workers had to lift the box off of him, Kyle would not have heard the box fall to the ground since it would have landed on Claimant instead of the floor.

16. On or about June 30, 2016, prior to being hired by Employer, Claimant was involved in a motor vehicle accident in which he injured his right shoulder.

17. On July 13, 2016, approximately two weeks after the motor vehicle accident, Claimant sought medical treatment at Denver Health for his right shoulder injury. Claimant complained of right shoulder pain for the last 2 weeks. The chart note also indicates Claimant had a "GSW (gunshot wound)" under past medical history. At the July 13, 2016, evaluation, Claimant's musculoskeletal examination demonstrated decreased range of motion, tenderness and pain and spasm in the right shoulder. Moreover, review of the pain diagram shows Claimant's pain to be in the right back scapula area.

18. At hearing, Claimant was questioned about the extent of the injuries he sustained in the 2016 motor vehicle accident. Claimant testified that he was not hurt in the accident, but that he just went to the doctor to make sure he was not hurt. Claimant also added that the 2016 motor vehicle accident resulted in "just pain in back." First, it does not make sense that Claimant felt he was not hurt in the motor vehicle accident, but without any symptoms, went to the emergency room to make sure he was not hurt. Moreover, the July 13, 2016, medical report from Denver Health is in stark contrast to Claimant's hearing testimony. As found above, the July 13, 2016, medical report demonstrates Claimant complained of hurting his right shoulder and that he also had pain in the back of his right scapula. The clinic notes also indicate Claimant had decreased range of motion, tenderness, pain, and spasm in his right shoulder. In addition, the pain diagram showed Claimant's pain to be in the right back scapula area. Claimant's misrepresentation that the 2016 automobile accident only caused back pain, but not right shoulder pain, severely discredits Claimant's testimony as well as the statements he made to various medical providers and Employer about the incident that occurred on February 19, 2018.

19. On March 16, 2018, Claimant returned to Denver Health. At this visit, Claimant sought treatment for a rash. And, despite Claimant's contention that he suffered a significant shoulder, neck, and back injury, after a 100-pound box fell on him – there was no notation made that Claimant was having any other medical problems. The report from that visit indicates Claimant:

    a. Was in no apparent distress,

    b. His neck had normal range of motion, and

    c. All other musculoskeletal systems had normal range of motion.

    Claimant also testified at hearing that due to his work accident, he is in pretty bad shape. Such testimony is inconsistent with going to Denver Health's emergency department for treatment of a rash, without any notation being made about what Claimant contends is quite a debilitating work injury that effects his neck, right shoulder, and low back. Although Claimant testified that Denver Health told him they do not treat work injuries, and appears to be contending that is why they did not note any pain complaints related to his alleged work injury in the March 16, 2018, medical note, such contention is not found to be credible. If Claimant complained of other musculoskeletal problems, such complaints would have most likely made it into the medical record from that visit. Therefore, Claimant's presentation to Denver Health on March 16, 2018, for a rash, without concurrent complaints of the symptoms he contends were caused by the work accident, discredits Claimant's contention that he suffered a compensable injury at work and that such injury requires ongoing treatment.

20. On March 26, 2018, Claimant was evaluated by Dr. Yamamoto. Claimant was directed to Dr. Yamamoto by his attorney. Although the Denver Health records note Claimant's reported pain on the date of the accident was 1-2/10, Claimant reported to Dr. Yamamoto that his shoulder and upper back pain was 8/10. Claimant also complained of low back pain, although it is not clear if he indicated

that his low back pain was also 8/10. Dr. Yamamoto ultimately diagnosed Claimant with strain of the right shoulder, strain of the upper back, and strain of the lumbar region. He also placed Claimant on modified duty and gave Claimant restrictions of no reaching overhead with right arm, a lifting limit of no more than 10 pounds, no repetitive lifting more than 5 pounds, no carrying over 5 pounds, and no pushing or pulling more than 10 pounds.

21. On April 26, 2018, Dr. Yamamoto evaluated Claimant again and noted that based on Claimant's persistent complaints, Claimant needs an MRI of his right shoulder and physical therapy for his upper and lower back. Dr. Yamamoto also continued Claimant's restrictions.

22. On May 21, 2018, Dr. Yamamoto again evaluated Claimant and indicated Claimant started experiencing increased pain going down his right arm and numbness in his right arm and hand. Dr. Yamamoto recommended Claimant receive an EMG.

23. On July 18, 2018, Dr. Yamamoto evaluated Claimant and diagnosed Claimant with a strain of the right shoulder muscle, strain of the back wall thorax, strain of the cervical muscle, paresthesia of the right arm, and thoracic outlet syndrome. He again opined that Claimant's need for treatment is due to his work related injury.

24. On August 20, 2018, respondents took the deposition of Dr. David Yamamoto. Dr. Yamamoto opined Claimant suffered a work related injury on August 19, 2018 and opined Claimant needs ongoing care and has ongoing restrictions. Dr. Yamamoto opined Claimant's report of injury has been consistent throughout treatment and Claimant's report of injury was also consistent with the medical records from Denver Health. However, the ALJ does not find Dr. Yamamoto's opinions to be reliable or persuasive because he relied upon the statements of Claimant in formulating his opinions and the ALJ has found Claimant's statements regarding the incident and the development of his symptoms after the incident to not be credible.

25. Mr. Grimes testified at hearing. He testified he called Claimant on February 20th and informed him that he had to come into the office and fill out some paperwork regarding his workers' compensation claim. He further testified that Claimant never returned to work or came into the Pro Logistics office to complete any paperwork regarding his alleged workers' compensation claim.

26. Claimant testified he notified Employer of the injury via a text message to Mr. Grimes. Claimant submitted various text messages between himself and Mr. Grimes. *See Ex. 5.* On February 21, 2018, the day Claimant was able to return to work, pursuant to the letter from PA Drew, there are some text messages indicating he called in and said he could not work because his back was sore. There is also a text message in which Claimant states he went to the doctor and they said "I need to do work comp." *See Ex. 5.*

27. However, Mr. Grimes also testified that the text messages submitted by Claimant do not appear to contain all of their communications via text. The text messages

provided by Claimant in Exhibit 5 do not appear to be complete regarding the conversations between Mr. Grimes and Claimant. The ALJ finds Mr. Grimes' testimony regarding this issue to be credible and persuasive.

28. Mr. Grimes also testified that he attempted to follow up with Claimant a number of times, but was never able to get in touch with him to discuss in detail the alleged accident and to have Claimant come in and fill out the proper paperwork. The ALJ also credits this portion of Mr. Grimes' testimony.

29. Allison M. Fall, M.D. performed an Independent Medical Examination on behalf of Respondents. She issued a report and testified via deposition.

30. As set forth in her report, Dr. Fall noted that Claimant's physical examination at Denver Health's emergency department was benign. She also indicated that despite escalating pain complaints, her examination of Claimant was unremarkable. She concluded by stating that Claimant's escalating pain complaints with high levels of reported pain involving multiple areas of his body were non-physiologic and were not supported by objective findings. Dr. Fall's findings and conclusions are found to be credible and persuasive.

31. During her deposition, Dr. Fall was offered and accepted as a medical expert in physical medicine and rehabilitation. Dr. Fall testified, and her testimony is found to be credible and persuasive, that there is no objective medical evidence to support any diagnosis other than a contusion to the back of the right shoulder as of February 19, 2018.

32. Dr. Fall testified, and her testimony is found to be credible and persuasive, that there were no residual findings of the contusion when she evaluated Claimant in August of 2018. Dr. Fall further testified based upon the objective medical evidence, Claimant may not have required any treatment for the contusion.

33. Dr. Fall specifically testified, and her testimony is found to be credible and persuasive, there is no objective medical evidence to support any type of lumbar spine diagnosis as it relates to the incident of February 19, 2018, nor is there any objective medical evidence to support neck pain as a result of the alleged incident, right arm numbness, or thoracic outlet syndrome.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a

fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

Compensability

Claimant was required to prove by a preponderance of the evidence that at the time of the alleged injury he was performing service arising out of and in the course of the employment, and that the alleged injury or occupational disease was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. The Act creates a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence." Section 8-40-201(1), C.R.S. In contrast, an "injury" contemplates the physical or emotional trauma caused by an "accident." An "accident" is the cause and an "injury" is the result. No benefits flow to the victim of an industrial accident unless the accident causes a compensable "injury." A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.,* W.C. No. 4-650-711 (ICAO February 15, 2007).

Moreover, a pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990).

As set forth above, Claimant's testimony was not found to be credible or reliable for a number of reasons. First, Claimant testified that although he was involved in a motor vehicle accident in 2016, he did not injure his right shoulder in that accident. According to Claimant's testimony, the only injury or pain that resulted from the motor vehicle accident was back pain. However, as set forth in the medical records from 2016 involving treatment for the motor vehicle accident, Claimant was treated for a right shoulder injury.

Second, not only did Claimant deny hurting his shoulder during the 2016 motor vehicle accident, Claimant's right shoulder symptoms which resulted from the 2016 motor vehicle accident are very similar to the symptoms he relates to the February 19, 2018, work incident.

Third, Claimant testified that after the incident, and before he was seen at Denver Health, he developed pain in his neck, right shoulder, and right lower back. However, despite this testimony, Claimant's medical records from Denver Health indicate Claimant denied neck and back pain.

Fourth, on the day of the accident, Claimant's pain complaints were minimal. His pain complaints were a 1-2 and Claimant was prescribed Motrin/Advil. Then, on March 16, 2018, Claimant returned to Denver Health due to a rash. The medical records from this visit are silent as to any ongoing shoulder or other musculoskeletal pain complaints. Thereafter, on March 26, 2018, Claimant presented to Dr. Yamamoto with 8/10 shoulder and upper back pain complaints as well as ongoing low back pain.

Fifth, Dr. Fall evaluated Claimant. As set forth in her report, Claimant's physical examination at Denver Health's emergency department was benign. Moreover, despite escalating pain complaints, her examination of Claimant was unremarkable. She also opined that Claimant's escalating pain complaints with high levels of reported pain involving multiple areas of his body are nonphysiologic and are not supported by objective findings. Dr. Fall also testified that Claimant might not have required any medical treatment. Dr. Fall's opinions are consistent with the medical records from Denver Health and the testimony of the Employer witnesses and therefore the ALJ found her opinions to be credible and persuasive.

Sixth, there was testimony at hearing that another co-worker or manager heard a box hit the ground the morning of February 19, 2018. However, there was no credible corroborating evidence presented that the box landed on Claimant and that two co-workers had to lift the box off of him- as alleged by Claimant. Had such occurred, it would be unlikely a co-worker would have heard the box hit the floor.

Seventh, Claimant indicated that after the accident occurred, he left work approximately 30 minutes later and went straight to Denver Health. However, medical records from Denver Health indicate Claimant did not arrive at Denver Health until approximately 5 hours after Claimant left work. Although it is not uncommon for someone to make an honest mistake when trying to remember exactly what time an incident occurred and the timing of events after the incident, this is an additional inconsistency which caused the ALJ to find Claimant was not a credible or reliable witness or historian.

Because Claimant is not found to be credible or reliable, any diagnoses which flow from Claimant's statements as to what happened, when it happened, and the extent of his symptoms are not found to be credible or persuasive. Therefore, this ALJ does not find Dr. Yamamoto's reports and testimony to be persuasive regarding Claimant's current condition, need for treatment, restrictions, and the cause of such because he relied upon the unreliable statements of Claimant in formulating and rendering his opinions.

Moreover, the mere fact that Claimant presented to Denver Health and Dr. Yamamoto and both provided medical treatment and work restrictions does not automatically require a finding that Claimant suffered a compensable work injury. The medical treatment and work restrictions were provided to Claimant based on Claimant's statements, which again, this ALJ did not find credible or reliable. Therefore, Claimant failed to establish by a preponderance of the evidence that the incident at work caused the need for medical treatment. Moreover, Claimant failed to establish by a preponderance of the evidence that the incident at work caused any disability.

A compensable injury is one that causes disability or the need for medical treatment. The ALJ concludes Claimant failed to establish by a preponderance of the evidence that he suffered an injury at work that caused any disability or the need for medical treatment. Therefore, Claimant failed to establish that he suffered a compensable injury.

Based on the above, the remaining issues raised by the parties are moot.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding

procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 3, 2019

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

The issue raised at hearing involves Claimant's entitlement to medical benefits. The question answered by this decision is:

I. Whether Claimant established, by a preponderance of the evidence, that a L4-S1 fusion surgery, as recommended by Dr. Stanton is reasonable, necessary, and related to Claimant's July 8, 2015 injury.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant, who was employed as an HVAC installer, was injured on July 8, 2015, when he fell through an unfinished ceiling and landed on his left hip injuring his left shoulder and low back.

2. The claim for injury was admitted and Claimant subsequently initiated treatment with the physicians at EmergiCare medical clinics. On July 25, 2015, Claimant underwent an MRI of the lumbar spine without contrast secondary to complaints of "leg weakness and low back pain." The MRI was completed at Peak Medical Imaging and was interpreted by Dr. Shawn Cory. Per Dr. Cory's report, the MRI revealed the following:

> A "3mm anterolisthesis, right foraminal annular tear, mild central spinal stenosis, moderate bilateral lateral recess stenosis, and moderate bilateral neural foraminal narrowing at L4-L5. Moderate to severe facet joint arthropathy and surrounding marrow edema at the same level" consistent with a degenerative etiology and at L5-S1, "a small to medium-sized left lateral recess/foraminal disc herniation . . . that displaces the traversing left S1 nerve roots and contribute to moderate left neural foraminal narrowing.

3. Given the MRI findings, Claimant was referred to Dr. Paul Stanton for orthopedic evaluation. Dr. Stanton evaluated Claimant on August 20, 2015. Dr. Stanton documented the following history:

> On 7-8-2015, [Claimant] was walking through a job site in a roof area, slipped through the roof and landed [some] number feet down onto the ground on a concrete floor. Since that time he has had increasing pain and weakness in his lower extremities.

* * *

> He reports increasing symptoms in both legs especially with overhead activity and lumbar extension. He feels shifting and clicking in his spine and at times it feels unstable with certain maneuvers.

4. Dr. Stanton performed a physical examination, obtained a set of flexion/extension x-rays and reviewed Claimant's July 25, 2015 MRI. He opined that Claimant's imaging supported a finding of a Grade I spondylolisthesis with angular motion, primarily left sided disc herniation and significant foraminal stenosis bilaterally. In combination, the imaging studies and Claimant's pronounced symptoms while upright and moving lead Dr. Stanton to opine that Claimant was suffering from dynamic instability at the L5-S1 segment in addition to the spondylolisthesis at L4-5. Dr. Stanton diagnosed Claimant with L5-S1 end stage disc disease with large left lateralizing disc bulge causing foraminal stenosis and nerve root contact; L4-5 Grade I spondylolisthesis with fluid in the facets; and left greater than right lower extremity radiculopathy and weakness. He explained that Claimant's spinal problem was "complex" and as he did not have any significant symptoms before the fall, he likely exacerbated the noted pathology at L4-5 and L5-S1 by plunging through the ceiling to the concrete below.

5. Dr. Stanton recommended conservative care to begin, including epidural steroid injections at L4 through S1. However, he opined that if Claimant failed to improve with conservative care, he would likely require stabilization surgery at L4-5 and L5-S1. He did not feel as if a discectomy would be in Claimant's best interests, primarily due to Claimant's symptoms that pointed to the presence of dynamic instability at L5-S1 as well as the existence of the spondylolisthesis at the L4-5 spinal segment.

6. In addition to his low back injury, Claimant sustained a left shoulder injury as part of his July 8, 2015 fall. This injury required surgical intervention and effected Claimant's ability to participate in low back treatment. As of June 15, 2016, Claimant had undergone 43 physical therapy appointments for his shoulder, which was doing well. But it was also reported that Claimant's "back [was] killing him." Claimant underwent a second lumbar spine MRI on June 16, 2016 at Southwest Diagnostic Centers. This MRI, per the radiologist's reading, demonstrated "moderate bilateral facet arthropathy with minimal anterolisthesis and disc bulge with mild central canal and mild bilateral foramina stenosis" at L4-5 in addition to "mild disc [bulging] with shallow left foraminal protrusion resulting in mild to moderate left foramina stenosis with no central canal or right foramina stenosis" at L5-S1. No comparison to the July 25, 2015 MRI was made.

7. Claimant was referred to Dr. Michael Rauzzino for further surgical evaluation on August 17, 2016. As of this appointment, it was noted that Claimant had SI joint injections, but no other injections for his lower back, despite the recommendation by Dr. Stanton a year prior. Claimant reported continued achy 2/10 pain in his low back aggravated by standing, walking, sitting, driving and climbing stairs.

He reported numbness in the left thigh radiating down to his left foot at times. Dr. Rauzzino referenced the June 16, 2016 MRI noting that he did not have the film available for review. He requested that Claimant obtain the films for review. He also noted a need to obtain new flexion and extension x-rays of the back to address Claimant's "stability".

8. Claimant returned to Dr. Rauzzino for follow-up on September 26, 2016. In his report from this encounter, Dr. Rauzzino references that an August MRI "showed L4-L5 anterolisthesis with left sided L5-S1 protrusion and multilevel degenerative changes. Based upon the evidence presented, the ALJ finds Dr. Rauzzino's reference to an August MRI a likely error. There is no convincing evidence to support a finding that Claimant underwent magnetic resonance imaging in August. Careful review of the MRI findings from July 25, 2015 and June 16, 2016 leads the ALJ to find that Dr. Rauzzino was probably referencing the findings of the June 16, 2016 MRI in his September 26, 2016 report. The ALJ finds no record support to indicate that Dr. Rauzzino ever reviewed the findings of Claimant's July 25, 2015 lumbar MRI.

9. Claimant's flexion and extension x-rays, as performed in Dr. Rauzzino's office and reviewed by him, revealed retrolisthesis of L5 on S1 that did not change from neutral position in flexion/extension. He agreed with Dr. Stanton's assessment that there was a Grade I spondylolisthesis at L4-5 which he (Dr. Rauzzino), did not feel changed in flexion but had some reduction in extension. Dr. Rauzzino explained to Claimant that there is not a "easy" surgery that one would do that would have a high likelihood of success." He recommended facet injections and ESIs to avoid surgery, "if at all possible." Contrary to Respondents' assertion, the ALJ does not interpret Dr. Rauzzino's statements concerning surgery as an absolute indication that Claimant is a non-surgical candidate. Rather, the ALJ finds that Dr. Rauzzino simply indicated that any surgery contemplated would not be "easy" and should be avoided if possible because the chances of success were not great.

10. Post examination with Dr. Rauzzino, Claimant underwent injections with Dr. Simon Blau, additional care at Concentra, and was subsequently placed at maximum medical improvement (MMI) on December 23, 2016, by Dr. Nicholas Kurz. Claimant contested the findings/conclusions of Dr. Kurz and requested a Division Independent Medical Examination (DIME). Claimant underwent the requested DIME with Dr. Timothy Hall on April 10, 2017. Dr. Hall found that Claimant was not at MMI and recommended further treatment with Dr. Blau.

11. Claimant returned to Dr. Blau on September 5, 2017 for bilateral medial branch blocks at L4-5 and L5-S1. Dr. Blau documented on September 11, 2017 that Claimant continued to have back pain, noting that it can be sharp in nature at times. On physical examination, Claimant was tender to palpation of the bilateral lumbar vertebral muscles and that there was pain with facet loading bilaterally. It was documented that Claimant had a diagnostic response to the blocks and Dr. Blau recommended repeating them to confirm.

12. Claimant underwent a second set of bilateral medial branch blocks at L4-5, L5-S1 on October 31, 2017. It was noted that Claimant's pain was a level 3 out of 10 at the time, but he reported his pain shoots up to around 8/10 with aggravating activities, such as traversing stairs. Claimant subsequently underwent bilateral L4-5, L5-S1 radiofrequency neurotomies with Dr. Blau on November 28, 2017. Claimant reported 100% relief of his symptoms 30 minutes after the procedure. Claimant followed up with Dr. Blau on December 21, 2017 reporting about 40% improvement in his lower back symptoms. Nonetheless, Claimant continued to have left sided lower back pain radiating into his left iliac crest, buttock, and posterior thigh, as well as some right-sided lower back pain that was not radiating. Dr. Blau recommended physical therapy and core strengthening as post lumbar RF protocol. At Claimant's next visit with Dr. Blau on January 12, 2018, he recommended continued physical therapy and low back trigger point injections. The aforementioned trigger point injections were administered on January 26, 2018. The trigger point injections provided no relief and Claimant reported continued left sided lower back pain with internal rotation of his left hip. Consequently, Dr. Blau recommended a left hip MRI to see if Claimant's pain was emanating from the hip. A left hip MRI was performed February 22, 2018 and was interpreted as unremarkable for hip pathology.

13. On March 15, 2018, Claimant reported to Concentra with complaints of severe 10/10 pain that occurred "while he was just sitting there". Claimant complained of radicular pain. Straight leg raise on the left was positive on physical examination. Consequently, Dr. Natasha Deonarain recommended a repeat MRI, along with a referral to an orthopedic spine surgeon. The aforementioned MRI was performed immediately following Dr. Deonarian's evaluation and demonstrated minimal spondylosis of the L4-5-disc space with a small annular fissure in the right foraminal portion of the disc associated with mild to moderate arthropathy of the facet joints. The radiologist could not rule out a small fracture of the facets. The radiologist also noted minimal spondylosis of the L5-S1 disc space without evidence of nerve root impingement or cauda equina syndrome, along with a small annular fissure in the left foraminal portion of the disc.

14. On April 11, 2018, Claimant underwent a follow-up DIME with Dr. Hall, who recorded that he reported that the procedures performed by Dr. Blau had led to 50%-60% improvement in low back pain. "This is in the area of the belt line. Lower and out to the right, he still has a lot of symptoms". Dr. Hall reviewed the March 15, 2018 MRI scan and opined that he did not find it to be all that different from the original MRI. He also noted that his examination on this date was not that much different than his prior examination and that neurologic examination of the lower extremities reveals no specific motor weakness. No wasting, reflexes were symmetrical, straight leg raise (SLR) caused some tightness and pulling in his back, but no leg symptoms. Dr. Hall opined that Claimant had reached MMI as of January 8, 2018, and provided impairment ratings for both his injured shoulder and low back. He also recommended ongoing maintenance care for Claimant's lumbar spine for at least the next three years.

15. On April 20, 2018, Claimant returned to Dr. Blau noting that he continued to have pain along his lateral lower back region bilaterally. Dr. Blau recorded that "[Claimant] states that the pain feels as if he was wearing at tight belt." At hearing Claimant testified that at this appointment, he advised Dr. Blau, that he was experiencing radiculopathy down his legs. He further stated that he had as he had repeatedly advised Dr. Blau of these symptoms in the past. On this date, Dr. Blau issued a report noting that upon examination claimant's neurologic examination was negative, and that he had reviewed the March 15, 2018 MRI scan, and "this does not appear to be surgical". Dr. Blau agreed with Dr. Hall's opinions regarding MMI, and his impairment ratings.

16. Respondents filed a Final Admission of Liability (FAL) admitting to the impairment rating provided by Dr. Hall. The FAL also admitted to reasonable, necessary and causally related medical benefits by an authorized treating physician post MMI.

17. As noted, Dr. Deonarain referred Claimant for additional orthopedic evaluation after he experienced an increase in his pain on March 15, 2018. Claimant returned to Dr. Stanton for said evaluation on April 24, 2018. Dr. Stanton documented that Claimant had undergone a lot of non-surgical care for his back, including rhizotomy, all without providing long-term relief. Claimant reported continued "shifting and clicking" in his spine with lifting, bending, and twisting, and stated that he felt better while lying in the supine position. On physical examination, Dr. Stanton appreciated a "step off" in the spinous process of the lumbar spine. He performed additional flexion and extension x-rays in his office on the date of this visit and "opined that these x-rays demonstrated significant collapse at the L5-S1 disc space with bone on bone contact posteriorly and retrolisthesis, facet spondylosis, and resultant foraminal stenosis. Dr. Stanton measured the L4-5 spondylolisthesis to be approximately 4mm. He indicated further that the MRI of Claimant's lumbar spine demonstrated a reduction in his spondylolisthesis at L4-5 when lying supine indicating mobility of the lumbar spine.

18. Dr. Stanton opined, "At this point, I think [Claimant's] symptoms are mainly one of dynamic instability." He indicated that Claimant had obvious signs of instability at the L4-5 level in tandem with significant collapse at his L5-S1 level, which was consistent with Claimant's dermatomal symptomatology. Dr. Stanton felt a discectomy and laminectomy would only destabilize Claimant's spine further, so he proposed a reconstruction of Claimant's L4 through S1 segments to fully address the instability and stenosis. Dr. Stanton formally requested authorization to perform an L4-S1 anterior-posterior fusion for spondylolisthesis, stenosis, and lumbar degenerative disc disease on April 27, 2018. Respondents subsequently denied the request on May 10, 2018 and sought an independent medical examination (IME) with Dr. Brain Reiss.

19. Dr. Reiss completed a records review, took a history from Claimant and completed a physical examination as part of his IME. His review of the records documented only one mention of a complaint of back pain and stiffness prior to the July 8, 2015 industrial injury. Following his IME Dr. Reiss authored a report in which he

opined that the findings at L4-5 on the September 14, 2016 flexion/extension x-rays represented a "degenerative spondylolisthesis" that was "probably" minimal and "probably" not meeting the definition of instability. Nonetheless, he indicated that he was unable to accurately measure the extent of the spondylolisthesis from this x-ray. In review of the MRIs, Dr. Reiss opined that, as of the 2018 MRI, he did not believe the foraminal stenosis at L5-S1 was clinically significant enough to cause nerve root irritation. He felt it possible, though not probable, that a fusion at L4-5 may improve Claimant's symptomatology, but he did not see a reason for the L5-S1 to be fused.[1] Dr. Reiss felt Claimant needed nothing more than core strengthening exercises to address his ongoing symptoms. Despite his acknowledgement of Claimant's lack of pre-existing symptoms or treatment for his lower back condition, Dr. Reiss opined that surgery for Claimant's spondylolisthesis would be unrelated to the work incident where Claimant fell through a ceiling and injured his back. Similar to his prior reports to Dr. Stanton, Claimant reported to Dr. Reiss that he felt better while lying down, and that if he moved, he would get a sharp pain.

20. After complete review of the medical record and the diagnostic imaging, Dr. Reiss disagrees that a fusion is indicated for the following medical reasons:

- His review of the diagnostic studies, fails to reflect presence loss of disc space height; or dynamic instability; but rather, refutes this assertion;

- The flexion/extension x-rays do not evidence sufficient movement per the Low Back Treatment Medical Treatment Guidelines to warrant consideration of a fusion; and,

- The medical record evidences that Claimant has repeatedly and consistently demonstrated a normal neurologic evaluation, which supports the conclusion that no radiculopathy exists; and hence, pursuant to the Medical Treatment Guidelines, and as admitted by Dr. Stanton in his deposition, fusion surgeries have poor outcomes for the treatment of primarily low back pain**.**

21. Dr. Timothy Hall's deposition was taken on September 26, 2018. Dr. Hall was of the opinion that if Claimant required surgery, it would certainly be work related; however, he was not confident that Claimant's pain generator had been adequately identified based on review of the records he had at the time of the DIME and the recent IME report from Dr. Reiss. (Depo. 11:8 – 12:6). Nonetheless, based upon the information he had, Dr. Hall opined that it is unlikely that this claimant will do well with a large fusion procedure. (Dr. Hall Dep., p. 8-11).

[1] However, Dr. Reiss did indicate that there is already degeneration above and below the L4-L5 level. (Clmt. Ex. 12, p. 271).

22. Dr. Stanton's deposition was taken on October 23, 2018 in his capacity as an expert in orthopedic surgery that was fellowship trained in orthopedic spine surgery. Dr. Stanton performs several surgeries of the lumbar spine per week and commonly performs the same procedure he is proposing for Claimant. (Dr. Stanton Dep., pp. 5:9 – 6:4). Dr. Stanton clarified that in his medical records, such as the August 20, 2015 note, that the diagnoses listed under assessment only have to do with coding and their software, and that his diagnoses of Claimant were numbered 1, 2, and 3 below the 7 documented diagnoses. (Dr. Stanton Dep., pp. 10:11 – 11:4). Dr. Stanton explained his first diagnosis was that of L5-S1 end stage disc disease with large lateralizing disc bulge causing foraminal stenosis and nerve root contact, meaning the disc is collapsing and bulging as a component of the collapse, and that would cause "sciatic" type pain down the leg. His second diagnosis of L4-5 Grade 1 spondylolisthesis with fluid in the facets meant that there is instability at the L4-5 level, and that the fluid collecting in the facet joint indicates there is gapping in the facet, which is also consistent with a spondylolisthesis or movement at the L4-5 level. (Dr. Stanton Dep., p. 11:5-21). Dr. Stanton based his original opinion on his examination of Claimant, flexion/extension x-rays, and the July 2015 MRI. He also made it clear that he reviews the films himself before reading the report of the radiologist. (Dr. Stanton Dep., p. 12:2-21).

23. Dr. Stanton opined that once instability or movement of the spine is found, removing the disc alone typically does not resolve the symptoms and the patient will eventually require a revision surgery in the near future. (Dr. Stanton Dep., p. 13:7-15). Dr. Stanton was asked about dynamic instability of the spine, which he explained is collapse of the disc space under physiologic load. So standing, lifting, bending, twisting, or moving causes collapse of the disc space because the disc is insufficient in strength to hold the spine stable. Typically, a patient's symptoms diminish when they are laying down on their back because there is less gravity on the spine. Dynamic instability is typically treated with a fusion surgery. (Dr. Stanton Dep., pp. 13:16 – 14:9).

24. Dr. Stanton also testified that Claimant had spondylolisthesis, which is a different type of spinal instability where one vertebral body slips forward on another. He used the analogy of dynamic instability being up and down collapse, like the shocks on a car, whereas spondylolisthesis is forward movement or slippage of the vertebra on one another. (Dr. Stanton Dep., pp. 14:19 – 15:8). As noted above, Dr. Stanton documented a "step off" of Claimant's lumbar spine during his physical examination. He testified that a step off that can be palpated is an indication that you are able to feel the instability or spondylolisthesis at the segmental level involved, i.e. the L4-5 level in this case. (Dr. Stanton Dep., pp. 15:25 – 16:9). Dr. Stanton clarified exactly what was performed in his office regarding the x-rays. There are standing x-rays, including flexion and extension, which shows the spine under the physiologic load of gravity. "When the patient moved, we saw significant collapse at the L5-S1 level or disc space with bone-on-bone contact in the back of the spine and retrolisthesis. This means the vertebral body is sliding backwards. As a result of that, there was a decrease in the nerve root window or height or foraminal stenosis. It also demonstrated again the spondylolisthesis or forward slipping of the vertebral body at L4-5." (Dr. Stanton Dep., pp. 16:16 – 17:9).

Dr. Stanton indicated that his proposed surgery would be intended to relieve Claimant of both his back pain and increase his function. (Dr. Stanton Dep., p. 18:9-14).

25. Dr. Stanton was asked questions about Dr. Reiss's report specifically. Dr. Stanton essentially agreed with Dr. Reiss's readings of the MRIs, but explained that without the context of the x-rays, the MRI alone "certainly does not provide the diagnosis" and therefore, the justification for surgery. He reiterated his opinion that the findings on imaging while lying down are not indicative of Claimant's condition while standing as there is no gravity on the spine when lying supine. Accordingly, if somebody were to read the MRI without contemporaneous comparison with the weight bearing x-rays, they would miss or not be able to diagnose Claimant's pathology correctly. (Dr. Stanton Dep., p. 19:1-22).

26. Dr. Stanton was asked about Dr. Reiss's opinion on page three of his report, paragraph 8, and his disagreement with Dr. Stanton's reading of the imaging. Dr. Stanton explained the following as to why Dr. Reiss's opinion is incorrect: "I think there is more rotational movement on the standing X-rays. I think there is more translational movement or reduction on the supine MRI, and that's why it's important to compare those two things. And as to say -- you know, contrary to my suggestion of bone on bone at L5-S1, when people think of bone-on-bone contact, they are looking at the center of the disc space. And I agree, in the center of the disc space, where you would typically look, there is not bone-on-bone contact; but at the back of that disc space, during that retrolisthesis, there is contact. And that's what generates the foraminal narrowing. Typically, that's the more common scenario in dynamic instability of this nature." (Dr. Stanton Dep., pp. 20:16 – 21:6). Dr. Stanton opined that he personally found enough instability to warrant surgery. He explained that four or more millimeters of movement is typically the accepted definition for what is approved for surgery by most insurance companies, although he would say as little as 2 to 3 millimeters of movement can be symptomatic, depending on the patient's individual anatomy. Regarding Claimant's spondylolisthesis Dr. Stanton was clear when he stated, ". . . I measured it, he had four millimeters or greater in his L4-5 level." (Dr. Stanton Dep., pp. 21:7 – 22:1).

27. Dr. Stanton also addressed Dr. Reiss's suggestion that Claimant only required additional core strengthening to treat his ongoing symptoms. Dr. Stanton testified: "At this point, I don't think it's likely to provide good results. Certainly there is a role early on for core strengthening to see if stabilizing some of the musculature is able to stop the spondylolisthesis, but the important thing to remember is that the lumbar musculature is not designed to decrease translation in a front/back position or an up/down position. The lumbar musculature's job is to contract in an up/down position; so, therefore, those muscles are not optimally aligned to stop spinal instability. So if early therapy is not successful, it's unlikely that adding additional visits is going to solve that problem." (Dr. Stanton Dep., pp. 22:2 – 23-1).

28. Dr. Stanton further disagreed with Dr. Reiss's opinion that Claimant's spondylolisthesis may not represent his pain generator. Dr. Stanton believed it was a

pain generator given Claimant's dermatomal representation of pain, meaning that the areas where he locates nerve pain on examination was consistent with the L4-5, L5-S1 issues. (Dr. Stanton Dep., pp. 23:14 – 24:1). When asked if he felt Claimant had "true instability," Dr. Stanton responded, "For sure." (Dr. Stanton Dep., p. 24:2-4). Dr. Stanton explained that the L5-S1 level should also be fused because fusing just L4-5 would stiffen the spine and make the dynamic collapse at L5-S1 even worse, which would likely precipitate a second surgery. He indicated that he would not recommend the fusion if it were limited to the L4-5 level only. (Dr. Stanton Dep., p. 24:5-23). Dr. Stanton reiterated that Claimant's examination, the location of his pain complaints, and the imaging results all supported his opinion that L4-5 and L5-S1 were the likely pain generators in this case. (Dr. Stanton Dep., pp. 24:24 – 25:10).

29. Dr. Stanton agreed with Dr. Reiss that a fusion surgery should not be performed for axial back pain alone due to arthritis, or for a disc problem without instability, However, he noted that "in the setting of instability, it's very well documented that back pain and associated neurologic symptoms are very well treated and resolved by a lumbar fusion surgery." (Dr. Stanton Dep., pp. 25:11 – 26:8). Dr. Stanton did not feel that more could be done to identify the pain generator in this case. (Dr. Stanton Dep., pp. 26:9 – 27:6).

30. On cross-examination, Dr. Stanton noted that he is not Level II Accredited and is not familiar with the Low Back Medical Treatment Guidelines published by the Division of Workers' Compensation. Regarding the Guidelines, he stated, "whatever the Workmen's Compensation Guidelines are, that has little or nothing to do with the active practice of medicine." (Dr. Stanton Dep. p. 43). Dr. Stanton would go on to state: "If the guidelines will or will not approve a fusion, that's up to the guidelines. I treat each patient individually based on what I think they medically need, based on what their symptoms are, their physical exam shows, and what their imaging shows. So I don't actually look at the insurance many times to find out if it's Workmen's Comp or private insurance or government insurance, it doesn't matter. Every patient gets treated equally using the same good treatment principles and guidelines. Whatever Work Comp has constructed to say that's appropriate for surgery, that's their business. As a board certified practicing spine surgeon, I use good medical practices to take care of all patients in the same way. The Workmen's Compensation population, for me, does not get a second set of guidelines; they don't get treated differently, everybody gets the same care." (Dr. Stanton Depo., pp. 43:13 – 44:13).

31. Dr. Brian Reiss testified at hearing as an expert in the field of orthopedic surgery. Dr. Reiss has been Board Certified in orthopedics for the past 28 years and currently limits his medical practice to disorders of the spine. He has performed a substantial number of fusion surgeries and has been Level II Accredited with the Division of Workers' Compensation since the onset of its program. He is familiar with the content of the Low Back Medical Treatment Guidelines.

32. After reviewing the pertinent records and imaging, including the x-rays obtained at Dr. Stanton's office, Dr. Reiss opined that the hard-medical evidence refutes

the basis for the performance of the surgery recommended by Dr. Stanton. Dr. Reiss opined that while Claimant is probably suffering from work-related back pain, an extensive fusion surgery is not indicated for this back pain. Rather, Dr. Reiss indicated that due to the significant amount of time that has elapsed since the date of injury, Claimant is deconditioned and should partake in core strengthening exercises, which will assist in the relief of his back pain. He explained that Claimant should have undergone core strengthening, which he described as a three-hour course of an exercise program per week for two or three months, early on in the course of his recovery from his injuries. He disagreed with Dr. Stanton's opinion that core strengthening was unlikely to provide any benefit to Claimant three plus years after the fact. Dr. Reiss finds support for his opinion that no surgery of any kind is indicated based upon the content of the reports authored by Drs. Rauzzino, Blau and Hall.

33. Dr. Reiss opined further that Claimant's spondylolisthesis would not be work related. In opining as such, Dr. Reiss noted that, more likely than not, Claimant had a spondylolisthesis prior to his injury but it was not symptomatic because he was not deconditioned. Dr. Reiss testified that he felt Dr. Stanton was "totally speculating" when he opined that Claimant's nerve root at L5 is getting compressed when he stands up. Dr. Reiss agreed that the flexion and extension x-rays taken by Dr. Stanton demonstrated slippage of the L4-5 vertebrae supporting the diagnosis of spondylolisthesis, but he measured it at about 3mm whereas Dr. Stanton measured it to be 4mm or greater. At hearing, Dr. Reiss was asked to measure the slippage at L4-5. He explained that, in order to do this, "You have to use those lovely tools on the top and place the little dot exactly in the appropriate spot and then it measures it for you. The difficulty is placing it in the exact spot." Dr. Reiss reiterated that "[d]epending on where you place your next little dot it can be difficult to measure." Dr. Reiss did admit that Claimant's slippage is "borderline" but was not jumping out as "being unstable" to him.

34. Dr. Reiss also disagrees that the alleged finding recorded by Dr. Stanton in the nature of extensor halluces longus (EHL) and tibialis anterior weakness justifies consideration of surgery. Dr. Reiss opined that Dr. Stanton hedged at his deposition that this finding may be associated with pain. Contrary to this testimony, Dr. Reiss explained that this is not a finding necessitating a fusion, and this alleged neurologic deficit in the L5 distribution was not noted by any other physician, at any other time**.** Dr. Reiss opined that Dr. Stanton's opinion regarding alleged radicular findings is pure speculation and is not supported by Drs. Rauzzino, any reading radiologist or other examining physician or other objective evidence.

35. Dr. Reiss disagrees with Dr. Stanton's opinion that the March 15, 2018 MRI evidences a large broad-based disc bulge at L5-S1 with significant tightness around the nerve root. Using the MRI images in Court, Dr. Reiss pointed to where the L5-S1 nerve root lied and opined that no compression existed to support Dr. Stanton's claim of nerve root compression. Dr. Reiss opined that without true radiculopathy, or neurologic compromise, a fusion is not indicated.

36. The ALJ finds that Claimant has established by a preponderance of the evidence that the surgery recommended by Dr. Stanton is reasonably necessary and related to the original work injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). To the extent, expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); see also, *Dow Chemical Co. v. Industrial Claim Appeals Office*, 843 P.2d 122 (Colo.App. 1992) (ALJ may credit one medical opinion to the

exclusion of a contrary opinion). When considered in its totality, the ALJ concludes that the evidence in this case supports a reasonable inference/conclusion that Claimant suffers from both a L4-5 spondylolisthesis and dynamic instability at L5-S1. Here, the evidenced presented supports a conclusion that Claimant's low back symptoms are in part emanating from an L4-5 spondylolisthesis that was probably aggravated by falling through a ceiling to a concrete floor below. While Dr. Reiss opines that this pre-existing spondylolisthesis became symptomatic due to deconditioning, the ALJ concludes that deconditioning a direct consequence of his fall through the ceiling. Consequently, the ALJ agrees with Dr. Reiss that Claimant's low back pain is likely work related. Where the ALJ finds Dr. Reiss's opinions dubious is where he concludes that fusion surgery is not reasonable or necessary because core strengthening can address Claimant's ongoing symptoms because he is deconditioned. In this case, the content of the medical records demonstrates that Claimant has failed conservative care and continues to experience functional decline secondary to back pain likely originating from both the failure of the disc at L5-S1 and the forward slipping of the vertebral segment at L4-5. The evidence presented convinces the ALJ that this pathology and not merely a weak core is substantially causing Claimant's ongoing symptoms. Given the mechanism of injury coupled with the content of the treatment records as a whole, the ALJ concludes that the medical analyses and opinions of Dr. Paul Stanton are credible and more persuasive than the contrary opinions of Dr. Reiss and Dr. Rauzzino, to the extent that Dr. Rauzzino can be interpreted as indicating that Claimant is not a surgical candidate as noted above

Medical Benefits
The Proposed L4-L5, L5-S1 Spinal Surgery Recommended by Dr. Stanton

D. A claimant is entitled to medical benefits that are reasonably necessary to cure or relieve the effects of the industrial injury. *See* § 8-42-101(1), C.R.S. 2003; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The question of whether the need for treatment is causally related to an industrial injury is one of fact. *Walmart Stores, Inc. v. Industrial Claims Office, supra*. Similarly, the question of whether medical treatment is reasonable and necessary to cure or relieve the effects of an industrial injury is one of fact. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003).

E. The mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability were caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those which flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970); § 8-41-301(1)(c), C.R.S. 2013. Based upon the evidence presented, the ALJ concludes that Claimant has proven that L4-L5, L5-S1 fusion surgery recommended by Dr. Stanton is

reasonable and necessary. The medical reports outline persistent pain and functional decline in the face of failed conservative treatment leading Dr. Stanton to recommend surgical intervention.

F. The Medical Treatment Guidelines are regarded as the accepted professional standards for care under the Workers' Compensation Act. *Hernandez v. University of Colorado Hospital*, W.C. No. 4-714-372 (January 11, 2008); see also *Rook V. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo.App. 2005). The Medical Treatment Guidelines, Rule 17-2(A), W.C.R.P. provide: All health care providers shall use the Medical Treatment Guidelines adopted by the Division. In spite of this direction, it is generally acknowledged that the Guidelines are not sacrosanct and may be deviated from under appropriate circumstances. *See*, Section 8-43-201(3) (C.R.S. 2014); *Nunn v. United Airlines,* W.C. 4-785-790 (ICAO September 9, 2011). Nonetheless, they carry substantial weight. Moreover, the MTGs have been accepted in the assessment of low back pain. While the MTGs provide for that several pre-operative surgical indications should be considered before surgery is undertaken, including assessment/definition and treatment of all likely pain generators along with x-ray, MRI or CT myelography findings consistent with spinal stenosis with instability or disc pathology, the Court is not bound by the MTGs in deciding individual cases on the guidelines or the principles contained therein alone. Indeed, § 8-43-201(3) specifically provides:

> It is appropriate for the director or an administrative law judge to consider the medical treatment guidelines adopted under section 8-42-101(3) in determining whether certain medical treatment is reasonable, necessary, and related to an industrial injury or occupational disease. The director or administrative law judge is not required to utilize the medical treatment guidelines as the sole basis for such determinations.

G. Concerning the issue presented, the MTG's indicate that "[t]here is some evidence that fusion is likely to have a higher beneficial effect compared to multidisciplinary rehabilitation for patients with isthmic spondylolisthesis, as differentiated from those without the condition who suffered from chronic low back pain." (WCRP 17 Ex. 1, p. 98). Pursuant to WCRP 17, Ex. 1(G)(4)(d)(ii), diagnostic indications may include the following: "Segmental instability: Excessive motion, as in degenerative spondylolisthesis 4mm or greater, surgically induced segmental instability." Another indication for a spinal fusion per the Guidelines is for primary mechanical back pain/functional spinal unit failure: Multiple pain generators involving two or more of the following: (a) internal disc disruption, (b) painful motion segment, as in annular tears, (c) disc resorption, (d) facet syndrome, and/or (e) ligamentous tear. WCRP 17 Ex. 1(G)(4)(d)(iii). In this case, the evidence presented supports a conclusion that Claimant meets the two of the above requirements as MRI imaging indicates that Claimant has both internal disc disruption at L4-5 and annular tearing. Moreover, the March 15, 2018 MRI raises suspicion for facet pathology consistent with instability.

H. Addressing part two of the aforementioned section of the Guidelines, fusion surgery is indicated when there is segmental instability, defined as excessive motion, as in degenerative spondylolisthesis 4mm or greater. Although Claimant's spondylolisthesis was measured by Dr. Reiss to be closer to 3mm, "give or take .2mm," the ALJ is convinced based on the testimony of Dr. Stanton, as well as objective imaging evidence, that Claimant does in fact have a "true instability" of the spine warranting surgery under the Guidelines.

I. WCRP 17 Ex. 1(G)(4)(e) addresses what the Guidelines feel are appropriate in terms of workup prior to proceeding with surgery. First, all pain generators must be adequately identified and treated. Given the results of Claimant's imaging studies coupled with Claimant's physical examinations and the treatment he has received to date, the ALJ credits Dr. Stanton's opinion that he is confident that Claimant's pain generators have been identified and treated. While the second prong of the MTG's indicates that all physical medicine and manual therapy have been completed, which was not apparently done in this case, the ALJ credits the testimony of Dr. Stanton that core strengthening is unlikely to provide any significant benefit at this point, especially considering the fact that the muscles of the spine are not optimally aligned to stop spinal instability. Prong three of the Guidelines for proceeding with surgery is satisfied as the imaging in this case documents what the ALJ concludes, based upon the persuasive testimony and examinations of Dr. Stanton, constitutes segmental instability, both laterally and vertically at L4-5 and L5-S1 respectively. Prong four is met as the spine pathology is limited to two levels. Prong five is not applicable given Claimant's diagnosis of spondylolisthesis, and prong six is merely a recommendation regarding smoking that has not been fleshed out by the parties. Taken in its entirety, the ALJ concludes that the evidentiary record contains substantial evidence to support a conclusion that the recommended procedure is reasonable and necessary to cure and relieve Claimant from the ongoing effects of his compensable injury and restore his function. Based upon the evidence presented and in keeping with the MTGs, the ALJ concludes that Claimant's surgery has been contemplated within the context of expected functional outcome and not merely for the purposes of pain relief.

ORDER

It is therefore ordered that:

1. Respondents shall authorize and pay, pursuant to the Workers' Compensation medical benefits fee schedule, for the L4-5, L5-S1 fusion and all expenses associated therewith as recommended by Dr. Paul Stanton.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service;

otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 7, 2019

Colorado Springs, CO 80906

ISSUES

I. What is the appropriate burden of proof to be applied to the DIME opinion of Dr. Hall regarding Claimant's admitted right shoulder injury?

II. Applying this burden of proof, what is Claimant's Impairment Rating for her right shoulder?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant has worked for Employer for several years, in part as an airline baggage handler. On June 1, 2013, Claimant sustained a compensable industrial injury to her right shoulder.

2. Respondents filed a General Admission of Liability ("GAL") on December 10, 2013.

3. At some point, Claimant was authorized for treatment by orthopedist John Pak, MD. However, the ALJ is in possession of exactly two reports prepared by Dr. Pak, to wit: his postoperative report dated 11/2/16. (Ex. 3), and his "Letter of MMI" dated 3/29/16 (Ex. A, p. 2). Thus, the ALJ is otherwise entirely dependent upon the interpretations of what Dr. Pak said, and did, by the DIME physician, Dr. Timothy Hall, and Respondents' IME physician, Dr. Eric Ridings.

4. Clamant suffered a torn rotator cuff, and underwent an initial repair surgery by Dr. Pak on 8/5/2015. Dr. Hall describes the procedure as: Right shoulder arthroscopy, subacromial decompression, **acromioplasty,** *and* rotator cuff repair (Ex. 2, p. 13). Dr. Ridings describes the procedure as a subacromial decompression, **acromioplasty,** *and* rotator cuff repair. (Ex. C, p. 10) (emphasis added).

5. According to Dr. Hall, Claimant was initially placed at MMI by Dr. Pak on 3/**29**/2016. (Ex. 3, p. 14). In fact, Dr. Pak's letter (dated 3/29/16) says MMI was reached on 3/**21**/2016). (Ex. A, p. 2). Dr. Ridings does not address the initial MMI date-although according to Dr. Hall, Dr. Ridings performed an initial IME (not in evidence herein), wherein he acknowledged causation of her work injury (Ex. 3, p. 14).

6. Following this first surgery, on August 12, 2016, Respondents filed a Final Admission of Liability admitting to a 6% scheduled right shoulder rating pursuant to authorized treating provider John Pak, M.D.'s opinion of March 29, 2016. (Ex. A).

7. However, Claimant's condition worsened. By accounts of both Drs. Hall and Ridings, Claimant had a new MRI. (Dr. Hall dates the MRI at 8/15/16-Ex. 3, p. 14) (Dr. Ridings

does not date the MRI at all-Ex C. p. 11). In any event, this MRI showed a re-tear of the same rotator cuff.

8. Dr. Hall then references a revision surgery occurring on 4/3/2016 (Ex. 3, p. 14). The ALJ finds this to be in error; the revision surgery, according to Dr. Pak, occurred 11/2/2016. (Ex. 3, p. 18). (This better fits the logical timelines; the ALJ notes that this surgery would not have occurred four months **before** the MRI took place.)

9. Dr. Pak's own surgical notes indicate what the revision surgery involved: "Right shoulder arthroscopy, removal of hardware and sutures, debridement, lysis of adhesions, and rotator cuff repair" (as well as **left** shoulder subacromial cortisone injection) (Ex. 3, p. 18).

10. According to Dr. Ridings, Claimant was again placed at MMI by Dr. Pak on 7/9/17 at the time of a Functional Capacity Exam ("FCE"); however, Dr. Ridings goes on to say that Dr. Pak issued a "letter of MMI" dated 10/30/17, wherein Dr. Pak performs range of motion measurements. At this time Dr. Pak assigns a 4% right extremity rating. (Ex. C, p. 11). (The ALJ notes that this report by Dr. Pak is not in evidence).

11. Dr. Hall, in contrast, references a "closing note" from Dr. Pak, placing Claimant at MMI on 8/18/17. (Ex. 3, p. 14).

12. The procedural record thereafter is silent; however, the ALJ infers that Claimant took exception to this second Impairment Rating assigned by Dr. Pak, and requested a DIME examination.

13. Claimant underwent this Division Independent Medical Examination by Dr. Hall, on July 11, 2018. Dr. Hall noted in his review of records that the second MRI was consistent with a large "read as re-tear" of the rotator cuff. Dr. Hall noted Claimant once again underwent a right shoulder arthroscopy with debridement, subacromial decompression, acromioplasty, rotator cuff repair and arthroscopic biceps arthrodesis.

14. Dr. Hall further noted Claimant returned to Dr. Pak, who placed Claimant back at MMI as of July 19, 2017. Based upon the FCE and repeat range of motion measurements, Dr. Pak this time determined Claimant's range of motion loss was 4% right upper extremity.

15. Under 'History of Present Illness' Dr. Hall documented the Claimant returned to doing the same work she did that "created these injuries." Dr. Hall further noted, "she had surgery, went back to work, released to full duty, re-injured the shoulder, had a subsequent surgery, and now is better than she had been following the re-injury, but not quite as good as she was after the first surgery". (Ex. B, p. 8).

16. With regard to Claimant's pain profile, Dr. Hall noted, "she does have some upper extremity symptoms, which are transient including tingling in the arm and hands and aching in the hand distally. She has more of these symptoms on the right than the left but no reports of focal weakness." *Id.*

17. Dr. Hall's assessment was rotator cuff tear x2 with two surgeries, myofascial pain and transit neurologic symptoms.

18. At Dr. Hall's evaluation he noted, "the bulk of her problem is the rotator cuff tear itself, which is what is rated. Range of motion reveals a 5% impairment per the worksheet. *She did have the* ***acromioplasty*** *which is the additional 5% which adds to 10 percent impairment."* (Ex. 2, p. 15) (emphasis added).

19. Claimant was evaluated by Eric O. Ridings, M.D. on two separate occasions. The first on October 19, 2014 and the second on September 10, 2018. Dr. Ridings noted, "This is an occupational disease claim in which Ms. Ford injured her right shoulder moving luggage at the airport working at the ticket counter and the gate for Delta Airlines." (Ex. C).

20. According to the second IME report, Claimant told Dr. Ridings, "when I was taking the chronological history and discussing her Division Independent Medical Examination, she stated that the entire visit in the room with her by Dr. Hall lasted only about 5 minutes. She also offered that she did not recall Dr. Hall using any measuring device to determine her right shoulder range of motion. She volunteered that she recalled at her last IME with me that she remembered having done so (about 3 yrs. ago) but really did not think that Dr. Hall had taken specific measurements at the Division IME (2 months ago). (Ex. C, pp. 12-13).

21. On physical examination Dr. Ridings found Claimant's upper extremity reflexes were 2 plus and symmetric, strength was 5/5, sensation to pin prick was intact. Structurally, although Claimant had some tenderness to palpation she did not have a painful ark, Hawkins Impingement maneuver was negative and right shoulder range of motion was fluid.

22. Based upon Dr. Ridings measurements at his IME on that date Claimant had a 7% impairment of the right upper extremity. He opined that this should remain a scheduled impairment rating only. Dr. Ridings prepared a range of motion worksheet in support of his findings. (Ex. C, p. 15).

23. With regard to Dr. Hall's addition of a 5% impairment rating for "acromioplasty," Dr. Ridings noted:

> The Division examiner in this case assigned an additional 5% impairment in addition to the range of motion impairment (which he found to be somewhat less, as 5% of the right upper extremity) for **"acromioplasty",** which is shaving off some of the underside of the acromion superior to the supraspinatus tendon. I do not recall ever seeing a rotator cuff repair surgery that also did not include this procedure as a routine part of the process. As taught in the Division of Workers' Compensation Level II Reaccreditation Courses, and as discussed in Desk Aid No. 11-Impairment Rating Tips, Page 7, routine rotator cuff arthroscopic surgery is rated simply based on range of motion impairment. The AMA Guides, Third Edition Revised include consideration of expected residual

> symptoms at a joint and assigned a certain percentage impairment for a certain degree of range of motion loss. As it says in the Impairment Rating Tips on Page 7 the "AMA Guides Fourth and Fifth Additions continue to suggest that **subacromial arthroplasty** should be rated using ROM, and when appropriate "joint crepitation with motion" from the "Other Disorders" section. In general, when any additional rating for subacromial arthroplasty is deemed appropriate in a case with or without crepitus because …**other factors** have not adequately rated the extent of the impairment it should not exceed 10%." (Ex. C, p. 14) (emphasis added).

24. Dr. Ridings explained that Dr. Hall did not make any argument in his DIME report why, in this case, Claimant should have any additional impairment beyond the decreased range of motion, instead simply noting that she had an acromioplasty. Dr. Ridings further opined in this case the Claimant had a typical outcome for a rotator cuff repair surgery and successfully returned to her previous job with the ability to lift 50 pounds. Given the absence of unusual circumstances indicating a worse than typical outcome, the Division Examiner is in error in assigning an additional 5%.

25. At hearing, Dr. Ridings was offered and accepted as a medical expert in physical medicine and rehabilitation with education, training and experience to examine, diagnosis and treat patients who have shoulder injuries. In addition, Dr. Ridings has been Level II Accredited since 1997.

26. Dr. Ridings opined that undergoing an acromioplasty does not cause increased functional limitation. Dr. Ridings further testified an acromioplasty does not cause permanent medical impairment.

27. Dr. Ridings testified that undergoing an acromioplasty is not ratable pursuant to the AMA Guides Evaluation of Permanent Medical Impairment Third Edition Revised. Dr. Ridings explained, as the whole purpose of the acromioplasty is to improve function and as part of that improved range of motion its purpose is to decrease not increase impairment.

28. Dr. Ridings reviewed Dr. Hall's report, and his deposition testimony. Dr. Ridings opined that Dr. Hall's citation to the AMA Guides Page 48, Section 3.1(j) as support for providing the additional 5% for the acromioplasty was in error. Not only did Dr. Hall not provide documentation justifying application for the additional 5% rating, his [Dr. Hall's] own physical examination did not support providing an additional 5% for the acromioplasty.

29. Dr. Ridings explained that Dr. Hall's attempt to use increased myofascial tone as justification was erroneous. So to, were complaints of pain.

30. At hearing, and without objection, Dr. Ridings testified-consistent with his IME report-that Claimant told him about the five-minute DIME with Dr. Hall, and her lack of recall of any formal range of motion testing.

31. Dr. Hall was deposed on October 23, 2018. Dr. Hall had read Dr. Ridings' second IME report, and when asked why he disagreed with it, he stated:

> A. Because I didn't think the range of motion impairment, in and of itself, completely described her impairment…..And the point of adding this five percent, even though we do it under this heading of acromioplasty, it's generally given when the rating does not adequately relate the extent of the impairment….." So I thought she deserved additional impairment due to those additional problems around the shoulder girdle.
>
> And it is the case that she did have acromioplasty. I mean, one can argue what exactly that means, but either way, I felt she deserved more than just a range of motion impairment, because her only problem was not range of motion. She also had this *pain* around the shoulder girdle that was *impairing*, as well. (Hall depo, pp. 6-7) (emphasis added).

32. Dr. Hall later clarified that he was referring not to the 3rd Edition of the AMA guidelines directly, but to **page 7 of the Impairment Rating Tips** issued in connection therewith (Hall depo. Pp. 9-10) (emphasis added).

> In general, when any additional rating for *subacromial arthroplasty* is deemed appropriate in a case *with or without crepitus* because, quote, **other factors** have not adequately rated the extent of the impairment, end quote, it should not exceed ten percent. (Hall depo, p. 10) (emphasis added).

33. When asked if Claimant's rating should be as an extremity or whole person, Dr. Hall stated:

> You know, I didn't get any report of neck symptoms. She does have some periscapular pain, but I don't—I mean, I don't see why this would necessarily be converted to whole person. No, I think it's essentially an extremity rating. (Hall depo, pp. 7-8).

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is

that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion). In this instance, the ALJ finds that both Dr. Hall (through his deposition testimony and DIME report) and Dr. Ridings (through his hearing testimony and IME report) are sincere, credible, and professional. In the end, they simply have certain differences in medical opinions, which the ALJ must resolve.

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Burden of Proof

D. The findings of a DIME physician concerning the Claimant's medical impairment rating shall be overcome by clear and convincing evidence. *Qual-Med., Inc. v. ICAO,* 134 P.3rd 475, 482 (Colo. App. 1998). However, the heightened burden does not apply to scheduled injuries. *Maestas v. American* Furniture *Warehouse,* WC 4-662-369, 2007 (ICAO 2007). While not an issue formally endorsed for hearing, the ALJ, therefore, must still determine whether Claimant's injuries will remain scheduled, or converted to the whole person. Only then can the ALJ determine the deference to be given the DIME opinion, and thus apply the proper burden of proof.

E. In resolving whether Claimant sustained a "loss of an arm at the shoulder" within the meaning of 8-42-107(2)(a) or a whole person impairment under 8-42-107(8), the trier of fact must determine the situs of the functional impairment which is not necessarily the location of the injury. *See Newsome v. King Soopers,* W.C. 4-941-297-02 (October 14, 2016). In this instance, Claimant did not testify. Dr. Pak's records, with the exceptions noted, are not in evidence. Dr. Ridings opined that this injury should be scheduled, and not converted. By his deposition testimony, Dr. Hall concurred. Based

upon the record, the ALJ concludes that there is insufficient evidence to convert Claimant's shoulder injury to the whole person; thus Claimant bears the burden of proof, by a preponderance of the evidence, to show entitlement to her impairment rating.

Range of Motion

F. Respondents urge that Dr. Pak's range of motion figures be accepted. In this case, Dr. Pak assigned a 4% range of motion rating to Claimant's shoulder after the revision surgery. However, neither Dr. Pak's worksheet, nor his narrative report are in evidence when he placed Claimant at MMI following the *revision* surgery. The range of motion worksheet following the *initial* surgery (Ex. A, pp. 2-4) (6% extremity) is of little value herein. The ALJ simply cannot rely upon the 4% figure, without evidence in support. Thus, the ALJ must compare Dr. Hall's range of motion to that of Dr. Ridings, both of which are supported by their respective worksheets.

G. Dr. Ridings conducted his second IME with Claimant on 9/10/18. In his narrative report, Dr. Ridings notes that Claimant told him that Dr. Hall spent only "about five minutes" with her during her entire DIME exam. Further, that she told Dr. Ridings that she does not recall Dr. Hall using any measuring device during the DIME exam to measure her range of motion. Dr. Ridings testified at hearing, without objection, to essentially the same two things.

H. The ALJ makes the following observations. First, Dr. Ridings accurately recorded, and then truthfully testified, about what Claimant told him during his IME. Secondly, Claimant's statements to Dr. Ridings as noted in his narrative are admissible, as being an integral part of his *medical report*. Third, Dr. Ridings' *testimony* in this regard drew no objection. If objected to, Claimant's statements to Dr. Ridings would not have been admissible as a "Declaration against Interest", under C.R.E. 804(b)(3), since Claimant was legally 'available' to testify. Interestingly, Claimant would not have known *at that moment* that her statements were *against her own interest*-in fact, Dr. Ridings eventually produced a more generous range of motion rating than did Dr. Hall.

I. Nonetheless, under a broad reading of C.R.E. 801(d)(2), such statements would be admitted as "non-hearsay"- despite the wording of the caption of this Rule ostensibly labelling such statements as "Admissions" by a party-opponent. Such statement was hardly an "admission," since, as noted, Claimant had no understanding of the possible effect of her "admissions" on these proceedings. However, the text of this Rule is more broadly written, and Claimant is plainly a "party-opponent".

J. While her statements are thus admitted, Claimant was not called by either side to clarify what she may have actually meant, nor her degree of certainty of her recall of the DIME exam. As such, the ALJ places comparatively little weight to what Claimant told Dr. Ridings about the DIME exam. It is further noted that Claimant's statements to Dr. Ridings were known by both parties at the time Dr. Hall was deposed on 10/23/18, yet Dr. Hall himself was not asked about the "five-minute DIME" by either party.

K. Nonetheless, the ALJ must choose. Due to the aforementioned issues, and the fact that Dr. Ridings' measurements were actually taken later in time, the ALJ will adopt Dr. Ridings' range of motion figures of 7% upper right extremity, not converted to the whole person, and with no apportionment.

Dr. Hall's Assignment of an Additional 5% Rating, Under the Ratings Tips

L. Dr. Hall's DIME report, standing alone, simply states that Claimant had an acromioplasty, for which he added an additional 5% to the 5% range of motion, for a total of 10%. His report does nothing further to justify this additional 5%, beyond the fact of the surgery itself. Had Dr. Hall not testified, this would have been inadequate to assign this additional 5%. The Desk Aid #11, Impairment Rating Tips (for which the ALJ takes administrative notice), however, was referenced by Dr. Hall in his deposition. During his deposition, Dr. Hall then clarified that he was supplying the additional 5% for shoulder *pain*- an *"other factor"* beyond the fact of the surgery itself. The pertinent part of the Rating Tips, reads, in pertinent part:

> The AMA Guides 4th and 5th Editions continue to suggest that subacromial **arthroplasty** should be rated using ROM, and *when appropriate*, 'joint crepitation with motion' from the "Other Disorders" section. In general, when any additional rating for subacromial arthroplasty is deemed appropriate in a case **with <u>or without</u> crepitus** because "…**other factors** have not adequately rated the extent of the impairment," it should not exceed 10%. (AMA Guides 3rd Edition (rev.) p. 48). (Desk Aid #1, Ratings Tips, p. 7) (emphasis added).

M. Parsing the above language, it appears that the Tips contemplate that there can be "other factors" *besides crepitus* which, if articulated, can justify an additional rating *of up* to 10%. It appears to be a "catch-all", vesting discretion in the rating physician. Dr. Hall assigned 5%, on the basis of **pain** following these procedures. Respondents argue that pain, being subjective, is not ratable. However, in the context of these Rating Tips, there appears to be no such exclusion for pain. Had the authors intended to exclude pain, it would have been easy for them to so state. The ALJ concludes that Dr. Hall had sufficient discretion, under the Rating Tips, to assign the additional 5% for Claimant's pain.

N. However, to qualify for an additional impairment rating under these Tips, the above section contemplates that a **subacromial arthroplasty** has occurred. Dr. Pak's notes from his *revision* surgery do not appear to describe such a procedure. Dr. Pak's surgical notes from the *first procedure* are not in the record. However, the first procedure has been described by both Dr. Hall and Dr. Ridings as an **acromioplasty.** The term **arthroplasty** does not appear to be defined in the AMA Guidelines, 3rd Edition. However, the *<u>American Heritage Stedman's Medical Dictionary</u>* defines the term thusly:

> 1. The creation of an artificial joint. 2. The surgical restoration of the integrity and functional power of a joint.

O. This second definition of arthroplasty encompasses an acromioplasty. Dr. Ridings himself appears to concede this definitional point in his discussion, using acromioplasty and subacromial arthroplasty in the same context. Dr. Ridings' real issue is Dr. Hall's use of ***pain*** *as an "other factor" besides crepitus.* He reasons that there is no residual, ratable, impairment from this surgery beyond her diminished range of motion. He describes Claimant's current condition as an expected result of a routine rotator cuff repair.

P. However, once at MMI, one would not expect the patient to suffer ongoing pain. The point of the surgery is not merely to restore function; rather it is to alleviate the patient's *pain* as well. For whatever reason, even at MMI, Claimant still has pain-in apparent contrast to others similarly situated. For this reason, the ALJ does not concur with Dr. Ridings' interpretation of the Tips by excluding consideration for pain.

Q. For the foregoing reasons, the ALJ finds, by a preponderance of the evidence, that there is ample evidence in support of Dr. Hall's 5% additional impairment rating for pain in her right upper extremity.

ORDER

It is therefore Ordered that:

1. Claimant's Impairment Rating for her upper right extremity is 12%, not converted to whole person, and with no apportionment.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant prove an L4-S1 fusion performed by Dr. Jamrich on June 27, 2018 was reasonably necessary treatment for his admitted injury?

FINDINGS OF FACT

1. Claimant worked for Employer as an IT professional for approximately 12 years. He suffered an admitted injury to his low back on July 24, 2017 lifting a sixty-pound box of cable locks. He felt no symptoms immediately but developed numbness in his buttock approximately 20 minutes later. Shortly thereafter, he had severe pain. Claimant discussed the matter with his supervisor, who sent him home.

2. The pain intensified that night, so Claimant called Employer at 8:00 AM the next morning and explained he needed to see a doctor. Employer did not refer Claimant to a physician, but asked him if he had a doctor in mind. Claimant knew of Dr. Eric Jamrich, an orthopedic surgeon who had treated one of his colleagues, so he made an appointment with Dr. Jamrich for later that afternoon.

3. Claimant explained to Dr. Jamrich his symptoms began shortly after lifting the box at work, and quickly progressed to become "excruciating." He described stabbing pain in his low back, aching pain in his buttock, with numbness down the back of his left leg into his foot.[1] Dr. Jamrich observed Claimant was "clearly uncomfortable." The physical examination was challenging due to the severe pain, but Dr. Jamrich appreciated decreased sensation to light touch in the left foot and an "exquisitely positive" straight leg raise on the left. X-rays showed moderate degeneration at L5-S1 with no evidence of instability. Dr. Jamrich opined Claimant probably had a herniated disc "secondary to lifting a heavy item at work yesterday." He prescribed a Medrol Dosepak, a muscle relaxer, and ordered a lumbar MRI. He asked Claimant to return "as quickly as possible" after the MRI because of his severe symptoms. The report also noted Claimant was a ¼ pack-per-day smoker "for a couple of years."

4. Claimant had the lumbar MRI the next day. The radiologist interpreted it as showing a right-sided disc protrusion at L4-5 moderately compressing the right L5 nerve root.

5. Claimant followed up with Dr. Jamrich on July 27, 2017. Claimant was feeling "significantly better" after the Medrol Dosepak. Dr. Jamrich suggested they could

[1] The exact distribution of radicular symptoms is unclear, because the patient intake form references pain and numbness in the right leg and foot, but the accompanying pain diagram indicates symptoms going down the left leg. Dr. Castro suggested Dr. Jamrich's references to the left leg were typographical errors, which seems reasonably likely.

try another Dosepak or an epidural steroid injection. He also referred Claimant for four weeks of physical therapy.

6. On September 1, 2017, Claimant had a transforaminal lumbar ESI targeting the right L5 nerve root. The injection only helped for a few days.

7. The next documented appointment with Dr. Jamrich was on January 11, 2018. Claimant was "somewhat" improved since the initial treatment with the Medrol Dosepak but still having constant pain in his low back into his leg. He also reported numb toes on the right foot. After reviewing the x-rays and MRI again, Dr. Jamrich confusingly opined, "most of his problem seems to be coming from "a markedly degenerative disc [at L5-S1]."

8. Claimant started physical therapy on February 21, 2018. He reported numbness in his feet, generally worse on the right, and a "heavy feeling" in his hips and legs. Claimant attended five therapy sessions over the following several weeks without significant improvement.

9. A repeat MRI was done on February 21, 2018. Compared to the previous MRI, there was now a disc extrusion at L4-5, whereas it was previously a protrusion. There was severe right lateral recess stenosis and moderate canal stenosis at L4-5 and severe compression of the right L5 nerve root.

10. Claimant followed up with Dr. Jamrich to review the new MRI on March 27, 2018. Dr. Jamrich noted Claimant had tried physical therapy, a lumbar ESI, pain medications, and oral steroids with minimal relief. He opined Claimant had failed conservative care and recommended an L4-S1 decompression and fusion.

11. Insurer obtained a timely Rule 16 peer review with Dr. Peter Garcia, an orthopedic surgeon. Dr. Garcia recommended denying the surgery because did not believe conservative care had been adequately exhausted. Additionally, he saw no updated physical examination findings, and Claimant had not undergone a psychological evaluation as discussed in the MTGs.

12. On April 13, 2018, Dr. Jamrich requested reconsideration of the denial. Insurer obtained another orthopedic peer review, this time with Dr. James Cain. Dr. Jamrich and Dr. Cain discussed the surgery by telephone on April 17, 2018. Dr. Cain requested an "in-depth" physical and neurological examination and flexion-extension x-rays. Dr. Cain also requested Dr. Jamrich explain why a fusion was necessary as opposed to a decompression. Dr. Jamrich "agreed that the documentation presented at this time did not reach a level to support the medical necessity for a two-level lumbar fusion in a young individual." The surgery request was denied pending the additional evaluation.

13. Dr. Jamrich re-evaluated Claimant on April 19, 2018. Claimant described severe weakness and numbness in his right leg, significant back pain, and pain radiating down his right leg. Dr. Jamrich opined the distribution of symptoms corresponded to the L4 and L5 nerve roots. On examination, Claimant had no left-sided symptoms. On the right, strength was 4/5 in the EHL, 4-/5 in the tibialis anterior, and 4/5 in the quad. Straight

leg raise was positive at approximately 40° on the right, and the right patella tendon reflex was mildly decreased as compared to the left side. Dr. Jamrich reviewed the MRI and noted a central disc herniation at L4-5 and a far lateral herniation at L4-5 in contact with the L4 nerve root. He opined, "this is giving him a combination of both L4 and L5 symptoms. Although he has a far lateral protrusion on the left side at L5-S1, this is not symptomatic." The flexion-extension x-rays showed 5 mm of retrolisthesis at L4-5 with extension that resolved with flexion. Dr. Jamrich concluded,

> This is a patient who has not responded to conservative care. He has both L4 and L5 distribution symptoms from both a far lateral and a central disc herniation at the L4-5 level. He has instability of the L4-5 level. He has weakness in the quad to the tibialis anterior and the EHL with dysesthetic pain in both an L4 and L5 distribution. He has a positive straight leg raise in a seated position at 40°.
>
> [A]lthough he has changes at the L5-S1 level, these are not symptomatic at this point. For this reason, Work Comp will certainly not want to address these. At the L4-5 level, however, he has both instability and impingement of nerve roots centrally and foraminal only that can only be addressed with a fusion. Given the fact that we are only going to address one level, I suggested an anterior interbody fusion at L4-5.

14. Based on his re-evaluation of Claimant, Dr. Jamrich submitted another request for authorization of surgery, this time a fusion at L4-5 only. The request was denied based on Rule 16 peer review by Dr. Kimberly Terry, a neurosurgeon. Dr. Terry cited the following factors in denying the surgery: (1) the MRI identified no significant stenosis at L4-5;[2] (2) Dr. Jamrich did not submit the flexion-extension x-rays to verify the 5mm of retrolisthesis he observed; and (3) Claimant had not undergone a presurgical psychological assessment as required by the MTGs.

15. Rather than wait for the litigation process to play out, Claimant elected to have the surgery under his private health insurance. On June 27, 2018, Dr. Jamrich performed an anterior interbody fusion at L4-5.

16. Claimant enjoyed immediate and substantial relief after surgery, particularly regarding his leg symptoms. His tolerance for functional activities steadily improved through the date of the hearing. Although the fusion is still consolidating and it is too early to draw a definitive conclusion about the outcome, all current indicators show the surgery was successful.

17. Dr. Andrew Castro performed an IME at Respondents' request on October 22, 2018. Dr. Castro agreed Claimant probably herniated the disc at work. He also agreed surgery at L4-5 was reasonably necessary to treat the injury. But Dr. Castro opined a fusion was not warranted, and Claimant should have had a microdiscectomy and

[2] This rationale is inconsistent with the MRI addendum report, which described "severe right lateral recess stenosis and moderate canal stenosis at L4-5." Close inspection of Dr. Terry's report suggests she did not have the addendum report.

decompression instead. He described Claimant's situation as "a very routine presentation of a disc herniation with radiculopathy or nerve root symptoms." Dr. Castro opined there was no evidence of instability to warrant arthrodesis. He based that opinion on the MRI, which showed minimal fluid in the facet joints. Dr. Castro did not acknowledge or discuss the flexion-extension x-rays showing 5 mm of retrolisthesis with extension. He also noted Claimant's smoking as a contraindication to fusion. Dr. Castro stated Claimant's symptoms had "markedly improved" since surgery and opined he was probably at MMI.

18. Claimant's testimony at hearing was credible.

19. Claimant proved by a preponderance of the evidence the L4-5 lumbar fusion performed by Dr. Jamrich was reasonably necessary to cure and relieve the effects of his industrial injury.

CONCLUSIONS OF LAW

The respondents are liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997). Even if the respondents admit liability, they retain the right to dispute the relatedness of any particular treatment, and the mere occurrence of a compensable injury does not compel the ALJ to find that all subsequent medical treatment was caused by the industrial injury. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997); *McIntyre v. KI, LLC*, W.C. No. 4-805-040 (July 2, 2010). Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove that an injury directly and proximately caused the condition for which he seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The claimant must prove entitlement to medical benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally, for either claimant or respondents. Section 8-43-201.

The Director has adopted Medical Treatment Guidelines (MTGs) to advance the statutory mandate to assure the quick and efficient delivery of medical benefits to injured workers at a reasonable cost to employers. WCRP Rule 17, Exhibit 1 addresses treatment for low back injuries. As the arbiter of disputes regarding treatment, the ALJ may consider the MTGs as an evidentiary tool but is not bound by the MTGs when determining whether requested treatment is reasonably necessary or injury-related. Section 8-43-201(3); *Logiudice v. Siemans Westinghouse*, W.C. No. 4-665-873 (January 25, 2011).

As found, Claimant proved the L4-5 lumbar fusion performed by Dr. Jamrich was reasonably necessary. The evidence convincingly shows Claimant herniated his L4-5 disc at work on July 24, 2017. Although he initially responded to oral steroids, his condition worsened over the following nine months, with progressive neurological deficits and steady decline in his functional capacity. There is no persuasive evidence of any intervening cause, and the deterioration reflected the natural progression of the industrial

injury. There is no persuasive reason to expect additional therapy or other nonsurgical measures would have resolved Claimant's condition, and further delay could have resulted in permanent nerve damage. Indeed, the MTGs suggest patients with herniated discs and radiculopathy should undergo surgical decompression within six to twelve weeks after the injury. *See* Rule 17, Exhibit 1 § (G). Dr. Castro agreed surgery was reasonable but thought a fusion inappropriate because "there is no instability." Dr. Castro's opinion in that regard is not persuasive because he overlooked the flexion-extension x-rays showing 5mm of vertebral movement. The MTGs provide that 4mm of motion is a sufficient indication for fusion surgery. *See* Rule 17, Exhibit 1 § (G)(4). Although Claimant did not have a pre-surgical psychological assessment, there were no red flags suggesting psychological unfitness for surgery. In any event, the MTGs do not strictly require a pre-surgical psychological evaluation in cases involving spondylolisthesis with radiculopathy and neurologic signs. *See* Rule 17, Exhibit 1 § (G)(4)(e)(v). The most significant contraindication for arthrodesis was Claimant's smoking habit. But the MTGs only "recommend" cessation of smoking; they do not require it. Dr. Jamrich knew Claimant smoked but decided the surgery was appropriate anyway. On balance, the ALJ is persuaded the L4-5 fusion was consistent with the MTGs and reasonably necessary to cure and relieve the effects of Claimant's injury.

ORDER

It is therefore ordered that:

1. Insurer shall cover the cost of the June 27, 2018 L4-5 fusion surgery performed by Dr. Jamrich and all ancillary charges relating to the surgery.

2. All issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 8, 2019

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

- Did Claimant meet his burden of proof by a preponderance of the evidence that his AWW was higher than the admitted AWW?

- Did Respondents meet their burden of proof to establish Claimant willfully violated a safety rule adopted by Employer, allowing a 50% reduction of his indemnity benefits.

FINDINGS OF FACT

1. Claimant began working for Employer on June 12, 2017. He was employed as an Installed Product Specialist. Claimant was hired at a rate of $21.00 per hour.[1]

2. Claimant was referred for this position by Rob G_____, with whom he had worked at a company called ICI. Mr. G_____ received a $450.00 referral bonus when Claimant was hired by Employer.

3. Claimant's wife, Jessica testified at the hearing. They have been married three years and together for a total of five years. She testified Claimant met Mr. G_____ while working at ICI. He applied to work for Employer for additional stability and security, as well as the benefits.

4. Claimant's wife testified she understood Claimant was entitled to a sign-on bonus after he completed the 90-day probationary period. Claimant's wife testified he worked overtime while he worked for Employer. It was her understanding Claimant was going to sign up for health insurance benefits before he was injured. Ms. B_____(Claimant's wife) also testified Claimant took some time off in July 2017 when his son was visiting, which was why he did not work full 40-hour work week. The ALJ credited that explanation.

5. Mr. G_____ testified as a witness on behalf of Employer and is employed as the production manager. He said he knew Claimant through his prior employment at ICI. Once he gave notice, Claimant contacted him to come work for Employer. Mr. G_____ testified Claimant was entitled to a sign-on bonus in the amount of $600.00. The ALJ inferred Mr. G_____ discussed a sign-on bonus with Claimant.

[1] Exhibit E, p. 37; Exhibit 10, p. 60.

6. Mr. G_____ testified Claimant was aware of the safety rule involving fall protection. This included the rule that workers were not allowed to unhook a safety harness while working at heights above 6 feet. Mr. G_____ attended the regular safety meetings, which occurred on Tuesday. The meetings lasted thirty (30) minutes and sometimes involved hands-on class participation involving a safety harness. The fall protection training included the rule that it was a violation of company policy to untie if you are working above six (6) feet. Mr. G_____ did not work at the Fort Lupton job site where Claimant was injured.

7. Mr. G_____ testified that the harness system has a two-part locking process. Neither of the two locks could accidentally unclip. To unlock this mechanism, an employee had to manually open the clipping mechanism.

8. Claimant's job description (Installed Product Specialist) required that he comply with Employer's safety policies. It specified Claimant was:

> **"Summary**
>
> …Responsible for observing and following all OSHA and Company Safety policies and procedures".
>
> Complying with safety rules was an essential function of this position, as follows:
>
> **"Essential Functions**
>
> Installs product per work order, manufacturer, quality and safety guidelines".[2]

9. Employer adopted a written safety policy, which established standards for fall protection. This document was entitled TrueTeam Standard and Guideline-Fall Protection Program. More particularly, there was a section entitled General Requirements that delineated when fall protection was required. That section provided in pertinent part:

> "Section 1—General Requirements
>
> **Program Overview**
>
> Some type of fall protection shall be employed anytime an employee is performing work from elevated heights and is exposed to a potential fall of six (6) feet or more in construction and four (4) feet or more manufacturing and warehousing. Employees who are exposed to any fall hazard from an impaling hazard, energized electrical hazard, exposed moving machinery parts, window, elevator, door or any other opening shall be protected from fall exposures four (4)

[2] Exhibit E, p. 67.

feet or more in all situations. In these situations, fall protection suitable to prevent injury shall be employed.

The following hierarchy shall be used when choosing methods to eliminate or control fall hazards:

1. **Elimination or substitution**--i.e. removal of the hazard

2. **Passive Fall Protection**--i.e. isolating or separating the hazard from the workers

3. **Fall Restraint**--i.e. preventing the person (CSS) from reaching fall hazard

4. **Fall Arrest**--i.e. attaching a person to system designed to stop a fall after it has started

Fall arrest systems may only be used when one of the three methods of fall prevention outlined are not feasible".[3]

10. The ALJ concluded Employer's fall protection program required methods to be employed to prevent falls when an employee worked at a height of 6 feet or higher in construction. This policy was in force at the job site where Claimant was injured.

11. Joshua W_____ is a division manager and testified on behalf of Employer. He oversees the day-to-day operations from production to the books. Claimant worked as part of Employer's infield production staff in Mr. W_____'s division. When Claimant was hired on June 12, 2017, it was for a full-time, forty hour per week position. Mr. W_____ testified employees could work overtime hours (depending on the project) and could put in a request for those hours.

12. Mr. W_____ testified Employer has safety guidelines and Claimant was responsible for following those guidelines. Claimant was advised of the safety guidelines, starting with the onboarding process. At the time of the onboarding, all types of safety related topics were discussed, including fall protection, PPE (personal protective equipment), scaffolding, ladder training, lift training and the like. Claimant would have received training on these subjects the first two days of his employment. Employer also holds weekly safety meetings. Mr. W_____ testified Claimant attended a safety meeting on fall protection after his initial training. As part of the training, he would have been taught not to clip while working at heights. A sign in sheet confirmed Claimant attended a meeting.

13. Mr. W_____ stated Claimant was required to use fall protection equipment while working on a roof. This included a full body harness, horizontal lifeline, along with a yo-yo and lanyard, which attaches to the backside of the equipment. The

[3] Exhibit F, pp.97-98.

horizontal lifeline is tied off to the anchorage point (on the building), which then hooks into the harness. Employees are required to use fall protection any time they are operating at heights above six (6) feet. An employee is allowed to unhook from the fall protection system once that employee is on the ground. If an employee is observed unhooking the harness while working at height by Mr. W_____ or a supervisor, that employee is taken from the job and disciplinary action would follow.

14. Mr. W_____ confirmed the fall protection safety plan which was in force on the Fort Lupton job where Claimant was injured.[4] Estaban C_____ was foreman on the job and was responsible for making sure the fall protection plan was implemented and the system installed. Mr. C_____ had 15 years of experience and was familiar with the system and how it was to be installed. Mr. C_____ was responsible for the job site where Claimant was working.

15. Mr. W_____ testified he would know if an employee would be entitled to a signing bonus and he would have to approve it as the division manager. He did not do that in this case. There was a referral bonus Mr. G_____ in the amount of $450.00. Mr. W_____ did not know what the retention bonus was.

16. Rose D_____ testified on behalf of Employer. Her position was Senior Manager of Human Resources Information Systems. In that capacity, she oversaw Employer's HR operations, including managing HR information system and benefits. Ms. D_____ testified there was no record Claimant was entitled to a sign-on bonus and if he was eligible for a sign-on bonus, this would have been included in the offer letter. If Claimant had been eligible for a sign-on bonus, the first half would be paid after three months of employment, the second half paid after six months of employment.

17. Ms. D_____ testified Claimant was eligible for employee benefits which included health, dental and vision insurance. There was also a short term disability/long term disability ("STD/LTD") plan in which employees were automatically enrolled at the beginning of their employment. Ms. D_____ confirmed Employer's benefits package included tuition reimbursement, EAP, flexible spending accounts and life insurance.

18. Ms. D_____ said employees were eligible to enroll in health insurance benefits any time during the initial 90-day period of employment. Ms. D_____ testified employees were required to make such an election within that period of time in order to secure coverage. Employer has an electronic system (ESS) on which employees can sign up for insurance. Ms. D_____ stated if the employee enrolled for health insurance coverage, the coverage would begin on the first day of the following month. If Claimant had signed up, his health insurance coverage would have been effective on October 1, 2017.

19. The deadline for Claimant to enroll for health insurance coverage was September 10, 2017. Ms. D_____ verified Claimant did not elect health insurance

[4] Exhibit G, p. 243.

within the first ninety (90) days of his employment and was not eligible for this benefit. He did not have vison or dental coverage. On cross-examination, Ms. D_____ was asked about two calls made by Claimant after midnight on September 11, 2017, which concerned a password reset. Ms. D_____ testified that was too late to sign up for insurance as this was past the September 10, 2017 deadline.

20. Claimant was enrolled in the STD/LTD policy when he began his employment.[5] Claimant made a contribution for that coverage in the first pay period in which he was eligible. Ms. D_____ testified that because he was not working after the 90-day period, this coverage was not in force, as the policy specified you had to be an active employee. The ALJ did not find this explanation credible. Although Ms. D_____ said Employer returned premiums to Claimant, the ALJ finds it is more probable than not that Claimant was covered by Employer's STD/LTD policy at the time of his accident by virtue of Employer's acceptance of the premiums. There was no evidence in the record whether employer paid some portion of the premiums related to this policy. There was also insufficient evidence for the ALJ to determine whether STD/LTD premiums should be included in Claimant's AWW.

21. Claimant participated in safety training while working for Employer and his training record was admitted into evidence. More particularly, he attended safety training on June 19, 2017. The subject was fall protection. Claimant also completed training on August 8, 2017 and the subjects were: fall protection, PPE and scaffolding training. The ALJ inferred Employer promulgated its safety policies and rules during the trainings Claimant attended.

22. Mr. C_____ worked for Employer as a foreman, a position he has held for two years. He has worked for Employer for a total of 17 years. As a foreman, he was responsible for reporting any issues with safety cables and the retractable cable. He was also responsible for making sure employees stay tied off throughout the day. He also set up the clamps that connect to the retractable cables, which attach to the main rafters. He set up the cable system and moved it as the job progressed. Mr. C_____ testified that if an employee was 6 feet or higher, that employee had to be tied off.

23. Claimant was injured on September 22, 2017 while working for Employer. He was working on a jobsite located in Fort Lupton, Colorado. Claimant was working at a height of anywhere from 24 to 30 feet and was unclipped from his safety harness when he fell.

24. Mr. C_____ was working with Claimant on the day of the accident. Jesus P_____ and Carlos R_____ were also working that day. Mr. C_____ stated they got to the roof by way of a scissor lift and had to hook into the fall protection system before untying from the scissor lift. They were putting insulation on the roof, which involved stacking rolls on the second rafter and then rolling out the insulation.

[5] The policy was not admitted into evidence at the hearing.

The insulation was installed between the purlins. The fall protection system was in place on the building and a horizontal safety line ran from one end, with the anchors were set on the main beams. Mr. C_____ testified that if an employee was more than six feet inside of an edge on this type of roof, that person did not have to be tied off.[6] The ALJ inferred Mr. C_____ believed there were some circumstances when employees could unhook from the safety harness, even when working above 6 feet.

25. Mr. C_____ had moved to set up a retractable line at a different location on the roof. He saw Claimant and Mr. P_____ walking over to the other part of the roof. Neither Mr. B_____ nor Mr. P_____ was hooked up.[7] Mr. C_____ did not see either unhook their harnesses. Mr. C_____ started cussing, asking them what they were doing, as they had unhooked from the retractable. He saw Claimant step on the insulation and fall.

26. Mr. P_____ testified at hearing. He has worked for Employer as an installer for eleven (11) years. At the time of the accident, he was working overtime hours and has continued to do so since then. He was helping Mr. C_____ run the rolls of insulation from one edge of the roof to the next. This took approximately hour and a half and he was clipped in while he was working. Once they were finished running the rolls, they would get on top of the roof and help everybody else run the overlays.

27. Mr. P_____ testified he unclipped his harness when he walked across with Claimant. He was the first to walk across and both of them unhooked from the horizontal line to walk along the edge of the building. Mr. P_____ stated walking across the roof and near the edge while unhooked was a violation of company policy. He was aware of the company policy. Mr. P_____ testified they were supposed to be clipped in at all times. Mr. C_____ did not tell him to stop walking across after he unclipped. They had done it many times on that job. Mr. P_____ said there were not safety lines on the roof where they were located. He saw Claimant fall backwards.

28. Mr. P_____ stated they worked to install the overlay without being clipped in before September 22, 2017. Mr. P_____ testified he was never disciplined or reprimanded for unclipping his harness while working.[8] That included discipline imposed by Mr. C_____.

29. Mr. W_____ testified he was not aware that Mr. C_____, Mr. R_____, Claimant, and Mr. P_____ worked unclipped from the fall protection system. If he had received notice from the manager that they were working unclipped, these employees would have been pulled from the job site and disciplined accordingly.

---

[6] Hearing Transcript Volume I ("Hrg. Tr. Vol. I"), p. 209:11-16.

[7] Hrg. Tr. Vol. I, p. 196: 6-11.

[8] Hrg. Tr. Vol. I, p. 270: 24-25.

If an employee was unclipped at high heights, that was a terminable offense, as this was one of the most dangerous things an employee can do in there in this industry. Mr. W_____ testified employees were encouraged to discuss the violations they witnessed.

30. There was no evidence in the record that Mr. W_____ disciplined employee(s) for unhooking safety harness while working at heights. Mr. C_____ testified he did not discipline employees for unhooking safety harnesses. Mr. P_____ was not disciplined for unhooking his harness on the jobsite on the date Claimant was injured. The ALJ found these were examples of Employer not enforcing the fall protection safety policy.

31. Photographs of the accident site were admitted at hearing.[9] These showed the area where Claimant fell, including a section of the insulation that was open through which Claimant fell. The pictures also depicted the roof on the building, which was partially completed, as well as area where insulation had been laid between the perlins.

32. A drawing/reconstruction of the area where Claimant was also admitted at hearing. This depicted the area in which Claimant, Mr. P_____ and Mr. C_____ was working. There was an area of exposed insulation where Claimant fell.

33. There was no evidence that equipment failure, including the harness Claimant was wearing and the lanyard, was a cause of the accident.

34. On October 10, 2017, a General Admission of Liability ("GAL") was filed on behalf of Respondents, admitting for wage and medical benefits. The GAL admitted for an AWW of $813.27, which gave a TTD rate of $542.18. This GAL reduced Claimant's TTD benefits by 50% for a safety rule violation and these benefits have been paid at a rate of $271.09 per week.

35. An Employer’s First Report of Injury was completed on December 5, 2017. It stated Claimant was installing insulation when he fell.

36. An expert report prepared by David Glabe, PE, dated April 16, 2018 was admitted into evidence. His areas of specialty included fall protection, scaffolding, shoring, forming and construction engineering. Mr. Glabe, who is a structural engineer, was retained by Respondents and offered several opinions related to the subject accident. First, he concluded Employer complied with the applicable OSHA regulations regarding safe workplaces, training and fall protection. Mr. Glabe also concluded Claimant did not comply with applicable OSHA regulations; this failure to do so resulted in his accident and injuries. Third, Mr. Glabe concluded Employer provided effective fall arrest systems that not only complied with applicable OSHA regulations, but also provided Claimant with fall arrest protection for the work activity he was doing at the time of his fall.

[9] Exhibit 1.

37. Mr. Glabe testified as an expert in civil engineering, as well as fall protection safety and fall protection systems. Mr. Glabe opined the accident was caused when Claimant unhooked his lanyard from the safety line and he had no protection to either arrest the fall or restrain him from a fall. This was the cause of his injuries. Mr. Glabe concluded Employer complied with applicable OSHA regulations regarding safe workplaces, training and fall protection. This was based upon his knowledge and understanding of the OSHA standards and expectations that come out of those standards. He also reviewed Employer's training program for fall protection and stated Employer did a thorough job as far as written documentation. Employees knew they needed to use fall protection and there was training on the program.

38. Mr. Glabe testified that the fall protection system in place at the time of the Claimant's fault complied with OSHA regulations. The horizontal lifeline installed at the jobsite was the correct choice and retractable lanyards (also known as yo-yos) were also in use. These locked up to prevent any further fall. Fixed length lanyards were in use and connected directly to horizontal life line. Mr. Glabe stated the system in place would have work had it been used. He testified Claimant did not comply with section 5(b), which requires employees to comply with OSHA standards. Mr. Glabe opined it was Claimant's failure to use the system and hook into a lifeline which resulted in his non-arrested fall to the floor below.

39. David Johnson testified as an expert on behalf of Claimant. He was qualified as an expert in construction safety, OSHA compliance and general industry standards. His job duties/responsibilities over the past twenty-four years has included jobsite visits to inspect, audit and evaluate how workers are following policies/procedures and OSHA regulations. He prepared two reports, the first of which was preliminary (February 20, 2018) and detailed what records he needed to provide a more complete opinion. In the report dated May 3, 2018, Mr. Johnson concluded that this accident could have been prevented with proper planning, training and supervision at the site level. He opined no site specific fall protection plan was created for this site as required by company policy. He modified the first opinion in his report, noting that based upon the testimony of witnesses, Claimant was likely not going to use the ladder that was underneath the area where the fall occurred. He reaffirmed the second opinion, namely that the fall protection plan in place at the job site where Claimant was injured was not sufficient.

40. Mr. Johnson testified fall protection was in place at the roof structure, but opined it was not adequate. The horizontal lifeline system which was in place and installed was beneficial for the area of the roof where it was installed. However, it did not protect work being done in other areas of the building, which also needed fall protection. Mr. Johnson said that there should have been another horizontal lifeline for Claimant and Mr. P_____ to clip into once they got to the flat roof. He noted Mr. C_____ was secured by a 40-foot retractable lifeline and he was going to secure them to that, allowing the next worker to walk over using that lifeline. Mr. Johnson believed that was a reasonable plan for getting to the flat roof. However, there was no

place for the workers to connect at the flat roof. Even if Claimant had been able to tie off at the purlins, there were not anchor points he could have tied into, as he was wearing an 11-foot self-retracting life line.

41. Mr. Johnson testified there was not a specific fall protection plan in place that laid out the sequence of what was to occur when workers were moved around to different positions on the roof. Specifically, there was a gap in the fall protection in terms of what steps were going to be taken once the big rolls of insulation were rolled out. Mr. Johnson testified the gap in the fall protection and was present once the workers got nearer to the finished roof section. On cross-examination, Mr. Johnson agreed that a fall protection plan did not have to be in writing. He agreed Mr. C_____ was right in not yelling at Claimant and Mr. P_____. Mr. Johnson stated once they got to the stable portion of the roof, Mr. C_____ should have (as a competent person) stopped the work and required Claimant and Mr. P_____ go to the middle of the roof, as opposed to the edge. He should have talked with them and possibly installed an anchor point for them to tie off. Mr. Johnson opined that Mr. C_____ was not enforcing Employer's safety rules requiring fall protection. The ALJ noted this was borne out by the specific circumstances of Claimant's fall and credited this testimony.

42. Mr. Johnson was present for the testimony where Mr. P_____ related that he stayed at a particular location (Point E) for approximately five minutes. Mr. Johnson opined Mr. C_____ should have made sure that there was an adequate fall protection systems available throughout the work area. This was evidence to him of a lackadaisical attitude and complacency regarding fall protection on the project, as the employees were right near the edge of the roof and didn't tie off. Mr. C_____ was responsible for enforcing the plan. On cross-examination, Mr. Johnson agreed that if Claimant had remained at Point E and didn't unhook the harness, he would not have fallen. Mr. Johnson said Claimant would not have been able to stay hooked in while Mr. C_____ moved the horizontal lifeline system.

43. The ALJ finds the admitted AWW did not fairly compensate Claimant. Claimant proved he was entitled to a signing bonus in the amount of $600.00, which should be included in his AWW. Since Claimant worked for three months, the ALJ determined his AWW should be increased $50.00 per week, which was determined by dividing the amount of the signing bonus by 12 weeks.

44. Claimant's wages varied from week to week before his injury. In addition, the testimony of Claimant's wife led the ALJ to conclude that the weeks in July when Claimant took off to spend time with his son caused the calculation of AWW to be low. The ALJ found the calculation of Claimant's average weekly wage should include the total wages earned from July 23, 2017 through September 17, 2017, which included weeks in which Claimant worked overtime hours. Claimant's earnings during this 10 week period totaled $8,859.03. This gave an average of $885.90 earned per week.

45. Claimant failed to prove he was entitled to a higher average weekly wage based upon the value of health insurance benefits. The evidence showed that Claimant

did not sign up for health insurance within the specified period and was not covered under Employer's health insurance plan.

46. The ALJ was unable to determine whether Claimant's average weekly wage should be increased by the value of the STD/LTD benefits.

47. Employer adopted a safety policy which covered its workers who worked at a height above 6 feet, including Claimant. Employer's safety policy required any employee who worked at a height of above 6 feet required that employee to utilize some type of fall protection.

48. The ALJ finds Employer trained its employees on the fall protection safety policy and communicated its terms to employees, including Claimant. Claimant attended training sessions in which the safety policy that required workers to be connected to a harness while working at height was discussed. The ALJ inferred Claimant knew of the rule which prohibited unhooking the safety harness when he was working at heights 6 feet or above.

49. The ALJ was unable to conclude Claimant willfully violated the safety rule when he unhooked the safety harness on September 22, 2017, as there was evidence that a co-worker (Mr. P_____) also violated the safety rule at the same time. The ALJ was unable to determine Claimant's state of mind prior to the fall either directly or indirectly from the evidence.

50. Employer did not uniformly enforce the safety policy which required all employees to be hooked in while working at height.

51. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. (2016). The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). In the case at bench, the credibility of Employer's witnesses, as well as experts determined whether there was a willful violation of a safety rule.

AWW

§ 8-42-102(2), C.R.S. (2016) requires the ALJ to calculate Claimant's AWW based on the earnings at the time of injury as measured by the Claimant's monthly, weekly, daily, hourly or other earnings. This section establishes the so-called "default" method for calculating Claimant's AWW.

However, if for any reason, the ALJ determines the default method will not fairly calculate the AWW, § 8-42-102(3), C.R.S. (2016) affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. § 8-42-102(3), C.R.S. establishes the so-called "discretionary exception". *Benchmark/Elite, Inc. v. Simpson,* 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of Claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra; Avalanche Industries v. ICAO*, 166 P.3d 147 (Colo. App. 2007)

In *Campbell*, Claimant's initial injury occurred ten years before her deteriorating condition caused her to cease working. Her employer argued that her AWW should be based on the wages she earned at the time of her initial injury, rather than the higher wages she had earned through salary increases and promotions during the intervening years. The Colorado Court of Appeals determined that it would be "manifestly unjust to base Claimant's disability benefits in 1986 and 1989 on her substantially lower earnings in 1979", and determined that her AWW should be based upon the higher salary earned at the time her deteriorating condition caused her to stop working. *Campbell v. IBM Corp., supra,* 867 P.2d at 82. The rationale for the Court's decision was one of fairness and Justice Plank stated:

"The entire objective of wage calculation [under the Act] is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. Although [AWW] generally is determined from the employee's wage at the time of injury, if for any reason this general method will not render a fair computation of wages, the administrative tribunal has long been vested with discretionary authority to use an alternative method in determining a fair wage". *Campbell v. IBM Corp., supra,* 867 P.2d at 82.

Likewise, in *Pizza Hut v. ICAO*, 18 P.3d 867, (Colo. App. 2001), Claimant was injured while working as a delivery driver. He then obtained a second job at a hospital. Claimant concurrently held two jobs for a short period, then quit the delivery job. The

Colorado Court of Appeals affirmed the increase in Claimant's average weekly wage and reinforced the principle that the ALJ had discretion to calculate Claimant's wages based on earnings from a subsequent employer and not upon wages earned at the time of injury, as the former represented a fairer calculation of Claimant's AWW.

In the case at bench, there was a dispute whether Claimant was entitled to a signing bonus while working for Employer. Claimant argued his AWW should be increased by the amount related to the signing bonus. Respondents, relying on the testimony of Ms. D_____ and Mr. W_____ asserted there was no evidence Claimant was entitled to a signing bonus, as it was not referenced in the offer letter. (Findings of Fact 15-16). As found, Claimant was entitled to a higher AWW, as it was more probable than not he was to receive a signing bonus. (Finding of Fact 38). The ALJ credited the testimony of Ms. Burd, as well as Mr. G_____ on this subject. (Findings of Fact 4-5). The ALJ determined Claimant was entitled to a signing bonus and prorated the amount of that bonus over the first three months of his employment, thereby increasing the average wage by $50.00 per week.

Claimant further argued that his average weekly wage should be increased to include the value of fringe benefits to which he was entitled (health, dental, and STD/LTD). Including signing bonus with all other benefits he expected to receive, Claimant asserted his AWW should be increased to $1,422.23, the maximum benefit rate for 2017. Respondents averred Claimant's admitted average weekly wage was correct and fair reflection of what Claimant was earning at the time of his injury. Respondents noted the admitted AWW calculation was based on Claimant's total earnings during his time of employment, $11,395.83 earned in 14 weeks from June 12, 2017 to September 17, 2017, equals $813.27 per week. Respondents contended Claimant failed to prove an entitlement to a higher AWW based upon a signing bonus and various fringe benefits.

As found, Claimant did not enroll in Employer's health insurance plan within the time period for enrollment and therefore that cannot be included in the AWW. (Finding of Fact 45). Likewise, there was insufficient evidence which would allow the ALJ to determine whether the STD/LTD policy should be included in the AWW. (Findings of Fact 20, 46).

The ALJ determined the fairest assessment of Claimant's AWW was to consider his wages from July 23, 2017 through September 17, 2017. This accounted for weeks when Claimant took time off in July. This also included weeks when he worked less than 40 hours, along with those when he qualified for overtime. Claimant earned a total of $8,859.03 over those 10 weeks, which gives an AWW of $885.90 per week. When the sign-on bonus is included, Claimant's average weekly wage should be increased to $935.90 per week.

Willful Violation of a Safety Rule

Section 8-42-112(1)(b), C.R.S. governs the imposition of a penalty for a violation of a safety rule. That section provides for a 50 percent reduction in Claimant's

compensation when Respondents prove "the injury is caused by the employee's willful failure to obey any reasonable rule adopted by the employer for the safety of the employee". The question of whether the Respondents met their burden and proved a willful safety rule violation by a preponderance of the evidence is generally one of fact for determination by the ALJ. *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office,* 907 P.2d 715, 719 (Colo. App. 1995).

In *Lori's Family Dining*, Claimant was engaged in horseplay with co-employees, which escalated to an altercation. Claimant was injured when he fell and broke his arm. The employer prohibited horseplay and had warned employees against such conduct. Employer's policies required three written warnings before termination. The ALJ declined to impose a 50% penalty for a safety rule violation on the grounds that employer had not enforced safety rule, which was affirmed by the Industrial Claim Appeals Office. The Colorado Court of Appeals considered whether the denial of the penalty was appropriate under those circumstances. Justice Hume noted the most frequent ground for rejecting a penalty for violation of a safety rule was the "lack of enforcement of the rule or policy by an employer with knowledge of and acquiescence in its violation". The Court affirmed the ALJ's denial of the safety rule violation. *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office,* 907 P.2d at 719.

As a starting point, the ALJ concluded Employer adopted a written safety policy which was in force at the time Claimant was injured. (Finding of Fact 9). This policy was expressed in Employer's Fall Protection Program. The specific policy at issue was the Safety and Hazard Communication Program, which required employees to wear a harness when working at heights above six feet. (Findings of Fact 10, 47).

As determined in Findings of Fact 7-10, Employer took steps to insure its employees were informed of the policies and the safety rules were reinforced throughout their employment. The testimony of Mr. G_____ and Mr. W_____ established Claimant receive training, specifically Employer's fall protection rules. (Findings of Fact 6, 12). The ALJ concluded that Employer communicated the safety policies to Claimant, who underwent training on fall protection. (Finding of Fact 10). Claimant's completion of the safety training was established by Employer. The ALJ concluded (by both direct evidence and inferences) that Claimant was aware of the safety policy. (Finding of Fact 48). Therefore, Respondents proved there was a safety rule which was communicated to employees, including Claimant. That does not end the inquiry, however. The ALJ next considered whether Employer enforced the subject safety policy.

The ALJ concluded Employer had not enforced the safety rule. First, there was direct evidence in the form of witness testimony which established employees worked on the subject jobsite and unhooked the safety harnesses in violation of the policy. Mr. C_____, who was the supervisor of the job site confirmed he witnessed Claimant and Mr. P_____ unhook their safety harnesses. (Finding of Fact 25). Mr. P_____ testified he unhooked the safety harness and was not subject to discipline. (Finding of Fact 27.) Mr. P_____ testified he had unhooked several occasions at this job site.

This evidence was apposite to the ALJ's determination that Employer did not enforce the safety rule at all times.

As determined in Findings of Fact 13, 29-30, Employer witnesses testified that violations of the rule against unhooking a safety harness subjected employees to discipline, up to and including termination. The written terms of the fall protection policy also described the failure to follow it as a disciplinable offense. (Finding of Fact 9). However, the evidence showed Employer did not discipline employees who violated the rule against unhooking safety harnesses. No contrary evidence was introduced to refute this. There was no evidence any employee was disciplined for what occurred on the date when the Claimant was injured. (Findings of Fact 29-30). Thus, while the evidence before the ALJ proved Employer had an established policy, which was communicated to employees, the Employer acquiesced in the violations of the policy. This fits within *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office, supra*, and its progeny. Where an Employer does not enforce a safety rule it adopted, this denudes the safety rule of its force and effect. *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office,* 907 P.2d at 719. Under these circumstances, Respondents were not entitled to reduce Claimant's benefits for violation of the safety rule.

Second, there was dissonance between the written text of Employer's safety rule governing fall protection and its employees' understanding of the rule. As found, Employer's fall protection policy required any employee who worked at the height of 6 feet or above was required to wear protection at all times. (Findings of Fact 9-10). Employer management witnesses, Mr. G_____ and Mr. W_____ testified that wearing fall protection was required at all times when employees worked above 6 feet. (Findings of Fact 6, 13). These Employer witnesses uniformly testified it was a violation of the safety rule to unhook from the harness plan for working higher than 6 feet off the ground.

However, Mr. C_____, who supervised the jobsite where Claimant was injured, testified an employee could unhook the harness working on the roof, as long as the employee was more than 6 feet from any edge.[10] The ALJ noted Employer's written policy did not make such a distinction, but the fact that the supervisor at the jobsite thought there was such a distinction led the ALJ to find there was a divergence between the written policy and Mr. C_____'s understanding of the policy.

Third and finally, the ALJ was unable to conclude that Claimant's willful violation of the safety rule was the cause of the fall. Respondents were required to show Claimant's conduct was willful, that is; he knew the rule, then intentionally did what the rule prohibited. *Bennett Props. Co. v. Indus. Comm'n*, 165 Colo. 135, 140, 437 P.2d 548, 551 (1968). On this element, Respondents failed to meet their burden. As used in this statute, the word "willful" means "with deliberate intent", *City of Las Animas v. Maupin*, 804 P.2d 285, 286 (Colo. App. 1990) [citation omitted], or "the intentional doing

[10] Respondents' expert Glabe testified OSHA regulations refer to a warning line which is installed within 6 feet of the edge of the roof. A warning line has flags on it and is installed to inform workers some sort of fall protection system must be used. [Hrg. Tr. Vol. II, p. 73: 24-74:15].

of something either with the knowledge that it is likely to result in serious injury, or with a wanton and reckless disregard of its probable consequences". *Johnson v. Denver Tramway Corp.*, 115 Colo. 214, 222, 171 P.2d 410, 414 (1946) (emphasis omitted) [quoting 1 William R. Schneider, *The Law of Workmen's Compensation* § 282, at 876 (2d ed. 1932)].

Respondents argued, relying on the testimony of Messrs. W_____ , G_____ and Glade, that Claimant intended to unhook the safety harness because two physical actions were required to unhook the harness. Because Claimant attended training on the safety policy, Respondents asserted this knowledge, coupled with the physical action required to unhook the harness, led to the conclusion this was a willful violation of a safety rule. *Bennett Props. Co. v. Indus. Comm'n*, *supra,*165 Colo. 135; *Scott Triplett, v. Evergreen Builders, Inc. and St. Paul Fire and Marine Ins. Co.,* W. C. No. 4-576-463. (ICAO May 11, 2004). However, Respondents were required to show that Claimant's conduct in violating the safety rule was intentional, which required a deliberate decision on the part of Claimant. *Scott Triplett v. Evergreen Builders, Inc, and St. Paul Fire and Marine Ins. Co., supra.*

The ALJ found that while Claimant had knowledge of the safety rule, this did not necessarily prove his conduct was entirely volitional. (Finding of Fact 49). Given the fact that Mr. P_____ also concurrently violated the safety rule and there were no repercussions, Claimant may have thought unhooking the safety harness was allowed in limited circumstances. Under the facts present in this case, the ALJ was unable to determine Claimant's violation of the safety rule was willful. (Finding of Fact 29).

For these reasons, the ALJ determined Respondents failed to meet their burden of proof. Claimant did not willfully violate Respondent-Employer's fall protection safety rule and Respondents are required to pay the full amount of Claimant's TTD benefits.

ORDER

IT IS ORDERED:

1. Respondents failed to prove Claimant willfully violated a safety rule. Claimant is entitled to receive 100% of his indemnity benefits.

2. Respondents shall pay 100% of Claimant's indemnity benefits.

3. Claimant's AWW is increased to $935.90 per week. Claimant TTD benefits shall be paid at the rate of $623.93 per week

4. Respondents shall file an Amended GAL reflecting Claimant's higher AWW and for the full amount of TTD benefits.

5. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that on April 11, 2018 she suffered an injury to her left knee arising out of and in the course and scope of her employment.

2. If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that the left knee arthroscopy recommended by Dr. Kennan Vance is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the April 11, 2018 work injury.

STIPULATIONS

At hearing the parties stipulated to the following:

1. If the claimant proves a compensable injury, her average weekly wage (AWW) is $429.95.

2. If the claimant proves a compensable injury, she is entitled to temporary total disability (TTD) benefits for the period of April 12, 2018 through May 26, 2018.

3. If the claimant proves a compensable injury, she is entitled to temporary partial disability (TPD) benefits for the period of May 27, 2018 through June 9, 2018.

FINDINGS OF FACT

1. The claimant was employed with the employer as a hair stylist. When performing a haircut, the claimant would stand on a "cutting mat". The claimant testified that April 11, 2018, she was cutting a client's hair when she stepped off the cutting mat with her right foot and slipped on some hair trimmings. While she was slipping, the claimant attempted to catch herself and in doing so she twisted and hyperextended her left knee.

2. The claimant reported the incident to the employer and was referred to St. Mary's Occupational Health for treatment. Upon contacting St. Mary's Occupational Health, the claimant was able to schedule an appointment for April 12, 2018. In addition, the claimant was informed that if she wished to seek medical treatment prior to that appointment she could go to the emergency room (ER).

3. The claimant sought treatment at the ER at Community Hospital on April 11, 2018 and was seen by Amber Carpenter, PA. At that time, the claimant described the slipping incident and reported that she twisted her left knee and experienced immediate pain and swelling. Ms. Carpenter diagnosed a knee sprain and excused the

claimant from work for two days. While at Community Hospital, x-rays were taken of the claimant's left knee and showed unremarkable soft tissues and no fracture.

4. On April 12, 2018, the claimant was seen by James Harkreader, NP at St. Mary's Occupational Health. The claimant described the April 11, 2018 incident and stated that she stepped of the mat with her right foot, which slipped, and while trying to hold herself up, her left knee twisted and flexed. Again the claimant reported that she had immediate swelling. Mr. Harkreader diagnosed a knee sprain and recommended ice, elevation, and crutches.

5. The claimant returned to Mr. Harkreader on April 17, 2018 and reported continued left knee pain, swelling, and the feeling that her knee was unstable. Mr. Harkreader recommend a magnetic resonance image (MRI) of the claimant's left knee and referred the claimant to Dr. Kennan Vance for an orthopedic consultation.

6. An MRI of the claimant's knee was performed on April 24, 2018 and showed advanced focal chondromalacia in the inferior lateral facet of the patella with subchondral cystic changes with mild lateral patellar tilt. The MRI also showed degeneration and fraying of the root of the posterior horn of the medial meniscus with mild medial meniscal extrusion.

7. On April 26, 2018, the claimant was seen by Dr. Vance. At that time, the claimant described the April 11, 2018 incident and stated that her left knee twisted. Dr. Vance completed a physical examination and reviewed the MRI images and diagnosed a tear of the medial meniscus of the left knee with synovitis and chondromalacia. Dr. Vance recommended that the claimant undergo a left knee arthroscopy with possible meniscal root repair.

8. A request for authorization of the recommended surgery was sent to the respondents on April 27, 2018. On May 7, 2018, the respondents filed a Notice of Contest.

9. The medical records entered into evidence show that the claimant received treatment for left knee related issues in April 2017 and October 2017 while she was living in California. The claimant testified that she considered these prior incidents to be minor sprains. The claimant also testified that her failure to report these prior incidents to her medical providers related to this workers' compensation claim was an oversight.

10. On April 15, 2017, the claimant sought treatment for pain in her left knee and reported that on April 14, 2017 she hyperextended her left knee. The claimant was diagnosed with a sprain and possible micro tears. The claimant testified that the April 14, 2017 incident occurred when she was hiking and "stepped wrong", which resulted in pain. The claimant also testified that the left knee pain and swelling she experienced in April 2017 resolved and she was able to perform her normal job duties.

11. On October 8, 2017, the claimant felt a pop and pain in her left knee while jogging. As a result, she sought medical treatment. The medical record dated October 9, 2017 indicates that the claimant was "running downhill when all of the sudden she had left knee pain."

12. With regard to the October 2017 left knee incident, the claimant testified that she stepped off a curb while jogging and felt pain in her left knee. On October 19, 2017, the claimant was seen by her personal physician, Dr. Michael MacMurray, for a physical. At that time, the claimant reported left knee pain and Dr. MacMurray recommended an MRI and physical therapy. Although an MRI and physical therapy were recommended, the claimant did not pursue either of these treatments. The claimant testified that her left knee pain resolved and she did not miss work related to the October 2017 incident.

13. At the request of the respondents, on August 14, 2018, the claimant attended an independent medical examination (IME) with Dr. James Lindberg. In connection with the IME, Dr. Lindberg reviewed the claimant's medical records, obtained a history from the claimant, and completed a physical examination. In his IME report Dr. Lindberg opined that the recommended arthroscopy was not indicated. In support of this opinion Dr. Lindberg noted his belief that the claimant's descriptions of the April 11, 2018 incident were inconsistent. Dr. Lindberg also pointed to the claimant's prior knee injuries in 2017. Dr. Lindberg further opined that the claimant's symptoms were due to an old injury "that just had a re-exacerbation of it." In his IME report, Dr. Lindberg indicated that he contacted the radiologist regarding the April 24, 2018 MRI and discussed the imaging and the findings and "agreed that there is no medial meniscal tear." Dr. Lindberg's testimony at hearing was consisted with his written report.

14. Dr. Vance testified by deposition in this matter and reiterated his recommendation for the left knee arthroscopy. Dr. Vance testified that his diagnosis is a tear of the claimant's left medial meniscus root. In support of this diagnosis Dr. Vance testified that the claimant's mechanism of injury is consistent with a tear and the MRI showed increased signal in the root of the medial meniscus. In addition, Dr. Vance stated that the recommended surgery is reasonable and necessary to treat the claimant's symptoms.

15. The claimant credibly testified that the left knee symptoms she experienced in April 2017 and October 2017 are different than those symptoms she has had since the April 11, 2018 incident at work. The claimant testified that her current symptoms include pain and swelling in her left knee. In addition, she feels that her left knee is not stable and it "locks", "gives out", and "catches". The claimant testified that she would like to get the recommended left knee surgery.

16. The ALJ credits the medical records, the claimant's testimony, and the opinion of Dr. Vance over the contrary opinion of Dr. Lindberg. The ALJ finds that the claimant has demonstrated that it is more likely than not that on April 11, 2018 she suffered an injury to her left knee at work.

17. The ALJ credits the medical records, the claimant's testimony, and the opinion of Dr. Vance over the contrary opinion of Dr. Lindberg. The ALJ finds that that the claimant has demonstrated it is more likely than not that the surgery recommended by Dr. Vance is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the April 11, 2018 work injury. While the April 11, 2018 incident at work did not cause the claimant's torn meniscus, the slip and subsequent twisting of her left knee aggravated and accelerated the preexisting condition of the claimant's left knee, necessitating surgery.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2016).

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

5. As found, the claimant has demonstrated by a preponderance of the evidence that she suffered an injury to her left knee arising out of and in the course and scope of her employment on April 11, 2018. As found, the medical records, the claimant's testimony, and the opinion of Dr. Vance are credible and persuasive.

6. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

7. As found, the claimant has demonstrated by a preponderance of the evidence that the knee surgery recommended by Dr. Vance is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury. As found, the April 11, 2018 incident at work aggravated and accelerated the claimant's preexisting left knee condition, necessitating surgery. As found, the medical records, the claimant's testimony, and the opinion of Dr. Vance are credible and persuasive.

ORDER

It is therefore ordered:

1. The claimant suffered a compensable injury to her left knee.

2. The respondents shall pay for the left knee arthroscopy recommended by Dr. Vance, subject to the Colorado Medical Fee Schedule.

3. The ALJ adopts and stipulation of the parties regarding AWW, TTD, and TPD.

4. The respondents shall pay interest to the claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

STATE OF COLORADO
OFFICE OF ADMINISTRATIVE COURTS
Workers' Compensation No. 5-078-773

ISSUE

- Whether Claimant has proven, by a preponderance of the evidence, that he sustained both an "accident" and a resulting compensable "injury" to his left shoulder on April 26, 2018?

PROCEDURAL MATTERS

Respondents' and Claimant jointly submitted exhibits A-H without objection.

FINDINGS OF FACT

Claimant Alleges Incident at Work on April 26, 2018

1. Claimant testified that he worked as a water technician for Employer at a jobsite in Wyoming. He testified that at the time of the alleged injury Employer assigned him to stay at the jobsite in Wyoming for a period of two weeks.

2. Claimant testified that he sustained an injury to his left shoulder on April 26, 2018 when wind blew shut a heavy steel door of a diesel container. He testified that the door hit his left upper arm.

3. Claimant testified that the impact of the door against his shoulder caused his alleged work injury. Specifically, Claimant alleges that he sustained an acute rotator cuff tear because of this impact incident.

4. Claimant did not provide an adequate explanation of either (1) how a gust of wind would push a heavy steel door hard enough into his shoulder to cause an actual injury; or (2) how a simple impact incident to the shoulder could cause a rotator cuff tear.

5. Dr. Timothy O'Brien, a board certified orthopedic surgeon, performed an IME in this case. He testified by deposition that the mechanism of injury as described by Claimant would not result in an acute rotator cuff tear. Rather, the mechanism of injury more likely and at the most would cause a contusion/bruise to the outside/lateral aspect of the left arm. Dr. O'Brien explained that rotator cuff tears occur when the arm is positioned overhead, which was not the case here.

6. Dr. O'Brien further explained that with the mechanism of injury as described – a blow to the outside of the left arm – force would dissipate into the deltoid muscle rather than the rotator cuff. As a result, he testified that, even if Claimant had a pre-existing cuff tear, it would be very unlikely for the mechanism of injury as described to aggravate the tear.

Although Admittedly Trained To Report Injuries Immediately, Claimant Did Not Report the Alleged Injury for a Week

7. Claimant conceded that Employer provided instructions and bout how to report work injuries. Specifically, Employer requires that an employee timely report a potential work injury.

8. Despite his training, Claimant conceded he did not report a work injury to his employer until May 3, 2018, after returning to Denver from the Wyoming job site. As a result, he delayed reporting the alleged incident to Employer for a week.

Claimant Continues Heavy Lifting and Full Duties after Alleged Injury

9. Claimant continued to work at full duty after his alleged injury for a total of between three and six days. During this time, he conceded that he was able to perform his normal job duties and that he did not have help from other employees during this time.

10. Claimant explained that his job required heavy lifting of more than fifty pounds several times a day. Specifically, Claimant testified that he lifted chemical bags weighing at least fifty pounds three to four times a day after his alleged injury. He explained that he lifted the chemical bags from the ground to a height of approximately five feet to pour them into water containers.

11. Claimant also testified that he lifted and connected hoses two or three times per day, and that the hoses weighed in excess of fifty pounds.

12. Dr. O'Brien testified that Claimant's testimony was completely inconsistent with sustaining an acute work injury to his left. Dr. O'Brien testified that both acute rotator cuff tears and aggravations of rotator cuff tears are some of the "most disabling injuries we see" and that they are associated with "substantial weakness" and inability to lift the affected arm.

13. Dr. O'Brien specifically and persuasively testified that the likelihood Claimant would be able perform his full duties after an acute new tear, or an acute new-on-chronic tear, was almost zero percent. And that it would be almost impossible for Claimant to be able to continue to lift 50-pound objects and pull hoses with that injured extremity.

14. The ALJ finds and determines that Claimant's testimony that he was able to perform his full job duties, including heavy lifting of 50 pounds to a five foot height, is inconsistent with sustaining either an acute rotator cuff tear or an aggravation of a pre-existing tear. In so finding, the ALJ credits both Claimant's testimony regarding his job duties and Dr. O'Brien's testimony regarding Claimant's level of function.

Claimant Has Intervening Incident at Home Prior to Reporting the Injury or Seeking Medical Treatment for the First Time

15. After working three to six days after the alleged work injury, Claimant returned to his Denver home. Claimant still did not report a work injury or seek medical

care. Claimant did not provide a persuasive explanation of why he did not timely report the alleged work injury.

16. Claimant testified that after he returned to Denver (but prior to his hospital visit on May 2, 2018), he bumped his left shoulder when going down the stairs in his home. He testified that prior to this incident, he had pain that "bothered" him, but it was not so bad. After the incident in his home where his shoulder hit a wall, he had more pain.

17. After hitting his shoulder against the wall at home, Claimant sought medical care at the emergency room the next day, May 2. Claimant admittedly never reported a work injury or sought medical care before his home incident.

18. The hospital record from May 2, 2018 documents that, at admission, Claimant reported new pain in his left shoulder occurring the night prior. Specifically, he reported hitting a wall after walking down stairs and missing a step.

Claimant Reported a Work Incident Which Occurred a "Few Months Ago" at the Hospital

19. At the hospital, Claimant reported that he hit his arm on a steel door at work *a few months ago*. As a result, the initial medical record was inconsistent with an injury occurring a week prior at work as Claimant alleged.

20. Dr. O'Brien testified that the need for medical attention on May 2, 2018 appeared to be due to the incident occurring in Claimant's home. He based this opinion on the fact that the home incident required Claimant to obtain treatment within twenty-four hours of its occurrence. However, based on the hospital's triage history, the reported work injury occurred months earlier.

21. The ALJ finds and determines that the incident that occurred in Claimant's home motivated him to seek medical treatment on May 2, 2018.

22. As noted above, Claimant conceded that prior to the home incident, he was able to perform his regular job duties.

23. The ALJ finds and determines that this history further proves that Claimant's need for disability and lost wages is related to the home incident rather than the alleged work incident.

Initial Medical Record Inconsistent with an April 26, 2018 Injury

24. As noted above, Claimant went to St. Anthony's emergency room on May 2, 2018 after the incident in his home. The record documents that immediately prior to admission, Claimant sustained an injury to his left shoulder on his staircase at his house.

25. The history of illness taken by the hospital's triage nurse documents that a few months prior to admission Claimant hurt his left shoulder.

26. The ALJ infers that the history of present illness is inconsistent with the assertion of the need for medical treatment due to an alleged injury occurring on April 26, 2018. Specifically, the ALJ finds and determines that Claimant's report that he sustained an injury two months prior to admission would render the date of injury in early March 2018 rather than a week prior on April 26, 2018.

Claimant Finally Reports the Alleged Work Injury to the Employer after the Incident at Home and the ER Visit

27. Claimant eventually reported the alleged work injury to Employer after the incident at home and the hospital visit. Specifically, Claimant reported the alleged work injury on May 3, 2018 after having the incident at home and seeking medical care. Thus, Claimant did not report the alleged work injury for a week.

Claimant Fails to Disclose the Incident that Occurred at Home to His Treating Providers for the Work Injury

28. The ALJ finds that the medical record establishes that none of Claimant's medical providers documented the incident at Claimant's home and prompted him to seek medical treatment. Claimant failed to tell the workers' compensation providers about the home incident.

29. Claimant disclosed the home incident during litigation after it was clear that Respondents would obtain the emergency room records.

No Acute Findings on MRI Performed Less than Month after Alleged Injury

30. Claimant underwent a left shoulder MRI on May 21, 2018. The study established an irregular 2.5 cm full-thickness tear of the rotator cuff with retraction and edema, subscapularis tendinopathy without tear, partial tear/tendinopathy in the biceps with degenerative SLAP lesion, and an os acromiale with synchondrosis.

31. Dr. O'Brien reviewed the MRI scan and opined the radiographic findings were not acute. Rather, he testified that the findings were chronic and long-standing with greater than 99 percent assurance.

32. Specifically, Dr. O'Brien testified that the MRI's findings were chronic and long-standing due to the following:

- A complete absence of an accumulation of blood or fluid which is anticipated in any acute tear of muscle or tendon;
- The size of the tear – 2.5 centimeters – without bleeding suggests that the muscle has been malfunctioning for a long period of time;
- The AC joint had arthritis in it suggesting a long-standing problem; and

- The presence of retraction at the tear suggests a chronic pull of a muscle over time rather than an acute tear.

33. Dr. O'Brien additionally testified that the MRI is such a sensitive test that it would be able to pick up even a very minor tear (i.e. an acute aggravation of a pre-existing tear). He testified that the MRI did not show that such a minor tear occurred, because there was still no accumulation of blood or posttraumatic fluid that you would anticipate even with a minor tear.

34. The ALJ finds and determines that the MRI does not support a finding that Claimant sustained an acute rotator cuff tear or an acute aggravation of a pre-existing tear.

Claimant Failed to Establish a Compensable Injury on April 26, 2018

36. The ALJ finds and determines Claimant failed to meet his burden to establish he sustained an acute compensable injury on April 26, 2018. The ALJ finds and determines there is insufficient objective evidence to support a finding that the need for medical treatment or disability after the alleged incident causally related to an incident occurring on April 26, 2018. In so finding, the ALJ finds the initial emergency room record documenting an intervening home incident and the testimony of Dr. O'Brien regarding the emergency room record and MRI to be persuasive and credible.

37. The ALJ additionally finds and determines that Claimant presented insufficient evidence that any incident occurring on April 26, 2018 aggravated, accelerated, or combined with a pre-existing condition to cause the need for medical care or disability. In so finding, the ALJ finds the testimony of Dr. O'Brien regarding Claimant's MRI to be persuasive and credible.

CONCLUSIONS OF LAW

General Legal Principles

The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. § 8-40-102(1), C.R.S. A claimant in a workers' compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. § 8-43-201, C.R.S. A workers' compensation case is decided on the merits. *Id.*

The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936).

When determining credibility, the ALJ should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co.*, 57 P.2d at 1205.

The ALJ has found Claimant's testimony is not credible or consistent with the totality of the evidence. The ALJ weighs Claimant's testimony accordingly.

Claimant Failed to Prove a Work-Related Accident on April 26, 2018 that Resulted in a Compensable Injury

A compensable industrial accident is one that results in an injury requiring formal medical treatment or causing disability. As a result, there needs to be both an "accident" and compensable "injury" which requires the need for formal medical care. *Wherry v. City and Cty. of Denver*, W.C. No. 4-475-818 (I.C.A.O., March 7, 2002). The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990).

The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse*, 805 P.2d 1167; *see also Subsequent Injury Fund*, 793 P.2d 576. A work related injury is compensable if it "aggravates, accelerates, or combines with" a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse,* 805 P.2d at 1167*.*

As found, Claimant did not persuasively explain how wind could blow a heavy steel door into his shoulder to cause an injury. Claimant did not persuasively explain how an impact to the outside of his upper left arm could cause a rotator cuff tear.

The claimant's behavior immediately after the alleged incident including, but not limited to, not reporting the incident and continuing his full job tasks requiring heavy lifting to shoulder level, is inconsistent with the claimant sustaining a compensable injury on April 26, 2018. Although an "accident" may have potentially occurred, there was no resulting compensable "injury" requiring the need for medical treatment. Instead, the need for medical care only arose after the incident that claimant had at home.

The ALJ also finds significant the initial medical record of the emergency room where Claimant described the subsequent home injury and the alleged work incident was noted as taking place well before the reported injury date.

The ALJ specifically credits the opinions of Dr. O'Brien that the MRI revealed no acute radiographic abnormalities and that all of the radiographic findings where chronic and long-standing. Consequently, per the credible and persuasive report of Dr. O'Brien, there is insufficient evidence in the totality of the record that Claimant sustained an injury on April 26, 2018, that required medical treatment or disability. *Wherry*, W.C. No. 4-475-818. Claimant's claim for benefits related to an alleged April 26, 2018 incident is denied and dismissed.

Also as found, there is insufficient evidence in the medical records that any incident occurring on April 26, 2018 aggravated, accelerated, or combined with a pre-existing condition to cause the need for medical care or disability. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949). In so finding, the ALJ specifically credits the testimony of Dr. O'Brien that no radiographic findings on the MRI would suggest a new-on-chronic injury to the shoulder. Claimant's claim for benefits related to an alleged April 26, 2018 aggravation is denied and dismissed.

ORDER

1. Claimant failed to prove by a preponderance of the evidence that he sustained either an acute compensable injury or a compensable aggravation of a pre-existing condition during the course and scope of his employment with employer on April 26, 2018. Claimant's claim for medical treatment and Workers' Compensation benefits is denied and dismissed with prejudice.

Dated January 9, 2019

Administrative Law Judge
Office of Administrative COurts
1525 Sherman Street #400
Denver, CO 80203

If you are dissatisfied with the Judge's Order, you may file a Petition to Review the Order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the Order, as indicated on the certificate of mailing or service; otherwise, the Judge's Order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the Order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43- 301(2), C.R.S. (as amended, SB 09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a Petition to Review at http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUE

- Whether Claimant met his burden of proving by a preponderance of the evidence that his right shoulder labrum tear caused by the July 26, 2007 incident that injured his elbow?

FINDINGS OF FACT

1. Claimant suffered an injury to his right upper extremity on July 26, 2007.

2. On July 27, 2007, Claimant described the injury as occurring "when loading patient into the medic unit I felt a pop in my elbow and significant pain in my right elbow bicep area." Claimant testified at hearing that he personally entered this description into the Littleton Accident/Injury/Incident Report, and that it was true and accurate.

3. Claimant did not immediately seek treatment for his right upper extremity injury. Almost two weeks later on August 9, 2017, while attending a medical appointment for a left upper extremity injury, Claimant described to Sharon Walker, M.D., that while lifting a pram "he felt 2 pops in the right antecubital fossa [anterior elbow]. He got immediate bad pain in this area." There is no mention of a right shoulder injury or pain in Dr. Walker's report, and Claimant testified at hearing that he did not complain of right shoulder problems to Dr. Walker during the August 9, 2017 examination. Nor is there any indication in the medical record of any pain or injury proximal to the elbow. Consistent with the absence of any right shoulder injury, or even an injury proximal to the elbow, Claimant waived any physical examination of the right shoulder.

4. Claimant continued to work his regular job duties without complaints or restriction on the use of his right shoulder. According to Claimant's testimony, this included the active and strenuous use of his right shoulder.

5. Claimant returned for treatment of his right elbow only with Dr. Walker on October 16, 2017. Dr. Walker noted that the chief complaint was to his right elbow.

6. On December 29, 2017, Respondents filed a General Admission of Liability for the July 26, 2017 incident and authorized medical treatment to cure and relieve Claimant from the effects of the right elbow injury.

7. Dr. Walker did not diagnose a right shoulder injury until April 6, 2018, assessing a right shoulder strain, and ordering an MRI. The MRI report showed a labrum tear, "age unknown," and chronic arthrosis. After the MRI, Dr. Walker referred Claimant to Dr. Hatzidakis for "labral tear & arthritis." Respondents authorized this initial evaluation,

including the MRI. Respondents then sought a record review completed by Carlos Cebrian, M.D. on July 5, 2018, to address the causation of newly alleged shoulder injury. Thereafter, Respondents challenged the compensability of the shoulder injury.

8. Renne M. Charest, PA-C at Western Orthopedics evaluated Claimant on May 1, 2018. At that time, Claimant inaccurately, and inconsistent with the contemporaneous record, provided a history of experiencing "pain into his shoulder" on July 26, 2017. This inaccurate history repeats throughout Claimant's treatment at Western Orthopedics, including evaluations on June 28, 2018, noting "continuing right shoulder pain," August 23, 2018, describing "right shoulder pain since a work-related injury on July 26, 2017." This inaccurate history culminates in the operative report inaccurately assuming "an injury to his shoulder on July 26, 2017." To the extent any of the reports by medical professionals at Western Orthopedics express an opinion that the shoulder surgery related to the alleged July 26, 2017 incident, those opinions are unreliable because of the inaccurate history provided by Claimant.

9. Dr. Walker attempted to explain the absence of contemporaneous shoulder complaints by suggesting that Claimant had a high pain threshold. This explanation is lacking because Claimant complained of pain in the elbow immediately per his report to Littleton, and to Dr. Walker on August 9, 2017, without mentioning shoulder problem.

10. More compelling is Dr. Carlos Cebrian's opinion that the mechanism of the injury described by Claimant "would not have injured the shoulder labral at the same time as a distal biceps tendon rupture." Dr. Cebrian elaborated, noting that because the maximum force was at the elbow causing a tendon tear, there "would not have been simultaneous force of a significant level to the labrum to cause a SLAP tear in the shoulder." As Dr. Cebrian explained at his deposition:

> There would not have been sufficient force simultaneously at two opposite ends of the humerus at the distal end to tear the biceps and at the upper end to cause a labral tear. The biceps was probably torn with some extension when Mr. Goorman was dealing with a combative patient, which is how distal biceps typically tear, when there is a forceful extension at that joint. So, if the force is primarily at the elbow, there wouldn't have been the same level of significant force at the shoulder which would have caused the humeral head to pull out of the socket to cause a labral tear of an acute nature.

11. Dr. Cebrian additionally explained that the mechanism of injury Claimant described is not typically associated with labrum tears, stating that Claimant may have "had a mild traction pull on his arm, but not to the significant extent that would have caused a labral tear at the same time as a distal biceps tendon rupture."

12. Unlike Dr. Walker's opinion, Dr. Cebrian's opinion is consistent with the contemporaneous record indicating pain in the elbow, not the shoulder.

CONCLUSIONS OF LAW

The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. The Claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 592 P.2d 792, 800 (Colo. 1979). The facts in a worker's compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. A worker's compensation case is decided on its merits. Section 8-43-201, C.R.S. (2018).

The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engn'g, Inc. v. Indus. Claim Apps. Office*, 5 P.3d 385, 389 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline*, 57 P.2d 1205, 1209 (Colo. 1936) overruled in part on other grounds by *Lockwood v. Travelers Ins. Co*., 498 P.2d 947 (Colo. 1972).

The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The Claimant must prove a causal nexus between the claimed need for treatment and the work-related occupational disease or injury. *Singleton v. Kenya Corp.*, 961 P.2d 571 (Colo. App. 1998). Here, Claimant has failed to meet his burden of proof that the labrum tear is causally related to the July 26, 2017 incident. The contemporaneous report of the injury mentions only an elbow injury and elbow pain, without any mention of a shoulder injury or pain. This is shortly followed by Claimant's detailed description of an elbow injury and elbow pain to the Dr. Walker on August 9, 2017, again without any reference to a right shoulder injury or pain. These contemporaneous records recorded at the time of the injury and shortly thereafter are a reliable indication that the extent of the injury suffered by Claimant was limited to the elbow.

Moreover, in the context of Claimant's obligation to meet the burden of proof, the evidence fails to sufficiently explain the absence of shoulder complaints at the time of the injury. The MRI revealed a labrum tear of uncertain age. Dr. Walker's surmise that

Claimant has a high pain threshold does not adequately explain the repeated contemporaneous and detailed descriptions of an injury to, and pain in, the elbow but no reports of pain in the shoulder. The fact that Claimant continued to work full duty after July 26, 2017 using his shoulder for strenuous activities, and reported an elbow injury and pain, but did not report or complain of a shoulder injury is further undisputed evidence not refuted by Claimant by a preponderance of the evidence.

The medical opinions of Dr. Cebrian that (1) the contemporaneous medical record does not support a labrum tear, and (2) the mechanism of the injury would not cause the elbow injury and at the same time generate enough force (or traction) to tear the labrum are found credible and persuasive.

Overall, the medical opinion and factual evidence presented by Respondents outweigh the evidence supplied by Claimant. Claimant has failed to prove by a preponderance of the evidence that he suffered a shoulder labrum tear caused by the injury on July 26, 2017. Because Claimant has failed to establish a causal nexus between the incident and his shoulder complaints, the issue raised about medical payments is moot.

ORDER

Based on the foregoing findings of fact and conclusions of law, it is Ordered that the claim for benefits related to the alleged right shoulder condition are denied and dismissed.

Dated this 11th day of January 2019.

/s/ Kimberly Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman, #400
Denver, CO 80203

If you are dissatisfied with the Judge's Order, you may file a Petition to Review the Order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the Order, as indicated on the certificate of mailing or service; otherwise, the Judge's Order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the Order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43- 301(2), C.R.S. (as amended, SB 09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a Petition to Review at http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

The issue raised at hearing involves Claimant's entitlement to additional medical benefits. The questions answered by this decision are:

I. Whether Claimant's claim is closed by virtue of his failure to object to a December 10, 2014 final admission of liability (FAL).

II. If the claim is closed, whether Claimant established, by a preponderance of the evidence, that he is entitled to reopen it based on an alleged worsening of condition or whether Claimant is barred from reopening the claim pursuant to the two-year statute of limitations enumerated at C.R.S. § 8-43-303(2)(b).

III. Whether Claimant's need for L3-4 epidural injections as recommended by Dr. Vikas Patel is reasonable, necessary and related to this 2010 industrial injury.

Because the ALJ is convinced, based upon the evidence presented, that Claimant's need for injections at L3-4 is probably unrelated to his May 4, 2010 industrial injury, this order does not address Respondents' assertions that his claim is closed (for failure to object to a final admission of liability) or that Claimant is prevented from seeking additional medical benefits because the pertinent statute of limitations enumerated at C.R.S. § 8-43-303(2)(b) has run.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

Issue and Background

1. The threshold issue in this case is whether Claimant's need for epidural injections at L3-4 are causally related to his May 5, 2010 industrial injury based upon the assertion that a prior work-related surgical fusion at L4-5 caused adjacent segment disease or alternatively that that fusion accelerated Claimant's pre-existing spinal/disc degeneration sufficient to cause the L3-4 level to become symptomatic and require treatment in the form of said injections.

2. Based upon the complexity of the issue presented, the passage of time, and an intervening and complex medical history, the following additional background is necessary to completely appreciate the nature of the parties' dispute:

- Claimant injured his low back in a work related incident on May 4, 2010. At that time, Claimant "bent down to lift and maneuver a

heavy a light pole to change ballast. After manipulating the pole, Claimant stood up to turn and walk away at which time he experienced severe pain in his back causing him to fall to the ground.

- Claimant was subsequently evaluated by Dr. Rakesch Khosla on May 17, 2010. At that time, Claimant reported a bit of vacillating back pain over the last couple weeks. After additional work-up, including urinalysis to exclude the presence of kidney stones, Claimant was diagnosed with mechanical back pain and degenerative disk disease.

- X-rays of the lumbar spine obtained May 21, 2010 revealed degenerative changes in the thoracic and lumbar spine, including "some lateral bridging osteophytes, particularly at the superior endplate of L4 in addition to a 1-2 mm anterior subluxation of L4 on L5.

- An MRI of the lumbar spine was done on June 7, 2010, a few weeks after Claimant first sought treatment for his back from his primary care physician (PCP). This MRI included in its findings, disc desiccation from L2-S1, a bilobed disk bulge or mild protrusion with intraforaminal extension on the right at L3-4 causing "mild compromise of the neural foramen without definite L3 entrapment" along with a broad-based central disc bulge or mild protrusion and bilateral facet and ligamentum flavum hypertrophy at L4-5. This study also demonstrated the presence of bone edema in the posterior laminar arch on the left at L4 and the right L5 pedicle suggestive of advanced stress reaction at L4-5. Finally, the MRI revealed mild dextroscoliosis in upper mid lumbar region, which Dr. Patel explained is a rotational curvature of the spine.

- A First Report of Injury was filed and Respondent's admitted liability for Claimant's injury by way of a General Admission of Liability (GAL) filed August 31, 2010.

- Claimant would subsequently undertake substantial conservative treatment to cure and relieve him from the effects of his low back injury.

- An MRI of the lumbar spine was repeated on April 18, 2011. Findings from that MRI were similar to those revealed in the study dated June 7, 2010 with the interpreting radiologist noting that when technical differences were accounted for, he did not suspect significant change at L4-5. The L3-4 level according to this MRI demonstrated minor disc desiccation.

- Claimant was placed at maximum medical improvement (MMI) on March 5, 2012 by Dr. Richard Nanes with 20% whole person impairment. Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Nanes opinions concerning MMI and impairment on March 19, 2012. This admission admitted liability for reasonable, necessary and related medical treatment and/or medications after MMI.

- The claim was then voluntarily reopened by way of a GAL on June 12, 2012. Following the reopening, Claimant underwent an MRI of the lumbar spine which demonstrated a 1-2 mm increase in the subtle spondylolisthesis first noted on Claimant's April 18, 2011 MRI. Minor disc desiccation as previously noted by MRI dated April 18, 2011 was "unchanged". Claimant subsequently underwent an L4-5 fusion procedure with Dr. Stephen Shogan on November 28, 2012. Dr. Shogan performed the aforementioned procedure using an "Aspen Device".

- On January 11, 2013, x-ray imaging demonstrated a 6 mm anterolisthesis of L4 on L5 along with facet arthropathy and disc space narrowing.

- Repeat MRI of the lumbar spine with contrast enhancement performed March 25, 2013 revealed no detectable spondylolisthesis at L4-5; however, the was lateral disc bulging into the foramina greater on the left than right side without significant change on the left. The L3-4-disc level demonstrated "mild enhancement of the facet joints with minor disc bulging without stenosis or interval change.

- On June 20, 2013, flexion and extension x-rays were obtained demonstrating an "anterospondylolisthesis of L4 in relation to L5 measuring 7 mm. In extension anterospondylolisthesis measures 5 mm and during flexion anterospondylolisthesis measures 9 mm."

- On September 9, 2013 a CT myelogram of the lumbar spine was performed which revealed [m]oderate-severe central spinal stenosis and moderate bilateral foraminal narrowing at L4-5 secondary to a combination of degenerative disc disease, facet arthropathy, and degenerative listhesis". When this study was compared with an MRI performed November 14, 2012, it was felt that Claimant's central stenosis at this spinal level had progressed. At the L3-4 segment, the CT demonstrated degenerative changes including "mild concentric disc bulging and facet arthropathy causing mild central spinal stenosis with AP dimension of the thecal

sac measuring 9 mm".

- Claimant also underwent an electrodiagnostic (EMG) study on September 9, 2013, during which it was documented that he underwent low back surgery for severe pain and that while he initially appeared to recover "quite well", in the last few months before the EMG he had a recurrence of progressive and low back pain radiating down into the buttocks and posterior thighs. Claimant's EMG was interpreted as mildly abnormal with findings of chronic denervation.

- It was determined that Claimant's November 28, 2012 fusion procedure, as performed by Dr. Shogan, had failed and that a second, i.e. revision surgery would be necessary to correct a likely pseudoarthritis and achieve stability at the L4-5 spinal segment. Therefore, on March 3, 2014. Dr. Patel performed an L4-5 revision surgery utilizing a interbody cage device and pedicle screws and rods to correct Claimant's nonunion. Correct positioning of the pedicle screws and alignment of the remaining hardware placed during surgery was confirmed by x-ray imaging.

- On April 21, 2014, post-surgical x-rays demonstrated no evidence of hardware failure along with "moderate disc space narrowing and proliferative endplate degenerative changes . . . at the thoracolumbar junction".

- At his six-month postop appointment on September 2, 2014, Claimant reported being pleased with resolution of his leg pain. Nonetheless, he reported residual back pain. Consequently, x-rays were obtained which demonstrated that Claimant's L4-5 bone graft had not yet incorporated.

- Following post-surgical care Claimant was again placed at MMI with 19% permanent impairment by Dr. Nanes on November 26, 2014. Claimant returned to full unrestricted work duty.

- Respondents filed a FAL consistent with Dr. Nanes' opinions on December 10, 2014. The FAL also admitted to reasonable and necessary and related post MMI medical treatment and/or medications.

- On March 3, 2015, Claimant returned to Dr. Patel for a one-year postop follow-up. During this appointment, Claimant reported having pain with "strenuous activity" associated with work, twisting and cold weather but otherwise was doing well. X-rays were obtained. The imaging revealed no acute abnormality, postsurgical

changes at L4-5 with progressive incorporation of the bone graft and "[m]ultilevel degenerative disc disease in the lower thoracic spine and upper lumbar spine . . . without significant change".

- Due to persistent complaints of back pain, Claimant was referred by Dr. Nanes for yet another MRI. This MRI was completed August 12, 2015. Imaging addressed the entire lumbar spine segments from T-11 through S1. Regarding the L3-4 spinal segment, the MRI revealed a "mild broad based disc bulge and small posterior osteophytes which appear new, accompanied by bilateral facet joint degeneration producing mild central canal stenosis, moderate left neural foraminal stenosis, and mild right neural foraminal stenosis". Comparison was made with the MRI dated March 25, 2013. No comparison to the September 9, 2013 appears to have been done. As noted by report, the September 9, 2013 CT scan demonstrated degenerative changes including "mild concentric disc bulging and facet arthropathy causing mild central spinal stenosis with AP dimension of the thecal sac measuring 9 mm". Comparison of the reports from the September 9, 2013 CT scan and the August 12, 2015 MRI reveal the following consistencies: mild disc bulging and mild central canal stenosis.

- Claimant returned to Dr. Patel on August 18, 2015. During this appointment, Claimant reported increasing pain, similar to that he had pre-operatively. The August 12, 2015 MRI was reviewed and interpreted as demonstrating degeneration and disc herniation at L3-4. Aggressive conservative care, including core strengthening and PT was suggested along with a "bilateral transforaminal epidural steroid injection to assist with diagnosis and treatment of Claimant's L3-4-disc herniation.

- On September 15, 2015, Dr. Patel administered bilateral transforaminal epidural steroid injections at L3-4.

- On September 29, 2015, Claimant suffered an injury to his left knee after tripping over 4 by 4 blocks.

- On September 30, 2015, Claimant returned to Dr. Nanes for follow-up for his low back during which appointment he reported no benefit from the injections administered approximately two weeks prior.

- On February 5, 2016, Claimant underwent a left arthroscopic arthroplasty and loose body removal of the left knee with Dr. David Weinstein. Post-surgical care focused on the left knee without much attention paid to Claimant's low back throughout the balance

of 2016.

- On March 20, 2017, Claimant underwent additional MRI of the lumbar spine on the referral of his PCP. Comparison of the results of this MRI to the MRI dated August 12, 2015 were done. The L3-4 segment demonstrated broad based disc bulging, moderate-severe central canal narrowing and hypertrophic change causing moderate to severe bilateral neural foraminal stenosis. The impression provided was documented as "[p]rogressive disc and hypertrophic degenerative disc disease throughout the lumbar spine with varying degree of canal and foraminal narrowing.

- On May 9, 2017, Claimant returned to the medical offices of Dr. Patel for a follow-up visit. Claimant was evaluated by Nurse Practitioner (NP)Susan Estes. According to NP Estes, Claimant's fusion appeared to be healed but he had "adjacent level disc degeneration and stenosis at L3-4 and some facet arthritis below the fusion at L5-S1". She opined that disc degeneration and stenosis at L3-4 was "likely caused from the increased pressure that the L4-5 fusion has put on the L3-4 region". Dr. Patel felt that Claimant's symptoms were likely emanating from the L3-4 segment due to the stenosis present at this level. He recommended an epidural steroid injection to help "verify" this. Plans were made to have Claimant schedule bilateral injections through Kaiser to "keep his out of pocket cost down".

- The recommended injection was submitted to Insurer for authorization. The request was denied leading Claimant to file an Application for Hearing along with a Petition to Reopen based upon an alleged change of condition.

Claimant's Hearing Testimony

3. Claimant testified that he did not believe that he was at MMI on November 26, 2014 as opined by Dr. Nanes. This testimony is supported by Claimant's pain diagram completed November 26, 2014 at his MMI appointment whereon he noted that he had 2/10 pain in his low back 100% of the time. Claimant also testified that after MMI and his surgeries he "gradually started having more problems with his back".

Dr. Patel's Deposition Testimony

4. Dr. Patel by deposition on October 1, 2018. Dr. Patel is a fellowship trained orthopedic surgeon. He is currently Chief of Orthopedic Spine Surgery at Colorado University (CU) Medical Center. Dr. Patel has not seen Claimant since May 9, 2017. As noted, the evaluation on this date was performed by NP Estes.

5. Dr. Patel testified that it is not uncommon for patients who have undergone fusion procedures to develop adjacent level problems above or below the fusion.

6. As set forth above, it is Claimant's assertion that he suffers from adjacent segment disease. He argues that treatment, i.e. the epidural steroid injection is now needed at L3-4, adjacent (above) the L4-5 fusion because wear and tear caused by the fusion has degenerated and made symptomatic the L3-4 segmental level.

7. Dr. Patel testified that he believed that claimant required an transforaminal injection at L3-4 to assist in determining whether Claimant's pain was emanating from that level. Simply put, Dr. Patel noted that an L3-4 injection would help for diagnostic purposes.

8. Dr. Patel did not recall reviewing Claimant's June 7, 2010 MRI report. After reviewing the June 7, 2010 MRI report at deposition, Dr. Patel conceded that it demonstrated disc desiccation and a bilobed disc bulge, meaning that the disc at this spinal segment was bulging to two different directions prior to the L4-5 fusion.

9. Dr. Patel testified that it is difficult to predict when symptoms associated with adjacent level disease may manifest themselves. He noted that it can vary with some patients manifesting symptoms as early as six months while in others cases it could be as long as 20 years. He also testified that there is no easy way to know if the extra forces placed on an adjacent level by a fusion is "pushing something over the edge as opposed to the natural progression of [degenerative] disease." He said, "it's hard to know whether that was going to happen anyway or whether it was going to happen because of the increased stress that you put on that level because of the fusion surgery."

10. When asked if the findings noted on Claimant's 2010 MRI could produce symptoms emanating from L3-4 level by 2017, in the absence of the L4-5 fusion, Dr. Patel responded: ". . . yes, it is possible that he would have had symptoms at L3-4 without having had a fusion at L4-5". He also testified that he could not, simply by looking at the multiple imaging reports, opine that the findings noted on the 2017 MRI report represented the natural progression of degenerative change over time. However, Dr. Patel did agree with the general concept that over the course of eight years, it would be expected that a degenerative condition would worsen, testifying "[t]hat is the natural history of degenerative conditions, that they do slowly progress and slowly worsen."

11. Dr. Kathleen D'Angelo performed an independent medical examination (IME) at the request of respondents. As part of her IME Dr. D'Angelo completed an extensive review/summary of the existing medical records in addition to completing an interview and examination. Thereafter, Dr. D'Angelo authored a lengthy report dated January 6, 2018, in which she concludes that Claimant's current low back symptoms are not consistent with adjacent level disease and that his current need for treatment at L3-4 is not related to Claimant's L4-5 fusion and therefore, his May 4, 2010 industrial

injury.

12. Dr. D'Angelo testified in support of her opinions by deposition on October 24, 2018. Dr. D'Angelo is board certified in internal medicine and has been Level II Accredited through the Division of Workers' Compensation since 2001. Her medical practice is currently limited to occupational medicine.

13. As part of her Level II certification, Dr. D'Angelo testified that she studied and taught concepts for assessing causality in the field of workers' compensation.

14. Dr. D'Angelo reviewed a substantial number of the imaging reports associated with this case opining that, overtime, the reports demonstrate a "very clear progression of disc desiccation, bulging, and other degenerative changes, including facet joint abnormalities at L3-L4, as well as progressive disc desiccations at other levels". She testified further that is what would be expected with degenerative spine disease.

15. Dr. D'Angelo reiterated her opinion that Claimant's pattern of persistent and unremitting symptoms following his fusion surgery is not consistent with adjacent segment disease. Dr. D'Angelo cited studies of long term follow up after fusion surgery which showed that adjacent segment disease requires many years to develop, not months, as is the case here based upon the record supporting that Claimant's recurrence of pain occurred 6 months or less after his lumbar fusion at L4-5. Dr. D'Angelo noted that the natural history of osteoarthritis is for progression of findings on radiological studies and intermittent flares of pain. She opined that claimant's current complaints are related to the natural progression of the underlying degenerative condition of his spine. As stated Dr. Dr. D'Angelo: "[H]ere you have a gentleman with a preexisting disc protrusion with evidence of preexisting facet joint arthropathy at that level who now is presenting with diffuse disc desiccations, multiple profuse – protrusions…multiple levels at which you have ligamentous hypertrophy and facet joint arthropathy. I am not sure why we are saying, Oh, L3-L4 is different just because that is adjacent to the surgical site".

16. In her deposition, Dr. D'Angelo also addressed the proposed treatment at L3-4. She testified that Claimant's diffuse low back pain and leg pain rendered it difficult to determine what level or levels were causing his pain. She questioned whether the proposed injection would be diagnostic in this case leading her to opine that the Claimant "would be where he is right now with or without those surgeries, with or without that injury". The ALJ interprets this testimony to indicate that Dr. D'Angelo believes that Claimant's current symptoms are all related to the ongoing degenerative process present in Claimant's thoracic and lumbar spine.

17. Based upon careful review of Dr. Patel's deposition testimony, the ALJ finds a lack of evidence to support Claimant's suggestion that Dr. Patel espouses the opinion that Claimant's ongoing symptoms/need for treatment are related to adjacent level disease at L3-4 caused by the L4-5 fusion. Rather, the ALJ finds from the

deposition transcript that Dr. Patel agrees generally that adjacent level disease can develop in some patients who have undergone fusion after an indeterminate period of time. Moreover, while Claimant could have adjacent level disease, Dr. Patel was careful to note that there is "no easy" way to tell whether failure of an adjacent level is due to the forces applied on it from an adjacent fusion versus the natural progression of a pre-existing degenerative process. The content of his deposition also fails to persuade the ALJ that Dr. Patel addressed the question of whether Claimant's L4-5 fusion likely accelerated Claimant's pre-existing degenerative spine disease to cause the symptoms he suspects are emanating from L3-4.

18. In this case, Dr. Patel testified that if a patient gets good relief from an injection, then it can be implied that the area where the medication was administered is the probable source of the pain. Consequently, injections can be diagnostic in nature. As noted above, Claimant underwent bilateral transforaminal epidural injections at the L3-4 level on September 15, 2015 for symptoms similar to both which he was experiencing prior to his revision surgery and what he is currently reporting. The injection failed to result in any benefit and it was documented by Dr. Nanes on September 30, 2015 that Claimant was "still in about the same amount of low back pain as compared to [his] last visit". While a second injection was supported by Dr. Nanes, Claimant never followed-up for receipt of the same. Given Claimant's response to prior injections, the ALJ finds Dr. D'Angelo's skepticism about the efficacy of trying more, as well as her suspicion that Claimant's current pain may not be emanating from the L3-4 level persuasive. Indeed, Claimant reports diffuse pain and the imaging studies conclusively establish that he has degenerative disease at multiple levels of the thoracic and lumbar spines, any of which are probably contributing to his present symptoms. Moreover, even if Claimant's pain is emanating from the L3-4 level, Claimant failed to establish that his need for an epidural injection at L3-4 is causally related to his May 4, 2010 industrial injury. Consequently, his claim for additional medical treatment, in the form of repeat injections, must be denied and dismissed.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and

resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). While the ALJ is convinced that Claimant's reports of persistent low back pain are credible and the recommended treatment is reasonable and necessary, the medical evidence persuades the ALJ that the need for such treatment is not causally related to his May 4, 2010 industrial injury.

D. The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). To the extent, expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); see also, *Dow Chemical Co. v. Industrial Claim Appeals Office*, 843 P.2d 122 (Colo.App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary opinion). When considered in its totality, the ALJ concludes that the evidence in this case supports a reasonable inference/conclusion that Claimant suffers from progressive degenerative disc and spine disease, the natural progression of which has probably resulted in his current symptoms and need for treatment at L3-4. While it is true that Claimant underwent fusion at L4-5, the evidence that this fusion applied additional force and strain on the L3-4 level to cause adjacent level disease is not as persuasive as the evidence presented, primarily through Dr. D'Angelo, establishing that Claimant's pre-existing degenerative condition progressed naturally to cause symptoms at this level. Similarly, there is a dearth of evidence to suggest that the L-4-5 fusion accelerated Claimant's degenerative process to cause the L3-4 level to fail and require treatment.

Dr. Patel's recommended L3-4 Transforaminal Epidural Steroid Injections

E. The claimant in a workers' compensation claim bears the burden of establishing entitlement to medical treatment. *See Snyder v. Industrial Claim Appeals*

Office, 942 P.2d 1337 (Colo. App. 1997); *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). Once a claimant has established a compensable work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable and necessary medical care to cure and relieve the effects of the work injury. *Section 8-42-101, C.R.S.*; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo.App. 1990). However, a claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of the his/her need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949). Ongoing benefits may be denied if the current and ongoing need for medical treatment or disability is not proximately caused by an injury arising out of and in the course of the employment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). In other words, the mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability was caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those which flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970). As found here, Claimant has failed to establish, by a preponderance of the evidence, that his L4-5 fusion acted upon the L3-4 level to cause adjacent level disease or that this fusion aggravated/acceleration Claimant's degenerative disc/spine disease and that this aggravation/acceleration caused his need for medical treatment, including the recommended injections.

F. A pre-existing condition "does not disqualify a claimant from receiving workers' compensation benefits." *Duncan v. Indus. Claims Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). However, an employer is not liable for the natural progression of pre-existing conditions if a claimant's employment duties, or as in this case, a prior work-related injury does not aggravate, accelerate or combine with the pre-existing infirmity or disease to produce disability and/or the need for treatment. *See generally, H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990); Roberts v. Industrial Commission, 509 P.2d 1285 (Colo.App. 1973). Even temporary aggravations of pre-existing conditions may be compensable. *Eisnack v. Industrial Commission*, 633 P.2d 502 (Colo.App. 1981). Pain is a typical symptom from the aggravation of a pre-existing condition. Thus, a claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment–related activities or in this case by the side effects of treatment for a compensable injury and not the underlying pre-existing condition. *See Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 488 (1940).

G. As found in this case, the totality of the evidence presented persuades the ALJ that Claimant's current symptoms and need for treatment, specifically a L3-4 transforaminal epidural steroid injection is probably related to age, genetic predisposition and his long standing pre-existing progressive disc/spinal disease. While the ALJ is convinced that Claimant's need for the aforementioned injection is reasonable and necessary, the ALJ credits Dr. D'Angelo's opinions to conclude that Claimant's current need for L3-4 treatment is, more probably than not, related to the natural progression of his pre-existing degenerative spinal disc disease rather than an

industrial cause, including his prior L4-5 fusion surgery. Consequently, the ALJ concludes that Claimant has failed to prove that there is a causal connection between his May 4, 2010 industrial injury and the resulting condition for which he seeks medical treatment benefits. §8-43-201, C.R.S.; *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000). Accordingly, his request for treatment under this claim must be denied and dismissed.

ORDER

It is therefore ordered that:

1. Claimants claim for medical benefits, in the form of additional L3-4 injections is denied and dismissed.

2. The stay concerning Claimant's obligation to reimburse Respondents' out of pocket expenses associated with the untimely cancellation of Dr. D'Angelo's anticipated hearing testimony is hereby lifted. Claimant shall reimburse Pinnacol Assurance in accordance with the Colorado Workers' Compensation fee schedule for a total of eight (8) units of expert witness time as set aside by Dr. D'Angelo for hearing preparation and anticipated testimony.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 11, 2019

/s/ Richard M. Lamphere_____

Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

ISSUES

- Whether the claimant has demonstrated by a preponderance of the evidence that permanent placement of a spinal cord stimulator, as recommended by Dr. Edward Maurin, is reasonable medical treatment necessary to maintain the claimant at maximum medical improvement (MMI).

The parties agreed that the issue of reopening the claimant's claim would be held in abeyance, without prejudice.

FINDINGS OF FACT

1. The claimant was injured on October 16, 2012. At that time, the claimant was working for the employer as a driller. The injury occurred when the claimant stepped on some grease, which caused him to slip and fall onto his back. The claimant testified his knees, shoulders, and back were injured in the October 16, 2012 fall.

2. The claimant has had extensive medical treatment since the 2012 work injury. This treatment has included physical therapy; spinal injections; magnetic resonance imaging (MRI) of his left shoulder, cervical spine, lumbar spine, and left knee; surgeries to the claimant's left knee and left shoulder; a L5-S1 spinal fusion; and various pain medications, including opioids. During this claim the claimant's authorized treating physician (ATP) has been Dr. Randal Jernigan.

3. On March 3, 2014, Dr. Jernigan placed the claimant at maximum medical improvement (MMI). At that time, Dr. Jernigan assessed a whole person impairment of 36% and imposed permanent restrictions of no lifting over 40 pounds.

4. The claimant testified that since being placed at MMI, he has had increasing low back symptoms that include pain that radiates into his left leg. On April 6, 2015, Dr. Jernigan noted that the claimant was still experiencing back pain. On January 11 2016, Dr. Jernigan noted that the claimant was experiencing left leg sciatica that was impacting the claimant's ability to sleep.

5. On May 24, 2016, the claimant was seen at Spine Colorado by Dr. Douglas Orndorff to discuss whether additional spinal surgery would be warranted given the claimant's continued left sided radiculopathy. At that time, Dr. Orndorff assured the claimant that there was union of the spinal fusion. Dr. Orndorff did not recommend additional surgery for the claimant.

6. On June 14, 2016, Dr. Jernigan noted that the claimant continued to have very severe low back pain that was radiating into both legs with numbness and tingling. Subsequently, Dr. Jernigan referred the claimant for an additional neurology consultation at San Juan Regional Neurology. On August 23, 2016 and August 30,

2016, the claimant was seen at San Juan Regional Neurology by Dr. Karen LeComte. It was at these appointments that Dr. LeComte noted that the claimant's asymmetrical symptoms were not typical of lumbar sacral radiculopathy or spinal stenosis. Dr. LeComte recommended the claimant undergo a brain MRI to address the possibility of demyelinating disease (multiple sclerosis).

7. On August 31, 2016 the claimant sought treatment with Dr. Jernigan. However, Dr. Jernigan sent the claimant to the emergency department because the claimant was experiencing symptoms of facial droop and an inability to speak. On that same date, the claimant was treated at Mercy Regional Medical Center for these symptoms. The claimant was diagnosed with transient aphasia, likely related to anxiety. A brain MRI performed on that date was normal.

8. On February 8, 2018, Dr. Jernigan referred the claimant to Dr. Tashof Bernton for testing and evaluation for complex regional pain syndrome (CRPS). The claimant was seen by Dr. Bernton on February 26, 2018. After testing, Dr. Bernton noted in his report that the evaluation was negative for CRPS. Dr. Bernton noted a differential diagnosis of lumbar radiculopathy.

9. The claimant continued to complain of low back pain that radiated in to both legs. Subsequently, Dr. Jernigan referred the claimant to Dr. Edward Maurin for a neurology consultation. On May 8, 2018, the claimant was seen by Dr. Maurin and reported three years of low back pain and left leg symptoms. Dr. Maurin opined that the claimant has chronic pain syndrome and recommended a spinal cord stimulator (SCS) trial.

10. The recommended SCS trial began on July 12, 2018. Following the SCS trial, the claimant reported to Emily Godfrey, PA-C that during the trial his pain symptoms were improved by 50%. Following the success of the trial, Dr. Maurin recommended permanent placement of a SCS device.

11. The claimant testified that during the SCS trial he had a reduction in his pain symptoms. With that reduction is his pain, the claimant was more active, was able to be on his feet more, and walk further when compared to his function prior to the SCS trial. The claimant also testified that he slept better during the SCS trial and was able to reduce his use of pain medications. The claimant testified that he took only half of his normal dosage of pain medication, Nucynta, during the SCS trial.

12. The claimant testified that he would like to undergo the recommended permanent SCS placement because he believes that it will improve his pain management and allow him to wean off his pain medications.

13. Dr. Jernigan testified that he agrees with Dr. Maurin's recommendation for permanent placement of an SCS. Dr. Jernigan noted in his testimony that the claimant experienced a 50% improvement in his back pain and had better use of his legs. Dr. Jernigan also testified that a permanent SCS device would increase the claimant's function and reduce, or even eliminate, the claimant's need for pain medication.

14. On July 27, 2018, Dr. John Douthit performed a review of the claimant's medical records related to the recommended permanent placement of an SCS device. In his report, Dr. Douthit opined that the claimant's SCS trial was not a valid trial under the Colorado Medical Treatment Guidelines (the guidelines), which require a functional assessment both before and after the trial. Dr. Douthit noted that the claimant's reports of improved function were subjective. Therefore, Dr. Douthit recommended an additional SCS trial before consideration of permanent SCS placement. Following Dr. Douthit's report, the respondents denied authorization of permanent placement of an SCS device.

15. The ALJ credits the medical records and the testimony of the claimant regarding the claimant's symptoms and the results of the SCS trial. The ALJ also credits the opinions of Drs. Maurin and Jernigan over the contrary opinion of Dr. Douthit. The ALJ finds that the claimant experienced functional improvement during the SCS trial. The ALJ finds that the claimant has demonstrated that it is more likely than not that permanent placement of a SCS device is reasonable medical treatment necessary to maintain claimant at MMI.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2012).

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. The need for medical treatment may extend beyond the point of maximum medical improvement where claimant requires periodic maintenance care to prevent further deterioration of his physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1999); *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an order for future treatment if supported by substantial evidence of the need for such treatment. *Grover v. Industrial Commission*, *supra.*

6. The Colorado Workers' Compensation Medical Treatment Guidelines (the guidelines) are regarded as accepted professional standards for care under the Workers' Compensation Act. *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). The statement of purpose of the guidelines is as follows: "In an effort to comply with its legislative charge to assure appropriate medical care at a reasonable cost, the director of the Division has promulgated these 'Medical Treatment Guidelines.' This rule provides a system of evaluation and treatment guidelines for high cost or high frequency categories of occupational injury or disease to assure appropriate medical care at a reasonable cost." W.C.R.P. 17-1(A). W.C.R.P. 17-5(C) provides: "The treatment guidelines set forth care that is generally considered reasonable for most injured workers. However, the Division recognizes that reasonable medical practice may include deviations from these guidelines, as individual cases dictate."

7. While it is appropriate for an ALJ to consider the guidelines while weighing evidence, the Medical Treatment Guidelines are not definitive. *See Jones v. T.T.C. Illinois*, Inc., W.C. No. 4-503-150 (May 5, 2006); ***aff'd Jones v. Industrial Claim Appeals Office*** No. 06CA1053 (Colo. App. March 1, 2007) (not selected for publication) (it is appropriate for the ALJ to consider the guidelines on questions such as diagnosis, but the guidelines are not definitive); *see also Burchard v. Preferred Machining*, W.C. No. 4-652-824 (July 23, 2008) (declining to require application of medical treatment guidelines for carpal tunnel syndrome in determining issue of PTD); *see also Stamey v. C2 Utility Contractors et al*, W.C. No. 4-503-974 (August 21, 2008) (even if specific indications for a cervical surgery under the medical treatment guidelines were not shown to be present, ICAO was not persuaded that such a determination would be definitive)

8. As found, the claimant has demonstrated by a preponderance of the evidence that permanent placement of a spinal cord stimulator recommended by Dr. Maurin is reasonable medical treatment necessary to maintain claimant at MMI. As found, the medical records, the testimony of the claimant, and the opinions of Drs. Maurin and Jernigan are credible and persuasive.

ORDER

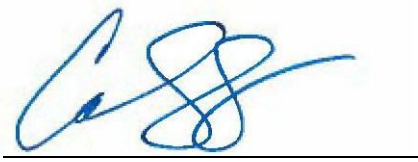
It is therefore ordered:

1. The respondents shall pay for permanent placement of a spinal cord stimulator, pursuant to the Colorado Medical Fee Schedule.

2. The issue of reopening the claimant's claim is held in abeyance, without prejudice.

3. All matters not determined here are reserved for future determination.

Dated January 14, 2019



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

- Whether claimant has proven by a preponderance of the evidence that he sustained a compensable injury arising out of and in the course of his employment with employer?

- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that the medical treatment he received was reasonable, necessary and related to his work injury?

- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that the need for knee surgery recommended by Dr. Christopher George is related to the work injury?

- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that claimant is entitled to an award of temporary total disability ("TTD") benefits from June 1, 2018 and ongoing until terminated by law or statute?

- If claimant has proven a compensable injury, whether respondents have proven by a preponderance of the evidence that claimant is prohibited from receiving TTD benefits due to the fact that he committed a volitional act that led to his separation of employment with employer?

- If the claim is compensable, the parties stipulated to an average weekly wage ("AWW") of $452.09.

FINDINGS OF FACT

1. Claimant testified at hearing that he was employed performing automotive and motorcycle repair work for employer. Claimant testified that on May 24, 2018 he was working on sealing the cab over part of a recreational vehicle ("RV") for employer when he came down the ladder of the RV and jumped to the ground. Claimant testified his right knee buckled when he landed on the ground.

2. Claimant testified he reported the incident to his supervisor, Mr. S_____, but did not seek medical treatment because he did not think his knee buckling was a big deal. Claimant testified he continued to work for employer and began wearing a knee brace.

3. Claimant testified on May 29, 2018, claimant and Mr. S_____ were discussing about repairing a water pump on a Class A Motorcoach, described by claimant as an RV the size of a bus. Claimant testified he and Mr. S_____ were inside the motorcoach and he stepped to go down the stairs out the RV when slipped

and hurt his right knee again. Claimant testified Mr. S_____ was five to eight feet away from him in the drivers' seat of the RV when he slipped. Claimant testified Mr. S_____ asked claimant if he was trying to hurt himself on purpose and told claimant to calm himself down.

4. Claimant testified he and Mr. S_____ then went to the office for employer and contacted the insurance company to file a workers' compensation claim. Claimant testified that in reporting the incident to the insurance company, he did not mention the incident on May 29, 2018 and only mentioned the May 24, 2018 incident. Claimant identified a handwritten report of both incidents he provided to employer on May 29, 2018.

5. Claimant testified that he raced motorcycles for nearly 20 years. Claimant testified that he rides single-track, off-road trails with friends and also participates in motorcycle races with a racing circuit. Evidence of a motorcycle accident claimant was involved in on December 2017 that was videotaped by claimant using a "go-pro" camera was entered into evidence. Following the accident, claimant is heard complaining of hyper-extending his right knee.

6. Matthew S_____, owner/operator of employer, testified at hearing. Mr. S_____ testified that he on occasion observed claimant wearing a knee brace at work or having a limp. Mr. S_____ testified claimant appeared at work on May 29, 2018 and had crutches and was hobbling. Mr. S_____ testified claimant reported that his knee injury from the prior week had gotten worse. Mr. S_____ testified claimant reported he wanted to file a workers' compensation claim and that they filled out the paperwork prior to working on any of the vehicles. Mr. S_____ testified that they then went to work on the vehicles and he thought claimant was going to seek medical treatment after work.

7. Mr. S_____ testified claimant reported the May 24, 2018 incident to him on the date it occurred. Mr. S_____ testified claimant was dragging his leg behind him on May 24, 2018. Mr. S_____ testified he continued to check on claimant on May 25, 2018.

8. Complicating matters in this case, claimant and employer had engaged in discussions regarding claimant's future with employer. Mr. S_____ testified that Claimant had indicated he wanted to resign his employment on or about May 18, 2018. Claimant testified he had given employer his two weeks notice as of approximately May 22, 2018, and that his last day of employment would be June 1, 2018. Mr. S_____ testified that after claimant had given his two weeks notice, he had spoken to claimant about staying with employer through the summer which was employer's busy season, and if claimant improved his performance, he would be provided a raise. The parties agreed to sever claimant's employer with employer as of June 1, 2018, however.

9. Mr. S_____ provided testimony that conflicted with the order of events that claimant testified to regarding his injury. Mr. S_____ testified that claimant arrived at work on May 29, 2018 using crutches, and requested medical treatment and

to report his May 24, 2018 incident as a workers' compensation injury. He testified that he and claimant called insurer to report the May 24, 2018 claim. Mr. S_____ testified this all occurred before claimant began to perform work on May 29, 2018.

10. Claimant testified that he was not using crutches when he arrived at work on May 29. Claimant testified he did not use crutches until May 31, 2018.

11. Mr. S_____ testified that he did not file a second report of injury with regard to the May 29, 2018 incident because it was agreed that claimant would report the second incident to doctors when he obtained medical treatment.

12. Insurer completed a First Report of Injury dated May 29, 2018. The First Report of Injury refers only to the May 24, 2018 incident. The report noted claimant jumped off a ladder, sustaining injury to his right knee.

13. Cynthia B_____ testified at hearing. Ms. B_____ performs bookkeeping work for employer on a periodic basis and testified that she would come by employer's business usually on Wednesdays. Ms. B_____ testified that she believed she came by employer's place of business on Wednesday, May 30, 2018 and had a short conversation with claimant. Ms. B_____ testified she noticed claimant was limping and when she inquired as to why he was limping, claimant stated he had injured his knee while motorcycle riding over the weekend and then had just jumped off a ladder of an RV and hurt his knee some more.

14. Ms. B_____ testified that Mr. S_____ was sitting at his desk, approximately 10-12 feet away. Ms. B_____ testified that she told Ms. S_____ of the conversation and told him that it wasn't very smart of claimant to jump off an RV ladder when he had already hurt his knee. Ms. B_____ did not testify that claimant was using crutches as of the date of her conversation.

15. Claimant produced another handwritten report dated June 12, 2018 for insurer at employer's request on a form provided by insurer. Claimant again described the May 24, 2018 incident. Claimant also noted the May 29, 2018 injury. Claimant reported his prior December 2017 knee injury and noted that he had returned to riding and racing after that incident.

16. Claimant was seen by Mr. Quinn, a physicians' assistant ("PA") on May 31, 2018. PA Quinn noted an accident history that documented both the May 24 and May 29 incidents, as well as the December 3, 2017 motorcycle incident. PA Quinn noted that on May 24 claimant had jumped off a ladder from an RV and felt his knee buckle inward with pain. PA Quinn noted that on May 29, claimant slipped as he stepped off the top landing of an RV, and his right knee had pain and swelling after he landed awkwardly. PA Quinn noted that after the incident, claimant "hobbled around" and tried to do some work, but went home early, and was on limited work duty the following two days.

17. PA Quinn also described claimant's December 3, 2017 incident with his motorcycle. PA Quin noted claimant had significant pain and swelling, but that his knee

had resolved and was back to his baseline until the May injuries. PA Quinn noted claimant had crutches at home. The records do not document claimant presenting to the appointment with the crutches. PA Quinn recommended x-rays and a magnetic resonance imaging ("MRI") scan of the right knee, as well as a hinged knee brace. PA Quinn took claimant off of work completely.

18. The x-ray of claimant's right knee taken on May 31, 2018 showed small to moderate-sized patellofemoral effusion.

19. Claimant was referred by employer to Dr. Konrad Nau for medical treatment. Claimant was evaluated by Dr. Nau on June 6, 2018. Dr. Nau took claimant's accident history and documented both the May 24 and May 29 incidents. Dr. Nau also recorded a history of claimant's December 3, 2017 motorcycle accident. Physical examination performed by Dr. Nau revealed moderate effusion of the right knee, a positive anterior drawers' sign and tender medial cruciate ligament ("MCL") with increased pain with valgus stress. Dr. Nau recommended that claimant undergo a right knee MRI scan. Dr. Nau provided claimant with work restrictions that included no work until June 12, 2018.

20. Claimant underwent an MRI scan on June 20, 2018. The MRI revealed a complete tear of the lateral meniscus, a medial meniscus tear, a torn ACL, and a large joint effusion.

21. Claimant returned to Dr. Nau on June 21, 2018. Dr. Nau noted the tears revealed on the right knee MRI scan. Dr. Nau opined that the tears were a result of injury when claimant jumped down from ladder on RV that he was working on. Dr. Nau opined that the injury was solely work related as opposed to related to a pre-existing injury. Dr. Nau recommended claimant undergo surgery to address his right knee condition and referred claimant to Dr. Christopher George for orthopedic consultation. Dr. Nau kept claimant off of work.

22. Claimant saw Christopher George on July 31, 2018. Dr. George described both the May 24 and May 29 incidents in the accident history Dr. George also described claimant's sprain type right knee injury that occurred in December 2017. Dr. George noted that Claimant improved after this injury, and was able to continue riding motorcycle. Claimant reported to Dr. George that he was not having any symptoms of pain or instability in his knee over the next almost six months.

23. Dr. George reviewed claimant's imaging studies, and noted clamant had a complete ACL tear, a bucket-handle lateral meniscus tear, and a medial meniscus tear. Dr. George noted that claimant's current symptoms and findings on his MRI correlated with his injury mechanism of the injury he described as occurring at work on May 24, 2018. With regard to claimant's knee injury in December 2017, Dr. George noted that he did not think that claimant's knee injury in December likely resulted in these injuries.

24. Respondents denied liability for claimant's work injury and did not approve the recommended surgery.

25. Claimant continued to follow up with Dr. Nau after his consultation with Dr. George. Dr. Nau last evaluated claimant on November 15, 2018. Dr. Nau noted claimant was continuing to ambulate with crutches and using a knee brace for additional support. Claimant was treating his knee with home physical therapy exercises including a stationary cycle. Dr. Nau noted that claimant was developing significant quadriceps atrophy that could affect claimant's eventual rehabilitation. Dr. Nau noted claimant continued to have work restrictions that included no work. Claimant has not returned to full work duty or been placed at maximum medical improvement ("MMI").

26. Respondents obtained a records review independent medical examination ("IME") with Dr. Frederick Scherr. Dr. Scherr reviewed claimant's medical records and produced a report dated October 22, 2018. Dr. Scherr noted claimant's prior medical history, including a long history of joint traumas, relating back to his high school sports and motocross injuries. Dr. Scherr noted that the medical records documented several iterations of claimant's right knee injury. Dr. Scherr noted that the medical records the knee buckling inwards when he jumped off the ladder. Dr. Scherr indicates in his report that if the knee did buckle inwards, it would be difficult for claimant to fall forward as he described. Dr. Scherr also noted that claimant continued to work after the knee injury and opined that if he sustained an acute tear of the ACL at that time, there would be significant swelling that would make walking and bending/extending the knee very difficult.

27. Dr. Scherr opines in the report that while claimant reported swelling following the May 29, 2018 incident, claimant did not report a pop or a twisting or hyper-extension of the knee.

28. Dr. Scherr testified at hearing consistent with his IME report. Dr. Scherr noted that he found some variations in the narrative that claimant gave to various treating physicians in this case and the therefore concluded that claimant's knee injury was unlikely to be related to a work injury. Dr. Scherr testified the tears shown on the MRI scan appear acute, and noted that edema was present in the knee according to the MRI. Dr. Scherr noted that this was a fairly significant injury and would require quite a bit of trauma. Dr. Scherr testified that if claimant had suffered the injuries shown on the MRI on May 24, 2018, performing his work on May 24, and May 25 would have been very difficult.

29. The ALJ credits claimant's testimony at hearing along with the medical reports from Dr. Nau and Dr. George and finds that claimant has established that it is more probable than not that he sustained a compensable injury arising out of and in the course of his employment with employer on May 29, 2018 when he slipped while getting out of the RV and noticed swelling in his right knee.

30. The ALJ notes the significant contradictions in the testimony in this case regarding the circumstances surrounding claimant's injury. Claimant was involved in an incident on May 24, 2018 when he jumped off a ladder of an RV, felt his knee buckle, and fell to the ground. Claimant reported this incident to his employer.

31. Claimant had a second incident on May 29, 2018 when he slipped while getting out of an RV and fell. Mr. S_____, claimant's employer, was present for this fall, and while he did not witness the fall, he heard it and acknowledged claimant afterwards.

32. The issue in this case becomes whether claimant reported his injury to the insurer prior to the fall while getting out of the RV or if the injury was reported after the fall getting out of the RV. Notably, if claimant was using crutches prior to falling on May 29, 2018, there is no indication in the employer records that claimant's limitations were taken into consideration when assigning his work after reporting the injury to insurer. For instance, there is an indication in the First Report of Injury that allows for employer to indicate when claimant initially received medical treatment, which is left blank. There is no indication in the employer's records that claimant had shown up for work on May 29, 2018, before he sought medical treatment, with crutches. Nor is there any indication as to how claimant would have been able to check the water pump, that he was directed to do by Mr. S_____, if he was on crutches. Mr. S_____ testified he did not believe claimant had the crutches with him inside the RV on May 29 before the fall, but also testified on cross examination that he was unaware of where the water pump would be located on the RV that he instructed claimant to check on May 29, 2018.

33. Likewise, the ALJ is unable to rectify the testimony of Ms. B_____ who testified she saw claimant on May 30, 2018, but did not report claimant using crutches. Moreover, while she testified that claimant had reported to her that he had injured his knee the previous weekend while riding his motorcycle, when Ms. B_____ reported this conversation to Ms. S_____, there is no credible evidence that employer took any steps to report this information to insurer in the immediate aftermath of receiving this information.

34. With regard to the prior injury in December 2017 to claimant's knee, the MRI shows changes in the knee that have been described as acute and are not likely to be related to any potential injury that occurred some five and a half months prior to the MRI.

35. Based on the evidence presented at hearing, the ALJ determines that it is more likely than not that the injury to claimant's knee occurred when he slipped in the RV on May 29, 2018. While respondents posit that claimant injured his knee over Memorial Day weekend prior to the May 29, 2018 incident, claimant specifically denied that he was riding motorcycles that weekend and denied any other prior injuries to his knee.

36. Claimant provided a credible accident history to his physicians which noted the prior December 2017 injury to his knee. Therefore, insofar as claimant's testimony is consistent with the accident histories provided by claimant to his treating physicians, the claimant's testimony in this case is determined to be credible and persuasive on the issue of compensability.

37. Claimant testified at hearing that he has not returned to work since May 31, 2018. Claimant testified that when he gave his two weeks notice to employer, prior to his injury, he had planned on starting his own business selling parts and supplies at racetracks, and planned to perform some automotive repair at his own home. Claimant testified that he was unable to perform that work, and had been unable to apply for any other jobs, because of his right knee condition.

38. Mr. S_____ testified at hearing that he had not offered claimant any modified duty work since May 31, 2018.

39. The ALJ credits claimant's testimony that he has not returned to work for any employer since May 31 2018, due to his disability and effects of the work injury. The ALJ finds that claimant's medical providers have not released claimant to return to work nor have they placed him at MMI. The ALJ finds claimant has established that it is more likely true than not that he is entitled to an award of TTD benefits beginning June 1, 2018 and ongoing until terminated by law.

40. With regard to respondents' argument that claimant's resignation constitutes a volitional act that led to his termination of employment, the resignation was provided to employer prior to his work injury. Moreover, the ALJ finds that claimant's work restrictions consisted of no work for employer May 31, 2018. Therefore, claimant has established that the basis of his wage loss is the work injury, and not his resignation of employment.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2006. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been

contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with "a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

4. As found, claimant has established by a preponderance of the evidence that he sustained a compensable injury arising out of and in the course of his employment with employer. As found, claimant has a pre-existing condition involving his low back, but the injury on April 15, 2017 aggravated, accelerated or combined with his pre-existing condition to cause the disability or need for medical treatment and therefore represents a compensable injury.

5. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

6. As found, claimant has proven by a preponderance of the evidence that the surgery treatment claimant received from PA Quinn, Dr. Nau, and Dr. George was reasonable medical treatment necessary to cure and relieve claimant from the effects of the work injury. As found, claimant has proven by a preponderance of the evidence that the surgery recommended by Dr. George is reasonable medical treatment related to claimant's work injury.

7. To prove entitlement to temporary total disability (TTD) benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a), C.R.S., requires claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*.

8. As found, claimant has established by a preponderance of the evidence that he is entitled to an award of TTD benefits beginning June 1, 2018 after he was taken off of work by PA Quinn. As found, the medical records in this case document that claimant was continually kept off of work by his treating physicians after his work injury and claimant is entitled to an ongoing award of TTD benefits.

9. Sections 8-42-105(4) and 8-42-103(1)(g), C.R.S., contain identical language stating that in cases "where it is determined that a temporarily disabled employee is responsible for termination of employment the resulting wage loss shall not be attributable to the on-the-job injury." In *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P3d 1061 (Colo. App. 2002), the court held that the term "responsible" reintroduced into the Workers' Compensation Act the concept of "fault" applicable prior to the decision in *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Hence, the concept of "fault" as it is used in the unemployment insurance context is instructive for purposes of the termination statutes. *Kaufman v. Noffsinger Manufacturing*, W.C. No. 4-608-836 (Industrial Claim Appeals Office, April 18, 2005). In that context, "fault" requires that the claimant must have performed some volitional act or exercised a degree of control over the circumstances resulting in the termination. *See Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1995) *opinion after remand* 908 P.2d 1185 (Colo. App. 1995).

10. In this case, claimant voluntarily resigned his employment with employer on or about May 22, 2018 when he gave his two weeks notice. After giving his two weeks notice and before his final day of work, claimant sustained the work injury in this case resulting in work restrictions that prohibited claimant from returning to work.

11. As noted by claimant, in *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004), the Colorado Supreme Court held that the provisions the termination statutes are not a permanent bar to receipt of temporary disability benefits. The court held if a worsened condition and not the termination of employment caused the wage loss, the claimant was entitled to temporary disability benefits.

12. In this case, prior to claimant's final scheduled day of work, claimant sustained the work injury that resulted in restrictions that led to claimant's wage loss. Therefore, the ALJ finds that the wage loss in this case is not the result of claimant's resignation of employment, but instead the work injury suffered by claimant on May 29, 2018.

ORDER

It is therefore ordered that:

1. Respondents shall pay for the medical treatment that is reasonable and necessary to cure and relieve claimant from the effects of the injury.

2. Respondents shall pay claimant TTD benefits beginning June 1, 2018 and continuing until terminated by law or statute and based on the stipulated AWW.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the

Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Grand Junction, Colorado 81501

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-006-625-001

ISSUES

The issue set for determination included:

(1) Did Respondents prove Claimant received an overpayment of benefits?

(2) If Respondents proved there was an overpayment, by what terms is Claimant required to repay the overpayment to Respondents?

FINDINGS OF FACT

1. On May 18, 2015, Claimant suffered an admitted industrial injury while working for Employer. Claimant injured his lumbar spine.

2. A General Admission of Liability ("GAL") was filed on behalf of Respondents on March 30, 2016. The GAL admitted for medical benefits only.

3. On October 4, 2016, Claimant was placed at MMI by Kathy McCranie, M.D., who was an ATP. Dr. McCranie assigned a 13% whole person medical impairment rating. This included 5% for a spinal disorder and 8% based on a loss of range of motion ("ROM") under the *AMA Guides*.

4. Respondents filed a Final Admission of Liability ("FAL") based upon Dr. McCranie's 13% whole person rating. The PPD award for that 13% rating to $30,397.64.

5. Claimant underwent a DOWC Independent Medical Examination, which was performed by Linda Mitchell, M.D. Dr. Mitchell determined Claimant was not at MMI.

6. On April 27, 2017, a GAL was filed on behalf of Respondents for medical benefits, based upon the DIME physician's determination.

7. Claimant received further treatment, including an injection to the lumbar spine, as well as undergoing an MRI.

8. Claimant returned to Dr. Mitchell on March 29, 2018 for a follow-up DIME. Dr. Mitchell determined Claimant was at MMI as of December 12, 2017. Dr. Mitchell assigned a 5% whole person medical impairment rating, pursuant to the *AMA Guides*. Because Claimant's ROM measurements were not considered valid, no impairment was assigned due to loss of range of motion in the lumbar spine.

9. On May 21, 2018, Respondents filed a FAL based upon Dr. Mitchell's rating. The 5% rating entitled Claimant to a PPD award in the amount of $11,691.40.

The FAL specified that an overpayment of PPD benefits existed in the amount of $18,706.24. Marchelle R_____ filed the FAL on behalf of Respondent-Insurer.

10. Ms. R_____ testified at hearing. She has been a claim professional for 19 years. In that capacity, she oversees and manages workers' compensation claims. This includes payment of medical bills, as well as indemnity payments. She is the claims professional to whom this case has been assigned.

11. Ms. R_____ testified she is familiar with the case, including the pleadings filed. She confirmed that the PPD benefits admitted to in the November 29, 2016 FAL were paid out completely. The PPD totaled $30,397.64. Ms. R_____ testified there were two lump sum payments in the amount of $10,000 taken on the PPD award and the lump sum discount was applied.

12. Ms. R_____ confirmed there was no objection or Application for Hearing filed in response to the May 21, 2018 FAL.

13. Claimant testified that he did not dispute an overpayment existed by virtue of the FAL filed in May 2018.

14. Respondents established an overpayment occurred because Claimant received more in PPD benefits than he was entitled to, based upon the DIME physician's rating.

15. Claimant testified that he is not working and intends to repay Insurer. Claimant stated he continues to experience pain in his low back due to his injury, which limits his activities. The ALJ inferred Claimant is suffering from financial exigencies due to his lack of income.

16. The ALJ determined that a payment in the amount of $65.00 per month will avoid undue hardship to Claimant, while requiring repayment of the overpaid PPD benefits to Respondents. The amount is roughly equivalent to dividing the amount of the total overpayment $18,706.24 (at the time of the FAL) by Claimant's life expectancy of 21.8 years.[1]

17. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be

[1] The Colorado life expectancy table is found in WCRP 7-3 [7CCR 1103-01].

interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

Overpayment

In the case at bench, Respondents bore the burden of proof to establish Claimant received an overpayment of benefits. The Colorado Workers' Compensation Act defines an overpayment as "money received by a Claimant that exceed the amount that should have been paid, or which Claimant was not entitled to receive… For an overpayment to result, it is not necessary for the overpayment exist at the time the claimant received disability or death benefits under said articles". § 8-40-201(15.5) C.R.S. (2017).

An overpayment in the amount of $18,706.24 occurred in this case by virtue of the fact that Respondents originally admitted for a higher medical impairment rating, as issued by the ATP. (Finding of Fact 3). PPD benefits based upon that rating were paid in full. (Finding of Fact 11). This was confirmed by Ms. R_____, the claims professional for Respondents-Insurer who testified at hearing. (Finding of Fact 11). After Claimant requested a DIME, that physician (Dr. Mitchell) concluded Claimant's permanent medical impairment was lower, which resulted in the overpayment. (Finding of Fact 9). As found, Claimant did not contest that such an overpayment of benefits existed. (Finding of Fact 13).

§ 8-42-113.5(1)(c), C.R.S. (2017) provides authority for Insurer in the instant case to seek an order for repayment of an overpayment of benefits. § 8-43-207(q) C.R.S. (2017) grants express authority to an ALJ to conduct a hearing to require repayment of overpayment of benefits. The ALJ has discretion to determine the terms required of Claimant for the repayment. *Louisiana Pacific Corp. v. Smith*, 881 P.2d 456 (Colo. App.1994). See also *Leah Turner v. Chipotle Mexican Grill*, W.C. No.4-893-631-07 (ICAO February 8, 2018). Neither the Colorado Workers' Compensation Act, nor the WCRP requires or prescribes a certain method for such reimbursement.

Appellate courts which have considered this issue and evaluated the terms of repayment have upheld the discretion of the trial court, beginning with *Johnson v. Industrial Commission,* 761 P.2d 1140 (Colo.1988). In *Johnson*, the Colorado Supreme Court approved an offset of the amount overpaid by an insurer against future workers' compensation disability benefits that might be awarded to the Claimant. Justice Quinn's opinion did not determine what method of recoupment was proper, nor did it provide specific guidance as to how Claimant was to repay the overpayment.

In *Louisiana Pacific Corp. v. Smith*, 881 P.2d 456, *supra,* Claimant received Social Security disability benefits and was overpaid permanent total disability benefits. The ALJ ordered a reduction of Claimant's permanent disability benefits over Claimant's life expectancy until the overpayment was fully recouped. The ALJ reasoned this would avoid undue hardship to Claimant. The Industrial Claims Appeals Office affirmed the decision, as did the Colorado Court of Appeals, which reasoned there was not an abuse of discretion. *Id; Simpson v. Industrial Claim Appeals Office,* 219 P.3d 354, 360-361 (Colo. App. 2009).

As found, Claimant's economic circumstances because he was not working led the ALJ to balance the potential of undue hardship with Insurer's right to recoup the overpayment. (Finding of Fact 16). Accordingly, the ALJ determined that payment in the amount of $65.00 per month was warranted under the circumstances of this case.

ORDER

It is therefore ordered:

1. Respondents met their burden of proof and established Claimant was overpaid in the amount of $18,706.24.

2. Claimant shall repay Respondents at the rate of $65.00 per month.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant prove he suffered a compensable injury to his right knee on December 8, 2017?
- Did Claimant prove entitlement to reasonably necessary medical treatment to cure and relieve the effects of his injury?
- What is Claimant's average weekly wage?

STIPULATIONS

The parties agreed if the claim is compensable, Claimant is entitled to temporary partial disability (TPD) from December 9, 2017 through May 11, 2018, and temporary total disability (TTD) from May 12, 2018 through May 14, 2018, based on the AWW determined by the ALJ.

FINDINGS OF FACT

1. Claimant worked for Employer on the I-25 ILEX construction project in Pueblo. Although his formal job title was heavy equipment operator, he worked approximately 85% to 90% of the time as a laborer. The work was physically demanding and required heavy lifting, bending, squatting, and walking on uneven surfaces.

2. On December 8, 2017, Claimant was prepping an area between two bridges for asphalt. He was carrying an 8-foot long L-shaped metal cage estimated to weigh approximately 20 pounds. The work area was somewhat sloped. When he was ready to put the cage down, he stepped forward onto his right leg and the knee "popped" and "buckled." Claimant felt immediate pain in the knee after the incident.

3. Claimant's co-worker, Richard P[Redacted], was working nearby and heard Claimant exclaim "Ow, my knee!" Claimant was limping and in obvious pain. Mr. P[Redacted] helped Claimant walk to their boss's truck to rest.

4. Claimant has a significant history of prior problems with his right knee. He suffered a work-related knee injury in January 2014 when he stepped on a rock. Claimant underwent a right knee arthroscopy with patellar chondroplasty and plica excision on February 6, 2015. The operative note indicates grade 3 chondral fissuring of the patellar apex, grade 1 chondromalacia of the lateral tibial plateau and grade 1-2 chondromalacia of the medial tibial plateau.

5. Claimant's knee remained symptomatic after MMI. He underwent viscosupplementation injections in 2015 with limited benefit. He was eventually put at MMI in May 2016 with a 24% scheduled lower extremity rating. On the advice of his ATP,

he went to the gym regularly to aggressively strengthen his quadriceps muscles and lose weight. Claimant's knee problems slowly improved, and after several months of working out his symptoms resolved. Claimant's testimony regarding the resolution of his prior knee symptoms is corroborated by Mr. P[Redacted]'s testimony and the lack of any medical records relating to his knee between July 2016 and December 2017. Additionally, Claimant worked a physically demanding job for eight months between April 2017 and December 2017 without limitation or difficulty. Mr. P[Redacted] worked closely with Claimant on a daily basis for approximately two months before the accident and observed no knee problems or limitations before December 8, 2017. The records also show Claimant lost 30 pounds between May 11, 2016 and December 11, 2017.

6. Claimant's right knee caused no disability and required no medical treatment immediately before December 8, 2017.

7. After the December 8 accident, Employer referred Claimant to CCOM. Claimant saw Brendan Madrid, NP at the initial appointment on December 11, 2017. He described the mechanism of injury consistent with his testimony at hearing. Mr. Madrid diagnosed a right knee "sprain" and ordered an MRI. Mr. Madrid imposed restrictions of carrying no over 20 pounds, no kneeling, squatting, or walking on uneven surfaces, and frequent breaks to allow for icing and to elevate the knee. Mr. Madrid opined the objective findings were consistent with a work-related injury.

8. Claimant saw Dr. Centi at his next CCOM appointment on December 19, 2017. He was having "constant" right knee pain and still waiting for the MRI. Physical examination showed moderate edema and effusion, medial joint line tenderness, equivocal Lachman's and anterior drawer test, and an antalgic gait. Dr. Centi changed Claimant's restrictions to sedentary work "sitting 95% of the time." He also opined, "the cause of this problem is related to work activities."

9. Claimant had a right knee MRI on January 19, 2018. It showed a small joint effusion and no evidence of torn ligaments. Dr. Centi referred Claimant to Dr. Ronald Royce for an orthopedic evaluation.

10. Claimant saw Dr. Royce on February 7, 2018. Dr. Royce recommended physical therapy and gave Claimant a cortisone injection for the pain and swelling.

11. The cortisone injection was minimally helpful, so Dr. Centi referred Claimant to Dr. Derek Purcell for a second orthopedic opinion.

12. Claimant saw Dr. Purcell on March 22, 2018. Dr. Purcell diagnosed "right knee early patellofemoral osteoarthritis, exacerbated by a work-related injury versus caused by a work-related injury." Dr. Purcell opined, "I would recommend that he exhaust conservative measures. A reasonable approach at this point would be viscosupplementation."

13. Claimant saw Dr. Timothy Hall for an IME at his counsel's request on May 23, 2018. Claimant told Dr. Hall his knee symptoms were "totally different" from the pain he had from the previous injury. Dr. Hall diagnosed chondromalacia patella exacerbated

by the work injury. Dr. Hall opined Claimant's ongoing knee symptoms were most likely related to the December 8, 2017 event. He further opined Claimant's previous knee condition made him more susceptible to injury. Dr. Hall agreed Claimant should try viscosupplementation injections.

14. Dr. William Ciccone performed an IME for Respondents on August 7, 2018. Dr. Ciccone diagnosed right knee pain with chondromalacia. Dr. Ciccone noted Claimant did not fall or twist his knee, and opined the mechanism Claimant described would not have aggravated or accelerated any degenerative process already occurring in his knee. Dr. Ciccone concluded Claimant sustained no new injury and his symptoms were due to degenerative arthritis without contribution from his work.

15. Dr. Ciccone testified in deposition for Respondents on October 31, 2018. He reiterated his opinion the mechanism Claimant described was not one he would associate with injury to a joint. He indicated there was no evidence of any new pathology because of the December 8, 2017 incident. Dr. Ciccone testified chondromalacia tends to worsen over time, and symptoms can wax and wane from day to day. He further noted viscosupplementation is generally used for arthritis and other degenerative conditions.

16. Claimant and Mr. P[Redacted] are credible.

17. Dr. Hall, Dr. Centi, and Dr. Purcell's causation opinions are more persuasive than the contrary opinions offered by Dr. Ciccone.

18. Claimant proved he suffered a compensable aggravation of his pre-existing right knee condition as a direct result of his work activities on December 8, 2017.

19. The evaluations and treatment Claimant received by and through CCOM were reasonably necessary to diagnose and treat the compensable injury.

20. Claimant proved viscosupplementation injections are reasonably necessary to cure and relieve the effects of the compensable injury and try to bring Claimant back to baseline.

21. Claimant's wages from Employer were relatively stable, without significant seasonal fluctuations. The ALJ finds the 12 weeks before the injury provide the best approximation of Claimant's typical preinjury wages and the wage loss caused by the injury. Claimant earned $19,517.51 during the 12 weeks before his injury, [1] which equates to an average weekly wage of $1,626.46.

[1] The 12-week window actually ends on December 9, 2017. Although the final pay period included the date of injury, the final paystub shows Claimant's wages for that period were not impacted by the injury, as Claimant had worked 40 hours plus 17.5 hours overtime.

CONCLUSIONS OF LAW

A. Claimant proved a compensable injury

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which she seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

If an industrial injury aggravates, accelerates, or combines with a pre-existing condition to produce disability or a need for treatment, the claim is compensable. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Compensable medical treatment includes evaluations or diagnostic procedures to investigate the existence, nature, or extent of an industrial injury. *Garcia v. Express Personnel*, W.C. No. 4-587-458 (August 24, 2000). Pain is a typical symptom from the aggravation of a pre-existing condition, and if the pain triggers the claimant's need for medical treatment, the claimant has suffered a compensable injury. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Dietrich v. Estes Express Lines*, W.C. No. 4-921-616-03 (September 9, 2016). But the mere fact that a claimant experiences symptoms at work does not necessarily mean the employment aggravated or accelerated the pre-existing condition. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968); *Cotts v. Exempla*, W.C. No. 4-606-563 (August 18, 2005). Rather, the ALJ must determine whether the need for treatment was the proximate result of an industrial aggravation or is merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

To prove an aggravation, a claimant need not show an injury objectively caused any identifiable structural change to their underlying anatomy. Rather, a purely symptomatic aggravation is a sufficient basis for an award of medical benefits if it caused the claimant to need treatment he would not otherwise have required but for the accident. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Dietrich v. Estes Express Lines*, W.C. No. 4-921-616-03 (September 9, 2016).

In *City of Brighton v. Rodriguez*, 318 P.2d 496 (Colo. 2014), the Supreme Court addressed whether an unexplained fall at work satisfies the "arising out of" test. The court identified three categories of risks that cause injuries to employees: (1) employment risk directly tied to the work itself; (2) personal risks, which are inherently personal; and (3) neutral risks, which are neither employment -related more personal. The first category of risks encompasses risks inherent to the work environment and are compensable, whereas the second category of risks is not compensable, unless an exception applies. The court further defined the category of personal risks to encompass so-called idiopathic injuries, which are considered "self-originated" injuries that spring from a personal risk of the claimant, such as heart disease, epilepsy, or similar conditions. The third category —

"neutral risks" — are compensable if the application of a "but for" test shows any employee would have been injured simply by virtue of being at work. The court was careful to point out that the "but for" test does not relieve the claimant the burden of proving causation, nor does it suggest that all injuries occurring at work are compensable.

When a claimant's injury is "precipitated" by a pre-existing condition, the injury is not compensable unless a "special hazard" of employment increased the probability or severity of the injury. *National Health Laboratories v. Industrial Claim Appeals Office*, 844 P.2d 1259 (Colo. App. 1992); *Gates Rubber Co. v. Industrial Commission*, 705 P.2d 6 (Colo. App. 1985). The classic case is the employee who suffers an epileptic seizure at work that causes him to fall from a scaffold or ladder. *E.g., Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989).

As found, Claimant proved he suffered a compensable injury to his right knee on December 8, 2017. The testimony of Claimant and his coworker, Mr. P[Redacted], was credible and persuasive. Although Claimant had a prior right knee injury that resulted in a permanent impairment rating, his condition subsequently improved and was not causing any significant problems immediately before December 8, 2017. Claimant was working a physically demanding job without limitation or difficulty and had pursued no formal treatment for his right knee for more than a year.

Claimant's injury arose out of an employment risk and was precipitated by the act of placing weight on his right leg and bending down while carrying a metal cage. The injury was not precipitated by his pre-existing condition or any other purely personal risk. The ALJ infers the additional weight of the cage subjected Claimant's knee to a greater force than would otherwise be associated with taking a normal step. The ALJ also credits Dr. Hall's opinion that Claimant's prior injury rendered the knee more susceptible to injury from forces that might not otherwise be injurious to a healthy knee. The causation opinions of Dr. Centi, Dr. Purcell, and Dr. Hall are more persuasive than the contrary opinions offered by Dr. Ciccone. The persuasive evidence shows the work accident aggravated Claimant's pre-existing condition, proximately causing disability and at least a need for diagnostic testing and conservative care.

Respondents cite *Alexander v. Emergency Courier Services*, W.C. No. 4-917-156-01 (October 14, 2014) to support their position that Claimant's injury is not compensable. The ALJ finds *Alexander* factually distinguishable. In that case, the claimant's knee spontaneously popped while he was extending his leg to take a step. No weight or other force was being applied to the claimant's knee at the moment of injury. By contrast, Claimant's injury occurred when he stepped onto his right leg while carrying a twenty-pound metal cage. Moreover, the Panel in *Alexander* did not hold the claimant's injury was noncompensable as a matter of law but merely upheld the ALJ's factual finding under the substantial evidence rule.

B. Viscosupplementation injections are reasonably necessary.

The respondents are liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial*

Claim Appeals Office, 942 P .2d 1337 (Colo. App. 1997). Compensable medical treatment includes evaluations or diagnostic procedures to investigate the existence, nature, or extent of an industrial injury. *Garcia v. Express Personnel*, W.C. No. 4-587-458 (August 24, 2000). Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove that an injury directly and proximately caused the condition for which he seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999).

As found, the viscosupplementation injections recommended by Dr. Purcell are reasonably necessary to treat the compensable injury. Dr. Ciccone explained it is reasonable to try viscosupplementation if, as here, cortisone injections are not effective. His primary disagreement was based on his opinion Claimant suffered no compensable injury. Since the ALJ has found Claimant symptomatically aggravated his pre-existing condition, it is reasonable to use viscosupplementation to try to bring Claimant back to baseline.

Claimant's request for PRP injections recommended by Dr. Ciccone must be denied. The ALJ can only award treatment recommended by an ATP and lacks jurisdiction to order treatment recommended solely by an IME. *Torres v. City and County of Denver*, W.C. No. 4-937-329-03 (May 15, 2018); *Short v. Property Management of Telluride*, W.C. No. 3-100-726 (May 4, 1995).

C. Claimant's average weekly wage is $1,626.46

Section 8-42-102(2), C.R.S. provides that compensation is payable based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But § 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that seems most appropriate under the circumstances. The entire objective of AWW calculation is to arrive at a "fair approximation" of the claimant's actual wage loss and diminished earning capacity because of the industrial injury. *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993).

As found, Claimant's AWW is $1,626.46. The ALJ agrees with Claimant's argument that the most reasonable method to calculate his AWW is to average the 12 weeks leading up to Claimant's injury.

ORDER

It is therefore ordered that:

1. Claimant's claim for a right knee injury on December 8, 2017 is compensable.

2. Insurer shall cover medical treatment from authorized providers reasonably necessary to cure and relieve the effects of Claimant's injury, including treatment from CCOM, Dr. Royce, and a trial of viscosupplementation as recommended by Dr. Purcell.

3. Claimant's request for PRP injections based on Dr. Ciccone's recommendation is denied and dismissed.[2]

4. Insurer shall pay Claimant TPD benefits from December 9, 2017 through May 11, 2018, and TTD benefits from May 12, 2018 through May 14, 2018, based on an AWW of $1,626.46, subject to the maximum compensation rate in effect on Claimant's date of injury.

5. Insurer shall pay statutory interest of 8% per annum on all benefits not paid when due.

6. All issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. The

DATED: January 15, 2019

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

[2] This order is not intended to limit Claimant's right to pursue PRP injections if later recommended by an ATP, nor Respondents' right to contest same.

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that he suffered a compensable injury while working for Employer on August 7, 2018?

II. Has Claimant shown, by a preponderance of the evidence, that he is entitled to all reasonable and necessary medical treatment related to a work injury?

III. Has Claimant shown, by a preponderance of the evidence, that he is entitled to Temporary Total Disability payments?

STIPULATIONS

The parties stipulated that Claimant's Average Weekly Wage is $700.60. The ALJ accepted this stipulation.

PRESERVED PROCEDURAL ISSUE

At the outset of hearing, Claimant wished to enter a stipulation that Claimant's cardiac arrest of August 7, 2018 was not work-related for purposes of the hearing, without entirely waiving the right to argue work-relatedness of the cardiac arrest at some future date, if warranted. Counsel for Respondents objected, reasoning that Claimant's theory of recovery at hearing was that he sustained a work-related injury due to a special hazard of employment. Such analysis is dependent upon a finding that Claimant sustained an initial *non-work related* event from a personal medical condition.

Therefore, Respondent asserted, that by attempting to preserve the right to argue relatedness of the cardiac arrest for some hypothetical later date, Claimant was attempting to improperly preserve a second attempt to litigate compensability for the same event under two contradictory theories of recovery. The ALJ permitted Claimant to proceed with the stipulation that the cardiac arrest was not work-related. However, the ALJ deferred any ruling on Claimant's future ability to raise the work-relatedness of his heart attack until such occasion might arise, if it ever should. The ALJ duly notes that Respondents have preserved their objection to moving forward at today's hearing, absent an express waiver by Claimant from ever litigating a possible link between his heart attack and this work incident. (The ALJ further notes that the evidence presented at hearing supports a finding that this heart attack was indeed not work-related).

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant was employed as a drywall installer for Employer. On August 7, 2018, Claimant sustained a cardiac arrest while working in a scissor lift. He lost consciousness and collapsed, falling inside the scissor lift. Claimant is not contending that his cardiac arrest was caused by his employment.

2. Colorado Springs Fire Department (CSFD) personnel were the first responders to the incident. Bystanders reported that Claimant fell from a standing position. Those bystanders were performing CPR upon the CSFD's arrival. (Ex. D, p. 81). Claimant was inside the scissor lift at that time (which had lowered to ground level) and was then removed from the lift to continue medical treatment. Claimant was noted to have a hematoma on the left occipital portion of his head. American Medical Response arrived on site, diagnosed Claimant with a cardiac arrest, and transported Claimant to UC Health Memorial Hospital. (Ex. E).

3. Claimant was assessed at Memorial Hospital with a cardiac arrest secondary to anterior and inferior myocardial infarction, coronary artery disease, and ischemic cardiomyopathy. (Ex. F, p. 98). He was separately diagnosed with a scalp hematoma. Claimant was noted to have bruising behind his left ear from his fall, which resulted in cervical and head CTs being administered. The head CT was negative and the cervical CT only showed multilevel degenerative changes.

4. Claimant was placed in a cervical collar. *Id. at 128.* As of August 9, 2018, Claimant was noted to be awake, off of pressor medication, and appearing 'much better.' *Id. at 104.* He was evaluated by the wound/ostomy/skin team which noted he was awake and "able to turn self." *Id. at 182.* He was to be started on beta-blocker and ACE inhibitor medications. *Id. at 203.*

5. On August 10, 2018, Dr. Kanchan Kanel performed Claimant's daily medical evaluation on that day and noted Claimant "feels okay." *Id. at 213.* Claimant's neck was noted to be supple without any documented complaints of pain. *Id.*

6. Claimant was evaluated by Memorial Hospital physical therapy staff on August 11, 2018. Claimant demonstrated independence with bed mobility, transfers and ambulation for 500 feet. *Id. at 215.* Katie McCord, P.T., felt that Claimant did not require any physical therapy at that time. On August 11, 2018, Claimant was noted to have 'normal' neck range of motion. *Id. at 217.* He was discharged later that day. His discharge summary, prepared by Dr. Kanel, noted that he had no complaints and 'felt good'.

7. Claimant next sought medical treatment on August 16, 2018. He was examined at the Parkview Medical Center. (Ex. G). He complained of headaches and pain in the right side of his neck "over the past week since fall," which had been

improving but then worsened gradually the day prior. *Id.* On exam, Claimant had full range of motion in his neck, but with complaints of pain and with muscle tenderness and spasm. *Id* at *241.* He was provided trigger point injections at the right posterior upper cervical paraspinal muscles. A CT scan taken that day showed "a right sided C3-C4 facet joint *effusion*." (Ex. 2, p. 3) (emphasis added).

8. Claimant was then evaluated at CCOM in Pueblo on August 17, 2018 by Brendon Madrid, N.P. (Ex. H, p. 248). Inspection showed purplish bruising on the left side of the neck due to drainage when he [Claimant] hit his head. (Ex. 3, p. 37). Claimant reported 10/10 neck pain but he denied headaches or numbness and tingling in his upper extremities. He also denied any memory loss. On exam, Claimant had "very little range of motion in his neck." *Id.* Mr. Madrid diagnosed Claimant with a concussion, a muscular strain, and referred Claimant for physical therapy.

9. Claimant returned to CCOM on 9/4/18, and saw Dr. Olsen. Dr. Olsen noted that Claimant still had tenderness along the right posterior neck muscles. Claimant's pain diagram referenced the right neck area, with pain at 7/10. Further, it was noted by Dr. Olsen:

> Looking at his neck he does have some improved range of motion. Right rotation is still somewhat limited. He does have pain on palpation of the sternocleidomastoid and posterior neck muscles. (Ex. 3, p. 33).

Dr. Olsen set the goal for Claimant to be able to "turn his neck all the way to the right without pain in the next 3 weeks" *Id at p. 35.*

10. Claimant returned to CCOM on 9/11/18. Claimant continued to have muscle spasms in his neck. Rotating his neck causes a spasm either right or left, but particularly to the left. "Palpation does show some tightness of the cervical muscles along the lateral portion of the neck as well as his trap" (Ex. 3, pp. 28-29). A cervical MRI was requested. *Id at p. 25.*

11. Dr. Olsen again saw Claimant on 9/25/18. He noted that Claimant "continues to have limitations and neck range of motion in all directions. He has about 30° rotation both left and right. Flexion and extension are limited." Under his *diagnosis*, Dr. Olsen put: "1. Concussion with loss of consciousness of 30 minutes or less, subsequent encounter; 2. Strain of muscle, fascia and tendon at neck level, subsequent encounter" (Ex. 3, p. 24).

12. Claimant was referred to see Michael Sparr, M.D. with Accelerated Recovery Specialists. He evaluated Claimant on October 1, 2018. Claimant reported his pain as between 7-10/10. (Ex. J, Ex. 5). He described bilateral cervical pain radiating to his trapezii and with numbness in his left biceps. Claimant also complained of headaches occurring 2-3 times per week. Claimant had "profoundly" limited cervical extension and limited flexion as well. *Id. at 278.*

13. Dr. Sparr diagnosed a cervical facet dysfunction with myofasciitis, with the possibility of a cervical disc herniation, associated with headaches. He recommended a cervical MRI, since it is **"reasonable, necessary and appropriate given the severity of pain and direct trauma that the patient experienced."** (Ex. 5, p. 105). (emphasis added). He also recommended trigger point injections, massage therapy, occipital nerve blocks, and possibly facet injections. Those were never authorized.

14. Claimant returned to CCOM to see Dr. Olsen on 10/16/18. At this time, Dr. Olsen noted that Claimant's "neck range of motion showed *improvement.* He still has some limitations with left rotation. Also extension is limited" (Ex. 3, p. 21) (emphasis added). His goal was still to be able to turn his neck all the way to the right without pain. *Id at p. 22*.

15. The last entry from Dr. Olsen is from 11/13/18. Dr. Olsen noted that by this time, Claimant was negative for headache, and had regained much of his range of motion. Dr. Olsen further noted in his narrative "He is scheduled to see Dr. Sparr "tomorrow" but so far his treatment has not been authorized (Ex. 3, p. 16). Pain was down to 3/10, 30% of the time. *Id.* Claimant's most recent work restrictions were "no lifting over 30 pounds, no pushing or pulling over 40 pounds" *Id at p. 17.* Follow up with Dr. Olsen was set for one month, at which time Claimant was anticipated to be at MMI. *Id.*

16. Kathleen D'Angelo, M.D. performed an Independent Medical Exam ("IME") of Claimant on Respondents' behalf. A report was issued on November 4, 2018. (Ex. C). Claimant reported his pain was between 7-9/10. *Id at 8.* Dr. D'Angelo inquired of the events of the accident. She noted that Claimant stated he went up in the lift, "we had to come back down and that's when I think I passed out." She inquired whether Claimant fell first and then had the heart attack, or had the heart attack resulting in the fall. Claimant was not certain. He stated it "could have been" that he fell first. *Id at 16*. Claimant ultimately stated he did not remember when he fell. When pressed on why he thought he might have fallen before his cardiac arrest, Claimant stated it was because the lift was wobbly and he may have lost his balance when coming down in the lift.

17. Claimant reported to Dr. D'Angelo that he began having headaches and neck pain "about the day after I got out of the hospital." *Id. at 11.* Claimant also reported having dizziness, and Dr. D'Angelo noted discussing with him that his blood pressure medications he recently started (Metroprolol and Lisinpril) can cause dizziness. Claimant also reported tingling down his left arm 2-3 times per week. Dr. D'Angelo noted she found no evidence to corroborate his memory complaints on exam and that his recall of dates, events, and names was 'excellent.' *Id at 23-24.*

18. Dr. D'Angelo opined that Claimant had full cervical range of motion, but some complaints of muscle tenderness upon palpation. *Id at 24.* Claimant's neurological exam was normal. She opined that Claimant's cardiac conditions were all non-work related. She noted that head injuries were not a recognized cause of cardiac arrest, but the cardiac arrest was a recognized cause of loss of consciousness. She felt

that any contusion he sustained to his left occipital scalp would have been secondary to his cardiac event and did not *cause* the cardiac event.

19. Dr. D'Angelo also noted that Claimant's complaints of dizziness, confusion, depression, and impaired memory and cognition may be caused by his medications. She also opined that there was no reason to suggest Claimant's current extensive subjective symptoms, including headaches, neck pain, upper back pain, and his cognitive complaints were related to the head contusion. She later clarified she was not opining on the *legal question* of whether those conditions would be considered work-related after they arose from a non-work related cardiac arrest. *Id at 42-43.*

20. Robert Ayala testified at hearing. Mr. Ayala is Claimant's brother, and also works for Employer. He was working directly with Claimant on August 7, 2018. He testified he and his brother were using the scissor lift to raise up to 30 feet to perform their work. He described the lift as a 5' x 8' cage lift on 4 wheels, made out of metal, which went up and down like an elevator. He testified that if the lift is not level, it will sound an alert and stop moving. Photographs of a scissor lift Claimant identified at hearing as a similar model, if not the exact lift, are contained in Exhibit L. (At hearing, the parties concurred that the portion of the scissor cage marked in green highlighter is the mid-level bar which Claimant struck when he fell. Respondents argue that said bar was likely "hollow" instead of solid metal. The ALJ concurs that this bar is indeed quite likely to be boxed steel (thus 'hollow'), and not solid. The significance of this distinction, or lack thereof, will be addressed in the Conclusions of Law, *infra).*

21. Mr. Ayala testified that as they were going up in the lift, the "buzzer" went off, indicating the lift was not stable. Mr. Ayala therefore told Claimant they should go back down. He testified that after they had gone all the way down, he began stepping backwards to climb out of the lift, facing Claimant, who was still standing inside the lift. He testified it was at this time that he saw Claimant fall and hit the back of his head on the middle rail of the lift. He stated that the lift was not moving, and was stable at the time Claimant passed out. He testified the middle rail was about 2 feet off of ground level. He testified he did not see Claimant's head strike any protruding parts from the rail, corner of the rail, or control box.

22. Claimant testified at hearing. Claimant testified the scissor lift he was working on had two rails, a top rail and mid rail, with the mid rail about 2 feet high and the top rail about 4 feet high. He testified the rails had squared edges. He testified the rails and floor were made of metal. Claimant testified him and his brother had been placing plywood under the lift to keep it balanced during that day. He testified the lift would wobble the higher up it went. Claimant testified he and his brother were going up, the lift began beeping to notify that it was unstable, they began descending in the lift, "and that was when I kind of lost consciousness and hit the rail." He testified he remembered passing out, and after that his next memory is waking up in the hospital. As of the hearing, Claimant has not returned to work, but has continued, per his testimony, to see his ATP, Dr. Olsen.

23. Claimant confirmed that he remembered losing consciousness while the lift was moving downward. He testified his brother was operating the lever which moved the lift downward when he lost consciousness. Claimant testified the gear box, which his brother was operating, was on the "front" of the lift, which is the opposite side of where the gate to enter/exit the lift is located. Claimant testified he was standing closer to the gate, or the "back" side. When asked on cross-examination whether his brother was exiting the lift at the time he lost consciousness, Claimant testified he was not. Claimant testified when he lost consciousness, his brother was looking at him to see if he was ready to come down.

24. Claimant testified his brother was asking him if he was ready to come down - meaning whether he was holding onto a rail - but he also testified they were already coming down. He testified his brother was facing the gear box on the front side of the lift while turning his head to look at Claimant near the back side of the lift. Claimant agreed he had no memory of what he struck his head on.

25. Claimant initially testified that during his stay at Memorial Hospital he was in bed the whole time without performing any physical activities. He testified his neck pain gradually got worse as he began sitting up at home after he left the hospital.

26. On cross-examination, Claimant testified he woke up in the hospital on August 9th and he did not have neck pain at that time. When asked if he had neck pain when he was discharged from the hospital, he could only state his pain began as he began standing and walking, and the first time he did so was upon discharge. Claimant was asked about the physical therapy evaluation from August 11, 2018. (Ex. F, p. 215). Claimant testified he did not remember that evaluation. When asked about the notes documenting him walking up to 500 ft. in the hospital, moving out of bed, and other tasks, Claimant stated he could not remember those activities. Claimant then testified he had neck pain when he was leaving the hospital at the time of discharge.

27. At hearing, Claimant was shown Dr. D'Angelo's note, wherein he informed her his first neck pain arose the day after he was discharged. Claimant then testified his first pain was in fact on August 12, and not the day before when he was discharged. He then testified he had a hard time remembering when his pain began. Claimant testified that he could barely move his neck when he was seen on August 16 at Parkview. When presented with the Parkview records documenting he had full range of motion in his neck without restriction, he testified those records were not correct.

28. Claimant testified he thinks he reported neck pain while at Memorial Hospital, but he could not state for certain. He did not elaborate why he thought he had informed someone at Memorial Hospital that he had neck pain, if he was also alleging he first felt neck pain upon being discharged from the hospital.

29. Claimant testified he had headaches while at Memorial Hospital and was told by a cardiologist that he should take Tylenol. Claimant testified when asked if he was surprised that this was not a documented condition, he stated that his headaches

actually started when he began walking after discharge. Claimant testified he had memory issues during his stay at Memorial Hospital and that he informed his provider at CCOM on August 17, 2018 of his memory complaints. When presented with the August 17, 2018 treatment note that documented he denied memory loss issues at that time, he testified that this record was not correct. (re: Ex. H, p. 248). Claimant testified he "most likely" had upper back pain first when he was discharged, and walking out of the hospital.

30. Dr. D'Angelo testified at hearing as an expert in the fields of internal medicine and occupational medicine. She testified Claimant's fall directly resulted from his cardiac arrest. She confirmed Claimant told her at the IME that his first symptoms in his head or neck began on August 12, 2018. She testified it was not medically likely he would first feel symptoms in his head and neck on August 12 which would be related to hitting his head on August 7th. She testified trauma to the head or cervical spine is acutely symptomatic.

31. She also testified that Claimant was taken off a respirator on August 9; his sedation stopped on that day, and by August 11, he was noted to be completely asymptomatic. She also noted Claimant had not been sedated or provided any pain killers which may have masked his symptoms while in the hospital, after he had been taken off the respirator on August 9. She also noted that Claimant's treating physicians had addressed his hematoma, and evaluated Claimant for a head and neck injuries in addition to his cardiac arrest, without documentation of those symptoms.

32. Dr. D'Angelo testified that in her opinion, it was not medically likely that, after having documented full range of motion on August 16 at Parkview, any severe restrictions documented on exam on August 17 would be related to an incident which had occurred ten days prior. She noted that the notes of Dr. Keller and the triage nurse at Parkview would have likely recognized abnormalities if present. Dr. D'Angelo testified that suffering a sudden seizing event such as a cardiac arrest, then laying immobile for several days can cause myofascial (muscular) problems, including spasms as were documented at Parkview. She noted that while at Parkview, Claimant was provided a trigger point injection, which is typically used to treat cervical myofascial spasms, as opposed to disc herniation or other cervical abnormalities which could be caused by acute trauma. She testified there was no sign of traumatic injury on Claimant's cervical imaging. She testified Claimant's exam during her IME was benign, and she could not find any evidence of neurological, facet, cervical, or even myofascial injury at that time.

33. Dr. D'Angelo testified any headache complaints Claimant had at Memorial would be more likely related to Nitroglycerin-based medications that he was administered for his cardiac issues. She testified the medications Claimant was provided for his cardiac arrest can also cause mentation issues, such as the cognitive problems of which Claimant complained. She testified Claimant's complaints of intermittent left arm numbness was not consistent with a cervical radiculopathy, but was more consistent with ongoing angina from his cardiac issues. She opined that Claimant

demonstrated during her IME excellent anterograde and retrograde memory by his recollection of events immediately prior to the fall and upon regaining consciousness. She testified this was the appropriate test for memory loss related to a concussion/brain injury, and in her opinion, Claimant demonstrated no signs of a concussion.

34. Dr. D'Angelo testified Claimant had no objective findings of injury to his head, neck, or back related to the incident subsequent to his hospitalization at Memorial Hospital. Therefore, it was her opinion that Claimant sustained no disability or required medical treatment from the August 7, 2018 incident aside from his unrelated cardiac arrest issues.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item

contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

D. In this case, the ALJ notes that Claimant has not been entirely consistent between his testimony and what he told his providers. There are gaps in his memory- not unsurprising given his medical condition. His onset of symptoms, and reporting of same, do not follow a medically predictable trajectory - but a failure to follow said trajectory does not render it false. Indeed, the Workers Compensation system is replete with examples of injured workers setting follow-up appointments which do not yield the expected results. MMI gets postponed, more testing ordered, referrals rendered, new discoveries made, experts confounded. And persons possibly suffering post-concussive symptoms might not be the best judge of their own memory. While the ALJ would not rely exclusively upon Claimant's testimony at hearing to make a decision, that is hardly necessary. The ALJ finds that Claimant, while not an entirely reliable medical historian, has been sincere throughout the process, including to his medical providers, in an earnest attempt to simply return to health. He fell at work, woke up in the hospital, and had to start anew. He has always answered the questions asked of him to the best of his present ability. As did, the ALJ finds, Robert Ayala.

E. The ALJ finds Dr. D'Angelo to be highly credentialed and respected. While the ALJ likewise finds Dr. D'Angelo to be sincere and credible in rendering her medical opinions, it does not necessarily render her *persuasive* on the ultimate issues. It is duly noted that greater persuasiveness sometimes occurs when one does not approach that line between expert and advocate. There is simply no need.

Compensability, Generally

F. A compensable injury is one that arises out of and occurs within the course and scope of employment. § 8-41-301(1)(b), C.R.S. An injury occurs in the course of employment when it was sustained within the appropriate time, place, and circumstances of an employee's job function. *Wild West Radio v. Indus. Claim Apps. Office*, 905 P.2d 6 (Colo. App. 1995). An injury arises out of employment when there is a sufficient causal connection between the employment and the injury. *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014). Where the claimant's entitlement to benefits is disputed, the claimant has the burden to prove, by a preponderance of the evidence, a causal relationship between the work injury and the condition for which benefits are sought. *Snyder v. Indus. Claim Apps. Office*, 942 P.2d 1337 (Colo. App. 1997).

Mechanism of Injury

G. Respondents argue that the mechanism of injury has not been shown with sufficient particularity. The ALJ cannot concur. While it is true that there are differences in Claimant's recall of events and that of his brother, such differences are of insufficient materiality. In fact, when all details match perfectly is when one should take pause. Given what he went through, Claimant can be forgiven for being fuzzy on details, as

previously noted. He did his best at all times pertinent, and combined with that of Robert Ayala, his testimony and medical records are sufficient for the ALJ to conclude that 1) Claimant was standing on the scissor lift with Robert Ayala while on the job, 2) While on the scissor lift, Claimant suffered a heart attack - said heart attack not alleged to be caused by his employment - and lost consciousness, 3) Upon losing consciousness, Claimant fell within the scissor lift platform, striking his left occipital region on the mid-level metal bar- a distance of around 3 feet. The ALJ concludes that this mechanism is sufficient to cause the injuries Claimant suffers from.

Special Hazard of Employment

H. Purely idiopathic or personal injuries are generally not compensable under the Act, unless an exception applies. *City of Brighton v. Rodriguez,* 318 P. 3d 496, 503 (Colo. 2014). When it comes to idiopathic injuries, the "special hazard" doctrine represents an exception to the general rule of non-compensability, where an injury is compensable if the most direct cause of that injury is a preexisting idiopathic disease or condition so long as a special employment hazard also *contributed to* the injury. *Mitchell v. Food Bank of the Rockies*, W.C. No. 4-860-191-01 (ICAO August 16, 2012). However, to be considered an employment hazard, the employment condition must not be a ubiquitous one; it must be a special hazard not generally encountered. *Ramsdell v. Horn*, 781 P.2d 150, 151 (Colo. App. 1989). A special hazard of employment is one which increases either the risk of injury or the severity of injury when combined with the pre-existing condition, which is the direct or precipitating cause of the injury. *Id.* Stated another way, the question is whether the claimant was exposed to an employment hazard *not generally encountered outside the workplace. National Health Laboratories v. Industrial Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992).

I. As noted by Claimant, a line of cases has found the existence of a special hazard-thus compensability- in a variety of contexts. In *Murray v. Colorado Department of Transportation*, W.C. No. 4-921-576-02 (June 10, 2014), sufficient evidence existed for a 'special hazard' when Claimant was injured on a set of 'stairs' on a ladder to a front end loader, in contrast to an ordinary staircase. In *Briggs v. Safeway, Inc*., W.C. No. 4-950-808-01 (July 8, 2015), a 'special hazard' was found to be present when the claimant fell, for an unexplained reason, onto a metal work table, injuring her head. The ALJ in that case found the existence of this metal work table to be more than simply a ubiquitous condition found in everyday life outside the workplace. The table itself was larger, heavier, fixed and more rigid than a table one might ordinarily find in a residential kitchen. That distinction was found to be sufficient for the ICAO.

J. Respondents seek to distinguish this case from *Briggs,* since the boxed steel bars in this scissor lift might be "hollow", and thus not "solid" like the table in *Briggs.* The ALJ is prepared to conclude that whether this scissor lift's mid-level bar is of "solid" or "hollow" construction is immaterial. Either way, when a worker strikes his head on this bar, it is the worker's head, and not the bar, that will bear the full force of the damage - unless this worker's name should be 'Curly'. Even if one assumes this steel bar is no different (which the ALJ does not) from the edge of a coffee table, it can hardly

be characterized as a hazard one might encounter in ordinary life outside of work. An essential component of Claimant's job duties is to climb into the confines of this metal platform, then rise up to 30 foot in the air. Should the platform not be sufficiently level and stable, one must return to earth to 'shim' the device and try again, lest the device fall over with all occupants aboard. Should a worker fall within the 'cage' for whatever reason, striking one of these steel bars in one direction or the other in some fashion is all but inevitable.

K. The ALJ therefore concludes that the scissor lift platform that Claimant occupied when he fell does fall within the ambit of "special hazard" of employment, in that it increased the likelihood of injury and/or severity of injury combined with Claimant's admittedly preexisting condition. This was more than an ordinary obstacle one might encounter in everyday life. Additionally, the risk of enhanced injury is greater when one hovers 30 foot above ground level.

Causal Relationship of Claimant's Injuries to the Work Accident

L. An "accident" is defined under the Act as an "unforeseen event occurring without the will or design of the person whose mere act causes it; an unexpected, unusual or undersigned occurrence." Section 8-40-201(1), C.R.S. In contrast, an "injury" refers to the physical trauma caused by the accident and includes disability. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *see also*, §8-40-201(2). Consequently, a "compensable" injury is one which requires medical treatment or causes disability. *Id*.; *Aragon v. CHIMR, et al.*, W.C. No. 4-543-782 (ICAO Sept. 24, 2004). No benefits are payable unless the accident results in a compensable "injury." § 8-41-301, C.R.S.

M. As noted earlier, Claimant has not followed the expected medical trajectory in reporting his symptoms and recovering from same. It happens. This Claimant was not acutely symptomatic for a few days - then he was. It is noted that his own ATPs, including Dr. Olsen, continued to treat his head and neck issues as *work injuries*, with possible post-concussive symptoms. Work restrictions were imposed, gradually loosened, but *remain in place as of November, 2018.* While the records suggest no objective evidence of disc or facet damage from this fall, the MRI did note an *effusion* which remains unexplained.

N. Dr. Olsen suspected soft tissue damage, in the form of a strain, to the cervical region, and made referrals to Dr. Sparr, who recommended treatment options, including trigger point injections. Those never occurred. No physician in Claimant's entire medical team suspected malingering. The ALJ finds unpersuasive the suggestion that Claimant's continuing neck problems might be due to remaining stationary in bed for a few days - instead of falling and bouncing his head on a steel bar at an oblique angle from several feet up, then falling two more feet to the floor. The latter is more likely, and the ALJ so finds.

Medical Benefits

O. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. § 8-42-101, C.R.S. Nevertheless, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. § 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Apps. Office,* 12 P.3d 844, 846 (Colo. App. 2000). Claimant must establish the causal connection with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Indus. Comm'n*, 491 P.2d 106 (Colo. App. 1971); *Indus. Comm'n v. Royal Indemnity Co.,* 236 P.2d 2993. A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Indus. Comm'n v. Jones*, 688 P.2d 1116 (Colo. 1984); *Indus. Comm'n v. Royal Indemnity Co., supra*, 236 P.2d at 295-296. All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970).

P. In this case, the ALJ finds, by a preponderance of the evidence, that Claimant is entitled to all reasonable and necessary medical treatment for this work injury. His injuries are likely myofascial, possibly post-concussive, but his ATPs are to be the judge of that for now. He is not yet at MMI. Dr. Sparr's suggested treatment regimen should be followed, assuming it is still recommended at this point.

Temporary Total Disability

Q. To prove entitlement to temporary total disability ("TTD") benefits, the Claimant must prove: that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). C.R.S. § 8-42-103(1)(a), requires a Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998)

R. The ALJ finds, by a preponderance of the evidence, that Claimant is entitled to TTD benefits. He suffered a compensable injury, and has been placed on restrictions by his ATP which prevent him from returning to work. There is no evidence of modified duty being offered to him by employer. The work restrictions provided by

his ATP remain in effect as of this Order, although hopefully Claimant can return to work soon with the medical treatment he is duly owed.

ORDER

It is therefore Ordered that:

1. Claimant's claim is compensable.

2. Respondents shall pay for all reasonable and necessary medical treatment to treat Claimant for his work injuries.

3. Claimant's Average Weekly Wage is $700.60.

4. Respondents shall pay Claimant Temporary Total Disability payments until terminated by operation of law.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 15, 2019

/s/ William G. Edie

William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

- Whether claimant has proven by a preponderance of the evidence that he sustained a compensable injury arising out of and in the course of his employment with employer?

- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that the medical treatment he received from Dr. Miller was reasonable, necessary and related to his work injury?

- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that claimant is entitled to an award of temporary total disability benefits from April 25-28, 2018 and from May 4-6, 2018, and on May 11, 2018.

- If the claim is compensable, the parties stipulated to an average weekly wage ("AWW") of $2,034.89.

FINDINGS OF FACT

1. Claimant was employed with employer for 10 ½ years. On April 15, 2017, Claimant's job was employed as the District Fire Training Chief for employer. Claimant testified that on April 15, 2017, claimant was involved with Firefighter I practice practical for the new recruits. Claimant testified that while participating in the training, he dragged a 185 pound rescue dummy underneath a stairwell, and felt a pop in his back. Claimant testified he felt immediate pain in his back and down his right leg.

2. Claimant exited the building and immediately reported the injury to Mr. C_____, but did not immediately seek medical treatment.

3. Claimant has a history of a prior low back injury involving a surgery that occurred on May 29, 2013. Claimant's surgery involved an L4 through S1 fusion.

4. Claimant testified that he spoke to a representative from insurer in June 2017 regarding his condition and informed employer that he needed to see a physician.

5. Claimant was initially evaluated on June 22, 107 by Ms. Bjerstedt, a physicians' assistant with Dr. Coleman. Ms. Bjerstedt noted claimant's accident history of having felt a pop in his back while dragging a mannequin and feeling symptoms in his right low back, radiating down his posterior thigh. Ms. Bjersted ordered physical therapy.

6. Claimant underwent a magnetic resonance image ("MRI") exam on August 1, 2017. The MR revealed post fusion changes at L4-5 and L5-S1 and progressive degenerative changes most significantly at L3-4.

7. Claimant returned to PA Bell with Dr. Clifford's office on August 16,2017. Mr. Bell reported that claimant was doing well until he was lifting a 180 pound mannequin and felt sudden pain in his back. Mr. Bell noted claimant complained of right leg pain radiating down to the posterior calf.

8. Claimant was again examined by Ms. Bjerstedt on August 18, 2018. Ms. Bjerstadt noted that claimant had undergone an MRI study and recommended claimant continue work full duty and return in one month. Dr. Clifford recommended claimant undergo an L3-4 epidural steroid injection.

9. Respondents obtained an independent medical examination ("IME") with Dr. McCranie on October 3, 2017. Dr. McCranie reviewed claimant's medical records, obtained a medical history and performed a physical examination in connection with her IME. Dr. McCranie opined that claimant sustained an exacerbation to his low back and right leg extremity pain. Dr. McCranie opined that claimant did not sustain a permanent aggravation of his pre-existing condition in the injury, however. Dr. McCranie opined that claimant sustained a temporary aggravation of his pre-existing condtion. Dr. McCranie noted that claimant's future medical treatment could include an epidural steroid injection and electromyelogram ("EMG").

10. Claimant was examined by Ms. Bjerstedt on October 23, 2017. Ms. Bjerstedt noted claimant had not heard back about the ESI and recommended claimant undergo the EMG study. Ms. Bierstedt cautioned claimant about his job and advised him to avoid any activity where he could endanger himself or a victim.

11. Claimant underwent an EMG on November 13, 2017 under the auspices of Dr. Burnbaum. Claimant's EMG demonstrated evidence of an old L5 root injury on the right with denervation and reinnervation but no evidence of ongoing denervation.

12. Claimant returned to Ms. Bjerstedt on November 29, 2017. Ms. Bjerstedt noted the results of claimant's EMG study and referred claimant for an ESI with Dr. Gebhardt's office. Claimant was instructed to follow up with Dr. Coleman for treatment of his neuropathy that was revealed in the EMG.

13. Claimant underwent the first ESI with Dr. Grazillo on December 8, 2017. Claimant testified that the first ESI helped for about a week and the second helped for about 2 weeks. Claimant testified that his pain shooting down his right leg returned after the second ESI. Dr. Grazillo referred claimant to Dr. Miller.

14. Claimant testified that during this time he was kept at full duty but was only doing the administrative portion of his job. This testimony is supported by the medical records that document claimant was continuing to complain of symptoms but was not provided with work restrictions by the treating physicians.

15. Claimant returned to Ms. Bjerstedt on March 29, 108. Ms. Bjersted had noted that she and Dr. Miller had requested a repeat MRI, but it had been denied by insurer.

16. Dr. Miller examined claimant on April 4, 2018. Dr. Miller noted claimant's history of low back pain and current presentation. Dr. Miller recommended an open lumbar re-exploration with removal of posterior final hardware followed by a complete L3-4 decompressive laminectomy facetoctomies and extension of instrumented fusion to L3-4 including an interbody fusion.

17. Claimant testified he underwent the proposed surgery with Dr. Miller on April 23, 2018 and had good results from the surgery.

18. Claimant testified that after the surgery with Dr. Miller, he was off of work from April 25, through April 28, 2018. Claimant testified he returned to work on May 3, 2018 for an all-staff meeting. Claimant testified he then missed work on May 4, May 5 and May 6, 2018. Claimant also missed work on May 11, 2018 before he returned to work on May 12, 2018 and has worked for employer since that time.

19. Claimant returned to Ms. Bjerstadt on May 29, 2018. Ms. Bjerstadt note claimant's surgery with Dr. Miller and recommended claimant continue to follow up with Dr. Miller. Claimant underwent an x-ray of the lumbar spine on June 5, 2018. The x-ray demonstrated no significant change when compared to the April 23, 2018 x-ray.

20. Claimant returned to Dr. Miller on June 5, 2018. Dr. Miller noted claimant reported considerable improvement in his preoperative symptoms. Dr. Miller recommended physician therapy.

21. Claimant returned to Ms. Bjerstedt on July 24, 2018. Ms. Bjerstadt noted claimant was three months post lumbar intervertebral fusion and removal of hardware. Ms. Bjerstedt placed claimant at maximum medical improvement ("MMI") and referred claimant for an impairment rating.

22. Respondents obtained a records review independent medical examination ("IME") of claimant on July 28, 2018 with Dr. Messenbaugh. Dr. Messenbaugh reviewed claimant's medical records and provided a report that set forth his medical opinions. Dr. Messenbaugh opined that claimant's condition was the result of the natural progression of his pre=existing condition dating back to prior to 2013. Dr. Messenbaugh opined that the events of April 15, 2017 caused claimant to experience a lumbar spine soft tissue myofascial strain and sprain with probable right lower extremity radiculopathy involving the L5 nerve root. Dr. Messenbaugh further opined that claimant's chronic pathology previously noted at the L3-L4 level were the cause of claimant's need for surgery. Dr. Messenbaugh opined that the events of April 15, 2017 caused a temporary exacerbation of claimant's pre-existing condition. Dr. Messenbaugh opined that claimant was at MMI as of March 21, 2018. Dr. Messenbaugh opined claimant did not sustain any permanent impairment as a result of the April 15, 2017 events.

23. Dr. Miller testified at hearing in this matter. Dr. Miller testified that prior to his evaluation of claimant, claimant had not received treatment at the L3-4 level. Dr. Miller testified that claimant's symptoms were consistent with both a lumbar and sacral nerve impingement. Dr. Miller testified that claimant's condition was caused by the lifting injury and it was not reasonable to assume that contemporaneous with the lifting incident, his pre-existing condition just happened to manifest itself at that time.

24. Dr. Miller testified that the L3-4 area was the most significant area and likely causing claimant's symptoms. Dr. Miller opined that claimant's L4 nerve roots were compressed and testified that he performed surgery at that level because he believed surgery at that level would treat claimant's symptoms.

25. Dr. McCranie testified by deposition in this case. Dr. McCranie testified consistent with her IME report. Dr. McCranie testified that is was her impression that claimant had an exacerbation of his low back and right lower extremity pain that was a temporary aggravation of claimant's pre-existing condition Dr. McCranie testified that claimant could have undergone an epidural steroid injection that would bring his symptoms down to baseline levels.

26. Dr. McCranie testified claimant's EMG showed an old L5 nerve root injury with evidence of reinnervation. Dr. McCranie testified it was her opinion that another MRI of the lumbar spine was not reasonable and necessary. Dr. McCranie testified that claimant's symptoms after his injury were in the L5-S1 distribution. Dr. McCranie opined that claimant's issues at the L3-4 level represented degenerative changes.

27. In this case, claimant does have a prior history of low back pain resulting in medical treatment, including a surgery in 2013 involving an L4-5 and L5-S1 fusion. However, claimant established at hearing that the incident in question on April 15, 2017 represents at least an aggravation of his pre-existing condition representing a new injury

28. The ALJ credits claimant's testimony at hearing along with the medical records entered into evidence and the testimony of Dr. Miller and finds that claimant has established by a preponderance of the evidence that he sustained a compensable injury arising out of and in the course of his employment with employer. The ALJ acknowledges the contrary opinions expressed by Dr. McCranie and Dr. Messenbaugh, but relies on the claimant's testimony along with the medical records that document claimant experiencing an onset of new symptoms following the incident on April 15, 2017 and finds that this constitutes a new injury under the Colorado Workers' Compensation Act.

29. The ALJ credits the testimony of claimant along with the medical records entered into evidence in this case and finds that claimant has established that it is more probable than not that the medical treatment provided by Dr. Miller including the surgery was reasonable medical treatment necessary to cure and relieve claimant from the effects of his work injury.

30. The ALJ credits the testimony of claimant and finds that claimant has established that it is more probable than not that he is entitled to an award of temporary disability benefits for the periods of time he missed from work following the surgery performed by Dr. Miller. The ALJ credits the medical records and claimant's testimony with regard to the issue of temporary disability benefits.

31. Claimant testified at hearing that following the surgery with Dr. Miller on April 23, 2018, he took four days of sick leave. Claimant testified he missed April 25, through the 28th. Claimant testified he went back to work on May 3, for a staff meeting and missed May 4-6 and May 11 before returning to work May 12, 2018.

32. The ALJ credits claimant's testimony regarding the dates he missed from work due to the injury and finds that claimant has proven that it is more likely than not that he is entitled to an award of temporary disability benefits as a result of the injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. C*_____, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2006. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with "a preexisting

disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

4. As found, claimant has established by a preponderance of the evidence that he sustained a compensable injury arising out of and in the course of his employment with employer. As found, claimant has a pre-existing condition involving his low back, but the injury on April 15, 2017 aggravated, accelerated or combined with his pre-existing condition to cause the disability or need for medical treatment and therefore represents a compensable injury.

5. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

6. As found, claimant has proven by a preponderance of the evidence that he sustained a compensable injury arising out of and in the course of his employment with employer on April 15, 2017. As found, claimant's testimony along with the medical records entered into evidence are credible with regard to this issue.

7. To prove entitlement to temporary total disability (TTD) benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a), C.R.S., requires claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*.

8. As found, claimant has established by a preponderance of the evidence that he is entitled to an award of TTD benefits following his surgery on April 23, 2018. As found, claimant's testimony regarding the days he missed from work is found to be credible on this issue.

ORDER

It is therefore ordered that:

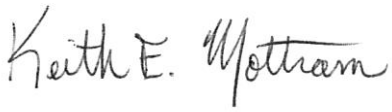
1. Respondents shall pay for the medical treatment that is reasonable and necessary to cure and relieve claimant from the effects of the injury.

2. Respondents shall pay claimant TTD benefits beginning April 25, 2018 through April 28, 2018 from May 4 through May 6, 2018 and May 11, 2018 based on the stipulated AWW. The TTD award is subject to any statutory waiting period that may be applicable to the TTD benefits.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 17, 2019



Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that medical treatment she received from North Suburban Medical Center Emergency Department and Diversified Radiology of Colorado on May 11, 2018, Montgomery Eye Care on May 17, 2018 and May 23, 2018, Dr. Chen on May 31, 2018, and Dr. Hamman on August 30, 2018 and November 8, 2018 was causally related to her May 9, 2018 industrial injury.

II. Whether Claimant proved by a preponderance of the evidence she is entitled to temporary indemnity benefits from May 9, 2018 through August 10, 2018.

STIPULATIONS

I. The parties stipulated to an average weekly wage ("AWW") of $776.98.

FINDINGS OF FACT

1. Claimant is a 51 year old woman who works for Employer as a head clerk.

2. On May 9, 2018, Claimant sustained an admitted industrial injury to her upper and lower extremities when she tripped on a shopping cart and fell.

3. The ALJ observed security footage of the incident. Claimant is observed taking a few steps then falling forward onto her knees and elbows. One camera angle clearly shows Claimant did not strike her head nor experience any whiplash-type motion from the fall. Claimant is observed immediately getting up, adjusting her clothes, checking her elbows and knees, smiling, laughing and talking to co-workers. Claimant does not appear to be confused or to have any issue walking and talking.

4. Claimant completed an Associate Work Related Injury/Illness Report approximately two hours after the fall. Claimant submitted a detailed handwritten three-page report regarding the incident. Under "Injury/Illness Type" Claimant wrote, "Both elbows both knees – wrist right hard time with filling out paper wrist (*sic*)." In describing the incident, Claimant wrote, in relevant part,

> I fell flat on floor landing on elbows & knees. Doug asked if I was ok I said not sure. I felt the pain from fall – I looked at elbows and knees after getting up. Doug left with buggy. I stayed back talking to RoseMarie and Emily. We looked at my elbows they started to have a knot and bruise. Looked at both knees they had bruises on both.

5. Claimant was wearing a wrist brace on her right wrist at the time of the fall. Claimant's written statement contains no mention of any alleged head injury or associated symptoms.

6. Claimant's supervisor, Doug Anton, was present during the fall and completed an In-Store Investigation Report. Mr. Anton documented that Claimant "tripped on buggie near time clocks and fell onto knees, elbow (right) and right wrist." Other co-workers also submitted written statements regarding Claimant's fall. None of the statements include any reference to any mechanism of injury to Claimant's head. Claimant was provided a designated providers list on May 9, 2018.

7. Claimant finished her shift on May 9, 2018 and worked her regular shift on May 10, 2018. She alleges she "got lost" on her way home from work on both May 9, 2018 and May 10, 2018 and had to call her mother for directions. There is no evidence Claimant reported these alleged incidents to Employer, experienced any cognitive issues affecting her ability to perform her regular job duties on these days, or sought medical attention on these days.

8. Claimant testified she was slurring her words by the morning of May 11, 2018 and sought treatment at authorized treating provider Concentra. Claimant presented to Darla Draper, M.D. on May 11, 2018 with complaints of bilateral knee pain, bilateral elbow pain and right hand soreness. Dr. Draper noted,

> While walking the pt tripped on a buggy and fell forward onto the elbows & knees onto tiled floor. She thinks she hit her head and had LOC for a couple seconds. R sided HA since injury + dyseqilibrium. She can't focus or think as well and writing penmanship is not as good as usual. Pt describes that she took wrong turns and was going in circles, trying to get to clinic. + nausea. Denies vomiting. Has a little numbness of R elbow. Bilateral hip and knee pain.

9. On physical examination Dr. Draper noted Claimant's judgment and insight were normal, her speech, mood and affect were appropriate, and her recent and remote memory was intact. She diagnosed Claimant with bilateral elbow and knee contusions and a concussion with loss of consciousness < 30 min. Due to Claimant's reports of a head injury and subjective complaints of associated symptoms, Dr. Draper instructed Claimant to have a friend or family member drive her to the emergency room. She also removed Claimant from work.

10. Claimant presented to the emergency department at North Suburban Medical Center at 3:14 p.m. on May 11, 2018 and was evaluated by the triage nurse at 3:22 p.m. It is noted that Claimant's chief complaint was head pain/injury. Meaghan M. Mercer, D.O. evaluated Claimant at 3:33 p.m. Claimant reported hitting her elbows and knees during a fall at work two days prior. Dr. Mercer noted, "Her next memory is looking up and seeing customers heading towards her. Pt reports unknown LOC, but positive head trauma. She went back to work for a couple hours immediately after the fall. She has felt confused since." Claimant complained of nausea, dizziness,

generalized pain, headache, fogginess and issues with memory. Dr. Mercer noted an atraumatic head, eyes, ears, nose, and throat exam, a normal neurological exam with normal mental status and normal cognition, and a GCS (Glasgow Coma Score) of 15. When reevaluated at 4:39 p.m., Claimant's pain had improved after receiving Toradol, and lab results were normal. However, at 5:01 p.m., it was noted "Pt is now c/o slurred speech and new onset left sided weakness in the past 20 minutes. On re-exam, pt had normal finger-nose, no pronator drift, no BLE drift but obvious weakness on left, subjective decreased sensation on left face and LUE." X-rays and CT scans were negative for acute abnormalities. A stroke evaluation and brain MRI were conducted. The MRI did not evidence any acute intracranial abnormality. Dr. Mercer's primary impression was post-concussive syndrome. Claimant was discharged with instructions to follow up with her physician.

11. Dr. Draper reevaluated Claimant on May 15, 2018. Claimant complained of right-sided headache, dysequilibrium, and issues with focusing and penmanship. Claimant also complained of changes in vision, forgetting what she was talking about mid-sentence, difficulty with word-finding, repeating things, and going off on tangents. On physical exam, Dr. Draper noted that Claimant's judgment, insight, speech, memory, mood and affect were normal. Her assessment included concussion with loss of consciousness, knee and elbow contusions, blurry vision and vertigo. She prescribed Claimant butalbital and meclizine for vertigo, physical therapy for the left knee, vestibular rehabilitation, and cognitive therapy. She referred Claimant for an ophthalmology evaluation and to Crosby and Chen, PLLC for a neurological evaluation for Claimant's "head/face." Dr. Draper released Claimant to modified duty on May 16, 2018 with the following restrictions: working two hours per day performing sedentary seated office duties, only in quiet darkened room, no work requiring high cognitive ability, and no driving to work.

12. Claimant also provided a 47-minute recorded statement to the claims adjuster on May 15, 2018. The ALJ listened to the entire recording in which Claimant coherently recalls and describes the May 9, 2018 work incident and subsequent events in great detail. Claimant's presentation on the recording is inconsistent with her reported symptoms of cognitive difficulties to her providers.

13. On May 17, 2018, Claimant saw Gary Mannheimer, O.D. at Montgomery Eye Care per the referral of Dr. Draper. Claimant reported hitting her head during a fall at work. She complained of decreased, cloudy, and foggy vision, as well as light sensitivity, pressure, floaters, flashes of light, and headaches. Claimant was assessed with unspecified visual field defects and prescribed eye drops for dry eye syndrome. Claimant attended a follow-up appointment at Montgomery Eye Care with James Montgomery, O.D. on May 23, 2018.

14. Dr. Draper reevaluated Claimant on May 18, 2018. Dr. Draper noted that referrals for a neurological evaluation, cognitive therapy, physical therapy and vestibular rehab were denied. Her assessment continued to include concussion with loss of consciousness. She continued Claimant's same work restrictions.

15. Claimant was seen by Debra J. Smith, M.D. at Concentra on May 23, 2018 and May 30, 2018 with continued complaints of headaches, dizziness, sensitivity to light and sound, and cognitive and memory problems. Dr. Smith's assessment included concussion with loss of consciousness, knee contusions, vertigo, and blurry vision. Claimant's work restrictions were as follows: working two hours a day performing simple, sedentary office tasks in a quiet setting, no climbing ladders, no driving to work, no working in safety sensitive positions, and no working at heights.

16. On May 31, 2018, Claimant saw Hua Judy Chen, M.D. at Crosby and Chen, PLLC for a neurological evaluation per the referral of Dr. Draper. Claimant reported thinking she hit her face and head when she fell during the work incident. On examination, Dr. Chen noted Claimant had an awake and alert mental status with no aphasia or dysarthia. Dr. Chen opined Claimant was likely suffering from a tension headache from a mild concussion and possible post-concussion syndrome with symptoms of cognitive difficulty.

17. Dr. Smith continued Claimant's same work restrictions on June 6, 2018 and June 18, 2016.

18. On July 2, 2018, Dr. Smith changed Claimant's restrictions to the following: working four hours a day in a quiet area performing simple tasks, no walking on uneven terrain, no climbing ladders, and no working is safety sensitive positions. Her assessment at the time was left knee contusion, right shoulder contusion and acute post-traumatic headache. She referred Claimant to Daniel R. Hamman, M.D. for evaluation and treatment of Claimant's left knee contusion. Dr. Hamman performed a prior knee replacement on Claimant in 2014.

19. On July 16, 2018, Dr. Smith's assessment was acute post-traumatic headache, left knee contusion, concussion with loss of consciousness, cognitive deficits, and right shoulder contusion. She again referred Claimant to Dr. Hamman, this time for both the left knee and right shoulder. Dr. Smith continued Claimant's same work restrictions.

20. On July 19, 2018, Dr. Hamman evaluated Claimant for left knee pain and performed a knee injection.

21. Dr. Smith reevaluated Claimant on July 26, 2018, noting Claimant received a shoulder injection and that physical therapy for Claimant's shoulder had been approved. Dr. Smith's assessment was acute post-traumatic headache, left knee contusion and right shoulder contusion. Dr. Smith assigned the following work restrictions: working six hours a day, lifting/pushing/pulling up to 10 pounds, taking a break every two hours to rest the knee, no reaching above shoulder with affected extremities, no repetitive motion with the right upper extremity, no climbing ladders, and no walking on uneven terrain.

22. On August 10, 2018, Dr. Smith released Claimant to work her entire shift with the same restrictions as assigned on July 26, 2018.

23. Claimant returned to Dr. Hamman for a follow-up evaluation on August 30, 2018. Dr. Hamman gave an assessment of acute right shoulder pain, right shoulder impingement, and left knee stiffness. He performed a right shoulder injection.

24. Claimant was referred to Kathy McCranie, M.D. for a psychiatric evaluation and impairment rating. Dr. McCranie reviewed Claimant's medical records and physically examined Claimant on October 26, 2018. Regarding the mechanism of injury, Claimant reported falling straight forward and striking her arms, left knee and head. Claimant denied any loss of consciousness. Dr. McCranie opined Claimant's work-related injury involved a left knee contusion, right shoulder sprain and posttraumatic headache. She assigned permanent impairment ratings for Claimant's right shoulder, left knee, and posttraumatic headaches.

25. On November 5, 2018 John Burris, M.D. performed an Independent Medical Evaluation ("IME") at the request of Respondent. Dr. Burris performed a medical record review, physically examined Claimant, and reviewed security footage of the May 9, 2018 work incident. He noted Claimant fell to the ground on her legs and elbows, did not strike her head, and was able to get up immediately. Dr. Burris noted no objective findings on his examination. He opined Claimant did not meet the criteria for a concussion or mild traumatic brain injury resulting from the May 9, 2018 work incident. He explained,

> Most importantly, she did not strike her head when she fell (which is clearly documented on the video footage of the event). Furthermore, there was no sign of head trauma at her medical evaluations (with GCS 15), no documented loss of conscious, no retrograde amnesia, repeated normal neurologic examinations, and a negative diagnostic workup (head CT and MRI). Throughout her care, [Claimant's] work restrictions assigned by her primary providers were focused on a presumed head injury. Because there was no head injury, these restrictions were not consistent with the nature of her injury, which was isolated soft tissue contusions. These types of injuries do not typically require any formal activity modification.

26. Dr. Burris opined Claimant's only work-related diagnoses were minor knee and elbow contusions. He concluded Claimant was at maximum medical improvement ("MMI") with no permanent impairment, restrictions or need for additional care.

27. Dr. Draper placed Claimant at MMI on November 7, 2018 with the impairment ratings assigned by Dr. McCranie. Dr. Draper recommended maintenance care in the form of appointments with a primary occupational provider for medication management for one year. Claimant was not assigned any permanent work restrictions.

28. There is no evidence Dr. Draper or Dr. Smith reviewed video footage of Claimant's May 9, 2018 fall. Despite Claimant's reports of a head injury, cognitive issues, and other associated symptoms, Dr. Draper and Dr. Smith consistently noted normal psychiatric findings on physical examination.

29. Dr. Hamman reevaluated Claimant on November 8, 2018 for left knee and right shoulder issues. He recommended surgical intervention for the left knee.

30. On December 1, 2018, Dr. McCranie performed an additional medical record review to assess whether there was evidence of a mechanism of injury for a head injury. Dr. McCranie reviewed Claimant's May 15, 2018 recorded audio statement, Dr. Burris' IME report, Dr. Hamman's records, and video footage of the work event. She noted Claimant was able to give a very detailed history of her work injury in her audio statement, with no evidence of retrograde or anterograde amnesia or cognitive impairment. Dr. McCranie further noted that video footage of the incident revealed Claimant did not hit her head and there was no loss of consciousness.

31. Based on her review of the additional information, Dr. McCranie opined there was no longer an impairment for Claimant's brain due to a lack of work-related mechanism of injury. She explained,

> ...it is clear there was no head injury. There was no impact to the head. There was no significant force that was involved that would cause a coup or countercoup head injury. There was no evidence of loss of consciousness. There was no amnesia. Previous review of the emergency records indicated a Glasgow coma scale of 15. MRI of the brain was negative as was a CAT scan of the head. There was no objective evidence that the patient sustained an injury to her head. Although she reported headaches and initially a blurred vision and cognitive symptoms, medical records reviewed by Dr. Burris showed that these were also preexisting conditions. For this reason, it is not reasonable that the patient would have a permanent impairment of the brain for either cognitive symptoms or headaches as there is no mechanism of injury to warrant an impairment in this regard.

32. Dr. Burris testified at hearing as an expert in occupational medicine. He continued to opine Claimant did not sustain any concussion or head injury as a result of the May 9, 2018 work event, based on the medical records, video footage of the incident, Claimant's May 9, 2018 written statement, and Claimant's May 15, 2018 recorded statement. Dr. Burris testified the video footage of the work incident clearly shows Claimant did not strike her head, lose consciousness, or have disequilibrium. He testified Claimant's complaints to Concentra were inconsistent with the video footage of her fall, her ability to walk after the fall, and Claimant's May 9, 2018 written statement, which went into great detail and showed no impairment of mental functioning.

33. Dr. Burris testified there was nothing unusual about Claimant's presentation for elbow and knee contusions that would have required an emergency department visit, and the medical records establish that Dr. Draper sent Claimant to North Suburban Medical Center Emergency Department only because of Claimant's subjective complaints of striking her head with loss of consciousness with associated symptoms. Dr. Burris testified that despite Claimant's subjective complaints, Claimant's emergency room evaluation showed no head abnormalities and a normal mental examination with a

GCS score of 15, which is the maximum rating showing normal cognitive functioning. Dr. Burris noted Claimant did not begin complaining of slurred speech until some later point in her emergency room evaluation, and testified her increased complaints over time were inconsistent with a closed head injury, as symptoms of a concussion are almost always worse immediately after the fall and begin to lessen over time.

34. As part of his evaluation, Dr. Burris listened to the entire recorded statement Claimant gave on May 15, 2018 and testified Claimant's mental status during the recorded statement "seemed perfectly normal." He testified Claimant spoke in normal speech patterns, answered questions appropriately, and seemed very aware and detail-oriented during the recording. Dr. Burris opined Claimant displayed complete recall of events despite her making some subjective comments about her inability to recall certain things. Dr. Burris testified there was no evidence in the recorded audio statement on to substantiate Claimant's subjective complaints of memory loss, cognitive difficulties or communication problems to Dr. Draper on that same date.

35. Dr. Burris testified the care Claimant received at North Suburban Medical Center Emergency Department, Montgomery Eye Care, and Crosby and Chen were due to a presumed head injury that did not occur, and thus were not causally-related to Claimant's work injury. Dr. Burris testified that medical records evidenced complaints of blurred vision and other vision problems prior to the work injury. He further testified the work restrictions imposed on Claimant from May 11, 2018 through July 25, 2018 were not reasonable, necessary or related to Claimant's knee and elbow injuries.

36. Claimant testified at hearing but did not offer any testimony regarding the mechanism of injury or any purported inability to work due to her knee and elbow injuries. She testified she received treatment at North Suburban Medical Center, Montgomery Eye Care, Crosby and Chen, Diversified Radiology of Colorado, P.C. and Dr. Hamman per the referrals of Drs. Draper and Smith.

37. The medical bill for Diversified Radiology of Colorado, P.C. reflects charges for the x-rays, CT scans and MRI obtained at North Suburban Medical Center Emergency Department on May 11, 2018.

38. Claimant did not work or earn any wages from May 11, 2018 through June 23, 2018 because Employer could not accommodate her work restrictions. Employer began accommodating Claimant's work restrictions on June 24, 2018, when Claimant returned to work for two hours a day. Claimant continued working in a modified capacity through August 10, 2018, earning less than her normal wage. Claimant returned to making her normal wage on August 11, 2018 when she was released to work her entire shift.

39. The ALJ credits the opinions of Drs. Burris and McCranie, as supported by the medical records, employment records, video security footage and audio recorded statement, over the conflicting opinions of Drs. Draper and Smith and finds Claimant did not sustain a head injury or associated symptoms as a result of the May 9, 2018 work event.

40. Claimant failed to prove by a preponderance of the evidence the medical treatment she received at North Suburban Medical Center Emergency Department (including Diversified Radiology of Colorado) on May 11, 2018, Montgomery Eye Care on May 17, 2018 and May 23, 2018, and Crosby and Chen on May 31, 2018 was causally related to the May 9, 2018 work injury. This treatment was for the purpose of evaluating a presumed head injury and associated symptoms, which were unrelated to Claimant's May 9, 2018 work injury.

41. Claimant proved by a preponderance of the evidence the medical treatment provided by Dr. Hamman to address Claimant's left knee and right upper extremity on August 30, 2018 and November 8, 2018 was causally related to her May 9, 2018 work injury.

42. Claimant failed to prove by a preponderance of the evidence she is entitled to temporary indemnity benefits from May 9, 2018 through July 25, 2018. Claimant did not suffer any actual wage loss on May 9, 2018 or May 10, 2018. While Claimant suffered wage loss from May 11, 2018 through July 25, 2018, the wage loss was not the result of a disability caused by the industrial injury. Claimant's work restrictions from May 11, 2018 through July 25, 2018 specifically addressed Claimant's alleged head injury associated symptoms, were unrelated to the May 9, 2018 work injury.

43. Claimant proved by a preponderance of the evidence she is entitled to TPD from July 26, 2018 through August 10, 2018. During such time period, Claimant suffered actual wage loss due to restrictions that specifically addressed her upper and lower extremities, which were caused by the May 9, 2018 industrial injury.

44. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it

is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Treatment

A respondent is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *See generally Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002). The question of whether the need for treatment is causally related to an industrial injury is also one of fact for the ALJ. *Walmart Stores, Inc. v. Industrial Claims Office,* 989 P.2d 521 (Colo. App. 1999). Where the claimant's entitlement to benefits is disputed, the claimant has the burden to prove a causal relationship between a work-related injury and the condition for which benefits or compensation are sought. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo.App.1997).

Authorization to provide medical treatment refers to a medical provider's legal authority to provide medical treatment to the claimant with the expectation that the provider will be compensated by the insurer for providing treatment. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006); *One Hour Cleaners v. Industrial Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). Authorized providers include those medical providers to whom the claimant is directly referred by the employer, as well as providers to whom an authorized treating physician refers the claimant in the normal progression of authorized treatment. *Town of Ignacio v. Industrial Claim Appeals Office,* 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997)

Claimant argues Respondent is liable for the cost of treatment provided by North Suburban Medical Center Emergency Department, Montgomery Eye Care, Dr. Chen, and Dr. Hamman because such treatment fell within the scope of authorized treatment. While Claimant received the aforementioned treatment upon the referral of her authorized treating physicians, this is not by itself, dispositive of whether the treatment was causally related to Claimant's work injury.

As found, the treatment provided by North Suburban Medical Center Emergency Department, Montgomery Eye Care, and Dr. Chen was not casually related to Claimant's May 9, 2018 industrial injury. The overwhelming evidence establishes Claimant did not sustain a head injury or associated symptoms as a result of the May 9, 2018 work injury. Video footage of the incident refutes Claimant's reported version of events, clearly showing Claimant did not strike her head, experience any whiplash-type motion, or lose consciousness. Claimant immediately got up from the floor after falling, spoke to her co-workers, laughed and smiled. Her detailed written incident report contains no mention of any alleged head trauma or associated symptoms. Claimant finished her shift on May 9, 2018 and worked her normal shift on May 10, 2018, with no evidence of any cognitive inability to perform her duties. While she alleges she got lost returning home from work on both days, there is no evidence Claimant reported this to Employer or sought medical attention at the time, which would be expected had such events actually occurred.

Claimant's course of treatment with respect to an alleged head injury and associated symptoms was based on Claimant's misrepresentations regarding the mechanism of injury and her subjective complaints. At her initial evaluation, Claimant informed Dr. Draper she thought she hit her head and had loss of consciousness during the May 9, 2018 work event. She complained of headaches, confusion, dysequilibrium and other cognitive issues. Claimant continued to misrepresent the mechanism of injury and report the same or increasing symptoms to her providers throughout the course of her treatment. Drs. Burris and McCranie are the only doctors who had the benefit of reviewing video footage of the work even and the recorded audio statement. Both Drs. Burris and McCranie credibly and persuasively opine Claimant did not sustain any injury to her head as a result of the May 9, 2018 work event.

Despite the absence of any objective findings of head trauma, Claimant was referred for evaluation of her head complaints based on an erroneous belief there was, in fact, a mechanism of injury to Claimant's head. Dr. Burris credibly testified that Dr. Draper sent Claimant to the emergency room due to a presumed head injury, and that Claimant's upper and lower extremity injuries did not require emergent care. Claimant was subsequently referred to Montgomery Eye Care and Dr. Chen for vision and neurological evaluations due to the presumed head injury. As Claimant did not sustain a head injury during her May 9, 2018 work event, this treatment was not causally related. Based on the totality of the evidence, Claimant failed to meet her burden to prove the treatment provided by North Suburban Medical Center Emergency Department,

Montgomery Eye Care, and Dr. Chen were causally related to the injuries Claimant sustained on May 9, 2018.

Claimant did meet her burden, however, to prove the treatment provided by Dr. Hamman on August 30, 2018 and November 8, 2018 was casually related to the May 9, 2018 work event. The treatment provided by Dr. Hamman was directed at Claimant's left knee and right extremity, which were injured in Claimant's fall on May 9, 2018.

Temporary Indemnity Benefits

To prove entitlement to temporary indemnity benefits, the claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). The existence of disability presents a question of fact for the ALJ.

As found, Claimant failed to prove by a preponderance of the evidence she is entitled to TTD or TPD benefits from May 9, 2018 through July 25, 2018. Claimant finished her shift on May 9, 2018 and worked her normal shift on May 10, 2018. As such, she did not suffer any wage loss for those two day. Claimant's subsequent wage loss from May 11, 2018 through July 25, 2018 was due to restrictions specifically imposed to address Claimant's alleged head injury, which was not causally related to the May 9, 2018 work event. Dr. Burris credibly testified Claimant's work restrictions during this time period were not reasonable, necessary or related to the upper and lower extremity injuries Claimant sustained as a result of the May 9, 2018 work event. There is insufficient credible and persuasive evidence establishing that the industrial injury, which consisted of injuries to Claimant's upper and lower extremities, produced a disability resulting in actual wage loss from May 11, 2018 through July 25, 2018.

As found, Claimant did, however, meet her burden to prove entitlement to TPD July 26, 2018 through August 10, 2018. During such time period, Claimant did not earn her normal wage due to work restrictions limiting her hours. The restrictions assigned by Dr. Smith during this time period specifically addressed Claimant's knee and upper extremity conditions, which were related to the May 9, 2018 work injury.

ORDER

It is therefore ordered that:

1. Respondent shall pay for the medical treatment provided by Dr. Hamman on August 30, 2018 and November 8, 2018, subject to the Medical Fee Schedule.

2. Respondent is not liable for the cost of medical treatment provided by North Suburban Medical Center Emergency Department and Diversified Radiology of Colorado on May 11, 2018, Montgomery Eye Care on May 17, 2018 and May 23, 2018, and Dr. Chen on May 31, 2018, as such treatment was not casually related to Claimant's May 9, 2018 industrial injury. Claimant's claim for these specific benefits is denied and dismissed.

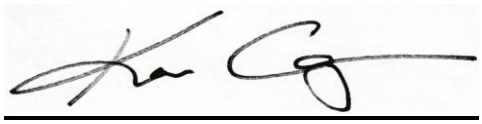
3. Respondent shall pay Claimant TPD from beginning July 26, 2018 through August 10, 2018.

4. Claimant claim for temporary indemnity benefits beginning May 9, 2018 through July 25, 2018 is denied and dismissed.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 17, 2019



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

- Did Claimant prove he suffered a compensable low back injury?
- If Claimant suffered a compensable injury, are Respondents entitled to apportionment of medical benefits?
- Is Claimant entitled to TTD benefits from April 16, 2017 through August 14, 2017?

FINDINGS OF FACT

1. This claim involves an alleged low back injury with an injury date of May 1, 2016. Claimant has alleged both an occupational disease and an accidental injury.

2. Claimant has a long history of low back problems, including two surgeries. In 1986, he herniated disc after an episode of severe coughing. He tried conservative treatment for approximately a year-and-a-half and eventually had a discectomy in 1988. He did well until 2010 when his "sciatic" pain recurred with no specific injury or identifiable cause. In April 2011, he had an L4 laminectomy and L3 laminotomy for severe stenosis. The surgery was successful and Claimant returned to his regular work.

3. Claimant has worked as an automobile mechanic since approximately 1980. He worked at Employer's Honda dealership from April 2013 through December 7, 2017. Claimant's job is physically demanding, requiring frequent lifting, bending, stooping, twisting, and working in awkward postures.

4. In early May 2016, Claimant was removing a wheel from a vehicle when he felt "kind of a funny twinge in my back."[1] Claimant took some Advil he had in his toolbox and continued working. Claimant did not report the incident to Employer or seek medical treatment.

5. Claimant saw his PCP, Dr. Patrick Shahan, on June 15, 2016, but said nothing about any back or leg symptoms. The documented musculoskeletal examination shows no abnormalities of the thoracic or lumbar spine.

6. Claimant next saw Dr. Shahan on January 11, 2016. His immediate problem was an infected right great toe that had been painful for five days. Claimant also reported two months of "spasmodic type" central low back pain, "intermittent" radiating pain down both legs, and "occasional" numbness in the back of both legs. Claimant did not attribute the symptoms to any specific incident and denied any trauma to his back. Dr. Shahan noted Claimant was "overweight and does a fair amount of lifting at work as a mechanic."

[1] Claimant testified he was not sure the exact injury date, and used May 1, 2016 as his best approximation. He testified the incident happened "in May."

Physical examination showed no neurological deficits, no lumbar tenderness, and only "mild" pain with flexion and extension. Dr. Shahan diagnosed mechanical back pain and opined Claimant "could have" re-herniated a disc or it "could be muscular." He thought an MRI was not warranted because there were no neurological findings. Claimant declined physical therapy and no specific treatment was recommended. Dr. Shahan advised Claimant to "minimize" lifting at work, and completed a form clearing Claimant to drive for Uber.

7. On August 29, 2016, Claimant saw a chiropractor, Dr. Kevin Miller. He reported symptoms from his neck to his right sacroiliac area. His most significant complaints were "constant" 9/10 pain in the upper back, and "constant" 7/10 tightness/discomfort in the mid-chest. Dr. Miller palpated "mild" muscle spasms in the right sacroiliac, lower thoracic, and upper thoracic areas. Lumbar extension and flexion were "mildly reduced" with pain. The report contains no indication of any neurologic symptoms or deficits.

8. Claimant saw a massage therapist roughly every month in 2016. He started the massages on June 14, 2015, and reported pain in neck and trapezius muscles, low back, and the back of both thighs. In December 2015, February 2016, and March 2016 he received massage for low back pain. On April 25, 2016 (before the alleged date of injury), Claimant reported pain in his low back into the right leg.[2] The low back pain appears to have improved after that, because the June 2016 report does not mention Claimant's low back, and records from July and August only refer to low back "tightness."

9. Claimant worked regular duties with no limitation throughout the summer and into the fall of 2016.

10. On September 29, 2016, Claimant started feeling dizzy while repairing an airbag. His friend and co-worker, Jeff Buckham, drove Claimant to Walgreens to check his blood pressure. The reading was dangerously high, so they went to Claimant's cardiologist, who directed Claimant to the Penrose Hospital emergency room.

11. Claimant told the ER physician he felt "fine" until earlier that morning when he "developed abrupt onset of chest pain with associated chills, diaphoresis, and lightheadedness." The medical history section of the report notes "chronic" low back pain radiating to the right leg, but the review of systems indicates no current back pain. Claimant said nothing about any injury, received no workup for back pain or radicular symptoms, and received no diagnosis related to his back. Cardiac workup was negative, and Claimant was sent home.

12. Within a few days of the emergency room visit, Claimant developed severe low back pain. On October 3, 2016, Claimant reported the symptoms to Employer and completed an accident report. Claimant described "spasms" in his low back and stated

[2] As noted previously, Claimant's alleged date of injury is an approximation of when symptoms began, and Claimant's counsel argues the symptoms described in this note may be related to the incident at work. But the report contains no mention of Claimant's work and gives no suggestion the symptoms were work-related.

they were from “heavy lifting, crawling under dashes of vehicles.” Claimant listed the injury date as “May 2016.” Employer referred Claimant to its designated provider, CCOM.

13. Claimant saw Dr. Kathryn Murray at CCOM on October 3. Claimant reported back spasms and pain in both legs. She noted his prior back surgeries and that “he has had some level of back pain ever since.” Regarding the current symptoms, Dr. Murray documented,

> He states approximately 5/1/2016 his back pain worsened. He denies any one injury on that particular day or around that time and May 2016. He denies any trauma. He denies anything out of the ordinary such as longer working hours, heavier lifting, unusual positions, or increased workload.

Dr. Murray concluded,

> [T]his is not a work-related injury. Patient did not have one incident, anyone trauma, or anything out of the ordinary other than his normal day-to-day job. He has a pre-existing history of a herniated disc that required surgery in 1988 followed by laminectomy of his lumbar region and 2010. He has had some degree of ongoing back pain since that time. Would recommend for him to work with his PCP for further evaluation and treatment of his back pain.

14. Dr. Murray released Claimant at MMI with no restrictions.

15. Claimant also had a massage therapy appointment on October 3, 2016. He reported low back pain going down the right leg.

16. Employer completed a First Report of Injury on October 5, 2016, listing May 1, 2016 as the date of injury. The report indicates Claimant “said it is from heavy lifting and crawling in the course of his job.” There was no mention of a specific incident.

17. Claimant identified Mr. Buckham as a witness to the injury. Mr. Buckham testified at the hearing for Respondents. Mr. Buckham worked with Claimant daily in the adjoining service bay since June 2015. He and Claimant became friends outside of work. Mr. Buckham denied witnessing any accident involving Claimant’s low back. Mr. Buckham further testified exhibited no outward signs of back pain or any limitations before October 2016. Claimant said nothing about any back pain or leg symptoms on September 29 while Mr. Buckham was driving him around town and taking him to the ER. He spoke with Claimant at work on October 3, 2016, and Claimant said he had injured his back “a couple of months prior.” That was the first time Claimant mentioned any back injury to Mr. Buckham. The ALJ finds Mr. Buckham’s testimony credible.

18. Respondents filed a Notice of Contest on October 18, 2016.

19. On October 27, 2016, Claimant saw Dr. Kenneth Finn, a physical medicine and rehabilitation specialist. Claimant told Dr. Finn he recovered well after his last back surgery “with no pain until about May 2016 noticed a gradual increase of back pain with

radiation to the groin and both legs, right more than left." Dr. Finn noted, "his work is very physical and may be a contributing factor." Dr. Finn prescribed Norco and ordered a lumbar MRI.

20. The MRI was done on November 15, 2016. As compared to Claimant's prior March 2011 MRI, the radiologist noted a new L3-L4 disc extrusion or sequestration with caudal migration resulting in severe canal stenosis and moderate to severe left lateral recess stenosis. There was also mild to moderate caudal stenosis and moderate to severe bilateral foraminal stenosis at L4-L5.

21. Dr. Finn administered a lumbar epidural steroid injection, which gave Claimant 80% relief for one day. Dr. Finn upon further ESIs were not appropriate given the short duration of relief and recommended a surgical evaluation.

22. Claimant saw Dr. Paul Stanton, a spine surgeon, on January 24, 2017. Claimant told Dr. Stanton his pain started "mid-May of 2016" and worsened in October 2016. Claimant described the September 2016 hypertension episode and stated, "approximately one day after this he was having severe low back pain as well as right lower extremity weakness." The history portion of the report contains no discussion of any possible work-related etiology. Dr. Stanton ordered x-rays and reviewed the MRI images, which he interpreted as showing "severe central stenosis due to ligamentum flavum facet hypertrophy with a superimposed disc herniation" and disc space collapse with severe foraminal stenosis at L3-4 and L4-5 bilaterally. Dr. Stanton opined the only reasonable surgical option was an L3-L5 fusion.

23. Dr. Stanton subsequently issued an "addendum" to his report and stated, "based on a reasonable degree of medical certainty, at least 51% of probability [Claimant's] occupation as an automobile mechanic had a role in causing or aggravating and making him symptomatic of his lumbar spine."

24. Dr. Stanton performed a L3-4 and L4-5 decompression fusion on April 17, 2017 under Claimant's private health insurance. Dr. Stanton described the "operative indications" as "history of previous lumbar laminectomy with continued degeneration and progressive stenosis." Intraoperatively, Dr. Stanton observed significant scar tissue "due to the previous laminectomy" at L4-5 compressing the L5 nerve root. He also noted osteophytes and partial segmental ankyloses requiring facet osteotomy. Findings were similar at L3-4.

25. Dr. Kathy McCranie performed an IME for Respondents on December 28, 2017. Claimant attributed the back injury to the May 2016 incident lifting a wheel. He told Dr. McCranie his symptoms "escalated" in October 2016 after the ER visit. Claimant was recovering well from the April 2017 fusion and had returned to work in August 2017. Dr. McCranie opined Claimant's assertion that his back problems were triggered by lifting a wheel in May 2016 was not supported by the medical records. She noted work activities such as heavy lifting or combined lifting and twisting *can* contribute to low back pain and cause a disc herniation, but she did not believe they caused Claimant's back pain. Rather, Dr. McCranie concluded, "considering the degree of degenerative disc disease in the

patient's lumbar spine, it is medically probable that the symptoms would have developed regardless of his work activities." Dr. McCranie did not have Claimant's PCP records, so she remained open to changing her opinion "if there were additional medical records [that] supported [Claimant's] assertion that he had a specific work injury involving heavy lifting and twisting with the immediate onset of pain."

26. Dr. McCranie testified via deposition on January 30, 2018. She reviewed Dr. Shahan's records before the deposition and saw no reference to lifting a wheel in May 2016, or any other specific incident. The additional records reinforced Dr. McCranie's conclusion that claimant's back problems are not work-related. Dr. McCranie reiterated her opinion Claimant's symptoms and resulting surgery reflected the natural progression of his underlying pre-existing degenerative spine pathology. If (contrary to her opinion) the claim was ultimately deemed compensable, Dr. McCranie would apportion only 30% to 40% to the work injury.

27. The causation opinions of Dr. McCranie and Dr. Murray are credible and more persuasive than the contrary opinions in the record.

28. Claimant failed to prove he suffered a compensable accidental injury or occupational disease.

CONCLUSIONS OF LAW

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which he seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

The Workers' Compensation Act recognizes a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence," whereas an "injury" is the physical trauma caused by the accident. Section 8-40-201(1). In other words, an "accident" is the cause, and an "injury" is the result. *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967). Workers' compensation benefits are only payable if an accident results in a compensable "injury." The mere fact that an incident occurred at work and caused symptoms does not establish a compensable injury. Rather, a compensable injury is one that requires medical treatment or causes disability. *E.g., Montgomery v. HSS, Inc*., W.C. No. 4-989-682-01 (August 17, 2016).

The mere existence of a pre-existing condition does not disqualify a claim for compensation or medical benefits. If an industrial injury aggravates, accelerates, or combines with a pre-existing condition to produce disability or a need for treatment, the claim is compensable. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). In evaluating whether a claimant suffered a compensable aggravation, the ALJ must determine if the need for treatment was the proximate result of the claimant's work or is

merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

The Act imposes additional requirements for liability of an occupational disease beyond the "arising out of" and "course and scope" requirements. A compensable occupational disease must meet each element of the four-part test mandated by § 8-40-201(14), which defines an occupational disease as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

The equal exposure element effectuates the "peculiar risk" test and requires that the injurious hazards associated with the employment be more prevalent in the workplace than in everyday life or other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). The claimant "must be exposed by his or her employment to the risk causing the disease in a measurably greater degree and in a substantially different manner than are persons in employment generally." *Id.* at 824. The hazard of employment need not be the sole cause of the disease, but must cause, intensify, or aggravate the condition "to some reasonable degree." *Id*.

As found, Claimant failed to prove a compensable accidental injury or occupational disease. The ALJ does not doubt the incident with the tire occurred as Claimant described around May 1, 2016. The problem is the lack of persuasive evidence linking that incident to the significant escalation of symptoms in October 2016 and eventual surgery. When Claimant saw his PCP on June 15, 2016, he said nothing about any back or leg symptoms. On July 11, 2016, Claimant reported back spasms and pain radiating down both legs "intermittently," but did not attribute the symptoms to any specific incident or activity. Physical examination at that visit showed no neurological deficits, no lumbar tenderness, and only "mild" pain with flexion and extension. An MRI was not warranted because there were no neurological findings. Claimant declined PT, and no specific treatment was recommended. In August 2016, Claimant's chiropractor documented nonspecific pain in multiple areas of his back, but there was no mention of any leg symptoms. Nor is there any suggestion the symptoms were related to Claimant's work. Massage records from June through August 2016 document no specific complaints and only "tightness" of Claimant's entire back. Claimant continued working without limitation through at least September 2016. The September 29, 2016 emergency room report noted a history of chronic low back and right leg pain, but mentions no current back or radicular symptoms. He had no workup for back pain and received no diagnosis related to his back. Claimant later told Dr. Stanton his back and leg symptoms became severe "approximately one day" after being treated at the emergency room. That coincides with the massage

therapy records, which consistently showed ongoing low back pain radiating to the right leg beginning on October 3, 2016, but not before.

The opinion evidence also points away from a compensable injury. Dr. Finn opined Claimant's work "may" have played a causal role in the development of his symptoms, but did not say a causal connection was probable. Although Dr. Stanton opined the symptoms are probably work-related, his opinion was conclusory and not accompanied by any detailed analysis. The ALJ finds the analysis and conclusions of Dr. McCranie and Dr. Murray more credible and persuasive than those offered by Dr. Finn and Dr. Stanton.

Except for the disc extrusion, the pathology shown on the MRI and observed intraoperatively was long-standing and degenerative in nature. Given the available medical records and other persuasive evidence regarding Claimant's condition before October 2016, the ALJ finds it implausible the disc extrusion occurred in May while lifting the wheel. Claimant may have suffered a minor back strain in May 2016, but it did not result in a compensable "injury" because it required no treatment and caused no disability. Although Claimant's job was physically demanding and could cause or aggravate a back condition over time, there is no persuasive evidence it did so in this case. The spontaneous worsening of Claimant's condition in October 2016 was probably due to the natural progression of his underlying degenerative pathology, without contribution from his work.

ORDER

It is therefore ordered that:

1. Claimant's workers' compensation claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 17, 2019

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

- Did Claimant prove by a preponderance of the evidence that 12 occupational therapy sessions recommended by her treating surgeon, Dr. Cassidy, are reasonably necessary to cure and relieve the effects of her compensable injury?

FINDINGS OF FACT

1. Claimant worked for Employer as a stockbroker. She suffered an admitted injury to her right hand and thumb on July 19, 2015. The injury was initially diagnosed and treated as a CMC joint sprain. Over time, Claimant developed ligamentous instability in her MP joint and her ATP recommended an MP joint fusion.

2. Respondents denied the surgery and the case went to hearing before ALJ Edie on April 18, 2018. ALJ Edie approved the surgery in an order dated May 24, 2018. ALJ Edie's order contains detailed findings of fact regarding the claim history leading up to the hearing, which need not be repeated here. Neither party appealed ALJ Edie's order.

3. Surgery is now scheduled for May 31, 2019. The delay in proceeding with surgery was caused by two factors. The primary issue relates to Claimant's job. Her job with Employer was terminated in late March 2018. Claimant found new employment in May 2018, but she must be employed there for at least one year to qualify for FMLA leave.

4. The second factor was the retirement of Claimant's treating surgeon, Dr. Idler, in June 2018. Claimant was directed to Dr. Dale Cassidy, Dr. Idler's replacement at the Colorado Springs Orthopedic Group. Due to scheduling difficulties, Claimant did not see Dr. Cassidy until August 13, 2018.

5. Dr. Cassidy agreed with the recommendation for an MP joint fusion. He noted Claimant wears a thumb splint "full time" to prevent movement of the thumb. Dr. Cassidy occupational therapy while Claimant waits for surgery. Specifically, Dr. Cassidy stated, "we are going to get her working some with therapy on her range of motion and strengthening to help protect [the] area [as] she awaits surgical intervention."

6. On August 20, 2019, Dr. Cassidy submitted a request for 12 sessions of occupational therapy. The recommended modalities included paraffin, ultrasound, iontophoresis, and electrical stimulation.

7. Dr. Wallace Larson, an orthopedic surgeon, performed a records review regarding the therapy request on August 21, 2018. Dr. Larson opined therapy was not reasonably necessary because it would not help the ligamentous instability. He opined Claimant could do home exercises and strengthening, but formal physical therapy was not warranted.

8. Dr. Cassidy's opinions are more persuasive than the contrary opinions offered by Dr. Larson.

9. Claimant proved the 12 occupational therapy sessions recommended by Dr. Cassidy are reasonably necessary treatment for her admitted injury.

CONCLUSIONS OF LAW

The respondents are liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997). Even if the respondents admit liability, they retain the right to dispute the relatedness of any particular treatment, and the mere occurrence of a compensable injury does not compel the ALJ to find that all subsequent medical treatment was caused by the industrial injury. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997); *McIntyre v. KI, LLC*, W.C. No. 4-805-040 (July 2, 2010). Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove that an injury directly and proximately caused the condition for which he seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The claimant must prove entitlement to medical benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally, for either claimant or respondents. Section 8-43-201.

As found, Claimant proved the 12 occupational therapy sessions recommended by Dr. Cassidy are reasonable and necessary. Dr. Larson's rationale that therapy is unnecessary because it will not improve ligamentous instability is unpersuasive because Dr. Cassidy ordered therapy primarily as a prophylactic and preparatory measure pending surgery. Strengthening the thumb and hand is certainly reasonable given the long period of relative disuse. It is also reasonable to have the guidance of a therapist and other modalities not available at Claimant's home. Claimant has been through a protracted process of treatment and delay, culminating in the surgery scheduled for May 31, 2019, and it is both parties interest that she have a good result from surgery. The best way to improve her odds is to follow the recommendations of her surgeon.

ORDER

It is therefore ordered that:

1. Insurer shall cover the 12 occupational therapy sessions recommended by Dr. Cassidy.

2. All issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the

Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Office of Administrative Courts

ISSUES

- Whether claimant has proven by a preponderance of the evidence that the recommended spinal cord stimulator trial and psychologic treatment are reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted June 6, 2017 work injury?

FINDINGS OF FACT

1. Claimant sustained a compensable injury arising out of and in the course of his employment on June 6, 2017 when a 900 pound cart rolled onto claimant's right foot and ankle. Claimant was taken to Workpartners for medical treatment. Claimant was evaluated by physicians' assistant ("PA") Erica Herrera on June 7, 2017. PA Herrera noted claimant's accident history and noted that x-rays revealed a hallux valgus deformity but were otherwise negative for any acute bone abnormalities. PA Herrera recommended conservative treatment including rest, ice, compression and elevation ("RICE") and provided claimant with work restrictions.

2. Claimant eventually underwent testing and was diagnosed with complex regional pain syndrome ("CRPS") as a result of his injury. Claimant testified he was referred to Dr. Stagg and Dr. Price for treatment of the CRPS, in addition to evaluations and treatment with Dr. Chavda.

3. Respondents obtained an independent medical examination ("IME") with Dr. Bernton on September 7, 2017. Dr. Bernton reviewed claimant's medical records, obtained a medical history and performed a physical examination in connection with his IME. Dr. Bernton noted claimant presented with unexplained persistent pain, swelling and discoloration of the right foot and opined that claimant was a candidate for autonomic testing battery and stress thermography. Dr. Bernton noted that the stress thermography and autonomic testing battery were both positive for presence of complex regional pain syndrome. Dr. Bernton recommended treatment including medications and physical therapy. Dr. Bernton also noted that use of a sympathetic blockade may also be helpful in conjunction with physical therapy and antineuritic medications. Dr. Bernton also recommended discontinuing the use of immobilization.

4. Claimant was referred to Dr. Sohn for sympathetic blocks on October 24, 2017. Dr. Sohn noted claimant's diagnosis of CRPS along with claimant's report of having an undiagnosed bipolar disorder. Dr. Sohn performed the sympathetic block, noting that if claimant failed to gain adequate relief with the sympathetic blocks, a spinal cord stimulator may be a good option to consider.

5. Respondents obtained an IME with Dr. Scott on March 13, 2018. Dr. Scott reviewed claimant's medical records, obtained a medical history and performed a

physical examination in connection with his IME. Dr. Scott noted claimant's history that the sympathetic block did not provide relief for claimant. Dr. Scott noted claimant's history of treatment including the physical therapy and clonidine patches, which did not provide significant relief. Dr. Scott diagnosed claimant with CRPS and recommended treatment that included reviewing the documentation of the sympathetic block performed by Dr. Sohn on November 26, 2017, and if claimant reported reduction of pain complaints of 50% or more, an additional lumbar sympathetic block be performed. Dr. Scott noted that if the lumbar sympathetic blocks were not diagnostic or therapeutic, claimant could consider a trial of spinal cord stimulation, but only after a psychological evaluation.

6. Claimant was evaluated by Dr. Chavda on April 25, 2018. Dr. Chavda noted that claimant had treated with gabapentin and lyrica which did not give him pain relief. Dr. Chavda noted that claimant was currently in physical therapy ("PT") for desensitization therapy. Dr. Chavda noted that due to failing neuropathics he is an excellent candidate for a spinal cord stimulator. Dr. Chavda referred claimant to Dr. Miller for the psychological evaluation prior to the spinal cord stimulator trial.

7. Claimant was examined by Dr. Price on July 30, 2018. Dr. Price reviewed claimant's medical records and noted in her report following her examination that she agreed with Dr. Chavda and Dr. Scott and recommended claimant consider a dorsal column stimulator trial.

8. Claimant testified at hearing that no treatment has provided him with long term pain relief or an increase in his functionality. Claimant testified that his treatment has included physical therapy, acupuncture, medications, topical creams and sympathetic blocks. Claimant testified his current symptoms include the bottom of his foot feeling like it is on fire and pain shooting up the side of his foot. Claimant testified his physical therapy has consisted of 6-8 sessions and he only had one session of acupuncture. Claimant testified he had one sympathetic block, after which he experienced symptoms that included vomiting and diarrhea.

9. Claimant was referred for an IME with Dr. Cebrian on June 29, 2018. Dr. Cebrian reviewed claimant's medical records, obtained a medical history and performed a physical evaluation in connection with his IME. Dr. Cebrian opined in his July 16, 21018 report that claimant had not failed full conservative therapy and opined that claimant was therefore not reasonable or necessary. Dr. Cebrian opined that in spinal cord stimulators, especially in workers' compensation settings, have poorer outcomes and recommended claimant have a psychiatric IME.

10. Claimant underwent a psychiatric IME with Dr. Kleinman on September 5, 2018. Dr. Kleinman noted claimant's pre-existing history of psychiatric treatment in his report. Dr. Kleinman opined in his report that claimant had several long standing psychiatric diagnoses including depression, anxiety and post-traumatic stress disorder ("PTSD"). Dr. Kleinman opined in his report that claimant had psychiatric diagnoses that were unrelated to his work injury and that none of his mental health treatment or psychiatric medications were related to the work injury. Dr. Kleinman ultimately appears to opine that claimant is not a psychiatric candidate for the spinal cord stimulator.

11. The ALJ credits the opinions expressed by Dr. Chavda and Dr. Price along with Dr. Scott and finds that claimant has established that it is more likely than not that the recommended spinal cord stimulator is reasonable medical treatment necessary to cure and relieve claimant from the effects of the industrial injury. The ALJ credits the recommendation of Dr. Chavda and finds that respondents are liable for the referral to Dr. Miller for psychiatric consultation prior to the spinal cord stimulator trial.

12. While the opinions of Dr. Kleinman regarding claimant's psychiatric condition are noted, the IME from Dr. Kleinman does not substitute for the referral from Dr. Chavda to Dr. Miller for psychiatric consultation. The ALJ finds that the referral from Dr. Chavda to Dr. Miller is reasonable medical treatment necessary to determine if claimant is a psychiatric candidate for the trial spinal cord stimulator. Therefore, respondents are liable for the medical treatment related to the work injury.

13. The ALJ further credits the opinions of Dr. Price that claimant is a candidate for a spinal cord stimulator and finds this opinion to be credible and persuasive. The ALJ recognizes that Dr. Cebrian has provided a contrary opinion based on claimant's failure to have failed full conservative therapy, but finds the opinions of Dr. Price and Dr. Chavda to be more persuasive with regard to this issue.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2006. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury.

Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

4. As found, claimant has proven by a preponderance of the evidence that the trial spinal cord stimulator recommended by Dr. Chavda and Dr. Price is reasonable medical treatment necessary to cure and relieve claimant from the effects of the work injury. Likewise, the recommended psychological consultation is found to be reasonable medical treatment necessary to cure and relieve claimant from the effects of the work injury.

5. As found, the opinions expressed by Dr. Chavda and Dr. Price with regard to this issue are found to be credible and persuasive.

ORDER

It is therefore ordered that:

1. Respondents shall pay for the medical treatment that is reasonable and necessary to cure and relieve claimant from the effects of the injury including the recommended psychological evaluation and trial spinal cord stimulator.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 22, 2019

Keith E. Mottram

_____

Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-952-264-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on January 2, 2019, in Denver, Colorado. The hearing was digitally recorded (reference: 1/2/19, Courtroom 3, beginning at 1:30 PM, and ending at 2:00 PM).

Respondents' Exhibits A and A-1 were admitted into evidence, without objection.

At the conclusion of the unilateral hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Respondents, which was filed, electronically on January 11, 2019. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUE

The issue designated on Respondents' Application for Hearing and to be determined by this decision concerns an overpayment to the Claimant of $48,512.76.

Respondents bear the burden of proof by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Notice

1. The ALJ takes administrative notice of the files and records of the Office of Administrative Courts (OAC) and the Division of Workers Compensation (DOWC), which disclose that the Claimant's last known, regular and registered address is xxxxxxx

2. Notice of the hearing, scheduled for January 2, 2019 at 1:30 PM, in Denver, CO, at the OAC, was mailed and emailed to the Claimant at his last known, regular and registered address; and, emailed to the Claimant at his registered email address on November 6, 2018. The ALJ takes administrative notice of the official acts of the OAC and the DOWC.

3. None of the Notices of the January 2, 2019 hearing mailed or emailed to the Claimant were returned as undeliverable. Therefore, there is a legal presumption of receipt, and the ALJ finds that the Claimant received notice of the hearing and elected not to appear.

4. Exhibit A-1 establishes that Respondents sent a letter to the Claimant at his last known, regular and registered address, 7656 Dusk Street, Littleton, CO 80125, via certified mail. The mailing was returned, marked "unclaimed." The ALJ infers and finds that the Claimant chose not to claim the letter.

Overpayment

5. Respondents paid a total of $126,587.95 in temporary total disability (TTD) benefits to the Claimant from June 20, 2016 through February 14, 2017 (Exhibit A).

6. ALJ Margot W. Jones, in her Order of June 6, 2018, determined that the Claimant's date of maximum medical improvement (MMI) was February 15, 2016, with a permanent 4% upper extremity impairment rating, thus, the Claimant was overpaid in TTD benefits.

7. Consistent with ALJ Jones' Order, Respondents filed a Final Admission of Liability (FAL) on July 20, 2018. In the FAL, Respondents admitted to payment of TTD benefits from June 20, 2014 through February 15, 2016 for a total of $75,786.36. Respondents also admitted to a 4% upper extremity impairment rating resulting in permanent partial disability (PPD) benefits of $2,288.83. A total of $78,075.19 in indemnity benefits were admitted. Claimant did **not** timely contest the FAL. Therefore, the Claimant was overpaid $48,512.76 ($126,587.95 - $78,786.36 = $48, 512.76).

Ultimate Finding

8. The ALJ finds that Respondents have overpaid the Claimant in the amount of $48,512.76 (Exhibit A).

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Notice

a. As found, Notice of the hearing was sent to the Claimant at his last known, regular and registered address of 7656 Dusk Street, Littleton, CO 80125, and by email at thor4u@gmail.com The mailed notice was not returned to the sender, as undeliverable, and the email notice was not returned as "undeliverable." Therefore, as found, there was a legal presumption of receipt and the ALJ found that the Claimant received notice of the hearing and failed to appear.. *See Olsen v. Davidson,* 142 Colo. 205, 350 P.2d 338 (1960); *Campbell v. IBM Corporation,* 867 P.2d 77 (Colo. App. 1993).

Overpayment

b. An overpayment is defined as "money received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive …" §8-40-201(15.5), C.R.S.

c. Respondents are entitled to recover an overpayment of TTD benefits. *In the Matter of the Claim of Brian Josue, Claimant*, W.C. No. 4-954-271-04, 2016 WL 3455466 [Indus. Claim Appeals Office (ICAO), June 17, 2016]; *Mattorano v. United Airlines*, W.C. No. 4-861-370 (ICAO, July 25, 2013); *Franco v. Denver Public Schools*, W.C. No. 4-818-570 (ICAO, November 13, 2014).

d. Further, §8-42-113.5(1)(c), C.R.S. provides that respondents can seek an order for repayment of an overpayment. §8-42-207(q), C.R.S. grants ALJs authority to conduct hearings to require repayment of an overpayment. *In the Matter of the Claim of: Leah Turner, Claimant*, W.C. No. 4-893-631-07, 2018 WL 852425 (ICAO,Feb. 8, 2018); *Simpson v. Indus. Claim Appeals Office*, 219 P.3d 354 (Colo. App. 2009), *rev'd on other grounds, Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010).

e. Based on ALJ Jones' Order, which was not appealed, an overpayment in the amount of $48,512.76. resulted.

Burden of Proof

f. The burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO),

March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a c *v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, Respondents have satisfied their burden that Claimant was overpaid $48,512.76.

ORDER

IT IS, THEREFORE, ORDERED THAT:

The Claimant shall pay the Respondents, in one lump sum, the amount of $48,512.76.

DATED this 23rd day of January 2019.

EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

- Did Claimant prove entitlement TTD benefits from March 8, 2018 to August 6, 2018?

- Did Respondents prove Claimant was responsible for termination of his employment?

- If Claimant is entitled to TTD, did Respondents prove entitlement to an offset for unemployment benefits?

- Did Respondents prove a March 20, 2018 motor vehicle accident was an "intervening event" sufficient to sever the causal relationship between Claimant's work injury and his wage loss?

FINDINGS OF FACT

1. Claimant worked for employer as a pest exterminator. His job duties included traveling to job sites in a company vehicle and providing extermination services.

2. Claimant suffered an admitted injury on June 23, 2016 when he rolled his ankle and tore his left Achilles tendon.

3. Dr. Michael Simpson surgically repaired the ruptured Achilles tendon on July 14, 2016. Claimant subsequently developed problems with keloid scar formation.

4. Claimant was put at MMI on December 20, 2016 with a permanent impairment rating. Respondents filed an FAL admitting for the rating and medical benefits after MMI.

5. Dr. Sandell subsequently took over as Claimant's primary ATP. Dr. Sandell referred Claimant to Dr. Heinz, a plastic surgeon, to consider keloid scar removal surgery.

6. Respondents obtained an IME from Dr. Kathy McCranie on March 15, 2017. Dr. McCranie agreed surgical scar revision was reasonably necessary but opined, "As this surgery is not likely to change the patient's overall function, I would recommend that this be done under maintenance care."

7. Dr. Heinz performed keloid excision surgery on May 17, 2017.

8. Notwithstanding Dr. McCranie's opinion surgery could have been done under maintenance care, Respondents reopened the case and paid additional TTD benefits. The admitted average weekly wage is $845.91, with a corresponding TTD rate of $562.97 per week.

9. Claimant recovered from the surgery in approximately two months, and Dr. Sandell put him back at MMI on July 31, 2017. Dr. Sandell assessed no work restrictions or additional permanent impairment.

10. Respondents filed another FAL on September 21, 2017 based on Dr. Sandell's July 31, 2017 MMI report. Claimant objected to the FAL and requested a DIME.

11. Claimant underwent a DIME with Dr. J. Stephen Gray on January 3, 2018. Dr. Gray agreed Claimant reached MMI on July 31, 2017 as determined by Dr. Sandell. He assigned a 7% scheduled lower extremity rating for range of motion and 10% whole person rating for Class II permanent skin impairment. Dr. Gray recommended bi-annual follow-up visits with Dr. Heinz for potential keloid scar revisions. He noted that, "[Claimant's] care may be handled under 'maintenance care,' although he may require temporary restrictions postoperatively."

12. Claimant followed up with Dr. Heinz on February 6, 2018. He was working full duty and "doing reasonably well." The scar was "much better than previous," and Dr. Heinz opined surgery was "certainly" not indicated at that time. He gave Claimant a Kenalog injection and advised him to wear a silicone insert under his sock.

13. Employer terminated Claimant's employment on February 20, 2018, due to discrepancies between Claimant's service tickets and corresponding "MOBI" reports showing Claimant's location from a GPS tracking system on his vehicle.

14. Respondents filed an FAL on March 5, 2018 based on Dr. Gray's DIME report. The FAL admitted for reasonable and necessary medical care.

15. Claimant had a follow-up appointment with Dr. Heinz on March 8, 2018. The recurrent keloid had progressed and was causing significant pain, particularly by the end of the workday. Dr. Heinz opined if Claimant were not improved by his next follow-up, he would revise the scar "one last time."

16. Claimant saw Dr. Sandell on March 20, 2018. He reported "increased pain" and return of the keloid. Dr. Sandell agreed surgery was appropriate but deferred to Dr. Heinz regarding the timing of surgery.

17. Also on March 20, 2018, Claimant was involved in a rear-end motor vehicle accident. Claimant presented the Penrose St. Francis emergency department on March 21, 2018. He indicated he hit his head, but did not lose consciousness. He described back pain, chest pain, headaches, nausea, neck pain, and vomiting. There is no indication Claimant injured his left leg or foot.

18. Claimant saw a chiropractor on March 21, 2018 for additional treatment relating to the MVA. On the intake form, he reported sore muscles, low back problems, and dizziness. He also checked a box stating, "I cannot do my usual work" due to neck pain. Claimant had six additional chiropractic visits through the end of April 2018.

19. Claimant followed up with Dr. Sandell on May 8, 2018. Dr. Sandell opined Claimant was no longer at MMI, stating, "I feel he should be off MMI status as of the date that his surgeon recommended that he have repeat surgery. That date is March 8, 2018."

20. Dr. Heinz performed the scar revision surgery on May 21, 2018. Respondents covered the procedure, but believe surgery was "maintenance care" and Claimant remains at MMI.

21. Claimant saw Dr. Sandell on June 14, 2018, and reported, "This was one of the more painful surgeries he went through." He was using a walking boot and following restrictions "as per his surgeon's recommendations." Dr. Sandell continued Claimant "off of MMI."

22. On July 16, 2018, Dr. Sandell noted Claimant was restricted to working no more than six hours per day, with no work on ladders, stairs, or uneven ground. He was continuing to improve from surgery. Claimant was "anxious to get back to work" and hoping Dr. Heinz would remove the restrictions at his next appointment.

23. Claimant followed up with Dr. Sandell on August 6, 2018, who noted, "he continues to improve and recover from surgery. He is doing better with regards to pain control." Dr. Sandell released Claimant to return to work without restrictions.

24. On October 2, 2018, Dr. Sandell described Claimant as "doing well" and "stable," with "decreasing" pain. He refilled Claimant's pain medication and released him to follow-up "as needed." Dr. Sandell later opined Claimant had reached MMI on October 2, 2018 with no additional impairment.

25. Dr. McCranie testified at hearing for Respondents. Dr. McCranie explained keloids are essentially a fibrotic tumor that grows over a wound. Surgical excision is the most common treatment, but recurrence rates typically run between 70% and 100%. In Claimant's case, the keloid formed because of the original Achilles tendon surgery. Dr. McCranie agreed the keloid surgeries were reasonably necessary but opined the surgery is best described as maintenance care. A keloid scar is a chronic condition that worsens over time as it slowly regrows. Dr. McCranie opined the purpose of the surgery was to keep Claimant's condition from worsening due to the natural disease process inherent in keloid scar formation.

26. Claimant filed for unemployment (UI) benefits in mid-April 2018. He was eventually approved for $474 per week, commencing the week ending April 14, 2018. Claimant did not request or receive UI benefits from May 20, 2018 through June 23, 2018 (5 weeks) because of the surgery. Claimant's UI benefits resumed effective June 24, 2018 and continued through October 6, 2018.

27. Dr. Sandell's opinions regarding MMI are credible and more persuasive than the contrary opinions offered by Dr. McCranie. Claimant was no longer at MMI as of March 8, 2018.

28. The keloid revision surgery was intended to cure and relieve the effects of Claimant's injury. It was not "maintenance" care.

29. Respondents proved Claimant was responsible for termination of his employment on February 20, 2018.

30. Claimant proved his condition worsened and caused increased disability as of May 21, 2018, the date of the surgery. The worsened condition caused a wage loss starting on May 21, 2018. Claimant failed to prove he had increased disability or any injury-related wage loss before May 21, 2018.

31. Claimant's eligibility for TTD benefits ended on August 6, 2018 when Dr. Sandell released him to return to regular employment.

32. Respondents proved an offset for UI benefits from June 24, 2018 through August 5, 2018.

CONCLUSIONS OF LAW

A. Claimant's condition worsened after the July 31, 2017 MMI date

Section 8-43-303 authorizes an ALJ to reopen any award on the grounds of error, mistake, or a change in condition. The allowance for reopening reflects a "strong legislative policy" that the goal of achieving a fair and just result overrides the interests of litigants in obtaining final resolution of their dispute. *Padilla v. Industrial Commission*, 696 P.2d 273, 278 (Colo. 1985). Thus, a "final" award means only that the matter has been concluded subject to reopening if warranted under the applicable statutory criteria. *Renz v. Larimer County School District Poudre R-1*, 924 P.2d 1177 (Colo. App. 1996). The authority to reopen a claim is permissive, and whether to reopen a claim if the statutory criteria have been met is left to the ALJ's discretion. *Id*. The party requesting reopening bears the burden of proof. Section 8-43-304(4).

Claimant requests his claim be reopened based on mistake, error, or a change of condition. A "change in condition" refers either to a change in the condition of the original compensable injury, or a change in the claimant's physical or mental condition that can be causally related to the original injury. *Heinicke v. Industrial Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008); *Chavez v. Industrial Commission,* 714 P.2d 1328 (Colo. App. 1985). If a claimant's condition is shown to have changed, the ALJ should consider whether the change represents the natural progression of the industrial injury, or results from an intervening cause. *Goble v. Sam's Wholesale Club*, W.C. No. 4-297-675 (May 3, 2001).

As found, Claimant proved his condition worsened since he was put at MMI on July 31, 2017. Medical records from Dr. Heinz and Dr. Sandell show a steady worsening of the keloid and increasing pain in early 2018, culminating in the recommendation for surgery.

B. MMI and impact on Claimant's earning capacity

Even if a claimant's condition has worsened, reopening is only appropriate if additional benefits can be awarded. *Richards v. Industrial Claim Appeals Office*, 996 P.2d 756 (Colo. App. 2000). Here, Claimant seeks reopening for additional TTD benefits. Claimant's eligibility for TTD hinges on two questions. First, was the May 21, 2018 surgery "curative" or merely "maintenance" in nature? Second, did Claimant's worsened condition cause increased disability and contribute to a wage loss?

The type of treatment is not dispositive of whether the treatment is intended to "cure and relieve" or simply "relieve" the claimant's condition. It is the *purpose* for which treatment is provided, rather than the *nature* of the treatment, that determines whether the treatment is curative or provided for permissible post-MMI purposes. *Milco Construction v. Cowan*, 860 P.2d 539, 542 (Colo. App. 1992). Here, the ALJ is persuaded the May 21, 2018 surgery was intended to improve Claimant's condition rather than simply relieve symptoms or prevent deterioration. Claimant's condition had worsened, and the surgery was undertaken to restore him to his baseline level as of the original July 31, 2017 MMI date. Moreover, the surgery required a convalescence and recovery period of two and one-half months, which also supports a finding it was more than "maintenance." The ALJ credits Dr. Sandell's opinion Claimant was no longer at MMI as of March 8, 2018.

A worsening after MMI does not automatically entitle a claimant to additional TTD benefits, unless the worsened condition causes a "greater impact upon [the] claimant's temporary work capability." *City of Colorado Springs Disposal v. Industrial Claim Appeals Office*, 954 P.2d 677 (Colo. App. 1997). The dispositive question is whether the claimant proves "increased disability, as measured by [their] capacity to earn wages." *Friesz v. Wal-Mart Stores, Inc*., W.C. No. 4-823-944-01 (July 26, 2012). The ICAO has repeatedly held that *City of Colorado Springs* does not require a claimant to establish an "actual wage loss," and a claimant may recover TTD even if he not working immediately before his condition worsened. *E.g.*, *Hebert v. Blac Frac Tanks, Inc*., W.C. No. 4-919-279-01 (October 19, 2018); *Garcia v. Frontier Airlines*, W.C. No. 4-677-511 (August 17, 2011); *Moss v. Denny's Restaurants*, W.C. No. 4-440-517 (September 27, 2006). As the Panel explained in *Friesz v. Wal-Mart, supra*,

> [T]he critical issue in cases controlled by *City of Colorado Springs* is not whether the worsened condition actually resulted in additional temporary wage loss, but whether the worsened condition has had a greater impact on the claimant's temporary work "capacity." . . . It therefore follows that it is the impact on the claimant's work "capacity," not proof of an actual wage loss, which determines whether the claimant has established entitlement to TTD benefits in connection with a worsening of condition after MMI. [Internal citations omitted].

As found, Claimant's worsened condition caused a greater impact on his work capacity as of May 21, 2018, the date of surgery.

C. The termination statutes do not bar an award of TTD

Sections 8-42-103(1)(g) and 8-42-105(4) preclude an award of TTD benefits if a claimant was "responsible for termination" of his employment. The respondents must prove by a preponderance of the evidence that a claimant was terminated for cause or was responsible for the separation from employment. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008). To establish that a claimant was responsible for termination, the respondents must show the claimant performed a volitional act or otherwise exercised "some degree of control over the circumstances which led to the termination." *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 5 P.3d 1061, 1062 (Colo. App. 2002); *Padilla v. Digital Equipment Corp*., 902 P.2d 414 (Colo. App. 1995); *Velo v. Employment Solutions Personnel*, 988 P.2d 1139 (Colo. App. 1988).

Respondents proved Claimant was responsible for termination of his employment on February 20, 2018. But the termination statutes are not a permanent bar to receiving temporary disability benefits, and a claimant can reestablish eligibility for TTD by showing a worsened condition that causes a subsequent wage loss. *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004). A post-termination wage loss is "caused by a worsened condition" if the worsening results in limitations or restrictions which did not exist at the time of the termination, and which cause a limitation on the claimant's temporary earning capacity that did not exist when she caused the termination. *Martinez v. Denver Health*, W.C. No. 4-527-415 (ICAO, August 8, 2005). The mere imposition of additional work restrictions does not automatically establish a worsened condition. *Apex Transportation, Inc. v. Industrial Claim Appeals Office*, 321 P.3d 630 (Colo. App. 2014). The burden of proof to establish a subsequent worsening and consequent decrease of earning capacity is on the claimant. *Green v. Job Site, Inc.*, W.C. No. 4-587-025 (ICAO, July 19, 2005).

As found, Claimant proved that his injury-related medical condition deteriorated and caused greater limitations on his ability to work than were present at the time of his termination. The ALJ is persuaded Claimant was precluded from performing any work activity for at least a brief period after surgery, and then remained under restrictions that prevented returning to his regular work. These facts are sufficient to commence TTD as of May 21, 2018.

D. Termination of TTD based on release to full duty

Once commenced, TTD benefits continue until one of the terminating events enumerated in § 8-42-105(3). Here, Dr. Sandell released Claimant to return to regular duty on August 6, 2018. *See* § 8-42-105(3)(c). Thus, Claimant is entitled to a closed period of TTD benefits from May 21, 2018 through August 5, 2018.

E. Respondents proved an offset for UI benefits

Section 8-42-103(1)(f) provides that TTD benefits shall be reduced by any concurrent unemployment benefits a Claimant received. As found, Claimant was paid UI

benefits from June 24, 2018 through the end of the closed period of TTD. Thus, Respondents are entitled to an offset for UI benefits from June 24 through August 5, 2018, a period of 6 1/7 weeks (43 days).

F. Respondents' intervening event defense is moot

Even if the ALJ found the March 20, 2018 MVA was an intervening event regarding Claimant's wage loss, the May 21 surgery substantially increased his disability and re-established a causal nexus between the injury and his wage loss. Since the ALJ has awarded no TTD benefits before the surgery, Respondents' intervening event defense is moot.

ORDER

It is therefore ordered that:

1. Claimant's request for TTD benefits from March 8, 2018 through May 20, 2018 is denied and dismissed.

2. Insurer shall pay Claimant TTD benefits at the admitted rate from May 21, 2018 through August 5, 2018, subject to an offset for UI benefits Claimant received from June 24, 2018 through August 5, 2018.

3. Insurer shall pay Claimant statutory interest of 8% per annum on all benefits not paid when due.

4. Respondents' intervening event defense is denied and dismissed as moot.

5. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

Whether Claimant has proven by a preponderance of the evidence that the lumbar peripheral cluneal nerve stimulator **trial** proposed by Giancarlo Barolat, M.D. is reasonable and necessary to relieve the effects of his September 9, 2010 industrial injury.

FINDINGS OF FACT

1. Claimant worked for Employer as a Branch Manager. On September 9, 2010 he suffered an admitted industrial injury to his lower back while lifting reams of paper.

2. Claimant initially received medical care from David W. Yamamoto, M.D. He was subsequently referred to various providers for treatment. Claimant has undergone multiple surgeries including an unsuccessful L5-S1 anterior fusion on November 3, 2011, a posterior fusion at L5-S1 on January 31, 2013 and hardware removal on June 9, 2015.

3. Dr. Yamamoto referred Claimant to Walter J. Torres, Ph.D. in December of 2012 for a pre-surgical evaluation. As part of his evaluation, Dr. Torres completed a clinical examination along with psychological testing that included the Millon Behavioral Medical Diagnostic and the Millon Clinical Multiaxial Inventory-III. Dr. Torres provided Claimant with both Axis 1 and Axis II diagnoses. Claimant's Axis 1 diagnoses included pain disorder associated with psychological and medical factors, major depression, anxiety disorder and alcohol dependence that was under current control based on Claimant's report. The Axis II diagnoses included a personality disorder with dependent, schizotypal, narcissistic and borderline personality features.

4. After Dr. Torres completed his evaluation of Claimant he issued a written report dated February 5, 2013. He concluded that Claimant was a very poor candidate for invasive procedures and it would not be surprising if he did not respond well or developed complications. Dr. Torres also remarked that Claimant had a history of alcohol dependence and posed a significant risk of opioid abuse or dependence.

5. On October 29, 2013 Claimant visited Ron Carbaugh, Psy.D for a psychological assessment related to a spinal cord stimulator trial. Dr. Carbaugh conducted an evaluation but did not complete any testing as a result of Claimant's dramatic pain behavior, subjective discomfort and reported visual difficulties. He diagnosed Claimant with a somatic symptom disorder and "probable persistent depressive disorder." Dr. Carbaugh concluded that Claimant was at best a fair candidate for any type of invasive procedure and noted there were concerns regarding his response to a stimulator trial because of his poor reaction to previous treatment.

6. On January 14, 2014 Claimant underwent an independent medical examination with Lawrence A. Lesnak, D.O. After reviewing Claimant's medical records and conducting a physical examination, Dr. Lesnak agreed that Claimant was not a suitable candidate for additional invasive procedures. He observed that Claimant had failed to improve with treatment over the past three and one-half years.

7. L. Barton Goldman, M.D. conducted follow-up independent medical examinations of Claimant on November 3, 2014 and December 12, 2014. He strongly agreed with other providers who had determined Claimant was not a suitable candidate for further invasive procedures.

8. On July 21, 2015 Claimant reached Maximum Medical Improvement (MMI) for his September 9, 2010 industrial lower back injury.

9. After a hearing, a spinal cord stimulator trial was authorized by Order dated November 16, 2015.

10. The stimulator trial occurred between January 20, 2016 and January 27, 2016. Giancarlo Barolat, M.D. and Robert Brown, M.D. each noted that Claimant had experienced good pain relief in the leg and lower back from the stimulator. However, the stimulation was not reaching the right medial buttock area. Nevertheless, Dr. Barolat recommended proceeding with permanent implantation. The permanent device was implanted on March 15, 2016.

11. Prior to receiving the spinal cord stimulator Claimant was taking the following pain medications as reflected in Dr. Yamamoto's records: (1) Acetaminophin-oxycodone hydrochloride tablet (Percocet) 325 mg-10mg tabs, every six hours; (2) Meloxicam tablet, 15 mg 1 tabs, three times per day; (3) Lyrica; (4) Baclofen, 10mg tab three times daily; (5) Fentanyl 50 mcg/hr film, extended release one patch every 48 hours; and (6) Depakote.

12. At Claimant's first visit with Dr. Yamamoto after the spinal cord stimulator implant he reported that his back pain had ceased and his right buttock pain was down to 1-2 out of 10. Based on Dr. Yamamoto's records Claimant continued his medications but his Percocet decreased from 10 mg to 7.5 mg and his Fentanyl decreased from 50 mcg to 25 mcg.

13. Claimant's pain management was eventually transferred to Michael Tracy, D.O. He initially visited Dr. Tracy on April 12, 2018 and reported an overall pain level of 9/10. Claimant's medications included Fentanyl, Percocet, methocarbamol, Lyrica and Nucynta.

14. Dr. Tracy evaluated Claimant approximately once per month and recommended various treatment interventions including medication adjustments and injections. On June 12, 2018 Dr. Tracy sought to proceed with Suboxone detoxification.

15. In a June 27, 2018 Order Claimant was determined to be permanently and totally disabled.

16. Claimant's Suboxone detoxification began on June 25, 2018 and continued over the following two months. Claimant reported significant worsening of his leg pain but increasing lower back pain.

17. On August 1, 2018 Giancarlo Barolat, M.D. proposed a trial of lumbar peripheral cluneal nerve stimulation for Claimant's pain. He explained:

> The stimulation is clearly helping him with the medial buttock pain, which was at the time of the implant the worst pain. The patient, however, has continued to complain of pain in the lumbar area following the multiple surgical procedures on his lumbar spine. The pain in the lumbar area has been controlled relatively well by narcotic intake; however, the patient has developed side effects to the narcotics. He wants to try to discontinue the use of the narcotics. Unfortunately, if he decreases the intake of narcotics, the back pain comes back immediately. His pain is fairly well localized in the lower lumbar area. I think that this pain could very well be addressed by lumbar cluneal nerve stimulation.

18. On August 13, 2018 Marc Steinmetz, M.D. completed a records review of Dr. Barolat's request for the trial of a lumbar peripheral cluneal nerve stimulator. Dr. Steinmetz determined that the request for the peripheral nerve stimulator trial was not reasonable and necessary or consistent with the Colorado Level II *Medical Treatment Guidelines* (*Guidelines*). He referenced the numerous prior providers who had recommended against invasive procedures as well as Claimant's lack of psychological clearance for a neurostimulator. Dr. Steinmetz further explained that the requirements set forth in the *Guidelines* had not been met with respect to the original stimulator because Claimant had not achieved any increase in function or decrease in pain medications.

19. On August 27, 2018 Claimant asked Dr. Tracy to transition him back to opiates because of decreasing functional ability. Claimant specifically noted that he was unable to perform household chores. Dr. Tracy commented that Claimant's "current pain intake form [was] identical to his initial patient evaluation where he rate[d] his pain at best a 4 and worst a 9 and noted that subsequent visits had been fairly consistent with a rating of 9 out of 10." He remarked that it was "striking" that Claimant complained of more axial back pain after the spinal cord stimulator "was adjusted to capture more symptoms consistent with the S1 radiculopathy that has been documented across the record."

20. On November 12, 2018 Claimant's treating psychologist Lupe Ledezma, Ph.D. determined that Claimant did not have any psychological impediments that would interfere with a trial of lumbar peripheral cluneal nerve stimulation. He detailed that "[a]fter several sessions discussing the neurostimulator trial and lead placement surgery, it is my opinion that there is no reason from a psychological standpoint that [Claimant] should not move forward with the trial process."

21. Robert E. Kleinman, M.D. conducted a psychiatric independent medical examination of Claimant on July 16, 2018. He issued addenda on August 10, 2018 and November 13, 2018 to address Dr. Barolat's requests for a spinal cord stimulator and a

peripheral nerve stimulator. Dr. Kleinman explained that the record did not support a conclusion that Claimant was a suitable psychological candidate for a stimulator. He reasoned that Claimant did not satisfy the *Guidelines* for determining whether he was an appropriate candidate. Dr. Kleinman remarked that the *Guidelines* require a psychiatric examination, complete review of the medical records and at least two psychological tests.

22. On November 13, 2018 the parties conducted the pre-hearing evidentiary deposition of Dr. Steinmetz. Dr. Steinmetz noted that Claimant did not have a good response to his existing spinal cord stimulator. He explained that, if the stimulator had worked and had a significant impact on Claimant's symptoms, his pain medications would have been reduced earlier than two years after the implantation. Moreover, Claimant has not demonstrated any increased functionality.

23. In a note dated November 26, 2018 Dr. Yamamoto agreed that Claimant should proceed with the peripheral cluneal nerve stimulator trial. He remarked that "Claimant has responded positively to the stimulator regarding the buttock pain."

24. On November 15, 2018 the parties conducted the pre-hearing evidentiary deposition of Dr. Barolat. Dr. Barolat explained that neurostimulation is designed to address chronic pain. He noted that he implanted a spinal cord stimulator into Claimant in March of 2016 and it decreased pain in the areas it was designed to reach. Dr. Barolat also commented that the spinal cord stimulator has helped Claimant reduce his pain medications for the symptoms in his legs and buttocks. However, Claimant continues to suffer lumbar spine symptoms. Dr. Barolat explained that the trial of a peripheral nerve stimulator would be the "most effective and the least invasive procedure." He detailed that he would place electrodes in the painful lower back area over the nerves in the lumbar region. If the procedure provided Claimant with more than a 50% relief of pain he would insert the lumbar peripheral cluneal nerve stimulator. Dr. Barolat summarized that the proposed procedure is approximately 70% less invasive than the insertion of the spinal cord stimulator. He commented that the purpose of the lumbar peripheral cluneal nerve stimulator was to decrease Claimant's lumbar spine pain and increase his function.

25. On November 28, 2018 the parties conducted the pre-hearing evidentiary deposition of Dr. Kleinman. He maintained that Claimant was not a suitable psychological candidate to undergo the peripheral cluneal nerve stimulator trial requested by Dr. Barolat. Dr. Kleinman also reiterated that the *Guidelines* require psychological clearance prior to proceeding with the stimulator trial and make no distinction in the type of stimulator under consideration. He further determined that the original stimulator had not resulted in any increase of function or reduction of pain medication for over two years after implantation. Because the spinal cord stimulator was not a success further treatment through neurostimulation is not appropriate.

26. Claimant testified at the hearing in this matter. He explained that the spinal cord stimulator implanted on March 15, 2016 had successfully relieved his leg and buttock symptoms. However, the stimulator was not designed to address his lower back symptoms. Although Claimant sought to discontinue his pain medications, his lower back

symptoms worsened with reduced medications. Claimant remarked that his continuing use of pain medications addressed his persistent lower back pain. Because the peripheral cluneal nerve stimulator would reduce the pain in his lower back and decrease his reliance on medications, he sought to proceed with the procedure.

27. Claimant has proven that it is more probably true than not that the lumbar peripheral cluneal nerve stimulator **trial** proposed by Dr. Barolat is reasonable and necessary to relieve the effects of his September 9, 2010 industrial injury. Initially, on September 9, 2010 Claimant suffered an admitted industrial injury to his lower back while lifting reams of paper. He subsequently underwent multiple back surgeries and required numerous pain medications. Despite psychological concerns, Claimant ultimately underwent a spinal cord stimulator implant through Dr. Barolat on March 15, 2016.

28. Claimant explained that he was able to reduce his pain medications after the spinal cord stimulator implant. He obtained Suboxone detoxification treatment through Dr. Tracy. Claimant's treatment began on June 25, 2018 and continued over the following two months. However, Claimant reported significant worsening of his leg pain and increasing lower back pain during the reduction of his pain medications. On August 1, 2018 Dr. Barolat proposed a trial of lumbar peripheral cluneal nerve stimulation for Claimant's pain. Dr. Barolat explained that the spinal cord stimulator had decreased Claimant's medial buttock pain. However, Claimant's lumbar spine pain continued and any decrease in pain medications increased his lower back pain. Dr. Barolat thus reasoned that the implantation of a peripheral cluneal nerve stimulator would decrease Claimant's lower back pain and use of narcotic pain medications.

29. In contrast, Dr. Steinmetz determined that the request for the peripheral nerve stimulator trial was not reasonable and necessary or consistent with the *Guidelines*. He referenced the numerous prior providers who had recommended against invasive procedures as well as Claimant's lack of psychological clearance for a neurostimulator. Moreover, Dr. Kleinman maintained that Claimant was not a suitable psychological candidate to undergo the peripheral cluneal nerve stimulator trial requested by Dr. Barolat. He explained that the *Guidelines* require psychological clearance prior to proceeding with the stimulator trial and make no distinction in the type of stimulator under consideration. Dr. Kleinman also noted that the original stimulator had not resulted in any increase of function or reduction of pain medication for over two years after implantation.

30. Despite the concerns of Drs. Steinmetz and Kleinman, the persuasive evidence reveals that the implantation of the lumbar peripheral cluneal nerve stimulator will likely decrease Claimant's pain medications and improve his function. Dr. Barolat noted that he implanted a spinal cord stimulator into Claimant in March of 2016 and it decreased pain in the areas it was designed to reach. He also commented that the spinal cord stimulator has helped Claimant reduce his pain medications for the symptoms in his legs and buttocks. However, Claimant continues to suffer lumbar spine symptoms. Dr. Barolat explained that the trial of a peripheral nerve stimulator would be the "most effective and the least invasive procedure." He summarized that the purpose of the lumbar peripheral cluneal nerve stimulator.was to decrease Claimant's lumbar spine pain

and increase his function. Moreover, Dr. Yamamoto agreed that Claimant should proceed with the peripheral cluneal nerve stimulator **trial**. He remarked that "Claimant has responded positively to the stimulator regarding the buttock pain." Furthermore, Claimant noted that, because the peripheral cluneal nerve stimulator would reduce the pain in his lower back and decrease his reliance on medications, he sought to proceed with the procedure. Finally, despite the detailed procedure mentioned in the *Guidelines*, the record reveals that Claimant is an appropriate psychological candidate for the implantation of a peripheral nerve stimulator. Claimant's treating psychologist Dr. Ledezma determined that Claimant did not have any psychological impediments that would interfere with a trial of lumbar peripheral cluneal nerve stimulation. He detailed that "[a]fter several sessions discussing the neurostimulator trial and lead placement surgery, it is my opinion that there is no reason from a psychological standpoint that [Claimant] should not move forward with the trial process." Accordingly, Claimant's request for a lumbar peripheral cluneal nerve stimulator **trial** is granted.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to

produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

5. It is appropriate for an ALJ to consider the *Guidelines* in determining whether a certain medical treatment is reasonable and necessary for a claimant's condition. *Deets v. Multimedia Audio Visual*, W.C. No. 4-327-591 (ICAP, Mar. 18, 2005); see *Eldi v. Montgomery Ward*, W.C. No. 3-757-021 (ICAP, Oct. 30, 1998) (noting that the *Guidelines* are a reasonable source for identifying the diagnostic criteria). The *Guidelines* are regarded as accepted professional standards for care under the Workers' Compensation Act. *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). Nevertheless, the *Guidelines* expressly acknowledge that deviation is permissible.

6. The Guidelines provide a list of surgical indications for spinal cord stimulators. Spinal cord stimulators are appropriate for patients who exhibit the following:

> persistent functionally limiting radicular pain greater than axial pain who have failed conservative therapy including active and/or passive therapy, pre-stimulator trial psychiatric evaluation and treatment, medication management, and therapeutic injections.

W.C.R.P. 17 Exhibit 9(H)(1)(c). Prior to a stimulator trial a candidate must undergo a "comprehensive psychiatric or psychological evaluation." The evaluation should include the following:

> a standardized detailed personality inventory with validity scales (e.g., MMPI-2, MMPI-2-RF, or PAI); pain inventory with validity measures (e.g., BHI 2, MBMD); clinical interview and complete review of the medical records. The psychologist or psychiatrist performing these evaluations should not be an employee of the physician performing the implantation. This evaluation must be completed, with favorable findings, before the screening trial is scheduled.

W.C.R.P. 17 Exhibit 9(H)((1)(c)(ii). Moreover, neurostimulation is inappropriate unless there are no psychiatric "red flags," the patient understands the risks and benefits of the procedure; the patient has demonstrated a history of adherence to prescribed treatments and all reasonable surgical and non-surgical treatment has been exhausted. W.C.R.P. 17 Exhibit 9(H)(1)(c)(ii).

7. The *Guidelines* specify that peripheral nerve stimulation should only be utilized "with a clear nerve injury or when the majority of pain is clearly in a nerve distribution" for patients who have completed six months of therapy. W.C.R.P. 17 Exhibit 9(H)(3). Implantation of a peripheral nerve stimulator requires the same "pre-trial psychosocial evaluation and treatment" as those recommended for a spinal cord stimulator. A trial is considered successful when a patient experiences a 50% decrease

in pain and "demonstrates objective functional gains or decreased utilization of pain medications." W.C.R.P. 17 Exhibit 9(H)(3).

8. As found, Claimant has proven by a preponderance of the evidence that the lumbar peripheral cluneal nerve stimulator **trial** proposed by Dr. Barolat is reasonable and necessary to relieve the effects of his September 9, 2010 industrial injury. Initially, on September 9, 2010 Claimant suffered an admitted industrial injury to his lower back while lifting reams of paper. He subsequently underwent multiple back surgeries and required numerous pain medications. Despite psychological concerns, Claimant ultimately underwent a spinal cord stimulator implant through Dr. Barolat on March 15, 2016.

9. As found, Claimant explained that he was able to reduce his pain medications after the spinal cord stimulator implant. He obtained Suboxone detoxification treatment through Dr. Tracy. Claimant's treatment began on June 25, 2018 and continued over the following two months. However, Claimant reported significant worsening of his leg pain and increasing lower back pain during the reduction of his pain medications. On August 1, 2018 Dr. Barolat proposed a trial of lumbar peripheral cluneal nerve stimulation for Claimant's pain. Dr. Barolat explained that the spinal cord stimulator had decreased Claimant's medial buttock pain. However, Claimant's lumbar spine pain continued and any decrease in pain medications increased his lower back pain. Dr. Barolat thus reasoned that the implantation of a peripheral cluneal nerve stimulator would decrease Claimant's lower back pain and use of narcotic pain medications.

10. As found, in contrast, Dr. Steinmetz determined that the request for the peripheral nerve stimulator trial was not reasonable and necessary or consistent with the *Guidelines*. He referenced the numerous prior providers who had recommended against invasive procedures as well as Claimant's lack of psychological clearance for a neurostimulator. Moreover, Dr. Kleinman maintained that Claimant was not a suitable psychological candidate to undergo the peripheral cluneal nerve stimulator trial requested by Dr. Barolat. He explained that the *Guidelines* require psychological clearance prior to proceeding with the stimulator trial and make no distinction in the type of stimulator under consideration. Dr. Kleinman also noted that the original stimulator had not resulted in any increase of function or reduction of pain medication for over two years after implantation.

11. Despite the concerns of Drs. Steinmetz and Kleinman, the persuasive evidence reveals that the implantation of the lumbar peripheral cluneal nerve stimulator will likely decrease Claimant's pain medications and improve his function. Dr. Barolat noted that he implanted a spinal cord stimulator into Claimant in March of 2016 and it decreased pain in the areas it was designed to reach. He also commented that the spinal cord stimulator has helped Claimant reduce his pain medications for the symptoms in his legs and buttocks. However, Claimant continues to suffer lumbar spine symptoms. Dr. Barolat explained that the trial of a peripheral nerve stimulator would be the "most effective and the least invasive procedure." He summarized that the purpose of the lumbar peripheral cluneal nerve stimulator.was to decrease Claimant's lumbar spine pain and increase his function. Moreover, Dr. Yamamoto agreed that Claimant should proceed with the peripheral cluneal nerve stimulator **trial**. He remarked that "Claimant has

responded positively to the stimulator regarding the buttock pain." Furthermore, Claimant noted that, because the peripheral cluneal nerve stimulator would reduce the pain in his lower back and decrease his reliance on medications, he sought to proceed with the procedure. Finally, despite the detailed procedure mentioned in the *Guidelines*, the record reveals that Claimant is an appropriate psychological candidate for the implantation of a peripheral nerve stimulator. Claimant's treating psychologist Dr. Ledezma determined that Claimant did not have any psychological impediments that would interfere with a trial of lumbar peripheral cluneal nerve stimulation. He detailed that "[a]fter several sessions discussing the neurostimulator trial and lead placement surgery, it is my opinion that there is no reason from a psychological standpoint that [Claimant] should not move forward with the trial process." Accordingly, Claimant's request for a lumbar peripheral cluneal nerve stimulator **trial** is granted.

ORDER

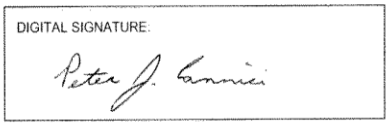
Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for a lumbar peripheral cluneal nerve stimulator **trial** is granted.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: January 24, 2019.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Are the facet-joint injections, at levels L3-L4, L4-L5, and L5-S1, as recommended by Dr. Castrejon, reasonable and necessary for Claimant's medical maintenance treatment, and related to his original work injury?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

The Injury

1. Claimant was a patrol officer for the City of P____ when he sustained an injury to his low back on October 5, 2007. On the date of the injury, he was in pursuit of a stolen car. The driver of that car abandoned the vehicle, which continued to move without a driver on board. Claimant positioned his police cruiser to stop the moving vehicle. It struck the patrol cruiser's driver's side door. Claimant described the impact like someone "kicking him in the tailbone." He initially presented with radiculopathy on both the right and left.

Early Care Notes

2. After failed conservative care, Dr. James Bee recommended an L5-S1 decompression and fusion. This was performed the operation on April 8, 2008.

3. Claimant was placed at maximum medical improvement (MMI) by his authorized treating provider, Dr. Daniel Olson, on January 16, 2009. Dr. Olson assessed Claimant with an apportioned 16% whole person impairment rating. Dr. Ridings, who performed the Division Independent Medical Examination, agreed with the MMI date and assigned a 15% apportioned whole person rating. Respondent admitted to this rating and to post-MMI medical maintenance.

4. Claimant continued treatment, including with Dr. Bradley Sisson of the Colorado Clinic. On 7/20/2017, Claimant received Radio Frequency Ablation ("RFA") treatment, bilaterally, at L3, L4, L5 levels (Ex. 2, pp. 26-30). In the history provided at this visit, Dr. Sisson noted:

> About 3 or 4 years ago, the patient had lumbar radiofrequency nerve ablation done. *The patient states that that procedure reduce the local the pain by 80-90%* (sic). *Id at .27* (emphasis added).

It was further noted by Dr. Sisson:

> The patient reports that he had an SI joint injection performed by Dr. Jenks in July 26, 2016. He reports the SI joint pain reduced his SI generated pain by approximately 80%. He did not have to take Norco as a pain analgesic for several months after that specific injection……In

November 2016, he felt that the SI joint injection was wearing off and Dr. Jenks ordered another SI joint injection which was denied by the insurance carrier.

Trigger point injections were administered by Dr. Sisson in lieu of the SI injection.

5. At his follow-up visit on 8/8/2017, Claimant reported to Dr. Sisson that this most recent RFA procedure was *90% helpful for pain relief* (Ex. 2, p. 22).

6. A lumbar MRI was taken at Parkview Medical Center on September 1, 2017. The primary care physician was not noted in the report. Under Findings, the following was noted:

> L3-L4: No significant disc bulge or spinal canal stenosis. *Minimal facet hypertrophy*. No significant foraminal narrowing.
>
> L4-L5: There is a broad-based disc bulge and *moderate facet hypertrophy* that minimally narrow the spinal canal. There is mild right greater than left foraminal narrowing.
>
> L5-S1: There are postsurgical changes from prior posterior decompression. An intervertebral disc spacer is identified. There is no significant spinal canal stenosis. *There is facet hypertrophy* and mild foraminal narrowing. (Ex. 1, p. 1) (emphasis added).

Recent Maintenance Medical Care

7. On January 11, 2018, maintenance care was transferred to Miguel Castrejon. Dr. Castrejon noted in his report that Dr. Jenks had provided multiple injections for pain management, including SI-Joint injections and facet joint injections. He also noted a prior SI-joint rhizotomy, and radiofrequency ablations. After Dr. Jenks lost his medical license, care was transferred to Dr. Shell of the Colorado Clinic, who resumed a series of injections. On his patient intake forms, Claimant reported pain in the SI area with constant ache and occasional stabbing on the right side into the groin area. This was worsened by sitting or standing on hard surfaces.

8. Claimant also reported pain in his buttocks and leg on the right side, with occasional shooting pain from hip down into the leg. He had a deep ache in his low back, and rated his pain as 4-5/10. Physical examination revealed that Claimant weighed 205 pounds, with a slow but normal gait. Facet loading was *equivocal* bilaterally. Claimant was neurologically intact, with negative straight leg raises but some evidence of pelvic obliquity. (Ex. 4, p. 80).

9. Based on Dr. Castrejon's review of the medical history, on 1/11/2018 he opined, "Having had the opportunity to discuss results of the prior SI-Joint injection as well as the risks associated with ongoing spinal injections, the recommendation of this examiner that the Claimant not undergo any further spinal injections including facet and sacroiliac." (Ex. J, p. 45, Ex. 4, p. 83).

10. Claimant returned to Dr. Castrejon on February 6, 2018. Physical examination revealed the same weight, along with slow but normal gait. He had mild tenderness in the area of the piriformis to a lesser degree than the SI-Joint. Facet loading was *negative.* There was evidence of pelvic obliquity. Straight leg raises were negative. Claimant remained neurologically intact. (Ex. K, p. 54).

11. Claimant returned to Dr. Castrejon on March 7, 2018. Physical examination remained relatively unchanged. However, he now noted that Claimant was *tender* at L5-S1 facet region, but that facet loading was still *negative*. Dr. Castrejon recommended physical therapy, but by this time, he had discussed a right SI-Joint injection. (Ex. L, p. 58, Ex. 4, p. 62).

12. At the next visit, on April 5, 2018, Dr. Castrejon noted improvement with physical therapy, and felt that Claimant could transition to his home exercise program. Claimant's physical examination remained relatively unchanged. Facet loading was still *negative.* Dr. Castrejon noted that patient was at risk for ongoing flare-ups, which would require treatment that may include spinal injections, physical therapy, and ongoing use of medications for indefinite period of time. (Ex. N, p. 65).

13. At a May 21, 2018 appointment with Dr. Castrejon, Claimant's physical examination remained largely unchanged. (Ex. O, p. 67). Facet loading was still *negative.* (Ex. 4, p 60). Claimant reported pain 4/10, with sciatic symptoms running down both legs occasionally. *Id at 69.* Dr. Castrejon recommended chiropractic care.

14. At a June 13, 2018 return visit, Claimant's physical examination remained largely unchanged. Facet loading was still *negative.* (Ex. P, p. 70, Ex. 4, p. 56). Dr. Castrejon recommended an SI-Joint injection. *Id at 71, 57.*

15. On June 27, 2018, Claimant reported withdrawal symptoms from switching between Butrans and Belbuca. The switch was initially made because of skin irritation caused by the Butrans patches. Based on Claimant's withdrawal symptoms and lack of pain control, Dr. Castrejon increased Claimant's dosage of Belbuca from 75 mg to 150 mg. (Ex. Q, pp. 72-73).

16. On July 18, 2018, Claimant reported that he was unsure of the benefit of the SI-Joint injection, indicating that he felt slightly worse. Claimant voiced right-sided low back pain extending into the buttock, with no referred pain or paresthesia. There was no groin pain. Claimant's physical examination remained unchanged. Facet loading still *negative.* (Ex. R, p. 74, Ex. 4, p. 52). Dr. Castrejon placed Claimant back on Butrans because of additional side effects with the Belbuca. He recommended six massage therapy sessions to decrease back muscles spasms. *Id*

17. On August 6, 2018, Claimant reported to Dr. Castrejon a severe flare-up of low back pain, which Claimant described as midline, and which worsened with extension. There was no radiation noted of pain into his legs. Physical examination revealed *moderate tenderness with extension* now with *positive facet loading* and tenderness at L5-S1

facet. Claimant continued to be neurologically intact. (Ex. S, p. 76, Ex. 4, p. 49). At this appointment, Dr. Castrejon noted:

> The patient is here for flare-up of low back pain *that presents as facet mediated pain.* I have discussed his medical condition and treatment recommendations. I am requesting authorization for bilateral L5, S1 facet joint injections with Dr. Steven Ford. Today, I have administered 5 trigger point injections utilizing a solution of 1% lidocaine and .25% Marcaine to the paraspinal musculature. I have dispensed a TENS unit for purchase to assist with muscle spasm. I have dispensed a tapering oral course of prednisone and robaxin 750 mg#60. He will return in 4 weeks. (Ex. 4, p. 50) (emphasis added).

18. On October 5, 2018, Dr. Allison Fall reviewed the request for bilateral L5-S1 facet joint injections. She opined that L5-S1 facet joints were not likely the cause of Claimant's symptoms. Claimant was fused at that level and therefore, there would be no movement in those joints to produce pain. (Ex. T, p. 78). She further opined that facet joint injections are not considered diagnostic under the Colorado Medical Treatment Guidelines; rather, medial branch blocks are the proper diagnostic tool. Additionally, Dr. Fall noted that Claimant had had multiple trigger point injections, prednisone, and a TENS unit, which would be more appropriate to addressing Claimant's flare-up than an interventional procedure. (Ex. T, p. 79).

19. A September 21, 2018 medical report from Dr. Castrejon indicated that Claimant was now on 300 mg of Belbuca (which had previously been ineffective in controlling Claimant's pain) because of a severe skin rash caused by the Butrans. Dr. Castrejon noted improvement in Claimant's pain level and function following massage therapy.

20. Claimant indicated that his pain was still 5/10. (Ex. U, p. 82). Physical examination now revealed *moderate* pain with *positive* facet loading and *tenderness* at L4-S1 and midline L3-S1. Dr. Castrejon prescribed LidoPro to provide additional pain control. Dr. Castrejon also noted:

> His examination *continues to support* ***facet mediated pain***…..A request for lumbar facet injections was not approved by the carrier…..**Please recall that a lumber MRI confirmed the presence of minimal facet hypertrophy at L3-4 and moderate at L4-5.** I am again requesting authorization for bilateral L3-4 and L4-5 facet injections wit Dr. Ford…(Ex. 4, p. 46)(emphasis added).

21. On November 14, 2018, Claimant indicated that his July 17, 2018 right SI-Joint injection did not result in any lasting benefit. (Ex. W, p. 86). In his medical report, Dr. Castrejon noted that Claimant's condition was actually worse by this time. Based on this finding, Dr. Castrejon began considering the L5-S1 region as a possible pain generator. (Ex. W, p. 87). At that appointment, Claimant reported a 25-pound weight gain; however, Dr. Castrejon's report continues to list Claimant's weight as 205 pounds.

22. Dr. Castrejon then provided a lengthy review of an article from the journal *Pain Medicine*. (Ex. AA.) Dr. Castrejon noted that the article showed evidence for post-fusion facet pain as being a possible pain generator; he thus supported his recommendation for bilateral L5-S1 facet joint injections. He believed that this article supported his decision to seek treatment of the fused joint, and undermined Dr. Fall's opinion that the fused facet could not be the pain generator. (Ex. W, p. 87).

23. Dr. Castrejon, also responded to Dr. Fall's report, noting these observations:

> This examiner notes that the patient underwent rhizotomy bilaterally at L3, L4, and L5 on 7/20/17. Record review documented 90% pain relief. Prior to the rhizotomy records document the patient as having undergone two prior facet injections at bilateral L3-4 and L4-5. At one point Dr. Fall argued that this did not follow diagnostic criteria. With all respect, the outcome was on of 90% benefit with pain having decreased to 1/10. This outcome in and of itself (sic). Deviating from "diagnostic criteria" recommendations is a medical decision that resulted in substantial benefit. Addressing the facet joints above the level of the fusion was medically reasonable on the basis of *adjacent level disease* that is often seen post fusion. In all medical probability the patient's treating physician was attempting to identify whether the patient's ongoing symptoms were *related to facet-mediated pain* coming from above the level of fusion. Excellent benefit was achieved with the rhizotomy procedure that satisfied the treatment guideline criteria….
>
> Given that there was no benefit following the SI injection I took into consideration the facet joints. I noted that the patient had previously undergone facet rhizotomy above the level of fusion with excellent benefit….Please recall that the patient underwent a surgical fusion procedure at this level (L5-S1). As a result, the structures contained at this level are no longer virgin territory having been violated by the surgical procedure and placing the patient *at risk for pain from structures directly manipulated, as well as adjoining and distal to the site of surgery*. (Ex. 4, p. 33) (emphasis added).

Dr. Fall's IME Report

24. On November 19, 2018, Dr. Fall issued a response to Dr. Castrejon's November 14 report. She also reviewed the journal article referenced by Dr. Castrejon. Dr. Fall pointed out that the article on which Dr. Castrejon was basing his treatment decisions showed no statistically significant change in facet joint pain between pre-and post-fusion for those with low back pain. (Ex. X, p. 89). Additionally, Dr. Fall opined that the article did not support Dr. Castrejon's assertion that a fused facet joint could be a possible pain generator. Instead, all of the patients with zygapophyseal pain in the study had the pain at adjacent levels to where the fusion was.

25. She concluded there was absolutely no documentation of facetogenic pain at the fused level in the entire article. (Ex. X, p. 90). Finally, Dr. Fall noted that the article was merely a preliminary look at some factors that may be implicated in ongoing low back pain after a fusion. There was nothing definitive in the article; further, one article would not be the proper basis for altering medical treatment parameters. i.e., the Colorado Medical Treatment Guidelines.

26. In her report, Dr. Fall further noted inconsistencies in the reported benefit from Claimant's July 2018 SI-Joint injection between his answers to interrogatories and what had been documented in Dr. Castrejon's reports. She explained that such inconsistencies are not uncommon in a chronic pain situation; that is in part why interventional procedures like facet injections are not recommended by the Colorado Medical Treatment Guidelines.

Deposition Testimony of Dr. Fall

27. Dr. Fall testified by evidentiary deposition on November 14, 2018. She was qualified as an expert in the field of physical medicine and rehabilitation. She further testified that she was Level II accredited and familiar with the Colorado Medical Treatment Guidelines.

28. Dr. Fall testified that facet joint injections are 'frowned upon', unless they are part of a functionally-directed rehabilitation program, but are not appropriate for patients with recurrent pain. She further opined that generally facet joint injections are not appropriate to address diffuse and divergent pain complaints.

29. Concerning Dr. Castrejon's L5-S1 request, she testified that this would not be a possible pain generator because of the fusion at that level. Moreover, because this was a chronic pain syndrome case, it was not appropriate to continue to manage Claimant's pain with spinal injections, particularly where Claimant had had inconsistent responses to those procedures. She further opined that this was consistent with Dr. Castrejon's *initial* recommendations in the case.

30. Dr. Fall testified that Claimant did have radiating pain down the back of his legs, but that it was not radicular in nature. Additionally, she testified that there was no indication that the fusion was unstable. She explained that the Colorado Medical Treatment Guidelines for chronic pain recommend against moving back and forth between various suspected pain generators with injections. She then explained that there was no basis in the medical records, or Claimant's fluctuating symptoms following Dr. Castrejon's initial January 11, 2018 report which would warrant a change in Dr. Castrejon's initial recommendation against continued spinal injections.

31. Dr. Fall explained that, at this point in the 11 years of treatment for chronic pain, the risks from continued spinal injections simply outweighed any benefit, which, at best, had been inconsistent throughout the case. The morbidities associate with continuing such

injections included deterioration of the joints being injected, allergic reaction, bleeding, infection, and spinal nerve injury. Additionally, she opined that in a chronic pain situation these types of interventional injections, specifically the facet joint injections, should not be utilized. Instead, it is more appropriate to treat a flare-up with anti-inflammatories, topical patches, massage, or a TENS unit. Moreover, the term "flare-up" indicates something short-lived, and Claimant's subjective reports were consistent with an underlying chronic pain condition with no specific pain generator. Additionally, she noted that facet joint injections should not be used to promote weight loss or facilitate exercise.

32. Concerning facet joint injections at levels above the fusion (specifically L3-L4 and L4-L5), Dr. Fall testified that this would be chasing diffuse complaints with no obvious pain generator. Additionally, she opined that the facet joints at those higher levels were pain generators from Claimant's pre-existing injury that was not related to this claim. However, no evidence in support of this proposition was cited by Dr. Fall.

33. Dr. Fall did acknowledge that facet joint pain is a potential pain generator in the lumbar spine, but disagreed that between 15% and 40% of low back pain is due to facet joints. Instead, she opined, and later confirmed her opinion, that 90% of all low back pain cases one cannot identify the source of the pain generator.

34. Further, after discussion of the interplay between Claimant's SI joint issues and the RFA on his facet joints, the following discussion was noted on p. 44 of her deposition:

> Q. Okay. So even if the RFA gives a patient 90 percent pain relief for a facet-mediated pain, you're saying that if they have pain that's *also* coming from the SI region they shouldn't get an RFA?
>
> A: That's correct.
>
> Q: That that's your interpretation of the [Medical Treatment] guidelines?
>
> A: Yes.

Claimant's Testimony

35. Claimant testified, at hearing. He stated that he was unable to engage in physical therapy because stretching was painful. He further indicated that he was not able to do home exercises. He testified that the TENS unit that was provided did not work. He also testified that massage therapy only provided momentary relief.

36. Claimant further testified that he did benefit significantly from the first Radio Frequency Ablation, and would like to repeat this process, since he had to take less Norco afterwards.

37. Claimant acknowledged that his sleep had improved since October 2017, but he had gained approximately 20 to 25 pounds during this period. He testified that following the July 17, 2018 SI-Joint injection performed by Dr. Stephen Ford, he noticed a decrease in the pain that he experienced while sitting. He noticed a lessening in the pain associated with walking on hard floors, and that he could now walk for longer periods of time. He acknowledged that following the facet rhizotomy that he received in 2017, that it did not improve his pain with sitting on hard surfaces or standing on hard ground. He did acknowledge that his condition improved with physical therapy conducted by Dr. Castrejon and that he was able to transition to a home exercise program.

38. Claimant testified that his reported weight did not accurately reflect his actual weight throughout the course of his treatment, including the November 14, 2018 report, which listed his weight at 205 pounds.

Testimony or Ray Wilbur

39. Ray Wilbur is a Claims Adjuster for Insurer. Mr. Wilbur testified about the claims process in this case, including his denial of the treatment being requested by Claimant. While the ALJ finds this witness to be truthful in his testimony, his professional decision making process is not pertinent to the issues currently before the ALJ.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

a. The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-101, *et seq.*, C.R.S. (2018), is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102 (1), C.R.S. (2018). The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201 (1), C.R.S. (2018). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. § 8-42-201 (1), C.R.S. (2018).

b. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A workers' compensation case is decided on its merits. § 8-43-201 (1), C.R.S. (2018).

c. In this case, the ALJ finds Claimant's testimony to be sincere and credible, limited though it is in addressing the medical issue presented. The ALJ further finds that both Dr. Castrejon and Dr. Fall have reported, and testified, to the best of their professional abilities. As such, the ALJ must analyze their medical opinions on the basis of relative *persuasiveness,* and not *credibility* per se.

d. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ need not address every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

Medical Treatment, Generally

e. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. § 8-42-101, C.R.S. (2018). However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. § 8-41-301 (1) (c), C.R.S. (2018); *Faulkner v. ICAO,* 12 P.3d 844, 846 (Colo. App. 2000).

f. The question of whether a particular medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. ICAO, supra*; *Wal-Mart Stores, Inc. v. ICAO,* 989 P.2d 251 (Colo. App. 1999). The claimant bears the burden of proof to establish the right to specific medical benefits. *HLJ Management Group, Inc. v. Kim,* 804 P.2d 250 (Colo. App. 1990).

Medical Treatment Guidelines

g. The Medical Treatment Guidelines ("Guidelines") are regarded as the accepted professional standards for care under the Workers' Compensation Act. *Hernandez v. University of Colorado Hospital*, W.C. No. 4-714-372 (January 11, 2008); see also *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). The Medical Treatment Guidelines, Rule 17-2(A), W.C.R.P. provide: All health care providers shall use the Medical Treatment Guidelines adopted by the Division. In spite of this direction, it is generally acknowledged that the Guidelines are not sacrosanct and may be deviated from under appropriate circumstances. *See*, Section 8-43-201(3) (C.R.S. 2014). Nonetheless, they carry substantial weight. While the Guidelines provide substantial guidance, the ALJ is not bound by the Guidelines in deciding individual cases or the principles contained therein alone. Indeed, § 8-43-201(3) specifically provides:

> It is appropriate for the director or an administrative law judge to consider the medical treatment guidelines adopted under section 8-42-101(3) in determining whether certain medical treatment is reasonable, necessary, and related to an industrial injury or occupational disease. *The*

director or administrative law judge is not required to utilize the medical treatment guidelines as the sole basis for such determinations. (emphasis added).

h. As noted by Claimant, Dr. Castrejon actually largely adhered to the Guidelines when he recommended the usage of facet injections. The Guidelines in Rule 17, Exhibit 1(F)(3)(e)(iii) on p. 54 [re Zygapophyseal (Facet) Injection] provide:

> Indications- *Patients with pain 1) suspected to be facet in origin based on exam findings and 2) affecting activity;* OR patients who have refused a rhizotomy and appear clinically to have facet pain; OR patients who have facet findings with a thoracic component. The physician should document the findings which, for lumbar and cervical spine, consist of pain with *extension and lateral bending with referral patterns consistent with the expected pathologic level*. **In these patients, facet injections may be occasionally useful in facilitating a functionally-directed rehabilitation program and to aid in identifying pain generators.** Patients with recurrent pain should be evaluated with more definitive diagnostic injections, such as medial nerve branch injections, to determine the need for a rhizotomy. Because facet injections are not likely to produce long-term benefit by themselves and are not the most accurate diagnostic tool, they should not be performed at more than two levels, unilaterally or bilaterally. Due to the lack of proof that these injections improve outcome, *prior authorization is required.* A high quality meta-analysis provides good evidence against the use of lumbar facet or epidural injections for relief of non-radicular low back pain. All injections should be preceded by an MRI or a CT scan. (emphasis added).

i. Claimant met the 'Indications' criteria. The findings were sufficiently documented to note pain with extension, with consistent referral patterns. Dr. Castrejon felt that these facet injections could be useful for both treatment, and diagnostic purposes. The ALJ finds Dr. Castrejon had substantial evidence in support of his opinions. While it is duly noted that the Guidelines recommend no more than two levels of facet injections at one time, the ALJ finds that under the circumstances herein, and as documented by ATP Castrejon, that the three levels being requested are nonetheless justified in this case. This is especially so, given the existing fusion at L5-S1, and the prior beneficial effects of RFA at the same three levels. The ALJ is not persuaded by Dr. Fall's analysis that Dr. Castrejon's request does not adhere to the Guidelines. And, to paraphrase Dr. Castrejon, it's hard to argue with success. The point, after all, is to provide beneficial medical treatment to injured workers.

Reasonable, Necessary, and Related

j. The ALJ further concludes that the reason Dr. Castrejon selected the three levels he did for facet injections is that these are the three areas of concern that

were documented in a MRI scan. The MRI of September 1, 2017, showed facet hypertrophy at L3-4, L4-5, and L5-S1. The Guidelines also state that an MRI scan should precede a facet injection. A clear reason is that one can then focus on the areas where the facet joints are showing some hypertrophy as a possible source of facet-mediated pain. Dr. Michael Shell previously looked at the hypertrophy on the MRI scan and treated the levels at L3-4, and L4-5. Dr. Castrejon, reasonably enough, now wants to also explore the possibility of facet pain coming from the L5-S1 level, where hypertrophy is also present- either because of the fusion, or perhaps in spite of it. Either way, his request is medically reasonable.

k. While the ALJ is mindful that Dr. Fall harbors a different medical opinion, it cannot be ignored that Dr. Fall clearly opined that a pain generator cannot be identified in 90% of lower back pain cases. The ALJ finds Dr. Castrejon more persuasive on this issue. He is attempting to identify and treat Claimant's pain generators, instead of classifying it as chronic back pain and prescribing medication. Further, Dr. Fall opined that 90% relief from facet-mediated pain from a prior RFA treatment does not justify a second RFA treatment *if SI pain is <u>also</u> present.* This logic escapes the ALJ, and renders Dr. Fall's other medical opinions less persuasive.

l. While Independent Medical Examinations hold a justifiably significant role in the Workers Compensation system, it cannot be ignored that Dr. Castrejon has regularly treated Claimant, in his ATP capacity, for over a year. His treatment notes are detailed, and indicate that the possible risks of the proposed procedures were understood by both he and the patient. The ATP and Claimant are both willing to take said risks. Dr. Fall opines that nothing justified Dr. Castrejon's change of opinion regarding the advisability of facet injections along the way. The ALJ once again does not concur. The physical examination *began* to show facet loading, beginning in the summer of 2018. Tenderness was also now noted at the facet joints. Claimant was beginning to show pain from extension. Conservative care was not providing the degree of relief that had been hoped for. And Dr. Castrejon did what he could to separate the source of the pain from prior, but related, SI issues. Further, while a sudden spike in symptoms might be described as a 'flare-up', this does not connote that such condition must be temporary, and will somehow resolve on its own. While that might prove to be the case, this does not mandate, ipso facto, conservative care. A 'flare-up' could also be the sudden onset of symptoms which could remain indefinitely, if not treated. It could herald the onset of something long-term. Certainly as of this Hearing, Claimant's 'flare-up" had not resolved.

m. Time will tell if Claimant benefits from the procedures being proposed by Dr. Castrejon, but Claimant has earned the right to find out. The ALJ concludes, by a preponderance of the evidence, that the medical procedures being proposed by Dr. Castrejon are reasonable and necessary to treat Claimant for his work injury. The ALJ further finds that symptoms Claimant experiences in connection therewith are related to his work injury, and not due to some other, undefined non-work injury.

ORDER

It is therefore Ordered that:

1. Respondents shall pay for the facet-joint injections as recommended by Dr. Castrejon, at levels L3-L4, L4-L5, and L5-S1, and all costs associated therewith.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether claimant has proven by a preponderance of the evidence that the left total knee arthroplasty recommended by Dr. Singh is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted February 25, 2016 work injury?

FINDINGS OF FACT

1. Claimant was employed by employer beginning on approximately March 15, 2015. Claimant's job duties included home visits with first time expectant mothers. Claimant sustained an admitted injury on February 25, 2016 she caught her toe on concrete and fell to the ground while finishing a home visit. Claimant was evaluated at the emergency room ("ER") the next day and was noted to be complaining of pain on weight bearing and pain involving her left wrist. Claimant was referred for x-rays and was diagnosed with a fracture of her left patella.

2. Claimant was referred for medical treatment to Dr. Frazetta by employer. Dr. Frazetta evaluated claimant on March 1, 2016 and noted claimant's accident history of falling at work on February 25, 2016 while carrying equipment and supplies. Claimant reported to Dr. Frazetta that she had immediate swelling of her knee and pain in her wrist. Dr. Frazetta reported claimant was diagnosed with a left wrist sprain as well as a non-displaced fracture of her left patella. Dr. Frazetta took claimant off of work and noted that claimant had an appointment with Dr. Singh in two days.

3. Claimant was examined by Dr. Singh on March 3, 2016. Dr. Singh noted claimant's accident history and obtained additional x-rays of claimant's wrist and knee. The x-rays showed that the patellar fracture had not changed. Dr. Singh recommended claimant be full weight bearing in her straight leg brace and kept claimant off of work until March 28, 2016.

4. Claimant returned to Dr. Singh on March 22, 2016. Dr. Singh noted claimant was fully weight bearing with a straight leg brace. Dr. Singh noted minimal swelling about the left patella with minimal tenderness to palpation over the mid-portion with no tenderness over the superior pole or inferior pole. Examination of the left wrist demonstrated a little bit of discomfort over the ulnocarpal joint, but was otherwise unremarkable. Dr. Singh noted claimant could return to work as of April 11, 2016.

5. Claimant returned to Dr. Frazetta on April 18, 2016. Dr. Frazetta noted claimant had been back to work as of April 11, 2016 after being released by Dr. Singh and noted claimant was doing well with her recovery.

6. Claimant was examined by Dr. Frazetta on May 16, 2016 and noted she would get a sharp pain in her knee, which Dr. Frazetta attributed to patella tracking.

Claimant testified that during May 2016, she began getting physical therapy for her knee, which did not help her pain.

7. On June 21, 2016, claimant returned to Dr. Singh and noted that while her knee was better, she did have some residual discomfort. Claimant reported pain on stairs and Dr. Singh noted crepitation in her knee that was occasionally sharp enough to shoot up to 10 out of 10 on the pain scale. Claimant denied significant knee pain prior to the injury. Claimant underwent a lidocaine injection into her knee under the auspices of Dr. Singh during this exam. Claimant testified that the injection helped immediately, but did not last.

8. Claimant returned to Dr. Singh on August 30, 2016. Dr. Singh noted that the blunt trauma from the fall had resulted in a patella fracture that had healed, but appeared to have exacerbated her patellofemoral joint. Dr. Singh noted that on claimant's previous visit, he had performed an injection that provided excellent relief, but that her pain had returned. Dr. Singh recommended a Synvisc injection into the left knee. Claimant also began reporting symptoms into her right hip.

9. Claimant eventually underwent a Synvisc injection in October 2016. Claimant testified that the Synvisc injection eased her pain a little by, but it only lasted approximately three months.

10. Claimant eventually underwent a total hip replacement of her right hip on January 30, 2017. Claimant testified that following her total hip replacement surgery, her left knee pain continued to progress.

11. Claimant returned to Dr. Frazetta on May 15, 2017. Dr. Frazetta noted was uncomfortable and she could feel crepitus and some popping in claimant's knee on examination with flexion and extension. Dr. Frazetta ultimately ordered a magnetic resonance image ("MRI") of the left knee.

12. The MRI was performed on May 24, 2017. The MRI revealed a radial tear of the posterior horn of the medical meniscus causing mild extrusion of the meniscus. Generalized moderate bipolar chondral loss in the medial compartment was also noted. The MRI made a comparison to a prior MRI dated February 26, 2011.

13. Claimant returned to Dr. Singh on June 20, 2017. Dr. Singh noted claimant had undergone the MRI and opined that claimant had findings of some degenerative changes in the left knee with some existent meniscal pathology and joint surface wearing. Dr. Singh discussed claimant's treatment options, including oral medications or corticosteroid injection. Dr. Singh noted that sometimes they can do a knee arthroscopy with the intent of evaluating her for long term possibility of unicompartmental arthroplasty versus a total knee arthroplasty. Claimant testified at hearing that she was not ready to undergo surgery at that time and elected to proceed with a corticosteroid injection into the knee which occurred on July 18, 2017. Claimant had a Synvisc injection on September 19, 2017.

14. Claimant returned to Dr. Singh on February 15, 2018. Dr. Singh noted that claimant had start up pain when she gets out of her bed or gets out of a car or

chair. Dr. Singh noted claimant had tried physical therapy as well as corticosteroid and Synvisc injections that were not of long term benefit. Dr. Singh performed weight bearing x-rays that demonstrated medial joint space narrowing as well as some patellofemoral changes. Dr. Singh recommended claimant consider a total knee arthroplasty.

15. Respondents obtained a records review from Dr. Ciccone on February 26, 2018. Dr. Ciccone reviewed claimant's medical records and opined that claimant had a work related injury when she tripped on February 25, 2016, but that this work related injury did not aggravate or accelerate the already on going degenerative process occurring in claimant's knee. Dr. Ciccone noted that throughout the medical records, claimant reports knee pain that varies in intensity and location and opined that these complaints were related to the underlying degenerative joint disease, and not any acute injury.

16. Respondents denied the recommended surgery.

17. Dr. Singh ultimately performed a left total knee arthroplasty on April 30, 2018. Claimant testified that after the surgery she had been improving and has been doing physical therapy. Claimant testified at the July 26, 2018 hearing that she did not have any knee injuries prior to her work injury and was not aware of any knee arthritis. Claimant further denied having undergone an MRI of the left knee on February 26, 2011. No records pertaining to the February 26, 2011 MRI were entered at the hearing.

18. Respondents' obtained an independent medical examination with Dr. Lindberg on June 19, 2018. Dr. Lindberg reviewed claimant's medical records, obtained a medical history from claimant, but did not perform a physical examination as claimant had recently had the left knee total arthroplasty.

19. Dr. Lindberg issued a report and noted that the probable reason claimant tripped and fell was secondary to the decreased mobility related to the degenerative joint disease in her knee and hip. Dr. Lindberg noted that claimant had a non-displaced fracture in her knee and likely did not aggravate the knee or hip condition in the fall. Dr. Lindberg noted that claimant had severe osteoarthritis that caused the need for the total knee replacement and opined that the hip condition was unrelated to the fall.

20. Dr. Lindberg testified at hearing in this matter consistent with his IME report. Dr. Lindberg opined that claimant had a non-displaced fracture as a result of the work injury that was treated conservatively and claimant gradually got better. Dr. Lindberg testified that claimant then gradually7 got worse, but noted that the patella did not have any loss of the articular cartilage. Dr. Lindberg testified that claimant's MRI showed significant changes in three compartmental joints resulting in decreased joint space throughout the entire knee joint. Dr. Lindberg testified that this decreased joint space was not caused by the fall at work on February 25, 2016.

21. Despite claimant's testimony that she did not have any complaints of pain in her left knee prior to the work injury and her denial of having undergone a prior MRI, evidence was obtained following the hearing that demonstrated that claimant did have treatment to her left knee in 2011. Claimant testified at the November 6, 2018 hearing

that she did not recall the prior MRI to her left knee. Claimant further testified that if the prior MRI had shown any significant injury, she would have remembered the MRI. Claimant testified that she worked with Dr. Singh in 2011 and obtained medical treatment with Dr. Singh and nurse practitioner Carmody around this time. Claimant testified she did not receive further medical treatment after the February 26, 2011 MRI. Claimant testified she did not have injections of treatment for her left knee prior to the work injury and did not miss work due to her knee pain.

22. Dr. Lindberg testified at the November 6, 2018 hearing for respondents. Dr. Lindberg testified that the 2011 MRI and medical records from nurse practitioner Carmody confirmed his prior opinion that claimant's degenerative findings were not related to her work injury. Dr. Lindberg testified that the 2011 MRI showed arthritic changes in the area where her meniscus tear appeared in the 2017 MRI. Dr. Lindberg testified claimant's 2017 MRI showed findings of a degenerative tear, and not a traumatic tear. Dr. Lindberg opined that claimant's findings were more consistent with the progression of claimant's chronic changes than findings associated with a patella fracture.

23. Dr. Lindberg testified that claimant's total knee arthroplasty was due to the lateral joint line degenerative changes in the medial joint. Dr. Lindberg testified that mechanism of injury in this case would not cause a lateral meniscal tear or the medial meniscus injury. Dr. Lindberg opined that the total knee arthroplasty was reasonable, but not related to the work injury.

24. The ALJ had previously credited claimant's testimony in finding that the total knee arthroplasty was related to claimant's work injury. However, this finding was based on claimant's credible testimony that she did not have symptoms in her left knee prior to the work injury. Claimant specifically denied at the July 26, 2018 hearing that she had undergone an MRI of the left knee in 2011. This testimony turned out to be contradicted by additional records that respondents did not have at the time of the injury.

25. The ALJ notes that the claimant's prior treatment included an MRI of the same body part performed almost exactly 5 years prior to her work injury. The ALJ notes that the MRI was not of such a remote time that it would be reasonable for claimant to forget the MRI occurring nor the symptoms that resulted in claimant seeking treatment for the knee that resulted in the recommendation for the MRI.

26. Based on the new evidence presented in this case, the ALJ cannot find that claimant's testimony regarding the condition of the left knee prior to the work injury, including her history of medical treatment to the left knee, to be credible. As such, the ALJ is unable to find that claimant has met her burden of proof of establishing that the left knee arthroplasty was related to her February 25, 2016 work injury.

27. The ALJ finds that the testimony of Dr. Lindberg provided at hearing on November 6, 2018 is credible and persuasive regarding the relatedness of claimant's total knee arthroplasty to her work related injury. The ALJ credits the testimony of Dr. Lindberg and finds that claimant has failed to establish by a preponderance of the

evidence that the total knee arthroplasty was reasonable medical treatment necessary to cure and relieve claimant from the effects of the work injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S, 2008. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with" a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. As found, claimant has failed to establish by a preponderance of the evidence that the left total knee arthroplasty recommended by Dr. Singh is reasonable medical treatment necessary to cure and relieve claimant from the effects of the injury. As found, claimant's initial testimony in this case denied any prior issues or treatment to her left knee. As found, the reopened evidence establishes that claimant was under treatment with Dr. Singh in 2011 that included an MRI of the left knee As found,

claimant has failed to establish by a preponderance of the evidence that her March 15, 2015 work injury aggravated, accelerated or combined with her pre-existing condition to cause the need for the left total knee arthroplasty.

6. As found, the ALJ credits the testimony of Dr. Lindberg and finds that claimant has failed to prove by a preponderance of the evidence that the total knee arthroplasty is related to her February 25, 2016 work injury.

ORDER

It is therefore ordered that:

1. Claimant's claim for medical benefits related to the left total knee arthroplasty performed by Dr. Singh on April 30, 2018 is hereby denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 633 17th Street, Suite 1300, Denver, Colorado, 80202. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 22, 2019

Keith E. Mottram

Keith E. Mottram
Office of Administrative Courts
Administrative Law Judge
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

- Whether the claimant has demonstrated by a preponderance of the evidence that permanent placement of a spinal cord stimulator, as recommended by Dr. Edward Maurin, is reasonable medical treatment necessary to maintain the claimant at maximum medical improvement (MMI).

The parties agreed that the issue of reopening the claimant's claim would be held in abeyance, without prejudice.

FINDINGS OF FACT

1. The claimant was injured on October 16, 2012. At that time, the claimant was working for the employer as a driller. The injury occurred when the claimant stepped on some grease, which caused him to slip and fall onto his back. The claimant testified his knees, shoulders, and back were injured in the October 16, 2012 fall.

2. The claimant has had extensive medical treatment since the 2012 work injury. This treatment has included physical therapy; spinal injections; magnetic resonance imaging (MRI) of his left shoulder, cervical spine, lumbar spine, and left knee; surgeries to the claimant's left knee and left shoulder; a L5-S1 spinal fusion; and various pain medications, including opioids. During this claim the claimant's authorized treating physician (ATP) has been Dr. Randal Jernigan.

3. On March 3, 2014, Dr. Jernigan placed the claimant at maximum medical improvement (MMI). At that time, Dr. Jernigan assessed a whole person impairment of 36% and imposed permanent restrictions of no lifting over 40 pounds.

4. The claimant testified that since being placed at MMI, he has had increasing low back symptoms that include pain that radiates into his left leg. On April 6, 2015, Dr. Jernigan noted that the claimant was still experiencing back pain. On January 11 2016, Dr. Jernigan noted that the claimant was experiencing left leg sciatica that was impacting the claimant's ability to sleep.

5. On May 24, 2016, the claimant was seen at Spine Colorado by Dr. Douglas Orndorff to discuss whether additional spinal surgery would be warranted given the claimant's continued left sided radiculopathy. At that time, Dr. Orndorff assured the claimant that there was union of the spinal fusion. Dr. Orndorff did not recommend additional surgery for the claimant.

6. On June 14, 2016, Dr. Jernigan noted that the claimant continued to have very severe low back pain that was radiating into both legs with numbness and tingling. Subsequently, Dr. Jernigan referred the claimant for an additional neurology consultation at San Juan Regional Neurology. On August 23, 2016 and August 30,

2016, the claimant was seen at San Juan Regional Neurology by Dr. Karen LeComte. It was at these appointments that Dr. LeComte noted that the claimant's asymmetrical symptoms were not typical of lumbar sacral radiculopathy or spinal stenosis. Dr. LeComte recommended the claimant undergo a brain MRI to address the possibility of demyelinating disease (multiple sclerosis).

7. On August 31, 2016 the claimant sought treatment with Dr. Jernigan. However, Dr. Jernigan sent the claimant to the emergency department because the claimant was experiencing symptoms of facial droop and an inability to speak. On that same date, the claimant was treated at Mercy Regional Medical Center for these symptoms. The claimant was diagnosed with transient aphasia, likely related to anxiety. A brain MRI performed on that date was normal.

8. On February 8, 2018, Dr. Jernigan referred the claimant to Dr. Tashof Bernton for testing and evaluation for complex regional pain syndrome (CRPS). The claimant was seen by Dr. Bernton on February 26, 2018. After testing, Dr. Bernton noted in his report that the evaluation was negative for CRPS. Dr. Bernton noted a differential diagnosis of lumbar radiculopathy.

9. The claimant continued to complain of low back pain that radiated in to both legs. Subsequently, Dr. Jernigan referred the claimant to Dr. Edward Maurin for a neurology consultation. On May 8, 2018, the claimant was seen by Dr. Maurin and reported three years of low back pain and left leg symptoms. Dr. Maurin opined that the claimant has chronic pain syndrome and recommended a spinal cord stimulator (SCS) trial.

10. The recommended SCS trial began on July 12, 2018. Following the SCS trial, the claimant reported to Emily Godfrey, PA-C that during the trial his pain symptoms were improved by 50%. Following the success of the trial, Dr. Maurin recommended permanent placement of a SCS device.

11. The claimant testified that during the SCS trial he had a reduction in his pain symptoms. With that reduction is his pain, the claimant was more active, was able to be on his feet more, and walk further when compared to his function prior to the SCS trial. The claimant also testified that he slept better during the SCS trial and was able to reduce his use of pain medications. The claimant testified that he took only half of his normal dosage of pain medication, Nucynta, during the SCS trial.

12. The claimant testified that he would like to undergo the recommended permanent SCS placement because he believes that it will improve his pain management and allow him to wean off his pain medications.

13. Dr. Jernigan testified that he agrees with Dr. Maurin's recommendation for permanent placement of an SCS. Dr. Jernigan noted in his testimony that the claimant experienced a 50% improvement in his back pain and had better use of his legs. Dr. Jernigan also testified that a permanent SCS device would increase the claimant's function and reduce, or even eliminate, the claimant's need for pain medication.

14. On July 27, 2018, Dr. John Douthit performed a review of the claimant's medical records related to the recommended permanent placement of an SCS device. In his report, Dr. Douthit opined that the claimant's SCS trial was not a valid trial under the Colorado Medical Treatment Guidelines (the guidelines), which require a functional assessment both before and after the trial. Dr. Douthit noted that the claimant's reports of improved function were subjective. Therefore, Dr. Douthit recommended an additional SCS trial before consideration of permanent SCS placement. Following Dr. Douthit's report, the respondents denied authorization of permanent placement of an SCS device.

15. The ALJ credits the medical records and the testimony of the claimant regarding the claimant's symptoms and the results of the SCS trial. The ALJ also credits the opinions of Drs. Maurin and Jernigan over the contrary opinion of Dr. Douthit. The ALJ finds that the claimant experienced functional improvement during the SCS trial. The ALJ finds that the claimant has demonstrated that it is more likely than not that permanent placement of a SCS device is reasonable medical treatment necessary to maintain claimant at MMI.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2012).

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. The need for medical treatment may extend beyond the point of maximum medical improvement where claimant requires periodic maintenance care to prevent further deterioration of his physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1999); *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an order for future treatment if supported by substantial evidence of the need for such treatment. *Grover v. Industrial Commission*, *supra.*

6. The Colorado Workers' Compensation Medical Treatment Guidelines (the guidelines) are regarded as accepted professional standards for care under the Workers' Compensation Act. *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). The statement of purpose of the guidelines is as follows: "In an effort to comply with its legislative charge to assure appropriate medical care at a reasonable cost, the director of the Division has promulgated these 'Medical Treatment Guidelines.' This rule provides a system of evaluation and treatment guidelines for high cost or high frequency categories of occupational injury or disease to assure appropriate medical care at a reasonable cost." W.C.R.P. 17-1(A). W.C.R.P. 17-5(C) provides: "The treatment guidelines set forth care that is generally considered reasonable for most injured workers. However, the Division recognizes that reasonable medical practice may include deviations from these guidelines, as individual cases dictate."

7. While it is appropriate for an ALJ to consider the guidelines while weighing evidence, the Medical Treatment Guidelines are not definitive. *See Jones v. T.T.C. Illinois*, Inc., W.C. No. 4-503-150 (May 5, 2006); ***aff'd Jones v. Industrial Claim Appeals Office*** No. 06CA1053 (Colo. App. March 1, 2007) (not selected for publication) (it is appropriate for the ALJ to consider the guidelines on questions such as diagnosis, but the guidelines are not definitive); *see also Burchard v. Preferred Machining*, W.C. No. 4-652-824 (July 23, 2008) (declining to require application of medical treatment guidelines for carpal tunnel syndrome in determining issue of PTD); *see also Stamey v. C2 Utility Contractors et al*, W.C. No. 4-503-974 (August 21, 2008) (even if specific indications for a cervical surgery under the medical treatment guidelines were not shown to be present, ICAO was not persuaded that such a determination would be definitive)

8. As found, the claimant has demonstrated by a preponderance of the evidence that permanent placement of a spinal cord stimulator recommended by Dr. Maurin is reasonable medical treatment necessary to maintain claimant at MMI. As found, the medical records, the testimony of the claimant, and the opinions of Drs. Maurin and Jernigan are credible and persuasive.

ORDER

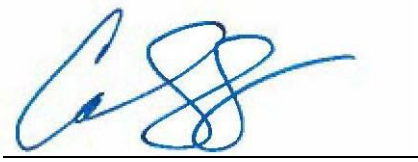
It is therefore ordered:

1. The respondents shall pay for permanent placement of a spinal cord stimulator, pursuant to the Colorado Medical Fee Schedule.

2. The issue of reopening the claimant's claim is held in abeyance, without prejudice.

3. All matters not determined here are reserved for future determination.

Dated January 14, 2019



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-078-666-001

CORRECTED FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

,

Claimant,

v.

,

Employer,

and

,

Insurer / Respondents.

No further hearings have been held in the above-captioned matter. On January 28, 2019, counsel Claimant filed a Motion for Corrected Order, based solely on the proposition that temporary partial disability (TPD) benefits were improperly calculated. The Motion is well taken and the Full Findings of Fact, Conclusions of Law and Order, served on the parties on January 24, 2019, is hereby corrected accordingly.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on December 18, 2018, in Denver, Colorado. The hearing was digitally recorded (reference:) 12/18/18, Courtroom 3, beginning at 8:30 AM, and ending at 11:00 AM). The official Spanish/English Interpreter was Portia Berrey.

The Claimant was present in person and represented by_____, Esq. Respondents were represented by _____, Esq.

Hereinafter [Redacted], shall be referred to as the “Claimant." [Redacted], ’s shall be referred to as the “Employer.” All other parties shall be referred to by name.

Claimant's Exhibits 1 through 10 were admitted into evidence, without objection. Respondents' Exhibits A through F were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant, which was filed, electronically, on December 24, 2018. Respondent was given two working days within which to file objections as to form. No timely objections were filed. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern compensability; if compensable, temporary partial disability (TPD) benefits from March 23, 2018 through June 22, 2018. At the commencement of the hearing, the parties stipulated that the Claimant's average weekly wage (AWW) is $547.40, and the ALJ so finds.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant is a 33-year old woman employed by the Employer. Prior to March 23, 2018, she worked as a waitress on the "Event" staff, and as a busser in the restaurant. Her stipulated AWW is $547.40.

2. The Claimant has had no prior injuries to her cervical spine or right shoulder.

3. Prior to the date of the Claimant's industrial injury she was able to perform her full work duties as both a waitress and busser.

The Compensable Event of March 23, 2018

4. The Claimant sustained a work-related injury on Friday March 23, 2018. The incident happened around 11:00 AM on the Employer's property as the Claimant was walking into her place of employment. The Claimant was roughly 12-15 feet from the Employer's entrance when the wind randomly blew a nearby plastic "A-Frame" sign into a 3 to 4 foot tall light post; the top of which broke off and sent debris into the air. The Claimant was talking on her cell phone when she noticed the debris was flying toward her. This caused the her to quickly turn away from the debris and attempt to protect herself with her bag which was draped over her right shoulder. Despite the attempt to protect herself, the Claimant was stuck in the right side of the face by the

debris. She quickly developed facial pain, headache, and vision issues with her left eye.

First Reporting of the Work Injury

5. The Claimant's manager, Cassandra Dunning, was walking behind the Claimant and witnessed the incident. Dunning approached the Claimant immediately thereafter to check on her wellbeing. Dunning then escorted the Claimant into the Employer's offices and helped the Claimant report a work injury.

6. An "Employer's First Report of Injury" was filed on March 23, 2018 at approximately 11:00 AM. Cassandra Dunning is listed as a witness. The incident as described in paragraph 4 above, is described as the mechanism of injury in the First Report.

Medical Treatment

7. The Claimant had an initial evaluation at Concentra around 1:00 PM on March 23, 2018. She was treated for an injury to her left eye, facial pain, and headache. She was given eye drops, instructed to wear protective eye wear while at work, and she scheduled for a follow-up appointment for Monday March 26, 2018.

8. After being discharged from Concentra, the Claimant returned to work for the Employer as a busser for the night. While working, the Claimant began experiencing pain in her neck and right shoulder. She did not work the next two days but continued to have issues with her neck and right shoulder.

9. The Claimant was evaluated at Concentra on Monday March 26, 2018 and she reported neck and right shoulder pain that began a few hours after being discharged on March 23, 2018. The Claimant was diagnosed with a cervical strain, prescribed medication, and referred for physical therapy (PT).

10. Thereafter, the Claimant underwent a course of cervical and right shoulder treatment inclusive of evaluations, work restrictions, PT, massage therapy, acupuncture, and injections.

11. The Claimant was placed at maximum medical improvement (MMI) on June 22, 2018.

Corrected Temporary Partial Disability

12. The Claimant suffered temporary, partial wage loss resulting from her work injury. The wage loss was in part due to temporary work restrictions, and in part due to her inability to buss tables after injuring work injury on March 23, 2018. TPD benefits are as follows

- Pay Period 3/20/18 – 4/2/2018: Only 11 days are counted from this

pay period (3/23/2018 to 4/2/2018). The Claimant earned $591.91 for these 11 days (**14 days wages = $753.53; 11 days wages = $591.91; AWW = $547.40; 11 days is $860.20).** This produces a temporary wage loss of $268.12 per week, and yields a TPD rate of $178.74 per week for this pay period, **for aggregate subtotal TPD benefits of $280.88.**

- Pay Period 4/3/2018 – 4/16/2018, **a total of 14 days.** The Claimant earned $531.38 per week. This produces a temporary wage loss of $16.02, and yields a TPD rate of $10.68 per week for this pay period **[10.68 divided by 7 days =$1.53 X 14 days, both dates inclusive=$21.42 X 14=$299.88].**
- Pay Period 4/17/2018 – 4/30/2018, **a total of 14 days** The Claimant earned $177.79 per week. This produces a wage loss of $369.61, and yields a TPD rate of $246.41 per week for this pay period **[246.41 divided by 7=$35.20 per day X 14 days, both dates inclusive= $492.82]**.
- Pay Period 5/1/2018 – 5/14/2018, **a total of 14 days** The Claimant earned $750.40 per week Pay Period 5/15/2018 – 5/28/2018, **a total of 14 days, both dates inclusive.** The Claimant earned $214.81 per week. This produces a wage loss of $332.59 per week, and yields a TPD rate of $221.73 per week for this pay period **[221.73 divided by 7=$31.68 X 14=$443.46].**
- Pay Period 5/29/20**18 – 6/11/2018, both dates inclusive, a total of 14 days.** The Claimant earned $363.31 per week. This produces a wage loss of $184.09 per week, and yields a TPD rate of $122.73 per week for this pay period **[122.73 divided by 7=17.53 X 14=$245.46]**.
- Pay Period 6/12/2018 – 6/25/2018: Only 11 days are counted from this pay period (6/12/2018 – 6/21/2018). The Claimant earned $281.15 for these 11 days (14 days wages = $357.83; 11 days wages = $281.15; AWW = $547.40; 11 days is $860.20). This produces a temporary wage loss of $579.05, and yields a TPD rate of $386.03 **per week** for this pay period. **[386.03 divided by 7=54.72 X 11=$601.92].**

The Claimant is entitled to a grand total of **$2,364.42** in TPD benefits **[280.88+299.88+492.82+443.46+245.46+601.92=$2,364.42].**

Ultimate Findings

13. The ALJ has considered the opinions regarding causation submitted by the Claimant's IME, Dr. Stephen Gray, Respondents' IME, Dr. William Ciccone, and Dr. Robert Kawasaki. Dr. Ciccone's opinions do not support a work-related injury and largely rely on his perceived inconsistent statements by the Claimant regarding the mechanism of injury. Dr. Kawasaki's opinions do not support a work related injury in large part due to the findings on the Claimant's MRI. However, when presented with knowledge that Dunning witnessed the incident Dr. Ciccone refused to appropriately

consider this new information in his assessment of how the alleged work incident happened. Therefore, his ultimate opinions lack credibility. Further, Dr. Kawasaki gives no credence to the notion of aggravation and/or acceleration of a preexisting medical condition. This substantially detracts from his causation opinions. Dr. Gray's opinions support a work-related injury, and are based on Claimant's credible statements and supporting medical documents. The ALJ accepts Dr. Gray's opinions on causation and rejects any conflicting opinions concerning causation.

14. Between conflicting medical opinions, the ALJ makes a rational choice, based on substantial evidence, to accept Dr. Gray's causation opinions and to reject opinions to the contrary.

15. The ALJ finds that the Claimant suffered a work-related injury to her head, cervical spine, and right shoulder area on March 23, 2018, thus, sustaining compensable injuries on that date.

16. The Claimant has sustained her burden of proof, by a preponderance of the evidence, that she sustained compensable work injuries on March 23, 2018.

17. The ALJ further finds that the medical treatment the Claimant received to her cervical spine, right shoulder was authorized, reasonably necessary, and causally related to her compensable work injuries of March 23, 2018.

17. The Claimant has also sustained her burden of proof, by preponderant evidence, that she suffered a partial loss of wages from the date of her injuries, March 23, 2018, through June 21, 2018, both dates inclusive. During this period of time, she had not been released to return to full duty, and she had not reached maximum medical improvement (MMI). The Claimant is entitled to TPD benefits in the aggregate grand total amount of **$2,364.42**, as detailed in Finding No. 12 herein above.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo.

App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the ALJ considered the opinions regarding causation submitted by the Claimant's IME, Dr. Stephen Gray, Respondents' IME, Dr. William Ciccone, and Dr. Robert Kawasaki. Dr. Ciccone's opinions do not support a work-related injury and largely rely on his perceived inconsistent statements by the Claimant regarding the mechanism of injury. Dr. Kawasaki's opinions do not support a work related injury in large part due to the findings on the Claimant's MRI. However, when presented with knowledge that Dunning witnessed the incident Dr. Ciccone refused to appropriately consider this new information in his assessment of how the alleged work incident happened. Therefore, his ultimate opinions lack credibility. Further, Dr. Kawasaki gives no credence to the notion of aggravation and/or acceleration of a preexisting medical condition. Under the present circumstances, this substantially detracts from his causation opinions and renders his opinions lacking in credibility. As found, Dr. Gray's opinions support a work-related injury, and are based on Claimant's credible statements and supporting medical documents. As further found, the ALJ accepted Dr. Gray's opinions on causation and rejected any conflicting opinions concerning causation.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of

conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions, the ALJ made a rational choice, based on substantial evidence, to accept Dr. Gray's causation opinions and to reject opinions to the contrary.

Compensability

c. A compensable injury is one that arises out of and in the course of employment. § 8-41-301(1) (b), C.R.S. The "arising out of" test is one of causation. If an industrial injury aggravates or accelerates a preexisting condition, the resulting disability and need for treatment is a compensable consequence of the industrial injury. Thus, a claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). An injured worker has a compensable new injury **if the employment-related activities aggravate, accelerate, or combine with a pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought.** § 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). An injury resulting from the concurrence of a preexisting condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, *supra*. *Duncan v. Indus. Claims App. Office*, 107 P.3d 999 (Colo. App. 2004). Even where the direct cause of an accident is the employee's preexisting disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989). *Also see* § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). As found, the Claimant suffered work-related injuries to her head, cervical spine, and right shoulder area on March 23, 2018, thus, sustaining compensable injuries on that date.

Medical

d. To be a compensable benefit, medical care and treatment must be causalld related to an industrial injury or occupational disease. *Dependable Cleaners v. Vasquez,* 883 P. 2d 583 (Colo. App. 1994). As found, Claimant's medical treatment is causally related to the compensable aggravation and acceleration of her compensable inuries of march 23, 2018. Also, medical treatment must be reasonably necessary to

cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's medical care and treatment was and is reasonably necessary. As found, the medical treatment the Claimant received for her cervical spine, right shoulder was authorized, reasonably necessary, and causally related to her compensable work injuries of March 23, 2018.

Temporary Partial Disability Benefits

e. To establish entitlement to temporary disability benefits, a claimant must prove that the industrial injury has caused a "disability," and that he has suffered a wage loss that, "to some degree," is the result of the industrial disability. § 8-42-103(1), C.R.S; *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Disability from employment is established when the injured employee is unable to perform the usual job effectively or properly. *Jefferson Co. Schools v. Headrick*, 734 P.2d 659 (Colo. App.1986). This is true because the employee's restrictions presumably impair his opportunity to obtain employment at pre-injury wage levels. *Kiernan v. Roadway Package System*, W.C. No. 4-443-973 [Indus. Claim Appeals Office (ICAO), December 18, 2000]. There is no statutory requirement that a claimant must present medical opinion evidence from of an attending physician to establish her physical disability. See *Lymburn v. Symbois Logic*, 952 P.2d 831 (Colo. App. 1997). Rather, the Claimant's testimony alone is sufficient to establish a temporary "disability." *Id*. As found, the Claimant was temporarily and partially disabled from March 23, 2018, through June 21, 2018, both dates inclusive.

f. Once the prerequisites for TPD are met (*e.g.,* no release to return to full duty, MMI has not been reached, and a temporary wage loss is occurring in modified employment, TPD benefits are designed to compensate for temporary wage loss. As found, the Claimant suffered a partial loss of wages from the date of her injuries, March 23, 2018, through June 21, 2018, both dates inclusive. During this period of time, she had not been released to return to full duty, and she had not reached MMI.She is entitled to TPD benefits in the aggregate grand total amount of **$2,364.42**, as detailed in Finding No. 12 herein above.

Burden of Proof

g. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County*

Bi-Products, Inc., W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained her burden with respect to compensability, medical benefits and TPD benefits.

CORRECTED ORDER

IT IS, THEREFORE, ORDERED THAT:

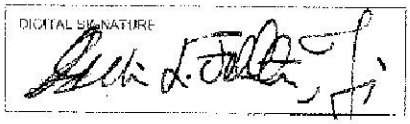
A. Respondents shall pay the costs of all authorized, reasonably necessary and causally related medical care and treatment, arising out of the compensable injuries of March 23, 2018, subject to the Division of Workers Compensation Medical Fee Schedule.

B. Respondents shall pay the Claimant temporary partial disability benefits in the aggregate grand total amount of **$ 2,364.42** which is payable retroactively and forthwith.

C. Any and all claims for temporary disability benefits from June 22, 2018, through December 18, 2018, the date of hearing, are hereby denied and dismissed.

D. Respondents shall pay the Claimant statutory interest of eight percent (8%) per annum on all amounts of indemnity benefits due and not paid when due.

DATED this 30th day of January 2019.



EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that

you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-078-666-001

CORRECTED FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

No further hearings have been held in the above-captioned matter. On January 28, 2019, counsel Claimant filed a Motion for Corrected Order, based solely on the proposition that temporary partial disability (TPD) benefits were improperly calculated. The Motion is well taken and the Full Findings of Fact, Conclusions of Law and Order, served on the parties on January 24, 2019, is hereby corrected accordingly.

Hereinafter [Redacted], shall be referred to as the “Claimant." [Redacted]’s shall be referred to as the “Employer.” All other parties shall be referred to by name.

Claimant’s Exhibits 1 through 10 were admitted into evidence, without objection. Respondents’ Exhibits A through F were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant, which was filed, electronically, on December 24, 2018. Respondent was given two working days within which to file objections as to form. No timely objections were filed. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern compensability; if compensable, temporary partial disability (TPD) benefits from March 23, 2018 through June 22, 2018. At the commencement of the hearing, the parties stipulated that the Claimant's average weekly wage (AWW) is $547.40, and the ALJ so finds.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant is a 33-year old woman employed by the Employer. Prior to March 23, 2018, she worked as a waitress on the "Event" staff, and as a busser in the restaurant. Her stipulated AWW is $547.40.

2. The Claimant has had no prior injuries to her cervical spine or right shoulder.

3. Prior to the date of the Claimant's industrial injury she was able to perform her full work duties as both a waitress and busser.

The Compensable Event of March 23, 2018

4. The Claimant sustained a work-related injury on Friday March 23, 2018. The incident happened around 11:00 AM on the Employer's property as the Claimant was walking into her place of employment. The Claimant was roughly 12-15 feet from the Employer's entrance when the wind randomly blew a nearby plastic "A-Frame" sign into a 3 to 4 foot tall light post; the top of which broke off and sent debris into the air. The Claimant was talking on her cell phone when she noticed the debris was flying toward her. This caused the her to quickly turn away from the debris and attempt to protect herself with her bag which was draped over her right shoulder. Despite the attempt to protect herself, the Claimant was stuck in the right side of the face by the debris. She quickly developed facial pain, headache, and vision issues with her left eye.

First Reporting of the Work Injury

5. The Claimant's manager, Cassandra D_____, was walking behind the Claimant and witnessed the incident. D_____ approached the Claimant immediately

thereafter to check on her wellbeing. D_____ then escorted the Claimant into the Employer's offices and helped the Claimant report a work injury.

6. An "Employer's First Report of Injury" was filed on March 23, 2018 at approximately 11:00 AM. Cassandra D_____is listed as a witness. The incident as described in paragraph 4 above, is described as the mechanism of injury in the First Report.

Medical Treatment

7. The Claimant had an initial evaluation at Concentra around 1:00 PM on March 23, 2018. She was treated for an injury to her left eye, facial pain, and headache. She was given eye drops, instructed to wear protective eye wear while at work, and she scheduled for a follow-up appointment for Monday March 26, 2018.

8. After being discharged from Concentra, the Claimant returned to work for the Employer as a busser for the night. While working, the Claimant began experiencing pain in her neck and right shoulder. She did not work the next two days but continued to have issues with her neck and right shoulder.

9. The Claimant was evaluated at Concentra on Monday March 26, 2018 and she reported neck and right shoulder pain that began a few hours after being discharged on March 23, 2018. The Claimant was diagnosed with a cervical strain, prescribed medication, and referred for physical therapy (PT).

10. Thereafter, the Claimant underwent a course of cervical and right shoulder treatment inclusive of evaluations, work restrictions, PT, massage therapy, acupuncture, and injections.

11. The Claimant was placed at maximum medical improvement (MMI) on June 22, 2018.

Corrected Temporary Partial Disability

12. The Claimant suffered temporary, partial wage loss resulting from her work injury. The wage loss was in part due to temporary work restrictions, and in part due to her inability to buss tables after injuring work injury on March 23, 2018. TPD benefits are as follows

- Pay Period 3/20/18 – 4/2/2018: Only 11 days are counted from this pay period (3/23/2018 to 4/2/2018). The Claimant earned $591.91 for these 11 days (**14 days wages = $753.53; 11 days wages = $591.91; AWW = $547.40; 11 days is $860.20).** This produces a temporary wage loss of $268.12 per week, and yields a TPD rate of $178.74 per week for this pay period, **for aggregate subtotal TPD**

benefits of $280.88.

- Pay Period 4/3/2018 – 4/16/2018, **a total of 14 days.** The Claimant earned $531.38 per week. This produces a temporary wage loss of $16.02, and yields a TPD rate of $10.68 per week for this pay period **[10.68 divided by 7 days =$1.53 X 14 days, both dates inclusive=$21.42 X 14=$299.88].**
- Pay Period 4/17/2018 – 4/30/2018, **a total of 14 days** The Claimant earned $177.79 per week. This produces a wage loss of $369.61, and yields a TPD rate of $246.41 per week for this pay period **[246.41 divided by 7=$35.20 per day X 14 days, both dates inclusive= $492.82]**.
- Pay Period 5/1/2018 – 5/14/2018, **a total of 14 days** The Claimant earned $750.40 per week Pay Period 5/15/2018 – 5/28/2018, **a total of 14 days, both dates inclusive.** The Claimant earned $214.81 per week. This produces a wage loss of $332.59 per week, and yields a TPD rate of $221.73 per week for this pay period **[221.73 divided by 7=$31.68 X 14=$443.46].**
- Pay Period 5/29/20**18 – 6/11/2018, both dates inclusive, a total of 14 days.** The Claimant earned $363.31 per week. This produces a wage loss of $184.09 per week, and yields a TPD rate of $122.73 per week for this pay period **[122.73 divided by 7=17.53 X 14=$245.46]**.
- Pay Period 6/12/2018 – 6/25/2018: Only 11 days are counted from this pay period (6/12/2018 – 6/21/2018). The Claimant earned $281.15 for these 11 days (14 days wages = $357.83; 11 days wages = $281.15; AWW = $547.40; 11 days is $860.20). This produces a temporary wage loss of $579.05, and yields a TPD rate of $386.03 **per week** for this pay period. **[386.03 divided by 7=54.72 X 11=$601.92].**

The Claimant is entitled to a grand total of **$2,364.42** in TPD benefits **[280.88+299.88+492.82+443.46+245.46+601.92=$2,364.42].**

Ultimate Findings

13. The ALJ has considered the opinions regarding causation submitted by the Claimant's IME, Dr. Stephen Gray, Respondents' IME, Dr. William Ciccone, and Dr. Robert Kawasaki. Dr. Ciccone's opinions do not support a work-related injury and largely rely on his perceived inconsistent statements by the Claimant regarding the mechanism of injury. Dr. Kawasaki's opinions do not support a work related injury in large part due to the findings on the Claimant's MRI. However, when presented with knowledge that D_____ witnessed the incident Dr. Ciccone refused to appropriately consider this new information in his assessment of how the alleged work incident happened. Therefore, his ultimate opinions lack credibility. Further, Dr. Kawasaki gives no credence to the notion of aggravation and/or acceleration of a preexisting medical

condition. This substantially detracts from his causation opinions. Dr. Gray's opinions support a work-related injury, and are based on Claimant's credible statements and supporting medical documents. The ALJ accepts Dr. Gray's opinions on causation and rejects any conflicting opinions concerning causation.

14. Between conflicting medical opinions, the ALJ makes a rational choice, based on substantial evidence, to accept Dr. Gray's causation opinions and to reject opinions to the contrary.

15. The ALJ finds that the Claimant suffered a work-related injury to her head, cervical spine, and right shoulder area on March 23, 2018, thus, sustaining compensable injuries on that date.

16. The Claimant has sustained her burden of proof, by a preponderance of the evidence, that she sustained compensable work injuries on March 23, 2018.

17. The ALJ further finds that the medical treatment the Claimant received to her cervical spine, right shoulder was authorized, reasonably necessary, and causally related to her compensable work injuries of March 23, 2018.

17. The Claimant has also sustained her burden of proof, by preponderant evidence, that she suffered a partial loss of wages from the date of her injuries, March 23, 2018, through June 21, 2018, both dates inclusive. During this period of time, she had not been released to return to full duty, and she had not reached maximum medical improvement (MMI). The Claimant is entitled to TPD benefits in the aggregate grand total amount of **$2,364.42** as detailed in Finding No. 12 herein above.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990);

Penasquitos Village, Inc. v. NLRB, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the ALJ considered the opinions regarding causation submitted by the Claimant's IME, Dr. Stephen Gray, Respondents' IME, Dr. William Ciccone, and Dr. Robert Kawasaki. Dr. Ciccone's opinions do not support a work-related injury and largely rely on his perceived inconsistent statements by the Claimant regarding the mechanism of injury. Dr. Kawasaki's opinions do not support a work related injury in large part due to the findings on the Claimant's MRI. However, when presented with knowledge that D_____ witnessed the incident Dr. Ciccone refused to appropriately consider this new information in his assessment of how the alleged work incident happened. Therefore, his ultimate opinions lack credibility. Further, Dr. Kawasaki gives no credence to the notion of aggravation and/or acceleration of a preexisting medical condition. Under the present circumstances, this substantially detracts from his causation opinions and renders his opinions lacking in credibility. As found, Dr. Gray's opinions support a work-related injury, and are based on Claimant's credible statements and supporting medical documents. As further found, the ALJ accepted Dr. Gray's opinions on causation and rejected any conflicting opinions concerning causation.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder

would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions, the ALJ made a rational choice, based on substantial evidence, to accept Dr. Gray's causation opinions and to reject opinions to the contrary.

Compensability

c. A compensable injury is one that arises out of and in the course of employment. § 8-41-301(1) (b), C.R.S. The "arising out of" test is one of causation. If an industrial injury aggravates or accelerates a preexisting condition, the resulting disability and need for treatment is a compensable consequence of the industrial injury. Thus, a claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). An injured worker has a compensable new injury **if the employment-related activities aggravate, accelerate, or combine with a pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought.** § 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). An injury resulting from the concurrence of a preexisting condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, *supra*. *Duncan v. Indus. Claims App. Office*, 107 P.3d 999 (Colo. App. 2004). Even where the direct cause of an accident is the employee's preexisting disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989). *Also see* § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). As found, the Claimant suffered work-related injuries to her head, cervical spine, and right shoulder area on March 23, 2018, thus, sustaining compensable injuries on that date.

Medical

d. To be a compensable benefit, medical care and treatment must be causalld related to an industrial injury or occupational disease. *Dependable Cleaners v.*

Vasquez, 883 P. 2d 583 (Colo. App. 1994). As found, Claimant's medical treatment is causally related to the compensable aggravation and acceleration of her compensable inuries of march 23, 2018. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's medical care and treatment was and is reasonably necessary. As found, the medical treatment the Claimant received for her cervical spine, right shoulder was authorized, reasonably necessary, and causally related to her compensable work injuries of March 23, 2018.

Temporary Partial Disability Benefits

e. To establish entitlement to temporary disability benefits, a claimant must prove that the industrial injury has caused a "disability," and that he has suffered a wage loss that, "to some degree," is the result of the industrial disability. § 8-42-103(1), C.R.S; *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Disability from employment is established when the injured employee is unable to perform the usual job effectively or properly. *Jefferson Co. Schools v. Headrick*, 734 P.2d 659 (Colo. App.1986). This is true because the employee's restrictions presumably impair his opportunity to obtain employment at pre-injury wage levels. *Kiernan v. Roadway Package System*, W.C. No. 4-443-973 [Indus. Claim Appeals Office (ICAO), December 18, 2000]. There is no statutory requirement that a claimant must present medical opinion evidence from of an attending physician to establish her physical disability. See *Lymburn v. Symbois Logic*, 952 P.2d 831 (Colo. App. 1997). Rather, the Claimant's testimony alone is sufficient to establish a temporary "disability." *Id*. As found, the Claimant was temporarily and partially disabled from March 23, 2018, through June 21, 2018, both dates inclusive.

f. Once the prerequisites for TPD are met (*e.g.,* no release to return to full duty, MMI has not been reached, and a temporary wage loss is occurring in modified employment, TPD benefits are designed to compensate for temporary wage loss. As found, the Claimant suffered a partial loss of wages from the date of her injuries, March 23, 2018, through June 21, 2018, both dates inclusive. During this period of time, she had not been released to return to full duty, and she had not reached MMI.She is entitled to TPD benefits in the aggregate grand total amount of **$2,364.42**, as detailed in Finding No. 12 herein above.

Burden of Proof

g. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App.

2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained her burden with respect to compensability, medical benefits and TPD benefits.

CORRECTED ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents shall pay the costs of all authorized, reasonably necessary and causally related medical care and treatment, arising out of the compensable injuries of March 23, 2018, subject to the Division of Workers Compensation Medical Fee Schedule.

B. Respondents shall pay the Claimant temporary partial disability benefits in the aggregate grand total amount of **$ 2,364.42** which is payable retroactively and forthwith.

C. Any and all claims for temporary disability benefits from June 22, 2018, through December 18, 2018, the date of hearing, are hereby denied and dismissed.

D. Respondents shall pay the Claimant statutory interest of eight percent (8%) per annum on all amounts of indemnity benefits due and not paid when due.

DATED this 30th day of January 2019.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-078-769

ISSUES

- Whether Claimant sustained a compensable injury on May 31, 2018 arising out of and in the course and scope of his employment?

STIPULATIONS

The parties stipulated that if the claim were found compensable, Claimant's period of disability lasted from June 1 to August 5, 2018; all treatment Claimant received was provided by authorized treatment providers; and that the parties would stipulate to an average weekly wage within ten days of this order.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Employer employed Claimant as a concrete worker whose primary duty was building concrete tubs. Claimant alleged that he sustained an injury to his ilioinguinal nerve when he moved a metal cage off a table with a co-worker and the co-worker dropped his side.

2. Claimant suffered two prior injuries to his abdomen and groin.

- First, on August 21, 2012, Claimant suffered a prior work related hernia. Albert Hattem, M.D. evaluated him for a Division Independent Medical Evaluation on September 11, 2013. Per the report, Claimant was a driver/warehouseman for an oil company. He experienced bilateral groin pain while moving a 500-pound drum. During the course of treatment, Claimant underwent a bilateral inguinal hernia repair with mesh, a right ilioinguinal nerve transection, and suffered right ilioinguinal neuropathy manifest as chronic pain. At the time of the appointment, Claimant complained of right-sided groin pain and abdominal pain. He indicated that his condition had worsened since his discharge from care. Dr. Hattem examined the right inguinal area and noted a normal appearance with no masses or protrusions and no erythema or warmth. He noted diffuse mild tenderness to palpation. He palpated no masses in the scrotum. The left inguinal area was completely normal. Dr. Hattem assigned a 4% lower extremity rating.

- Claimant sought treatment in the emergency room at St. Anthony North Hospital on November 9, 2013. He complained of abdominal pain that

started 30 minutes prior to arrival. He indicated that he had experienced this pain in the past since undergoing hernia surgery. A CT did not show any acute abnormality and claimant was discharged.

- Second, on June 30, 2014 Claimant sustained another injury to his abdomen and groin. He initially sought treatment with Terrell Webb, M.D. He reported pain secondary to moving a 55-gallon drum of oil that weighed 410 pounds from the back of a truck onto a loading dock. He complained of pain from the right side of his stomach down his right leg. Dr. Webb assessed an abdominal wall strain and an inguinal strain.

- Nikolas Curcija, PA evaluated Claimant on September 25, 2014. Mr. Curcija noted that Claimant underwent an appendectomy in August of 2014. He released Claimant from care for his June 30, 2014 injury.

3. On May 31, 2018, Claimant initially sought treatment for this claim at Afterhours, Inc. He reported that he was moving a heavy object at work and felt a quick stabbing pain that turned into a continuous throbbing pain with a stabbing sensation with movement. He reported swelling initially which had improved significantly since onset. A history of a similar incident in the past was noted, as was a history of an indirect inguinal hernia. The inguinal canal was tender to palpation as was the right testicle. Claimant's provider diagnosed a unilateral inguinal hernia, without obstruction or gangrene and right testicular pain. The provider instructed Claimant to follow-up with Concentra for further treatment and possible surgical repair.

4. On June 1, 2018, Claimant treated with Deana Halat, NP at Concentra Medical Center. He reported that he was pulling a steel cage and felt a pop in his abdomen. "He states it started last night when he was at work and lifted a steel cage. He noticed that he had an immediate sharp pain in his right lower abdomen with swelling of the testicle. He reported a previous hernia in 2014 which was treated through Concentra." He noted that Afterhours, Inc. recommended an ultrasound, which was not performed. Ms. Halat assessed an abdominal wall strain and a groin strain, and referred Claimant for an ultrasound and to a general surgeon.

5. On June 1, 2018, Claimant underwent an abdominal ultrasound. The study was unremarkable.

6. On June 2, 2018, Claimant underwent an ultrasound of the testicles and scrotum. This revealed no evidence of epididymoorchitis, and no acute findings.

7. On June 5, 2018, Claimant treated with Ms. Halat. Per Ms. Halat, "[Claimant] returns to the clinic today for recheck of his right lower abdominal pain and right testicular swelling. He notes that at the Urgent Care he went to they did an ultrasound and told him that his intestine had fallen into his scrotal sac and this is why he

had swelling and this could be an inguinal hernia.[1] The right abdominal US was unremarkable. He is scheduled to see the general surgeon but he was quite angry today that he needed an MRI, and that he has sued us before and he has a lawyer. He left abruptly without an exam." Ms. Halat noted that there was no indication for an MRI. She assessed an abdominal wall strain and noted that claimant should follow up as previously scheduled.

8. On June 12, 2018, Claimant treated with John Lampe, M.D. Dr. Lampe noted "no hernia on exam" and indicated that he would obtain prior records.

9. On June 13, 2018, Claimant treated with Scott Richardson, M.D. Dr. Richardson noted that Dr. Lampe had called to obtain Claimant's prior records. He noted that Claimant had a prior work-related bilateral inguinal hernia repair in 2014 with nerve entrapment and an infection. Claimant admitted that he had chronic pain on the right side following the prior hernia, but alleged that his pain was more severe than usual and was higher in the abdomen. Dr. Richardson assessed an abdominal wall strain and prescribed Diclofenac Sodium 1% Transdermal Gel.

10. On August 1, 2018, Claimant treated with Dr. Sacha. Dr. Sacha opined that a one-time right ilioinguinal plus iliohypogastric nerve block under fluoroscopic guidance and conscious sedation was reasonable for diagnosis, treatment, and causality. Dr. Sacha did not perform a causation analysis.

11. On August 7, 2018, Claimant treated with Dr. Richardson. He walked in to the clinic and indicated that he needed his restrictions lightened in order to obtain a new job. Dr. Richardson complied with Claimant's request and imposed a 90-pound lifting, pushing, and pulling restriction.

12. On October 8, 2018, Alexander Jacobs, M.D. evaluated Claimant for an independent medical examination. Upon examination, Dr. Jacobs noted significant tenderness and some guarding in the right lower quadrant of the abdomen (in the region of the appendectomy). There was less tenderness in the left groin and no tenderness in the testicle. There was a modicum of dysesthesia, without true pain, in the right inner groin region, the suprapubic region, and the distribution of the ilioinguinal and hypogastric nerves. Some right thigh decreased pinprick sensation was noted. Dr. Jacobs noted, "[i]t is important to state that from the time of the original hernia, hernia repair and ilioinguinal nerve ablation he continued to have intermittent symptoms. He had bilateral symptoms on rare occasions. However, his symptoms were usually on the right side and associated with excessive straining or lifting. Sometime he had symptoms with coughing or sneezing. The pain was usually isolated to the right groin and right lower quadrant regions. After the appendectomy his symptoms continued."

13. Per Dr. Jacobs, "[e]xamination of the groin demonstrates no defect in the inguinal rings, no tenderness with compression of the inguinal area and no hernia

[1] Records associated with Claimant's May 31, 2018, visit at Afterhours, Inc., do not support a finding that an ultrasound was performed.

whatsoever (even with Valsalva maneuver.) There is no actual muscle tenderness in the right lower quadrant, thigh, or inguinal area. There is no evidence of muscle spasm or inflammation."

14. Dr. Jacobs stated, "[h]is symptoms are clearly not related to a hernia, because there is none. There is precious little evidence for muscle strain that would cause these symptoms since there is no true muscle tenderness currently. At this time, 5 months after the alleged injury, muscle symptoms should have pretty much dissipated. According to the patient these symptoms have decreased by about 40% (50 % according to his physicians)."

15. Dr. Jacobs stated, "[i]f this, indeed, was a problem with either the ilioinguinal or iliohypogastric nerve, it certainly wasn't related to the claim of May 31, 2018. Rather it would be related to the original claim of August 21, 2012, when he underwent the herniorrhaphy that resulted in entrapment of those nerves."

16. Claimant testified at hearing that the only claim he was pursuing in relation to the May 31, 2018 incident was for an injury to his iliohypogastric nerve. He agreed that he did not have a hernia arising out of that incident. He did not indicate he was pursuing a claim for a groin strain or sprain. He stated specifically, and his counsel stated, that the only alleged injury was that of his nerve.

17. With regard to Dr. Sacha's recommendation for a one-time right ilioinguinal plus iliohypogastric nerve block under fluoroscopic guidance and conscious sedation, Dr. Jacobs stated, "[t]he iliolinguinal nerve had already been resected and cauterized by radiofrequency ablation technique. If this was indeed a problem with the iliohypogastric nerve (closely related to the ilioinguinal nerve and a branch of the same parent nerve), it would not be a problem related to the current Worker's Comp claim. It would be related to the original herniorrhaphy."

18. Dr. Jacobs concluded, "[n]ot only is it fair to say that the injury of May 31, 2018 didn't cause any problems with neuropathy but it is unlikely that it aggravated or accelerated conditions that may have pre-existed from his original herniorrhaphies gives the type of symptoms that have persisted since the original surgery. His symptoms may have increased to some extent after his appendectomy."

19. It is Dr. Jacob's position that the incident on May 31, 2018 did not cause, aggravate, or accelerate any condition in claimant's abdomen or groin.

20. No persuasive medical opinion was submitted into evidence that specifically opined the May 31, 2018 incident caused, aggravated, or accelerated any condition in the claimant's iliohypogastric nerve.

21. Of note, Dr. Sacha's medical evaluation of July 18, 2018 states, "I do feel this is just a flare of a pre-existing problem." He does not make any statement the May 31, 2018 incident specifically caused the flare, nor does he state that the May 31, 2018 incident aggravated or accelerated any condition of the iliohypogastric nerve.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201 C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. Section 8-43-201 C.R.S.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

A claimant must prove by a preponderance of the evidence that his injury arose out of the course and scope of his employment with employer. Section 8-41-301(1)(b) C.R.S.*; see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). An injury "arises out of and in the course of" employment when the origins of the injury are sufficiently related to the conditions and circumstances under which the employee usually performs his or her job functions to be considered part of the employee's services to the employer. *General Cable Co. v. Industrial Claim Appeals Office,* 878 P.2d 118 (Colo. App. 1994).

Where the claimant's entitlement to benefits is disputed, the claimant has the burden to prove a causal relationship between a work-related accident and an injury, disease, or condition for which benefits or compensation are sought. *Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997).

The Workers' Compensation Act creates a distinction between an "accident" and an "injury". The term "accident" refers to an "unexpected, unusual, or undesigned occurrence." Section 8-40-201(1) C.R.S. In contrast, an "injury" contemplates the physical or emotional trauma caused by an "accident." An "accident" is the cause and an "injury" is the result. No benefits flow to the victim of an industrial accident unless the accident causes a compensable "injury." A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.,* WC 4-650-711 (ICAO February 15, 2007).

The determination of whether claimant proved an injury which required medical treatment is one of fact for the ALJ. *F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). The ALJ has the discretion to find an industrial accident resulted in only a non-disabling injury which did not require medical treatment. *Graphman v. Amberwood Court Care Center,* W.C. No. 4-621-138 (I.C.A.O., June 29, 2005).

The persuasive and credible evidence shows that the May 31, 2017 incident did not cause, aggravate, or accelerate any condition in Claimant's abdomen or groin.

Claimant sustained prior injuries to his abdomen and groin on August 21, 2012 and June 30, 2014. Claimant's 2012 injury resulted in right ilioinguinal neuropathy manifested by chronic pain.

Claimant remained symptomatic after his reaching MMI for his August 21, 2012 injury. Per Dr. Jacobs, "[i]t is important to state that from the time of the original hernia, hernia repair and ilioinguinal nerve ablation he continued to have intermittent symptoms. He had bilateral symptoms on rare occasions. However, his symptoms were usually on the right side and associated with excessive straining or lifting. Sometime he had symptoms with coughing or sneezing. The pain was usually isolated to the right groin and right lower quadrant regions. After the appendectomy his symptoms continued."

The ALJ credits the opinion of Dr. Jacob that "[i]f this, indeed, was a problem with either the ilioinguinal or iliohypogastric nerve it certainly wasn't related to the claim of May 31, 2018. Rather it would be related to the original claim of August 21, 2012, when he underwent the herniorrhaphy that resulted in entrapment of those nerves."

The minor incident observed in the video from May 31, 2018 did not cause, aggravate, or accelerate any condition in Claimant's abdomen or groin.

The ALJ notes that Dr. Jacobs is the only physician who performed a causation analysis. This ALJ notes that no persuasive medical opinion supporting a determination that the May 31, 2018 incident caused, aggravated, or accelerated an injury to the iliohypogastric nerve has been submitted into evidence.

The ALJ notes discrepancies in Claimant's accounts of the mechanism of injury in the medical records and in the information provided to claimant's various providers. While the ALJ acknowledges an incident is visible on the video, Claimant is also seen to be moving without apparent difficulty immediately following the incident in question. The ALJ specifically rejects the testimony of Claimant.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant claim for compensation is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. ***For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.***

DATED: January 31, 2019

/s/ Kimberly Turnbow
Kimberly Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Respondents have overcome by clear and convincing evidence the DIME physician's opinion on Claimant's permanent partial disability impairment causally related to Claimant's injury.

2. If the DIME physician's opinions on permanent impairment causally related to the work injury are overcome, determination of Claimant's appropriate permanent partial disability impairment rating and whether the impairment is scheduled or whole person.

3. Determination of Claimant's average weekly wage (AWW).

4. Whether Claimant has established by a preponderance of the evidence an entitlement to increased temporary partial disability (TPD) benefits based on an increased AWW.

5. Whether Respondents have established by a preponderance of the evidence that Claimant was responsible for his termination on July 10, 2017 and that the resulting wage loss is not attributable to the May 26, 2017 injury.

6. Whether Claimant has established by a preponderance of the evidence that he is entitled to a gym membership as a specific medical maintenance benefit.

FINDINGS OF FACT

1. Claimant worked for Employer as a forklift operator and was so employed from approximately 2013 until his termination July 10, 2017. Claimant's job duties were heavy and involved pulling orders, loading boxes, lifting boxes, and operating a forklift.

2. On May 26, 2017, while so employed, Claimant sustained an admitted work related injury. On that date, Claimant was loading boxes weighing between 50 and 100 pounds from waist level to a forklift pallet that was at ground level. Claimant pulled a box weighing approximately 92 pounds toward his body when he felt a dislocation in his left shoulder.

3. On May 26, 2017, Claimant was evaluated at Concentra. Claimant reported that he was pulling cases when he felt a twinge and burning in his left shoulder. Claimant reported the pain was in the left posterior shoulder, the pain was sharp and burning, and that the pain was constant. Claimant reported the pain level was an 8/10 and worse with

shoulder movement and rotation. Claimant was diagnosed with left shoulder strain. *See* Exhibits 3, C.

4. Claimant was referred to and underwent physical therapy during the next month for his left shoulder. He continued to complain of pain in the left shoulder. *See* Exhibits 3, C.

5. On June 1, 2017, NP Halat evaluated Claimant. Claimant had continued pain at the AC joint in his left shoulder, popping and clunking with movement, and tenderness. Claimant underwent x-rays on his left shoulder that showed AC separation. Clamant was referred for an orthopedic evaluation. *See* Exhibits 3, C.

6. On June 15, 2017, Mark Failinger, M.D. evaluated Claimant. Claimant reported pain in the upper back and with reaching. Dr. Failinger noted that Claimant's strength was fairly good, range of motion was decent, and that Claimant did have some shoulder pain to the side and reaching to the side. On examination, Dr. Failinger found left shoulder weakness and pain, minimal AC joint pain, some pain in the greater tuberosity, and forward flexion at about 50 degrees with some pain in medium ranges. Dr. Failinger reviewed an MRI of the left shoulder that showed a small tear of the supraspinatus and he diagnosed left shoulder rotator cuff supraspinatus tear. Dr. Failinger administered a cortisone injection to the left shoulder. *See* Exhibits 5, D.

7. Claimant alleges he sustained a separate injury to his right shoulder on July 5, 2017. This separate injury was not consolidated into this claim nor is the separate injury part of this case. In his evaluation on July 6, 2017 for his left shoulder, there is no mention of a new right shoulder injury or right shoulder problems. *See* Exhibit 3.

8. On July 13, 2017, Dr. Failinger evaluated Claimant. Claimant reported that the cortisone injection did not provide much relief. Claimant reported that he had the same pain and had no new injuries. Claimant reported pain at the worst was 5-6/10 and at best was 1-2/10. Claimant reported that he did not want surgery because he had surgery on the right shoulder previously that did not really help him at all. Claimant reported the pain woke him up at times and that reaching overhead bothered him some. Claimant's strength and range of motion were noted to be decent. Dr. Failinger performed another cortisone injection. *See* Exhibits 5, D.

9. Claimant continued to be evaluated for his left shoulder. In his left shoulder, Claimant had continued pain, joint stiffness, weakness, tenderness to palpation at the AC joint area, and achiness. Providers continued to note that Claimant's left shoulder had discomfort on flexion, abduction, and internal/external rotation. *See* Exhibits 3, C.

10. On August 10, 2017, Dr. Failinger evaluated Claimant. Dr. Failinger noted again that Claimant did not want surgery, but that he had little else to offer Claimant. Dr. Failinger recommended a second opinion. *See* Exhibits 5, D.

11. On August 24, 2017, John Papillion, M.D. evaluated Claimant. Dr. Papilion noted that Claimant had a prior right shoulder injury in 2014 repaired surgically but that Claimant had no prior problems with the left shoulder. Dr. Papilion found on examination of the left shoulder pain above 90 degrees, a markedly positive impingement sign type I and II, a mildly positive drop arm test, and pain with testing the supraspinatus. Dr. Papilion diagnosed moderated grade articular sided partial tear rotator cuff lesion (PASTA lesion) in the left shoulder. Dr. Papilion recommended surgical repair. Claimant was hesitant to undergo surgery due to a prior right shoulder surgery that he had undergone and due to the fact that following his prior right shoulder surgery, his right shoulder had continued symptoms. Dr. Papilion explained to Claimant that the 2014 right shoulder injury had involved a very large central tear compared to Claimant's current left shoulder tear which was much smaller and could likely be managed nicely with the recommended surgery and could likely heal completely. Claimant decided to go forward with surgery on his left shoulder. *See* Exhibits 6, E.

12. On September 8, 2017, Dr. Papilion performed surgery on Claimant's left shoulder. Dr. Papilion performed arthroscopic debridement of the labrum and rotator cuff, arthroscopic subacromial decompression with a release of the coracacromial ligament, and arthroscopic rotator cuff repair. In the operative not, Dr. Papilion noted that there was a full thickness tear of the rotator cuff. *See* Exhibits 6, E.

13. On September 19, 2017, Claimant was evaluated by Scott Richardson, M.D. Claimant was noted to still be in a sling following surgery and Claimant reported pain at a level of 5/10 with joint pain, joint stiffness, and night pain. Dr. Richardson noted that the surgical wound looked good, but noted ecchymosis and tenderness to palpation generally about the glenohumeral joint. Dr. Richardson ordered post surgery physical therapy three times per week. *See* Exhibits 3, C.

14. Claimant underwent physical therapy in October of 2017 with Chris Traut, PT. Claimant had a little bit of increased pain at a 6/10 for about 2 hours following a treatment but generally reported his pain at about a 1/10 during October. Claimant reported that he had cervical thoracic joint pain since his surgery and that he had pain with abduction in the impingement position. Claimant reported his shoulder was improving with low pain level at the anterior superior shoulder. PT Traut noted improvement in active range of motion. *See* Exhibits 10. C.

15. On November 2, 2017, Dr. Richardson evaluated Claimant. Claimant reported that his pain level was now at a 0/10 at rest and at a 2/10 with movement. Claimant was noted to be out of the sling and advancing with physical therapy. Claimant reported continued trouble with sleeping and with pain in the left cape area. Claimant was found to have tenderness to palpation at the anterior and superior glenohumeral area and the left trapezius area. *See* Exhibits 3, C.

16. On November 2, 2017, Claimant underwent physical therapy with Autumn Grove, PT. Claimant reported he was doing well with no change. Claimant reported reduced symptoms and benefit from his current treatment. *See* Exhibits 10. C.

17. On November 7, 2017, Claimant underwent physical therapy with PT Traut. Claimant reported that his shoulder felt good but weak and that his current pain was at a 1/10. Claimant reported that he still had trouble sleeping and that his shoulder pain increased at night, up to a 7/10 on days he had therapy and up to a 5/10 on days that he did not have therapy. PT Taut noted that Claimant was progressing well per protocol but was limited by neck pain. PT Traut adjusted Claimant's neck and recommended they continue to monitor and address the neck pain for regional interdependence while also continuing Claimant'' left shoulder rehabilitation. *See* Exhibits 10. C.

18. On November 9, 2017, Claimant underwent physical therapy with PT Traut. Claimant reported increased left superior shoulder pain at night and increased left cervical spine pain at night. On November 14, 2017, Claimant underwent physical therapy with PT Traut. Claimant reported his left shoulder felt tight but had no other symptoms. Claimant reported that he could elevate his shoulder and was happy about that but that his flexion was still limited. PT Traut noted that Claimant could begin resistance. PT Traut noted improved abduction and flexion and that Claimant was progressing as expected. *See* Exhibits 10. C.

19. On November 16, 2017, Claimant underwent physical therapy with PT Traut. Claimant reported pain at a 2/10. Claimant reported that he had gotten up in the middle of the night to go to the bathroom and that he experienced pain in his left cervical from the occiput to the AC joint and that all cervical motions caused pain. Claimant reported that he was doing the home exercise program two times per day and had some pain after doing the home exercise program. PT Traut noted that Claimant's active range of motion decreased from the prior visit and noted concerns over Claimant's cervical pain. Claimant reported that he was seeing a surgeon on the 30th to address his cervical pain. *See* Exhibits 10. C.

20. On November 30, 2017, Dr. Papilion evaluated Claimant. Claimant reported that he was doing well and progressing in therapy. Claimant reported that he still had some pain with overhead use and some cervical paraspinous spasms and tension that bothered him at night. Dr. Papilion found good motion of the cervical spine but some paraspinous tenderness with mild spasm. Dr. Papilion also found tenderness in the trapezius and minimally in the subacromial space. Dr. Papilion found good early strength in the rotator cuff. Dr. Papilion was very pleased with Claimant's progress and recommended Claimant continue therapy and progress to a work conditioning program primarily for strengthening and functional rehab. *See* Exhibits 6, E.

21. Claimant started strengthening and work simulation physical therapy on December 1, 2017 with PT Traut. Claimant reported he was still weak in abduction and reported soreness/pain into the left cervical spine at C5-6 worse with rotation, flexion, and extension. On December 7, 2017 at therapy, Claimant reported no new complaints and that he was doing well. PT Traut noted that Claimant was handling work conditioning well and was progressing with activity tolerance and strength. *See* Exhibits 11, C.

22. On December 7, 2017, Dr. Richardson evaluated Claimant. Claimant reported pain levels at a 1-2/10 with movement. Claimant reported continued joint pain and night pain. On exam, Claimant had tenderness in the trapezius muscle and in the anterior shoulder but was noted to be at near full range of motion with some lacking in internal rotation. *See* Exhibits 3, C.

23. On December 11, 2017, Claimant underwent therapy with PT Traut. Claimant reported the pain in his anterior shoulder was minimal. Claimant reported that he had neck pain since surgery that was unchanged and was at a 3/10 with neck motions in his left lower cervical area/suprascapular area. PT Traut noted that Claimant continued to have neck pain with relief from manual therapy. The next day, December 12, 2017, Claimant reported feeling more sore in his neck than normal. PT Traut noted Claimant's therapy and progress were as expected. PT Traut opined that Claimant's cervical pain was likely due to weak deep cervical flexors and a tight left levator. PT Traut planned to progress cervical exercises and to continue work simulation for the left shoulder. *See* Exhibits 11, C.

24. On December 13, 2017, Claimant underwent therapy with Michael Griffin, PT. Claimant reported that he had 5/10 soreness in his left shoulder/neck area following a massage the day prior. *See* Exhibits 11, C.

25. On December 18, 2017, Stephanie Best, PT noted that Claimant was there for visit 1/18 for work conditioning. Claimant reported neck/upper trapezius pain that increased with overhead activity and with sleeping. *See* Exhibits 11, C.

26. Claimant continued to undergo work-conditioning therapy. He reported continued soreness/tightness along the left upper trapezius towards the base of the skull, a headache, and tightness from his shoulder to his neck. *See* Exhibits 11, C.

27. On January 11, 2018, Dr. Papilion evaluated Claimant. Dr. Papilion noted that Claimant was doing exceedingly well and had completed therapy. Claimant reported some paracervical and trapezial muscle soreness and pain but reported no shoulder pain. On exam, Dr. Papilion found full active motion in the shoulder and excellent strength in the rotator cuff. Dr. Papilion found some mild tenderness over the trapezius and cervical paraspinous muscles and opined that those symptoms were not related to the shoulder surgery. Dr. Papilion opined that Claimant was approaching MMI with regard to his left shoulder rotator cuff repair and that Claimant had sustained permanent impairment. *See* Exhibits 6, E.

28. Claimant continued to undergo work-conditioning therapy. During this time, he reported continued pain from the shoulder up to the neck bothering him the most at night and reported that it was just always tight.

29. On January 25, 2018, Dr. Richardson evaluated Claimant. Claimant continued to have pain at a 1-2/10 with movement. Claimant also continued to have

tenderness and pain in the left trapezius muscle and left anterior shoulder. It was noted that roughly 75% of anticipated healing had taken place. *See* Exhibits 3, C.

30. On February 8, 2018, Dr. Richardson evaluated Claimant. Claimant reported he had been doing physical therapy for strengthening and that his arm still felt weak. Claimant reported pain at a 4/10. Dr. Richardson noted on examination that Claimant lacked about 20-30 degrees of internal rotation but otherwise was at/very near full range of motion. Dr. Richardson noted that Claimant's healing was almost sufficient for the safe return to regular duty work but that Claimant required another recheck prior to discharge. *See* Exhibits 3, C.

31. At work conditioning therapy on February 27, 2018, Claimant reported that he continued with the same feeling of tightness and soreness through the area of the upper trapezius. *See* Exhibits 11, C.

32. On March 8, 2018, Dr. Richardson evaluated Claimant. Claimant reported feeling stronger in his left shoulder and that he had no arm numbness. Dr. Richardson noted that Claimant had not yet found a gym to use yet and discussed finding one near Claimant's residence. Claimant reported shoulder pain at night with pressure in shoulder and joint pain and that his pain medications wore off by 2 a.m. On exam, Claimant's neck was normal and his left shoulder had tenderness to palpation at the about the glenohumeral/trapezius area. Dr. Richardson noted that Claimant was at his functional goal and ready for discharge. Dr. Richardson discussed that Claimant was at maximum medical improvement and provided an impairment rating of 3% upper extremity, 2% whole person. Dr. Richardson opined that Claimant could return to full work/activity. Dr. Richardson noted that for post MMI and future care, Claimant needed six months of maintenance care with him and Dr. Papilion and that Claimant continued to need a gym membership. *See* Exhibits 3, C.

33. On July 12, 2018, Thomas Higginbotham, D.O. performed a division independent medical examination (DIME). Dr. Higginbotham noted that the parts of the body to be evaluated included neck, bilateral shoulders, left rotator cuff injury status post surgery, injury to labrum, injury to coracoacromial ligament, separation of the left acromial joint, leg pain, insomnia, and depression. Dr. Higginbotham noted dates of injury of May 26, 2017 for the left shoulder and another date of injury of July 5, 2017 for the right shoulder that was apparently exacerbated from compensatory use as the left shoulder was healing. Dr. Higginbotham noted that it appeared that both shoulder claims were coupled together. *See* Exhibits 14, B

34. Claimant reported that on July 5, 2017 he injured his right shoulder while pulling and lifting heavy boxes and at the same time trying to protect his injured left shoulder and that his boss denied filling out a new report of injury form. Claimant reported that he retained an attorney in August or September of 2017 and that a new claim was made for the right shoulder. Claimant reported a prior injury to his right shoulder and prior surgery to his right shoulder. Claimant reported that the prior right shoulder injury settled

sometime in 2015 and that he was unsure of a rating that he was provided. *See* Exhibits 14, B

35. Claimant reported pain and discomfort in both his shoulder about the left suprascapular and cervical paraspinal areas. Claimant reported headaches, muscle cramps, joint pain and stiffness, depression and nervousness, trouble falling and staying asleep, mood swings, hot flashes, tinging and hot sensation to the hands, nausea and photophobia. Claimant reported that he had a lack of movement in both arms. On exam, Claimant had mild tenderness on moderate pressure palpation about the left deltoid muscle insertion. Claimant had no AC joint tenderness. Claimant had moderate bicipital groove tenderness. Claimant also had mild-moderate left upper trapezius and levator scapular tenderness in his cervicospinal muscles and mild left tenderness in the suboccipitals. Claimant's cervical spine range of motion was mildly limited with pain about the left paraspinal areas. *See* Exhibits 14, B

36. Dr. Higginbotham assessed pull/push/lift strain events to the bilateral shoulders, structural diagnostic evidence of a partial thickness tear of the left distal rotator cuff with surgery, and cervicalgia with strain from post-operative splintage without specific trauma to the neck at the time of the injury. Dr. Higginbotham agreed that Claimant was at MMI as of March 8, 2018 as opined by Dr. Richardson. Dr. Higginbotham opined that a whole person impairment consideration was for both shoulders and for the loss of cervical spine range of motion because of the shoulder condition and without specific injury to the cervical spine itself. Dr. Higginbotham provided an upper extremity impairment for the left shoulder at 15%, which converts to 9% whole person. He noted that included 10% upper extremity impairment for subacromial decompression/acromioplasty, and 6% for range of motion deficits. For the right shoulder, Dr. Higginbotham provided an upper extremity impairment of 6%, which converts to 4% whole person. For the cervical spine, Dr. Higginbotham provided a spine impairment of 6% whole person based entirely on range of motion deficits. Dr. Higginbotham noted that there was no specific disorder of the cervical spine and no specific injury to the cervical spine at the time of the injury but opined that Claimant had a loss or range of motion due to the bilateral shoulder conditions. Dr. Higginbotham opined that the total combined whole person impairment rating was 17%. Dr. Higginbotham opined that there was no apportionment of the cervical loss of range of motion or the left shoulder and that there were no disabling conditions of the left shoulder and neck at the time of the injury. Dr. Higginbotham noted that apportionment of the right shoulder would be appropriate but that there were no records of the prior injury and Claimant was unsure of any impairment. Thus, Dr. Higginbotham noted specifically that the 17% value was without apportionment of the right shoulder. *See* Exhibits 14, B

37. Dr. Higginbotham noted that further medical care needed and that the ongoing care would be primarily in the form of self-care and mindfulness of excessive physical activities of the shoulder along with a concerted stretching and strengthening exercise routine and auto massage techniques with tennis ball and/or foam roller. Claimant's lifting restriction was put at a maximum of 45 pounds and his above shoulder activity was limited to intermittently up to 2 hours. *See* Exhibits 14, B.

38. On October 31, 2018, John Burris, M.D. performed an independent medical evaluation. Claimant reported that he injured his left shoulder at work on May 26, 2017. Claimant reported undergoing physical therapy, injections, and surgery. Claimant reported there were no complications and that he completed physical therapy after surgery. Claimant reported pain at a 7/10 directly in his left shoulder. Claimant reported the pain could vary between 2-9/10 and on a pain diagram, Claimant localized the pain to the superior trapezius region. Claimant did not report neck pain, radiation of symptoms into his extremities or persistent numbness/weakness in extremities. Dr. Burris reviewed medical records and performed a physical examination. On exam, Claimant's cervical spine was normal, non-tender, with full fluid range of motion in all planes and negative Spurlings bilaterally. On left shoulder exam, Claimant was non-tender over the lateral edge of the acromion and bicipital groove, focally tender over the superior aspect of the left trapezius musculature, with no muscle spasm or trigger points. Claimant was non-tender through the posterior shoulder girdle. Claimant had full strength.

39. Dr. Burris noted that Claimant reported that he had a good response from his prior right shoulder workers' compensation claim with complete relief of pain that was contradicted by the medical records. Dr. Burris also noted the claimed new right shoulder injury on July 5, 2017 is not noted or documented by providers in this claim who were treating the left shoulder. Dr. Burris opined that there was clear consensus that Claimant reached MMI on March 8, 2018 for the left shoulder injury. Dr. Burris opined that Claimant's permanent impairment was 3% upper extremity for range of motion loss. Dr. Burris opined that this was consistent with Claimant's range of motion documented by all of his treating providers. Dr. Burris noted that while the rating could be converted to a 2% whole person rating, in Claimant's case there was no evidence of proximal involvement on examination so the rating remains an upper extremity rating.

40. Dr. Burris opined that DIME physician Dr. Higginbotham made several significant errors in the impairment rating calculations including rating the cervical spine without a table 53 disorder, rating the right shoulder that was unrelated to this claim, and rating for the subacromial decompression. Dr. Burris opined that Claimant did not injure the cervical spine or right shoulder on May 26, 2017. Dr. Burris noted that the Division of Workers' Compensation specifically instructs providers that "in shoulder cases with accompanying neck pain, the clinician must determine whether an additional objective work related Table 53 cervical pathology qualifies for a rating or the symptoms the patient has are those expected from the shoulder pathology and do not qualify for an additional rating." Dr. Burris opined that Claimant currently has some myofascial tenderness in the left trapezius musculature without cervical spine pain. He opined that was an expected finding after shoulder surgery and does not qualify for an additional cervical rating. Dr. Burris further noted that for shoulder surgery, the Division of Workers' Compensation instructs that "subacromial arthroplasty should be rated using range of motion, and when appropriate, joint crepitation with motion from the other disorders section." Dr. Burris noted that although there was an allowance for up to 10% upper extremity, it was recommended only if "other factors have not adequately rated the extent of the impairment." Dr. Burris opined that given the concepts, DIME physician Dr.

Higginbotham's inclusion of a 10% impairment for the subacromial decompression was inconsistent with the instructions. Further, Dr. Burris opined that the DIME physician's range of motion was significantly different from all the range of motion measurements in the records which were relatively consistent including from Dr. Richardson, Dr. Papilion, the physical therapists, and his measurements. Dr. Burris opined that no permanent work restrictions or maintenance care was indicated and that Claimant should be encouraged to actively and regularly participate in a self-directed home exercise program. See exhibit A.

41. Dr. Burris testified at hearing consistent with his independent medical evaluation report. Dr. Burris testified that he disagreed with DIME physician Higginbotham and that it was not appropriate to give a 10% rating for the subacromial decompression since range of motion should characterize most losses and that the use of the additional rating is only in extreme cases where range of motion doesn't capture the anatomical loss. Dr. Burris opined there was no reason on exam for an additional rating of 10% and that the physical therapy records, authorized treating provider records, and surgeon's records did not support the 10% additional rating. Dr. Burris noted that Claimant had good range of motion, full strength, and no work restrictions and that his range of motion adequately rated Claimant's loss as Claimant had done very well following surgery. Dr. Burris noted that his rating of 3% was supported by the range of motion measurements done by Dr. Richards, Dr. Papilion, and the physical therapists. He noted that Dr. Higginbotham's rating of 6% was not as consistent as the consistent ratings between himself and multiple other providers. Dr. Burris further noted that Claimant's irritation of musculature including the trapezius, paraspinals, rhombus can be related to shoulder surgery and can get irritated during a recovery, but that the musculature irritation is not a cervical spine injury nor does it qualify for a Table 53 diagnosis or cervical spine permanent impairment. Dr. Burris opined that the musculature irritation was a very common and expected outcome from shoulder surgery and that DIME physician Dr. Higginbotham rated the cervical spine in error since you should not rate range of motion limitations without a Table 53 diagnosis. Dr. Burris testified that in unusual cases with severe shoulder pathology there is an exception but that Claimant did not have severe pathology and had a great outcome.

42. Records show that Claimant previously received a 7% upper extremity rating of his right shoulder. This was for a work related right shoulder injury on August 12, 2014. Claimant has better range of motion in his right shoulder now than he did at the time he received a prior impairment rating. Claimant did not present testimony or persuasive evidence to support his contention that he sustained a new right shoulder injury in this case or that he is entitled to a right shoulder rating in this case. *See* Exhibits 15, I, J.

43. Wage records show that prior to his injury on May 26, 2017, Claimant's gross pay varied from week to week based on the number of hours that he worked. Claimant had some weeks with higher hours and pay and some weeks with lower hours and pay. A variance throughout his pay existed from wage records November 2015 and through his injury. In the 21 weeks prior to his injury, Claimant earned gross wages of

$18,081.15, amounting to an average weekly wage of $861.01. Respondents admitted to an average weekly wage of $862.03 using 53 weeks of wages prior to the injury. Claimant argues that the ALJ should use a 5-week period prior to the injury to calculate Claimant's average weekly wage. Claimant has not presented persuasive argument or evidence to establish that a five-week period accurately reflects Claimant's earnings or lost income potential. Rather, as the records consistently show from 2015 through the injury, Claimant's wages varied and the ALJ finds that a fair calculation includes a larger period than just 5 weeks prior to the injury. Claimant's average weekly wage is $862.03.

44. Claimant was terminated by Employer on July 10, 2017. Prior to his May 26, 2017 injury, Claimant had received two corrective action forms. On April 17, 2017 Claimant received and signed a corrective action form for insubordination. On May 19, 2017, Claimant received a corrective action noting he had accumulated 8 points against his attendance. The corrective action noted that if Claimant received 2 more points he would be terminated and noted that it was a final warning. Claimant had accumulated points for being late on March 4, 2017, March 8, 2017, March 23, 2017, April 5, 2017, April 17, 2017, and April 21, 2017. All of these were prior to his injury. Claimant accumulated two additional points for being late on May 20, 2017, May 26, 2017, June 2, 2017, and July 1, 2017 before he was terminated.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the

discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Average Weekly Wage

Section 8-42-102(2) C.R.S. requires the ALJ to base claimant's AWW on her earnings at the time of injury. Under some circumstances, the ALJ may determine a claimant's TTD rate based upon her AWW on a date other than the date of injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Section 8-42-102(3), *supra*, grants the ALJ discretionary authority to alter that formula if for any reason it will not fairly determine claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective of calculating AWW is to arrive at a fair approximation of claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 1997). Where her earnings increase periodically, claimant's AWW should be calculated based upon her earnings during a given period of disability, and not based upon earnings at the time of injury. *Campbell v. IBM Corp.*, *supra*. Earnings from concurrent employment may be included in a claimant's AWW where the injury impairs earning capacity from such employment. *Jefferson County Schools v. Dragoo*, 765 P.2d 636 (Colo. App. 1988).

Wage records show that prior to his injury on May 26, 2017, Claimant’s gross pay varied from week to week based on the number of hours that he worked. Claimant had some weeks with higher hours and pay and some weeks with lower hours and pay. A variance throughout his pay existed from wage records November 2015 and through his injury. In the 21 weeks prior to his injury, Claimant earned gross wages of $18,081.15, amounting to an average weekly wage of $861.01. Respondents admitted to an average weekly wage of $862.03 using 53 weeks of wages prior to the injury. Claimant argues that the ALJ should use a 5-week period prior to the injury to calculate Claimant’s average weekly wage. Claimant has not presented persuasive argument or evidence to establish that a five-week period accurately reflects Claimant’s earnings or lost income potential. Rather, as the records consistently show from 2015 through the injury, Claimant’s wages varied and the ALJ finds that a fair calculation includes a larger period than just 5 weeks prior to the injury. Claimant’s average weekly wage is $862.03.

DIME Physician Opinion

A DIME physician must apply the AMA Guides when determining the claimant’s medical impairment rating. Section 8-42-101(3.7), C.R.S.; §8-42-107(8)(c), C.R.S. The

finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

The questions of whether the DIME physician properly applied the AMA Guides, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000). A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

Right Shoulder

As found above, the medical records lack any mention to treating providers of an acute right shoulder injury on July 5, 2017. Rather, the evidence is persuasive that after a work related right shoulder injury in 2014 and after surgery for that injury, Claimant continued to have issues with his right shoulder. Claimant received a permanent impairment rating for his prior right shoulder injury, which was a 7% scheduled impairment. DIME physician Dr. Higginbotham noted in his report that any prior impairment of the right shoulder should be apportioned out of this claim (where he provided a 6% right shoulder extremity rating). DIME physician Dr. Higginbotham also noted his belief that there had been a right shoulder injury and belief that the right shoulder had been consolidated into this case in his preliminary page. These "beliefs" in his report are in error. DIME physician Dr. Higginbotham clearly erred by rating and including the right shoulder. Rather than finding a causal relationship of the right shoulder to this claim, the DIME physician just rated the right shoulder. The records clearly lack any demonstrated acute right shoulder injury actually occurred on July 5, 2017 and lack any demonstrated evidence that a right shoulder injury would be in any way related to this claim where Claimant sustained an acute left shoulder injury on May 26, 2017. Even if

hypothetically Claimant sustained a right shoulder injury on July 5, 2017 that was somehow consolidated into this claim, the rating for the right shoulder would be 0. The DIME physician correctly noted that a prior right shoulder rating would have to be apportioned out yet did not have records or request records to determine how much should be apportioned out and just rated the right shoulder. The DIME physician erred by rating the right shoulder as there was no right shoulder injury and, even if there were a right shoulder injury, a prior higher rating on the same shoulder would require this rating to be 0. Claimant's right shoulder is better now than it was at the time he was rated following his 2014 injury. It is very difficult to conceive why Claimant did not concede that the right shoulder was not part of this claim and/or concede that the right shoulder was not ratable due to the prior rating and apportionment requirements. Respondents have overcome the DIME physician opinion on permanent partial impairment and have established by clear and convincing evidence that the right shoulder is not part of this claim and is not ratable.

Cervical Spine

Respondents also have stablished by clear and convincing evidence that DIME physician Dr. Higginbotham erred by providing a cervical spine impairment rating. Claimant did not injure his cervical spine on May 26, 2017. Claimant has no cervical spine objective pathology or diagnosis. Claimant has no structural change to his cervical spine. DIME physician Dr. Higginbotham noted in his report that Claimant had no injury to the cervical spine at the time of the injury event and that there is no specific disorder of Claimant's cervical spine under Table 53. Despite this, Dr. Higginbotham rated Claimant as having a cervical spine impairment. This was in error. DIME physician Dr. Higginbotham even notes in his report that the range of motion impairment he rated flowed from both of Claimant's shoulders and not from a specific cervical spine problem or Table 53 diagnosis. Although some of the muscles between the shoulder and neck were irritated after shoulder surgery, Claimant did not sustain a permanent impairment to his cervical spine allowing or requiring a rating. Claimant has no intervertebral disc lesion and no soft tissue lesion in his cervical spine. Unlike other cases where a specific scalene muscle injury was diagnosed and documented as part of an injury and was allowed to be rated, Claimant has no such diagnoses. Cervicalgia, or neck pain, is not a specific diagnosis of injury to a structure or specific muscle but is a term for neck pain. Surgeon Dr. Papilion believed Claimant's neck muscle symptoms were not related to the shoulder surgery. The DIME physician opined that the symptoms were due to post-operative splintage. However, this opinion is in error and contradicted by the overall medical records showing a lack of complaints during the splintage period. Even Claimant argues contrary to the DIME opinion on post-operative splintage and Claimant argues that he actually injured his cervical spine during a physical therapy manipulation treatment in November of 2017, two months after his left shoulder surgery. Records from therapy show an increase in neck pain and decrease in motion after waking up from sleeping during the night. Here, there was no documented injury to any areas of the cervical spine. Rather, as testified persuasively by Dr. Burris, Claimant had expected muscle soreness in areas next to his shoulder following surgery. Not only did Claimant not have a medically documented injury to his cervical spine (or any diagnosis to a specific lesion or

muscle area during his treatment), to rate there also is a requirement of pain AND rigidity. The records fail to show rigidity. Rather, Claimant does exceedingly well in physical therapy and has near full range of motion and strength. Claimant further argues that he would be allowed a cervical spine rating under the Spinal Rating Tips even if he did not qualify for a Table 53 rating, because his case is an unusual case with established severe shoulder pathology accompanied by treatment of the cervical musculature. Not only does this tip require it be to be well justified by the clinician (and DIME physician Dr. Higginbotham provides very little justification) but it also requires the case to be unusual with severe shoulder pathology. Claimant does not have severe shoulder pathology nor is his case unusual. Claimant had a shoulder tear corrected by surgery and has had an excellent outcome. Thus, the rating provided by Dr. Higginbotham is in error and has been overcome. Claimant is not entitled to a rating for his cervical spine.

DIME physician opinion – after overcome by clear and convincing evidence

Deleon v. Whole Foods Market, Inc., W.C. No. 4-600-477 (ICAO, November 16, 2006), addressed the proper evidentiary standard for determining a claimant's impairment rating after an ALJ finds that a portion of the DIME physician's impairment rating has been overcome by clear and convincing evidence. In the *Deleon* case the ALJ determined the respondents overcame by clear and convincing evidence a DIME physician's finding that the claimant sustained 5 percent impairment for lost range of motion in the lumbar spine. However, the ALJ also found that the respondents failed to overcome by clear and convincing evidence the DIME physician's finding that the claimant sustained 5 percent impairment for a specific disorder of the lumbar spine. Consequently the ALJ upheld the specific disorder portion of the rating. The ICAO ruled that once an ALJ determines "the DIME's rating has been overcome in any respect" the ALJ is "free to calculate the claimant's impairment rating based upon the preponderance of the evidence" standard. The ICAO further stated that when applying the preponderance of the evidence standard the ALJ is "not required to dissect the overall impairment rating into its numerous component parts and determine whether each part or sub-part has been overcome by clear and convincing evidence."

Left shoulder- determination of appropriate rating- scheduled vs. whole person

As the DIME physician's opinions on permanent partial disability rating has been overcome, the determination of the appropriate permanent partial disability rating may be calculated and determined based on a preponderance of the evidence. The DIME physician provided a rating for the left shoulder that included both a 10% rating for the subacromial decompression/acromioplasty and a 6% rating for range of motion deficits.

A preponderance of the evidence establishes that the appropriate permanent partial disability rating for the left shoulder range of motion deficit is 3% upper extremity and not the 6% provided by DIME physician Dr. Higginbotham. The 3% rating is consistent with the overall weight of the evidence and medical records and is consistent with the ratings provided by the authorized treating provider Dr. Richardson, Dr. Burris,

the physical therapists measurements, and the opinion of Dr. Papilion the surgeon. The range of motion permanent impairment deficit in Claimant's left shoulder is 3%.

Further, as found above, DIME physician Dr. Higginbotham provided an additional 10% rating of the left shoulder for the subacromial decompression/acromioplasty. Although the rating tips allow a 10% rating if other factors have not adequately rated the extent of Claimant's impairment, Dr. Burris is persuasive that there were no other factors in this case to provide an additional 10% rating and is persuasive that the range of motion impairment adequately rates and captures Claimant's true impairment given Claimant's excellent result following surgery. The opinion of Dr. Burris is consistent with the opinions of Dr. Richardson, Dr. Papilion, and of the records from physical therapy which show excellent progress. DIME physician Dr. Higginbotham did not explain his basis for including the extra 10% rating or explain why the range of motion did not adequately rate the extent of Claimant's impairment. The overall medical records show very little residual impairment following surgery, physical therapy, and work conditioning. Claimant cites to an untitled case where an additional 10% rating was provided and upheld as being appropriate, as range of motion did not adequately rate the extent of an impairment. In that case, the Claimant had a metal plate and multiple pins and screws permanently inserted and fixed in his shoulder. This case is entirely different. Here, Claimant had a left shoulder surgery with normal resection and stitching. Claimant had no metal plates, screws, or pins inserted. In this case, Claimant had an excellent outcome with very minimal remaining impairment. The ALJ finds, by a preponderance of the evidence and the persuasive medical evidence, that the appropriate rating for Claimant's left shoulder injury is 3% left upper extremity.

Claimant has established by a preponderance of the evidence that his 3% left upper extremity impairment should be converted to a 2% whole person impairment rating. Section 8-42-107(1)(a), C.R.S., provides that when an injury results in permanent medical impairment and the "injury" is enumerated in the schedule set forth in subsection (2) of the statute, "the employee shall be limited to the medical impairment benefits as specified in subsection (2)." If the claimant sustains an injury not found on the schedule § 8-42-107(1)(b), C.R.S., provides the claimant shall "be limited to medical impairment benefits as specified in subsection (8)," or whole person medical impairment benefits. As used in these statutes the term "injury" refers to the part or parts of the body that sustained the ultimate loss, not necessarily the situs of the injury itself. Thus, the term "injury" refers to the part or parts of the body that have been functionally disabled or impaired. *Warthen v. Industrial Claim Appeals Office,* 100 P.3d 581 (Colo. App. 2004); *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366 (Colo. App. 1996). Under this test the ALJ is required to determine the situs of the functional impairment, not the situs of the initial harm, in deciding whether the loss is one listed on the schedule of disabilities. *Strauch v. PSL Swedish Healthcare System, supra.* Pain and discomfort that limit the claimant's use of a portion of the body may constitute functional impairment. *Johnson-Wood v. City of Colorado Springs,* W.C. No. 4-536-198 (ICAO June 20, 2005); *Vargas v. Excel Corp.,* W.C. No. 4-551-161 (ICAO April 21, 2005). The ALJ may also consider whether the injury has affected physiological structures beyond the arm at the shoulder. *Brown v. City of Aurora,* W.C. No. 4-452-408 (ICAO October 9, 2002).

Section 8-42-107(2)(a), C.R.S., provides for scheduled compensation based on "loss of an arm at the shoulder." The claimant bears the burden of proof by a preponderance of the evidence to establish functional impairment beyond the arm at the shoulder and the consequent right to PPD benefits awarded under § 8-42-107(8)(c). Whether the claimant met the burden of proof presents an issue of fact for determination by the ALJ. *Delaney v. Industrial Claim Appeals Office,* 30 P.3d 691 (Colo. App. 2001); *Johnson-Wood v. City of Colorado Springs, supra.*

Claimant's functional impairment due to his May 26, 2017 left shoulder injury, by a preponderance of the evidence, is found to extend beyond the arm at the shoulder. Claimant has pain and discomfort in the primary site of his injury to the left shoulder and pain and discomfort that refers out into musculature beyond the arm at the shoulder. The referred pain and muscular discomfort from his left shoulder can be expected as a result of the type of surgical procedure Claimant underwent. Although has no rigidity, specific lesion, or objective structural change beyond the arm at the shoulder, Claimant has established by preponderant evidence that he has pain and discomfort beyond the arm at the shoulder that cause some functional impairment beyond the arm at the shoulder. His injury, pain, and discomfort limit his overhead usage of the left arm and limit the usage of surrounding muscles that extend beyond the arm at the shoulder. Thus, Claimant has established by a preponderance of the evidence that his 3% scheduled left shoulder impairment should be converted to a 2% whole person impairment rating for his May 26, 2017 left shoulder injury.

Medical Maintenance Benefits

The respondents are liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. Colorado courts have ruled that the need for medical treatment may extend beyond the point of MMI where the claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or prevent further deterioration of her condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995).

In cases where the respondents file a final admission of liability admitting for ongoing medical benefits after MMI they retain the right to challenge the compensability, reasonableness, and necessity of specific treatments. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Ford v. Regional Transportation District,* W.C. No. 4-309-217 (ICAO February 12, 2009). The question of whether the claimant proved that specific treatment is reasonable and necessary to maintain his condition after MMI or relieve ongoing symptoms is one of fact for the ALJ. *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

Claimant has failed to meet his burden to establish that a gym membership is reasonable and necessary to maintain his condition after MMI or to relieve his ongoing symptoms. Claimant did not explain why the home exercise program needs to be completed in a gym and why the exercises cannot be completed at home. There is insufficient evidence in the record to establish that a gym is necessary to complete his continued home exercises program.

Temporary Partial Disability Benefits and Termination

Claimant requested the ALJ order additional temporary partial disability benefits based only on Claimant's argument that Claimant's average weekly wage should have been higher and thus the benefits should be higher. As found above, the ALJ has declined to increase the average weekly wage and found Claimant's average weekly wage argument not persuasive. Therefore, the temporary partial disability benefits will not be adjusted or increased as requested.

Respondents requested that the ALJ find Claimant was responsible for the termination of his employment on July 10, 2017 and thus argued that Claimant is not entitled to benefits after that date. Section 8-42-103(1)(g), C.R.S., and § 8-42-105(4)(a), C.R.S., provide that if a temporarily disabled employee "is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury." Because these statutes provide a defense to an otherwise valid claim for TTD benefits, the respondents shoulder the burden of proof by a preponderance of the evidence to establish each element of the defense. *Gilmore v. Industrial Claim Appeals Office,* 187 P.3d 1129 (Colo. App. 2008); *Brinsfield v. Excel Corp.,* W.C. No. 4-551-844 (I.C.A.O. July 18, 2003). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

In *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061 (Colo. App. 2002), the court held the term "responsible" as used in the termination statutes reintroduces the concept of fault as it was understood prior to the Supreme Court's decision in *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995). Consequently, the concept of fault used in the unemployment insurance context is instructive. Fault requires a volitional act or the exercise of some control in light of the totality of the circumstances. *Padilla v. Digital Equipment Corp.,* 902 P.2d 414 (Colo. App. 1994), *opinion after remand*, 908 P.2d 1185 (Colo. App. 1995); *Brinsfield v. Excel Corp., supra.*

Violation of an employer's policy does not necessarily establish the claimant acted volitionally with respect to a discharge from employment. *Gonzales v. Industrial Commission,* 740 P.2d 999 (Colo. 1987). However, a claimant may act volitionally if he is aware of what the employer requires and deliberately fails to perform accordingly. *Gilmore v. Industrial Claim Appeals Office, supra*. This is true even if the claimant is not specifically warned that failure to comply with the employer's expectations may result in termination. *See Pabst v. Industrial Claim Appeals Office,* 833 P.2d 64 (Colo. App. 1992). Ultimately, the question of whether the claimant was responsible for the termination is

one of fact for determination by the ALJ. *Gilmore v. Industrial Claim Appeals Office, supra.*

As found above, Claimant violated employer's attendance and tardiness policy. Claimant accumulated 10 points for repeated violations of the policy. Claimant presented no testimony or evidence surrounding these violations documented by Employer. Respondents established through evidence that Claimant accumulated these points, leading to his termination, on multiple dates. There are no medical records indicating sleep problems interfering with work attendance. Respondents have established, by a preponderance of the evidence that Claimant was responsible for his termination from employment on July 10, 2017 and that the resulting wage loss is not attributable to his injury.

ORDER

IT IS HEREBY ORDERED that:

1. Respondents have overcome by clear and convincing evidence DIME physician Dr. Higginbotham's opinion on Claimant's permanent partial disability impairment causally related to Claimant's May 26, 2017 injury.

2. Claimant is not entitled to a rating for his right shoulder or cervical spine.

3. Claimant's left shoulder rating is 2% whole person impairment.

4. Claimant's average weekly wage is $862.03 and he is not entitled to an increase in temporary partial indemnity benefits, as his AWW has not been increased.

5. Claimant has failed to establish by a preponderance of the evidence that a gym membership is reasonable and necessary as a specific medical maintenance benefit.

6. Respondents have established by a preponderance of the evidence that Claimant was responsible for his termination on July 10, 2017 and that the resulting wage loss is not attributable to the injury.

7. All other issues not determined are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to

the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 31, 2019

Denver, CO 80203

ISSUES

I. Whether Respondent overcame the DIME physician's opinion on permanent impairment.

II. Determination of Claimant's permanent impairment rating.

III. Whether Claimant proved by a preponderance of the evidence he is entitled to medical maintenance benefits.

IV. Whether Respondent provided by a preponderance of the evidence they are entitled to an overpayment in the amount of $13,126.42 for payment of temporary total disability ("TTD") benefits.

PROCEDURAL HISTORY

Hearing in this matter took place on September 18, 2018. On October 2, 2018, Claimant filed an Opposed Motion to Allow DIME Doctor to Review Hearing Transcript, requesting that Dr. Gray be permitted to review the hearing transcript prior to his post-hearing deposition scheduled for October 9, 2018. Claimant argued Dr. Gray should have the opportunity to review the hearing transcript in order to have a better understanding of Claimant's horse riding activities as they related to his determinations. On October 3, 2016, Respondent filed an Objection to Claimant's Opposed Motion to Allow DIME Doctor to Review Hearing Transcript, arguing the DIME doctor should not be provided the transcript because it would require him to make liability assessments, credibility assessment and resolve issues of fact. On October 4, 2018, Claimant filed a response to Respondent's objection, reiterating his request. The motion, response and reply were not forwarded to the ALJ Cayce until October 15, 2016. ALJ Cayce subsequently denied the motion as moot, as the deposition had already taken place. No further motions were received regarding the matter.

FINDINGS OF FACT

1. Claimant is a 46 year old right-hand-dominant male who worked for Employer as a traffic technician.

2. On February 2, 2015, Claimant sustained an admitted industrial injury when he slipped on a street sign covered with snow and fell on his left side. Claimant testified at hearing his initial symptoms were sore ribs, left-sided neck pain and left arm pain.

3. Claimant presented to Robert Broghammer, M.D. on February 5, 2015 with complaints of pain in the anterior left shoulder and across his chest and left flank. No complaints of neck pain were noted. Dr. Broghammer assessed Claimant with left

shoulder and upper flank pain and pectoral strain. Claimant began physical therapy and working modified duty.

4. On March 13, 2015, Claimant underwent a left shoulder MRI which revealed a supraspinatus small anteromedial footplate tear 2 x 4 x 3 mm, a small spur of the acromion, and mildly thickened capsule.

5. On April 7, 2015, Claimant reported shoulder pain with reaching out and forward flexion. Dr. Broghammer noted, "[Claimant] is asking if he can begin riding his horse again. He had previously called the clinic to discuss this with Anisha, our case manager, that he is not cleared to ride or participate in equestrian activities because of his shoulder problem." Dr. Broghammer continued Claimant's restrictions, limiting reaching overhead and away from the body.

6. On April 21, 2015, Claimant presented to Steven E. Horan, M.D. for an orthopedic evaluation. Claimant reported 7/10 pain in his left shoulder and neck stiffness. Claimant reported being unable to sleep on his left shoulder, with flexion and abduction being "really, really difficult for him," but also reported that his symptoms did not really interfere with his activities of daily living. Dr. Horan reviewed Claimant's MRI, noting it "clearly showed four-point type tear where the insertion of the supraspinatus has clearly peeled off the humeral head." He assessed Claimant with a rotator cuff tear and recommended surgery.

7. Claimant's care was subsequently transferred from Dr. Broghammer to William H. Miller, M.D. Claimant presented to Dr. Miller on April 24, 2015 with complaints of decreased shoulder range of motion and left trapezius pain. Dr. Miller noted, "[Claimant] is an avid horse rider, but has not done this since the injury." His continued restrictions between April 24, 2015 and September 9, 2015 were no use of the left arm. On physical exam, Dr. Miller noted markedly decreased left shoulder range of motion with cervical motion preserved, and diffuse tenderness about the shoulder girdle. He assessed Claimant with a partial rotator cuff tear.

8. Claimant testified at hearing he is an avid horse rider, having ridden horses since the age of six. Claimant and his son own three horses. Claimant testified he finds horse riding to be a major stress reliever, and rides approximately once per week. Claimant testified he returned to riding horses approximately one to two months after the initial work injury despite being aware he was not released by his physicians to do so at the time. Claimant testified that manipulating his well-trained horses is not physically demanding for him due to his experience, and that he has never fallen off of a horse. At hearing, Claimant demonstrated the positioning of his arms while riding a horse, holding both arms at his sides at 90-degree angles.

9. Claimant further testified he has competed in rodeo competitions since the age of 10 or 11. Claimant's primary event is team calf roping, which involves two participants, a heeler and a header. Claimant participates as the heeler. The header is responsible for roping the calf around the head and turning the calf, while the heeler is responsible for roping the calf's hind feet. Claimant testified he rides approximately 20 miles per hour during the team roping competitions. Claimant testified calf roping is not physically

demanding and does not require exertion of his left arm, as he relies on the horse's movement.

10. At hearing, Claimant acknowledged participating in a team roping event in the Commissioner's Classic Team Roping Hall of Fame on August 8, 2015. Claimant identified himself in two photographs taken at the event, both showing Claimant on a horse using both arms to rope a calf.

11. There is no indication in the record Claimant's treating physicians were aware Claimant had returned to participating in rodeo activities at the time.

12. On August 24, 2015, Dr. Horan performed an extensive arthroscopic debridement and mini open rotator cuff repair with partial accompanying acromionectomy on Claimant. Claimant subsequently participated in post-operative physical therapy. Claimant continued to experience symptoms.

13. On January 6, 2016, Dr. Horan opined Claimant was suffering from adhesive capsulitis and recommended manipulation under anesthesia, which Claimant underwent on January 28, 2016.

14. On April 28, 2016, a record from Medical Massage of the Rockies noted complaints of left shoulder and neck pain. Under objective findings, the record notes Claimant "is still point tender but improving slightly around clavicle, moderate pressure to all areas with light stretching to the neck."

15. Claimant subsequently transferred care from Dr. Horan to orthopedic surgeon David J. Schneider, M.D. Claimant first presented to Dr. Schneider on May 2, 2016 with complaints of stiffness, pain and instability. Dr. Schneider noted that an April 21, 2016 left shoulder MRI revealed labral tearing with high-grade tearing of the anterior posterior bands of the inferior glenohumeral ligament. He assessed Claimant with shoulder instability and pain and suspected Claimant was suffering from an infection. He recommended Claimant undergo blood work and a left shoulder arthroscopy.

16. On May 4, 2016, Dr. Miller assessed Claimant with a partial tear of the left rotator cuff and adhesive capsulitis.

17. On May 17, 2016, Dr. Schneider performed a left shoulder arthroscopic synovectomy, multiple deep culture and manipulation under anesthesia. Claimant was placed on restrictions of no pushing, pulling, lifting, reaching, or overhead work with his left arm.

18. On June 2, 2016, Sonali Hemachandra, M.D. examined Claimant's left shoulder and noted, "obvious muscle wasting about the trapezius and upper arm, and "exquisite tenderness and palpation all over the shoulder joint." Claimant was diagnosed with a P. Acnes infection and treated with antibiotics.

19. In July 2016, Dr. Miller placed Claimant on restrictions of five pounds reaching overhead and away from the body with his left upper extremity.

20. Claimant's name is referenced in a July 22, 2016 newspaper article in the White Mountain Independent regarding the results of a Pikes Peak or Bust Rodeo in Colorado Springs, Colorado that took place on July 13-16, 2016. Claimant's name is listed with another individual under the team roping category. Claimant testified he knows the individual listed and has participated in team roping competitions with that individual on other occasions; however, Claimant contends he did not participate in any rodeo competition in 2016 and believes the article is incorrect.

21. Claimant engaged in physical therapy throughout the remainder of 2016, as well as treatment that provided "ongoing transient relief." On September 9, 2016, a Medical Massage of the Rockies note documents complaints of pain in Claimant's left shoulder and neck. The record states under objective findings "all neck muscles hypertonic, also medial scapula muscles hypertonic. Mod. to deep massage in all areas with stretching the neck."

22. On March 2, 2017, L. Barton Goldman, M.D. saw Claimant upon the referral of Dr. Miller for evaluation of possible chronic regional pain syndrome ("CRPS"). Dr. Goldman opined Claimant did not have CRPS, but suggested Claimant might benefit from a round of trigger point injections.

23. On May 18, 2017, Allison M. Fall, M.D performed an Independent Medical Examination ("IME") at the request of Respondent. On examination, Dr. Fall noted unrestricted cervical range of motion per her visual inspection and no significant hypertonicity in the left upper trapezius or cervical paraspinals. She noted the following left shoulder range of motion measurements: 90 degrees of flexion, 35 degrees of extension, 80 degrees of abduction, 45 degrees of adduction, 50 degrees of internal rotation, and 50 degrees of external rotation. Dr. Fall opined Claimant reached maximum medical improvement ("MMI") as of May 18, 2017. She recommended follow-up with physicians pertaining to any infection, but did not find any indication for ongoing chiropractic or other treatment. Dr. Fall's report states the impairment rating was calculated on an accompanying worksheet, which was not introduced as evidence.

24. On July 26, 2017, Dr. Miller released Claimant to ride horses and assigned permanent restrictions of no lifting or carrying over 30 pounds and no reaching overhead or away for his body over five pounds.

25. Dr. Schneider placed Claimant at MMI on July 31, 2017, noting Claimant's continued low level of pain was his "new normal."

26. Dr. Miller placed Claimant at MMI on August 30, 2017. Claimant reported ongoing pain, stiffness, headaches, cramps, and a "new complaint" of neck pain. Dr. Miller noted Claimant did not have prior cervical complaints. Dr. Miller documented that Claimant had transient relief from his chiropractic treatment, with no functional gains after more than 20 sessions. He further noted trigger point injections were being considered, while no follow-up was warranted for any infection.

27. Dr. Miller performed an impairment evaluation on September 20, 2017. Claimant reported ongoing discomfort and decreased motion in the left shoulder, and

left-sided neck pain. Dr. Miller noted the neck pain was first voiced by Claimant to him on August 30, 2017, and there were no prior cervical complaints. On examination, Dr. Miller noted grossly intact cervical motion with discomfort. Left upper extremity range of motion measurements were as follows: 90 degrees of flexion, 30 degrees of extension, 70 degrees of abduction, 30 degrees of adduction, 0 degrees of internal rotation, and 90 degrees of external rotation. Dr. Miller assessed 15% upper extremity impairment after subtracting the contralateral shoulder impairment (4%) for purposes of normalization. He released Claimant with permanent work restrictions and recommended 25 sessions of ongoing chiropractic care, a six-month pool pass, trigger point injections, and a visit with Dr. Schneider as maintenance treatment.

28. Respondent filed a Final Admission of Liability ("FAL") on November 7, 2017 admitting for Dr. Miller's 15% upper extremity rating and reasonable, necessary and related post-MMI medical treatment. The FAL notes an overpayment of $9,341.26.

29. Claimant filed an Objection to the Admission and a Notice and Proposal to Select an Independent Medical Examiner on November 22, 2017.

30. Stephen Gray, M.D. performed a DIME on March 5, 2018. Claimant reported constant pain in his left shoulder radiating into his neck and occipital area, as well as numbness, tingling and weakness in the left upper extremity. Regarding his medical record review, Dr. Gray noted multiple medical records contained reports of neck stiffness, neck pain, left trapezius pain, and headaches as early as April 24, 2015. On examination of Claimant's neck, Dr. Gray noted diffuse tenderness over the entire left side of the neck up to the occiput, over the scalenes, and essentially over the entire trapezius muscle area with no trigger points. On examination of the left shoulder, Dr. Gray noted tenderness and pain throughout the left shoulder region, with no significant evidence of muscle atrophy in the left shoulder girdle area. Cervical range of motion measurements, as taken with double inclinometers, were as follows: flexion 63 degrees, extension 53 degrees, right lateral flexion 61 degrees, left lateral flexion 61 degrees, right rotation 86 degrees, and left rotation 87 degrees. Left shoulder range of motion measurements, as taken with a goniometer, were as follows: 70 degrees flexion, 28 degrees extension, 46 degrees adduction, 75 degrees abduction, 11 degrees internal rotation, and 75 degrees external rotation.

31. Dr. Gray opined Claimant reached MMI on July 31, 2017 with permanent restrictions. Dr. Gray assigned 13% left upper extremity impairment (8% whole person) for range of motion limitations after subtracting for the contralateral impairment (5%) for purposes of normalization. Dr. Gray opined Claimant's impairment should be considered on a whole person basis "due to the significant involvement of shared musculoskeletal structures proximal to the glenohumeral joint." He recommended an isolated cervical range of motion impairment as there was no direct injury to the neck. He assigned 2% whole person impairment due to cervical spine range of motion loss, secondary to the left shoulder injury.

32. As maintenance care, Dr. Gray recommended Claimant be afforded "quarterly follow-up visits with a Level II Accredited physician." He also recommended four

injections per year, two to four limited courses of physical therapy or manipulative therapy, and yearly follow-up visits with his surgeon.

33. Respondent filed an Application for Hearing on April 18, 2018, which became the subject of the hearing held on September 18, 2018.

34. On June 27, 2018, Claimant returned to Dr. Miller with complaints of progressive bilateral upper extremity paresthesias radiating into his arms and fingers. Dr. Miller again noted Claimant reported new symptoms of neck pain to him on August 30, 2017, had no prior cervical complaints, and did not have complaints of paresthesias into the upper extremities at that time. He referred Claimant for a cervical spine MRI.

35. On July 3, 2018, Dr. Fall reviewed additional records including, *inter alia*, Dr. Gray's DIME report, photos of Claimant's August 8, 2015 rodeo competition, and the newspaper article regarding the July 2016 rodeo competition. Dr. Fall opined Claimant's rodeo activities were significant and raised the question as to the etiology of Claimant's worsening symptoms. Dr. Fall opined Dr. Gray's 2% cervical impairment rating was in error, noting Dr. Gray was not aware of Claimant's rodeo activity, his bilateral rotation was greater than normal, and his cervical motion limitation was more likely related to underlying degenerative changes and a history of rodeo activity than a separate shoulder injury. She opined that recommendations for a pool pass, ongoing chiropractic treatment, and a cervical MRI were not reasonable, necessary or related to the work injury.

36. On July 18, 2018, Dr. Miller issued a letter clarifying the basis for his recommendation of a cervical MRI. Dr. Miller opined Claimant's cervical symptoms were not related to the February 2015 work injury, and explained that his request for a cervical MRI was not meant as maintenance care. He further explained that the purpose of the cervical MRI was to assess Claimant's cervical complaints, and additional evaluation and treatment for Claimant's cervical symptoms should occur outside of the workers' compensation system.

37. Dr. Fall performed a follow-up IME on August 8, 2018. Claimant reported soreness in both arms, neck and shoulders, spasms, and weakness. Dr. Fall spoke with Claimant regarding his participation in rodeo competitions. Claimant reported to Dr. Fall he participated in one rodeo competition after his work injury, but no others after his first surgery. On examination, Dr. Fall noted increased pain behaviors with self-limited range of motion measurements. Left shoulder active range of motion measurements were as follows: flexion 85 degrees, extension 30 degrees, abduction 70 degrees, adduction 40 degrees, internal rotation 40 degrees, and external rotation 50 degrees. Dr. Fall noted there was no crepitus, muscular wasting in the thoracic area, trigger points, or spasming. Claimant reported pain in the bilateral upper trapezii. Dr. Fall noted cervical range of motion "upon casual observation" did not appear restricted. Dr. Fall continued to opine Claimant reached MMI as of May 18, 2017 with the same impairment rating she assessed on that date. She opined Claimant's functional deficit as related to his initial work injury was only to the shoulder and not proximal to the shoulder. Dr. Fall

again opined Claimant's cervical symptoms were not causally related to the mechanism of injury and Claimant is not entitled to maintenance treatment.

38. Dr. Fall testified at hearing as a Level II accredited expert in physical medicine and rehabilitation. Dr. Hall testified consistent with her IME reports. Dr. Fall agreed with Dr. Gray's date of MMI. Regarding cervical impairment, Dr. Fall explained that, in circumstances where there is significant enough involvement of the soft tissues of the neck, an impairment for loss of range of motion can be imposed without a Table 53 rating, pursuant to the AMA Guides. She continued to opine, however, that Dr. Gray erred in assigning 2% cervical impairment in Claimant's case, as neck pain was not documented until August 30, 2017. Dr. Fall stated Claimant's rodeo activities could have an effect on his spine, although she is unable to say within a reasonable degree of medical probability that Claimant's participation in the rodeo caused problems to his cervical spine. She testified there was not any loss of function proximal to the glenohumeral joint, and Claimant's functional limitation was limited to the shoulder. She stated Claimant did not achieve functional gains or benefit from his treatment, as Claimant's complaints are now worsening and widespread. Dr. Fall testified further treatment is not reasonable, necessary or related to Claimant's work injury.

39. Dr. Gray testified by post-hearing deposition. Dr. Gray testified as a Level II accredited expert in occupational medicine. Dr. Gray initially testified consistent with his DIME report. However, on cross-examination, Dr. Gray changed his opinion on impairment upon being shown photographs of Claimant engaged in team calf roping on August 8, 2015 and the July 2016 newspaper article. Dr. Gray stated he had not before seen the photographs and Claimant had not informed him of his involvement in rodeo activity. He testified he was surprised Claimant would engage in team roping activities after surgery was deemed necessary and approved, and team roping activity would not be indicated if surgery was necessary. Dr. Gray further testified it surprised him Claimant would engage in team roping activity after undergoing revision of the shoulder surgery on May 17, 2016. He testified such activity would not be medically indicated.

40. Respondent's counsel informed Dr. Gray of Claimant's description of the team roping activity at hearing, stating:

> And [Claimant] himself testified that in team roping, which is the activity that he was engaged in, there is one person who is working on the – there is a header and heeler. One person is working on the head of the cow and gets it out, and then the heeler tries to rope the back. And he testified that he was riding about 20 miles per hour, he was roping the calf with one arm, and he was holding on to the horn of the saddle with the other.

[Dep. Transcript pp. 16:18-25, 17:1]

41. Dr. Gray stated he could not determine the structural impact of Claimant's rodeo activity on the whole person and surrounding structures. However, he repeatedly testified his opinion on impairment had now changed with the knowledge of Claimant's participation in rodeo activities:

A: And – but I'll just give you right up front that knowing what I know now, even if only part of it is true, I would say that if I had than I probably wouldn't have gone the extra mile on the impairment rating.

Q: So you would not assess the 2 percent?

A: I would – I would correct that back and probably take that away, right, because there are too many unknowns here.

[Dep. Transcript p. 19:15-23]

* * *

Q: I think you also indicated that you thought the 2 percent was appropriate because of his post surgery activity. Would seeing these photos change your mind about post surgery activity?

A: Absolutely.

[Dep. Transcript p. 20:17-21]

* * *

Q: But you would retract the 2 percent cervical rating?

A: Yeah, I think I would. I don't think that is far. I don't think that was – that is not fair considering all the knowledge I've gained.

[Dep. Transcript p. 23:7-11]

42. On re-direct, Claimant's counsel informed Dr. Gray of Claimant's testimony that Claimant has been participating in calf-roping since he was a child, purported to be very comfortable participating in the activity, and mainly uses his right upper extremity when doing so. Claimant's counsel further informed Dr. Gray of Claimant's testimony that he did not participate in rodeo activities in 2016 and that the July 2016 newspaper article is incorrect. In response, Dr. Gray testified,

A: …even if he didn't do the activity in 2016, I think that the activity that he did in 2015 confounds the issues very significantly. And the end result of that, either way, is going to be my not feeling so strongly about the 2 percent.

Because, you know, knowing that he is going on doing that sort of activity, not just that he is taking the risk, but the fact that that activity is going to cause micro tears and certainly not – not recommended by the doctors, it is still going to – I'm not going to – even without the 2016 stuff, I am not going to change my now new

> opinion that the 2 percent was kind of going overboard, not knowing all of the facts.

[Dep. Transcript p. 25:9-22]

Dr. Gray further testified that Claimant "has had pretty had pretty extreme activities before and after his surgeries, and I just think that that – I would not have gone down that road with the 2 percent if I had known that." [Dep. Transcript p. 25:9-22]. Dr. Gray opined Claimant was not entitled to a whole person rating.

43. Dr. Gray stated he no longer felt strongly that Claimant should receive injections as maintenance care, but continued to opine ongoing maintenance care was appropriate in the form of pain medications and annual visits with Claimant's surgeons.

44. Helen Sullivan works as the adjuster on Claimant's claim. She testified at hearing Claimant continued to be paid temporary total disability ("TTD") benefits after being placed at MMI at August 30, 2017 because no impairment rating had been issued at the time. Ms. Sullivan testified that, although an impairment rating was subsequently issued by Dr. Miller on September 20, 2017, Respondent did not receive the impairment rating report until on or around October 25, 2017, and that during such time Claimant continued to be paid TTD benefits. Per the FAL, Ms. Sullivan calculated an overpayment of $9,341.26 of TTD benefits between the time Claimant placed at MMI and when Respondent received the impairment rating report. She further testified that, based on the MMI date assigned by DIME physician Dr. Gray, an additional overpayment of $3,784.79 exists for TTD paid for the 31 days between July 31, 2017 and August 30, 2017. Respondent contends it is entitled to a total overpayment of $13,126.42.

45. Ms. Sullivan further testified that, as of August 2018, Claimant completed 25 sessions of chiropractic care. She stated when Dr. Miller recommended Claimant undergo a neck MRI, she requested a Rule 16 review and denied additional medical maintenance care.

46. Claimant testified he continues to experience headaches, weakness in his arm, and spasms and twitching on the left side of his neck into his shoulder. Clamant further testified he felt relief as a result of the chiropractic treatment.

47. The ALJ finds that Dr. Gray changed his DIME opinion on impairment originally expressed in his March 5, 2018 DIME report. Per his testimony under oath at his post-hearing deposition, Dr. Gray's revised opinion on impairment is that Claimant sustained 13% upper extremity impairment, with no whole person impairment.

48. On the issue of scheduled impairment, the ALJ credits the opinion of Dr. Gray over that of Dr. Miller, and finds the preponderant evidence establishes Claimant sustained 13% scheduled upper extremity impairment.

49. The ALJ credits the opinions of Drs. Miller, Fall and Gray over the testimony of Claimant and finds Claimant did not sustain functional impairment beyond the shoulder.

Claimant failed to provide by a preponderance of the evidence he is entitled to conversion of his scheduled impairment to whole person impairment.

50. Respondent has established it is more probably true than not it is entitled to recover an overpayment in the amount of $13,126.45, as Claimant received such amount in TTD benefits after being placed at MMI.

51. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME on Permanent Impairment

The DIME physician's findings include his or her subsequent opinions, as well as his or her initial report. *Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328, 330 (Colo. App. 2005). If a DIME physician issues conflicting or ambiguous opinions concerning MMI or impairment, it is the ALJ's province to determine the Division IME's true opinion as a matter of fact. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000); *Rainwater v. Sutphin*, WC 4-815 042-04 (ICAO September 9, 2014).

While a DIME physician's opinion on MMI and non-scheduled impairment must be overcome by clear and convincing evidence, no statutory or presumptive weight is given to a DIME physician's opinion on a scheduled impairment rating. *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000). A party disputing the impairment rating of a scheduled injury bears the burden of proof by a preponderance of the evidence. *Maestas v. American Furniture Warehouse*, W.C. No. 4-662-369 (June 5, 2007); *Ortiz v. Ingersoll-Rand Co*., W.C. No. 4-981-218-04 (January 25, 2018). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001).

Dr. Gray initially opined Claimant sustained 13% left upper extremity impairment and 2% cervical whole person impairment. Upon being presented with evidence of Claimant's participation in rodeo activities in 2015 and 2016, Dr. Gray subsequently revised his opinion in post-hearing deposition testimony. Dr. Gray testified that, even if Claimant did not participate in rodeo activities in 2016 as claimed, the 2015 activities alone sufficed to "confound" the issues and serve as a basis for retraction of the 2% whole person impairment he initially assessed. Dr. Gray was unambiguous regarding his revised opinion on impairment. As found, Dr. Gray's true opinion is that Claimant is solely entitled to 13% upper extremity impairment with no whole person impairment.

Claimant argues that, despite Dr. Gray's revised opinion, a 2% whole person impairment for the cervical spine is appropriate. Claimant contends he was unduly prejudiced by Respondent's presentation of pictures and articles regarding Claimant's 2015 and 2016 rodeo activities to Dr. Gray during the post-hearing deposition. Claimant purports Dr. Gray had no context for Claimant's involvement in the rodeo and would have been in a better position to fairly assess the role calf-roping played in Claimant's injury had Dr. Gray read the hearing transcript. The ALJ disagrees Claimant was unduly prejudiced under the circumstances. Claimant identified himself in pictures showing Claimant during the actual competition. Respondent's counsel explained Claimant participated in team roping as a heeler, and what that entailed, based on Claimant's description at hearing. Claimant's counsel informed Dr. Gray of Claimant's extensive experience riding horses, and also apprised him of Claimant's contention that calf roping does not require much use of his right arm and that he did not participate in

rodeo activities in 2016. Dr. Gray specifically stated that, even if Claimant did not participate in rodeo activities in 2016 as alleged, Claimant's participation in 2015 confounded the issues enough to cause him to retract the 2% cervical impairment. Dr. Gray was provided sufficient context for Claimant's involvement in rodeo activities during the deposition.

The ALJ is most persuaded by Dr. Gray's opinion on impairment. The preponderant evidence establishes Claimant sustained 13% upper extremity impairment.

Conversion of Scheduled Impairment to Whole Person Impairment

Section 8-42-107(2)(a), C.R.S., provides for scheduled compensation based on "loss of an arm at the shoulder." The claimant bears the burden of proof by a preponderance of the evidence to establish functional impairment beyond the arm at the shoulder and the consequent right to PPD benefits awarded under § 8-42-107(8)(c), C.R.S. Whether the claimant met the burden of proof presents an issue of fact for determination by the ALJ. *Delaney v. Industrial Claim Appeals Office,* 30 P.3d 691 (Colo. App. 2001); *Johnson-Wood v. City of Colorado Springs,* W.C. No. 4-536-198 (ICAO June 20, 2005).

As used in these statutes the term "injury" refers to the part or parts of the body that sustained the ultimate loss, not necessarily the situs of the injury itself. Thus, the term "injury" refers to the part or parts of the body that have been functionally disabled or impaired. *Warthen v. Industrial Claim Appeals Office,* 100 P.3d 581 (Colo. App. 2004); *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366 (Colo. App. 1996). Under this test the ALJ is required to determine the situs of the functional impairment, not the situs of the initial harm, in deciding whether the loss is one listed on the schedule of disabilities. *Strauch v. PSL Swedish Healthcare System, supra.* Pain and discomfort that limit the claimant's use of a portion of the body may constitute functional impairment. *Johnson-Wood v. City of Colorado Springs, supra; Vargas v. Excel Corp.,* W.C. No. 4-551-161 (ICAO April 21, 2005). The ALJ may also consider whether the injury has affected physiological structures beyond the arm at the shoulder. *Brown v. City of Aurora,* W.C. No. 4-452-408 (ICAO October 9, 2002).

Claimant failed to prove by a preponderance of the evidence he is entitled to conversion of his scheduled upper extremity impairment to whole person impairment. Dr. Miller and Dr. Fall credibly opined Claimant's cervical complaints are unrelated to the work injury. Dr. Fall credibly explained Claimant's functional deficit is limited to the shoulder. While Dr. Gray initially opined Claimant's impairment should be considered on a whole person basis, he subsequently changed his opinion, concluding Claimant is solely entitled to a scheduled impairment. Despite Claimant's testimony as to his purported pain and functional limitations, based on the totality of the evidence, Claimant did not sustain any functional impairment not listed on the schedule of disabilities.

Medical Maintenance Benefits

Respondents are liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. Colorado courts have ruled that the need for medical treatment may extend beyond the point of MMI where the claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or prevent further deterioration of her condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995).

Dr. Miller opined maintenance treatment in the form of ongoing chiropractic sessions, a pool pass, trigger point injections, and a follow up with Dr. Schneider is appropriate. Although Dr. Gray changed his opinion regarding the reasonableness and necessity of trigger point injections, he continued to opine maintenance treatment in the form of follow-up with surgeons and medication is reasonable, necessary and related to Claimant's work injury. Based on the totality of the credible and persuasive evidence, future medical treatment is reasonably necessary to relieve Claimant of the effects of the work injury or prevent further deterioration of his condition. Respondent retains the right to challenge the compensability, reasonableness, and necessity of specific treatments requested by Claimant.

Overpayment

Section 8-40-201(15.5), C.R.S, defines "overpayment" as "money received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive, or which results in duplicate benefits because of offsets that reduce disability or death benefits payable under said articles." The Court in *Simpson* found Section 8-40-201(15.5) provides for three categories of possible overpayment: overpayments created when a claimant receives money that exceeds the amount that should have been paid, overpayments created when a claimant receives money claimant was not entitled to receive, and overpayments created when a claimant receives money that results in duplicate benefits because of offsets that reduce disability or death benefits. *Simpson v. ICAO,* 219 P.3d 354, 358 (Colo. App. 2009).

Section 8-42-105(3), C.R.S. provides that TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

As found, Respondent established by a preponderance of the evidence it is entitled to recover an overpayment in the amount of $13,126.45. The DIME physician, Dr. Gray, opined Claimant reached MMI as of July 31, 2017. Accordingly, Claimant was no longer entitled to receive TTD benefits as of that date. Between July 31, 2017 and when Respondent received Dr. Miller's impairment rating and filed a FAL, Claimant

received a total of $13,126.45 in TTD benefits to which he was not entitled. As such, Respondent are entitled to recover an overpayment from Claimant for that amount.

ORDER

It is therefore ordered that:

1. Claimant is entitled to a 13% upper extremity rating.

2. Claimant's request for conversion of the award of scheduled impairment benefits to whole person permanent physical impairment benefits is denied and dismissed.

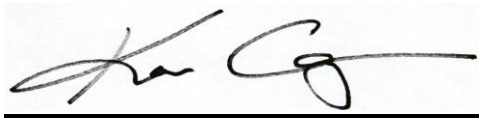
3. Respondent shall pay for reasonable, necessary and related medical maintenance care.

4. Respondent is entitled to recover an overpayment from Claimant in the amount of $13,126.45.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 1, 2019



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-993-326-04

PROCEDURAL STATUS

A Prehearing Conference Order was issued by PALJ Harr on January 12, 2017. PALJ Harr granted Respondents' Motion to Add the Issue of Overcoming/Striking the Determination of DIME physician, Dr. Lindenbaum, based upon the allegations that Claimant violated WCRP 11. Claimant's Objection to adding the issue of overcoming the DIME physician as unripe, as closed, and as it outside the jurisdiction of an Administrative Law Judge was also added as an issue for determination at hearing. Claimant's request that his objection be treated as an attempt to have the issue struck as unripe pursuant to 8-43-211(3) was granted and preserved for future adjudication.

On August 11, 2017, Respondents filed a Motion to Add the Issue of Reopening based upon mistake. Claimant objected to that issue being added for determination at hearing.

At the August 18, 2017 hearing, the ALJ determined, based upon the procedural posture of the case, as well as a need for testimony regarding the procedural and substantive issues, an Order bifurcating the issues set for determination was in the interests of justice. Accordingly, the Court issued an Order Bifurcating the issues set for determination. The following issues were heard initially: Respondents' Motion to Add Issues at hearing; whether Respondents' requested remedy of striking the Division of Worker's Compensation IME is an available remedy under the OACRP and WCRP; whether the issue of the DIME rating was closed; whether the foregoing issues were ripe for determination.

A full Order was issued by the undersigned on May 15, 2018. A transcript of the August 18, 2017 hearing was also lodged with the Court on or about October 11, 2018. Following two status conferences (on June 18, 2018 and October 9, 2018), which were conducted with counsel for the parties, that Order was vacated and the parties were asked to submit a new proposed Order. Claimant and Respondents stipulated to the issuance of the Amended Order and requested the opportunity to present evidence on the remaining issues outlined *infra*. The Court determined it was in the interests of justice to allow Claimant and Respondents to present additional evidence on those issues.

The undersigned issued a procedural Order on September 26, 2018 for the second part of the bifurcated hearing, which added the issue of sanctions/remedy for a Rule 11 violation, if one was found. Pursuant to a Status Conference Order issued on November 1, 2018 (served November 2, 2018), the remaining issues were reserved, to be determined after the second day of hearing.

PRELIMINARY FINDINGS OF FACT

1. Claimant worked as an Assistant Principal for Employer.

2. Claimant's medical history was significant in that he previously injured his low back in 2012 in a motor vehicle accident. An MRI done in May 2012 revealed Claimant had grade 1 spondylolisthesis at the L5-S1 level, with bilateral pars defect. Moderate foraminal stenosis was also noted at this level.

3. On August 14, 2012, Claimant underwent surgery for his low back, which was performed by Hooman Melamed, M.D. The procedure performed included: partial L5 and S1 semicorporectomy (anterior retroperitoneal approach); anterior lumbar interbody arthrodesis at the L5-S1 level; anterior lumbar segmental instrumentation and L5-S1, using RSB interbody plate; insertion of the biomechanical RSB cage with 12-decree lordosis; use of local harvested autograph and allograft bone; iliac crest bone grafting on the left side, separate procedure, separate incision and modifying up to 59; use of intraoperative fluoroscopy in multiplane; use of intraoperative somatosensory evoked potential and electromyographic monitoring. The pre-and post diagnoses were: grade 1 isthmic spondylolisthesis at L5-S1 level; bilateral L5-S1 pars defects; bilateral foraminal stenosis; left leg pain, radiculitis, and sciatica; significant left L5 radiculitis; neurologic deficits in the L5 distribution on the left side; failed conservative management; and progressive worsening of the patient's symptoms of low back pain.

4. Claimant was involved in an altercation in 2014 while working. He underwent an MRI on September 17, 2014, which was ordered because of trauma and weakness in the lumbar spine. The MRI, which was read by Jaime Contreras, M.D., showed no acute findings and the anterior fusion at L5-S1, with grade one anterolisthesis of L5 on S1. Bilateral foraminal stenosis was noted at this level. The other lumbar levels were unremarkable.

5. Claimant sustained an admitted industrial injury on August 20, 2015 while working for Employer. Claimant was injured after he was struck in the parking lot by a parent in a pick-up truck.[1]

6. Claimant received treatment for his injuries, including at the North Colorado Medical Center, where he was treated in the Emergency Department.

7. On August 24, 2015, Claimant was evaluated by Jason Haas, D.C.[2] X-rays were taken and Claimant's posture and body composition was analyzed. Claimant returned to Dr. Haas' office on August 31, 2015 and received chiropractic treatments from Alisha Jacobs, D.C. Claimant's cervical, thoracic and lumbar spine were adjusted.

[1] Exhibit PP, page 477.

[2] Records of treatment with Dr. Haas before Claimant's work injury were admitted at hearing. These records included treatments on March 19, 26, May 26, August 3, 6, 13, 2015; all of which occurred before the subject injury. Claimant treated for lumbar, cervical and right foot pain, receiving chiropractic adjustments.

Claimant also received chiropractic adjustments and a physical therapy evaluation on September 2, 2015.

8. A General Admission of Liability ("GAL") was filed on September 16, 2015 Respondents admitted for medical and temporary total disability ("TTD") benefits.

9. On September 10, 2015, Dr. Melamed issued a report following a telephone conference with Claimant. The report noted Claimant was doing well until recently when he was involved in a car accident. Dr. Melamed had reviewed Claimant's MRI and the CT scan, which showed psuedoarthrosis at the L5-S1 level. The PEEK cage and plate had completely subsided into the S1 vertebral body, causing bilateral L5-S1 significant foraminal stenosis. Dr. Melamed concluded there was pseudoarthrosis and also a loss of lumbosacral lordosis. Dr. Melamed recommended a posterior pedicle screw fixation at the L5-S1, with bilateral L5-S1 foraminal decompression, requiring an osteotomy and removing the entire facet complex and the pars to open up room for the nerve. Claimant indicated he wanted to go forward with surgical intervention.

10. Claimant received treatment at the Workwell Occupational Health, the designated ATP for Employer, beginning on September 22, 2015. Claimant was evaluated by Kevin Keefe, D.O., who diagnosed sprain/strains-lumbosacral; disturbance of skin sensation. Dr. Keefe opined Claimant's problem was related to work activities and issued an M164, as well as placing Claimant on restricted duty.

11. On September 30, 2015, Claimant was evaluated by Gregory Reichhardt, M.D. On examination, Claimant demonstrated diffuse give-way weakness in the left lower extremity. His reflexes were 2/4 and symmetrical in the patellae and Achilles. Claimant had god cervical and thoracic range of motion ("ROM"). Marked limitations were found in his lumbar ROM. Dr. Reichhardt's impression was: low back pain and bilateral lower extremity pain-history of previous L5-S1 fusion for spondylytic spondylolisthesis; mechanism of injury/pedestrian-motor vehicle accident in which he was directing traffic and was hit intentionally by a truck on 8/20/15; lumbosacral spine x-rays- post-op findings at L5-S1, grade II anterolisthesis, which may be chronic; thoracic spine x-ray 8/20/15-no acute findings; pelvic x-ray 8/20/15-no acute findings; CT of the thoracic spine 9/4/15-negative for acute bony pathology; lumbar MRI 9/4/15-bilateral pars defect, L5, grade I anterolisthesis, previous interbody fusion, moderate bilateral neural foraminal narrowing, L5-S1-mild ligamentum flavum and facet overgrowth, other levels normal; CT of the lumbar spine 9/4/15: L5-S1, interior screw fixation device was well-positioned in the line, no loosening fractures, bilateral L5 spondylolisthesis, slight L5-S1 listhesis, no acute pathology; 9/29/15 thoracic MRI demonstrating a small disc extrusion T5 to T7; concern by patient's prior surgeon re: pseudoarthrosis, with osteolysis; bilateral upper extremity numbness: C-spine x-ray 8/20/15-no acute findings; C3-4 minimal disc bulge, mild bilateral foraminal narrowing, C5-6 mild disc bulge, mild left foraminal stenosis, etiology unclear; opioid use, ORT, high risk; history of Hodgkin's lymphoma; history of stomach ulcers, psoriasis of hypothyroidism; borderline renal insufficiency. Dr. Reichhardt recommended Claimant keep his evaluation by a spine surgeon and offered various referral options.

12. On December 4, 2015, Claimant was evaluated by Anant Kumar, M.D.[3] Dr. Kumar noted Claimant had an antalgic gait and used a cane. Claimant's lumbar spine had localized tenderness at L4-S1. There were no obvious motor deficits, but a subjective decrease in sensation was noted. Dr. Kumar stated Claimant had undergone and L5-S1 anterior lumbar fusion, with anterior fixation using a stand-alone plate/cage. It appeared there had been subsidence of the cage and sacrum, but Dr. Kumar did not have the immediate postoperative x-rays or imaging to compare. In 2014, an MRI showed Claimant had left-sided foraminal stenosis at the L5-S1 level and an in situ fusion at L5-S1, with associated cage subsidence. Dr. Kumar disagreed a posterior only fusion would be successful in a reduction of the spondylolisthesis. He opined a posterior decompression would not decompress Claimant's up-and-down stenosis. Dr. Kumar recommended a revision anterior followed by a posterior spinal fusion.

13. Dr. Kumar is an ATP.

14. Claimant was evaluated by Dr. Pouliot on December 21, 2015. Dr. Pouliot documented Claimant was referred by Dr. Keefe. Dr. Pouliot reviewed the MRI which showed a neural compression at L5. On examination, Claimant's sensation and proprioception were intact on the upper and lower limbs, other than slight decreased sensation on the left in the L5 distribution. Dr. Pouliot's assessment was: 44-year-old male with a work injury on August 20, 2015, reportedly struck by a vehicle speed-now with back and radicular pain bilaterally worse on left, neural compression seen at L5's MRI bilaterally. Claimant was noted to have a history of anterior lumbar interbody fusion at L4-5, with reported pseudoarthrosis and reported negative EMG. Dr. Pouliot offered bilateral L5 transforaminal injections, but felt he would need a spinal operation. Dr. Pouliot noted he would assist Claimant with medication management.

15. Claimant returned to Dr. Keefe on February 9, 2016. Dr. Keefe noted back surgery had been denied by Insurer and Claimant was deciding whether to proceed with procedure using private insurance. Dr. Keefe recommended Claimant see Dr. Mathwich regarding case closure and a potential impairment rating. Dr. Keefe opined the cause of Claimant's problem was related to work activities.

16. On February 24, 2016, Claimant underwent a posterior lumbar spine fusion at L5-S1, which was performed by Dr. Kumar. A posterior instrumented fusion using pedicle screws, local bone graft, a medium in use was performed. Dr. Kumar also did a bilateral decompression of the L5 and S1 nerve roots in the canal and sub-particular zone. Claimant's pre-and post-operative proceedings were the same and included: pseudoarthrosis at L5-S1, status post L5-S1 anterior lumbar fusion; grade 1 spondylolisthesis, with severe foraminal stenosis, bilateral lower limb radiculopathy, left worse than right; present in both upper limbs, left worse than right; inability to stand upright; severe back pain; and failure of conservative treatment.

[3] Dr. Kumar stated Claimant was referred by Insurer for an independent medical opinion. Claimant described Dr. Kumar as an ATP in his Position Statement and the referral from Dr. Pouliot was admitted as Exhibit J, p.177.

17. Dr. Kumar opined Claimant's prior L5-S1 anterior lumbar fusion had not healed appropriately and this was a revision surgery performed with no complications. Intraoperatively, Dr. Kumar found that the L5 nerve root was severely compromised and there was significant spinal stenosis in the canal, in the sub-pedicular and sub-articular zone.

18. On March 2, 2016, Claimant was evaluated by Brian Mathwich, M.D. Dr. Mathwich noted he was asked to evaluate Claimant regarding recent complications and the denial of surgery. He noted Insurer had not admitted liability for the lumbar spine and had denied the request for surgery. He spoke to Ms. Harrington, who confirmed the lumbar spine was not related. The lumbar CT and MRI showed significant issues in the lumbar spine, which was determined to be pre-existing and non-work-related. Dr. Mathwich stated Claimant underwent a conservative course of treatment.

19. At the time of Dr. Mathwich's evaluation, Claimant had complaints of bilateral arm numbness and tingling. Dr. Mathwich noted this was a difficult case due to significant pre-existing issues. Dr. Mathwich found a normal cervical spine, reviewed the neurologic and upper extremity exam from Dr. Kumar, with no further complaints from the patient regarding bilateral arm numbness. Dr. Mathwich's diagnosis was: sprain/strains-lumbosacral; disturbance of skin sensation. If there continued to be no significant issues, Dr. Mathwich would consider Claimant to be without impairment rating and would issue permanent restrictions.

20. Dr. Keefe confirmed Insurer had denied liability after speaking to Ms. Harrington and also spoke to Dr. Mathwich. Dr. Keefe determined Claimant was at MMI on March 17, 2016 and completed a M-164.

21. On April 15, 2016, an amended GAL was filed. TTD benefits were terminated based upon Claimant's return to full duty.

22. Claimant returned to Dr. Mathwich, M.D. on April 21, 2016. Dr. Mathwich said Claimant initially had discomfort in the upper extremities, with bilateral arm numbness and had a negative MRI, as well as bilateral negative EMGs. Claimant underwent surgery on February 24, 2016, which was covered by private insurance. At the time of evaluation, Dr. Mathwich found tightness in the paraspinal muscles bilaterally, with some point tenderness of the left L4-5 paraspinal muscles. Tenderness was noted, along with trigger points in the gluteus medius bilaterally, just over the iliac crest. Dr. Mathwich's diagnosis was the same as on March 2, 2016.

23. Dr. Mathwich stated the cause of this problem did not appear to be related to work activities and noted he received documentation from Insurer which said the back injury, surgery and all associated treatment were not compensable. Dr. Mathwich stated there was no choice but to keep Claimant at MMI as of March 17, 2016. He indicated he would agree to be Claimant's primary care provider, if Insurer accepted liability.

24. Respondents requested a DOWC IME and Stephen Lindenbaum, M.D. was selected as the examining physician.

25. Claimant was evaluated by Dr. Lindenbaum on July 23, 2016. At the time of the evaluation the, Claimant walked without an antalgic gait and was able to walk heel to toe without discomfort. Dr. Lindenbaum agreed with Dr. Mathwich that Claimant reached MMI on March 17, 2016. Dr. Lindenbaum noted he received records from Dr. Haas. More particularly, he stated:

> "Today, the patient brought in some records from Dr. Haas, who he had been followed prior to the injury for just basic medical and physiological well-being. The notes that were brought to me show that the patient on exams prior to the injury had range of motion of the lumbar spine of flexion over 50° and extension over 26°. The exam after the accident dating 12/28/15, which is roughly 5 months later, shows the patient only has 90° flexion and 12° of extension".

26. On examination, Claimant had no long tract signs, clonus, or atrophy in the lower extremities. He had a prior injury fusion by Dr. Melamed and advised Dr. Lindenbaum he had no problems with his back since that time, until some mild back pain related to an altercation in 2014.

27. Dr. Lindenbaum obtained valid ROM measurements during his examination. Based on the *AMA* Guides, Table 53, IIB, Claimant had a 10% impairment of the body for his specific spine disorder (lumbar spine) and a 9% range of motion deficit. Combining the range of motion deficit with the specific disorder, Dr. Lindenbaum determined Claimant sustained an 18% whole person impairment. Dr. Lindenbaum agreed with Dr. Kumar that this injury was not pre-existing and was a new injury, since he was previously asymptomatic. Dr. Lindenbaum opined that any postoperative care should have been covered under the compensation claim.

28. On August 4, 2016, the DOWC issued a Notice of Receipt of Division IME (DIME) Report DIME Process Concluded. Insurer received a copy of the Notice, as it was date stamped by its mail operations on August 5, 2016.

29. There was no evidence in the record that Respondents took any steps to procure the DIME report before August 16, 2016.

30. There was no dispute Respondents received a copy of the DIME report on August 17, 2016.

31. Pursuant to 8-42-107.2(4)(c), C.R.S., Respondents were required to either file an admission of liability or request a hearing on or before August 24, 2016.

32. On August 30, 2016, Respondents filed an Application for Hearing ("AFH"), seeking to overcome Dr. Lindenbaum's findings.[4] This was six days after the deadline for filing set by 8-42-107.2(4)(c), C.R.S. The AFH was withdrawn after Ms. Harrington discussed the case with Insurer's staff attorneys and Claimant's counsel. A Notice of Cancellation of hearing was filed, although the hearing had not been set.[5]

33. On September 12, 2016, a Final Admission of Liability ("FAL") was filed on behalf of Respondents. This was 18 days after the deadline set forth in § 8-42-107.2 (4)(c), C.R.S. Respondents admitted for PPD benefits based upon the medical impairment rating issued by Dr. Lindenbaum. Medical benefits after MMI were denied.

34. Claimant filed a timely objection to the FAL on September 15, 2016.

35. Claimant filed an AFH on October 3, 2016. The issues set for determination included medical benefits, disfigurement, *Grover* medical benefits, mileage and interest on PPD.

36. On November 16, 2016, Respondents filed a Response to the Application for Hearing ("RAH"). The issues listed included reasonableness, necessity and relatedness of any and all medical care sought and/received; authorization/authorized medical care; fee schedule; *Grover v. ICAO*. There was no reference to an alleged violation of WCRP 11 in the RAH.

37. On January 12, 2017, counsel for the parties participated in a Prehearing Conference before Prehearing Administrative Law Judge Michael Harr. PALJ Harr's Order is referenced, *supra*.

38. An AFH was filed on behalf of Claimant on February 28, 2017. The AFH listed the issues of medical benefits, disfigurement, as well as *Grover* medical benefits, mileage, and interest due on PPD.

39. A Response to the AFH was filed on behalf of Respondents on March 2, 2017. Respondents marked the following issues to be considered at hearing: medical benefits, disfigurement, permanent partial disability benefits. Other issues to be heard included reasonableness, necessity and relatedness of any and all medical care sought and/or received; authorization/authorized medical care; fee schedule; *Grover v. ICAO*; overcoming/striking the DIME; violation of Rule 11.

40. A Prehearing Conference was held on April 11, 2017 and an Order issued that same day. The Order vacated the hearing set for May 12, 2017. In addition, the Order allowed Respondents, at their discretion, to suspend payment of PPD benefits, pending a hearing. The Order also provided that if benefits remained owing after the

[4] Exhibit KK, pp. 463-465.

[5] Exhibit JJ.

hearing, Respondents were required to pay statutory interest on any amounts not paid during the duration of the suspension.

41. On April 14, 2017, Respondents filed a FAL. Respondents suspended payment of PPD benefits pending the resolution of issues at hearing.

42. On April 18, 2017, Claimant filed an Objection to the FAL.

43. On May 10, 2017, Claimant filed an AFH. He requested a hearing on the following issues medical benefits, disfigurement, along with *Grover* medicals, mileage, interest due on PPD, waiver, ripeness and closure.

44. On June 1, 2017, an RAH was filed on behalf of Respondents. The issues set for determination included medical benefits, disfigurement, and PPD benefits. Other issues include those referenced on Claimant's AFH. Respondents also sought an adjudication on reasonableness, necessity and relatedness of any and all medical care sought and/or received; authorization/authorized medical care; fee schedule; *Grover v. ICAO*; overcoming/striking the DIME; Claimant's violation of Rule 11.

FURTHER FINDINGS OF FACT

45. Dr. Haas testified JTECH is company that prepares a digital ROM assessment. The system on which this is prepared was separate from the medical record system which housed the records related to evaluations of patients.[6] The individual in his office who gathered the information for the report was Dr. Allison, the physical therapist or the PTA (Justin). Dr. Haas testified he had not reviewed Dr. Lindenbaum's report prior to the deposition. He did not have information as to what records Claimant took to the DIME.

46. Claimant brought notes documenting his ROM findings by Dr. Haas' office to the DIME, which was performed by Dr. Lindenbaum.

47. Respondents were not aware Claimant brought the ROM findings from Dr. Haas' office to the DIME.

48. Dr. Lindenbaum testified he received notes from Dr. Haas at the time of his evaluation of Claimant.[7] Dr. Lindenbaum confirmed Claimant brought these records to the evaluation.[8]

[6] Haas deposition page 16:18-25.

[7] Lindenbaum deposition page 8:14-21.

[8] Lindenbaum deposition page 8:25-9-10.

49. Dr. Lindenbaum testified in his evidentiary deposition that he did not put much weight in the documents from Dr. Haas, stating at page 9:17-10:3:

> "Well, let me preface it by saying, I didn't put very much credence in it, but I thought it was something that should be placed in my report. It just basically says--Dr. Haas is commenting that he had seen the patient before this injury, [Claimant], and his range of motion was one level. And that several months after the injury, he saw him again, and his range of motion dropped significantly.
>
> Now, let me--let me state here that this is a very-this does not mean a lot to me. Only that I think it is important to put that in here because it is a document that suggests there had been a change".

50. Dr. Lindenbaum also stated his major concerns were the findings made by orthopedic surgeons. The ALJ noted Dr. Lindenbaum concluded Claimant's medical impairment was caused by his industrial injury.

51. Dr. Lindenbaum's testimony that his opinions were not affected by review of Dr. Haas' records was persuasive to the ALJ.

52. Laura Harrington testified as a representative for Respondent-Insurer. She has been employed by Insurer as a claims adjuster for 18 years and received notice of the claim on August 25, 2015. She has been responsible for adjusting the instant claim since that time. Ms. Harrington testified she became aware of Claimant's low back condition, which required surgery in 2012, in one of her first conversations with him.

53. Ms. Harrington testified that she and Claimant exchanged the e-mails in which Claimant advised her that Benchmark would get her records. Ms. Harrington testified she sent a release for medical records to Benchmark and did not receive records. Ms. Harrington testified she did not prepare the DIME packet which was submitted to Dr. Lindenbaum. Insurer did not have a copy of Dr. Haas' JTECH records prior to the DIME. Ms. Harrington was a credible witness.

54. Ms. Harrington testified she telephoned Dr. Lindenbaum's office on August 16, 2016 and received Dr. Lindenbaum's DIME report on August 17, 2016, which was faxed to her at 3:56 p.m.[9] Insurer did not have a copy of this report prior to this time. Ms. Harrington testified she skimmed the report and believed she had 20 days from receipt of the DIME report to take a position. Ms. Harrington testified Respondents disagreed with the DIME and wished to challenge the DIME opinion.

55. The ALJ found Ms. Harrington could have determined there was a reference to Dr. Haas' ROM records in Dr. Lindenbaum's report within the time frame to take a position on the DIME. Ms. Harrington incorrectly thought the 20-day time ran

[9] Exhibit A, p.1.

upon receipt of the DIME report. An AFH could have been filed on behalf of Respondents within the 20-day period to dispute the conclusions made by the DIME physician.

56. The issues concerning the DIME were ripe for determination.

57. The Court does not have jurisdiction to adjudicate Respondents' Objection to the DIME, as the AFH was filed beyond the 20-day time limit provided by statute.

58. It is in the interests of justice to vacate the May 15, 2018 Order.

59. Testimony and evidence inconsistent with the above findings is either not credible and/or not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S. (2016), is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. (2016). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S. (2016).

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. (2016). The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

RIPENESS

In the case at bench, Claimant disputed whether the issue of striking the determination of a DIME physician was ripe. The term "ripeness" refers to whether an issue is "real, immediate, and fit for adjudication". Colorado courts have held that under this doctrine "adjudication should be withheld for uncertain or contingent future matters that suppose a speculative injury which may never occur". *Olivas-Soto v. Industrial Claim Appeals Office,* 143 P.3d 1178 (Colo. App. 2006).

That is not present in the instant case. The ALJ determined that the issues related to the DIME, including Respondents' response to the Notice of Receipt of Division IME (DIME) Report DIME Process Concluded and receipt of the report of Dr. Lindenbaum were ripe for determination. (Finding of Fact 56). In addition, Respondents Motion to Strike the DIME report, as well as Claimant's assertion that § 8-42-107.2 (4) (c), C.R.S. barred any attempt to overcome the DIME physician opinions were also ripe for determination.

MOTION TO STRIKE DIME

Claimant contended Respondents' failure to request a hearing within 20 days barred Respondents' attempt to contest the DIME opinion and this Court had no jurisdiction to decide the issue. Respondents asserted that the issues admitted to in a filed FAL are closed, unless Claimant filed a timely objection, pursuant to § 8-43-203(2)(b)(II)(A). Respondents cited *Balfour v Boulder County*, W.C. No 4-020-145 (ICAO March 22, 1993) for the proposition that Respondents could then controvert their own admission of liability once the Claimant objected. Respondent further argued that it did not waive its right to contest the DIME opinion since it was not aware Claimant had provided the Dr. Haas' records to Dr. Lindenbaum.

As determined in Findings of Fact 28-30, no contrary evidence was introduced to refute the fact that Respondents received the Notice of Receipt of Division IME (DIME) Report DIME Process Concluded on August 4, 2017. Respondents were required to take a position on or before August 24, 2016 upon issuance of the Notice of Receipt of Dr. Lindenbaum's report. There was evidence in the record, specifically Ms. Harrington's testimony, that Respondent-Insurer did not have a copy of Dr. Lindenbaum's DIME report. (Finding of Fact 54). As found, Respondents took no steps to procure this report until August 17, 2016. (Finding of Fact 29). The evidence also revealed that the DIME report was not received by Respondents until August 17, 2016. (Finding of Fact 53). It was undisputed that Respondents did not have a copy of Dr. Haas' medical records (including the range of motion studies from JTECH) prior to the DIME. (Finding of Fact 30). Even though the adjuster for Insurer (Ms. Harrington) did not have JTECH report which contained the ROM readings before the evaluation, the ALJ determined she could have found the reference to those records in Dr. Lindenbaum's DIME report. (Finding of Fact 54).

The deadline set forth in § 8-42-107.2 (4) (c), C.R.S. has been held to be jurisdictional. *Leprino v. Industrial Claim Appeals Office,* 134 P.3d 475, 482 (Colo. App. 2005). In *Leprino*, Claimant suffered an admitted industrial injury and reached MMI. Claimant requested a lump sum after an FAL was filed and then requested a DIME. The DIME physician concluded Claimant was not at MMI, but Respondents took no position with regard to that opinion. The case went to hearing, the ALJ found Claimant had not reached MMI and was entitled to PPD benefits. The ALJ also determined that Respondents failed to either admit or contest liability within 30 days [the 2005 version of § 8-42-107.2 (4)] and therefore Respondents were precluded from challenging the DIME physicians' opinion.

The Colorado Court of Appeals found Respondents were bound by the DIME physician's report because they failed to contest the findings. Justice Casebolt observed:

"Both sections [§ 8-42-107.2 (4) and § 8-43-203(2)(b)(II)] are part of an overall statutory scheme designed to ensure the prompt payment of benefits without the necessity of litigation in cases that do not present a legitimate controversy. [citation omitted]. The provisions of this statute are clear and require the insurer either to contest the DIME report within thirty days or to admit in accordance with the report. *City Mkt., Inc. v. Indus. Claim Appeals Office,* 68 P.3d 601 (Colo.App.2003) [upholding the imposition of penalties for employer's failure to either contest or admit to the DIME report]. Just as an ALJ lacks jurisdiction, without a DIME, to resolve a dispute concerning an ATP's finding of MMI, *Town of Ignacio v. Indus. Claim Appeals Office,* 70 P.3d 513 (Colo. App. 2002), the ALJ also lacks jurisdiction, absent an objection to the DIME physician's findings, to resolve a dispute as to those findings". *Id* at 482.

Leprino has not been overruled and remains good law, which governs the case at bench. No contrary authority was provided to the Court. The time limit prescribed by § 8-42-107.2(4) is jurisdictional. Accordingly, Respondents' August 30, 2016 Application for Hearing was outside the jurisdictional time limit for responding to the DIME report. The ALJ determined there was no jurisdiction once the time provided for in § 8-42-107.2(4) had elapsed. In particular, the issue of whether Respondents may attempt to overcome the DIME physician's opinions by clear and convincing evidence is time-barred.

In coming to this decision, the ALJ considered the application of *Rigoberto Almanza v. Terry Johnson and R. Edeltraud Johnson*, W.C. 4-713-132-02 (ICAO December 7, 2012) to the case at bar. Citing *Leprino v. Industrial Claim Appeals Office,* 134 P.3d 475, *supra*, the Industrial Claim Appeals Panel concluded the provisions of § 8-42-107.2 (4) were jurisdictional. The Panel reversed the ALJ Order which determined Respondents had not waived their right to respond to the DIME report based on a PALJ Order which extended the time to respond. (The basis for challenging the original DIME was because there was an improper communication with the examining physician.) The Order awarding PPD benefits based upon a subsequent DIME was also set aside. The ALJ determined this case does not provide the authority to strike the DIME in its entirety, as suggested by Respondents.

Respondents also averred they did not waive the right to contest the findings of the DIME physician. Respondents correctly pointed out the requirements for waiver were not met here, as there was not a knowing, intentional and voluntary relinquishment of a known right since they were not aware Claimant brought the JTECH report to the DIME. Respondents argued they could not have waived the right to raise the issue of a Rule 11 violation because they were not aware it had occurred. The ALJ found Respondents did not have a copy of Dr. Haas' records prior to Dr. Lindembaum's DIME, which was confirmed by the testimony of Ms. Harrington. (Finding of Fact 51).

The ALJ has determined that Respondents are entitled to present evidence in support of their Petition to Reopen and/or withdrawal of the FAL. Under the particular factual circumstances of this case, the ALJ finds Respondents should be given the opportunity to present evidence on these issues at the subsequent hearing. Likewise, Claimant is entitled to present evidence on this issue.

Finally, the ALJ has determined that the question of whether Claimant violated WCRP 11 and whether sanctions should be imposed is a matter on which Claimant and Respondents may submit additional evidence at the second part of the hearing.

ORDER

It is therefore ordered:

1. The May 15, 2018 Findings of Fact, Conclusions of Law and Order is vacated.

2. The issue of Respondents' Motion to Strike the DIME is closed by virtue of § 8-42-107.2(4).

3. Claimant's Objection to Respondents adding the issue of Petition to Reopen is overruled. This issue is deemed ripe and is set for determination at the hearing following this Order.

5. All matters not determined herein are reserved for future determination.

6. The following issues are ripe for determination at the upcoming hearing:

(a) Medical benefits (pre-MMI and *Grover*) and Respondents' defenses thereto;
(b) Disfigurement;
(c) Respondents' Petition to Reopen (mistake);
(d) Whether Claimant violated WCRP Rule 11;
(e) Sanctions/remedy for Rule 11 violation, if a violation is found;
(f) Interest on PPD benefits from March 27, 2016 to September 12, 2016;
(g) Resumption of permanent partial disability ("PPD") benefit payments, which were suspended pursuant to the April 11, 2017 Order.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to

follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether Claimant established by a preponderance of the evidence that he is entitled to a change of physician from Dr. Michael Volz to DaVita Medical Group due to Respondents' failure to authorize medical treatment for non-medical reasons.

II. Whether Claimant has established that Respondents are subject to penalties pursuant to § 8-43-304(1) C.R.S. for failure to comply with ALJ Spencer's March 9, 2017 Order, specifically for failing to provide all reasonable, necessary, and related care with Dr. Volz, including diagnostic testing and for failing to pay previously submitted medical billing on a "forthwith" basis to mitigate damage to Claimant's credit.

III. Whether Claimant has established by a preponderance of the evidence that Respondents are subject to penalties pursuant to § 8-43-304(1) for dictating medical care in violation of § 8-43-503(3).

IV. Whether Respondents "cured" Claimant's penalty allegations.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. The claim has been the subject of a prior hearing held before ALJ Patrick Spencer on February 1, 2017. The issues presented at that hearing included Claimant's request for additional medical treatment and whether Respondents were liable for an April 19, 2016 bill from Quest Diagnostics for lab work on the grounds that the aforementioned lab work was reasonable, necessary, and causally related to Claimant's October 25, 2014 industrial injury.

2. Following the February 1, 2017 hearing, ALJ Spencer ordered Respondents to authorize and pay for omalizumab (Xolair) therapy to treat Claimant's ongoing urticarial and immunological symptoms caused by his October 25, 2014 work-related injury. ALJ Spencer also ordered Respondents to pay for additional diagnostic testing as suggested by Dr. Volz, if Claimant wanted to such testing. Finally, ALJ Spencer ordered Respondents to pay an outstanding $539.73 bill from Quest Diagnostics for lab work performed April 19, 2016. Regarding this bill, ALJ Spencer "encouraged" Respondents to pay the bill "forthwith to mitigate any further damage to Claimant's credit". The above referenced order was issued March 9, 2017.

3. The ALJ adopts, as articulated in the March 9, 2017 Order, ALJ Spencer's Findings of Fact.

4. After the hearing held before ALJ Spencer, the parties agreed to designate Dr. Volz as Claimant's authorized treating provider (ATP).[1] The change to Dr. Volz as Claimant's ATP was necessitated by the prior ATP assigned to the case leaving his medical practice.[2]

5. Based upon the evidence presented, it is unclear to the ALJ when the change of physician to Dr. Volz took place. The record evidence supports that Leigha N_____, paralegal to Respondents' counsel, responded to a request from "Sar" (Sareang S_____) of Dr. Volz' office on December 18, 2017 indicating that she (Ms. N_____) would gather the medical records and send them to Dr. Volz' office.

6. Claimant was evaluated in Dr. Volz' office on January 4, 2018. At 1:54 p.m. "Sar" emailed Ms. N_____ indicating a PFT test needed to be done and she asked how she was to get approval for said testing. Ms. N_____ responded, stating, "Everything will go through the adjuster, contact info below" and the contact information for Susan B_____ with Sedgwick CMS was provided.

7. Ms. S_____ emailed Ms. N_____ again on January 8, 2018. Ms. S_____ stated that she had attempted to contact Ms. B_____ twice already with no response. The email message states:

> **Everything is on hold as for right now until we get approval for testing**. She were (sic) suppose (sic) to send me approval for the PFT that was done on the same day, still nothing. And Dr. Volz order (sic) blood work so we are not moving forward until approval [is] received. Just an FYI since the appointment was scheduled by you. Please let me know if you hear anything from Susan. Thanks.

Ms. N_____ responded indicating she would pass the information along to Respondents' counsel.

8. The ALJ finds from the above email message and the medical records submitted into evidence that pulmonary function testing was completed during Claimant's January 4, 2018 appointment with Dr. Volz. The ALJ finds further that Dr. Volz' office was to receive approval for this testing the same day it was completed but the approval was not forthcoming. Moreover, the ALJ finds that after two additional failed attempts to obtain approval to "move forward" with additional diagnostic testing, Dr. Volz' office elected to put "everything on hold" until approval was secured. Ms. N_____ responded by noting as follows: "I will pass along to the attorney as well and see if we can help get this moving forward".

---

[1] Dr. Volz had previously performed an Independent Medical Examination (IME) of Claimant on November 17, 2016.

[2] Dr. Matthew Bowdish was acting ATP until he left his medical practice at which time the parties agreed that since Dr. Volz was familiar with Claimant's medical situation and Dr. Bowdish had left his practice, it was appropriate to allow Dr. Volz to assume Claimant's care.

9. On April 10, 2018, Claimant filed an Application for Hearing endorsing "[p]enalties from March 29, 2017 through the present and ongoing pursuant to §8-43-304(1) for failure to comply with ALJ Spencer's March 9, 2017 Order that Respondents shall pay for all reasonable and necessary medical treatment to cure and relieve the effects of Claimant's injury, specifically the additional diagnostic testing suggested by Dr. Volz". Claimant sought a $1000.00/day penalty for each day that Respondents unreasonably delayed Claimant's treatment. Claimant also sought a $1000.00/day penalty pursuant to §8-43-304(1) for "dictating medical care in violation of §8-43-503(3) by repeatedly failing to respond to an authorized provider's requests for treatment. Finally, Claimant sought penalties in the amount of $1000.00/day for Respondent's failure to pay for treatment already performed. Claimant requested the imposition of penalties at $1000.00/day pursuant to §8-43-304(1) beginning January 5, 2018 and ongoing for this violation. Claimant did not include any claim for a penalty for failing to pay the Quest Diagnostic bill "forthwith" as ordered by ALJ Spencer in the April 10, 2018 Application for Hearing. Claimant also failed to endorse "Change of Physician" or "Right of Selection" as an issue for hearing in the April 10, 2018 Application for Hearing.

10. Claimant notified Respondents' counsel of his decision to file an Application for Hearing endorsing penalties. Notice was provided via email dated April 10, 2018 at 11:44 a.m. At 11:53 a.m. on April 10, 2018, Respondents counsel notified Claimant's counsel via email response that a new adjuster had been assigned to the claim as of the previous Friday. The ALJ takes judicial notice that the Friday before Tuesday, April 10, 2018 was April 6, 2018. In his responsive email Respondents' counsel identified the new adjuster as Christina Smith with Sedgwick CMS, noting further that Ms. Smith and her supervisor had authorized treatment but not the lab requests of Dr. Volz. He also advised Claimant's counsel that he spoke with Sar in Dr. Volz' office to provide her Ms. Smith's authorization for treatment and telephone number to "confirm anything necessary".

11. The evidentiary record contains a note from Ms. S_____, dated April 10, 2018 reflecting that a new adjuster had been assigned to the claim. According to this note, the claim was assigned to "Christina Smith" who could be reached at 214-922-0664. The ALJ finds this information was provided by Respondents' counsel to Dr. Volz' office per the April 10, 2018, email referenced above.

12. On April 12, 2018, Respondent's counsel sent an email to Claimant's counsel asking if he was "still having lab scheduling issues".

13. On May 1, 2018, Ms. Smith verbally authorized the use of Xolair to "rule out causation issues" as evidenced by an email message generated by Dr. Volz' office. On May 3, 2018, Ms. Smith, via email, authorized the following treatment: OV (office visit), Allergy skin testing, spirometry, and "any labs that needs (sic) to be ordered". The approval to proceed with the above was forwarded to Ms. S_____. The ALJ finds that this email effectively transmitted Insurer's authorization for the additional testing requested by Dr. Volz on January 4, 2018.

14. It was not documented that Dr. Volz's office attempted to contact Claimant for a follow-up until Ms. S_____'s note dated May 21, 2018.

15. Claimant testified that he called Dr. Volz's office multiple times after January 4, 2018 about a follow-up appointment. Claimant never returned to Dr. Volz for additional testing/treatment, as it was his understanding that the testing/treatment recommended by Dr. Volz had not been approved by Respondents. The ALJ finds this consistent with the January 8, 2018 email message to Ms. N_____ from Sar at Dr. Volz' office notifying her that everything had been placed on hold pending authorization.

16. Lacking authorization to continue to treat with Dr. Volz, Claimant presented to DaVita Medical Group (DaVita), specifically Dr. Christopher Webber on April 16, 2018 for "chronic idiopathic uticaria and exertional shortness of breath". Claimant testified that he sought treatment from Dr. Webber because Dr. Volz would not see him and he needed to see a doctor because he had been breaking out in hives nearly every day for the past year and was having a lot of difficulty breathing. Claimant specifically testified that he felt he was in "dire straits" and needed treatment for his condition despite Respondents' lack of attention to this claim. Claimant testified that he began receiving the Xolair treatment with Dr. Webber and that by his second round of treatment, he was no longer breaking out in hives and his breathing issues had subsided slightly. It was Claimant's understanding that he was supposed to have up to six Xolair shots to continue treatment for his condition.

17. The deposition of the new adjuster, Ms. Christina Smith, was taken on October 31, 2018, forty-three days after the hearing. Ms. Smith testified that she took over Claimant's claim from Susan B_____ around the end of March, beginning of April, 2018. This was due to Ms. B_____ taking medical leave. (Depo. p. 5:2-17). On cross-examination, Ms. Smith testified that she had absolutely no knowledge of whether anybody with the Insurer was covering for Ms. B_____'s claims while she was out on medical leave, but the last notes in the file were from Ms. B_____. (Depo. pp. 6:22 – 7:9).

18. Ms. Smith testified that Respondents' counsel alerted her in April of 2018 regarding the testing requests from Dr. Volz's office. She was then asked if she authorized the treatment, and if so, when. Ms. Smith testified, "Yes, I did. I did it verbally on May 1st, and then I putting [sic] it in writing on – on May the 5th, 2018. (Depo. pp. 5:18 – 6:5). On re-direct, Respondent's counsel asked, "And just to be clear, you had advised them prior to May 1st that the treatment was authorized; is that correct?" To which Ms. Smith stated, "That's correct." (Depo. pp. 7:25 – 8-3). Ms. Smith's testimony suggesting that she advised Dr. Volz' office that treatment was authorized before May 1, 2018 is inconsistent with the more persuasive evidence that she authorized Xolair treatment on May 1, 2018 and additional treatment, including testing on May 3, 2018. The ALJ finds Ms. Smith's testimony that she authorized treatment prior to May 1, 2018 unsupported by the record. The ALJ finds this testimony unreliable and unpersuasive.

19. Claimant's Exhibit 7 reveals that Respondents did not pay the Quest Diagnostics bill until August 30, 2017.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

I. Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

II. Claimant's Right to Select a Physician to Attend to his Ongoing Medical Symptoms

C. Authorization refers to a physician's legal status to treat an injured worker's industrially related injury(ies) at the respondents' expense. *Bunch v. Industrial Claim Appeals Office*, 148 P.3d 381 (Colo.App. 2006); *Popke v. Industrial Claim Appeals Office*, 944 p.2d 677 (Colo.App. 1997). Under §8-43-404(5)(a)(I)(A), C.R.S., the employer has the right in the first instance to designate the authorized provider to treat the claimant's compensable condition(s). The rationale for this principle is that the respondents may ultimately be liable for the claimant's medical bills and, therefore, have an interest in knowing what treatment is being provided. *Andrade v. Industrial Claim Appeals Office*, 121 P.3d 328 (Colo.App. 2005). Consequently, if the claimant obtains unauthorized medical treatment, the respondents are not required to pay for it. *Yeck v. Industrial Claim Appeals Office*, 996 P.2d 228 (Colo.App. 1999); Pickett v. Colorado State Hospital, 32 Colo. App. 282, 513 P.2d 228 (1973).

D. Section 8-43-404(10)(a) and (b) provides the mechanism by which a

claimant may secure a change of physician in the event that an authorized physician refuses to treat an injured worker or discharges said injured employee for non-medical reasons. In determining whether an injured employee is entitled to select his/her treating physician under the circumstances presented, § 8-43-404(10)(a) provides that "[t]he director or any administrative law judge of the office of administrative courts has jurisdiction to resolve disputes regarding whether a refusal to provide medical treatment . . . was for medical or nonmedical reasons". Although the "change of physician/right of selection" issue presented at hearing was not specifically endorsed in this case, the ALJ concludes that the issue was tried by consent as Respondents voiced no objection to hearing the same at the outset of the hearing, elicited testimony from Claimant regarding his treatment with DaVita and addressed the issue directly in his post hearing position statement. Accordingly, the ALJ concludes that he has jurisdiction to determine whether Dr. Volz' decision to not schedule Claimant for a follow-up medical appointment was secondary to non-medical reasons. Here, the evidence presented supports a conclusion that Dr. Volz' office placed "everything", i.e. treatment/testing on hold due until "approval" was received from the adjuster. The approval was not forthcoming until May 3, 2018 when Ms. Smith emailed Dr. Volz' the requested authorization for additional treatment and testing. Based upon the evidence presented, the ALJ is convinced that Dr. Volz' elected not to treat Claimant because he was not given authority to do so. The ALJ concludes that this is a nonmedical reason.

E. Because he was denied treatment/testing for nonmedical reasons and Respondents did not designate a new doctor to attend to his condition after Dr. Volz put treatment on hold, Claimant asserts that he is entitled to select a new provider to attend to his medical condition. Based upon the evidence presented, the ALJ is not convinced. In this case, the evidence fails to establish compliance with § 8-43-404(10)(b), C.R.S. which provides in relevant part:

> If the insurer or self-insured employer receives written notice pursuant to paragraph (a) of this subsection (10)[3], or if the insurer or self-insured employer and the authorized treating physician receive written notice by certified mail, return receipt requested, from the injured employee or the injured employee's legal representative that an authorized physician refused to provide medical treatment to the injured employee or discharged the injured employee from medical care for nonmedical reasons when such injured employee requires medical treatment to cure or relieve the effects of the work injury, and there is no authorized physician willing to provide medical treatment, then the insurer or self-insured employer shall, within fifteen calendar days from receiving the written notice, designate a new authorized physician willing to provide medical treatment. If the insurer of self-insured employer fails to

[3] Paragraph (a) provides an authorized physician refusing to treat for nonmedical reason to, within three business days from the refusal, to provide written notice of the refusal by certified mail, return receipt requested, to the injured employee explaining the reasons for the refusal to treat. Based upon the evidence presented, the ALJ finds that Dr. Volz failed to provide such notice.

designate a new physician pursuant to this paragraph (b), then the injured employee may select the physician who attends to the injured employee.

F. Because Dr. Volz' office and Claimant or his legal representative failed to comply with the notice requirements of § 8-43-404(10)(a) and (b) prior to presenting to DaVita, Respondents were never afforded the opportunity to designate a new physician willing to provide medical treatment designed to cure and relief Claimant of the ongoing effects of his industrial injury. The ALJ concludes, from the evidence presented, that Claimant's decision to present to DaVita without first affording Respondents the opportunity to designate a new provider by providing notice as set forth in § 8-43-404(10)(a) and (b) is fatal to his claim that he was entitled to select DaVita as his authorized provider in this case. Consequently, the ALJ finds the services rendered there unauthorized relieving Respondents of the obligation to pay for this care. *Yeck v. Industrial Claim Appeals Office, supra.*

III. Penalties

G. Section 8-43-304(1) authorizes the imposition of penalties when an employer or insurer: (1) Violates any provision of the Act; (2) does any act prohibited by the Act; (3) fails or refuses to perform any duty lawfully mandated within the time prescribed by the director or Panel; or (4) fails, neglects, or refuses to obey any lawful order of the director or Panel. *Pena v. Industrial Claim Appeals Office*, 117 P.3d 84 (Colo. App. 2005). The imposition of penalties under §8-43-304(1), supra, requires a two-step analysis. First, the ALJ must determine whether the disputed conduct constituted a violation of a rule or order. *Allison v. Industrial Claim Appeals Office,* 916 P.2d 623 (Colo.App. 1995). If the ALJ finds a violation, the ALJ must then determine whether the insurer or employer's actions which resulted in the violation were objectively reasonable. *See City Market, Inc. v. Industrial Claim Appeals Office*, 68 P.3d 601 (Colo.App. 2003). Objectively unreasonable conduct will result in the imposition of penalties. *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office*, 907 P.2d 676 (Colo.App. 1995). The reasonableness of the employer's action depends on whether it is predicated in a rational argument based in law or fact. *Jiminez v. Industrial Claim Appeals Office*, 107 P.3d 965 (Colo.App. 2003). Section 8-43-304(4) also provides that an application for penalties "shall state with specificity the grounds on which the penalty is being asserted."

H. A purported violator can "cure" a penalty by paying the benefits or complying with the statute or order which was allegedly violated. Section 8-43-304(4) provides that any party alleged to have committed any violation categorized above shall have twenty days to cure the violation from the date of mailing of an application for hearing in which penalties are alleged. Section 8-43-304(4) also provides that if the alleged violator cures the violation within the twenty-day period, and the party seeking a penalty fails to prove by clear and convincing evidence that the alleged violator knew or reasonably should have known such person was in violation, no penalty shall be assessed. The cure statute effectively adds an element of proof to a claim for penalties in cases where a cure is proven. In the ordinary case, it is not necessary for the party

seeking penalties to prove that the violator knew or reasonably should have known they were in violation. All that is necessary is that the party seeking penalties prove the putative violator acted unreasonably under an objective standard. *See Jiminez v. Indus. Claim Appeals Office,* 107 P.3d 965 (Colo.App.2003); *Pueblo School District No. 70 v. Toth,* 924 P.2d 1094 (Colo.App. 1996). Section 8-43-304(4) modifies this rule and adds an extra element of proof when a cure has been effected. Accordingly, when a penalty allegation has been cured the party seeking penalties must prove the violator had actual or constructive knowledge that its conduct was unreasonable. *Diversified Veterans Corporate Center v. Hewuse,* 942 P.2d 1312 (Colo.App. 1997); *Ray v. New World Van Lines of Colorado* W. C. No. 4-520-251 (October 12, 2004).

I. In this case, Claimant has asserted two separate penalties for a violation of ALJ Spencer's March 9, 2017 Order in addition to a penalty for Respondents asserted dictation of medical care in violation of § 8-43-503(3) C.R.S. As noted, a violation of an order occurs when a party authorized or obligated to perform does an action prohibited by the order, or fails to take an action required by the order. *See Dworkin, Chambers and Williams, P.C. v. Provo,* 81 P.3d 1053, 1058 (Colo. 2003). Respondents contend that they have cured any violations and that Claimant's penalties claims have not been pled or are vague and lack specificity as required by § 8-43-304(4). Accordingly, Respondents request dismissal of the penalty claims. As the claims for penalties are separate and based on specific conduct, they are discussed independently below.

J. First is the issue of whether Respondents are subject to penalties for failing to pay for all reasonable and necessary medical treatment to cure and relieve the effects of Claimant's injury, including additional diagnostic testing suggested by Dr. Volz in keeping with ALJ Spencer's March 9, 2017 order. Respondents' assert that this penalty is not pled with specificity and even if it was, the penalty was cured requiring Claimant to prove the penalty by clear and convincing evidence which he failed to do. Before analyzing this penalty claim, the ALJ notes that ALJ Spencer's March 9, 2017 order became final on March 29, 2017 as Respondents did not appeal it.

K. Concerning Respondents' claim that the penalty claim was not plead with specificity, the ALJ disagrees. In the Application for Hearing filed April 10, 2018, Claimant specifically noted that he was seeking penalties beginning "March 29, 2017 through the present and ongoing pursuant to § 8-43-304(1) for failure to comply with ALJ Spencer's Order that Respondents shall pay for all reasonable and necessary treatment to cure and relieve the effects of Claimant's injuries, specifically the additional diagnostic testing suggested by Dr. Volz". Claimant requested penalties at a rate of $1000.00/day for this alleged violation. The ALJ concludes that Claimant's penalty statement is sufficient, pursuant to § 8-43-304(4), to place Respondents on notice of the basis for the penalty by noting that the alleged conduct resulting in the penalty allegation was the purported violation of ALJ Spencer's order, specifically that portion which required Respondents to pay for additional diagnostic testing, in violation of § 8-43-304(1).

L. Regarding Respondents claim that this penalty was cured within twenty (20) days from the mailing of the April 10, 2018 Application of Hearing, the undersigned also disagrees. Here, Respondents contend that they cured the penalty as early as April 10-12, 2018 and this cure was subsequently clarified between May 1 and May 3, 2018 in writing. As found, at 11:53 a.m. on April 10, 2018, after being notified of the Application for Hearing, Respondents counsel advised Claimant's counsel that a new adjuster had been assigned to the claim. In his email, Respondents' counsel identified the new adjuster as Christina Smith with Sedgwick CMS, noting further that Ms. Smith and her supervisor had authorized treatment but not the lab requests of Dr. Volz. He also advised that he spoken with Sar in Dr. Volz' office to provide her Ms. Smith's authorization for treatment and telephone number to "confirm anything necessary". On April 12, 2018, Respondent's counsel sent an email to Claimant's counsel asking if he was "still having lab scheduling issues" suggesting that authorization to proceed had not been forthcoming. Based upon the evidence presented, the ALJ is not convinced that the email exchange between Counsel for Respondents and Dr. Volz' office served to "authorize" the additional diagnostic care that had been suggested by Dr. Volz. Rather, the email merely notified both Claimant's counsel and Dr. Volz' office that there was a new adjuster assigned to the claim and that this adjuster had verbalized a willingness to authorize care but not lab/diagnostic work. Based upon the email evidence, the ALJ concludes that without receiving written authorization for diagnostic work-up, including lab work, Dr. Volz and Claimant were left wondering if the same had specifically been authorized. Ms. Smith did not actually authorize the any care or diagnostic work-up, including lab work, skin testing and spirometry until May 3, 2018 when she emailed Dr. Volz' office providing written confirmation/authorization of the same. This authorization came 23 days after mailing of the April 10, 2018 Application for Hearing endorsing penalties. Consequently, the ALJ concludes that Respondents did not effectively cure the alleged violation of ALJ Spencer's order within twenty (20) days as required by § 8-43-304(4), C.R.S. Accordingly, the ALJ concludes that Claimant is only required to prove the penalty by a preponderance of the evidence.

M. Based upon the totality of the evidence presented, the ALJ concludes that Respondents violated ALJ Spencer's order requiring the payment of all reasonable and necessary medical treatment, specifically the additional diagnostic testing as requested by Dr. Volz. The ALJ notes that counsel for both parties explained there was difficulty in finding Claimant an authorized treating physician after Dr. Bowdish left his practice. Consequently, the ALJ is declining to impose penalties for the time period before Claimant established treatment with Dr. Volz during which the request for additional diagnostic testing was made.[4] Indeed the conduct giving rise to the penalty claim

[4] Although not raised in his post hearing position statement, Respondent's counsel made a fleeting reference during his opening remarks at hearing that Claimant's claimed penalty for violation of ALJ Spencer's order for failing to pay for additional diagnostic testing was "time-barred" as he was seeking penalties from March 29, 2017 and the Application for Hearing was filed April 10, 2018, or more than one year after the date for which penalties per the Application for Hearing in contravention of § 8-43-304(5), C.R.S. Because the ALJ finds that Claimant only became aware of and first knew of the facts giving rise to the penalty allegation in January 2018, after Dr. Volz placed treatment on hold for lack of authorization

arose, as found above, on January 8, 2018, when Dr. Volz' office put all treatment, including diagnostic testing on hold pending authorization. Accordingly, the ALJ determines the period for the imposition of penalties extends from January 8, 2018, the date by which Claimant's care was placed on hold for lack of authorization to perform blood testing and pulmonary function tests (PFT) through May 2, 2018, as the aforementioned diagnostic testing was approved May 3, 2018. This represents a period of 114 days. Once a violation occurs, each subsequent day that the violation continues constitutes a separate violation which may be joined with the first for purposes of adjudicating the violator's total liability for penalties. *Spracklin v. Industrial Claim Appeals Office,* 66 P.3d at 177-178. Thus, a violation occurs and is subject to penalties from the day the improper conduct occurs.

N. While the evidence presented supports that a violation of ALJ Spencer's order occurred for failure to authorize the requested additional diagnostic testing, it is necessary to analyze whether the insurer's delay in and failure to authorize this care despite being ordered to do so was objectively reasonable. The evidence presented establishes that, at or around the time Claimant first presented to Dr. Volz's office for treatment, Susan B_____ was the claims adjuster assigned to this case. Per Ms. Smith's testimony, Ms. B_____ was out on medical leave and Ms. Smith did not take over the handling of Claimant's claim until around the end of March or early April, 2018. Ms. Smith testified that she was unaware whether anybody was even assigned to Claimant's claim for proper claims adjusting once Ms. B_____ went on medical leave, but could state that the last note in the file prior to her taking over said file was from Ms. B_____. It was Insured's duty, based upon the March 9, 2017 order, either through Ms. B_____ or another representative to provide a response to Dr. Volz's office for requested treatment, which it failed to do. Of importance is that the office of Respondents' counsel specifically informed Ms. S_____ to contact Susan B_____ for authorization, and yet nothing was done by Respondents until the date Claimant filed his application for hearing. Even with Claimant's application for hearing being filed April 10, 2018, it was not until May 3, 2018, twenty-three (23) days later, that Dr. Volz's office was given written authorization to provide the requested care for Claimant.

O. Respondents acknowledge the existence of "authorization issues" but contend that the language of ALJ Spencer's Order is so vague and ambiguous that they could not be expected to know what medical treatment he ordered Respondents to pay for. Moreover, Respondents assert that Claimant's medical situation was "fluid and changing". As such, Respondents couch the issue confronting the ALJ not as a penalty for violating the order, but as a "delay with an explanation and justification" for not authorizing the treatment/testing earlier. The ALJ is not persuaded. While this case clearly has a complex procedural history and Claimant's treatment was interrupted by Dr. Bowdish leaving his practice, the ALJ notes from the evidence submitted that Insurer has been represented continuously during the claim by qualified counsel since

---

and because he filed his Application asserting penalties on April 10, 2018, within a year of having that knowledge, the ALJ concludes that this penalty allegation was filed timely.

the February 1, 2017 hearing before ALJ Spencer. It is because this case has a complex history, created by the litigation that has ensued, that the undersigned finds it highly improbable that Respondents would not know that they were obligated to provide additional diagnostic testing and that failure to authorize the same would result in a violation of ALJ Spencer's directive. Based upon the evidence presented, the ALJ concludes that Insurer simply failed to take action on the order, probably because Ms. B_____ was on leave and had not assigned the matter to a new adjuster. While the ALJ understands the precarious position Ms. Smith finds herself in, Insurer's negligence in assigning this claim to another adjuster in the absence of Ms. B_____ and their failure to act upon the order for 114 days after the testing was requested is objectively unreasonable. This is especially true in light of the efforts of Dr. Volz' office to secure authorization. Simply asserting that a change of Adjusters somehow excuses Insurers failure to act on the request for authorization in light of the order is unpersuasive. Respondents additional assertions that Ms. Smith never denied care, that Claimant's lab testing resulted in normal outcomes and that he was unaffected by the delay in authorizing the aforementioned testing are equally unpersuasive. It is the failure to follow the order that justifies the imposition of penalties in this case.

P. Concerning Claimant's second claim for penalties for failing to pay the Quest Diagnostics bill "forthwith" as ordered by ALJ Spencer, the ALJ agrees with Respondents that this asserted penalty was not pled, let alone with specificity as required by § 8-43-304(4), C.R.S., in the April 10, 2018 Application for Hearing. Indeed, the April 10, 2018 Application for Hearing is silent on the specifics of this penalty claim. Moreover, Respondents' counsel stated, at the outset of hearing, that he was unaware that failure to pay the Quest Diagnostic billing was an issue for hearing. Because the penalty was not pled and Respondents were not apprised/noticed regarding the nature of the penalty, the ALJ concludes that it was not properly placed before the ALJ at the September 19, 2018 hearing.

Q. Due process requires that parties be given advance notice of the issues that may be considered at a hearing. *See Shaw v. Valdez,* 819 F.2d 965 (10th Cir. 1987). The fundamental requirements of due process are notice and an opportunity to be heard. Due process contemplates that the parties will be apprised of the evidence to be considered and afforded a reasonable opportunity to present evidence and argument in support of their positions. Inherent in these requirements is the rule that a party will receive adequate notice of both the factual and legal bases of the claims and defenses to be litigated. *See Hendricks v. Industrial Claim Appeals Office,* 809 P.2d 1076, 1077 (Colo.App. 1990). As established above, such notice was not properly given concerning the alleged penalty for failing to pay the Quest Diagnostic billing. Any contention that this issue was also tried by consent is unpersuasive. Although issues may be "tried by consent," unendorsed issues should not be heard unless there no reasonable doubt exists that the issue was intentionally and actually tried. *Bill Dreiling Motor Co. v. Schultz*, 168 Colo. 59, 450 P.2d 70 (Colo. 1969); *Bradford v. Nationsway Transport Service*, W. C. No. 4-349-599 (March 16, 2000). It is not enough that some evidence connected to the issue has been

received. *Id.* In light of the exchange between the ALJ and counsel at the outset of hearing specifically wherein Respondent specifically noted that he was not aware that penalties for failing to pay the Quest Diagnostic billing were an issue for hearing, the ALJ concludes that the issue of penalties for failing to pay the aforementioned billing "forthwith" was not properly before the undersigned ALJ for adjudication.

R. Finally, Claimant contends that Respondents are subject to penalties for "dictating" medical care in contravention of § 8-43-503(3), C.R.S. "by repeatedly failing to respond to an authorized provider's requests for treatment and for failing to pay for treatment already performed for (sic) an authorized provider". As the ALJ interprets Claimant's contention, Respondents delay in authorizing treatment is tantamount to dictating care. The ALJ is not persuaded.

S. Section 8-43-503(3) C.R.S. states: "Employers, insurers, claimants, or their representatives shall not dictate to any physician the type or duration of treatment or degree of physical impairment. "Dictate" is defined as ordering or instructing what is to be said or written. Black's Law Dictionary, *Definitions of the Terms and Phrases of American and English Jurisprudence, Ancient and Modern*, Sixth Ed. 1990. By analogy, dictating medical care would be to order or instruct what medical treatment is to be given. A fair reading of § 8-43-503(3), when replacing the word "dictate" with "order or instruct" would be: "Employers, insurers, claimants, or their representatives shall not order or instruct any physician concerning the type or duration of treatment or degree of physical impairment. In support of his claim for penalties for dictating medical care, Claimant relies on the decision of the Industrial Claims Appeals Office (ICAO) announced in the case of *Jose Casillas v*. *Bemas Construction*, *Inc.,* W.C. No. 4-777-652, (May 24, 2010). Claimant contends that the Casillas decision stands for the proposition that Respondents in the instant matter can be penalized under § 8-43-503(3) for unduly delaying authorization of medical treatment. The ALJ finds Claimant's interpretation of the *Casillas* matter misplaced.

T. In the *Casillas* matter, ICAO upheld the ALJ's determination that Respondents violated § 8-43-503(3) C.R.S., not as a direct result of undue delay in authorizing care, but rather for the adjuster issuing a command, i.e. dictating to the authorized treating physician that his request for an EMG be done through a "gatekeeper" agency known as One Call (OC). In affirming the ALJ's decision to impose penalties for dictation of care, the Panel noted:

> The Respondents' arguments notwithstanding, there is substantial evidence in the record to supporting (sic) the ALJ's conclusion that the insurer effectively dictated the claimant's treatment by unilaterally attempting to modify Dr. Ogin's status as a ATP by dictating that before he performed the EMG he was required to go through "vetting" by OC, the insured "gatekeeper".

The Panel went on to note that the adjuster's requirement that Dr. Ogin adhere to the "gatekeeper" policy resulted in the adjuster effectively commanding that Dr. Ogin take

an action he was "not legally required to take in order to secure payment for the EMG" and that this mandate by the adjuster "prolonged the duration of claimant's treatment by influencing Dr. Ogin not to perform the EMG" as he had planned. Accordingly, the Panel affirmed the imposition of penalties on the grounds that the adjusters affirmative command/order/instruction to Dr. Ogin, not only dictated the type of care Claimant was to receive but also the duration of that care. Simply put, the prolonged duration of care was occasioned by the adjuster's "unjustified demand" that the EMG be performed by OC. In contrast, the instant matter does not involve the overt influence or unjustified commands, instructions or orders of the adjuster assigned to the claim. Indeed, the adjuster in the instant matter took no action to influence Claimant's ability to seek care with Dr. Volz or see to it that the order of ALJ Spencer's was obeyed. The delay in procuring treatment, which may have impacted the type and duration of future care in this case, was not caused by the dictation of medical care in this case, but rather the negligence of Insurer in failing to take action to authorize diagnostic testing that had been ordered by ALJ Spencer. It is that conduct with subjects Respondents to penalties, rather than the claim that the Respondents were dictating medical care for Claimant.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish that the right to select a physician passed to him following Dr. Volz' decision to place all treatment on hold and not treat for nonmedical reasons. Claimant's request that DaVita Medical Group be considered an authorized provider in this case is denied and dismissed.

2. Respondents shall pay to Claimant a penalty in the amount of two hundred ($200.00) dollars per day for 114 days for a total penalty of $22,800.00 for their violation of ALJ Spencer's order requiring payment of all reasonable and necessary medical treatment to cure and relieve the effects of Claimant's injury, including additional diagnostic testing suggested by Dr. Volz.

3. Pursuant to § 8-43-304(1) the penalty assessed is apportioned between Claimant and the Colorado uninsured employer fund created in § 8-67-105. Fifty percent (50%) of the penalty assessed shall be paid to Claimant and the remaining fifty percent of the penalty assessed shall be paid to the Colorado uninsured employers fund.

4. Claimant's request for penalties for failure to pay the billing associated with Claimant's diagnostic testing through Quest Diagnostics is denied and dismissed.

5. Claimant's request for penalties for dictation of medical care in violation of § 8-43-503(3) is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor,

Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Determination of Claimant's average weekly wage ("AWW").

II. Whether Claimant is equitably estopped from seeking an increase in his AWW.

III. Whether Respondents are entitled to a credit against permanent partial disability benefits based on the net proceeds of Claimant's third party settlement.

IV. Whether Respondents are entitled to recover an overpayment.

STIPULATIONS

1. Claimant's AWW on date of injury, December 30, 2014, is $126.25. Claimant was an employee for Employer on the date of injury and was operating under an independent contractor agreement. The AWW on the date of injury was derived by subtracting the expenses incurred by Claimant to provide transportation service from his gross earnings as a cab driver.

2. If applicable, Claimant's AWW on the date of MMI, April 20, 2017, was $984.20.

3. Claimant's net proceeds from settlement of his third-party personal injury action was $24,205.79. At the time of settlement, Respondents' lien was $52,320.12 based upon the payment of $43,275.39 in medical benefits and $9,044.82 in disability benefits. Respondents have previously recovered $28,300.00 in satisfaction of their subrogation lien.

4. Claimant received an overpayment in temporary total disability ("TTD") benefits from January 8, 2017 to April 19, 2017 in the amount of $924.84. Respondents are entitled to credit that amount against liability for future indemnity benefits.

FINDINGS OF FACT

1. Claimant is a 57 year old male who worked for Employer as a cab driver. At the time of his industrial injury, Claimant had been working for Employer for eight years.

2. On December 30, 2014, Claimant sustained an admitted industrial injury when he was involved in a motor vehicle accident. Claimant was initially placed on restrictions of no lifting/pushing/pulling more than 10 pounds, no reaching above shoulders with affected extremities, no commercial driving, and performing only sedentary work.

3. Claimant returned to work for Employer approximately one month after the motor vehicle accident with work restrictions. Claimant underwent physical therapy, epidural steroid injections, trigger points injections and a knee injection.

4. Claimant testified he ceased working as a cab driver at some point in 2015 and began receiving TTD benefits.

5. Claimant relocated from Colorado to Georgia in August or September of 2016.

6. Christopher Taylor, M.D. assumed Claimant's care upon his relocation to Georgia. On October 20, 2016, Claimant presented to Dr. Taylor with complaints of right-sided low back pain and right knee pain. Dr. Taylor noted Claimant was currently working as a lighting consultant with restrictions of no lifting over 30 pounds, no kneeling and a two hour break every 10 hours of work. He diagnosed Claimant with a right knee meniscus tear and possible lumbar discogenic pain and assigned work restrictions no lifting greater than 30 pounds, no kneeling, and taking a two hour break for every 10 hours of work.

7. Claimant testified he began employment as a conservation energy representative in January 2017. Claimant described the job as an entry-level position that involves approaching customers to perform energy assessments in small commercial businesses.

8. On February 8, 2017, Claimant filed an Application for Hearing ("AFH") endorsing the issues of medical benefits (authorization of a right knee arthroscopy), temporary indemnity benefits from the date of injury onward, and AWW. A hearing was scheduled and then ultimately rescheduled for July 25, 2017.

9. On April 20, 2017, Dr. Taylor placed Claimant at maximum medical improvement ("MMI") and imposed a permanent work restriction of no lifting over 100 pounds.

10. On May 18, 2017, the parties attended a prehearing conference before PALJ John A. Steninger during which Respondents sought supplemental answers to interrogatories, including provision of Claimant's 2015 and 2016 income tax returns, and "a detailed explanation and basis for the AWW claimed by the Claimant." In an order dated May 18, 2017, PALJ Steninger ordered Claimant to "submit clarification and supplementation as to the basis for Claimant's AWW".

11. Claimant complied with ALJ Steninger's order, submitting supplemental responses on May 31, 2017. The first interrogatory asked Claimant to "state the [AWW] sought by [him] and produce copies of all documentary evidence upon which Claimant will rely at hearing to support this claimed [AWW]." Claimant stated that, based upon his 2014 tax records, he "asserts an AWW of $126.25 based on $6,565 in net profits."

12. Claimant subsequently moved to withdraw the February 8, 2017 AFH, without prejudice, and vacate the July 25, 2017 hearing. ALJ Michelle Jones granted Claimant's motion in an order dated July 20, 2017.

13. On July 17, 2017, Allison Fall, M.D. performed an impairment assessment. Dr. Fall treated Claimant prior to his relocation to Georgia. Claimant reported low back complaints. Dr. Fall noted Claimant had new employment in Georgia and listed the name of the company. She examined Claimant's knees and found full range of motion, mild bilateral crepitance, and no instability. There were no shoulder complaints. Dr. Fall's final assessment was chronic low back pain with degenerative changes following a MVA. Dr. Fall concurred Claimant reached MMI as of April 20, 2017. She assigned a combined whole person impairment of 16% for lumbar range of motion deficits and a rightward disc protrusion at L4-5. She agreed with Dr. Taylor's permanent restrictions.

14. July 20, 2017, ALJ Michelle Jones granted Claimant's unopposed motion to withdraw the Application for hearing without prejudice and vacate the July 25, 2017 hearing.

15. On August 7, 2017, Respondents filed a Final Admission of Liability ("FAL") based on Dr. Fall's report, admitting to 16% whole person impairment, permanent partial disability based on an AWW of $63.47. Claimant objected to the August 7, 2017 FAL and requested a Division Independent Medical Examination ("DIME").

16. Brian Shea, D.O. performed the DIME on December 21, 2017. Dr. Shea documented that Claimant resided in the Atlanta metro area and worked as an energy computer business consultant. Dr. Shea noted Claimant complained of low back and left shoulder stiffness and some neck pain, but continued to improve and was "highly functional." He agreed Claimant reached MMI as of April 20, 2017 and found 1% cervical range of motion impairment, 4% for Table 53 cervical impairment, 7% for Table 53 lumbar impairment, and 10% lumbar range of motion impairment. The spinal impairment ratings combined for 20%. Dr. Shea also awarded Claimant 8% upper extremity impairment which converted to 5% whole person impairment. The spinal and converted extremity ratings combined for a 24% whole person impairment rating. Dr. Shea found no lower extremity impairment and rendered no opinion as to permanent restrictions of any kind.

17. On January 31, 2018, Respondents filed a FAL admitting to a 24% whole person impairment per Dr. Shea's report, and PPD benefits based on an AWW of $63.47.

18. On February 28, 2018, Claimant filed an AFH endorsing PPD and AWW at the time of MMI. A hearing was scheduled for June 21, 2018.

19. On March 27, 2018, Respondents filed an Amended FAL admitting to the 24% whole person impairment rating assigned by Dr. Shea, and PPD based on an AWW of $126.25. On April 7, 2018, Claimant objected to the Amended FAL, noting a hearing was already scheduled for June 21, 2018.

20. The June 21, 2018 hearing was rescheduled to August 21, 2018 and subsequently vacated so the parties could attend a settlement conference. An order dated August 15, 2018 singed by Designated Clerk Gabriela Chavez granted Claimant's motion to withdraw the AFH without prejudice and vacate the August 21, 2018 hearing.

21. On September 6, 2018, Claimant filed another AFH endorsing, among other things, AWW and PPD. The AFH states, "Claimant is not challenging the impairment rating. PPD is endorse (*sic*) by Claimant solely for purposes of increasing the PPD award based on an increase in AWW."

22. Claimant testified t he graduated school with an associate degree in renewable energy shortly before the admitted industrial injury and that he had been actively seeking employment in the renewable energy industry in the time, in the fields of solar, wind and geothermal heating. Claimant testified entry-level positions in the industry require physical activities including climbing wind towers, standing on roofs, and installation of solar panels and heat pumps in construction areas. Claimant testified that his temporary physical restrictions arising out of his work-related injury precluded him from pursuing job opportunities in the field of renewable energy. Claimant testified that he was precluded from obtaining on-the-job training from prospective employers to further his career goals and advancement in the renewable energy field due to the physical limitations caused by his work injury. Claimant testified he was unable to take tests to prove he could climb a 100 foot tower while carrying safety gear to obtain employment in the wind industry due to the weight of the gear exceeding Claimant's lifting restrictions. Claimant testified that, as a result, he did not apply for jobs in the wind industry that carried these requirements. Claimant also testified that he did not apply for jobs that required installation of solar panels on uneven roofs as these jobs exceeded his physical capacity arising out of his work-related injuries. Claimant testified that the renewable energy jobs in the construction field typically required minimum lifting requirement of 50 pounds which exceeded Claimant's temporary restrictions following his injury.

23. Claimant testified he relocated from Colorado to Georgia to assist in the care of a family member and to pursue employment prospects in the renewable energy industry, which he stated were more plentiful on the east coast. Claimant testified he had been unable to obtain entry-level employment in the renewable energy field after his injury while living in Colorado.

24. Claimant testified he obtained entry-level employment in the renewable energy field in December 2016 and began the employment on January 8, 2017. Claimant's job as a conservation energy representative involves approaching customers to provide energy assessments for small commercial businesses. Claimant testified his job duties do not involve the wind or solar energy field and he is not able to obtain the experience and career advancement opportunities he desires in wind or solar energy through his current position. Claimant testified he believes he is precluded from obtaining employment in the wind and solar industry due to the physical limitations arising out of his work injury.

25. Regarding the May 2017 supplemental discovery responses, Claimant testified he provided his 2014 tax records "to show that my income is much less than it currently is in 2017" and to support how he came to an AWW of $126.25, which would be the AWW at the date of injury. Claimant testified that he notified Insurer of his relocation to

Georgia so that his TTD checks could be forwarded. Claimant testified he did not notify Respondents of his employment and wages in Georgia.

26. Amber Castillo testified as a claims representative for Insurer. Ms. Castillo is the adjustor on Claimant's workers' compensation claim and has been adjusting claims in Colorado for approximately 10 years. Ms. Castillo testified she used a net income figure derived from Employer's records in preparing admissions of liability. Ms. Castillo testified that, when Claimant provided supplemental discovery responses in May 2017, she did not dispute the AWW figure stated therein as it was based on tax records and was consistent with the manner in which she calculated the AWW of independent contractors such as Claimant. She testified that, between Claimant's relocation to Georgia in December 2016 and Claimant's return to Colorado for an impairment rating with Dr. Fall in July 2017, Ms. Castillo received no information as to Claimant's Georgia wages.

27. Ms. Castillo testified she admitted to the impairment rating from Dr. Fall based on a cost-benefit analysis that included Claimant's asserted low AWW. Ms. Castillo testified she would not have admitted to the impairment rating from Dr. Fall if Claimant had previously asserted an AWW of $984.20. Ms. Castillo further testified that the DIME physician, Dr. Shea, provided a higher rating than Dr. Fall and issued an impairment rating on the schedule of injuries. Ms. Castillo testified she would not have converted the schedule rating to a whole person rating and admitted to a combined whole person rating if Claimant would have previously asserted an AWW of $984.20. Ms. Castillo testified the cost-benefit analysis of the higher AWW would have resulted in Respondents admitting to the schedule impairment rating which would result in a lower PPD award. She testified that by the time she received notice Claimant was seeking a higher wage, it was too late for her to initiate the hearing process to overcome the DIME.

28. Claimant filed a complaint in Denver District Court against another individual for causing the December 30, 2014 accident and his resulting injuries. The case settled on May 2, 2018. In compromise of the existing lien, Claimant paid Respondents $28,300.00.

29. Claimant's testimony regarding the effects of the work injury on his future earning capacity is not found credible or persuasive.

30. The ALJ finds that Claimant's AWW at the time of injury, $126.25, is a fair approximation of Claimant's wage loss and diminished earning capacity.

31. The ALJ finds Respondents are entitled to a credit against future workers' compensation benefits for the $24,205.79 in net recovery proceeds from Claimant's third party lawsuit.

32. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Equitable Estoppel

Respondents argue Claimant's request to increase his AWW is barred by the doctrine of equitable estoppel.

To establish an application of the doctrine of equitable estoppel, the claimant must prove four elements: (1) the party to be estopped must know the relevant facts; (2) the party to be estopped must also intend that its conduct be acted on or must so act that the party asserting the estoppel has a right to believe the other party's conduct is so intended; (3) the party asserting the estoppel must be ignorant of the true facts; and (4)

the party asserting the estoppel must reasonably rely on the other party's conduct to his or her detriment. *Johnson v. Industrial Commission*, 761 P.2d 1140, 1146; *Sneath v. Express Messenger Service*, 931 P.2d 565 (Colo. App. 1996).

Respondents contend Claimant was aware of his increased wages when he was placed at MMI and when he provided supplemental discovery responses claiming an AWW of only $126.25. Respondents maintain they had a right to believe Claimant intended to assert an AWW of $126.25 moving forward, based on the supplemental discovery responses, and that they were unaware of Claimant's Georgia employment and wages until after admitting to the DIME's impairment rating. Lastly, Respondents assert they detrimentally relied on Claimant's failure to disclose his Georgia wages in making their decision not to contest the impairment ratings of Dr. Fall and Dr. Shea. The ALJ disagrees each element of equitable estoppel has been met here.

Claimant was aware of the relevant facts. He began employment in Georgia in January 2017 and was earning wages from such employment at the time he was placed at MMI in April 2017. Thus, at the time Claimant submitted supplemental discovery responses, he was aware his AWW at the time of MMI was higher than $126.25. Claimant was also aware he did not notify Employer of his Georgia employment or wages.

Nonetheless, the ALJ is not persuaded Claimant intended his conduct to be acted on or acted so that Respondents had a right to believe Claimant's conduct was so intended. In his May 2017 supplemental responses, Claimant claimed at AWW of $126.25 based on 2014 tax records, the date of injury. Although Claimant had been placed at MMI by the time he submitted the supplemental responses, no impairment evaluation had taken place and no definitive impairment rating had been assigned. Claimant's February 8, 2017 AFH was subsequently withdrawn without prejudice, preserving the issue of AWW. Respondents then filed an August 7, 2017 FAL admitting to an AWW of $63.47, to which Claimant objected and requested a DIME. Pursuant to Section 8-43-203 (2)(b)(II)(A), C.R.S., Claimant was not required to file a request for hearing on the AWW issue until the DIME process was terminated. Accordingly, it was appropriate for Claimant to not file an AFH on the issue of AWW at the time of MMI in response to Respondents' August 7, 2017 FAL.

Although Claimant failed to notify Respondents of his Georgia employment and wages, there is reference to Claimant's new employment in both Dr. Fall's July 17, 2017 impairment assessment report and Dr. Shea's December 21, 2017 DIME report, which Respondents relied upon in filing the FALs. The record contains no indication that, prior to filing the August 7, 2017 and January 31, 2018 FALs, Respondents made any attempt to confirm Claimant continued to claim an AWW of $126.25, despite deciding to use that figure as their basis for not contesting the assigned impairment ratings. While it was practical for Respondents' to undergo this cost-benefit analysis, it was Respondents' choice to do so, and such choice does not result in Claimant being equitably estopped from requesting an increase in AWW under the specific circumstances.

AWW

Section 8-42-102(2), C.R.S., requires the ALJ to calculate the claimant's AWW based on the earnings at the time of injury as measured by the claimant's monthly, weekly, daily, hourly or other earnings. This section establishes the so-called "default" method for calculating the AWW. However, if for any reason the ALJ determines the default method will not fairly calculate the AWW § 8-42-102(3), C.R.S., affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. Section 8-42-102(3) establishes the so-called "discretionary exception." *Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp.*, supra.

Claimant contends that determining his AWW at the time of MMI more fairly compensates him for his loss of future earning capacity, based on his impairment and restrictions. Claimant relies on *Pizza Hut v. ICAO*, 18 P.3d 867 (Colo. App. 2001). In *Pizza* Hut, the claimant was injured as a part-time pizza delivery driver. The claimant had recently graduated nursing school and obtained a full time job with a hospital shortly after his work-injury. Following the DIME, the respondents filed a FAL admitting to the AWW from the part-time pizza job. The claimant objected and requested an AWW based on his earnings at the hospital when he attained MMI. The Court affirmed the Panel's order upholding utilizing the AWW at the time of MMI. *Pizza Hut*, 18 P.3d. at 870.

As found, the AWW at the date of injury is a fair approximation of Claimant's wage loss and earning capacity. While Claimant obtained a degree in renewable energy shortly before sustaining the work injury, the ALJ is not persuaded by Claimant's testimony that he was unable to pursue work in this field as a result of the work injury. Claimant began an entry level position in the renewable energy field shortly after relocating to Georgia, prior to being placed at MMI. When placed at MMI, the only permanent restriction assigned to Claimant limited Claimant from lifting more than 100 pounds. The ALJ did not find Claimant's testimony regarding the physical requirements of the jobs and his inability to pursue work opportunities in the renewable energy field credible or persuasive. The ALJ is not persuaded the work injury limited Claimant in pursuing other jobs in the renewable energy industry to obtain experience and further advance his career. Claimant's AWW at the time of injury, $126.25, fairly approximates the impact of Claimant's injury on his future earning capacity.

Credit of Net Tort Recovery Against Future Indemnity Benefits

Where an employee is injured through the fault of a third party, there are two components or elements to be considered, a lien representing benefits already paid and a potential credit to be offset against the obligation to provide workers' compensation

benefits in the future. *Tate v. Industrial Claim Appeals Office*, 815 P.2d 15 (Colo. 1991); *Andrews v. Industrial Claim Appeals Office*, 952 P.2d 853 (Colo. App. 1998); *Metcalfe v. Bruning Division of AMI*, 868 P.2d 1145 (Colo. App. 1993). Mere acceptance of money to fully or partially satisfy the lien, without more, does not affect an insurer's right to claim a credit. *Metcalfe*, supra.

Here, Respondents accepted the sum of $28,300.00 to extinguish a lien of $52,320.12, resolving the lien, but not Respondents' right to a credit. The parties stipulated Claimant's net tort recovery was $24,205.79. Claimant does not contest Respondents are entitled to a credit against future workers' compensation benefits for the $24,205.79 in net recovery proceeds from the third party lawsuit.

ORDER

It is therefore ordered that:

1. Claimant's AWW is $126.25.

2. Respondents are entitled to credit the $24,205.79 representing Claimant's net recovery from the 3rd party tort action against any future indemnity benefits.

3. Respondents are entitled to a credit in the amount of $924.84 representing TTD benefits received by Claimant from January 8, 2017 to April 19, 2017 against future indemnity benefits.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-067-439-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on November 7, 2018, in Denver, Colorado. The hearing was digitally recorded (reference: 11/7/18, Courtroom 4, beginning at 1:30 PM, and ending at 4:00 PM).

Claimant's Exhibits 1 through 19 were admitted into evidence, without objection. Respondents' Exhibits A through R were admitted into evidence, without objection.

At the conclusion of the hearing, the record was left open pending the filing of the post-hearing evidentiary deposition of Brian Reiss, M.D., followed by briefs. Dr. Reiss' post-hearing evidentiary deposition was taken on November 19, 2018 and a written transcript thereof was referred to the ALJ on December 24, 2018. Respondents' opening brief in support of Petition to Terminate Benefits was referred to the ALJ on December 24, 2018. Claimant's combined brief in opposition to Respondents' opening brief and in support of payment of medical bills was referred to the ALJ on December 24, 2018. Respondents' response to Claimant's combined brief was referred to the ALJ on December 24, 2018. The matter was deemed submitted for decision on December 24, 2018.

ISSUES

The issues to be determined by this decision concern whether the Respondents' Petition to Modify, Terminate or Suspend temporary disability benefits, effective July 30, 2018, based on Claimant's alleged at-fault termination from employment (Respondents bear the burden of proof by preponderant evidence on this issue) should be granted; whether the surgery the Claimant underwent by Sharad Rajpal, M.D. on March 10, 2018 was emergency treatment, rendering it authorized although outside the chain of referrals; and, whether post-surgical treatment provided by Boulder Community Hospital is authorized as part of Claimant's allegedly ongoing emergency (Claimant bears the burden of proof by a preponderance of the evidence on these issues).

The Claimant does not dispute that she voluntarily resigned from employment to pursue other interests, however, it is her position that her condition related to the admitted injury worsened and the bar on temporary disability benefits should be lifted as of the time of worsening, without the necessity of formally filing a Petition to Re-open which, if granted, would start a new scenario wherein temporary disability benefits could be commended anew under the holding in *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004). The Claimant bears the burden of proof by preponderant evidence on this proposition.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. Respondents filed a General Admission of Liability (GAL), dated February 2, 2018, admitting for an average weekly wage (AWW) of $503.96, authorized medical benefits; and, temporary total disability (TTD) benefits of $335.99 per week from January 21, 2018 and "ongoing."

2. Respondents filed a Petition to Terminate, Modify or Suspend Compensation on July 30, 2018, alleging that Claimant voluntarily resigned from her employment on February 5, 2018.

3. On August 3, 2018, Claimant filed an Objection to Respondents' above Petition, stating that "Respondents' Motion is not supported by facts or law," and requesting that the matter be set for hearing on the Respondents' Petition. As found herein below, Respondents' Petition is **clearly supported by facts and law.**

4. The Claimant is a four-year employee of the Employer. Her date of birth is February 3, 1990, and she was 28-years old on the date of the hearing.

The Admitted Compensable Injury

5. The Claimant started working as a flight attendant for [the Employer] on February 15, 2017. She was injured on January 20, 2018, while in the course and scope of employment as a flight attendant for [the Employer] while flying from Denver, Colorado, to Edmonton, Canada.

6. The Claimant's injury occurred when severe turbulence knocked her to the ground. She landed first on her right side and then levitated, landing again, this time on her stomach. The ALJ infers and finds that by filing a GAL and continuing to pay the Claimant temporary total disability (TTD) benefits, at least until July 30, 2018, without raising the "termination of benefits" issue, the Respondents essentially conceded that the Claimant sustained a compensable injury on January 20, 2018, with significant consequences. Respondents Petition to Terminate benefits is based on an alleged "voluntary resignation," **not** on a subsequent discovery that the consequences of the Claimant's injury abated and the Claimant returned to a baseline of naturally progressing rheumatoid arthritis (RA), as opined by some of Respondents' IMEs.

At-Fault Termination

7. On February 5, 2018, the Claimant sent an email to Phally [Redacted], Chief Flight Attendant and a supervisor to the Claimant, voluntarily resigning from the Employer's company. The email read as follows:

> Hello Phally,
> Though I have greatly appreciated my time with [Employer], it is with a tremendous amount of thought and prayer that I have decided to turn in my resignation from the company today. I will forever be grateful for all the places I have seen and the people have met along the way but it is time for me to start a new chapter in my life. [Employer] has been one of the best companies I have ever worked for….
> s/Claimant.
>
> [Redacted] replied:
> Hi there…oh no…what happened [Claimant]?
>
> To which Claimant replied:

Nothing happened. I just want to pursue a new avenue…Respondents' Exhibit P, p. 144)

8. Based on the above email exchange, the ALJ finds that the Claimant voluntarily and willfully caused her separation from employment by voluntarily resigning. There is no credible evidence that would lead to an inference of any circumstance supporting a constructive discharge. Further, in her brief, the Claimant concedes that she voluntarily terminated her employment.

Medical Treatment Before Worsening

9. The Claimant immediately suffered pain as a result of this event but continued working on her flight. When she returned to Denver she was referred to Dee Jay Beach, D.O. on January 22, 2018, and then to Concentra. The Concentra records from January 27, 2018, describe the Claimant's symptoms as cervical strain, left shoulder strain, right shoulder strain and lumbar strain (Respondents' Exhibit L, bates stamp [BS] 88).

10. The Claimant was given restrictions by Concentra and she was offered modified duty by her Employer, which she commenced on February 2, 2018.

11. Following her resignation, the Claimant continued treatment with Concentra and sought a second opinion with Sharad Rajpal , M.D., at Boulder Neurological and Spine Associates Community Hospital in February 2018 (Claimant's Exhibit 10, BS 337, 339). Potential surgical intervention was discussed but no surgery decision was made.

12. The ALJ finds that the Claimant would have continued at her modified, accommodated work from February 5, 2018, through March 5, 2018, the day before her condition significantly worsened whereby she could no longer work at modified, accommodated work.

Worsening Condition

13. On March 6, 2018, the Claimant was walking in a parking lot when she felt a sharp pain in her injured right shoulder and cervical region. This pain was caused her to fall to the ground. The ALJ infers and finds that the fall and injuries were directly and proximately caused by the Claimant's condition that resulted from her compensable injuries of January 20, 2018.

14. The Claimant sought emergency care at UC Health Longs Peak on March 6, 2018, for worsening low back pain. The records from Long Peak state that the Claimant had an exacerbation of her chronic back pain with a syncopal episode (Respondents' Exhibit M, BS 112). The records indicate that Claimant had fallen on

her back and was having increased pain there. *Id*., BS 113. She also had tingling in her right arm and in her bilateral legs. The records from Longs Peak noted that the Claimant had previously undergone surgery (microdiscectomy in 2016) for back pain. The ALJ finds and pinpoints the time of a medically supported worsening of condition as March 6, 2018.

15. Thereafter, the Claimant followed-up with an appointment with Chiropractor Dr. Smith, D.C., on March 7, 2018, to whom she had been referred by Concentra. Authorized Treating Provider (ATP) Dr. Smith refused to treat the Claimant at that time, expressing concern about the severity of her symptoms.

16. On March 7, the Claimant returned home following her visit to Dr. Smith, D.C., with severe low back pain which continued worsening throughout that evening and to the next morning. Her mother transported her to UC Health Boulder Community Hospital for further emergency care on March 8, 2018.

17. The Claimant underwent an MRI (magnetic resonance imaging) on March 8, 2018, which established a large paramedian disc herniation and extrusion resulting in severe left lateral recess stenosis. *Id*., BS 291.

18. The records from Boulder Community Hospital show that the Claimant was seen on March 8, 2018, with a "2-month history of severe progressive lumbar pain and radiculopathy that worsened acutely over the last 24 to 48 hours" (Claimant's Exhibit 9, BS 271). A hospital summary accurately described the circumstances of the Claimant's hospitalization:

> HOSPITAL COURSE: Patient is a 28-year-old female patient who had previously been seen in Dr. Rajpal's office as an outpatient. She was found to have a known recurrent disc herniation at L4-L5 and also bilateral pars defect at L5-S1. She presented to the emergency room with uncontrolled pain. She was working as a flight attendant, had some turbulence in the airplane, which made her symptoms much worse. She was admitted to the hospital for pain control and definite management. We discussed risks, benefits, and alternate treatment options with the patient and after much deliberation, the patient elected to proceed with surgical intervention in the way of a redo L4-L5 diskectomy, with TLIF and posterior fusion L4-L5. The procedure was performed by Dr. Sharad Rajpal, for which there were no known complications. Please see his operative note for further details. Surgery took place on March 10, 2018. After the operation, the patient was in stable condition and was transferred from the operating room to the PACU, and from the PACU to the postsurgical

> floor. On the floor, patient received physical therapy, occupational therapy, and pain management. The patient did have some episodes of hypotension and dizziness. The hospitalist team was consulted and worked on managing this. Her symptoms improved. She was cleared by Physical Therapy and Occupational Therapy. Her postoperative x-rays demonstrated stable, well placed hardware. All drains and catheters were removed. On March 14, 2018, the patient's pain was well managed, she was cleared by the medicine team and she was subsequently discharged to home.

(Claimant's Exhibit 9, BS 267).

19. Dr. Rajpal he concluded that the Claimant required immediate fusion surgery intervention due to the presence of progressive neurological deficits impacting the lower extremity and resulting in radiculopathy, weakness, and numbness. *Id.* The Claimant underwent an L4/L5 fusion on March 10, 2018. *Id.,* BS 306. The ALJ finds Dr. Rajpal's decision credible and supportive of the need for emergency surgery. Further, the ALJ makes a rational choice, based on substantial evidence, to accept Dr. Rajpal's decision to perform emergency surgery and to reject any opinions to the contrary. Thus, the ALJ finds Dr. Rajpal's surgery reasonably necessary, causally related to the admitted compensable injury herein, and of an emergent nature. The Claimant remained hospitalized for approximately one-week post-surgery. The ALJ infers and finds that causal opinions to the contrary strain credulity because of the unlikelihood that the surgery was needed because of the natural progression of RA in a 28-year old woman, as opposed to the work-related trigger..

20. Boulder Community Hospital submitted payment for the emergency treatment rendered to the Claimant, including surgery and post-surgery care. This was denied by the Respondents (Claimant's Exhibit 19). The Claimant has continued treatment with Concentra and Nicholas K. Olsen, D.O. (Respondents' Exhibit L and Claimant's Exhibit 14.)

21. The records from Concentra show that the Claimant was seen on April 11, 2018. PAC (Certified Physician's Assistant) Ron Rasis at Concentra who stated that he "[d]iscussed need for review of significant medical records, coordination of care with neurosurgeon. . . ." *Id.,* BS 107.

22. Following surgery, the Claimant was released by Dr. Rajpal, with the following restrictions: avoiding higher powered twisting motions, no tennis until nine months post-surgery, and avoid heavy impact activities such as horseback riding. The Claimant was told that she may increase her weight by 5 lbs. per week and would be permitted to lift at least 20 - 30 lbs., as of August 13, 2018. (Claimant's Exhibit 10, BS 353).

23. According to the Claimant, since her surgery she has been unable to return to work at [the Employer] and has not again been offered modified duty by [the Employer] following her resignation.

24. Prior to her January 20 injury and while working for [the Employer] following her 2016 microdiscectomy with Fernando Techy, M.D. (Respondents' Exhibit I), the Claimant continued her physical activity which included working out several days a week, running, hiking, and horseback riding (specifically timing exercises for roping steers) although her low back began hurting more in mid-2017 (Respondents' Exhibit L, BS 65). Until her injury of January 20, 2018, the Claimant was able to perform all of the essential functions of her job. She was able to perform modified work until her voluntary resignation on February 4, 2018. Afterward her significant worsening on March 6, 2018, the Claimant was not able to perform essential job functions nor was she able to engage in the leisure activities described herein above. .

Nicholas K. Olsen, D.O., ATP

25. Concentra eventually referred the Claimant to Dr. Olsen. She underwent her first evaluation with him in August 20, 2018 (Claimant's Exhibit 14). Dr. Olsen performed an extensive records review and described the circumstances leading up to the Claimant's hospitalization based on this review. His report describes the progression of the Claimant's low back symptoms, to the events preceding her hospitalization on March 8, 2018. As of October 10, 2018, the Claimant 's restrictions were 15 lbs. repetitive lifting and maximum lifting of 40 lbs. (Claimant's Exhibit 14, BS 369).

26. Dr. Olsen noted that the Claimant had undergone a microdiscectomy in 2016, performed by Dr. Techy in July 2016 (Respondents' Exhibit I, BS 47). The Respondents argue that the Claimant's need for emergent surgery on March 10, 2018, was related directly to her prior low back injury and surgery in 2016. This contention is not persuasively borne out by the facts of this case.

27. In 2017 prior to her injury, the Claimant reported limited back problems which caused her to take time off work. She stated that these back problems arose when she was realigning seatbelts on an aircraft which required her to engage in constant bending. Although she missed work, she did not file a workers' compensation claim and returned to work full duty and, was working full duty prior to the events of January 20, 2018.

Brian Reiss, M.D., Respondents' IME

28. Respondents rely on the testimony of IME Dr. Reiss who was of the opinion that the events occurring on January 20, 2018, were insufficient to give rise to a worsening condition warranting hospitalization on March 8, 2018. He also stated the opinion that the surgery on March 10, 2018, was not reasonable or causally related to the January 20, 2018 injuries. For the reasons stated herein below, the ALJ does not find Dr. Reiss' opinions adequately founded or credible.

29. Dr. Reiss testified at his deposition on November 19, 2018, that the Claimant had suffered an aggravation of her pre-existing back problems but stated the opinion that the aggravation should have resolved within a month following her January 20, 2018, injury. The ALJ finds his opinion "should have resolved within a month" as lacking in an adequate foundation, contrary to the weight of the evidence and as significantly lacking in credibility. Dr. Reiss could point to no documents in the records showing that the Claimant had been placed at maximum medical improvement (MMI) for her medical condition related to the present injury. Dr. Reiss agreed that the surgery performed by Dr. Rajpal did not breach the medical standard of care, although he stated the opinion that there **may have been** (emphasis supplied) a violation of the Medical Treatment Guidelines (*Guidelines*) because adequate time had not passed prior to the performance of surgery. He **did not** render an opinion that the Guidelines "were vfiolated." He acknowledged, however, that the presence of significant pain could warrant the intervention of the fusion performed by Dr. Rajpal on March 10, 2018 (Dr. Reiss' deposition, November 19, 2018, p, 20, lines 6 – 13).

Ultimate Findings

30. Based on the totality of the evidence, the ALJ finds the Claimant credible. Further, the ALJ finds Dr. Rajpal's opinions to be persuasive and credible with respect to the work-relatedness, worsening of condition related to the admitted injury, and the emergent need for the surgery which was performed. To the extent other medical opinions are consistent with Dr. Rajpal's opinions, the ALJ finds them to be credible and persuasive. As found herein above, the ALJ finds the medico-legal opinions of Dr. Reiss to be contrary to the weight of the evidence and, therefore, lacking in persuasiveness and credibility. The ALJ finds the Claimant's testimony concerning the occurrence of the March 6, 2018, incident for which she sought and received emergency medical care at UC Health Boulder Community Hospital and UC Health Longs Peak credible and highly persuasive.

31. Between conflicting testimonies and evidence, the ALJ makes a rational choice, based on substantial evidence, to accept the Claimant's testimony, the opinions of Dr. Rajpal and treatment providers that support a work-related worsening of condition, and to reject any opinions to the contrary, including the opinions of Dr. Reiss.

32. The totality of the evidence establishes that the Claimant's need for low back surgery on March 10, 2018, arose as a result of a substantial worsening of condition after her fall on March 6, 2018. This required her to seek emergency medical care at UC Health Boulder Community Hospital and undergo fusion surgery.

33. There is no persuasive evidence in the record that the Claimant demanded a fusion surgery or that the Claimant's hospitalization at UC Health Boulder Community Hospital was the result of anything but the need for emergency surgery. Rather, the records establish a progression in work-related symptoms requiring her to

undergo a fusion at L4/L5 On March 10, 2018, following her debilitating fall on March 6, 2018.

34. Prior to the admitted injury of January 20, 2018, the Claimant was working full time and was able to perform a variety of physical activities without restriction; and, her need for further treatment was triggered by the worsening events of March 6, 2018.

35. The Claimant's voluntary resignation from employment served as a bar to TTD benefits from February 5, 2018, until March 6, 2018, when her condition worsened to the point that she could no longer perform modified duties for the Employer.

36. After March 6, 2018, the Claimant has been temporarily and totally disabled (TTD), and she continues to be TTD, which had previously been admitted in the GAL.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact

finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, based on the totality of the evidence, the Claimant was credible. Further, Dr. Rajpal's opinions were persuasive and credible with respect to the work-relatedness, worsening of condition related to the admitted injury, and the emergent need for the surgery which was performed. To the extent other medical opinions were consistent with Dr. Rajpal's opinions, they were credible and persuasive. The medico-legal opinions of Dr. Reiss, however, were contrary to the weight of the evidence and, therefore, lacking in persuasiveness and credibility. The Claimant's testimony concerning the occurrence of the March 6, 2018, incident for which she sought and received emergency medical care at UC Health Boulder Community Hospital and UC Health Longs Peak, plus Dr. Rajpal's surgery, was credible and highly persuasive..

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting testimonies and evidence, the ALJ made a rational choice, based on substantial evidence, to accept the Claimant's testimony, the opinions of Dr. Rajpal and treatment providers that support a work-related worsening of condition, and to reject any opinions to the contrary, including the opinions of Dr. Reiss.

At Fault Termination

c. Respondents argue that the Claimant's entitlement to TTD benefits ceased and was barred into the future when she tendered her resignation on February 5, 2018. They request that TTD be terminated as of July 30, 2018, the date they filed the Petition to Modify, Terminate, or Suspend (Claimant's Exhibit 3). They also dispute that the fusion surgery the Claimant underwent on March 10, 2018, was the result of an emergency, was reasonably necessary, or was causally related to her January 20, 2018, injury. Ordinarily, § 8-42-105 (4), C.R.S., provides that an employee responsible for her own termination is not entitled to temporary disability benefits. This statutory provision has been interpreted to mean that "responsibility for termination" must be through a volitional act on the part of the terminated employee. *Colorado Springs Disposal v. Indus. Claim Appeals Office,* 58 P. 3d 1061 (Colo. App. 2002). A finding of fault requires a volitional act or the exercise of a degree of control by a claimant over the circumstances leading to termination. *Gilmore v. Indus. Claim Appeals Office,* 187 P.3d 1129, 1132 (Colo. App. 2008); *Apex Transport, Inc. v. Indus. Claim Appeals Office,* **2014 COA 25.** An unqualified voluntary resignation, as found herein above, qualifies as a volitional act. The Supreme Court, however, has determined that the "responsibility for termination" defense is not absolute and is vitiated when a worsening of condition occurs. *Anderson v. Longmont Toyota,* 102 P. 3d 323 (Colo. 2004). In *Longmont Toyota*, the Supreme Court did **not** indicate that the mechanistic action of filing a petition to re-open and the granting of a re-opening was necessary to end the bar on termination of temporary disability benefits. The Supreme Court quite simply held that a worsening of condition period is all that is necessary to end the bar on temporary disability benefits. Indeed, the critical facts in *Longmont Toyota* are virtually identical to the facts herein—a worsening of condition occurred after the claimant's voluntary resignation. As found, prior to the admitted injury of January 20, 2018, the Claimant was working full time and was able to perform a variety of physical activities without restriction; and, her need for further treatment was triggered by the worsening events of March 6, 2018. Her voluntary resignation from employment served as a bar to TTD benefits from February 5, 2018, until March 6, 2018, when her condition worsened to the point that she could no longer perform modified duties for the Employer. After March 6, 2018, the Claimant has been temporarily and totally disabled (TTD), and she continues to be TTD, which had been admitted in the GAL.

Medical—Emergent Care and Surgery

d. A medical emergency allows an injured worker the right to obtain treatment without undergoing the delay inherent in notifying the employer and awaiting approval. However, once the emergency has ended, the employee must give notice to the employer of the need for continuing care. *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the totality of the evidence established that the Claimant's need for low back surgery on March 10, 2018, arose as a result of a substantial worsening of condition after her fall on March 6, 2018. This required her to seek emergency medical care at UC Health Boulder Community Hospital and undergo fusion surgery. As further found, there was no persuasive evidence in the record that

the Claimant demanded a fusion surgery or that the Claimant's hospitalization at UC Health Boulder Community Hospital was the result of anything other than the need for emergency surgery. The persuasive medical records established a progression in work-related symptoms requiring her to undergo a fusion at L4/L5 On March 10, 2018, following her debilitating fall on March 6, 2018.

Burden of Proof

e. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). When a respondent seeks to terminate or suspend temporary benefits, however, the respondent bears the buden of proof by preponderant evidence. The burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Respondents sustained their burden insofar as benefits should be suspended from February 5, 2018, through March 5, 2018. Respondents, however **failed** to sustain their burden after the worsening of condition on March 6, 2018.

f. The Claimant has sustained her burden with respect to medical treatment for her work-related injuries. Indeed, the GAL admits for medical benefits. Further, the Claimant has proven that the treatment and surgery by Dr. Rajpal was of an emergent nature and, thus, the liability of Respondents although outside the chain of authorized referrals.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents having failed to establish entitlement to suspend temporary disability benefits after March 6, 2018, the General Admission, dated February 2, 2018, remains in full force and effect with respect to this time period.

B. Respondents may suspend temporary disability benefits from February 5, 2018, through March 5, 2018 and to this extent the General Admission is modified accordingly.

C. Respondents shall pay the costs of all medical care and treatment, including the emergency care and surgery by Sharad Rajpal, M.D., causally related to the admitted injury of January 20, 2018, subject to the Division of Workers Compensation Medical Fee Schedule.

D. Any and all issues not determined her are reserved for future decision,

DATED this 8th day of February 2019.

ISSUE

- Whether Claimant has overcome by clear and convincing evidence the Division Independent Medical Examination (DIME) opinion of Dr. Stephen Lindenbaum that Claimant sustained 0% impairment because of his work injury.

FINDINGS OF FACT

1. On March 2, 2017, Claimant and a co-worker had a dispute regarding paperwork that Claimant was advised to sign in order to complete his job duties. At the time of the incident, Claimant was 79 years old and had worked for Employer for a lengthy period as both a maintenance worker and a tax preparer.

2. During the dispute, Claimant's co-worker grabbed him by the collar of his shirt, spun him around and pushed him out a door where he fell to the ground and landed on his hands and knees. A witness called the local police department and officers responded to the incident. Claimant notified his maintenance supervisor of the incident. On March 3, 2017, Claimant's supervisor took Claimant to Concentra to initiate medical treatment for any injuries.

3. Claimant has a history of neck pain, medical treatment, and surgery. In approximately 2000, Claimant began to develop numbness in his neck. These symptoms eventually progressed to the point where Claimant began to lose function in his left arm. Claimant ultimately underwent a multi-level cervical fusion procedure. In 2006, Claimant was involved in a motor vehicle accident that required him to undergo a cervical MRI, but no medical treatment.

4. On March 3, 2017, Claimant presented to Concentra for an initial evaluation of his March 2, 2017 injury. His provider assessed a strain of his neck muscles and anterolisthesis.

5. Respondents retained orthopedic surgeon Dr. William Ciccone to perform an Independent Medical Evaluation (RIME) on October 18, 2017. Dr. Ciccone opined Claimant sustained a minor sprain/strain of the cervical spine because of his March 2, 2017 injury. Dr. Ciccone agreed with Claimant's surgeon, Dr. Ghiselli, that no need for surgical intervention related to the work injury. Dr. Ciccone noted Claimant's MRIs showed no evidence of an acute injury and opined that Claimant's continuing symptoms related to progressive cervical spine pathology and not to the work accident.

6. Claimant received conservative medical treatment at Concentra until January 30, 2018, when Dr. Amanda Cava placed him at maximum medical improvement

(MMI) with no permanent impairment, no medical maintenance, and no permanent work restrictions.

7. Claimant applied for a Division IME in response to Dr. Cava's MMI report. Dr. Stephen Lindenbaum performed the DIME on May 25, 2018. Dr. Lindenbaum agreed with Dr. Cava's January 30, 2018 MMI date and 0% impairment rating.

8. Dr. Lindenbaum evaluated Claimant and noted his nerve studies were negative for radiculopathy and that Claimant's symptoms were myofascial. Dr. Lindenbarum ultimately determined that the findings then seen in Claimant's cervical spine related to the effects of a long fusion with increased motion and stress at the levels above and below the prior fusion. Dr. Lindenbaum further opined the C6-C7 pseudoarthrosis was not related to Claimant's March 2, 2017 injury because there was no evidence of any changes in the plate positioning and it was very unlikely the pseudoarthrosis would relate to the work injury without some associated abnormalities seen on the imaging studies. In determining Claimant had a 0% impairment rating, Dr. Lindenbaum reasoned that there was no evidence of any significant structural abnormality related to the work accident and that any loss of range of motion was likely related to the prior cervical fusion. The ALJ finds Dr. Lindenbaum's opinions to be credible and persuasive and notes they are supported by the opinions of Claimant's treating providers. The ALJ finds Dr. Lindenbaum appropriately used his discretion as the DIME in determining Claimant was at MMI with 0% impairment related to his work injury.

9. Claimant testified at hearing regarding the events of his injury and his prior cervical fusion. He testified that following the injury he was no longer able to ride his motorcycle across country and that he had not ridden his motorcycle since the March 2, 2017 injury. Claimant testified that prior to the March 2, 2017 injury he had no limitations in his range of motion following his cervical neck fusion. Claimant testified that after being placed at MMI he has had tingling in his right arm, but has not had pain. Claimant testified he has returned to his regular job duties with Employer and can do everything he used to do prior to the March 2, 2017 accident, except that he can no longer replace ceiling tiles because he cannot look straight upwards.

10. Dr. Jack Rook testified at hearing on behalf of Claimant. He testified that in his opinion, Dr. Lindenbaum inappropriately provided Claimant a 0% impairment rating because claimant had 6 or more months of pain and rigidity that qualified him for an impairment rating under Table 53 of the *America Medical Association Guidelines to the Evaluation of Permanent Impairment, 3rd Ed.* Dr. Rook, however, had not reviewed the medical record and was not aware of material facts, such as Claimant having MRIs that preexisted the March 2, 2017 injury. The ALJ finds that Dr. Rook's testimony and opinions are not persuasive.

11. The ALJ finds that Claimant's testimony and the testimony and medical opinions of Dr. Rook do not amount to clear and convincing evidence to overcome the DIME of Dr. Lindenbaum.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

General Legal Principles

The purpose of the Workers' Compensation Act of Colorado (Act), sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Claimant Failed to Present Clear and Convincing Evidence to Overcome the Division Independent Medical Examination (DIME) Opinion of Dr. Stephen Lindenbaum that Claimant Sustained 0% Impairment because of His Work Injury

A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial ClaimAppeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAP, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAP, Apr. 16, 2008).

A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v.Monte Vista Head Start, Inc.*, W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004); see *Shultz v. Anheuser Busch, Inc.*, W.C. No. 4-380-560 (ICAP, Nov. 17, 2000).

As found, Claimant failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Lindenbaum that Claimant sustained a 0% whole person impairment as a result of his March 2, 201 admitted work injury. Claimant failed to demonstrate that Dr. Lindenbaum improperly applied the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised) (AMA Guides*) or otherwise erred in assigning a 0% impairment rating. After reviewing Claimant's medical records, Dr. Lindenbaum ultimately determined that the findings now seen in Claimant's cervical spine are related to the effects of a long fusion with increased motion and stress at the levels above and below the prior fusion. Dr. Lindenbaum further opined the C6-C7 pseudoarthrosis was not related to claimant's March 2, 2017 injury because there was no evidence of any changes in the plate positioning and it was very unlikely the pseudoarthrosis would be related to the work injury without some associated abnormalities seen on the imaging studies. In determining Claimant had a 0% impairment rating, Dr. Lindenbaum reasoned that there was no evidence of any significant structural abnormality related to the work accident and that any range of motion loss was likely related to the prior cervical fusion. Although Claimant argues that Dr. Lindenbaum's determination is incredible, Dr. Lindenbaum properly applied the *AMA Guides* and exercised his discretion in assigning a 0% impairment rating because of the March 2, 2017 injury. Accordingly, Claimant has failed to produce clear and convincing evidence that Dr. Lindenbaum's impairment determination is incorrect.

ORDER

IT IS, THEREFORE, ORDERED THAT:

1. Claimant failed to overcome the Division IME of Dr. Stephen Lindenbaum by clear and convincing evidence. Claimant sustained 0% impairment from his March 2, 2017 work injury.

DATED this 8th day of February 2019.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-067-453-002

ISSUES

- Whether Claimant has proven by a preponderance of the evidence that the recommended four level cervical fusion from C3-7 is reasonable, necessary, and causally related to his admitted industrial injury.

- Whether Claimant has proven by a preponderance of the evidence that the recommended ankle arthroscopy, Brostrom procedure, and repair of peroneal tendons surgery is reasonable, necessary, and causally related to his admitted industrial injury.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. On January 17, 2018, Claimant suffered an admitted injury to the left ankle, left shoulder and cervical spine. Claimant testified that he fell to the ground landing on his left shoulder. Claimant testified that he tapped his head when he fell, but his medical records did not support that testimony.

2. On the day of the fall, Claimant presented to North Suburban Medical Center with medial and lateral left ankle pain after a fall at work. A radiologist read his left ankle x-ray as normal. Claimant did not report head trauma or neck pain.

3. Also on the date of the injury, Claimant had an initial evaluation with ATP Dr. Matthew Lugliani. Claimant reported ankle pain and an inability to bear weight. Again, he reported no head trauma or neck pain. Claimant filled out a pain diagram on whic documents the sole location of pain as the left ankle. Yet at hearing, Claimant testified that after he fell, his neck was immediately sore.

4. On January 22, 2018, Claimant reported the onset of shoulder pain. A pain diagram Claimant filled out on this day documented symptoms in his left shoulder along with his left ankle. Claimant noted no neck symptoms. A January 30, 2018 pain diagram documented the same symptoms.

5. On February 16, 2018, Claimant reported symptoms radiating down his left arm, but still no neck pain or symptoms. However, Claimant testified the numbing down his arm started a week after the accident.

6. By February 21, 2018, a month after the accident, Claimant began reporting "persistent left-sided neck pain." At hearing, Claimant testified that sometime in February, "like the 21st," he informed the doctor his neck was sore and he was having

headaches. Dr. Lugliani referred Claimant to Dr. Pehler for his neck, Dr. Myers for his ankle, and Dr. Davis for his shoulder.

7. By March 28, 2018 Claimant's symptoms expanded to include aching in his head and stabbing pain at the back of his neck, as documented Claimant's pain diagram.

8. Dr. Lugliani referred Claimant to pain specialist Dr. Lesnak for treatment and an EMG.

9. On April 6, 2018, Dr. Lesnak saw Claimant. Dr. Lesnak noted diffuse complaints through the neck, scapula, shoulder and arm. Dr. Lesnak noted a history of bipolar manic depression. On physical exam, Claimant demonstrated giveway weakness in his left shoulder and significant guarding to any attempt at examination. Claimant had decreased sensation throughout his arm in a non-dermatomal distribution. Claimant demonstrated diffuse tenderness with gentle brushing on the skin on his neck, but no distinct trigger points or spasms. Overall, the findings were nonphysiologic. Dr. Lesnak noted that Claimant had no "real clear objective findings to support his complaints." Dr. Lesnak noted an extremely high level of somatic pain complaints, which "strongly suggests an underlying somatic disorder. Patients with these types of diagnoses frequently embellish/exaggerate their symptomology and their subjective complaints are commonly unreliable at best." Thus, Dr. Lesnak recommended that any medical diagnoses be based solely on reproducible objective findings, and not his complaints. Dr. Lesnak recommended moving forward with the EMG to confirm the diagnosis.

10. As part of his exam, Dr. Lesnak performed a Comprehensive Outcome Assessment, which includes a psychological assessment. Claimant's results placed him in the "distressed depressive" category, which means, "there are significant psychological factors that are influencing the patient's symptoms, recovery, and perceived function at this point in time."

11. On April 16, 2018, Dr. Lesnak performed the EMG. The EMG revealed no abnormalities of the left upper extremity, neck or scapular region. This finding concerned Dr. Lesnak, who noted no "reproducible objective findings to suggest any symptomatic cervical spine pathology." His complaints are "dramatically out of proportion to what one would expect given the mechanism of his incident." Dr. Lesnak recommended moving forward with the left shoulder MRI, and basing further recommendations off those results. Dr. Lesnak did not prescribe opioid pain medications.

12. Claimant went to the ER reporting terrible pain. Dr. Sheldon Goldberg, the attending physician at the hospital, put Claimant on a "cocktail" of painkillers. Dr. Goldberg did not perform any psychological evaluation.

13. On April 18, 2018, Dr. Lugliani performed a Comprehensive Outcome Assessment, which included a psychological assessment. Claimant's results placed him in the "distressed depressive" category, which means, "There could be significant psychological factors that could interfere with recovery." Dr. Lugliani believed this was preexisting and not related to the work injury.

14. At a follow-up on April 25, 2018, Dr. Lugliani noted that Claimant had elected to move to a different pain specialist, Dr. Goldberg, contrary to their policy, so he released Claimant from his care.

15. Dr. Stuart Myers treated Claimant's ankle. By April 9, 2018, Dr. Myers stated he had expected Claimant to be at MMI for his ankle by now, but "things seem to be progressing a bit more slowly than I initially anticipated." Dr. Myers ordered an ankle MRI that revealed intra-articular pathology. Dr. Myers recommended an ankle injection. The injection provided no benefit. Accordingly, Dr. Myers recommended an ankle arthroscopy, Brostrom, and peroneal tendon debridement repair of tendon.

16. By May 15, 2018, Claimant reported a "limited ability to do standing and walking." At hearing, Claimant testified that Dr. Myers gave him a boot for his ankle that he "pretty much wears all the time." On surveillance taken over six different days, Claimant is not wearing a protective boot.

17. At hearing, Claimant testified that he has difficulty going up steps, and has to gauge how much room he has before squaring up and stepping up. He further testified that if he is approaching a step he leads with his right foot, since his left foot is continuing to have issues. However, surveillance footage of Claimant walking while talking on a cell phone reveals no abnormal hesitation while Claimant walks up a curb, leading with his injured left foot.

18. Claimant testified that his ankle has even affected how he gets in and out of the car. Video surveillance shows Claimant getting into and out of his truck repeatedly with no obvious issue, including specifically pushing off his left injured ankle while getting into his pickup truck.

19. Dr. Stephen Pehler treated Claimant's cervical spine. Dr. Pehler noted that Claimant had "a relatively atypical nature of his presentation." Dr. Pehler cited the "fairly perplexing and concerning clinical presentation," with some symptoms "consistent with progressive spinal cord and nerve root compression . . . and some other signs and symptoms that do not match with this particular pathology."

20. Nonetheless, on May 25, 2018 Dr. Pehler recommended a C3-C7 anterior and posterior cervical decompression and fusion. Dr. Pehler noted "this is obviously an extensive undertaking," and Claimant will "likely have long-term pain and disability following this operation." Dr. Pehler opined that it would be "a fairly debilitating operation for the patient to recover from," and that he would not likely return to his work as a mechanic. Dr. Pehler further opined that given Claimant's pain symptoms, "recovery from this procedure is questionable at best.

21. Claimant testified that he needs the cervical fusion to be able to function, as his current status "is not functioning." He agreed that his current condition is so bad that he is willing to take the risk with some of the functionality issues he may have after the fusion. Dr. Castro noted his concern for performing the 4-level fusion when Claimant was functioning pretty well while washing his car and in the surveillance videos. The

surveillance shows Claimant washing his truck, using a soap brush to soap the vehicle, including lifting his injured left arm above shoulder level to remove and replace his hat with ease, and applying rigorous force while soaping his truck with a brush, using his left shoulder and neck, all with no obvious dysfunction.

22. Claimant testified at times his neck hurts to move, and specifically when looking down or turning in both directions, and that his neck symptoms have been the same for the last three to four months. The surveillance shows Claimant looking down and to the left while talking to the mail carrier, with no apparent issue. The surveillance also shows Claimant bending his head straight down without any apparent issue.

23. Claimant testified he can move his head towards his shoulder, but not all the way, and that he experiences pain like "a red-hot poker getting stuck" in him when he moves his head towards his shoulder. Dr. Castro agreed that the action of pinning a phone to your shoulder with your head is not something an individual who requires a four-level fusion would like to do, as it will bring on pain. Yet on surveillance, Claimant pins his phone against his left shoulder with his head, while he steps into his truck, with no apparent issue.

24. Claimant testified that if he is driving and has to look left and right at a stop sign, he can turn his head to a point but then has to roll his body. However, surveillance documents Claimant moving his head side to side repeatedly and with ease while driving his truck.

25. Dr. Davis is treating Claimant's shoulder. He recommended a shoulder surgery, which Insurer has authorized. However, Dr. Davis is refusing to go forward with the shoulder surgery until the neck surgery is performed. Dr. Pehler opined that the shoulder surgery could move forward before any neck surgery. Dr. Castro agreed, and stated that the shoulder may be the underlying cause of his neck issues.

Dr. Bryan Andrew Castro

26. Dr. Castro testified as a level II accredited, board certified orthopedic spine surgeon who performs surgery four to six times a week.

27. Dr. Castro testified that the recommended four-level fusion would not benefit Claimant. The surgery is typically performed for major trauma, fractures, spinal cord injury, and tumors.

28. In assessing whether to perform a four-level fusion, Dr. Castro testified that you look for a clear dermatomal pattern of persistent radiculopathy that can be fixed. Although Claimant had complaints of pain, his normal EMG and strength findings on physical exam do not support a finding of significant cervical radiculopathy. Claimant had migratory patterns that would not predict a good result. Claimant's MRI also did not match the dermatomal pattern. If the MRI results were causing radiculopathy, it would be on the thumb side, and not on the pinky side that Claimant is reporting. The pinky

side nerve is located at C8, which was patent on the MRI, with nerve channels open with no compressing.

29. Dr. Castro testified that this surgery would result in long-term pain and disability. He testified that the risks associated with this surgery are significant, including dysphagia, infection, permanent loss of range of motion, and particularly in Claimant's case fusion failure resulting in the need for additional operations. He stated that when the ramifications of a surgery are so high, it is important that you can determine the patient will be predictably better after the surgery. The ramifications for this surgery increase because it involves four levels. Dr. Castro explained that the fusion rate for a four-level fusion is in the low 40th percentile. This healing rate is before factoring Claimant's nicotine usage (chewing tobacco), which inhibits bone healing.

30. Dr. Castro testified that Dr. Pehler's opinion that the surgery is needed to ameliorate myelopathy is not supported by the actual findings for Claimant. Myelopathy spinal cord compression results in very specific findings, including balance problems, gait disturbances, hand dexterity changes, and a very unique set of reflexes that is consistent with myelopathy. Dr. Castro testified that Claimant did not have these physical findings as documented on surveillance, nor did he have the cardinal reflex findings. The surveillance does not support what any of the providers were finding on physical examination, including himself. Dr. Rook also testified that he did not find myelopathic symptoms on his physical examination. Nor did the neck MRI reveal any injury to the spinal cord.

31. Dr. Castro testified that in the workers' compensation setting the concern is not just pain amelioration but also functional improvement. Dr. Castro stated that this surgery would not be of benefit, and instead would cause a "tremendous functional worsening of his condition."

Dr. Robert Messenbaugh

32. Dr. Messenbaugh testified as a board certified, level II accredited orthopedic physician.

33. Dr. Messenbaugh testified that Claimant suffered an ankle sprain and has an MRI that shows a tear of the anterior talofibular ligament (ATFL). Dr. Messenbaugh noted that Dr. Myers' recommend surgery is for documented instability of the ankle.

34. Dr. Messenbaugh opined that the surgery was not indicated given the lack of documented instability. He noted that stress tests used to assess instability were not performed. He further noted that the surveillance videos revealed no instability or reluctance to put weight on his lower extremity. Dr. Myer's own physical exams do not document instability, as no stability physical examination testing was done given Claimant's discomfort. Dr. Messenbaugh agreed that he could not even stress Claimant's ankle sufficiently to determine whether it was unstable or not.

35. Dr. Messenbaugh physically examined Claimant, specifically looking for findings consistent with his ATFL tear. He did not find tenderness consistent with the ATFL tear, and instead found tenderness in a separate part of the ankle where the peroneal tendons pass. Since the ATFL area was not tender, he expressed concern whether a repair of that ligament would serve any good for Claimant. Meanwhile, peroneal tendinosis, which may explain Claimant's symptoms, could be caused by Claimant's age and obesity.

36. On cross, Dr. Messenbaugh agreed that Claimant stating that his ankle gives way, if the treating physician believed him, could be evidence of instability. However, the surveillance taken over six days documents Claimant walking, getting into his vehicle, and stepping up and down curbs, and shows no evidence of instability or issue.

Dr. Jack Rook

37. Dr. Jack Rook testified as a board certified physical medicine and rehabilitation level II accredited expert. Dr. Rook opined that Claimant's industrial injury caused the need for the surgeries recommended by Drs. Pehler and Myers.

38. When Dr. Rook saw Claimant for an examination, Claimant favored his left leg while walking and held his left arm in a protective manner, which is what Dr. Rook would expect with a torn ankle ligament and severe shoulder pain/pathology. Yet surveillance video documents Claimant walking without apparent limp or protective manner towards his left arm, and in fact hops down a curb onto his injured left ankle with no issue. Surveillance also documents Claimant driving himself to a physician appointment with his partner in the passenger's seat, his partner tossing him his shoulder sling prior to entering the appointment, and then removing it after the appointment, before getting back in the car to drive. Dr. Rook testified that he did not view the surveillance.

39. Dr. Rook testified that Claimant reported severe neck pain, ongoing and constant since the accident occurred, particularly when looking down. However, Claimant's neck pain began roughly a month after the accident.

40. Dr. Rook opined that the recommended ankle surgery would improve Claimant's weight bearing while walking or standing. However, surveillance documents Claimant standing, bearing his full weight on his left leg, with his right leg crossed, with no apparent issue.

41. Dr. Rook testified that Claimant reported to him a poor level of functional ability. The consideration for performing the four-level fusion is that his current function is so poor that it is worth considering this serious surgery. Surveillance footage of Claimant's functional ability contradicts Dr. Rook's opinion.

42. The ALJ does not credit the testimony of Dr. Rook. Dr. Rook's analysis is based on faulty information. Dr. Rook recommended the surgeries given the severe dysfunction Claimant reported. Dr. Rook opined that the potential benefit to improve

Claimant's function, since Claimant's condition is so poor, outweigh the risks associated with the four-level fusion. The surveillance completely contradicts the level of functional deficit Claimant alleges and reports to Dr. Rook and the other treating physicians. As Dr. Rook testified that he did not review this surveillance footage, his opinion is not persuasive.

43. Surveillance showing what Claimant is able to do fails to support his alleged disabilities and his reports to his treating physicians. Claimant's medical records document nonphysiologic complaints, unusual findings that do not match the diagnostics, and subjective complaints out of proportion to the findings. Therefore, the opinions of the physicians who viewed Claimant's surveillance, Drs. Castro and Messenbaugh, are more persuasive.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, this ALJ draws the following conclusions of law:

GENERALLY

In addition to determining the sufficiency of the evidence presented, the ALJ evaluates the credibility and probative value of conflicting evidence, including competing experts and inconsistencies in a particular witness' testimony. *Johnson v. ICAO*, 973 P.2d 624, 626 (Colo. App. 1997).

The ALJ does not have to reject explicitly every theory found to be unpersuasive. Nor does the ALJ have to make findings about every piece of evidence. *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000). An ALJ may even reject uncontroverted evidence. *Mosley v. ICAO*, 78 P.3d 1150, 1153 (Colo. App. 2003).

For credibility determinations, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

MEDICAL BENEFITS

Respondents are liable for authorized medical treatment that is reasonably necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S; *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994).

Whether medical treatment is reasonable and necessary is for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002); *Wal-Mart Stores, Inc. v. Industrial Claims Office*, 989 P.2d 251 (Colo. App. 1999). The

claimant bears the burden of proof to establish the right to specific medical benefits. *Wal-Mart Stores, Inc. v. Industrial Claims Office, supra*.

The ALJ finds that, more likely than not, the recommended surgeries: 1) fusion from C3-C7; and 2) ankle arthroscopy, Brostrom procedure, and repair of peroneal tendons surgery, are not reasonable, necessary or related to the industrial injury. The ALJ is highly concerned about the level of disability Claimant demonstrated at hearing, testified to and reported to his treating physicians, versus his demonstrated functionality in the surveillance video when he was not aware he was being observed.

Each physician acknowledges that a 4-level fusion is a significant undertaking with significant risks. However, it may be necessary for certain severe injuries. Dr. Pehler, the spine surgeon who recommended the fusion, did so in part based on findings of myelopathy. Yet the surveillance shows none of the balance issues or gait disturbances expected if Claimant's cord was compressed. Dr. Castro noted Claimant did not present with the Cardinal reflex. Even Claimant's own IME Dr. Rook agreed that on physical exam Claimant showed no myelopathic findings. Dr. Pehler himself expressed significant reservation throughout his treatment of Claimant, noting the atypical findings throughout. Oddly, Dr. Pehler has now agreed that Claimant's shoulder surgery can proceed prior to the neck surgery. This seems contradictory to Dr. Pehler finding that the neck surgery is truly needed, since Claimant's neck must be manipulated in order to perform the shoulder surgery, and if Claimant truly had a compressed cord, it is unlikely he would be comfortable allowing the shoulder to proceed first. On the contrary, it appears that Dr. Pehler's opinion may be more in line with Dr. Castro's, in that the shoulder may be the true cause of Claimant's symptoms, if any.

Claimant's subjective complaints serve as the base for Dr. Myers and Dr. Pehler's surgical recommendation. The reasonableness of these surgical recommendations depends on the veracity of Claimant's statements to them. Given the evidence presented at hearing, Claimant's subjective complaints are not credible. At hearing Claimant appeared very debilitated, limping and demonstrating pain behaviors. He also testified to his inability to function, including experiencing "red-hot pokers" of pain in his neck with movement, and the need to constantly wear a boot on his left ankle. This is consistent with what he reported to his treating physicians. For the ankle, Claimant reported to Dr. Myers that he has a limited ability to stand/walk. Dr. Myers could not even perform a physical examination of the ankle given pain complaints.

Dr. Pehler opined that the only option given Claimant's complaints is a 4-level fusion. At hearing, when confronted with the likelihood of permanent post-surgical disability and pain, Claimant testified that he still wanted to proceed with the surgery since his current level of function was so bad.

The surveillance contradicts the level of disability Claimant reports. In viewing the surveillance, it is not obvious that Claimant has any injury at all, whether to his left ankle, left shoulder, or neck. Claimant carries himself with the ease expected of an individual his size, and he not once winces in pain or exhibits the hesitation or protective behaviors

one would expect given his alleged injuries. Claimant casually leans his full weight on his left ankle. He walks with ease, hopping up and down curbs. Claimant moves his neck repeatedly and even while applying force while soaping his vehicle, and yet exhibits no pain reactions or limitations. Even the left shoulder, which is admitted for surgery and not in dispute at this hearing, shows no obvious sign of injury, with Claimant opening his door, and lifting his arm above shoulder height without issue. In totality, the surveillance videos taken on 4/18, 5/16, 5/26, 5/31 and 6/7 contradict the disability and lack of function Claimant alleges. Claimant argued at hearing that he may have been having a good day during the surveillance. Yet the surveillance spanned six days from April 18, 2018 to June 7, 2018, and in no instance did Claimant appear disabled to the extent he is claiming.

The ALJ finds psychological issues and/or somatic disorder to be the most likely explanation for the discrepancy between Claimant's purported disability and what he demonstrates on surveillance. Unreliable subjective complaints would also explain the "atypical, unusual" findings from each of Claimant's treating physicians, including Drs. Pehler and Myers. Spine surgeon Dr. Pehler expressed concern throughout, with some symptoms consistent with cord compression and others not consistent. These physicians relied on the truthfulness of Claimant's complaints for their surgical recommendations. They do not have the benefit of viewing the surveillance and the treating records of the other physicians, which also document nonphysiologic and unusual findings. Thus, while the ALJ does not question their credentials, their opinions are undermined by their reliance on Claimant's unreliable complaints.

This ALJ gives significant weight to the opinions of Dr. Lesnak. He was a pain management treating physician, and the only physician to perform psychological testing. Claimant is bipolar manic-depressive. The psychological testing revealed that Claimant was "depressed distressed," with significant concern for somatic disorder and unreliable complaints. Because of this, Dr. Lesnak recommended relying on objective evidence, and requested an EMG. Once the EMG returned normal, Dr. Lesnak refused to prescribe opioids pending additional diagnostics for the shoulder. Once Dr. Lesnak refused to prescribe opioids, Claimant began seeing Dr. Goldberg (who did prescribe opioids *without* psychological testing), resulting in Claimant's discharge from Dr. Lugliani/Dr. Lesnak's care for noncompliance. Claimant has been on opioids since the beginning of his treatment, and sought other care as soon as he was denied opioids, yet no other physicians have performed a psychological assessment, particularly considering his baseline bipolar condition.

The ALJ finds that the recommended ankle arthroscopy, Brostrom procedure, and repair of peroneal tendons surgery is not reasonable, necessary or related to the industrial injury, as it is based on Claimant's subjective complaints and not objective evidence. Claimant's complaints of ankle instability are not credible and are not supported by the surveillance. Claimant's ankle pain complaints migrate and are not consistent, as documented by the physical exams of Drs. Messenbaugh, Rook and Myers. Also, as Dr. Messenbaugh testified, there is a lack of objective evidence documenting instability, which is the indicator for this surgery.

The ALJ also finds that the recommended cervical fusion from C3-7 is not reasonable, necessary or related to the industrial injury. The physician who recommended this surgery, Dr. Pehler, shows significant concern throughout with Claimant's atypical findings. Dr. Pehler states that Claimant will be disabled and with permanent pain, yet continues to recommend the surgery given Claimant's complaints. The ALJ credits Dr. Castro's testimony that Claimant's functioning would be far worse after the surgery than his current condition. Dr. Castro's testimony that Claimant's complaints have been nonphysiologic and inconsistent find support in the medical records, including the normal EMG and cervical MRI with degenerative pathology that would tie to different dermatomal complaints than what Claimant is alleging. Ultimately, Claimant at hearing appeared hobbled, in pain, and disabled. Yet the Claimant on surveillance went about his daily life with no obvious injury or disability. Given Claimant's demonstrated ability and the lack of objective findings in the medical records, the 4-level fusion is not reasonable, necessary or related.

ORDER

It is therefore ordered that:

1. Claimant's request for a cervical fusion from C3-7 is denied and dismissed.

2. Claimant's request for an ankle arthroscopy, Brostrom procedure, and repair of peroneal tendons is denied and dismissed.

3. Any issues not resolved in this order are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she sustained a compensable right shoulder injury during the course and scope of her employment with Employer on June 21, 2018.

2. Whether Claimant has demonstrated by a preponderance of the evidence that she is entitled to receive authorized medical treatment that is reasonable and necessary to cure or relieve the effects of her industrial injury.

3. Whether Claimant has proven by a preponderance of the evidence that Respondents failed to timely provide a list of at least four designated physicians in compliance with §8-43-404(5)(a)(I)(A), C.R.S. and she is thus permitted to select a treating physician.

STIPULATIONS

The parties agreed to the following:

1. Claimant earned an Average Weekly Wage (AWW) of $401.66.

2. If the claim is compensable, Claimant is entitled to receive Temporary Partial Disability (TPD) benefits for the period June 22, 2018 through November 23, 2018.

FINDINGS OF FACT

1. Claimant worked for Employer as a Cashier. She testified that on June 21, 2018 she was helping another cashier unload a customer's cart. While lifting a six-pound package of hamburger patties across her body to place on a conveyor belt, Claimant suffered a burning sensation in her right shoulder.

2. Claimant reported her injury to her supervisor but did not initially seek medical care. Although Claimant had not received work restrictions Employer accommodated her by modifying her job duties. However, when Claimant's symptoms did not resolve, she completed a First Report of Injury on June 25, 2018.

3. Employer directed Claimant to UC Health Urgent Care for medical treatment. On June 27, 2018 Claimant visited UC Health for an examination. Claimant reported that, while working for Employer six days earlier, she lifted a six-pound package of hamburger and suffered a sharp pain in her right shoulder that radiated into her right chest area. She noted sharp pain with movement, but Advil and a heating pad provided some relief. On physical examination Claimant exhibited tenderness and decreased range of motion in her right shoulder area down to her first and second right

ribs. Jocelyn Cavender, PA-C diagnosed Claimant with somatic rib dysfunction, strain of the neck muscles and strain of the right shoulder. PA-C Cavender prescribed medications and assigned work restrictions of no lifting, carrying, pushing or pulling in excess of five pounds and no overhead reaching.

4. Claimant explained that she desired to continue follow-up treatment with UC Health. However, she commented that she had a conversation with her manager and the insurance adjuster. Claimant testified that the insurance adjuster informed her the claim was denied and she would be unable to receive any additional authorized medical care. She subsequently attempted to schedule an appointment with her primary care physician but her request was initially declined because she had suffered a work injury.

5. On July 10, 2018 Insurer filed a Notice of Contest challenging Claimant's claim. The Notice of Contest specifically provided that the claim was denied because Claimant's injury was not work-related.

6. Claimant testified that, approximately one month after her injury, Employer's Human Resources (HR) person presented her with a list of doctors. The HR person told Claimant to circle the doctor she had visited for her industrial injury. Claimant noted that she signed, but did not date, the form.

7. Claimant subsequently obtained treatment from her primary care physician. On October 24, 2018 Claimant visited David Bak-Yen Leung, N.P. at Centura Orthopedics and Spine for an initial examination. She reported that while at work in late June 2018 she was trying to lift a heavy object and felt a burning sensation in her right shoulder. N.P. Leung recommended an MRI to evaluate Claimant's right shoulder pathology. He remarked that "she very likely has a biceps tendon injury but also has an exam consistent with rotator cuff injury as well."

8. On October 17, 2018 Claimant underwent an independent medical examination with Timothy S. O'Brien, M.D. Dr. O'Brien issued a report on October 31, 2018. Claimant reported that on June 21, 2018 she was unloading a customer's cart while working for Employer. She picked up a six-pound package of frozen beef and immediately experienced right shoulder pain. After considering Claimant's medical records and conducting a physical examination, Dr. O'Brien concluded that the June 21, 2018 work incident caused a "diffuse strain and sprain of the right shoulder girdle" that included the first and second right ribs. He noted that Claimant did not sustain any permanent or partial disability as a result of the work incident and does not require any additional medical treatment. Dr. O'Brien emphasized that "whatever minor injury occurred on June 21, 2018" had healed by the time of his examination. He reasoned that the mechanism of injury was "innocuous" and would not have generated sufficient energy to "result in substantial tissue breakage or yielding." Dr. O'Brien summarized that Claimant's injuries would likely have healed within four weeks of the event and her current symptoms were unrelated to the June 21, 2018 incident.

9. On November 2, 2018 Claimant underwent a right shoulder MRI. The MRI revealed a "partially healed/synovialized superior labral tear" and "short segment insertional tendinosis and low-grade interstitial split tearing" of the anterior distal rotator cuff tuberosity attachment.

10. On November 15, 2018 Dr. O'Brien issued a Supplemental Report after reviewing additional medical records and the November 2, 2018 MRI. He concluded that Claimant's right shoulder MRI was normal for her age. He reiterated that Claimant's mechanism of injury was not traumatic enough to cause "substantial tissue breakage or yielding." Dr. O'Brien summarized that Claimant's continuing pain symptoms were not organically based.

11. On November 21, 2018 Claimant returned to her primary care physician and visited orthopedic surgeon Landon Richard Fine, D.O. for continuing right shoulder symptoms. After conducting a physical examination and reviewing Claimant's November 7, 2018 right shoulder MRI, Dr. Fine diagnosed Claimant with the following: (1) a SLAP tear; (2) impingement with subacromial bursitis; and (3) a small interstitial supraspinatus rotator cuff tear. He discussed treatment options with Claimant that included possible surgery. Dr. Fine specifically noted that the arthroscopic surgery would consist of "subacromial decompressions of biceps tear pieces plus or minus rotator cuff repair." However, Claimant chose to continue conservative treatment that included medications, physical therapy and activity modifications.

12. On January 8, 2019 the partiers conducted the post-hearing evidentiary deposition of Dr. O'Brien. Dr. O'Brien maintained that Claimant's June 21, 2018 work incident did not cause a disability or require medical treatment. He specifically explained that lifting six pounds of beef from a shopping cart to a conveyor belt lacked sufficient force to cause a labral tear in Claimant's right shoulder. Dr. O'Brien detailed that lifting hamburger meat from a cart would not generate enough energy to "aggravate or accelerate a preexisting tear beyond its normal rate of progression."

13. Dr. O'Brien determined that Claimant suffered a diffuse strain and back sprain of the right shoulder girdle that included the first two ribs on the right side. He remarked that Claimant's symptoms were not the result of "substantial tissue breakage or yielding, but rather a fairly deconditioned musculoskeletal system that was performing a very innocuous activity." Claimant did not require medical treatment because her symptoms were "self-healing and self-limited." Dr. O'Brien also noted that Claimant's right shoulder MRI was normal for a 41 year-old individual.

14. Claimant has established that it is more probably true than not that she sustained a compensable right shoulder injury during the course and scope of her employment with Employer on June 21, 2018. Initially, Claimant explained that on June 21, 2018 she suffered right shoulder pain while lifting a six-pound package of hamburger meat from a customer's cart to a conveyor belt when performing her job duties. On June 27, 2018 Claimant visited UC Health and reported that, while working for Employer six days earlier, she lifted a six-pound bag of hamburger and suffered a sharp pain in her right shoulder that radiated into her right chest area. PA-C Cavender

diagnosed Claimant with somatic rib dysfunction, strain of the neck muscles and strain of the right shoulder. By October 24, 2018 Claimant visited personal provider N.P. Leung for an examination. N.P. Leung recommended a right shoulder MRI and remarked that she likely had a biceps tendon injury and an examination consistent with rotator cuff injury. The MRI revealed a partially healed labral tear. Moreover, after conducting a physical examination and reviewing the right shoulder MRI, orthopedic surgeon Dr. Fine diagnosed Claimant with the following: (1) a SLAP tear; (2) impingement with subacromial bursitis; and (3) a small interstitial supraspinatus rotator cuff tear. Finally, Dr. O'Brien determined that the June 21, 2018 work incident caused a "diffuse strain and sprain of the right shoulder girdle" that included the first and second right ribs. He noted that Claimant did not sustain any permanent or partial disability as a result of the work incident and "whatever minor injury occurred on June 21, 2018" had healed by the time of his examination. Accordingly, the bulk of the persuasive medical evidence reflects that Claimant's work activities aggravated, accelerated or combined with her pre-existing condition to produce a need for medical treatment. Claimant thus suffered a compensable right shoulder injury on June 21, 2018.

15. Claimant has established that it is more probably true than not that she is entitled to receive reasonable, necessary and causally related medical treatment for her June 21, 2018 industrial injuries. The record reflects that Claimant is seeking additional medical treatment for her right shoulder. Respondents are not challenging a specific medical benefit but instead assert that Claimant's current symptoms are not related to the injuries and seek a denial of additional medical treatment. Relying on the opinion of Dr. O'Brien, Respondents assert that Claimant is not entitled to receive any additional medical treatment because her injuries have resolved.

16. Dr. O'Brien reasoned that any injuries Claimant suffered on June 21, 2018 healed prior to his October 17, 2018 independent medical examination. He specified that "whatever minor injury occurred on June 21, 2018" had healed by the time of his examination. He reasoned that the mechanism of injury was "innocuous" and would not have generated sufficient energy to "result in substantial tissue breakage or yielding." Claimant did not require medical treatment because her symptoms were "self-healing and self-limited." Dr. O'Brien summarized that Claimant's injuries would likely have healed within four weeks of the event and her current symptoms were unrelated to the June 21, 2018 incident.

17. Relying on Dr. O'Brien's analysis requires a *de facto* finding that Claimant has reached Maximum Medical Improvement (MMI) regarding the June 21, 2018 right shoulder injury. Because Claimant is entitled to medical benefits until reaching MMI, a denial of all further medical treatment necessarily reflects an implicit determination that Claimant reached MMI for the effects of his industrial injuries. However, there has been no medical determination of MMI by an Authorized Treating Physician (ATP) or Division Independent Medical Examination (DIME) physician. Furthermore, Claimant's medical care has been reasonable, necessary and related to her June 21, 2018 industrial injury. The persuasive opinions of Claimant's treating doctors also demonstrate that she requires additional medical treatment. Accordingly, Claimant is entitled to receive

continuing reasonable, necessary and related medical treatment for her June 21, 2018 work injuries.

18. Claimant has proven that it is more probably true than not that Respondents failed to timely provide a list of at least four designated physicians and she is thus permitted to select a treating physician. After Claimant reported her injury and sought medical care Employer directed her to UC Health Urgent Care for medical treatment. On June 27, 2018 Claimant visited UC Health for an examination. Claimant was diagnosed with somatic rib dysfunction, strain of the neck muscles and strain of the right shoulder. She received medications and work restrictions. Although Claimant desired to continue treatment with UC Health, the insurance adjuster informed her the claim was denied and she would be unable to receive any additional authorized medical care. Claimant credibly testified that, approximately one month after her injury, Employer's HR person presented her with a list of doctors. The HR person told Claimant to circle the doctor she had visited for her industrial injury. Claimant noted that she signed, but did not date, the form listing the doctors. Claimant subsequently obtained treatment from her primary care physicians.

19. Although Claimant reported her June 21, 2018 right shoulder injury and completed a First Report of Injury on June 25, 2018, Employer failed to provide her with a list of at least four designated providers. In fact, Claimant was simply directed to circle the provider from which she had received treatment approximately one month after her industrial injury. The right of selection thus passed to Claimant and she was permitted to choose a treating physician. Claimant chose to obtain treatment from her personal physician and associated referrals. The record reflects that the medical treatment Claimant has received through her personal physicians and associated referrals is reasonable, necessary and related to her June 21, 2018 industrial injury. Accordingly, Respondents are financially responsible for Claimant's medical treatment.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings

as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. As found, Claimant has established by a preponderance of the evidence that she sustained a compensable right shoulder injury during the course and scope of her employment with Employer on June 21, 2018. Initially, Claimant explained that on June 21, 2018 she suffered right shoulder pain while lifting a six-pound package of hamburger meat from a customer's cart to a conveyor belt when performing her job duties. On June 27, 2018 Claimant visited UC Health and reported that, while working for Employer six days earlier, she lifted a six-pound bag of hamburger and suffered a sharp pain in her right shoulder that radiated into her right chest area. PA-C Cavender diagnosed Claimant with somatic rib dysfunction, strain of the neck muscles and strain of the right shoulder. By October 24, 2018 Claimant visited personal provider N.P. Leung for an examination. N.P. Leung recommended a right shoulder MRI and remarked that she likely had a biceps tendon injury and an examination consistent with rotator cuff injury. The MRI revealed a partially healed labral tear. Moreover, after conducting a physical examination and reviewing the right shoulder MRI, orthopedic surgeon Dr. Fine diagnosed Claimant with the following: (1) a SLAP tear; (2) impingement with subacromial bursitis; and (3) a small interstitial supraspinatus rotator

cuff tear. Finally, Dr. O'Brien determined that the June 21, 2018 work incident caused a "diffuse strain and sprain of the right shoulder girdle" that included the first and second right ribs. He noted that Claimant did not sustain any permanent or partial disability as a result of the work incident and "whatever minor injury occurred on June 21, 2018" had healed by the time of his examination. Accordingly, the bulk of the persuasive medical evidence reflects that Claimant's work activities aggravated, accelerated or combined with her pre-existing condition to produce a need for medical treatment. Claimant thus suffered a compensable right shoulder injury on June 21, 2018.

Medical Benefits

7. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The claimant bears the burden of demonstrating a causal connection between his industrial injuries and the need for additional medical treatment. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

8. Section 8-42-101(1), C.R.S. requires the employer to provide medical benefits to cure or relieve the effects of the industrial injury, subject to the right to contest the reasonableness or necessity of any specific treatment. *See Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). The employer's obligation continues until the claimant reaches MMI. MMI is defined as the point in time when the claimant's condition is "stable and no further treatment is reasonably expected to improve the condition." §8-40-201(11.5), C.R.S. However, the claimant may receive medical benefits after MMI to maintain his status or prevent a deterioration of his condition. *See Grover v. Industrial Commission,* 759 P.2d 705 (Colo. 1988). Furthermore, §8-42-107(8)(b)(I) & (II), C.R.S. provide that the initial determination of MMI is to be made by an ATP. If either party disputes the ATP's MMI determination, the claimant must undergo a DIME. The statute also provides that the ALJ lacks authority to determine MMI until there has been a medical determination of MMI by an ATP or a DIME. *See Story v. Industrial Claim Appeals Office,* 910 P.2d 80 (Colo. App. 1995); *In Re Bruno*, W.C. Nos. 4-947-316-01, 4-935-813-03 (ICAP, July 31, 2015).

9. As found, Claimant has established by a preponderance of the evidence that she is entitled to receive reasonable, necessary and causally related medical treatment for her June 21, 2018 industrial injuries. The record reflects that Claimant is seeking additional medical treatment for her right shoulder. Respondents are not challenging a specific medical benefit but instead assert that Claimant's current symptoms are not related to the injuries and seek a denial of additional medical

treatment. Relying on the opinion of Dr. O'Brien, Respondents assert that Claimant is not entitled to receive any additional medical treatment because her injuries have resolved.

10. As found, Dr. O'Brien reasoned that any injuries Claimant suffered on June 21, 2018 healed prior to his October 17, 2018 independent medical examination. He specified that "whatever minor injury occurred on June 21, 2018" had healed by the time of his examination. He reasoned that the mechanism of injury was "innocuous" and would not have generated sufficient energy to "result in substantial tissue breakage or yielding." Claimant did not require medical treatment because her symptoms were "self-healing and self-limited." Dr. O'Brien summarized that Claimant's injuries would likely have healed within four weeks of the event and her current symptoms were unrelated to the June 21, 2018 incident.

11. As found, relying on Dr. O'Brien's analysis requires a *de facto* finding that Claimant has reached Maximum Medical Improvement (MMI) regarding the June 21, 2018 right shoulder injury. Because Claimant is entitled to medical benefits until reaching MMI, a denial of all further medical treatment necessarily reflects an implicit determination that Claimant reached MMI for the effects of his industrial injuries. However, there has been no medical determination of MMI by an Authorized Treating Physician (ATP) or Division Independent Medical Examination (DIME) physician. Furthermore, Claimant's medical care has been reasonable, necessary and related to her June 21, 2018 industrial injury. The persuasive opinions of Claimant's treating doctors also demonstrate that she requires additional medical treatment. Accordingly, Claimant is entitled to receive continuing reasonable, necessary and related medical treatment for her June 21, 2018 work injuries. *See Story v. Industrial Claim Appeals Office,* 910 P.2d 80 (Colo. App. 1995); *In Re Bruno*, W.C. Nos. 4-947-316-01, 4-935-813-03 (ICAP, July 31, 2015) (where the claimant had not reached MMI, ALJ's finding terminating all future medical treatment reflected an implicit determination that the claimant had reached MMI and was thus erroneous); *Davis v. Little Pub,* W.C. No. 4-947-977 (June 17, 2015).

Right of Selection

12. Section 8-43-404(5)(a), C.R.S. permits an employer or insurer to select the treating physician in the first instance. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999). However, the Colorado Workers' Compensation Act requires that respondents must provide injured workers with a list of at least four designated treatment providers. §8-43-404(5)(a)(I)(A), C.R.S. Section 8-43-404(5)(a)(I)(A), C.R.S. states that, if the employer or insurer fails to provide an injured worker with a list of at least four physicians or corporate medical providers, "the employee shall have the right to select a physician." W.C.R.P. Rule 8-2 further clarifies that once an employer is on notice that an on-the-job injury has occurred, "the employer shall provide the injured worker with a written list of designated providers." W.C.R.P. Rule 8-2(E) additionally provides that the remedy for failure to comply with the preceding requirement is that "the injured worker may select an authorized treating physician of the worker's choosing." An employer is deemed notified of an injury when

it has “some knowledge of the accompanying facts connecting the injury or illness with the employment, and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim.” *Bunch v. industrial Claim Appeals Office,* 148 P.3d 381, 383 (Colo. App. 2006).

13. As found, Claimant has proven by a preponderance of the evidence that Respondents failed to timely provide a list of at least four designated physicians and she is thus permitted to select a treating physician. After Claimant reported her injury and sought medical care Employer directed her to UC Health Urgent Care for medical treatment. On June 27, 2018 Claimant visited UC Health for an examination. Claimant was diagnosed with somatic rib dysfunction, strain of the neck muscles and strain of the right shoulder. She received medications and work restrictions. Although Claimant desired to continue treatment with UC Health, the insurance adjuster informed her the claim was denied and she would be unable to receive any additional authorized medical care. Claimant credibly testified that, approximately one month after her injury, Employer’s HR person presented her with a list of doctors. The HR person told Claimant to circle the doctor she had visited for her industrial injury. Claimant noted that she signed, but did not date, the form listing the doctors. Claimant subsequently obtained treatment from her primary care physicians.

14. As found, although Claimant reported her June 21, 2018 right shoulder injury and completed a First Report of Injury on June 25, 2018, Employer failed to provide her with a list of at least four designated providers. In fact, Claimant was simply directed to circle the provider from which she had received treatment approximately one month after her industrial injury. The right of selection thus passed to Claimant and she was permitted to choose a treating physician. Claimant chose to obtain treatment from her personal physician and associated referrals. The record reflects that the medical treatment Claimant has received through her personal physicians and associated referrals is reasonable, necessary and related to her June 21, 2018 industrial injury. Accordingly, Respondents are financially responsible for Claimant’s medical treatment.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant sustained a compensable right shoulder injury during the course and scope of her employment with Employer on June 21, 2018.

2. Claimant has received reasonable, necessary and causally related medical treatment for her June 21, 2018 industrial injuries. She is also entitled to receive continuing reasonable, necessary and causally related medical treatment for her right shoulder condition.

3. Because Respondents failed to timely provide a list of at least four designated physicians Claimant is permitted to select a treating physician.

4. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-966-735-02

ISSUES

The issues set for determination included:

(1) Did Claimant overcome the opinions of the physician who performed the DOWC Independent Medical Examination ("DIME") [John Douthit, M.D.] regarding causation and relatedness by clear and convincing evidence?

(2) If Claimant overcame the DIME's opinion, did she prove that she sustained permanent medical impairment to her low back, including the SI joint?

(3) Is Claimant entitled to *Grover* medical benefits?

PROCEDURAL STATUS

The Court issued Findings of Fact, Conclusions of Law and Order on or about December 17, 2018 (mailed on December 19, 2018). Claimant filed an Unopposed Motion for a Corrected Order on or about December 21, 2018, which was received by the undersigned on December 31, 2018. More particularly, the Motion requested the elimination of paragraph four of the previous Order. That part of the Order provided that Claimant's recovery was subject to the combined PPD/TTD limits found in § 8-42-107.5, C.R.S.[1] Claimant's Motion for a Corrected Order is granted and this Order follows.

STIPULATIONS

The parties stipulated to the following facts: (a) Claimant is at maximum medical improvement; (b) Claimant is not seeking retroactive temporary disability benefits; (c) Claimant is not challenging Dr. Douthit's extremity ratings; (d) Respondents have paid $74,544.99 in indemnity benefits to date. The Stipulations were accepted by the Court and are made part of this Order.

FINDINGS OF FACT

1. Claimant was employed as a home health LPN for Employer.

2. There was no medical evidence in the record that Claimant suffered an injury to her low back/hip or right SI joint before 2014.

[1] The ALJ notes that at the outset of the hearing when the issues to be determined were discussed, at the time the parties related the Stipulation concerning the amount of temporary benefits paid, counsel for Claimant and Respondents agreed that the question of statutory caps was an issue in the case. The parties' assent was the reason for the inclusion of § 8-42-107.5, C.R.S. in the prior Order.

3. Claimant suffered an admitted industrial injury when she was involved in a motor vehicle accident ("MVA") on November 14, 2014. She was a restrained driver, who was involved in a head-on collision with another vehicle. Claimant testified there was significant force associated with the impact and both airbags deployed in her vehicle. Claimant testified she felt pain all over after the accident, including her back and her right leg. The initial focus of her treatment was on her right leg and the tibial plateau fracture.

4. Claimant was transported by ambulance to Poudre Valley Hospital (University of Colorado Health). The EMS report and the initial documentation from University of Colorado Health documented right knee pain only.[2] Claimant complained of right knee and left foot numbness and tingling in the Emergency Department. Claimant underwent surgery (open reduction internal fixation) to repair the right tibial plateau fracture, which was performed by orthopedic surgeon Robert Baer, M.D. on November 14, 2014

5. An Employee's Report of Injury was completed on November 21, 2014 and signed by Claimant. In the injury description section, Claimant listed a right tibia plateau fracture and right lower leg to the right hip pain, which was caused by a head-on collision.

6. On December 2, 2014, Claimant was evaluated by Kevin O'Connell, M.D. In a pain diagram she completed, Claimant referenced burning in her hip and aching in her low back. Claimant testified that she advised Dr. O'Connell of pain in her low back and hip area early on when she treated with him. Dr. O'Connell's diagnosis was right tibial plateau fracture-closed. There was not a diagnosis related to the hip or low back.

7. In the physical therapy ("PT") notes authored by Jennifer Himot, PT, dated December 22, 2014, there was a reference to rib pain and reduced muscle strength in the right hip (abduction, adduction and extension). The references to reduced MMT in the right hip were reflected in PT Himot's notes through April 3, 2015.

8. Dr. O'Connell noted Claimant was making gradual progress to weight-bearing in the treatment note of January 20, 2015. Claimant reported right-sided costochondral soreness and x-rays were taken at that time. The x-rays were negative for fracture. Dr. O'Connell's record reflected claimant gradually advanced to weight-bearing. Dr. Baer noted Claimant was able to ambulate without a cane or crutch on February 11, 2015, but it was still recommended she use a cane.

9. When Claimant returned to Dr. O'Connell on March 24, 2015, it was noted she slipped in the bathroom while exiting the shower. Her right knee gave out and she impacted the right leg, as well as her right arm and shoulder. Dr. O'Connell's assessment continued to be specific to the right knee tibial plateau fracture, status post-ORIF. However, Dr. O'Connell also examined her right shoulder and right arm.

[2] Exhibit C, pp.6-11 (Exhibit 1 to Dr. Anderson-Oeser's deposition.)

10. In the six evaluations of Claimant by Dr. O'Connell which occurred between April 30, 2015 and August 28, 2015, there was no reference to low back or hip pain, although a shoulder sprain was included in Dr. O'Connell's diagnoses. Claimant underwent surgery to remove the hardware in the right knee on August 5, 2015. She continued to receive PT following that procedure.

11. On October 9, 2015, Claimant returned to Dr. O'Connell and reported right hip discomfort, which she thought was attributable to her original right knee injury. Dr. O'Connell did not list a diagnosis for the low back or hip for this visit. Claimant also reported hip/low back, as well as right leg symptoms at the November 3, 2015 appointment with Dr. O'Connell. Were documented in a pain diagram she completed. O'Connell noted Claimant there were myalgias and joint swelling present at the time of the examination.

12. Claimant testified she felt pain in her hip and SI joint once she transitioned to weight-bearing on the right leg. The ALJ found the medical records corroborated Claimant's testimony that she was not weight-bearing for a period of time and the focus of her treatment was on the right knee. Her symptoms in the low back and hip area increased as she used her leg more.

13. In a treatment note, dated December 10, 2015, Dr. O'Connell noted Claimant was experiencing more pronounced right-sided low back pain at the SI areas radiating into the right groin. The symptoms were often triggered by movements of the right hip. Dr. O'Connell's diagnoses were: tibial plateau fracture, right, closed with routine healing; labral tear of hip, degenerative; sciatica neuralgia, right. Although Dr. O'Connell initially questioned whether the back complaints were causally related to subsequent to December 2015, he made referrals for evaluation and treatment of the low back/hip. Claimant was also referred for diagnostic testing, including an MRI of the low back. The ALJ inferred this supported the conclusion Dr. O'Connell believed Claimant's low back and hip condition were related to the industrial injury.

14. Claimant was referred for an MRI of the lumbar spine on December 23, 2015. Jeremy McCue, M.D. read the films and noted a small focal right foraminal protrusion at L3-L4, contacting the exiting right L3 nerve root. The disc did not cause a significant anatomic stenosis. Mild degenerative changes with annular fissuring was also noted at L4-5 and L5-S1. The ALJ found this MRI showed objective evidence of anatomic lesions in the lumbar spine.

15. On January 12, 2016, Claimant underwent arthroscopy of the right knee, which was performed by Robert Trumper, M.D. Grade IV post-traumatic osteoarthritis was identified at that time. The ALJ inferred the traumatic osteoarthritis resulted from the MVA.

16. Dr. O'Connell continued to oversee Claimant's treatment, as she treated for symptoms in the right knee, hip, right shoulder and neck. When Claimant returned to Dr. O'Connell on January 15, 2016, additional diagnoses included neck pain,

radiculitis of the right cervical region; shoulder sprain, right; adjustment reaction; in addition to those identified in December 2015.

17. On February 10, 2016 Claimant was evaluated by Hans Coester, M.D. to whom she was referred by Dr. O'Connell. At that time, her chief complaints were listed as neck, shoulder, right arm and back pain. Dr. Coester found extension of Claimant's neck aggravated her pain, but she had no arm pain or weakness. She also had no weakness in her lower extremities. Dr. Coester noted Claimant had degenerative disc disease at multiple levels of the cervical spine. There was a small protrusion at C7-T1, without significant nerve root compression. Dr. Coester did not recommend any cervical treatment/intervention. Claimant's lumbar MRI scan showed mild degenerative disc disease at the L4-5 and L5-S1 level, but no nerve root compression. Dr. Coester did not recommend surgical intervention and thought the burning pain may be the result of the meralgia paresthetica. He recommended a physiatry evaluation and possible nerve conduction tests.

18. On March 1, 2016, Jeff Raschbacher, M.D. (Occupational Medicine) reviewed a prior authorization request related to treatment of Claimant's right hip on behalf of Insurer. Dr. Raschbacher noted the hip was mentioned in June 2015 by an orthopedic physician and it was his opinion that given the nature of the injury, this could have caused a labral tear in the right hip, the force being transmitted up the extremity proximally from the knee. He recommended a review of the PT records before authorizing the treatment.

19. Claimant was evaluated by Brian White, M.D. on March 16, 2016 with a focus on the right hip pain. She complained of worsening right hip pain, as well as low back pain, without numbness, tingling, or any significant radicular symptoms. On examination (performed by Shawn Karns, PA-C), Claimant had a non-antalgic gait, with excellent lumbar range of motion ("ROM") and no midline or paraspinal muscular tenderness. The bilateral hip exam showed flexion of the right hip to be limited as compared to the left. Straight leg test was negative for low back pain radicular symptoms and FABER test was negative for SI joint pain. No tenderness was found to palpation over the greater trochanters.

20. PA-C Karns' concluded Claimant had findings consistent with right hip femoroacetabular impingement and labral tear. Due to the extent of her pain and failure of conservative treatment, she was a candidate for hip arthroscopy surgery. Dr. White's addendum noted Claimant had significant pain with anterior impingement maneuver, otherwise good ROM. The MRI showed a labral tear. Dr. White's assessment was: Claimant had an underlying labral tear likely from a subluxation event at the time of her injury. He recommended that Claimant lose weight before undergoing hip surgery.

21. On July 22, 2016, Claimant was evaluated by Kimberly Siegel, M.D. at UC Health. Dr. Siegel noted Claimant previously treated with Dr. O'Connell, whose most recent notes indicated Claimant was approaching nearing MMI with respect to all conditions, except for the right hip labral tear. Claimant was also to have a NCS/EMG to rule out right lumbar radiculitis. Claimant's pain diagram reflected pain in the right

side of her low back, as well as radiating pain down the right leg. At the time of the evaluation, Claimant's gait demonstrated mild favoring of the right lower extremity. Cervical ROM was moderately limited in all planes and lumbar ROM was limited to about 30 to 40° flexion by right-sided low back pain. Extension was mildly limited and elicited pain, along with bilateral flexion.

22. Dr. Siegel's assessment was: labral tear of hip, degenerative; neck pain; low back pain with radiation, right; cervical myofascial pain syndrome; pain, right thigh. Dr. Siegel noted surgery was not recommended on Claimant's neck or back. Dr. Siegel opined Claimant was primarily having myofascial pain in her neck and back and thought some treatment (i.e. dry needling) directed specifically at this may be of some benefit. The ALJ inferred Dr. Siegel was of the opinion that Claimant's low back required additional treatment, as evidenced by referrals made and this opinion was persuasive.

23. Claimant was evaluated by George Girardi, M.D. on May 9, 2016. Dr. Girardi noted Claimant had a history of low back pain going into the right hip, right groin and right anterior thigh. Her MRI demonstrated a right foraminal protrusion at L3-4, which correlated with her symptoms. On examination, Claimant was able to reproduce her pain with extension and had a positive Spurling's maneuver to the right side. Claimant also had discomfort with the straight leg test on the right side of the anterior thigh and groin.

24. Dr. Girardi's assessment was: neck pain, with right radicular symptoms potentially due to a C6-7 disc protrusion; low back pain, with right anterior thigh pain, with the disc protrusion at L3-4. Dr. Girardi ordered epidural steroid injections for the lumbosacral area, as well as the cervical, thoracic region.

25. Claimant was evaluated by Raymond Van den Hoven on August 17, 2016. She was complaining of pain in the right SI joint, buttock, lateral hip, and anterior thigh region, along with burning in the right anterolateral leg. On examination, Dr. Van den Hoven found right SI joint tenderness, along with piriformis and hip adductor tenderness. Hip flexion/adduction/internal rotation resulted in pain in the right anterior hip region, but no popping or catching was noted. Claimant's lumbar spine was not tender and there was no tenderness over the ASIS region. There was negative Tinel's over the lateral femoral cutaneous nerve near ASIS. FABER testing resulted in SI joint pain and anterior hip pain. Dr. Van den Hoven also noted sensitivity in the skin around anterior knee and medial shin, but normal sensation in L3 and L4 dermatomes above the knee.

26. Dr. Van den Hoven's impression was: no acute or chronic lumbar radiculopathy in the L3 through S1 myotomes, right lower extremity; no clinical evidence for meralgia parasthetica, right lower extremity; no tarsal tunnel syndrome, bilateral lower extremities; no fibular neuropathy in the knee or ankle, bilateral lower extremities; no peripheral neuropathy. Dr. Van den Hoven opined Claimant's pain appeared to be multifactorial and related to the right SI joint strain, tendinopathy of the right abductor tendons, right anterior hip labral tear, knee issues, with right thigh pain likely being somewhat related to all of these sources. The skin sensitivity was likely due to

cutaneous nerve injuries, possibly post-surgical. Dr. Van den Hoven recommended consideration of right SI joint and right hip abductor tendon injections, along with resolving the right hip labral tear issues.

27. On October 18, 2016, Claimant underwent surgery for her right hip Adventist Hospital. Dr. White performed a right hip arthroscopy, with femoral osteoplasty, limited acetabular rim trimming, minor shaving chondroplasty, acetabular labral reconstruction and capsular closure.

28. Claimant returned to Dr. White on December 14, 2016. Claimant was described as doing really well with regard to the right hip, but having issues with her SI joint and knee on the ipsilateral side. Dr. White noted this was all stemming from the MVA. Dr. White thought Claimant's SI joint may come around with further PT. If she had continued pain, he recommended Jeffrey Donner, M.D. for an evaluation and possible injections.

29. In a follow-up to visit with PA-C Karns on February 9, 2017, he documented Claimant walked with a mildly antalgic gait, which she attributed to the knee. Mild tenderness was found over the greater trochanter. In PA-C Karns' assessment, Claimant was noted to be progressing well post-surgery, but still dealing with right knee and SI joint issues. If Claimant's hip bursa became more of an issue, a cortisone injection was recommended.

30. From February 13, 2017 through February 27, 2017, Claimant underwent three Hyalgan injections in the right knee. Relief was noted after those injections.

31 On February 15, 2017, Claimant was evaluated by Albert Hattem, M.D., at the request of Respondents. Claimant reported right leg pain and sensitivity, right-sided low back pain, right hip tenderness, along with upper back and neck tightness. Dr. Hattem's medical records summary stated there was a PT note from Orthopedic Center of the Rockies in which Claimant reported right rib, hip, low back, right knee and right ankle pain. On examination, Claimant's right knee revealed a well-healed surgical scar, with no swelling or skin discoloration. There was mild to decreased flexion and extension, but no crepitation noted. Claimant's right hip had well-healed surgical scars, very mild decreased range of motion and slight tenderness over the lateral aspect. Slight right paraspinous tenderness was noted in the lumbar spine. Claimant's cervical spine and bilateral shoulders had full range of motion, with mild use tenderness.

32. Dr. Hattem' diagnoses were: right bicondylar tibial plateau fracture, post-open reduction internal fixation by Dr. Baer on November 15, 2014; status post right knee hardware by Dr. Baer on August 5, 2015; post-traumatic osteoarthritis versus aggravation of pre-existing arthritis of medial femoral condyle right knee, status post right knee arthroscopic chondroplasty of the medial femoral condyle and chondroplasty of the patella performed by Dr. Trumper on January 12, 2016; right hip femoral acetabular impingement and labral tear, status post right arthroscopic femoral osteoplasty, limited acetabular trimming, chondroplasty, and acetabular labral

reconstruction by Dr. White on October 8, 2016; myofascial cervical and shoulder/upper back pain; mechanical nonspecific low back pain.

33. Dr. Hattem opined Claimant would be at MMI for the right knee in a month, once she completed injections. He noted the right shoulder exam was unremarkable with full ROM and Claimant's right hip was approaching MMI. Claimant was at MMI for her neck and low back. Dr. Hattem stated Claimant's right knee, right hip and low back were causally related to the November 14, 2014 work injury. He did not believe the cervical spine complaints were related to the work injury.

34. Dr. Hattem testified as an expert in Physical Medicine and Rehabilitation at hearing. He is Level II accredited pursuant to the WCRP. He testified consistently with his report and noted on evaluation Claimant did not have objective evidence of pain in the lumbar spine, including radiculopathy. He said the MRI was negative for acute pathology and Claimant had a small disc protrusion.

35. Dr. Hattem took issue with Dr. Anderson-Oeser's conclusion that a positive Faber's test and pain to palpation were objective signs. Dr. Hattem testified there was no objective evidence to establish Claimant's SI joint was involved in this case because the SI joint injection was not diagnostic, Claimant's pain complaints were subjective, and the FABER test could have been positive for Claimant's right hip pathology. Also, Claimant's arthritic knee could have caused the antalgic gait. He also concluded there was no objective evidence to establish a permanent impairment for Claimant's low back because myofascial back pain is not entitled to a permanent impairment rating. Dr. Hattem stated Claimant was not entitled to a permanent medical impairment rating for low back/hip. Dr. Hattem testified this was consistent with Dr. Siegel's findings and noted Dr. Siegel did not rate Claimant's lumbar spine.

36. On cross-examination, Dr. Hattem admitted he did not perform provocative maneuvers when he evaluated Claimant. He agreed that in his report he concluded the low back was injured as a result of the motor vehicle accident. He admitted the mechanism of injury in this accident could cause an injury to the hip/low back and the right SI joint had required treatment.

37. On April 10, 2017, Claimant was evaluated by Dr. Siegel, who concluded she was at MMI and evaluated her permanent medical impairment. Dr. Siegel noted Claimant continued to have right low back pain, which was felt to stem from right SI joint inflammation or dysfunction. Dr. Siegel referred Claimant to Dr. Donner, but she had not been evaluated by that physician. Dr. Siegel's diagnoses were: sprain of right hip; tibial plateau fracture, right, closed, with routine healing; traumatic arthritis of the knee, right; ACL laxity, right; pain of right thigh; low back pain with radiation, right; cervical myofascial pain syndrome; and chronic myofascial pain.

38. Dr. Siegel assigned a permanent medical impairment rating to Claimant's right knee and right hip. Dr. Siegel assigned a 39% extremity impairment rating for the right knee, which included range of motion loss (11%) and Table 40 diagnoses (arthritis and ACL loss. Dr. Siegel assigned a 25% impairment to the hip, which included the

right hip flexion, abduction and abduction, as well as internal and external rotation. The lower extremity impairments combined to a total of 54%, which corresponded to a 22% whole person impairment. Dr. Siegel noted Claimant's right low back pain had been felt to stem from right SI joint inflammation or dysfunction. However, Dr. Siegel did not perform range of motion testing on Claimant's lumbar spine and did not detail in her report why Claimant would or would not be entitled to a medical impairment for the lumbar spine/SI joint.

39. Dr. Siegel opined Claimant required maintenance treatment, including a follow-up with Dr. White, as well as completion of the remaining PT for her hip. Claimant was also to receive maintenance/adjustment/replacement of the knee brace, as well as viscosupplementation injections for the knee. Claimant was to follow-up with Dr. Trumper every 2-4 years to monitor functional status of right knee, as well as to continue with her prescription meds. The ALJ credited Dr. Siegel's opinion with regard to Claimant's need for maintenance treatment for her hip and knee. Claimant was authorized to follow-up with Dr. Donner possible right SI joint injection, per the prior referral. The ALJ inferred Dr. Siegel was of the opinion that treatment for the SI joint was reasonable, necessary and related to the industrial injury.

40. On June 1, 2017, Claimant was evaluated by Chris Kottonstette, PA-C. At that time, she described pain over the SI joint, including pain of the posterior sacral sulcus and along the SI joint line. Single leg standing increased her pain on the right. Shear and compressive force in the supine position increased her pain and there was a positive Lasegue's test, along with increased pain at 30° elevation during the straight leg raise. Dr. Donner was in to examine the patient, reviewed her imaging studies and treatment plan. PA-C Kottonstette noted they would set Claimant up for a right SI joint injection, as well as potential discography determine whether the two annular tears contributing to her back pain. The right SI joint injection was performed on June 28, 2017.

41. The ALJ noted there was nothing in the record to confirm Dr. Donner requested authorization for an additional procedure (injection) from Insurer. There was no follow-up with Dr. Donner after the first injection and no record in which he recommended further injections.[3]

42. Claimant underwent a DIME which was performed by Dr. Douthit on July 10, 2017. Claimant complained of pain in the right knee, low back pain and sacroiliac joint pain, which she referenced as near the sacrum. She also complained of hypersensitivity in the lower leg. Claimant stated her shoulder and hip pain had resolved. On examination, Dr. Douthit found the right knee was stable in both the Lachman and drawer maneuvers. There was no collateral ligament instability. There

[3] Dr. Anderson-Oeser was asked about an SI joint injection which Claimant underwent on June 28, 2017. (Deposition of Dr. Anderson-Oeser, p. 29:10-16.) There was no evidence before the Court which showed Dr. Donner saw Claimant after that time.

was limitation in range of motion of the right hip on extension, internal rotation and external rotation, along with mild atrophy of the gluteus muscle.

43. Dr. Douthit stated he was missing some of the early records and relied on Dr. Hattem's report for the records of the first year. This is not proscribed by the AMA Guides. Dr. Douthit said he did not find records that she was complaining of low back pain in the months after the accident and the first records that were noted were in December 2015. This was contradicted by evidence in the record. Claimant had no neurological findings and limited motion was from volitional guarding of the lumbar spine. Also, there were no medical imaging studies to indicate an injury to the SI joint occurred and the MRI finding of the lumbar spine did not demonstrate convincing evidence of an associated back injury.

44. Dr. Douthit noted the MRI showed mild labral tearing of the right hip and x-rays were equivocal/open to interpretation. He assigned 12% scheduled impairment for the mild loss of range of motion of the right hip. Dr. Douthit determined Claimant sustained a 25% impairment of the lower extremity for the right knee, which included 12% related to loss of range of motion, 10% impairment for arthritis and 5% for the possibility of attenuation of the cruciate ligament. The 25% impairment was added/combined to the 12% extremity rating for the hip which equaled 34% impairment of the lower extremity and 14% whole person impairment. Dr. Douthit did not find objective medical evidence of permanent injury of the lumbar spine, shoulder, neck or SI joint and did not assign an impairment rating to those areas of the body.

45. Claimant underwent three Hyalgan injections in the right knee in September 2017. Dr. Trumper opined Claimant would require a total knee replacement and the strategy was to defer that procedure as long as possible.[4]

46. A record review was prepared by Mark Failinger, M.D., dated December 10, 2017. After reviewing Claimant's course of treatment, Dr. Failinger opined Claimant sustained a high-energy injury to her knee which created, with reasonable medical probability, post-traumatic arthritis. This arthritis progressed with time and would not imrove. Dr. Failinger agreed with Dr. Trumper's opinion that the Claimant had a high chance that the knee had progressed to arthritis, which would, with medical probability, become recalcitrant to conservative measures, including those she had undertaken to this point. A knee replacement was the next most reasonable step, with one repetition in Claimant's lifetime. The ALJ concluded Claimant will require continuing treatment for her right knee, including possible joint replacement surgery.

47. On December 14, 2017, Claimant was evaluated by Dr. Anderson-Oeser, who performed an IME at the request of her attorney. At that time, Claimant reported an aching sensation in the right posterior shoulder girdle, along with aching pain to the lower lumbar region, including the right sacroiliac and buttocks, left buttocks and posterior thigh. She also reported burning sensation over the lateral aspect of the right

[4] Exhibit G, p.185.

lower extremity to her ankle and numbness over the right knee. The ALJ noted these latter complaints were not reported to Dr. Douthit. On her examination, Claimant's gait was mildly antalgic. Her cervical ROM was within functional limits. Claimant was tender over the lower lumbar SI joints, bilateral PSIS and bilateral sacroiliac joints, as well as right gluteal muscles. The FABER test was positive on the right.

48. Dr. Anderson-Oeser opined, based on the mechanism of Claimant's injury and the fact that she reported pain in the low back and SI region from the onset, these were causally related to the vehicle accident of November 14, 2014. Dr. Anderson-Oeser testified that a lumbar rating was appropriate for SI joint injuries. Dr. Anderson-Oeser assigned a 9% impairment of the lumbar spine due to loss of range of motion and a 5% impairment of the lumbar spine based on Table 53 II(B); for a total of 14% spinal impairment. The ALJ credited the opinion offered by Dr. Anderson-Oeser with regard to Claimant's permanent impairment in the lumbar spine/SI joint.

49. Dr. Anderson-Oeser testified as an expert in Physical Medicine and Rehabilitation, the specialty in which she is board-certified. She is Level II accredited pursuant to the WCRP. Dr. Anderson-Oeser testified that this MVA caused the front-end of the dashboard to push the femur up into the hip socket, which transferred the forces across Claimant's sacrum. This can cause an injury to the SI joint, as well as low back pain. Dr. Anderson-Oeser opined that the mechanism of injury involved in an MVA can cause injury to the SI joint and spine.[5] Dr. Anderson-Oeser concluded Claimant had a problem on the right SI joint and myofacial pain in the lower lumbar region. The ALJ credited this opinion.

50. Dr. Anderson-Oeser testified Claimant's SI joint could have constant irritation, if it was not moving appropriately. On examination, Claimant had positive Faber's sign on the right, along with tenderness to palpation. Dr. Anderson-Oeser agreed there was a subjective element to these findings. There was also spasm of the gluteal muscles, along with a loss of ROM in the lumbar spine. On the question of whether Claimant initially reported low back/hip/SI joint problems, Dr. Anderson-Oeser referenced will the pain diagram Claimant completed for Dr. O'Connell, as well as the initial report of injury. She did not recommend a DIME physician relying on the medical records summary, as Dr. Douthit did in this case. The ALJ inferred Dr. Anderson-Oeser reviewed the initial report of symptoms at as supportive of the conclusion that there was an injury to this area of body and thus, potential impairment. Also the evidence of muscle spasm and loss of ROM were objective findings. The ALJ found Dr. Anderson-Oeser's opinions to be more persuasive than Dr. Hattem.

51 Dr. Anderson-Oeser opined Claimant was at MMI for the SI joint and low back condition. She believed these conditions could be treated as part of medical maintenance.

52. Claimant suffered an injury to her low back, and right SI joint as a result of the November 14, 2014 MVA.

[5] Deposition of Dr. Anderson-Oeser, p. 8:5-17.

53. There was agreement amongst the physicians, including Dr. Douthit, Dr. Hattem and Dr. Anderson-Oeser that Claimant did not sustain a permanent medical impairment to her cervical spine or right shoulder. The dispute in the case centered on the lumbar spine and right SI joint.

54. Claimant proved she is entitled to post-MMI medical treatment, including treatment for the right knee.

55. No ATP, including Dr. Siegel, recommended further injections for Claimant's right SI joint after June 2017.

56. Claimant failed to prove she required additional treatment for her right SI joint at this juncture.

57. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

Overcoming the DIME

In resolving the issues, the ALJ notes the question of whether Claimant overcame Dr. Douthit's opinion is governed by §§ 8-42-107(8)(b)(III) and (c), C.R.S. *Peregoy v. Indus. Claim Apps. Office*, 87 P.3d 261, 263 (Colo. App. 2004). These sections provide that the finding of a DIME physician selected through the Division of Workers' Compensation shall only be overcome by clear and convincing evidence. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence". § 8-42-107(8)(b)(III), C.R.S.; *Leprino Foods Co. v. Indus. Claim Appeals Office*, 134 16 P.3d 475, 482-83 (Colo. App. 2005); *accord Martinez v. Indus. Claim Appeals Office*, 176 P.3d 826, 827 (Colo. App. 2007).

Clear and convincing evidence is highly probable and free from serious or substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995). The mere difference of medical opinions does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO July 19, 2004); see *Shultz v. Anheuser Busch, Inc.*, W.C. No. 4-380-560 (ICAO Nov. 17, 2000).

The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Indus. Claim Apps. Office*, 961 P.2d 590 (Colo. App. 1998). Since the DIME physician is required to identify and evaluate all losses and restrictions that result from the industrial injury as part of the diagnostic assessment process, the DIME physician's opinion regarding causation of those losses and restrictions is subject to the same enhanced burden of proof. *Id*. The elevated burden is evidence of the Colorado Legislature's intent to limit overcoming the DIME physician's opinion to those cases where it is more probable than not that the opinion was incorrect.

The crux of the issue represented by the case is whether Dr. Douthit's opinion that Claimant did not sustain a permanent impairment to the lumbar spine (including the SI joint) was more probably wrong. The ALJ considered the arguments proffered by Claimant and Respondents with regard to Dr. Douthit's opinion. Claimant asserted that Dr. Douthit's conclusions were erroneous because he did not review Claimant's treatment early records where she reported low back pain. Respondents' argued that the Dr. Douthit's opinions were not overcome by clear and convincing evidence, as there was a lack of objective evidence to support the conclusion there was a lumbar spine/SI joint injury. Respondents also asserted the MRI did not show evidence of an acute lumbar injury and on the occasions when Claimant had an antalgic gait, this was related to her knee injury. Respondents relied upon the testimony of Dr. Hattem to support their contentions. In the case at bar, the ALJ determined Claimant met her burden to overcome Dr. Douthit's opinion.

There are two facets to the ALJ's reasoning; first, there was a sufficient quantum of evidence introduced that Dr. Douthit's conclusions vis a' vis the lumbar spine were erroneous. As found, Dr. Douthit relied upon Dr. Hattem's summary of the

early treatment records, which does not constitute an error *per se.* However, this lessened the weight of Dr. Douthit's opinion. Dr. Douthit went on to conclude that Claimant did not complain of low back pain initially, (which is contrary to the records) as part of his conclusion Claimant sustained no permanent medical impairment for lumbar spine.

As determined in Findings of Fact 3, 5-7, 11, Claimant complained of low back/hip pain in the initial aftermath of this accident. Claimant also referenced low back pain in her report of injury (Finding of Fact 5) and testified she had low back pain after the accident. There were also references to hip pain in the PT notes admitted into evidence. (Finding of Fact 7). The medical evidence in the record supported the conclusion Claimant had low back and right sided hip/leg pain following the accident. To the extent Dr. Douthit based his opinion that Claimant did not sustain an injury to the low back/hip as a result of the MVA because there were no complaints initially, this conclusion was erroneous.

In addition, the records of Dr. Siegel (an ATP) indicate she believed that Claimant suffered an injury to her low back/SI joint, which required diagnostic testing and treatment for these areas of the body. The ALJ credited Dr. Siegel's opinions in this regard. (Finding of Fact 22.) Medical records from other physicians confirmed Claimant had symptoms and treatment involving the lumbar spine and SI joint. As found, Dr. O'Connell initially questioned causation with regard to the hip and low back complaints. (Finding of Fact 13). However, the medical evidence in the record indicated Dr. O'Connell referred Claimant for diagnostic testing (MRI) as an ATP. (Findings of Fact 13-14). Other ATPs who opined that the hip, low back and right leg complaints were related to the subject accident included Drs. Girardi, White, Van den Hoven, and Donner (ATPs). Even Respondents' IME physician, Dr. Hattem, determined Claimant's low back was injured in the subject accident. (Finding of Fact 33.)

To be sure, there was not a uniform consensus between the doctors regarding the source of Claimant's pain complaints during the course of her treatment. Several physicians identified a labral tear in Claimant's hip as the pain generator. Also, there was a delay before Claimant's treatment focused on the hip and lumbar spine. On balance, the ALJ was persuaded that based upon the evidence, including the physicians' opinions, the MVA caused an injury to Claimant's lumbar spine and SI joint which required treatment. (Finding of Fact 52).

Second, the ALJ credited Dr. Anderson-Oeser's opinion that Claimant's low back and SI joint were causally related to the subject accident and Claimant sustained a permanent medical impairment to that area of her body. At the time of her evaluation, Dr. Anderson-Oeser had reviewed Dr. Hattem's report, as well as Dr. Douthit's. Dr. Anderson-Oeser's opinion on causation was supported by Dr. Raschbacher, as well as by Respondents' expert, Dr. Hattem who in his initial report concluded the hip and low back were related. Dr. Siegel, who was an ATP, also concluded Claimant's SI joint pain was related to the subject accident and referred Claimant to Dr. Donner for an evaluation and treatment. (Finding of Fact 34). All of these physicians concluded

Claimant had an SI joint diagnosis which supported the ALJ's conclusion that Claimant was entitled to a rating for the low back/SI joint under the AMA Guides. Dr. Anderson Oeser testified, which provided a rationale and support for the conclusion Claimant suffered a permanent medical impairment to the lumbar spine and the basis for rating. This was the most complete explanation that opinion of all the opinions within the record. The ALJ credited Dr. Anderson Oeser's opinion that Claimant was entitled to a Table 53II(B) impairment under the AMA Guides and concluded Claimant's total impairment was 14% whole person. (Finding of Fact 48).

Therefore, after considering the totality of the medical evidence, the ALJ concluded Claimant sustained a permanent medical impairment to lumbar spine (including the SI joint) and was entitled to a permanent medical impairment rating. Since Dr. Douthit's conclusion that Claimant did not have lumbar impairment was based, at least in part, on the erroneous belief Claimant did not complain of symptoms, his opinion was overcome. Accordingly, Claimant is entitled to additional PPD benefits for the injury to the lumbar spine/SI joint which was injured in the subject accident.

Grover Medical Benefits

The need for medical treatment may extend beyond the point of maximum medical improvement where claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995). As found, Claimant's traumatic injury to the right knee caused post-traumatic arthritis. (Finding of Fact 46). The medical evidence revealed Claimant may require knee joint replacement for the right knee and Respondents are liable for said treatment. Claimant proved she is entitled to continuing treatment to maintain MMI for the right knee. (Findings of Fact 45, 53). In this regard, Claimant's ATP, Dr. Siegel, opined Claimant required maintenance medical treatment at the ALJ credited this opinion. (Finding of Fact 39).

Claimant offered the opinion of Dr. Anderson-Oeser to support her contention that she requires maintenance treatment for her SI joint and low back. The ALJ concluded Claimant failed to prove entitlement to those medical benefits to either maintain MMI or prevent deterioration. (Findings of Fact 54-55). As found, Dr. Siegel referred Claimant to Dr. Donner and she was evaluated by PAC Kottonstette at Dr. Donner's office on June 1, 2017. Claimant underwent one injection, but there was no evidence in the record Claimant returned to Dr. Donner after that time. Claimant failed to prove the efficacy of said injection, such that a further SI joint injection would be warranted. Based upon this failure of proof, Claimant's claim for additional medical benefits for the low back and SI joint is denied.

ORDER

It is therefore ordered:

1. Claimant's Motion for a Corrected Order is granted.

2. Claimant met her burden to overcome the DIME physician's findings with regard to causation and medical impairment by clear and convincing evidence.

3. Respondents shall pay PPD benefits to Claimant based upon a 14% whole person impairment to lumbar spine.

4. Pursuant to the Stipulation of the parties, Respondents shall pay the scheduled impairment ratings issued by Dr. Douthit. This includes a 25% scheduled impairment of the lower extremity (right knee), which was added to the 12% extremity rating (hip) and that totaled a 34% scheduled impairment of the lower extremity, which converts to a 14% whole person impairment.

5. Respondents are entitled to a credit for PPD benefits paid.

6. Respondents shall pay reasonable and necessary post-medical treatment, including treatment for post-traumatic arthritis in the right knee.

7. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80203

ISSUES

The issues set for determination included:

(1) Did Claimant sustain a compensable work-related injury to her right upper extremity?

(2) If Claimant sustained a work-related injury, what medical benefits are related, reasonable and necessary to cure and relieve the effects of the industrial injury?

(3) What was Claimant's AWW?[1]

STIPULATION

The parties stipulated that should this claim be found compensable, Respondent will reimburse Claimant $10.00 for out-of-pocket expenses associated with the purchase of ibuprofen. The Stipulation was accepted by the Court and is made part of this Order.

FINDINGS OF FACT

1. Claimant has worked as a dental assistant for Employer since 2002. Claimant testified she works at the Denver Reception and Diagnosis Center and was part of the intake process for offenders. Her job duties included entering information in the data system and taking dental x-rays. Claimant testified she worked 7 AM to 3 PM, Monday through Friday.

2. Claimant testified her job duties included completing the intake procedures for anywhere from 45 to 60 offenders per day. The process of taking dental x-rays involved a panorex machine, which required the offender to put their head in a chin rest and bite on a bite stick. This required Claimant (who is 5' 3" tall) to reach overhead. Claimant was required to push a button for 25 seconds continuously while the panorex x-ray was completed. Claimant would then push print after the x-ray was completed and she was responsible for cleaning the panorex machine.

3. Claimant testified her salary was $3,775.00 per month (gross wages).

4. Claimant's prior medical records were admitted into evidence and medical history was significant in that she treated for chronic back pain. In particular, treatment records from Matthew Dickson, D.C. from July 1, 2009 through January 6, 2014 for admitted into evidence. Claimant consistently reported mid-and low back pain, as well as

[1] Claimant listed AWW as an issue to be determined at hearing in the Application for Hearing and her CIS form. However, this was not identified as an issue by either party at the outset of the hearing and neither party briefed this issue in their post-hearing submissions.

occasional cervical pain. Dr. Dickson diagnosed Claimant as suffering from lumbar, sacral, thoracic and cervical segmental dysfunction, as well as lumbar and sacrum sprain/ strain. Claimant received chiropractic manipulation on a regular basis during that time. In 2009, Claimant received 24. The ALJ noted Claimant complained of pain in both shoulder on one occasion (July 1, 2009) she complained of shoulder pain.

5. In 2010, Claimant underwent 51 chiropractic treatments and the ALJ noted there were references to pain in both of her shoulders at five visits including February 10, March 10, 15, 22, and April 12, 2010. Acquired spondylolisthesis was added to list of diagnoses. On September 7, 2010, Claimant underwent a microdiscectomy at L5-S1. Claimant received 13 chiropractic treatments in 2011 and there was no reference to shoulder pain. She underwent 28 chiropractic and 2 massage therapy treatments in 2012 and on one occasion (April 5, 2012 during a massage therapy session) there was a reference to shoulder symptoms. Additional diagnoses in 2012 included degeneration of lumbar, lumbosacral IVT; joint disorder/facet syndrome; kyphosis postural; cervical, thoracic, lumbar stiffness/restriction; unequal leg length.

6. In 2013, Claimant underwent 16 chiropractic treatments. The ALJ noted there were references to back and upper extremity symptoms on three occasions (February 7, 13, 21, 2013), as well as a reference to repetitive activities at work. In 2014, Claimant underwent one chiropractic manipulation at this facility, but there was no reference to shoulder or upper extremity pain. The ALJ inferred that Claimant's references to right upper extremity pain during the chiropractic appointments was infrequent.

7. Claimant also received chiropractic treatment from various chiropractors at the facility called The Joint in Aurora from December 2013 through December 31, 2018. The various providers noted subluxations at various levels and chiropractic manipulation was performed to the cervical, thoracic and lumbosacral spine. Claimant three adjustments in 2013 and six treatments in 2014 at this facility. Claimant underwent 31 chiropractic treatments/adjustments in 2013 and 38 in 2016. Claimant received 17 treatments in 2017. There was no reference to the right shoulder or upper extremity complaints in these records.

8. There was evidence Claimant treated for low back pain, as well as shoulder and elbow pain before 2017. On July 6, 2015, Claimant was evaluated by Daniel Hubbard, M.D. for low back. Dr. Hubbard's assessment included degeneration of what lumbar spine or lumbosacral into full disk, along with medial epicondylitis. Claimant was to continue doing daily stretches and taking medications. Claimant returned to Dr. Hubbard for elbow pain on August 25, 2015. Dr. Hubbard diagnosed medial epicondylitis of the elbow joint and lateral epicondylitis. Claimant underwent a steroidal injection.

9. The ALJ concluded Claimant's chiropractic treatment for chronic back pain was episodic in nature and the frequency varied. There was no evidence before the Court Claimant experienced anything more than periodic right upper extremity symptoms during the time she received chiropractic treatment.

10. On February 16, 2016, Claimant was evaluated by Dr. Hubbard, as she was experiencing shoulder pain and back pain. The onset of the shoulder pain was approximately nine months before, with no injury described. Claimant's back pain was described as six months in duration. Dr. Hubbard's assessment was: spinal stenosis, lumbar region, dorsalgia, chondrocostal junction syndrome, somatic dysfunction of rib cage. Medications were prescribed.

11. There was no evidence in the record Claimant had permanent restrictions related to the right upper extremity or thoracic spine before 2017.

12. Claimant testified her job duties changed in January 2017. A new computer system (EOMIS) was installed and additional keyboarding was required. Claimant said the new system at work increased the number of clicks she was doing from 44 to 64 clicks per offender. In addition, Claimant testified that the new system required manual data entry between where the panorex x-rays were stored and the computer terminal for the new system. Employer also completed an audit during the months of January through March 2017, which increased Claimant's workload. Claimant said the increased job duties caused pain in her right arm and elbow.

13. Claimant was initially evaluated by Martin Kalevik, D.O. on March 17, 2017 to whom she was referred by Employer. She was having arm pain and numbness, which she attributed to a change in the computer system at work in January which led to increased clicking and leaning on her arm. On examination, Claimant had stiffness in the right upper arm to the forearm. Mild tightness was noted in the forearm flexors, with an equivocal Phalen test.

14. Dr. Kalevik's assessment was: probable carpal tunnel syndrome, tendinitis involving extensor tendon from and forearm flexors, myofascial pain involving upper arm and lateral deltoid. Dr. Kalevik instructed Claimant on improved ergonomics, as well as stretching, along with the use of heat and ice. Claimant was provided a brace. Dr. Kalevik issued temporary work restrictions for Claimant requiring her to take a five-minute break for every 30 minutes of typing. The M-164 completed by Dr. Kalevik, who noted his objective findings were consistent with the history and/work related mechanism of the injury/illness.

15. Claimant returned to Dr. Kalevik on March 28, 2017. At that time, mild tension in the forearm was noted, but Claimant had full motion in all joints of the upper extremity. She reported numbness of the second and fifth fingers on the right hand. Dr. Kalevik's assessment was: probable carpal tunnel syndrome, mild tendinitis, with some myofascial pain in the upper arm. An EMG/nerve conduction study was pending and Claimant was to continue therapy.

16. Similar symptoms for Claimant were noted in the appointment on April 11, 2017. Dr. Kalevik's assessment was probable mild tendinitis and he also noted that the EMG was negative. Claimant was to continue therapy and Dr. Kalevik recommended a job site evaluation. Claimant was discharged by Dr. Kalevik on April 25, 2017. Dr. Kalevik noted she had no impairment or restrictions.

17. A job site evaluation was completed by Sara Shugars, MS CRC CCM, COEE, AEP (ergonomic consultant) on July 18, 2017. The job analysis gave a breakdown of daily job tasks, which included mousing (3-5 hours), keyboarding (1-2 hours), phone use (limited), scanning/printing/faxing (30 minutes-1.5 hours), handwriting (limited), assisting dentist (2-3 hours), other: counting and storing instruments (20-30 minutes). Ms. Shugars identified as a primary risk factor that was present at Claimant's worksite: four hours of wrist flexion > 45°, extension > 30°, or ulnar deviation > 20°.

18. Claimant provided additional information about her job duties by way of an addendum to the job site evaluation.[2] In the addendum, Claimant stated she would make 63 separate clicks from starting the system through entering the data for an inmate and taking an x-ray. This was in addition to typing information into the system. Claimant testified that beginning in October 2017, two x-rays per offender were taken.

19. Claimant received chiropractic treatments from January 2018 to July 2018 at which were provided by Phillip Sarver, D.C. There were references in these records to symptoms resulting from work duties.

20. An Independent Medical Examination was conducted on June 4, 2018 by Randy Burris, M.D., at the request of Respondent.[3] Dr. Burris said Claimant reported that pain in her shoulder and upper arm begin in January 2017. On examination, Claimant reported 2/10 pain throughout the right shoulder girdle in the upper arm regions. Diffuse tenderness was found throughout the posterior myofascial shoulder girdle. Numerous trigger points were present without muscle spasm. There was full ROM in the shoulder. Dr. Burris noted a negative impingement sign, speed test, Ferguson's test and drop arm sign. Claimant had full ROM at the elbow, wrist and all digits, with no tenderness noted over the medial and lateral epicondylitis. There was no pain with resisted flexion and extension of the wrist.

21. Dr. Burris' assessment was: right upper extremity myofacial pain. He noted Claimant had nonspecific myofascial complaints of the right shoulder girdle without a definitive diagnosis. Dr. Burris said Claimant's MRI findings were consistent with impingement syndrome, which was an anatomical condition that occurred absent trauma. Dr. Burris said Claimant did not meet the criteria for work-related shoulder pathology under the Colorado Division of Workers' Compensation Medical Treatment Guidelines ("DOWC MTG"). In particular, Dr. Burris analyzed the following risk factors: overhead work consisting of additive times per day of at least 30 minutes/day for a minimum of five years; work that requires shoulder movement at the rate of 15-36 repetitions per minute with no 2 second pauses for 80% of the work cycle; work that requires shoulder movement with force 10% or greater of the maximum voluntary force and has no 2 second pauses for 80% of the work cycle.[4] The ALJ found Dr. Burris did not analyze the aggravation of the underlying changes in Claimant's shoulder, limiting his analysis to the DOWC MTG.

[2] Exhibit E, pp. 32-39.

[3] Exhibit F.

[4] WCRP Rule 17, Exhibit 4, p.17

Dr. Burris opined Claimant did not the criteria to establish a work-related occupational disease of the shoulder.

22. Dr. Burris noted the job evaluation report identified some awkward posture of the risk with keyboarding and use of the mouse which may contribute to elbow/wrist conditions, however, he did not believe significant risk factors were identified for the shoulder joint. Dr. Burris based this on what he described intermittent operation of the x-ray. Dr. Burris also postulated that Claimant did not currently have a work-related occupational disease at the elbow because she had no complaints and the examination was normal. He recommended adjustments should be made to avoid awkward keyboarding postures previously identified. The ALJ noted Dr. Burris did not appear to consider Claimant's addendum, which described significant keyboarding and mousing for each inmate intake. Dr. Burris also did not consider the amount of overhead reaching Claimant performed for each intake, as well as the number of x-rays taken.

23. Claimant testified that Dr. Burris inaccurately recorded her history. More particularly, Claimant noted she did not have shoulder issues in January 2017. She also did not tell Dr. Burris that her symptoms never fully recovered. Claimant's prior treatment record records corroborated her testimony.

24. On or about July 16, 2018, Claimant completed a Worker's Claim for Compensation. It listed the date of injury as July 13, 2018 and stated her right hand, arm and shoulder were injured. The Worker's Claim said the injury was caused by excessive repetitive clicking of a computer mouse and having to reach above her head to adjust the patient's head for intake x-rays.

25. Claimant returned to Dr. Kalevik on July 18, 2018. Claimant reported she had been doing excessive repetition, with repeated mouse clicking and overhead reaching. She said her ergonomic set-up had not been changed. Claimant could move all joints of her upper extremities fully. Dr. Kalevik found mild muscle tension in the posterior right shoulder, but no scapular winging. Soreness was noted on the right lateral epicondylar area, but full motion was present with no crepitus. Mild muscle tension was present in the extensors and flexors of the right forearm. No swelling was present in the hand or fingers.

26. Dr. Kalevik's assessment was: sprain of other specified parts of thorax, initial encounter; pain in right elbow, pain in right shoulder. The ALJ noted the thorax sprain was a new diagnosis. Dr. Kalevik stated he would provide occupational therapy and encourage Claimant on a home exercise program. He recommended change of repetitive activity every 15 minutes for different activity, as well as the use of anti-inflammatory medications. The work-related diagnosis was listed as sprain of other specified parts of thorax, initial encounter. The M164 completed by Dr. Kalevik noted his objective findings were consistent with the history and/work related mechanism of the injury/illness. The ALJ credited this opinion of Dr. Kalevik and found it more persuasive than Dr. Burris' opinion.

27. An Employer's First Report of Injury was completed on or about July 18, 2018. It specified Claimant reported an aching arm, prickly sensation in fingers, side,and palm of right hand, right index finger from repetitive mouse clicking and overextending arms above head during the week of July 9, 2018.

28. A Notice of Contest was filed on behalf of Employer on August 14, 2018. The claim was being contested/denied for further investigation of Claimant's prior medical history and a job site evaluation.

29. On August 22, 2018, Claimant returned to Dr. Kalevik. Claimant had full range of motion ("ROM") of all joints in the upper extremity, with mild muscle tension of the extensors on the right. Dr. Kalevik's assessment was the same as the July 18, 2018 evaluation. Dr. Kalevik concluded Claimant was at MMI, with no permanent medical impairment. He opined Claimant did not require maintenance care, but Dr. Kalevik sent Claimant back to the therapist to go over her exercises and recommended the use of proper ergonomics.

30. Claimant underwent an MRI of the right shoulder on September 9, 2018 and the films were read by David Solsberg, M.D. Dr. Solsberg's impression was: arthritis of the acromioclavicular joint, which mildly compressed superior aspect of the supraspinatus myotendinous junction and therefore may be associated with impingement symptoms. Dr. Solsberg noted there was no rotator cuff or labral tear; there was tendinosis of the supraspinatus and infraspinatus tendon. There was subacromial sub deltoid bursitis.

31. On September 21, 2018, Claimant underwent a physical therapy ("PT") evaluation.[5] She was experiencing chronic right arm pain from repetitive motions at work and Kevin Gabrych, DPT muscular dysfunction in the right pec minor and posterior RTC. The ALJ noted these were objective signs of dysfunction in Claimant's right upper extremity. Good passive ROM was present, but AROM was limited due to pain. A six-week PT program was begun.

32. Dr. Hubbard authored a letter, dated September 24, 2018, after Claimant underwent the MRI on her shoulder. Dr. Hubbard noted the MRI showed arthritis in the AC joint with shoulder blade joined the clavicle. He wished to discuss the impingement with Claimant.

33. The ALJ found that it was more probable than not that Claimant experienced shoulder, arm and thorax symptoms on July 18, 2018 as a direct result of her work for Employer. The ALJ credited Claimant's testimony regarding the onset of her symptoms.

34. Claimant successfully proved that, on balance, it is more probable than not that the condition of her right upper extremity and thoracic spine was exacerbated by her job duties and caused her to experience symptoms.

[5] Exhibit K, pp. 391-392.

35. Claimant proved she is entitled to receive medical benefits to cure and relieve the effects of the industrial injury.

36. Respondent is required to provide treatment to Claimant to cure and relieve the effects of the industrial injury.

37. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

Compensability-Upper Extremity

Claimant was required to prove by a preponderance of the evidence that, at the time of the injury, she was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. Sections 8-41-301(1)(b) & (c), C.R.S. (2016). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). This case presented a question of whether Claimant's work activities aggravated a pre-existing condition.

Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. *Faulkner v. Indus. Claim Appeals Office*, 12 P3d 844, 846 (Colo. App. 2000); Section 8-41-301(1)(c), C.R.S. The evidence must establish the causal connection with reasonable probability, not medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission, 491 P.2d 106* (Colo. App. 1971*)*. Claimant must establish a nexus between the work activities and the claimed disability. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). The question of whether Claimant met the burden of proof is one of fact for determination by the ALJ. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant asserted she sustained a compensable occupational disease while working for Employer. Claimant attributed increased symptoms in her right shoulder and arm, as well as thoracic spine to the change and duties and increased physical requirements of her job. Respondent averred Claimant failed to meet her burden of proof to prove she suffered a compensable occupational disease arising out of and in the course of his employment. Respondent relied upon the opinions of Dr. Burris and argued Claimant's symptoms were not caused by her work duties. As the criteria under WCRP Rule 17, Exhibit 5 were not met.

As a starting point, the ALJ determined Claimant's work caused symptoms to be present in her thoracic spine, as identified by Dr. Kalevik. The medical evidence revealed Claimant required chiropractic treatment for degenerative changes in her spine prior to 2017/2018 and the ALJ determined that Claimant's work activities aggravated this condition. (Finding of Fact 33). This conclusion was supported by the Dr. Kalevik, who opined Claimant's symptoms were related to work activities. (Finding of Fact 23). This aggravation of a pre-existing condition fits within the Colorado Court of Appeal's holding in *H & H Warehouse v. Vicory, supra,* 805 P.2d at 1170 and is therefore compensable.

The ALJ also determined Claimant's duties aggravated the underlying condition of her right upper extremity, including the shoulder and thus, she suffered a compensable injury as a result of her work activities. As determined in Findings of Fact 1-3, Claimant testified that her job duties involved use of the upper extremity, which included using a keyboard and mouse. She also stated these job duties increased, specifically the x-rays taken of inmates and the number of clicks required in the intake process. (Finding of Fact 12). The ALJ found the work Claimant was doing for Employer caused an increase in symptoms. Further, the job analysis report admitted at hearing corroborated Claimant's testimony regarding the number of clicks on the mouse, typing required and movement of the right upper extremity. (Findings of Fact 15-16). This evidence was not controverted by Respondent. Thus, the ALJ determined Claimant suffered an occupational exposure which caused her to experience symptoms in the right upper extremity.

The medical evidence in the record, including the MRI performed on December 22, 2017, established there were degenerative changes in the shoulder joint, as well as impingement in Claimant's right shoulder. Tendinosis of both tendons was present. (Finding of Fact 30). No medical evidence was admitted at hearing which showed Claimant required treatment or missed time from work because of the prior treatment for her lumbar, thoracic and cervical spine. (Finding of Fact 6). In addition, Claimant's prior

treatment record revealed only intermittent shoulder symptoms over the course of several years of treatment. (Findings of Fact 4-8). Accordingly, the ALJ determined Claimant's work duties were the cause of her shoulder symptoms. (Findings of Fact 32-33).

When evaluating this issue of causation, the ALJ may consider the provisions of the DOWC MTG because they represent the accepted standards of practice in workers' compensation cases and were adopted pursuant to an express grant of statutory authority. However, the DOWC MTG are not dispositive of the issue of causation and the ALJ need not give them any more weight than he determines they are entitled to in light of the totality of the evidence. *See Cahill v. Patty Jewett Golf Course,* WC 4-729-518 (ICAO February 23, 2009); *Siminoe v. Worldwide Flight Services,* WC 4-535-290 (ICAO November 21, 2006).

The ALJ considered Dr. Burris' expert opinions and analysis under the DOWC MTG and concluded Claimant's job duties aggravated her shoulder, along with the elbow and forearm. In this regard, Claimant's occupational exposure and resulting constellation of symptoms do not fit neatly with in the DOWC MTG or the traditional occupational disease analysis under § 8-43-201(14), C.R.S. and *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). Nonetheless, based upon the evidence before the Court, the ALJ determined the specific physical tasks associated with Claimant's job were sufficient to cause an occupational injury.

As found, the job analysis (including Claimant's addendum) identified an exposure that the ALJ concluded could cause both the shoulder and arm symptoms. Dr. Burris conceded that the awkward positioning could cause Claimant's arm symptoms, although his opinion was circumscribed. The ALJ found Dr. Burris did not consider the overhead reaching done by Claimant, as well as the frequency of the physical movements required when x-rays were taken with each intake. As found, Claimant had substantial keyboarding, mousing and overhead reaching, particularly when her job duties changed. Also, Dr. Burris analyzed Claimant's shoulder symptoms under WCRP Rule 17 Exhibit 4, as opposed to Exhibit 5. (Finding of Fact 21). Respondents cited WCRP Rule 17, Exhibit 5 to support their contention Claimant did not sustain an occupational disease. In the case at bench, the Court determined there was a sufficient occupational exposure to be the cause of Claimant's symptoms and credited Dr. Kalevik's opinions on this subject. On balance, the ALJ determined there was sufficient evidence introduced at hearing to establish the required causal connection between Claimant's work activities and support a finding of compensability with regard to Claimant's arm condition (elbow and forearm).

Medical Benefits

Claimant is entitled to receive medical treatment that is reasonable and necessary to cure and relieve the effects of the injury. § 8-42-101(1)(a), C.R.S.; *Yeck v. Industrial Claims Appeals Office,* 996 P.2d 228 (Colo. App. 1999). Claimant bears the burden to prove by a preponderance of the evidence there was a causal relationship between the work-related injury and the condition for which treatment is sought. *Snyder v. Industrial Claims Appeals Office,* 942 P.2d 1337 (Colo. App. 1997).

The ALJ determined Claimant was entitled to medical benefits to cure and relieve the effects of her work-related injury. Respondent will be ordered to provide medical benefits through the ATP, Dr. Kalevik and any referrals made by him. In addition, pursuant to the Stipulation of the parties, Respondent shall reimburse Claimant $10.00 for out-of-pocket expense medications.

ORDER

It is therefore ordered:

1. Claimant proved she suffered a compensable injury on July 13, 2018, namely an aggravation of the preexisting degenerative changes in her right shoulder, injurious exposure to her wrist, elbow and forearm and a thoracic strain.

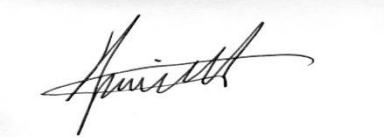
2. Respondents shall pay for medical benefits to cure and relieve the effects of Claimant's injury, including reimbursing Claimant $10.00 for out of pocket expenses.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 12, 2019

STATE OF COLORADO



Timothy L. Nemechek
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-074-721-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

,

Claimant,

v.

,

Employer,

and

,
,

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on November 20, 2018, in Denver, Colorado. The hearing was digitally recorded (reference: 11/20/18, Courtroom 4, beginning at 1:30 PM, and ending at 4:30 PM).

The Claimant was present in person and represented by _____, Esq. The Respondents were represented by _____, Esq.

Hereinafter [Redacted], shall be referred to as the “Claimant." [Redacted], shall be referred to as the “Employer.” All other parties shall be referred to by name.

Claimant’s Exhibits 1 through 11 were admitted into evidence, without objection. Respondents’ Exhibits A through H were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ established a post-hearing briefing schedule. Claimant's opening brief was filed on December 3, 2018. Respondents' answer brief was referred to the ALJ on January 11, 2019, having been timely filed on December 6, 2018. No timely reply brief was filed and the matter was deemed submitted for decision on January 11, 2019.

ISSUES

The issues to be determined by this decision concern compensability of a left elbow injury/incident of February 17 2017; if compensable, medical benefits and average weekly wage (AWW). At the commencement of the hearing, the Claimant withdrew issues concerning temporary disability, without objection.

The Claimant bears the burden of proof by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

The Incident

1. The Claimant is a four-year employee of the Employer. On February 17, 2017, she was engaged in a training exercise related to the safe handling of children. A co-employee was supposed to grab the Claimant's upper left arm, but instead, grabbed her left elbow and pulled down.

2. The incident cited as the cause of injury occurred in the course of employment. The Claimant was at work, during working hours, engaged in a work-related or mandated training exercise. The injury arose out of employment: the training exercise involved another employee grasping Claimant's arm and pulling downwards sharply, which Claimant reports caused the injury to her left elbow. Claimant's injury also satisfies the positional risk doctrine, because the conditions and obligations of her employment—training related to safe restraint and transportation of children—placed her in the position in which the injury was incurred.

3. The Claimant had not suffered any left elbow pain prior to the incident, of February 17, and it is more likely than not that the incident at work aggravated and accelerated any underlying problem. Her subsequent fall in a parking lot precipitated no further injury to her left elbow and arm injuries. This occurred, however, after Claimant began treatment, so any medical expenses incurred beforehand could not have been caused by her later fall in a parking lot. The Claimant not seeking compensation for her

broken right hand, which was unrelated to the incident at work. This subsequent injury is irrelevant to the compensability of the initial accident.

4. The Claimant reported to feel the onset of pain in her left elbow later that day and reported her injury to her Employer on February 18, 2017. Upon cross-examination conducted by the Respondent, however, the Claimant stated that she developed pain over the next week. The Employer's First Report of the Injury was completed on February 28, 2017 because—according to Respondent witness' testimony—they did not have notice of the injury until the 27th. The ALJ finds that Claimant reported her injury to an authorized Employer representative on February 27, 2017.

5. Respondents argue that the Claimant's pain allegedly began several days after the incident (the Claimant did not see a doctor for ten days afterwards) it is not the cause of the pain. Claimant states that she had no pain in her elbow before the event. The ALJ finds this testimony credible. All of the Claimant's authorized treating physician (ATPs) state in their reports that the Claimant's history of the incident is consistent. Respondent argues that there is no causation finding in the medical reports. Such an analysis is not necessary if the Claimant's testimony, coupled with the totality of the evidence supports causation, which the ALJ hereby infers and finds.

6. ATPs Dr. Davis, Dr. Brunworth, and Dr. Sollender all conclude that the Claimant has left medial epicondylitis, and Dr. Davis has recommended that Claimant receive PRP injections. Dr. Mordick disputes this and is of the opinion that the Claimant is at maximum medical improvement (MMI); however, Dr. Mordick is not an ATP, and the ALJ finds that his opinions have less weight and credibility that the opinions of the ATPs in this specific case.

Medical

7. The Claimant was first seen on March 8,2017 and was given temporary restrictions for her injury from March 8,2017 to March 29, 2017. On May 11, 2017, the Claimant was referred to Craig Davis, M.D., who diagnosed the Claimant with "left medical epicondylitis." Dr. Davis recommended a brace, injections, medications, ice and heat to the affected area. On April 17, 2018, Dr. Davis made a referral for PRP injections. Dr. Davis did not conduct a "causation analysis" as to the origin of the Claimant's injuries. Dr. Davis was an authorized referral.

8. Dr. Davis' April 17, 2018 report states that he "suggested a PRP injection which might be helpful in this situation. I went over the nature of the injection with her at some length and all questions were answered."

9. The Claimant also saw Gretchen Brunworth, M.D., for an EMG. On April 5th, 2018, Dr. Brunworth stated that the Claimant's EMG reported normal results. She

also noticed that the Claimant was suffering from rheumatoid arthritis (RA) which she was of the opinion that it "may be contributing to her prolonged healing." Dr. Brunworth did not conduct a "causation analysis" as to the origin of the Claimant's injuries. Dr. Brunworth was an authorized referral.

10. The Claimant has suffered from RA for about eight years, with pain primarily emanating from her cervical spine and lower back.

11. The Claimant was also referred to Jonathan Sollender M.D., on March 20, 2018. Dr. Sollender called for an MRI (magnetic resonance imaging) of her left elbow. On June 12, 2017, the MRI had normal results, but also showed slight changes of chronic lateral epicondyltitis. Dr. Sollender was within the chain of authorized referrals.

12. Dr. Sollender further conducted a physical examination, and noted tenderness along the medial bone of the left epicondyle. Dr. Sollender recommended additional testing for her RA. He did not recommend PRP injections, but held it was a reasonable consideration if her MRI showed any obvious medical elbow pathology. Dr. Sollender did not conduct a "causation analysis" as to the origin of the Claimant's injuries.

Thomas Mordick, M.D., Respondents' Independent Medical Examiner (IME)

13. The Claimant also saw Dr. Mordick at the request of the Respondents. Dr. Mordick disagreed with Dr. Davis' recommended PRP injections because there was no tear in the Claimant's medial epicondyle, according to Dr. Mordick. He was of the opinion that Claimant's February 17, 2017 injury was a result of her RA and there likely existed no causation between the injury and the recommended injections. The ALJ finds Dr. Mordick's opinions and testimony interesting but insufficient to outweigh the opinions of Dr. Davis and the Claimant's (a 36-before-and-after the incident of February 17, 2017) testimony. Dr. Mordick's testimony does not make it more likely than not that the Claimant's RA was **not** aggravated and accelerated by the incident of February 17, 2017. Stated in the affirmative, the ALJ finds that it is more likely than not that the incident of February 17, 2017, aggravated and accelerated the Claimant's underlying RA.

Ultimate Findings

14 The ALJ finds the Claimant's testimony concerning lack of previous problems in the left elbow credible, persuasive and they outweigh the opinions of IME Dr. Mordick. Further, the ALJ finds the medical opinions of Dr. Davis and Dr. Sollender credible, highly persuasive and they indirectly support a causal relation to the February 17, 2017 incident.

15. Between conflicting testimonies and opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the Claimant's testimony as a whole, and the indirectly supporting opinions of Dr. Davis and Dr. Sollender and to reject opinions and testimony to the contrary.

16. The Claimant has established by a preponderance of the evidence that she sustained a compensable injury, or aggravation and acceleration of her underlying RA, to her left elbow on February 17, 2017.

17. The medical care and treatment that Claimant received for her left elbow, as demonstrated in the evidence, was authorized, causally related to the February 17 incident, and reasonably necessary to cure and relieve the effects of that injury.

18. On the date of injury, the Claimant was paid $14.38 an hour, based on a 35-hour week, which establishes an AWW of $503.30, which the ALJ hereby finds.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo.

275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaner v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's testimony concerning lack of previous problems in the left elbow was credible, persuasive and outweigh the opinions of IME Dr. Mordick. Further, the medical opinions of Dr. Davis and Dr. Sollender were credible, highly persuasive and indirectly supported a causal relation to the February 17, 2017 incident.

b. In *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997), the Court of Appeals determined that a medical opinion was not necessary to prove causation because imposing such a requirement would be reading something into the statute that was not there. *See Jacoby v. Metro Taxi, Inc.,* 851 P.2d 245 (Colo. App. 1993). § 8-41-301, C.R.S., which specifies the conditions necessary for a compensability determination (this would include the compensability of a medical procedure or diagnostic tests) does **not** provide that a medical opinion is necessary to make such a determination. As observed in *Lymburn*, to require a medical opinion to support a causality determination would be to read something into the statute that does not exist. As found herein above, the Claimant's testimony, indirectly buttressed by the opinions of Dr. Davis and Dr. Sollender, circumstantially support the compensability of the February 17, 2017 incident.

Substantial Evidence

c. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting testimonies and opinions, the ALJ made a rational choice, based on substantial

evidence, to accept the Claimant's testimony as a whole, and the indirectly supporting opinions of Dr. Davis and Dr. Sollender and to reject opinions and testimony to the contrary.

Compensability

d. A compensable injury is one that arises out of and in the course of employment. Section 8-41-301(1) (b), C.R.S. The "arising out of" test is one of causation. If an industrial injury aggravates or accelerates a preexisting condition, the resulting disability and need for treatment is a compensable consequence of the industrial injury. Thus, a claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). An injured worker has a compensable new injury **if the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought.** § 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). An injury resulting from the concurrence of a preexisting condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, *supra*. *Duncan v. Indus. Claims App. Office*, 107 P.3d 999 (Colo. App. 2004). Even where the direct cause of an accident is the employee's preexisting disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989). *Also see* § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). As found, the incident of February 17, 2017, caused the Claimant's left elbow epicondylitis and/or an aggravated and accelerated of her underlying rheumatoid arthritis.

Medical

e. To be authorized, all referrals must remain within the chain of authorized referrals in the normal progression of authorized treatment. *See Mason Jar Restaurant v. Indus. Claim Appeals Office,* 862 P. 2d 1026 (Colo. App. 1993); *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P. 2d 501 (Colo. App. 1995); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). As found, the Claimant's medical treatment for her left elbow was the result of a referral by the Employer and thereafter further treatment remained in the authorized chain of referrals.

f. To be a compensable benefit, medical care and treatment must be causally related to an industrial injury or occupational disease. *Dependable Cleaners v. Vasquez,* 883 P. 2d 583 (Colo. App. 1994). As found, Claimant's medical treatment for

her left elbow is causally related to the incident of February 17, 2017. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990) to cure and relieve the effects of her compensable injury.

Average Weekly Wage

g. An AWW calculation is designed to compensate for **total** temporary wage loss. *Pizza Hut v. Indus. Claim Appeals Office,* 18 P. 3d 867 (Colo. App. 2001). *See* § 8-42-102, C.R.S. As found, Claimant's AWW is $503.30.

Burden of Proof

h. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained her burden with respect to compensability, medical benefits and AWW.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Claimant sustained a compensable left elbow injury on February 17, 2017.

B. Respondents shall pay the costs of all authorized, causally related and reasonably necessary medical care and treatment for the Claimant's compensable left elbow injury of February 17, 2017, subject to the Division of Workers Compensation Medical Fee Schedule.

C. The Claimant's average weekly wage is hereby established at $503.30.

D. Any and all issues not determined herein are reserved for future decision.

DATED this13th day of February 2019.

EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

I. Whether Respondents overcame the DIME physician's opinion on MMI by clear and convincing evidence.

FINDINGS OF FACT

1. Claimant is a 63 year old woman who began working for Employer in February 2015 as a homemaker performing housekeeping duties. Claimant subsequently became a personal care worker, which involved performing housekeeping duties and assisting clients with bathing, dressing, and ambulating. On November 24, 2015, Claimant became a certified nursing assistant ("CNA"). As a CNA, Claimant went on home visits and assisted clients with bathing, toileting, ambulating and other personal care needs. Claimant's role as a CNA required frequent bending, stooping, squatting, reaching, ascending and descending stairs, and kneeling to maneuver patients. The position also required frequent exertion of objects up to 25 pounds and occasional exertion of objects between 50-75 pounds. Claimant did not have assistance while performing her job duties for Employer. Claimant worked between 40-50 hours a week for Employer.

2. At the time of Claimant's admitted work injury, Claimant also worked 20 hours a week as a cashier at a home improvement store. Claimant's job at the home improvement store required constant standing and the ability to lift up to 50 pounds. During her employment at the home improvement store, Claimant sustained an injury to her foot in 2014 and left hand in 2016. Claimant returned to work for Employer after receiving treatment for both injuries and was able to perform her regular job duties for Employer leading up to the admitted industrial injury she sustained during the course and scope of her employment with Employer on May 8, 2016.

3. On May 8, 2016, Claimant sustained an admitted injury to her right knee during the course and scope of her employment for Employer when she attempted to transfer a large elderly client from a wheelchair to a bed. Claimant was assisting the client using a gait belt when the client lost her balance and collapsed against Claimant. Claimant attempted to use her leg to reposition the client's foot to no avail. Claimant ultimately pivoted her body to heave the client onto the bed.

4. Claimant testified she immediately felt a sharp pain and a burning sensation in her right knee. She testified she had to finish her shift as "there was no one to call." She reported the injury to Susan Jean in the human resources department the next morning. Claimant informed Ms. Jean she was hoping it was just a sprain, and would attempt to treat it on her own before seeking medical attention.

5. Claimant continued to work both jobs from May 9, 2016 to May 17, 2016. Claimant testified she braced herself on a bed and shifted her weight to her left leg

when lifting. Claimant was allowed to sit on a stool while she performed her cashier duties at the home improvement store. During this time period, Claimant treated her knee with compression, ice and elevation. Claimant ultimately decided to seek medical treatment when her symptoms worsened and she felt unable to bear weight on her right leg.

6. On May 18, 2016, Claimant presented to Colleen Moss, P.A. at Kaiser Permanente. Claimant reported she injured her right knee on May 8, 2016 when a client collapsed in her arms with her full weight. Claimant reported that she experienced symptoms that evening which had since worsened. On examination, P.A. Moss noted tenderness to palpation with no ecchymosis, erythema or laceration. She noted it was difficult to assess effusion due to Claimant's body habitus. P.A. Moss assessed Claimant with right knee pain with possible meniscal involvement and suggested Claimant follow up with a workers' compensation provider.

7. On May 20, 2016, Claimant presented to authorized provider Robert Broghammer, M.D. at HealthOne. Claimant reported to Dr. Broghammer that she injured her right knee while transferring a very large client. On examination of the right knee, Dr. Broghammer noted mild effusion and positive medial and lateral joint line pain. He assessed Claimant with a work-related right knee strain and recommended that Claimant undergo a right knee MRI, noting the "duration of symptoms, with ongoing effusion, medial joint line pain, and physical findings, as well as history, [were] highly suggestive of a meniscal tear." Claimant was placed on 20 pound lifting limit with restrictions of no crawling, kneeling, squatting or climbing.

8. Claimant underwent a right knee MRI on May 26, 2016. William R. Dunfee, M.D.'s impression was as follows: 2.1 cm long horizontal tear medial meniscus, osteoarthritis with areas of grade 2 and 3 cartilage fissuring, and small knee joint effusion and Baker's cyst.

9. On May 27, 2016, Dr. Broghammer noted Claimant's MRI revealed a large horizontal tear in the medial meniscus. He further noted,

> In addition, she has quite a bit of associated degenerative changes, not necessarily unexpected, with grade 2 and grade 3 osteoarthritic changes in multiple areas of the knee. [Claimant] was surprised by the arthritic findings because she never had symptoms. I told her that imaging studies are poorly coordinate with symptomatology, especially when it comes to arthritis.

Dr. Broghammer assessed Claimant with a right knee strain with meniscal tear, continued her work restrictions, and referred Claimant for an orthopedic evaluation.

10. On June 9, 2016, Claimant presented to John Schwappach, M.D. for an orthopedic evaluation. Claimant reported the same mechanism of injury to Dr. Schwappach. Dr. Schwappach reviewed the MRI results and opined Claimant sustained an acute right strain on top of chronic osteoarthritis. He doubted the horizontal meniscal

tear was an acute injury. Dr. Schwappach administered a right knee corticosteroid injection, recommended Claimant begin taking ibuprofen, and referred Claimant for physical therapy. Claimant reported experiencing improvement after the injection.

11. On June 17, 2016, Claimant was involved in a non-work-related motor vehicle accident ("MVA") when she was cut off by another vehicle and T-boned a truck.

12. Dr. Broghammer reexamined Claimant on July 12, 2016, noting that Claimant had been involved in a recent MVA. Claimant reported left knee, right ankle, low back, and whiplash symptoms as a result of the MVA. Dr. Broghammer noted Claimant's right knee was "status quo" after the MVA.

13. Claimant returned to Dr. Schwappach on July 28, 2018 and received a second right knee steroid injection, which caused Claimant's pain to increase. Claimant experienced intermittent swelling, difficulty walking and weight bearing. On August 9, 2016, Dr. Broghammer noted Claimant was now ambulating with a cane. Claimant reported to Dr. Broghammer that her knee had returned to feeling like it did when she was first injured.

14. On September 1, 2016, Dr. Schwappach recommended Claimant undergo a right knee arthroscopy and partial meniscectomy. In a September 2, 2016 medical note, Dr. Broghammer noted that he agreed with Dr. Schwappach's recommendation for surgery based on Claimant lack of response to conservative modalities.

15. On September 12, 2016, physician advisor Jon M. Erickson, M.D. performed a review of the requested right knee arthroscopy and partial meniscectomy. He noted Claimant's May 26, 2016 MRI revealed a degenerative horizontal tear of the medial meniscus and advanced osteoarthritic changes with no evidence of acute trauma. Dr. Erickson opined that Claimant's abnormalities were pre-existing, and that the requested arthroscopic partial medial meniscectomy would be appropriate, "with the understanding that such procedure in the face of advanced osteoarthritis holds very little chance of long term benefit." He explained that any continued substantial knee pain or need for a total knee replacement would be directly related to Claimant's pre-existing advanced osteoarthritis and not the work injury.

16. Claimant underwent a left knee MRI on September 27, 2016 in connection with her non-work-related MVA. The left knee MRI revealed a horizontal tear of the medial meniscus body, blunting of the lateral meniscus inner margin, and osteoarthritis. Claimant was subsequently with assessed a left knee medial meniscus tear with underlying osteoarthritis. Charlie C. Yang, M.D. recommended that Claimant undergo a total left knee arthroscopy.

17. On October 5, 2016, Claimant underwent a right partial medial meniscectomy, partial lateral meniscectomy and chondroplasty, performed by Dr. Schwappach. On October 17, 2016, Dr. Schwappach noted near resolution of Claimant's preoperative symptoms. However, on October 19, 2016, Claimant reported that her knee was feeling worse and increasingly achy. Claimant engaged in extensive physical therapy after the

surgery, yet Claimant continued to report constant knee pain and require the assistance of a cane. On February 20, 2017, Dr. Schwappach offered to administer a third right knee steroid injection, which Claimant declined.

18. On March 20, 2017, Claimant presented to Levi Miller, D.O. upon the referral of her authorized providers at HealthOne. Claimant reported the same mechanism of injury to Dr. Miller. Claimant rated her pain 2/10 at best and 9/10 at worst. Dr. Miller diagnosed Claimant with chronic right knee pain and a meniscal tear from the May 8, 2016 industrial injury. He recommended Claimant use a brace and prescribed a topical cream.

19. Dr. Schwappach last evaluated Claimant on June 15, 2017. Claimant reported she continued to have some pain but was making progress in physical therapy. Dr. Schwappach concluded Claimant reached MMI for her right knee and discharged her from his care.

20. Due to her ongoing pain, Claimant sought a second orthopedic opinion on her right knee with Nathan Faulkner, M.D. on June 30, 2017. Dr. Faulkner recommended Claimant undergo weight-bearing x-rays and a second right knee MRI.

21. Claimant attended a follow-up evaluation with Dr. Faulkner on August 29, 2017, reporting 3-7/10 pain. Dr. Faulkner noted that June 30, 2017 x-rays revealed mild medial joint space narrowing with well-maintained lateral and patellofemoral joint spaces. He further noted that a July 27, 2017 MRI showed grade 4 chondromalacia of the media ridge and medial patellar facet, mild/moderate chondromalacia of the medial and lateral femoral condyles, and a small recurrent vertical tear of the posterior horn medial meniscus. He opined that, despite the recurrent tear, Claimant's pain distribution and exam was more consistent with arthritis. Dr. Faulkner recommended Claimant undergo a PRP injection, which he administered on September 15, 2017.

22. On September 27, 2017, Claimant reported to Dr. Miller experiencing significant pain since receiving the PRP injection. Claimant was released to return to work in an administrative capacity working four hours per day.

23. On December 18, 2017, Dr. Faulkner reevaluated Claimant. Claimant reported 3-7/10 persistent pain. Dr. Faulkner noted that he had prescribed Claimant a Medrol Dosepak which helped Claimant with swelling but not pain. Dr. Faulkner opined that the next step for Claimant would be a total knee replacement, as Claimant had an extensive workup and had not responded to conservative treatment.

24. Claimant returned to Dr. Miller on December 27, 2017 reporting continued symptoms. Dr. Miller noted that the July 27, 2017 MRI revealed a recurrent meniscal tear with associated degenerative changes in the medial joint compartment. He further noted that Claimant was reporting locking and catching symptoms, "which may be consistent with recurrent meniscal tear and undersurface flap, as described by the radiologist."

25. On January 3, 2018, physician advisor Albert Hattem, M.D. reviewed Dr. Faulkner's recommendation for additional surgery. Dr. Hattem agreed with Dr. Erickson and opined that the recommended surgery was to treat Claimant's pre-existing degenerative joint disease, which was not caused by the work injury.

26. Dr. Miller reevaluated Claimant on January 16, 2018. He initially opined that Claimant's need for a total knee replacement was work-related, stating,

> The patient, in my opinion, is a candidate for total knee replacement to be paid for by Colorado Worker's Compensation as she suffered the knee injury while working and there is no record of prior knee complaints or treatment despite the preexisting degenerative changes as seen on the MRI, the patient has been fully functional and working full time prior to this injury; the patient's current knee pain and limited function is attributable to the industrial injury. Currently, the patient remains at a stable and stationary though substantially diminished functional status, a knee replacement would very likely return the patient to work full time without permanent restrictions.

27. Claimant also saw Dr. Faulkner on January 16, 2018. Dr. Faulkner also initially opined Claimant's need for surgery was work-related. He wrote, "It is my opinion that while her arthritis was not caused by the injury, it is as likely as not that the treatment and sequela for her work-related injury to the meniscus including including (*sic)* knee arthroscopy and partial medial meniscectomy could have caused progression of her arthritis."

28. On February 6, 2018, Kathy F. McCranie, M.D. performed an independent medical examination ("IME") at the request of Respondents. Claimant reported the same mechanism of injury to Dr. McCranie as she did to her providers. Dr. McCranie performed a records review and physically examined Claimant, noting moderate pain behaviors and complaints on examination. She opined Claimant sustained a medial meniscal tear and possible lateral meniscal tear of the right knee in relationship to the May 8, 2016 work injury. She concluded that Claimant's right knee osteoarthritis was unrelated to the work injury and agreed with Dr. Hattem and Dr. Erickson that Claimant's need for a total knee arthroplasty was related to Claimant's pre-existing osteoarthritis. Dr. McCranie opined Claimant was at MMI with a 24% lower extremity impairment and permanent restrictions limiting walking, standing, squatting, kneeling and crawling. She suggested potential maintenance care in the form of completing physical and psychotherapy sessions and use of topical analgesic cream.

29. On February 9, 2018, Dr. Miller issued a letter stating Claimant was restricted from lifting/pushing/pulling greater than 20 pounds, and was to avoid kneeling, climbing, squatting, in addition to walking or standing for greater than 10 minutes per hour. Dr. Miller reiterated his then-opinion that Claimant was an appropriate candidate for a total knee replacement, and stated that, without the knee replacement, Claimant's current restrictions would become permanent.

30. After subsequently reviewing Dr. McCranie's IME report, Dr. Miller issued a letter on February 18, 2018 stating, "I am in agreement with the opinions and recommendations of the examining physician."

31. On March 12, 2018, Dr. Miller placed Claimant at MMI with 26% lower extremity impairment. Claimant reported 3/10 pain, diminished range of motion, and swelling with activity. Dr. Miller noted continued to use a cane. His final assessment was: right knee pain associated with medial and lateral meniscal tear superimposed on pre-accident osteoarthritis, medial and lateral meniscal tear due to work-related injury 05/08/2016, status post arthroscopic partial medial and lateral meniscectomy and chondroplasty. He assigned permanent restrictions of no lifting/pushing/pulling more than 20 pounds, avoiding climbing and squatting, and avoiding walking and standing for greater than 10 minutes. He recommended Claimant complete her pending physical therapy and psychotherapy sessions and use topical analgesic cream for up to one year.

32. On March 20, 2018, Respondents filed a Final Admission of Liability ("FAL") in accordance with Dr. Miller's March 12, 2018 report, admitting for 26% scheduled impairment and reasonable, necessary and related maintenance benefits. Claimant objected to the FAL on April 2, 2018 and requested a DIME.

33. Timothy Higginbotham, M.D. performed the DIME on July 10, 2018. Dr. Higginbotham reviewed Claimant's medical records, including both right knee MRIs, and examined Claimant. Claimant reported the same mechanism of injury. Claimant denied any right knee complaints, evaluation or treatment prior to the work injury. Dr. Higginbotham noted Claimant was involved in a non-work-related MVA in 2016 and was experiencing issues with her left knee. Dr. Higginbotham noted no notable pain behaviors on examination. He assessed Claimant with, *inter alia*, a torsion strain event of the right knee, previously asymptomatic early degenerative changes of the right knee, structural diagnostic evidence of a large 2 cm radial medial meniscal tear, and post-operative structural diagnostic evidence of a recurrent medial meniscal tear superimposed upon associated degenerative joint disease. He opined was not at MMI due to her need for a total right knee arthroplasty. Dr. Higginbotham opined a total knee replacement was reasonable, necessary and related to the work injury. He assigned a provisional lower extremity impairment of 24%.

34. Dr. Higginbotham addressed the causality of the total knee replacement, specifically addressing the conflicting opinions of Drs. Schwappach, Erickson, Faulkner, Hattem, Miller, and McCranie in his report. He noted there were no medical records or personal history indicating Claimant had arthritic symptoms or loss of function prior to the work injury. Dr. Higginbotham explained,

> Surely the degenerative processes were pre-existing. However, degenerative processes in and of themselves may not connote symptomatic or dysfunctional processes. Without the so described injury mechanism and as cautioned by the WC orthopedic adviser and discussed by the latest treating orthopedist about the arthroscopic

debridement, it is merely speculative as to when, or possibly if ever, a total arthroplasty would have been necessary.

35. On October 18, 2018, Timothy S. O'Brien, M.D. performed an IME at the request of Respondents. Dr. O'Brien reviewed medical records, including the MRI imaging, and physically examined Claimant. Claimant reported the same mechanism of injury to Dr. O'Brien. Claimant reported she did not have knee pain prior to the May 8, 2016 injury and that since the injury her knee pain had not resolved. Claimant rated her knee pain 9/10. Dr. O'Brien concluded Claimant solely sustained a very minor knee strain on May 8, 2016. He opined Claimant did not sustain an acute tear of her meniscus, or any other acute injury of her right knee as a result of the May 8, 2016 work injury. He based this opinion on the MRI imaging, as well as the fact that Claimant did not seek any medical care for approximately two weeks following the injury. Dr. O'Brien stated such behavior would not be typical for someone following an acute knee injury, but would be typical for a person with pre-existing knee pain due to osteoarthritis. Dr. O'Brien explained that, if Claimant had sustained an acute injury, there would have been evidence of bleeding and post-traumatic fluid as well as an acute meniscus tear on the May 26, 2016 MRI. Dr. O'Brien opined that all of the pathology shown on Claimant's MRI was pre-existing. Additionally, Dr. O'Brien further noted that very early in the case Claimant began to develop non-organic physical findings, with Claimant's pain escalating despite a lack of physiologic or anatomic explanations. He noted that, despite Claimant's assertions she never had any right knee pain prior to the work incident, the likelihood of that was actually very small, based on his experience performing over 3000 knee replacements and treating thousands of patients with osteoarthritis of the knee.

36. Dr. O'Brien agreed with Dr. Hattem, Dr. Erickson, and Dr. McCranie that Claimant's need for a total knee replacement is not related to her admitted work injury, and that the admitted injury did not aggravate or accelerate her need for a total knee replacement. He opined that the surgery that was performed was not related and contraindicated. He further opined that Dr. Higginbotham's opinion regarding MMI was flawed because Dr. Higginbotham incorrectly stated Claimant had sustained a serious injury on May 8, 2016 and "inappropriately assumed" Claimant's continued symptomatology was work-related.

37. Drs. Miller and Faulkner subsequent reviewed Dr. O'Brien's IME report. In letters dated November 19, 2018 and November 29, 2018, Dr. Miller and Dr. Faulkner, respectively, stated they agreed with Dr. O'Brien that Claimant's need for a total right knee replacement is related to Claimant's pre-existing arthritis, which was not aggravated or accelerated by her admitted work injury.

38. Dr. Higginbotham testified by pre-hearing deposition on November 20, 2018 as a Level II accredited expert in occupational medicine. Dr. Higginbotham reviewed Dr. O'Brien's IME report and testified that, while he agreed Claimant's ongoing symptoms are due to the progression of her osteoarthritic symptomatology, he disagreed Claimant's condition is solely a personal health issue and not work-related. Dr. Higginbotham testified Claimant had degenerative changes in her knees, but opined

that her current complaints, condition, and need for treatment are related to the May 8, 2016 work injury. In support of his opinion, he explained that, prior to the work injury, Claimant was not under any treatment for her knee, was working in her usual capacity without experiencing any disabling patterns, and was not symptomatic such that she required evaluation.

39. Dr. Higginbotham reviewed additional medical records from Claimant's June 2016 MVA. He testified that the bilaterally of the knee symptoms did not change his opinion on the relatedness of the right knee total replacement, reiterating his opinion that Claimant's symptomatology was significantly aggravated by the work injury and caused the need for surgery. Dr. Higginbotham testified Claimant is an appropriate candidate for a total arthroplasty of the right knee. He expressed some concern as to the potential for success of the surgery due to Claimant's obesity but testified that, at this time, "the most appropriate and only option is the total knee replacement."

40. Dr. O'Brien testified at hearing as a Level II accredited expert in orthopedic surgery. Dr. O'Brien testified consistent with his IME report. He testified that the May 26, 2016 MRI showed significant pre-existing age-related osteoarthritic changes throughout her knee, with no evidence of any acute damage to her knee. Dr. O'Brien testified that if Claimant had aggravated or accelerated her pre-existing condition when she was injured at work she would have sought treatment immediately, the provider at Kaiser would have documented an acute injury, and/or her radiological findings would have reflected an acute injury. Dr. O'Brien explained that, in general, an aggravation or acceleration would at least be apparent from the presence of bleeding on an MRI. Dr. O'Brien also noted that in order for an aggravation or acceleration of Claimant's bone on bone osteoarthritis to be found, extensive force would have needed to be present such that a fracture would occur which was not found on Claimant's MRI, nor could such a force have been exerted given the nature of Claimant's injury.

41. Dr. O'Brien testified that it is virtually impossible for Claimant to have not experienced any sort of knee pain given her age, obesity, and radiological findings. Dr. O'Brien testified that it is typical for a patient to have no history of seeking treatment for their knees before finally coming in to be evaluated for treatment despite having long standing pain complaints. Dr. O'Brien further testified that Claimant's significant physical decline could not be explained physically or anatomically. He noted that the only way to explain her behavior is to implicate non-organic factors such as secondary gain. Dr. O'Brien noted that the bilateralism of Claimant's knee issues is further evidence that Claimant's need for a total knee replacement for her right knee is not related to her work injury. Dr. O'Brien stated he disagreed with the decision to perform a knee arthroscopy. He testified that scoping arthritic knees introduces trauma that accelerates the need for a knee replacement. Dr. O'Brien stated that had the knee arthroscopy been related to Claimant's industrial injury, the knee replacement would be related to her industrial injury.

42. Dr. O'Brien stated that Dr. Higginbotham's opinion that the absence of pre-existing pain indicates that there is a direct causal link between the incident at work and her need for the total knee replacement is clearly in error. Dr. O'Brien testified that Dr.

Higginbotham's opinion is not supported by science and logic, and that Dr. Higginbotham has never had the training to correlate an MRI scan finding with true surgical findings. Dr. O'Brien testified that Dr. Higginbotham's mental picture of the severity of Claimant's injury is not supported by any objective evidence. He further stated Dr. Higginbotham failed to explain how he came to his conclusions absent what Dr. O'Brien believed to be objective evidence of an acute injury to the right knee. Dr. O'Brien concluded that Claimant's candidacy as a patient who should undergo a total knee replacement was established radiographically years before the incident at work. Dr. O'Brien testified that Dr. Higginbotham's opinion that it is merely speculative that Claimant would ever need to undergo a total knee replacement is clearly wrong.

43. Cheryl Mochizuki testified at hearing on behalf of Claimant. She works for Employer as a paraprofessional educator and observes each CNA to ensure they are physically able to perform their job. Ms. Mochizuki explained that a CNA has to be able to bear the weight of each patient and transfer the patient from bed to chair, chair to chair, or from chair to bed. When performing a transfer, a CNA has to do a stand-to-pivot, which requires the CNA to take the sitting patient from the side of the bed, help the patient get up, turn the patient, and place them into the wheelchair. She further elaborated that heavier patients require an extensive amount of pulling, pushing, and lifting in order to be positioned correctly. When performing a stand-to-pivot motion, a CNA must demonstrate flexing at the knee and hip while also having the ability to stand with the patient. Ms. Mochizuki stated that she observed Claimant perform these motions on December 22, 2015. She also observed Claimant after this date during co-visits. Ms. Mochizuki testified she did not perceive any issues with Claimant performing these motions, nor did it appear Claimant experienced pain when performing these motions.

44. Claimant testified she did not have any knee pain or seek treatment for her knee prior to the work injury. Claimant testified she did not have any issues performing her job duties prior to the work injury. Claimant stated she did not begin using a cane until after receiving the second injection to her knee. Claimant testified that her current symptoms included pain, swelling, and an inability to walk or sit for extended periods of time. She stated she can no longer walk her three dogs, which she was able to do prior to the work injury. Claimant has permanent restrictions. She returned to work for Employer working 20 hours a week performing customer service, scheduling and other administrative duties.

45. Claimant's testimony is found credible and persuasive.

46. On the issue of relatedness of the total right knee replacement and MMI, the ALJ credits the opinion of DIME physician Dr. Higginbotham over the conflicting opinions of Drs. Miller, Faulkner, Hattem, Erickson, McCranie and O'Brien.

47. The ALJ credits Dr. Higginbotham's opinion that Claimant is a candidate for a total right knee replacement due to the work injury's significant aggravation of Claimant's pre-existing osteoarthritis.

48. Respondents failed to overcome Dr. Higginbotham's DIME opinion on MMI by clear and convincing evidence.

49. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME on MMI

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. Under the statute MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007). A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (I.C.A.O. March 2, 2000).

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). Where the evidence is subject to conflicting inferences a mere difference of opinion between qualified medical experts does not necessarily rise to the level of clear and convincing evidence. Rather it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Industries,* WC 4-712-812 (ICAO November 21, 2008). The ultimate question of whether the party challenging the DIME physician's finding of MMI has overcome it by clear and convincing evidence is one of fact for the ALJ. *Metro Moving and Storage Co. v. Gussert*, *supra*.

As found, Respondents failed to prove it is highly probable Dr. Higginbotham's DIME opinion on MMI is incorrect. Respondents point to Claimant's delay in seeking medical treatment in support of their position that Claimant only sustained a minor strain as a result of the work incident. Although Claimant did not immediately seek medical attention, she credibly testified as to the sudden onset of symptoms during the work injury and the subsequent worsening of symptoms. Claimant credibly testified she did not have prior right knee symptoms, which Dr. O'Brien opined is virtually impossible based on Claimant's MRI findings. Assuming *arguendo* Claimant did have knee pain prior to the work injury due to pre-existing degenerative changes, there is no evidence Claimant required treatment or was incapacitated to the extent she has been post-work-injury and treatment. Even with pre-existing degenerative changes, prior to the work injury Claimant was able to work two jobs that involved frequent standing, lifting, squatting, bending, and kneeling without any restrictions or accommodations. Subsequent to the work injury, Claimant has experienced continuing pain and functional

limitations, even after undergoing extensive conservative treatment and surgery which was provided within the workers' compensation system as a result of the May 8, 2016 injury. Although Dr. O'Brien opined the arthroscopy was not related or indicated, he acknowledged that such procedure introduces trauma to arthritic knees and that the trauma accelerates the need for a knee replacement.

Respondents emphasize that each of the providers, IME physicians and physician advisors in this case opine that Claimant's need for a total knee replacement is related to her pre-existing osteoarthritis, which was not aggravated or accelerated by the work injury. The ALJ notes that Drs. Faulkner and Miller initially opined Claimant's total knee replacement was due to the work injury, and that Dr. Faulkner also at one point opined that it was likely Claimant's treatment could have caused the progression of her osteoarthritis. Drs. Faulkner and Miller subsequently changed their opinions based on the reports of Drs. McCranie and O'Brien.

Dr. Higginbotham was aware of these conflicting opinions and their bases, and directly addressed them in his report and deposition testimony. Dr. Higginbotham was told the same mechanism of injury and history as the other examiners and reviewed the same MRIs and medical records. He was aware of Claimant's pre-existing bilateral degenerative condition and continued to opine the work injury significantly aggravated Claimant's right knee condition, causing the need for a total knee replacement. Dr. Higginbotham credibly opined Claimant is not at MMI due to the need for a total knee replacement, which he described as Claimant's only option at this point. As noted above, a finding that a claimant needs additional medical treatment to improve his or her injury-related medical condition is inconsistent with a finding of MMI. Although multiple opinions to the contrary are reflected in the record, the ALJ is persuaded these amount to mere differences of opinion that are insufficient to overcome Dr. Higginbotham's DIME opinion.

ORDER

It is therefore ordered that:

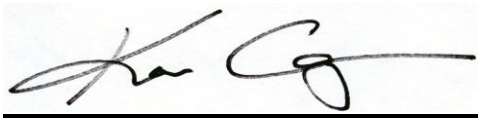
1. Respondents failed to overcome Dr. Higginbotham's DIME opinion that Claimant is not at MMI by clear and convincing evidence.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures

to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 13, 2019



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-978-924-003

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Self-Insured Respondent.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on January 8, 2019, in Denver, Colorado. The hearing was digitally recorded (reference: 1/8/19, Courtroom 3, beginning at 1:30 PM, and ending at 3:15 PM).

Claimant's Exhibits 1 through 6 were admitted into evidence, without objection. Respondents' Exhibits A through O were admitted into evidence, without objection. The evidentiary deposition of William Ciccone, M.D., taken on September 12, 2018 (referred to herein after as Ciccone Depo., followed by a page number).

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant, which was filed, electronically, on January 17, 2019. Respondent was given two working days within which to file objections. Objections not having been timely filed, the matter was deemed submitted for decision on January 23, 2019. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern the Claimant's Petition to Re-Open; and, if reopened, medical benefits.

The Claimant bears the burden of proof by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. Respondent filed a Final Admission of Liability (FAL) on or about April 2, 2015. At the hearing, the Claimant stated that her claim arose from her attempt to climb and descend stairs in a somewhat harried fashion while under restrictions from a previous, unrelated automobile accident. Claimant's version of the incident was consistent with the medical records. Respondent did not assert any form of safety violation or similar benefit reduction in its FAL.

2. The FAL was accompanied by medical records authored by Kathy F. McCranie, M.D., and Eric Tentori, D.O., and therein Respondent agreed to "medical care that is reasonable, necessary and related and authorized by (sic) designated clinic/authorized treating physician."

3. In the FAL, Respondent also admitted for a medical impairment rating/permanent disability award of 9 percent of the whole person, apportioned out due to her "preexisting condition" and finally resulting in an award of 3% whole person. The FAL admitted a maximum medical improvement (MMI) date of February 2, 2015.

4. In his report, Dr. Tentori noted that Claimant "was provided with activity restrictions above/beyond her pre-work activity restrictions." He also was of the opinion that "this injury has resulted in permanent physical therapy (sic) impairment."

5. In her report, Dr. McCranie stated that the Claimant suffered from "low back pain predominately left sided" and "possible facetogenic pain." In the course of providing her impairment rating, including the above-referenced apportionment, Dr. McCranie also noted that the Claimant was on "irregular work restrictions" at the time of the incident.

Petition to Re-open

6. On or about July 20, 2017, the Claimant filed a timely Petition to Reopen her claim on the basis of a change in her medical condition. Attached to it was a medical report from Amy Pearson, M.D., dated February 21, 201, which stated that the Claimant's back pain had returned with the same pattern and intensity as she originally suffered from her claim. Dr. Pearson also stated that the Claimant had experienced a worsening of condition and was no longer at MMI. Dr. Pearson prescribed "additional care" in the form of physician visits, a facet block and a possible nerve ablation along with physical and aqua therapy and therapeutic massage. Dr. Pearson stated the opinion that this was necessary to bring the Claimant "back" to MMI.

7. On or about January 9, 2017, Elena Pimanova, M.D., stated the opinion that the Claimant was not at MMI, had experienced a worsening of condition and was in need of additional care (Claimant's Exhibits, p. 58).

8. Dr. Pearson confirmed Dr. Pimanova's opinion, in her medical report, dated February 21, 2017 (*Id. 18).*

9. The Claimant received a lengthy course of physical therapy (PT) through Benchmark PT during 2017. Her treatment was consistent with her presentation as referenced above by the opinions of, Dr. Pimanova and Dr. Pearson.

10. Gerald Chai, D.O. saw the Claimant regularly from early 2016 through the beginning of 2017. He was of the opinion that the Claimant had lumbar spondylosis, disuse atrophy and chronic pain syndrome for which he provided treatment which was approved by Respondents (*Id. 34*).

11. The Claimant's testimony was credible, overall, and consistent with the above medical opinions. The Claimant stated that her condition from the admitted workers' compensation claim had worsened and she requested the treatment prescribed by Dr. Pearson.

Respondent's Independent Medical Examiner (IME), William Ciccone, M.D.

12. Respondent sent the Claimant to an IME physician of its choosing in preparation for the hearing. The IME physician, Dr. Ciccone was of the overall opinion in his report that the Claimant did not suffer a workers' compensation injury and/or claim in the first place. Dr. Ciccone's opinion would have compensability re-litigated. For this reason and other reasons specified herein below, the ALJ finds Dr. Ciccone's opinion concerning "compensability," contrary to the weight of the evidence and lacking in credibility on the issue of causality.

13. In his evidentiary deposition submitted at the hearing, however, Dr. Ciccone stated that the Claimant moved "very slowly" and exhibited a left-sided limp at

the time of his examination. Dr. Ciccone stated that the Claimant was limited due to pain and had limited motion in her low back along with muscular weakness. He also noted that Claimant had reported a worsening of her pain symptomatology over time. Finally, he stated that, regardless of causation, he agreed within a reasonable degree of medical probability with Dr. Pearson's recommendations for her care (Respondents Exhibits, p. 12, lines 20-24; *Id.,* p. 13, line 2; *Id.*p. 36, lines 17-22 or Deposition transcript p. 8, lines 20-24; p. 9, line 2; p. 32, lines 17-22).

14. When taken with the evidence as a whole, Dr. Ciccone's opinion is not credible or persuasive with regard to the Claimant's not having a worsening of condition or, for that matter, the original existence of a compensable claim. His agreement(s) with her need for medical care, however, is credible and persuasive. The ALJ infers that the foundation of this opinion is either Dr. Ciccone's underlying assumption that the Claimant's treatment is for non-work related causes. The ALJ does not find this purported underlying assumption credible.

Ultimate Findings

15. The Claimant presented forthrightly and credibly. Her testimony alone supports a worsening of condition after MMI. The ALJ finds the opinions of Dr. Pearson and Dr. Pimanova, concerning a worsening of condition, unequivocal, credible and highly persuasive. On the other hand, Dr. Ciccone's causality opinions are **not** credible.

16. Between conflicting testimonies and evidence, the ALJ makes a rational choice, based on substantial evidence, to accept the Claimant's testimony and the opinions of Dr. Pearson and Dr. Pimanova, and to reject the opinions of dr. Ciccone.

17. The Claimant has proven a worsening of her condition, after MMI, by a preponderance of the evidence.

18. The Claimant has established that all authorized medical care and treatment, after the worsening of the Claimant's work-related condition, was and is causally related and reasonably necessary to cure and relieve the effects of the worsening of condition.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences

from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's testimony alone supports a worsening of condition after MMI. *See Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo.App. 1997). As further found, the opinions of Dr. Pearson and Dr. Pimanova, concerning a worsening of condition, were unequivocal, credible and highly persuasive. On the other hand, Dr. Ciccone's causality opinions were **not** credible.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial

evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting testimonies and evidence, the ALJ made a rational choice, based on substantial evidence, to accept the Claimant's testimony and the opinions of Dr. Pearson and Dr. Pimanova, and to reject the opinions of Dr. Ciccone.

Re-Opening

c. A workers' compensation "award" may be reopened within six years after the date of injury on the ground of fraud, an overpayment, an error, a mistake, or change in condition. § 8-43-303(1), C.R.S. A change in condition refers either "to a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition that can be causally connected to the original compensable injury." *Anderson v. Longmont Toyota, Inc.*, 102 P.3d 323, 330 (Colo. 2004). As found, Claimant's condition worsened after MMI.

d. The reopening authority granted to an ALJ by § 8-43-303, C.R.S. "is permissive, and whether to reopen a prior award when the statutory criteria have been met is left to the sound discretion of the ALJ." *Renz v. Larimer County Sch. Dist. Poudre R-1*, 924 P.2d 1177, 1181 (Colo.App.1996). Moreover, whether a claimant's condition is due to the natural progression of a pre-existing condition or a new industrial accident is one of fact for resolution by the ALJ. *Pavelko v. Southwest Heating and Cooling, LLC*, W.C. No. 4-897-489-02 [Indus. Claim Appeals Office (ICAO), September 4, 2015) (citing *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999)). Further, whether a claimant proved a worsened condition, and whether the worsening was causally related to the industrial injury, are factual issues for resolution by the ALJ. *Id.* As found, the Claimant has proven a work-related worsening of condition.

Medical

e. To be a compensable benefit, medical care and treatment must be causally related to an industrial injury or occupational disease. *Dependable Cleaners v. Vasquez,* 883 P. 2d 583 (Colo. App. 1994). As found, Claimant's medical treatment is causally related to the worsening of her work-related condition after MMI. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's medical care and treatment was and is reasonably necessary to cure and relieve the effects of the worsening of condition.

Burden of Proof

f. The party seeking to reopen an issue or claim bears the burden of proof as to any issues sought to be reopened. § 8-43-303(4), C.R.S. A claimant has the

burden of proof in seeking to reopen a claim for a worsened condition. *Richards v. Indus. Claim Appeals Office*, 996 P.2d 756, 758 (Colo. App. 2000). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained her burden with respect to re-opening and reasonably necessary and causally related medical care and treatment.

ORDER

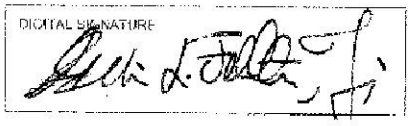
IT IS, THEREFORE, ORDERED THAT:

A. W.C. No. 4-978-924-001 is hereby re-opened.

B. Respondent shall pay the costs of all authorized, causally related and reasonably necessary medical care and treatment, subject to the Division of Workers Compensation Medical fee Schedule.

C. Any and all issues not determined herein are reserved for future decision.

DATED this 14th day of February 2019.



EDWIN L. FELTER, JR.
Administrative Law Judge

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-080-983-001

ISSUES

I. Whether Claimant has established by a preponderance of the evidence that she sustained a compensable occupational disease to her upper extremities during the course and scope of her employment with Employer.

II. Whether Claimant has proven by a preponderance of the evidence that she is entitled to receive authorized medical treatment that is reasonable and necessary to cure or relieve her from the effects of her occupational disease.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant was born on July 3, 1966, and was 52 years of age at the time of the hearing.
2. At the time of the hearing, Claimant was employed by Lockheed Martin. Claimant started working at Lockheed Martin on May 6, 1986. Claimant performed her work at Lockheed Martin's Waterton Campus.
3. For the ten years prior to the hearing, Claimant worked full time (40 or more hours per week) as an electrical senior specialist. Claimant's job duties involved building by hand – and using hand tools - satellite harnesses, ground test cables, power cables, and test racks to test the satellites. Claimant is right-hand dominant.
4. Clamant testified that she performed her various job tasks using various hand tools such as wire cutters and wire crimpers. This required the repetitive and forceful gripping of various hand tools throughout her work shift.
5. Claimant also testified that she used her hands 100% of the time to perform her job tasks. Claimant described her job tasks as follows:

> When I start a project, you cut wire – you cut enough wire – when you cut, you cut, cut, cut, cut; and then when you label, you label, label, label, label; you route, route, route, route; when you twist, you twist and you tie like that.

6. Claimant credibly testified that between 2014/16 she worked 2600 hours and in 2017 she worked over 2900 hours and that from August 1 through November of 2017 she was a project lead where she worked lots of hours until her hands hurt.

7. Claimant further testified that throughout 2017, she never worked as hard as she did from August until the end of the year in 2017 because she was required to train a lot of new employees. Claimant testified that she trained the new employees how to measure, cut, label, and crimp wires and perform other prep work - all of which was done by hand.

8. Claimant testified that prior to November of 2017 she had no issues with either of her hands.

9. On December 13, 2017, Claimant was evaluated by Physicians' Assistant Amanda Doetsch, at New West Physicians, complaining of bilateral had pain and arm tingling. Claimant indicated that her pain was worse at night and that it sometimes radiated up to her shoulders and back. Her musculoskeletal examination revealed joint swelling and joint stiffness combined with bilateral wrist pain and tingling. PA Doetsch diagnosed Claimant as suffering bilateral carpal tunnel syndrome, with the left being worse than the right. She also prescribed, among other things, wrist splints.

10. Employer regularly shuts down for two weeks at the end of each year. The shutdown at the end of 2017, started around December 22, 2017, which was a Friday, and would have gone through approximately Friday, January 5, 2018.

11. On December 18, 2017, Claimant went to the Lockheed Martin Wellness Center, which is on the Waterton Campus, and was evaluated by Nurse Practitioner Tracy Jessen. NP Jessen suspected either wrist arthritis or carpal tunnel syndrome. She sent Claimant for bilateral wrist x-rays, which were unremarkable and did not demonstrate evidence of arthritis.

12. On January 4, 2018, Claimant returned to the Lockheed Martin Wellness Center on the Waterton Campus and was seen by Dr. Andrew Plotkin. Dr. Plotkin noted in his report that Claimant has worked for Employer for 30 years as an electrical specialist building electrical components requiring repetitive use of her hands while using hand tools. He noted that Claimant stated that her job tasks included crimping, routing, stripping, and wire cutting. He did note that Claimant said there might have been some mild improvement with splint use and being off work due to the shutdown. Dr. Plotkin also noted in his report that Claimant stated that she had previously had some paresthesias in her hands at night, while in bed, but that it resolved without treatment. In his assessment, Dr. Plotkin noted that Claimant presented with symmetric upper extremity pain and paresthesias. He stated in his report that:

> The mechanism of injury was reviewed and based on my initial evaluation, suggests possible risk factors for cumulative trauma disorders. The presentation, however is somewhat less typical for cumulative trauma disorder such as peripheral nerve entrapment syndromes given the sudden onset of bilateral symmetric symptoms. (Ex. A, pg. 002)

He went on to say that:

> [I]t is not clear that there were any significant changes in the work load, work tasks or ergonomic factors which may have precipitated the patient's symptoms.

He also stated that:

> Based on my evaluation, other potential causes of her underlying symptoms have not been excluded including other musculoskeletal, neurological, inflammatory, and metabolic disorders. I carefully reviewed causality issues today with the patient. Additional information is required prior to making a determination regarding causality.

In order to investigate other causative factors, Dr. Plotkin's plan involved:

a. Obtaining claimant's medical records from her primary care physician; and

b. Ordering various blood tests to check Claimant's CBC, Sed rate, RF, ANA, uric acid, and folic acid/B12 to look for a metabolic reason for Claimant's upper extremity complaints.

13. On Monday, January 8, 2018, after not working for approximately two weeks, Claimant returned to New West Physicians and saw her primary treating physician, Leanne Richardson, M.D. At this visit, Claimant's chief complaints were bilateral hand and finger numbness for approximately 2 months. It was noted in the report from this visit that Claimant reported a lot of repetitive movement with both hands at work. It was also noted that Claimant was wearing her wrist splints and was not working.

14. On January 11, 2018, Claimant returned to Dr. Plotkin. At that time, she indicated the Employer could not accommodate her restrictions and she had been off work. Dr. Plotkin noted in his report that she had stopped taking her medications but that she was still wearing her wrist splints. Despite wearing her wrist splints, Dr. Plotkin indicated that Claimant's symptoms had increased and her symptoms were symmetric and included numbness in both hands including all fingers. Dr. Plotkin also noted that he had received and reviewed Claimant's prior medical records which included the December 13, 2017, visit with PA Doetsch, in which it was noted Claimant's symptoms started the week before. Dr. Plotkin also indicated Tinel's testing was positive bilaterally, but that Phalen's testing was negative bilaterally.

Dr. Plotkin's assessment included the following statement:

> The results of her metabolic testing was normal overall except for a borderline elevated HgA1c of 5.6. The patient's presentation is quite atypical for a cumulative trauma type injury, given the sudden onset of symmetric bilateral upper extremity pain and paresthesias. No clear precipitating factor factors are noted and the patient describes her work as "the same." The distribution of her exam findings are

> diffuse and symmetric and would involve multiple nerve distributions. Based on all of the information available, I do not feel that this represents a work-related injury within a reasonable degree of medical probability. (Ex. A, pg. 5)

15. On January 15, 2018, Claimant returned to Dr. Richardson. The medical report from this visit indicates Claimant was advised by her workers' compensation physician that her symptoms were not related to her job duties and that Claimant can return to work without restrictions. The medical report also indicates that Claimant stated she continues to have the same symptoms which started after an intense project where she was doing repetitive movement with her hand tools for up to 10-14 hours per day for several months. (Ex. 4, pg. 31) Dr. Richardson noted Claimant had "***absolutely no comorbid illnesses which could explain her upper extremity symptoms***." (Emphasis added.)

16. On February 5, 2018, Claimant returned to Dr. Richardson, with continued complaints of bilateral hand pain, numbness, and weakness – which included a weakened grasp. Dr. Richardson assessed Claimant's risk factors for developing her symptoms. Dr. Richardson concluded Claimant's only risk factors were her "**job related activities**." Dr. Richardson diagnosed Claimant with carpal tunnel syndrome and continued Claimant's work restrictions which required Claimant to avoid repetitive movement of her hands and she also recommended that Claimant continue wearing her wrist splints. (Ex. 4, pg. 38.)

17. On February 21, 2018, Claimant underwent a routine physical – health maintenance evaluation. Dr. Richardson noted that Claimant's active problems included her carpal tunnel syndrome. She also noted Claimant's past medical history included:

    a. Acute upper respiratory infection,
    b. Eustacian tube dysfunction,
    c. Laryngitis,
    d. Streptococcal pharyngitis,
    e. Iron deficiency anemia due to inadequate dietary intake of iron,
    f. Oral thrush,
    g. Overweight, and
    h. Urticaria.

    (Ex. 4, pg. 36.)

18. On February 22, 2018, Claimant underwent Nerve Conduction testing at Blue Sky Neurology, which was normal, and did not demonstrate evidence of carpal tunnel syndrome. (Ex. 4, pg. 32.) However, as noted by Dr. Plotkin, the testing performed was only a screening and did not include a full electromyography, which Dr. Plotkin stated was preferable. (Dep. pg. 25.)

19. On February 23, 2018, Claimant returned to Dr. Richardson. Claimant indicated that although she still had tingling in her thumb, index, and middle finger – bilaterally – her feeling, weakness, and pain had improved. Dr. Richardson went over Claimant's nerve conduction results, which were negative. Dr. Richardson released Claimant back to full duty, as long as she could wear her wrist splints while doing repetitive and forceful work (Ex. 4, pg. 30.) Dr. Richardson also noted the following:

> She is very anxious to get back to work. She reports she still has tingling in her thumb index and middle finger bilaterally, but her feeling is improved, she still has some weakness but it's improved as well. Her pain has mostly subsided since the swelling in her wrists decreased. She has continued to do her home physical therapy exercises and states that PT has been very helpful.

Dr. Richardson also noted that her physical exam revealed a negative Tinel's sign and a negative Phalen's maneuver. Therefore, removing Claimant from performing her repetitive and forceful job duties resulted in a decrease in her symptoms and abatement of clinical findings, i.e., negative Tinel's and Phalen's testing. (Ex. 4., pg. 31). Based upon Claimant's nerve conduction studies and negative Tinel's and Phalen's testing, Dr. Richardson returned Claimant to full duty.

20. On February 26, 2018, Claimant returned to work full time and at full duty.

21. On March 12, 2018, after returning to work full time and at full duty, Claimant returned to Dr. Richardson due to an increase in symptoms. Dr. Richardson noted that Claimant returned to work on February 26, 2018, and that she was okay for the first week, which was only three days, but after the first week, Claimant's pain came back and the pain was constant. In addition to the work activities causing an increase in pain, it also caused the tingling in her hands to come back. Upon further provocative testing, Dr. Richardson also noted that after Claimant returned to work, and her symptoms got worse, she also had the reemergence of positive Tinel's and Phalen's signs. (Ex. 4., pg. 22.)

22. Dr. Richardson also indicated that although Claimant's EMG was normal, it was performed after Claimant had an extended period off from work and after her symptoms had greatly improved.

23. On June 25, 2018, after Claimant returned to work - which required the repetitive and forceful use of her hands - and caused an increase in symptoms and the reemergence of positive Tinel's and Phalen's findings, Claimant underwent another EMG. The findings of the second EMG were not symmetrical. The study showed evidence of left mild carpal tunnel syndrome without axonal loss and no electrodiagnostic evidence of right sided carpal tunnel syndrome.

24. Despite the lack of electrodiagnostic findings for right sided CTS, Dr. Horner, of Panorama Orthopedics, noted Claimant's symptoms were pretty pathognomonic – consistent – with CTS. Therefore, Dr. Horner recommended corticosteroid

injections to each carpal tunnel for diagnostic and therapeutic purposes. (Ex. 5, pg. 77.)

25. On July 3, 2018, Claimant underwent bilateral diagnostic and therapeutic corticosteroid carpal tunnel injections. The injections did not alleviate her symptoms.

26. On August 21, 2018, Dr. Lodha, from Panorama Orthopedics, evaluated Claimant. After considering the results of Claimant's physical examination and second EMG, as well as her response to the injections, Dr. Lodha opined:

> I cannot say that carpal tunnel releases would offer any benefit to this patient. I do not have a structural or pathophysiological explanation for her pain. She may benefit from potentially rheumatologic evaluation vs. evaluation with neurology for further workup. However, I am afraid we don't have anything else to offer her at this point. (Ex. 5, pg. 62).

27. On November 8, 2018, Dr. Richardson wrote a letter regarding her assessment of Claimant and addressed causation: Her letter provides:

> To Whom It May Concern:
>
> I have been the primary care Physician for [Claimant] for over 10 years. During this time she has not had significant hand or wrist complaints until seen by a PA in our office on 12/13/17. Based on her clinical symptoms she was diagnosed with carpal tunnel syndrome and conservative therapy was advised.
>
> I saw her in follow up on 1/8/18, and at that time she was working with Workman's Comp regarding her concerns, and was having similar complaints to when she was seen initially. She came back on 1/15/18 stating she was advised by Workman's Comp her symptoms were not work related. I did not have access to those records. Claimant reported her symptoms started after an intense project requiring working overtime, up to 10 to 14 hours per day for several months. Her job is described as working with hand tools/repetitive movement. Her symptoms of pain in thumbs, index and long fingers, wrist pain, numbness and swelling are consistent with CTS, which is often caused by and exacerbated by repetitive movement. Other causes for her symptoms were not evident.
>
> I am not a hand specialist or occupational medicine specialist. It seems reasonable to conclude her symptoms were caused by her occupational activities, but she was also referred to an orthopedic hand specialist for further

evaluation and treatment. I would defer to their opinion on this matter.

28. On September 17, 2018, Claimant was seen by Dr. John Froelich, at Panorama Orthopedics for a second opinion. Dr. Froehlich evaluated Claimant and many of her records, which included Dr. Lodha's, and the results from the injections and second EMG. After evaluating the matter, Dr. Froelich concluded Claimant suffers from bilateral carpal tunnel syndrome.

29. Claimant complied with Lockheed Martin's rules with regard her alleged claim. Claimant reported it to her supervisor and then went to see the Lockheed Martin in-house physician, Dr. Plotkin. Claimant also showed Dr. Plotkin the type of work she was doing and explained to him what she did every day. She laid out her tools and showed him her daily use at her workstation. Claimant ascribed her symptoms to use of a small wire cutter up to use of the big crimper. The small cutter was used in the right hand. But, sometimes she would use it in the left hand.

30. Allison M. Fall, MD, performed an IME and testified at hearing. Dr. Fall was offered and accepted as a medical expert in physical medicine and rehabilitation and is Level II Accredited. Dr. Fall was familiar with the Colorado Medical Treatment Guidelines (*Guidelines*) regarding cumulative trauma disorders in general and carpal tunnel syndrome in specific.

31. Dr. Fall explained carpal tunnel syndrome is slowing or compression of the median nerve as it passes through the wrist. She also testified that although carpal tunnel syndrome can be caused by a person's activities at work, it is not always caused by work activities.

32. Dr. Fall testified that the *Guidelines* provide a framework for performance of a causation assessment for carpal tunnel syndrome to determine whether or not it is or is not more likely due to work. Dr. Fall explained that the *Guidelines* are very specific because carpal tunnel syndrome is very prevalent in society and has been misconstrued as always being related to repetition when really there are other significant factors that people will just get carpal tunnel syndrome without any history of repetition.

33. Dr. Fall explained the *Guidelines* recognize that the etiology of carpal tunnel syndrome can be based on genetic factors or a Claimant's pre-disposition, as well as other factors that involve inflammation such as diabetes or obesity.

34. Dr. Fall indicated that in order to determine if a patient actually has carpal tunnel syndrome an expert goes on symptoms, physical examination and electrodiagnostic testing.

35. Dr. Fall evaluated Claimant on October 24, 2018 and observed and heard her testify at the hearing.

36. Dr. Fall evaluated Dr. Richardson's November 8, 2018, "To Whom It May Concern" letter. Dr. Fall explained merely because Claimant was diagnosed with carpal tunnel syndrome on December 13, 2017, based on her clinical symptoms does not mean it was due to her job duties at Lockheed Martin because a

causation analysis would need to occur to have the information as to what the exact job duties were and whether those job duties would be consistent with the risks that cause carpal tunnel syndrome if that is truly the diagnosis.

37. Dr. Fall indicated that Dr. Richardson's statement, which is contained in her November 8, 2018 letter, was not a causation analysis as required by Level II training and the cumulative trauma disorder *Guidelines*. She also testified that even if Claimant did work on a project that required working overtime up to 10 to 14 hours per day which required Claimant to use hand tools repetitively does not mean in and of itself ipso facto that her work is the cause of her symptoms that are consistent with carpal tunnel syndrome. Dr. Fall explained causation is based on the specific activities of Claimant's job duties which requires determining the force, duration, how many times per minute, and force or strength that is required to perform each task—and it is less dependent upon the total number of hours performing the tasks.

38. Dr. Fall testified that the testimony Claimant offered at hearing is insufficient, based upon her Level II training, to establish Claimant's physical complaints that are consistent with carpal tunnel were in fact caused by Claimant's job duties because pursuant to the *Guidelines*, there is specific criteria laid out for the time duration of forceful awkward movements with amounts of force listed. Dr. Fall also explained that it does not make sense that Claimant's symptoms would be present on her left wrist, her non-dominant hand.

39. As part of her record review process, Dr. Fall reviewed Dr. Plotkin's records. Dr. Plotkin noted the patient's presentation is quite atypical for a cumulative-trauma-type injury given the sudden onset of symmetrical bilateral upper extremity pain and paresthesia. Dr. Fall agreed with Dr. Plotkin's opinion and explained typically if there is going to be a cumulative trauma problem - especially with the type of work Claimant did - you would expect different symptoms on the two sides. In addition, Claimant's claim of "sudden onset" is also inconsistent with a work etiology because typically with a cumulative-trauma-type of injury the condition gradually increases over time in correlation with the work being done.

40. When Dr. Fall met and evaluated Claimant, she specifically asked Claimant whether or not something changed with her job duties before the onset of her symptoms. Claimant told Dr. Fall nothing had changed regarding her job duties. Such answer was correct. Claimant's tasks were the same, however, Claimant was doing the same tasks for longer periods of time each day.

41. Dr. Fall testified that non-work-related causes of carpal tunnel syndrome include, genetic predisposition, diabetes, anything that increases fluid volume in one's body or is a toxin to the nerves. She also testified that being overweight is a space limiting issue with more fluid in the body and that carpal tunnel syndrome is also more common in females and as one gets older.

42. Dr. Fall specifically testified there is no objective medical evidence the crimping work Claimant performed at work caused, which required the forceful use of manually operated hand tools, aggravated, accelerated or exacerbated Claimant's alleged carpal tunnel syndrome. She also testified that Claimant's

initial electrodiagnostic test, which occurred on February 22, 2018, was negative. However, the first electrodiagnostic test was described by Dr. Plotkin as merely a screening tool and not as effective as a full electromyography test for carpal tunnel syndrome.

43. The evidentiary deposition of Andrew Plotkin, M.D. was taken on November 30, 2018, and submitted as evidence. Dr. Plotkin was offered and accepted as a medical expert in occupational medicine Level II accredited. Dr. Plotkin is also familiar with the *Guidelines*.

44. Dr. Plotkin explained the causes of carpal tunnel syndrome or risk factors are being female, being older, obesity, diabetes, and other conditions.

45. Dr. Plotkin knew Claimant was an employee at Lockheed Martin because he had evaluated her for her upper extremity symptoms. Based upon Dr. Plotkin's work at Lockheed Martin, he testified that he became familiar with Claimant's job duties. Dr. Plotkin testified that he had been to Claimant's lab, walked through it a few times over the years, and was familiar with the harness shop.

46. Dr. Plotkin reviewed the chart note from New West Physician's dated December 13, 2017, and he explained that based upon Level II training, the *Guidelines*, the matrix as well as his own education, training and experience merely because someone in their mind associates symptoms with work does not mean there is a work etiology because carpal tunnel syndrome in particular has a lot of misinformation and a lot of people believe that really the only way you can get it is through work activities.

47. Dr. Plotkin also testified that although he believed she probably had nerve entrapment in her upper extremities which could be carpal tunnel syndrome, he did not feel he could say within a reasonable degree of medical probability her problem was work related because it was an unusual presentation that it was bilateral, abrupt, symmetric symptoms, and often if someone has abrupt, symmetric and bilateral symptoms it raises the suspicion there is something other underlying or systemic kind of problem something metabolic, hormonal, or inflammatory.

48. As part of his evaluation of Claimant, Dr. Plotkin actively looked for non-work related causes of Claimant's symptoms. In order to investigate other causes, Dr. Plotkin had Claimant undergo various blood tests to see if there was an underlying systemic, metabolic, hormonal, or inflammatory process that was causing Claimant's symptoms. The test results were normal. Therefore, despite his thorough investigation of alternative causes, Dr. Plotkin was unable to find an alternative cause of Claimant's symptoms.

49. Dr. Plotkin also stated that looking at Rule 17, Exhibit 5, of the cumulative trauma treatment guidelines, (the *Guidelines*) and the results of the electrodiagnostic testing in which the NCV done on February 22, 2018 was negative or normal, was not consistent with the development of an occupationally related cumulative trauma disorder.

50. However, subsequent electrodiagnostic testing did reveal carpal tunnel syndrome on the left, but not the right. Moreover, such findings were clearly not symmetric bilaterally. Moreover, even though Dr. Plotkin testified that electrodiagnostic testing is the gold standard, he also testified that a patient can still have a nerve injury which does not show up on electrodiagnostic testing. Dr. Plotkin went on to testify that in his opinion, the findings of the initial electrodiagnostic was reassuring that Claimant did not have a "severe nerve injury or a dying nerve or something like that. This is a reassuring kind of test result." (Depo. Pg. 25-26). Therefore, Dr. Plotkin merely concluded the initial electrodiagnostic testing merely ruled out a "severe" nerve injury or a "dying" nerve.

51. Based upon a complete review of all the information Dr. Plotkin was provided, his meetings with and conversations with Claimant, Dr. Plotkin testified that it was his opinion within a reasonable degree of medical probability that Claimant's bilateral upper extremity condition is not work related.

52. On cross examination, Dr. Plotkin explained that in formulating his opinion, he:

> [P]ersonally walked through the harness lab, discussed Claimant's case with April Hillman, her manager, allowed Claimant to show him all the work that she did to show him all the tools that she used, he handled the tools, he watched other employees perform the work duties that [Claimant] performed.

However, despite Dr. Plotkin's vivid description of his investigation into Claimant's job duties, which was allegedly undertaken to determine the extent of Claimant's exposure to the risk factors set forth in the *Guidelines,* Dr. Plotkin's reports and testimony fail to indicate with sufficient detail what he did find during his investigation regarding the repetition, force, awkward posture, and duration of Claimant's job duties each day. Moreover, even though Dr. Plotkin indicated in his initial report that Claimant's job involved "possible risk factors," but that he wanted to exclude other potential factors that might be causing her symptoms, he never articulated in a subsequent report or his testimony as to what the possible work risk factors were - after the other causes were ruled out. Therefore, the ALJ finds that there is a very large analytical gap between Dr. Plotkin's testimony regarding his alleged investigation into possible work related risk factors and his ultimate conclusion that Claimant's work did not cause, aggravate, or accelerate her upper extremity condition.

The ALJ further finds that Dr. Plotkin did not perform an impartial causation analysis. This finding is demonstrated by the following exchange during his deposition when he was asked whether Claimant's contention that she was working 10-14 hours a day towards the end of 2017, when her symptoms developed, would make a difference in his analysis. The exchange is as follows:

> Q. Now, hypothetically, if Ms. Moua were to testify before an administrative law judge that her symptoms started after an intense project requiring working overtime up to 10 to 14 hours per day for several months, does that, in and of itself,

pursuant to the matrix, establish a work-related etiology for carpal tunnel syndrome?

A. I do know that they work overtime often and I do know that the work hours, you know, can be increased over there. I would want to know really what the what the numbers were and try to figure out how that type of exposure and the timing of her symptoms and everything else fit together. So it's something that I would consider, and it is the reason that I had talked with her manager on two or three occasions. So I did go over there, and I wasn't -- I wasn't told that there was any kind of significant changes in the work stresses that she was exposed to. So that was my understanding when I made my determination.

As demonstrated above, Dr. Plotkin admitted that he knew Claimant often worked overtime and admitted that it would be important in determining causation if the extent and type of her exposures corresponded with her symptoms. Yet, despite these admissions, there is a lack of credible and persuasive evidence that he analyzed these factors in any sufficient detail in support of his opinion that Claimant's condition is not related to her work activities. In other words, his ultimate opinion appears highly conclusory.

53. Dr. Richardson's evidentiary deposition was taken on December 19, 2018 and submitted as evidence. Dr. Richardson testified she is a family practitioner of 21 years. Dr. Richardson is not board certified in physical medicine or rehabilitation and is not Level II accredited by the Division of Workers' Compensation. Dr. Richardson admitted she is not an expert in carpal tunnel syndrome. However, Dr. Richardson is a licensed physician and evaluated Claimant on a number of occasions. As part of her examination, she took a history and performed various diagnostic testing to diagnose Claimant's bilateral hand condition. Her testing included Phalen's and Tinel's tests. Such testing demonstrates that although Dr. Richardson is not an "expert in carpal tunnel syndrome," she is competent to assess such a condition and render an opinion as to the cause of such condition. And, in this case, Dr. Richardson concluded Claimant has carpal tunnel syndrome and the condition was caused by Claimant's work duties, after she ruled out other potential causes.

54. According to the *Guidelines*, the following Primary and Secondary Risk Factors are relevant when determining the cause off carpal tunnel syndrome:

Force & Repetition /Duration

Primary Risk Factors, include the following:

6 hours of use of 2 pounds of pinch force or 10 pounds hand force 3 times or more per minute, or

6 hours of lifting 10 pounds greater than 60 times per hour.

Secondary Risk Factors, include the following:

3 hours of use of 2 pounds of pinch force or 10 pounds hand force 3 times or more per minute, or

3 hours of lifting 10 pounds greater than 60 times per hour.

Awkward Posture & Repetition/Duration

Primary Risk Factors, include the following:

4 hours of wrist flexion greater than 45 degrees, extension greater than 30 degrees, or ulnar deviation greater than 20 degrees.

6 hours of elbow flexion of greater than 90 degrees.

4 hours of supination/pronation with task cycles 30 seconds or less or posture is used for at least 50% of a task cycle.

Secondary Risk Factors include the following:

3 hours of elbow flexion of greater than 90 degrees.

3 hours of supination/pronation of 45 degrees with power grip or lifting.

See Guidelines, Rule 17, Exhibit 5.

55. None of the physicians who offered opinions in this case documented the physical requirements of Claimant's job duties with the specificity required by the *Guidelines.* Therefore, they were unable to determine whether Claimant's job duties met the primary and/or secondary risk factors set forth in the *Guidelines.*

56. However, the *Guidelines* also indicate that there are other risk factors for the development of cumulative trauma disorders such as carpal tunnel syndrome. These include, but are not limited to, age, obesity - BMI (body mass index), diabetes, gender, and wrist depth/ratio. The Guidelines also indicate that preexisting conditions may be aggravated by, or contribute to, exposures lower than those listed in the *Guidelines*. Therefore, because Claimant has a high BMI, is female, and is over 50 (and considered older) it does not appear to this ALJ that Dr. Plotkin or Dr. Fall considered those factors which could have predisposed Claimant to develop carpal tunnel syndrome with lower exposure levels than those described in the *Guidelines*.

57. Claimant is found to be credible regarding the hours she worked, the description of her job duties, and the onset of her symptoms.

58. The ALJ finds that Claimant's job required the repetitive and forceful use of her hands at work in order to cut, strip, and crimp wires used for various products built by Employer. The ALJ finds that during the latter part of 2017, Claimant worked overtime and the overtime resulted in an increase in the amount of repetitive and forceful work performed by Claimant with her hands on daily basis.

59. The ALJ finds that the increase in repetitive and forceful work with her hands corresponded with the development of symptoms in her upper extremities and which has been diagnosed by many physicians as being carpal tunnel syndrome.

60. The ALJ finds that Claimant's work activities necessitated the need for medical treatment as of December 13, 2017, and resulted in disability which has precluded Claimant from performing her regular job duties for more than three days.

61. The ALJ does not find the opinions offered by Dr. Fall in her report and testimony to be persuasive in resolving the issues of causation in this case. Dr. Fall focused predominately on the risk factors and exposure levels set forth in the *Guidelines.* However, Dr. Fall did not adequately address the fact that the *Guidelines* indicate that exposure levels can be lower, when other risk factors are present such as Claimant's age, BMI, gender, and possibly her pre-diabetic state, as discussed by Dr. Fall. Therefore, the ALJ finds that Dr. Fall did not persuasively and credibly address causation pursuant to the *Guidelines*.

62. The ALJ credits the opinions of Dr. Richardson and Dr. Froelich that Claimant has bilateral carpal tunnel syndrome.

63. The ALJ also credits the opinion of Dr. Richardson that Claimant's carpal tunnel syndrome was caused her work activities.

64. Claimant has established by a preponderance of the evidence that she sustained an occupation disease and a compensable injury involving her wrists.

65. Claimant has established by preponderance of the evidence that she is entitled reasonable and necessary medical treatment to cure her from the effects of her occupational disease.

66. There is no dispute between the parties that Dr. Plotkin is an authorized treating physician. The medical treatment provided by Dr. Plotkin is found to be reasonable and necessary to treat Claimant's occupational disease.

67. The onset of disability is December 13, 2017, when Claimant first sought medical treatment for her symptoms.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in

favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. Claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Where the medical evidence is subject to conflicting inferences, it is the ALJ's sole prerogative to resolve the conflict. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998).

Compensability

The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation,* 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by § 8-40-201(14), C.R.S., as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

This section imposes additional proof requirements beyond those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). However, the existence of a preexisting condition does not defeat a claim for an occupational disease. *Id.* A claimant is entitled to recovery if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

The claimant bears the burden to prove by a preponderance of the evidence that the hazards of the employment caused, intensified or aggravated the disease for which compensation is sought. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000); *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251 (Colo. App. 1999). The question of whether the claimant has proven causation is one of fact for the ALJ. *Faulkner v. Industrial Claim Appeals Office, supra*. In this regard the mere occurrence of symptoms in the workplace does not require the conclusion that the conditions of the employment were the cause of the symptoms, or that such symptoms represent an aggravation of a preexisting condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (I.C.A.O. August 18, 2005). Once claimant makes such a showing, the burden shifts to respondents to establish both the existence of a non-industrial cause and the extent of its contribution to the occupational disease. *Cowin & Co. v. Medina*, 860 P.2d 535 (Colo. App. 1992).

When determining the issue of causation, the ALJ may consider the provisions of the Medical Treatment Guidelines because they represent the accepted standards of practice in workers' compensation cases and were adopted pursuant to an express grant of statutory authority. However, the *Guidelines* are not dispositive of the issue of causation. Rather, the ALJ may decide the weight to be assigned the provisions of the *Guidelines* upon consideration of the totality of the evidence. *See Cahill v. Patty Jewett Golf Course,* WC 4-729-518 (ICAO February 23, 2009); *Siminoe v. Worldwide Flight Services,* WC 4-535-290 (ICAO November 21, 2006).

The Division of Worker's Compensation Rule 17, Exhibit 5, Cumulative Trauma Conditions Medical Treatment Guidelines specifically provides that "acceptable medical practice may include deviations from these guidelines as individual cases dictate." The *Guidelines* themselves indicate that the opinion provided by Dr. Richardson in determining causation is in line with the intent of the *Guidelines* which state:

> Mechanisms of injury for the development of cumulative trauma related conditions have been controversial. However, repetitive awkward posture, force, vibration, cold exposure, and combinations thereof are generally accepted as occupational risk factors for the development of cumulative trauma related conditions.

As found, Dr. Richardson reasonably attributed Claimant's bilateral carpal tunnel syndrome to her work activities which were found to be repetitive and forceful. The ALJ finds and concludes that the opinion of causation offered by Dr. Richardson in the medical records and her testimony, certain statements made by Dr. Plotkin, Claimant's medical records, and Claimant's credible testimony supports the ALJ's conclusion that Claimant's bilateral carpal tunnel syndrome is causally related to her work activities. Dr. Plotkin's opinions to the contrary are not persuasive. As found above, Dr. Plotkin attempted to demonstrate that he critically evaluated Claimant's job duties and Claimant's overall clinical presentation and determined that Claimant's work activities did not cause her carpal tunnel syndrome. However, as found by the ALJ, Dr. Plotkin really did not analyze Claimant's job duties to determine whether they met the primary and/or secondary risk factors set forth in the *Guidelines.* Dr. Plotkin spent more time focusing on and investigating the possibility of non-work-related factors than work related factors. And, despite not finding any non-work-related factors that were the cause of Claimant's symptoms and/or condition, he summarily and unconvincingly concluded Claimant's job did duties did not cause her condition and need for medical treatment.

Moreover, even though the *Guidelines* indicate that other preexisting conditions – and risk factors - can predispose a worker to develop carpal tunnel syndrome with exposure levels which are less than those levels set forth in the *Guidelines,* neither Dr. Plotkin nor Dr. Fall addressed how Claimant's BMI, age, gender, and history of family diabetes and her own borderline glucose levels, might have predisposed Claimant to develop bilateral carpal tunnel syndrome at lower exposure levels than those set forth in the *Guidelines*.

Moreover, even though Claimant's job duties were not quantified in sufficient detail to assess whether they met the primary or secondary risk factors outlined in the causation matrix of the *Guidelines*, the ALJ finds and concludes that the particular facts in this case based upon the totality of the evidence presented makes it more likely than not that Claimant's bilateral carpal tunnel syndrome was caused by her exposure to forceful and repetitive bilateral hand activities at work. While the *Guidelines* provide specific steps in analyzing whether there is sufficient proof to causally connect Claimant's condition and need for treatment to her job activities, the Court is not bound by the *Guidelines* in deciding individual cases on the *Guidelines* or the principles contained therein alone. Indeed, § 8-43-201(3) specifically provides:

> It is appropriate for the director or an administrative law judge to consider the medical treatment guidelines adopted under section 8-42-101(3) in determining whether certain medical treatment is reasonable, necessary, and related to an industrial injury or occupational disease. The director or

> administrative law judge is not required to utilize the medical treatment guidelines as the sole basis for such determinations.

Respondent's position regarding compensability and Claimant's entitlement to medical benefits is based primarily upon a rigid application of the *Guidelines* causation matrix. Respondent's argument primarily rests upon the assumption that the causation matrix is absolute, and provides the only source of information to which we should turn to determine causation in this case. Such assumption is misplaced. Here, the opinion of Dr. Richardson regarding the cause of Claimant's bilateral carpal tunnel syndrome is credible and persuasive. The majority of Claimant's testimony regarding her job duties, symptomatology and onset of symptoms is similarly credible, persuasive, and consistent with the development of her occupational disease. The totality of the evidence presented persuades the ALJ that Claimant has established a causal connection between her work duties and her bilateral carpal tunnel syndrome. Accordingly, the ALJ concludes that Claimant has proven by a preponderance of the evidence that she suffered an occupationally induced disease occasioned by the nature of her work, which did not come from a hazard to which she was equally exposed outside of her employment. Consequently, the injury is compensable.

Claimant has proven by a preponderance of the evidence that she suffered an occupational disease to her bilateral upper extremities in the form of bilateral carpal tunnel syndrome.

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury and occupational disease. Section 8-42-101(1)(a), C.R.S. The question of whether Claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

The medical record establishes Claimant is in need of medical treatment for her occupational disease. The ALJ finds the reports of Dr. Richardson and Dr. Froehlich to be credible and persuasive and support a finding that Claimant is in need of medical treatment for her occupationally caused carpal tunnel syndrome. Therefore, the ALJ concludes Claimant has established by a preponderance of the evidence that she is entitled to medical treatment to cure and relieve her from the effects of her occupational disease. Claimant has also established by a preponderance of the evidence that the treatment provided by Dr. Plotkin was reasonable and necessary.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has proven by a preponderance of the evidence she suffered a compensable occupational disease in the form of bilateral carpal tunnel syndrome.
2. Claimant is entitled to reasonable and necessary medical treatment to cure and relieve her from the effects of her bilateral carpal tunnel syndrome.
3. Dr. Plotkin is an authorized provider and Respondents shall pay for the treatment provided by Dr. Plotkin.
4. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-052-108-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

[Redacted],

Claimant,

v.

[Redacted],

Employer,

and

[Redacted],

Self-Insured Respondent.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on January 17, 2019, in Denver, Colorado. The hearing was digitally recorded (reference: 1/17/19, Courtroom 3, beginning at 8:30 AM, and ending at 11:30 AM).

The Claimant was present in person and represented by [Redacted], Esq. The Respondent was represented by [Redacted], Esq.

Hereinafter [Redacted] shall be referred to as the “Claimant." [Redacted] shall be referred to as the “Employer.” All other parties shall be referred to by name.

Claimant’s Exhibits 1 through 10 were admitted into evidence, without objection. Respondent’s Exhibits A and C were admitted into evidence, without objection. Respondent’s Exhibit B was admitted into evidence, without objection, with the exception of Exhibit B, pp. 170-173 which was rejected.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant. It was filed,

electronically, on January 25, 2019. Respondent had been given 2 working days within which to file objections. None were timely filed. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUE

The sole issue to be determined by this decision concerns medical benefits, specifically, the causal relation and reasonable necessity of lumbar fusion surgery, recommended by Michael Drewek, M.D.

The Claimant bears the burden of proof by a preponderance of the evidence.

FINDINGS OF FACT

'Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. Since 2013, the Claimant has worked as a bus driver for the Employer. On July 7, 2017, he injured his back while exiting a bus during a stop. Initially, he cringed and felt pain in his back. He thought it was a strain and finished his shift. As the day went on, he noticed increased back and left leg pain. The next morning, he was unable to get out of bed; his son had to help him get out of bed and move around the house. On July 8, 2017, the Claimant's son drove him to the Employer so that Claimant could report his injury. On August 8, 2017, Respondent filed a General Admission of Liability (GAL), admitting for medical benefits and temporary total disability (TTD) benefits. (Claimant's Exhibit 1, p. 1). The Claimant continues to receive TTD benefits.

2. On June 29, 2018, Michael Drewek, M.D., requested authorization for L4-5 transforaminal lumbar interbody fusion. On July 10, 2018, Respondent denied the surgery. Wallace K.Larson, M.D., Respondent's retained expert witness, agrees that the recommended surgery is reasonable and necessary. Dr. Larson, however, is of the opinion that the Claimant never sustained an industrial injury and that the recommended surgery is related to the Claimant's preexisting, degenerative condition. At hearing, Respondent conceded that the surgery is reasonable and necessary. Respondent argues that the surgery is not related to the Claimant's admitted, July 7, 2017 industrial injury.

3. Claimant proved by a preponderance of the evidence that the lumbar fusion surgery recommended by Michael Drewek, M.D., is reasonably necessary and causally related to his July 7, 2017 industrial injury.

Brandon Reiter, D.O. - Claimant's initial Authorized Treating Physician (ATP)

4. On July 10, 2017, the Claimant treated at Midtown Occupational Health Services with Brandon Reiter, D.O., and reported that he injured his back while stepping off a bus. The Claimant reported that he had to "twist funny" and when he stepped down off the bus he felt a pop in his back and into his hip. He then went home and his pain worsened throughout the night and the next morning he had difficulty getting up and walking. Dr. Reiter provided the Claimant with work restrictions, prescribed medications, and referred the Claimant to a chiropractor (Claimant's Exhibit 4, pp. 8-11). On July 17, 2017, the Claimant followed up with Dr. Reiter and reported ongoing back pain and increased numbness and tingling in his left leg. Dr. Reiter maintained Claimant's treatment plan and work restrictions (Claimant's Exhibit 4, pp. 12-14). The Claimant 's care was transferred to US Health Works, Lori Long Miller, M.D., which later changed to Concentra.

Lori Long Miller, M.D. – US Health Works and Concentra

5. On July 31, 2017, the Claimant first treated with Dr. Long Miller, US HealthWorks, who took over as the Claimant's ATP. The Claimant reported the nature of his injury and that he immediately felt pain. He also reported the nature of his symptoms and treatment. Dr. Long performed a physical examination and placed the Claimant on work restrictions, including 10 pounds lifting and no commercial driving, maintained his treatment plan, and ordered a MRI (magnetic resonance imaging). [Claimant's Exhibit 5, pp. 15-21). On August 17, 2017, Dr. Miller reviewed the Claimant's lumbar MRI and noted it revealed degenerative changes at L4-5. Dr. Long referred the Claimant to Spine West (Exhibit 5, pp. 27-31). On November 3, 2017, the Claimant treated with Dr. Long, who noted that the Claimant's lumbar injection provided only minimal improvement. Dr. Long maintained the Claimant's treatment plan, including second lumbar injection, and work restrictions (Claimant's Exhibit 5, pp. 37-41). On December 4, 2017, the Claimant followed-up with Dr. Long and reported that the second lumbar injection did not provide any relief and that he is now experiencing constant left leg symptoms. Dr. Long referred the Claimant to Bryan Castro, M.D. (Claimant's Exhibit 5, pp. 42-46). On December 21, 2017, the Claimant reported to Dr. Long that the third lumbar injection provided no relief and made his left leg symptoms worse (Claimant's Exhibit 5, pp. 47-51).

6. On February 20, 2018, the Claimant treated with Dr. Long, who noted that his lumbar and left leg symptoms persisted, and Dr. Long maintained the Claimant's treatment plan and work restrictions (Claimant's Exhibit 5, pp. 62-65). On May 4, 2018, the Claimant treated with Dr. Long and reported that Dr. Castro did not want to do surgery. Dr. Long referred the Claimant to Dr. Drewek (Claimant's Exhibit 5, pp. 79-84). On June 8, 2018, the Claimant reported to Dr. Long that Dr. Drewek wanted to do surgery. Dr. Long agreed with the treatment plan and maintained the Claimant's work restrictions (Claimant's Exhibit 5, pp. 85-89). On October 19, 2018, the Claimant treated with Dr. Long (now at Concentra), who noted that Claimant's surgery was denied. Dr. Long maintained the Claimant's treatment plan and work restrictions (Claimant's Exhibit 5, pp. 95-98).

Lumbar MRIs

7. On August 11, 2017, the Claimant underwent a lumbar MRI, which revealed multilevel degenerative changes, most pronounced at L4-5, where a disc bulge and facet arthropathy result in mild to moderate bilateral neural foraminal narrowing, with probably mass effect on the bilateral L4-5 nerve roots. The radiologist was of the opinion that the MRI did not reveal an acute abnormality (Claimant's Exhibit 9, pp.137-138). On April 16, 2018, the Claimant underwent a second lumbar MRI, which, when compared to the prior MRI, revealed a minimal increase in size of the L4-5 disc extrusion. The MRI revealed mild anterolisthesis at L4-5 with facet joint hypertrophy causing some narrowing of the left neural foramen along the L4 nerve root (Claimant's Exhibit 9, pp. 139-140).

John Tobey, M.D. - Spine West

8. On August 31, 2017, the Claimant first treated with Dr. Tobey, and reported the nature of his injury and ongoing symptoms. Dr. Tobey reviewed the MRI and noted a L4-5 broad based disc bulge with facet arthropathy, resulting in mild to moderate left greater than right foraminal stenosis. Dr. Tobey recommended a few weeks of therapy and medications and a left L5 transforaminal epidural steroid injection (TFESI) (Claimant's Exhibit 6, pp.99-101). On October 18, 2017, the Claimant underwent a left L5 TFESI with Dr. Tobey (Claimant's Exhibit 6, pp.102-103). The Claimant had 25% pain relief (Claimant's Exhibit 6, pp. 104-106). On December 14, 2017, the laimant underwent a L5 and S1 TFESI with Dr. Tobey (Claimant's Exhibit 6, pp. 107-108). The Claimant did not get any relief from the second injection. Dr. Tobey recommended an EMG (Claimant's Exhibit 6, pp. 109-110.) On January 31, 2018, the Claimant underwent a left leg EMG; the EMG was essentially normal (Claimant's Exhibit 6, p. 111). On February 15, 2018, the Claimant underwent a SI joint injection with Dr. Tobey (Claimant's Exhibit 6, pp. 113-114). He did not get any relief from the injection (Claimant's Exhibit 6, pp. 115-116).

Bryan Castro, M.D. – Cornerstone Orthopaedics

9. On April 4, 2018, the Claimant treated with Bryan Castro, M.D., and reported the nature of his injury and persistent pain, symptoms, and limitations with his lower back and left leg. Dr. Castro reviewed Claimant's lumbar MRI and noted no obvious signs of neural impingement but that it was a poor MRI. Dr. Castro recommended a repeat lumbar MRI. Dr. Castro also stated that he did not think Claimant would be a surgical candidate (Claimant's Exhibit 7, pp. 117-122). On April 30, 2018, the Claimant followed up with Dr. Castro, who reviewed the more recent MRI and recommended an EMG. Dr. Castro noted that if the EMG does not reveal any nerve dysfunction, then he is not recommending surgery (Claimant's Exhibit 7, pp. 123-127).

Michael Drewek, M.D. – Panorama Orthopedics

10. On June 6, 2018, the Claimant treated with Michael Drewek, M.D., and reported the nature of his injury and persistent pain, symptoms, and limitations with his lower back and left leg. Dr. Drewek noted that the Claimant's treatment related to his injury and reviewed the Claimant's lumbar MRI. Dr. Drewek had the Claimant undergo lumbar x-rays, which revealed findings that he opined explained Claimant's ongoing symptoms. Dr. Drewek recommended Claimant undergo a L4-5 transforaminal lumbar interbody fusion (Claimant's Exhibit 8, pp. 128-134). On June 29, 2018, Dr. Drewek requested authorization for this surgery (Claimant's Exhibit 8, p. 134). On July 10, 2018, Respondent denied the surgery (Respondent's Exhibit B, pp.155-161). On August 2, 2018, the Claimant followed up with Dr. Drewek, who noted Claimant's ongoing lower back and left leg symptoms and that the recommended surgery is denied. Dr. Drewek noted he does not have anything to offer Claimant other than the surgery (Claimant's Exhibit 8, pp.135-136).

Wallace K. Larson, M.D. – Respondent's Independent Medical Examiner (IME)

11. On September 25, 2018, Claimant underwent an IME with Respondent's retained expert witness, Wallace Larson, M.D. Dr. Larson noted Claimant's medical history, the nature of his injury, and his ongoing symptoms. Dr. Larson reviewed Claimant's medical records. Dr. Larson opined Claimant did not sustain a work-related injury because he did not have exposure to any unusual hazard and did not have trauma to his lumbar spine. Dr. Larson opined Claimant does not suffer from an atraumatic condition to the lumbar spine, and, therefore, any treatment required would not be related to Claimant's occupational exposure. Dr. Larson did opined that the surgery recommended by Dr. Drewek is appropriate. *Respondent's Exhibit A, pages 1-9*.

12. At Hearing, Dr. Larson testified consistently with his report. Dr. Larson opined Claimant did not sustain an industrial injury on July 7, 2017. Dr. Larson opined Claimant experienced just a manifestation of his preexisting degenerative lumbar condition and that it is coincidental Claimant started feeling symptomatic around the time of the July 7, 2017 industrial injury. Dr. Larson agreed that that no evidence exists that Claimant had any prior back injuries or treatment and that Claimant was working full duty, without restriction, prior to the July 7, 2017 industrial injury. Dr. Larson opined the surgery recommended by Dr. Drewek is reasonable and necessary but related to Claimant's preexisting, degenerative condition, not his July 7, 2017 industrial injury. The ALJ finds Dr. Larson's opinion regarding the relatedness of the lumbar surgery neither credible nor persuasive.

The Claimant

13. According to the Claimant he has no prior back injuries or treatment and he was working full duty, without restrictions prior to his July 7, 2017 industrial injury. Prior to his work injury, the Claimant was active and spent a lot of time in the gym lifting weights and working out. He was able to go for long bike rides (even upwards of 50 to 100 miles) without any problems. He rode his motorcycle and was often out on his boat.

He did not have any issues doing these activities prior to July 7, 2017. Since July 7, 2017, the Claimant has been unable to do these activities as a result of the July 7, 2017 industrial injury and the associated symptoms. Now, the Claimant has constant lower back pain and symptoms into his left leg, including numbness, tingling, and shooting pain. The ALJ finds that the Claimant's testimony concerning his before and after condition is credible and convincing.

Ultimate Findings

14. The ALJ finds the opinions of Dr. Long Miller and Dr. Drewek especially credible and persuasaive. On the other hand, the ALJ finds the opinions of Dr. Larson inadequately based, contrary to the weight of medical opinions in evidence, and lacking in credibility for the reasons herein above stated. Further, the ALJ finds the Claimant's testimony to have been straight-forward, consistent with the weight of the medical evidence and, therefore, credible and persuasive.

15. Between conflicting testimonies and opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the Claimant's testimony and the opinions of Dr. Drewek and Dr. Long Miller and to reject opinions to the contrary.

16. The ALJ finds that the Claimant has proven by a preponderance of the evidence that his need for the lumbar fusion surgery recommended by Dr. Drewek is causally related to his July 7, 2017 industrial injury and reasonably necessary to cure and relieve the effects of the compensable injury of July 7, 2017.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254

(1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the opinions of Dr. Long Miller and Dr. Drewek were especially credible and persuasive. On the other hand, the opinions of Dr. Larson were inadequately based, contrary to the weight of medical opinions in evidence, and lacking in credibility. Further, as found, the Claimant's testimony was straight-forward, consistent with the weight of the medical evidence and, therefore, credible and persuasive.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting testimonies and opinions, the ALJ made a rational choice, based on substantial evidence, to accept the Claimant's testimony and the opinions of Dr. Drewek and Dr. Long Miller and to reject opinions to the contrary.

Medical Benefits

c. To be a compensable benefit, medical care and treatment must be causally related to an industrial injury or occupational disease. *Dependable Cleaners v. Vasquez,* 883 P. 2d 583 (Colo. App. 1994). As found, Claimant's medical treatment is

causally related to the compensable injury of July 7, 2017. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's medical care and treatment was and is reasonably necessary.

Burden of Proof

d. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained his burden concerning the need for the lumbar fusion surgery recommended by Dr. Drewek, as causally related to the July 7, 2017 industrial injury and reasonably necessary to cure and relieve the effects of the injury.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The General Admission of Liability, dated August 8, 2017, shall remain in full force and effect.

B. Respondent shall pay the costs of the the lumbar fusion surgery recommended by Dr. Drewek, and the costs of all other causally related and reasonably necessary medical care and treatment, subject to the Division of Workers' Compensation Medical Fee Schedule.

C. Any and all issues not determined herein are reserved for future decision.

DATED this 22nd day of February 2019.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-075-667-002

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on January 29, 2019, in Denver, Colorado. The hearing was digitally recorded (reference: 1/29/19, Courtroom 3, beginning at 8:30 AM, and ending at 11:45 AM).

Claimant's Exhibits 1 through 8 were admitted into evidence, without objection. Respondents' Exhibits A through P were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant, which was filed, electronically, on February 7, 2019. On February 8, 2019, Respondents indicated no objection to the proposed decision. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern; compensability of an April 21, 2018 low back injury; medical benefits; average weekly wage (AWW); and, temporary partial disability (TPD) benefits.

The Claimant bears the burden of proof by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The parties stipulated, and the ALJ finds that the treatment Claimant received at St. Joseph's Hospital (Respondents' Exhibit K) and with Charles Wenzel, D.O. at Colorado Occupational Medicine Physicians (COMP) and their referrals are authorized, reasonably necessary and causally related. The parties further stipulated, and the ALJ finds, that the authorized treating physician (ATP) placed the Claimant at maximum medical improvement (MMI) on August 1, 2018.

2. The Claimant has worked for the Employer as a Material Specialist since 2010. In this position, he operates a reach truck – a standing operating forklift – to pick and store parts for the Employer.

3. The Claimant suffered a non-occupational motor vehicle accident (MVA) to his lower back on June 7, 2017. Claimant treated for this injury from June 16, 2017 through December 13, 2017.

4. On January 2, 2018, Physician's Assistant (PAC) Diana N. Kelling with Arbor Family Medicine saw the Claimant for an upper respiratory infection. Of note, PAC Kelling documented that back pain was not present.

5. On February 5, 2018, the Claimant returned to Arbor Family Medicine for a health maintenance exam and physical. PAC Sara E. Galio documented that back pain was absent, and that spine had normal movements without pain and normal strength and tone.

The Claimant's Job

6. The Material Specialist position requires the Claimant to assure that he is picking or storing the correct item by stepping off the reach truck with a scanner to ensure that the part number on the scanner matches the identification number on the item.

7. The step down on the truck is about 9 inches to 9.75 inches to the ground depending upon the model.

8. It is undisputed that the Employer has a policy directing employees to exit

the reach truck utilizing “three points of contact” meaning that three of the worker’s four extremities must be touching either the truck or the ground or both. As a result of this reasonable safety policy, the Claimant must exit the truck backwards as demonstrated in Respondents’ Exhibit P.

The Injury

9. On April 21, 2018, the Claimant was working as a Material Specialist and he exited his truck at 8:33 AM. The Claimant credibly testified that as he descended the reach truck his head and torso were twisted to the left. When the Claimant stepped down on his left foot he felt an immediate onset of low back pain.

10. According to the Employee Incident Report, the Claimant reported the incident immediately afterwards at 8:35 AM. His incident report is consistent with his testimony concerning the mechanism of injury. The Claimant also disclosed the earlier motor vehicle accident and noted that he had been cleared and pain free since November 2017.

Medical

11. The Claimant initially treated with SCL Health, St. Joseph Hospital. He was removed from work until April 25, 2018. Charles Wenzel, D.O., attended the Claimant and imposed 20-lbs. lifting restrictions. These restrictions eventually were increased on April 30, 2018 to no lifting over 10 lbs., and eventually included restrictions on the amount of hours per shift the Claimant could work.

Job Description

12. According to the Claimant, his regular employment with the Employer involves ten-hour shifts and lifting up to 50 lbs. The ALJ finds this job description undisputed and credible.

Average Weekly Wage (AWW)

13. The Claimant earns $18.38 an hour and also earns occasional overtime, and performance bonuses quarterly. Considering his testimony as well as the payroll records, the ALJ finds and concludes that a fair AWW is $735.20.

Temporary Partial Disability (TPD)

14. Based upon the payroll records (Claimant’s Exhibit 7), the Claimant is entitled to aggregate TPD benefits of $1,244.94 from April 23, 2018 to July 29, 2018 as follows

Start	End	Earnable	Earned	Wage Loss	TPD Due
4/30/18	5/6/18	$735.20	$384.14	$351.06	$234.04
5/7/18	5/13/18	$735.20	$385.98	$349.22	$232.81
5/14/18	5/20/18	$735.20	$404.36	$330.84	$220.56
5/21/18	5/27/18	$735.20	$385.98	$349.22	$232.81
5/28/18	6/3/18	$735.20	$652.49	$82.71	$55.14
6/4/18	6/10/18	$735.20	$551.40	$183.80	$122.53
6/18/18	6/24/18	$735.20	$661.68	$73.52	$49.01
7/23/18	7/29/18	$735.20	$588.16	$147.04	$98.03
					$1,244.94

Lawrence Lesnak, D.O., Respondents' Independent Medical Examiner (IME)

15. Dr Lesnak evaluated the Claimant on September 25, 2018 and produced a report (Respondents' Exhibit E). Dr. Lesnak stated the opinion that Claimant's current condition is related to his prior MVA. Dr. Lesnak stated, "The mere act of stepping backward off a platform from approximately 1 ½ feet high is not an activity that would be sufficient enough to cause a low back strain of aggravate pre-existing pathology. Unfortunately, the patient had ongoing occasional low back pains even after +6 months of treatment that included more than 43 chiropractic treatment sessions, physical therapy treatments, and massage therapy treatments, and a right-sided L3-L4 facet joint injection performed on 10.02/2017. Even when he was discharged from the motor vehicle collision, the patient continued to have ongoing occasional low back pains; and Dr. Higgins, his then treating chiropractor, noted that he most likely would have aggravation of these symptoms in the future that would require treatment. (Respondents' Exhibit E). The ALJ finds that the causality opinion of Dr. Lesniak lacks credibility, primarily for lack of a persuasive underlying rationale or explanation for the alleged "inadequacy" of the mechanism of injury.

Sander Orent, M.D.

16. Dr. Orent evaluated the Claimant on November 29, 2018 and produced a report (Claimant's Exhibit 5). Dr. Orent was of the opinion that the Claimant did, in fact, sustain an acute event leading to a low back strain as a result of the April 21, 2018 incident. Dr. Orent stated the following opinion: "This patient actually had a twisting injury of the spine and was attempting to fulfill a new training requirement of 3 points of contact on the machine as he stepped off it. This was a jarring event that occurred to his spine and caused immediate pain such that he required an emergency department visit. The concept that this mechanism was not adequate to cause the pain is obviously inaccurate not just mechanistically, but the fact

is the patient went to the emergency room after this acute event which caused the immediate onset of his back pain."

Assessment of the Evidence

17. The medical records reflect that the Claimant had two medical appointments between December 2017 up until the time before this incident at work. In both appointments, there was never a mention of back pain in those medical records. The ALJ finds this is consistent with the Claimant's testimony that he was released after the MVA, a serious accident, and the Claimant returned back to work full steam with no problems.

Ultimate Findings

18. Respondents' theory is that the Claimant had an underlying condition that was ready to surface as soon as the facet injection wore off is not credible considering the totality of the facts. The Claimant had basically recovered substantially from the effects of the MVA by the day before the incident.

19. Following the incident of April 21, 2018, the Claimant reported feeling pain immediately. He was taken to the emergency room (ER). Thereafter the Claimant was restricted to 10 lbs. no lifting for months, which he was not before. Dr. Lesnak's opinion that the April 21, 2018 incident was coincidental, and that the Claimant's back pain resulted suddenly because the effects of the facet injection wore off and the Claimant's preexisting back condition surfaced "with a vengeance" is un-persuasive and lacks credibility.

20. Dr. Orent's opinions are credible, persuasive and supported by the Claimant's testimony and the previous lack of back complaints before the incident even after the Claimant returned to work in November 2017.

21. Between conflicting testimonies and opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the Claimant's testimony and the opinions of Dr. Orent concerning causality, and to reject opinions to the contrary, including the opinion of Dr. Lesnak.

22. The Claimant has demonstrated that it is more probably true than not that he sustained a compensable injury to his low back on April 21, 2018, with the combination of his stepping down nine-and-a-half inches in a twisting motion. The Employer directed the Claimant to exit the reach truck using three points of contact and this means that the Claimant is turning, doing something a little bit unusual and he is twisting. For this reason, the ALJ finds that this incident does not involve a ubiquitous condition (as argued by the Respondents). The Claimant's testimony was credible, persuasive and supported by Dr. Orent's opinions.

23. All of the Claimant's medical care the treatment that the Claimant received at St. Joseph's Hospital (Respondents' Exhibit K) and with Charles Wenzel, D.O. at Colorado Occupational Medicine Physicians (COMP) and their referrals are authorized, reasonably necessary and causally related.

24. The Claimant's authorized treating physician (ATP) placed the Claimant at maximum medical improvement (MMI) on August 1, 2018.

25. The Claimant's AWW is $735.20.

26. The Claimant is entitled to TPD benefits (2/3 of his temporary wage loss) as follows:

Start	End	Earnable	Earned	Wage Loss	TPD Due
4/30/18	5/6/18	$735.20	$384.14	$351.06	$234.04
5/7/18	5/13/18	$735.20	$385.98	$349.22	$232.81
5/14/18	5/20/18	$735.20	$404.36	$330.84	$220.56
5/21/18	5/27/18	$735.20	$385.98	$349.22	$232.81
5/28/18	6/3/18	$735.20	$652.49	$82.71	$55.14
6/4/18	6/10/18	$735.20	$551.40	$183.80	$122.53
6/18/18	6/24/18	$735.20	$661.68	$73.52	$49.01
7/23/18	7/29/18	$735.20	$588.16	$147.04	$98.03
					$1,244.94

27. The Claimant has proven compensability, entitlement to medical benefits, AWW, and entitlement toTPD benefits as herein above specified by preponderant evidence.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183

(Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, 2012 COA 85. The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, following the incident of April 21, 2018, the Claimant reported feeling pain immediately. He was taken to the emergency room (ER). Thereafter the Claimant was restricted to 10 lbs. no lifting for months, which he was not before. Dr. Lesnak's opinion that the April 21, 2018 incident was coincidental, and that the Claimant's back pain resulted suddenly because the effects of the facet injection wore off and the Claimant's preexisting back condition surfaced "with a vengeance" is un-persuasive and lacks credibility. As further found, Dr. Orent's opinions are credible, persuasive and supported by the Claimant's testimony and the previous lack of back complaints before the incident even after the Claimant returned to work in November 2017. The Claimant's testimony was credible, persuasive and supported by Dr. Orent's opinions.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985).

It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting testimonies and opinions, the ALJ made a rational choice, based on substantial evidence, to accept the Claimant's testimony and the opinions of Dr. Orent concerning causality, and to reject opinions to the contrary, including the opinion of Dr. Lesnak.

Compensability

c. In order for an injury to be compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Office,* 919 P.2d 207, 210, 210 (Colo. 1996). An injury "arises out of' employment if it would not have occurred **but for** the fact that the conditions and obligations of employment placed the employee in a position that he or she was injured." *See City of Brighton v. Rodriguez,* 318 P.3d 496, **2014 CO 7** (presumption that an injury arises out of employment when an unexplained injury occurs during the course of employment.) Thereupon, it is incumbent to show that non-work related factors caused the injury. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1) (c), C.R.S. *See Faulkner v. Indus. Claim Appeals Office,* 24 P.3d 844 (Colo. App. 2000)*; Eller v. Indus. Claim Appeals Office*, 224 P.3d 397, 399 (Colo. App. 2009); *Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277, 1279 (Colo. App. 2008). The question of causation is generally one of fact for determination by an ALJ. *Faulkner* at 846; *Eller* at 399-400. As found, the Claimant sustained a compensable injury on April 21, 2018, arising out of the course and scope of his employment.

d. Employment risks are distinguished from entirely personal risks (which do not "arise out of" employment), for instance, a preexisting idiopathic illness or medical condition that is completely unrelated to employment, such as fainting spells, heart disease, or epilepsy. *See, e.g., Irwin v. Indus. Comm'n,* 695 P.2d 763 (Colo. App. 1985); *Gates Rubber Co. v. Indus. Comm'n,* 705 P.2d 6 (Colo. App. 1985). Such "personal risks" also include an assault at work arising solely from an employee's private, not professional, life. *See, e.g., Velasquez v. Indus. Comm'n,* 41 Colo. App. 201, 581 P.2d 748 (1978). As found, the ALJ rejected Respondents' argument that stepping down from the Reach machine was a ubiquitous condition. Indeed, it was a specific risk of employment.

Medical

e. To be a compensable benefit, medical care and treatment must be causally related to an industrial injury or occupational disease. *Dependable Cleaners v.*

Vasquez, 883 P. 2d 583 (Colo. App. 1994). As found, Claimant's medical treatment is causally related to the compensable low back injury of April 21, 2018.. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's medical care and treatment was and is reasonably necessary. to cure and relieve the effects of his compensable low back injury, specifically, care and treatment received at St. Joseph's Hospital (Respondents' Exhibit K) and with Charles Wenzel, D.O. at Colorado Occupational Medicine Physicians (COMP) and their referrals are authorized, reasonably necessary and causally related.

Average Weekly Wage (AWW)

f. An AWW calculation is designed to compensate for **total or partial** temporary wage loss. *Pizza Hut v. Indus. Claim Appeals Office,* 18 P. 3d 867 (Colo. App. 2001). *See* § 8-42-102, C.R.S. As found, the Claimant's AWW is $735.20, the baseline for calculating temporary wage loss.

Temporary Partial Disability

g. As found, Claimant partially lost wages from the Employer as follows:

Start	End	Earnable	Earned	Wage Loss	TPD Due
4/30/18	5/6/18	$735.20	$384.14	$351.06	$234.04
5/7/18	5/13/18	$735.20	$385.98	$349.22	$232.81
5/14/18	5/20/18	$735.20	$404.36	$330.84	$220.56
5/21/18	5/27/18	$735.20	$385.98	$349.22	$232.81
5/28/18	6/3/18	$735.20	$652.49	$82.71	$55.14
6/4/18	6/10/18	$735.20	$551.40	$183.80	$122.53
6/18/18	6/24/18	$735.20	$661.68	$73.52	$49.01
7/23/18	7/29/18	$735.20	$588.16	$147.04	$98.03
					$1,244.94

Burden of Proof

h. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). Also, the burden

of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained his burden on compensability, medical benefits, AWW, TPD, and lack of an ubiquitous syncopal event.

ORDER

IT IS, THEREFORE, ORDERED THAT:

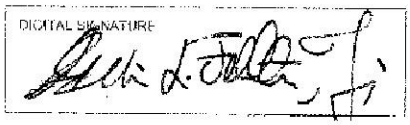
A. Respondents shall pay the costs of all authorized, causally relate and reasonably necessary medical care and treatment for the Claimant's low back injury of April 21, 2018, including care and treatment received at St. Joseph's Hospital (Respondents' Exhibit K) and with Charles Wenzel, D.O. at Colorado Occupational Medicine Physicians (COMP) and their referrals which are authorized, reasonably necessary and causally related, subject to the Division of Workers' Compensation Medical Fee Schedule.

B. Respondents shall pay the Claimant aggregate temporary partial disability benefits in the amount of $1,244.94, which is payable retroactively and forthwith.

C. Respondents shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts of indemnity benefits due and not paid when due.

D. Any and all issues not determined herein are reserved for future decision.

DATED this 25th day of February 2019.



EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

- Whether claimant has proven by a preponderance of the evidence that he is entitled to an award of permanent total disability benefits?

- Whether respondents have proven by a preponderance of the evidence that they are entitled to an offset of claimant's award of benefits?

- Whether respondents have proven by a preponderance of the evidence that they are entitled to a credit for an overpayment of benefits?

FINDINGS OF FACT

1. Claimant was employed by employer building a wall on April 21, 2016 when he injured his low back. Claimant testified he had built the wall on the ground and was raiding the wall when he felt back pain. Claimant testified he did not report his injury that day, but worked another approximately ½ hour before going home. Claimant testified he went home following his injury and by the next morning, he could barely get out of bed and had difficulty walking. Claimant testified he returned to work and reported the injury to his supervisor Mr. B_____ and advised his employer that he was not capable of working.

2. Claimant sought medical treatment following his injury with the Marillac clinic. Claimant was initially evaluated at the Marillac clinic on April 28, 2016. Claimant testified that the Marillac clinic was his regular family doctor. Claimant testified employer did not refer claimant to a physician for medical treatment.

3. Claimant was examined by nurse practitioner ("NP") Jennings on April 28, 2016. Claimant reported he woke up four days ago and had an increase in low back pain. Claimant reported taking ibuprofen, Tylenol and aspirin without relief. Claimant was provided with a prescription for gabapentin and instructed to return in 6 months, or if symptoms worsen or fail to improve.

4. Claimant returned to Dr. Pasterz at Marillac Clinic on May 3, 2016. Dr. Pasterz noted claimant had an insidious onset of right sided lumbar back pain starting two weeks ago. Dr. Pasterz also noted claimant had a long-standing history of intermittent back problems going back about 30 years. Dr. Pasterz noted claimant already had Flexeril and prescribed oxycodone. Dr. Pastetz also provided claimant with work restrictions of no heavy lifting and no use of power tools with his medication.

5. Claimant was again evaluated by Dr. Pasterz on May 17, 2016. Dr. Pasterz had obtained x-rays of claimant's lumbar spine and noted that the films showed multilevel degenerative disc disease especially at the L3 level. Significant osteophyte

and spondylosis was also noted. Dr. Pasterz provided claimant with work restrictions of no lifting over 40 pounds.

6. Claimant returned to Dr. Pasterz on May 20, 2016. Dr. Pasterz noted claimant was using about 2 to 3 tablets of Percocet per day. Claimant reported he got a massage which seemed to help his pain. Claimant was diagnosed with acute lumbar myositis with degenerative disc disease of the lumbar spine. Dr. Pasterz referred claimant for x-rays of the lumbar spine and noted that if claimant did not improve, he would need a magnetic resonance image ("MRI") and probably an epidural.

7. Dr. Pasterz evaluated claimant on May 31, 2016. Dr. Pasterz diagnosed claimant with acute lumbar back pain with degenerative disc disease and degenerative joint disease of the lumbar spine.

8. Claimant eventually underwent the MRI of the lumbar spine on June 14, 2016. The MRI revealed levoscoliosis of the lumbar spine centered at the level of L3. The MRI also showed acute compression fractures over the mid and right lateral aspect of the L3 and L4 vertebra, along with degenerative disc disease with disc bulges at L2-3 through L5-S1. An inflamed Schmorl's node of the anterior infra plat of L1 was also noted.

9. Claimant testified at hearing that he was surprised by the severity of the MRI findings.

10. Following the MRI, claimant was referred for an orthopedic evaluation with Dr. Clifford. Claimant was examined by Dr. Clifford's physician assistant ("PA"), Mr. Ousley, who noted claimant had been experiencing low back pain for about the last two to three months. Claimant reported that the back pain came on without accident or injury but did occur fairly suddenly. Claimant reported he would occasionally get pain radiating into the right proximal thigh, but the pain did not radiate distally. Dr. Clifford noted that claimant improved very little with time and treatment. Dr. Clifford reviewed the MRI and opined that while there was a small chance the changes were degenerative in nature, it was more likely related to some degree of acute or subacute fracture.

11. Claimant returned to Dr. Clifford on July 21, 2016. Dr. Clifford indicated in this report that claimant was involved in a work injury back in April 2016. Dr. Clifford noted that claimant was three months out and still having pain. Dr. Clifford recommended some personal home based physical therapy. Dr. Clifford opined that if the physical therapy did not work, he would recommend another MRI and see if the STIR image was still strong. If the STIR image was still high, he would recommend a kyphoplasty procedure at L3 and L4. Dr. Clifford opined in the report that claimant's lumbar stenosis was not related to the work injury and noted that he would be discussing injections for this condition in two weeks.

12. Claimant testified at hearing that he did not tell Dr. Pasterz about the work injury and was initially treating the claim on his private health insurance. Claimant

testified that after he discovered the severity of the injury, he then sought to file a workers' compensation claim. Respondents subsequently admitted liability for the claim.

13. Dr. Pasterz testified by deposition in this matter consistent with his medical reports. Dr. Pasterz testified he was unaware that claimant had alleged his injury was the result of a lifting incident at work.

14. Claimant was evaluated by Dr. McLaughlin on August 8, 2016. Dr. McLaughlin noted claimant's report of being injured while at work and reviewed claimant's medical records. Dr. McLaughlin diagnosed claimant with a work injury of April 21, 2016 with subsequent L3 and L4 compression fractures. Dr. McLaughlin recommended physical therapy and provided claimant with work restrictions that included no lifting over 10 pounds, no repetitive bending and mostly sit down work with the ability to change positions as needed.

15. Claimant returned to Dr. McLaughlin on September 12, 2016. Dr. McLaughlin noted that x-rays from September 6, 2016 showed advanced lumbar spondylosis without acute abnormality. Dr. McLaughlin noted claimant was schedule to be re-evaluated by Dr. Clifford on September 12, 2016. Dr. McLaughlin discussed with claimant the likelihood that Dr. Clifford would request additional MRI or computed tomography ("CT") studies and instructed claimant to follow up after his appointment with Dr. Clifford.

16. A repeat MRI was performed on September 14, 2016. The MRI showed multilevel degenerative disc disease at all levels, with right lateral disc protrusion with neural encroachment on the right lateral recess and narrowing right neural foramen at L2-L3. Broad based spurring was also noted at the L3-S1 levels.

17. Claimant underwent rights sided L2-3 and L3-4 transforaminal epidural steroid injections ("ESI") under the auspices of Dr. Clifford on September 29, 2016. Dr. Clifford noted that post injection, claimant's leg pain was improved dramatically in the appropriate distribution. Claimant was instructed to follow up in six (6) weeks.

18. Claimant followed up with Dr. McLaughlin on October 17, 2016 and reported that he had very good resolution following the ESI of his left leg pain. Claimant reported the left leg pain had returned, but was not a bad as it was pre-injection. Dr. McLaughlin recommended continuing with therapy and provided claimant with work restrictions that included no lifting over 20 pounds and no repetitive bending with changing of positions as needed.

19. Claimant again returned to Dr. McLaughlin on November 14, 2016. Claimant reported to Dr. McLaughlin that he had significant improvement in his leg symptoms after the injection and had improved function in his activities of daily living. Claimant reported that after the injection work off, he continued to have low back pain, difficulty bending and lifting. Claimant reported he would like to undergo the recommended spinal fusion procedure.

20. Dr. Clifford performed surgery on December 6, 2016. The surgery included an L2-3, L3-4 and L4-5 lateral lumbar interbody fusion ("LLIF") with cage placement, and L2-S2 posterolateral spinal fusion ("PSF") with instrumentation and an L5-S1 transforaminal lumbar interbody fusion ("TLIF") with cage placement.

21. Claimant returned to Dr. McLaughlin on December 20, 2016. Dr. McLaughlin noted claimant's current medications and recommended claimant continue with the limitations set forth by Dr. Clifford. Claimant was again evaluated by Dr. McLaughlin on January 4, 2017. Dr. McLaughlin again noted claimant's recovery and recommended a home health evaluation to determine if he would need some assistance at home with cleaning, moving things and getting things set up.

22. Dr. Clifford noted on January 19, 2017 that claimant was doing remarkably well. Dr. Clifford instructed claimant to return in six weeks and provided him with work restrictions of no lifting over 25 pounds. Claimant was instructed to be really careful about bending, lifting, or twisting.

23. Dr. McLaughlin re-evaluated claimant on February 2, 2017, and noted claimant had not yet started physical therapy. Dr. McLaughlin reviewed a Rule 6 letter with claimant. Dr. McLaughlin noted that Dr. Clifford recommended maximum lifting of 45 pounds, but Dr. McLaughlin thought at work it would be 25 pounds max lifting, with 0 pounds for routine lifting, and no crawling, kneeling squatting or climbing. Dr. McLaughlin recommended a four hour shift with sit down work mostly and the ability to stand as needed. Claimant returned to Dr. McLaughlin on February 16, 2017. Dr. McLaughlin provided claimant with exercises to strengthen his glute muscles and continued his work restrictions.

24. Claimant was examined by Dr. Clifford on March 2, 2017. Dr. Clifford noted claimant was doing very well with back pain of 3 out of 10 and no significant leg pain. Dr. Clifford provided claimant with a 30 pound lifting restriction.

25. Claimant returned to Dr. McLaughlin on March 6, 2017. Dr. McLaughlin noted Dr. Clifford had recommended that claimant get in the gym and Dr. McLaughlin tried to show claimant some home exercises. Dr. McLaughlin recommended physical therapy as opposed to going to the gym and referred claimant to a specific physical therapist. Dr. McLaughlin recommended work restrictions of no lifting over 25 pounds.

26. Claimant was again evaluated by Dr. McLaughlin on March 27, 2017. Dr. McLaughlin recommended claimant get a gym pass along with four more visits of physical therapy. Claimant again returned to Dr. McLaughlin on April 21, 2016 and reported he was feeling better now than he did a month ago. Claimant reported that the gym pass had been very helpful. Dr. McLaughlin recommended work restrictions of maximum lifting of 30 pounds with 10 pounds routinely, along with changing positions as needed.

27. Claimant again returned to Dr. McLaughlin on May 4, 2017 after he developed some pain down his right leg. Claimant reported he had upped his weights

about 10 pounds at the gym and wondered if he overdid it. Dr. McLaughlin noted that on exam his main issues appeared to be tightness to the paraspinal muscles, just overdoing it. Dr. McLaughlin noted his concern that claimant may have a disk issue or neuropathy, which did not appear present on exam, but could be present. Claimant was provided with a prescription for Flexeril and instructed to return to physical therapy.

28. Claimant returned to Dr. McLaughlin on May 10 with reports that he was doing better, but was still sore. Dr. McLaughlin ordered x-rays which showed no acute osseous abnormalities or complications were evident. Dr. McLaughlin recommended continued physical therapy.

29. Claimant was examined by Mr. Ousley on May 31, 2017 with Dr. Clifford's office. Mr. Ousley noted claimant was six months post-op and doing fairly well overall. Claimant complained of some "burning pain" in primarily the right side of his low back, ut otherwise his pain was fairly manageable. Claimant had been trying to do some high repetition weight exercises and more walking. Mr. Ousley reviewed claimant's clinical and radiographic findings and recommended that claimant gradually increase his walking so he could slowly increase his weight training.

30. Claimant returned to Dr. McLaughlin on June 21, 2017 and noted he could be overdoing it a bit. Claimant reported he was tired, but denied radicular complaints or bowel or bladder incontinence. Claimant was provided with work restrictions that included no lifting over 10 pounds.

31. Claimant again returned to Dr. McLaughlin on August 3, 2017 and reported he had to back off his exercises because he was feeling pain through his lateral right hip and lateral aspect of the low back. Claimant denied any significant radicular symptoms and denied bowl or bladder incontinence. Dr. McLaughlin noted that he believed claimant had just been overdoing it, and noted that his lumbar range of motion was the best that it had been in quite some time. Claimant was referred to a new physical therapist and had his work restrictions continue with a maximum of 10 pounds lifting.

32. Claimant returned to Dr. McLaughlin on September 5, 2017 and noted his new physical therapy had been somewhat helpful. Physical examination revealed claimant to be very tight on the left side with marked tightness to the lumbar paraspinal muscles. Claimant reported increased pain with extension and lateral flexion left and right. Dr. McLaughlin referred claimant to Dr. Bowen, a psychologist, to evaluate and treat claimant. Claimant's work restrictions were continued at 10 pounds maximum lifting.

33. Claimant reported to Dr. McLaughlin on September 20, 2017 that he had stopped physical therapy because it was causing him more pain and he was not getting any more function. Claimant also reported his left hip hurt. Claimant was referred for an x-ray of the left hip which showed a normal pelvis and left hip. Claimant's work restrictions were continued at 10 pounds.

34. The records from the physical therapist document claimant complaining of right hip pain up until the final visit on September 9, 2017, when he complained of pain in his hips on both sides.

35. Claimant was re-examined by Dr. McLaughlin on October 5, 2017. Claimant reported that being off physical therapy had definitely helped him, and reported his pain was lower. Dr. McLaughlin noted that claimant has not worked in some time and he did not expect claimant to return to work. Dr. McLaughlin reported that he anticipated claimant to be at maximum medical improvement ("MMI") after he sees Dr. Clifford and receives a permanent impairment. Dr. McLaughlin noted that claimant would most likely be indefinitely off work.

36. Claimant continued to follow up with Dr. McLaughlin and returned to Dr. Clifford on November 30, 2017. Dr. Clifford noted that overall, claimant was doing really well. Claimant reported a little bit of pain along the right lateral incision just inferior to the incision and some mild back pain that he rated about a 2/10. Claimant reported his symptoms were worse with bending and lifting activities, but reported he was overall very pleased with the surgical management. Dr. Clifford noted some mild tenderness to deep palpation in the right paraspinal musculature, with some paresthesias over the inferior aspect of the right lateral incision down to the iliac crest. Dr. Clifford recommended claimant continue his activities including weight loss and noted that claimant had a little adjacent segment degeneration across the L1-2 level that he would keep an eye on.

37. Claimant returned to Dr. McLaughlin on December 14, 2017. Dr. McLaughlin noted that claimant was inquiring about hardware removal or altering the hardware, which Dr. McLaughlin noted would only occur if there was an issue of worsening of condition or need for further surgery to extend the fusion. Dr. McLaughlin noted that claimant was doing his home exercise program and reported feeling better than his last visit with improvements involving his flaring of pain and allowing him to be a bit more functional, moving around the house, getting in and out of vehicles and walking. Dr. McLaughlin recommended claimant finish out his consultations with Dr. Bowen and return in one month for an impairment rating. Dr. McLaughlin noted that it was very unlikely that claimant would return to any work that will have gainful employment. Dr. McLaughlin noted that he anticipated claimant would be at MMI as of this visit, but felt claimant should complete his treatment with Dr. Bowen and get a Flector patch prescription before being put at MMI.

38. Claimant returned to Dr. McLaughlin on February 6, 2018 and noted that the Flector patch had not been approved. Dr. McLaughlin again recommended the Flector patch and noted that claimant did not have side effects associated with the Flector and felt he could do more when using the Flector patch such as walk the dog and get in and out of the car. Dr. McLaughlin noted that claimant had completed his eight (8) therapy sessions with Dr. Bowen, but opined that claimant was not at MMI due to the fact that when he was using the non-steroid anti-inflammatories, he was better functionally and had better range of motion. Dr. McLaughlin therefore requested

claimant to return in one month and to determine if claimant could get his Flector patches authorized.

39. Claimant returned on February 21, 2018 at which time the insurer had approved the Flector patches. Dr. McLaughlin noted the Flector patches had been very helpful and claimant could move better and get in and out of his car better. Dr. McLaughlin opined that claimant was at MMI and provided claimant with a permanent impairment rating of 32% whole person. The impairment rating was based on 16% whole person due to a specific disorder of the lumbar spine pursuant to Table 53 of the AMA Guides to Permanent Impairment, 3rd Edition revised and 19% whole person for loss of range of motion. Dr. McLaughlin opined that claimant was permanently off work indefinitely and did not provide claimant with any permanent work restrictions based on this opinion.

40. Respondents filed a final admission of liability ("FAL") on March 22, 2018 that admitted for the 32% whole person impairment rating. Respondents also admitted for post-MMI medical benefits.

41. Claimant returned to Dr. McLaughlin on May 21, 2018 for post-MMI medical care. Dr. McLaughlin noted that claimant continued off work indefinitely and on Social Security Disability. Claimant again reported the Flector patch was helpful. Dr. McLaughlin again noted that he did not expect claimant to return to the workforce and continued on Social Security Disability.

42. Dr. McLaughlin testified by deposition in this matter. Dr. McLaughlin acknowledged the issues with regard to claimant's initial reports to his medical providers that failed to indicate a work related injury prior to onset of low back symptoms. Dr. McLaughlin testified he asked claimant about the discrepancies in the medical records and claimant indicated he liked his employer and did not want to be a burden on his employer. Dr. McLaughlin testified that it was his opinion that claimant's low back complaints and compression fractures were related to the accident history claimant provided of being injured on April 21, 2016 while working for employer. Dr. McLaughlin testified that it was possible that compression fractures could be caused by osteoporosis and confirmed that claimant had been diagnosed with osteoporosis

43. With regard to claimant's work restrictions, Dr. McLaughlin testified that Dr. Clifford provided claimant with work restrictions that included maximum lifting of 25 pounds on January 18, 2017. Dr. McLaughlin testified that based on his examination of claimant, there was nothing erroneous about this restriction. Dr. McLaughlin testified claimant could continue to work with a 25 pound lifting restriction as of March 6, 2017.

44. Dr. McLaughlin testified that when he placed claimant at MMI, he opined that claimant was off work indefinitely. Dr. McLaughlin testified that this opinion was in part because claimant was receiving Social Security Disability benefits. Dr. McLaughlin testified that claimant, in theory, could work if the job had appropriate restrictions and/or limitations. Dr. McLaughlin testified that nothing precludes claimant from performing a sit down job with maximum lifting of 10 pounds.

45. Claimant obtained a vocational evaluation from Mr. Van Iderstine to address the issue of whether he could obtain employment in the same or other field. Mr. Van Iderstine reviewed claimant's medical records, met with claimant for an interview and performed a labor market study in connection with his vocational evaluation. Mr. Van Iderstine noted that claimant had a degree but had never used it in a vocational aspect for his work other than when he worked in a business setting. Mr. Van Iderstine noted the opinion of Dr. McLaughlin that claimant was in capable of returning to work. Mr. Van Iderstine opined that based on the restrictions set forth by Dr. McLaughlin, claimant was not capable of returning to work in the same or other employment.

46. Mr. Van Iderstine testified at hearing consistent with his vocational report. Mr. Van Iderstine opined that if you considered claimant's work restrictions to be a 10 pound lifting restriction as opposed to no work, claimant's restrictions would limit him to sedentary work. Mr. Van Iderstine testified that if claimant were limited to sedentary only work, it was his opinion that claimant would be unable to obtain employment as he does not have experience in an office setting or in sales that would allow for him to perform jobs within this restriction. Mr. Van Iderstine further testified that claimant would not be able to sustain this type of employment as he does not have appropriate typing skills or computer skills that would be necessary for a sedentary type job.

47. Respondents obtained a vocational evaluation from Katie Montoya to address the issue of whether claimant could obtain employment in the same or other field. Ms. Montoya reviewed claimant's medical records, interviewed claimant, and noted claimant's transferrable skills, including his degree from Colorado State University, customer relation experience and supervisory experience. Ms. Montoya noted that claimant reported he could lift up to 10 pounds, but that a repetitive lift was not good for him. Ms. Montoya noted that claimant reported he did spend a few hours per day on his tablet.

48. Ms. Montoya opined in her report that if you used Dr. McLaughlin's work restrictions that indicated claimant was capable of lifting anywhere between 10 and 30 pounds, claimant could work some sales, cashier or driving type positions.

49. Ms. Montoya testified at hearing in this matter consistent with her report. Ms. Montoya testified that Dr. McLaughlin's prior work restrictions that limited claimant to lifting between 10 and 30 pounds would allow claimant to work. Ms. Montoya testified that if we assume Dr. McLaughlin's statement when claimant was placed at MMI was correct, claimant would not be able to return to work. Ms. Montoya testified that her lifting restriction she used for formulating her opinion was based on the 10 pound lifting restriction set forth by Dr. McLaughlin prior to MMI.

50. The ALJ credits the testimony of Dr. McLaughlin and Mr. Van Iderstine and finds that claimant has established by a preponderance of the evidence that he is incapable of earning wages in the same or other employment. The ALJ notes that the work restrictions set forth by Dr. McLaughlin are the only restrictions set forth by a

physician after MMI and finds that the testimony of Mr. Van Iderstine relying on these restrictions to be credible and persuasive.

51. Respondents maintain that the claimant's work restrictions are not substantially related to the work injury. The ALJ notes that it is claimant's burden of proof to establish that the work injury is a significant causative factor of his in ability to earn wages. The ALJ finds that claimant has established that it is more probable than not that the fusion surgery performed by Dr. Clifford was reasonable and necessary to cure and relieve the claimant from the work injury. The ALJ relies on the opinions expressed by Dr. McLaughlin in his reports and testimony along with the reports from Dr. Clifford in coming to this conclusion. The ALJ further finds that claimant has established that it is more likely true than not that the work restrictions set forth by Dr. McLaughlin are related to the fusion surgery and thus, related to the work injury.

52. Claimant testified at hearing that he was receiving social security disability ("SSDI") benefits. The Final Admission of Liability in this case did not take an offset against the SSDI benefits. However, Respondents are entitled to a statutory offset of SSDI benefits against the PTD benefits awarded in this case. The ALJ therefore finds that respondents are entitled to an offset against the award of benefits in this case based on claimant's receipt of SSDI benefits.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2015).

3. In order to prove permanent total disability, claimant must show by a preponderance of the evidence that he is incapable of earning any wages in the same or other employment. §8-40-201(16.5)(a), C.R.S. (2007). A claimant therefore cannot receive PTD benefits if he or she is capable of earning wages in any amount. *Weld County School Dist. RE-12 v. Bymer*, 955 P.2d 550, 556 (Colo. 1998). The term "any wages" means more than zero wages. See, *Lobb v. ICAO,* 948 P.2d 115 (Colo. App. 1997); *McKinney v. ICAO*, 894 P.2d 42 (Colo. App. 1995). In weighing whether claimant is able to earn any wages, the ALJ may consider various human factors, including claimant's physical condition, mental ability, age, employment history, education, and availability of work that the Claimant could perform. *Weld County School Dist. R.E. 12 v. Bymer*, 955 P.2d at 550, 556, 557 (Colo. 1998). The critical test is whether employment exists that is reasonably available to claimant under his particular circumstances. *Weld County School Dist. R.E. 12 v. Bymer*, Id.

4. The claimant is not required to establish that an industrial injury is the sole cause of his inability to earn wages. Rather the claimant must demonstrate that the industrial injury is a "significant causative factor" in his permanent total disability. *Seifried v. Industrial Commission,* 736 P.2d 1262 (Colo. App. 1986). Under this standard, it is not sufficient that an industrial injury create some disability which ultimately contributes to permanent total disability. Rather, *Seifried* requires the claimant to prove a direct causal relationship between the precipitating event and the disability for which the claimant seeks benefits. *Lindner Chevrolet v. Industrial Claim Appeals Office,* 914 P.2d 496 (Colo. App. 1995), *rev'd on other grounds*, *Askew v. Industrial Claim* Appeals Office, 927 P.2d 1333 (Colo. 1996).

5. As found, claimant has proven by a preponderance of the evidence that the work injury in this case was a significant causative factor in the work restrictions set forth by Dr. McLaughlin. As found, claimant has established by a preponderance of the evidence that he is incapable of earning wages in the same or other employment as a result of his work injury. As found, claimant has established by a preponderance of the evidence that he is entitled to an award of permanent total disability benefits.

6. As found, the testimony of Dr. McLaughlin and Mr. Van Iderstine are found to be credible and persuasive in coming to this decision. As the ALJ has determined that claimant is entitled to an award of PTD benefits, the ALJ need not address the issue of overpayments raised by respondents.

7. Respondents, however, are entitled to an offset against the PTD benefits for claimant's receipt of social security disability. Insofar as respondents are claiming an offset for SSDI benefits, respondents may do so on any subsequent Final Admission of Liability that addresses the award of PTD benefits. If there is an issue with regard to the extent of the offset, the parties may raise the issue with the Court.

ORDER

It is therefore ordered:

1. Respondents' shall pay claimant permanent total disability benefits based on the admitted average weekly wage.

2. Respondents may claim an offset for SSDI benefits against the award for PTD benefits, but the amount of the offset is governed by statute and not addressed in this Order

3. All matters not determined here are reserved for future determination.

Dated February 25, 2019

Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

The issues raised by the evidence presented concerns: 1) Claimant's entitlement to additional medical benefits and; 2) Whether Claimant was actually placed at MMI by Dr. Dallenbach on August 7, 2018 by closing report and reiterated in his October 1, 2018 impairment rating report, thereby depriving the ALJ of jurisdiction to resolve the medical benefits question. The precise question concerning medical benefits is whether Respondent's are liable to provide and pay for a nonindustrial right hip surgery, which Claimant contends is necessary to optimize her treatment for and recovery from her compensable left knee injury.

PROCEDURAL HISTORY

The above captioned matter is before Administrative Law Judge (ALJ) Richard M. Lamphere on **RESPONDENTS' MOTION FOR RECONSIDERATION OF AN ORDER OR IN THE ALTERNATIVE, MOTION TO REOPEN THE RECORD FOR NEWLY DISCOVERED OUTCOME DETERMINATIVE EVIDENCE,** Claimant's response filed thereto and Respondents' **PETITION TO REVIEW** filed December 12, 2018. The ALJ is fully advised in the premises of Respondents' motion and the particular errors raised by Respondents in the Petition to Review having reviewed the recitation of relevant facts contained in his November 21, 2018 Order and a Prehearing Conference Order issued by Prehearing Administrative Law Judge (PALJ) Michael J. Barbo issued January 2, 2019. This Supplemental Order supplants the Findings of Fact, Conclusions of Law and Order issued by the undersigned ALJ on November 21, 2018.

Hearing in the above captioned matter was held on October 4, 2018, before Administrative Law Judge (ALJ), Richard M. Lamphere. The ALJ held the record open through October 19, 2018 to allow counsel time to submit their written argument. Respondent's subsequently filed an unopposed motion to extend the position statement deadline to October 24, 2018. The motion to extend the filing deadline for position statements was granted and the parties position statements were timely received via electronic transmission on October 24, 2018, prompting the ALJ to issue his Order on November 21, 2018.

On December 10, 2018, a prehearing conference was held before PALJ Michael J. Barbo on Claimant's motion to stay the Division Independent Medical Examination (DIME) process. Claimant's request for a prehearing conference followed Respondents' filing of a final admission of liability (FAL) on October 23, 2018, based upon a report issued by Claimant's authorized treating physician (ATP), Dr. Michael Dallenbach on October 2, 2018, placing Claimant at maximum medical improvement (MMI) on August 7, 2018. At the prehearing conference, the parties were afforded the option of submitting position statements prior to the entry of PALJ Barbo's order. Given the holidays, the deadline for the filing of position statements was set for December 28, 2018. As part of the position statements, PALJ Barbo was made aware that Dr. Dallenbach had issued

the aforementioned October 2, 2018, placing Claimant at MMI as of August 7, 2018 with impairment. Neither, Claimant nor Respondents were aware of the existence of this report prior to proceeding to hearing on October 4, 2018. PALJ Barbo also received a report from Dr. Dallenbach dated December 20, 2018, noting that he reviewed the November 21, 2018 Order of the ALJ, noting further that if he had known that responsibility for payment of a right total hip arthroplasty was going to fall to Respondents, he would not have placed Claimant at MMI.

On December 12, 2018, Respondents filed a Petition to Review the November 21, 2018 Order contending that it is "not supported by the facts or the applicable law. . . because, unbeknownst to the parties, the claimant had been declared at MMI on August 7, 2018 for her knee injury". Because Claimant was post MMI before the hearing, which only addressed her request for pre-MMI surgery, Respondents also contend that the November 21, 2018 order is contrary to law. Along with their Petition to Review, Respondents filed a motion for reconsideration or in the alternative, a motion to reopen the record for newly discovered outcome determinative evidence. The ALJ convened a status conference with the parties on December 19, 2018 in light of Respondents' filings. The ALJ requested the reports which were presented to PALJ Barbo as part of their December 28, 2018 position statements following the December 10, 2018 prehearing conference. On December 21, 2018, the ALJ received the requested materials along with Claimant's response to Respondents' motions for reconsideration and reopening the record for newly discovered outcome determinative evidence.

On January 2, 2019, PALJ Barbo issued his order following review of the parties' December 28, 2018 position statements. In his order PALJ Barbo notes:

> Pursuant to *Town of Ignacio v. Industrial Claim Appeals Office*, 70 P.3d 513 (Colo.App. 2002), if the ATP has made a determination that the claimant is at MMI, the issue cannot be further litigated unless the party disputing the issue obtains a DIME. However, 'Ignacio' also holds that a DIME is not a prerequisite to an ALJ's determination of whether the ATP has actually determined the claimant to be at MMI. *MGM Supply Co v. Industrial Claim Appeals Office*, 62 P.3d 1001 (Colo.App. 2002), *Loyda v. Greg Farthing DDS*, W.C. 4-467-593 (Jan. 21, 2005). In the view of this PALJ, the absence of a resolution by Dr. Dallenbach regarding whether other medical treatment is reasonable and necessary in this instance to "optimize" the treatment for the claimant's work-related injury, coupled with the statement that she may need a total knee arthroplasty creates an ambiguity as to whether Dr. Dallenbach actually considers the claimant to be at MMI, regardless of his later statement about Judge Lamphere's order.

PALJ Barbo held the DIME process held in abeyance and ordered the parties to return to the Colorado Springs Office of Administrative Courts (OAC) for a determination of "whether Dr. Dallenbach actually placed Claimant at MMI". After careful consideration of Respondents' motion and Petition to Review, the FAL and the additional medical records authored by Dr. Dallenbach, the ALJ concludes that, in addition to the issue surrounding Claimant's entitlement to medical benefits, a question exists as to whether

Dr. Dallenbach actually considered Claimant to be at MMI when he opined as such in an August 7, 2018 closing report and again on October 1, 2018 in his report of MMI and impairment. Because the ALJ finds the additional medical records authored by Dr. Dallenbach potentially outcome determinative, it is appropriate to reopen the record for consideration of this evidence and analyze any impact this evidence may have on the additional medical benefits previously ordered by the undersigned on November 21, 2018. Accordingly, the ALJ issues this Supplemental Order pursuant to Section 8-43-301(5), C.R.S. 2013. As noted, this order supplants the November 21, 2018 order.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant suffered an injury to her left knee on November 18, 2016, when "she was loading 50 lb. mortar into a customer's vehicle. She was on the 3rd bag and turned to the left and heard a pop in her left knee." Liability for the injury was admitted and Claimant was referred for treatment.

2. Claimant was initially seen by Brian Sefcik, DO, on November 19, 2016. [Claimant Exhibit 7, p. 198]. X-rays of the knee were obtained and were interpreted as "showing minimal degenerative changes and preservation of joint spaces."

3. Claimant was referred to physical therapy (PT), which she started on December 20, 2016.

4. During the initial PT visit on December 20, 2016, besides reporting posterolateral knee pain, Claimant reported "pain beginning at anterior left hip/groin in the past 3 weeks" which she believed was related to "walking different due to pain in knee". There were findings of antalgic gait and left knee strain with "suspected involvement of the hamstring muscles".

5. Claimant was seen by Douglas Bradley, MD, at Emergicare on December 23, 2016. There was documentation of the physician records of dull ache to the left hip without associated symptoms. The left hip pain was not addressed at this visit. It was also noted that she was no longer having antalgic gait.

6. Claimant returned to Emergicare in follow-up on January 7, 2017, at which time it was noted she had "intermittent L hip pain as well with a pain intensity of 2/10 in severity."

7. Claimant underwent MRI of the left knee on February 11, 2017. The imaging revealed "mild osteoarthritis of the left knee with chondromalacia patellae type III, lateral patellofemoral spurring, lateral patellar tracking, moderate joint effusion, a "small horizontal tear on the body of the lateral meniscus" and a mild strain versus mucoid degeneration of the ACL. No Tear."

8. Claimant was seen at Emergicare on February 25, 2017. The record generated from this date of visit is devoid of any mention of complaints regarding her hips specifically. Physical examination revealed edema in the legs bilaterally, left greater than right.

9. Claimant returned to Emergicare on March 18, 2017, with continued complaints of "achy" pain in the left knee and with a new report that her "right knee and hip [were] also starting to feel sore as well". Claimant's right hip was "tender" to palpation as were both of her knees. Claimant was referred to Dr. David Walden for an orthopedic evaluation.

10. Claimant presented to the offices of Dr. Walden on April 17, 2017 where she was evaluated by Physician Assistant (PA), Rachel Cerchia. In the history of present illness provided by Claimant it is documented that she reported radiating pain "down the outside lateral portion of her left leg and now her opposite hip is bothering her." Claimant was assessed with "primary osteoarthritis of left knee." Claimant's MRI imaging was reviewed which, according to PA Cerchia, demonstrated osteoarthritic changes in the patellofemoral joint and a meniscal tear. PA Cerchia recommended MRI review with Dr. Walden.

11. Dr. Walden evaluated Claimant on April 25, 2017, after which he recommended arthroscopic surgery of the left knee. Dr. Walden noted: "I talked to her about a possible arthroscopic partial lateral meniscectomy versus repair. She understands that arthritis is not curable by arthroscopy." It was also noted motion at the right hip was painful and she had a slight antalgic gait.

12. Claimant underwent a partial lateral meniscectomy and chondroplasty of both the patellofemoral joint and medial femoral condyle with Dr. Walden on June 28, 2017. She was referred to post-surgical PT.

13. Claimant returned to Emergicare on August 17, 2017, with complaints of constant sharp pain affecting her pain along with an associated "locking" sensation in the hip. An injection of lidocaine mixed with 20 mg of Decadron was administered to the right hip (bursa) and SI joint.

14. Claimant was seen at Emergicare for follow-up on her left knee on September 7, 2017. During this visit, Claimant reported that her knee was not feeling "good" and her condition was otherwise unchanged since her last appointment. She also reported that her "gait [was] still off" along with continued pain to her right hip. Physical examination revealed an antalgic gait and tenderness over the right hip. Claimant was assessed with, among other diagnoses, sprain of the right hip for which an MRI was ordered.

15. The aforementioned MRI was performed on September 23, 2017. The MRI demonstrated the following right hip findings: Severe right hip degeneration; large hip effusion; marginal osteophytes; maceration of the labrum and bilateral trochanteric bursitis

16. Claimant returned to Dr. Walden's care on October 3, 2017, during which appointment Dr. Walden documented the following: ". . . she reports that her hip is become (sic) significantly worse (no pain prior to injury) and she believes that it is due to her left knee". Dr. Walden noted that Claimant's MRI "showed severe right hip degeneration, cam femoral acetabular impingement and trochanteric bursitis". Dr. Walden also noted that Claimant felt as though an altered gait "exacerbated her right hip". Finally, Dr. Walden stated:

> Although her knee is somewhat better, she is still getting some muscular pain around the leg. Hopefully these will improve with independent exercises but it is difficult to know… At this point, I would recommend that the patient utilize independent exercises for stretching and strengthening and over the counter remedies for her left knee. No further orthopedic care is indicated at this point with regard to the left knee. She can be placed at maximum medical improvement after her workup is complete with regard to her additional problems.

17. Based upon the evidence presented, the ALJ finds that Dr. Walden's mention that Claimant could be placed at MMI after workup of her "additional problems" is, more probably than not, a reference to her right hip condition.

18. The claimant was referred from Emergicare to Scott Primack, DO, who saw her on November 10, 2017, for a comprehensive consultation of her left knee pain and right hip discomfort. Upon completion of his workup, Dr. Primack stated:

> This is a very complicated case. There are work-related issues and non-work-related issues. First and foremost, from a causality prospective, as I reviewed with Ms. H_____ [Claimant], her right hip OA is not work-related. This is due to the mechanism of injury, the clinical examination, the imaging studies, and the pathophysiology of osteoarthritis of the hip. Therefore, treatment would not be considered work-related. She has been through a hip injection, but this did not give her significant pain control. This would make sense; in that her OA is rather severe. Her final common pathway at right hip would be a hip replacement. However, as I reviewed with Mr. and Mrs. H_____ [Claimant], this would not be considered work-related.
>
> In reference to the work-related left hip[1] problem, the claimant's options include an impairment rating versus viscosupplementation versus regeneration options such as mesenchymal stem cells or plasma—rich protein. A knee replacement would not be considered work-related given the

[1] The ALJ finds that reference to "left hip" in the note is likely an error and that Dr. Primack probably meant to reference Claimant's "work-related left knee problem.

> mechanism of injury and degree of degenerative changes. The patient will weigh out her options for the left knee. . . . Another option would be for her to undergo her non-work-related hip replacement and see what that "does to her left knee".

19. Claimant was evaluated by Dr. Nakamura on February 23, 2018. X-rays of the right hip showed "advanced degenerative changes of the right hip with bone—on bone arthritis." After evaluation, Dr. Nakamura recommended a right total hip replacement "at some point" and "noted that she could also have a right hip steroid injection." He recommended the arthroplasty. At the left knee, he noted that she had degenerative joint disease and some point would need a total knee replacement. He added, "At this time, her hip is much worse than her knee. I recommend she hold off on treatment for her knee symptoms. She is going to have some stem cell therapy done in Denver, and I recommend that she continue with stem cell therapy in Denver."

20. Dr. Primack authored a letter concerning Claimant's condition on April 30, 2018. In his April 30, 2018 letter, Dr. Primack notes that Claimant suffers from a non-work-related right hip problem secondary to "osteoarthritis". He went on to state, "As a rehabilitation position, wanting to optimize Ms. H_____ [Claimant]'s recovery, I would recommend the right hip arthroplasty, gets done first." He goes on to state, "Once she recovers, we can talk about the care and treatment for her work-related left knee injury. This may include regenerative medicine as option".

21. Dr. Nakamura issued a similar letter on May 9, 2018, which stated:

> It is my medical opinion, that the patient, Erma H_____ [Claimant], date of birth 4-24-1967, should have a right total hip arthroplasty. From a rehabilitation position, we want to optimize Ms. H_____ [Claimant]'s recovery process. I recommend that she have a right hip arthroplasty procedure first, before addressing the left knee-work-injury issue. The patient's non-work-related right hip osteoarthritis is significant enough to be addressed initially. After patient has recovered from the hip procedure, we can discuss care and treatment for her work-related left knee injury.

22. Respondents requested an independent medical examination (IME) with Dr. Eric Ridings. Dr. Ridings performed his IME on August 27, 2018, and he noted that "[Claimant] complained that her right hip pain is much more severe than her left knee pain and is progressively worsening". He agreed with Dr. Primack and Dr. Nakamura that Claimant's right hip pain is due to non-work-related severe end stage osteoarthritis and concurred that the appropriate treatment for that would be a right hip replacement surgery.

23. Dr. Ridings concluded that Claimant's left knee osteoarthritis was not caused, aggravated or accelerated by her meniscal injury and that the severity of her right hip arthritis is a contributor to the severity of her left knee complaints. Because the right

hip arthritis is unrelated to Claimant's work duties and is, according to Dr. Ridings, a contributor to the severity of the osteoarthritic complaints in the left knee, he concluded that "any and all treatment directed toward the osteoarthritis of the left knee is also, therefore, not work related. Accordingly, Dr. Ridings concluded that any request for additional injection therapy is unrelated to this claim and should be performed outside of the workers' compensation system.

24. While Dr. Ridings provided a thorough analysis concerning the relatedness of Claimant's need for additional left knee treatment, to the original injury this case, the ALJ finds that his report does not address the precise medical question presented here. Indeed, Dr. Ridings report is devoid of any analysis concerning whether Claimant should be afforded a right hip arthroplasty on the theory that it is necessary to optimize the treatment of and recovery from her work-related left knee injury. Rather, Respondents argue that because Dr. Ridings opined that the only treatment recommended for the left knee relates to Claimant's personal degenerative condition, there is no causal connection between her need for the right hip surgery and her admitted left knee injury nor is there a medical basis to address Claimant's right hip condition before placing her at MMI for her left knee condition. Accordingly, Respondents urge the ALJ to deny the requested right hip arthroplasty.

25. On November 21, 2018, the ALJ rejected the opinions of Dr. Ridings to find that the Claimant was not currently at MMI and remained a candidate for additional treatment designed to cure and relieve her of ongoing injury related pain and dysfunction. Moreover, the evidence presented persuaded the ALJ that Dr. Primack and Dr. Nakamura were of the opinion that the efficacy of this treatment and Claimant's recovery from her knee injury could not be optimized without first treating Claimant's right hip condition. Consequently, while Claimant's right hip arthritic condition is non-work-related in origin, the ALJ was convinced that her right hip condition must be addressed surgically, as ancillary to the work-related injury in this case, in order for her to achieve optimum treatment for and recovery from her compensable left knee injury. Accordingly, the ALJ found Respondents liable for the recommended right hip arthroplasty.

26. As noted above, on December 12, 2018 Respondents' counsel filed their Motion for Reconsideration or Order or in the Alternative, Motion to Reopen the Record for Newly Discovered Outcome Determinative Evidence along with a Petition to Review. The ALJ finds Respondents' motion for inclusion of Dr. Dallenbach's medical reports from August 7, 2018, October 1, 2018 and December 20, 2018 to constitute a request to reopen the record for the submission of additional evidence. After careful consideration of the motion, the ALJ finds it meritorious for the following reasons: First, the ALJ agrees with Respondents that the aforementioned reports constitute relevant evidence, which could not have been produced/presented at the October 4, 2018 and, second, the reports address a material issue in the case, namely whether the ALJ has jurisdiction to resolve the medical benefits issue in question. Accordingly, the ALJ finds the reports have the potential to be "outcome determinative" and herby grants Respondents' motion to reopen the record in this case. Consequently, the August 7, 2018 "closing report", the October 1, 2018 report of MMI and permanent impairment and the December 20, 2018 report of Dr. Dallenbach are considered evidence.

27. Having admitted the aforementioned records into evidence, the ALJ enters the following supplemental factual findings:

a. Regardless of Dr. Ridings opinions, the additional records submitted by Respondents as part of their motion for reconsideration support a finding that Dr. Dallenbach placed Claimant at MMI on August 7, 2018. Indeed, the "closing" report attached as part of "Exhibit A" to Respondents' motion provides that Claimant was evaluated on August 7, 2018, at which time Dr. Dallenbach placed her at MMI indicating that a report of permanent partial impairment (PPI) was due on August 21, 2018. Although Dr. Dallenbach noted that the PPI report was due on August 21, 2018, he delayed in preparing the report until October 1, 2018. Based upon the evidence presented at hearing and the statements of counsel at the post hearing status conference, the existence of this report was unknown at the time of the October 4, 2018 hearing. Respondents did not receive Dr. Dallenbach's October 1, 2018 report until October 23, 2018, well after the hearing.

b. In his October 1, 2018 report, Dr. Dallenbach placed Claimant at MMI noting that his analysis was "based upon the currently available information within a reasonable degree of medical probability" including, the "history given by [Claimant]; the physical findings; the medical records and tests". He also opined that Claimant would need maintenance treatment including a possible left knee arthroplasty as maintenance care "inasmuch as her work-related injury, within a reasonable degree of medical probability led to a significant aggravation of a pre-existing previously asymptomatic condition".

c. Careful review of Dr. Dallenbach's report of MMI and impairment supports a finding that he had no reservations about placing Claimant at MMI as of August 7, 2018. The suggestion that Dr. Dallenbach simply placed Claimant at MMI because the parties were litigating the relatedness of Claimant's need for right hip treatment to the left knee injury and because this treatment, including surgery was not being covered by workers' compensation is speculative and unpersuasive. Based upon the report presented, the ALJ finds that Dr. Dallenbach unequivocally placed Claimant at MMI after his August 7, 2018 evaluation without any opinion regarding her need for right hip treatment related to the left knee injury. Indeed, Dr. Dallenbach was without an opinion regarding Claimant's need for right hip treatment related to the left knee injury until December 20, 2018 when the issue was brought to his attention by Claimant. The ALJ interprets Dr. Dallenbach's December 20, 2018 report to indicate had he known that the ALJ was going to find Respondents liable for the recommended right hip surgery, he would not have placed Claimant at MMI as of August 7, 2018. This subsequent opinion fails to convince the ALJ that Dr. Dallenbach did not opine that Claimant was at MMI as of August 7, 2018, as outlined in M164 form and the October 1, 2018 report of MMI and impairment attached collectively to Respondents' motion as Exhibit A.

d. Although the ALJ rejects Dr. Ridings opinions as unconvincing, the new outcome determinative evidence, i.e. Dr. Dallenbach's August 7, 2018, October 1, 2018 and December 20, 2018 reports, presented post hearing, persuade the ALJ that he actually placed Claimant at MMI prior to the October 4, 2018 hearing. Accordingly, the ALJ finds that, lacking a DIME, he has no jurisdiction to resolve the issue of the relatedness of Claimant's need for additional right hip treatment to her left knee injury. Claimant must avail herself to the DIME process currently being held in abeyance pending the issuance of this order.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Respondents' Motion for Submission of Post-Hearing Evidence

A. The ALJ has discretion whether to permit the admission of post-hearing evidence. *IPMC v. Industrial Claim Appeals Office*, 753 P.2d 803 (Colo. App. 1988). In deciding whether to receive additional evidence after a party has rested his/her case, the ALJ should consider whether the evidence could have been obtained and presented at the hearing through the exercise of due diligence. *Aspen Skiing Co. v. Peer*, 804 P.2d 166 (Colo. 1991); Kennedy v. Bailey, 169 Colo. 43, 453 P.2d 808 (1969). Further, the ALJ should consider whether the evidence involves a material issue and; and whether it has the potential to be outcome determinative. *See Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691 (Colo. App. 2000); *Potomac Insurance Co. v. Industrial Commission*, 744 P.2d 765 (Colo. App. 1987). The ALJ should consider these factors and balance them against the competing interests, i.e. the expense and inconvenience, of the party opposing receipt of the additional evidence so as to guard against the potential for injustice arising from giving finality to an erroneous result. *IPMC v. Industrial Claim Appeals Office, supra; Renz v. Larimer County School District Poudre R-1*, 924 P.2d 1177 (Colo. App. 1996)(reopening authority is evidence of legislative policy that goal of achieving fair and just result overrides litigants' interests in finality); *Gurule v. Board of Developmentally Disabled*, W.C. No. 3-595-093 (February 9, 1995). In this case, the balance for admission of the additional medical records tips in favor of Respondents as the evidence likely could not have been previously discovered and presented at hearing through the exercise of due diligence since Dr. Dallenbach authored the MMI and impairment rating report giving rise to the existence of the August 7, 2018 MMI report on October 1, 2018, three days prior to hearing. More importantly, the new evidence addresses a material issue in the case, specifically the ALJ's jurisdiction to resolve the issues presented for determination. As such, the ALJ concludes that new evidence is potentially outcome determinative. Consequently, Claimant's interest in finality is outweighed by the injustice, which may result from giving final effect to an erroneous result. For these reasons, the ALJ concludes that Respondents' motion is meritorious and is, therefore GRANTED.

Supplemental Order & Other General Legal Principles

B. Section 8-43-301(5) provides that in ruling on a petition to review, the ALJ may issue a supplemental order limited to the "matters raised in the petition to review, and, as to those matters, . . . may amend or alter the original order or set the matter for further hearing." Here the ALJ concludes that a Supplemental Order is necessary to address Respondents' motions and the assertion that the ALJ erred as a matter of law because the November 21, 2018 Order failed to address the jurisdictional question raised by Dr. Dallenbach's declaration of MMI in this case.

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

D. Assessing the weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). When considered in its totality, the ALJ concludes that the evidence in this case supports a reasonable inference/conclusion that Dr. Dallenbach placed Claimant at MMI on August 7, 2018 and deferred the preparation of his impairment rating report to August 21, 2018. Unfortunately, Dr. Dallenbach failed to finalize this report until October 1, 2018, three days prior to hearing in this case.

Claimants' Request for Additional Medical Benefits

E. Given the procedural posture of the claim, the ALJ concludes that he does not have jurisdiction to resolve the question regarding Claimant's entitlement to additional medical benefits. In concluding as much, the ALJ finds the case of *May B. McCormick v. Exempla Healthcare*, W.C. No. 4-594-683 (ICAO January 27, 2006) instructive. In *McCormick*, the Panel held that in the absence of a completed DIME, an ALJ lacks jurisdiction to award or deny medical benefits to cure and relieve a claimant's condition after he/she has been placed at MMI. In reaching this conclusion the Panel noted:

> Pursuant to § 8-42-107(8)(b)(I), C.R.S. 2005, an authorized treating physician shall make the initial determination concerning the date of MMI. Once an authorized treating physician makes a determination of MMI, the termination of medical care is triggered and the ALJ lacks jurisdiction to

conduct a hearing concerning the accuracy of the authorized treating physician's determination until a DIME is conducted. §8-42-107(8)(b)(III), C.R.S. 2005; *Story v. Industrial Claim Appeals Office,* 910 P.2d 80 (Colo. App. 1995). The Colorado Supreme Court has noted that the DIME procedure is "the only way for an injured worker to challenge the treating physician's findings -- including MMI, *the availability of post-MMI treatment*, degree of non-scheduled impairments, and whether the impairment was caused by an on-the-job injury...." *Whiteside v. Smith*, 67 P.3d 1240, 1246 (Colo. 2003) (emphasis added).

* * *

Consistent with this principle, we have stated that "once an authorized treating physician places the claimant at MMI, an ALJ lacks jurisdiction to award additional medical benefits for the purposes of curing the industrial injury and assisting the claimant to reach MMI unless the claimant undergoes a DIME." *Eby v. Wal-Mart Stores, Inc.*, W.C. No. 4-350-176 (February 14, 2001). *See also Anderson-Capranelli v. Republic Industries, Inc.*, W.C. No. 4-416-649 (November 25, 2002) (following MMI, "In the absence of a DIME the ALJ lacks jurisdiction to adjudicate a request for additional medical benefits to cure the effects of the injury."); *Toledo-Zavala v. Excel Corp.*, W.C. Nos. 4-534-398, 4-534-399 (November 14, 2003) (same); *Cass v. Mesa County Valley School District*, W.C. No. 4-629-629 (August 26, 2005) ("[I]f an ATP places the claimant at MMI, an ALJ lacks jurisdiction to award additional medical benefits to improve the claimant's condition unless a DIME has been conducted on the issue of MMI.").

This result is grounded in the principle that a treating physician's finding of MMI necessarily reflects the physician's determination that no further treatment is reasonably expected to improve any of the *compensable components* of the injury, and the authorized treating physician's opinion on the cause of the claimant's condition is inherent to the physician's determination of MMI. *See Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App.1998) We have previously stated that "[d]etermining MMI necessarily requires a physician to ascertain the cause or causes of the claimant's condition in order to decide whether the claimant warrants additional treatment for any work-related problem. Consequently, the issues of whether all work-related conditions are stable and do not require additional treatment are an inherent part of the DIME process...." *Ayala v. Conagra Beef Company*, W.C. No. 4-579-880 (July 22, 2004).

F. Because the current version of the statue in question has not changed and because Dr. Dallenbach is an authorized treating provider (ATP) who effectively placed Claimant at MMI, the principals announced by the Panel in *McCormick* apply to the facts of this case. Consequently, the ALJ concludes that he does not have jurisdiction to resolve questions regarding the relatedness of Claimant need for right hip surgery to her admitted left knee injury or for that matter the need for additional medical treatment to

cure and relieve her of any ongoing symptoms related to her left knee injury until completion of the DIME he has requested.

ORDER

It is therefore ordered that:

1. Questions regarding the relatedness of Claimant need for right hip surgery to her left knee injury and in general, her entitlement to additional medical treatment benefits are reserved for future determination after completion of the DIME process currently being held in abeyance as the ALJ does not have jurisdiction to resolve these issues.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 25, 2019

Colorado Springs, CO 80906

ISSUES

- Whether claimant has proven by a preponderance of the evidence that he sustained a compensable injury arising out of and in the course of his employment with employer?

- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that the medical treatment he received was provided by a physician authorized to treat claimant for his injury?

- Whether claimant has proven by a preponderance of the evidence that the injuries he sustained in a motor vehicle accident on March 28, 2018 occurred in the quasi scope of his employment with employer?

- If claimant has proven a compensable injury, whether claimant has established by a preponderance of the evidence that he is entitled to temporary total disability benefits for the period of December 22, 2017 to April 20, 2018?

- If claimant has proven a compensable injury, whether respondents have proven by a preponderance of the evidence that claimant sustained an intervening injury as of March 28, 2018 that severed their liability for medical treatment?

- The parties stipulated to an average weekly wage ("AWW") of $1,647.81 as of the date of injury.

- The parties stipulated that if the claim is found compensable, claimant's AWW would increase by $248.02 as of April 1, 2018 due to the cost of claimant's COBRA benefits, for an AWW of $1,895.83.

FINDINGS OF FACT

1. Claimant was employed with employer as a derrick hand. Claimant was working on a drilling operation in Wyoming. Claimant's job duties included latching and pulling drilling pipes. Claimant began working for employer in March, 2017. Claimant's shifts while working for employer would last from 6:00 p.m. until 6:00 a.m. Claimant testified that on December 22, 2017, he was tripping pipe for employer when a board came out after the elevator hit the board causing the board to flip up about sixty degrees and strike claimant. Claimant testified he had more weight on his left side and his body jarred going down with the extension board struck him.

2. Claimant testified he reported the incident to Chris, the driller, and advised him that it hurt pretty bad when the extension board struck him. Claimant did not fill out paper work to report an injury at that time, however.

3. Claimant testified that when he went to work on December 23, 2017, he had a burning sensation on his left side and was unable to continue to latch up the drill pipe. Claimant testified he told Jamie, the night rig manager, in the dog house. Claimant testified that Jamie had him watch the mud system while Trent, a co-worker, finished latching up the drill pipe. Claimant testified that he did not request medical treatment on December 23, 2017 and instead just tried to tough it out.

4. Claimant testified that there were two times that he reported pain involving his work to his supervisor. The first accorded after tripping pipe on December 22, 2017. Claimant testified he reported the pain to his supervisor, but returned to work the next day and continued to attempt to perform his work. Claimant testified that after attempting to perform his job on December 23, 2017, and concluding that he could not perform his work, he reported again to his supervisor that he was experiencing pain and was placed on light duty by employer.

5. Claimant testified he reported to work on December 24, 2017 and reported his condition to the rig manager. Claimant testified he was put on light duty by employer. Claimant testified his light duty required him to watch the mud system. Claimant testified his hitch was scheduled to end on December 26, 2017 and he worked light duty on December 24 and December 25, 2017. Claimant testified he got into an argument with Mr. J_____, a co-worker in the early morning of December 25, 2017. Claimant testified that Mr. J_____ came into the mud house and asked claimant for help on the rig. Claimant testified he told Mr. J_____ that he could not help him because he was mixing chemicals and Mr. J_____ went and got another employee. Claimant testified Mr. J_____ and the other employee returned and when claimant informed them that he couldn't help them because he was on light duty due to an injury, they inquired as to why he had not reported the injury. Claimant testified that he agreed and then filled out an IADC form reporting the injury.

6. Mr. J_____ testified at hearing somewhat consistent with claimant's testimony. Mr. J_____ testified he confronted claimant because he did not believe claimant was pulling his weight. Mr. J_____ testified during the confrontation claimant got upset and explained that he was trying not to report the incident, but eventually said and expletive and explained that he was just going to report the injury. Mr. J_____ testified that after the confrontation, he tried to apologize to claimant, but claimant remained confrontational.

7. Mr. M_____testified at hearing for respondents. Mr. M_____testified he was claimant's supervisor and testified that all injuries should be reported to him. Mr. M_____testified that claimant reported soreness in his arm, but could not recall claimant's exact words, or the day he reported the soreness. Mr. M_____testified he asked claimant if he was injured and claimant said no. Mr. M_____testified that if claimant reported to him that claimant had been injured, Mr. M_____would have reported the injury to Mr. McKague's supervisor. Mr. M_____testified that if an employee reports that he is just sore, Mr. M_____can modify the employee's job duties while the employee is sore. Mr. M_____testified that in claimant's case, he modified

claimant's work and instructed claimant to stay off the boards. Claimant was instructed to clean and assist other co-workers as needed. Mr. M_____testified that after claimant reported pain and was assigned light duty work, claimant was not allowed to go back on the boards to his usual job. Mr. M_____testified it is the employer's policy that injured workers are not allowed to return to work until being released by a physician.

8. Mr. M_____testified that he became aware of an argument between claimant and Mr. J_____ and later found out that claimant had signed out as injured. Mr. M_____testified claimant appeared agitated when Mr. M_____spoke to him. Mr. M_____testified claimant's argument with Mr. J_____ was a couple of days after he reported to Mr. M_____that he was sore.

9. Claimant testified he filled out a report for Wyoming workers' compensation on December 26, 2017 after his hitch ended. Subsequently, a First Report of Injury for Colorado was filled out by the insurer on January 11, 2018.

10. Claimant testified he decided to seek medical treatment because he was in pain and knew he was hurt. Claimant testified he inquired with Aubrey, the safety supervisor, as to whether there was a doctor he should go to, but he was not provided with a list of physicians by employer.

11. Claimant testified he returned to Colorado following his hitch and sought treatment with St. Mary's Occupational Medicine on December 28, 2017. According to the medical records, claimant reported on the new patient intake form that the injury occurred when he was on his knees latching up pipe at a bad angle with both arms squeezing together when he felt a sharp pain in his left shoulder and bicep. Claimant reported his current pain included the left side of his neck, left shoulder, left bicep and left tricep. Mr. Harkreader, a nurse practitioner ("NP") for Dr. Stagg, noted claimant's accident history including that he was down on one knee with one leg extended in a weird position and using both arms to close the elevators around the pipe, when he had an onset of pain in his left side neck and left bicep down to his elbow. NP Harkreader performed a physical examination and diagnosed claimant with a cervical strain and left distal biceps strain. NP Harkreader recommended an x-ray of the left should and cervical spine and provided claimant with work restrictions that included no lifting over five (5) pounds.

12. Claimant returned to NP Harkreader on January 9, 2018. Claimant testified he told NP Harkreader that he was going back up to Wyoming for his next hitch. According to the medical records, NP Harkreader noted claimant complained of pain of 5 to 6 out of 10 and reported he had not made any progress. NP Harkreader mentions in his report that claimant is supposed to go back to work that night in Pinedale, Wyoming. NP Harkreader diagnosed claimant with left shoulder pain consistent with a strain, left elbow bicep strain with a mild tennis elbow/lateral epicondylitis, possible left upper extremity cervical radiculopathy and a hypoesthesia of the left heel with a decreased reflex on the left. NP Harkreader noted that radiographs were unremarkable,

but recommended a magnetic resonance image ("MRI") of the cervical spine and referred claimant to Dr. Vance for evaluation and treatment. Claimant's work restrictions continued to be set at no lifting over 5 pounds.

13. Claimant testified he returned to work on January 10, 2018 and was told to talk to "Andy" when he got back to work. Claimant testified he expected to be provided with light duty work when he returned for his next hitch. Claimant testified he was told by Andy that he could not go back to work without a full release from his doctor.

14. Claimant was examined by Dr. Vance on January 29, 2018. Dr. Vance noted claimant was reporting symptoms in his cervical area, left shoulder, left arm and left elbow. Dr. Vance performed a physical examination and noted that his left elbow was consistent with lateral epicondylitis. Dr. Vance provided claimant with a steroid injection into his left elbow and recommended he return for follow up in six weeks.

15. Claimant was evaluated by Dr. Stagg on February 14, 2018. Dr. Stagg noted claimant's accident history and recommended claimant proceed with the MRI of the cervical spine and lumbar spine. Dr. Stagg noted claimant was complaining of back pain and numbness into the right heel area. Dr. Stagg continued claimant with modified duty that included no lifting over 5-10 pounds.

16. Claimant returned to Dr. Stagg on March 7, 2018. Dr. Stagg noted claimant reported doing fairly well, but was complaining of some pain in his left shoulder. Dr. Stagg noted that the numbness had improved quite dramatically and claimant's cervical spine was not nearly as significant as it was previously. Dr. Stagg recommended claimant continue with his physical therapy and exercises. Dr. Stagg increased claimant's work restrictions to no lifting over 25 pounds.

17. Claimant returned to Dr. Vance on March 19, 2018. Dr. Vance noted that claimant continued to complain of symptoms in his cervical area, left shoulder and left elbow. Dr. Vance noted that his physical examination was similar to his prior exam and recommended claimant have a steroid injection in his shoulder and a Platelet Rich Plasma injection for his lateral epicondylitis.

18. Respondents arranged for an independent medical examination ("IME") of claimant on March 28, 2018 with Dr. Striplin in Thornton, Colorado. Dr. Striplin reviewed claimant's medical records, obtained a medical history and performed a physical examination in connection with his IME. Dr. Stiplin noted claimant was a poor historian with regard to specific dates and medical providers. Dr. Striplin noted that claimant reported that while at work when he was leaning out from the platform to position the pipe in the elevator, which was ascending, the elevator struck the platform and claimant's left side was "jarred". Dr. Striplin noted that the next day, claimant was back on the rig attempting to latch a drill pipe and had to kneel on his right knee and forcefully close the elevator around the pipe. Claimant reported he felt pain in his left biceps, left shoulder, left neck and low back. Dr. Striplin noted that physical examination revealed no tenderness over the left medial or lateral epicondyle and no pain was elicited with forced left wrist flexion or extension. Dr. Striplin opined in his

report that claimant had no objective pathology that was related to his work injury. Dr. Striplin opined that claimant's mechanism of injury was consistent with a muscular strain of the left upper extremity which, Dr. Striplin opined required no further treatment. Dr. Striplin further opined that claimant was at maximum medical improvement as of March 30, 2018 with no permanent impairment related to the injury.

19. Claimant testified that while driving from the IME to his home in Fruita, Colorado on March 28, 2018, claimant was involved in a motor vehicle accident ("MVA"). Claimant testified the truck in front of him stopped causing him to stop his vehicle, and the car behind him rear ended claimant. Claimant provided pictures of his vehicle and the vehicle that struck him at the hearing. Claimant testified that the MVA occurred at approximately 4:40 p.m.

20. Claimant returned to Dr. Stagg on March 30, 2018. Dr. Stagg noted claimant reported some improvement with his symptoms and released claimant to return to work full duty. Claimant testified he did not mention the MVA to Dr. Stagg as this examination.

21. Claimant testified that he contacted employer on April 2, 2018 regarding returning to work. Claimant testified he contacted Rhonda inquiring about what he needed to do to return to work and was told to contact Lisa. Claimant testified he attempted to contact Lisa, but did not have his calls returned. Claimant testified he then returned to Dr. Stagg and was again placed on restrictions.

22. According to the medical records, claimant returned to Dr. Stagg on April 12, 2018. Claimant reported to Dr. Stagg that he had been involved in an MVA during this examination. Dr. Stagg noted claimant did not mention the MVA at the previous visit and reported that claimant indicated it was due to a combination of his not hurting as bad and that he really needed and wanted to get back to work. Dr. Stagg noted decreased range of motion in his cervical spine and tenderness to palpation over his paraspinal muscles. Dr. Stagg recommended x-rays of the cervical, thoracic and lumbar spine due to claimant's complaints of increased pain in his entire back following the MVA.

23. Claimant returned to Dr. Stagg on May 3, 2018. Dr. Stagg noted claimant had to move to the Wyoming area and was still having pain in his neck and low back with occasional numbness into his lower extremity. Dr. Stagg recommended a short course of physical therapy and provided claimant with work restrictions that included no lifting over 40 pounds.

24. Dr. Stagg testified by deposition in this matter. Dr. Stagg testified that based on claimant's description of the injury, it was his impression that claimant's left shoulder was pulled up and possibly back, which was a mechanism of injury that could injure the rotator cuff. Dr. Stagg testified that claimant returned for evaluation on April 12, 2018 which was earlier than when he was scheduled to return. Dr. Stagg testified that claimant was complaining of an increase in symptoms related to an MVA. Dr. Stagg testified that on the May 3, 2018 visit, claimant was complaining of tenderness

over the right trapezoid. Dr. Stagg testified that this was on the opposite side of claimant's prior complaints and represented a new complaint. Dr. Stagg testified that the reported symptoms claimant had were consistent with the MVA.

25. Dr. Stagg testified that he believed that claimant's neck pain was related to his mechanism of injury with employer. Dr. Stagg testified that he also believed claimant's back pain could be related to his work injury. Dr. Stagg testified that he was not clear as to what was causing claimant's left heel numbness, but felt the MRI's that he had requested would help determine what was causing claimant's symptoms. Dr. Stagg opined that claimant's complaints were related to the December 2017 work injury and the motor vehicle accident. Dr. Stagg noted that the x-rays performed after the MVA showed no acute findings for the lumbar spine, thoracic spine and cervical spine.

26. Dr. Stagg testified that when claimant initially presented to his office, there was no documentation that claimant was complaining of low back pain or lingering numbness into the hand.

27. Claimant returned to Dr. Striplin for another IME on June 5, 2018. Dr. Striplin noted claimant was in an MVA following the prior IME. Dr. Striplin reviewed Dr. Stagg's note from March 30, 2018 that did not mention the MVA. Dr. Striplin opined that the MVA on March 28, 2018 did not produce an objective injury and that the onset of symptoms claimant reported on April 5, 2018 was not related to the accident, but were more consistent with claimant's fluctuating symptoms following the incident at work on December 23, 2017.

28. Dr. Striplin testified by deposition in this matter consistent with his IME reports. Dr. Striplin testified that claimant's presentation on March 28, 2018 provided no objective abnormal findings. Dr. Striplin testified claimant presented with normal range of motion of the cervical spine, normal range of motion of the left shoulder and neurological examination was normal except for light touch diminution over the left heel.

29. Dr. Striplin opined that claimant had a strain of the shoulder that could resolve with conservative medical treatment. Dr. Striplin further opined that epicondylitis could be a temporary issue that could resolve without surgery. Dr. Striplin testified that when he evaluated claimant on March 28, 2018, claimant did not appear to have any ongoing problem with the epicondylitis based on the physical examination.

30. Dr. Striplin testified that claimant reported that on December 22, 2017, he was jarred. Dr. Striplin testified that he would not expect the jarring to cause any problems to any body parts of any significance. Dr. Striplin testified that it was his opinion that claimant's complaints of left heel numbness were not related to the December incident as claimant did not allege any injury to his lumbar spine. Dr. Striplin testified it was his opinion that claimant's left heel symtpoms were related to claimant's prior low back injury for which claimant received medical treatment between 2004 and 2006.

31. Dr. Striplin testified that it was his opinion that claimant did not sustain a rotator cuff tear as a result of the December incident. Dr. Striplin testified that when he evaluated claimant, claimant presented with minimal symptoms in his shoulder and normal range of motion.

32. Dr. Striplin testified that prior to his June 5, 2018 IME, he reviewed additional medical records. Dr. Striplin testified claimant reported following his IME he was heading home and was rear ended by a vehicle traveling approximately 35 miles per hour. Dr. Striplin noted that Dr. Stagg's medical records from March 30, 2018 do not document the MVA having occurred. Dr. Striplin also notes that Dr. Stagg at that time released claimant to return to work without restrictions. Dr. Striplin opined that claimant does not need additional medical treatment related to the incident of December 2017 and does not need additional medical treatment related to the March 28, 2018 MVA.

33. Claimant entered into evidence at hearing a video that showed the type of work claimant was performing at the time of his alleged injury. The video is not conclusive evidence that an injury occurred in this case, but does provide a depiction of the type of work claimant was performing for employer.

34. The ALJ credits claimant's testimony at hearing along with the medical reports from PA Harkreader and Dr. Stagg along with the testimony of Dr. Stagg and finds that claimant has established the he sustained a compensable injury arising out of and in the course of his employment with employer on December 22, 2017. The ALJ credits claimant's testimony that he reported the injury to his employer and notes that this testimony is corroborated by Mr. J_____ and Mr. M_____who confirmed that claimant reported the incident to employer and was provided with light duty work for his shift. It was claimant's inability to perform his regular job that led to the disagreement with Mr. J_____, and Mr. J_____ confirmed that he was later informed that claimant was provided with modified work based on the reported incident.

35. The ALJ notes that there was testimony regarding claimant filling out an IADC form that reported he was injured on the job days after the incident and following his argument with Mr. J_____. The ALJ finds that the delay in filling out this form and the testimony regarding claimant being at the computer following the argument with Mr. J_____ is immaterial to the determination of whether claimant sustained a compensable injury arising out of and in the course of his employment with employer.

36. The ALJ credits the medical records from St. Mary's Occupational Medicine and Dr. Vance and finds that claimant has demonstrated that it is more probable than not that the medical treatment claimant received following his work injury was reasonable and necessary to cure and relieve claimant from the effects of the work injury. The ALJ credits claimant's testimony at hearing as being consistent with the medical records entered into evidence in this case and finds that claimant has established the reasonableness and necessity of the medical treatment he received in this case. The ALJ notes that claimant complained of left heel numbness consistently following the December 22, 2017 work injury and finds claimant has established that it is

more probable than not that the treatment for the heel injury, including the lumbar spine MRI is related to claimant's December 22, 2017 work injury.

37. With regard to the issue of authorization of medical treatment, the ALJ credits claimant's testimony that employer did not refer claimant to a specific provider after he reported to employer that he had been injured at work. The ALJ further notes that employer voluntarily provided claimant with modified duty for the remained of his hitch and reasonably should have known that claimant may need medical treatment for his injury. The ALJ therefore determines that claimant is afforded the opportunity to select his choice of provider and St. Mary's Occupational Medicine and the referrals from those providers, including Dr. Vance, are thereby authorized.

38. Claimant argues that the MVA he was in on March 28, 2018 resulted in injuries that are compensable under the quasi-course of employment doctrine. Respondents conversely argue that the MVA represents an intervening event that severs their liability for ongoing medical treatment. The ALJ finds that the MVA in this case did not result in any injury to claimant, and is therefore not compensable.

39. Following claimant's MVA, claimant returned to Dr. Stagg on March 30, 2018. No mention of the MVA was made during this visit. Dr. Stagg released claimant to return to work without restrictions. Claimant returned on April 12 and complained of low back and neck pain after the MVA. The ALJ notes that claimant did not complain of any significant low back pain related to his December 2017 injury until after the March 28, 2018 MVA. However, claimant was complaining of left heel pain prior to the MVA, which the ALJ finds to be a compensable component of the December 22, 2017 work injury.

40. The ALJ credits the testimony of Dr. Stagg and Dr. Striplin and finds that the claimant's ongoing complaints of cervical spine, shoulder and left heel symptoms after the March 28, 2018 MVA are related to his December 22, 2017 work injury. The ALJ credits the medical records in coming to this finding and specifically notes that claimant's recommended medical treatment did not significantly change following the MVA. Specifically, Dr. Stagg had recommended a cervical and lumbar MRI as of February 14, 2018 and continued to recommend this course of treatment after the MVA. Moreover, claimant was complaining of low back pain as of February 14, 2018 and continued to complain of low back pain after the MVA. Lastly, the ALJ credits claimant's testimony that his primary focus at the March 30, 2018 appointment was to receive a full release to return to work to allow him to return to employer. This testimony is corroborated by the testimony of Dr. Stagg who confirmed that claimant had requested a release to return to work at the March 30, 2018 appointment.

41. Notably, while respondents argue that the MVA in this case constitutes an intervening injury, the ALJ finds that the MVA was not significant enough to cause an intervening injury. With regard to the medical restrictions that were put into place by Dr. Stagg on April 12, 2018, the ALJ finds that these relate to the December 22, 2017 work injury and not the MVA. In coming to this finding, the ALJ credits the opinions of Dr. Striplin who testified that claimant did not sustain any injury in the MVA.

42. The ALJ therefore finds that the medical treatment recommended for claimant did not change after the MRI. While Dr. Stagg did provide claimant with work restrictions of no lifting greater than 40 pounds, the ALJ credits the testimony of claimant that when he went to Dr. Stagg on March 30, 2018, his focus was to get a release that would allow him to return to work. The ALJ finds that the medical restrictions in this case set forth on April 12, 2018 relate to the December 22, 2017 work injury and are not related to the MVA.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2006. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with" a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

4. As found, claimant has proven by a preponderance of the evidence that he sustained a compensable injury arising out of and in the course of his employment with employer on December 22, 2017 when he was tripping pipe for employer and a board struck claimant on his left side resulting in symptoms. As found, claimant's

testimony that he reported the incident to his employer and continued to experience symptoms the following day that resulted in claimant being provided with modified duty is determined to be credible and persuasive regarding this issue.

5. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Pursuant to Section 8-43-404(5), C.R.S., Respondents are afforded the right, in the first instance, to select a physician to treat the industrial injury. Once respondents have exercised their right to select the treating physician, claimant may not change physicians without first obtaining permission from the insurer or an ALJ. *See Gianetto Oil Co. v. Industrial Claim Appeals Office*, 931 P.2d 570 (Colo. App. 1996).

6. "Authorization" refers to the physician's legal authority to treat, and is distinct from whether treatment is "reasonable and necessary" within the meaning of Section 8-42-101(1)(a), C.R.S. 2008. *Leibold v. A-1 Relocation, Inc.*, W.C. No. 4-304-437 (January 3, 2008). Section 8-43-404(5)(a) specifically states: "In all cases of injury, the employer or insurer has the right in the first instance to select the physician who attends said injured employee. If the services of a physician are not tendered at the time of the injury, the employee shall have the right to select a physician or chiropractor." "[A]n employee may engage medical services if the employer has expressly or impliedly conveyed to the employee the impression that the employee has authorization to proceed in this fashion…." *Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985), *citing*, 2 A. Larson, *Workers' Compensation Law* § 61.12(g)(1983).

7. As found, claimant has proven by a preponderance of the evidence that the treatment claimant received from St. Mary's Occupational Medicine and their referrals, including Dr. Vance, is reasonable medical treatment necessary to cure and relieve claimant from the effects of the work injury. As found, claimant's testimony that he was not provided with a list of physicians authorized to treat claimant is determined to be credible and therefore, St. Mary's Occupational Medicine and their referrals represents authorized medical treatment in this case.

8. To prove entitlement to temporary total disability (TTD) benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a), *supra*, requires claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no statutory requirement that claimant establish physical disability through a medical opinion of an attending physician; claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The

impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo.App. 1998).

9. As found, claimant has proven by a preponderance of the evidence that he is entitled to TTD benefits. As found, the medical records from Dr. Stagg are determined to be credible and persuasive regarding the restrictions related to claimant's work injury. As found, claimant's testimony regarding employer's inability to provide claimant with work absent a full release from a physician is determined to be credible and persuasive.

10. As found, the restrictions set forth by Dr. Stagg in his April 12, 2018 report are determined to be related to claimant's December 22, 2017 work injury. Therefore, claimant is entitled to an award of TTD benefits for the period of December 27, 2017 until March 30, 2018 and from April 12, 2018 and continuing until terminated by law.

11. Claimant argues that injuries sustained in the MVA on March 28, 2018 are compensable under the quasi-course of employment doctrine. Respondents argue that the MVA represents an intervening injury that severs their liability for workers' compensation benefits. The ALJ finds that there was no injury sustained in the MVA on March 28, 2018.

12. The "quasi-course of employment" doctrine provides that an injury occurring during authorized medical treatment is compensable because the employer is required to provide medical treatment for the industrial injury and the claimant is required to submit to the treatment. Therefore, the treatment becomes an implied part of the employment contract, and injuries sustained while attending the authorized medical treatment, are considered to be a consequence of the original industrial injury. *Excel v. Industrial Claim Appeals Office*, 860 P.2d 1393 (Colo. App. 1993). The rationale for this doctrine holds that, because the employer is required to provide reasonable and necessary medical treatment, and because claimant is required to submit to it or risk suspension or termination of benefits, treatment by the authorized physician becomes an implied part of the employment contract. *See Employers Fire Insurance Co. v. Lumbermens Mutual Casualty Co*., 964 P.2d 591 (Colo. App. 1998); *Schreiber v. Brown & Root, Inc.*, 888 P.2d 274 (Colo. App. 1993). The quasi-course doctrine is designed to attenuate the usual requisites of compensability.

13. As noted by respondents, the Industrial Claim Appeals Panel in *Trover v. Coors Ceramics and Royal and Sun Alliance*, W.C. No. 4-408-646 (ICAO, October 8, 2004) has held that injuries arising out of travel to IME appointments are not compensable under the quasi-course of employment doctrine. Because the ALJ finds that no injury occurred in the MVA, the ALJ rejects the arguments from claimant that the claim is compensable, and rejects respondents claim that the MVA represents an intervening injury.

14. As found, following the MVA, claimant was evaluated by Dr. Stagg on March 30, 2018 and did not mention the MVA. As found, claimant's testimony that his concern at that point was to get a release that would allow him to return to work is found to be credible and persuasive.

15. As found, claimant's complaints when he returned to Dr. Stagg on April 12, 2018 were markedly similar to his complaints on February 14 and March 7, 2018. During those visits, claimant's work restrictions were increased from 5-10 pounds to 25 pounds. The ALJ finds that the increase in restrictions to 40 pounds are consistent with a finding that the restrictions relate to the December 22, 2017 work injury and that the lifting of restrictions on March 30, 2018 was based on claimant's focus of obtaining a full release to return to work for employer.

16. The doctrine of intervening injury concerns the effect of a separate injury, which occurs while the claimant is receiving medical and disability benefits for a compensable injury effectively holds that respondents are not liable for injuries which occur subsequent to a compensable injury, and are not a "natural result" of the compensable injury. *Post Printing and Publishing Co. v. Erickson,* 94 Colo. 382, 30 P.2d 327 (1934). Respondents are only liable for subsequent injuries which "flow proximately and naturally" from the compensable injury. *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970).

17. As found, respondents have failed to prove by a preponderance of the evidence that claimant suffered an intervening injury that would sever their liability for claimant's medical treatment. As found, the recommended medical treatment remained consistent both before and after the MVA and the ALJ determines that no injury occurred in the MVA. The ALJ relies on the opinions expressed by Dr. Striplin along with the medical records from Dr. Stagg after the MVA that do not mention the MVA as being credible and persuasive in coming to the conclusion that the MVA did not cause an injury in this case.

18. Because the ALJ finds that there was no injury in the MVA, the arguments by both claimant and respondents are moot. The ALJ further notes that the recommended treatment from Dr. Stagg remained consistent before and after the MVA, including a cervical and lumbar MRI and ongoing physical therapy. This recommended medical treatment is determined to be related to claimant's December 22, 2017 work injury and not related to the MVA.

ORDER

It is therefore ordered that:

1. Respondents shall pay for the reasonable medical treatment necessary to cure and relieve claimant from the effects of the industrial injury of December 22, 2017.

2. The claimant's claim of injuries arising from the March 28, 2018 MVA are denied as dismissed as the MVA did not result in an injury.

3. Respondents shall pay TTD benefits for the period of December 27, 2018 through March 30, 2018 and from April 12, 2018 and ongoing until terminated by law, based on the stipulated AWW.

4. Respondents request for a finding of an intervening injury is denied and dismissed.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Grand Junction, Colorado 81501

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-062-858-001

ISSUES

The issues set for determination included:

(1) Was Claimant an "employee", as that term is defined by 8-40-203(1) at the time he was injured at Respondents' residence on January 22, 2016?

(2) Are Respondents an "employer", as that term is defined by the Colorado Workers' Compensation Act?

(3) If Claimant was an employee at the time he was injured, is he entitled to medical benefits to cure and relieve the effects of said injury?

PROCEDURAL STATUS

The Court issued a Summary Order on or about November 14, 2018 (mailed on November 19, 2018). Claimant filed a Request for Full Order on or about November 26, 2018, (received by the undersigned on December 3, 2018) and this Order follows.

STIPULATIONS

The parties stipulated to the following: (a) Claimant was injured on January 22, 2016; (b) Respondents Reinaldo and Marianne G_____ did not have workers' compensation insurance coverage in place at the time Claimant was injured on January 22, 2016. The Stipulations were accepted by the Court and are made part of this Order.

FINDINGS OF FACT

1. Respondent Reinaldo G_____ testified he owned commercial and residential properties. He did not employ any individuals to perform maintenance and repair work. Mr. G_____ did not hire employees to perform work on these properties, including mowing the grass and the like.

2. Mr. G_____ testified his residence was located at 14970 Clinton Street. He lives at that address, with his wife. Mr. G_____ performed work there, including managing various properties he owned.

3. Mr. G_____ testified he hired contractors to perform work on the Clinton Street property.

4. Respondents' tax return for 2016 confirmed they received income from real estate rentals. Expenses were taken for cleaning and maintenance, as well as

repairs on these properties. There were no employee expenses listed on the tax return for the rental properties.[1] Mr. G_____ used 14970 Clinton Street as the address for the G_____ Family Properties LLC, of which he was a partner.[2] There was no evidence Respondents employed other individuals were subject to the provisions of the Colorado Worker's Compensation Act.

5. Claimant testified he met Mr. G_____ in Lochbuie, Colorado. He had finished mowing the lawn at the house of a friend of his and asked Mr. G_____ if he needed any yard work done. Approximately a day or two after they met, Mr. G_____ drove Claimant to the Clinton street house and he cut the grass. Claimant did not recall the exact month this occurred, but thought it was during the summer when grass was growing and there was yard work to be done. Claimant testified he had memory issues and had trouble recalling specific dates.

6. Claimant testified he did various types of jobs at Mr. G_____ ' house, located on Clinton Street. Claimant testified his son would drive him to work and initially this was at 6:00 a.m., then at 9:00 a.m. Claimant said Kimberly H_____ and her son would pick him up at 5:00 or 6:00 p.m., depending on how long the job took and if he need to take time off.[3]

7. Claimant testified the work he performed at the Clinton Street address included landscaping, plumbing, electrical, insulation, tile work in the basement, repairing the water heater, as well as work on the roof. They leveled the air conditioners on the roof and put down roofing paper. He worked weekdays and would start at 9:00 a.m. Claimant said they would work five days per week. Claimant testified he was paid $10.00 per hour.

8. Claimant testified Mr. G_____ hired individuals to work on the Clinton street house, including a man who did framing. There were also individuals who worked on the siding, but were fired because they did not do a good job. Claimant did not know whether these individuals worked for a company.

9. Claimant also worked on other properties owned by Mr. G_____ , including 1326 Allison St., which he thought was related to an air-conditioning problem. That job took only a few hours. He also worked at 6401 W. 44th Pl., but could not recall what he did at that location. He worked at 5846 Newport St. in Commerce City and dug a 6-foot hole because there was water seeping into the basement. Claimant testified he worked until 8:00 p.m. on that job. He also worked at 6750 and 6771 Lowell Blvd., doing cleaning and plumbing.

---

[1] Exhibit 3.

[2] Exhibit 4.

[3] Hearing Transcript ("Hrg. Tr.") p.24:16-24.

10. Tax assessor printouts for the various properties owned by Respondents were admitted into evidence.[4] This included houses located at 1326 Allison St., 6401 W. 44th, 6411 W. 44th, 5846 Newport St., 6796 Laurel Blvd., 6750 Lowell Blvd., 6771 Lowell Blvd. and 14790 Clinton St. This totaled eight properties, including Respondents' Clinton Street residence. The assessor records included handwritten notes by Claimant, describing tasks done at various properties. The ALJ was unable to conclude how long the various projects took for Claimant to complete, however, the ALJ inferred the work did not require forty hours per week.

11. Claimant thought there were other properties where he worked, but did not recall specifically the number of places he worked. Claimant testified he did not recall the dates on which he worked at those properties. Mr. G_____ would drive him to the various houses and would supervise his work at those properties.

12. Exhibit 8/Exhibit E[5] was a summary which purported to show the dates Claimant worked. This document was prepared on behalf of Respondents and attached to discovery responses. It listed the following payments to Claimant:

- Oct. 5-$50.00
- Oct. 6-$20.00
- Oct. 9-$90.00
- Oct. 15-$80.00
- Oct. 20-$90.00
- Oct. 27-$100.00
- Oct. 30-$75.00
- Nov. 13-$100.00
- Nov. 25-$85.00
- Nov. 27-$80.00
- Dec. 7-$100.00
- Dec. 18-$95.00
- Dec. 22-$100.00
- Dec. 31-$90.00
- Jan. 5-$85.00
- Jan. 9-$65.00
- Jan. 22-doesn't recall.

This document showed Claimant worked seven days in October, three days in November, four days in December and three days in January. This evidence was not rebutted.

13. Mr. G_____ testified Claimant did not work 40 hours per week at any time at his residence, nor did he work five days/40 hours/week at any rental property.

[4] Exhibit 14.

[5] This document was provided in conjunction with discovery responses.

When reviewing Exhibit E, Mr. G_____ testified this document reflected the days Claimant worked for him and that he started in October. Mr. G_____ said when Claimant worked at the rental properties, these were tasks that took a couple of hours.

14. Mr. G_____ stated Claimant was not paid more than $2,000.00 for any kind of work he performed 2015. Mr. G_____ testified Claimant also helped Ms. H_____ clean office buildings at night. Mr. G_____ testified a separate contractor did the framing and the siding work at the Clinton Street house. He did not provide workers' compensation coverage for those workers. Mr. G_____ testified not employ other individuals to perform maintenance work for the rental properties, as he did the work himself. Claimant was not employed in the usual and business or profession of Respondents, which was listed ranching, cattle and hay (partnership tax return), as well as management of rental properties (personal income tax return).

15. The ALJ noted Exhibit E showed a total of $1,305.00 was paid to Claimant, of which $1,155.00 was paid in 2015. No other written documentation of Claimant's earnings was introduced into evidence. The ALJ was unable to conclude the precise month when Claimant began working for Respondents, but Exhibit E documented the first cash payments were in October 2015. No further documentation was introduced into evidence which documented Claimant's earnings.

16. Claimant testified he thought he was paid more than 15 times by Mr. G_____ , as there were times he was paid every day. He was paid mostly in cash, but recalled being paid approximately three times with a check. He cashed the check at a Key Bank between Mr. G_____ ' house and his son's house. Claimant also testified that he received advances on occasion for which he then worked. He also was given a trailer and bought a car from Mr. G_____ .[6] He never received a W-2 or 1099 form from Mr. G_____ .

17. Claimant testified he was paid for work done at Respondents' son's house by Respondent. Claimant testified he had done yard work for elderly people in the neighborhood where he met Mr. G_____ . He understood that he did not have to report the income, as long as it wasn't $1,300.00 per month. Claimant did not proffer any written documents which memorialized his earnings while working for Respondents. Claimant testified his son picked him up by the flea market one time and Kimberly (Ms. _____) picked him up a couple of times.[7] The ALJ inferred from this testimony that Claimant worked less than five days per week.

18. The ALJ credited Claimant's testimony that he worked on Mr. G_____ ' rental properties and the family home on Clinton street, as well as the specific jobs he did on those properties. The ALJ concluded Claimant's testimony did not establish that he received $2,000.00 during the calendar year of 2015 working for Mr. G_____ .

[6] The ALJ noted it was unclear from the record whether this constituted some sort of remuneration.

[7] Hrg. Tr. p. 35:21-36:6.

19. Claimant's son, Jesus C_____ , testified at hearing. Mr. C_____ was living with his father in the summer of 2015, as he was going to school at the time. He said he dropped Claimant off and picked him up at Respondent's property on Clinton Street. He went there on multiple occasions. There was one occasion when he picked Claimant up by the flea market. Mr. C_____ testified his father worked more than one day a week and it could have been as many as five times per week, although he would leave the house before Claimant did.[8] The ALJ inferred Claimant's son was not able to confirm the number of days per week his father worked. He also testified that his younger brother occasionally took Claimant to work.

20. Ms. H_____ testified at hearing. She has known Claimant for approximately five years. She also knew Mr. G_____ , as she did some work for his wife and some housecleaning for his sister. The work she did for the G_____ was at the Clinton Street house.

21. Ms. H_____ testified that Claimant worked from approximately July 2015 to January, 2016. She picked Claimant up from the Commerce City address (approximately 62nd and Monaco), from different places over at Lowell, at Jonathon G_____ ' house (144th and I-25), and at the Clinton Street house. She testified Claimant worked pretty much every day, but could not remember any other locations where she picked Claimant up. She overheard Claimant talking to Mr. G_____ about what tasks were going to be done the next day. Ms. H_____ said she saw Claimant paid one time in cash.

22. Jonathon LL____ testified at hearing. He is Respondents' son and had Claimant perform work on his residence. Claimant built basement shelving in the storage area. This job took place in November 2015 and took a couple of days. He paid Claimant $200.00 in cash.

23. On January 20, 2016, Claimant was injured at Respondents' residence, located at 14970 Clinton Street. He fell from a ladder while working on siding at the house.

24. Ms. H_____ testified Claimant initially wanted to go home, but she said he was in no condition to make that decision. Claimant did not want Mr. G_____ to call an ambulance. She took Claimant to the hospital.

25. Claimant was initially evaluated at Platte Valley, at which time x-rays were taken. He was then taken to the University of Colorado hospital and evaluated in the emergency department by Vikhyat Bebarta M.D. and Travis Smith, M.D. Dr. Bebarta's impression was in the thoracic spine fracture; calconeal fracture; back pain; 25. Claimant was admitted to the hospital and treated. He was discharged on January 27, 2016.

[8] Hrg. Tr. p. 71:14-21.

26. Respondents did not designate an ATP for Claimant's treatment after he was injured.

27. A Worker's Claim for Compensation was admitted into evidence.[9] This document was completed on or about January 16, 2018. Claimant's average weekly wage was estimated to be $209.00 per week. The ALJ inferred that, by Claimant's own estimate of his AWW, he worked approximately 21 hours per week.

28. The ALJ determined that Claimant did not work at Respondents' Clinton street house or other properties 40 hours or more per week, nor did he work five days per week. The ALJ was unable to conclude from the testimony of the witnesses that Claimant's work for Respondents was anything more than intermittent.

29. Claimant's work for Respondents was casual.

30. Claimant was not an employee of Respondents.

31. Respondents were not the employer of Claimant.

32. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and

[9] Exhibit 15.

bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

Compensability

To establish a right to compensation under the Colorado Workers' Compensation Act, the employer and employee must be subject to the provisions of the Act and, at the time of the injury, Claimant be performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. *Martin v. Hyams*, W.C. No. 4-781-144 (ICAO November 19, 2009); §§ 8-41-301(1)(b) & (c), C.R.S. (2017).

Stated another way, Claimant must meet the definition of an "employee" under § 8-40-202(1), C.R.S. and the scope of that definition is delimited by § 8-40-301(1), C.R.S. Respondents must be an "employer", as that term is defined in § 8-40-203, C.R.S. and the scope of the term employer is set forth in § 8-40-302, C.R.S. *Roop v. Hallum*, W.C. 4-383-408 ((ICAO November 9, 1999). In this regard, §§ 8-40-302(3) and (4) C.R.S. (2017) are statutory exclusions to the general rule of coverage under the Act for those persons who perform work under a contract of hire. Those subsections provide in pertinent part:

> "(3) Articles 40 to 47 of this title are not intended to apply to…. employers of persons who do casual maintenance, repair, remodeling, yard, lawn, tree, or shrub planting or trimming, or similar work about the place of business, trade, or profession of the employer if such employers have no other employees subject to said articles 40 to 47, if such employments are casual and are not within the course of the trade, business, or profession of said employers, if the amounts expended for wages paid by the employers to casual persons employed to do maintenance, repair, remodeling, yard, lawn, tree, or shrub planting or trimming, or similar work about the place of business, trade, or profession of the employer do not exceed the sum of two thousand dollars for any calendar year…."
>
> (4) Articles 40 to 47 of this title are not intended to apply to employers of persons who do domestic work or maintenance, repair, remodeling, yard, lawn, tree, or shrub planting or trimming, or similar work about the private home of the employer if such employers have no other employees subject to said articles 40 to 47 and if such employments are not within the course of the trade, business, or profession of said employers. This exemption shall not apply to such employers if the persons who perform the work are regularly employed by such employers on a full-time basis. For purposes of this subsection (4), "full-time" means work performed for forty hours or more a week or on five days or more a week."

First, the ALJ applied the definitional section of § 8-40-202(1)(b), C.R.S., which provides that the term "employee" does not include an individual whose employment "is but casual and not in the usual course of the trade, business, profession, or occupation

of the employer". The ALJ applied this definition when determining whether the exemption in § 8-40-302(3), C.R.S. applied in this case. That section, which has several clauses separated by commas, provides the Act does not apply to individuals who perform "casual" tasks for an employer, if the employer has no other employees subject to the Act and the work is not within the course of the trade, business or profession, and if the employer does not pay more than $2,000.00 in wages for those tasks. This use of the conjunctive in § 8-40-202(1)(b), C.R.S. is evidence of the Colorado Legislature's intent that both elements are required to be present for the exemption to apply.

As determined in Findings of Fact 28-29, the ALJ found Claimant's employment with Respondents was "casual". This was based upon evidence in the record which showed Claimant worked not on a regular basis, but intermittently. (Finding of Fact 29). The written evidence submitted by Respondents documented 17 occasions on which Claimant worked from October 2015 through January, 2016. Exhibit E also led to the conclusion that Claimant's work was less than 40 hours per week. (Finding of Fact 12). Mr. Gallegos testified Claimant worked less than 40 hours per week. (Finding of Fact 13). Claimant's Worker's Claim for Compensation showed he worked less than 40 hours per week. (Finding of Fact 27). Claimant's testimony also established there were times when he took off from work while performing tasks for Respondents. (Finding of Fact 6). The Court determined that the evidence proffered by Respondents was not rebutted by Claimant.

Although Claimant testified he thought he worked more than what was shown on Exhibit E, the ALJ unable to conclude that Claimant worked on a regular basis, as there were no documents which supported the claim he worked five days per week. (Finding of Fact 12). The other evidence provided by Claimant did not lead to a different conclusion. Although Claimant's son thought he might have worked five days per week, the ALJ found the son was not present in the home when Claimant left for work. (Finding of Fact 27). Finally, Ms. H_____ 's testimony did not persuade the ALJ that Claimant worked five days per week.

In the case at bench, the evidence established Claimant did not work on a regular basis and worked less than 40 hours per week. The ALJ was unable to determine that Claimant made more than what was documented in Exhibit E, as that was supported by Mr. G_____'s testimony. This is contrasted with the situation in *Roop v. Hallum*, *supra*, where Claimant worked for approximately nine years and it was determined Respondent was an employer, despite the fact that Respondent did not own a business at the time.

Under these circumstances, the ALJ found Claimant's employment was casual. As the Colorado Supreme Court stated: "The word 'casual' is the antonym of 'regular.' [citing *Lackey v. Industrial Commission*, 249 P.662 (1926)] Casual employment may be said to be that which is occasional, incidental, temporary, emergent or haphazard". *Heckman v. Warren*, 238 P.2d 854, 860 (Colo. 1951); C.f. *Butland v. Industrial Claim Appeals Office*, 754 P. 2d 411, 414 (Colo. App. 1988).

Further, the ALJ determined Claimant was not employed in the regular business or profession of respondents. When looking at the other clauses of § 8-40-302(3), C.R.S., the ALJ determined Respondents employed no other individuals subject to the Act and Claimant was not paid more than $2000.00 in wages for those tasks. (Findings of Fact 1-4). Accordingly, the exemption found in § 8-40-302(3), C.R.S. applies in the case at bar. C.f. *Brogger v. Kezer*, 626 P.2d 700, 701 (Colo. App. 1980).

Second, the ALJ considered whether the exemption for work done on a private home [§ 8-40-302(4), C.R.S.] applied in this case. As found, there was no evidence Respondents employed other individuals were subject to the provisions of the Colorado Workers' Compensation Act. (Finding of Fact 4). In addition, Claimant did not establish he worked 40 hours or more per week or five days per week. (Findings of Fact 10,13,17, 27-28). On this subject, Claimant's testimony did not establish he was working full-time, nor did the testimony of his son or Ms. H_____ . More particularly, Claimant's testimony was that his son picked him up on a few occasions and Ms. H_____ picked him up a couple of times. This testimony did not prove Claimant was working 5 days/40 hours per week. Based upon the evidence in the record, the ALJ determined the exemption found in § 8-40-302(4), C.R.S. applied and Claimant was not an employee.

In coming to this conclusion, the ALJ considered Claimant's contentions that Respondents underreported the number of hours he worked and what he was paid. The ALJ also closely evaluated the testimony of Claimant's son, as well as Ms. H_____ , to determine whether the foregoing exemptions applied. Based upon the totality of the evidence, the ALJ determined that he was unable to conclude Claimant was an employee and therefore entitled to workers' compensation benefits.

ORDER

It is therefore ordered:

1. Claimant's claim for benefits under W.C. 5-062-858-001 is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to

follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether claimant has proven by a preponderance of the evidence that she sustained a compensable occupational disease arising out of and in the course and scope of his employment with employer?

- If claimant has proven a compensable occupational disease, whether claimant has proven by a preponderance of the evidence that the medical treatment she received was reasonable and necessary to cure and relieve the claimant from the effects of the industrial injury?

- The parties agreed to reserve the issue of temporary disability benefits pending the resolution of the claim involving compensability.

FINDINGS OF FACT

1. Claimant was employed with employer as a cashier. Claimant testified she is left handed and, in the course of her employment would need to reach across her body with her left hand from her right to her left to scan items on the conveyer belt. Claimant testified that she worked at the store located at 12th and Patterson which tends to be a busy store. Claimant testified that in addition to her regular shift, she may be called in for extra hours.

2. Claimant testified that her job duties including scanning multiple items of different sizes for customers and testified that most customers had a significant number of items to scan. Claimant testified that she would work two hours before receiving 15 minute break during her shift. Claimant would then work another 2 hours before being provided with a break. Claimant testified her entire shift would last between six to eight hours. Claimant testified that scanning items would require her to do a "swim motion" consistently through the day. Claimant testified that she was required to scan heavy items including dog food, cases of soda and cases of water. Claimant testified she would also bag groceries.

3. Claimant testified that she began developing problems with her left hand. Claimant testified that initially she would wake up and think she slept wrong. Claimant testified that her symptoms continued to develop until the point that she could not work anymore.

4. Claimant testified she sought treatment with Dr. Reicks, her primary care physician. Claimant testified Dr. Reicks provided claimant with a brace for her wrist. Claimant testified that prior to May 2018, she had some similar symptoms and had undergone testing for carpal tunnel syndrome that was negative. Claimant testified that her physicians thought her symptoms could be related to her shoulder. Claimant testified that she had should surgery and her symptoms resolved.

5. Claimant's was evaluated by Ms. Farmer, a physicians' assistant with Dr. Reicks, on April 25, 2018. Claimant reported that she had noticed the pain when working and the next day. Claimant described the pain as numbness and tingling of the left hand and into the forearm all day. Claimant was diagnosed with carpal tunnel syndrome of the left wrist and de Quervain's disease. Ms. Farmer recommended a wrist brace and ice to the area with use of anti-inflammatories. Claimant was also instructed to talk to her supervisor.

6. Claimant returned to Dr. Reicks on May 17, 2018. Dr. Reicks noted claimant was being evaluated for follow up of her wrist pain and forearm pain in the left. Claimant reported she had been wearing a splint while working, but had not noted any improvement in her symptoms. Claimant reported tingling and numbness sensation in the thumb, first, second and third digits and also up into the forearm at the base of the thumb. Dr. Reicks noted a positive Tinel's test and diagnosed claimant with tendonitis of the wrist. Dr. Reicks opined that claimant's condition was related to her work as she was a cashier and performed repetitive picking and squeezing with the left hand. Dr. Reicks encouraged claimant to file a workers' compensation claim.

7. Claimant was examined by nurse practitioner ("NP") Wilson on May 24, 2018. Ms. Wilson noted claimant's complaints of symptoms into her left hand and complaints of wrist pain and finger pain and numbness and tingling. Claimant reported she was wearing a brace while working and noticed her swelling was less when the brace was on. Claimant was provided with work restrictions and instructed to follow up with Dr. Utt in one week.

8. Claimant was examined by Dr. Utt on June 1, 2018. Dr. Utt noted claimant complained of left hand and forearm discomfort since early April. Dr. Utt noted claimant had been performing her present job for 2 and a half years for 8 hours a day and 40 hours a week. Dr. Utt reported that claimant's shift consisted entirely of scanning, with some flexibility to where she works the self scanning area. Dr. Utt noted on physical examination that her left hand showed no atrophy or puffiness or swelling. Claimant had a positive Tinel's sign on the left. Dr. Utt noted that claimant could have carpal tunnel syndrome, but with claimant's history of chronic pain, it made her symptom intensity hard to sort out. Dr. Utt noted he needed more information from the employer regarding her hours and frequency of continuous non-stop work.

9. Dr. Utt provided claimant with work restrictions that included no lifting more than 3-5 pounds or pushing more than 15 pounds with the left hand or wrist. Dr. Utt noted claimant could push up to 50 pounds with the opposite hand.

10. Claimant returned to Dr. Utt on June 4, 2018. Dr. Utt noted that claimant was somewhat better after taking Saturday off. Physical examination revealed that claimant had less exquisite discomfort of the left wrist and palmar region and range of motion was noted to be less painful. Resisted wrist flexion over the cart flexor carpi naris radialis was not as painful and there was less hyperalgesia. Claimant was diagnosed with left hand paresthesia, carpal tunnel syndrome of the left wrist, right forearm pain and chronic pain syndrome. Dr. Utt recommended physical therapy and continued claimant's work restrictions with some increased restrictions on the right hand and arm.

11. Claimant returned to Dr. Utt on June 11, 2018. Dr. Utt noted no change since her last visit and complained that her work restrictions had not been accommodated very well by employer and she was continuing to do repetitive motion. Dr. Utt noted that he received claimant's job description and was able to speak with personnel about claimant's hours. Dr. Utt noted claimant averaged about 30 hours a week and her job description does describe the potential for some repetitiveness with up to 80% of the day involving twisting and bending of the wrist and use of her hands with grabbing. Dr. Utt noted that claimant's job was paced and she was not working an 8 hour shift every day. Dr. Utt opined that it was unclear as to whether her paresthesias that likely caused by the carpal tunnel was caused by her job. Dr. Utt provided claimant with continued restrictions that included no use of the cash register and up to 60 minutes of activity before doing a different activity at work.

12. Respondent obtained a Jobs Demand Analysis ("JDA") by Sara Nowotny on June 12, 2018. Ms. Nowotny issued a report dated June 15, 2018 outlining the job duties of claimant's position with employer.

13. Respondent obtained an independent medical examination ("IME") with Dr. Sollender. Dr. Sollender issued a report dated July 12, 2018. Dr. Sollender reviewed claimant's medical records, obtained a medical history and performed a physical examination in connection with his IME. Dr. Sollender diagnosed claimant with left carpal tunnel syndrome of a moderate severity and noted it could be confirmed through electrodiagnostic testing. Dr. Sollender opined in his report that he did not believe the carpal tunnel syndrome was related to claimant's work as a cashier and noted that he had not ever seen a cashier with any of the major supermarkets who had a job that was forceful, repetitive or awkward for had usage. Dr. Sollender opined claimant had no obvious findings of any specific pathology of the right upper extremity.

14. Claimant was examined by Dr. Reicks on July 17, 2018. Dr. Reicks noted claimant's frustration with her ongoing left wrist and hand pain and numbness. Dr. Reicks continued to treat claimant for her other conditions during this visit.

15. Claimant testified that she stopped working on September 9, 2018 and has not worked anywhere since that time. Claimant testified she stopped working for employer after employer required claimant to have a full work release before she could return to work.

16. Claimant returned to Dr. Reicks on September 14, 2018. Dr. Reicks noted claimant's ongoing issues with her left wrist and referred claimant to Dr. Rose for further evaluation.

17. Claimant was examined by Dr. Rose on October 3, 2018. Dr. Rose noted claimant's report of symptoms with work, motion and exercise. Claimant described a gradual onset of the hand numbness and radial styloid pain with her work related duties over the past year or so. Dr. Rose diagnosed claimant with de Quervain tenosynovitis and referred claimant for nerve conduction studies. Dr. Rose opined that it was certainly possible that repetitive grasping and weight bearing performed by a cashier at a supermarket can be responsible for the symptoms.

18. Claimant underwent surgery on her left wrist on November 1, 2018 under the auspices of Dr. Rose. Dr. Rose noted in his operative report that claimant was status post repetitive work related injury to the best of his ability to judge in these injuries. Dr. Rose further opined that both carpal tunnel and first dorsal compartment tenosynovitis across would be associated with the type of repetitive trauma claimant described at her job.

19. Dr. Sollender issued a second IME report dated December 17, 2018. Dr. Sollender was able to review additional medical records for the second IME report. Dr. Sollender noted in his report that he had not reviewed a JDA and opined that while claimant's condition was likely not work related, this could be confirmed with a review of a JDA.

20. Dr. Sollender testified at hearing in this matter. Dr. Sollender testified that prior to the hearing, he was able to review the JDA performed by Ms. Nowotny. Dr. Sollender testified that claimant's diagnosis would be carpal tunnel syndrome of unknown etiology. Dr. Sollender testified that pursuant to Workers' Compensation Rules of Procedure 17, Exhibit 5, a causation analysis must be performed to determine if a repetitive trauma injury is related to a patient's employment. Dr. Sollender testified that the JDA will tell the evaluator risk factors and the threshold of time, force and specific angles of posture that must be met when determining whether a repetitive trauma condition is related to work.

21. Dr. Sollender testified that based on his review of the JDA, claimant's work activities were insufficient to cause a cumulative trauma condition based on the criteria set forth under the Colorado Medical Treatment Guidelines.

22. The ALJ credits the testimony and reports of Dr. Sollender and finds that claimant has failed to establish that it is more likely true than not that her carpal tunnel syndrome is related to her repetitive activities at work. The ALJ notes that Dr. Sollender reviewed the JDA and applied the Colorado Medical Treatment Guidelines in coming to this conclusion.

23. The ALJ finds that while Dr. Utt and Dr. Rose opined that it was possible that claimant's condition was related to her work with employer, they did not review the JDA performed by Ms. Nowotny in coming to this conclusion. The ALJ further notes that the opinions of Dr. Utt and Dr. Rose did not reference the Colorado Medical Treatment Guidelines and relied on claimant's subjective reports of her work duties.

24. Based on these findings, the ALJ finds that claimant has failed to establish by a preponderance of the evidence that she sustained a compensable occupational disease arising out of and in the course of her employment with employer.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2006. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been

contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. Claimant must show that the injury was sustained in the course and scope of his employment and that the injury arose out of her employment. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 579. A work-related injury is compensable if it "aggravates, accelerates or combines with" a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.* Whether there is a sufficient "nexus" or relationship between the Claimant's employment and his injury is one of fact for resolution by the ALJ based on the totality of the circumstances. *In re Question Submitted by the United States Court of Appeals*, 759 P.2d 17 (Colo. 1988). The question of whether a claimant has proven that a particular disease, or aggravation of a particular disease, was caused by a work-related hazard is one of fact for determination by the ALJ. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999).

4. The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation*, 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by Section 8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

5. This section imposes additional proof requirements beyond that required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). The existence of a preexisting condition does not defeat a claim for an occupational disease. *Id.* A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an

occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.* Once claimant makes such a showing, the burden shifts to respondent to establish both the existence of a non-industrial cause and the extent of its contribution to the occupational disease. *Cowin & Co. v. Medina*, 860 P.2d 535 (Colo. App. 1992).

6. The Colorado Workers' Compensation Medical Treatment Guidelines are regarded as accepted professional standards for care under the Workers' Compensation Act. *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). The statement of purpose of the Medical Treatment Guidelines is as follows: "In an effort to comply with its legislative charge to assure appropriate medical care at a reasonable cost, the director of the Division has promulgated these 'Medical Treatment Guidelines.' This rule provides a system of evaluation and treatment guidelines for high cost or high frequency categories of occupational injury or disease to assure appropriate medical care at a reasonable cost." W.C.R.P. 17-1(A). W.C.R.P. 17-5(C) provides: "The treatment guidelines set forth care that is generally considered reasonable for most injured workers. However, the Division recognizes that reasonable medical practice may include deviations from these guidelines, as individual cases dictate."

7. While it is appropriate for an ALJ to consider the guidelines while weighing evidence, the Medical Treatment Guidelines are not definitive. *See Jones v. T.T.C. Illinois*, Inc., W.C. No. 4-503-150 (May 5, 2006); ***aff'd Jones v. Industrial Claim Appeals Office*** No. 06CA1053 (Colo. App. March 1, 2007) (not selected for publication) (it is appropriate for the ALJ to consider the guidelines on questions such as diagnosis, but the guidelines are not definitive); *see also Burchard v. Preferred Machining*, W.C. No. 4-652-824 (July 23, 2008) (declining to require application of medical treatment guidelines for carpal tunnel syndrome in determining issue of PTD); *see also Stamey v. C2 Utility Contractors et al*, W.C. No. 4-503-974 (August 21, 2008) (even if specific indications for a cervical surgery under the medical treatment guidelines were not shown to be present, ICAO was not persuaded that such a determination would be definitive).

8. As found, claimant has failed to establish by a preponderance of the evidence that she sustained a compensable occupational disease arising out of and in the course of her employment with employer.

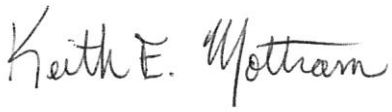
ORDER

It is therefore ordered that:

1. Claimant's claim for benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 28, 2019



Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

- Whether Claimant has established by a preponderance of the evidence that he sustained an injury in the course and scope of his employment on July 13, 2017.

- Whether Claimant has established by a preponderance of the evidence that he is entitled to medical benefits because of a work-related injury.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. Employer is a framing and welding company owned by Michael D_____. Claimant and Mr. D_____ are first cousins. After Claimant took welding classes, he began working for Employer's welding company in May 2017 as its sole employee.

2. On July 13, 2017, Claimant was driving a three-ton company truck when a small passenger sedan hit it from behind. The other driver was at fault and the responding officer issued him a citation. Claimant testified that there was damage to the rear trailer hitch and the electrical trailer plug-in, and that he took it to a shop for repair. However, Mr. D_____ testified that he inspected the truck at the scene of the accident and that it sustained no damage. He also testified that he was unaware of any repair work performed on the truck. Photographs of the truck admitted as exhibit J show no discernable damage.

3. At the scene, Claimant told Mr. D_____ that he was not injured, and he denied medical care. However, Claimant testified that he later began experiencing symptoms.

4. That evening Claimant sought medical attention at the emergency department of Boulder Community Hospital. Records of the visit provide:

- Claimant complained of pain in his left neck and left shoulder, "no other symptoms."

- Claimant told his treating physician that his symptoms developed throughout his neck and upper back, primarily on the left side.

- Claimant reported no neurologic symptoms.

5. Claimant testified that the records were incorrect because he did not have

left-sided symptoms. He later testified that he initially had pain in both of his shoulders.

6. The emergency room provider diagnosed Claimant with an acute cervical sprain and dispensed a muscle relaxant and ibuprofen.

7. On July 21, 2017, Claimant returned to the emergency department of Boulder Community Hospital complaining of headache, ringing in his ears, left lateral neck pain, and numbness of the left hand. Claimant's testimony did not relate his headaches or the ringing in his ears as ongoing symptoms due to his work-related injury. The record details the neurological examination of Claimant's left fingers and his left hand. It also details the musculoskeletal examination, which found "vague left-sided paraspinal tenderness on palpation, which is mild extending down into his left trapezius."

8. Claimant testified that the July 21, 2017 medical record was also incorrect because he did not have left-sided symptoms.

9. Claimant initially testified that his current symptoms were numbness in three fingers of his right hand, burning extending from his right forearm through his right elbow into is right shoulder and the right side of his neck. Claimant further testified that all these symptoms had been present since he began experiencing symptoms on July 13, 2017.

10. Claimant sought medical treatment for an unrelated incident on August 17, 2017, after falling and striking his right elbow on a rock. The physician performed a comprehensive examination of twelve systems, including the neurological and musculoskeletal systems that he noted were negative except for Claimant's severely swollen right elbow. Claimant initially testified that the provider examined only his right elbow. Later, he testified that a normal examination occurred regarding other body parts. Claimant further testified that he was experiencing tingling in his right hand and fingers on August 17, 2017. However, the record does not support his claim.

11. Dr. Hattem, Respondent's expert witness and former emergency medicine practitioner, testified that performing a neck examination is a precautionary measure and standard practice for any person who reports falling.

12. Claimant returned to Boulder Community Health on August 20, 2017, to follow up regarding his right elbow. The physician did not record Claimant reporting any symptoms related to the car accident. The physician performed another review of symptoms noting only right arm swelling and pain. However, the provider specifically noted, "Neck is supple and non-tender." The medical record contradicts Claimant's testimony that no provider examined his neck when he treated for his elbow.

13. In early spring of 2018, Claimant began receiving invoices for his July 2017 emergency room visits.1

1 Neither party explained why the at-fault driver's auto insurance did not cover Claimant's treatment.

14. On April 25, 2018, Claimant reported his July 13, 2017 work injury. Employer filed a first report of injury that day, and provided Claimant with a designated provider list.

15. On April 30, 2018, Claimant sought treatment at U.S. Healthworks where Peter Mars, M.D. evaluated him. Claimant reported a 261-day history of right-sided neck pain and tingling in his right index and middle fingers. Claimant reported that with heavy activity he experienced burning pain down his posterior right arm to the elbow and that his fourth and fifth digits experienced infrequent numbness and tingling. Claimant did not report right or left shoulder pain, or left neck pain. In the eight months since Claimant had last treated, his reported symptoms migrated from the left side to the right side of his body.

16. On June 28, 2018, Dr. Shoemaker reviewed Dr. Mars' May 30, 2018 medical record, examined Claimant, and determined that Claimant's current symptoms were work related. Nothing in Dr. Shoemaker's notes indicates that Dr. Shoemaker reviewed any other records, specifically the July and August of 2017 Boulder Community Health records.

17. On August 14, 2018, Dr. Shoemaker conducted an EMG study of Claimant's right arm. An EMG provides objective evidence of radiculopathy if it is present. Claimant exhibited a C8 distribution of chronic/remote radiculopathy, but at C6-7, the test exhibited normal results.

18. Claimant has a broad-based disc herniation at C6-7, for which Dr. Gerlach offered surgery. Insurer denied the surgical request.

19. Dr. Long-Miller placed Claimant at MMI.

20. Dr. Hattem testified the Medical Treatment Guidelines consider whiplash an unlikely cause of disc herniation. Additionally, Dr. Hattem testified that Claimant reported left-sided radicular symptoms eight days after the accident.

21. Dr. Hattem relied on the Medical Treatment Guidelines which provide:

- No evidence relates degenerative disc disease related to whiplash or to non-radicular neck pain.
- Whiplash is probably an uncommon cause of cervical disc herniation.
- Early and reproducible sings of radiculopathy should support a potential causal connection between whiplash and cervical disc herniation. Claimant's initial assessment did not include any immediate or reproducible radicular symptoms.

22. Dr. Hattem testified that Claimant initially reported left-sided pain, but that when he evaluated Claimant, Claimant reported right-sided pain. Dr. Hattem explained that while errors regarding the side of pain do occur, it was unlikely the references to left-

sided symptoms were in error because they repeated throughout the July 13 and July 21 medical records in both the physician's and nurse's notes. Dr. Hattem concluded that Claimant's right-sided symptoms had not occurred at that time. The fact that Claimant's current symptoms are contralateral to those he reported on the date of and one week following the car accident indicate that Claimant's current symptoms are unrelated to the accident. Further, Dr. Hattem testified that medical providers examined Claimant twice in August 2017 and both reviews of symptoms and examinations were negative for neck symptoms.

23. Dr. Hattem was unsure if Dr. Shoemaker and the other authorized treating physicians were aware of the eight-month gap in Claimant's treatment. As a former occupational medical provider, he opined that unless a physician receives a specific prior medical record with a request to review it, physicians typically treat and test based solely on the history obtained from the patient.

24. Dr. Hattem testified that even if there had been radiculopathy at C6-7, the symptoms still would have been on the right side while Claimant's initial complaints were left-sided.

25. Dr. Hattem persuasively testified that any injury from the accident would have been minor and unlikely to produce neck pain, based on his review of the police report and Claimant's description of the accident. Dr. Hattem testified that Claimant's evaluations in August establish that his symptoms had resolved in one month. Therefore, Claimant's herniation at C6-7 disc does not relate to the July 13, 2017 accident.

26. Dr. Hattem testified that no objective evidence supported Claimant's claim for benefits in this case. Dr. Hattem concluded that Claimant's neck pain and decreased range of motion related to cervical degenerative disc disease rather than an acute work injury.

27. Claimant treated through November 19, 2018, reporting constant pain in the right side of his neck, right trapezius, and right shoulder radiating to the right upper arm, forearm, and hand.

28. On December 18, 2017, Michael D_____ provided Claimant with a notice of layoff, terminating Claimant's employment on December 22, 2017. Mr. D_____ testified that financial constraints caused Claimant's termination and that Claimant was Employer's highest paid employee. After terminating Claimant, Employer closed its welding shop and consolidated its limited welding work at the framing business location.

29. The ALJ finds it unlikely that the hospital records erred in describing Claimant's symptoms, especially given the consistent and detailed descriptions of left-sided symptoms and examinations.

30. The ALJ finds Claimant to be a poor historian with respect to his symptoms and medical treatment.

31. The ALJ finds that Claimant sustained a work-related injury on July 13, 2017 consisting of an acute cervical strain.

32. The ALJ finds that that injury resolved on its own sometime before August 17, 2017.

33. The ALJ finds Dr. Hattem's opinions and analysis to be well founded and persuasive.

34. The ALJ finds that Claimant has not met his burden of proving by a preponderance of the evidence that he sustained a right-sided work injury.

CONCLUSIONS OF LAW

Based on the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. C.R.S. § 8-41-301(1)(c). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp*., 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the ALJ. *Faulkner*, 12 P.3d at 846. A compensable injury is an injury which "arises out of" and "in the course of" employment. *See* C.R.S. § 8-41-301(1)(b); *Price v. Industrial Claim Appeals*, 919 P.2d 207 (Colo. 2012).

In deciding whether the claimant has met his burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to testimony, and draw plausible inferences from the evidence." *See Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002).

Credibility is a significant consideration when determining compensability. In assessing credibility, the ALJ should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness of the testimony; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936).

In establishing causation, a claimant must show that the industrial injury bears a direct causal relationship between the precipitating event and the resulting disability. Respondents are liable for medical treatment that is reasonably necessary to cure and/or relieve an injured worker from the effects of an industrial injury. § 8-42-101(1)(a), C.R.S. The claimant must prove a causal nexus between the claimed disability, need for medical treatment, and the work related injury. *Singleton*, 961 P.2d 571 (Colo. App. 1998). The question of whether the claimant has met the burden to establish the requisite causal

connection and whether the medical treatment sought is reasonably necessary is one of fact for the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner*, 12 P.3d 844 (Colo. App. 2000).

Claimant has failed to meet his burden to establish the requisite causal connection between the July 13, 2017 accident and medical treatment for his right-sided symptoms. Claimant originally reported only left-sided symptoms on July 13 and 21, 2017. Furthermore, August 17 and 20, 2017 medical records indicate that no further neck, shoulder, or arm symptoms were present. Claimant's extensive testing and treatment in 2018 indicates that there is a herniated disc at C6-7, but such disc herniation is degenerative in nature. An EMG concluded that Claimant did not have right-sided radicular symptoms due to a C6-7 disc herniation. Claimant's temporary left-sided symptoms resolved within one month and his right-sided symptoms are not related to the July 13, 2017, accident.

Claimant failed to meet his burden to prove by a preponderance of the evidence that he suffered an injury other than an acute left-sided cervical strain proximately caused by and arising out of the course and scope of his employment. Claimant's testimony during the hearing was self-contradictory, inconsistent with medical records, and inconsistent with the more credible testimony of Mr. D_____ and Dr. Hattem. Two medical records indicate that immediately following the accident, Claimant was experiencing left-sided symptoms in his neck, shoulder, and, eventually, hand. Two additional medical records indicate an absence of those same symptoms one month after the accident. Nine months after the date of injury, Claimant reported new symptoms in the opposite side of his body despite seeking no additional treatment during the interim. Then, from April 2018 through November 2018, Claimant's symptoms evolved from being intermittent to constant. This again conflicted with Claimant's testimony that his symptoms had been constant since they first began.

ORDER

IT IS THEREFORE, ORDERED THAT:

A. Claimant has failed to prove that he sustained a right-sided injury in the course and scope of his employment on July 13, 2017.

B. Claimant's claim for benefits is therefore denied and dismissed.

DATED this 4th day of March, 2019.

/s/ Kimberly Turnbow

Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, see Section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://colorado.gov/dpa/oac/forms-WC.htm**.

ISSUES

- Whether claimant has proven by a preponderance of the evidence that she sustained a worsening of condition that would entitle claimant to reopen her claim for benefits pursuant to Section 8-43-303, C.R.S.?

- If claimant has proven that he claim should be reopened, whether claimant by a preponderance of the evidence that the spine surgery recommended by Dr. Clifford is reasonable medical treatment necessary to cure and relieve claimant from the effects of her industrial injury?.

FINDINGS OF FACT

1. Claimant sustained an admitted injury on May 8, 2016 when she lifted a large bucket of ice and felt a pop and stabbing pain in her low back. Claimant testified at hearing that she had back pain for over 20 years prior to her May 8, 2016 work injury.

2. Claimant testified that she had intermittent low back pain with limited sciatica into her left hip in the years following 1994. Claimant testified that she did not see a doctor for low back problems in the late 1990s or the 2000s.

3. Claimant testified that she moved to Colorado in 2011, and began seeing Dr. Joel Gates in 2012 as her primary care physician. Claimant testified that she sought treatment with Dr. Gates primarily for gastrointestinal ("GI") issues, and that her low back pain came up during the course of those discussions. According to the medical records, claimant discussed her low back pain with Dr. Gates on October 31 and November 12, 2012. Claimant received osteopathic manipulation treatment from Dr. Gates and was sent for low back x-rays and a magnetic resonance imaging ("MRI") scan.

4. The lumbar spine x-ray was performed on November 9, 2012 and revealed scoliosis and some degenerative disc changes at the L5-S1 level. The lumbar spine MRI taken November 19, 2012 showed scoliosis with stenosis at multiple levels.

5. Claimant testified that she was aware from those scans that she had some problems with her lumbar spine, but was not very aware of her scoliosis. Claimant testified that she did not have regular medical care, did not change her activities, or have any work restrictions as a result of her low back condition in late 2012.

6. Claimant testified that she had some GI issues, a gallbladder problem, a hernia, and other problems that resulted in significant medical treatment, including multiple surgeries. Claimant testified that these issues prevented her from returning to work as a nurse. Claimant testified that she had a prescription for medical marijuana for these issues.

7. Claimant consulted with Dr. Sherwood on February 12, 2014. Dr. Sherwood noted Claimant had had a cholecystectomy – gallbladder removal surgery – in 2012. Dr. Sherwood also noted that claimant was using medical marijuana to manage her low back pain. Dr. Sherwood noted that medical marijuana was controlling Claimant's low back pain without need for other medications.

8. Claimant returned to see Dr. Sherwood on February 4, 2015. Dr. Sherwood noted Claimant had a right inguinal hernia repair surgery in September 2014. Claimant was seeing Dr. Sherwood to renew her medical marijuana prescription. Claimant noted that the need for the marijuana prescription was primarily for her lower back pain.

9. Claimant again saw Dr. Sherwood on March 28, 2016 for renewal of her medical marijuana prescription. Dr. Sherwood noted claimant used the medical marijuana to help control her low back pain, anxiety and depression. Dr. Sherwood noted Claimant's use of medical marijuana conflicted with her job as a nurse.

10. Claimant testified that she was initially unable to work as a nurse because of her other health problems, including multiple surgeries. Claimant testified that she had difficulty re-applying for nursing work because of lack of clinical experience in recent years. Claimant testified that she was unable to apply for nursing jobs while on medical marijuana due to federal regulations. However, claimant testified that in approximately 2014 she stopped using medical marijuana because she wanted to start her own home health care agency. Claimant testified that the agency did not open for business because she was unable to procure enough funding.

11. Claimant testified she began working as a dishwasher for Employer in December 2015, later becoming a barista in the café. Claimant testified she worked as a housekeeper at the Box Canyon Lodge, another business owned by the same owner as employer. Claimant testified this housekeeping job involved carrying items up and down stairs, stripping beds, cleaning linens. Claimant testified that she was also participated in recreational activities including hiking and swimming during this timeframe. Claimant testified that before this work injury, if she had a hard day at work, she would have some back pain. Claimant also testified that her back pain did not limit her ability to do her work either for employer or for the Box Canyon Lodge.

12. Following the May 8, 2016 work injury, claimant was referred to Dr. Erika Woodyard at St. Mary's Occupational Medicine. Dr. Woodyard noted on May 20, 2016, that claimant had been off of work for five years due to health problems. Dr. Woodyard noted that claimant had returned to work the previous fall. Dr. Woodyard noted that claimant reported having low back pain since lifting the ice bucket. Dr. Woodyard reported claimant had some pain in her right leg from previous injuries that had fairly well resolved prior to her present injury. Claimant reported to Dr. Woodyard that she had osteoarthritis and scoliosis contributing to chronic low back problems. Dr. Woodyard provided work restrictions and recommended physical therapy.

13. Claimant was evaluated by Dr. Sherwood on May 16, 2016. Dr. Sherwood noted that claimant had aggravated her low back pain lifting a bucket of ice.

14. Claimant had follow-up visits with Dr. Woodyard on May 27, June 10, and June 24, 2016. Claimant reported ongoing symptoms, some of which she related to her preexisting low back problems, and some she related to the work injury. Claimant testified that immediately after the injury, she had fairly severe lower back pain. Claimant testified that once the localized back pain decreased, she began noticing tingling and numbness in her legs and feet.

15. On July 8, 2016, Dr. Woodyard noted claimant's report that her back pain was doing much better in the eight to nine months before the injury and claimant had managed her back pain well until the incident lifting the ice bucket. On July 26, 2016, Dr. Woodyard noted she had reviewed claimant's medical records from prior to her injury and opined that claimant's back pain had been fairly well controlled prior to lifting the ice bucket with use of medical marijuana.

16. Claimant underwent a lumbar spine MRI on July 27, 2016. The MRI revealed scoliosis as well as disk extrusions and protrusions at levels L2 through S1, all causing moderate to severe stenosis.

17. Claimant was evaluated by Dr. Craig Stagg on July 29, 2016. Dr. Stagg reviewed claimant's MRI and referred claimant for evaluation by a neurosurgeon for severe spinal stenosis. Dr. Stagg noted claimant's prior history of chronic back issues.

18. Claimant consulted with Dr. Robert Replogle on August 3, 2016, who noted Claimant's low back pain with radiating symptoms to her right knee. Dr. Replogle noted Claimant had "dramatic worsening" of her preexisting symptoms since her work injury. Dr. Replogle reported the MRI from 2016 showed multilevel moderate to severe degenerative disease throughout the lumbar spine with some worsening of stenosis at L3-4 compared to the 2012 MRI. Dr. Replogle noted that claimant's symptoms did not appear to radiate past the knee and opined that it would be reasponable to try an epidural steroid injection.

19. Dr. Woodyard noted on August 5, 2016 that she believed Claimant's condition was not related to the work injury, but to her pre-existing condition. Dr. Woodyard noted claimant had been referred to a neurosurgeon and was awaiting approval on her recommended injections. Dr. Woodyard opined that the work activities including the lifting of the ice bucket were not the reason for her treatment and discharged claimant from her care.

20. Claimant consulted with Dr. Sherwood on August 12, 2016, concerned that Dr. Woodyard was going to close her workers' compensation case because of her previous low back pain problems. Dr. Sherwood noted claimant felt like things were collapsing down with constant pain on her right side. Dr. Sherwood noted that she reviewed Dr. Woodyard's report and did not see her opinion that claimant's condition

was not related to her work injury. Dr. Sherwood offered an opinion in her report that claimant's condition was an acute re-injury of a chronic problem.

21. Claimant was evaluated by Dr. Stagg on August 22, 2016. Dr. Stagg noted claimant's report that her symptoms had become a lot worse since her injury. Dr. Stagg noted claimant had more constant numbness into her lower extremities, which was only intermittent prior to her work injury. Claimant reported that she had numbness into the right buttock into the right foot with ambulation, as well as numbness into the left leg and foot with sitting. Claimant reported more difficulty with activities of daily living compared with prior to her injury. Dr. Stagg noted claimant did not want to pursue the injection recommended by Dr. Replogle. Dr. Stagg therefore recommended physical therapy and electrodiagnostic studies.

22. Claimant returned to Dr. Stagg on September 12, 2016. Dr. Stagg noted claimant's longstanding history of low back issues with chronic changes on MRI. Dr. Stagg opined, however, that claimant's work injury aggravated the underlying condition, and represented a temporary aggravation. Dr. Stagg recommended an additional 6 visits with the physical therapist and referred claimant to Dr. Hehmann for electrodiagnostic testing.

23. Claimant returned to Dr. Stagg on October 3, 2016. Dr. Stagg noted the electrodiagnostic testing performed by Dr. Hehmann showed lumbosacral radiculopathy with peroneal neuropathy. Dr. Stagg recommended claimant continue with her physical therapy and referred claimant to Dr. Clifford's office for consultation regarding further treatment.

24. Claimant consulted with Physicians' Assistant ("PA") Bell with Dr. Kirk Clifford's office on October 19, 2016. Claimant reported a history of lifting a bucket of ice overhead when she developed right-sided low back and leg pain. PA Bell reviewed claimant's symptoms and radiographic findings. PA Bell noted Dr. Clifford would only recommend surgery once claimant's symptoms became unbearable given the extensive nature of the surgery. PA Bell noted claimant would like to hold off on any injections for the time being and work on more conservative measures on her own.

25. Claimant returned to Dr. Stagg on October 25, 2016. Dr. Stagg noted claimant had minimal gains over her past 10 physical therapy visits and reported that at this point, claimant wanted to proceed with lumbar spine injections.

26. Claimant underwent a right-sided transforaminal epidural steroid injection at the L3-4 and L4-5 levels under the auspices of Dr. Clifford on November 17, 2016. Dr. Clifford noted that post injection, claimant's leg pain was improved in the appropriate distribution. Claimant was instructed to return in six weeks for follow up.

27. Claimant returned to Dr. Stagg on November 30, 2016. Dr. Stagg noted significant symptoms for several days following the injection, but was now doing better with pain down the right lower extremity being almost resolved. Dr. Stagg recommended working on her core strength.

28. Claimant returned to Dr. Clifford on December 29, 2016 and reported having a good response to the injections that waned over time. Claimant reported some flu like symptoms initially following the injection, but expressed an interest in undergoing a left sided injection at the L4-5 and L5-S1 levels.

29. Claimant was eventually placed at maximum medical improvement ("MMI") by Dr. Stagg on March 6, 2017. Dr. Stagg noted claimant was working full duty without restrictions before her injury, but has had "chronic persistent symptoms and was unable to work at full duty following the injury. The doctor opined Claimant had aggravated her underlying condition on May 8, 2016 and provided claimant an 8% whole person impairment. Dr. Stagg also provided claimant with permanent work restrictions pursuant to the functional capacity evaluation ("FCE"). Dr. Stagg also recommended 3 to 4 follow up visits and a possible repeat injection as maintenance medical treatment.

30. Respondents filed a Final Admission of Liability on March 15, 2017 admitting for the permanent impairment rating and maintenance medical treatment. Claimant filed a timely objection and requested a Division-sponsored Independent Medical Examination ("DIME"). Dr. Jeffrey Krebs was selected as the DIME physician.

31. Dr. Krebs performed the DIME on May 31, 2017. Dr. Krebs reviewed Claimant's history, obtained a medical history and performed a physical examination in connection with his DIME. Dr. Krebs' review of claimant's medical records included claimant's pre-existing medical records along with her post-injury imaging studies. Dr. Krebs noted that his range-of-motion measurements were valid, and provided a 24% whole person impairment rating for loss of lumbar range of motion together with a 10% whole person impairment rating for specific disorders: a total of 32% whole person. Dr. Krebs noted that he was concerned that her levoscoliosis was the primary issue for her. Dr. Krebs noted that her levoscoliosis was profound and undoubtedly had predisposed claimant to the findings on the MRI scan. Dr. Krebs, however, noted the was unable to ignore the radiological findings and provided the impairment rating without apportionment. Dr. Krebs made recommendations for maintenance treatment including Lidoderm patches and injections of up to one time per year.

32. Respondents applied for hearing to overcome the DIME rating of Dr. Krebs. Prior to proceeding to hearing, Dr. Stagg issued an opinion that claimant was no longer at MMI on October 12, 2017 and referred claimant to Dr. Price, a rehabilitation specialist, and Dr. Cohen for psychological evaluation. Dr. Stagg ultimately referred claimant back to Dr. Clifford as of November 22, 2017.

33. On November 28, 2017, PA Ousley in Dr. Clifford's office reviewed the imaging studies and noted that from a surgical standpoint, correction of claimant's lumbar spine would require a T9 to sacral fusion. PA Ousley noted that given the magnitude of this procedure, claimant would need to have her bone health evaluated with a DEXA scan.

34. Claimant followed up with PA Ousley on January 17, 2018 at which time the DEXA scan was ordered.

35. Claimant testified that after being placed at MMI, she attempted to perform caretaking work for an elderly person who needed in-home assistance. Claimant testified she was unable to do that work for more than a few hours per day due to her ongoing symptoms and ultimately stopped doing the work.

36. Claimant underwent the bone density scan and returned to PA Ousley on April 4, 2018 to determine her fitness for surgery. PA Ousley noted it was reasonable to proceed with surgical planning. Dr. Clifford requested authorization for the fusion surgery.

37. Dr. Clifford's office noted on April 6, 2018 that claimant would need to undergo a psychological evaluation prior to spinal fusion surgery.

38. Claimant presented to Dr. Dale Bowen on May 14, 2018 for a pre-surgical psychological evaluation. Dr. Bowen noted claimant was undergoing vocational rehabilitation and was taking a "refresher course" in nursing. Dr. Bowen noted the only medications claimant was using at this point were lidocaine patches and CBD oil. Dr. Bowen noted claimant understood the risks of surgery. Dr. Bowen noted claimant had a significant level of ongoing pain and physical limitation, and recommended claimant have the proposed surgery recommended by Dr. Clifford.

39. Respondents filed an application for hearing on June 8, 2018, pursuant to W.C.R.P. 16-10, contesting the request for surgery from Dr. Clifford.

40. Claimant returned to Dr. Stagg on July 9, 2018. Dr. Stagg noted that claimant's symptoms were worsening with more pain, and she was unable to control the pain with medication. Dr. Stagg opined that claimant sustained an injury that aggravated her underlying condition and recommended claimant proceed with the surgery recommended by Dr. Clifford.

41. Dr. Clifford issued a report date September 26, 2018. Dr. Clifford noted claimant had an injury at work and had undergone a prior right sided L3-4, 4-5 transforaminal epidural steroid injection. Dr. Clifford noted that claimant was not quite ready to undergo surgery when he talked to her about it in the past, but she does feel this point in time that her symptoms had progressed and gotten more significant despite her past treatment options. Dr. Clifford noted that before her injury, she had some mild back pain, but that I was exacerbated by her work injury. Dr. Clifford recommended claimant get an MRI of the lumbar spine and updated CT scan of the thoracic and lumbar spine.

42. Respondents obtained an independent medical examination ("IME") with Dr. Rauzzino. Dr. Rauzzino provided a record review IME report dated November 15, 2018. The doctor opined that the current surgical recommendation from Dr. Clifford was not related to the admitted lifting injury at work. Dr. Rauzzino opined the recommended surgery was related to claimant's pre-injury low back condition. Dr. Rauzzino noted that

claimant had a history of low back pain prior to the admitted injury for which she used medical marijuana along with a pre-existing scoliosis and spinal deformity. Dr. Rauzzino opined that the recommended medical treatment was related to her pre-existing condition and not the work injury. Dr. Rauzzino further opined that claimant was not a good surgical candidate due to her psychological condition and history of chronic pain.

43. Claimant testified that her back pain, lower extremity tingling, lower extremity numbness, pain at night, and balance had all worsened somewhat since being placed at MMI in March 2017. Claimant testified she had more difficulty performing activities of daily living, including going up and down stairs and dressing herself. Claimant testified even though she was relunctant to have the surgery, she wanted to pursue surgical intervention because she hoped that surgery would help improve her function, reduce her pain level, and help her return to work.

44. The ALJ credits that testimony of claimant at hearing along with the opinions expressed by Dr. Stagg and Dr. Clifford and finds that claimant has established that it is more likely true than not that her condition has worsened since she was placed at MMI by Dr. Stagg on March 6, 2017. The ALJ further finds that claimant has established that it is more likely true than not that the worsened condition is related to claimant's May 8, 2016 work injury.

45. The ALJ credits the opinions of Dr. Clifford and Dr. Stagg and finds that claimant has established that it is more likely true than not that the surgical procedure recommended by Dr. Clifford involving a T9-S1 fusion is reasonable medical treatment necessary to cure and relieve claimant from the effects of the May 8, 2016 work injury. The ALJ notes that contrary opinion expressed by Dr. Rauzzino, but finds the opinions expressed by Dr. Stagg and Dr. Clifford to be more credible and persuasive with regard to this issue.

46. The ALJ notes that claimant's history of prior back pain and stenosis as documented by the medical records, but finds that the evidence has established that claimant's work injury of May 8, 2016 aggravated claimant's pre-existing condition and caused the need for medical treatment including the surgery recommended by Dr. Clifford.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the

employer. Section 8-43-201, C.R.S., 2006. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. At any time within six years after the date of injury, the ALJ may reopen an award on the ground of a change in condition. Section 8-43-303(1), C.R.S. A change in condition refers to "a change in the condition of the original compensable injury or to a change in claimant's physical or mental condition which can be causally connected to the original compensable injury." *Heinicke v. Industrial Claim Appeals Office*, 197 P.3d 222 (Colo. App. 2008). The ALJ is not required to reopen a claim based upon a worsened condition whenever an authorized treating physician finds increased impairment following MMI. *Id.* The party attempting to reopen an issue or claim shall bear the burden of proof as to any issues sought to be reopened. Section 8-43-303(4).

4. As found, claimant has established by a preponderance of the evidence that she is entitled to reopen her claim based on a worsening of condition. As found, the testimony of claimant along with the medical records of Dr. Stagg and Dr. Clifford are found to be credible and persuasive with regard to this issue.

5. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990).

6. As found, claimant has established by a preponderance of the evidence that the recommended T9 through S1 fusion is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury. As found, the opinions expressed by Dr. Stagg and Dr. Clifford in their medical reports is found to be credible and persuasive regarding this issue.

ORDER

It is therefore ordered that:

1. Claimant's claim for benefits is hereby reopened.

2. Respondents shall pay for the reasonable medical treatement necessary to cure and relieve claimant from the effects of the May 8, 2016 work injury including the surgery recommended by Dr. Clifford.

3. All issues not determined herein are reserved for further determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 4, 2019

Keith E. Mottram

Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

The ALJ finds and Concludes as follows:

I. The **ISSUES** as originally cited in the Findings of Fact and Conclusions of Law, dated November 19, 2019 remain unchanged.

II. **FINDINGS OF FACT** #s 1 through 46 remain unchanged.

III. **CONCLUSIONS OF LAW** #s A through P remain unchanged.

IV. **CONCLUSIONS OF LAW** Q through V are withdrawn, and the ALJ enters the following Conclusions of Law in their place:

CONCLUSIONS OF LAW

Did Respondents waive the Issue of Safety Rule Violation by failing to address it in the Final Admission of Liability?

Q. Respondents argue in their Brief in Support of Cross-Petition to Review that once Claimant timely contested the FAL, he had effectively subjected all ripe issues to a determination by an ALJ at an adversarial hearing. Upon reconsideration, the ALJ concurs with Respondents' position. Respondents cite, among others, *Barela v. CMHIP,* W.C. 4-842-938-03 (ICAO July 29, 2013). The ALJ finds the following language of *Barela* persuasive:

> In this case, however, the claimant objected to the respondent's final admission of liability and filed an application for hearing on the issue of permanent partial disability. As we previously have recognized in Franco v. Denver Public Schools, W.C. No. 4-818-579 (April 23, 2013), a respondent may controvert its own admission of liability by timely applying for a hearing **or, as here, filing a response to the application for hearing**. See Id.; Bauer v. Boulder County, W.C. No. 4-020-145, (March 22, 1993). The court of appeals in HLJ Management Group, Inc. v. Kim, 804 P.2d 250 (Colo.App. 1990), held that an admission of liability may be contested by either party, and that the "determination of the matter thus placed in issue is subject to determination by the ALJ at the adversary hearing." Id. at 253. The court further stated that **the admission is binding only until the controverted issue is determined and the ALJ issues an order.** See Pacesetter v. Collett, 33 P.3d 1230 (Colo.App. 2001); see also Rodriguez v. Industrial Claim Appeals Office, 2012 COA 139. *(Emphasis added).*

R. The ALJ therefore concludes that Respondents herein were permitted to litigate all issues otherwise ripe for litigation-*including violation of a safety rule*-once Claimant objected to the Final Admission of Liability. By so objecting, Claimant effectively assumed the risk that other issues otherwise deemed admitted by the FAL could be revisited at hearing.

Does the Equitable Doctrine of Waiver prevent Respondents from now raising the Issue of Violation of a Safety Rule?

S. "Waiver constitutes an intentional relinquishment of a known right." *Campos v. J.C. Penney Co.*, W.C. No. 4-86-186-02 (ICAP Nov. 14, 2013). "Waiver may be explicit or implied from conduct inconsistent with assertion of the right. However, a waiver implied from conduct must unambiguously reveal the party's intention to waive the right." *Dep't of Health v. Donahue,* 690 P.2d 243, 247 (Colo. App. 1997). A ruling that a party knowingly waived a right, an application of a legal standard to facts, is subject to de novo review. *People v. Al-Yousif*, 49 P.3d 1165, 1169 (Colo. 2002). The fact that Respondents did not pursue a termination for cause defense does not imply or unambiguously reveal that the Respondents intentionally and knowingly waived their right to assert a Safety Rule Violation offset. As found in Finding of Fact #8, it is unclear from the record if Claimant was terminated for failing to wear his seat belt, or for the simple act of rolling a full cement truck, seat belt or not.

T. The ALJ makes no findings that Respondents were aware at any time prior to Claimant's admission at the DIME that he had willfully failed to wear his seatbelt. At the time of his DIME, Claimant asserted that he did not willfully fail to wear a seatbelt because it was malfunctioning. Respondents did not implicitly or expressly waive a right to assert the Safety Rule Violation offset, since facts concerning the offset were still being revealed through the date of the DIME, and then beyond.

U. The ALJ concludes, therefore, that Respondents did not expressly or impliedly waive their ability to assert the defense of Violation of a Safety Rule under C.R.S. 8-42-112(1)(a).

ORDER

It is therefore Ordered that:

1. The DIME report of Dr. Higginbotham has been overcome. Claimant's Impairment Rating of the Whole Person is 0%.

2. As Claimant willfully violated a safety rule violation, as found, a 50% offset is applicable to all disability benefits, as permitted by law.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's Supplemental Order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. The Petition to Review shall set forth in detail the particular errors and objections relied upon, and shall be accompanied by a brief in support thereof. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts, and to all other parties. For statutory reference, see section 8-43-301(6), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 4, 2019

Colorado Springs, Colorado 80906

ISSUES

- Did Respondent prove a basis to withdraw its admission of liability?
- Did Respondent overcome the DIME's determination Claimant is not at MMI by clear and convincing evidence?

FINDINGS OF FACT

Pre-Existing Condition

1. Claimant has a history of low back pain dating to a work-related injury on October 13, 1992. Imaging studies showed Grade 1 spondylolisthesis and a "mild" disc bulge at L5-S1, with no nerve root or cord impingement. An EMG in November 1992 showed "minor" bilateral S1 radiculopathy. Dr. Daniel Olson, who served as the primary ATP, placed Claimant at MMI as of August 10, 1993. Claimant underwent a DIME on August 25, 1994 with Dr. Velma Campbell, who affirmed MMI and provided 13% whole person rating for the lumbar spine. There is no record of ongoing treatment after the claim concluded.

2. Claimant started working for Employer in the maintenance department in 1993, and has worked in this capacity for Employer since then.

3. On January 19, 1997, Claimant sustained a work-related injury when he fell through a ceiling in an office building. Claimant complained cervical, thoracic, and lumbar pain, with pain radiating into his legs. He received conservative treatment and was placed at MMI with no additional impairment, no future medical recommendations, and no permanent restrictions.

4. Claimant continued to work full duty for Employer after the 1997 incident.

5. In October 2006, Claimant suffered another flare of his low back pain while working. He was performing computer work when he noticed pain in his back and radicular type symptoms in his left leg. Claimant had a brief course of conservative treatment and was released after three weeks with no impairment, physical restrictions, or future treatment recommendations.

6. On January 9, 2016, Claimant aggravated his back when he slipped on ice and fell directly on his back. He was evaluated at the Parkview Medical Center emergency department. Claimant disclosed his history of low back pain and noted an acute onset of spasms due to the fall. Examination of the back and lower extremities was unremarkable, except some midline tenderness of the low back. X-rays showed no fracture or other acute structural injury. Claimant was given a nonspecific diagnosis of "back pain" and released with instructions to follow up with his primary care physician.

7. Per the ER instructions, Claimant followed up with his PCP, Dr. Bradley Smith a few days later. Dr. Smith prescribed a muscle relaxer and referred Claimant to massage and physical therapy. Claimant went to PT at the Parkview Medical Center Outpatient Rehabilitation Center from January 25, 2016 to March 22, 2016. The discharge note indicates Claimant was "no longer having any pain," and "feels like a new man." Claimant saw Dr. Smith again a month later for an unrelated medical problem, but the report contains no mention of any ongoing back symptoms. The records corroborate Claimant's testimony that the symptoms resolved.

8. At hearing, Claimant testified that between 1992 and 2016 his low back flared episodically, but these flares were generally brief, rarely required any medical treatment, and he always returned to full activity. This ALJ finds Claimant to be credible in this regard. Furthermore, Claimant's testimony is supported by the medical records and his ability to work full duty during those years.

Claimant's injury and course of treatment

9. Claimant's current claim arose out of landscaping work he performed on July 21, 2016, spraying trees with the assistance of several inmates. To accomplish the task, Claimant drove a "sand rail" vehicle outfitted with a tank and sprayer. He drove the sand rail over uneven and bumpy terrain throughout his shift, including over curbs and through swales and "trenches." The vehicle had very limited suspension, and the rough ride caused significant jarring to his body throughout the day. It also vibrated badly while the engine was running.

10. Claimant credibly testified the activity bothered his back during the shift. He recalled several instances where he felt a jolt of pain when hitting a bump or driving through a trench. He explained the pain was "deep inside . . . under my belly button and went to my back." By the end of his shift, Claimant felt pain "deep" in his abdomen and his low back and spams in his back muscles. He also felt nauseous and wondered if he had caught a stomach illness that was bothering one of the inmates that day.

11. Claimant's symptoms worsened on the drive home. He laid down on the floor when he got home, hoping to alleviate the pain. The pain kept getting worse, so he called a supervisor and reported he was going to see a doctor.

12. Claimant was seen at the Southern Colorado Clinic urgent care facility later that day. The history is described as:

> This is a 56-year-old male who presents with mid abdominal pain. The symptoms began today while he was driving "a cart" spraying trees today at his work at DOC. On a scale of mild to severe, the intensity is described as moderate-severe. Pain is constant and worsened in severity since onset this afternoon.

13. On examination, his abdomen was slightly distended with diffuse tenderness and guarding on palpation of the epigastric region. No back examination was performed. The urgent care physician diagnosed abdominal pain of "unclear" etiology.

Due to the severity of symptoms, she directed him to the emergency room. The report concludes with the comment, “he was claiming this was a work-related issue but I don’t see any association with his work today driving a cart.”

14. Claimant left the urgent care clinic and went to Parkview Hospital. The emergency department was very busy, and after waiting more than an hour to be seen Claimant felt a bit better and went home to rest.

15. The next day Claimant was still in pain. He worked part of his shift — running the sand rail again — and the pain continued to intensify. He asked his supervisor to send him to a doctor, and was referred to CCOM.

16. Claimant saw PA-C Steven Quackenbush at CCOM on July 22, 2016. On the intake form, Claimant described “lower back pain, mid back pain,” which he attributed to “spraying trees in a Go Cart bouncing and turning” the day before. Claimant related his prior history of back problems, but stated, “He feels that the back pain he developed on 07/21/2016 is ‘different’ from his usual back pain symptoms.” Claimant also reported a “stinging” pain in his left foot, which was “new” since the work incident. On examination, Claimant walked with an “obvious antalgic gait.” Palpation revealed paralumbar and para thoracic muscular tenderness, mild left SI joint tenderness, and mild diffuse periumbilical muscular tenderness. Mr. Quackenbush diagnosed a low back muscular strain and opined,

> Acute findings are consistent with history and/or work-related mechanism of injury. Any chronic findings from known chronic back pain from 1997 injury are not work-related . . . . The patient has chronic back pain and may be treated back to baseline only.

17. Mr. Quackenbush imposed a five-pound lifting restriction, prescribed muscle relaxers and ibuprofen, and asked Claimant to return in three days.

18. Claimant returned to CCOM on July 25, 2016. He was somewhat better but still had aching and spasms in his low back and SI area with some radicular pain to the left knee. Physical examination showed persistent paralumbar and parathoracic muscular tenderness and left SI joint tenderness. Mr. Quackenbush maintained the 5-pound lifting restriction and referred Claimant to physical therapy.

19. On August 2, 2016, Mr. Quackenbush added tramadol for pain and ordered a lumbar MRI “to help sort out acute from chronic.”

20. On August 10, 2016, Mr. Quackenbush noted Claimant remained symptomatic with ongoing “spasms” and some radicular symptoms. Claimant said physical therapy was not helping, so Mr. Quackenbush referred him to a chiropractor. Claimant subsequently had several chiropractic sessions, which were somewhat helpful.

21. Claimant had the lumbar MRI on August 17, 2016. The most significant findings were at L5-S1, including anterolisthesis and pars defects, severe foraminal narrowing (worsen toward the left), and a left lateral disc herniation.

22. Dr. Daniel Olson took over Claimant's care on August 31, 2016. Dr. Olson noted Claimant's symptoms began "after using an all-terrain vehicle up and down some slopes spraying trees. It is a somewhat odd presentation in that he noticed discomfort in his abdomen first, then lower back pain." Claimant told Dr. Olson "while he was in physical therapy [he felt] like his spine shifted and since then he has noticed increasing thoracic pain and even muscle spasms on the left side of his anterior neck." Claimant's pain diagram reflected pain in the neck, mid-thoracic and lumbar areas, and some numbness in his left foot. On examination, Dr. Olson appreciated asymmetry of the left anterior neck musculature compared to the right, and thoracic pain on palpation with spasm. Dr. Olson liberalized Claimant's work restrictions to 10 pounds lifting and referred him for a physiatric evaluation.

23. Claimant saw Dr. Dwight Leggett, a physical medicine and rehabilitation specialist, on September 26, 2016. Claimant described the history as

> On [July 21, 2016], he states that he was given a cart to drive around to monitor inmates. He reports that the cart had minimal suspension and he had to drive over variable surfaces. This was quite "jarring." Soon after, he began to have pain in the low back as well as in his stomach muscles. He was evaluated by Mr. Quackenbush on 722/2016. He was diagnosed with a low back strain which was felt to be different from his chronic low back issues.

24. Claimant's primary area of concern was his low back, with constant stabbing, pinching, and sharp pain. He also reported intermittent pain, numbness, and tingling in the left leg. His symptoms were aggravated by prolonged standing and static postures. Claimant described muscle tension and twitching on the left side of his neck and stated, "He believes that this began on the same day as his workman's compensation claim, and has been worsening with time. This was especially true after his physical therapy visits, which seemed to intensify the spasms." Claimant also reported spasms in the abdominal muscles. Claimant told Dr. Leggett about his preinjury back problems, but was "quite specific that his current pain is very different in character from his previous back pain."

25. Dr. Leggett documented by far the most thorough physical examination performed up to that time. He noted significant myofascial tightness and tenderness in the low back with multiple palpable trigger points, and moderate tenderness in the left greater than right SI joints. He also documented significant myofascial tightness at the insertion of the abdominal muscles below the ribs. Cervical examination showed significant tension, primarily involving the left sternocleidomastoid muscle, which produced "noticeable asymmetry and muscle tension." Dr. Leggett opined Claimant's primary issue was his low back pain, mainly involving the L5-S1 facet joints. He recommended facet joint injections and a steroid injection into the pars region. He suggested a lumbar ESI if the facet injections did not help. Dr. Leggett also referenced "irritability" in the left rib/abdominal region, and opined "this will improve once we get the low back region under control." He suggested additional chiropractic treatment, with more focus on manual manipulation. Regarding the neck pain, Dr. Leggett stated, "at this point,

we have been asked to address the low back region, and any additional treatment to the neck will be left at your discretion, Dr. Olson."

26. Dr. Olson reviewed Dr. Leggett's report on October 13, 2016, and agreed with the recommendations.

27. On October 20, 2016, Claimant reported the chiropractic treatment was helpful, particularly regarding his neck spasms. He was still waiting for the facet injections to be approved.

28. Dr. Leggett reevaluated Claimant on December 5, 2016. The facet injections had been denied by a peer review due to "incomplete documentation," which Dr. Leggett could not understand given the thorough examination and detailed discussion documented after the initial visit. Claimant reported the chiropractic treatment was helpful but only giving short-term relief. Claimant was "extremely frustrated with his ongoing pain." Dr. Leggett noted the initial referral was limited to the low back, but he had now been authorized to look at the cervical region. Examination of his back revealed significant myofascial tenderness and palpable trigger points. Clinical findings regarding the neck were worse than at the previous evaluation. Dr. Leggett reiterated his recommendation for bilateral L5 S1 facet joint injections, and recommended trigger point injections for both cervical and lumbar myofascial pain. Depending on Claimant's response to the trigger point injections, he would consider an occipital nerve block or Botox injections for the neck. Dr. Leggett noted many months have passed since Claimant's injury with "minimal" treatment and opined "it is important that we be more aggressive with his treatment. I would like to prevent his acute pain from becoming chronic in nature."

29. Claimant underwent the L5 S1 facet blocks with Dr. Scheper on January 10, 2017. He followed up with Dr. Leggett on January 25, and reported approximately one week of significant pain reduction and increased function. Dr. Leggett considered it a positive diagnostic response, which "confirms that we are targeting the right pain generation." He recommended bilateral medial branch blocks, and possible rhizotomy. Dr. Leggett noted the trigger point injections had been denied.

30. Dr. Sparr performed electrodiagnostic testing on February 8, 2017, which showed no evidence of lumbosacral radiculopathy, sciatic, or distal compression neuropathy.

31. On March 15, 2017, Dr. Leggett noted the medial branch blocks had been denied. Dr. Leggett was frustrated by the ongoing difficulty obtaining authorization for treatment, which he believed was impeding Claimant's recovery. He could not understand why the blocks had been denied given the extensive and thorough documentation in his previous reports. Dr. Leggett further explained,

> On exam, there continue to be multiple areas of myofascial pain generation with clear trigger points and associated twitch responses. In the past, trigger point injections have been requested and denied. Similar was noted for the request for massage treatments.

> He has received authorization for chiropractic treatments, which were beneficial. Unfortunately, he has completed this course of treatment. I believe that the overall effect of the chiropractic treatment, while helpful, was not nearly as impactful as coordinating additional treatments. [Claimant's] pain has been going on for months, with his care being sporadic at best. We are having extreme difficulty with any sort of recommended treatment being approved. When a form of treatment is approved, it takes a significant amount of time for this to be completed. With the multiple regions of pain generation and the worsening nature of his pain, a multifactorial approach to his care is required. This is also been instructed by insurance, selecting only part of the recommended course of medical treatment. As discussed in the past, it seems of the insurance company is directing his medical care.
>
> Despite the above issues, I will continue to move forward with [Claimant's] best interest in mind. With this, I will again request trigger point injections and massage.
>
> For the ongoing neck pain, there seems to be an evolving spasticity. This is not surprising in that no treatment has been approved to target this region. . . . Botox injections may be needed, as previously discussed.
>
> I will have him return to clinic as soon as some form of treatment is authorized. Despite the disruption in his care, I will do my best to move forward with any possible treatment that I can.

32. The medial branch blocks were ultimately completed on April 4, 2017. Claimant returned to Dr. Leggett the next day to discuss his response. Almost immediately after the injections, Claimant developed severe flare of pain and muscle spasm and multiple areas including his abdomen, low back, and neck. Dr. Leggett had a lengthy discussion with Claimant, but Claimant could not separate his low back pain from the increased pain and other areas of his body. Dr. Leggett opined, "With this, I am unable to identify any specific diagnostic improvement that would support the need for radiofrequency ablation." Dr. Leggett noted his of the recommendations remained denied. He stated,

> At this point, authorizations have been quite sporadic, and no specific treatment plan has been followed. I am running out of options . . . .
>
> Highest concern right now is the increasing left a cervical tension, which is evolving into spasticity. There seems to be a developing and increasing cervical dystonia. [Ideally], trigger point injections would be the first line to target this in coordination with manual treatments. However, this has been denied. Therefore, I will request authorization for Botox injections.

33. Claimant later declined Botox due to fear of possible complications and side effects.

34. On April 14, 2017, Dr. Olson noted he was "struggling" with Claimant's symptom complex, as "nothing really seems to make sense."

35. Claimant underwent cervical and thoracic MRIs on May 13, 2017. They showed diffuse degenerative changes and multiple bulging discs, but no obvious structural instability or compromise of the spinal cord or spinal nerve roots.

36. Claimant transferred his care to CCOM's Canon City clinic in May 2017 and started seeing Dr. Thomas Centi. Commencing on May 30, 2017, Dr. Centi issued a series of reports allegedly documenting essentially normal physical examinations of all areas involved in Claimant's claim, including no pain with palpation or movement of his cervical, thoracic, or lumbar areas and normal range of motion. These cloned examination notes are inconsistent with the accompanying pain diagrams and Dr. Leggett's detailed clinical findings. Dr. Centi also repeatedly alleged Claimant had described his symptoms as "minimal" and "improving," which is also belied by the pain diagrams and Dr. Leggett's records. The ALJ finds Dr. Centi's records inaccurate and unreliable and declines to give them substantial weight. The ALJ has given far greater weight to Claimant's pain diagrams and Dr. Leggett's thorough reports.

37. Dr. Leggett last saw Claimant on June 16, 2017. He had recently spoken with Dr. Centi who was under the mistaken impression Claimant only drove the sand rail "on a completely level surface" on the date of injury. Dr. Leggett was concerned about the persistent and progressive nature of Claimant's symptoms and suggested additional workup to investigate potential diffuse neurological issues such as ALS or muscle related dystrophy. He recommended a dexamethasone steroid burst to help with any inflammatory-related pain. He concluded,

> At this point, I do not have any other options to offer [Claimant]. We have tried some interventional procedures which did not provide the anticipated benefit. There are some procedures that he is not comfortable moving forward with. Other procedures have been denied. . . . I encouraged him to follow-up with [Dr. Centi] to see how the steroid burst performed. If there are any other treatment options that are available that I can assist with, I would be more than happy to do so.

38. Dr. Centi placed Claimant at MMI with no impairment and no permanent restrictions on July 20, 2017. Dr. Centi's report contains no significant discussion or analysis of MMI, which is surprising given the complex nature of Claimant's condition and his course of care.

39. Respondent filed a Final Admission of Liability (FAL) on August 28, 2017 based on Dr. Centi's MMI report. Despite Dr. Centi's recommendation for refills of Mobic, Robaxin, and Ultram, the FAL denied medical benefits after MMI.

40. Claimant timely objected to the FAL and requested a DIME.

41. Claimant saw Dr. Miguel Castrejon for the DIME on November 15, 2017. Claimant's gait was slow and unsteady, favoring the left leg. Cervical range of motion was

reduced, with “visible spasm” of the left sternocleidomastoid muscle, and scattered trigger points with muscle hypertonicity and spasm. Dr. Castrejon also appreciated hypertonicity and spasm of the thoracic and lumbar musculature. Sensation was decreased in an S1 distribution on the left. Gastrocnemius strength was 4/5 with “evident” atrophy. Dr. Castrejon diagnosed cervical spine “dystonic features,” thoracic sprain, lumbar strain/sprain with facetitis, aggravation of pre-existing spondylolisthesis at L5-S1, and left S1 radiculopathy. He opined theses diagnoses were causally related to Claimant’s work activity on July 21, 2016. Regarding the cervical spine, he opined, “the presence of a recent traumatic event (the activity of July 21, 2016 in combination with an apparent injury during participation in physical therapy) argues toward the cervical spine as being considered industrial in nature.” Dr. Castrejon further commented that Dr. Centi’s “template examination” reports made him wonder “whether he ever reviewed Dr. Olson’s report of April 14, 2017 and respectfully question whether he examined the same individual that I, Dr. Olson and Dr. Olson’s PA examined.”

42. Dr. Castrejon determined Claimant is not at MMI. He recommended flexion and extension x-rays, a neurosurgical consultation, repeat electrodiagnostic testing, and consideration of left L5 and S1 nerve root blocks. He also recommended a psychological evaluation to help Claimant manage his chronic pain.

43. On February 2, 2018, Claimant completed an annual refresher Defensive Tactics and Pressure Points Control Tactics course, required of all employees to work around inmates. Mr. James Holcomb has taught the course for the past 10 years. Mr. Holcomb testified the PPCT testing is physically demanding and demonstrated several tactics during the hearing. Some tactics and techniques require the ability to freely turn one’s neck and twist at the waist. Others require bending at the waist and kneeling to take physical control of an inmate on the floor. Mr. Holcomb explained, “I don’t expect anyone to be an MMA fighter,” and tells the participants “when you take this class, just do the best you can.” Mr. Holcomb certified Claimant proficient after completing the refresher course in February 2018. Claimant also passed the course in approximately January or February 2017.

44. Before completing the course, Claimant completed a form on which he referenced “back and neck problems” as conditions that “may impede participation in this program.” Mr. Holcomb admitted he did not specifically recall the refresher session Claimant attended in February 2018, and his testimony merely described the techniques he teaches generally.

45. Claimant testified he struggled with the refresher course and could not complete few tactics. He recalled the 2018 course was “gentler” than some previous courses, and not as strenuous as those Mr. Holcomb described generally.

46. Dr. Allison Fall performed an IME for Respondent on March 15, 2018. She disagreed with Dr. Castrejon’s opinion Claimant is not at MMI. She opined his physical examination findings were nonphysiologic and self-limited. In contrast to examinations by Dr. Leggett and Dr. Castrejon, Dr. Fall stated there was no acute spasm on palpation of

Claimant's neck. Dr. Fall thought Claimant's presentation was exaggerated and nonsensical, and none of his ongoing complaints were related to his work.

47. Dr. Michael Rauzzino performed an IME for Respondent on April 3, 2018. His conclusions echoed those reached by Dr. Fall, namely that Claimant did not injure his back or neck at work at work on July 21, 2016, and requires no further treatment in relation to any work exposure. Specifically, Dr. Rauzzino opined,

> [Claimant's] vague and diffuse complaints have morphed over the course of his claim. There is nothing in the records to suggest that he sustained a specific injury as a result of riding in the sand rail or as a result of his treatment such that he would have sustained injury to the cervical spine, specifically dystonia or cervical facetogenic disease for which treatment has been proposed.

48. Dr. Rauzzino testified for Respondent in an evidentiary deposition on June 4, 2018. His testimony tracked the opinions expressed in his IME report. Dr. Rauzzino testified Claimant does not have cervical dystonia[1] based on his presentation and the mechanism of injury. Dr. Rauzzino opined it was not medically probable Claimant developed cervical dystonia because of any activity in therapy. Dr. Rauzzino reviewed Claimant's August 2016 lumbar MRI and identified no acute lumbar spine injury. He opined Claimant's MRI findings are consistent with a chronic disk bulge with no evidence of acute annular tear or hemorrhage to suggest any acute process.

49. Dr. Castrejon testified in an evidentiary deposition on September 26, 2018. He reviewed additional medical records before the deposition, including Dr. Rauzzino's and Dr. Fall's IME reports. Dr. Castrejon admitted he had not known about Claimant's participation in the PPCT refresher course, and would have doubted he could complete such a program. Nonetheless, none of the additional information convinced Dr. Castrejon to change his opinions regarding injury-related body parts or MMI.

50. Dr. Fall testified for Respondent in a post-hearing deposition on December 18, 2018, consistent with the opinions expressed in her IME report. She testified Claimant's presentation at Dr. Castrejon's DIME and her IME were incompatible with her general understanding of the defensive tactics in the PPCT course. Dr. Fall reiterated her opinion Claimant's presentation is "exaggerated" and "does not make physiologic sense." She maintained that Claimant is at MMI and requires no further treatment for any work-related condition.

51. Claimant's testimony regarding the onset and progression of symptoms in relation to his work is credible and persuasive.

[1] The ALJ notes Dr. Castrejon did not specifically diagnose cervical dystonia, but rather diagnosed "dystonic features."

52. Respondent failed to prove a basis to withdraw its admission of liability. The preponderance of persuasive evidence shows Claimant suffered a compensable injury on July 21, 2016.

53. Respondent failed to overcome the DIME's determination Claimant is not at MMI by clear and convincing evidence. Respondent failed to overcome the DIME's causation determination regarding Claimant's cervical spine. The contrary opinions of Dr. Fall and Dr. Rauzzino amount to "mere differences of medical opinion," which are insufficient to overcome the DIME.

CONCLUSIONS OF LAW

A. Withdrawal of admissions

By filing an admission of liability, the Respondent "admitted that the claimant sustained the burden of proving entitlement to benefits." *City of Brighton v. Rodriguez*, 318 P.3d 496, 507 (Colo. 2014). If the respondents seek to withdraw the admission of liability, they must prove by a preponderance of the evidence that the claimant suffered no compensable injury. *See* § 8-43-201(1) ("a party seeking to modify an issue determined by a general or final admission … shall bear the burden of proof for any such modification."). Under *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000), the respondents may withdraw an admission of liability even after a claimant has gone through the DIME process. But to ensure that a request to withdraw an admission is not merely a "tactical" pretext to avoid the heightened burden of proof regarding DIMEs, the respondents must prove the claimant suffered no compensable injury in the first instance. *Id*. Once the claimant crosses the threshold for compensability, determinations of MMI are driven by ATPs and the DIME process.

The existence of a pre-existing condition does not disqualify a claim for compensation if an industrial injury aggravates, accelerates, or combines with a pre-existing condition to produce disability or a need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Compensable medical treatment includes evaluations or diagnostic procedures to investigate the existence, nature, or extent of an industrial injury. *Garcia v. Express Personnel*, W.C. No. 4-587-458 (August 24, 2000). Pain is a typical symptom from the aggravation of a pre-existing condition, and if the pain triggers the claimant's need for medical treatment, the claimant has suffered a compensable injury. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Dietrich v. Estes Express Lines*, W.C. No. 4-921-616-03 (September 9, 2016). But the mere fact that a claimant experiences symptoms at work does not necessarily mean the employment aggravated or accelerated the pre-existing condition. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968); *Cotts v. Exempla*, W.C. No. 4-606-563 (August 18, 2005). Rather, the ALJ must determine whether the need for treatment was the proximate result of an industrial aggravation or is merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

To prove an aggravation, a claimant need not show an injury objectively caused any identifiable structural change to their underlying anatomy. Rather, a purely symptomatic aggravation is sufficient for an award of medical benefits if it caused the claimant to need treatment he would not otherwise have required. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Dietrich v. Estes Express Lines*, W.C. No. 4-921-616-03 (September 9, 2016).

Even a "minor strain" or a "temporary exacerbation" of a pre-existing condition can be a sufficient basis for a compensable claim if it was caused by a claimant's work activities and caused him to seek medical treatment. *E.g., Garcia v. Express Personnel*, W.C. No. 4-587-458 (August 24, 2004); *Conry v. City of Aurora*, W.C. No. 4-195-130 (April 17, 1996).

As found, Respondents failed to prove a basis for withdrawing the admission of liability. The persuasive evidence shows Claimant more likely than not suffered at least soft tissue strains and a symptomatic aggravation of his pre-existing condition as a proximate result of his work activities on July 21, 2016. The symptoms reasonably caused a need for treatment and limitations that impeded his ability to perform his regular work. Although Claimant had prior back problems, they were tolerable and well managed before July 21, 2016. The January 2016 slip and fall temporarily aggravated Claimant's back but he recovered well after two months of therapy. Claimant's statement that his symptoms after July 21, 2016 differed greatly from before the accident is credible and supported by the medical records. The fact that Claimant's symptoms may have expanded and intensified since the original injury does not change the ALJ's conclusion he suffered a compensable injury in the first instance.

B. Overcoming the DIME

"Maximum Medical Improvement" (MMI) is defined as the point when any medically determinable physical or mental impairment as a result of the industrial injury has become stable, and no further treatment is reasonably expected to improve the condition. Section 8-40-201(11.5). The DIME's determination regarding MMI is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b) and (c); *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). In determining whether a claimant is at MMI, the DIME "inherently" must decide whether further treatment is causally related to the industrial injury, and the DIME's determination that a particular condition is or is not related to the industrial injury is binding unless overcome by clear and convincing evidence. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998). Clear and convincing evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). The party challenging a DIME's conclusions must demonstrate it is "highly probable" that the MMI finding is incorrect. *Qual-Med*, 961 P.2d at 592; *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A "mere difference of medical opinion" does not constitute clear and convincing evidence that the DIME is incorrect. *E.g., Gutierrez v. Startek USA, Inc*., W.C. No. 4-842-550-01 (March 18, 2016).

As found, Respondent failed to overcome Dr. Castrejon's MMI opinion. Reasonable physicians can disagree on whether Claimant's ongoing back and neck symptoms are causally related to his work on July 21, 2016. In his report and deposition testimony, Dr. Castrejon provided well-reasoned and thorough explanations for his opinions and conclusions. Dr. Castrejon considered Claimant credible. Dr. Leggett also believed Claimant's complaints were genuine and the lion's share of his symptoms relate to the admitted injury. Additionally, Dr. Leggett noted at least some of the worsening over time is attributable to delays in authorization and denial of some requested treatment. The record shows Claimant experienced the onset of low back and mid back pain shortly after operating the sand rail on July 21, 2016. Claimant has consistently attributed his symptoms to that activity. He has consistently stated his symptoms after July 21, 2016 were substantially different than his previous back problems. Claimant's physical condition as depicted in the medical records after July 21, 2016 appears significantly worse than before the injury. Dr. Castrejon synthesized all the available information, which led him to conclude Claimant's current back symptoms are more likely than not injury-related. Dr. Fall and Dr. Rauzzino's contrary opinions are amount to "mere differences of opinion," and do not persuade the ALJ to overturn the DIME.

Respondent's most compelling evidence is the testimony of James Holcomb. At first blush, Claimant's completion of the defensive tactics refresher course in 2018 appears inconsistent with his reported symptoms and limitations. Mr. Holcomb appeared sincere and the ALJ has no reason to doubt the general descriptions he provided of the physical maneuvers involved. But it requires supposition to connect the dots between Mr. Holcomb's general demonstration of tactics and Claimant's *actual performance* in the course. Mr. Holcomb testified he does not "expect anyone to be an MMA fighter" and tells the participants to "do the best they can." It seems reasonable to infer a wide range of proficiency among DOC employees, many of whom probably complete the course without looking like the second coming of Bruce Lee. Moreover, Mr. Holcomb admitted he had no specific recollection of Claimant's refresher training, so he cannot directly contradict Claimant's testimony of how he managed to get through the course despite his pain and limitations. The ALJ is also mindful that Dr. Leggett and Dr. Castrejon documented objective clinical findings to corroborate Claimant's reported symptoms, including muscle spasm and trigger points. Respondent's primary argument is Claimant's completion of the refresher course "is inconsistent with an ongoing need for medical care and permanent impairment." The ALJ is not persuaded to draw that inference, particularly in the context of a clear and convincing evidence burden.

Regarding the neck, Claimant asserts he injured his neck in physical therapy prescribed for his compensable injury. He told multiple providers the same thing since August 2016. Dr. Castrejon was persuaded by Claimant's assertion and incorporated it into his MMI determination. As a result, Respondent must prove a negative, *i.e.*, that Claimant did not injure his neck, by clear and convincing evidence. While there is room for legitimate disagreement on this point, Respondent's evidence does not rise to the level of clear and convincing.

Nor does the ALJ find clear and convincing evidence to overcome Dr. Castrejon's recommendations for further evaluations and treatment. Several of Dr. Castrejon's

recommendations are diagnostic in nature, which seems reasonable given the challenging and complex nature of Claimant's presentation. Diagnostic procedures are a legitimate basis to forestall MMI when such procedures have a reasonable prospect of diagnosing or defining the claimant's condition so as to suggest a course of further treatment. *Soto v. Corrections Corp. of America*, W.C. No. 4-813-582 (October 27, 2011). The ALJ concludes that standard is satisfied here.

Additionally, the ALJ sees no persuasive evidence to contradict Dr. Castrejon's opinion that Claimant would benefit from a psychological assessment and possible counseling. The Chronic Pain MTGs provide,

> All patients who are diagnosed as having chronic pain should be referred for a psychosocial evaluation, as well as concomitant interdisciplinary rehabilitation treatment. This referral should be performed in a way so as to not imply that the patient's claims are invalid or that the patient is malingering or mentally ill. Even in cases where no diagnosable mental condition is present, these evaluations can identify social, cultural, coping, and other variables that may be influencing the patient's recovery process and may be amenable to various treatments including behavioral therapy. As pain is understood to be a biocide Co. social phenomenon, these evaluations should be regarded as an integral part of the assessment of chronic pain conditions.[2]

Finally, Respondent's argument the ALJ has no authority to order treatment recommended a non-ATP (the DIME) is unpersuasive for several reasons. First, the ALJ is not ordering any specific treatment. The sole issues for determination are (1) Respondent's request to withdraw the GAL, and (2) Respondent's attempt to overcome the DIME regarding MMI. Claimant has not requested the ALJ to award any specific treatment. Second, Respondent's argument would mean a DIME could never make treatment recommendations, which would eviscerate the ability to declare a claimant not at MMI. The DIME's role is not to simply choose between treatment recommendations made by ATPs. Rather, the DIME gives an independent opinion regarding any treatment he or she believes is necessary to bring the claimant to MMI. It is then incumbent on ATPs to implement those recommendations, or for the parties to otherwise find a way to resolve the matter. The possibility that a claimant may be whipsawed between the DIME and a recalcitrant ATP, while unfortunate, is simply an inherent feature of this process. *Williams v. Kunau*, 147 P.3d 33 (Colo. 2006).

ORDER

It is therefore ordered that:

1. Respondent's request to withdraw its admission of liability is denied and dismissed.

[2] Rule 17, Exhibit 9, § (F)(2).

2. Respondent’s request to overcome the DIME regarding MMI is denied and dismissed.

3. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 5, 2019

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUE

Whether Claimant has established by a preponderance of the evidence that he is entitled to receive reasonable, necessary and related medical maintenance benefits designed to relieve the effects of his admitted June 27, 2005 lower back injury or prevent further deterioration of his condition pursuant to *Grover v. Industrial Comm'n.,* 759 P.2d 705 (Colo. 1988).

FINDINGS OF FACT

1. On June 27, 2005 Claimant suffered an admitted industrial injury to his lower back while working for Employer. Claimant received conservative medical treatment through Authorized Treating Physician (ATP) Robert Kawasaki, M.D.

2. In February 2006 Gary Ghiselli, M.D. performed microdiscectomy surgery at the L5-S1 level of Claimant's lumbar spine. However, Claimant continued to report lower back and left lower extremity symptoms. A lumbar MRI revealed recurrent disc herniation at the L5-S1 level that displaced the left S1 nerve root. Dr. Ghiselli informed Claimant that a repeat microdiscectomy would likely relieve his left lower extremity symptoms. However, because of concerns about Claimant's lower back pain, Dr. Ghiselli referred Claimant back to Dr. Kawasaki for diagnostic/therapeutic epidural steroid injections (ESIs).

3. Dr. Kawasaki administered ESIs and medial branch blocks. He also prescribed physical therapy. On November 14, 2006 Dr. Kawasaki determined that Claimant had reached Maximum Medical Improvement (MMI) and assigned a 16% whole person impairment rating.

4. In a November 28, 2006 visit with Dr. Kawasaki Claimant reported occasional decreased sensation in his genital area and erectile dysfunction (ED). Although Claimant had been experiencing the ED symptoms for several months, he was reluctant to report them to Dr. Kawasaki. Dr. Kawasaki noted that the ED symptoms failed to represent an acute change in Claimant's condition. He subsequently referred Claimant for a repeat lumbar spine MRI.

5. On January 11, 2007 Dr. Ghiselli reviewed the repeat MRI findings with Claimant. The MRI continued to reflect the recurrent disc herniation that existed on the initial MRI. Dr. Ghiselli commented that Claimant's radicular symptoms were not significant. He explained that "[d]ue to the confounding ED, it would be unreasonable to decompress the L5-S1 level. I do not think that this is the reason for his [ED] and it may be contributing to his lower back and left lower extremity complaints." Dr. Ghiselli recommended a second surgery but Claimant was reluctant to proceed. He thus referred Claimant back to Dr. Kawasaki to discuss additional treatment options.

6. Dr. Kawasaki referred Claimant to urologist Seth Glick, M.D. Dr. Glick recommended a trial of Viagra for Claimant's ED. He did not believe there were any problems with Claimant's lower urogenital tract and noted that the ED could be related to psychological issues or back pain.

7. On March 15, 2007 Claimant returned to Dr. Ghiselli for an examination. Dr. Ghiselli again recommended surgery to decompress the L5-S1 level. He reasoned that surgery would likely improve Claimant's left lower extremity complaints but would not likely correct his back pain or ED symptoms.

8. On April 24, 2007 Claimant underwent a Division Independent Medical Examination (DIME) with Greg Reichhardt, M.D. Claimant reported decreased sensation throughout the entire left side of his body including his face, arm, trunk and leg. Dr. Reichhardt noted diffuse weakness throughout the entire left upper and lower extremity. He diagnosed Claimant with lower back pain, left hemi-body sensory loss unlikely related to his industrial injury, sexual dysfunction and gross numbness of uncertain etiology. Dr. Reichhardt detailed that "Claimant's presentation raises several concerns. His sexual dysfunction is not well explained based on the lumbar MRI. In addition, he has neurologic symptoms and findings which are unexplained based on his back injury. This likely represents a neurologic condition unrelated to his work-related injury or manifestation of a non-physiologic presentation." He recommended a psychological evaluation, further urologic testing and electrodiagnostic testing. Dr. Reichhardt agreed with Dr. Kawasaki that Claimant had reached MMI on November 14, 2006. He assigned a 10% impairment for a specific disorder of the lumbar spine and a 17% rating for range of motion deficits for a total 25% whole person impairment. Dr. Reichhardt did not assign impairment ratings for sexual dysfunctions or depression because the conditions were not related to his June 27, 2005 industrial injury.

9. On October 29, 2007 Claimant visited clinical psychologist Rebecca Hawkins, PhD. for an examination. Claimant reported that he had not experienced ED problems prior to his February 2006 back surgery. Dr. Hawkins noted that, after the discectomy in February 2006, Claimant no longer had typical morning erections and did not respond to sexual stimulation. Claimant's ED did not improve with Viagra.

10. On October 31, 2007 Administrative Law Judge Michael E. Harr issued Findings of Fact, Conclusions of Law and an Order in the present matter. ALJ Harr concluded that Claimant had demonstrated his condition worsened as of September 25, 2007 and he was no longer at MMI. He thus determined that Dr. Kawasaki's recommendations for further urological testing and a psychological evaluation were reasonably necessary to cure and relieve the effects of Claimant's June 27, 2005 industrial injury. Nevertheless, ALJ Harr reasoned that Claimant's "ongoing prescription for Viagra or similar medication" was not reasonable and necessary.

11. On November 6, 2007 Claimant returned to Dr. Hawkins for an evaluation. Claimant reported multiple issues including ED, psychological concerns and postsurgical problems. Dr. Hawkins diagnosed major depressive disorder, probable male erectile disorder and a pain disorder. She determined that psychological factors

were likely contributing to his experience of pain and suffering. Dr. Hawkins also noted that Claimant's ED might be multifactorial. She recommended up to 10 psychotherapy sessions and treatment with Wellbutrin. Dr. Hawkins summarized that Claimant's depressive symptoms appeared to be "reactive to his injury, chronic pain, and limitations in his ability to function occupationally and sexually."

12. On May 5, 2008 Claimant's treating urologist Fred Grossman. M.D. addressed the cause of his ED and hypogonadism after Insurer's adjuster denied treatment for the conditions. Dr. Grossman explained that Claimant had hypogonadism or reduced testosterone as a result of "sustained action oral opioids" that subsequently caused his ED. He included "a copy of a recent article from the Journal of Pain that documented the occurrence of hypogonadism in men consuming sustained action oral opioids."

13. On May 15, 2008 urologist Richard R. Augspurger, M.D. provided his opinion on the cause of Claimant's ED after reviewing Dr. Grossman's report. He noted that he could not demonstrate that a neurological condition was causing Claimant's ED. However, he remarked that low testosterone levels may be attributed to narcotic use. Dr. Augspurger reasoned that, if Claimant's ED was related to narcotic use, the ED would be "indirectly related" to his industrial lower back injury.

14. After additional conservative medical treatment, diagnostic testing and psychological counseling Claimant returned to Dr. Kawasaki on August 25, 2009. Claimant reported that he continued to suffer leg pain and back stiffness. Dr. Kawasaki noted that he had multiple discussions with Claimant about decreasing opioid medications to restore endocrine function and "potentially" restore sexual function. He diagnosed Claimant with the following: (1) L5-S1 discectomy with postlaminectomy syndrome; (2) chronic left S1 radiculopathy; (3) chronic opioid dependence; (4) hypogonadism with hypotestosteronism secondary to opioid use that resulted in sexual dysfunction; and (5) adjustment disorder with depressed mood. Dr. Kawasaki determined that Claimant had reached MMI. However, Claimant would require significant medical maintenance treatment including a gym membership for 12 months and 10 psychological visits with Dr. Hawkins over the following 12 months. Dr. Kawasaki explained that Claimant would continue the following medications for an indefinite period: (1) Ambien CR; (2) Wellbutrin XL; (3) Ibuprofen and (4) Zoloft. He also remarked that Claimant would require follow-up care with Dr. Grossman. Dr. Grossman was prescribing Cialis, Androgel and penile injections. Finally, Dr. Kawasaki commented that Claimant was not interested in any additional surgical interventions.

15. On January 25, 2011 Claimant returned to Dr. Kawasaki for maintenance treatment. Dr. Kawasaki remarked that Claimant had been taken off multiple medications because of an elevation in liver function results after being treated for tuberculosis. Claimant reported that subsequent additional liver function testing revealed that his blood levels were returning to normal. He commented that he would be returning to Mali at the end of the week but would return in mid-March.

16. During 2015 and 2016 Claimant visited an emergency room for right-sided neck, back and hip pain. Claimant did not seek additional urological treatment during the period.

17. After additional maintenance visits with Dr. Kawasaki in 2017, Claimant returned to Dr. Hawkins for psychological treatment on January 16, 2018. Claimant reported that he had returned to the area because he had an independent medical examination scheduled with Brian D. Lambden, M.D. for the following day. He reported significant anxiety and depression as well as nocturnal panic attacks.

18. On January 17, 2018 Claimant visited Dr. Lambden for an independent medical examination. Dr. Lambden performed a physical examination and thoroughly reviewed Claimant's medical records. Claimant reported continued lower back symptoms that included low-level radiating pain down his left leg. Dr. Lambden concluded that Claimant's ED was not likely caused by opioid use, borderline low testosterone levels or surgery because his symptoms preceded his opioid use and surgery. He noted that medical literature suggested a likely psychological cause for Claimant's ED symptoms. Dr. Lambden thus determined that he was "not sure anything else" needed to be done for Claimant's ED. In addressing Claimant's chronic pain, Dr. Lambden reasoned that no further treatment was necessary because Claimant was not interested in surgical intervention and it was questionable whether surgery would provide a benefit 10 years after Claimant's industrial injury. Claimant had thus reached MMI. Regarding opioid dependence, Dr. Lambden agreed that Claimant should be switched from Opana to Percocet but attempt opioid tapering to reduce dependence. He also questioned whether Claimant required Lyrica and recommended reduction in Ibuprofen use. Finally, Dr. Lambden noted that Claimant's depression would resolve over time with case closure. He also stated that Claimant's use of anti-depressants was not unreasonable, but suggested the discontinuation of Sertraline because Claimant was not exhibiting depressive symptoms and the medication has a negative effect on ED.

19. In a March 22, 2018 report Dr. Lambden reviewed additional medical records from Dr. Kawasaki and Dr. Hawkins. He also considered a January 30, 2018 urine toxicology report that reflected Claimant's testosterone level was 291 with a normal range of 250-827.

20. On April 3, 2018 Claimant visited urologist John W. Tillett, M.D. for an examination. He evaluated Claimant's ED and hypogonadism. Claimant recounted that he had suffered an industrial lower back injury on June 27, 2005, subsequently underwent surgery and continued to experience back pain. Dr. Tillett noted that Claimant has received narcotic pain medications since 2005 and had visited Dr. Grossman since 2007 for ED and hypogonadism until Dr. Grossman's retirement. Claimant denied any ED prior to surgery and has managed his ED well with Cialis 10mg since 2008. He remarked that he currently lives in Mali but spends significant time in Denver to visit his ex-wife and children. Dr. Tillett noted that Claimant was taking the following medications: (1) Oxycodone HCL capsule; (2) Ibuprofen 800 mg oral capsule; (3) Lyrica 75 mg oral capsule; (4) Temazepam 7.5 mg oral capsule; (5) Bupropion HCL

tablet; (6) Cialis 10 mg oral tablet; and (7) Sertraline HCL 100 mg oral tablet. After conducting a physical examination, Dr. Tillett diagnosed Claimant with ED and hypogonadism or low testosterone.

21. On April 5, 2018 Dr. Tillett conducted a medical records review of Claimant's case. He recounted that Claimant had suffered an industrial lower back injury on June 27, 2005, subsequently underwent surgery and continued to experience back pain. In an addendum report dated April 24, 2018 Dr. Tillett noted that Dr. Lambden determined Claimant's ED was unrelated to chronic opioid use, low testosterone or surgery because the condition preceded surgery and opioid use. In contrast, Dr. Tillett explained that there was no evidence in the medical records that Claimant's ED existed prior to his surgery or opioid use. He also disagreed that low testosterone was unrelated to ED.

22. Claimant and Dr. Kawasaki testified at the hearing in this matter that Claimant currently takes the following medications:

a. 100 milligrams of Sertraline (an anti-anxiety medication for panic disorders);
b. Bupropion (an anti-depressant medication for major depressive disorders);
c. Ibuprofen (an anti-inflammatory medication for pain);
d. Lyrica, 75 milligrams (a neuropathic pain medication);
e. Oxycodone, 10 milligrams every six hours (a narcotic medication for pain),
f. Cialis 10 milligrams (for ED);
g. Temazepam (for sleep).

23. Respondents clarified at hearing that they were challenging the medications prescribed by Drs. Kawasaki and Tillett. Respondents specifically contested prescriptions for Cialis, Oxycodone, Lyrica and Bupropion. They did not seek a denial of all medical maintenance treatment.

24. Claimant testified at the hearing in this matter that he began suffering from constant back pain, depression and ED shortly after his June 27, 2005 industrial injury. He emphasized that he had not experienced ED prior to his lower back injury. Claimant noted that his pain medications reduce his symptoms. Although the medications do not completely eliminate his pain, they allow improved sleep and function. Claimant remarked that his psychotropic medications help him deal with anxiety and depression. Nevertheless, he continues to suffer panic attacks that are typically worse at night.

25. Dr. Kawasaki testified at the hearing in this matter. He stated that he has been Claimant's ATP since August 2005. Dr. Kawasaki explained that Claimant suffers from chronic pain as a result of his June 27, 2005 industrial injury. He requires opioid pain medications to improve his function. Without the medications Claimant would likely become non-functional and have difficulty getting out of bed. Dr. Kawasaki noted that Claimant takes a reasonable amount of opioid medications and there are no plans for weaning. Claimant specifically takes about 60 milligrams of morphine equivalent. The amount does not place Claimant in the "danger zone." In contrast, when individuals

take 90-120 milligrams of morphine equivalent, they tend to develop opioid-related problems. Dr. Kawasaki summarized that opioid medications assist Claimant in performing activities of daily living. He noted that Claimant has never presented with any addictive or aberrant behavior since he began treatment in August 2005.

26. Dr. Kawasaki explained that chronic pain can increase depression, anxiety and other psychosocial issues. He summarized that Claimant requires anti-depressant medications because of his industrial injury. Dr. Kawasaki specifically prescribed Bupropion 300 mg. Temazepam 75 mg and Sertraline 100 mg on January 15, 2018 for Claimant's symptoms of anxiety and depression. Furthermore, because Claimant has exhibited both objective and subjective pain symptoms consistent with the injured nerve in his lower back, Dr. Kawasaki prescribed Lyrica 75 mg on January 15, 2018.

27. Dr. Kawasaki explained that Claimant's extended opioid use for pain is partially responsible for his ED. He remarked that log-term use of opioid medications generally affects the endocrine system. Specifically, the use of opioids impairs the gonadal system that produces testosterone. Dr. Kawasaki commented that, although Claimant's ED was secondary to chronic opioid use, psychologic issues also contributed to his sexual dysfunction. He explained that Claimant felt powerless, had a shift in identity, lost his job, suffered pain, felt fear and experienced performance anxiety. Dr. Kawasaki commented that the preceding factors contribute to Claimant's sexual dysfunction. He detailed that Claimant underwent unsuccessful ED treatment modalities with penile injections, testosterone, clomid and Viagra. However, Claimant had success treating his ED when he began taking Cialis. Dr. Kawasaki thus continues to prescribe Cialis.

28. Dr. Tillett testified at the hearing in this matter. He explained that ED is a distressing medical condition in which a man is unable to achieve or sustain an erection. Hypogonadism refers to suboptimal production of sperm or testosterone. Dr. Tillett diagnosed Claimant with both ED and hypogonadism. He maintained that Claimant's chronic opioid use constituted a significant causative factor in his ED and hypogonadism conditions. Dr. Tillett remarked that the longer an individual is taking opioid medications, the greater the effect on erectile and testicular function. Moreover, Claimant's anxiety and depression may be contributing to his ED. Dr. Tillett determined that reducing Claimant's opioid medication now would likely not have much impact on his ED and testosterone function. The chronicity of opioid therapy has damaged Claimant's ability to recover erectile function and testosterone secretion.

29. Dr. Tillett recommended additional diagnostic testing for Claimant's hypogonadism condition. He explained that hypogonadism therapy can produce benefits such as increased sexual desire, libido, energy and lean muscle mass while also improving a general sense of well-being. The therapy can also cause improvements in emotional/psychologic parameters, lipid profiles/cholesterol levels and ED. Thus, beginning testosterone treatment could help decrease Claimant's depression while increasing his energy and level of functioning. Dr. Tillett explained that testosterone levels and erectile function are intertwined. He commented that the American Urology Association (AUA) guidelines on the management of ED recommend

that every man presenting with ED have a serum testosterone work-up. Dr. Tillett agreed with Dr. Kawasaki that Claimant should continue to use Cialis 10 mg. for treatment of his ED.

30. Dr. Lambden testified at the hearing in this matter. He maintained that Claimant should be gradually tapered from opioid medications. He specifically recommended ceasing Sertraline, Temazepam, Oxycodone, Bupropion, Lyrica and Ibuprofen. Dr. Lambden remarked that his preference for chronic pain management is to decrease opioids whenever possible. He also commented that opioids and Lyrica negatively impact ED. He explained that ED is a multifactorial problem not associated with Claimant's testosterone levels. Therefore, Claimant's use of opioids for his June 27, 2005 industrial injury did not cause his ED and Cialis should be discontinued. Furthermore, Dr. Lambden noted that Claimant was not having sufficient depressive symptoms to warrant continuing Sertraline in light of its negative effect on ED. He summarized that, once the case has been closed and Claimant has adjusted to living in Mali, his depression symptoms should resolve without medication.

31. Claimant has established that it is more probably true than not that he is entitled to receive reasonable, necessary and related medical maintenance treatment designed to relieve the effects of his admitted June 27, 2005 lower back injury or prevent further deterioration of his condition. Initially, Claimant suffered an industrial lower back injury on June 27, 2005, subsequently underwent surgery and continued to experience back pain. The record is replete with evidence that Claimant continues to suffer chronic pain, sleep disturbances, psychological problems and urological issues as a result of his June 27, 2005 injury.

32. Dr. Kawasaki has been Claimant's ATP since August 2005. He persuasively explained that Claimant suffers from chronic pain as a result of his June 22, 2005 industrial injury. He requires opioid pain medications to improve his function. Without the medications Claimant would likely become non-functional and have difficulty getting out of bed or completing activities of daily living. Dr. Kawasaki noted that Claimant takes a reasonable amount of opioid medications and there are no plans for weaning. Furthermore, Claimant noted that his pain medications reduce his symptoms. Although the medications do not completely eliminate his pain, they allow improved sleep and function.

33. Claimant remarked that his psychotropic medications help him deal with anxiety and depression. Nevertheless, he continues to suffer panic attacks that are typically worse at night. Dr. Kawasaki explained that chronic pain can increase depression, anxiety and other psychosocial issues. He summarized that Claimant requires anti-depressant medications because of his industrial injury. Dr. Kawasaki specifically prescribed Bupropion 300 mg. Temazepam 75 mg and Sertraline 100 mg on January 15, 2018 for Claimant's symptoms of anxiety and depression. Furthermore, because Claimant has exhibited both objective and subjective pain symptoms consistent with the injured nerve in his lower back, Dr. Kawasaki also prescribed Lyrica. Finally, Dr. Hawkins summarized that Claimant's depressive symptoms appeared to be

"reactive to his injury, chronic pain, and limitations in his ability to function occupationally and sexually."

34. Dr. Kawasaki further explained that Claimant's extended opioid use for pain is partially responsible for his ED. He remarked that long-term use of opioid medications generally affects the endocrine system. Specifically, the use of opioids impairs the gonadal system that produces testosterone. Dr. Kawasaki commented that, although Claimant's ED is secondary to chronic opioid use, psychologic issues also contribute to his sexual dysfunction. Similarly, Dr. Tillett diagnosed Claimant with both ED and hypogonadism. He maintained that Claimant's chronic opioid use constituted a significant causative factor in his ED and hypogonadism conditions. Dr. Tillett remarked that the longer an individual is taking opioid medications, the greater the effect on erectile and testicular function. He determined that reducing Claimant's opioid medication now would not likely have much impact on his ED and testosterone function. Furthermore, Dr. Grossman explained that Claimant had hypogonadism or reduced testosterone as a result of "sustained action oral opioids" that subsequently caused his ED. Moreover, Dr. Augspurger remarked that low testosterone levels may be attributed to narcotic use. He reasoned that, if Claimant's ED was related to narcotic use, the ED would be "indirectly related" to his industrial lower back injury.

35. Dr. Tillett also recommended additional diagnostic testing for Claimant's hypogonadism condition. He explained that hypogonadism therapy can produce benefits such as increased sexual desire, libido, energy and lean muscle mass while also providing a general sense of well-being. The therapy can also cause improvements in emotional/psychologic parameters, lipid profiles/cholesterol levels and ED. Thus, beginning testosterone treatment could help decrease Claimant's depression while increasing his energy and level of functioning.

36. In contrast, Dr. Lambden maintained that Claimant should be gradually tapered from opioid medications. Dr. Lambden concluded that Claimant's ED is a multifactorial problem not likely caused by opioid use, borderline low testosterone levels or surgery because his symptoms preceded his opioid use and surgery. He reasoned that Claimant's use of opioids as a result of his June 27, 2005 industrial injury did not cause his ED and Cialis should be discontinued. Furthermore, Dr. Lambden noted that Claimant was not having sufficient depressive symptoms to warrant continuing Sertraline in light of its negative effect on ED. He summarized that, once the case has been closed and Claimant has adjusted to living in Mali, his depression symptoms should resolve without medication. However, the persuasive evidence reveals that Claimant began suffering from constant back pain, depression and ED as a result of his June 22, 2005 industrial injury. The record and medical opinions of Drs. Kawasaki, Hawkins and Tillett reflect that Claimant's pain medications, psychotropic prescriptions and ED medications have not only reduced his pain but also maximized his level of function over an extended period of time consistent with the Division of Workers' Compensation *Medical Treatment Guidelines* (*Guidelines*). Moreover, the testosterone therapy recommended by Dr. Tillett will likely decrease Claimant's depression while improving his level of functioning. Accordingly, Claimant shall receive reasonable, necessary and

related medical maintenance benefits designed to relieve the effects of his June 27, 2005 industrial injury or prevent further deterioration of his condition.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. To prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App. 1995). Once a claimant establishes the probable need for future medical treatment he "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna v. Print Expediters, Inc.*, 77 P.3d 863, 866 (Colo. App. 2003); *see Karathanasis v. Chilis Grill & Bar,* W.C. No. 4-461-989 (ICAP, Aug. 8, 2003). Whether a claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the Judge. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 919 P.2d 701, 704 (Colo. App. 1999).

5. The *Guidelines* provide, in relevant part, that "medications should be clearly linked to improvement of function, not just pain control." WCRP 17, Exhibit 9 (H)(6). Furthermore, the *Guidelines*, specify that, "examples of routine functions include

the ability to perform work tasks, drive safely, pay bills or perform math operations, remain alert and upright for 10 hours per day, or participate in normal family and social activities." WCRP 17, Exhibit 9(H)(6).

6. As found, Claimant has established by a preponderance of the evidence that he is entitled to receive reasonable, necessary and related medical maintenance treatment designed to relieve the effects of his admitted June 27, 2005 lower back injury or prevent further deterioration of his condition. Initially, Claimant suffered an industrial lower back injury on June 27, 2005, subsequently underwent surgery and continued to experience back pain. The record is replete with evidence that Claimant continues to suffer chronic pain, sleep disturbances, psychological problems and urological issues as a result of his June 27, 2005 injury.

7. As found, Dr. Kawasaki has been Claimant's ATP since August 2005. He persuasively explained that Claimant suffers from chronic pain as a result of his June 22, 2005 industrial injury. He requires opioid pain medications to improve his function. Without the medications Claimant would likely become non-functional and have difficulty getting out of bed or completing activities of daily living. Dr. Kawasaki noted that Claimant takes a reasonable amount of opioid medications and there are no plans for weaning. Furthermore, Claimant noted that his pain medications reduce his symptoms. Although the medications do not completely eliminate his pain, they allow improved sleep and function.

8. As found, Claimant remarked that his psychotropic medications help him deal with anxiety and depression. Nevertheless, he continues to suffer panic attacks that are typically worse at night. Dr. Kawasaki explained that chronic pain can increase depression, anxiety and other psychosocial issues. He summarized that Claimant requires anti-depressant medications because of his industrial injury. Dr. Kawasaki specifically prescribed Bupropion 300 mg. Temazepam 75 mg and Sertraline 100 mg on January 15, 2018 for Claimant's symptoms of anxiety and depression. Furthermore, because Claimant has exhibited both objective and subjective pain symptoms consistent with the injured nerve in his lower back, Dr. Kawasaki also prescribed Lyrica. Finally, Dr. Hawkins summarized that Claimant's depressive symptoms appeared to be "reactive to his injury, chronic pain, and limitations in his ability to function occupationally and sexually."

9. As found, Dr. Kawasaki further explained that Claimant's extended opioid use for pain is partially responsible for his ED. He remarked that long-term use of opioid medications generally affects the endocrine system. Specifically, the use of opioids impairs the gonadal system that produces testosterone. Dr. Kawasaki commented that, although Claimant's ED is secondary to chronic opioid use, psychologic issues also contribute to his sexual dysfunction. Similarly, Dr. Tillett diagnosed Claimant with both ED and hypogonadism. He maintained that Claimant's chronic opioid use constituted a significant causative factor in his ED and hypogonadism conditions. Dr. Tillett remarked that the longer an individual is taking opioid medications, the greater the effect on erectile and testicular function. He determined that reducing Claimant's opioid medication now would not likely have much

impact on his ED and testosterone function. Furthermore, Dr. Grossman explained that Claimant had hypogonadism or reduced testosterone as a result of "sustained action oral opioids" that subsequently caused his ED. Moreover, Dr. Augspurger remarked that low testosterone levels may be attributed to narcotic use. He reasoned that, if Claimant's ED was related to narcotic use, the ED would be "indirectly related" to his industrial lower back injury.

10. As found, Dr. Tillett also recommended additional diagnostic testing for Claimant's hypogonadism condition. He explained that hypogonadism therapy can produce benefits such as increased sexual desire, libido, energy and lean muscle mass while also providing a general sense of well-being. The therapy can also cause improvements in emotional/psychologic parameters, lipid profiles/cholesterol levels and ED. Thus, beginning testosterone treatment could help decrease Claimant's depression while increasing his energy and level of functioning.

11. As found, in contrast, Dr. Lambden maintained that Claimant should be gradually tapered from opioid medications. Dr. Lambden concluded that Claimant's ED is a multifactorial problem not likely caused by opioid use, borderline low testosterone levels or surgery because his symptoms preceded his opioid use and surgery. He reasoned that Claimant's use of opioids as a result of his June 27, 2005 industrial injury did not cause his ED and Cialis should be discontinued. Furthermore, Dr. Lambden noted that Claimant was not having sufficient depressive symptoms to warrant continuing Sertraline in light of its negative effect on ED. He summarized that, once the case has been closed and Claimant has adjusted to living in Mali, his depression symptoms should resolve without medication. However, the persuasive evidence reveals that Claimant began suffering from constant back pain, depression and ED as a result of his June 22, 2005 industrial injury. The record and medical opinions of Drs. Kawasaki, Hawkins and Tillett reflect that Claimant's pain medications, psychotropic prescriptions and ED medications have not only reduced his pain but also maximized his level of function over an extended period of time consistent with the Division of Workers' Compensation *Medical Treatment Guidelines* (*Guidelines*). Moreover, the testosterone therapy recommended by Dr. Tillett will likely decrease Claimant's depression while improving his level of functioning. Accordingly, Claimant shall receive reasonable, necessary and related medical maintenance benefits designed to relieve the effects of his June 27, 2005 industrial injury or prevent further deterioration of his condition.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant shall receive specifically delineated reasonable, necessary and related medical maintenance benefits as prescribed by Drs. Kawasaki and Tillett. The medical maintenance medications that Claimant shall receive include: (1) 100 milligrams of Sertraline (an anti-anxiety medication for panic disorders); (2) Bupropion (an anti-depressant medication for major depressive disorders); (3) Ibuprofen (an anti-

inflammatory medication for pain); (4) Lyrica, 75 milligrams (a neuropathic pain medication; (5) Oxycodone, 10 milligrams every six hours (a narcotic medication for pain); (6) Cialis 10 milligrams (for ED); and (7) Temazepam (for sleep).. Claimant shall also receive the additional testosterone therapy recommended by Dr. Tillett. Respondents shall be financially responsible for the preceding medical maintenance benefits.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUE

1. A determination of Claimant's Average Weekly Wage (AWW).

2. Whether Claimant is entitled to receive increased Temporary Partial Disability (TPD) and Temporary Total Disability (TTD) benefits based on a higher AWW.

STIPULATION

The parties agreed that Claimant's admitted AWW of $1,190.06 from Employer is not in dispute.

FINDINGS OF FACT

1. Employer is a rehabilitation facility that provides in-patient medical services to acutely injured and ill individuals. On December 5, 2017 Employer hired Claimant to work as an overnight Registered Nurse (RN). Employer's HR Director Rae Roberts testified that Claimant was hired to perform full-time employment consisting of three to four twelve-hour overnight RN shifts per week. Ms. Roberts explained that Claimant's position as an overnight RN included not only caring for patients but also supervising other employees.

2. Employer hired Claimant with the expectation that she would be available seven days each week. Claimant only limited her availability by requesting to have off every other weekend. Ms. Roberts explained that Employer's staffing needs changed weekly and monthly based on the number of patients who were at the facility and the acuity level of each patient. Because of the changing staffing needs, Employer did not offer Claimant a permanent, fixed schedule.

3. After Claimant secured a position with Employer, she tendered her written resignation with previous Employer Avamere on December 6, 2017. Claimant's resignation letter reflects that she ceased employment with Avamere because her new job with Employer offered an increased salary and a shorter commute.

4. Claimant explained that she had worked for Avamere since approximately 2012 as an RN performing overnight shifts. Similar to Employer, Avamere provides in-patient rehabilitation services to individuals. Claimant noted that the patients at Employer's facility tend to be more acutely ill or injured than the patients at Avamere. Otherwise, Claimant's job duties for Employer and Avamere were fairly similar.

5. Director of Nursing at Avamere Daniella Johnson, RN testified that when Claimant tendered her resignation on December 6, 2017 Avamere asked her to work on a PRN or "as needed" basis. Ms. Johnson remarked that nurses who are employed on a

PRN basis are expected to work at least one shift each month. The PRN shifts would be scheduled when Avamere required additional coverage and Claimant was available.

6. During January 2018 Claimant worked full-time for Employer. She specifically worked three to four twelve-hour shifts per week.

7. Ms. Johnson testified that in the first week or two of January 2018 she offered Claimant a full-time position at Avamere involving three shifts per week with a pay raise of $4.00-$5.00 per hour to match her pay rate from Employer. Claimant did not immediately accept the offer because she wanted to discuss the matter with her family.

8. On January 21, 2018 Claimant suffered injuries to her hip while working for Employer. She specifically slipped and fell on ice. Physicians assigned Claimant work restrictions. Claimant received Temporary Total Disability (TTD) benefits from Employer because it was unable to accommodate her restrictions. Claimant noted that Avamere was also unable to accommodate her work restrictions and she was placed on a leave of absence.

9. Ms. Johnson testified that Claimant contacted her and advised that she wanted to accept the full-time position at Avamere at the higher wage rate. However, she had just been injured in a slip and fall accident while working for Employer. Claimant agreed that she did not accept the offer to return to work full-time at the higher pay rate at Avamere prior to sustaining her work-related injuries on January 21, 2018.

10. Claimant explained that she never performed any PRN shifts at Avamere in January 2018 because they conflicted with her work schedule for Employer. She noted, and Ms. Johnson agreed, that her schedule with Employer received priority and any Avamere shifts would be scheduled around her work for Employer. Ms. Johnson confirmed that Avamere offered Claimant PRN shifts in January 2018 but Claimant was unavailable and did not work any shifts. She remarked that Avamere offers a flexible PRN schedule that could accommodate Claimant's full-time position with Employer.

11. Subsequent to her industrial injury while working for Employer, Claimant attended meetings at Avamere. The meetings permitted Claimant to remain current on her training requirements. Avamere paid Claimant for attending the meetings.

12. Claimant's rate of pay from Avamere for the period January 22, 2018 through August 15, 2018 was $30.40 per hour. Beginning August 16, 2018 Claimant's pay rate from Avamere increased to $34.00 each hour.

13. Claimant's 2017 W-2 Wage and Tax Statement from Avamere reflects that she earned total wages of $63,639.80 or an AWW of $1,223.04. Prior to December 2017 Claimant routinely worked three to five twelve-hour shifts per week at Avamere and did not have concurrent employment. She seeks to increase the admitted AWW of $1,190.06 by adding her AWW from Avamere. Claimant thus seeks a total AWW of $2,413.10.

14. Claimant's request to increase her base AWW from Employer by adding her AWW from Avamere in 2017 does not fairly approximate her wage loss or diminished

earning capacity at around the time of her Industrial injuries on January 21, 2018. Her wages from Avamere in 2017 do not reflect earnings as a result of concurrent employment. Claimant acknowledged that her 2017 wages from Avamere include weeks in which she worked five twelve-hour shifts. Working five twelve-hour overnight shifts each week at Avamere is incompatible with Employer's requirement of completing at least three twelve-hour overnight shifts each week.

15. Nevertheless, Claimant is entitled to an increase in her AWW as a result of concurrent employment with Avamere. Initially, Claimant credibly explained that she worked three to five twelve-hour shifts each week at Avamere and her employment with Employer involved similar job duties. Moreover, Claimant is required to work at least three twelve-hour shifts each week with Employer. She specifically worked three to four twelve-hour shifts per week for Employer during January 2018 but did not engage in concurrent work for Avamere during the time period.

16. Based on Claimant's credible testimony and employment records, she typically worked four twelve hour shifts or 48 hours per week at Avamere. Claimant continues employment with Avamere but is currently on a leave of absence status. She has attended paid meetings at Avamere to remain current on her training requirements. Claimant is thus concurrently employed by Employer and Avamere.

17. Because Claimant is required to work at least three twelve-hour shifts each week for Employer, adding an additional twelve-hour shift each week at Avamere accurately reflects her wage loss and diminished earning capacity. Claimant's rate of pay from Avamere beginning January 22, 2018 was $30.40 per hour. One twelve-hour shift per week times $30.40 yields an AWW from concurrent employment with Avamere of $364.80. Adding $364.80 to Claimant's admitted AWW with Employer of $1,190.06 yields a total AWW of $1554.86. A total AWW based on Claimant's work for Employer and concurrent employment with Avamere constitutes a fair approximately of her wage loss and diminished earning capacity as a result of her January 21, 2018 industrial injuries. Accordingly, Claimant is entitled to receive increased TPD and TTD benefits based on her higher total AWW of $1554.86.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Section 8-42-102(2), C.R.S. requires the Judge to determine a claimant's AWW based on her earnings at the time of injury. The Judge must calculate the money rate at which services are paid to the claimant under the contract of hire in force at the time of injury. *Pizza Hut v. ICAO,* 18 P.3d 867, 869 (Colo. App. 2001). However, §8-42-102(3), C.R.S. authorizes a Judge to exercise discretionary authority to calculate an AWW in another manner if the prescribed methods will not fairly calculate the AWW based on the particular circumstances. *Campbell v. IBM Corp.,* 867 P.2d 77, 82 (Colo. App. 1993). The overall objective in calculating an AWW is to arrive at a fair approximation of a claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 1997). Therefore, §8-42-102(3), C.R.S. grants an ALJ substantial discretion to modify the AWW if the statutorily prescribed method will not fairly compute a claimant's wages based on the particular circumstances of the case. *In Re Broomfield,* W.C. No. 4-651-471 (ICAP, Mar. 5, 2007).

5. When a worker is concurrently employed the ALJ may, in order to achieve fairness, include all wages in the computation of the AWW. *Broadmoor Hotel and Continental Ins. Co. v. Industrial Claim Appeals Office*, 939 P.2d 460 (Colo. App. 1996); *Guerrero Barrio v. GCA Services Group, Inc.*, W.C. No. 4-813-965 (ICAO, July 28, 2010); *see Miranda v. ISS Prudential Services, Inc. and/or Denver Public Schools,* W.C. Nos. 3-833-976, 3-908-234 and 4-105-113 (ICAO, Feb. 28, 1994) (where the claimant holds concurrent employment at the time of the injury, the ALJ has discretion to calculate the AWW to include the total income from the multiple employers). However, there is no mandate that wages from concurrent employment must be included in the AWW. *Coleman v. National Produce Service,* W.C. No. 4-601-676 (ICAO, July 12, 2005); *Yankee v. Flagship International,* W.C. No. 3-862-644 (ICAO, Dec. 7, 1988).

6. As found, Claimant's request to increase her base AWW from Employer by adding her AWW from Avamere in 2017 does not fairly approximate her wage loss or diminished earning capacity at around the time of her Industrial injuries on January 21, 2018. Her wages from Avamere in 2017 do not reflect earnings as a result of concurrent employment. Claimant acknowledged that her 2017 wages from Avamere include weeks in which she worked five twelve-hour shifts. Working five twelve-hour overnight shifts

each week at Avamere is incompatible with Employer's requirement of completing at least three twelve-hour overnight shifts each week.

7. As found, nevertheless, Claimant is entitled to an increase in her AWW as a result of concurrent employment with Avamere. Initially, Claimant credibly explained that she worked three to five twelve-hour shifts each week at Avamere and her employment with Employer involved similar job duties. Moreover, Claimant is required to work at least three twelve-hour shifts each week with Employer. She specifically worked three to four twelve-hour shifts per week for Employer during January 2018 but did not engage in concurrent work for Avamere during the time period.

8. As found, based on Claimant's credible testimony and employment records, she typically worked four twelve hour shifts or 48 hours per week at Avamere. Claimant continues employment with Avamere but is currently on a leave of absence status. She has attended paid meetings at Avamere to remain current on her training requirements. Claimant is thus concurrently employed by Employer and Avamere.

9. As found, because Claimant is required to work at least three twelve-hour shifts each week for Employer, adding an additional twelve-hour shift each week at Avamere accurately reflects her wage loss and diminished earning capacity. Claimant's rate of pay from Avamere beginning January 22, 2018 was $30.40 per hour. One twelve-hour shift per week times $30.40 yields an AWW from concurrent employment with Avamere of $364.80. Adding $364.80 to Claimant's admitted AWW with Employer of $1,190.06 yields a total AWW of $1554.86. A total AWW based on Claimant's work for Employer and concurrent employment with Avamere constitutes a fair approximately of her wage loss and diminished earning capacity as a result of her January 21, 2018 industrial injuries. Accordingly, Claimant is entitled to receive increased TPD and TTD benefits based on her higher total AWW of $1554.86.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant earned an AWW of $1554.86.

2. Claimant is entitled to receive increased TPD and TTD benefits based on her higher total AWW of $1554.86.

3. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it

within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: March 7, 2019.

Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Respondents have established that Claimant was responsible for the termination of his employment on October 19, 2018 based on his voluntary resignation and thus is not entitled to temporary total disability (TTD) benefits after that date.

FINDINGS OF FACT

1. Claimant is a 50 year old male who was employed by Employer as a dishwasher.

2. On July 17, 2017, while working, Claimant sustained a compensable injury to his right eye. On that date, a co-worker dropped a plate and a shard of the broken plate penetrated the Claimant's right eye causing him eventually to lose almost all sight in his right eye.

3. Claimant underwent extensive treatment for his injury and M. Susan Zickenfoose, M.D. became one of his authorized treating providers. In September of 2018, Dr. Zickenfoose noted that the duration of Claimant's condition was probably life and that he may never regain full vision in his right eye and may need injections in his eye for the rest of his life. Dr. Zickenfoose noted that Claimant was unable to be around heat and steam as it caused right eye irritation. She also noted that Claimant needed another surgery on his right eye. Dr. Zickenfoose noted that Claimant had not been completely incapacitated due to his injury, but that he had been incapacitated for multiple short periods of time due to medical treatment and recovery. Dr. Zickenfoose noted that Claimant would need to be off work for the new surgery and for visits with his eye doctor. *See* Exhibit J.

4. Claimant was scheduled for an additional surgery on October 8, 2018. Claimant worked on Friday October 5, 2018, his last scheduled day of work before surgery.

5. On October 8, 2018, Claimant underwent surgery that included a vitrectomy of the right eye. Claimant's diagnoses included epiretinal membrane, right and aphakia of the right eye. *See* Exhibits 2, K.

6. The aftercare instructions for Claimant following surgery included wearing his eye patch/shield the first night, positioning himself to avoid lying flat on his back, lifting of more than 10 pounds for 1 week, and no bending, stooping, or straining for one week. Claimant was scheduled for follow up visits. *See* Exhibit 1.

7. On October 13, 2018, Claimant went to the emergency room due to a headache and pain in his right eye. He was ultimately discharged with instructions to follow up the next day.

8. On October 14, 2018, Claimant called UC Health to report that he was not sure if he could make it to his follow up appointment due to weather and the cost of a taxi. Claimant reported that his eye felt better and that he didn't know if he needed to come in. Claimant was encouraged to come in due to potential pressure that could be high and put him at risk for vision loss. Claimant reported that he would come in and have his son bring him. *See* Exhibit 3.

9. On October 14, 2018, Claimant was evaluated at UC Health by Marisa Lau, M.D. Claimant reported that following his right eye surgery he had some delay in using eye drops due to difficulty getting medications because he was going through workers' compensation. Claimant also reported that he had stopped taking a different eye drop because he did not recall being told to continue those drops. Claimant reported that the day prior he had an acute right sided headache and that he went to the emergency department. Dr. Lau recommended Claimant continue the eye drop regimen for his right eye including five different types of drops. Dr. Lau emphasized the importance of compliance with the eye drop regimen. Her diagnosis noted ruptured globe of right eye with a retinal detachment surgery. *See* Exhibit 3.

10. On October 15, 2018, M. Susan Zickenfoose, M.D. evaluated Claimant. Dr. Zickenfoose noted that Claimant underwent eye surgery on October 8, 2018 and that he then had increased eye pain on October 13, 2018 and had to go to the emergency room where they found that the pressure in Claimant's eye was increased. Dr. Zickenfoose noted that Claimant could not work until he was rechecked by an eye doctor and by her and noted his work status as unable to work from October 15 through October 24, 2018. She scheduled Claimant for a return evaluation on October 24, 2018. *See* Exhibit 4.

11. Claimant did not go to the scheduled return evaluation. Claimant did not return to work for Employer. Claimant, without notifying his Employer or physicians, moved to Texas where he thought his finances would be in better shape since he owns a home in Texas.

12. On October 19, 2018, Claimant's counsel sent a letter to Respondents' counsel. The letter indicated that Claimant owned a home in Texas and had advised their office that day that he was moving to Texas and would need a change of physician immediately. Claimant's counsel noted that his staff would cancel all future appointments set in Denver. Claimant's counsel also indicated that Claimant had to treat urgently over the last weekend due to complications following surgery and that there was the potential Claimant would need treatment very soon. *See* Exhibit H.

13. On October 29, 2018, Claimant sent a fax to Employer indicating that he was resigning because he had moved to Texas. Claimant listed his resignation date as October 19, 2018. Claimant noted that he had surgery on October 8, 2018 and was in

pain since. Claimant noted he had been hospitalized on October 13, 2018 and that after he was released he saw other doctors. Claimant reported that he had moved to Texas on October 19. *See* Exhibits 5, H.

14. On October 30, 2018, Respondents filed a Petition to Modify, Terminate, or Suspend Compensation requesting to terminate TTD benefits from October 19, 2018 to ongoing. Respondents indicated that Claimant had been working for Employer within his restrictions but that he had voluntarily moved to Texas and voluntarily terminated his position with Employer as of October 19, 2018. *See* Exhibit C.

15. On October 31, 2018, Respondents filed an Amended General Admission of Liability noting temporary total disability benefits were admitted from October 8, 2018 thru ongoing. Respondents admitted for reasonable and necessary medical treatment to the right eye and noted that Claimant had been out of work since undergoing an eye surgery on October 8, 2018. *See* Exhibit B.

16. On November 6, 2018, Claimant objected to the Petition to Modify, Terminate, or Suspend Compensation. Claimant noted that he remained on restrictions while awaiting Respondents designation of a provider in Texas and argued that temporary benefits must continue until terminated according to Rule 6. *See* Exhibit D.

17. In early November, 2018 Claimant began treatment in Texas.

18. On November 6, 2018, Claimant was evaluated by Marc Ellman, M.D. and Ahmed Sollman, M.D. in Texas. Dr. Ellman filled out a Texas Workers' Compensation Work Status Report indicating that Claimant was still prevented from returning to work as of the date of injury July 17, 2017. Claimant was expected to be prevented from returning to work through the time of recommendation from a primary care physician/retina specialist. Claimant reported to Dr. Sollman that about a year ago, a piece of glass went into his right eye and that he had multiple eye surgeries. Claimant reported that he had recently moved to Texas, had constant headaches, and sees floaters in his right eye. Claimant reported that his vision was blurry and that he had stains in the right eye that would multiply or decrease throughout the day. Claimant requested a second opinion on the vision in his right eye and reported he wanted to be able to get at least 25-30% of his vision back. The plan was to get a baseline FP/MOCT/RNFL done and to repeat the MOCT at the next visit. Dr. Sollman noted that if the MOCT was not better at the next visit, they would refer Claimant to a retina specialist. *See* Exhibits 6, 7, L.

19. On November 12, 2018, Claimant was evaluated by Dr. Sollman and Dr. Ellman. Claimant was referred to SWRC for re-evaluation in 6 weeks. Dr. Ellman filled out another Texas Workers' Compensation Work Status Report indicating that Claimant was still prevented from returning to work as of the date of the injury and was expected to continue through "per PCP." *See* Exhibits 8, 9, L.

20. On December 6, 2018, Manouchehr Refaeian, M.D. evaluated Claimant. Claimant reported that while he was at work, a piece of glass went into his right eye and

that he was 90% blind due to his injury. Claimant reported that he had multiple surgeries to his right eye with the last one being in October of 2018. Claimant reported blurry vision and poor visual acuity in his right eye. Dr. Refaeian planned a follow up in one month and told Claimant to return if the problem worsened. Dr. Refaeian noted that Claimant could perform light duty work status with no driving. He noted that Claimant could return to work with a restriction of no driving/operating heavy equipment. Dr. Refaeian noted that since moving to Texas, Claimant had only been seen by general physicians for his eye, which was not sufficient given Claimant's ongoing and very complicated issues. Dr. Refaeian requested that a retinal specialist see Claimant. *See* Exhibits 10, 11, M.

21. Prior to his injury, Claimant had worked for Employer for approximately 2.5 years as a dishwasher/utility worker. Claimant was a great employee and hard worker.

22. Throughout Claimant's treatment for this injury, Employer honored Claimant's work restrictions and found jobs he could do within his restrictions. They accommodated him by having him bus tables instead of being on dishwashing duties, and put him into a "utility position." Employer had a policy of always trying to accommodate work restrictions. In September of 2018, they provided Claimant an offer of utility worker without dishwashing to accommodate his restriction from working around steam. *See* Exhibit I.

23. After his October 8, 2018 surgery, Claimant decided to move to Texas where he owned a home due to his perceived financial stress. Claimant was aware that while receiving temporary total disability (TTD) benefits he would not get his entire salary replaced and Claimant was living on a tight budget. Claimant decided, for personal financial reasons that living in a home he owned without a mortgage in Texas would be a better decision for him.

24. Following his injury and during periods where he was not earning 100% of his normal pre-injury wages, Claimant was able to make ends meet but lived on a very limited budget. Claimant had visited food banks on occasion. Claimant felt embarrassed about this because he had never before needed assistance and had always worked multiple jobs. After his October 8, 2018 surgery, and due to his financial situation, Claimant called his son and asked his son to come get him and drive him to Texas.

25. Once in Texas, Claimant submitted his resignation letter to Employer noting that he had moved to Texas.

26. If Claimant had stayed in Colorado, Employer would have continued to employ Claimant. Employer would have continued to accommodate Claimant's restrictions as they had done throughout the claim from July of 2017 through October of 2018. Employer would have worked with Claimant to accommodate him, since Claimant was a great and valued employee.

27. On December 28, 2018, Claimant signed an affidavit comparing his expenses while living in Texas to his expenses while living in Colorado. The expenses,

overall, were very similar except in Texas Claimant pays $0 in rent as he owns a home outright while in Colorado he paid $800 per month in rent. *See* Exhibits 13, N.

28. Claimant testified at hearing. Claimant testified that after his October 8, 2018 surgery he couldn't return to work. Claimant testified that on October 13, 2018 he went to the emergency room because of the terrible pain in his eye. Claimant testified that he moved to Texas on October 19, 2018 and that he decided to move because he knew his wages would drop if he wasn't working and knew that he would have financial problems and stress if he stayed in Colorado. Claimant testified that after his injury he was under financial stress with time off work and wage replacement not covering his full wages. Claimant testified that he had to go to a food bank for food and was ashamed. Claimant testified that he felt like there was no way out if he stayed in Colorado and that he didn't want to have to go to a food bank again. Claimant testified that he is still restricted from driving and that there are not many businesses near his home with the closest one being five miles away. Claimant testified that there is no public transportation and that an Uber ride costs $45-50 roundtrip. Claimant testified that he enjoyed his job with Employer and only resigned because of the money issues.

29. Claimant testified that the last day he worked was October 5th and that although Employer knew he had surgery coming up, he did not have any conversations with Employer about returning to work after his surgery. This is not credible.

30. Neil Davis, Claimant's direct supervisor while employed with Employer, testified at hearing. Mr. Davis believed Claimant planned to return to work after the October 8, 2018 surgery. Mr. Davis was unaware that Claimant was moving to Texas. Mr. Davis was shocked by Claimant's resignation and surprised that Claimant didn't call him directly or tell him. Mr. Davis had thought that he would be getting a doctor's note to look at for restrictions so that he could continue to accommodate Claimant after the surgery and was shocked to see a resignation letter in his box at work. Mr. Davis testified that he wanted Claimant to return to work after the October 8, 2018 surgery because Claimant was a good employee and a hard worker. Mr. Davis is credible.

31. Jennifer Davidson, Employer's executive director, also testified at hearing. She also testified that Claimant was a good employee. Ms. Davison testified that after the injury, Claimant was on and off work restrictions while going through treatment and that Employer accommodated all the restrictions Claimant had completely. Ms. Davidson testified that Employer has a policy to always accommodate work restrictions. She testified that they were always glad when Claimant was at work. Claimant never asked Ms. Davidson for more hours or for a raise and did not mention financial problems to her. Claimant did not tell Ms. Davidson that he planned to move to Texas. On October 5, 2018, Ms. Davidson saw Claimant at work and wished him luck with his October 8, 2018 surgery. Ms. Davidson told Claimant to let her know when he was released by the doctor to return to work. Ms. Davidson testified that she was waiting for doctor's orders to know when Claimant could return after October 8, 2018 and what restrictions he would have. Instead, she testified that she received a faxed resignation letter from Claimant. Ms. Davidson also was surprised by the resignation. Ms. Davidson is credible.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Termination of Employment

Section 8-42-103(1)(g), C.R.S., and § 8-42-105(4)(a), C.R.S., provide that if a temporarily disabled employee "is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury." Because these statutes provide a defense to an otherwise valid claim for TTD benefits, the respondents shoulder the burden of proof by a preponderance of the evidence to establish each element of the defense. *Gilmore v. Industrial Claim Appeals Office,* 187 P.3d 1129 (Colo. App. 2008); *Brinsfield v. Excel Corp.,* W.C. No. 4-551-844 (I.C.A.O. July 18, 2003). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of

the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

In *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061 (Colo. App. 2002), the court held the term "responsible" as used in the termination statutes reintroduces the concept of fault as it was understood prior to the Supreme Court's decision in *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995). Consequently, the concept of fault used in the unemployment insurance context is instructive. Fault requires a volitional act or the exercise of some control in light of the totality of the circumstances. *Padilla v. Digital Equipment Corp.,* 902 P.2d 414 (Colo. App. 1994), *opinion after remand*, 908 P.2d 1185 (Colo. App. 1995); *Brinsfield v. Excel Corp., supra.* Ultimately, the question of whether the claimant was responsible for the termination is one of fact for determination by the ALJ. *Gilmore v. Industrial Claim Appeals Office, supra.*

Claimant's wage loss from October 8, 2018 through December 6, 2018 was due to Claimant's work related injury, surgery, and inability to work following surgery. Claimant was on "no work" restrictions during this period following his October 8, 2018 surgery. However, on December 6, 2018, Claimant was released to light duty work. If Claimant had stayed in Colorado, Employer would have accommodated Claimant's work restrictions as they had repeatedly done throughout the claim. Claimant thus would have been able to return to his normal full time schedule with Employer under his work restrictions of no driving or operating heavy equipment. Claimant would have resumed earning his normal full wages on December 7, 2018. However, Claimant's resignation and his voluntary decision to resign his employment with Employer and move to Texas prevented him from resuming his job and returning to his normal full wages. Thus, the cause of Claimant's wage loss beginning December 7, 2018 was Claimant's voluntary decision to quit his job. Claimant was responsible for the termination of his employment. Respondents have established by a preponderance of the evidence that any wage loss after December 6, 2018 is due to the termination of Claimant's employment for which Claimant was responsible. Respondents have established that they are entitled to terminate TTD benefits as of December 7, 2018.

Respondents' argument that TTD benefits should be terminated as of the date of Claimant's resignation, October 19, 2018, is not persuasive. The wage loss that is the consequence of Claimant's voluntary resignation did not begin until December 7, 2018. Prior to December 7, 2018, Claimant's wage loss was due to his "no work" restrictions from his medical providers. The wage loss attributable to the termination of employment did not begin until December 7, 2018.

Claimant's arguments, overall, are not found persuasive. Although Claimant was living on a very tight budget, Claimant was not compelled to resign because of his injury. The undersigned realizes that Claimant barely could meet his monthly expenses while receiving TTD, but Claimant was able to do so. Claimant was an excellent worker and Respondents had repeatedly accommodated any restrictions that Claimant had following his injury. Respondents would have continued to do so after the October 8, 2018 surgery and when Claimant was released to light duty work on December 6, 2018. If not for his

resignation, Claimant could have returned to his normal wages and normal work hours on December 7, 2018. Claimant prevented this opportunity by voluntarily resigning and moving to Texas. Any wage loss December 7, 2018 and ongoing is due to Claimant's voluntary decision to resign and move out of state. This decision was not compelled by Respondents and was not compelled by the injury but was a subjective decision made by Claimant. Claimant owned a home without mortgage in Texas. While it is understandable that Claimant would want to move and would subjectively decide that he was sick of living check to check in Colorado, this was a subjective personal choice made by Claimant and was not compelled by the injury.

ORDER

It is therefore ordered that:

1. Claimant was responsible for the termination of his employment with Employer.

2. Claimant is entitled to TTD benefits from October 8, 2018 through December 6, 2018. His wage loss during this time was due to his work related surgery and recovery from surgery.

3. Respondents have established that Claimant is not entitled to TTD benefits from December 7, 2018 and ongoing as the wage loss beginning December 7, 2018 was due to Claimant's termination of employment.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, *see* section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. ISSUES

- Did Claimant prove his claim should be reopened for further medical treatment as recommended by Dr. Miguel Castrejon?

- Did Respondent prove no further treatment is reasonably necessary or causally related to Claimant's June 9, 2008 admitted injury?

FINDINGS OF FACT

1. Claimant suffered an admitted neck injury on June 9, 2008. He was moving bleachers with three coworkers and felt a "strain sensation" in the left side of his neck. He was diagnosed with a left cervical and trapezius strain. A cervical MRI showed chronic multilevel degenerative changes, but no acute pathology. Claimant was prescribed conservative care, including therapy, muscle relaxers, and Biofreeze. In April 2009, he underwent diagnostic facet medial branch blocks at C4-5, C5-6, and C6-7, with no benefit.

2. Claimant's ATP, Dr. Richard Nanes, put him at MMI on April 28, 2009 with a 14% whole person rating. Dr. Nanes noted Claimant's condition was "pretty much unchanged" with "no response to all of our treatments." Claimant was released to work without restrictions. The only maintenance recommendations were to finish a few remaining sessions of physical therapy and a final refill of Biofreeze.

3. Thereafter, Claimant received no treatment for his neck for more than four years.

4. Claimant saw Dr. Jenks on August 8, 2013 for a DIME. Dr. Jenks assigned a 10% whole person cervical spine rating. The rating was lower than Dr. Nanes' rating because Claimant's range of motion had improved in the interim. Dr. Jenks opined, "He does not need any maintenance care."

5. Respondent filed an FAL admitting to Dr. Jenks' 10% rating and denying medical benefits after MMI. Claimant timely objected to the FAL.

6. Claimant saw Dr. Miguel Castrejon for an IME at his counsel's request on January 15, 2014. Dr. Castrejon recommended additional treatment including C3-4, C4-5, and C5-6 facet blocks and medial branch blocks, possible rhizotomy, a left greater occipital nerve block, trigger point injections, physical therapy, and a psychological evaluation.

7. Dr. Carlos Cebrian performed an IME for Respondent in July 2014. Dr. Cebrian's report was not entered into evidence, but its general content can be gleaned from other records. Dr. Cebrian disagreed with Dr. Castrejon's recommendations and opined no further treatment was required on a work-related basis.

8. The parties subsequently reached a stipulation on November 20, 2014, which provides, "Respondent agrees to admit to reasonable, necessary, and related maintenance medical treatment as related to this June 9, 2008 workers' compensation claim. Furthermore, the parties agreed to authorize a facet injection as long as this injection continues to be recommended by the new authorized treating physician, Dr. Michael Sparr." The stipulation closed the claim as to all other issues.

9. Claimant received treatment from Dr. Sparr from December 10, 2014 to February 3, 2016. Dr. Sparr provided no detailed causation analysis and simply noted he had been authorized to provide ongoing treatment for Claimant's neck symptoms. Dr. Sparr found no reliable indication for facet injections. He provided multiple trigger point injections followed immediately by chiropractic treatment. Claimant reported short-term relief, but no lasting benefit. On February 3, 2016, Dr. Sparr released Claimant to a self-directed stretching and home exercise program. On May 17, 2017, Dr. Sparr reiterated that no further active treatment was reasonably necessary.

10. Dr. Castrejon re-evaluated Claimant on November 1, 2018. His opinions and recommendations remained essentially unchanged from his original evaluation.

11. Dr. Cebrian performed another IME on September 26, 2018. Dr. Cebrian maintained his opinion Claimant requires no further treatment in relation to his June 2008 injury.

12. Dr. Castrejon and Dr. Cebrian testified consistent with the opinions expressed in their reports.

13. Dr. Cebrian's causation opinions are credible and more persuasive than those offered by Dr. Castrejon.

14. Respondent proved by a preponderance of the evidence Claimant requires no further treatment causally related to the June 2008 injury.

CONCLUSIONS OF LAW

Claimant requests that his claim be "reopened" for further treatment. But the medical portion of Claimant's claim remains open pursuant to the parties' stipulation. Therefore, reopening is moot.

Respondent seeks to withdraw its "admission" for medical treatment after MMI on the theory that no further care is reasonably necessary or causally related to the June 2008 admitted injury. Although Respondent has covered maintenance care under a stipulation rather than a formal admission, the analysis is the same. Even where the respondents admit liability for medical benefits after MMI, they retain the right to challenge the compensability, reasonableness, and necessity of specific treatment. *Hanna v. Print Expediters Inc*., 77 P.3d 863 (Colo. App. 2003). Usually, the claimant must prove entitlement to disputed medical benefits by a preponderance of the evidence. *Ford v. Regional Transportation District*, W.C. No. 4-309-217 (February 12, 2009). But the Act was amended in 2009 to place the burden of proof on the party seeking to modify an

issue determined by a previous admission or order. Where the respondents' seek to terminate all previously admitted maintenance benefits, the respondents must prove treatment is no longer reasonably necessary or causally related to the injury. Section 8-43-201(1); *Salisbury v. Prowers County School District RE2*, W.C. No. 7-702-144 (June 5, 2013); *Dunn v. St. Mary Corwin Hospital*, W.C. No. 4-754-838 (October 1, 2013).

Respondent proved there is no causal connection between any ongoing need for treatment and the 2008 admitted injury. Dr. Cebrian's causation opinions are credible and persuasive. Claimant's injury involved no significant trauma and caused no identifiable objective change to his cervical spine. The ALJ sees no persuasive connection between Claimant's current symptoms and a minor strain nearly 11 years ago. Given the pre-existing degenerative changes shown on imaging studies, the minor nature of the original incident, the lengthy interval since the accident, and the expected, natural progression of Claimant's underlying condition over time, the ALJ is persuaded the 2008 accidental injury is not the proximate cause of any current need for treatment. Claimant's current need for treatment is due to the natural progression of his personal medical condition, without contribution from the work accident.

ORDER

It is therefore ordered that:

1. Respondent's request to terminate Claimant's medical benefits is granted. Claimant's request for further medical treatment related to the June 9, 2008 injury is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Office of Administrative Courts

ISSUES

I. Whether Claimant established by a preponderance of the evidence that he suffered compensable injuries to his back, head and hands in addition to an aggravation of his pre-existing PTSD on January 15, 2018.

II. If Claimant established that he suffered compensable injuries, whether he also established that he is entitled to reasonable, necessary, and related medical treatment.

III. If Claimant established that he sustained compensable injuries, whether he also established that he is entitled to temporary total disability benefits extending from January 15, 2018 through April 24, 2015

IV. Whether Respondents' established by a preponderance of the evidence that Claimant is responsible for his separation from employment thereby precluding his entitlement to TTD benefits.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant alleges injuries as a result of being assaulted while in the course and scope of his employment on January 15, 2018. Claimant was the Director of Dining Services for Respondent-Employer. Claimant began working for Respondent-Employer on August 14, 2017. His employment with Respondent-Employer ended on January 19, 2018. As director of dining services, Claimant's duties, included, cooking, ordering food, managing kitchen staff, maintaining sanitation standards, and assist in the purchasing of food supplies.

2. Prior to the alleged January 15, 2018 assault, Claimant caught a subordinate cook (Nick) stealing t-shirts out of his office. Claimant testified that based upon his job description, he thought he had authority to terminate Nick. Claimant testified that he discussed the situation with Chris W_____ and Wendy V_____, co-workers associated with Respondent-Employer's Human Resources Department. Ms. V_____ conducted an investigation into the incident and spoke directly to Nick. According to Claimant, Nick admitted taking the shirts during his

conversation with Ms. V_____ prompting Claimant to terminate him. Per Claimant, Nick then spoke to Mr. G_____, Respondent-Employer's Executive Director who agreed to investigate the matter further. Ultimately, Mr. G_____ agreed to back Nick and reinstate him to his position.

3. Regarding this situation, Mr. G_____ testified that on January 11, 2018, he held a meeting with Claimant and Ms. V_____ to discuss Claimant's decision to terminate Nick. Ms. V_____ testified that Claimant was very upset at the meeting and was raising his voice. The ALJ infers from the evidence presented, that Claimant was upset about Nick's decision to discuss the situation with Mr. G_____ and more importantly, Mr. G_____'s decision to investigate the matter further. At the end of this meeting, Mr. G_____ asked Claimant to attend a follow-up meeting on January 12, 2018 with he and Nick to discuss the termination decision further. Claimant did not show for the meeting.

4. On January 13, 2018, Claimant, having not attended the January 12th meeting, emailed Mr. G_____ informing him that there were two cooks coming to interview for the vacant cook position the following Monday. Mr. G_____ responded that same day that he was reassessing Nick's termination and to wait on filling the position. He also requested that they discuss the matter on the following Monday. Claimant testified he felt undermined by Mr. G_____ and that he was angry with him for overriding his decision to terminate Nick. Accordingly, he sent a responsive email informing Mr. G_____ that he would "make it easy" on him by resigning on Monday so he could bring Nick back. Claimant specifically indicated to Mr. G_____ that he would prepare his letter of resignation on Monday. Claimant copied Emily C_____ with his email response to Mr. G_____. He also explained his anger/frustration with Mr. G_____ and informed her of his intent to resign.

5. Mr. G_____ responded to Claimant later on January 13, 2018, acknowledging his contributions to kitchen and explaining that Nick's firing was still in investigation so as to mitigate "possible unemployment" consequences. His email response also documented his hope that Claimant might reconsider his decision to resign. Mr. G_____ testified that he never received any indication from Claimant that he intended to withdraw his decision to resign.

6. Ms. V_____ testified that the proper procedure to terminate an employee is for the supervisor to discuss the termination with the Executive Director and then obtain the necessary paperwork documenting the termination from Ms. V_____. Before going to Mr. G_____ to discuss Nick's termination, Claimant went to Ms. V_____ to secure the paperwork necessary to document and support Nick's termination. V_____ testified that she believed that Claimant told her Mr.

G_____ had approved the termination when he requested the termination paperwork; although, it later was made clear that Mr. G_____ had not approved Nick's firing.

7. On January 14, 2018, Claimant sent an email to Mr. G_____ explaining that he was leaving for Arizona on January 22 and returning on January 27, 2018. Mr. G_____ responded to the email by indicating: "Will, I just remembered that our CCA audit will start on the 22nd and go through the 24th. I believe one of the sections of the audit will be on dietary. We need to come up with a plan on who will represent the kitchen those days. Perhaps Emily or Nicole. Let me know who will be covering the kitchen". Despite testifying that Respondent-Employer's policy requires 30 days advanced notice for requesting time off, Mr. G_____ did not mention the above referenced policy in his email response to Claimant nor did he indicate that Claimant was not approved for leave. Indeed, as far as Mr. G_____ knew, Claimant was going to resign on Monday, January 15, 2018.

8. On January 15, 2018, Ms. C_____ responded to Claimant's January 13,2018 email regarding the circumstances surrounding Nick's termination. She asked if Claimant really intended to resign. Claimant immediately responded that he was not going to resign deciding instead to "do his job". He also took the opportunity to question Mr. G_____'s leadership noting that if "Mark wants to go against his Directors and not back us then I will start looking for something one day".

9. Ms. C_____ testified that she was not Claimant's supervisor and had a limited role in the hiring and disciplinary process for Respondent-Employer. She testified she did not have authority to terminate anyone. She also testified that she was not the proper person to whom Claimant should have send his email rescinding his decision to resign his employment. Rather, Ms. C_____ testified that if Claimant had decided to rescind his resignation, he needed to inform Mr. G_____. As noted above, Mr. G_____ testified that Claimant never informed him he had changed his mind regarding his decision to resign his position with Respondent-Employer.

10. Claimant reported to work as scheduled on Monday, January 15, 2018. He testified that on January 15, 2018, at approximately 8:30 a.m. he went out to an outdoor freezer where food items are stored to do inventory and complete a food order. Claimant testified that he noticed the freezer door and back gate were partially open. According to Claimant, as he looked into the open freezer, a large man rushed out and struck him on the left forehead, knocking his glasses from his face and to the ground. Claimant testified that he fell backwards landing on the palms of his hands and buttocks as the assailant fled. He reported having abrasions resulting in a small amount of blood coming from his right hand. Claimant testified that he got up and went back inside and called Mr. G_____ to report the assault.

11. Mr. G_____ testified that he received a call from Claimant stating that he had just been hit. Mr. G_____ testified that he found Claimant calm and collected, sitting on the stairs inside the back door of the building where just outside the freezer in question is located. Mr. G_____ testified that Claimant told him he went outside to check the food truck delivery and was punched by someone when he looked into the freezer.

12. Mr. G_____ testified that he did not observe any cuts on or bleeding coming from Claimant and his glasses appeared intact. He admitted during cross examination that he did not look at Claimant's hands, but added that Claimant did not complain about injuries and did not request medical attention or that the police be called. He also questioned Claimant's report that he was going to check the food truck delivery, testifying that food trucks deliver food on Tuesdays and Fridays. The ALJ takes judicial notice that January 15, 2018 was a Monday. Moreover, the evidence presented, supports a finding that a food delivery was made on January 16, 2018 for an order placed January 15, 2018.[1]

13. Based upon the evidence presented, including Mr. G_____'s testimony that, as part of his duties, Claimant would have to go to the outside freezer to take inventory coupled with the invoice indicating that a food order was placed on January 15, 2018, the ALJ finds it reasonable to infer that Claimant had gone out to the freezer to check, i.e. inventory the food delivery from the previous Friday and order additional food items for delivery on January 16, 2018. Nonetheless, this evidence, without more is insufficient to support a finding that Claimant was assaulted as he prepared to take inventory.

14. Ms. V_____ testified that Mr. G_____ came to her office and told her to call 911 to report the assault. Ms. V_____ testified that Claimant then came into her office wearing his white chef's coat. According to Ms. V_____, the back of Claimant's coat was wrinkled[2]; however, she observed no cuts, redness or abrasions about Claimant's person. Ms. V_____ testified that Claimant was not acting anxious. The police were summoned and according to Ms. V_____, arrived about 10 minutes after she called 911. Ms. V_____ also testified that she completed an Employer's First Report of Injury and a statement regarding the circumstances surrounding the assault on January 15, 2018. However, on cross examination Ms. V_____ admitted that the statement she insisted she wrote on the

[1] Claimant would reference the January 16, 2018 delivery to Dr. Peterson during a visit later the same day.

[2] Mr. G_____ testified on cross examination that he did not specifically look at the back of Claimant's coat after the assault was reported to him.

day of the assault included events which occurred on subsequent days, leading the ALJ to find that she probably did not write her statement on January 15, 2018 as claimed.

15. Officer Cory May with the Colorado Springs Police Department investigated this incident. Office May obtained a statement from Claimant during which he reported that he had gone out to the "refrigerated lockers" to get some items for the kitchen when he noticed the locker door was open. According to Claimant's statement, he did not think much about the door being open because another member of the kitchen staff was retrieving items from the locker during the same timeframe. Claimant reported that he went into the refrigerator and was "immediately punched in the left eye". Claimant reported that he fell on his back and his glasses went "flying" off his head. Officer May took digital photographs of Claimant. He testified that he observed redness above the left eye but admitted during cross examination that he did not know what caused the redness. He also testified that Claimant's glasses may have been scratched when they impacted the ground. The ALJ scrutinized the photographs taken by Officer May. Based upon that review, the ALJ is unable to discern any observable redness, swelling, bruising, bleeding, or abrasions to the head or hands. Nevertheless, the pictures support Ms. V_____'s testimony that Claimant's white coat appeared wrinkled at the time the pictures were taken. Furthermore, the coat appears slightly dirty at the bottom as if the fabric made contact with the ground. While this constitutes some evidence that Claimant, at some point, made contact with the ground, it is not, alone conclusive evidence that Claimant was assaulted and then fell to the ground. Without more, the ALJ finds it equally plausible that the wrinkles and dirt located on the bottom of Claimant's chef's coat may have been caused by sitting on the steps where Mr. G_____ testified he found Claimant.

16. Claimant testified that there were several prior incidents involving transients loitering around the outdoor refrigerators. He testified to prior break-ins of the refrigerators noting further that safety measures, including the installation of flood lights, fencing and sirens, had been taken to help make the area more secure.[3] While Respondent-Employer undertook efforts to make the area safe for its employees, the area could not be locked off completely per the report of Officer May due to fire code restrictions. The evidence presented persuades the ALJ that thieves were able to access the freezers and the same probably occurred on January 15, 2018. Because the area was not secure and the refrigerators had been discovered and plundered before, the ALJ also finds the potential for a confrontation ending in an assault by a would be thief probable.

[3] Mr. Gardner confirmed Claimant's testimony in this regard noting that individuals would access the area of the freezer through an unlocked gate and would then proceed to cut the lock on the freezer in an effort to steal food items.

17. Claimant was evaluated by Dr. Peterson at Concentra the same day of the alleged assault, on January 15, 2018. Dr. Peterson noted under "History of Present Illness" that Claimant was hit with a fist in the left forehead by a vagrant. Dr. Peterson noted tenderness over the left frontal area of the head, but it was atraumatic with no masses, swelling, or hematoma. A small superficial abrasion on the heel of the right hand was noted as were subjective reports of burning pain in the low back between the shoulder blades. Palpation of the thoracic and lumbar spine revealed subjective reports of tenderness but without objective evidence of muscle spasm. Straight leg raise testing was negative, strength was normal and Claimant's reflexes in the upper and lower extremities were symmetric and his sensation to light touch was intact. Claimant was assessed with a contusion of the scalp, lumbosacral strain, thoracic strain, abrasion of the right hand and anxiety caused by "assault by bodily force". As for treatment, Dr. Peterson recommended Advil or Tylenol, rest and an ice pack.

18. Ms. C_____ testified that she spoke to Claimant after the alleged incident. Ms. C_____ testified that Claimant explained that he thought he heard a delivery truck pull up at the back door, so he went outside to check it. Ms. C_____ testified that this was odd because delivery trucks do not come on Mondays but arrive on Tuesdays. Ms. C_____ also testified that there were several concrete block walls between the kitchen and the outside making it very difficult to hear a delivery truck arrive.

19. On January 16, 2018, Claimant was reevaluated by Dr. Peterson. During this encounter Claimant reported that he had returned to work but felt incapable of handling food deliveries. Palpation of the back reveals left-sided muscle spasm and Claimant demonstrated limited and painful range of motion, for which Dr. Peterson prescribed Cycobenzaprine, a muscle relaxant. Claimant also reported sleeping poorly the night before his appointment secondary to nightmares he attributed to a "flare up" of his chronic PTSD prompting him to call a counselor through his employee assistance program (EAP). According to Dr. Peterson's note, Claimant's PTSD was "rendering him a bit non-functional". While the pain between Claimant's shoulder blades had resolved, he reported persistent back pain. Dr. Peterson recommended physical therapy for the back pain, referred Claimant to Dr. Gary Neuger or Dr. Herman Staudenmayer for "assistance in dealing with an acute anxiety reaction to the assault" and excused Claimant from work for two days.

20. On January 18, 2018 Claimant followed up with Dr. Peterson for continued low back pain. Claimant told Dr. Peterson that he was planning on flying to Arizona to see his son. Physical examination on this date, revealed tenderness over left frontal area, tenderness upon palpation of the left QL areas. Dr. Peterson also found persistent restricted range of motion with left-sided muscle spasms. Dr. Peterson noted Claimant appeared agitated, angry, anxious, depressed, dysphoric,

fearful, frightened, in pain, and tearful. On this date, Dr. Peterson gave Claimant work restrictions of lifting up to 10 pounds occasionally, push/pull up to 15 pounds occasionally, bending occasionally, engage in activities requiring trunk rotation occasionally, and change positions periodically to relieve discomfort.

21. On January 19, 2018, Respondent-Employer terminated Claimant's employment. On this date, Claimant met with Mr. G_____ and Ms. W_____ to discuss his job separation. During the January 19, 2018 meeting, Mr. G_____ informed Claimant that Respondent had elected to accept his resignation as tendered on January 13, 2018. Following this meeting, Mr. G_____ authored a post discharge letter which was sent to Claimant wherein he explained that the decision to accept Claimant's resignation was based upon the following performance issues:

- Failure to follow the chain of command by contacting Mr. G_____'s supervisor concerning a pay raise,
- Improper termination of the dietary employee without performing a complete and thorough investigation of the facts surrounding the misconduct along with refusing to meet with Mr. G_____ and the HR/payroll representative regarding the termination and then becoming angry, argumentative, and tendering his resignation when requested to attend the meeting,
- Providing less than thirty (30) days formal notice to take time off with an audit pending; and
- Undermining a work place investigation concerning sexual harassment by intimidating and making remarks to subordinates.[4]

22. Mr. G_____ testified that he reported to work at approximately 7:45 on Monday, January 15, 2018. He testified that he was unaware and surprised that Claimant had begun his shift Monday morning testifying that he felt that Claimant had decided to resign since he had not heard from him in response to the email message he sent Claimant on January 13, 2018 requesting that they discuss matters concerning Nick's termination and his (Claimant's) decision to tender his resignation. Absent a response, Mr. G_____ testified that he understood Claimant to have resigned. Claimant suggested that Mr. G_____ knew that Claimant had not resigned because he did not come looking for him upon arrival to work and he knew that someone had to get breakfast ready for the facilities residents. Mr. G_____

[4] While employed by Respondent-Employer in December of 2017, an anonymous complaint was received alleging that Claimant was sexually harassing co-workers. Ms. W_____ was involved in investigating the sexual harassment allegations. According to Mr. Gardner, while the matter was being investigated, Claimant became very upset and impeded the investigation through inappropriate behavior and comments.

testified that he did not look for Claimant because he had a meeting and knew that the kitchen staff could prepare the residents breakfast in Claimant's absence.

23. Claimant was reevaluated by Dr. Peterson on February 8, 2018. On this date, Claimant told Dr. Peterson that his low back pain continues but he was having nightmares again which wakes him up at night leading to drowsiness. Dr. Peterson prescribed diazepam and referred Claimant for an MRI and to Dr. Kenneth Finn or Dr. Tim Sandell for consideration of injection therapy for facet syndrome. Dr. Peterson also referred Claimant to Dr. Gary Neuger or Dr. Herman Staudenmayer for acute exacerbation of pre-existing PTSD. Claimant's work restriction remained unchanged from his prior visit with Dr.Peterson.

24. Dr. Peterson's office note of February 23, 2018 reflects that Claimant had plateaued with physical therapy. He recommended further care to include an MRI and a consult with pain management. Dr. Peterson noted that the MRI and referrals to physiatry had been denied. Dr. Peterson continued the same restrictions as given on prior visits.

25. Claimant was last seen by Dr. Peterson on March 21, 2018. Dr. Peterson noted that there were no significant changes since the last visit and the Insurer had denied all referrals. Upon physical examination, Dr. Peterson found significant tenderness at L4-5 facets with less tenderness at the SI joint. Dr. Peterson also found more pain with extension/rotation vs. flexion along with a positive Patrick's test on the left. Dr. Peterson noted that Claimant did not wish to take the diazepam due to addiction concerns. Because of this, Dr. Peterson prescribed Doxepin and Terazosin to help with nightmares and insomnia. Dr. Peterson continued the same restrictions as given on prior visits. Claimant has not returned to Dr. Peterson due to the claim being denied.

26. At Respondent's request, Claimant was evaluated by Dr. Kathleen D'Angelo on April 30, 2018. Claimant gave Dr. D'Angelo a history of going to the freezers out back and noticing the back gate and freezer door were open. The history further reveals that when Claimant stuck his head around the door, an unidentified person hit him in the head, knocking him to the ground. Claimant denied being hit with a fist but could not identify the object with which he was hit. Claimant told Dr. D'Angelo that he had a lump on his head, both his hands were scraped up and he had a cut on one hand as a result of the fall. Dr. D'Angelo testified that she reviewed the police photos and did not see any lumps, redness, or abrasions. Dr.

D'Angelo testified that the face and scalp are very vascular which causes quick swelling, ecchymosis, or bleeding with head contusions if struck.

27. Similar to Dr. Peterson's initial report, Dr. D'Angelo noted a lack of muscle spasms in Claimant's low back. She explained this was very significant because the lack of spasm did not correlate with Claimant's lumbar spine range of motion. Dr. D'Angelo explained that it was unusual to not have muscular hypertonicity, (spasm), when a patient has a lumbar strain because it is almost involuntary. D'Angelo testified that it was extraordinarily unusual to have a patient complain of severe pain, have restricted range of motion and not have muscle spasm. Dr. D'Angelo raised concerns regarding the assault itself. In support of her concern, Dr. D'Angelo pointed to the inconsistencies in Claimant's history concerning the mechanism of injury (MOI) in this case, including the "Employer Incident Report" and the history initially given to Dr. Peterson of being hit on the left side of the forehead and what she perceived to be the absence of any visible signs consistent with an assault present in the police photographs.

28. During his independent medical examination (IME), Claimant reported, to Dr. D'Angelo, a history of significant emotional trauma he had experienced, including a tumultuous childhood, a prior assault in 2003/2004, and, most significantly, his daughter's murder in 2007. Claimant reported that since his January 15, 2018 assault, he was afraid to go outside and was isolating himself. According to Dr. D'Angelo, Claimant reported that he was too afraid to go bowling with his friends, an activity he previously enjoyed doing. Dr. D'Angelo was very concerned with Claimant's mental health and recommended further psychological evaluation following her IME.

29. Ultimately, Dr. D'Angelo opined that Claimant was at MMI for claim related diagnoses of head contusion, lumbar myofascial irritation, thoracic myofascial irritation. She deferred regarding the possible aggravation of pre-existing PTSD, which she noted she would opine upon after reviewing a psychiatric assessment by Dr. Carbaugh.

30. Claimant underwent an independent medical examination with Dr. Robert Kleinman on May 30, 2018. Claimant reported to Dr. Kleinman that he was hit by an object that was in the hand of the assailant. Dr. Kleinman noted that Claimant had a long history of trauma which caused posttraumatic stress disorder, major depressive episodes, persistent depressive disorder and maladaptive personality traits. Dr. Kleinman opined that Claimant's posttraumatic stress disorder was caused by his childhood trauma and neglect and permanently aggravated by the violent murder of his

daughter. Dr. Kleinman also opined that Claimant had been persistently depressed with several episodes of major depression which again was permanently aggravated by the death of his daughter.

31. Dr. Kleinman opined that there was no indication that Claimant's psychological symptoms were any worse after the alleged assault on January 15, 2018. Dr. Kleinman opined that Claimant's PTSD was at baseline and that his depression was not exacerbated or aggravated by the January 15, 2018 incident. Dr. Kleinman opined that Claimant had persistent maladaptive personality traits evidence by six failed marriages and inconsistent work history. The MMPI 2 indicated a chronic and pervasive pattern of psychological problems. Dr. Kleinman ultimately opined that Claimant did not have a psychiatric diagnosis caused by the January 15, 2018, incident. However, Dr. Kleinman said that "taken at face value" the January 15, 2018 incident might have caused a brief temporary exacerbation of Claimant's PTSD symptoms for a few days.

32. Respondents performed a social media search wherein Facebook photographs were discovered of Claimant vacationing in Honduras. During his testimony, Claimant admitted that he took a trip to Honduras from March 23 through March 30, 2018. He testified that he travelled with his best friend for her 50th birthday. According to Claimant, he flew from Denver to Honduras with a stop in Miami and Cayman. Claimant testified that he spent time with his friend's family, relaxing and cooking out. Photographs posted to Facebook show Claimant socializing, wading/swimming, and dancing. Claimant appears relaxed and generally in good spirits in the posted pictures. Claimant reported that none of his activities while on vacation resulted in a violation of his physical restrictions, except perhaps "lifting a piece of luggage".

33. Dr. Kleinman reviewed the aforementioned photos and provided an addendum IME report on July 13, 2018. Dr. Kleinman noted that Claimant underreported his activities of daily living and attempted to appear worse than he was. Dr. Kleinman opined that Claimant version of events cannot be accepted at face value and he could not be relied upon to provide an accurate history, noting further that the fact that "Mr. McElroy is willing to misrepresent himself regarding his mental health issues, activities of daily living, interpersonal relationships, and impairment, indicates that [he] might also misrepresent himself regarding how the alleged incident occurred".

34. Dr. D'Angelo also reviewed the social media photographs and altered her opinion. One of the Facebook photographs shows Claimant underwater bent over. Dr. D'Angelo explained that Claimant's position in the photo contradicts his reported symptoms of pain in the trapezius muscles and numbness down his left lower extremity.

Dr. D'Angelo explained that bending forward, as in the pictures, would cause dural stretch and worsen Claimant's lower extremity numbness. Dr. D'Angelo also noted that flexion of the trunk and extension of the head at the neck is a tough maneuver for the trapezius muscle and Claimant did not appear uncomfortable in the photographs. Dr. D'Angelo also noted that the photographs of Claimant dancing showed him in various positions that Claimant previously reported as being difficult. Finally, Claimant's dancing, smiling, and socializing were psychologically very different than he reported his functioning to be during his IME with Dr. D'Angelo.

35. Dr. D'Angelo agreed with Dr. Kleinman, that Claimant's reliability regarding the assault was questionable specifically agreeing that he might misrepresent how the alleged incident occurred. She testified that it would be "really hard to believe" given everything involved in the case, that Claimant suffered a physical or mental injury assuming that the assault occurred. Nonetheless, she admitted that the mechanism of injury as described by Claimant can cause a low back injury and that if the assault occurred, her diagnosis would be lumbosacral myofascial irritation and thoracic myofascial irritation. Finally, Dr. D'Angelo testified that she disagreed with Dr. Peterson that more care was needed in this case.

CONCLUSIONS OF LAW

Based upon the evidence presented, including the deposition testimony of Emily C_____ and Dr. D'Angelo, the ALJ draws the following conclusions of law:

Generally

A. In accordance with *Section 8-43-215, C.R.S.,* this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Claimant's Credibility

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony

and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. While there are inconsistencies in Claimant's reporting concerning how the alleged assault occurred in this case, the ALJ concludes, as noted as noted at paragraph 13 of the above findings of fact, that Claimant probably had gone out to the freezer to check, i.e. inventory the food delivery from the previous Friday and order additional food items for delivery on January 16, 2018. Consequently, the ALJ concludes that Claimant had the occasion to be in and around the area of the outdoor freezer on January 15, 2018. Moreover, as found above, the evidence presented, including Claimant's testimony, convinces the ALJ that he probably encountered a would be thief who rushed him and struck him in the head causing him to fall to the ground on his outstretched arms/hands and buttocks. This most accurately explains the wrinkles and dirt on Claimant's coat and small abrasion on the right hand. While Claimant varied on whether he was hit in the head by a fist or an object, the ALJ notes that Officer May observed redness over the left eye and Dr. Peterson documented tenderness over this area, leading the ALJ to conclude that Claimant was probably hit by something as the assailant was attempting to flee the scene. Accordingly, the ALJ finds Claimant's testimony regarding the events surrounding this assault credible. Dr. D'Angelo and Dr. Kleinman's contrary inferences/suggestions are not persuasive.

Compensability

C. A "compensable injury" is one which requires medical treatment or causes disability. *Romero v. Industrial Commission*, 632 P.2d 1052 (Colo. App. 1981); *Aragon v. CHIMR, et al.*, W.C. No. 4-543-782 (ICAO, Sept. 24, 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167, 1169 (Colo. App. 1990). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." *Romero*, supra; § 8-41-301, C.R.S. To sustain his burden of proof concerning compensability, Claimant must establish that the condition for which he seeks benefits was proximately caused by an "injury" arising out of and in the course of employment. *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo. App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); *Section 8-41-301(I)(b), C.R.S.*

D. The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements for the injury to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). An injury occurs in the course and scope of employment when it takes place within the time and place limits of the employment

relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). Here, the ALJ determines that Claimant has produced sufficient evidence to support a conclusion that the assault and subsequent injuries to his head, back and hands occurred in the scope of employment, specifically while he was taking inventory of food stocks and completing an order for subsequent delivery as part of his duties as the Dining Services Director for Respondent-Employer. As found, the totality of the evidence, including the prior break-ins of the onsite freezers and Mr. G_____'s testimony that Claimant did have to complete inventory of the outside freezers coupled with the objective evidence, i.e. Claimant's dirty/wrinkled uniform, the redness over the left eye observed by Officer May and the scrape on Claimant's right hand is more persuasive that an assault occurred than is Dr. D'Angelo speculation that Claimant fabricated the incident.

E. While Claimant established that he was injured in the course and scope of his employment, it is also necessary to address whether his symptoms/injury arose out of that employment before his injury can be determined to be compensable. The term "arises out of" refers to the origin or cause of an injury. *Deterts v. Times Publ'g Co. supra.* There must be a causal connection between the injury and the work conditions for the injury to arise out of the employment. *Younger v. City and County of Denver, supra.* An injury "arises out of" employment when it has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered part of the employee's employment contract. *Popovich v. Irlando supra.*

F. There is no presumption that an injury, which occurs in the course of employment, also arises out of the employment. *Finn v. Industrial Commission*, 165 Colo. 106, 437 P.2d 542 (1968). The determination of whether there is a sufficient "nexus" or causal relationship between a claimant's employment and the injury is one of fact and one that the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo.App. 1996). As found, the totality of the evidence presented, including the observations of Officer May and the medical reports of Dr. Peterson persuade the ALJ that the assault involved in this case probably resulted in acute soft tissue injuries to the head and right hand as well as a lumbosacral strain. Indeed, Dr. D'Angelo testified that assuming the assault to have occurred, she would diagnose Claimant with lumbosacral and thoracic myofascial irritation. While not a strain, the ALJ finds myofascial irritation a recognized diagnosis and treatable condition. Accordingly, the ALJ concludes that Claimant has proven he suffered compensable injuries to his head, right hand and low back. Nonetheless, the ALJ finds Claimant's testimony regarding the effects this encounter had on his psyche highly suspect. Here, the totality of the evidence presented, persuades the ALJ that Claimant probably over-reported his alleged psychological injuries and failed to report

important functional abilities to both Dr. D'Angelo and Dr. Kleinman. Without question, Claimant reported that his mental state was so impaired and he was so paralyzed by fear after this incident that he was isolating himself and rarely left the house. Indeed, Claimant reported that he no longer socialized, participated in bowling or went to movies. Dr. Kleinman and Dr. D'Angelo took Claimant's reports at face value and provided opinions consistent with this stated functional capacity. Dr. D'Angelo testified that she was so concerned about the state of Claimant's mental health that but for his comments about never committing suicide, she had considered placing him on a 72-hour psychiatric hold.

G. Claimant's reported psychological symptoms and functional capacity stand in stark contrast to his demonstrated psychological capabilities. Despite reporting significantly impaired psychological functioning, Claimant was able to travel to both Arizona and Honduras after the attack. Claimant failed to report to either Dr. D'Angelo or Dr. Kleinman that he was capable of traveling long distances and in the case of Honduras, if current events are to be credited, to a country plagued by substantial violence. The Facebook photos introduced into evidence demonstrate Claimant to be dancing, swimming, socializing and enjoying himself. Such evidence strongly belies Claimant's testimony suggesting that he was a virtual shut in following this attack. To be sure, the photographic evidence posted to Facebook lead Dr. Kleinman, an expert in psychiatry, to opine that Claimant was misrepresenting his mental functioning. Based upon the evidence presented, the ALJ credits the opinions of Dr. Kleinman to conclude that Claimant's mental health conditions are probably emanating from his pre-existing PTSD and persistent maladaptive personality traits without contribution from his January 15, 2018 assault as originally expressed by Dr. Kleinman following his May 30, 2018 psychiatric IME. As Claimant's psychological/psychiatric conditions did not arise from his work related assault, they are not compensable.

Medical Benefits

H. Once a claimant has established the compensable nature of his/her work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable, necessary, and related medical care to cure and relieve the effects of the work injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo.App. 1990). However, a claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his/her need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949); *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970)*;* § 8-41-301(1)(c), C.R.S. Ongoing benefits may be denied if the current and ongoing need for medical treatment or disability is not proximately caused by an injury arising out of and in the course of the employment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo.App. 1997). In other words, the mere

occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability was caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those which flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball*, *supra*.

I. Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003). The question of whether a particular medical treatment is reasonably necessary to cure and relieve a claimant from the effects of the injury is a question of fact. *City & County of Denver v. Industrial Commission*, 682 P.2d 513 (Colo.App. 1984). As found here, Claimant has proven by a preponderance of the evidence that he sustained acute soft tissue injuries to his head, right hand and low back after being assaulted on January 15, 2018. The evidence presented convinces the ALJ that these compensable "injuries" are the proximate cause of Claimant's need for medical treatment including his visits to Dr. Peterson. Moreover, the totality of the evidence presented establishes that the care received was reasonable and necessary in light of the MOI and the acute nature of Claimant's symptoms. While the aforementioned conditions can be fairly traced to Claimant's assault, his claimed psychological symptoms cannot. Here, the evidence presented persuades the ALJ that Claimant's current psychological symptoms flow naturally from his non-work related PTSD and persistent maladaptive personality traits driven and reinforced by his chaotic upbringing and the tragic murder of his daughter. As Claimant's current need for psychological treatment is not proximately related to his January 15, 2018 work related assault, Respondents are not obligated to provide and pay for it.

Claimant's Separation from Employment & Entitlement to TTD

J. As Claimant's injury was after July 1, 1999, sections 8-42-105(4) and 8-42-103(1)(g), C.R.S. apply regarding her entitlement to TTD benefits. These identical provisions state, "In cases where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury." *Colorado Springs Disposal d/b/a Bestway Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061 (Colo. App. 2002). Simply put, if the claimant is responsible for his/her termination of employment, he/she is not entitled to recover temporary disability benefits for wage loss. *Padilla v. Digital Equipment Corp., 902 P.2d 414, 416 (Colo. App. 1994).* Respondents shoulder the burden of proving by a preponderance of the evidence that Claimant was responsible for the termination. *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office,* 20 P. 3d 1209 (Colo. App. 2000).

K. The concept of "responsibility" is similar to the concept of "fault" under the previous version of the statute. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). "Fault" requires a volitional act or the exercise of some control in light of the totality of the circumstances. *Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1994). An employee is "responsible" if the employee precipitated the employment termination by a volitional act that an employee would reasonably expect to result in the loss of employment. *Patchek v. Colorado Department of Public Safety*, W.C. No. 4-432-301 (September 27, 2001). "Fault" does not require "willful intent" on the part of the Claimant. *Richards v. Winter Park Recreational Association*, 919 P.2d 933 (Colo. App. 1996) (unemployment insurance); *Harrison v. Dunmire Property Management, Inc.,* W.C. no. 4-676-410 (ICAO, April 9, 2008).

M. In this case, the record evidence demonstrates that prior to January 15, 2018, Claimant was considered an excellent employee. He was given a raise approximately three months after he was hired. Respondent-Employer's email reflects that Claimant was receiving accolades for saving money and for helping out when and where needed. No credible evidence was presented that Claimant had been counseled or disciplined for his job performance prior to his reporting the work related assault. From the evidence presented, Claimant was terminated on January 19, 2018 for failure to follow the chain of command, improper termination of a dietary employee and unprofessional conduct, providing late notice to take time off, and undermining a workplace investigation.

N. The failure to follow the chain of command concerns an email Claimant sent to Mr. G_____'s supervisor, David J_____, regarding a pay raise on January 12, 2018. The email response from Mr. J_____ simply indicated that the workplace culture allows employees to reach out to each other concerning work issues but any pay raise issues needs to be addressed with Mr. G_____. There was no indication in Mr. J_____'s email to Claimant that the email to Mr. J_____ was in any way improper. In fact, Mr. G_____ testified that employees can go over their supervisor's head without fear of termination. There was no credible evidence that sending the email to Mr. J_____ was in anyway improper until Claimant was terminated on January 19, 2018.

O. Concerning the late notice to take time off from work, Claimant emailed Mr. G_____ on January 14, 2018 of his intent to go to Arizona on January 22, 2018 to spend time with his family on the anniversary of his daughter's murder. Mr. G_____ responded back simply indicating that a plan needs to be devised as

to who will represent the kitchen for an upcoming audit. In this same email, Mr. G_____ suggested that Claimant contact Emily C_____ or Nicole as to coverage for the audit. There was no indication in this email exchange that Claimant was violating any rules or doing anything improper by asking for the time off. In fact, there was never an indication from Mr. G_____ that asking for the time off was problematic until after Claimant reported his work assault and injury.

P. Regarding the work place investigation, Claimant credibly testified that he did not intimidate of harass any of his subordinates or anyone else concerning the investigation and that it was his subordinates who came to him with information concerning the investigation. There was no credible evidence presented that the investigation was in any way hampered by Claimant. Moreover, there was no credible evidence presented that reflects that Claimant was disciplined for any alleged interference with the investigation.

Q. Insofar as the termination of the dietary employee Claimant admits that he did indeed terminate one of his subordinates for what Claimant thought was theft of company property. Claimant testified that he thought he had the authority to terminate an employee under his supervision without conferring with Mr. G_____. This view is supported by the job duty description for the dining director which allows for termination of employees when necessary so long as he documents and coordinates the termination with the personnel director and/or administrator. Claimant reasonably thought Wendy V_____ was the personnel director as she was the only human resources employee in the facility where Claimant worked. Mr. G_____ testified that he is both the director of the facility where Claimant worked and also the personnel director. However, when pressed, Mr. G_____ admitted that the job description for the dining services director is out of date as there is no personnel director at the facility where Claimant was injured.

R. Based on a totality of the circumstances presented, the ALJ concludes that the explanations articulated for "accepting" Claimant's resignation in Respondent-Employer's January 19, 2018 letter were pre-textual in nature and designed to cloak their real intention in separating Claimant from his employment. In this case, the evidence supports that Claimant was a valued employee up until the date he was he reported that he was assaulted. Moreover, while Claimant attempted to resign his position via email on January 13, 2018, Mr. G_____ did not accept the resignation. In fact, in response to Claimant's email, Mr. G_____ emailed Claimant indicating that he had been a good employee, was an asset to the team, and asking if he and Claimant could discuss the matter further on January 15, 2018 in

the hopes that Claimant might change his mind. Had Respondent-Employer clearly accepted Claimant's resignation on January 13, 2018 the analysis on this point would be different. Instead, the evidence reflects that Claimant was lead to believe he was still Respondent-Employer's Director of Dining Services. Moreover, the evidence presented persuades the ALJ that Claimant had changed his mind concerning resigning and Mr. G_____ knew or should have known about this fact. This evidence is reflected by Claimant's email to Ms. C_____ that he was not going to resign. Moreover, Claimant emailed Mr. G_____ on January 14, indicating that he was going to take time off to go Arizona providing constructive notice to Mr. G_____ that he did not intend to resign. In addition, Claimant showed up for his regular shift on the morning of January 15, 2018 without preparing a resignation letter as he informed Mr. G_____ he intended to do. If Mr. G_____ felt that Claimant had resigned as he testified, the ALJ finds it unpersuasive he would not take it upon himself to clarify with Claimant his intentions before he allowed him into the building to start working. Based upon the evidence presented, the ALJ finds that Respondents failed to establish that Claimant voluntarily terminated his employment in this case or was terminated for cause.

ORDER

It is therefore ordered that:

1. Claimant has proven by a preponderance of the evidence that he sustained a compensable injury to his head, right hand and low back as a consequence of being assaulted in the course and scope of his work on January 15, 2018.

2. Respondents shall pay for all medical expenses, pursuant to the Workers' Compensation Medical Benefits Fee Schedule, to cure and relieve Claimant from the effects of his head, right hand and low back injuries, including, but not limited to the care provided by Dr. Peterson.

3. Claimant has failed to prove, by a preponderance of the evidence that his psychological symptoms and need for mental health treatment are causally related to his January 15, 2018 work related assault.

4. Respondents have failed to establish, by a preponderance of the evidence, that Claimant is responsible for his termination of employment.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor,

Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 11, 2019

/s/ Richard M. Lamphere

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

ISSUES

Whether the claimant has demonstrated by a preponderance of the evidence that her scheduled impairment rating should be converted to a whole person impairment rating.

FINDINGS OF FACT

1. The claimant suffered an admitted injury to her left shoulder on November 18, 2015. The injury occurred when the claimant was reaching overhead for a box, and a box on top of that box slipped and fell. The claimant testified that she attempted to catch the falling box with her left hand. However, as the box fell the claimant's left hand also moved downward, resulting in pain in the claimant's left shoulder.

2. During her claim, the claimant's authorized treating provider (ATP) has been Work Partners where she primarily treated with Erica Herrera, PA, but was also seen by Dr. Lori Fay.

3. Ultimately, the claimant was diagnosed with a left torn rotator cuff. On March 10, 2016, Dr. Mark Luker performed a rotator cuff repair.

4. The claimant testified that following her March 10, 2016 surgery she experienced low back pain while in physical therapy. The claimant also testified that she reported this low back pain to her chiropractor as well as to Dr. Fay and Ms. Herrera.

5. On January 27, 2017 Dr. Peter Millett performed a reverse shoulder arthroplasty. Thereafter, the claimant began a course of physical therapy. When she first began physical therapy, the claimant reported low back pain. However, on February 8, 2017, the claimant reported to Dr. Fay that her low back pain had resolved.

6. Thereafter, the claimant was seen by Dr. Millet on May 4, 2017. At that time, the claimant reported a "clunking" sensation in her left shoulder. Dr. Millett indicated this would improve with strengthening. On that date, Dr. Millet discharged the claimant from his care and instructed her to follow-up in one year.

7. On August 10, 2017, the claimant returned to Dr. Millett and reported continued popping and clunking in her left shoulder. Based upon these complaints, Dr. Millett referred Claimant for computerized tomography (CT) scan of her left shoulder.

8. On September 18, 2017, the CT scan showed an "uncomplicated left shoulder reverse arthroplasty." On November 9, 2017, Dr. Millet informed the claimant that she could return to normal activities.

9. On January 12, 2018, Dr. Fay placed the claimant at maximum medical improvement (MMI). At that time Dr. Fay assessed a permanent impairment rating of 44% for the claimant's left upper extremity (which equates to a 26% whole person impairment). At that time, Dr. Fay assessed permanent work restrictions including no lifting, repetitive lifting, carrying, pushing, or pulling over 20 pounds. In addition, no reaching overhead with her left upper extremity or reaching away from her body with her left upper extremity.

10. On February 15, 2018, the respondent filed a Final Admission of Liability (FAL) admitting for the MMI date and permanent impairment rating as assessed by Dr. Fay. The claimant objected to the FAL and proceeded to the Division sponsored independent medical examination (DIME) process.

11. On July 9, 2018, the claimant attended a DIME with Dr. Douglas Scott. As part of the DIME process, Dr. Scott reviewed the claimant's medical records, obtained a history from the claimant and completed a physical examination. Dr. Scott agreed that the claimant was properly placed at MMI on January 12, 2018. Dr. Scott assessed a permanent impairment rating of 41% for the claimant's left upper extremity. Dr. Scott also agreed with the permanent work restrictions assigned by Dr. Fay.

12. Following the DIME, the Division asked Dr. Scott to review the issue of apportionment given the claimant's **prior** injury to her left shoulder.

13. The claimant suffered a prior work related injury to her left shoulder on February 27, 2006. Dr. Scott performed a DIME for that injury on August 27, 2010. At that time, Dr. Scott assessed a permanent impairment rating of 15% for the claimant's left upper extremity.

14. On August 29, 2018, Dr. Scott issued an addendum to his July 9, 2018 DIME report with consideration of apportionment of the claimant's 2006 injury and related impairment. Dr. Scott subtracted 15% from the 44% assessment for the 2010 impairment rating. This resulted in a permanent impairment rating of 29% for the claimant's left upper extremity (which would equate to a 17% whole person impairment) for the November 18, 2015 work injury.

15. On September 18, 2018, the respondent filed a FAL admitting for the 29% permanent impairment rating for the claimant's left upper extremity.

16. On November 14, 2018, the claimant attended an independent medical examination (IME) with Dr. Allison Fall. In connection with the IME, Dr. Fall reviewed the claimant's medical records, obtained a history from the claimant and completed a physical examination. In her IME report, Dr. Fall opined that the claimant's injury was to her left shoulder. Dr. Fall specifically diagnosed the claimant with a left shoulder rotator cuff tear "acute on chronic", status post rotator cuff repair with subsequent re-tear and a reverse total shoulder arthroplasty. Dr. Fall agreed that the claimant reached MMI on January 12, 2018 and opined that the claimant's permanent impairment was appropriately determined to be a left upper extremity impairment. Dr. Fall's testimony at hearing was consistent with her written report. Dr. Fall credibly testified that the claimant's loss of function is only to her left shoulder. Dr. Fall also testified that the

claimant's complaints of pain throughout her body are likely related to the claimant's inflammatory arthritis, and not related to the claimant's left shoulder injury.

17. The claimant testified that as a result of her left shoulder injury, she has pain into her left trapezius and into her neck. The claimant also testified that the pain travels down into her ribcage and is particularly painful when she coughs. The claimant further testified that she has pain into her low back, hip, and knees. The claimant testified that she leans to the left when she walks. It is the claimant's belief that these symptoms are related to her left shoulder injury.

18. The ALJ credits the medical records and the opinions of Dr. Fall and finds that the permanent impairment rating was appropriately assessed for the claimant's left upper extremity, and there is no functional impairment beyond the claimant's left shoulder. Therefore, the ALJ finds that the claimant has failed to demonstrate that it is more likely than not that she has suffered any functional impairment that is not contained on the schedule. Therefore, the ALJ declines to convert the claimant's scheduled left upper extremity impairment rating to a full person impairment.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2015).

3. The question of whether the claimant has sustained an "injury" which is on or off the schedule of impairment depends on whether the claimant has sustained a "functional impairment" to a part of the body that is not contained on the schedule. *Strauch v. PSL Swedish Health Care System*, 917 P.2d 366 (Colo. App. 1996). Functional impairment need not take any particular impairment. Discomfort which interferes with the claimant's ability to use a portion of his body may be considered

"impairment." *Mader v. Popejoy Construction Company, Inc.*, W.C. No. 4-198-489, (ICAO August 9, 1996). Pain and discomfort which limits a claimant's ability to use a portion of his body may be considered a "functional impairment" for determining whether an injury is on or off the schedule. *See, e.g., Beck v. Mile Hi Express Inc.*, W.C. No. 4-238-483 (ICAO February 11, 1997).

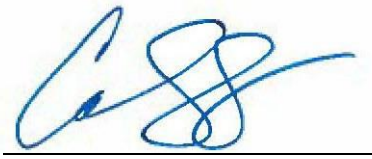
4. It is the claimant's burden of proof by a preponderance of the evidence to establish both that he suffered a permanent impairment and that the permanent impairment is either contained on the schedule set forth at subsection (2) or not on the schedule specified in subsection (2). Further, it is the claimant's burden to prove by a preponderance of the evidence the extent of the permanent impairment.

5. As found, the claimant has failed to demonstrate by a preponderance of the evidence that she has suffered any functional impairment that is not contained on the schedule. Therefore, claimant's request to convert her scheduled impairment rating to a whole person impairment is denied. As found, the medical records and the opinions of Dr. Fall are credible and persuasive.

ORDER

It is therefore ordered that the claimant's request to convert her scheduled impairment to a whole person impairment is denied and dismissed.

Dated March 12, 2019



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

1. Whether Claimant has overcome Division Independent Medical Examination (DIME) physician Bennett Machanic's opinion that Claimant does not suffer from chronic regional pain syndrome (CRPS) causally related to her January 2, 2014 work injury by clear and convincing evidence.

2. Determination of disfigurement related to the admitted work injury.

FINDINGS OF FACT

1. Claimant is a 58 year old female who was employed by Employer.

2. On January 2, 2014, Claimant sustained an admitted work related injury. On that date, Claimant was letting passengers in and out of an exit door during a snowstorm when the door blew closed and struck her in the back.

3. After her admitted injury, Claimant underwent treatment that eventually included a lower back fusion surgery that occurred in two parts on February 26, 2015 and February 27, 2015.

4. From the fusion surgery, Claimant has scarring on both her abdomen and her back. On the lower abdomen, Claimant has a scar measuring approximately 15 inches that remains red and discolored from her normal skin tone despite adequate time for healing. On her back, Claimant has two scars each measuring approximately 1 inch in length and each remaining white and discolored from her normal skin tone despite adequate time for healing.

5. On October 29, 2015, Matthew Lugliani, M.D. evaluated Claimant. Claimant reported minimal improvement in her symptoms with continued low back pain at a 3-4/10 in severity. Claimant reported no radiating symptoms. Claimant also reported left elbow pain at a 6/10. Dr. Lugliani assessed stable chronic lumbar pain, L4-5 and L3-4 disc bulges with nerve root impingement status post fusion on February 26 and 27, 2015, and left lateral epicondylitis. *See* Exhibit H.

6. On December 12, 2016, Dr. Lugliani evaluated Claimant. Dr. Lugliani noted that Claimant was status post lumbar spine fusion from February of 2015 that was complicated by left lateral epicondylitis during physical therapy. Claimant reported persistent back pain, numbness and tingling into her bilateral legs at a 5-6/10 with aching stabbing numbness and tingling. Claimant reported that prolonged standing, walking, and lifting made her symptoms worse. Dr. Lugliani noted that Claimant was scheduled for platelet rich plasma injections for her left elbow on January 13, 2017. Dr. Lugliani

assessed chronic lumbar pain and radiculopathy following lumbar fusion and left elbow epicondylitis with tears on MRI. Claimant requested referral back to Dr. Rauzzino. *See* Exhibit 4.

7. On December 19, 2016, Usama Ghazi, D.O. evaluated Claimant. Dr. Ghazi noted that recent bilateral sciatic nerve blocks for Claimant's persistent piriformis pain and radicular symptoms had given her excellent long-term relief. Dr. Ghazi noted remarkable improvement for Claimant with Claimant being able for the first time to control sciatica and gluteal spasms. Claimant reported concern with coldness in the tips of her toes, brittle toenails that were falling off, collapse in the arches of her feet, and unexplained intermittent edema. Dr. Ghazi was concerned with chronic regional pain syndrome (CRPS) after looking at Claimant's feet. Claimant reported that the tips of all five toes on both feet would become pale and cold sometimes hyperemic. On exam, Dr. Ghazi found a cold pallor and multiple degree hypothermia compared to proximal to the MTPs at the tips of all five toes. Dr. Ghazi found Claimant's toenails to be brittle and discolored brownish-yellow and multiple areas where the toenails had flaked off and broken. Dr. Ghazi found some hyperemia of the distal shins. Dr. Ghazi found collapse of the arch more profound on the right foot and tenderness, especially with weight bearing, over the right sinus tarsi. In his impressions, Dr. Ghazi noted his significant concern for CRPS with postoperative edema, neuritic pain, cold toes, temperature differences, vasoconstriction of the toes, and brittle and flaking toes that were discolored and fragile. Dr. Ghazi opined that the type of contusion Claimant sustained could have caused mild CRPS, which could have been worsened by the fact that Claimant had chronic radiculopathy, postoperative pain, bilateral hip bursitis, and sciatic nerve compression. Dr. Ghazi planned to schedule Claimant for two sets of lumbar sympathetic blocks back to back to be diagnostic. *See* Exhibit 5.

8. On December 22, 2016, Claimant underwent bilateral lumbar sympathetic blocks performed by Dr. Ghazi. He noted pre-injection that Claimant's toes measured 84 degrees bilaterally and post injection the toes showing increased temperature of 88 degrees on the left and 86 degrees on the right. Dr. Ghazi also opined that vasodilation was noted with reduction of pallor in the bilateral toes after injection. Dr. Ghazi opined that the hyperesthesia and paresthesias in the feet and the curling of the toes was relaxed post injection and that the hypersensitivity in the tips of the toes was significant reduced. Dr. Ghazi opined that it was a successful bilateral sympathetic blockade and opined that the injections confirmed that Claimant had a portion of sympathetic mediated pain with vasoconstriction and Raynaud phenomenon. *See* Exhibit 5.

9. On February 9, 2017, Claimant again underwent bilateral lumbar sympathetic blocks performed by Dr. Ghazi. Claimant reported that after her first lumbar sympathetic blocks she did not have significant pain relief for the first week and a half but then began noticing a slow improvement in warming of the foot and toes as well as reduction in hypersensitivity especially when taking on and off her socks or having sheets tough her feet which caused 9/10 pain before. Claimant reported that now, her pain was reduced down to a 5-6/10 in the tips of the toes at rest but remained at an 8/10 with light touch when wearing socks or touching sheets. Dr. Ghazi noted some vasomotor changes

in Claimant's feet including paleness and coolness in the tips of the toes with vasoconstriction in the dorsum of the feet compared to the shins and calves. Dr. Ghazi noted no hyperhidrosis but pallor and brittle yellow toenails. After the February 9, 2017 injection Claimant reported 0/10 pain to light touch in the toes with 100% resolution of allodynia at rest and with light touch. Dr. Ghazi noted that the temperature in Claimant's left foot went from 87.2 to 91.2 degrees after injection and that the temperature in the right foot went from 87.9 to 90.2 degrees after injection with both feet showing palpable and measurable improvements consistent with successful sympathetic blockade. *See* Exhibit 5.

10. On April 3, 2017, Dr. Ghazi evaluated Claimant. Dr. Ghazi noted that Claimant's follow up MRI of the lumbar spine showed the L5-S1 fusion with right laminotomy changes and a large osteophyte in the right paracentral region causing mass effect with posterior displacement of the right S1 nerve root. He noted at L4-5 the MRI showed a diffuse disk bulge more pronounced than a prior June 2016 study and that there was moderate spinal stenosis also worsened from the prior study with possible impingement of the L5 nerve roots and possible impingement of the left L4 nerve root. At L3-4 Dr. Ghazi noted it showed mild disk bulge with facet and ligamentum flavum hypertrophy. Dr. Ghazi opined that perhaps a foraminotomy was needed for the displacement of the right S1 nerve root. Dr. Ghazi noted under history of present illness that Claimant's persistent bilateral lower extremity neuralgia appeared to be due to severe piriformis syndrome with sciatica as well as L5-S1 radiculitis with intact strength but persistent paresthesias in the S1 and L5 distributions. Dr. Ghazi also noted that Claimant had sympathetic mediated abnormalities that had progressed in the lower extremities but responded to lumbar sympathetic blocks with improvement in thermal asymmetry, pallor, and vasoconstriction. Dr. Ghazi noted that Claimant had lost almost all her toenails due to brittle vasomotor changes and that the sympathetic blocks provided 50% relief from pain but greater than 85% improvement in the vasoconstricted, cold, pale toes. Claimant reported that she was doing much better that her toes had rarely been cold and rarely had vasoconstriction since her injections. Claimant reported some return of the paresthesia and numbness and tingling as well as hypersensitivity. *See* Exhibits 5, F.

11. Claimant reported the pain radiated from her buttocks and hips into the bilateral feet along the lateral S1 distributions and then into the dorsum of the feet along the L5 distributions. Claimant noted hypersensitivity but was more concerned that she had lost almost all her toenails. Dr. Ghazi noted that on the left foot, Claimant had lost every toenail except for the fourth digit and that they had grown halfway back. On the right foot, Dr. Ghazi noted that Claimant had lost the toenails of digits four and five and that the brittleness and yellow discoloration of the toenails was improving as the nails had grown back. Dr. Ghazi also noted that Claimant was status post platelet rich plasma injection of the left medial lateral epicondyle and that Claimant reported her elbow pain was 90% improved. On physical examination, Claimant had a positive straight leg raise in the right S1 distribution. Dr. Ghazi noted that Claimant's reflexes were absent at 0/4 in the right Achilles consistent with the posteriorly displaced and compressed right S1 nerve root on MRI. Dr. Ghazi provided the impression of bilateral sciatica combined bilateral L5-S1 radiculitis with superimposed CRPS which was at least 50% improved from two

sets of sympathetic blocks. He opined that there had been some recurrence of CRPS with loss of almost all the toenails of the feet due to brittle trophic changes of the toenails from CRPS with symptoms much improved from prior injections, but wearing off. Dr. Ghazi also provided the impression of Raynaud syndrome with vasoconstriction and pallor in the toes remarkably improved after bilateral lumbar sympathetic blocks. Dr. Ghazi recommended Claimant follow up with Dr. Rauzzino regarding the left S1 flattening in displacement on the MRI. Dr. Ghazi opined that for the sciatic portion of Claimant's pain, Claimant should continue with piriformis stretches and physical therapy as well as pelvic tilt therapy and opined Claimant may eventually require PRP injections into the troachanteric and gluteal bursae/tendons. Dr. Ghazi recommended two additional lumbar sympathetic blocks for recurrence of vasomotor symptoms and the loss of toenails. Dr. Ghazi recommended repeat PRP injections to the left elbow down the road. *See* Exhibits 5, F.

12. On April 6, 2017, Dr. Ghazi requested bilateral lumbar sympathetic blocks x2 with them two weeks apart. Blocks were performed on May 18, 2017 and Claimant reported 100% anesthetic relief of the allodynia of the lower extremities. *See* Exhibits 5, F.

13. On June 9, 2017, Dr. Ghazi evaluated Claimant. Claimant reported complete resolution of the allodynia to light touch following the lumbar sympathetic blocks. Claimant reported that the changes in her toenails and the CRPS were almost reversed with the bluish-yellowish brittle nails appearing more healthy and pink and with the re-grown toenails coming in with a healthy pink color as opposed to the brittle discoloration. Claimant reported some coolness in the tips of the toes at times, especially on the right foot but overall her shins and thighs had no hypersensitivity to light touch and no allodynia for which she was grateful. Claimant was found to have radicular symptoms in the right L5-S1 distribution with the absence of the right S1 reflex/Achilles reflex. Claimant had a positive straight leg raise on the right radiating to the right L5 and S1 distribution. Palpation of the right sinus tarsi caused burning in the third, fourth, and fifth metatarsals and toes on the right side. Dr. Ghazi provided the impression of: chronic postoperative radiculopathy especially involving the right L5 and S1 distributions; sympathetic mediated pain remarkably improved after a series of lumbar sympathetic blocks; and right ankle pain with evidence of neuritic discomfort in the nerves of the right sinus tarsi. Dr. Ghazi planned to do a right S1 transforaminal epidural steroid injection combined with a block to the nerves of the right sinus tarsi. *See* Exhibit 5.

14. On August 10, 2017, Dr. Ghazi performed a right S1 lumbosacral transforaminal epidural steroid injection and a right sinus tarsi injection. Claimant reported 100% anesthetic relief and was found to have appropriate vasodilation of her foot, resolved pain, and was pain free in the leg and foot/ankle. *See* Exhibit 5.

15. On August 18, 2017, Dr. Ghazi evaluated Claimant. Dr. Ghazi noted that Claimant was significantly improved after a right sinus tarsi injection combined with a right S1 transforaminal epidural steroid injection . Claimant reported the neuralgia in her right foot and her radicular symptoms in the right leg were better and Claimant displayed a

negative straight leg raise on the right lower extremity. On exam, Dr. Ghazi found marked vasodilation of the right foot symmetric with the left side and no pallor or coolness in the toes. Dr. Ghazi found the toes of the right lateral foot appearing to be more warm than the medial aspect of the foot and the contralateral leg. He found the right piriformis and gluteal muscles to be completely relaxed, soft and pliable on the right side versus the non injected left side where there was continued gluteal spasm and almost a tight clenching with inability to relax. Dr. Ghazi opined that Claimant was doing well following the injection with a negative straight leg raise, without any allodynia, and without sympathetic mediated abnormalities. He planned to repeat a platelet rich plasma injection in the left elbow and recommended continued massage therapy and home exercises. *See* Exhibit 5.

16. On September 1, 2017, Dr. Ghazi performed an impairment rating as requested by Dr. Lugliani. Dr. Ghazi noted that Claimant had lumbar radiculopathy status post her L5-S1 fusion, postoperative chronic neuritis and sympathetic mediated pain in the lower extremities consistent with CRPS, and postoperative radicular symptoms related partially to chronic radiculopathy but mostly related to sciatic neuralgia from chronic hypertonic spasm of the gluteal and piriformis muscles. Dr. Ghazi noted that the ratable impairments would be the lumbar disk herniation with fusion, which would include lumbar range of motion, range of motion for the left elbow lateral and medial epicondylar tears, and an impairment rating for CRPS. Dr. Ghazi noted that he would not rate the persistent radiculopathy and sciatica as that would be "double dipping" since they were already rating Claimant for the most severe cause of the neuralgia in the legs with was the CRPS. For the sympathetic mediated pain, vasomotor changes, Raynaud phenomenon, and the CRPS of the bilateral lower extremities including other neuritic complaints sciatic and postradicular, Dr. Ghazi provided a 5% impairment. For the left elbow epicondylar rating, Dr. Ghazi provided a 0% rating. For the lumbar rating with history of L5-S1 anterior/posterior fusion Dr. Ghazi provided a 21% whole person impairment. Dr. Ghazi opined that the final whole person impairment rating, combing the lumbar fusion and the neuralgia/CRPS would be 25% whole person. *See* Exhibit 5.

17. Dr. Ghazi made several recommendations for maintenance treatment for Claimant's pain management. Dr. Ghazi recommended follow up with him on an as needed basis with as needed facet injections and rhizotomies above the fusion, and as needed SI joint injections and/or rhizotomies below the fusion. Dr. Ghazi recommended repeat bilateral S1 transforaminal epidural steroid injections, repeated sciatic nerve blocks, and repeat lumbar sympathetic blocks on an as needed basis including sympathetic blocks to the feet. Dr. Ghazi recommended continued medications including NSAIDs, muscle relaxants, opioids, topical pain creams and patches, and neuropathic pain medications. Dr. Ghazi recommended follow up with Dr. Rauzzino for any complications related to the fusion. Dr. Ghazi recommended updated imaging of a lumbar MRI on average of once per year as well as one set of x-rays once per year to evaluate postsurgical stability. Dr. Ghazi recommended 12 visits of physical therapy per year and 12 visits per year of either massage or chiropractic. Dr. Ghazi recommended Botox injections to the buttocks up to three times per year. Dr. Ghazi also recommended platelet rich plasma injections for the left medial and left lateral epicondyle in the elbow as needed. Dr. Ghazi recommended maintenance include surgical treatment for the left elbow if

needed as well as updated MRI and/or ultrasound of the left elbow on average once per year. *See* Exhibit 5.

18. On September 7, 2017, Dr. Ghazi issued a letter to Insurer noting that he had completed the impairment rating for Claimant. He noted that he had rated the neuralgia specifically as CRPS since Claimant had significant vasomotor changes, Raynaud phenomenon, edema, color changes, and excellent diagnostic responses with sympathetic blocks. *See* Exhibit 5.

19. On November 2, 2017, Dr. Lugliani evaluated Claimant. Dr. Lugliani noted that Claimant had recently followed up with Dr. Ghazi and received an impairment rating of her back and elbow. Dr. Lugliani noted that Claimant was status post her second platelet rich plasma injection in the elbow. Claimant reported minimal improvement and persistent pain in the lateral aspect of the elbow worse with heavy lifting. Claimant reported that her low back pain was unchanged and was achy with persistent bilateral lower extremity numbness and tingling involving her bilateral feet. Dr. Lugliani assessed: status post lumbar decompression and fusion, at MMI and left elbow epicondylitis, stable, and at MMI. Dr. Lugliani noted that Claimant would be placed on permanent work restrictions of 15 pounds lifting. He opined that Claimant would have continued maintenance follow up with Dr. Rauzzino and Dr. Ghazi indefinitely for repeat injections, medication refills, imaging, and/or surgery if deemed necessary. Dr. Lugliani also recommended 1 year of follow up with Dr. Clinkscales for the left elbow in the event Claimant required surgery for the left elbow. Dr. Lugliani opined that Claimant was at MMI and discharged her from care. *See* Exhibits 5, I.

20. On November 7, 2017, Respondents filed a final admission of liability (FAL). Respondents admitted to a 25% whole person impairment rating with an MMI date of November 2, 2017. Respondents admitted to medical maintenance benefits per Dr. Lugliani's November 2, 2017 report. *See* Exhibit 3.

21. Claimant objected to the FAL and sought a DIME. Claimant requested the DIME physician evaluate the low back, both legs and hips, CRPS, and left elbow. *See* Exhibit L.

22. On March 2, 2018, NP Fresques evaluated Claimant. Claimant reported her pain usually was a 5/10 but was up to a 9/10 that day. NP Fresques found sensory deficits in Claimant's feet migrating up to the ankle area. He found some color changes and tactile changes as well. NP Fresques assessed lower extremity CRPS and recommended a trial of Nucynta. *See* Exhibit 5.

23. On March 20, 2018, Dr. Ghazi evaluated Claimant. Claimant reported a return of some sympathetic abnormalities with neuralgia, hyperesthesia, and vasomotor changes in her lower extremities. Claimant also reported diffuse pain complaints in her legs that were best relieved with bilateral lumbar sympathetic blocks. Claimant reported thoracic pain, cervical pain, and paresthesias in the upper extremities. Claimant reported diffuse body aches and myalgias. On examination, Dr. Lugliani found hyperesthesia

throughout the lower lumbar dermatomes at L5 and S1 throughout the shins, calves, and dorsum and plantar aspect of the feet with cold purplish toes on the left greater than right side. He found no hyperhidrosis and no abnormal hair growth. Dr. Lugliani found no SI joint loading pain and extension pain limited to the SI joints. Dr. Ghazi opined that Claimant was having some return of the vasomotor abnormalities in the lower extremities combined with parethesias, coolness, pallor, hypothermia, and temperature/color changes. Dr. Ghazi opined that most of Claimant's pain was neuritic but noted that Claimant did not tolerate the anti-neuropathic pain medication very well. Dr. Ghazi discussed CBD oils and CBD salve with Claimant that were THC free and recommended a trail to help Claimant's neuropathic pain and sleep. Dr. Ghazi also planned to schedule Claimant for repeat bilateral lumbar sympathetic blocks x2 to be done back to back. Dr. Ghazi explained to Claimant that he was not treating her diffuse other areas of pain not related to the work injury and that he would be focusing on her work related injuries. *See* Exhibits 5, O.

24. On March 28, 2018, Bennett Machanic, M.D. performed a division independent medical examination (DIME). Claimant reported low back pain, bilateral leg pain, and difficulties with her left elbow. Claimant reported that her back fusion surgery helped a lot. Claimant reported that her back and her elbow both needed more help. Claimant reported low back pain bilaterally with radiation down to both legs that fluctuated. Claimant reported the pain radiated from her back, over her hips, then down the legs and that both legs were numb ad tingly and her toes sometimes felt dead. Claimant reported that her legs and toes could jerk. Dr. Machanic reviewed medical records and performed a physical examination. *See* Exhibits 9, G, M.

25. Dr. Machanic noted that after Claimant's fusion surgery, Claimant reported 70% improvement but worsening sciatic like pain. He also noted Claimant's report after fusion surgery that her leg pain was 80% reduced and her back pain was 70% reduced. On examination, Dr. Machanic found decreased pin sensation over the lower extremities diffusely over the feet and distal limbs becoming full at the mid calves. He found temperature sensation at a 2/10 to a cold metal object over the feet and at a 10/10 over the thighs. Dr. Machanic saw no signs of shrinkage or swelling of the feet, allodynia, or hyperalgesia. Dr. Machanic found no asymmetry or focal abnormalities and no perspiration. Dr. Machanic found there were no signs of CRPS or classical causalgia on his examination. *See* Exhibits 9, G, M.

26. Dr. Machanic agreed with the prior physicians that Claimant reached MMI for her back on November 2, 2017. However, Dr. Machanic opined that Claimant's elbow was not at MMI. Dr. Machanic emphasized that he found no clinical evidence or even record evidence of the true presence of CRPS and did not feel Claimant had a true causalgia. Dr. Machanic opined that most of Claimant's pain was generated from the lumbosacral spine and agreed with Dr. Rauzzino that there was post-operative scarring and chronic arachnoiditis. He also noted on clinical exam, the possibility of a small fiber neuropathy with an unknown etiology but not related in any fashion to the January 2, 2014 work injury. Dr. Machanic also noted the description of restless leg syndrome which he opined could be indirectly due to the low back problems or the small fiber neuropathy, or

both. Dr. Machanic noted that Claimant had right S1 dysfunction with an absent ankle reflex and weakness of plantar flexion plus numbness in the S1 distribution intermixed with sensory loss in both legs and provided Claimant with a 2% loss of sensation rating, 2% loss of strength in the right lower extremity, equating to 2% whole person bring Claimant to a total rating of 24% whole person permanent partial impairment rating for the lower back. He opined that the back had reached MMI and that the consequences of the low back work injury had reached permanency. Dr. Machanic opined that ongoing treatment with Dr. Ghazi and Dr. Rauzzino could be appropriate. Dr. Machanic opined that he was somewhat baffled as to why sympathetic blocks would be continued as Claimant did not have CRPS and he suggested no further injections of that sort. He opined, however, that local pain blocks might be appropriate in the future based on the opinions of Claimant's physician. Dr. Machanic opined that the left elbow was not at MMI and recommended further follow-up for the elbow. *See* Exhibits 9, G, M.

27. On April 30, 2018, Dr. Lugliani evaluated Claimant. Claimant reported her symptoms were unchanged and that she had persistent left elbow pain at a 5/10 and persistent back pain that she rated at a 6/10 involving her low back with radiating symptoms down into her feet described as numbness and tingling. Dr. Lugliani assessed Claimant to be status post lumbar decompression and fusion and at MMI for the lower back. Dr. Lugliani referred Claimant for follow up for her ongoing left elbow pain and noted Claimant may require left elbow surgery. *See* Exhibits 5, H.

28. On June 5, 2018, Carlton Clinkscales, M.D. evaluated Claimant. Claimant reported she had two platelet rich plasma injections for her chronic left lateral epicondylitis since he saw her last and reported that the injections had helped. Claimant reported that her every day aching had stopped. Dr. Clinkscales noted that Claimant had done well with right lateral epicondylitis surgery but that the right was still sore, felt different, and that she was limited on the right to 15-20 pounds lifting even with surgery. Claimant reported that she did not want to consider surgery on the left. Dr. Clinkscales opined that based on the chronicity of Claimant's left epicondylitis symptoms, the failure of non-operative treatment, the previously good results with surgery on the right, left lateral condyle debridement could be considered. Dr. Clinkscales noted that Claimant declined surgery again as she had in the past. Dr. Clinkscales opined that he had nothing further to offer Claimant regarding her left lateral epicondylitis. He opined that Claimant could accept it as is, continue non-operative treatment, get a second opinion, or undergo the left lateral epicondyle surgery. After this follow up opinion where Claimant declined left elbow surgery, Claimant returned to the DIME physician. *See* Exhibits 5, K.

29. On August 14, 2018, Dr. Machanic performed a follow up DIME. Claimant reported that her back was about the same. Claimant reported that she decided not to undergo left elbow surgery. Claimant reported a recent fall which worsened her low back pain but that it was fairly stable before the fall. Dr. Machanic found a bruise over the right side of Claimant's lumbar spine and over her right upper arm from the fall. He was unable to demonstrate any vasomotor or sympathetic changes in Claimant's legs and noted that his back and leg exam was very close to the exam he did previously. He found a change

in the elbow range of motion with additional lost range of motion compared to his prior exam. *See* Exhibits 9, M, N.

30. Dr. Machanic opined that Claimant had reached MMI in regards to both her lower back, her radicular symptoms, and her ongoing left elbow issues. He opined that MMI was reached on June 5, 2018. Dr. Machanic opined that the prior rating he did on the lumbar spine impairment was the same and included Claimant's S1 radiculopathy on the right and remained at 24% whole person. He opined that the left elbow was at a rating of 5% upper extremity, 3% whole person. Dr. Machanic noted that Claimant did have chronic low back pain and recommended that if there were exacerbation of symptoms over the lumbosacral spine perhaps one to two weeks of physical therapy in a pool be performed. He opined that an ongoing pool exercise in a health club setting or independently would be advised to maintain stability of the lumbar spine in view of the chronic pain issues and Claimant's post-operative lumbosacral arachnoiditis and scarring. He opined that it was not CRPS. He suggested additional PRP injections for the elbow pain and suggested one additional PRP injection for the elbow with Dr. Ghazi. Dr. Machanic opined that if the additional elbow PRP injection provided benefit, then Dr. Ghazi should provide a rationale for future treatment in that regard. Dr. Machanic opined that there was no indication for lumbar sympathetic blocks. The maintenance benefits recommended thus were pool exercise, and one PRP injection in the elbow. *See* Exhibits 9, M, N.

31. On August 17, 2018, Respondents filed another FAL. Respondents admitted to a whole person impairment of 24% and a scheduled impairment of 5% left upper extremity. Respondents admitted to medical maintenance benefits per Dr. Machanic's August 14, 2018 report. *See* Exhibit 3.

32. On August 31, 2018, Dr. Ghazi evaluated Claimant. Dr. Ghazi noted that Claimant had not had any steroid injections for one year and that her lower extremity pain had been controlled with a series of lumbar sympathetic blocks. Dr. Ghazi noted, unfortunately, that Dr. Machanic performed a DIME and opined that sympathetic blocks were not indicated and opined that Claimant did not have CRPS. Dr. Ghazi disagreed and opined that Claimant clearly had sympathetic mediated abnormalities. Dr. Ghazi noted that Claimant had vasomotor instability including blue toes, Raynaud type phenomenon with toes going from hot red to white to blue within minutes, multiple episodes of brittle toenails with three episodes of toenail loss after becoming brittle, intermittent edema, erythema, and thermal asymmetry. Dr. Ghazi noted that Claimant had responded positively to sympathetic blocks with marked vasodilation, increased temperature, and increased improvement in her symptomatology. Dr. Ghazi opined that Claimant met the Budapest criteria for CRPS and disagreed with the DIME. Dr. Ghazi noted that Dr. Machanic recommended thermography and QSART testing for CRPS and noted he would get that done as soon as possible. Claimant wanted to proceed with epidural steroid injections bilaterally since the lumbar sympathetic blocks were denied and reported that she had been having numbness, tingling, cramping, and instability with multiple falls where her big toe goes into extension and her other toes go into flexion causing her to be unstable. On examination, Dr. Ghazi found Claimant's toenails to be

at 75% regrowth. He found her toes to be pale and white at the tips and her feet to be several degrees cooler from the mid arch to the tips of the toes bilaterally, worse on the right foot. Dr. Ghazi also found hyperesthesia to light touch on the left foot and on the dorsum and plantar aspect of the left foot. Claimant had a positive straight leg raise shooting into the plantar aspects of both feet. Dr. Ghazi provided the impression of: failed back syndrome with history of L5-S1 fusion with a stable fusion but persistent lower extremity pain likely due to a combination of arachnoiditis, chronic post decompression radiculopathy, and sympathetic mediated pain; CRPS of the bilateral lower extremities after treating the patient for several years and documenting multiple episodes of edema, vasomotor instability, severe temperature drops in the tips of the toes, Raynaud phenomenon, loss of toenails, brittle toenails, and positive responses to multiple sympathetic blocks; and left elbow pain. Dr. Ghazi planned to request bilateral transforaminal epidural steroid injections for bilateral S1 radiculopathy, deferral of a left elbow platelet rich plasma injection, and a QSART and thermogram test to evaluate bilateral lower extremity CRPS. *See* Exhibit 5.

33. On October 25, 2018 and November 8, 2018, Dr. Ghazi performed S1 tranforaminal epidural steroid injections. Claimant reported 100% relief of the neuralgia and pain in both legs following the injections. *See* Exhibit 5.

34. On November 30, 2018, Janet Stansbury, certified massage therapist, wrote a letter. Ms. Stansbury indicated that Claimant had been a medical massage client of hers since February of 2016. Ms. Stansbury observed Claimant losing toe nails three times, Claimant's hands and feet turning blue, Claimant's legs and feet cramping, and Claimant have enough pain that she could not bend over or stand up straight. Ms. Stansbury also observed Claimant to report migraines and observed muscle spasms in Claimant's back and glutes. Ms. Stansbury noted that Claimant continued to have all those symptoms and continued to have cramps in the legs and feet during every session. Exhibit 8.

35. On December 7, 2018, Dr. Ghazi evaluated Claimant. Claimant reported that following the bilateral S1 transforaminal epidural steroid injections, her legs were doing great with 100% resolution of the nerve burning and paresthesia. Claimant reported, however, that she still had tightness and vasomotor changes including temperature, cold, purple, and pale toes and feet. Claimant noted that she had lost the toenails from her feet for the third time. Claimant reported that although the burning pain in her legs was gone, she still had persistent vasoconstriction and pallor and wanted to have repeat sympathetic blocks. On examination, Dr. Ghazi found cold, pale toes bilaterally with toenails showing signs of regrowth. Dr. Ghazi also found marked vasoconstriction and coolness in the feet bilaterally. Dr. Ghazi provided the impression of: bilateral S1 radiculopathy with resolution of radicular neuralgia in the legs following epidurals at S1; CRPS/sympathetic mediated changes in the bilateral lower extremities including Raynaud phenomenon, vasoconstriction, pallor, and repeated loss of toenails; and sympathetic dysregulation with marked vasoconstrictions in the lower extremities, also known as Raynaud phenomenon versus CRPS that responds temporarily to sympathetic blocks. Dr. Ghazi planned to request repeat sympathetic blocks. Dr. Ghazi

heartily disagreed with Dr. Machanic's opinion that it was not CRPS given Claimant's lost toenails, vasoconstriction, thermal asymmetry, temperature changes, and color changes. Dr. Ghazi noted that he had ordered QSART and thermography back in August but that the tests had not been authorized or completed. Dr. Ghazi opined, however, that Claimant's issues responded to sympathetic blocks and therefore he considered Claimant to have CRPS. Dr. Ghazi planned to refer Claimant to Dr. Ament for consultation regarding CRPS and vasculopathy and also to Dr. Schneider for sciatica sacroilitis and CRPS/Raynaud-type changes and neuritis. *See* Exhibit 5.

36. On December 20, 2018, NP Fresques evaluated Claimant. Claimant reported up to 70% relief on the left side following bilateral S1 transforaminal epidural steroid injections that she underwent in November. Claimant reported that she was doing well but chiropractic treatment aggravated her symptoms. NP Fresques noted that Claimant had elements of CRPS with tactile and color changes in the lower extremities and that Claimant had lost her toenails on three different occasions. NP Fresques opined that work comp guidelines should cover diagnostic thermography and/or QSART testing. Following this visit, Dr. Ghazi requested authorization for repeat bilateral lumbar sympathetic blocks. *See* Exhibit 5.

37. On December 27, 2018, Insurer denied Dr. Ghazi's request for bilateral lumbar sympathetic blocks. *See* Exhibit 5.

38. On January 22, 2019, NP Fresques evaluated Claimant. Claimant reported that she was overall much improved following the bilateral S1 epidural injection in November. Claimant reported a pain level of 6/10. NP Fresques noted that Claimant continued with CRPS symptoms in her lower extremities, right greater than left and had responded to past sympathetic blocks. NP Fresques noted that Dr. Machanic suggested Claimant's symptoms were not consistent with CRPS and NP Fresques opined that Claimant would be an excellent candidate for thermography and/or QSART testing for diagnosis of CRPS. On examination, NP Fresques found some slight discoloration of the right foot and some tactile changes. He assessed low back pain with radicular symptoms, S1 dermatome; history of L5-S1 fusion; and CRPS, lower extremities. *See* Exhibit 5.

39. Claimant filed an Application for Hearing endorsing the casual relationship of CRPS to her January 2, 2014 work injury. Claimant seeks a determination that DIME physician Dr. Machanic was incorrect in opining that she does not suffer from CRPS and seeks further medical maintenance treatments including ongoing sympathetic block injections as needed to maintain her condition.

40. Claimant testified at hearing that following her lumbar spine fusion surgery, she had a cluster of unusual symptoms in her lower extremities. She testified that her legs cramped, her toes curled uncontrollably, her feet and legs turn colors, and that on three occasions her toenails had fallen off and regrown. Claimant testified that the injections from Dr. Ghazi had helped reduce her symptoms and bring her pain down and that the temperature in her feet would return to normal following an injection.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Overcoming DIME opinion

Under the statute MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007). Thus, a DIME physician's findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining

MMI. Therefore, the DIME physician's opinions on these issues are binding unless overcome by clear and convincing evidence. *See Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). The question of whether the party challenging the DIME physician's finding regarding MMI has overcome the finding by clear and convincing evidence is one of fact for the ALJ.

Dr. Machanic, the DIME physician, opined that Claimant does not suffer from CRPS and opined that Claimant did not need any treatment, including maintenance treatment of sympathetic blocks, for that condition. Dr. Machanic did not recommend or request additional testing such as QSART or thermogram. Rather, he opined that the sympathetic blocks should not be done or approved since Claimant did not suffer from work related CRPS. This causal opinion was inherent in Dr. Machanic's overall determination on MMI and must be overcome by clear and convincing evidence. Claimant has met her burden to overcome the opinion that she does not have a diagnosis of CRPS and does not need any treatment or procedures for CRPS by clear and convincing evidence.

The medical records above establish by clear and convincing evidence that Dr. Machanic erred in his opinion that Claimant does not suffer from CRPS. Claimant, as found above, has had significant symptoms consistent with CRPS following her lumbar spine fusion surgery. Claimant's testimony is credible and persuasive. The reports of Dr. Ghazi, Claimant's massage therapist, and NP Fresques are consistent in symptoms and signs of CRPS that have been identified and documented over the past several years. Claimant responded positively to sympathetic blocks, helping to confirm the CRPS diagnosis. Thermogram and QSART testing are not necessary as Claimant's response to the sympathetic blocks combined with her symptoms observed by multiple providers, confirms by clear and convincing evidence that she has the diagnosis of CRPS. Claimant, is not challenging her MMI date and she remains at MMI as of June 5, 2018. Claimant, however, has established by clear and convincing evidence that CRPS is a work related diagnosis and that she remains in need of "as needed" sympathetic blocks to manage and maintain her work related CRPS condition. Claimant has established by clear and convincing evidence that CRPS is casually related to her work injury and Claimant is therefore entitled to reasonable and necessary medical maintenance benefits including sympathetic blocks to maintain her CRPS condition and prevent deterioration.

Disfigurement

If Claimant has sustained serious permanent disfigurement to areas of the body normally exposed to public view, Claimant is entitled to additional compensation. § 8-42-108(1),(2) C.R.S. As found above, Claimant's lumbar fusion surgery required entry both on her lower abdomen and on her back and was a two part procedure. Claimant has scarring from three scars totaling approximately 17 inches in length that remain discolored from her normal skin tone despite adequate time for healing. Insurer shall pay Claimant additional compensation in the amount of $4,250 pursuant to § 8-42-108(1)C.R.S. for her disfigurement.

ORDER

It is therefore ordered that:

1. Claimant has overcome by clear and convincing evidence DIME physician Dr. Machanic's opinion on the casual relationship of CRPS to this claim. Claimant has CRPS, casually related to her work injury.

2. Claimant remains at MMI but has established an entitlement to reasonable and necessary medical maintenance benefits for her work related CRPS, including sympathetic blocks.

3. Claimant has established an entitlement to an award for disfigurement in the amount of $4,250.00.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, *see* section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 12, 2019

OFFICE OF ADMINISTRATIVE COURTS

STATE OF COLORADO

W.C. No. 5-010-740-003

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on March 5, 2019, in Denver, Colorado. The hearing was digitally recorded (reference: 3/5/19, Courtroom 3, beginning at 1:45 PM, and ending at 5:00 PM). The official Spanish/English Interpreter was Alice Her.

Claimant's Exhibits 1 through 24 were admitted into evidence, without objection, however, Exhibit 23 was withdrawn. Respondents' Exhibits A through CC were admitted into evidence, without objection, however, ruling on Exhibits Q through U and X was reserved. The objections to Exhibits Q through U are hereby overruled and these exhibits are hereby admitted into evidence. The objection to Exhibit X is hereby sustained and Exhibit X is rejected.

At the conclusion of the hearing, the ALJ established a post hearing briefing schedule. The Claimant's opening brief was filed, electronically, on March 8, 2019. The Respondents' answer brief was filed, electronically, on March 12, 2019. Because the Claimant has prevailed in the above-referenced matter, it is unnecessary to wait two days for a reply brief. Consequently, the matter was deemed submitted for decision on March 14, 2019.

ISSUES

The issues to be determined by this decision concern medical benefits; reasonably necessary left ankle surgery (juvenile allograft cartilage replacement) pursuant to the recommendation of Alan Ng, D.P.M., an authorized treating podiatrist.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. Respondents filed a General Admission of Liability (GAL), dated April 7, 2016, admitting for authorized, causally related and reasonably necessary medical benefits; an average weekly wage (AWW) of $723.81; and, temporary total disability (TTD) benefits of $482.54 per week from March 26, 2016 and "ongoing." The GAL remains in full force and effect (Claimant's Exhibit 1). The parties stipulated to an initial average weekly wage of $750.00, effective from the date of loss until May 31, 2018, and that the average weekly wage increased to $853.05 effective June 1, 2018, that includes the replacement cost of health insurance, and the ALJ so finds.

2. On October 9, 2015, the Claimant suffered an admitted industrial injury. Claimant's left hip was driven into by a pickup truck driven by his supervisor. Among other injuries, the Claimant sustained a left ankle injury (Respondents' Exhibit AA)

3. On November 12, 2015, the Claimant presented to his primary care provider with complaints of ankle pain after a truck bumped and pinned him between the gate and the truck. He reported low back pain which radiated down his left leg, left knee pain, and occasional ankle pain. The Claimant was diagnosed with an ankle strain. His instructions were to limit lifting, pushing, or pulling, to follow up with a workers' compensation doctor due to his injury occurring at work (Claimant's Exhibit 5).

4. On November 13, 2015, the Claimant presented to Kevin Vlahovich, M.D. at Banner Occupational Health Clinic. The Claimant reported opening a fence on October 9, 2015 when his supervisor drove the bumper of a truck into his left hip causing his left leg to twist and get pinned against the fence. The supervisor laughed and claimed it was a joke. The Claimant walked with a limp and reported pain which traveled from hip to the medial ankle. Left ankle examination was abnormal for pain on motion and palpation medially around the tibiofibular joint. The left ankle also had decreased strength and range of motion (ROM). Original x-rays of the left ankle showed abnormalities related to the incident. Objective findings were consistent with the history of a work-related etiology, specifically caused when the Claimant was hit by a vehicle on the left hip and leg while at work (Claimant's Exhibit 6)

5. On November 30, 2015, the Claimant reported popping and catching in the left ankle (Claimant's Exhibit 6).

Medical Chronology

6. On December 8, 2015, Kevin Vlahovich, M.D. of Banner Occupational Health Clinic in Greely reviewed an MRI (magnetic resonance imaging) of the left ankle which showed both acute and chronic changes. Dr. Vlahovich referred the Claimant for an orthopedic evaluation and treatment followed by a referral of physical therapy (Claimant's Exhibit 6).

7. Upon the referral of Dr. Vlahovich on December 16, 2015, the Claimant presented to orthopedic surgeon Richard Williams, M.D. The Claimant informed Dr. Williams that he was struck by a truck at work on October 9, 2015. Since then he reported left ankle pain and swelling. Dr. Williams noted a decreased range of motion in the left ankle and positive Achilles reflexes tests. Dr. Williams reviewed x-rays and MRIs and diagnosed a chronic talar dome osteochondral lesion. The Claimant desired the beginning of conservative care. Dr. Williams performed a steroid injection to the left ankle (Claimant's Exhibit 7). Dr. Williams is within the chain of authorized referrals.

8. On January 5, 2016, the Claimant reported that he was doing the same or slightly worse after being referred to Dr. Williams, who gave him an injection of steroids into the left ankle. The injection in the ankle did not decrease the pain (Claimant's Exhibit 6).

9. On January 26, 2016, the Claimant reported the ankle injection did not provide any relief. There was clicking and swelling noted. Dr. Williams gave the Claimant and ankle brace and referred him to Steven Sides., M.D. (Claimant's Exhibit 7). Dr. Sides is within the chain of authorized referrals.

10. Upon the referral of Dr. Williams on February 8, 2016, the Claimant presented to Dr. Sides. The Claimant reported that a co-worker bumped him with a car while he was opening a gate and the Claimant had since developed severe and constant left foot symptoms. Dr. Sides diagnosed an osteochondral defect of the talus and performed a left ankle steroid injection. Dr. Sides recommended continued use of an ankle brace and following the RICE protocol (Claimant's Exhibit 9).

11. On February 9, 2016, the Claimant reported pain mostly in the left ankle. The ankle still had some popping and catching (Claimant's Exhibit 6).

12. On February 23, 2016, the Claimant reported continued left ankle pain and was noted to be walking with crutches. Dr. Vlahovich referred the Claimant for a second opinion when Dr. Sides was unavailable and Dr. Vlahovich noted the left ankle was not improving with conservative measures and was delaying recovery (Claimant's Exhibit 6).

13. Upon the referral of Dr. Vlahovich on March 1, 2016, the Claimant presented to Wesley P. Jackson, M.D. for a second opinion for the left ankle pain. The Claimant stated that he was injured when a truck hit his left hip and he developed left anterior ankle pain. Dr. Jackson diagnosed left talar dome medial cystic osteochondral defect. Dr. Jackson was of the opinion that surgery at that time was unpredictable. Dr. Jackson performed a cortisone injection in the left ankle. According to Dr. Jackson, if the Claimant had a positive response, he may benefit from an arthroscopy and debridement (Claimant's Exhibit 10).

14. On March 1, 2016, Dr. Jackson, Orthopedic specialist, noted that the Claimant was 5 feet 7 inches tall and weighed 300 pounds. Dr. Jackson reported that Claimant's cysts predated the work injury. On examination, Claimant's pain was "quite

out of proportion to the findings." Dr. Jackson considered surgery unpredictable at helping the Claimant at that time but if Claimant responded well to a diagnostic injection, the Claimant may benefit from an ankle arthroscopy and debridement "albeit it would still be rather unpredictable based upon his pain pattern today" (Respondents' Exhibit G).

15. On March 30, 2016, Dr. Vlahovich noted that the Claimant had a second ankle injection on March 1st but reported no relief. A second opinion from Dr. Jackson was that the outcome would be uncertain. The Claimant's physical therapy was on hold until after the left knee surgery on April 4th (Claimant's Exhibit 6).

16. On April 4, 2016, the Claimant had a left knee arthroscopy with a trochlea microfracture (Claimant's Exhibit 7).

17. On June 28, 2017, Dr. Sides noted that the Claimant reported his left ankle pain was not getting better but in fact worse. An ankle brace did not provide relief (Claimant's Exhibit 9).

18. On July 19, 2017, Dr. Sides reviewed MRI results. He recommended an allograft transplant of the Claimant's talus and referred the Claimant to David B. Hahn, M.D. Dr. Sides was of the opinion that: "**If he does not get a replacement of his talus he will need ankle replacement soon**" (Claimant's Exhibit 9).

Division Independent Medical Examination (DIME) by Mark S. Failinger, M.D.

19. At the request of Respondents, on August 10, 2016, the Claimant presented to Dr. Failinger for a DIME. Dr. Failinger found swelling that occurred all the time with locking sensations in the ankle. The Claimant used a cane to walk sometimes and had give-away episodes. The Claimant wore a brace for the ankle that somewhat helped. Examination revealed discomfort in the anterior and anterolateral left ankle. Dr. Failinger agreed with an opinion by Dr. Williams and was of the opinion that left ankle arthroscopy was a reasonable procedure for drilling an osteochondral defect, or if the lesion is large enough, to perform an open reduction, internal fixation (ORIF) of the lesion. Due to the Claimant's "morbid obesity, however, Dr. Failinger noted that the procedure would have a lower medical probability of helping (Claimant's Exhibit 14).

20. On August 24, 2016, Dr. Vlahovich noted that the Claimant was walking as tolerated with a cane but he was awaiting a second knee surgery due to "locking" in the knee. The Claimant also reported left hip, knee, **ankle** (emphasis supplied) and low back pain (Claimant's Exhibit 6).

21. On August 26, 2016, the Claimant reported anterior and that the ankle was worse than the knee. Dr. Williams explained that if the ankle was causing the Claimant problems, Dr. Sides could perform a medial malleolus osteotomy with a talus osteochondral allograft (Claimant's Exhibit 7).

22. On September 23, 2016, Dr. Failinger issued an addendum to his August 10, 2016 DIME report --after reviewing diagnostic imaging. Dr. Failinger was of the opinion that the Claimant's morbid obesity was a major risk factor for future ankle fusion, although ankle replacement may be considered. Dr. Failinger instead recommended a subchondral bone grafting given the Claimant's age group (Claimant's Exhibit 14).

23. Dr. Williams performed left knee arthroscopy on November 3, 2016 (Claimant's Exhibit 7).

24. On November 22, 2016, Dr. Vlahovich noted that Dr. Failinger performed a DIME on August 10, 2016, which supported approval of several surgeries in the left leg. The Claimant still walked as tolerated with a cane (Claimant's Exhibit 6).

Dr. Vlahovich

25. On December 20, 2016, Dr. Vlahovich discussed left ankle surgery with bone graft over osteochondral defect. Dr. Vlahovich discussed his diet and that weight loss would likely improve surgical outcome and emphasized use of a food diary (Claimant's Exhibit 6).

26. In a letter dated December 28, 2016, Dr. Vlahovich noted that the Claimant was not at maximum medical improvement (MMI) and his MMI determination was dependent upon approval for surgical procedures (Claimant's Exhibit 6)

27. On January 6, 2017, the Claimant was using a cane to ambulate following left knee surgery (Claimant's Exhibit 7).

28. On February 2, 2017, the Claimant had a left total knee arthroplasty (total left knee replacement). (Claimant's Exhibit 7).

29. On April 24, 2017, Dr. Vlahovich noted that the Claimant had complications from the knee surgery and was walking as tolerated with a cane. The Claimant's ankle pain remained the same (Claimant's Exhibit 6).

Gregory Reichhardt, M.D. and David B. Hahn, M.D.

30. Upon the referral of Dr. Vlahovich on June 20, 2017, the Claimant presented to Dr. Reichhardt for a physiatrist consultation. Dr. Reichhardt reviewed the history of the injury including the responsible coworker laughing at him. The left ankle revealed decreased range of motion and tenderness to palpation over the anterior aspect of the ankle. Dr. Reichhardt recommended an active independent exercise program (Claimant's Exhibit 18). Dr. Reichhardt was within the chain of authorized referrals.

31. On June 30, 2017, Dr. Vlahovich noted that an MRI of the left ankle showed an osteochondral defect. The Claimant reported increased left ankle pain and Dr. Sides suggested a repeat MRI. Dr. Vlahovich ordered the MRI. (Exhibit 6)

32. On July 19, 2017, the Claimant returned to Dr. Sides to review the new left ankle MRI results and discuss treatment options. At this point, Dr. Sides recommended an allograft transplant of the Claimant's talus and referred the Claimant to Dr. Hahn. Dr. Sides was of the opinion that if the Claimant did not get a replacement of the talus soon, he would need an ankle replacement soon (Claimant's Exhibit 9).

33. Upon the referral of Dr. Sides on August 2, 2017, the Claimant presented to Dr. Hahn for a second opinion on a fresh talar allograft transplantation surgery. The Claimant reported that he felt like something was stuck in his ankle and he felt his ankle lock up intermittently. Dr. Hahn did not feel that a fresh talar allograft would be as effective as a DeNovo procedure done over the top of a subchondroplasty procedure. Dr. Hahn stated, "certainly I do think that something needs to be done (*sic*) his ankle and this is going to be a difficult process because of the patient's significant weight, but I do think it would be worth it given the patient's reasonable ankle motion, although I did tell him that **there is a very good likelihood that he will require an ankle fusion if his discomfort continues**" (Claimant's Exhibit 11). Dr Hahn was within the chain of authorized referrals.

34. On August 25, 2017, Dr. Reichhardt noted that the Claimant continued to walk with a mildly antalgic gait, favoring the left lower extremity. He reviewed Dr. Hahn's report recommending a DeNovo procedure instead of an allograft transplant procedure. The Claimant expressed frustration over the treatment plan of his left ankle. Dr. Reichhardt spoke with Dr. Sides' office who referred the Claimant to Alan Ng, D.P.M. This was reasonable from a physiatric standpoint (Claimant's Exhibit 16). Dr. Ng was within the chain of authorized referrals.

Alan Ng, D.P.M., Podiatrist

35. Upon the referral of Dr. Vlahovich, by recommendation of Dr. Hahn, on October 10, 2017 the Claimant presented to Dr. Ng, the Claimant indicated that he had stiffness and pain in the left heel and ankle. Range of motion (ROM) was limited. The Claimant reported that his symptoms were constant and he described them as mild-moderate. Dr. Ng ordered an MRI of the left ankle to evaluate a possible osteochondral defect (Claimant's Exhibit 15).

36. The Claimant returned to Dr. Ng on October 17, 2017 to review the left ankle MRI. Dr. Ng found severe osteochondritis dissecans and recommended surgical intervention, including a juvenile allograft cartilage replacement with a subchondraplasty calcium phosphate injection to stabilize the severe osteochondral defect and insufficiency fracturing (Claimant's Exhibit 15).

***Samms* Conference**

37. On October 24, 2017 Dr. Vlahovich participated in a *Samms* conference. Dr. Vlahovich explained that Dr. Ng ordered an MRI that indicated an extensive cystic medial talar osteochondral insults accompanied by a significant degree of osseous inflammatory changes with attenuation of the subchondral cortex and overlying articular cartilage without frank disruption of the subchondral cortex or collapse. Dr. Vlahovich

referred to Dr. Sides who recommended surgery. Dr. Vlahovich referred to Dr. Hahn who was of the opinion that the Claimant's obesity made treatment and recovery difficult, however, he suggested a DeNovo procedure done over the top of a subchondroplaty procedure. Since Dr. Hahn did not perform that procedure, Dr. Vlahovich referred the Claimant to Dr. Ng who recommended a different surgery than he was willing to perform, *i.e.*, juvenile allograft cartilage replacement with subchondraplasty calcium phosphate injection. Dr. Vlahovich stated:

> In my opinion, the Claimant has a lesion in his foot/ankle that needs surgery or the Claimant will not get better and will likely get worse. I am concerned that the Claimant's weight will make recovery more difficult because the Claimant may not be able to walk for over a month or two; time necessary to try and give the surgery a chance to heal before the Claimant puts all his weight on his ankle…
>
> The Claimant's cystic lesion, essentially a hole in the bone, likely preexisted the work injury, however, the Claimant was asymptomatic prior to the work injury and, as a result, the need for surgery is more likely related to the work injury.

(Claimant's Exhibit 6).

38. On December 5, 2017, Dr. Vlahovich noted further left ankle surgery was put on hold until it was confirmed that the Claimant was not allergic to any surgical materials. The Claimant reported feeling the same left ankle pain (Claimant's Exhibit 6).

39. On January 3, 2018, Dr. Vlahovich noted no problem with the allergy testing and that the Claimant may move forward with the recommendation of Dr. Ng (Claimant's Exhibit 6).

40. On January 4, 2018, the Claimant returned to Dr. Ng reporting persistent left ankle pain. Dr. Ng requested pre-authorization for an ankle scope with debridement (Claimant's Exhibit 15). The request was denied, thus, the need for the hearing herein.

Independent Medical Examination (IME) by Scott Primack, D.O.

41. Dr. Primack testified at the hearing. He was of the opinion that the Claimant is not a good surgical candidate for the following reasons:

a. Function: Claimant's function improved without surgery. Claimant exercised and lost weight. Originally, the Claimant reported that he could walk 10 - 15 minutes. Now the Claimant walks up to an hour and a half. Computerized outcome analysis reflected the Claimant's self-perception of functionality increased despite his reported symptoms of pain. Dr.

Primack stated the opinion that there is a good chance that surgery will result in increased pain and decreased function. Dr. Primack recognized that an MRI reflected objective changes but Dr. Primack pointed out that findings of objective improvement in function also exist. The decision to operate should be based on the person and functionality and not on MRI findings alone, according to Dr. Primack. The Claimant's testimony supports the fact that Dr. Ng's recommended surgery is based on the Claimant's present condition and his functionality.

b. Obesity: Claimant is obese with a BMI over 40. Dr. Primack recognized that the possibility of surgical success, regardless of the surgery, is lower due to the Claimant's morbid obesity. Dr. Primack anticipated that significant BMI will crush the graft recommended by Dr. Ng. The ALJ infers and finds that the possibility of surgical success is generally uncertain, yet patients undergo surgeries.

c. Expectations: Dr. Primack was concerned about the Claimant's mental state and expectations. Walking is a reasonable expectation and Claimant's ability to walk has improved without surgery. Running and jumping are not reasonable expectations. Returning to preinjury status is not a reasonable expectation. Reducing pain could be reasonable, however, in this case, Dr Primack was of the opinion that Claimant's pain levels are not terrible. Dr. Ng noted that the Claimant's symptoms were "mild" and that Claimant reported a pain level of 3. Dr. Primack stated that mild symptoms do not support the need for surgery. In this respect, his opinion differs from that of foot surgeon, Dr. Ng. Also, Dr. Primack anticipated that pain will increase following surgery and that surgery will most likely not reduce the Claimant's pain level below 3. Dr. Primack noted that the Claimant already underwent three knee surgeries and wants a fourth knee surgery which does not bode well for a positive result following ankle surgery, in Dr. Primack's opinion. The ALJ infers and finds that this opinion is speculative. Dr. Primack referenced that Dr. Jackson, an orthopedic surgeon, noted that Claimant's pain was out of proportion to the cysts which make surgery unpredictable. The ALJ finds a degree of speculation in this opinion. Indeed, the ALJ infers and finds that the outcomes of many surgeries are "unpredictable," yet the patients who chose to undergo these surgeries are not denied the opportunity to do so.

d. Surgery is not reasonable, according to Dr. Primack's interpretation of the Medical Treatment Guidelines (hereinafter "MTG'). According to Dr. Primack, the MTG recommend a surgical progression that starts with a microfracture. In this case, microfracture surgery is not reasonable because of the size of Claimant's cyst, according to Dr. Primack. If the microfracture fails, the MTG recommend doctors consider an Osteochondral Autograft/Allograft Transfer System (OAATS). According to Dr. Primack, the OAATS procedure is not reasonable because Claimant's BMI of 40 is greater than the recommended BMI of less than

35. Dr Ng, a podiatrist, recommended a juvenile allograft cartilage replacement with subchondraplasty calcium phosphate injection, in this respect, Dr. Ng disagrees with Dr. Primack. The ALJ finds that Dr. Ng's clinical judgment herein outweighs general provisions of the MTG, as interpreted by Dr. Primack.

42. Instead of surgery, Dr. Primack recommended ongoing exercise and weight loss, and a bracing feature to support the Claimant's ankle if Claimant reports loss of function.

43. Ultimately, Dr. Primack is of the opinion that the Claimant is "doing as well as can be expected" despite the Claimant's continuing pain and Dr. Ng's recommended surgery.

The Claimant's Testimony

44. The Claimant testified at the hearing. Several doctors told him he should lose weight to lessen the pressure on his ankle. Claimant worked out at the recreation center 1 hour to 1½ hour, five to six times per week; sometimes twice per day. On occasion he drove himself to the recreation center. Claimant primarily exercised on the treadmill, stationary bike, and elliptical machine. Claimant lost 60 pounds and currently weighs around 274 pounds. The ALJ infers and finds that the Claimant has exerted maximum effort to lose weight. The ALJ further infers and finds that the Claimant presented as a naturally heavy-set individual. None of the doctors, other than Dr. Primack specified how much weight the Claimant should lose. According to Dr. Primack the Claimant's BMI should be reduced to 35 or less. The ALJ infers and finds that this could well be an impossible goal for a heavy set individual such as the Claimant, thus, effectively precluding a class of individuals with BMI's over 35 from a surgical option for the ankle despite the expert recommendation of a foot surgeon. According to the Claimant, he cannot step and put pressure on his ankle. Nonetheless, he lost weight exercising on the treadmill and on the elliptical machine despite his ankle pain which leads the ALJ to infer and find that he is determined to lose weight to undergo Dr. Ng's recommended surgery. Dr. Ng is recommending the surgery, which consists of juvenile allograft cartilage replacement with subchondraplasty calcium phosphate injection. The ALJ infers and finds that Dr. Ng has considered the Claimant's present weight status.

Ultimate Findings

45. Although Dr. Primack makes a convincing case that the Claimant's condition is now as good as it's going to get, the Claimant still experiences pain that he would like to alleviate, and a foot surgeon, Dr. Ng, is recommending a surgical procedure, juvenile allograft cartilage replacement with subchondraplasty calcium phosphate injection, which the Claimant desires to undergo. The opinions of other physicians are not as current as Dr. Primack's opinion and the ALJ infers that they do not take into account the Claimant's present weight loss and vigorous exercise program, or Dr. Primack's opinion to the effect that the Claimant's present condition is as good as it's

going to get, which the ALJ finds to be speculative. Dr. Primack's opinion in this regard, which is speculative, tends to contraindicate Dr. Ng's surgical recommendation. Dr. Ng, an authorized and accredited podiatrist, has more specific expertise than the other physicians, including Dr. Primack, whose opinions are reflected in the evidence and Dr. Ng is recommending ankle surgery, which consists of a different procedure than has been performed in the past. Indeed, the opinions of other physicians contained in the evidence support the appropriateness of ankle surgery, with the qualification that the Claimant's obesity is a factor and he should lose weight. These opinions do not take into account that the Claimant has lost 60 pounds and is engaged in a vigorous exercise regimen. The ALJ infers and finds that a reduction to a BMI of 35 or less may create an impossibly high bar for a portly individual such as the Claimant. The ALJ infers and finds that an arbitrary distinction between portly and non-portly individuals is being made for considerations of ankle surgery. For these reasons, the ALJ finds the ultimate opinion of Dr. Ng, supported by the Claimant's testimony, more credible and persuasive than other opinions to the contrary.

46. Between conflicting medical opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the opinion of Dr Ng as supported by the Claimant's testimony, and to reject opinions to the contrary.

47. The ALJ finds that the Claimant's testimony concerning his present condition and desire for Dr. Ng's recommended surgery bears considerable weight in supporting Dr. Ng's recommendation

48. Based on the totality of the evidence, including the Claimant's testimony, the ALJ finds that the surgical procedure recommended by Dr. Ng, a juvenile allograft cartilage replacement with subchondraplasty calcium phosphate injection, is causally related to the admitted injury of the admitted injury of October 9, 2015 (a GAL for that injury has remained in full force and effect since March 26, 2016) and it is reasonably necessary to cure and relieve the effects thereof.

Respondents' Position on Reasonable Necessity and Causal Relatedness of Surgery Recommended by Dr. Ng

Respondents argue that the medical records, the testimony of Dr. Primack, and the Medical Treatment Guidelines support the idea that surgery is not reasonably necessary. They argue that surgical interventions should be contemplated within the context of expected functional outcome and not purely for the purpose of pain relief. Later, however, they apparently concede that surgery may be necessary to relieve pain caused by an industrial injury. As found, the Claimant's function improved with the help of exercise and weight loss and without surgery. It is just as probable that the long-term outcome of Dr. Ng's surgery, along with a vigorous exercise regimen after the surgical recovery period, could improve the Claimant's functionality. Claimant testified that he primarily exercised on the treadmill, stationary bike, and elliptical machine, that he lost 60 pounds, and that he currently weighed around 274 pounds. Claimant admitted he works out 1 – 1 ½ hours 5 to 6 times per week. Dr. Primack pointed out that when he first evaluated Claimant, he reported he could walk 10 - 15 minutes and, when Dr.

Primack last evaluated the Claimant, he reported that he walks up to an hour and a half at a time. Also, computerized outcome analysis reflected Claimant's self-perception of functionality increased despite his reported symptoms of pain. It stands to reason that the Claimant's self-perception of functionality would increase even more after the recovery period from surgery. Pain reduction may support surgery in some situations, and this is exactly such a situation. Dr. Ng noted that Claimant's symptoms were "mild" and that Claimant reported a pain level of only 3. According to Dr. Primack, mild symptoms do not support the need for surgery, pain will likely increase following surgery, and it is unlikely that surgery will reduce Claimant's pain level below a rating of 3, according to Dr. Primack. The ALJ finds that this opinion is speculative. It is just as probable that ankle surgery by a foot specialist could reduce the Claimant's pain even more.

Despite the fact that Dr. Ng is within the authorized chain of referrals, referred by virtue of his foot and ankle specialty as a podiatrist, Respondents ultimately argue that his recommended surgery is no reasonably necessary to cure and relieve the effects of the admitted injury of 2015. With all due respect to the Respondents, the ALJ does not accept this argument.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences *from the evidence." See Bodensleck v. Indus. Claim Appeals Office, 183 P.3d 684* (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training,

experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S. As found, although Dr. Primack made a convincing case that the Claimant's condition is now as good as it's going to get, the Claimant still experiences pain that he would like to alleviate, and a foot surgeon, Dr. Ng, is recommending a surgical procedure, juvenile allograft cartilage replacement with subchondraplasty calcium phosphate injection, which the Claimant desires to undergo. The opinions of other physicians are not as current as Dr. Primack's opinion and the ALJ infers that they do not take into account the Claimant's present weight loss and vigorous exercise program, or Dr. Primack's opinion to the effect that the Claimant's present condition is as good as it's going to get, which the ALJ finds to be speculative. Dr. Primack's opinion in this regard, which is speculative, tends to contraindicate Dr. Ng's surgical recommendation. Dr. Ng, an authorized and accredited podiatrist, has more specific expertise than the other physicians, including Dr. Primack, whose opinions are reflected in the evidence and Dr. Ng recommended ankle surgery, which consists of a different procedure than has been performed in the past. Indeed, the opinions of other physicians contained in the evidence support the appropriateness of ankle surgery, with the qualification that the Claimant's obesity is a factor and he should lose weight. These opinions do not take into account, as found, that the Claimant has lost 60 pounds and is engaged in a vigorous exercise regimen. As found, a reduction to a BMI of 35 or less may create an impossibly high bar for a portly individual such as the Claimant. An arbitrary distinction between portly and non-portly individuals should not be made for considerations of ankle surgery. For these reasons, as found, the ultimate opinion of Dr. Ng, supported by the Claimant's testimony, was more credible and persuasive than other opinions to the contrary.

b. Compensation can be awarded where there is competent evidence other than expert opinion. *Martin Marietta Corp. v. Faulk*, 158 Colo. 441, 407 P.2d 348 (1965). Such competent evidence includes lay testimony. *See Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Colorado Fuel & Iron Corp. v. Alitto*, 130 Colo. 130, 273 P.2d 725 (1954). *Also see Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997). As found, although the Claimant's testimony supports the expert opinion of foot surgeon, Alan Ng, D.P.M., the Claimant's testimony plays a significant role in the determination that Dr. Ng.'s recommended surgery is reasonably necessary.

Substantial Evidence

c. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial**

evidence which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions, the ALJ made a rational choice, based on substantial evidence, to accept the opinion of Dr Ng, as supported by the Claimant's testimony, and to reject opinions to the contrary.

Reasonably Necessary Ankle Surgery by Alan Ng, D.P.M.

d. To be a compensable benefit, medical care and treatment must be causally related to an industrial injury or occupational disease. *Dependable Cleaners v. Vasquez,* 883 P. 2d 583 (Colo. App. 1994). As found, Claimant's medical treatment is causally related to his injuries of October 9, 2015. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's medical care and treatment, including the ankle surgery recommended by Dr. Ng, specifically, the juvenile allograft cartilage replacement with subchondraplasty calcium phosphate injection, is reasonably necessary to cure and relieve the effects of the Claimant's admitted injury of October 9, 2015.

Burden of Proof

e. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to contested medical benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained his burden with respect to the juvenile allograft cartilage replacement with subchondraplasty calcium phosphate injection, recommended by Dr. Ng.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents shall pay the costs of causally related and reasonably necessary medical care and treatment, including the juvenile allograft cartilage replacement with subchondraplasty calcium phosphate injection, recommended by Alan Ng, D.P.M, an authorized foot surgeon, subject to the Division of Workers Compensation Medical Fee Schedule.

B. The General Admission of Liability, dated April 7 2016, shall remain in full force and effect.

C. Any and all issues not determined herein are reserved for future decision.

DATED this 14th day of March 2015.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. WORKERS' COMPENSATION NO. 5-080-939-001

ISSUES

I. Has Claimant proven by a preponderance of the evidence that he sustained an injury arising out of and in the course and scope of his employment?

II. If compensable, did Claimant's conduct constitute a willful failure to follow the employer's reasonable safety rules, violating C.R.S. 8-42-112(1)(b)?

STIPULATIONS

A. The parties stipulated that Claimant's average weekly wage is $2,403.84

B. The parties stipulated that if this claim is compensable, the Claimant is entitled to TTD from July 1 – July 15, 2018.

C. If compensable, the parties agree that medical treatment at Good Samaritan Hospital and from Dr. Koldenhoven through October 3, 2018 is authorized, reasonable, and necessary.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant's date of birth is January 18, 1958. He has worked as a Physician's Assistant ("PA") for 17 years. Claimant commenced employment for the Employer as a PA on April 23, 2018. Employer is an urgent care and family practice medical office. Claimant worked in the family practice office. The Claimant had previously worked with Dr. Veras for three years at a different clinic and considered him a friend. He and Dr. Veras joined the Employer at the same time. [p. 20-21]

2. Claimant's job description provides that as a PA, he is responsible for direct patient care and other administrative duties, as designed by the Medical Director in accordance with the Colorado Medical Practice Act. Claimant is required to use sound medical judgment, know limitations, seek and consult when advisable, and advise administration of any issues that may impact the practice. Claimant is required to communicate through appropriate channels. [RS 13-17]

3. The Claimant agreed that his primary duty as a physician's assistant was patient care. The Claimant was also responsible for answering questions and doing consultations with staff, planning and teaching in-services as directed, and following medical protocol handouts and clinical standards. The Claimant is required to use sound medical judgment. [p. 32]

4. On June 27, 2018, at the end of the workday, Dr. Veras' keys became locked in his office. Claimant had completed his patient care for the day. Claimant did not speak with Dr. Veras or know where he was, but testified that he was concerned that Dr. Veras would need his vehicle keys to get home. [p. 23, 33]

5. Unbeknownst to anyone, Claimant unilaterally determined that he would attempt to access Dr. Veras' office. Claimant decided that he would get a six-foot ladder and attempt to climb the ladder in the massage therapy room adjacent to Dr. Veras' office, remove a ceiling tile, climb through the ceiling crawlspace, drop into Dr. Veras' office and unlock the door.

6. Unbeknownst to anyone, Claimant did get a six-foot ladder and climbed up the ladder and removed various ceiling tiles before finding an area in the massage therapy room that provided access to Dr. Veras' office. Claimant climbed higher up the ladder and went up into the crawlspace in the ceiling. He then removed the ceiling tile that went into Dr. Veras' office. Once the ceiling tile in Dr. Veras' office was removed, Claimant then tried to lower himself into Dr. Veras' office.

7. While trying to lower himself into Dr. Veras' office, Claimant experienced difficulty. He lost his footing and fell awkwardly into Dr. Veras' office, sustaining the injuries that give rise to this claim, a Grade 3 distal tibia and fibula fracture. [p. 25-28] [RS 61]

8. Claimant did not know where Dr. Veras was and had not spoken to him before attempting to climb through the ceiling. Nobody asked Claimant to engage in this conduct, and he had not obtained permission or consent from his employer to engage in the activities that led to his injuries. Nobody at the clinic knew what Claimant was doing. [p. 33-34] He did not check with anyone at the office to see what steps were being taken to access Dr. Veras' office, such as looking for keys, calling a locksmith, or taking any other steps to get into the office. [p. 60]

9. Claimant agreed that there was nothing in his job description that was remotely close to climbing up ladders and climbing through crawlspaces in ceilings and then dropping into offices for any purpose – let alone to retrieve a co-employee's personal items. [p. 39]

10. Maggie Ward was employed as a radiology technician for the Employer on June 27, 2018. When Ms. Ward became aware that Dr. Veras' office was locked, she attempted to access the office by first looking for keys and then trying to pry the office door open with a credit card. [p. 46] These attempts were unsuccessful. Ms. Ward then obtained Employer authorization to contact a locksmith. She called a locksmith and advised other employees, including Claimant, that a locksmith was on the way. This occurred prior to Claimant's accident. [p. 47-48]

11. Claimant acknowledged Employer was and is safety-conscious, it checked all the boxes when it came to safety, and employees were required to report unsafe practices. Claimant acknowledged receipt of the Employee Handbook and agreed to abide by the policies and procedures set forth in the Handbook. [RS 61] The Employee Handbook provided, *inter alia,* that safety must come before all other concerns [RS 36] and that "under no circumstances are employees

allowed to place themselves at risk to fulfill business needs." [p. 36, 37] The Claimant acknowledged that safety enforcement had been explained to him, that he knew how to locate safety policies, and that he would abide by these policies. [RS 82,83]

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

Compensability

For an injury to be compensable under the Act, it must "arise out of" and "occur within the course and scope" of employment. Section 8-41-301(1), C.R.S.; *Price v. Industrial Claim Appeals Office,* 919 P.2d 207, 210 (Colo. 1996); *Panera Bread, LLC v. Industrial Claim Appeals Office,* 141 P.3d 970 (Colo. App. 2006); *Orist v. G4S Solutions*, (ICAO, August 17, 2012) (W.C. 4-886-126). An injury occurs "in the course of" employment where Claimant demonstrates that the injury occurred within the time and place limits of his employment. *Popvich v. Irlando,* 811 P.2d 379 (Colo. 1991). The "arising out of" requirement is narrower and requires Claimant to show a causal connection between the employment and injury such that the injury has its origins in the Employer's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. *Triad Paining Co. v. Blair,* 812 P.2d 638 (Colo. 1991). An employee's activities must be sufficiently incidental to the work itself as to be properly considered as arising out of and in the course and scope of employment. *City of Boulder v. Streeb,* 706 P.2d 786 (Colo. 1985). An activity arises out of and in the course and scope of employment when the activity is sufficiently related to the conditions and circumstances upon which the employee generally performs job functions such that the activity may reasonably be characterized as an incident of employment. *Price v. ICAO,* 919 P.2d 207 (Colo. 1996). There is no presumption that an injury which occurs in the course of employment, arises out of the employment. *Finn v. ICAO,* 165 Colo. 106, 437 P.2d 542 (Colo. 1968).

If an employee substantially deviates from the mandatory or incidental functions of his employment, however, then the injury is not compensable. *Kater v. Industrial Commission,* 728 P.2d 746 (Colo. App. 1986). When an employer asserts that employees should not be compensated because they have deviated from the conditions and circumstances of employment, the issue is whether the activities that caused the injuries deviated from employment in a manner that removed those activities from the employment relationship. *Phillips Contracting, Inc. v. Hirst,* 905 P.2d 9, 12 (Colo. App. 1995). As a general rule, substantial deviations curtail coverage, while minor deviations do not. *Kelly v. ICAO,* 214 P.3d 516, 518 (Colo. App. 2009).

In *Lori's Family Dining v. ICAO,* 901 P.2d 715 (Colo. App. 1995), the Colorado Court of Appeals announced a four-part test to be applied when applying whether horseplay constitutes a deviation: (1) the extent and seriousness of the deviation; (2) the completeness of the deviation, i.e., whether it was comingled with the performance of a duty or involved in an abandonment of duties; (3) the extent to which the practice of horseplay has become an accepted part of the employment; and (4) the extent to which the nature of the employment may be expected to include some horseplay. *See also*, §8-40-201(8), C.R.S.

No single factor is determinative, and the Claimant need not prove the existence of every factor in order to establish compensability. The first two factors have been held to be more critical than the third and fourth, which "may be viewed merely as specific methods of proving that a claimant's actions became part of the employment." *Panera Bread, LLC v. Industrial Claim Appeals Office, supra.* Resolution of the issue is one of fact determination by the ALJ. *See, Schrieber v. Brown & Root, Inc.,* 888 p.2d 274, 277 (Colo. App. 1993).

The Claimant has failed to prove by a preponderance of the evidence that the injuries he sustained which give rise to this claim, arose out of and in the course and scope of his employment. The Claimant is a physician's assistant. His job duties as testified to, and as described in the job description, show that the Claimant's primary duties include direct patient care, following medical protocols, and clinical standards in accordance with the Colorado Medical Practice Act. The Claimant is required to use sound medical judgment, know limitations, seek consult when advisable, and advise administration of any issues that impact the practice. It is undisputed that the Claimant's conduct constituted a substantial deviation from his job functions. The Claimant admits that the activity that he was engaged in, which led to his injury was not remotely close to his job requirements. The Claimant engaged in these activities without the knowledge or consent of his Employer or any of his co-employees at the clinic, and without regard to the fact that a locksmith had been called to access Dr. Veras' office. Even if Claimant had no knowledge that a locksmith had been called, he engaged in the conduct that gave rise to his injuries without checking to see if any alternative measures were being taken to access Dr. Veras' office. Moreover, no one asked Claimant to help unlock the door and no one specifically, or even tacitly, allowed him to undertake unlocking the door in any manner-let alone the extreme and dangerous manner undertaken by Claimant.

Here, there were no specific benefits which flowed to the Employer from Claimant's conduct. Claimant was attempting to do a personal favor for a co-worker and the favor was unsolicited and involved a substantial and complete deviation from his employment. Claimant's actions did not involve patient care and in no way reflected his job duties as a physician's assistant. Claimant was not responding to an emergency situation; he simply took it upon himself to risk his personal safety from which his employer derived no benefit. Claimant's actions were not a slight deviation from his job duties but a substantial and complete deviation. The consequences of Claimant's conduct, climbing up a ladder, removing ceiling tile, and then climbing through a ceiling crawlspace and attempting to drop into another office to try and obtain car keys for a co-employee, far outweigh any benefits to his employer as can be seen from the resulting accident and Claimant's injuries.

Therefore, Claimant has failed to establish by a preponderance of the evidence that the injuries he sustained which give rise to this claim, arose out of and in the course and scope of his employment.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claims for benefits are denied and dismissed.

2. Consequently, all other issues are moot.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after

mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 14, 2019

/s/ Glen B. Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant is entitled to temporary total disability (TTD) benefits from September 11, 2017 through October 11, 2017.

2. Whether Claimant has established by a preponderance of the evidence that a left elbow EMG and a left elbow MRI are reasonable, necessary, and causally related medical benefits for his October 27, 2016 work injury.

FINDINGS OF FACT

1. Claimant was employed by Employer as an electrician and sustained an electrocution injury on October 27, 2016.

2. Claimant was up on a ladder approximately 4 feet when someone walked in who could not see Claimant and hit a light switch while Claimant was working with 270 volts. The electrocution was significant and Claimant was able to move his feet off the ladder to fall, which disengaged him from the electricity. Before falling off the ladder, Claimant was pinned in place with a wicked titanic contraction of muscle. Claimant had significant entry and exit wounds from the electrocution.

3. As a result of the electrocution and fall from the ladder, Claimant injured multiple body parts. In his initial evaluations with Philip Findler, M.D., Robert Dixon, M.D., and John Woodward M.D. from November, 2016 through January, 2017, Claimant had multiple complaints but did not mention left elbow symptoms or left elbow deformity as one of his complaints. *See* Exhibits J, K, L.

4. On January 2, 2017, Douglas Scott, M.D. performed an independent medical examination. Dr. Scott noted that Claimant probably had injury to the tissues in his right arm, right shoulder, right upper chest quadrant, left upper chest quadrant, left shoulder, and left arm as was the probable course of the electrical current as it passed through Claimant's body. *See* Exhibit G.

5. On January 4, 2017, John Reister, M.D. evaluated Claimant. Dr. Reister recommended surgery to repair Claimant's right shoulder and recommended fixation of the near-complete subscapularis tear and subluxated biceps tendon with right shoulder arthroscopy. A request for surgery authorization was sent on January 11, 2017. *See* Exhibits 1, I, L.

6. On January 17, 2017, Dr. Scott performed a Rule 16 Utilization Medical Review to address whether the right shoulder surgery recommended by Dr. Reister was

reasonable, necessary, and related to the October 27, 2016 work injury. Dr. Scott concluded that it was and recommended the surgery. *See* Exhibit G.

7. The shoulder surgery was scheduled for February 17, 2017. On February 7, 2017 Claimant called and cancelled the surgery. Surgery was then rescheduled for April 17, 2017. Claimant again called and cancelled the surgery. Surgery was then rescheduled once again for May 5, 2017. Claimant cancelled the May 5, 2017 surgery.

8. During this period of time, Claimant moved several times. Claimant no longer resides in Colorado.

9. On September 11, 2017, ALJ Goldman issued an Order finding that Claimant's actions in moving so often and cancelling multiple scheduled surgeries was tantamount to a refusal to submit to the right shoulder surgery which was a reasonably essential surgery to promote Claimant's recovery. ALJ Goldman found an opinion from Dr. Scott that the delay in getting the surgery may be making Claimant's underlying shoulder condition worse credible. ALJ Goldman found that Claimant's refusal to undergo surgery was an injurious practice imperiling and retarding Claimant's recovery. *See* Exhibits 4, F.

10. ALJ Goldman's September 11, 2017 Order provided that Respondents may suspend Claimant's temporary total disability (TTD) benefits as of the date of the Order. It required Respondents to reinstate TTD benefits as of the date Claimant underwent the recommended right shoulder surgery. ALJ Goldman noted that benefits may be reduced or suspended if a Claimant persisted in injurious practice tending to imperil or retard recovery or refused to submit to surgical treatment reasonably essential to promote recovery. ALJ Goldman found that happened in this case and that suspension of TTD was appropriate per § 8-43-404(3), C.R.S. *See* Exhibits 4, F.

11. Consistent with ALJ Goldman's Order, Respondents suspended TTD benefits as of September 11, 2017. Claimant finally underwent the recommended right shoulder surgery on October 12, 2017 with Dr. Reister. Respondents reinstated TTD benefits on October 12, 2017. *See* Exhibit F.

12. On October 25, 2017, Dr. Reister evaluated Claimant. Dr. Reister noted that this was the first visit following the surgery for subscapular repair and biceps tenodesis. Dr. Reister noted that Claimant had a very easy to fix subscapular tendon but a terrible biceps. Dr. Reister noted physical therapy would not start until six weeks post surgery and provided Claimant with a physical therapy script to find a therapy center as Claimant was residing in Nevada. Dr. Reister noted Claimant was doing very well at the first post-op visit. *See* Exhibit 1.

13. On January 3, 2018, Dr. Reister evaluated Claimant. Dr. Reister noted that Claimant was around 10 weeks out from his surgery and that his right shoulder was improving. Overall, Dr. Reister found improved motion, strength, and forward progress and recommended Claimant continue his therapy. Dr. Reister noted that Claimant's other

injuries from the same accident included the left shoulder, which was not as symptomatic as the right shoulder but had been symptom producing all along and had been treated with physical therapy. Dr. Reister noted that an MRI showed low-grade partial tears in the left shoulder rotator cuff as well as mild bursal symptoms. Dr. Reister also noted that Claimant's exam had been classic for bursitis and impingement and that Claimant was now ready to deal with the left shoulder since his right shoulder was improving and the left shoulder was now becoming the more symptomatic shoulder. Dr. Reister noted that Claimant had failed conservative management for bursitis and partial cuff tear of the left shoulder and opined that the next step for the left shoulder would be to do an EUA arthroscopy with sub acromial decompression and thorough inspection. Dr. Reister noted the challenges in getting Claimant care in Denver while Claimant was living in Nevada. Dr. Reister noted that they would try to get Claimant into the operating room for the left shoulder. *See* Exhibits 1, H, L.

14. On January 4, 2018, Dr. Reister sent a request for authorization for the left shoulder surgery. On January 15, 2018, Dr. Scott issued a Rule 16 Utilization Medical Review report where he opined that the left shoulder surgery was not reasonable, necessary, or causally related to the October 27, 2016 work injury. Dr. Scott opined that the left shoulder symptoms were a result of congenital type II acromion, chronic degenerative tendinosis/bursitis, and bony osteoarthritis. *See* Exhibit H.

15. On May 30, 2018, Dr. Scott issued a medical records review report. Dr. Scott opined that left shoulder surgery recommended by Dr. Reister was not reasonable or necessary and that it was not indicated to treat the effects of Claimant's October 27, 2016 injury. *See* Exhibit G.

16. On August 30, 2018, Dr. Reister evaluated Claimant. Dr. Reister noted that it was the first time he had seen Claimant in seven months. Claimant reported that his right shoulder was significantly better than before. On examination, Dr. Reister found the subscapular tendon to be healed. Claimant reported that he had left shoulder pain and that he had numbness, tingling, odd sensation in his hands, and spasms in the hands. Claimant reported that he could only write for maybe 20 minutes before his hands went weak and numb and that he dropped things on a regular basis. Claimant reported that these symptoms were not present prior to the injury. Dr. Reister noted that an MRI had been done on the left shoulder a month after the injury that had some findings. Claimant reported difficulty in getting the left shoulder associated with the work comp injury so that Dr. Reister could try an arthroscopy evaluation, debridement, and decompression. *See* Exhibits 1, H, I.

17. Dr. Reister noted that Claimant brought to his attention for the first time a deformity at the left elbow. Dr. Reister opined that Claimant had classic stigmata of a distal bicep tendon tear and gross loss of supination strength in the left side. Dr. Reister opined that this would be 2 years out from the injury in 2 months' time and that it unfortunately was very unlikely to be repaired successfully with surgery. However, Dr. Reister noted it was appropriate to document the injury, the level of the tendon retraction, and would be worth seeing with a hand surgeon whether allograft reconstruction was

possible. Dr. Reister recommended an EMG/NCV of the bilateral upper extremities to see if Claimant had any stigmata of electrocution or permanent nerve injury. Dr. Reister also requested Claimant's left elbow be evaluated since Claimant would have a permanent deformity and permanent loss of some strength in supination. Dr. Reister continued to recommend left shoulder surgery with a scope decompression, debridement of the labrum and partial-thickness tears, and a good look at the subscapular. *See* Exhibits 1, H, I.

18. On the Physician's Report of Worker's Compensation Injury form, undated, but date stamped as received from Respondents on September 17, 2018, Dr. Reister noted the treatment plan included an MRI of the left elbow and an EMG/NCV of the bilateral upper extremities. *See* Exhibit 1.

19. On September 4, 2018, Dr. Reister requested authorization for an MRI of the left elbow as well as for bilateral EMG/NCV studies of the upper extremities. *See* Exhibits 1, H.

20. In the meantime, after the request was made for a left elbow MRI and bilateral EMG/NCV testing of the upper extremities, and on September 7, 2018, ALJ Spencer issued an Order requiring Respondents to cover the left shoulder arthroscopic surgery recommended by Dr. Reister. *See* Exhibit D.

21. On September 11, 2018, Respondents responded to the request from Dr. Reister for left elbow MRI and bilateral upper extremity EMG/NCV testing. Respondents denied the request for left elbow MRI but approved the authorization request for bilateral upper extremity EMG/NCV testing based on a Rule 16 Utilization Medical Review performed on September 11, 2018 by Dr. Scott. *See* Exhibit H.

22. Dr. Scott opined that considering the possible long-term sequelae of electrocution injuries with entry in the right hand and exit in the left hand, he recommended the EMG/NCV studies of the bilateral upper extremities to rule out mono versus poly neuropathy. Dr. Scott noted that Claimant had a history of type II diabetes and was on Metformin medication and that the testing should be done by a neurologist. Dr. Scott opined that given the lack of complaint in the medical record of left elbow pain, left elbow dysfunction, or left elbow deformity related to a possible distal biceps tendon tear, and considering that the deformity complaint was made 22 months after the electrocution accident, the request for left elbow MRI should be denied as not indicated and/or necessary to treat the October 27, 2016 accident. Dr. Scott opined that the left elbow issues should have manifested sooner than 22 months post-injury. Dr. Scott noted that Claimant, Dr. Reister, and the physical therapist did not make any mention of the left elbow issues before August of 2018. *See* Exhibit H.

23. On October 16, 2018, neurologist Marc Triehaft, M.D. evaluated Claimant and performed EMG testing. Claimant reported that he had sudden spasms in his hands 1-3 times per month where he suddenly loses strength and his hands open involuntarily causing him to drop objects. Claimant denied numbness and tingling in his hands.

Claimant reported that he had been followed for two years for diabetic peripheral neuropathy and had undergone several shoulder procedures for injuries sustained in the work related accident. Dr. Triehaft noted that the EMG studies had been approved by Insurer and that they revealed severe bilateral carpal tunnel syndrome and a left ulnar neuropathy at the elbow. Dr. Triehaft opined that the finding of left ulnar neuropathy at the elbow shown by EMG was compatible with mono neuropathy multiplex and was more likely related to diabetes than to the electroshock injury. Dr. Triehaft opined that disorders associated with electrocution injury were not identified in Claimant's upper extremities. He opined that the disorders associated with electrocution injury included peripheral neuropathies, sympathetic neuropathies, and CRPS. Dr. Triehaft opined that the episodic and fleeting hand spasms and weakness was of undetermined etiology but raised the question of spinal cord injury involving the cervical or thoracic regions from the electrocution. Dr. Triehaft recommended cervical and thoracic MRI studies and neurological follow up afterwards. *See* Exhibit N.

24. On October 18, 2018, Claimant underwent a left shoulder arthroscopy performed by Dr. Reister with labral debridement, bicipital tenotomy, subscapularis tendon debridement, open sub acromial decompression, repair of supraspinatus tendon, and bicipital tendon tenodesis. *See* Exhibits 1, I.

25. On October 30, 2018, Dr. Reister evaluated Claimant. Dr. Reister noted that Claimant's wounds looked great, that Claimant was doing very well, and that Claimant could begin therapy four weeks post surgery. Dr. Reister noted that claimant was living out of state and provided Claimant with his physical therapy script. On the October 30, 2018 Physician's Report of Worker's Compensation Injury form, signed by Dr. Reister, Dr. Reister noted that the treatment plan included physical therapy starting in 4 weeks and that Claimant had a current restriction of no use of left arm. Dr. Reister recommended a return appointment in 4 weeks and recommended follow up care of referral for evaluation of low back pain. Dr. Reister did not recommend an MRI or an EMG at this visit. *See* Exhibits 1, I.

26. Dr. Scott testified at hearing. Dr. Scott opined that Claimant had no deformity in his left elbow or left elbow complaints until August of 2018, almost two years following the October, 2016 injury. Dr. Scott opined that the left elbow problems were not work related. Dr. Scott opined that he believed the left upper extremity EMG testing should have been approved to check the nerves in Claimant's arms and the electrical activity in Claimant's muscles. Dr. Scott noted that the EMG was done on October 16, 2018 and showed that diabetes was the more likely cause than electrical shock. Dr. Scott opined that diabetes can lead to reduced blood flow to nerves which damages the nerves and leads to conduction/electrical problems with the nerves. He opined that the EMG showed that the problems Claimant was having in the left elbow were due to Claimant's diabetes. Dr. Scott opined that if the problems had been acutely caused by the work injury, the symptoms would have manifested earlier in treatment and he recommended denial of the left elbow MRI.

27. Claimant did not testify or appear at hearing. Claimant's counsel requests TTD benefits from September 11, 2018 through October 12, 2018 and requests authorization of a left elbow MRI and left upper extremity EMG.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

TTD Benefits

Claimant has failed to establish, by a preponderance of the evidence, an entitlement to temporary total disability (TTD) benefits from September 11, 2017 through October 11, 2017. Claimant's arguments are not found persuasive. Claimant's use of the *Sigala* case, 184 P.3d 40 (Colo. 2008) is misplaced and factually distinguishable from the facts in this matter.

In *Sigala v. Atencio's Market*, 184 P.3d 40 (Colo. 2008), a Claimant was found to be entitled to receive disability indemnity benefits withheld by her Employer during a period of suspension of benefits. The Claimant in that case missed an appointment with her attending physician and was notified that her TTD benefits could be suspended if she failed to attend a rescheduled appointment. *Id.* She failed to attend the rescheduled appointment and Respondents stopped payment of her benefits. *Id*. When she attended an appointment with her attending physician approximately 2 months later, Respondents reinstated her benefits. *Id.* The Claimant argued that the term suspend meant to withhold benefits temporarily such that the accrue and are paid once they attend the appointment under § 8-42-105(2)(c), C.R.S. *Id*. The Court noted that a different statute, § 8-43-404(3), C.R.S is in place and permits suspension of compensation to a Claimant who refuses to submit to treatment or evaluation as is reasonably essential to promote recovery. *Id.* The Court referred to language indicating that if the employee refuses to submit to such examination…or is any way obstructs the same, all right to weekly indemnity which accrues and becomes payable during the period of such refusal or obstruction shall be barred. *Id*. The Court continued to note that if any employee persisted in injurious practice which tended to imperil or retard recovery or refused to submit to such medical or surgical treatment as reasonably essential to promote recovery, the director had discretion to reduce or suspend the compensation of any such injured employee. *Id.* The Court, thus made a distinction between § 8-42-105(2)(c), C.R.S. and § 8-43-404(3), C.R.S.

The Court in *Sigala*, noted that a temporary suspension of benefits may be followed by a reinstatement and repayment of suspended benefits as long as there has been no order entered directing the claimant to submit to examination. *Id*. The Court pointed out that if the General Assembly had intended for the term suspend to mean a permanent withholding they would have used the term "barred" as they did in the penalties and enforcement provision. *Id*. The Court held that an ALJ lacked grounds to bar benefits unless a claimant's refusal to submit to a medical examination resulted in a continuing and detrimental effect on Claimant's condition. *Id*. The Court determined that provisions of the Workers' Compensation Act, such as the penalties and enforcement provision, provided stringent sanctions when Claimant's actions so demanded but differentiated the term suspend in the TTD benefits provision as applying to *Sigala* and found that the term suspend in the TTD benefits provision meant to stop temporarily and not bar or exclude. *Id*. Therefore, they ordered benefits paid to *Sigala* for the period of time in between her missed appointment when TTD had been stopped and the appointment she eventually attended. *Id*. The Court specifically noted that if the Respondent believed that *Sigala* had imperiled or retarded her recovery by refusing to submit to medical treatment, then Respondent could take action under the penalties and enforcement section of the Act where more stringent sanctions of barring or excluding benefits existed.

Here, Respondents sought action under the penalties and enforcement section of the Workers' Compensation Act when they appeared at hearing before ALJ Goldman. ALJ Goldman found, in fact, that Claimant had engaged in injurious practice and refused to submit to such medical or surgical treatment as reasonably essential to promote recovery. Claimant's argument that she should be paid benefits for the one month period

in between ALJ Goldman's Order and the surgery he eventually underwent is not persuasive. Claimant's benefits had been suspended during that time under the more stringent sanctions of the Act barring recovery as ALJ Goldman found injurious practice. Claimant has therefore failed to meet his burden to show any entitlement to TTD from September 11, 2017 through October 11, 2017 and the facts of Claimant's case are distinguishable from *Sigala*.

Medical Benefits – EMG and MRI

Claimant has failed to establish, by a preponderance of the evidence, that medical benefits of a left elbow MRI and left upper extremity EMG/NCV testing are reasonable, necessary, and causally related to his October 27, 2016 work injury.

As found above, Dr. Reister requested a left elbow MRI and EMG/NCV testing on August 30, 2018. Claimant underwent the EMG/NCV testing on October 16, 2018. Although Claimant represented that there had been an additional request for EMG/NCV testing, this is not found in the records. Rather, the EMG/NCV testing that was requested by Dr. Reister was approved by Respondents and Claimant underwent that testing on October 16, 2018. No new outstanding request for additional EMG/NCV testing exists. Therefore, Claimant's request for EMG/NCV testing of the left upper extremity is denied as he has already undergone that testing and Claimant has failed to establish that an additional EMG/NCV test is reasonable or necessary.

Further, the opinion of Dr. Scott is credible and persuasive that a left elbow MRI is not reasonable, necessary, or casually related to Claimant's October 27, 2016 injury. The ALJ finds persuasive the opinion that Claimant would have manifested symptoms much earlier if he sustained an injury to the left elbow on October 27, 2016. None of the treating providers noted any deformity in the left elbow during 22 months of treatment which is logically incredible given the opinion that by August of 2018 it was a noticeable deformity. Further, the opinion of neurologist Dr. Triehaft is persuasive that the evidence shows Claimant's problems in the left elbow are more likely due to his diabetes than his electrocution injury. Claimant has failed to establish, by a preponderance of the evidence, that a left elbow MRI is reasonable, necessary, and causally related to his October 27, 2016 work injury.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish an entitlement to TTD benefits from September 11, 2017 through October 11, 2017.

2. Claimant has failed to establish by a preponderance of the evidence an entitlement to medical benefits of a left elbow MRI and EMG/NCV testing of his left upper extremity. EMG/NCV testing was already authorized and performed and there is no new request for such testing. The MRI of the left elbow is not causally related to Claimant's October 27, 2016 work injury.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, *see* section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant overcome the DIME's impairment rating by clear and convincing evidence? If so, what is the proper rating?
- Did Claimant prove entitlement to a general award of medical benefits after MMI?
- Disfigurement.

FINDINGS OF FACT

1. Claimant suffered an admitted injury to his lumbar spine on July 12, 2016 in a work-related motor vehicle accident.

2. Claimant has a lengthy history of low back issues, including four surgeries. Dr. Richard Lazar performed an L4-5 microdiscectomy in April 2008 and a revision left L4-5 microdiscectomy in February 2011. Dr. Sung performed a right L5-S1 microdiscectomy on November 29, 2011, and a revision L4-5 microdiscectomy on October 29, 2013. Claimant had seven physical therapy visits after the October 2013 surgery, and the final report dated December 16, 2013 indicated Claimant had made significant gains with mobility and strength.

3. The last time Claimant saw Dr. Sung before the July 12, 2016 motor vehicle accident was on February 4, 2014. At that visit, Claimant was "doing well" overall. Dr. Sung noted he had "no consistent leg pain. On occasion, he will get a twinge in the left calf. His back feels pretty good. He has no real complaints at this time." Dr. Sung released Claimant from care to follow-up "as needed."

4. After the July 12, 2016 accident motor vehicle accident, Employer referred Claimant to Dr. Robi Baptist at Colorado Springs Health Partners (CSHP). At the initial visit on July 14, 2016, Claimant reported low back pain radiating down his right leg to the calf, and tingling in his 2nd-4th toes. Dr. Baptist ordered a lumbar MRI and referred Claimant back to Dr. Sung.

5. The MRI was done on July 27, 2016. It showed an acute left-sided disc herniation at L4-5 impinging on the left L4 nerve root, and a bulging disc at L5-S1 contacting the S1 nerves and causing moderate bilateral lateral recess narrowing.

6. Claimant saw Dr. Sung on August 16, 2016. He reported low back pain and pain into his legs, worse on the left. Dr. Sung referred Claimant to Dr. Finn for injections and to physical therapy.

7. Dr. Finn administered two ESIs, neither of which were helpful.

8. The claimant followed up with Dr. Sung on October 26, 2016. Dr. Sung noted Claimant had already had four back surgeries and concluded,

> [H]e did not do well with the injections and I am recommending an L4-S1 anterior-posterior fusion. Anteriorly, I would like to go into the disc space at 4-5 and pullout that recurrent fragment and then fuse. He has had too many surgeries and I think ***he is just unstable at this point***. Both of these segments are involved and I believe that at the time of surgery, both need to be included. (Emphasis added).

9. On December 13, 2016, Dr. Sung performed an L4-S1 anterior lumbar decompression and interbody fusion. The final postoperative diagnoses included recurrent stenosis at L4-S1, and recurrent left L4-5 herniated nucleus pulposus.

10. The surgery was successful, and Claimant's symptoms slowly but steadily improved over the ensuing several months.

11. Dr. Lund took over for Dr. Baptist in November 2016. On March 1, 2017, Dr. Lund noted Claimant was "improving, [but] not 100% yet though." He was still having weakness in his left leg and foot. Physical examination showed EHL weakness on the left, mild atrophy of the left thigh, and decreased sensation in the left lower leg and foot.

12. On May 25, 2017, Dr. Lund documented continued left leg weakness, including ankle dorsiflexion and a "very weak" EHL.

13. Claimant followed up with Dr. Sung on June 15, 2017, and stated he felt "very good." His back pain and leg symptoms were significantly improved, but he still had some weakness on the left. On examination, Dr. Sung noted, "a little weakness in his EHL on the left compared to the right, and just a touch of weakness in dorsiflexion on the left compared to the right." Flexion-extension x-rays showed no motion, and the fusion appeared to be consolidating as expected. Dr. Sung released Claimant to follow-up "as needed."

14. Dr. Baptist resumed Claimant's care on August 24, 2017 and documented residual motor deficits in the left leg. Dr. Baptist noted, "the patient's pain is much improved but is still having tingling in his foot and difficulty raising his toes off the ground." Claimant was scheduled to see Dr. Sung later that day, although the last report from Dr. Sung in the record is dated 15, 2017.

15. ALJ Edie conducted a hearing on September 14, 2017 regarding Respondents' liability for the December 2016 surgery. Everyone agreed the surgery was reasonably necessary, but the parties disagreed about causation. One of ALJ Edie's findings of fact indicates Respondent's expert had opined the surgery was reasonably necessary to address spinal "instability." ALJ Edie resolved the causation issue in Claimant's favor and ordered Respondents to cover the surgery.

16. Dr. Baptist placed Claimant at MMI on February 15, 2018, with a 31% whole person rating. Dr. Baptist opined apportionment was not appropriate because Claimant

was “essentially asymptomatic prior to the work injury.” Dr. Baptist assigned a 13% Specific Disorder rating under Table 53(IV)(B) and (C), which applies to “Spinal stenosis, segmental instability, or spondylolisthesis, operated.” She assigned 19% for lumbar range of motion deficits, using valid measurements obtained during an FCE completed on January 25, 2018. Finally, Dr. Baptist included 2% whole person under Table 51 for weakness in plantar flexion.

17. Regarding maintenance care, Dr. Baptist recommended ongoing pain management with Dr. Finn or another physiatrist/pain specialist, follow up with Dr. Sung as directed by Dr. Sung, and home exercises. Dr. Baptist further opined, “there is a strong possibility this patient’s condition will deteriorate in the near or distant future and provision should be made for further care.”

18. Respondents challenged Dr. Baptist’s rating and Claimant underwent a DIME with Dr. Michael Janssen on July 24, 2018. Claimant credibly testified Dr. Janssen appeared irritated and complained the DIME fee was inadequate based on the size of the records packet. Dr. Janssen’s report corroborates Claimant’s perception because Dr. Janssen stated, “I only allocated the hours they agreed to compensate me for this. I stopped exactly 4.0 hours in attempting to read all this. I am a speed reader, but there was [sic] more than 165 pages and I could not read any faster, so I made all my assessments only based upon the information in the time that was allocated.” Claimant perceived the evaluation as “very rushed” and cursory.

19. The physical examination documented in Dr. Janssen’s report appears largely benign, with almost no significant clinical findings aside from minimal range of motion reduction. He stated Claimant demonstrated “non-physiological” weakness in his lower extremities and opined the strength in all muscle groups was normal. Dr. Janssen’s examination is an outlier and inconsistent with other examinations documented in the record.

20. Dr. Janssen assigned 11% for Specific Disorders under Table 53(II)(E) and (F), which applies to “intervertebral disc or other soft-tissue lesions.” Dr. Jensen did not explain why he used § (II)(E) instead of § (IV)(B). He also added 5% for lumbar range of motion, for a total rating of 16% whole person. [1] Finally, he opined, “there is no indication for maintenance management currently.”

21. Claimant saw Dr. Jack Rook for an IME at his counsel’s request on December 3, 2018. Claimant reported a good outcome with the surgery, but still had some “soreness” in his back at the end of a long workday, weakness in his left foot and ankle, and paresthesias in the left big toe. Claimant stated he was prone to stumbling on stairs because of the left leg weakness and had fallen on more than one occasion. Dr. Rook observed atrophy of the left extensor digitorum brevis compared to the right side muscle. Pinprick sensation was diminished in the left big toe compared to the right. Dr. Rook noted

[1] Although not mentioned by either party, Dr. Janssen clearly erred by *adding* the two components of the rating instead of *combining* them as required by the *AMA Guides*. See § 3.3a, p.81, and the Spine Impairment Summary form. According to the Combined Values Chart, Dr. Janssen’s final rating should have been 15%.

"obvious" weakness in the left lower extremity including 4/5 big toe extension and ankle dorsiflexion and 5-/5 plantar flexion. Claimant could walk short distances on his toes and heels but developed progressive fatigue of his left ankle dorsiflexors as he did so.

22. Dr. Rook opined Dr. Janssen committed two significant errors regarding Claimant's impairment rating. First, Dr. Janssen erred by using Table 53(II)(E) and (F), because the appropriate section is Table 53(IV)(B) and (C). He explained,

> [Dr. Janssen] gave this patient a spinal impairment for a surgically treated disc lesion per (II.E). This category refers to those patients who undergo a laminectomy and discectomy procedures, and not a spinal fusion procedure which is rated under section IV, which is for "spinal stenosis, segmental instability, or spondylolisthesis." This patient's surgical procedure was performed because of spinal stenosis with nerve root entrapment. At his October 2016 preoperative visit, Dr. Sung's assessment concluded: "Large recurrent left L4-5 herniated disc, with L5-S1 severe degenerative disc disease, collapse and stenosis." Additionally, the patient underwent a procedure whereby the discs at L4-5 and L5-S1 were removed as part of the L4 through S1 anterior and posterior fusion. Removal of these disks creates segmental instability at these two levels. Therefore, this patient was appropriately placed into this specific diagnosis category by Dr. Baptist who provided the patient with a 12% lumbar impairment (IV.B) plus the additional one % for the second level involved in the fusion (IV.C). Dr. Baptist performed her impairment rating correctly. Dr. Janssen performed his rating incorrectly, as he relied upon an erroneous specific diagnosis/Table 53 impairment.

23. Additionally, Dr. Rook opined Dr. Janssen should have assigned a rating for residual lower extremity neurological deficits,

> [T]his patient continues to have weakness at his left ankle and left foot in the L5 distribution and there is muscle atrophy of the extensor digitorum brevis muscle which is innervated by the L5 nerve root. Therefore, it was appropriate for Dr. Baptist to provide this patient with an L5 motor impairment . . . .

24. Dr. Rook testified at hearing consistent with his report. He reiterated the rating Dr. Janssen gave would be appropriate for a disc herniation treated with a laminectomy, but not a fusion. He explained that, although Claimant had a herniated disc, the surgery was done for stenosis and instability, not simply the herniated disc. He emphasized it is important to rate "the actual anatomy and pathology that exists in this case." When asked whether his disagreements with Dr. Janssen's methodology were merely differences of opinion, Dr. Rook replied, "well, it's my opinion to use the proper category and not use the wrong category."

25. Regarding post-MMI treatment, Dr. Rook did not believe Claimant required any active interventional pain management, but opined annual follow-up visits with Dr. Sung would be reasonable:

> I think it's reasonable that he follow-up with his surgeon at regular intervals, maybe once a year. I think that's not unreasonable because there could be changes. When you have a fusion, you can develop transitional problems above the fusion. I think it's pretty routine to have annual visits at least for several years with your surgeon to see how you're doing and to determine the integrity of the fusion and the — the hardware. Whether he needs, you know, active every three months interventional injections, that was not my impression when I saw him.

26. Claimant was a credible witness.

27. Dr. Rook's opinions regarding Claimant's impairment rating and errors committed by the DIME are credible and persuasive.

28. Claimant overcame the DIME's impairment rating by clear and convincing evidence.

29. Claimant proved by a preponderance of the evidence Dr. Baptist's 31% whole person rating is the most appropriate rating.

30. Claimant proved by a preponderance of the evidence he is entitled to a general award of medical benefits after MMI.

31. Claimant has injury-related disfigurement consisting of: (1) a 5 ½ inch long by 1 inch wide curved, irregularly-shaped, discolored, partially indented, partially raised, surgical scar on the abdomen ending at the belt line; (2) two 5 inch long by ¼ inch wide irregular, discolored, partially indented, partially raised, surgical scars on either side of his spine; and (3) each scar on the back scar is flanked along its length by many pairs of staple scars, substantially enhancing the overall noticeability of the scarring. The ALJ finds Claimant should be awarded $3,000 for disfigurement.

CONCLUSIONS OF LAW

A. Claimant overcame the DIME regarding impairment.

A DIME's determination regarding whole person impairment is binding unless overcome by "clear and convincing evidence." Section 8-42-107(8)(C). Clear and convincing evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). The party challenging a DIME's conclusions must demonstrate it is "highly probable" that the impairment rating is incorrect. *Qual-Med*, 961 P.2d at 592; *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A "mere difference of medical opinion" does not constitute clear and convincing evidence that the DIME is incorrect. *E.g., Gutierrez v. Startek USA, Inc*., W.C. No. 4-842-550-01 (March 18, 2016).

As found, Claimant overcame the DIME rating by clear and convincing evidence. The ALJ sees three clear errors in Dr. Janssen's rating: (1) he applied the incorrect section under Table 53, (2) he failed to assign a rating for lower extremity neurological impairment, and (3) he added the spinal impairments instead of combining them.

The ALJ is persuaded by Dr. Rook's discussion and explanation regarding the application of Table 53 § (IV) instead of § (II) to rate Claimant's impairment. Dr. Baptist also used § (IV), which corroborates and bolster's Dr. Rook's opinions. Respondents' IME at the hearing before ALJ Edie agreed the fusion was necessary to remedy "instability." The ALJ does not consider this a mere difference of opinion and is persuaded by Dr. Rook's testimony that his and Dr. Baptist's approach is "right," and Dr. Janssen's approach is "wrong."

The ALJ also concludes Dr. Janssen should have included a lower extremity neurological rating. Multiple providers have documented residual weakness in the left ankle and foot, and the ALJ has no substantial doubt Claimant still suffers from some neurological sequelae of his injury. Dr. Janssen's physical examination documenting no neurological deficits is an outlier and not credible.

Finally, Dr. Janssen erred by adding the components of Claimant's spinal rating rather than combining them.

Any of these errors could be sufficient to overcome the DIME. Taken together, they leave the ALJ free from serious or substantial doubt that Dr. Janssen's rating was incorrect.

B. Claimant has 31% whole person impairment as determined by Dr. Baptist

Once the DIME's rating has been overcome "in any respect," the proper rating becomes a factual issue for the ALJ based on a preponderance of the evidence. *Newsome v. King Soopers*, W.C. No. 4-941-297-02 (October 14, 2016).

As found, Claimant proved Dr. Baptist's rating is the most reliable and accurate. Dr. Baptist correctly applied Table 53, and the range of motion measurements were obtained during an FCE conducted by a neutral evaluator. The FCE measurements were internally consistent, and within the ranges one would expect after a spinal fusion. Dr. Janssen's range of motion measurements are suspect; it is unlikely Claimant would have full extension, near full rotation and minimal limitations on flexion after a two-level lumbar fusion. Dr. Janssen's implausible numbers lend credence to Claimant's testimony that Dr. Janssen assisted his motion, contrary to the requirement to use "passive" range of motion only. Moreover, Dr. Baptist's decision to include a neurological rating is supported by and consistent with the evidence and the *AMA Guides*. The ALJ does not find Dr. Janssen's physical examination credible, because it is inconsistent with the examinations of multiple other providers. As Claimant credibly explained, Dr. Janssen hurried through the appointment, which probably explains why he missed the residual left leg weakness documented by multiple other examining and treating providers. It appears Dr. Janssen was more focused on minimizing his time expenditure than conducting a thorough

examination and report. The ALJ considers Dr. Janssen's evaluation sloppy and unreliable, and declines to give his opinions significant weight.

C. Claimant is entitled to a general award of medical benefits after MMI

The respondents are liable for medical treatment from authorized providers reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101(1)(a); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Medical benefits may extend beyond MMI if the claimant requires maintenance care to relieve symptoms or prevent deterioration of their condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). If the claimant establishes the probability of a need for future treatment, he is entitled to a general award of medical benefits after MMI, subject to the respondents' right to dispute compensability, reasonableness, or necessity of any particular treatment. *Hanna v. Print Expediters, Inc.*, 77 P.3d 863 (Colo. App. 2003). A claimant need not be receiving treatment at the time of MMI nor prove that a particular course of treatment has been prescribed to obtain a general award of *Grover*-type medical benefits. *Miller v. Saint Thomas Moore Hospital*, W.C. No. 4-218-075 (September 1, 2000).

A claimant must prove entitlement to medical benefits after MMI by a preponderance of the evidence, and the mere occurrence of a compensable injury does not compel the ALJ to find that all subsequent medical treatment was caused by the industrial injury. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997); *McIntyre v. KI, LLC*, W.C. No. 4-805-040 (ICAO, Jul. 2, 2010). The DIME's opinion regarding medical treatment after MMI is not entitled to any special weight but is simply another medical opinion for the ALJ to consider when evaluating the preponderance of the evidence. *See Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Story v. Industrial Claim Appeals Office*, 910 P.2d 80 (Colo. App. 1995).

As found, Claimant proved he is entitled to a general award of medical benefits after MMI. Claimant underwent a major surgical procedure, and the ALJ credits Dr. Rook's opinion he should retain access to periodic follow-up with Dr. Sung to monitor the stability of the fusion. Although Claimant had a good outcome from surgery, he remains symptomatic, and the ALJ is also persuaded by Dr. Baptist's opinion he should have access to further treatment for the symptom relief. Although Claimant has had no formal treatment since February 2018, he credibly testified he has "a call in to Dr. Finn" to discuss further treatment options.

D. Disfigurement

Section 8-42-108(1) provides that a claimant is entitled to additional compensation if he is "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view." As found, Claimant has sustained noticeable disfigurement as a direct and proximate result of the July 12, 2016 injury. As found, Claimant should be awarded $3,000 for disfigurement.

ORDER

It is therefore ordered that:

1. Claimant's request to set aside the DIME's impairment rating is granted.

2. Insurer shall pay Claimant PPD benefits based on Dr. Baptist's 31% whole person rating. Insurer may take credit for any PPD previously paid in connection with this claim.

3. Insurer shall pay Claimant statutory interest of 8% per annum on all benefits not paid when due.

4. Insurer shall cover reasonably necessary "*Grover*" medical treatment after MMI from authorized providers causally related to the July 12, 2016 admitted injury.

5. Insurer shall pay Claimant $3,000 for disfigurement. Insurer may take credit for any disfigurement benefits previously paid in connection with this claim.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Office of Administrative Courts

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that the second bilateral L3, L4, L5 radiofrequency neurotomy ("RFN") as recommended by Dr. Malinky, is reasonable, necessary, and related to her work injury of November 12, 2016?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant is a 68-year-old personal care provider who has been employed by Employer since October 2015. (Ex. C, p. 12). On November 12, 2016, a special-needs patient assaulted Claimant while at work, causing injuries to her left shoulder, right hip, abdomen, chest, neck, and back. Employer was notified of a work injury, paramedics were called, and Claimant was transported to Memorial Hospital Emergency Room.

2. Upon examination and imaging in the ER, Claimant was diagnosed with an L-1 compression fracture, generalized abdominal pain, left shoulder pain, and myalgias. (Ex. S). She initially complained of pain primarily in her left hip with lesser pain in her back. Claimant was noted to have diabetes, pre-existing severe left glenohumeral joint osteoarthrosis, and severe left C4-5 facet osteoarthritis with related grade 1 anterolisthesis. Claimant told providers in the ER that her assailant kicked her in the chest, abdomen, shoulder, and hip. *Id.* at 249. Physical examination did not reveal evidence of contusions to claimant's spine.

3. On November 16, 2016, Claimant returned Memorial ER complaining of 10/10 pain with urinary incontinence since her work injury (4 days prior). (Ex. S, p. 261) Claimant indicated that she had had incontinence while in the ER on November 12, 2016, but thought it had been due to the pain she was experiencing. Claimant was deemed non-surgical, as her compression fracture did not result in cord compromise or cauda equina syndrome. Her providers were unsure as to the source of her incontinence. Physical examination of Claimant's spine revealed minimal tenderness to palpation and "no evidence of contusion, edema, or erythema." Claimant was admitted to inpatient care for continued observation. She was discharged on November 22, 2016, referred to undergo physical therapy, and recommended to follow up with her neurosurgeon in 3 to 4 weeks.

4. On November 22, 2016, Claimant presented to Dr. Cynthia Lund with complaints, in part, of severe mid-back pain and urinary incontinence. Because of the compression fracture along with complaints of urinary incontinence, Claimant was immediately admitted to Memorial Hospital for further evaluation (Ex. 3, pp. 18-19). Claimant was

discharged from Memorial Hospital on November 28, 2018 with diagnoses of L1 compression fracture, L5-S1 neuroforaminal narrowing, bowel and bladder incontinence of uncertain etiology, diabetes mellitus, rheumatoid arthritis, and recent emotional trauma. Upon discharge Claimant was advised to follow up with a neurosurgeon and to consult with a social worker for the emotional trauma

5. Claimant was transferred from Memorial Hospital to Health South Rehabilitation where she was treated up through December 14, 2016. According to the records, Claimant was experiencing low back pain for which she received Fentanyl along with Meloxicam. Upon discharge from Health South Claimant was ambulating over 300 feet with a quad cane and was able to ascend and descend multiple stairs. Claimant was discharged home with home healthcare services and a prescription for Fentanyl patch and Oxycodone/Oxy-IR 5 mg per 6 hours (Ex. O, pp. 163-170).

6. Claimant was seen on December 16, 2016 by Dr. Lund with complaints of severe mid back pain and severe left shoulder pain. Claimant advised Dr. Lund she was unable to walk unassisted, had incontinence of urine, had generalized pain, and was lightheaded. Dr. Lund advised Claimant to continue using a back brace, continue the Fentanyl patch and Oxycodone. Dr. Lund also referred Claimant to a psychologist and a urologist (Ex. 3, p. 24).

7. Claimant returned to Dr. Lund on January 7, 2017 with ongoing complaints of mid back pain at a 9/10 level. On this date, Claimant was still wearing a back brace. Dr. Lund recommended Claimant should walk and try to move about more. Dr. Lund indicated that Claimant was to wean down off Norco and Valium and that there will be no further refill of Fentanyl patches (Ex. 3, p.30).

8. Claimant was re-evaluated on January 20, 2017 by Dr. Lund. It was noted that Claimant was still experiencing severe mid-back pain and severe left shoulder pain at a 10/10 level. Dr. Lund prescribed Norco, and referred Claimant to physical therapy (Ex. 3, pp. 36-37).

9. Claimant was seen by Dr. Lund on February 3, 2017 with continued back pain at a 10/10 level. Dr. Lund noted that Claimant was off the Fentanyl patch and was only taking Norco twice daily. Dr. Lund noted that Claimant was wearing her back brace and therefore no range of motion testing was done. Dr. Lund diagnosed Claimant with multiple injuries due to the assault including an L1 vertebral fracture and situational depression. Dr. Lund recommended Claimant continue her home exercises and to continue treating with Dr. Beaver and Staudenmayer for depression (Ex. 3, p. 39).

10. On January 24, 2017, Dr. Steven Hake reviewed Claimant's lumbar films and concluded that her L1 compression fracture was stable. He was unable to explain Claimant's urinary incontinence from a spinal perspective despite "extensive work-up." (Ex. BB, p. 661).

11. Claimant was seen by Dr. Lund on February 3, 2017 with continued back pain at a 10/10 level. Dr. Lund noted that Claimant was off the Fentanyl patch and was only taking Norco twice daily. Dr. Lund noted that Claimant was wearing her back brace and therefore no range of motion testing was done. Dr. Lund diagnosed Claimant with multiple injuries due to the assault including an L1 vertebral fracture and situational depression. Dr. Lund recommended Claimant continue her home exercises and to continue treating with Dr. Beaver and Staudenmayer for depression. (Ex. 3, p. 39)

12. On February 21, 2017, Claimant returned to her rheumatologist, Dr. Michael Sayers, DO, for evaluation of her RA. Her work injuries were discussed at this time. *(Ex. 6, Ex. L).* Claimant's medications included: amitriptyline HCL 50 MG tablet 1 tablet orally once a day, levothyroxine sodium 75 MCG capsule 1 capsule on an empty stomach in the morning orally once a day, meloxicam 15 MG tablet 1 tablet orally once a day, paroxetine HCL ER 12.5 MG Tablet extended release 24 hour 1 tablet in the morning orally once a day, myrbetriq 50 MB tablet extended release 24 hour tablet orally once a day, prednisone 1 mg 1 MG tablet delayed release 2 tablets orally once a day, vitamin D-3 1- unit capsule 1 capsule orally twice a week, methotrexate sodium 50 MG/2ML solution .8 ml injection once a week, Enbrel sureclick 1 ml 50 MG/ML solution auto0injector 1 ml subcutaneous once a week, and voltaren 1% gel transdermal. *Id*., at p 122.

13. Claimant was seen by Dr. Vernon Maas at UC Health for follow-up on March 23, 2018. At this time Claimant was experiencing low back, right hip, and right sided pain at an 8/10 level. Claimant indicated that she is no better than how she felt at her last examination. Dr. Maas noted that Claimant was tender to palpation over bilateral lower thoracic and lumbar region with spasms present. Dr. Maas diagnosed multiple injuries due to assault including L1 vertebral fracture and situational depression. Dr. Maas recommended continued use of the walker as needed, continued us of Paxil and Norco, and to follow up with Dr. Lund (Claimant's Submissions- Bate #s 0047-0049).

14. Dr. Lund's office notes of April 14, 2017 indicated that Claimant lost her balance on April 12 and fell down some steps on April 9. As a result, Claimant's left side was hurting. On this date Claimant's pain was worse at a 9/10 level. Dr. Lund noted that a recent MRI showed that Claimant's L1 fracture was stable at 25 percent. Dr. Lund continued Claimant's same medication and made multiple referrals to a variety of physicians including Dr. Willman for pain management. (Claimant's Submissions, Bate #s 0050-0052).

15. During Claimant's April 18, 2017 neurosurgical examination, Dr. Thompson noted claimant's L1 compression fracture to be almost completely healed. Claimant was noted to have "spondylolysis at L5 with grade 1 spondylolisthesis at this level with bilateral lateral recess and neural foraminal stenosis. There is also a disk bulging at L4-5 with lateral recess stenosis. Unfortunately, **she continues to have low back pain *and* right radicular leg pain**" (Ex.BB, p. 668) (emphasis added).

16. Claimant reported for initial examination at Interventional Pain Management on May 3, 2017, where she was examined by Dr. Bertram Willman. (Ex. P, p. 175). Claimant complained of pain in her face, bilateral cervical spine, bilateral shoulders, thoracic spine, lower back, SI joint, bilateral hands, and bilateral feet. She had tenderness over her old L1 compression fracture and lower lumbar pain over her L5. Claimant's Norco was replaced with tramadol 50 3 times a day, she was continued on Robaxin 500 4 times a day, and Neurontin 300 3 times a day was initiated to help with her neuropathic pain. Dr. Willman believed Claimant's pain might have been emanating from her L5 foraminal stenosis, or from her L1 compression fracture. He believed she might benefit from L5-S1 transforaminal injection and a medical branch block *at the L1 level*, and bilateral SI joint injections. (Ex.8 pp. 319-320).

17. On May 4, 2017, Claimant received a L5-S1 caudal epidural steroid injection ("ESI") from Dr. Martin Verhey. It was noted that she complained of lumbar radiculopathy. (Ex. N, p. 161). On May 5, 2017, Claimant returned to Dr. Lund. According to the notes of this date, Claimant had received an L5 ESI and was still experiencing 9/10 low back pain. This same note indicates that Claimant was now using a cane at home and a walker out of the home. Dr. Lund also noted that Claimant was seeing Dr. Staudenmayer with good results. Under "Treatment Plan", Dr. Lund wrote that Claimant was improving but continues to have low back pain. Furthermore, Dr. Lund wrote that Claimant was to follow up with Dr. Thompson in a month regarding her back brace and Dr. Verhey for a possible second ESI (Ex. 3, pp. 53-55).

18. On May 17, 2017 Claimant returned for psychological counseling with Dr. Staudenmayer. Claimant described the incident to Dr. Staudenmayer and reported an increase in her back pain after visualizing the assault. (Ex. Z, p. 605).

19. Claimant was seen by Dr. Willman on May 30, 2017. Dr. Willman's note of this date indicates that Claimant's recent injection under Dr. Verhey provided some benefit for 6 days. Claimant's main complaints on this date were low back and bilateral hip pain. Dr. Willman noted that by history and exam Claimant had not only spinal stenosis at L4-5 and L5-S1 but also bilateral SI joint irritation with inflammation. Dr. Willman deferred any procedures until Claimant was seen by her neurosurgeon Dr. Thompson (Ex. 8, pp. 319-321).

20. An office note from Dr. Lund dated July 14, 2017 indicated that Claimant had fallen in the bathtub due to lack of a handrail for support. Dr. Lund recommended that Claimant continue in her back brace, and follow up with her specialists. (Ex. 3, pp. 59-61).

21. During her July 28, 2017 follow up appointment with Dr. Willman, Claimant indicated that her tramadol prescription was not strong enough. (Ex. P, p. 179). Dr. Willman replaced her tramadol with a prescription for Norco. Claimant was referred to undergo L3-5 medial branch blocks.

22. On August 7, 2017, Claimant returned to see Dr. Willman at Interventional Pain Management for examination, with continued complaints of chronic low back pain. (Ex.

P. p. 181). After speaking with Claimant, Dr. Willman performed medial branch blocks ("MBB") on Claimant's L2-L3, L3-L4, L4-L5 bilaterally. No pre-VAS scores were identified. No post-VAS scores were notated. Claimant was not given a pain diary. She was recommended to follow up in a few weeks for post-MBB evaluation.

23. Claimant returned for physical therapy on August 9, 2017 (2 days after her MMB) where she complained of pain of 8.5-9. (Ex. W, p. 500). No significant reduction in her pain was reported. Claimant was discharged from care as she no longer wished to participate in physical therapy.

24. MRI results obtained on August 22, 2017 revealed no significant change of Claimant's L1 compression deformity of persistent bone marrow edema, no significant change of anterolisthesis of her L5 on S1, no significant change of lumbar spondylosis with mild to moderate L4-5 and L5-S1 spinal canal stenosis, and no significant change of her severe bilateral L5-S1 foraminal stenosis. (Ex. DD, p. 98).

25. On October 16, 2017 Claimant reported for physical therapy at Amazing Care. (Ex. K, p.113). Claimant reported 9/10 pain. However, her therapist noted that despite her high reported pain level, she moved and functioned like someone with a lower pain level. Claimant did not make any facial grimaces and picked up her granddaughter without issue. (Ex. K, p.114).

26. On October 18, 2017 Claimant returned for examination with her occupational therapist. Claimant reported that she "is more fearful and that she did not know how to report it, so she feels that it is severe pain." Her therapist noted claimant's current report of 9-10/10 pain, "although facial expressions do not correlate with such levels." She reported a minimum Pain of 8/10 with a maximum of 10/10. (Ex. K, p. 118).

27. On October 23, 2017, Claimant returned to Interventional Pain Management for post L3-L5 MBB examination. Dr. Willman had left the practice, and Dr. Malinky took over her care. Dr. Malinky noted "pt here for f/u L3-5 MBB, 60-70% relief, pt would like to discuss another injection pt has been in a full body brace up until 2 weeks ago, denies fever/chills s/s infection pain level 8-9/10" (Ex. P, p. 184). She was given a refill on her narcotic medications, gabapentin, and muscle relaxer and referred to undergo L3-L5 RFTCs. Under Review of Systems, he noted: Psychiatric: depression and anxiety. (Ex. P, p. 184)

28. On November 27, 2017, Claimant returned to Dr. Malinky for examination. (Ex. P, p.187). Dr. Malinky now reported that Claimant had experienced greater than 70% reduction in pain from the single set of bilateral medial branch blocks, and that **she had no history of any radicular symptoms** (despite her prior complaints of right leg radiculopathy during her April 18, 2017 neurosurgical evaluation). Dr. Malinky opined the MRI and physical exam suggested facet related pain. Dr. Malinky, without obtaining prior authorization, administered L3-S1 radiofrequency nerve ablations. (Ex. P, p. 188). No Visual Analog Scale ("VAS") pain scores were identified. No post-VAS scores were notated. Claimant was not given a pain diary. *Id.*

29. On December 20, 2017, Claimant returned to UC Health Physical Therapy with current complaints of 8/10 pain. (Ex. W, p. 501). Claimant noted 8/10 was the minimum amount of pain she felt at the time.

30. On January 3, 2018 Claimant returned to physical therapy noting 6/10 for current pain complaints but noted she had been in 9/10 pain within the last 24 hours. (Ex. W, p. 507). Claimant's physical therapist made a note of Claimant's "high subjective pain levels."

31. Claimant returned to her physical therapist at UC Health on January 10, 2018. She complained of 8/10 pain currently with a minimum of 7/10 and maximum of 10/10. (Ex. W. p. 509*)*

32. On January 12, 2018 Claimant reported her current pain level as 7/10 with a maximum of 10/10 pain in the last 24 hours. Her therapist continued to note Claimant's 'high levels of subjective pain'. (Ex. W, p. 511).

33. On January 17, 2018 Claimant reported for physical therapy at UC Health. (Ex. W, p. 512). She noted that she had seen her pain management physician yesterday, and was concerned with the lowering of her Norco medication. She was encouraged to address her concern at her next pain management appointment on March 7, 2018. She reported 8/10 pain currently with a minimum of 8/10 and maximum of 10/10.

34. On January 19, 2018 Claimant complained of 8-9/10 pain in the past 24 hours. (Ex. W, p. 517). Claimant was noted to have lower left leg weakness which was presenting claimant with difficulties ascending stairs. Likewise, on January 26, 2018 Claimant reported minimum pain levels as 8/10. *Id* at 522.

35. Claimant attended additional physical therapy appointments on January 31, February 7, and February 21, 2018 with no mention of any pain complaints at the level of 2-3/10. (Ex. W, pp. 523-529).

36. On March 7, 2018 (3 months and 8 days after the 1st RFN procedure) Claimant returned to Dr. Malinky with complaints of 8/10 pain and requests to increase her narcotic pain medications after they had been decreased less than a month prior. (Ex. P, p.193). Dr. Malinky requested repeat medial branch blocks (not repeat RFN) and increased her pain medications. (Ex. G, p. 61).

37. On March 13, 2018, Dr. Joseph Fillmore completed a physician advisor review regarding the request for repeat medal branch blocks. (Ex. J, p. 109). He did not believe there was any medical indication for repeat medial branch blocks at the same level as previously performed as Claimant's complaints remained the same and records did not show functional improvement.

38. Dr. Malinky wrote a letter on March 21, 2018, now requesting Respondents grant the request for bilateral L3-5 radiofrequency nerve ablation. (Ex. P, p. 196). He acknowledged his failure to follow the guidelines regarding the requirement for 2 diagnostic medical branch blocks prior to proceeding to radiofrequency nerve ablation, but argued for a second RFN due to claimant's reported "70% relief for five months", and increased physical activity and quality of life after the first RFN. There is no evidence in the records suggesting that Dr. Malinky had actually reviewed any of Claimant's other medical records at this time.

39. On March 22, 2018, Dr. Fillmore conducted his second physician advisor review based the appeal received from Dr. Malinky. (Ex. J, p. 110). It was noted that Dr. Malinky was now requesting a repeat radiofrequency neurotomy, as Claimant had "70% improvement with both medial branch blocks and prior radiofrequency neurotomy." Dr. Fillmore could not find indications or documentation of functional improvement, and recommended denying the procedure.

40. Claimant's ATP care was transferred to Dr. Autumn Dean on or about April 13, 2018. (Ex. BB, p. 708). During her appointment on that date, Claimant noted that she was nearly complete with physical therapy and had 9 sessions of massage therapy left. Claimant's PTSD was stable at the time. MMI was pending her upcoming IME.

41. On April 16, 2018, Dr. Eric Ridings completed his IME of claimant. It was his opinion that there were no anatomical findings which would support her claim of urinary incontinence. Instead, he believed the cause to be emanating from Claimant's severe somatic and psychological distress and recommended a complete review of claimant's prior medical and psychological history. He also believed claimant's facet arthritis and spondylolisthesis were not related to this claim. and that the previously administered diagnostic tests were not within the medical treatment guidelines. Dr. Ridings believed Claimant had attained MMI for her physical conditions, but recommended the she undergo a psychiatric evaluation to determine what, if any, psychiatric diagnosis should be included as part of her work-injury.

42. After receiving Dr. Ridings IME report, Dr. Dean wrote a letter on May 18, 2018, stating that she agreed with Dr. Ridings assessment, and recommended Claimant undergo a psychiatric assessment. (Ex. BB, p. 712). She deferred determination of MMI until psychiatric evaluation was completed.

43. Dr. Stephan Moe conducted a psychiatric IME of Claimant on July 16, 2018. (Ex. H). Dr. Moe opined that the Claimant's "physical symptoms have been influenced by psychological factors," and that her subjective reports of pain were not in alignment with objective data. Dr. Moe opined that emotional distress, that which follows a traumatic incident in particular, is associated with greater and more severe physical symptoms, a process called somatic amplification. He concluded that psychological factors undoubtedly had a very significant influence on her post-injury medical history, and that Claimant was likely suffering from conversion disorder as she had many medically unexplained symptoms. *Id.* He recommended tending to Claimant's psychological

conditions in order for her to reach MMI.

44. Dr. Moe testified at hearing that Claimant had significant somatic overlay to her physical conditions. Claimant scored the highest possible score on the GAD-7, to measure her symptoms of anxiety disorders, scored 8/9 symptoms on her PHQ-9, indicating a significant level of depression, and had 16/20 symptoms on the PCL-5, indicating severe PTSD symptoms. Dr. Moe agreed that Claimant had severe psychological overlay in her symptoms that significantly influenced her descriptions of pain. He cautioned against proceeding with invasive treatment techniques without first thoroughly reviewing her psychiatric conditions. He also cautioned against undue reliance on claimant's subjective description of pain and recommended objective confirmation.

45. Dr. Moe testified that as a rule, individuals with high amounts of psychological overlay are not good candidates for invasive procedures. He opined that an individual's psychological condition should first be addressed prior to any invasive procedures, including RRN nerve ablation, and that all safeguards should have absolutely been taken in this instance. Dr. Moe believed any 'dismissive attitudes' toward Claimant's psychological condition and its effects should be reconsidered. He was very concerned that Dr. Malinky was giving excessive weight to Claimant's subjective descriptions of pain.

46. Dr. Ridings testified via deposition on January 23, 2019. It was his opinion that the repeat L3-L5 RFN procedure was not reasonable, necessary, or related to her November 12, 2016 injury. Dr. Ridings reviewed Claimant's medical records from her work injury in addition to records from before the injury. He testified that there was no objective evidence showing an injury to Claimant's L3-L5, and that her L1 compression fracture had healed, having no effect on her L3-L5. It was his opinion that the medical treatment guidelines where used to rule out false positives - "the placebo effect"- and that the Guidelines should have been followed in Claimant's case due to a multitude of red flags.

47. Based on his review of the records, he believed Claimant had a negative diagnostic response to the medial branch blocks and a negative diagnostic response to the RFN procedure. According to Dr. Ridings, those negative diagnostic responses provided evidence which showed Claimant's pain generator to be coming from somewhere other than her L3-L5 facet joints. He believed there was substantial literature showing that if there is psychological overlay to the severity of the patient's pain complaints, that unless that was effectively treated, the results of interventional procedures would be much worse. He strongly believed Claimant needed no further physical intervention and instead, suggested that her psychological issues be addressed.

48. Christopher Malinky, M.D. testified by deposition as an expert in anesthesia and pain management. Dr. Malinky testified that the majority of his practice involves treating patients who suffer from chronic and acute low back issues Dr. Malinky testified that he first evaluated Claimant on October 23, 2017 as a transfer patient from Dr. Willman who had recently left the practice. Dr. Malinky testified that he was seeing Claimant for

reevaluation following a diagnostic medial branch block done on August 7, 2017.

49. Dr. Malinky reported that Claimant had a 60 to 70 percent relief from that medial branch block which tells him, as a pain management doctor, that the L3-L5 levels are the pain generators. Dr. Malinky testified that based on the results of the August 7, 2017 diagnostic block he recommended a radiofrequency neurotomy to achieve the same amount of relief but lasting for six to eight months to avoid ongoing/escalating narcotics and to increase function. He testified that on November 27, 2017 (the date of the RFN procedure), he spent "a couple minutes" with Claimant face-to-face about her existing pain complaints, since he had already seen her at the October 23, 2017 consult.

50. According to Dr. Malinky, after the November 27, 2017 neurotomy was done Claimant reported a 75 to 80 percent reduction in low back pain and that her pain level in the low back was a 2-3/10 and a 9/10 for other parts of her body. Dr. Malinky opined that a 75 to 80 percent pain relief and a concomitant reduction in narcotic usage, as well as the ability to participate in physical therapy would be a good result.

51. Dr. Malinky testified that at Claimant's next visit with him, she was complaining of more pain in her low back with a corresponding decrease in her ability to perform her activities of daily living, both of which indicated that the effects of the radiofrequency neurotomy was wearing off. Dr. Malinky testified that Claimant received only four to five months of pain relief as opposed to the preferred six to eight months. However, Dr. Malinky went on to explain that everyone's nerves regenerate at a different rate and the nerve may not have been completely ablated, so as to achieve a more lasting result. Ultimately, Dr. Malinky opined that a four to five-month duration in pain relief was meaningful improvement and a repeat neurotomy can last even longer.

52. Dr. Malinky testified that as of March 7, 2018, Claimant would benefit from a repeat radiofrequency neurotomy. Dr. Malinky testified that he was aware that the D.O.W.C. Treatment Guidelines (Guidelines) for the low back require that two MBBs be done with good results before the radiofrequency neurotomy is performed and that Claimant had only had one medial branch block before. However, Dr. Malinky went on to explain that since Claimant already had a medial branch block followed by a successful neurotomy that the chances of having a false positive are low. Therefore, Dr. Malinky felt that this was justification for deviating from the Guidelines. Dr. Malinky further testified that he uses psychological screenings with some patients who will be undergoing radiofrequency neurotomies. However, in Claimant's case, he did not feel it was necessary.

53. Dr. Malinky also testified concerning the discrepancies in the pain levels noted in the physical therapy records and his own treatment notes. He stated that when he asks a patient concerning pain levels that he gets really specific about what exactly hurts and how much it hurts. Dr. Malinky further testified that in many instances the patient is going to concentrate on what hurts the most. In addition, Dr. Malinky said it also depends on how and when the question is asked regarding pain levels e.g. before or after therapy. On cross examination, Dr. Malinky was queried concerning pain scales

and the psychological status of a patient who is a potential candidate for a neurotomy. Dr. Malinky testified that pain is subjective and you can't rely on it alone for determining whether or not a neurotomy is appropriate. Rather, a physician has to look at the whole picture which includes talking to the patient, examining them, looking at their imaging, and how they respond to treatment.

54. Dr. Malinky testified that he had not reviewed any of Claimant's prior medical records upon examining her for the first time. He testified that a Rhizotomy procedure should give a patient 75%-80% pain relieve for 6-9 months. Dr. Malinky believed that Claimant had pain relief for 4 months from her initial RFN. He testified that he believed the rhizomoty had 'worked', because Claimant was now able to engage in physical therapy and reduced her Norco prescription.

55. He further acknowledged that there was no evidence of any acute injury to Claimant's L3-L5 region, but there was evidence of degenerative changes. He had not read any of Claimant's medical records, either from within his own office, or from outside. He had not read any of Dr. Staudenmeyer's records.

56. He further admitted that he cannot recall if he ever gave Claimant a pain diary, nor if he ever used any VAS pain charts. Instead, he relied exclusively upon Claimant's self-reported characterization of a 60-70% improvement in pain from the date of service (August 7, 2017), until her follow up appointment on 10/23/2017. Based upon this one appointment, he then determined to perform the RFA, which occurred on 11/27/2017.

57. Dr. Malinky further acknowledged that the Guidelines required him to perform two MBBs, but he went straight to the first RFA after one MBB. When asked why this occurred, Dr. Malinky replied: "I don't know. I think, probably is was a mistake and miscommunication."

58. Claimant testified at hearing on October 30, 2018. Claimant alleged that all treatment modalities gave her benefit. She confirmed her pre-existing diagnosis of fibromyalgia and rheumatoid arthritis, which presented her with whole body aching pains.

59. Claimant remembered receiving some benefit from the ESI she received in early May 2017. Claimant alleged she had 3 months of relief from the first Rhizotomy. Claimant testified that she could feel the difference when the injections were wearing off; however, she reported pain levels which mirrored those prior to the medial branch block or RFN procedure. She confirmed she had not had a pain free day since the incident, and denied that she ever reported a 2-3/10 pain to any provider. She confirmed the pain levels had never been lower than a 6-6.5/10 since her injury, and that improvement in her pain from the injections only ever reduced her pain to a 6-6.5/10.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

1. The purpose of the "Workers' Compensation Act of Coloradan is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

2. The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2006. A Workers' Compensation case is decided on its merits. Section 8-43-201, supra. The claimant in a workers' compensation claim bears the burden of establishing entitlement to medical treatment. *See Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997); *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990).

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the Judge need not address every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO, 5 P.3d 385 (Colo. App. 2000).*

Medical Benefits, Generally

4. Respondents are liable for authorized medical treatment that is reasonably necessary to cure and/or relieve an injured worker from the effects of the industrial injury. § 8-42-101(1)(a), C.R.S. An admission of liability does not amount to an admission that all subsequent medical treatment is causally related to the industrial injury or that all subsequent treatment is reasonably necessary. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Respondent retains the right to challenge the cause of the need for continuing treatment and the reasonable necessity of specific treatment. *Hanna v. Print Expediters, Inc*., 77 P.3d 863 (Colo. App. 2003).

5. The Claimant must prove a causal nexus between the claimed disability and need for medical treatment and the work related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998).

Medical Treatment Guidelines, Generally

6. The Director of the Division of Workers' Compensation (Division)

promulgated the "medical treatment guidelines and utilization standards." *City of Manassa v. Ruff 235 P.3d 1051 (Colo. 2010)*. The Division's medical treatment guidelines were established by the Director pursuant to an express grant of statutory authority. Section 8-42-101(3.5)(a)(II), C.R.S. The Division's medical treatment guidelines are regarded as the accepted professional standards for care under the Workers' Compensation Act (Act). *Rook v. Industrial Claim Appeals Office 111 P.3d 549 (Colo. App. 2005)*. The guidelines are to be used by health care practitioners when furnishing medical aid under the Act. Section 8-42-101(3)(b), C.R.S.; *Hall v. Industrial Claim Appeals Office 74 P.3d 459 (Colo. App. 2003)*.

7. An ALJ should consider the Guidelines in deciding whether a certain medical treatment is reasonable and necessary for the Claimant's condition. *Deets v. Multimedia Audio Visual*, W. C. No. 4-327-591 (March 18, 2005), *aff'd Deets v. Industrial Claim Appeals Office No. 05CA0719* (Colo. App. May 17, 2007) (not selected for publication); See *Eldi v. Montgomery Ward* W. C. No. 3-757-021 (October 30, 1998) (medical treatment guidelines are a reasonable source for identifying the diagnostic criteria).

8. While it is appropriate for an ALJ to consider the Guidelines in deciding whether a certain medical treatment is reasonable and necessary for the claimant's condition, *See Deets v. Multimedia Audio Visual,* W. C. No.4-327-591 (March 18, 2005) (medical treatment guidelines are a reasonable source for identifying the diagnostic criteria), the ALJ's consideration of the Guidelines may include deviations from them where there is evidence justifying the deviations. *Logiudice v. Siemans Westinghouse,* W.C. No. 4-665-873 (January 25, 2011).

Medical Treatment Guidelines, Rule 17, Exhibit 1, (E) (2) (b) (vi) B)

B) Medial Branch Blocks: These are generally accepted diagnostic injections, used to determine whether a patient is a candidate for radiofrequency medial branch neurotomy (also known as facet rhizotomy).

It is obligatory that sufficient data be accumulated by the examiner performing this procedure such that the diagnostic value of the procedure is evident to other reviewers. This entails documentation of patient response regarding the degree and type of response to specific symptoms. As recommended by the ISIS guidelines, the **examiner should identify three or four measurable physical functions, which are currently impaired and *can be objectively reassessed 30 minutes or more after the injection***. A successful block requires documentation of positive functional changes **by trained medical personnel experienced in measuring range of motion or assessing activity performance.** *The evaluator should be acquainted with the patient, in order to determine pre and post values, and preferably unaffiliated with the injectionist's office.* Qualified evaluators include nurses, physician assistants, medical assistants, therapists, or noninjectionist physicians. To be successful the results should occur within the expected time frame and there

should be pain relief of *approximately 80% demonstrated by pre and post Visual Analog Scale (VAS) scores.* Examples of functional changes may include sitting, walking, and lifting. *Additionally, a prospective patient* ***completed pain diary must be recorded*** *as part of the medical record that documents response hourly for a minimum requirement of the first 8 hours post injection or until the block has clearly worn off and preferably for the week following an injection.* The diary results should be compared to the expected duration of the local anesthetic phase of the procedure. Responses must be identified as to specific body part (e.g., low back, leg pain). The practitioner must identify the local anesthetic used and the expected duration of response for diagnostic purposes. The success rate of radiofrequency neurotomy is likely to decrease with lesser percentages of pain relief from a branch block.

A separate comparative block on a different date should be performed to confirm the level of involvement. A comparative block uses anesthetics of varying lengths of activity. Medial Branch blocks are probably not helpful to determine the likelihood of success for spinal fusion.

It is essential that only light sedation be used for diagnostic trials in order to avoid having the sedation interfere with the patient's ability to interpret pain relief from the injection itself. Many patients may not need any medication. For those requiring anxiolytics, short acting agents, such as midazolam, may be used. As with all patients, the pain diary and functional testing post injection must be rigorously adhered to in order to correctly interpret the results of the diagnostic injection.

Needle Placement: Multi-planar fluoroscopic imaging is required for all medial branch blocks injections. Injection of contrast dye to assure correct needle placement is required to verify the flow of medication. Permanent images are required to verify needle placement.

Indications: All injections should be preceded by an MRI or a CT scan. Individuals should have met all of the following indications:

• Physical exam findings consistent with facet origin pain, and

• At least 3 months of pain, unresponsive to 6-8 weeks of conservative therapies, including manual therapy, and

• *A psychosocial screening (e.g., thorough psychosocial history, screening questionnaire) with treatment as appropriate.*

> ϖ Frequency and Maximum Duration: May be repeated once for comparative blocks. Limited to 2 anatomic facet levels or 3 medial branch levels. (emphasis added).

e. Radio Frequency (RF) Denervation - Medial Branch Neurotomy/Facet Rhizotomy:

i. Description -- A procedure designed to denervate the facet joint by ablating the corresponding sensory medial branches. Continuous percutaneous radiofrequency is the method generally used. Pulsed radiofrequency should not be used as it may result in incomplete denervation. Cooled radiofrequency is generally not recommended due to current lack of evidence.

There is good evidence in the lumbar spine that *carefully selected patients* who had 80% relief with medial branch controlled blinded blocks and then had RF neurotomy will have improved pain relief over 6 months and decreased impairment compared to those than those who had sham procedures. *Generally pain relief lasts 7-9 months and repeat radiofrequency neurotomy can be successful and last longer*. RF neurotomy is the procedure of choice over alcohol, phenol, or cryoablation. Precise positioning of the probe using fluoroscopic guidance is required because the maximum effective diameter of the device is a 5x8 millimeter oval. Permanent images should be recorded to verify placement of the device.

ii. Needle Placement: Multi-planar fluoroscopic imaging is required for all injections. Injection of contrast dye to assure correct needle placement is required to verify the flow of medication. Permanent images are required to verify needle placement.

iii. Indications -- *Those patients with proven, significant, facetogenic pain. A* ***minority*** *of low back patients would be expected to qualify for this procedure.* (emphasis added). This procedure is **not recommended** (emphasis suppled) for patients with *multiple pain generators* or involvement of more than 3 levels of medial branch nerves.

Individuals should have met **all** of the following indications:

• Physical exam findings consistent with facet origin pain, **and**

• Positive response to controlled medial branch blocks, **and**

• At least 3 months of pain, unresponsive to 6-8 weeks of conservative therapies, including manual therapy, **and** (emphasis supplied)

• *A psychosocial screening* (e.g., thorough psychosocial history, screening questionnaire) with treatment as appropriate *has been undergone.*

All patients should continue **appropriate exercise with functionally directed rehabilitation.** Active treatment, which patients will have had prior to the procedure, will frequently require a repeat of the sessions previously ordered (Refer to F.13. Therapy-Active). (emphasis added).

*It is **obligatory** that sufficient data be accumulated by the examiner performing this procedure such that the value of the medial branch block is evident to other reviewers*. This entails documentation of patient response regarding the degree and type of response to specific symptoms. As recommended by the ISIS guidelines, the examiner should identify three or four measurable physical functions, which are currently impaired and can be objectively reassessed 30 minutes or more after the injection. *A successful block requires documentation of positive functional changes by trained medical personnel experienced in measuring range of motion or assessing activity performance. The evaluator should be acquainted with the patient, in order to determine pre and post values, and preferably unaffiliated with the injectionist's office.* Qualified evaluators include nurses, physician assistants, medical assistants, therapists, or non-injectionist physicians. To be successful the results should occur within the expected time frame and there should be pain relief of approximately 80% demonstrated by pre and post *Visual Analog Scale (VAS) scores.* Examples of functional changes may include sitting, walking, and lifting. Additionally, *a prospective patient completed pain diary must be recorded as part of the medical record that documents response hourly for a minimum requirement of the first 8 hours post injection or until the block has clearly worn off and preferably for the week following an injection.* The diary results should be compared to the expected duration of the local anesthetic phase of the procedure. Responses must be identified as to specific body part (e.g., low back, leg pain). The practitioner must identify the local anesthetic used and the expected duration of response for assessment purposes.

In almost all cases*, this will mean a reduction of pain to 1 or 2 on the 10-point Visual Analog Scale (VAS)* correlated with functional improvement. The patient should also identify activities of daily living (ADLs) (which may include measurements of ROM) that are impeded by their pain and can be observed to document objective functional improvement in the clinical setting. Ideally, these activities should be assessed throughout the observation period for function. The observer should not be the physician who performed the procedure. It is suggested that this be recorded on a form similar to ISIS recommendations.

A separate comparative block on a different date should be performed to confirm the level of involvement prior to the rhizotomy. A comparative block uses anesthetics with varying lengths of activity. Medial Branch blocks are probably not helpful to determine the likelihood of success for spinal fusion. (emphasis added).

The success rate of radiofrequency neurotomy is likely to decrease with lower percentages of pain relief from a medial branch block.

Informed decision making should also be documented for injections and all invasive procedures. This must include a thorough discussion of the pros and cons of the procedure and the possible complications as well as the natural history of the identified diagnosis. The purpose of spinal injections, as well as surgery, is to facilitate active therapy by providing short-term relief through reduction of pain. Patients should be encouraged to express their personal goals, outcome expectations and desires from treatment as well as any personal habits or traits that may be impacted by procedures or their possible side effects. *All patients must commit to continuing appropriate exercise with functionally directed rehabilitation usually beginning within 7 days, at the injectionist's discretion.* Since most patients with these conditions will improve significantly over time, without invasive interventions, patients must be able to make well-informed decisions regarding their treatment. *All injections must be accompanied by active therapy.*

iv. Complications-- Bleeding, infection, or neural injury. The clinician must be aware of the risk of developing a localized neuritis, or rarely, a deafferentation centralized pain syndrome as a complication of this and other neuroablative procedures. Spinal musculature atrophy is likely to occur especially with repeat procedures as a rhizotomy denervates the multifidus-muscle in patients. For this reason, repeated rhizotomies and multiple level rhizotomies can be harmful by decreasing supportive spinal musculature. This is especially problematic for younger patients who may engage in athletic activities or workers with strenuous job requirements as the atrophy could result in increased injuries or pain, although this has not been documented.

v. Post-Procedure Therapy -- Active therapy. Implementation of a gentle aerobic reconditioning program (e.g., walking) and back education within the first post-procedure week, barring complications. Instruction and participation in a long-term home-based program of ROM, core strengthening, postural or neuromuscular re-education, endurance, and stability exercises should be accomplished over a period of four to ten visits post-procedure. *Patients who are unwilling to engage in this therapy should not receive this procedure.*

vi. Requirements for Repeat Radiofrequency Medial Branch Neurotomy: In some cases pain may recur. *Successful RF Neurotomy usually provides from* ***six to eighteen months*** *of relief.* Due to denervation of spinal musculature repeated rhizotomies should be limited. Refer to the Division's Chronic Pain Disorder Treatment Guidelines. Before a repeat RF Neurotomy is done, a confirmatory medial branch injection should be performed if the patient's pain pattern presents differently than the initial evaluation. In occasional patients, additional levels of RF neurotomy may be necessary. The same indications and limitations apply.

Substantial Deviations from the Medical Treatment Guidelines

9. Using the treatment Guidelines in the current case shows that the request for a repeat L-3-L5 RFN procedure is not reasonable or necessary as the first RFN procedure was negative diagnostically. The Guidelines state that for a positive response claimant have 3-4 measureable improvements in physical function. The medical records fail to show any *measureable* improvement in her function due to the RFN procedure. Claimant's statement of improvement is not supported by the records.

10. Medical records confirm Claimant failed to receive the 80% relief in pain complaints that the Guidelines require. Medical records and Claimant's own testimony prove claimant had at best 6-6.5/10 at any point during her treatment. Dr. Malinky's single report of functional improvement and 2-3/10 pain is not supported by any of the records. Claimant herself has denied ever having told him of 2-3/10 pain. Claimant failed to complete a pain diary. Available medical records during the period of time where she should have felt the most relief, indicate she actually received little to no relief from the injections.

11. The Guidelines state that the procedure and subsequent reduction in pain should last anywhere from 6-18 months. Records show that any pain relief achieved by Claimant was lost within one to two months after she received the injection on November 27, 2017. By December 20, 2017 she had pain complaints of 8/10. The guidelines suggest that in almost all cases, Claimant will have a reduction of pain to 1 or 2 on the 10-point VAS. At no point in her claim, did Claimant ever report reduction in her pain to a 1 or 2 on the 10-point VAS. Likewise, physical examination of Claimant substantiates a correlation between her continually high complaints of pain and severe functional limitation, as she never functioned in an objective manner that would indicate she was at a 1 or 2 on the 10-point scale.

12. Claimant had an insufficiently diagnostic response to the medial branch blocks and therefore no further MBBs were then warranted. However, because Dr. Malinky apparently did not know about the Guidelines, he bypassed the requirements and safeguards and moved directly to administering an *unauthorized* RFN procedure. The evidence shows that he did not follow the Guidelines to determine if Claimant had genuine lower back pain. Claimant's circumstances called for much closer adherence to the Guidelines to ensure she was receiving appropriate and authorized care.

13. After the medial branch blocks and RFN procedures, Dr. Malinky failed in the Guidelines' requirement to collect data such that the diagnostic value of the procedure is evident to other reviewers. Dr. Ridings testified that there was a lack of data indicating a positive diagnostic response. The ALJ concurs. Dr. Malinky did not identify three or four measurable physical functions, which were then impaired and could be objectively reassessed in 30 minutes of more after the injection. He also failed to follow the recommendation that he become acquainted with the patient such that he could determine pre and post VAS values, as he spent only a few minutes getting acquainted with the patient.

14. The Guidelines recommend that the evaluator be someone other than the injectionist. Dr. Malinky himself injected Claimant and then indicated that he evaluated her. The Guidelines recommend rigorous adherence to a pain diary and objective functional testing post-injection to correctly interpret the results. Claimant was given no pain diary and no pre- or post- VAS scores were taken by Dr. Malinky.

15. The Guidelines recommend a second set of medial branch blocks to rule out the possibility of a false positive and a psychosocial evaluation. Dr. Malinky acknowledged that he might have significant concern with an individual who reported anxiety as pain. He admitted he would have concern with an individual who presented with symptom magnification. He did not have the expertise to comment on psychological issues and had only had a face-to-face conversation with claimant for no more than 5 minutes; however, at intake he noted Psychiatric issues of Depression and Anxiety.

16. Dr. Moe's assessment of Claimant's severe psychological overlay essentially mandates that a second set of injections should have been given to claimant to rule out a false positive. Dr. Malinky acknowledged that the guidelines require a second set of injections to rule out a false positive, or placebo effect, but again relied on his "couple-minute" conversation with Claimant to justify his deviation from the Guidelines. The justification given by Dr. Malinky for all of his deviations is that he did not know that the Guidelines required two injections and he had a brief face-to-face conversation with Claimant. The ALJ finds such deviation in this instance is not supportable.

17. Although Claimant testified to functional improvement, the Guidelines recommend obtaining objectively measurable functional improvements. No objectively measureable functional improvement can be found within the medical records surrounding the administration of medial branch blocks or the RFN procedure.

18. Dr. Malinky agreed that pain was subjective. A physician should look at other, more objective, data to confirm a patient's subjective description of pain. Dr. Malinky did not document or confirm Claimant's subjective description of pain with objective data. Claimant's medical providers noted their concerns with her unusually high levels of pain compared to objective data and observable function. No evidence exists within the record to support functional gains attained by Claimant from any treatment she received.

19. The Guidelines' direction in eliminating false positives is especially applicable in the current instance. Four months prior to Claimant's work-injury she complained of near whole body pain complaints. Likewise, Claimant had undergone extensive work-up of her spine due to her complaints of urinary incontinence, yet no physician could explain her symptoms. Imaging of Claimant's lumbar spine showed a fully healed L1 compression fracture, with no acute pathology in her L3-L5. Claimant's providers agreed that Claimant's L1 fracture had properly healed and that it had no

effect on her L3-L-5. All objective data has failed to show any work-related pathology in claimant's L2-L5 and diagnostic tests have failed to confirm claimant's L2-L5 facet joints as the pain generator.

20. Claimant's significant and diagnosed somatic amplification of her physical feelings of pain did not justify deviating from the guidelines. While her psychological complaints do not disqualify her from receiving injections, her psychological presentation should give any provider concern when moving forward with invasive treatments and all precautions should be undertaken. Dr. Malinky himself noted "Depression and Anxiety" on Claimant's initial consult with him. Dr. Moe has opined that Claimant was a poor candidate for the RFN procedure as numerous studies evidenced poor outcomes for individuals with severe psychological overlay, such as Claimant.

21. The Guidelines indicate that RFA is **not recommended** for patients with multiple pain generators. Claimant apparently had many. They go on to state that "a *minority* of low back patients would be expected to quality for this procedure."

In Conclusion

22. The ALJ concludes that Dr. Malinky is sincere in his testimony, and felt it was in best interests of Claimant when he recommended the second MBB, then the second RFN. However, the ALJ concludes that that is simply insufficient to justify the numerous, substantial, deviations he would ask the Workers Compensation system to accept. While the Guidelines may be deviated from, sufficient documentation and rationale for so doing must be supplied by the treating physician in support. Otherwise, the Guidelines would mean very little. They exist for a reason-to assure appropriate, proven, and uniform care of injured workers. The ALJ finds the expert testimony of Dr. Ridings and Dr. Moe to be persuasive, in that Dr. Malinky has failed to justify why the proposed second RFA procedure is reasonable and necessary to treat Claimant's work injuries.

ORDER

It is therefore Ordered that:

1. Claimant's request for the second L3, L4, L5 bilateral radiofrequency neurotomy as requested by Dr. Malinky is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to

the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-058-572-01

ISSUE

- Whether Claimant met his B_____en of proving by a preponderance of the evidence that he requires the use of a wheelchair accessible vehicle.

FINDINGS OF FACT

1. Claimant is a 36-year-old male who sustained an occupational injury when he fell over twenty feet from a roof while working as an installer for Employer. Claimant sustained severe injuries and has undergone extensive medical treatment.

2. Respondents admitted liability by filing a general admission of liability on October 10, 2017.

3. Claimant's diagnoses include but are not limited to catastrophic traumatic brain injury, quadriplegia, spastic hemiplegia affecting his right dominant side, hypertonicity of muscles throughout his trunk and extremities, and aphasia.[1]

4. Because of his injuries, Claimant is permanently paralyzed, non-ambulatory, and has lost function in his arms and legs.

5. On April 19, 2018, Claimant's treating neurologist, Dr. Michael Makley, prescribed a wheelchair accessible vehicle.

- Dr. Makley opined that Claimant's paralysis was a life-long mobility limitation for which he needs specialized equipment to perform mobility related activities of daily living.

- Dr. Makley opined that without such a vehicle, Claimant's "safety and health will be negatively impacted."

- Dr. Makley explained that rather than being transferred out of his wheelchair and into a regular vehicle, Claimant needs to remain seated in his wheelchair to "maintain positioning, skin protection, and due to the inability to transfer into a standard vehicle."

- Dr. Makley outlined that "[i]ndependence in community mobility can be essential for [Claimant's] autonomy, community mobility, personal care and daily living needs."

[1] Aphasia is the loss of ability to understand or express speech, caused by brain damage.

Claimant's specially trained and certified therapist, Sarah Davidson, co-wrote the prescription.

6. Claimant receives physical and occupational therapy from Monday through Friday at Learning Services Neurobehavioral Institute ("Learning Services"), a day center specialized in brain injury care.

7. On August 22, 2018, Jill Castro, MD, the medical director of Learning Services, also prescribed Claimant a wheelchair accessible vehicle. She noted that Claimant requires a specialized wheelchair to accommodate his spasticity and limited motion in his extremities. She noted that the vehicle Claimant used did not accommodate his wheelchair, which limited his ability to be more independent in the community. She prescribed a wheelchair accessible van as "medically necessary to allow [Claimant] access to the community, for frequent needs in therapy, physician visits, and other community integration."

8. On August 14, 2018, Claimant received occupational therapy. His therapist, Becky Cady, noted, "[Claimant] is much more oppositional, often does the opposite of what you are asking him to do. His is more verbal but he also has increased frustration when he can't communicate clearly. He often refuses assist when completing tasks, becoming a safety risk." Linda Morgan, and Rich Morgan, further noted under Physical Therapy, "[Claimant] is definitely overestimating his own abilities and has poor safety awareness. This is now a safety issue. He has unbuckled his wheelchair safety belt and has attempted to stand on his own."

9. Claimant's wife, Jessica B_____, testified that she has been married to Claimant for three years and together as a couple for five years. Although Claimant has round the clock care, she provides and assists in providing care for many of Claimant's needs. These include feeding him meals, attending to his restroom needs, taking him to appointments, taking him to Outward Bound programs, and being involved with his treatment.

10. Mrs. B_____ testified that Claimant is unable to care for himself. Claimant is unable to stand on his own, and his injury hinders his motor skills. Claimant poses a danger to himself if left alone, and is at risk of re-injury if he attempts to stand on his own.

11. Mrs. B_____ testified that the following complications occur when she attempts to transfer Claimant to her current vehicle.

- Claimant is at a risk of falling and injuring himself and his caregivers.
- Claimant fights and argues when she attempts to transfer him into her vehicle.
- She must use a "gap" belt to transfer Claimant into the vehicle. Doing so risks damaging Claimant's skin, which poses a risk of infection.

- Transferring Claimant overstimulates him and can cause him to experience seizures.

- Transfers are so difficult that Claimant often chooses not to participate in activities that would allow him to integrate more fully in his community.

12. When Mrs. B_____ manages to transfer Claimant into their vehicle, the following problems remain:

- Claimant is unable to maintain proper posture when restrained in his seat, which limits the distance they can travel.

- Claimant is able to unfasten the car's restraints.

- Claimant becomes aggressive in the car which and has pushed her while driving.

- Claimant "plays" with controls on the dashboard and attempts to shift gears while she is driving.

13. On November 14, 2018, Claimant's wife and physicians met to evaluate Claimant's current status and management plan. Meeting notes show that Mrs. B_____ remained unable to integrate the Claimant into the community.

14. Use of Claimant's current vehicle exposes Claimant to increased risks of skin damage, infection, and seizures. At the same time, it decreases his ability to participate in therapeutic activities and integration into his community. It exposes Claimant and his caregivers to heightened risks of harm from falling, straining, and unsafe driving.

15. Providing Claimant a wheelchair accessible vehicle would reduce these risks to Claimant's health and safety.

16. A wheelchair accessible vehicle would provide Claimant with numerous medical and therapeutic benefits, including the ability to integrate into his community. Claimant could leave his room to go out for haircuts, shopping, and social activities.

17. Claimant participated in several outdoor activities prior to his injury. Dr. Jim Schraa, one of Claimant's neuropsychologists, has recommended "fishing and other recreational activities," as therapeutic treatment. Having a wheelchair accessible van would allow CLaimant to participate in accessible outdoor activities such as visiting a paved park in Baily, Colorado, and participating in accessible programs through Outward Bound including modified skiing.

18. Since his injury, Claimant has participated in two Outward Bound modified skiing therapy programs. Once, Claimant's wife transported him in their own vehicle. Mrs. B_____ testified that Claimant smiles and "comes to life" after participating in adaptive skiing. Persuasive evidence supports a finding that Claimant would participate

more frequently in such activities if she had a wheelchair accessible vehicle because it would reduce Claimant's risk of harm.

19. Mrs. B_____ testified that the primary reason Claimant is unable to engage in additional therapeutic outdoor activities is the lack of a wheelchair accessible vehicle. Using her current vehicle involves a great production, and causes too much frustration for Claimant and his family. She testified that she would travel to the mountains and an adaptive park if she had a proper mode of transportation.

20. Learning Services provides adequate transportation if Claimant needs to be transported during his day programing.

21. Mrs. B_____ testified that she attends Claimants doctor's appointments and that she has had to take Claimant to doctor appointments that fall outside the scope of Claimant's Workers' Compensation injuries. On at least two occasions, Mrs. B_____ has had to use an ambulance for non-emergent trips to doctors or hospitals, because she was unable to transport Claimant in her own car. She credibly testified that she would have transported Claimant on those occasions if she had a wheelchair accessible vehicle.

22. Dr. Makley testified by telephone as an expert in neurology. He was Claimant's physician during his inpatient rehabilitation, and remains involved with Claimant's care. Dr. Makley testified that Claimant suffers from spastic tetraparesis, and has cognitive deficits. He further testified that the Claimant is dependent for care for the remainder of his life.

23. Dr. Makley testified that (1) Claimant requires a structured day program like that provided by Learning Services that engages him and keeps him moving; and (2) Claimant requires integration into the community. Dr. Makley recommended a wheelchair accessible vehicle in part to integrate Claimant into the community. *Dr. Makley testified that integrating Claimant into the community is vital to Claimant's medical treatment.* Specifically, the ability for Claimant to be back in his world is a medical benefit. Dr. Makley testified that it is important for all rehabilitation patients to return to their community, and that Claimant remaining in his room is inadequate.

24. Dr. Makley testified that proper usage of a wheelchair is vitally important, as positioning during transport poses risk of skin breakdown, as well as risk of re-injury. He testified that skin breakdown can be lethal, and proper seating is crucial to protecting his skin. He testified that transferring into a standard vehicle poses threats of falling, and could injure his caregivers.

25. On cross-examination, Claimant's wife agreed with Respondents' counsel that a wheelchair accessible van would make things easier for her, would provide peace of mind, and that it would make Claimant more independent. However, from context is clear to the ALJ that the primary purpose of a wheelchair accessible van is to provide Claimant with medical and therapeutic benefit.

26. The ALJ finds that Claimant established by a preponderance of the evidence that he requires the use of a wheelchair accessible vehicle is necessary for the treatment of Claimant's injuries and provides therapeutic relief from the effects of his injuries.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8- 40-101, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). The claimant shoulders the B_____en of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. Respondent bears the B_____en of establishing any affirmative defenses. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201 (2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

Medical Benefits – Reasonably Necessary

Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101, C.R.S; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). Although Respondents are liable for medical treatment that is reasonably necessary to cure and relieve the effects of the industrial injury, Respondents may, nevertheless, challenge the reasonableness and necessity of current or newly requested treatment notwithstanding its position regarding previous medical care in a case. See *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002) (upholding employer's refusal to pay for third arthroscopic procedure after having paid for multiple surgical procedures). The question of whether a particular medical treatment or modality is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial*

Claim Appeals Office, supra; *Wal-Mart Stores, Inc. v. Industrial Claims Office*, 989 P.2d 251 (Colo. App. 1999).

Employers are required to provide services that are either medically necessary for the treatment of a claimant's injuries or incidental to obtaining such treatment. See *Bellone v. Indus. Claim Appeals Office*, 940 P.2d 1116, 1117-18 (Colo. App. 1997) (upholding child care services as medical in nature because they relieved the symptoms and effects of the injury and were directly associated with claimant's physical needs). However, in interpreting the scope of C.R.S. 8-42-101(1)(a), the Colorado Court of Appeals has narrowly construed the Act by stating that an apparatus must be necessary for the treatment of the injury **or** it must provide therapeutic relief from the effects of the injury. *Cheyenne Cnty. Nursing Home v. Indus. Claim Appeals Office*, 892 P.2d 443, 446 (Colo. App. 1995) (upholding employer's refusal to pay for a stair glider as being a medical apparatus because it did not provide a therapeutic benefit to the disabling injury although it provided peace of mind and access to lower levels of a home in a tornado prone area).

Respondents focus on the first clause, that if an apparatus is not medically necessary for the treatment of a claimant's injuries or incidental to obtaining such treatment then the employer will not be liable to pay for it. See *ABC Disposal Servs. v. Fortier*, 809 P.2d 1071, 1073 (Colo. App. 1990) (upholding employer's refusal to pay for a snow blower because it was not prescribed as a medical aid to cure or relieve claimant from the symptoms of his injury but rather provided an easier way to accomplish a household chore). In other recent cases, the courts have likewise denied an "apparatus" or a service where it was not found to be medically necessary, but was rather prescribed as a means to achieve an independent lifestyle or provided peace of mind in emergencies. *Bogue v. SDI Corporation, Inc.*, 931 P. 2d. 477 (Colo. App. 1996) (holding that a wheelchair accessible van was not medically necessary and therefore beyond the intent of C.R.S. 8-42-101(1)(a)); *Hillen v. Tool King*, 851 P.2d 289 (Colo. App. 1993) (Although lawn care services necessitated by Claimant's work-related condition, they are unrelated to physical condition and the lawn care was not prescribed to cure or relieve Claimant of symptoms of the injury, but simply to relieve the Claimant of the rigors of yard work).

In the Colorado cases where an apparatus or services were authorized, the courts found that the apparatus or service was medically necessary. *Bellone*, supra; *Atencio v. Quality Care*, 791 P.2d 7 (Colo. App. 1990) (housekeeping services allowed where Claimant had severely restricted use of hands and could not perform activities of daily living or chores without assistance); *City and County of Denver, School District 1 v. Indus. Claims Appeals Office*, 682 P.2d 513 (Colo. App. 1984) (Hot tub installed in home found medically necessary where Claimant's work hours prevented use of health club and hot tub was prescribed to cure and relieve the Claimant from the effects of his work injury).

For a particular medical benefit to be compensable, even if not curative, the benefit must provide "therapeutic relief" from the effect of the injury. Courts have defined "therapeutic relief" very narrowly. See *Cheyenne County Nursing Home, v. Indus. Claim Appeals Office*, 892 P.2d 443 (Colo. App. 1995). Despite the narrow reading of "therapeutic relief" in benefit jurisprudence, the case law referenced below supports the

proposition that Claimant's Employer is obligated to provide him with a wheelchair accessible van.

A wheelchair accessible van will provide therapeutic relief. For example, in *Theresa Carlson v. Applebee's R.C.I*., W.C. No. 4-210-386 (ICAO, March 17, 2000), the claimant suffered injuries to her knees and hips when a 200-pound keg fell on her while at work. Afterwards, she experienced significant difficulty walking and eventually had to use crutches. Evidence presented at hearing showed that the claimant was still unsteady when walking, even while on crutches, and had fallen on occasion. Testimony was elicited that her unsteadiness and history of falling put her at risk of further injury. At hearing, the claimant testified that using crutches caused her to experience pain in her arms, knees and hips" and that "her pain was lessened by using a wheelchair." The ALJ determined that because her wheelchair relieved the symptoms of her industrial injury, it was a medical benefit her employer was obligated to provide pursuant to section 8-42-101(1) (a), C.R.S. Additionally, the ALJ found that the employer was obligated to pay for wheelchair ramps at her home because the ramps were deemed "necessary components" of a manual wheelchair. ICAO reviewed the decision of the ALJ, and acknowledged the narrow reading of the term "therapeutic relief" as defined in *Cheyenne County Nursing Home, v. Industrial Claim Appeals Office*, supra. Nevertheless, the panel ultimately distinguished the claimant's case determining that "the ALJ reasonably inferred that the wheelchair provides therapeutic relief from the symptoms of the injury", namely pain, and that the "prescribed apparatus [was] designed to prevent further deterioration of the claimant's condition which may result from additional falling injuries." See *Carlson*, W.C. No. 4-210-386 at 2, see also *Bellone v. Indus. Claim Appeals Office*, supra. ICAO also upheld the ALJ's decision regarding the wheelchair ramps finding that "instillation of wheelchair accessible ramps is a necessary component of the claimant's use of a wheelchair. Consequently, [they perceived] no basis to interfere with the ALJ's award of wheelchair accessible ramps." *Id*. In so holding, ICAO cited to *Kuziel v. Pet Fair, Inc.*, 931 P.2d 521 (Colo. App. 1996); *Cheyenne County Nursing Home, v. Indus. Claim Appeals Office*, supra, *Stockton v. Fountain Valley Plumbing & Heating*, W.C. No. 3-953-094 (ICAO, November 19,1992) (where the employer was liable for expenses related to operation of medically prescribed hot tub).

The facts in the present case are congruous to those in *Carlson*. Claimant remains unsteady on his feet, and is unable to ambulate, and because he has a standard vehicle, he is forced to transfer from his wheelchair to his spouse's passenger seat whenever he leaves the confines of his home for certain medical and therapeutic reasons. His spasticity limits his overall mobility and ambulation, and he faces the potential for skin tears, infection, and seizures.

Similar to the Claimant in *Carlson,* substantial evidence indicates that Claimant faces an increased risk of falling and further injury. Evidence at hearing establishes that Claimant's spouse has been injured by helping lift Claimant. Claimant is further at risk of injury while seated in the passenger seat, as he is unable to situate himself in a safe position, and risks distracting his spouse while she drives. Claimant's spouse testified that Claimant attempts to unbuckle himself, and plays with knobs and handles while seated, putting all occupants at risk.

The record further supports that Claimant would suffer additional harm if he remains confined to his home. Dr. Makley testified that it is necessary to re-integrate with the community for this type of injury. Medical records establish that Dr. Jim Schraa believes Claimant will benefit from recreational activities. Claimant's spouse testified that on the two occasions she has taken the Claimant skiing, she has seen him change in demeanor, and experience considerable pleasure. This is consistent with the lifestyle Claimant enjoyed prior to his injuries, and would likely benefit from. The records also support Claimant's improvement when he engages with family activities, and fostering interactions with his two-year-old daughter. Such activities require the use of a wheelchair accessible vehicle. The facts of this case, when compared to those of *Carlson*, constitute substantial evidence that a wheelchair accessible van is necessary to relieve the Claimant's pain and symptoms as well as prevent further injury. Substantial evidence supports a finding that a wheelchair accessible van is a "necessary component" of the Claimant's use of his wheelchair; that a wheelchair accessible van would prevent further injury or falls; and that a wheelchair accessible van would relieve the fatigue Claimant experiences when transferring in-and-out of his vehicle. Finally, a wheelchair accessible van would prevent further deterioration of Claimant's condition.

Claimant's entitlement to a wheelchair accessible van finds additional support in *Gregory Harrison v. Advanced Component Systems*, W.C. No. 4-192-027 (ICAO, November 3, 2006). In *Harrison*, the employer was required to purchase for claimant, who had incomplete paraplegia, a wheelchair accessible van in order to relieve him of the symptoms of his paraplegia. In *Harrison*, the claimant had a power wheelchair but could not use it because he did not have a means to transport it. The claimant in *Harrison*, reverted back to an inadequate method of ambulation in order to engage in everyday activities. The claimant in *Harrison* would use his manual wheelchair to reach his Ford Explorer and, upon reaching his vehicle, would transfer into the vehicle on his own. Once inside, he would then have to lift his manual wheelchair inside the vehicle. At hearing, expert testimony confirmed this placed the claimant at risk of further injury to his shoulders, injuries to his back, and skin shearing. The panel in *Harrison*, similar to the panel in *Carlson*, held that the claimant was entitled to the benefit of a wheelchair accessible van because, in part, "the wheelchair accessible van is a necessary component of the claimant's use of a power wheelchair." ICAO further held that "there is substantial evidence in the record from which the ALJ reasonably inferred that the van provides therapeutic relief from the symptoms of the injury. The ALJ also found that the prescribed apparatus is designed to prevent further deterioration of the claimant's condition."

In this case, Claimant would face a worsening condition if confined to his home, and the wheelchair accessible van is an extension of his use of a manual wheelchair. Claimant requires a specialized vehicle to participate in activities outside the home, and faces injury should he utilize a standard vehicle. The record also suggests that Claimant may suffer damage to his skin if he is required to use a standard vehicle, and video evidence suggests that Claimant is at a high risk of injury if he attempts to enter or exit a vehicle on his own. Even with assistance, there is risk of injury to both the Claimant, as well as his caretakers when using a standard vehicle.

At the hearing in *Harrison*, the employer argued that the holding in *Bogue v. SDI Corporation, Inc.*, 931 P.2d 477 (Colo. App. 1996), should apply to the claimant's case. In *Bogue v. SDI Corporation, Inc.*, the court denied a conversion van for a wheelchair bound claimant where the van would only have kept claimant safe from inclement weather rather than provide him "therapeutic relief" from the symptoms of his injuries or provide him greater access to medical treatment. In response to this argument, ICAO accurately distinguished the *Harrison* claimant's case from *Bogue* by noting that the wheelchair-accessible van was "a medical aid to relieve him of the medical symptoms of his quadriplegia" not merely a benefit designed to give the claimant peace-of-mind. The facts in the present case are similar to those in *Harrison*.

As found, in order to access medical care, reintegrate into the community, pick up prescriptions, purchase groceries, or engage in any long-range activity, Claimant requires the use of a specialized vehicle. If Claimant attempts to engage in such activities, then he must use his spouse's standard vehicle. Claimant's spouse must lock the wheelchair in place, and then she must detach Claimant's wheelchair restraint, guide the Claimant into grabbing the vehicle so that he may assist her while she attempts to lift him out of his chair. Claimant's spouse must then direct Claimant's torso into the vehicle, and guide him into a sitting position into the passenger seat. Claimant's spouse must then remove the wheelchair, and place Claimant in a safe position inside the vehicle. All the while, Claimant remains unable to control parts of his body, is unable to comprehend instruction, will often resist assistance, risks damage to his skin, and injury to both himself and his spouse. These facts, in comparison to *Harrison*, represent substantial evidence that Claimant needs a wheelchair accessible van as a medically necessary component of his manual wheelchair, for relief of his industrial injury, to avoid further injury, and for greater access to medical treatment.

A wheelchair accessible van will prevent further deterioration of Claimant's condition. When comparing the ICAO decisions in *Richard Trigg v. Acoustical & Constructional Supply,* W.C. No. 3-766-426 (ICAO, September 7, 1994) and *Bellone v. Indus. Claim Appeals Office*, supra, with the facts of this case, there is additional support for the proposition that Claimant is entitled to a wheelchair accessible van. In *Trigg*, ICAO upheld the ALJ's determination that a quadriplegic needed a modified van to get "to and from medical appointments and to do his own grocery shopping in order to control his diet." ICAO upheld the ALJ's decision on the basis that it allowed the claimant greater access to treatment and prevented further degradation of claimant's condition. ICAO held that treatment designed to maintain the claimant's condition or prevent a further deterioration is considered treatment that "relieves" the effects of the injury. In this case, as in *Trigg* and *Bellone*, providing Claimant with a wheelchair accessible van will prevent deterioration of his condition. As noted at hearing, Respondents only provide Claimant with transportation for medical appointments associated with his Workers' Compensation claim. However, the medical records, as well as testimony from Dr. Makley, indicate that Claimant will benefit from engaging in recreational activities, integrating into the community, and involvement with his family. Claimant is expected to engage in everyday activities that a family unit may have, and restricting him to his home is punitive to Claimant. These facts constitute substantial evidence that if Claimant uses a standard vehicle, it will hasten the deterioration of his condition.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents shall pay the costs of a wheelchair accessible van capable of transporting Claimant's manual wheelchair in order that he might experience relief from his industrial injury and experience greater access to medical care, subject to the Division of Workers Compensation medical fee Schedule.

Dated March 15, 2019

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, C 80203

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether Claimant proved by a preponderance of the evidence he is permanently and totally disabled.

FINDINGS OF FACT

1. Claimant is a 71 year old native of Macedonia. Claimant earned a law degree from the University of Macedonia in 1973 and worked as a government attorney in Macedonia from 1974 until 1981. Claimant moved to the United States in 1981 and did not obtain employment in the United States until 2001. During such time period, Claimant was a stay at home father and volunteered for approximately 10 years assisting refugees with obtaining driver's licenses and housing.

2. Claimant has a pre-existing history of poorly controlled diabetes and severe hearing loss.

3. Claimant began working for Employer in 2001. Claimant worked for Employer as a custodian for approximately 16 years performing cleaning duties.

4. On January 8, 2016, Claimant sustained an admitted industrial injury to his right lower extremity when he tripped and fell while wearing a backpack vacuum. Claimant was initially diagnosed with a right ankle strain. He subsequently underwent a right ankle MRI that revealed a rupture of the anterior tibialis tendon.

5. On February 5, 2016, authorized treating physician ("ATP") Paul T. Raford, M.D. recommended surgical repair for the ruptured tendon, advising that Claimant would likely end up with a flat foot if he did not have the surgery. Claimant declined the surgery due to concerns of diabetes complications. Claimant was instructed to wear a walker boot.

6. Claimant's primary ATP, Christian U. Updike, M.D. agreed with Claimant's decision to not proceed with surgery, noting there was high "potential for medical misadventures and negative outcomes" considering Claimant's age, poorly controlled diabetes and limited English. In a February 29, 2016 medical record, Dr. Updike noted there was a paucity of research regarding the anterior tibialis, but referenced one journal article that found non-operative treatment was a reasonable option for elderly nonathletic patients. Dr. Updike recommended Claimant continue wearing the walker boot and released Claimant to perform sitting work only.

7. Claimant underwent conservative treatment, which included pain medication, Lidoderm patches, custom ankle braces and physical therapy. Claimant did not experience any significant improvement and continued to report 9.5/10 pain.

8. On June 1, 2016, Claimant presented to Yusuke Wakeshima, M.D. for a pain consultation per the referral of Dr. Updike. Dr. Wakeshima discussed the possibility of using an electrical stimulation device to treat Claimant. He noted Claimant was reluctant. Dr. Wakeshima prescribed Claimant Cymbalta for ongoing pain and explained to Claimant the medication would be utilized for neuropathic pain and chronic musculoskeletal pain and not depression. Claimant nonetheless declined to take Cymbalta due to concerns about the medication being an anti-depressant. On June 28, 2016, Claimant reported to Dr. Wakeshima that he did not feel he needed to be on any anti-depressant medication, and wanted his medical record to reflect he was not taking the medication and did not have any depression issues.

9. On August 4, 2016, Dr. Updike noted Claimant was approaching maximum medical improvement ("MMI"). Dr. Updike wanted Claimant to have an opportunity to try a second custom ankle brace. He remarked,

> I think it is reasonable that he get a 2nd change at the 2nd custom ankle brace because I think that is his only chance of possibly having gainful employment. Otherwise, he will be on permanent sitting type restrictions where he will undoubtedly lose his job and likely be in financial distress given his age, demographic, and lack of transferrable skills and language barrier.

10. Dr. Updike placed Claimant at MMI on October 6, 2016. At the time, Claimant's second custom ankle brace was in the process of being made. Claimant continued to report 9.5/10 pain. Dr. Updike provided a 21% lower extremity impairment and assigned permanent restrictions of performing sitting work only and no lifting over 10 pounds. As maintenance treatment, Dr. Updike recommended Claimant wear the ankle brace as desired and follow-up with Dr. Wakeshima.

11. Respondents filed a Final Admission of Liability ("FAL") on November 2, 2016, admitting to Dr. Updike's MMI date and impairment rating, as well as reasonable, necessary and related post-MMI treatment.

12. On November 28, 2016, Claimant filed an Application for Hearing endorsing compensability and permanent total disability.[1]

13. Claimant subsequently received his second custom ankle brace and continued to treat with Dr. Wakeshima, reporting that the new brace was not helpful and caused more pain. Claimant expressed frustration with the company that made the brace, and declined to have the brace adjusted. Claimant also declined to be on any non-steroidal anti-inflammatory medications due to concerns of diabetes complications. Dr. Wakeshima subsequently prescribed Claimant a TENS unit, which Claimant tried and reported caused increased pain.

[1] The ALJ took judicial notice of the OAC electronic records associated with W.C. No. 5-006-031-04 pursuant to C.R.E. 201.

14. On April 14, 2017, Claimant continued to report 9.5/10 pain to Dr. Wakeshima. Dr. Wakeshima noted that since his last evaluation, Claimant's primary care physician had prescribed Claimant lorazepam for anxiety/panic attacks. He noted Claimant had been seen in the emergency department at St. Joseph's Hospital for panic attacks as related to his ankle pain. Claimant reported to Dr. Wakeshima that his anxiety and panic attacks had been improving and that he did not want to see a psychologist at that juncture.

15. Dr. Wakeshima reexamined Claimant on May 11, 2017. Claimant's wife reported Claimant's overall condition was deteriorating. She reported Claimant had lost all motivation and was no longer taking his medications, performing self-hygiene or feeding himself. Claimant's wife reported Claimant was barely eating and had lost 50 pounds over the last two months. Dr. Wakeshima noted Claimant presented with a flat affect and was "not his usual argumentative self." Dr. Wakeshima questioned whether Claimant's failure to thrive was related to severe depression. Dr. Wakeshima referred Claimant to a psychologist for evaluation. At a follow up evaluation on June 15, 2017, Dr. Wakeshima continued to note progressive weight loss and an unrevealing medical workup. He referred Claimant for a psychiatric evaluation to determine whether Claimant's symptoms and depression were related to the work injury.

16. On June 27, 2017, Claimant was found by the police wandering the street and admitted to the emergency department at Lutheran Medical Center with worsening confusion, signs of dementia, decreased appetite and failure to thrive. It was noted that the behavioral health team and overnight team evaluated Claimant and "highly suspect[ed] dementia as the cause of [Claimant's] symptoms." The behavioral health team concluded Claimant was not an appropriate candidate for psychiatric placement and recommended Claimant be placed in an assisted living facility, which Claimant's family refused.

17. Claimant returned to Dr. Wakeshima on June 30, 2017. Dr. Wakeshima referred to Claimant's recent hospital visit, noting the behavioral team at Lutheran Medical Center suspected possible dementia. Dr. Wakeshima remarked that Claimant did not have a history of dementia. Dr. Wakeshima noted that, even after multiple hospitalizations and a CT scan of the brain, no etiology for Claimant's failure to thrive and weight loss had been identified. He opined that there was a strong possibility Claimant's failure to thrive was related to severe depression. He referred Claimant for a psychological and psychiatric evaluation to assess Claimant's condition and the relatedness to the work injury.

18. Claimant underwent a psychological evaluation with John Mark Disorbio, Ed.D. on July 10, 2017. Claimant's wife reported that she now spoon feeds Claimant, and once came home to discover Claimant had stuffed tissues in his mouth to the degree it became difficult to remove them. Dr. Disorbio noted that during his evaluation Claimant had difficulty responding to questions and remembering what happened, and was unaware of the day, where he was, and the name of the President. Dr. Disorbio noted it was "quite clear" Claimant was suffering with significant psychological effects, was very thought disturbed, and had some definite psychotic features and difficulties. He

assessed Claimant with major clinical depression with psychotic features, and opined Claimant was "extraordinarily emotionally and physically disabled. Dr. Disorbio recommended Claimant undergo a psychiatric evaluation to become stabilized with his psychotic condition. Dr. Disorbio did not address the cause of Claimant's condition or the relatedness of Claimant's condition to the work injury.

19. On July 24, 2017, Gary S. Gutterman, M.D. performed a psychiatric evaluation of Claimant. Dr. Gutterman issued a report dated August 7, 2017. Dr. Gutterman noted Claimant appeared somewhat catatonic and did not speak during the entire evaluation. Claimant's wife provided Claimant's history, reporting that Claimant was unable to return to work after being injured and had become increasingly depressed, with anxiety attacks beginning in in February 2017. Dr. Gutterman noted that during his evaluation, Claimant was unresponsive and lost control of his bladder, urinating in a chair. Dr. Gutterman opined that he was unable to make a diagnosis after the brief meeting and could not offer further assistance to Claimant at the time due to Claimant's state and level of function. He noted, if anything, Claimant had a severe depressive condition with an almost catatonic presentation. Dr. Gutterman opined Claimant required intensive outpatient treatment or, more likely, hospitalization to treat his psychiatric status. Dr. Gutterman did not offer an opinion on the cause of Claimant's condition or relatedness to the work injury.

20. Claimant returned to Dr. Wakeshima on August 17, 2017 with severe depression issues. Claimant remained noncommunicative with a flat affect. Claimant's spouse reported that she had made two attempts to have Claimant undergo an audiology exam, but due to Claimant being nonresponsive he was being arranged to take a hearing test utilized for infants. Dr. Wakeshima noted Claimant's clinical presentation was most suggestive of worsening major depression and opined Claimant's condition was related to the work injury. He stated that psychiatric evaluation of Claimant should be covered under workers' compensation "…as depression is part of his Workers' Compensation diagnosis." Dr. Wakeshima noted he had spoken with both Dr. DiSorbio and Dr. Gutterman who deemed Claimant severely depressed and found Claimant warranted inpatient psychiatric admission at Porter Hospital. Dr. Wakeshima referred Claimant for inpatient psychiatric hospitalization. Claimant's wife indicated to Dr. Wakeshima she wished to try intensive outpatient treatment if possible. Dr. Wakeshima noted there was no concern Claimant was a danger to himself at that time, and delayed further action until a follow-up evaluation.

21. Claimant was admitted to Denver Health on August 31, 2017 after being found wandering in the street. Claimant's wife reported Claimant began an abrupt decline six months prior when he became more depressed and anxious about his job, and had significantly worsened since. She reported Claimant had no prior history of depression, mania or psychosis. The following factors were noted as indications for Claimant's hospital admission: "[G]ravely disabled and unable to perform basic self-care activity and maintain safety, severe problem with cognition, memory, judgment or impulse control and management at a lower level of care not feasible until acute intervention is initiated." Claimant was hospitalized for one week and underwent workup for dementia; however, it was noted that "normal laboratory studies and normal neuro imaging

suggest[ed] a primary psychiatric etiology." Claimant was discharged on September 6, 2017 with a diagnosis of a severe single current episode of major depressive disorder with psychotic features. He was prescribed medications for depression, catatonia and paranoia, and referred for follow up with his primary care provider and an outpatient psychiatrist.

22. Cynthia Bartmann, CCM, CDMS, performed an employability evaluation at request of Claimant. Ms. Bartmann met with Claimant on March 17, 2017. She issued an initial employability evaluation report on April 5, 2017. Claimant's wife served as his interpreter during the evaluation. Claimant's wife reported to Ms. Bartmann that, on occasion, Employer would call her on the telephone with instructions to translate for Claimant. Claimant reported that, even with hearing aids, it is difficult for him to hear normal conversations. Claimant reported to Ms. Bartmann that he did not obtain employment upon relocating to the United States due to language difficulties and his education not being recognized. Claimant reported continued severe pain and an inability to drive, manage stairs, stand for more than a few minutes at a time, walk more than one block, and sit for periods of time without elevating his leg. Claimant reported no limitations with his upper extremities. Ms. Bartmann noted Claimant has held only one job since living in the United States, a janitor, which she opined falls in the unskilled category. She further noted that Claimant's permanent work restrictions of no lifting over 10 pounds and sitting work only limited him to sedentary work and precluded him from working in a janitorial position. Ms. Bartmann opined Claimant's restrictions placed him in a sedentary work category, and noted certain jobs in the sedentary work category require a good command of the English language, which Claimant did not possess. She noted that other sedentary jobs would likely involve some amount of walking, and that potential employers would likely not be willing to train someone Claimant's age. Ms. Bartmann further noted Claimant's hearing loss makes it difficult for Claimant to understand directions. Ms. Bartmann opined that, based on Claimant's age, limited work history, physical limitations, language limitations and work restrictions, Claimant is precluded from employment and unable to earn any wages.

23. Patricia A. Anctil, CRC, CDMS, CCM performed a vocational assessment at the request of Respondents. She met with Claimant on March 10, 2017 and issued a vocational report dated July 10, 2017. A professional interpreter was used during the assessment. Ms. Anctil noted Claimant presented as fluent in English. Claimant's wife reported Claimant can speak, read, and write in English. Claimant reported being able to speak approximately 10 languages, including Macedonian, Turkish and Albanian. Ms. Anctil noted Claimant's employment application indicated Claimant can also read, write and speak French, Italian and Swedish. Claimant reported continuing 9.5/10 pain. Claimant did not specify how long he can stand at one time. He reported an inability to walk more than 50 feet at a time and sit for extended periods of time. Claimant reported he sometimes elevates his foot when seated. Claimant reported he cannot kneel, bend, stoop or lift, but had no issues with his upper extremities.

24. Ms. Anctil noted Claimant reported he did not seek employment until 2000 because he was a stay at home dad after relocating to the United States. Claimant volunteered with Lutheran Services from 1990 until 1999 assisting refugees with

obtaining identification, passing driving tests, informal translation, computer skills, and purchasing food. She further noted Claimant is computer literate. Using the Dictionary of Occupational Titles, Ms. Anctil opined that Claimant's prior employment and volunteer work was classified in unskilled, semi-skilled and skilled categories. She acknowledged Claimant had not been released to work in a janitorial position, and his physical restrictions placed him in sedentary occupation category. Ms. Anctil identified some possible sedentary occupations for Claimant, including translator and assembler. Ms. Anctil contacted some translation agencies, noting requirements varied, but that certification was not always required. Regarding Claimant's hearing loss, Ms. Anctil noted reasonable accommodations could be made. With respect to Claimant's age, Ms. Anctil referred to a newspaper article noting expected increase in labor force participation of older workers due to the slowing growth of the labor force, and a second newspaper article noting the value of older workers in bringing expertise to the workplace.

25. On December 11, 2017, Ms. Bartmann issued an updated employability evaluation. Ms. Bartmann noted Claimant remained in the sedentary work category; however, per her review of additional medical records, Claimant now appeared to be non-communicative and unable to follow directions, having problems with cognition, memory and judgment. Ms. Bartmann noted that, although Claimant was able to speak English, language difficulties were documented throughout the medical records and an interpreter was used for the majority of his medical appointments. Ms. Bartmann opined that Claimant's hearing loss would present safety concerns working in a manufacturing environment. She stated she was unaware how Claimant could perform the jobs suggested by Ms. Anctil at 70 years of age with no related work experience in the United States, severe hearing loss, work restrictions, English as his second language, an inability to drive, and an inability to respond to questions in an employment interview.

26. Ms. Bartmann testified at hearing as an expert in vocational rehabilitation. Ms. Bartmann testified consistent with her reports and continued to opine that, based on Claimant's age, restrictions, work experience, hearing issues and language issues, Claimant is unable to earn a wage. Ms. Bartmann testified Claimant's education is not recognized in the United States, and the only job Claimant has had while living in the United States has been as a custodian. Ms. Bartmann stated she considered Claimant's vocational skills from the last 15 years, as skills beyond 15 years become obsolete. Ms. Bartmann testified that Claimant's hearing and language issues present difficulties with training and communication. Regarding age, Ms. Bartmann acknowledged that there can be a niche for highly skilled older workers in certain jobs, but that this was not the case for an unskilled worker such as Claimant. Ms. Bartmann testified that, solely considering Claimant's physical restrictions and other human factors such as age, language limitations and hearing loss, Claimant is unable to earn a wage. She further testified that, considering Claimant's psychiatric issues alone, Claimant is unable to earn any wages.

27. Dr. Updike testified at hearing as an expert in occupational medicine. Dr. Updike testified that communication with Claimant was difficult due to Claimant's hard-of-hearing behaviors, even when Claimant was wearing his hearing aids. He testified he

first saw Claimant with no interpreter, but subsequently requested and used an interpreter. Dr. Updike testified that poor hearing can lead to decreased mood and depression, but that he was unaware of how common a factor hearing loss is in dementia. Dr. Updike stated that depression was not a concern when he was seeing Claimant. Dr. Updike testified that Claimant's conservative treatment consisted of medications, physical therapy, custom ankle braces, splints, walker boots, and opined that nothing else could have been done for Claimant. He reiterated his opinion that surgery would not have made a significant difference in Claimant's functional outcome considering Claimant's age and other factors. Dr. Updike testified that, but for Claimant's workers' compensation injury, Claimant would most likely still be working.

28. Claimant's former supervisor, David Nelson, testified at hearing that he communicated with Claimant in English. He testified that Claimant reviewed and submitted written documents in English. Mr. Nelson further testified that Claimant is hard of hearing and he was unable to communicate with Claimant if Claimant was not wearing his hearing aids. Mr. Nelson confirmed Claimant was unable to continue performing his job as a custodian due to his permanent work restrictions.

29. On March 1, 2018, Ms. Anctil testified in a post-hearing deposition as a vocational rehabilitation expert. Ms. Anctil testified consistent with her report and continued to opine Claimant is capable of obtaining employment. Ms. Anctil testified she considered Claimant's restrictions, age, hearing issues and transferrable skills in reaching her conclusions. She stated Claimant's education and volunteer work fall within the skilled category. Ms. Anctil noted several points of disagreement with Ms. Bartmann's reports and testimony. She testified that Ms. Bartmann failed to conduct a transferrable skills analysis, which is standard methodology in the field. She further testified that the Dictionary of Occupational Titles is widely used. Ms. Anctil opined Claimant's age does not exclude him from employment, nor does his severe hearing loss. Ms. Anctil continued to opine Claimant is proficient in the English language. She acknowledged that, prior to issuing her report, she had not reviewed additional medical records regarding Claimant's mental state. She testified that she had since reviewed the reports of Drs. Wakeshima and Gutterman, but did not conduct updated labor market research, because it had not been determined Claimant's mental condition was related to the work injury. Ms. Anctil testified that Claimant would not be able to obtain or maintain work in his current psychiatric state.

30. Ms. Bartmann provided rebuttal testimony in a deposition on April 11, 2018. Ms. Bartmann testified she had no reason to complete a transferrable skills analysis as Claimant's work history consisted of janitorial work, which falls in the unskilled category with no transferrable skills. Ms. Bartmann testified that she contacted the translation agencies listed in Ms. Anctil's report, and was informed generally certification was required to be a translator, with some exceptions, and that formal training, and in some circumstances, higher education or paid experience as a translator is required.

31. Ms. Anctil offered surrebuttal deposition testimony on December 11, 2018. She testified that a transferrable skills analysis should include not only prior work experience but education, volunteer work and hobbies. She acknowledged that the standard period

of time to consider when performing a vocational assessment is 15 years, but that a 15-year period is not a set rule. Ms. Anctil testified that Claimant's skills go beyond janitorial duties due to Claimant's prior vocational experience. Ms. Anctil testified she re-contacted some of the listed translator services, and was informed by some services that certification was not needed, Claimant's volunteer service could be considered, and that his hearing issues and physical restrictions would not disqualify him from employment.

32. The opinion and testimony of Ms. Bartmann is found more credible and persuasive than the conflicting opinion of Ms. Anctil.

33. The ALJ finds the opinions of Drs. Wakeshima, Gutterman and DiSorbio credible and persuasive.

34. Claimant proved it is more probable than not he is unable to earn any wages in any employment and that the work injury was a significant causative factor in Claimant's inability to earn any wages.

35. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert

testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Permanent Total Disability

To prove his claim that he is permanently and totally disabled, the claimant shoulders the burden of proving by a preponderance of the evidence that he is unable to earn any wages in the same or other employment. Sections 8-40-201(16.5)(a) and 8-43-201, C.R.S. (2003); *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). The claimant must also prove the industrial injury was a significant causative factor in the PTD by demonstrating a direct causal relationship between the injury and the PTD. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001). The term "any wages" means more than zero wages. *See Lobb v. Industrial Claim Appeals Office,* 948 P.2d 115 (Colo. App. 1997); *McKinney v. Industrial Claim Appeals Office,* 894 P.2d 42 (Colo. App. 1995). In weighing whether claimant is able to earn any wages, the ALJ may consider various human factors, including the claimant's physical condition, mental ability, age, employment history, education, and availability of work that the claimant could perform. *Weld County School Dist. Re-12 v. Bymer*, 955 P.2d 550 (Colo. 1998). The ALJ may also consider the claimant’s ability to handle pain and the perception of pain. *Darnall v. Weld County,* W.C. No. 4-164-380 (I.C.A.O. April 10, 1998). The critical test is whether employment exists that is reasonably available to claimant under his or her particular circumstances. *Weld County School Dist. Re-12 v. Bymer*, *supra*. The question of whether the claimant proved inability to earn wages in the same or other employment presents a question of fact for resolution by the ALJ. *Best-Way Concrete Co. v. Baumgartner,* 908 P.2d 1194 (Colo. App. 1995).

As found, Claimant has proven it is more probable than not he is unable to earn any wages in the same or other employment. As a direct result of his work injury, Claimant is subject to permanent physical restrictions of performing only sitting work and lifting no more than 10 pounds, precluding him from continuing employment in the same or similar employment. In addition to Claimant’s permanent restrictions, Claimant has consistently reported continuing functional limitations, including an inability to drive, manage stairs, and sit for extended periods of time without elevating his leg. Respondents argue, in part, that they should not be liable for permanent total disability benefits because Claimant has refused reasonable medical treatment that would alleviate or mitigate his condition. The ALJ disagrees. Claimant attempted the majority of treatment recommended by his treating providers, including taking various medications and wearing a TENS units and two custom ankle braces, none of which

provided significant sustained relief. Claimant declined to undergo surgery or take certain medications due to concerns of diabetes complications. Dr. Updike agreed with Claimant's decision to not proceed with surgery. He later credibly testified nothing more could be done for Claimant. The ALJ is persuaded Claimant's refusal of certain treatment was reasonable under the circumstances.

In addition to Claimant's physical condition and restrictions, multiple human factors contribute to Claimant's inability to earn wages. The only employment Claimant has held in the last 37 years is janitorial work, which he performed for 16-17 years prior to sustaining the work injury. It is undisputed janitorial work falls in the unskilled category. Although Claimant earned a law degree in Macedonia in 1973 and worked as an attorney for seven years, Claimant's education was not recognized upon his relocation to the United States, and such legal experience was obtained in a different jurisdiction over 30 years ago. Claimant's volunteer service took place over 15 years ago. Ms. Bartmann credibly opined that skills beyond 15 years are considered obsolete. Moreover, while Claimant assisted refugees with various tasks while volunteering, including some translation, there is insufficient credible and persuasive evidence regarding the extent of the translation services he provided.

English is not Claimant's first language. Despite a few records indicating Claimant speaks fluent English and did not wish to use an interpreter, either a professional interpreter or Claimant's wife was utilized at almost all of Claimant's medical appointments and the vocational assessments. While it is reported Claimant can speak, read and write multiple other languages, the level of proficiency in each language is unknown. Additionally, Claimant is severely hard of hearing, which Ms. Bartmann credibly opined affects Claimant's employability. Claimant is also 71 years old, which presents additional challenges to obtaining and maintaining employment. While older workers who are highly skilled may have access to certain employment opportunities, Ms. Bartmann credibly and persuasively testified that Claimant does not fall in such category, having solely performed unskilled work in the last 16-17 years.

The ALJ is persuaded the physical restrictions resulting from Claimant's work injury, along with the human factors of Claimant's age, limited work history in an unskilled position, language issues, and severe hearing loss render Claimant unable to earn any wages. As Claimant's physical restrictions and functional limitations are a direct result of the work injury, the ALJ concludes the work injury was a significant causative factor in Claimant's permanent total disability.

Beyond the aforementioned factors, Claimant's mental state further contributes to his inability to earn any wages. Claimant has been diagnosed with depression with psychotic features, and has been noted to be unresponsive and near catatonic in his presentation. Such presentation clearly precludes Claimant from obtaining and maintaining employment. Dr. Wakeshima opined that Claimant's mental state is a result of the work injury, thus further establishing the work injury as a significant causative factor in Claimant's inability to earn any wages.

Although Ms. Anctil opined there are certain jobs Claimant can perform, the ALJ is not persuaded these jobs are reasonably available to Claimant under his particular circumstances. Based on the totality of the credible and persuasive evidence, Claimant has met his burden of proof to establish he is permanently and totally disabled.

ORDER

It is therefore ordered that:

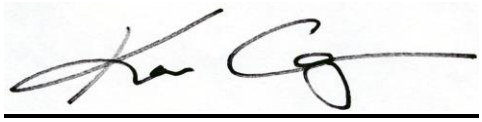
1. Respondents shall pay Claimant permanent total disability benefits commencing on October 6, 2016, subject to any applicable credits and offsets.

2. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 15, 2019



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that her incisional hernia is causally related to her work injury which occurred on 5/16/2018?

STIPULATIONS

The parties stipulated that a work injury occurred on the above date which injured Claimant's neck and shoulder; the sole issue before the ALJ is causation of this admitted work injury for Claimant's incisional hernia. While other issues were deferred for this hearing, the ALJ finds that implicit in this issue is the awarding of any reasonable, necessary, and related medical expenses for the incisional hernia.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant suffered an injury on May 16, 2018 while working for Employer. According to the "Associate Incident Report Form" of Employer, Claimant was "preventing a resident from falling went to grab resident while on the toilet, felt tightness to left lower portion of neck and shoulder." (Ex. D, p. 44) (*note-all page numbers for Respondents' Exhibits are referenced from bottom center bates numbers of said Exhibits). Claimant signed this report.

2. The report identifies the left shoulder and lower neck as the body parts injured in the incident. At hearing, Claimant testified that she "felt like she ran a marathon" and referred to her whole body being injured, although such description is not reflected in this initial report.

3. Claimant was initially evaluated by Dr. Jessica Fisher with UC Health on 5/17/2018. The reason for visit was noted as "trying to stop pt from falling, she injured her left shoulder, neck pain." Claimant stated to Dr. Fisher that she "used her left arm at the front of the resident" and "noted subsequent s/s neck pain (L>R), left shoulder pain." The initial diagnosis of Dr. Fisher was "cervical strain, left shoulder pain." (Ex. B, p, 8). These initial reports do not reference hernia pain or lower body pain at this visit to Dr. Fisher.

4. Claimant returned to visit Dr. Fisher on May 24, 2018. Diagnosis continued as "cervical strain, left shoulder strain." (Ex. B, p. 16).

5. Hernia pain or lower body pain at the May 24, 2018 visit to Dr. Fisher are not referenced in the reports. Claimant was restricted from overhead reaching, and

limited use of left shoulder, and no crawling or climbing. MMI was anticipated to occur on 6/14/2018. (Exhibit B, p. 16). In her medical history, Claimant was noted to have had two cesarean sections, along with a cholecystectomy. *Id*

6. Claimant returned to see Dr. Fisher on 6/7/2018. At this visit, Claimant was noted to have been evaluated "via "PCP" for upper abdominal "bulge" *just noted last week."* Dr. Fisher opined that it was "<50% probability for causation (re: incisional hernia)." Further, Dr. Fisher noted that "Findings consistent with incisional hernia as reviewed with IW. Work-related mechanism . . . unlikely as discussed." Claimant was to resume follow up with her "PCP." (Ex. B, p. 25) (emphasis added).
   At no point in this visit does Dr. Fisher note that Claimant was in any *pain* from this bulge; she merely noted its presence, and marked its location on a diagram. *Id* at p. 28. The ALJ notes further than *pain* was not mentioned by Claimant until her IME with Dr. Hall in December, 2018.

7. Claimant returned to Dr. Fisher on 6/21/2018. It was noted that she was improving but the incisional hernia noted on 6/7/2018 was again noted in this report. MMI was now anticipated to occur on 7/19/2018. (Ex. B, p.32).

8. The next visit to Dr. Fisher in the available records is referenced on August 22, 2018. The incisional hernia noted on June 7, 2018 is not noted in this report. (Ex. B, p. 38). It was noted that before her termination from employment that she was tolerating work well without complaint/concern. MMI was now anticipated for 9/12/2018).

9. Claimant's medical records were reviewed by Dr. Carlos Cebrian at Respondents' request. Dr. Cebrian produced a report dated November 6, 2018. Dr. Cebrian noted that Dr. Fisher's June 7, 2018 report noted a small reducible incisional hernia, related to remote laparoscopy site. (Ex. A, p. 2).

10. Dr. Cebrian also noted that Dr. Fisher had expressed her concern that the hernia "symptoms were not present at the initial visits and were only noted on her acute visit with her primary care physician when she was seen for upper respiratory infection and believed the hernia was related to her old laparoscopy site." Dr. Cebrian also noted that Dr. Fisher also believed Claimant's "body habitus" was a factor. (Ex. A, p.4) (*note-This note from Dr. Cebrian references Dr. Fisher's report dated 7/23/2018. Dr. Cebrian also references reports from Dr. Fisher from 7/12/18, 7/31/18, 8/8/18, and 9/5/18-none of which were presented as exhibits at hearing).

11. Dr. Cebrian opined that Claimant was diagnosed with an incisional abdominal hernia, which develops at a site where a surgery had previously been performed. He further indicated that there "was a temporal delay in the development of the incisional hernia" and that Claimant was evaluated 'multiple' times before there were complaints. He further explained that Claimant would have had

"immediate pain" and tearing of the muscles which would have "resulted in acute pain." (Exhibit A, p.7).

12. Dr. Cebrian concluded, "Ms. Sotelo is obese and the constant increased intra-abdominal pressure is a risk factor for the development of an incisional hernia." *Id.*

13. Claimant was also evaluated by Dr. Timothy Hall at Claimant's request, and a report was issued on 12/17/2018. (Ex. 5). Dr. Hall only referenced visits with Dr. Fisher from 5/24/18, 6/7/18, and 6/21/18. No subsequent visits to Dr. Fisher are noted. Dr. Hall does note in the history of the incident that Claimant told him:

> She hurt primarily, the left shoulder, upper back and neck, but reports she was hurting all over for a time following this event. She, a week later or so, noticed this deformity in her upper abdomen and went to Peak Vista. The Peak Vista provider told her she should go tell Work Comp about it. She did that and reports that Dr. Fisher told her it was not related. (Ex. 5, p. 18).

14. Dr. Hall further noted:

> I went over the medical history. ***She had a gallbladder surgery involving that area in 2003 due to stones. She has had no problems since.*** She had a back injury in 2012. She had a car accident in 2011. In 2013, she was diagnosed with diverticulosis and had an upper and lower GI done. (Ex. 5, p. 18) (emphasis added).

15. Dr. Hall concluded his report:

> …..At issue here is causation. ***The question is whether it is more likely that this hernia occurred spontaneously with no particular precipitating event or if it is the consequence of this straining maneuver while catching the patient.*** It is my opinion within a reasonable degree of medical probability it is the latter. It is clear from the patient's history that she was bent over trying to hold the patient up and then lowered her to the ground. This would create a lot of muscle activity through the rectus abdominis, which is the area of the tear, probably through the previous surgical scar. This would represent a weak section of the abdominal wall/muscle, which simply could not carry the load of this event. ***I find it extremely unlikely that it would be simply a coincidence*** that she had this event at work and then the development of this rather obvious finding on her abdomen, which she would not have missed if it existed previously. I disagree with Dr. Fisher's causation opinion. (Ex. 5, pp. 18-19). (emphasis added).

16. Claimant testified at hearing. She testified that while she "hurt all over" as a result of this work incident, her primary focus at the time was her neck and shoulder. She believes she noticed the hernia bulge 'about a week' after the incident, and may have told Dr. Fisher about it on the 5/24/2018 visit, but was told it was not work-related. Claimant testified that she had not noticed this bulge before, and had not engaged in any strenuous activity after the work injury which might have precipitated this injury. Claimant also recounted that since Dr. Fisher dismissed the work-relatedness of the bulge, there was little time spent on it after that.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion). In this case, the ALJ finds that Claimant, while an imperfect historian, has testified in good faith, and provided her medical providers the best information she could, in an effort to be medically assisted.

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals*

Office, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

When the Incisional Hernia was first Reported

D. Claimant has indicated that she first noticed this hernia "about a week" after the work incident. The lack of reference to this in Dr. Fisher's 5/24/2018 report suggests that Claimant did not *report* the hernia until she saw her PCP the week following this 5/24/2018 visit. While Claimant's PCP's report is not in evidence, Dr. Fisher did note in her 6/7/2018 report that Claimant had reported it to her own PCP "just last week" - which would place this PCP visit the week of May 28-June 1. The ALJ does conclude that this is the most likely time that Claimant *reported* this symptom to any medical provider – a period of approximately two weeks from the injury date. It is less clear when Claimant first began to *notice* the bulge herself, but the ALJ credits her testimony that she was primarily focused on the shoulder and neck *pain* at the beginning. Regardless of her causation analysis, Dr. Fisher felt that Claimant's neck and shoulder injuries were serious enough to eventually move her MMI date back to at least 9/22/2018 – two months past the original MMI date.

E. Dr. Cebrian has opined, and not entirely without reason, that Claimant 'should have' felt pain immediately after this work incident, and not at some later point in time. However, delayed pain appears to be what occurred. Even at the 6/7/2018 visit, when it was first brought to Dr. Fisher's attention, *pain* was not mentioned- just the bulge. Claimant detailed at hearing that Dr. Fisher was not interested in this hernia, and referred her back to her PCP. *Pain* was never documented until Claimant's IME with Dr. Hall in December. The inference the ALJ draws from this evidence is that *this untreated incisional hernia has gotten worse with time,* now manifesting itself painfully, and is no longer a mere bulge.

Claimant Aggravated a Pre-Existing Condition due to this Work Injury

F. The mere fact that a Claimant suffers from a pre-existing condition does not disqualify a claim for compensation or medical benefits if the work-related activities aggravated, accelerated, or combined with the pre-existing condition to produce disability or a need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition, and the claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment-related activities and not the underlying pre-existing condition. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949). The Claimant must prove by a preponderance of the evidence that her symptoms were proximately caused by an industrial aggravation of a pre-existing condition rather than simply the natural progression of the condition. *Melendez v. Weld County School District #6*, W.C. No. 4-775-869 (ICAO, October 2, 2009). The ALJ finds that Claimant's gallbladder incision site was, in effect, a preexisting condition which

rendered her more susceptible to a re-aggravation, and possible herniation, if sufficient force were applied.

G. While the onset of *pain* was apparently delayed, the above analysis does not change. Claimant first *reported* this bulge about two weeks after her work injury. She apparently *noticed* it sometime between 5/24/18 and her PCP visit. She is adamant that there was not a separate incident, away from work and after 5/16/2018, which caused her to strain. Given the pain Claimant was already in from the shoulder and neck injuries, it is easy enough to conclude that she was not engaging in *extra-employment* strenuous activities, post 5/16/2018.

H. The ALJ simply cannot accept Dr. Cebrian's analysis - and apparently that of Dr. Fisher – that Claimant's weight was the likely cause of this hernia manifesting itself. Claimant had her gallbladder removed **15 years** prior – apparently without incident, despite, presumably being overweight to some degree that whole time. She even had some sort of back injury in 2012, and a car accident in 2011, without herniating either time. This was no mere natural progression of an underlying pathology. It was an *event.*

I. The ALJ is more persuaded by Dr. Hall's position that Claimant's abdominal wall –weakened by her prior surgery - could not carry the strain of this work incident. It was not a mere coincidence that her symptoms coincided with the work incident; there was a cause-and-effect relationship, and the ALJ so finds, by a preponderance of the evidence.

Medical Benefits

J. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. § 8-42-101, C.R.S. Nevertheless, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. § 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Apps. Office,* 12 P.3d 844, 846 (Colo. App. 2000). Claimant must establish the causal connection with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Indus. Comm'n*, 491 P.2d 106 (Colo. App. 1971); *Indus. Comm'n v. Royal Indemnity Co.,* 236 P.2d 2993. A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Indus. Comm'n v. Jones*, 688 P.2d 1116 (Colo. 1984); *Indus. Comm'n v. Royal Indemnity Co., supra*, 236 P.2d at 295-296. All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970).

K. In this case, Claimant has shown that the incisional hernia proximately flowed from her admitted work injury which occurred on May 16, 2018. While the onset of *pain* did not occur until later, a sufficient nexus has been established between her

work injury and her need for treatment. Respondents are responsible for all medical care that is reasonable, necessary, and related to her work injury, and this includes the incisional hernia repair.

ORDER

It is therefore Ordered that:

1. Respondents shall pay for all reasonable and necessary medical costs for the repair of Claimant's incisional hernia.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 15, 2019

/s/ William G. Edie

William G. Edie

Colorado Springs, Colorado 80906

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that the total left knee arthroplasty proposed by David Beard M.D. is reasonable, necessary and related to his May 15, 2017 admitted left knee injury.

FINDINGS OF FACT

1. Claimant is a 65 year old man with a pre-existing history of gout. Claimant has worked for Employer for 30 years repairing vending machines. Claimant's regular work duties involved standing and walking at least 8-10 hours per shift, and required kneeling, squatting, and crawling.

2. On May 15, 2017, Claimant suffered an admitted industrial injury to his left knee when he fell off the back of a truck while unloading vending equipment. Claimant immediately reported the injury to Employer and was taken to UC Health Urgent Care. Claimant underwent a left knee x-ray that revealed mild degenerative change without acute bony finding. He was initially diagnosed with a left knee sprain.

3. Claimant subsequently began treatment with authorized provider UC Health Occupational Medicine. On May 22, 2017, Michael Deltz, PA-C assessed Claimant with the following: left knee strain with history of gout differential diagnosis gouty attack peripatellar tendon. Claimant reported he had experienced three major gout attacks in the last 15 years. The body parts that were not specified. Claimant was placed on restrictions of no lifting over 20 pounds and no walking or standing more than one hour per day.

4. On May 25, 2017, Claimant underwent a left knee MRI that revealed a complete rupture of the anterior cruciate ligament (ACL) with posterior tibial bone contusions and intermediate-sized joint effusion and a left knee medial meniscus bucket-handle tear.

5. Authorized treating physician (ATP) John D. Charbonneau, M.D. referred Claimant to orthopedic surgeon David A. Beard, M.D., who first evaluated Claimant on June 30, 2017. Dr. Beard reviewed the MRI, diagnosed Claimant with a work-related ACL tear and bucket handle tear of the medial meniscus, and recommended Claimant undergo an ACL reconstruction, allograft and partial medial meniscectomy.

6. On July 8, 2017, Mark Failinger, M.D. performed a Rule 16 record review at the request of Respondents. Dr. Failinger also performed an independent medical examination (IME) on July 31, 2017. Dr. Failinger reviewed, *inter alia*, Claimant's x-rays and MRI and physically examined Claimant. His impression was as follows: acute ACL tear, displaced bucket-handle medial meniscus tear, mild chondromalacia of the medial femoral condyle, and mild chondromalacia of the proximal pole of the patella. Dr.

Failinger concluded that Claimant was a candidate for the proposed ACL reconstruction and partial medial meniscectomy. He opined that Claimant's need for surgery was related to his May 15, 2017 work injury, stating, "[t]here does not appear to be anything in the records that I have been supplied or in his history that indicate there was prior injury or preexisting conditions other than some mild chondromalacia which does not appear to be causing problems at this point." Dr. Failinger noted that the surgery should be performed as soon as possible to avoid permanent loss of full extension.

7. On October 18, 2017, Dr. Beard performed a left knee ACL reconstruction and partial medial and lateral meniscectomies. Dr. Beard's operative report notes areas of grade 3 and grade 4 chondral changes along the medial femoral condyle and some grade 2A chondral changes on the lateral tibial plateau. There were no operative complications.

8. Claimant subsequently treated with medication and physical therapy and was released to full-time work light office or shop work with restrictions of lifting no more than 15 pounds, no walking or standing more than one hour per day, and no crawling, kneeling, squatting or climbing. Claimant was unable to take oral anti-inflammatory medication due to kidney issues.

9. Claimant's condition did not improve as expected. Due to the continued pain and swelling in the left knee, Dr. Beard performed an aspiration of the left knee on November 9, 2017 and a second aspiration and steroid injection on November 30, 2017. Dr. Beard opined Claimant's symptoms were likely secondary to Claimant's primary osteoarthritis.

10. During a follow-up evaluation with Dr. Charbonneau on December 11, 2017, Claimant continued to complain of constant left knee pain and swelling. Claimant reported having a gout flare-up in his right ankle the previous week. Dr. Charbonneau opined that infection, gout or other potential causes of Claimant's symptoms needed to be ruled out.

11. On December 14, 2017, Dr. Beard noted Claimant underwent laboratory studies that showed no evidence of infection. He continued to opine Claimant's ongoing knee inflammation was likely secondary to osteoarthritis. Dr. Beard recommended Claimant continue conservative management. He further noted that Claimant's final option would be a total knee arthroplasty, but specified that such surgery would be due to Claimant's osteoarthritis, which he opined was not work-related.

12. On January 12, 2018, Claimant presented to his personal care physician, Richard Budensiek, M.D., reporting a gout flare-up of his right ankle. Claimant was ordered to take prednisone for five days.

13. Dr. Beard reevaluated Claimant on January 25, 2018. He noted Claimant continued to have persistent problems with pain and swelling due to pre-existing, non-work-related osteoarthritis. Dr. Beard opined Claimant was not having difficulties with the reconstruction itself. He requested authorization for a total left knee arthroplasty,

noting, “It is quite possible that this might be denied through his Worker’s Compensation claim as this was preexisting…If his total knee arthroplasty is denied by his Workers’ Compensation claim, it would then have to fall back on his commercial insurance.”

14. On February 1, 2018 Respondents denied authorization of the total knee arthroplasty as not related to the admitted work injury.

15. Dr. Failinger performed an additional medical records review on February 3, 2018 and opined that the recommended total knee replacement was not related to the May 15, 2017 work injury, nor was it reasonable or necessary at that time, as Claimant was only a few months post-surgery. Dr. Failinger questioned whether Claimant’s continued symptoms were actually the result of infection, a gouty flare-up, or arthritis. He recommended further testing and re-aspiration of Claimant’s knee. He opined that if Claimant chose to proceed with the knee replacement, it should be performed under Claimant’s private health insurance, as his arthritis was pre-existing.

16. Claimant underwent additional x-rays of the left knee on March 3, 2018 that revealed joint effusion and marked joint space effacement medially.

17. Claimant continued to see Dr. Budensiek, reporting continued left knee pain and worsened gout pain on March 16, 2018. The area of gout pain was not specified. Dr. Budensiek performed another left knee aspiration and steroid injection.

18. On March 22, 2018, Dr. Charbonneau reevaluated Claimant, noting the March 3, 2018 x-rays showed medial compartment degenerative joint disease. Claimant reported improvement in his left knee after his most recent aspiration and injection, but remained limited in kneeling, climbing, stairs and crawling. Dr. Charbonneau recommended Claimant return to Dr. Beard to determine if surgery was still indicated.

19. Claimant returned to Dr. Beard on March 29, 2018, who opined Claimant had reached maximum medical improvement (MMI) for his work-related injury. Dr. Beard opined Claimant ongoing symptoms were related to his primary osteoarthritis, which was not work-related. He recommended Claimant return to his primary ATP for placement at MMI and assignment of an impairment rating, and that Claimant pursue the total knee arthroplasty through his personal health insurance.

20. On April 2, 2018, Claimant returned to Dr. Budensiek’s office reporting a second degree burn on his right foot and an acute gout flare-up in the right foot. By April 4, 2018 Claimant’s right ankle and foot pain had improved.

21. Dr. Charbonneau reevaluated Claimant on April 17, 2018. Referring to the MTG, he that Claimant suffered a work-related aggravation of his underlying osteoarthritis and that the proposed surgery should be covered under workers’ compensation. In support of his opinion, Dr. Charbonneau noted Claimant had no previous left knee injuries or symptomatic episodes of left knee osteoarthritis or left knee gouty arthritis. He further noted Claimant’s had a five-month delay between the injury and the authorization for surgical repair of his ACL and medial meniscus, and that

since the surgery, Claimant had experienced constant left knee pain, recurrent effusions and, more recently, left knee weakness. He continued Claimant on work restrictions.

22. Claimant continued to see Dr. Beard, who performed left knee aspirations on June 8 and June 19, 2018. Cultures from the knee aspirate were tested and found negative for infection. Dr. Beard again opined Claimant's chronic knee effusion was secondary to osteoarthritis.

23. On September 18, 2018, Jeffrey A. Wunder, M.D. performed an IME at the request of Claimant. He noted Claimant had a history of gout primarily in his ankles, with a few episodes of gout in his great toes and right elbow, but never affecting his knees. Dr. Wunder performed a records review and physically examined Claimant. He noted Claimant had evidence of longstanding but mild underlying osteoarthritis in his knee, and Claimant reported having no history of left knee problems prior to the work injury. Dr. Wunder opined that Claimant's work injury "clearly" affected his osteoarthritis, noting that the May 2017 and March 2018 x-rays showed progression of osteoarthritic change far beyond the rate that would commonly be expected of normal degenerative changes. Dr. Wunder further noted that testing for infection was negative, as was testing for the presence of any uric acid crystals that would indicate a gouty flare-up. Dr. Wunder opined that the May 15, 2017 work injury resulted in a significant aggravation of Claimant's underlying osteoarthritis. He thus concluded that the proposed total knee replacement surgery was reasonable, necessary and related to the May 15, 2017 work injury.

24. Dr. Failinger reviewed additional records and issued a report dated December 18, 2018. Dr. Failinger disagreed with Dr. Wunder's on multiple accounts. He noted that the lack of uric acid crystals found in Claimant's knee aspirate did not definitively establish there was not a gouty flare-up, as crystals would not be present on testing if the testing did not occur in the early stages of the flare-up. Dr. Failinger opined that there was a high probability Claimant's arthritis was preexisting and not directly affected by the work injury. He continued to opine Claimant required additional testing to definitively rule out infection. He noted that, if infection was ruled out, the need for a total knee replacement would be due to Claimant's preexisting arthritis and not the work injury. He opined that the knee replacement was medically necessary and appropriate, as significant time had passed. He recommended Claimant limit his weight bearing time to one to two hours a day, and only intermittently.

25. Dr. Failinger testified by pre-hearing deposition as an expert in orthopedic surgery. Dr. Failinger testified consistent with his reports and continued to opine Claimant had preexisting arthritis. He explained that, although bone contusions can cause arthritis and there was evidence of bone contusions on Claimant's MRI, those contusions were not in the same area as Claimant's arthritis. Dr. Failinger acknowledged that, when comparing the May 2017 and March 2018 x-rays there appears to be an advancement of arthritis, but explained that the comparison is insufficient because it is unknown if the x-rays were non-weight-bearing or weight-bearing. Dr. Failinger did state that the appearance of advanced degeneration on the imaging is more than what would by typically expected over a 10-month period.

26. Dr. Failinger testified that it is not unreasonable to proceed with a total knee replacement, as Claimant has had persistent pain despite undergoing a course of conservative treatment. He explained that the proposed surgery would be expected to significantly decrease Claimant's pain and increase his function. Dr. Failinger reiterated his opinion, however, that unless it is determined there is an infection, the proposed surgery is not related to Claimant's work injury. Dr. Failinger testified that he can acknowledge Claimant had no history of prior knee pain or functional limitations, but that he did not agree the advanced degeneration of Claimant's knee was thrown into motion by the work injury.

27. Dr. Beard testified by pre-hearing deposition as an expert in orthopedic surgery. He testified that he noted evidence of some osteoarthritis primarily in the medial compartment of Claimant's left knee during the surgery he performed in October 2017. Regarding potential infection, Dr. Beard testified that he was comfortable ruling out infection as a possible cause for Claimant's symptoms, as multiple cultures had been obtained and tested negative. Dr. Beard acknowledged that the delay in Claimant's first surgery could have caused an aggravation or acceleration of the degenerative process, and also acknowledged that there are a number of studies that reflect people with ACL injuries and meniscal repairs are likely to develop osteoarthritis. He testified that there is no way of knowing when and if Claimant would have ever had a recommendation for a total knee replacement without the events of May 15, 2017 placing everything in motion. Dr. Beard further testified that he agreed Claimant's pre-existing arthritis was substantially aggravated by the work injury, stating:

> Q: Do you - - what is the cause of claimant's injury that requires the total knee replacement?
>
> A: He was asymptomatic with regards to the osteoarthritis up until this work-related injury, which is not unusual. Oftentimes we will see people who have some preexisting arthritis and then they get an injury on top of that, that really sets in motion this chain of events of persistent pain and swelling and the arthritic changes just becoming more symptomatic.
>
> Q: But you can't say to a reasonable degree of medical probability that this injury is the cause of that, can you?
>
> A: I cannot say, and as I've stated in my notes, that the injury caused the osteoarthritis. It's my professional opinion that it preexists.
>
> Q: Okay.
>
> A: It's just that he wasn't symptomatic prior to that.

28. Dr. Beard stated the proposed surgery would be expected to improve Claimant's function significantly and significantly decrease his pain.

29. Claimant testified at hearing that, prior to the May 15, 2017 work injury, he had no prior left knee injuries, symptoms or limitations. Claimant testified that he did not have any gout symptoms in his left knee prior to the work injury. Claimant was not subject to any work restrictions prior to the work injury or had any need to modify or decline work due to any left knee issues. Claimant has been on work restrictions since sustaining the work injury and since undergoing surgery. Claimant has returned to work performing light duty, as he is physically restricted from performing his regular tasks.

30. Claimant's testimony is found credible and persuasive.

31. The ALJ finds the testimony and opinions of Drs. Charbonneau, Wunder and Beard, as supported by the medical records, more credible and persuasive than the conflicting opinion of Dr. Failinger.

32. Claimant has proven it is more probable than not that the proposed total left knee replacement is reasonable, necessary and related to the May 15, 2017 work injury.

33. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert

testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Treatment

A respondent is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *See generally Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002).

Claimant completed a course of conservative treatment and underwent an ACL reconstruction and medial meniscectomy, all with no substantial improvement. Claimant's continued pain, swelling and functional limitations are documented throughout the records. Claimant's treating physicians, as well as Claimant's IME physician and Respondents' IME physician all agree that, at this point, the proposed total left knee arthroplasty is reasonable, necessary and medically appropriate.

Accordingly, the crux of the dispute before the ALJ is whether the proposed surgery is related to Claimant's work injury. Dr. Failinger opined that Claimant's current need for surgery could be the result of gout, infection or pre-existing arthritis. Although Dr. Failinger is of the opinion additional testing for infection should be completed, Claimant underwent testing for infection on multiple occasions, the results of which Dr. Wunder and Dr. Beard credibly opined were negative and sufficient. Although Claimant has pre-existing arthritis and gout, Claimant has credibly and consistently reported that he did not have prior symptoms, treatment or limitations with respect to his left knee. The record is devoid of any evidence to the contrary. While there is reference in the record to gouty flare-ups, the references are limited to Claimant's ankles, toes, and elbow. While Dr. Beard has discussed the possibility of arthritis as the cause of Claimant's symptoms, he has never opined that Claimant's condition is the result of pre-existing gout. Additionally, Claimant's knee aspirate was negative for uric acid crystals which, when considered in light of the other evidence, offers persuasive support that gout is not the cause of Claimant's continuing left knee symptoms and need for surgery.

As mentioned, Claimant has not experienced any significant improvement since suffering the work injury. Claimant, who formerly had no prior left knee issues or functional limitations, has since experienced constant pain and swelling and been subject to continuing work restrictions. ATP Charbonneau and Dr. Wunder credibly opined that the work injury substantially aggravated Claimant's underlying osteoarthritis, causing the need for the proposed surgery. Dr. Beard's opinion that Claimant's osteoarthritis was pre-existing does not preclude a conclusion that the pre-existing osteoarthritis was substantially aggravated by the work injury. Dr. Beard acknowledges this in his deposition testimony, agreeing that the work injury caused Claimant's asymptomatic condition to become symptomatic. Based on the totality of the credible and persuasive evidence, Claimant has by a preponderance of the evidence the total left knee arthroplasty recommended by Dr. Beard is reasonable, necessary and related to his May 15, 2017 work injury.

ORDER

It is therefore ordered that:

1. Respondents shall authorize and pay for the total left knee arthroplasty recommended by Dr. Beard.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 18, 2019

Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Has Claimant proven, by a preponderance of the evidence, that he sustained compensable injuries arising out of and in the course of his employment?

2. If the claim is compensable, is Claimant entitled to medical benefits that are reasonable and necessary to cure and relieve the effects of his injuries?

3. Did the Employer provide a list of medical providers/physicians in compliance with section 8-43-404(5) to Claimant after he reported his injuries? And if not, did the right of selection pass to Claimant?

ADMISSIBILITY OF RESPONDENTS' EXHIBIT V

Two prehearing conferences contesting this Exhibit were held: October 3, 2018, and December 28, 2018. This ALJ has reviewed the subsequent Orders in their entirety. In summary, Claimant objects to the admission of said exhibit, arguing that it is so highly prejudicial that the ALJ should not even view it. Respondents argue that it is a medical report relevant to one theory of their case, and that the ALJ must view it in this context. Respondents at least wanted to allow the ALJ to view this report to issue an evidentiary ruling on the merits. The 12/28/2018 prehearing ALJ concurred.

Exhibit V is a *Psychiatric Independent Medical Examination for Fitness-for-Duty,* prepared by Robert E. Kleinmann, MD. The IME was conducted on 2/5/2015, and the report was issued on 2/17/2015. Portions have been redacted. At issue in this IME is Claimant's fitness to return to duty with the Colorado Springs Fire Department, based upon certain concerns for his mental health.

After reviewing this report this ALJ concludes that, at best, it has tangential value to one of Respondents' theories of the case, to wit: Claimant is maladapted to his work environment, thus prone to an unduly adversarial mindset. The evidence received at this hearing, taken as a whole, does not justify this report's admission. The ALJ concludes that its admission would be unduly prejudicial, and this report's usage should have been limited to the proceedings for which was originally prepared.

Further, as noted below, this matter can be decided on the medical evidence alone, without resort to divining Claimant's psychological condition. Exhibit V will not be admitted or considered by the ALJ, but the tendered copy will remain as part of the record.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant is employed as a Firefighter with the City of Colorado Springs. From 2007 to 2014 he was a member of Employer's Heavy Rescue Program, ("HRP"). During this time, he was assigned to Station 17, the station at which HRP is based. In addition to typical firefighter duties, those in the HRP were required to be proficient in other disciplines, disciplines, including dive rescue, swift water, high-angle rescue, confined space, heavy machinery entrapments, auto extrication, building collapse, ice rescue, and rapid intervention. Scuba proficiency was necessary in order to conduct rescues and recoveries. For scuba diving, the heavy rescue goal is for all of the members to be rescue diver-certified, which is an advanced scuba diving certification. Claimant dived only in connection with his employment and has never dived recreationally.

2. In 2015 Claimant was reassigned to a different fire station where he did not participate in the HRP. In 2017 Claimant successfully bid to re-join the HRP at Station 17. Claimant was required to participate in scuba training dives for re-familiarization purposes since he had not dived recently.

3. On July 29, 2017, he had his first re-familiarization check-out dive with diving instructor Curt Crumb. The dive took place at Gold Camp Reservoir, and the plan was to go to the "Grizzly," the outlet structure at the bottom, which is usually between 40 and 50 feet from the surface. Claimant only got down to 12 feet, after 10 minutes in the water, due to ear-clearing issues and difficulties equalizing. Claimant told Mr. Crumb he had troubles clearing before and was generally slower going down because of clearing issues. Mr. Crumb testified this was not a successful dive, and Claimant did not perform another dive on that date. Claimant filled out a dive log and it was signed by Crumb. The log indicates the depth of the dive was 12 feet. (Ex. 7, p. 91). In his own log notes Claimant wrote, "…Re-familiarization dive. Ears/sinus wouldn't equalize…" (Ex. 7, p. 90.1) Claimant did not request an accident or injury report be completed or claim a work injury after the July 29, 2017 dive.

4. Claimant's next dive was September 21, 2017. That dive was determined to be 'successful', down 47 feet to the Grizzly with Mr. Crumb and Lt. Leach. He dove with fellow firefighter Lt. Jason Leach at Gold Camp Reservoir. Claimant completed a dive log for this dive. (Ex. 7, p. 90). In the log Claimant noted, "Confidence / ear exercising dive…No hood to assist with equalizing…slow descent / ears." The log reflects the depth of the dive was 43 feet and it lasted 14 minutes. Lt. Leach also completed a dive log for this dive. In his log he noted, "…Langmaid – worked on buoyancy / clearing. Slow descent from platform to Grizzly." (Ex. 7, p. 89.2).

5. The second dive planned for September 21, 2017 was not attempted due to Claimant's report of ear pain at the surface. Claimant did not request an accident report be completed or indicate he sustained a work injury after the September 21, 2017 dive. At hearing, Lt. Leach testified that the purpose of these dives was to re-familiarize Claimant and get him to dive to the level of his certification, which is rescue diver level.

6. At hearing, Claimant testified that attempted to participate in a dive with Curt Crumb on September 30, 2017 but was unable to equalize his ears and Crumb cancelled the dive. He testified that he was unable to descend more than around 10 feet, but did not log

this attempted dive. After this dive Claimant testified that he began experiencing additional symptoms including headaches, sinus pressure, and sinus discharge.

7. On October 1, 2017 Claimant sent a text message to Lt. Dave Barron that said, "I have a possible partial solution for my equalizing problem. However, I'd like your permission to experiment with a piece of equipment before I do it. I'd like to try modifying my hood with small holes (similar to vent on top) alongside my ears. This would allow water pressure and equalizing to be easier. However, it may not work because the cold water could potentially cause other problems like vertigo. Only one way to find out. I figured I'd start with a very small hole and perhaps extend to a slice if need be. Let me know your thoughts." (Ex. 10). Lt. Barron gave permission for the hood modification. *Id*

8. Claimant discussed his ear problems with Lt. Barron in September or October of 2017. At hearing, Lt. Barron testified that he, too, occasionally has difficulty clearing his ears when diving. He recommended some techniques he found useful, including use of Neo-Synephrine spray. Lt. Barron testified that approximately one-quarter of all divers experience ear problems when diving

9. Claimant did not participate as a diver in the water during any of the dive training sessions between September 21, 2017, and April 27, 2018. Claimant did not tell Mr. Crumb why he was not actively diving. Lt. McConnellogue testified he did not know the reason Claimant did not dive during that period, other than Claimant's expressed interest in trying to focus on a couple other things regarding the dive. Lt. Leach testified it was not clear why Claimant did not participate as an active, actual in-the-water diver.

10. Lt. Leach testified about a meeting he had with Claimant on February 14, 2018. Claimant stated he was having difficulty scuba diving and getting under the water. He also stated that he thought he had a brain tumor or other related issues going on, and sometimes he had clear liquid coming out of his nose that he thought was cerebral spinal fluid. Claimant did not indicate he had a work injury at that time. On February 20, Claimant sent Lt. Leach a text stating he had made an appointment for his 'brain leak'.

11. Lt. McConnellogue testified that he and Lt. Leach had brought up with Claimant the lapse of time in his diving and advised him it was critical that every single person on the team was a diver. Lt. McConnellogue recalled a conversation with Claimant in which Claimant expressed concern about his ear problems and requested to be assigned to more of a supporting role. Lt. McConnellogue testified that he and Lt. Leach expressed that everyone on the team had to be able to perform all diving activities. If someone is in the program, the expectation is he has to perform all of the skills within the program. Lt. McConnellogue testified Claimant had expressed some concerns with nasal drainage, and in February said he was going to schedule an appointment to get medical clearance and make sure everything was okay.

12. On March 13, 2018, Lt. Leach and Lt. McConnellogue had a meeting with Claimant to follow up on his March 12 medical appointment, and whether he had been cleared to dive. They expressed concerns for Claimant's health and reiterated the importance of making sure everybody was a qualified, certified diver because they needed everybody

to be able to perform every discipline with the program. They told Claimant they didn't want him to do anything to jeopardize his health and asked about his medical appointment. Claimant informed them he had canceled the appointment due to financial constraints.

13. Claimant did not provide a clear answer on why he wasn't diving. He thought, possibly, something medically was going on with him. Lt. McConnellogue believed Claimant, at one point in this meeting, talked about some cerebral spinal fluid had been leaking, and his wife wanted him to get that checked out. Lt. McConnellogue asked whether there was some kind of mental block, maybe some anxiety coming back. Claimant said he wasn't qualified to answer whether it was a mental block, but indicated it could be something physiological, or a little bit of a mental block, or because of the things that happened with him in the department over the course of time.

14. Lt. McConnellogue testified he was really not privy to the prior interactions to which Claimant referred, because most of those were when he was on another shift. The events to which Claimant was apparently referring were events that resulted in his being transferred out of the Station 17 heavy rescue station and reassigned to a different station in February 2015.

15. Claimant underwent a physical examination on March 13, 2018. This was a required part of his participation in the HRP. In the written "medical history statement" Claimant referenced sinusitis, and earaches "post diving (intermittent)." (Ex. 4)

16. On March 20, 2018, a memorandum, prepared by Angela Hines with HR, was tendered to Claimant by his chain of command, advising him of Employer's ADA program. It was sent to him because he had indicated he had a physical or mental issue impacting his ability to participate in the diving requirements of the Heavy Rescue program. (Ex. O, p. 41). The Memo concluded; "…Please know that I am not considering you to be disabled; I am simply providing information that may be beneficial to you based on information you have shared with your supervisors." Lt. Leach testified this was the result of his conversation with human resources about the liquid coming from Claimant's nose and his statement about a brain tumor.

17. On April 16, 2018, Claimant sent an email to Paula Homberger, PA-C, of Employer's Occupational Health Clinic, and stated, "…I am concerned that a symptom that I included in the history form was not discussed during the Heavy Rescue evaluation and that it may actually be causing difficulties with diving. Please contact me Wednesday at Station 17 if you can so that we can discuss the best course of action to determine the cause of these symptoms." Ms. Homberger responded, "No problem, PJ, I'll call Wednesday morning to discuss further. I am happy to discuss further and see if your medical symptom is a problem with diving. I apologize for not discussing it further at the time of your physical." (Ex.4 p. 40).

18. On April 23, 2018, Claimant was given a memorandum outlining a dive training plan intended to provide him with time to practice and demonstrate proficiency with the dive skills required by his level of certification. (Ex. P, pp. 42–43) Lt. McConnellogue explained the reason for the memorandum was to help Claimant become re-familiarized

with the diving equipment, get comfortable with the dive operation, and make sure he was able to perform the skills for which he was certified. Lt. McConnellogue thought the plan was fair, noting they were very basic skills Claimant was being asked to perform. He testified they had full support of Battalion Chief Wheeler to alter their training schedule and were given latitude to pull their company out of service within reason in order to complete the training. They discussed with Claimant that if there were significant events that would not allow them to train, they would be able to extend the time frame for completion.

19. The April 23 Memo stated, in pertinent part: "…On March 13, 2018, your officers discussed with you a general dive training plan intended to provide you with time to practice and demonstrate proficiency with the dive skills required by your level of certification. This memorandum outlines the dive training plan." (Ex. 7. pg. 87) (emphasis supplied). The Memo went on to describe four "Phases" of training dives in which Claimant was to participate, and concluded, "…By July 31, 2018 you must have completed all phases of this dive training plan. Failure to meet the requirements herein may result in your removal from the Heavy Rescue Program." (Ex7, p. 88) (emphasis suppled).

20. Lt. Leach testified he did not feel the dive training plan was too aggressive. These were basic dives to get through in order to perform at Claimant's level of certification as a rescue diver. He also testified that assuming reasonable progress were made by Claimant towards this goal, that the compliance deadline could even be extended.

21. Battalion Chief Wheeler explained that the Fire Department needed Claimant to demonstrate he could perform to the level of his certification as a diver. It was essentially a remedial plan of dive skills which Claimant had previously accomplished, and for which he had been previously certified, to get him back to the level he was expected to dive. He also explained how the calendar could have been adjusted to accommodate the training plan. When Chief Wheeler delivered the dive training plan memorandum to Claimant, Claimant did not request an accident or injury report be completed for his ears, nor did he ask that a workers' compensation claim be completed concerning an injury to his ears.

22. Mr. Crumb was familiar with the dive training plan memorandum of April 23, 2018, which he had helped put together. In his opinion, the dive plan was not overly ambitious, because it only required Claimant to demonstrate skills for which he'd already been certified, and there was no extra class time. Mr. Crumb testified the dive training plan was appropriate from a time perspective. He discussed with Claimant that if they were finding success with the dive training plan but there were scheduling issues, there would be some leeway for the timeline for completion.

23. On April 27, 2018, a dive training session took place in the pool at Underwater Connection. It was the beginning of the 'confined water' dives (pool sessions, as opposed to 'open water' dives (lakes and oceans). This component was expected to require between two and four dive sessions to complete. Lt. McConnellogue was also present at this session. Mr. Crumb testified they planned to do five skill sets per dive, and it would have been ideal to get a couple dives in that day. Claimant only completed

one dive that day, electing to end on a positive note. Although he was noted to be apprehensive with water around his nose, it was a 'successful' dive to 15 feet. (Ex. P, p. 42). Claimant reported his ears were sore or tender and he was having a little problem clearing. Mr. Crumb noted all divers eventually have ear tenderness at some point. Claimant did not request an injury or accident report be completed or indicate he sustained a work-related injury after the April 27, 2018 dive.

24. The May 6, 2018 'confined water' dive training session took place at the Colorado College pool. Claimant and Mr. Crumb completed dives 2 and 3, the first to the bottom of the 13-foot deep end and the second to 6 feet. Claimant completed almost all the skills to mastery except mask removal and mask flooding skills, which were noted to not be comfortable to Claimant. Claimant verbally mentioned his ears were sore at the end of the session, but he did not request an injury or accident report be filed and did not complain of a work-related injury.

25. The May 20, 2018 dive training session was back at Underwater Connection. The plan was to do dive #4 and then, hopefully, dive #5 of the confined water portion of Claimant's plan. They did not successfully complete the first dive that day, because Claimant, when asked to demonstrate his oral inflate and hover skill, overinflated and had a rapid ascent to the surface. (Mr. Crumb did characterize this incident as a 'common mistake'). Claimant told Mr. Crumb that the ascent had hurt his ears. At that time, since every dive had "some sort of ear component to it," Mr. Crumb aborted the dive and requested Claimant get checked out. Claimant did not request an accident report be completed or indicate that he sustained a work injury to his ear or ears.

26. On June 11, 2018, Claimant was given a memorandum regarding *Suspension of the Dive Training Plan, Station 17.* The memorandum gave Claimant options: obtain a medical release from his healthcare provider allowing him to continue with the Dive Training Plan, or initiate a request for FMLA leave or ADA accommodation, if appropriate. He was to complete one of the options within 10 calendar days, but no later than June 21, 2018. Failure to exercise one of the two options would result in his removal from the program. (Ex. Q, pp. 44–45) Based on his expertise as a diving instructor, Mr. Crumb agreed there was no reason to push forward with the Dive Training Plan until they could figure out what was going on with Claimant's ears.

27. Lt. McConnellogue and Chief Wheeler explained that the reason for the memorandum was Mr. Crumb's recommendation that the training plan be suspended. Mr. Crumb had become uncomfortable with Claimant expressing concern about his ears and inability to clear them. He didn't want to take the chance of Claimant getting injured. Lt. McConnellogue testified that at no point prior to the June 11, 2018 memorandum had Claimant requested an accident or injury report be filed or filed a workers' compensation claim with respect to his ears.

28. Claimant sought treatment for his ear problems at the City Employee Medical Clinic on June 18, 2018. Nurse Practitioner Lorada Shrawder reported, "He is employed by CSFD and on the underwater diving unit. He is having left ear pain during diving and is having difficulty 'equalizing' during his dives. He also notes an increase of Post Nasal Drainage after dives. He wants a full evaluation to determine if diving is safe for him to

continue." (Ex. 3, p. 35). NP Shrawder diagnosed "Otalgia, left ear." She referred Claimant to Colorado ENT & Allergy. (Ex. 3, p. 37).

29. NP Shrawder issued a letter "To Whom It May Concern" on the same date, stating; "PJ Langmaid was seen in this clinic today with concern of ear pain and post nasal drainage after diving. I have referred him to Otolaryngology. I recommend he abstain from diving until he is evaluated by the specialist and receives medical clearance to resume underwater diving." (Ex. 3, p. 34). Claimant testified at hearing that as a result of seeing this information, he believed his ear problems were not the product of routine discomfort while diving, but rather that they rose to the level of an injury.

30. On June 21, 2018, (the deadline date imposed by the 6/11/18 memorandum) Claimant sent an email to Chief Wheeler, Lt. McConnellogue and Lt. Leach objecting to the June 11, 2018 memorandum and informing them he had seen a medical provider at the City Employee Medical Clinic on June 18 and initiated a request for an ADA accommodation "as prescribed in your memo to me." (Ex. R, p. 46) Later on June 21, 2018, Claimant sent another email to Lt. Leach asserting that the time he spent at the clinic on June 18 was on duty because "the department specifically told me to see a medical provider for something job related." He concluded by stating, "I want an injury report and workers comp claim filed. There is enough documentation in the form of memos and training notes to demonstrate that the injuries I am dealing with are as a direct result of the dive training and that I notified both my supervisors and the instructor of the initial injury and continued aggravation of injury due to the training plan imposed upon me." (Ex. S, p. 48)

31. Lt. Leach, Lt. McConnellogue and Chief Wheeler all testified that prior to the June 21, 2018 email from Claimant, Claimant had never requested an accident or injury report be completed or a workers' compensation claim be filed on his behalf. Chief Wheeler testified, at no point had they been made aware of an 'injury'. Up until the June 21 email from Claimant, they had no knowledge or information Claimant was alleging a work-related injury to his ears as a result of the scuba diving training program.

32. Claimant testified he knew how to submit a Workers' Compensation claim and that Workers' Compensation has always been "you go to occupational health." He testified he had not seen any medical provider between September 2017 and April 2018.

33. On June 29, 2018, a memorandum was sent to Claimant responding to his June 21 emails, and contradicting his assertions he had been directed or ordered to see a healthcare provider. The June 29 memorandum also noted that Claimant had not previously objected or expressed concern that the dive plan would cause or exacerbate any injury, and he had never previously communicated he believed he had suffered a job related injury. The memorandum also advised him of the correct processes for filing an injury report and filing a Workers' Compensation claim. (Ex. T, pp. 50–51).

34. Claimant filed his Worker's Claim for Compensation on July 6, 2018. (Ex. 9, pp. 101-102). Employer denied Claimant's claim on July 10, 2018.

35. Employer did not provide Claimant with a list of authorized medical providers for him to choose from to treat his work injuries. Claimant chose the City Employee Medical Clinic to be his authorized medical provider.

36. Claimant saw Daniel Smith, M.D., at Colorado ENT & Allergy on July 12, 2018. Dr. Smith reported, "…Patient is city diver with left otalgia during/after dive in September of 2017. He avoided diving and left otalgia resolved although he restarted diving in April with decongestant and nasal steroids. Pain recurred when he restarted diving though. PND [post-nasal drip?] resolving and no sinus issues although he has had sinus surgery in past. **Exam clear today.** Audiogram testing in view of history ordered today and reviewed with *mild hearing gloss [sic].* Type A tympanogram. **Etiology unclear** although suspect ETD [eustachian tube dysfunction] exacerbated by diving…" Dr. Smith diagnosed: Otalgia, left ear. Other specified disorders of Eustachian tube, left ear. Sensorineural hearing loss, unilateral, left ear, with unrestricted hearing on the contralateral side." Dr. Smith recommended a MRI "…in view of unilateral hearing gloss [sic] and otalgia." (Ex. B, p. 30) (emphasis added).

37. On July 17, 2018, Chief Wheeler sent Claimant a memorandum about his temporary reassignment to another station until a determination was made concerning whether his dive responsibilities could be reasonably accommodated under the ADA. (Ex. U, p. 52) Chief Wheeler acknowledged Claimant was never provided with a list of medical providers to choose from to treat his condition, explaining that Employer doesn't do that with persons who have non-job-related injuries.

38. Violet Heath, Employer's Human Resources Manager, wrote to Dr. Smith on July 31, 2018 and asked him questions about Claimant's condition. (Ex. 2, pp. 18-26). Dr. Smith responded on August 10, 2018 and explained; "I was asked to comment on difficulties that he has been experiencing with his ears. He initially noted difficulties in October following a dive during work. This did cause pain and irritation within his left ear at the time. This occurred during the dive itself. He did allow for resting of the ear and avoid diving to allow this difficulty to resolve, although he was instructed to dive again for the fire department in April. In doing so, during the dive he again experienced pain and irritation within the left ear similar to what he experienced in October. He has been seen by me, and examination including otologic examination, nasopharyngoscopy, audiologic testing, and MRI imaging have been done. **They have not demonstrated any fixed lesion;** although with his history and the difficulty during diving and the symptom he notes, this is suggestive of eustachian tube dysfunction related to his dives…" (Ex. 2, p. 17). Dr. Smith discussed treatment options for eustachian tube dysfunction, and referred Claimant to Dr. Hegarty ("a neurootologist") for such treatment. (emphasis added).

39. Claimant saw Joseph Hegarty, M.D., on August 21, 2018. Dr. Hegarty noted, "…This 45 year old patient reports that, in early October, he went scuba diving and was not able to equalize his pressure. In subsequent attempts to dive, he was also unable to equalize his pressure. He has been a diver for about ten years and, prior to this incident, did not experience issues equalizing. His last attempt was in April 2018. He reports that, in the last month, he has had several spells of dizziness and light-headedness when he has successfully popped his ears. He reports that he has taken

prednisone and other anti-inflammatory medications prior to his dives. He reports that, recently, he has become increasingly sensitive to noise. He reports that his symptoms generally occur in his left ear, but occasionally impact the right ear as well. He reports that the pain, which has previously been consistent for several months, has begun to recede in the past few days…He comes in to consider Eustachian tube dilation procedures…" (Ex. 1 p. 11).

40. On examination, Dr. Hegarty reported, "…DIAGNOSTIC BINOCULAR MICROSCOPY shows chronic ETD (eustachian tube dysfunction) with some chronic eczema AU [both ears]. No fluid or infection seen in the middle ear. Minimal tympanosclerosis is seen." His diagnoses included bilateral sound sensitivity; left ear pressure and symptoms suggestive of atypical hydrops, and bilateral eustachian tube dysfunction. (Id. at 12).

41. Hearing tests were performed on September 6, 2018 and the results were normal. (Ex. 1, p. 4). Dr. Hegarty met with Claimant on that date and noted, "…He reports that diving is important to him and is interested in a treatment plan that would allow him to continue to dive. He has been using a nasal steroid spray as prescribed…" The doctor reported that microscopy again showed "mild chronic ETD and chronic EAC eczema AU." Dr. Hegarty's diagnoses again included bilateral eustachian tube dysfunction. He recommended Claimant "…Dive once without prednisone. Dive once with taking prednisone as prescribed…If persistent fluctuant symptoms consider diuretic treatment." (Ex. 1, p. 3).

42. On October 15, 2018, Seth A. Reiner, M.D., performed an Independent medical examination and records review. Dr. Reiner did not see any permanent impairment of Claimant's ears. Even if Claimant had some eustachian tube dysfunction, (which Dr. Reiner noted is common, especially with patients who have sinus troubles), Dr. Reiner did not think this caused any significant hearing loss. Dr. Reiner stated that, with normal testing, he did not think Claimant had hydrops *caused by* the diving he had done for work, or any significant cochlear damage from diving.

43. Dr. Reiner opined that barotrauma, if any occurred during the dives, did not seem to have damaged the eardrum or middle ear structures. None of the typical findings of ruptured eardrum, retracted eardrum, or conductive hearing loss were described or documented on examinations. Dr. Reiner noted the hearing loss determined by the most recent audiogram was very mild and in higher frequencies, and he did not think it was due to any diving activities. (Ex. M, p. 39)

44. Dr. Reiner testified by deposition on November 8, 2018. He opined, "with a great deal of medical certainty," that a diving incident did not cause any damage to Claimant's ears. He was confident to a medical degree of certainty that Claimant has no significant hearing problems. He didn't think the diving incident Claimant described caused any significant damage to his ears. He didn't think there was anything during diving that caused any injury to Claimant's ears. He opined Claimant did not have any impairment because applying the formula used by the American Academy of Otolaryngology to Claimant's audiogram numbers gives zero disability. He opined, if Claimant sustained a work-related injury, he was at MMI at the time of his evaluation.

45. Dr. Reiner further testified that, when there is damage from diving, it is usually in both ears, rather than in one ear. Both ears are subjected to the same pressure changes, so it would be hard to damage just one ear. If there was damage to an ear from a diving incident, the most common damage one would expect would be a perforated eardrum, with blood or extreme hearing loss. That hearing loss would show as a conductive hearing loss, or if it was really severe, it would be a dramatic drop rather than flat across like Claimant has now. This was shown on Dr. Hegarty's September 6, 2018 audiogram.

46. Dr. Reiner opined that if there was damage to the ear from a barometric change or a dive, it would be a sloping curve, usually downward sloping, pretty severe hearing loss, not a notch like Claimant has. The hearing loss Claimant has is very typical of most middle-aged or older males with noise-induced hearing loss. The most common injury from barometric pressure changes is a ruptured eardrum, with acute dizziness, usually drainage, sometimes blood in the ear. Such injury drives people to the emergency room right away.

47. Dr. Reiner opined that Claimant has mild eustachian tube dysfunction, which could be caused by allergies, irritants, dust, swelling in the eustachian tube, or chronic sinus problems. Sometimes a cause for it is never identified. If a person had mild eustachian tube dysfunction and went diving, they would feel pressure in the ear. The dive would provide symptoms of a problem that the person already had.

48. On February 21, 2019, a follow-up evidentiary deposition was taken of Dr. Reiner. Dr. Reiner testified it was highly unlikely-and not probable at all-that Claimant sustained an occupational disease or injury from repeated dives. He added that for shallow dives, such as the dives Claimant made in 2017 and 2018, it was extremely unlikely there was any occupational disease or work-related injury from repeated dives. Dr. Reiner's opinion was based on the fact he couldn't find in the records any objective finding of eustachian tube dysfunction or damage. He opined that chronic eustachian tube dysfunction or damage from repeated injury would show what's called a conductive hearing loss, not a sensory hearing loss. Claimant shows no evidence of that.

49. Dr. Reiner also explained that, if there was a significant repeated eustachian tube problem from diving, they might see negative tympanometry or pressure in the ears. Claimant's were essentially normal. Dr. Reiner noted Claimant's eardrums looked completely normal upon physical examination. In all of the examination, especially in the nasopharynx and the MRI scan, there was no objective finding that would substantiate any occupational damage.

50. Dr. Reiner testified he didn't think he had ever heard of eustachian tube problems or damage at depths of 10 to 12 feet. Even with a dive to a depth of approximately 45 feet, if Claimant had sustained eustachian tube disorder, there would have been objective findings such as conductive hearing loss, retracted eardrums, or fluid in the middle ears. It would usually affect both ears, because the water pressure is applied to both sides of the head. Dr. Reiner himself has been a recreational diver for over 40 years. He is certified through NAUI and PADI, and has made dives down to 85 feet.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. §8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

D. The ALJ finds the testimony of Lt. Leach, Lt. McConnellogue, Chief Wheeler, Lt. Barron, and Engineer Crumb to be sincere, reliable, and credible. At all times, the Fire Department showed appropriate concern for Claimant's well-being, but with appropriate attention to assuring a proper state of readiness for the Heavy Rescue Program as a whole. While not necessarily dispositive of the compensability issue, the ALJ finds that the terms of the April 23, 2018 Dive Training Memorandum were

reasonable, appropriate, and not overly ambitious, especially with the ability to extend the completion date as needed.

E. The ALJ further finds Claimant to be sincere in his own perception of events, but an analysis of Claimant's psychological state is not necessary for a determination of the compensability issue. There is ample evidence in the record to analyze this matter from a purely medical perspective, regardless of Claimant's unusual timing in filing a Workers Compensation claim.

F. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

G. Further, courts are to be "mindful that the Workmen's Compensation Act is to be liberally construed to effectuate its humanitarian purpose of assisting injured workers." *James v. Irrigation Motor and Pump Co.*, 503 P.2d 1025 (Colo 1972).

Compensability, Generally

H. A pre-existing disease or susceptibility to an injury does not disqualify a claim if the employment aggravates, accelerates, or combines with a pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of a natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Renta*, 717 P.2d 965 (Colo. App. 1995).

I. The mere fact that a claimant experiences pain at work does not necessarily require a finding of a compensable injury. In *Miranda v. Best Western Rio Grande Inn*, W.C. No. 4-663-169 (ICAO April 11, 2007), the panel stated "[p]ain is a typical symptom caused by the aggravation of pre-existing condition. However, an incident which merely elicits pain symptoms caused by a pre-existing condition does not compel a finding that the claimant sustained a compensable injury."

Claimant's Diving Activities, Causing an "Injury"

J. Claimant had trouble clearing his ears in shallow water on July 29, 2017 while attempting to rejoin to Station 17. Because of this trouble, he naturally experienced pain while diving. He had been away from diving since his departure in 2015. He wisely avoided diving and stayed on the shore providing dive support after his September 21, 2017 dive. When his supervisor met with him about his difficulty scuba diving and getting under the water, he complained of symptoms he said he thought

could be a brain tumor or a leak of cerebral spinal fluid. Nevertheless, he did not seek medical treatment during this time-period, and he cancelled the medical appointment he had scheduled for his "brain leak" due to financial constraints. Regardless of any alleged 'mental block' Claimant may have concurrently been experiencing, he had apparent trouble with clearing his ears on each subsequent dive, even in shallow, confined water. It can happen to even experienced divers who maintain their skills.

K. While not dispositive of the causation issue, it is duly noted that Claimant did not allege his ongoing complaints were the result of a work injury or occupational disease until his dive training plan was suspended and he was given the options of obtaining a medical release from his healthcare provider allowing him to continue with the dive training plan or initiating a request for FMLA leave or ADA accommodation, if appropriate.

L. Dr. Reiner credibly opined that Claimant has mild eustachian tube dysfunction, which could be caused by allergies, irritants, dust, swelling in the eustachian tube, or chronic sinus problems. Sometimes they never find a cause for it. Dr. Reiner explained that if a person had mild eustachian tube dysfunction and went diving, they would feel pressure in the ear. The dive would provide symptoms of a problem that the person already had (pre-existing disease). Dr. Reiner has opined that a diving incident or incidents did not cause any damage to Claimant's ears, and that Claimant did not sustain an occupational disease or injury from repeated dives.

M. Dr. Reiner also opined that Claimant had no significant hearing problems, and that the hearing loss Claimant does have is very typical of most middle-aged or older males or noise-induced hearing loss. Dr. Reiner's opinion was based on the fact that he couldn't find in the records any objective finding of eustachian tube dysfunction or damage. Dr. Reiner testified he didn't think he had ever heard of eustachian tube problems or damage at depths of 10 to 12 feet. Even with a single dive to a depth of approximately 45 feet, if Claimant had sustained eustachian tube disorder there would have been objective findings like conductive hearing loss, retracted eardrums, or fluid in the middle ears. Also, it would usually affect both ears because the pressure is exposed equally to both sides of the head.

N. Most notably, there is nothing inconsistent with Dr. Reiner's findings and those of Dr. Hegarty and Dr. Smith-as well as the Nurse Practitioners Claimant also encountered. While Dr. Hegarty noted some *mild chronic* eustachian tube dysfunction, at no point did he even suggest that it was *caused by* Claimant's diving activities. Nor did Dr. Smith ever attempt to make a *causal* link. He merely noted his observations, and how to possibly move forward. In fact, the evidence in the record suggests this ETD problem is not uncommon in divers. If you cannot successfully address it medically, you cannot dive. It does not have to be someone's fault. It does not have to be connected to a specific cause; often it is not. Unfortunate for the diver, but true.

O. Of course Claimant felt some discomfort since he could not properly clear his ears. He then did the correct thing by aborting the dives he attempted-and with the full support at every turn of his co-workers. In so doing, he incurred no damage or injuries to his ears, either in an acute event, or cumulatively, and the ALJ so finds. His

symptoms were temporary, not resulting in any aggravation requiring treatment. Stated another way, if a firefighter is standing too close to the fire, he might feel some discomfort. Before the discomfort morphs into an actual 'injury', he merely takes a few steps back. Problem solved. Similarly, Claimant has failed to show, by a preponderance of the evidence, that he suffered a compensable work injury, either acutely, or as a result of any occupational disease caused by scuba diving.

Medical Benefits/Authorized Treating Provider

P. Claimant has not suffered a compensable work injury. There is no need to further address Medical Benefits or Authorized Treating Provider.

ORDER

It is therefore Ordered that:

1. Claimant's claim for Workers Compensation benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 19, 2019

Colorado Springs, Colorado 80906

ISSUES

Whether the claimant has demonstrated by a preponderance of the evidence that her scheduled impairment rating should be converted to a whole person impairment rating.

FINDINGS OF FACT

1. The claimant suffered an admitted injury to her left shoulder on November 18, 2015. The injury occurred when the claimant was reaching overhead for a box, and a box on top of that box slipped and fell. The claimant testified that she attempted to catch the falling box with her left hand. However, as the box fell the claimant's left hand also moved downward, resulting in pain in the claimant's left shoulder.

2. During her claim, the claimant's authorized treating provider (ATP) has been Work Partners where she primarily treated with Erica Herrera, PA, but was also seen by Dr. Lori Fay.

3. Ultimately, the claimant was diagnosed with a left torn rotator cuff. On March 10, 2016, Dr. Mark Luker performed a rotator cuff repair.

4. The claimant testified that following her March 10, 2016 surgery she experienced low back pain while in physical therapy. The claimant also testified that she reported this low back pain to her chiropractor as well as to Dr. Fay and Ms. Herrera.

5. On January 27, 2017 Dr. Peter Millett performed a reverse shoulder arthroplasty. Thereafter, the claimant began a course of physical therapy. When she first began physical therapy, the claimant reported low back pain. However, on February 8, 2017, the claimant reported to Dr. Fay that her low back pain had resolved.

6. Thereafter, the claimant was seen by Dr. Millet on May 4, 2017. At that time, the claimant reported a "clunking" sensation in her left shoulder. Dr. Millett indicated this would improve with strengthening. On that date, Dr. Millet discharged the claimant from his care and instructed her to follow-up in one year.

7. On August 10, 2017, the claimant returned to Dr. Millett and reported continued popping and clunking in her left shoulder. Based upon these complaints, Dr. Millett referred Claimant for computerized tomography (CT) scan of her left shoulder.

8. On September 18, 2017, the CT scan showed an "uncomplicated left shoulder reverse arthroplasty." On November 9, 2017, Dr. Millet informed the claimant that she could return to normal activities.

9. On January 12, 2018, Dr. Fay placed the claimant at maximum medical improvement (MMI). At that time Dr. Fay assessed a permanent impairment rating of 44% for the claimant's left upper extremity (which equates to a 26% whole person impairment). At that time, Dr. Fay assessed permanent work restrictions including no lifting, repetitive lifting, carrying, pushing, or pulling over 20 pounds. In addition, no reaching overhead with her left upper extremity or reaching away from her body with her left upper extremity.

10. On February 15, 2018, the respondent filed a Final Admission of Liability (FAL) admitting for the MMI date and permanent impairment rating as assessed by Dr. Fay. The claimant objected to the FAL and proceeded to the Division sponsored independent medical examination (DIME) process.

11. On July 9, 2018, the claimant attended a DIME with Dr. Douglas Scott. As part of the DIME process, Dr. Scott reviewed the claimant's medical records, obtained a history from the claimant and completed a physical examination. Dr. Scott agreed that the claimant was properly placed at MMI on January 12, 2018. Dr. Scott assessed a permanent impairment rating of 41% for the claimant's left upper extremity. Dr. Scott also agreed with the permanent work restrictions assigned by Dr. Fay.

12. Following the DIME, the Division asked Dr. Scott to review the issue of apportionment given the claimant's **prior** injury to her left shoulder.

13. The claimant suffered a prior work related injury to her left shoulder on February 27, 2006. Dr. Scott performed a DIME for that injury on August 27, 2010. At that time, Dr. Scott assessed a permanent impairment rating of 15% for the claimant's left upper extremity.

14. On August 29, 2018, Dr. Scott issued an addendum to his July 9, 2018 DIME report with consideration of apportionment of the claimant's 2006 injury and related impairment. Dr. Scott subtracted 15% from the 44% assessment for the 2010 impairment rating. This resulted in a permanent impairment rating of 29% for the claimant's left upper extremity (which would equate to a 17% whole person impairment) for the November 18, 2015 work injury.

15. On September 18, 2018, the respondent filed a FAL admitting for the 29% permanent impairment rating for the claimant's left upper extremity.

16. On November 14, 2018, the claimant attended an independent medical examination (IME) with Dr. Allison Fall. In connection with the IME, Dr. Fall reviewed the claimant's medical records, obtained a history from the claimant and completed a physical examination. In her IME report, Dr. Fall opined that the claimant's injury was to her left shoulder. Dr. Fall specifically diagnosed the claimant with a left shoulder rotator cuff tear "acute on chronic", status post rotator cuff repair with subsequent re-tear and a reverse total shoulder arthroplasty. Dr. Fall agreed that the claimant reached MMI on January 12, 2018 and opined that the claimant's permanent impairment was appropriately determined to be a left upper extremity impairment. Dr. Fall's testimony at hearing was consistent with her written report. Dr. Fall credibly testified that the claimant's loss of function is only to her left shoulder. Dr. Fall also testified that the

claimant's complaints of pain throughout her body are likely related to the claimant's inflammatory arthritis, and not related to the claimant's left shoulder injury.

17. The claimant testified that as a result of her left shoulder injury, she has pain into her left trapezius and into her neck. The claimant also testified that the pain travels down into her ribcage and is particularly painful when she coughs. The claimant further testified that she has pain into her low back, hip, and knees. The claimant testified that she leans to the left when she walks. It is the claimant's belief that these symptoms are related to her left shoulder injury.

18. The ALJ credits the medical records and the opinions of Dr. Fall and finds that the permanent impairment rating was appropriately assessed for the claimant's left upper extremity, and there is no functional impairment beyond the claimant's left shoulder. Therefore, the ALJ finds that the claimant has failed to demonstrate that it is more likely than not that she has suffered any functional impairment that is not contained on the schedule. Therefore, the ALJ declines to convert the claimant's scheduled left upper extremity impairment rating to a full person impairment.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2015).

3. The question of whether the claimant has sustained an "injury" which is on or off the schedule of impairment depends on whether the claimant has sustained a "functional impairment" to a part of the body that is not contained on the schedule. *Strauch v. PSL Swedish Health Care System*, 917 P.2d 366 (Colo. App. 1996). Functional impairment need not take any particular impairment. Discomfort which interferes with the claimant's ability to use a portion of his body may be considered

"impairment." *Mader v. Popejoy Construction Company, Inc.*, W.C. No. 4-198-489, (ICAO August 9, 1996). Pain and discomfort which limits a claimant's ability to use a portion of his body may be considered a "functional impairment" for determining whether an injury is on or off the schedule. *See, e.g., Beck v. Mile Hi Express Inc.*, W.C. No. 4-238-483 (ICAO February 11, 1997).

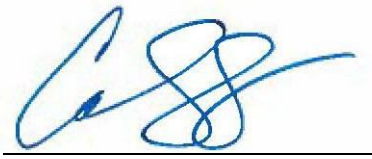
4. It is the claimant's burden of proof by a preponderance of the evidence to establish both that he suffered a permanent impairment and that the permanent impairment is either contained on the schedule set forth at subsection (2) or not on the schedule specified in subsection (2). Further, it is the claimant's burden to prove by a preponderance of the evidence the extent of the permanent impairment.

5. As found, the claimant has failed to demonstrate by a preponderance of the evidence that she has suffered any functional impairment that is not contained on the schedule. Therefore, claimant's request to convert her scheduled impairment rating to a whole person impairment is denied. As found, the medical records and the opinions of Dr. Fall are credible and persuasive.

ORDER

It is therefore ordered that the claimant's request to convert her scheduled impairment to a whole person impairment is denied and dismissed.

Dated March 12, 2018



Cassandra M. Sidanycz

Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-004-352-002 & 5-025-676

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on March 5, 2019, in Denver, Colorado. The hearing was digitally recorded (reference: 3/5/19, Courtroom 3, beginning at 8:30 AM, and ending at 12:15 PM).

Claimant's Exhibits 1 through 13 and 15 were admitted into evidence, without objection. Respondents' Exhibits A through N and Q were admitted into evidence, without objection.

W.C. No. 5-004-252-002 concerns an admitted injury of January 14, 2016. W.C. No 5-025-676 concerns a fully contested injury of August 25, 2016.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant, which was filed, electronically, on March 11, 2019. Respondents were given two working days within which to file objections. No timely objections were filed. After a consideration of the proposed decision, the ALJ has it and hereby issues the following decision.

ISSUES

For W.C. No. 5-004-252, the sole issue for decision concerns post maximum medical improvement (MMI) medical maintenance benefits, specifically, completion of acupuncture recommended by authorized treating physician (ATP) Franklin Shih, M.D; and, counseling by Ron Carbaugh, Psy.D., a licensed clinical psychologist.

For W.C. No. 5-025-676, the issues for decision concern compensability and, if compensable, medical benefits, specifically, evaluation of the Claimant by a neurologist pursuant to the recommendation of Neha N. Patel, M.D. The parties stipulated that if W.C. 5-025-676 was found compensable, Dr. Patel was an ATP.

The Claimant bears the burden of proof on all issues by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

W.C. No. 5-004-352-002 –Admitted January 14, 2016 Injury

Preliminary Findings

1. The Claimant worked as a material handler for the Employer. On January 14, 2016, he injured his back when he turned his body to reach for a handle while exiting a trailer (Claimant's Exhibit 1). Respondents accepted the claim and medical treatment was provided.

2. ATP Dr. Michael Ladwig, M.D. originally placed the Claimant at MMI on May 26, 2016. Claimant objected and requested a Division Independent Medical Examination (DIME), which was performed by Michael Striplin., M.D. In his DIME report Dr. Striplin determined that the Claimant reached MMI on May 26, 2016.

3. Respondents filed a Final Admission of Liability ((FAL), dated November 22, 2016 consistent with Dr. Striplin's DIME report. The FAL admitted for medical maintenance benefits (Claimant's Exhibit 2). At the time he placed the Claimant at MMI, Dr. Ladwig recommended medical maintenance in the form of 3 acupuncture sessions with Dr. Shih and 3 counseling sessions with Dr. Carbaugh (Claimant's Exhibit 5, p. 99). Dr. Striplin also adopted Dr. Ladwig's medical maintenance recommendations in his DIME report (Claimant's Exhibit 2, pp. 13). Respondents subsequently denied the

medical maintenance recommendations. F. Mark Paz, M.D., Respondent's retained expert, disagrees that the treatment recommended by the ATP and DIME physician is reasonably necessary. The ALJ accepts the opinions of the ATP and the DIME and rejects the opinion of IME Dr. Paz in this regard.

Dr. Ladwig – Claimant's Authorized Treating Physician (ATP)

4. In his MMI report of May 26, 2016, Dr. Ladwig states "MMI with maintenance: allowed to see Dr. Shih for acupuncture times 3 sessions for 6 months also allowed to see Dr. Carbaugh times 3 sessions for 6 months if needed" (Claimant's Exhibit 5, p. 99).

Dr. Carbaugh, Psy.D. – Psychological and Pain Management Services

5. In his report of May 13, 2016, Dr. Carbaugh states, "At this point, [Claimant] has completed three of the initial authorized six treatment sessions through this practice. If Dr. Shih has placed him at MMI, the remaining three sessions would appropriately be considered part of his maintenance care plan" (Claimant's Exhibit 6, p. 107).

Dr. Striplin – Division Independent Medical Examiner (DIME)

6. Regarding Claimant's maintenance treatment, Dr. Striplin states in his DIME report of November 1, 2016 that "The patient should be offered up to three follow-up visits with Dr. Shih, for acupuncture treatments if needed, and two additional counseling sessions with Dr. Carbaugh if needed, to be completed by May 31, 2017" (Claimant's Exhibit 2, p. 13). At the time of the DIME appointment, the Claimant had completed one of the three recommended counseling sessions with Dr. Carbaugh--under maintenance care.

Dr. Paz – Respondents' Independent Medical Examiner (IME)

7. Dr. Paz performed a records review as the basis of his report and findings, as he did not perform a physical evaluation of the Claimant. Regarding the recommended medical maintenance Dr. Paz's IME report only highlights that "Dr. Striplin, the DIME physician, recommended no additional treatment medical maintenance would be required beyond May 31, 2017, for the low back pain which was attributable to the January 14, 2016, incident" (Respondent's Exhibit G, p. 21).

8. At the hearing, Dr. Paz testified consistently with his report. He stated that the Claimant is beyond the six-month window for completion of his medical maintenance recommendations, therefore; the recommendations are no longer reasonably necessary. Because Respondents would not pay to complete the

implementation of the recommendations of the ATP and the DIME, Dr. Paz's opinion in this regard is based on a conundrum involving the expiration of 6-months. Carried to its logical conclusion, a carrier could simply delay the implementation of recommended treatment for six months and then take the position "tume's up.". Such a proposition, in part, undermines Dr. Paz's opinion. The ALJ finds Dr. Paz's opinion regarding the reasonableness and necessity of the recommended medical maintenance neither credible nor persuasive.

The Claimant

9. The Claimant credibly testified at hearing that following being placed at MMI, he was informed by his medical providers that his case was closed and they were unable to schedule completion of the recommended medical maintenance treatment. The Claimant contacted the adjuster who confirmed that his case was closed and that the additional treatment recommendations were denied. Following the denial, the Claimant attempted, unsuccessfully, to seek treatment at an urgent care facility. According to the Claimant, he was symptomatic at the time he was placed at MMI and he continues to have ongoing symptoms. He has not sustained any subsequent injury to his low back. He wishes to proceed with the medical maintenance recommendations for follow up treatment with Dr. Shih and Dr. Carbaugh. The ALJ finds that the Claimant's testimony concerning being denied the recommended medical treatment, his ongoing symptoms, and desire for treatment is credible, convincing and unrefuted by any other evidence.

Ultimate Findings

10. The ALJ finds the opinions of Dr. Ladwig, Dr. Carbaugh, and Dr. Striplin highly credible and persuasive. On the other hand, the ALJ finds the opinions of Dr. Paz inadequately based, contrary to the weight of medical opinions in evidence, and lacking in credibility for the reasons herein above stated. Further, the ALJ finds the Claimant's testimony to be consistent with the weight of the medical evidence and therefore, credible and persuasive.

11. Between conflicting testimonies and opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the Claimant's testimony and the opinions of Dr. Ladwig, Dr. Carbaugh, and Dr. Striplin and to reject opinions to the contrary.

12. The ALJ finds that the Claimant has proven by a preponderance of the evidence that his need for the medical maintenance, including completion of 3 sessions of acupuncture and 3 counseling sessions is reasonably necessary to treat the effects of the compensable injury of January 14, 2016.

13. Dr. Ladwig was an authorized treating physician and Dr. Carbaugh was within the chain of authorized referrals.

W.C. No. 5-025-676 –August 25, 2016 Injury

Preliminary Findings

14. The Claimant continued to work as a material handler for Employer. On August 25, 2016, he responded to a chemical overflow that occurred while unloading a tanker truck. As a result, he was exposed to Caustic Soda, a hazardous chemical. The Caustic Soda overflow resulted in the chemical coming from a pipe below the tanker and also from the manhole on the top of the tanker. This resulted in a mist like rain that came down on top of the Claimant, resulting in exposure to his eyes, head, and neck. The Claimant immediately reported the injury and flushed his eyes followed by a shower at the job site. Later that day, the Claimant was driven to the Emergency Room (ER) at Rose Medical Center by his supervisor, William Bell. The Claimant filled out a formal First Report of Injury on September 15, 2016 (Claimant's Exhibit 8, p. 143). He sought medical treatment from Neha N. Patel, M.D., following his date of the exposure incident, based on the referral from the ER physicians. Respondents filed a Notice of Contest on October 12, 2016 (Claimant's Exhibit 9, p. 144).

15. On October 31, 2016, Dr. Patel referred the Claimant for evaluation by a neurologist (Claimant's Exhibit 8, p. 218). Following this referral, Respondents invoked their Notice of Contest and refused approval of future medical treatment. Dr. Paz, Respondent's retained expert witness, is of the opinion that Dr. Patel's referral to a neurologist is not reasonably necessary and the Claimant reached MMI on January 9, 2017. For the reasons specified herein below, the ALJ rejects Dr. Paz's opinion in this regard.

Rose Medical Center – Emergency Room

16. On the day of his toxic exposure incident, the Claimant sought treatment at the ER of Rose Medical Center. The ER record states "39yoM with no pertinent pmh presents to the ED c/o eye pain, photophobia, and skin irritation being sprayed on by a "20% caustic/corrosive" chemical at 1730 today while at work at [Employer] chemical plant. Pt reports that the truck overflowed and was sprayed in his face/neck by the wind" (Claimant's Exhibit 10, p. 147). The report further outlines "Pt states he was exposed indirectly to misted solution after it spilled over" (Claimant's Exhibit 10, p.149).

17. The ER report states "Pt was able to call his boss and he was able to identify substance he was exposed to: caustic soda 20%" (Claimant's Exhibit 10, p. 150). The Claimant was released from the ER with "close f/u through work comp. Pt also given ophthalmology referral. Encouraged to return to ER for any change or worsening in condition" (Claimant's Exhibit 10, p. 150).

Dr. Patel – Oculoplastics & Ophthalmology

18. On August 26, 2016, the Claimant sought follow up treatment with Dr. Patel, an oculoplastic specialist. Dr. Patel diagnosed the Claimant with a "Chemical injury to conjunctiva" (Claimant's Exhibit 13, p. 208).

19. In her report of September 26, 2016, Dr. Patel diagnosed the Claimant with a chemical injury to conjunctiva and notes that the Claimant has intermittent episodes of blurred vision. At that evaluation, Dr. Patel contemplated a "neuro op" referral (Claimant's Exhibit 13, p. 212).

20. On October 31, 2016 Dr. Patel noted that Claimant is reporting "headaches that begins around eye and radiates out toward temple." (Claimant's Ex 13, pp. 217). Dr. Patel concludes that she "will refer to neurology." (Claimant's Ex 13, pp. 218).

Joel H. Goldstein, M.D. - UC Health Urgent Care

21. Due to the denial of his claim and medical treatment, Claimant sought treatment at UC Health Urgent care due to an increase of eye symptoms. The medical record states "2 day history of FB sensation and redness and blurry vision RE. Previous history of chemical keratitis RE." (Claimant's Ex 11, pp. 147). Claimant was provided artificial tears, medications, and lubricating gel. (Claimant's Ex 11, pp. 147).

David Reinhard, M.D. – Colorado Rehabilitation & Occupational Medicine

22. ATP Dr. Patel referred the Claimant to David L. Reinhard, M.D. Dr. Reinhard diagnosed THE Claimant with "1. Work-related chemical exposure to face, eyes, and skin with resultant chemical conjunctivitis. 2. Ongoing visual complaints including reduced visual acuity, photophobia and dry eyes secondary to chemical exposure. 3. Migraine headaches secondary to #1" (Claimant's Exhibit 12, p. 204).

Material Safety Data Sheet (MSDS)

23. The Material Safety Data Sheet (MSDS) classifies Caustic Soda as a hazardous material. The MSDS outlines that exposure "causes severe skin burns and eye damage." (Claimant's Ex 15). The MSDS further warns that Caustic Soda is "corrosive to eyes. Contact with the eyes rapidly causes severe damage to the tissues. may cause redness, pain, blurred vision. May cause severe, deep burns and permanent impairment to, or total loss of, sight" (Claimant's Exhibit 15, p. 229).

Dr. Paz – Respondent's Independent Medical Examiner (IME)

24. Dr. Paz performed a records review as the basis of his report and findings, as he did not perform a physical evaluation of the Claimant. Dr. Paz outlines in his report that Claimant reached maximum medical improvement for his August 25, 2016 injury on January 9, 2017. As a result, Dr. Paz concludes that Claimant's headaches and visual disturbances are not causally related to his industrial injury.

25, At THE hearing, Dr. Paz testified consistently with his report. Dr. Paz stated that Dr. Patel's referral to a neurologist for further evaluation is not reasonably necessary as related to the Claimant's industrial injury. The ALJ finds Dr. Paz's opinion regarding the reasonableness of the referral to a nuerologist neither credible nor persuasive. Any opinion by Dr. Paz that Claimant did not sustain a compensable injury on August 25, 2016 is also found to be neither credible nor persuasive. Dr. Paz opined in his report and at hearing that Claimant reached MMI on January 9, 2017, which indicates by his own admission that Claimant sustained a compensable injury.

The Claimant

26. The records from the ER corroborate Claimant's testimony regarding the industrial exposure. Claimant's account of the exposure is uncontested. Claimant's testimony regarding his symptoms is also consistent with the medical reports from the Rose Hospital emergency room, Dr. Patel, Dr. Goldstein, and Dr. Reinhard. Claimant testified that he currently has ongoing symptoms consistent with those reported to his treating doctors. The ALJ finds that the Claimant's testimony concerning the injurious event and ongoing symptoms is credible and persuasive.

Ultimate Findings

27. The ALJ finds the opinions of the Rose Medical ER physicians, Dr. Patel, Dr. Goldstein, and Dr. Reinhard highly credible and persuasive regarding their diagnosis of a work related injury. On the other hand, the ALJ finds the opinions of Dr. Paz inadequately based, contrary to the weight of medical opinions in evidence, and lacking in credibility for the reasons herein above stated. Further, the ALJ finds the Claimant's testimony to have been consistent with the weight of the medical evidence and, therefore, credible and persuasive.

28. Between conflicting testimonies and opinions, the ALJ made a rational choice, based on substantial evidence, to accept the Claimant's testimony and the opinions of Dr. Patel, Dr. Goldstein, Dr. Reinhard, and the Rose Medical ER physicians and reject opinions to the contrary.

29. The ALJ finds that the Claimant has proven by a preponderance of the evidence that he sustained a compensable injury on August 25, 2016. The Claimant has proven, by preponderant evidence, that Dr. Patel's neurological referral is causally related to the August 25, 2016 industrial injury and reasonably necessary to cure and relieve the effects thereof. Further, the treatment that Claimant has received to date is causally related to his August 25, 2016 injury.

30. The Rose Center ER was an authorized medical provider. Its referral to Dr. Patel was within the authorized chain of referrals; and, referrals by Dr. Patel, or within the unbroken chain, to Dr. Goldstein and Dr. Reinhard were within the authorized chain of referrals.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's

knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the opinions of Dr. Ladwig, Dr. Striplin and Dr. Carbaugh with respect to W.C. No. 5-004-352-002 were high credible and persuasive. With respect to W.C. No. 5-025-676, the opinions of the Rose Medical ER physicians, Dr. Patel, Dr. Goldstein, and Dr. Reinhard were highly credible and persuasive regarding their diagnosis of a work related injury. On the other hand, as found, the opinions of Dr. Paz, in both cases, were inadequately based, contrary to the weight of medical opinions in evidence, and lacking in credibility for the reasons herein above stated. Further, as found, the Claimant's testimony, as related to both cases, was consistent with the weight of the medical evidence and, therefore, credible and persuasive.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting testimonies and opinionsin W.C. No. 5-004-352-002, the ALJ made a rational choice, based on substantial evidence, to accept the Claimant's testimony and the opinions of Dr. Ladwig, Dr. Carbaugh, and Dr. Striplin and to reject opinions to the contrary.With respect to W.C. No. 5-025-676, between conflicting testimonies and opinions, the ALJ made a rational choice, based on substantial evidence, to accept the Claimant's testimony and the opinions of Dr. Patel, Dr. Goldstein, Dr. Reinhard, and the Rose Medical ER physicians and reject opinions to the contrary.

Medical

c. An employee is entitled to continuing medical benefits after MMI if reasonably necessary to relieve the employee from the effects of an industrial injury. *See Grover v. Indus. Comm'n of Colorado*, 759 P.2d 705 (Colo. 1988). The record must contain substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve a claimant from the effects of an injury or to prevent further deterioration of his condition. *Stollmeyer v. Indus. Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995); *Grover v. Indus. Comm'n, supra*. Such evidence may take the form of a prescription or recommendation for a course of medical treatment necessary to relieve a claimant from the effects of the injury or to prevent further deterioration. *Stollmeyer v. Indus. Claim Appeals Office, supra*. An injured worker is ordinarily entitled to a general award of future medical benefits, subject to an employer's right to contest causal relatedness and reasonable necessity. *See Hanna v. Print Expediters,* 77 P.3d 863 (Colo. App. 2003). Treatment to **improve** a claimant's condition does **not** fall under the purview of *Grover* benefits. *Shalinbarger v. Colorado Kenworth, Inc.,* W.C. No. 4-364-466 [Indus. Claim Appeals Office (ICAO), March 12, 2001]. As found, Claimant is entitled to maintenance medical care, which is reasonably necessary to address the injury in W.C. No. 5-004-352-002. Dr. Ladwig was an ATP and his referral to Dr. Carbaugh was within the chain of authorized referrals.

d. An employer must provide an injured employee with reasonably necessary medical treatment to "cure and relieve the employee from the effects of the injury." § 8-42-101(1) (a), C.R.S. The employee must prove a causal relationship between the injury and the medical treatment for which the worker is seeking benefits. *Snyder v. Indus. Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. Ct. App. 1997). Treatments for a condition not caused by employment are not compensable. *Owens v. Indus. Claim Appeals Office*, 49 P.3d 1187, 1189 (Colo. Ct. App. 2002). An industrial accident is the proximate cause of a claimant's disability if it is the necessary precondition or trigger of the need for medical treatment. *Subsequent Injury Fund v. State Compensation Insurance Authority,* 768 P.2d 751 (Colo. App. 1988). In order to prove that an industrial injury was the proximate cause of the need for medical treatment, an injured worker must prove a causal nexus between the need for treatment and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). It is for the ALJ, as the fact-finder, to determine whether a need for medical treatment is caused by the industrial injury, or some other intervening injury. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985). Respondents are liable for the "direct and natural consequences" of a work-related injury, including consequential injuries caused by the original compensable injury. *See Travelers Ins. Co. v. Savio*, 806 P.2d 1258 (Colo. 1985). The chain of causation, however, can be broken by the occurrence of an independent intervening injury. *See* 1 A. *Larson, Workers' Compensation Law,* section 13.00 (1997). As found, the medical care and treatment for the Claimant's toxic exposure was causally related thereto and reasonably necessary to cure and relieve the effects thereof. As found, with respect to W.C. No. 5-004-352-002,
